#### b. Newborn Diagnoses Edit

Last year, in our changes to the MCE, we inadvertently added code 796.6 (Abnormal findings on neonatal screening) to both the MCE edit for "Maternity Diagnoses—age 12 through 55", and the MCE edit for "Diagnoses Allowed for Females Only". We are proposing to remove code 796.6 from these two edits and add it to the "Newborn Diagnoses" edit.

#### c. Diagnoses Allowed for "Males Only" Edit

We have received a request to remove two codes from the "Diagnoses Allowed for Males Only" edit, related to androgen insensitivity syndrome (AIS). AIS is a new term for testicular feminization. Code 257.8 (Other testicular dysfunction) is used to describe individuals who, despite having XY chromosomes, develop as females with normal female genitalia and mammary glands. Testicles are present in the same general area as the ovaries, but are undescended and are at risk for development of testicular cancer, so are generally surgically removed. These individuals have been raised as females, and would continue to be considered female, despite their XY chromosome makeup. Therefore, as AIS is coded to 257.8, and has posed a problem associated with the gender edit, we are proposing to remove this code from the "Males Only" edit in the MCE.

A similar clinical scenario can occur with certain disorders that cause a defective biosynthesis of testicular androgen. This disorder is included in code 257.2 (Other testicular hypofunction). Therefore, we also are proposing to remove code 257.2 from the "Male Only" gender edit in the MCE.

#### d. Tobacco Use Disorder Edit

We have become aware of the possible need to add code 305.1 (Tobacco use disorder) to the MCE in order to make admissions for tobacco use disorder a noncovered Medicare service when code 305.1 is reported as the principal diagnosis. On March 22, 2005, CMS published a final decision memorandum and related national coverage determination (NCD) on smoking cessation counseling services on its Web site: (<http://www.cms.hhs.gov/coverage/>). Among other things, this NCD provides that: "Inpatient hospital stays with the principal diagnosis of 305.1, Tobacco Use Disorder, are not reasonable and necessary for the

effective delivery of tobacco cessation counseling services. Therefore, we will not cover tobacco cessation services if tobacco cessation is the primary reason for the patient's hospital stay."

Therefore, in order to maintain internal consistency with CMS programs and decisions, we are proposing to add code 305.1 to the MCE edit "Questionable Admission-Principal Diagnosis Only" in order to make tobacco use disorder a noncovered admission.

#### e. Noncovered Procedure Edit

Effective October 1, 2004, CMS adopted the use of code 00.61 (Percutaneous angioplasty or atherectomy of precerebral (extracranial) vessel(s) (PTA)) and code 00.63 (Percutaneous insertion of carotid artery stent(s)). Both codes are to be recorded to indicate the insertion of a carotid artery stent or stents. At the time of the creation of the codes, the coverage indication for carotid artery stenting was only for patients in a clinical trial setting, and diagnostic code V70.7 (Examination of participation in a clinical trial) was required for payment of these cases. However, effective October 12, 2004, Medicare covers PTA of the carotid artery concurrent with the placement of an FDA-approved carotid stent for an FDA-approved indication when furnished in accordance with FDA-approved protocols governing post-approval studies. Therefore, as the coverage indication has changed, we are proposing to remove codes 00.61, 00.63, and V70.7 from the MCE noncovered procedure edit.

#### 10. Surgical Hierarchies

(If you choose to comment on issues in this section, please include the caption "Surgical Hierarchy" at the beginning of your comment.)

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPE by which these cases are assigned to a single DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the DRG associated with the most resource-intensive surgical class.

Because the relative resource intensity of surgical classes can shift as a function of DRG reclassification and recalibrations, we reviewed the surgical

hierarchy of each MDC, as we have for previous reclassifications and recalibrations, to determine if the ordering of classes coincides with the intensity of resource utilization.

A surgical class can be composed of one or more DRGs. For example, in MDC 11, the surgical class "kidney transplant" consists of a single DRG (DRG 302) and the class "kidney, ureter and major bladder procedures" consists of three DRGs (DRGs 303, 304, and 305). Consequently, in many cases, the surgical hierarchy has an impact on more than one DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes DRGs 1 and 2 and surgical class B includes DRGs 3, 4, and 5. Assume also that the average charge of DRG 1 is higher than that of DRG 3, but the average charges of DRGs 4 and 5 are higher than the average charge of DRG 2. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weight the average charge of each DRG in the class by frequency (that is, by the number of cases in the DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of "other O.R. procedures" as discussed below.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPE search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average charge is ordered above a surgical class with a higher average charge. For example, the "other O.R. procedures" surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average charge for the DRG or DRGs in that surgical class may be higher than that for other surgical classes in the MDC. The "other O.R. procedures" class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but

are still occasionally performed on patients in the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average charges for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average charges are likely to shift such that the higher-ordered surgical class has a lower average charge than the class ordered below it.

Based on the preliminary recalibration of the DRGs, we are proposing to revise the surgical hierarchy for MDC 5 (Diseases and Disorders of the Circulatory System) and MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) as follows:

In MDC 5, we are proposing to reorder—

- DRG 116 (Other Permanent Cardiac Pacemaker Implant) above DRG 549 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent With AMI With CC).

- DRG 549 above DRG 550 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent With AMI Without CC).

- DRG 550 above DRG 547 (Percutaneous Cardiovascular Procedure With AMI With CC).

- DRG 547 above DRG 548 (Percutaneous Cardiovascular Procedure With AMI Without CC).

- DRG 548 above DRG 527 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent Without AMI).

- DRG 527 above DRG 517 (Percutaneous Cardiovascular Procedure With Non-Drug Eluting Stent Without AMI).

- DRG 517 above DRG 518 (Percutaneous Cardiovascular Procedure Without Coronary Artery Stent or AMI).

- DRG 518 above DRGs 478 and 479 (Other Vascular Procedures With and Without CC, respectively).

In MDC 8, we are proposing to reorder—

- DRG 496 (Combined Anterior/Posterior Spinal Fusion) above DRG 546 (Spinal Fusion Except Cervical With Principal Diagnosis of Curvature of the Spine or Malignancy).

- DRG 546 above DRGs 497 and 498 (Spinal Fusion Except Cervical With and Without CC, respectively).

- DRG 217 (Wound Debridement and Skin Graft Except Hand, For

Musculoskeletal and Connective Tissue Disease) above DRG 545 (Revision of Hip or Knee Replacement).

- DRG 545 above DRG 544 (Major Joint Replacement or Reattachment).
- DRG 544 above DRGs 519 and 520 (Cervical Spinal Fusion With and Without CC, respectively).

#### 11. Refinement of Complications and Comorbidities (CC) List

(If you choose to comment on issues in this section, please include the caption "CC List" at the beginning of your comment.)

##### a. Background

As indicated earlier in this preamble, under the IPPS DRG classification system, we have developed a standard list of diagnoses that are considered complications or comorbidities (CCs). Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length of stay by at least 1 day in at least 75 percent of the patients.

##### b. Comprehensive Review of the CC List

In previous years, we have made changes to the standard list of CCs, either by adding new CCs or deleting CCs already on the list, but we have never conducted a comprehensive review of the list. There are currently 3,285 diagnosis codes on the CC list. There are 121-paired DRGs that are split on the presence or absence of a CC.

We have reviewed these paired DRGs and found that the majority of cases that are assigned to DRGs that have a CC split fall into the DRG with CC. While this fact is not new, we have found that a much higher proportion of cases are being grouped to the DRG with a CC than had occurred in the past. In our review of the DRGs included in Table 7b of the September 1, 1987 **Federal Register** rule (52 FR 33125), we found the following percentages of cases assigned a CC in those DRGs that had a CC split (DRG Definitions Manual, GROUPE Version 5.0 (1986 data)):

- Cases with CC: 61.9 percent.
- Cases without CC: 38.1 percent.

When we compared the above DRG 1986 data to the DRG 2004 data that were included in the DRGs Definitions Manual, GROUPE Version 22.0, we found the following:

- Cases with CC: 79.9 percent.

• Cases without CC: 20.1 percent.  
(We used DRGs Definitions Manual, GROUPER Version 5.0, for this analysis because prior versions of the DRGs Definitions Manual used age as a surrogate for a CC and the split was "CC and/or age greater than 69".)

The vast majority of patients being treated in inpatient settings have a CC

as currently defined, and we believe that it is possible that the CC distinction has lost much of its ability to differentiate the resource needs of patients. The original definition used to develop the CC list (the presence of a CC would be expected to extend the length of stay of at least 75 percent of the patients who had the CC by at least one

day) was used beginning in 1981 and has been part of the IPPS since its inception in 1983. There has been no substantive review of the CC list since its original development. In reviewing this issue, our clinical experts found several diseases that appear to be obvious candidates to be on the CC list, but currently are not:

| Code   | Code Description  | 2004 Count |
|--------|---|------------|
| 041.7  | Pseudomonas Infection in Conditions Classified Elsewhere and/or of Unspecified Site | 47,350     |
| 253.6  | Disorders of Neurohypophysis  | 23,613     |
| 414.12 | Dissection of Coronary Artery   | 2,377      |
| 359.4  | Toxic Myopathy  | 1,875      |
| 031.2  | Disseminated Disease Due to Mycobacteria  | 1,428      |
| 451.83 | Phlebitis and Thrombophlebitis of Deep Veins of Upper Extremities                   | 376        |

Conversely, our medical experts believe the following conditions are

examples of common conditions that are on the CC list, but are not likely to lead

to higher treatment costs when present as a secondary diagnosis:

| Code   | Code Description                                       | 2004 Count |
|--------|--|------------|
| 424.0  | Mitral Valve Disorder                                  | 401,359    |
| 305.00 | Alcohol Abuse Unspecified Use                          | 69,099     |
| 578.1  | Blood in Stool   | 53,453     |
| 723.4  | Brachial Neuritis/Radiculitis, Not Otherwise Specified | 5,829      |
| 684    | Impetigo   | 1,230      |
| 293.84 | Anxiety Disorder in Conditions Classified Elsewhere    | 1,153      |

We note that the above conditions are examples only of why we believe the CC list needs a comprehensive review. In addition to this review, we note that these conditions may be treated differently under several DRG systems currently in use. For instance, ICD-9-CM code 414.12 (Dissection of coronary artery) is listed as a "Major CC" under the All Patient (AP) DRGs, GROUPER Version 21.0 and an "Extreme" CC under the All Patient Refined (APR) DRGs, GROUPER Version 20.0, but is not listed as a CC at all in GROUPER Version 22.0 of the DRGs Definitions Manual used by Medicare. Similarly, ICD-9-CM code 424.0 (Mitral valve disorder) is a CC under GROUPER Version 22.0 of the DRGs Definitions Manual for Medicare's DRG system, a minor CC under the GROUPER Version 20.0 of the APR-DRGs, and not a CC at all under GROUPER Version 21.0 of the AP-DRGs.

Given the long period of time that has elapsed since the original CC list was developed, the incremental nature of changes to it, and changes in the way inpatient care is delivered, we are planning a comprehensive and systematic review of the CC list for the IPPS rule for FY 2007. As part of this process, we plan to consider revising the standard for determining when a condition is a CC. For instance, we may use an alternative to classifying a condition as a CC based on how it affects the length of stay of a case. Similar to other aspects of the DRG system, we may consider the effect of a specific secondary diagnosis on the charges or costs of a case to evaluate whether to include the condition on the CC list. Using a statistical algorithm, we may classify each diagnosis based on its effect on hospital charges (or costs) relative to other cases when present as a secondary diagnosis to obtain better

information on when a particular condition is likely to increase hospital costs. For example, Code 293.84 (Anxiety disorder in conditions classified elsewhere), which is currently listed as a CC, might be removed from the CC list if analysis of the data do not support the fact that it represents a significant increase in resource utilization, and a code such as 359.4 (Toxic myopathy), which is currently not listed as a CC, could be added to the CC list if the data support it. In addition to using hospital charge data as a basis for a review, we would expect to supplement the process with review by our medical experts. Further, we may also consider doing a comparison of the Medicare DRG CC list with other DRG systems such as the AP-DRGs and the APR-DRGs to determine how the same secondary diagnoses are treated under these systems.

By performing a comprehensive review of the CC list, we expect to revise the DRG classification system to better reflect resource utilization and remove conditions from the CC list that only have a marginal impact on a hospital's costs. We believe that a comprehensive review of the CC list would be consistent with MedPAC's recommendation that we improve the DRG system to better recognize severity. We will provide more detail about how we expect to undertake this analysis in the future, and any changes to the CC list will only be adopted after a notice and comment rulemaking that fully explains the methodology we plan to use in conducting this review. We encourage comment at this time regarding possible ways that more meaningful indicators of clinical severity and their implications for resource use can be incorporated into our comprehensive review and possible restructuring of the CC list.

#### c. CC Exclusions List for FY 2006

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPE logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) to preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair. As we indicated above, we developed this list of diagnoses, using physician panels, to include those diagnoses that, when present as a secondary condition, would be considered a substantial complication or comorbidity. In previous years, we have made changes to the list of CCs, either by adding new CCs or deleting CCs already on the list. At this time, we are not proposing to delete any of the diagnosis codes on the CC list for FY 2006.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another.
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another.

- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another.

- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another.

- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC.<sup>1</sup>

We are proposing a limited revision of the CC Exclusions List to take into account the proposed changes that will be made in the ICD-9-CM diagnosis coding system effective October 1, 2004. (See section II.B.13. of this preamble for a discussion of ICD-9-CM changes.) We are proposing these changes in accordance with the principles established when we created the CC Exclusions List in 1987.

Tables 6G and 6H in the Addendum to this proposed rule contain the revisions to the CC Exclusions List that would be effective for discharges occurring on or after October 1, 2005. Each table shows the principal diagnoses with changes to the excluded CCs. Each of these principal diagnoses is shown with an asterisk, and the additions or deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis.

<sup>1</sup> See the FY 1989 final rule (53 FR 38485) [September 30, 1988] for the revision made for the discharges occurring in FY 1989; the FY 1990 final rule (54 FR 36552) [September 1, 1989] for the FY 1990 revision; the FY 1991 final rule (55 FR 36126) [September 4, 1990] for the FY 1991 revision; the FY 1992 final rule (56 FR 43209) [August 30, 1991] for the FY 1992 revision; the FY 1993 final rule (57 FR 39753) [September 1, 1992] for the FY 1993 revision; the FY 1994 final rule (58 FR 46278) [September 1, 1993] for the FY 1994 revisions; the FY 1995 final rule (59 FR 45334) [September 1, 1994] for the FY 1995 revisions; the FY 1996 final rule (60 FR 45782) [September 1, 1995] for the FY 1996 revisions; the FY 1997 final rule (61 FR 46171) [August 30, 1996] for the FY 1997 revisions; the FY 1998 final rule (62 FR 45966) [August 29, 1997] for the FY 1998 revisions; the FY 1999 final rule (63 FR 40954) [July 31, 1998] for the FY 1999 revisions; the FY 2001 final rule (65 FR 47064) [August 1, 2000] for the FY 2001 revisions; the FY 2002 final rule (66 FR 39851) [August 1, 2001] for the FY 2002 revisions; the FY 2003 final rule (67 FR 49998) [August 1, 2002] for the FY 2003 revisions; the FY 2004 final rule (68 FR 45364) [August 1, 2003] for the FY 2004 revisions; and the FY 2005 final rule (69 FR 49848) [August 11, 2004] for the FY 2005 revisions. In the FY 2000 final rule (64 FR 41490) [July 30, 1999], we did not modify the CC Exclusions List because we did not make any changes to the ICD-9-CM codes for FY 2000.

CCs that are added to the list are in Table 6G—Additions to the CC Exclusions List. Beginning with discharges on or after October 1, 2005, the indented diagnoses would not be recognized by the GROUPE as valid CCs for the asterisked principal diagnosis.

CCs that are deleted from the list are in Table 6H—Deletions from the CC Exclusions List. Beginning with discharges on or after October 1, 2005, the indented diagnoses would be recognized by the GROUPE as valid CCs for the asterisked principal diagnosis.

Copies of the original CC Exclusions List applicable to FY 1988 can be obtained from the National Technical Information Service (NTIS) of the Department of Commerce. It is available in hard copy for \$152.50 plus shipping and handling. A request for the FY 1988 CC Exclusions List (which should include the identification accession number (PB) 88-133970) should be made to the following address: National Technical Information Service, United States Department of Commerce, 5285 Port Royal Road, Springfield, VA 22161; or by calling (800) 553-6847.

Users should be aware of the fact that all revisions to the CC Exclusions List (FYs 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2001, 2002, 2003, 2004, and 2005) and those in Tables 6G and 6H of this proposed rule for FY 2006 must be incorporated into the list purchased from NTIS in order to obtain the CC Exclusions List applicable for discharges occurring on or after October 1, 2005. (Note: There was no CC Exclusions List in FY 2000 because we did not make changes to the ICD-9-CM codes for FY 2000.)

Alternatively, the complete documentation of the GROUPE logic, including the current CC Exclusions List, is available from 3M/Health Information Systems (HIS), which, under contract with CMS, is responsible for updating and maintaining the GROUPE program. The current DRG Definitions Manual, Version 22.0, is available for \$225.00, which includes \$15.00 for shipping and handling. Version 23.0 of this manual, which will include the final FY 2006 DRG changes, will be available for \$225.00. These manuals may be obtained by writing 3M/HIS at the following address: 100 Barnes Road, Wallingford, CT 06492; or by calling (203) 949-0303. Please specify the revision or revisions requested.

## 12. Review of Procedure Codes in DRGs 468, 476, and 477

(If you choose to comment on issues in this section, please include the caption "DRGs 468, 476, and 477" at the beginning of your comment.)

Each year, we review cases assigned to DRG 468 (Extensive O.R. Procedure Unrelated to Principal Diagnosis), DRG 476 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis), and DRG 477 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis) to determine whether it would be appropriate to change the procedures assigned among these DRGs.

DRGs 468, 476, and 477 are reserved for those cases in which none of the O.R. procedures performed are related to the principal diagnosis. These DRGs are intended to capture atypical cases, that is, those cases not occurring with sufficient frequency to represent a distinct, recognizable clinical group. DRG 476 is assigned to those discharges in which one or more of the following prostatic procedures are performed and are unrelated to the principal diagnosis:

- 60.0, Incision of prostate.
- 60.12, Open biopsy of prostate.
- 60.15, Biopsy of periprostatic tissue.
- 60.18, Other diagnostic procedures on prostate and periprostatic tissue.
- 60.21, Transurethral prostatectomy.
- 60.29, Other transurethral prostatectomy.
- 60.61, Local excision of lesion of prostate.
- 60.69, Prostatectomy, not elsewhere classified.
- 60.81, Incision of periprostatic tissue.
- 60.82, Excision of periprostatic tissue.
- 60.93, Repair of prostate.
- 60.94, Control of (postoperative) hemorrhage of prostate.
- 60.95, Transurethral balloon dilation of the prostatic urethra.
- 60.96, Transurethral destruction of prostate tissue by microwave thermotherapy.
- 60.97, Other transurethral destruction of prostate tissue by other thermotherapy.
- 60.99, Other operations on prostate.

All remaining O.R. procedures are assigned to DRGs 468 and 477, with DRG 477 assigned to those discharges in which the only procedures performed are nonextensive procedures that are unrelated to the principal diagnosis.<sup>2</sup>

<sup>2</sup> The original list of the ICD-9-CM procedure codes for the procedures we consider nonextensive procedures, if performed with an unrelated principal diagnosis, was published in Table 6C in section IV. of the Addendum to the FY 1989 final

## a. Moving Procedure Codes From DRG 468 or DRG 477 to MDCs

We annually conduct a review of procedures producing assignment to DRG 468 or DRG 477 on the basis of volume, by procedure, to see if it would be appropriate to move procedure codes out of these DRGs into one of the surgical DRGs for the MDC into which the principal diagnosis falls. The data are arrayed two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical DRGs for the MDC in which the diagnosis falls. Based on this year's review, we did not identify any procedures in DRGs 468 or 477 that should be removed to one of the surgical DRGs. Therefore, in this proposed rule, we are not proposing any changes for FY 2006.

## b. Reassignment of Procedures Among DRGs 468, 476, and 477

We also annually review the list of ICD-9-CM procedures that, when in combination with their principal diagnosis code, result in assignment to DRGs 468, 476, and 477, to ascertain if any of those procedures should be reassigned from one of these three DRGs to another of the three DRGs based on average charges and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the DRGs clinically similar or to provide payment for the cases in a similar manner. Generally, we move only those procedures for which we

rule (53 FR 38591). As part of the FY 1991 final rule (55 FR 36135), the FY 1992 final rule (56 FR 43212), the FY 1993 final rule (57 FR 23625), the FY 1994 final rule (58 FR 46279), the FY 1995 final rule (59 FR 45336), the FY 1996 final rule (60 FR 45783), the FY 1997 final rule (61 FR 46173), and the FY 1998 final rule (62 FR 45981), we moved several other procedures from DRG 468 to DRG 477, and some procedures from DRG 477 to DRG 468. No procedures were moved in FY 1999, as noted in the final rule (63 FR 40962); in FY 2000 (64 FR 41496); in FY 2001 (65 FR 47064); or in FY 2002 (66 FR 39852). In the FY 2003 final rule (67 FR 49999) we did not move any procedures from DRG 477. However, we did move procedure codes from DRG 468 and placed them in more clinically coherent DRGs. In the FY 2004 final rule (68 FR 45365), we moved several procedures from DRG 468 to DRGs 476 and 477 because the procedures are nonextensive. In the FY 2005 final rule (69 FR 48950), we moved one procedure from DRG 468 to 477. In addition, we added several existing procedures to DRGs 476 and 477.

have an adequate number of discharges to analyze the data.

It has come to our attention that procedure code 26.12 (Open biopsy of salivary gland or duct) is assigned to DRG 468 (Extensive O.R. Procedure Unrelated to Principal Diagnosis). We believe this to be an error, as code 26.31 (Partial sialoadenectomy), which is a more extensive procedure than code 26.12, is assigned to DRG 477. Therefore, we are proposing to correct this error by moving code 26.12 out of DRG 468 and reassigning it to DRG 477.

We are not proposing to move any procedure codes from DRG 476 to DRGs 468 or 477, or from DRG 477 to DRGs 468 or 476.

## c. Adding Diagnosis or Procedure Codes to MDCs

Based on our review this year, we are not proposing to add any diagnosis codes to MDCs.

## 13. Changes to the ICD-9-CM Coding System

As described in section II.B.1. of this preamble, the ICD-9-CM is a coding system used for the reporting of diagnoses and procedures performed on a patient. In September 1985, the ICD-9-CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the National Center for Health Statistics (NCHS) and CMS, charged with maintaining and updating the ICD-9-CM system. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the ICD-9-CM to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The Official Version of the ICD-9-CM contains the list of valid diagnosis and procedure codes. (The Official Version of the ICD-9-CM is available from the Government Printing Office on CD-ROM for \$25.00 by calling (202) 512-1800.) The Official Version of the ICD-9-CM is no longer available in printed manual form from the Federal Government; it is only available on CD-ROM. Users who need a paper version are referred to one of the many products available from publishing houses.

The NCHS has lead responsibility for the ICD-9-CM diagnosis codes included in the *Tabular List* and *Alphabetic Index for Diseases*, while CMS has lead

responsibility for the ICD-9-CM procedure codes included in the *Tabular List* and *Alphabetic Index for Procedures*.

The Committee encourages participation in the above process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, medical record administrators, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed at the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2006 at a public meeting held on October 7-8, 2004, and finalized the coding changes after consideration of comments received at the meetings and in writing by January 12, 2005. Those coding changes are announced in Tables 6A through 6F of the Addendum to this proposed rule. The Committee held its 2005 meeting on March 31-April 1, 2005. Proposed new codes for which there was a consensus of public support and for which complete tabular and indexing changes can be made by May 2005 will be included in the October 1, 2005 update to ICD-9-CM. These additional codes will be included in Tables 6A through 6F of the final rule.

Copies of the minutes of the procedure codes discussions at the Committee's October 7-8, 2004 meeting can be obtained from the CMS Web site: <http://www.cms.hhs.gov/paymentsystems/icd9/>. The minutes of the diagnoses codes discussions at the October 7-8, 2004 meeting are found at: <http://www.cdc.gov/nchs/icd9.htm>. Paper copies of these minutes are no longer available and the mailing list has been discontinued. These Web sites also provide detailed information about the Committee, including information on requesting a new code, attending a Committee meeting, and timeline requirements and meeting dates.

We encourage commenters to address suggestions on coding issues involving diagnosis codes to: Donna Pickett, Co-Chairperson, ICD-9-CM Coordination and Maintenance Committee, NCHS, Room 2402, 3311 Toledo Road,

Hyattsville, MD 20782. Comments may be sent by e-mail to: [dfp4@cdc.gov](mailto:dfp4@cdc.gov).

Questions and comments concerning the procedure codes should be addressed to: Patricia E. Brooks, Co-Chairperson, ICD-9-CM Coordination and Maintenance Committee, CMS, Center for Medicare Management, Hospital and Ambulatory Policy Group, Division of Acute Care, C4-08-06, 7500 Security Boulevard, Baltimore, MD 21244-1850. Comments may be sent by e-mail to: [Patricia.Brooks1@cms.hhs.gov](mailto:Patricia.Brooks1@cms.hhs.gov).

The ICD-9-CM code changes that have been approved will become effective October 1, 2005. The new ICD-9-CM codes are listed, along with their DRG classifications, in Tables 6A and 6B (New Diagnosis Codes and New Procedure Codes, respectively) in the Addendum to this proposed rule. As we stated above, the code numbers and their titles were presented for public comment at the ICD-9-CM Coordination and Maintenance Committee meetings. Both oral and written comments were considered before the codes were approved. In this proposed rule, we are only soliciting comments on the proposed classification of these new codes.

For codes that have been replaced by new or expanded codes, the corresponding new or expanded diagnosis codes are included in Table 6A. New procedure codes are shown in Table 6B. Diagnosis codes that have been replaced by expanded codes or other codes or have been deleted are in Table 6C (Invalid Diagnosis Codes). These invalid diagnosis codes will not be recognized by the GROUPER beginning with discharges occurring on or after October 1, 2005. Table 6D contains invalid procedure codes. These invalid procedure codes will not be recognized by the GROUPER beginning with discharges occurring on or after October 1, 2005. Revisions to diagnosis code titles are in Table 6E (Revised Diagnosis Code Titles), which also includes the DRG assignments for these revised codes. Table 6F includes revised procedure code titles for FY 2006.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the April meeting as part of the code revisions effective the following October. As stated previously, ICD-9-CM codes discussed at the March 31-April 1, 2005 Committee meeting that receive consensus and that can be finalized by

May 2005 will be included in Tables 6A through 6F of the final rule.

Section 503(a) of Pub. L. 108-173 included a requirement for updating ICD-9-CM codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the "Secretary shall provide for the addition of new diagnosis and procedure codes in April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) \* \* \* until the fiscal year that begins after such date." This requirement improves the recognition of new technologies under the IPPS system by providing information on these new technologies at an earlier date. Data will be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

While section 503(a) states that the addition of new diagnosis and procedure codes on April 1 of each year shall not require the Secretary to adjust the payment, or DRG classification under section 1886(d) of the Act until the fiscal year that begins after such date, we have to update the DRG software and other systems in order to recognize and accept the new codes. We also publicize the code changes and the need for a mid-year systems update by providers to capture the new codes. Hospitals also have to obtain the new code books and encoder updates, and make other system changes in order to capture and report the new codes.

The ICD-9-CM Coordination and Maintenance Committee holds its meetings in the Spring and Fall, usually in April and September, in order to update the codes and the applicable payment and reporting systems by October 1 of each year. Items are placed on the agenda for the ICD-9-CM Coordination and Maintenance Committee meeting if the request is received at least 2 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the **Federal Register** as well as on the CMS Web site. The public decides whether or not to attend the meeting based on the topics listed on the agenda. Final decisions on code title revisions are currently made by March 1 so that these titles can be included in the IPPS proposed rule. A

complete addendum describing details of all changes to ICD-9-CM, both tabular and index, are publicized on CMS and NCHS Web pages in May of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers. This 5-month time period has proved to be necessary for hospitals and other providers to update their systems.

A discussion of this timeline and the need for changes are included in the December 4-5, 2003 ICD-9-CM Coordination and Maintenance Committee minutes. The public agreed that there was a need to hold the fall meetings earlier, in September or October, in order to meet the new implementation dates. The public provided comment that additional time would be needed to update hospital systems and obtain new code books and coding software. There was considerable concern expressed about the impact this new April update would have on providers.

In the FY 2005 IPPS final rule, we implemented section 503(a) by developing a mechanism for approving, in time for the April update, diagnoses and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICD-9-CM Coordination and Maintenance Committee meeting are considered for an April 1 update if a strong and convincing case is made by the requester at the Committee's public meeting. The request must identify the reason why a new code is needed in April for purposes of the new technology process. The participants at the meeting and those reviewing the Committee meeting summary report are provided the opportunity to comment on this expedited request. All other topics are considered for the October 1 update. Participants at the Committee meeting are encouraged to comment on all such requests. There were no requests for an expedited April 1, 2005 implementation of an ICD-9-CM code at the October 7-8, 2004 Committee meeting. Therefore, there were no new ICD-9-CM codes implemented on April 1, 2005.

We believe that this process captures the intent of section 503(a). This requirement was included in the provision revising the standards and process for recognizing new technology under the IPPS. In addition, the need for approval of new codes outside the existing cycle (October 1) arises most

frequently and most acutely where the new codes will capture new technologies that are (or will be) under consideration for new technology add-on payments. Thus, we believe this provision was intended to expedite data collection through the assignment of new ICD-9-CM codes for new technologies seeking higher payments.

Current addendum and code title information is published on the CMS Web page at: <http://www.cms.hhs.gov/paymentsystems/icd9>. Summary tables showing new, revised, and deleted code titles are also posted on the following CMS Web page: <http://www.cms.hhs.gov/medlearn/icd9code.asp>. Information on ICD-9-CM diagnosis codes, along with the Official ICD-9-CM Coding Guidelines, can be found on the Web page at: <http://www.cdc.gov/nchs/icd9.htm>.

Information on new, revised, and deleted ICD-9-CM codes is also provided to the AHA for publication in the *Coding Clinic for ICD-9-CM*. AHA also distributes information to publishers and software vendors.

CMS also sends copies of all ICD-9-CM coding changes to its contractors for use in updating their systems and providing education to providers.

These same means of disseminating information on new, revised, and deleted ICD-9-CM codes will be used to notify providers, publishers, software vendors, contractors, and others of any changes to the ICD-9-CM codes that are implemented in April. Currently, code titles are also published in the IPPS proposed and final rules. The code titles are adopted as part of the ICD-9-CM Coordination and Maintenance Committee process. The code titles are not subject to comment in the proposed or final rules. We will continue to publish the October code updates in this manner within the IPPS proposed and final rules. For codes that are implemented in April, we will assign the new procedure code to the same DRG in which its predecessor code was assigned so there will be no DRG impact as far as DRG assignment. This mapping was specified by Pub. L. 108-173. Any midyear coding updates will be available through the websites indicated above and through the *Coding Clinic for ICD-9-CM*. Publishers and software vendors currently obtain code changes through these sources in order to update their code books and software systems. We will strive to have the April 1 updates available through these websites 5 months prior to implementation (that is, early November of the previous year), as is the case for the October 1 updates. Codebook publishers are evaluating how they will

provide any code updates to their subscribers. Some publishers may decide to publish mid-year book updates. Others may decide to sell an addendum that lists the changes to the October 1 code book. Coding personnel should contact publishers to determine how they will update their books. CMS and its contractors will also consider developing provider education articles concerning this change to the effective date of certain ICD-9-CM codes.

#### 14. Other Issues: Acute Intermittent Porphyria

Acute intermittent porphyria is a rare metabolic disorder. The condition is described by code 277.1 (Disorders of porphyrin metabolism). Code 277.1 is assigned to DRG 299 (Inborn Errors of Metabolism) under MDC 10 (Endocrine, Nutritional, and Metabolic Diseases and Disorders).

In the FY 2005 final rule (69 FR 48981), we discussed the DRG assignment of acute intermittent porphyria. This discussion was a result of correspondence that we received during the comment period for the FY 2005 proposed rule in which the commenter suggested that Medicare hospitalization payments do not accurately reflect the cost of treatment. At that time, we indicated that we would take this comment into consideration when we analyzed the MedPAR data for this proposed rule for FY 2006.

Our review of the most recent MedPAR data shows a total of 1,370 cases overall in DRG 299, of which 471 had a principal diagnosis coded as 277.1. The average length of stay for all cases in DRG 299 was 5.17 days, while the average length of stay for porphyria cases with code 277.1 was 6.0 days. The average charges for all cases in DRG 299 were \$15,891, while the average charges for porphyria cases with code 277.1 were \$21,920. Based on our analysis of these data, we do not believe that there is a sufficient difference between the average charges and average length of stay for these cases to justify a change to the DRG assignment for treating this condition.

#### C. Proposed Recalibration of DRG Weights

(If you choose to comment on issues in this section, please include the caption "DRG Weights" at the beginning of your comment.)

We are proposing to use the same basic methodology for the FY 2006 recalibration as we did for FY 2005 (FY 2005 IPPS final rule (69 FR 48981)). That is, we have recalibrated the DRG weights based on charge data for

Medicare discharges using the most current charge information available (the FY 2004 MedPAR file).

The MedPAR file is based on fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2004 MedPAR data used in this final rule include discharges occurring between October 1, 2003 and September 30, 2004, based on bills received by CMS through December 31, 2004, from all hospitals subject to the IPPS and short-term acute care hospitals in Maryland (which are under a waiver from the IPPS under section 1814(b)(3) of the Act). The FY 2004 MedPAR file includes data for approximately 11,910,025 Medicare discharges. Discharges for Medicare beneficiaries enrolled in a Medicare+Choice managed care plan are excluded from this analysis. The data excludes CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken.

The proposed methodology used to calculate the DRG relative weights from the FY 2004 MedPAR file is as follows:

- To the extent possible, all the claims were regrouped using the DRG classification revisions discussed in section II.B. of this preamble.
- The transplant cases that were used to establish the relative weight for heart and heart-lung, liver, and lung transplants (DRGs 103, 480, and 495) were limited to those Medicare-approved transplant centers that have cases in the FY 2004 MedPAR file. (Medicare coverage for heart, heart-lung, liver, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)
- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis. Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average charge for the DRG and before eliminating statistical outliers.
- Charges were standardized to remove the effects of differences in area wage levels, indirect medical education and disproportionate share payments, and, for hospitals in Alaska and Hawaii, the applicable cost-of-living adjustment.
- The average standardized charge per DRG was calculated by summing the standardized charges for all cases in the DRG and dividing that amount by the number of cases classified in the DRG. A transfer case is counted as a fraction

of a case based on the ratio of its transfer payment under the per diem payment methodology to the full DRG payment for nontransfer cases. That is, a transfer case receiving payment under the transfer methodology equal to half of what the case would receive as a nontransfer would be counted as 0.5 of a total case.

- Statistical outliers were eliminated by removing all cases that are beyond 3.0 standard deviations from the mean of the log distribution of both the charges per case and the charges per day for each DRG.
- The average charge for each DRG was then recomputed (excluding the statistical outliers) and divided by the national average standardized charge per case to determine the relative weight.

The proposed new weights are normalized by an adjustment factor of 1.47263 so that the average case weight after recalibration is equal to the average case weight before recalibration. This proposed adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. We used that same case threshold in recalibrating the proposed DRG weights for FY 2006. Using the FY 2004 MedPAR data set, there are 41 DRGs that contain fewer than 10 cases. We are proposing to compute the weights for these low-volume DRGs by adjusting the FY 2005 weights of these DRGs by the percentage change in the average weight of the cases in the other DRGs.

Section 1886(d)(4)(C)(iii) of the Act requires that, beginning with FY 1991, reclassification and recalibration changes be made in a manner that assures that the aggregate payments are neither greater than nor less than the aggregate payments that would have been made without the changes. Although normalization is intended to achieve this effect, equating the average case weight after recalibration to the average case weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case weight. Therefore, as we have done in past years and as discussed in section II.A.4.a. of the Addendum to this proposed rule, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

#### *D. Proposed LTC-DRG Reclassifications and Relative Weights for LTCHs for FY 2006*

(If you choose to comment on issues in this section, please include the caption "LTC-DRGs" at the beginning of your comment.)

##### 1. Background

In the June 6, 2003 LTCH PPS final rule (68 FR 34122), we changed the LTCH PPS annual payment rate update cycle to be effective July 1 through June 30 instead of October 1 through September 30. In addition, because the patient classification system utilized under the LTCH PPS is based directly on the DRGs used under the IPPS for acute care hospitals, in that same final rule, we explained that the annual update of the long-term care diagnosis-related group (LTC-DRG) classifications and relative weights will continue to remain linked to the annual reclassification and recalibration of the CMS-DRGs used under the IPPS. In that same final rule, we specified that we will continue to update the LTC-DRG classifications and relative weights to be effective for discharges occurring on or after October 1 through September 30 each year. Furthermore, we stated that we will publish the annual update of the LTC-DRGs in the proposed and final rules for the IPPS.

In the past, the annual update to the IPPS DRGs has been based on the annual revisions to the ICD-9-CM codes and was effective each October 1. As discussed in the FY 2005 IPPS final rule (69 FR 48954 through 48957) and in the February 3, 2005 LTCH PPS proposed rule (70 FR 5729 through 5733), with the implementation of section 503 (a) of Pub. L. 108-173, there is the possibility that one feature of the GROUPER software program may be updated twice during a Federal fiscal year (October 1 and April 1) as required by the statute for the IPPS. Specifically, ICD-9-CM diagnosis and procedure codes for new medical technology may be created and added to existing DRGs in the middle of the Federal fiscal year on April 1. This policy change will have no effect, however, on the LTC-DRG relative weights which will continue to be updated only once a year (October 1), nor will there be any impact on Medicare payments under the LTCH PPS. The use of the ICD-9-CM code set is also compliant with the current requirements of the Transactions and Code Sets Standards regulations at 45 CFR Parts 160 and 162, promulgated in accordance with the Health Insurance Portability and Accountability Act of 1996 (HIPAA), Pub. L. 104-191.

In the health care industry, historically annual changes to the ICD-9-CM codes were effective for discharges occurring on or after October 1 each year. Thus, the manual and electronic versions of the GROUPER software, which are based on the ICD-9-CM codes, were also revised annually and effective for discharges occurring on or after October 1 each year. As noted above, the patient classification system used under the LTCH PPS (LTC-DRGs) is based on the patient classification system used under the IPPS (CMS-DRGs), which historically had been updated annually and effective for discharges occurring on or after October 1 through September 30 each year. As mentioned above, the ICD-9-CM coding update process has been revised, as discussed in greater detail in the FY 2005 IPPS final rule (69 FR 48954 through 48957). Specifically, section 503(a) of Pub. L. 108-173 includes a requirement for updating ICD-9-CM codes as often as twice a year instead of the current process of annual updates on October 1 of each year. This requirement is included as part of the amendments to the Act relating to recognition of new medical technology under the IPPS. Section 503(a) of Pub. L. 108-173 amended section 1886(d)(5)(K) of the Act by adding a new clause (vii) which states that "the Secretary shall provide for the addition of new diagnosis and procedure codes in [sic] April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) \* \* \* until the fiscal year that begins after such date." This requirement will improve the recognition of new technologies under the IPPS by accounting for those ICD-9-CM codes in the MedPAR claims data at an earlier date. Despite the fact that aspects of the GROUPER software may be updated to recognize any new technology ICD-9-CM codes, as discussed in the February 3, 2005 LTCH PPS proposed rule (70 FR 5730 through 5733), there will be no impact on either LTC-DRG assignments or payments under the LTCH PPS at that time. That is, changes to the LTC-DRGs (such as the creation or deletion of LTC-DRGs) and the relative weights will continue to be updated in the manner and timing (October 1) as they are now.

As noted above and as described in the February 3, 2005 LTCH PPS proposed rule (70 FR 5730), updates to the GROUPER for both the IPPS and the LTCH PPS (with respect to relative weights and the creation or deletion of DRGs) are made in the annual IPPS proposed and final rules and are

effective each October 1. We explained in the FY 2005 IPPS final rule (69 FR 48955 and 48956), that since we do not publish a midyear IPPS rule, April 1 code updates discussed above will not be published in a midyear IPPS rule. Rather, we will assign any new diagnostic or procedure codes to the same DRG in which its predecessor code was assigned, so that there will be no impact on the DRG assignments. Any proposed coding updates will be available through the websites indicated in the same rule and provided above in section II.B. of this preamble and through the *Coding Clinic for ICD-9-CM*. Publishers and software vendors currently obtain code changes through these sources in order to update their code books and software system. If new codes are implemented on April 1, revised code books and software systems, including the GROUPER software program, will be necessary because we must use current ICD-9-CM codes. Therefore, for purposes of the LTCH PPS, since each ICD-9-CM code must be included in the GROUPER algorithm to classify each case into a LTC-DRG, the GROUPER software program used under the LTCH PPS would need to be revised to accommodate any new codes.

As we discussed in the FY 2005 IPPS final rule (69 FR 48956), in implementing section 503(a) of Pub. L. 108-173, there will only be an April 1 update if new technology codes are requested and approved. It should be noted that any new codes created for April 1 implementation will be limited to those diagnosis and procedure code revisions primarily needed to describe new technologies and medical services. However, we reiterate that the process of discussing updates to the ICD-9-CM has been an open process through the ICD-9-CM C&M Committee since 1995. Requestors will be given the opportunity to present the merits of their proposed new code and make a clear and convincing case for the need to update ICD-9-CM codes for purposes of the IPPS new technology add-on payment process through an April 1 update.

In addition, in the FY 2005 IPPS final rule (69 FR 48956), we stated that at the October 2004 ICD-9-CM Coordination and Maintenance Committee meeting, no new codes were proposed for an April 1, 2005 implementation, and the next update to the ICD-9-CM coding system would not occur until October 1, 2005 (FY 2006). Presently, as there were no coding changes suggested for an April 1, 2005 update, the ICD-9-CM coding set implemented on October 1, 2004 will continue through September

30, 2005 (FY 2005). The proposed update to the ICD-9-CM coding system for FY 2006 is discussed above in section II.B. of this preamble.

In this proposed rule, we are proposing revisions to the LTC-DRG classifications and relative weights and, to the extent that they are finalized, we will publish them in the corresponding IPPS final rule, to be effective October 1, 2005 through September 30, 2006 (FY 2006), using the latest available data. The proposed LTC-DRGs and relative weights for FY 2006 in this proposed rule are based on the proposed IPPS DRGs (GROUPER Version 23.0) discussed in section II. of this proposed rule.

## 2. Proposed Changes in the LTC-DRG Classifications

### a. Background

Section 123 of Pub. L. 106-113 specifically requires that the PPS for LTCHs be a per discharge system with a DRG-based patient classification system reflecting the differences in patient resources and costs in LTCHs while maintaining budget neutrality. Section 307(b)(1) of Pub. L. 106-554 modified the requirements of section 123 of Pub. L. 106-113 by specifically requiring that the Secretary examine "the feasibility and the impact of basing payment under such a system [the LTCH PPS] on the use of existing (or refined) hospital diagnosis-related groups (DRGs) that have been modified to account for different resource use of long-term care hospital patients as well as the use of the most recently available hospital discharge data."

In accordance with section 307(b)(1) of Pub. L. 106-554 and § 412.515 of our existing regulations, the LTCH PPS uses information from LTCH patient records to classify patient cases into distinct LTC-DRGs based on clinical characteristics and expected resource needs. The LTC-DRGs used as the patient classification component of the LTCH PPS correspond to the DRGs under the IPPS for acute care hospitals. Thus, in this proposed rule, we are proposing to use the IPPS GROUPER Version 23.0 for FY 2006 to process LTCH PPS claims for LTCH occurring from October 1, 2005 through September 30, 2006. The proposed changes to the CMS DRG classification system used under the IPPS for FY 2006 (GROUPER Version 23.0) are discussed in section II.B. of the preamble to this proposed rule.

Under the LTCH PPS, we determine relative weights for each of the CMS DRGs to account for the difference in resource use by patients exhibiting the

case complexity and multiple medical problems characteristic of LTCH patients. In a departure from the IPPS, as we discussed in the August 30, 2002 LTCH PPS final rule (67 FR 55985), which implemented the LTCH PPS, and the FY 2004 IPPS final rule (68 FR 45374), we use low-volume quintiles in determining the LTC-DRG weights for LTC-DRGs with less than 25 LTCH cases, because LTCHs do not typically treat the full range of diagnoses as do acute care hospitals. Specifically, we group those low-volume LTC-DRGs (LTC-DRGs with fewer than 25 cases) into 5 quintiles based on average charge per discharge. (A listing of the composition of low-volume quintiles for the FY 2005 LTC-DRGs (based on FY 2003 MedPAR data) appears in section II.D.3. of the FY 2005 IPPS final rule (69 FR 48985 through 48989).) We also adjust for cases in which the stay at the LTCH is less than or equal to five-sixths of the geometric average length of stay; that is, short-stay outlier cases (§ 412.529), as discussed below in section II.D.4. of this preamble.

#### b. Patient Classifications into DRGs

Generally, under the LTCH PPS, Medicare payment is made at a predetermined specific rate for each discharge; that is, payment varies by the LTC-DRG to which a beneficiary's stay is assigned. Similar to case classification for acute care hospitals under the IPPS (see section II.B. of this preamble), cases are classified into LTC-DRGs for payment under the LTCH PPS based on the principal diagnosis, up to eight additional diagnoses, and up to six procedures performed during the stay, as well as age, sex, and discharge status of the patient. The diagnosis and procedure information is reported by the hospital using codes from the ICD-9-CM.

As discussed in section II.B. of this preamble, the CMS DRGs are organized into 25 major diagnostic categories (MDCs), most of which are based on a particular organ system of the body; the remainder involve multiple organ systems (such as MDC 22, Burns). Accordingly, the principal diagnosis determines MDC assignment. Within most MDCs, cases are then divided into surgical DRGs and medical DRGs. Some surgical and medical DRGs are further differentiated based on the presence or absence of CCs. (See section II.B. of this preamble for further discussion of surgical DRGs and medical DRGs.)

Because the assignment of a case to a particular LTC-DRG will help determine the amount that is paid for the case, it is important that the coding is accurate. As used under the IPPS,

classifications and terminology used under the LTCH PPS are consistent with the ICD-9-CM and the Uniform Hospital Discharge Data Set (UHDDS), as recommended to the Secretary by the National Committee on Vital and Health Statistics ("Uniform Hospital Discharge Data: Minimum Data Set, National Center for Health Statistics, April 1980") and as revised in 1984 by the Health Information Policy Council (HIPC) of the U.S. Department of Health and Human Services. We point out again that the ICD-9-CM coding terminology and the definitions of principal and other diagnoses of the UHDDS are consistent with the requirements of the Transactions and Code Sets Standards under HIPAA (45 CFR Parts 160 and 162).

The emphasis on the need for proper coding cannot be overstated. Inappropriate coding of cases can adversely affect the uniformity of cases in each LTC-DRG and produce inappropriate weighting factors at recalibration and result in inappropriate payments under the LTCH PPS. LTCHs are to follow the same coding guidelines used by the acute care hospitals to ensure accuracy and consistency in coding practices. There will be only one LTC-DRG assigned per long-term care hospitalization; it will be assigned at the discharge. Therefore, it is mandatory that the coders continue to report the same principal diagnosis on all claims and include all diagnostic codes that coexist at the time of admission, that are subsequently developed, or that affect the treatment received. Similarly, all procedures performed during that stay are to be reported on each claim.

Upon the discharge of the patient from a LTCH, the LTCH must assign appropriate diagnosis and procedure codes from the ICD-9-CM. Completed claim forms are to be submitted electronically to the LTCH's Medicare fiscal intermediary. Medicare fiscal intermediaries enter the clinical and demographic information into their claims processing systems and subject this information to a series of automated screening processes called the Medicare Code Editor (MCE). These screens are designed to identify cases that require further review before assignment into an LTC-DRG can be made.

After screening through the MCE, each LTCH claim will be classified into the appropriate LTC-DRG by the Medicare LTCH GROUPER. The LTCH GROUPER is specialized computer software based on the same GROUPER used under the IPPS. After the LTC-DRG is assigned, the Medicare fiscal intermediary determines the prospective payment by using the Medicare LTCH

PPS PRICER program, which accounts for LTCH hospital-specific adjustments. As provided for under the IPPS, we provide an opportunity for the LTCH to review the LTC-DRG assignments made by the fiscal intermediary and to submit additional information within a specified timeframe (§ 412.513(c)).

The GROUPER is used both to classify past cases in order to measure relative hospital resource consumption to establish the LTC-DRG weights and to classify current cases for purposes of determining payment. The records for all Medicare hospital inpatient discharges are maintained in the MedPAR file. The data in this file are used to evaluate possible DRG classification changes and to recalibrate the DRG weights during our annual update (as discussed in section II. of this preamble). The LTC-DRG relative weights are based on data for the population of LTCH discharges, reflecting the fact that LTCH patients represent a different patient mix than patients in short-term acute care hospitals.

#### 3. Development of the Proposed FY 2006 LTC-DRG Relative Weights

##### a. General Overview of Development of the LTC-DRG Relative Weights

As we stated in the August 30, 2002 LTCH PPS final rule (67 FR 55981), one of the primary goals for the implementation of the LTCH PPS is to pay each LTCH an appropriate amount for the efficient delivery of care to Medicare patients. The system must be able to account adequately for each LTCH's case-mix in order to ensure both fair distribution of Medicare payments and access to adequate care for those Medicare patients whose care is more costly. To accomplish these goals, we adjust the LTCH PPS standard Federal prospective payment system rate by the applicable LTC-DRG relative weight in determining payment to LTCHs for each case. Under the LTCH PPS, relative weights for each LTC-DRG are a primary element used to account for the variations in cost per discharge and resource utilization among the payment groups (§ 412.515). To ensure that Medicare patients classified to each LTC-DRG have access to an appropriate level of services and to encourage efficiency, we calculate a relative weight for each LTC-DRG that represents the resources needed by an average inpatient LTCH case in that LTC-DRG. For example, cases in an LTC-DRG with a relative weight of 2 will, on average, cost twice as much as cases in an LTC-DRG with a weight of 1.

## b. Data

To calculate the proposed LTC-DRG relative weights for FY 2006 in this proposed rule, we obtained total Medicare allowable charges from FY 2004 Medicare hospital bill data from the December 2004 update of the MedPAR file, and we used the proposed Version 23.0 of the CMS GROUPEX for IPPS (as discussed in section II.B. of this preamble) to classify cases. Consistent with the methodology under the IPPS, we are proposing to recalculate the FY 2006 LTC-DRG relative weights based on the best available data for this proposed rule.

As we discussed in the FY 2005 IPPS final rule (69 FR 48984), we have excluded the data from LTCHs that are all-inclusive rate providers and LTCHs that are reimbursed in accordance with demonstration projects authorized under section 402(a) of Pub. L. 90-248 (42 U.S.C. 1395b-1) or section 222(a) of Pub. L. 92-603 (42 U.S.C. 1395b-1). Therefore, in the development of the proposed FY 2006 LTC-DRG relative weights, we have excluded the data of the 19 all-inclusive rate providers and the 3 LTCHs that are paid in accordance with demonstration projects that had claims in the FY 2003 MedPAR file.

In the FY 2005 IPPS final rule (6 FR 48984), we discussed coding inaccuracies that were found in the claims data for a large chain of LTCHs in the FY 2002 MedPAR file, which were used to determine the LTC-DRG relative weights for FY 2004. As we discussed in the same final rule, after notifying the large chain of LTCHs whose claims contained the coding inaccuracies to request that they resubmit those claims with the correct diagnosis, from an analysis of LTCH claims data from the December 2003 update of the FY 2003 MedPAR file, it appeared that such claims data no longer contain coding errors. Therefore, it was not necessary to correct the FY 2003 MedPAR data for the development of the FY 2005 LTC-DRGs and relative weights established in the same final rule.

As stated above, in this proposed rule, we are proposing to use the December 2004 update of the FY 2004 MedPAR file for the determination of the proposed FY 2006 LTC-DRG relative weights as these are the best available data. Based on an analysis of LTCH claims data from the December 2004 update of the FY 2004 MedPAR file, it appears that such claims data do not contain coding inaccuracies found previously in LTCH claims data. Therefore, it was not necessary to correct the FY 2004 MedPAR data for

the development of the proposed FY 2006 LTC-DRGs and relative weights presented in this proposed rule.

## c. Hospital-Specific Relative Value Methodology

By nature, LTCHs often specialize in certain areas, such as ventilator-dependent patients and rehabilitation and wound care. Some case types (DRGs) may be treated, to a large extent, in hospitals that have, from a perspective of charges, relatively high (or low) charges. This nonarbitrary distribution of cases with relatively high (or low) charges in specific LTC-DRGs has the potential to inappropriately distort the measure of average charges. To account for the fact that cases may not be randomly distributed across LTCHs, we use a hospital-specific relative value method to calculate the LTC-DRG relative weights instead of the methodology used to determine the DRG relative weights under the IPPS described above in section II.C. of this preamble. We believe this method will remove this hospital-specific source of bias in measuring LTCH average charges. Specifically, we reduce the impact of the variation in charges across providers on any particular LTC-DRG relative weight by converting each LTCH's charge for a case to a relative value based on that LTCH's average charge.

Under the hospital-specific relative value method, we standardize charges for each LTCH by converting its charges for each case to hospital-specific relative charge values and then adjusting those values for the LTCH's case-mix. The adjustment for case-mix is needed to rescale the hospital-specific relative charge values (which, by definition, averages 1.0 for each LTCH). The average relative weight for a LTCH is its case-mix, so it is reasonable to scale each LTCH's average relative charge value by its case-mix. In this way, each LTCH's relative charge value is adjusted by its case-mix to an average that reflects the complexity of the cases it treats relative to the complexity of the cases treated by all other LTCHs (the average case-mix of all LTCHs).

In accordance with the methodology established under § 412.523, we standardize charges for each case by first dividing the adjusted charge for the case (adjusted for short-stay outliers under § 412.529 as described in section II.D.4. (step 3) of this preamble) by the average adjusted charge for all cases at the LTCH in which the case was treated. Short-stay outliers under § 412.529 are cases with a length of stay that is less than or equal to five-sixths the average length of stay of the LTC-DRG. The

average adjusted charge reflects the average intensity of the health care services delivered by a particular LTCH and the average cost level of that LTCH. The resulting ratio is multiplied by that LTCH's case-mix index to determine the standardized charge for the case.

Multiplying by the LTCH's case-mix index accounts for the fact that the same relative charges are given greater weight in a LTCH with higher average costs than they would at a LTCH with low average costs which is needed to adjust each LTCH's relative charge value to reflect its case-mix relative to the average case-mix for all LTCHs. Because we standardize charges in this manner, we count charges for a Medicare patient at a LTCH with high average charges as less resource intensive than they would be at a LTCH with low average charges. For example, a \$10,000 charge for a case in a LTCH with an average adjusted charge of \$17,500 reflects a higher level of relative resource use than a \$10,000 charge for a case in a LTCH with the same case-mix, but an average adjusted charge of \$35,000. We believe that the adjusted charge of an individual case more accurately reflects actual resource use for an individual LTCH because the variation in charges due to systematic differences in the markup of charges among LTCHs is taken into account.

## d. Proposed Low-Volume LTC-DRGs

In order to account for LTC-DRGs with low-volume (that is, with fewer than 25 LTCH cases), in accordance with the methodology established in the August 30, 2002 LTCH PPS final rule (67 FR 55984), we group those low-volume LTC-DRGs into one of five categories (quintiles) based on average charges, for the purposes of determining relative weights. For this proposed rule, using LTCH cases from the December 2004 update of the FY 2004 MedPAR file, we identified 172 LTC-DRGs that contained between 1 and 24 cases. This list of proposed LTC-DRGs was then divided into one of the 5 low-volume quintiles, each containing a minimum of 34 LTC-DRGs ( $172/5 = 34$  with 2 LTC-DRGs as the remainder). For FY 2006, we are proposing to make an assignment to a specific low-volume quintile by sorting the low-volume proposed LTC-DRGs in ascending order by average charge. For this proposed rule, this results in an assignment to a specific low volume quintile of the sorted 172 low-volume proposed LTC-DRGs by ascending order by average charge. Because the number of LTC-DRGs with less than 25 LTCH cases is not evenly divisible by five, the average charge of the low-volume proposed LTC-DRG was used to determine which low-

volume quintile received the additional proposed LTC-DRG. After sorting the 172 low-volume LTC-DRGs in ascending order, we are proposing that the first fifth of low-volume LTC-DRGs with the lowest average charge would be grouped into Quintile 1. The highest average charge cases would be grouped into Quintile 5. Since the average charge of the proposed 35th LTC-DRG in the sorted list is closer to the proposed 34th LTC-DRG's average charge (assigned to Quintile 1) than to the average charge of the proposed 36th LTC-DRG in the sorted list (to be assigned to Quintile 2), we are proposing to place it into Quintile 1. This process was repeated through the remaining low-volume proposed LTC-DRGs so that 2 proposed

low-volume quintiles contain 35 proposed LTC-DRGs and 3 proposed low-volume quintiles contain 34 proposed LTC-DRGs.

In order to determine the proposed relative weights for the proposed LTC-DRGs with low volume for FY 2006, in accordance with the methodology established in the August 30, 2002 LTCH PPS final rule (67 FR 55984), we are proposing to use the proposed five low-volume quintiles described above. The composition of each of the proposed five low-volume quintiles shown in the chart below would be used in determining the proposed LTC-DRG relative weights for FY 2006. We would determine a proposed relative weight and (geometric) average length of stay

for each of the proposed five low-volume quintiles using the formula that we apply to the regular proposed LTC-DRGs (25 or more cases), as described below in section II.D.4. of this preamble. We are proposing to assign the same relative weight and average length of stay to each of the proposed LTC-DRGs that make up that proposed low-volume quintile. We note that, as this system is dynamic, it is possible that the number and specific type of LTC-DRGs with a low volume of LTCH cases will vary in the future. We use the best available claims data in the MedPAR file to identify low-volume LTC-DRGs and to calculate the relative weights based on our methodology.

### Proposed Composition of Low-Volume Quintiles for FY 2006

| LTC-DRG           | Description  |
|-------------------|--|
| <b>QUINTILE 1</b> |  |
| 17                | NONSPECIFIC CEREBROVASCULAR DISORDERS W/O CC                     |
| 25                | SEIZURE & HEADACHE AGE >17 W/O CC                                |
| 29                | TRAUMATIC STUPOR & COMA, COMA <1 HR AGE >17 W/O CC               |
| 65                | DYSEQUILIBRIUM   |
| 69                | OTITIS MEDIA & URI AGE >17 W/O CC                                |
| 95                | PNEUMOTHORAX W/O CC  |
| 102               | OTHER RESPIRATORY SYSTEM DIAGNOSES W/O CC                        |
| 133               | ATHEROSCLEROSIS W/O CC   |
| 140               | ANGINA PECTORIS  |
| 142               | SYNCOPE & COLLAPSE W/O CC  |
| 171               | OTHER DIGESTIVE SYSTEM O.R. PROCEDURES W/O CC                    |
| 175               | G.I. HEMORRHAGE W/O CC   |
| 219               | LOWER EXTREM & HUMER PROC EXCEPT HIP, FOOT, FEMUR AGE >17 W/O CC |
| 237               | SPRAINS, STRAINS, & DISLOCATIONS OF HIP, PELVIS & THIGH          |
| 241               | CONNECTIVE TISSUE DISORDERS W/O CC                               |
| 246               | NON-SPECIFIC ARTHROPATHIES                                       |
| 251               | FX, SPRN, STRN & DISL OF FOREARM, HAND, FOOT AGE >17 W/O CC      |
| 254               | FX, SPRN, STRN & DISL OF UPARM, LOWLEG EX FOOT AGE >17 W/O CC    |
| 262               | BREAST BIOPSY & LOCAL EXCISION FOR NON-MALIGNANCY                |
| 273               | MAJOR SKIN DISORDERS W/O CC                                      |
| 281               | TRAUMA TO THE SKIN, SUBCUT TISS & BREAST AGE >17 W/O CC          |
| 284               | MINOR SKIN DISORDERS W/O CC                                      |
| 301               | ENDOCRINE DISORDERS W/O CC                                       |
| 305               | KIDNEY, URETER & MAJOR BLADDER PROC FOR NON-NEOPL W/O CC         |
| 312               | URETHRAL PROCEDURES, AGE >17 W CC                                |
| 319               | KIDNEY & URINARY TRACT NEOPLASMS W/O CC                          |
| 326               | KIDNEY & URINARY TRACT SIGNS & SYMPTOMS AGE >17 W/O CC           |
| 328               | URETHRAL STRICTURE AGE >17 W CC                                  |

| LTC-DRG           | Description   |
|-------------------|---|
| 344               | OTHER MALE REPRODUCTIVE SYSTEM O.R. PROCEDURES FOR MALIGNANCY     |

\*One of the original 172 low-volume proposed LTC-DRGs initially assigned to another proposed low-volume quintile and now assigned to this proposed low-volume quintile to address nonmonotonicity (see step 5 below).

#### 4. Steps for Determining the Proposed FY 2006 LTC-DRG Relative Weights

As we noted previously, the proposed FY 2006 LTC-DRG relative weights are determined in accordance with the methodology established in the August 1, 2003 IPPS final rule (68 FR 45367). In summary, LTCH cases must be grouped in the appropriate LTC-DRG, while taking into account the low-volume proposed LTC-DRGs as described above, before the proposed FY 2006 LTC-DRG relative weights can be determined. After grouping the cases in the appropriate proposed LTC-DRG, we are proposing to calculate the proposed relative weights for FY 2006 in this proposed rule by first removing statistical outliers and cases with a length of stay of 7 days or less, as discussed in greater detail below. Next, we are proposing to adjust the number of cases in each proposed LTC-DRG for the effect of short-stay outlier cases under § 412.529, as also discussed in greater detail below. The short-stay adjusted discharges and corresponding charges are used to calculate "relative adjusted weights" in each proposed LTC-DRG using the hospital-specific relative value method described above.

Below we discuss in detail the steps for calculating the proposed FY 2006 LTC-DRG relative weights.

##### Step 1—Remove statistical outliers.

The first step in the calculation of the proposed FY 2006 LTC-DRG relative weights is to remove statistical outlier cases. We define statistical outliers as cases that are outside of 3.0 standard deviations from the mean of the log

distribution of both charges per case and the charges per day for each LTC-DRG. These statistical outliers are removed prior to calculating the proposed relative weights. We believe that they may represent aberrations in the data that distort the measure of average resource use. Including those LTCH cases in the calculation of the proposed relative weights could result in an inaccurate proposed relative weight that does not truly reflect relative resource use among the proposed LTC-DRGs.

##### Step 2—Remove cases with a length of stay of 7 days or less.

The proposed FY 2006 LTC-DRG relative weights reflect the average of resources used on representative cases of a specific type. Generally, cases with a length of stay 7 days or less do not belong in a LTCH because these stays do not fully receive or benefit from treatment that is typical in a LTCH stay, and full resources are often not used in the earlier stages of admission to a LTCH. If we were to include stays of 7 days or less in the computation of the proposed FY 2006 LTC-DRG relative weights, the value of many proposed relative weights would decrease and, therefore, payments would decrease to a level that may no longer be appropriate.

We do not believe that it would be appropriate to compromise the integrity of the payment determination for those LTCH cases that actually benefit from and receive a full course of treatment at a LTCH, in order to include data from these very short-stays. Thus, in determining the proposed FY 2006 LTC-DRG relative weights, we remove

LTCH cases with a length of stay of 7 days or less.

##### Step 3—Adjust charges for the effects of short-stay outliers.

After removing cases with a length of stay of 7 days or less, we are left with cases that have a length of stay of greater than or equal to 8 days. The next step in the calculation of the proposed FY 2006 LTC-DRG relative weights is to adjust each LTCH's charges per discharge for those remaining cases for the effects of short-stay outliers as defined in § 412.529(a). (However, we note that even if a case was removed in Step 2 (that is, cases with a length of stay of 7 days or less), it was paid as a short-stay outlier if its length of stay was less than or equal to five-sixths of the average length of stay of the LTC-DRG, in accordance with § 412.529.)

We make this adjustment by counting a short-stay outlier as a fraction of a discharge based on the ratio of the length of stay of the case to the average length of stay for the proposed LTC-DRG for nonshort-stay outlier cases. This has the effect of proportionately reducing the impact of the lower charges for the short-stay outlier cases in calculating the average charge for the proposed LTC-DRG. This process produces the same result as if the actual charges per discharge of a short-stay outlier case were adjusted to what they would have been had the patient's length of stay been equal to the average length of stay of the proposed LTC-DRG.

As we explained in the FY 2005 IPPS final rule (69 FR 48991), counting short-

stay outlier cases as full discharges with no adjustment in determining the proposed LTC-DRG relative weights would lower the proposed LTC-DRG relative weight for affected proposed LTC-DRGs because the relatively lower charges of the short-stay outlier cases would bring down the average charge for all cases within a proposed LTC-DRG. This would result in an "underpayment" to nonshort-stay outlier cases and an "overpayment" to short-stay outlier cases. Therefore, in this proposed rule, we adjust for short-stay outlier cases under § 412.529 in this manner because it results in more appropriate payments for all LTCH cases.

**Step 4**—Calculate the Proposed FY 2006 LTC-DRG relative weights on an iterative basis.

The process of calculating the proposed LTC-DRG relative weights using the hospital specific relative value methodology is iterative. First, for each LTCH case, we calculate a hospital-specific relative charge value by dividing the short-stay outlier adjusted charge per discharge (see step 3) of the LTCH case (after removing the statistical outliers (see step 1)) and LTCH cases with a length of stay of 7 days or less (see step 2) by the average charge per discharge for the LTCH in which the case occurred. The resulting ratio is then multiplied by the LTCH's case-mix index to produce an adjusted hospital-specific relative charge value for the case. An initial case-mix index value of 1.0 is used for each LTCH.

For each proposed LTC-DRG, the proposed FY 2006 LTC-DRG relative weight is calculated by dividing the average of the adjusted hospital-specific relative charge values (from above) for the proposed LTC-DRG by the overall average hospital-specific relative charge value across all cases for all LTCHs. Using these recalculated proposed LTC-DRG relative weights, each proposed LTCH's average relative weight for all of its cases (case-mix) is calculated by dividing the sum of all the proposed LTCH's LTC-DRG relative weights by its total number of cases. The LTCHs' hospital-specific relative charge values above are multiplied by these hospital specific case-mix indexes. These hospital-specific case-mix adjusted relative charge values are then used to calculate a new set of proposed LTC-DRG relative weights across all LTCHs. In this proposed rule, this iterative process is continued until there is convergence between the weights produced at adjacent steps, for example, when the maximum difference is less than 0.0001.

**Step 5**—Adjust the proposed FY 2006 LTC-DRG relative weights to account for nonmonotonically increasing relative weights.

As explained in section II.B. of this preamble, the proposed FY 2006 CMS DRGs, which the proposed FY 2006 LTC-DRGs are based, contain "pairs" that are differentiated based on the presence or absence of CCs. The proposed LTC-DRGs with CCs are defined by certain secondary diagnoses not related to or inherently a part of the disease process identified by the principal diagnosis, but the presence of additional diagnoses does not automatically generate a CC. As we discussed in the FY 2005 IPPS final rule (69 FR 48991), the value of monotonically increasing relative weights rises as the resource use increases (for example, from uncomplicated to more complicated). The presence of CCs in a proposed LTC-DRG means that cases classified into a "without CC" proposed LTC-DRG are expected to have lower resource use (and lower costs). In other words, resource use (and costs) are expected to decrease across "with CC"/"without CC" pairs of proposed LTC-DRGs.

For a case to be assigned to a proposed LTC-DRG with CCs, more coded information is called for (that is, at least one relevant secondary diagnosis), than for a case to be assigned to a proposed LTC-DRG "without CCs" (which is based on only one principal diagnosis and no relevant secondary diagnoses). Currently, the LTCH claims data include both accurately coded cases without complications and cases that have complications (and cost more), but were not coded completely. Both types of cases are grouped to a proposed LTC-DRG "without CCs" because only one principal diagnosis was coded. Since the LTCH PPS was only implemented for cost reporting periods beginning on or after October 1, 2002 (FY 2003) and LTCHs were previously paid under cost-based reimbursement, which is not based on patient diagnoses, coding by LTCHs for these cases may not have been as detailed as possible.

Thus, in developing the FY 2003 LTC-DRG relative weights for the LTCH PPS based on FY 2001 claims data, as we discussed in the August 30, 2002 LTCH PPS final rule (67 FR 55990), we found on occasion that the data suggested that cases classified to the LTC-DRG "with CCs" of a "with CC"/"without CC" pair had a lower average charge than the corresponding LTC-DRG "without CCs." Similarly, as discussed in the FY 2005 IPPS final rule (69 FR 48991 through 48992), based on FY 2003 claims data, we also found on

occasion that the data suggested that cases classified to the LTC-DRG "with CCs" of a "with CC"/"without CC" pair have a lower average charge than the corresponding LTC-DRG "without CCs" for the FY 2005 LTC-DRG relative weights.

We believe this anomaly may be due to coding that may not have fully reflected all comorbidities that were present. Specifically, LTCHs may have failed to code relevant secondary diagnoses, which resulted in cases that actually had CCs being classified into a "without CC" LTC-DRG. It would not be appropriate to pay a lower amount for the "with CC" LTC-DRG because, in general, cases classified into a "with CC" LTC-DRG are expected to have higher resource use (and higher cost) as discussed above. Therefore, previously when we determined the LTC-DRG relative weights in accordance with the methodology established in the August 30, 2002 LTCH PPS final rule (67 FR 55990), we grouped both the cases "with CCs" and "without CCs" together for the purpose of calculating the LTC-DRG relative weights for FYs 2003 through 2005. As we stated in that same final rule, we will continue to employ this methodology to account for nonmonotonically increasing relative weights until we have adequate data to calculate appropriate separate weights for these anomalous LTC-DRG pairs. We expect that, as was the case when we first implemented the IPPS, this problem will be self-correcting, as LTCHs submit more completely coded data in the future.

There are three types of "with CC" and "without CC" pairs that could be nonmonotonic; that is, where the "without CC" proposed LTC-DRG would have a higher average charge than the "with CC" proposed LTC-DRG. For this proposed rule, using the LTCH cases in the December 2004 update of the FY 2004 MedPAR file (the best available data at this time), we identified one of the three types of nonmonotonic LTC-DRG pairs.

The first category of nonmonotonically increasing proposed relative weights for FY 2006 proposed LTC-DRG pairs "with and without CCs" contains zero pairs of proposed LTC-DRGs in which both the proposed LTC-DRG "with CCs" and the proposed LTC-DRG "without CCs" had 25 or more LTCH cases and, therefore, did not fall into one of the 5 low-volume quintiles. For those nonmonotonic proposed LTC-DRG pairs, we would combine the LTCH cases and compute a new proposed relative weight based on the case-weighted average of the combined LTCH cases of the proposed LTC-DRGs.

The case-weighted average charge is determined by dividing the total charges for all LTCH cases by the total number of LTCH cases for the combined proposed LTC-DRG. This new proposed relative weight would then be assigned to both of the proposed LTC-DRGs in the pair. In this proposed rule, for FY 2006, there are no proposed LTC-DRGs that fall into this category.

The second category of nonmonotonically increasing relative weights for proposed LTC-DRG pairs "with and without CCs" consists of one pair of proposed LTC-DRGs that has fewer than 25 cases, and each proposed LTC-DRG would be grouped to different proposed low-volume quintiles in which the "without CC" proposed LTC-DRG is in a higher-weighted proposed low-volume quintile than the "with CC" proposed LTC-DRG. For those pairs, we would combine the LTCH cases and determine the case-weighted average charge for all LTCH cases. The case-weighted average charge is determined by dividing the total charges for all LTCH cases by the total number of LTCH cases for the combined proposed LTC-DRG. Based on the case-weighted average LTCH charge, we determine within which low-volume quintile the "combined LTC-DRG" is grouped. Both proposed LTC-DRGs in the pair are then grouped into the same proposed low-volume quintile, and thus have the same proposed relative weight. In this proposed rule, for FY 2006, proposed LTC-DRGs 531 and 532 fall into this category.

The third category of nonmonotonically increasing relative weights for proposed LTC-DRG pairs "with and without CCs" consists of zero pairs of proposed LTC-DRGs where one of the proposed LTC-DRGs has fewer than 25 LTCH cases and is grouped to a proposed low-volume quintile and the other proposed LTC-DRG has 25 or more LTCH cases and has its own proposed LTC-DRG relative weight, and the proposed LTC-DRG "without CCs"

has the higher proposed relative weight. We remove the proposed low-volume LTC-DRG from the proposed low-volume quintile and combine it with the other proposed LTC-DRG for the computation of a new proposed relative weight for each of these proposed LTC-DRGs. This new proposed relative weight is assigned to both proposed LTC-DRGs, so they each have the same proposed relative weight. In this proposed rule, for FY 2006, there are no proposed LTC-DRGs that fall into this category.

*Step 6*—Determine a proposed FY 2006 LTC-DRG relative weight for proposed LTC-DRGs with no LTCH cases.

As we stated above, we determine the proposed relative weight for each proposed LTC-DRG using charges reported in the December 2004 update of the FY 2004 MedPAR file. Of the 526 proposed LTC-DRGs for FY 2006, we identified 194 proposed LTC-DRGs for which there were no LTCH cases in the database. That is, based on data from the FY 2004 MedPAR file used in this proposed rule, no patients who would have been classified to those LTC-DRGs were treated in LTCHs during FY 2004 and, therefore, no charge data were reported for those proposed LTC-DRGs. Thus, in the process of determining the proposed LTC-DRG relative weights, we are unable to determine weights for these 194 proposed LTC-DRGs using the methodology described in steps 1 through 5 above. However, because patients with a number of the diagnoses under these proposed LTC-DRGs may be treated at LTCHs beginning in FY 2006, we assign proposed relative weights to each of the 194 "no volume" proposed LTC-DRGs based on clinical similarity and relative costliness to one of the remaining 332 ( $156 - 194 = 332$ ) proposed LTC-DRGs for which we are able to determine proposed relative weights, based on FY 2004 claims data.

As there are currently no LTCH cases in these "no volume" proposed LTC-DRGs, we determine proposed relative

weights for the 194 proposed LTC-DRGs with no LTCH cases in the FY 2004 MedPAR file used in this proposed rule by grouping them to the appropriate proposed low-volume quintile. This methodology is consistent with our methodology used in determining proposed relative weights to account for the proposed low-volume LTC-DRGs described above.

Our methodology for determining proposed relative weights for the proposed "no volume" LTC-DRGs is as follows: We crosswalk the proposed no volume LTC-DRGs by matching them to other similar proposed LTC-DRGs for which there were LTCH cases in the FY 2004 MedPAR file based on clinical similarity and intensity of use of resources as determined by care provided during the period of time surrounding surgery, surgical approach (if applicable), length of time of surgical procedure, post-operative care, and length of stay. We assign the proposed relative weight for the applicable proposed low-volume quintile to the proposed no volume LTC-DRG if the proposed LTC-DRG to which it is crosswalked is grouped to one of the proposed low-volume quintiles. If the proposed LTC-DRG is crosswalked is not one of the proposed LTC-DRGs to be grouped to one of the proposed low-volume quintiles, we compare the proposed relative weight of the proposed LTC-DRG to which the proposed no volume LTC-DRG is crosswalked to the proposed relative weights of each of the five quintiles and we assign the proposed no volume LTC-DRG the proposed relative weight of the proposed low-volume quintile with the closest weight. For this proposed rule, a list of the proposed no volume FY 2006 LTC-DRGs and the proposed FY 2006 LTC-DRG to which it is crosswalked in order to determine the appropriate proposed low-volume quintile for the assignment of a relative weight for FY 2006 is shown in the chart below.

**Proposed No Volume LTC-DRG Crosswalk and  
Quintile Assignment for FY 2006**

To illustrate this methodology for determining the proposed relative weights for the 194 proposed LTC-DRGs with no LTCH cases, we are providing the following examples, which refer to the proposed no volume LTC-DRGs crosswalk information for FY 2006 provided in the chart above.

*Example 1:*

There were no cases in the FY 2004 MedPAR file used for this proposed rule for proposed LTC-DRG 163 (Hernia Procedures Age 0-17). Since the procedure is similar in resource use and the length and complexity of the procedures and the length of stay are similar, we determined that proposed LTC-DRG 178 (Uncomplicated Peptic Ulcer Without CC), which is assigned to proposed low-volume Quintile 3 for the purpose of determining the proposed FY 2006 relative weights, would display similar clinical and resource use. Therefore, we assign the same proposed relative weight of proposed LTC-DRG 178 of 0.7586 (proposed Quintile 3) for FY 2006 (Table 11 in the Addendum to this proposed rule) to proposed LTC-DRG 163.

*Example 2:*

There were no LTCH cases in the FY 2004 MedPAR file used in this proposed rule for proposed LTC-DRG 91 (Simple Pneumonia and Pleurisy Age 0-17). Since the severity of illness in patients with bronchitis and asthma is similar in patients regardless of age, we determined that proposed LTC-DRG 90 (Simple Pneumonia and Pleurisy Age >17 Without CC) would display similar clinical and resource use characteristics and have a similar length of stay to proposed LTC-DRG 91. There were over

25 cases in proposed LTC-DRG 90. Therefore, it would not be assigned to a low-volume quintile for the purpose of determining the proposed LTC-DRG relative weights. However, under our established methodology, proposed LTC-DRG 91, with no LTCH cases, would need to be grouped to a proposed low-volume quintile. We determined that the proposed low-volume quintile with the closest weight to proposed LTC-DRG 90 (0.5004) (refer to Table 11 in the Addendum to this proposed rule) would be proposed low-volume Quintile 1 (0.4502) (refer to Table 11 in the Addendum to this proposed rule). Therefore, we assign proposed LTC-DRG 91 a proposed relative weight of 0.4502 for FY 2006.

Furthermore, we are proposing LTC-DRG relative weights of 0.0000 for heart, kidney, liver, lung, pancreas, and simultaneous pancreas/kidney transplants (LTC-DRGs 103, 302, 480, 495, 512, and 513, respectively) for FY 2006 because Medicare will only cover these procedures if they are performed at a hospital that has been certified for the specific procedures by Medicare and presently no LTCH has been so certified.

Based on our research, we found that most LTCHs only perform minor surgeries, such as minor small and large bowel procedures, to the extent any surgeries are performed at all. Given the extensive criteria that must be met to become certified as a transplant center for Medicare, we believe it is unlikely that any LTCHs would become certified as a transplant center. In fact, in the nearly 20 years since the implementation of the IPPS, there has never been a LTCH that even expressed

an interest in becoming a transplant center.

However, if in the future a LTCH applies for certification as a Medicare-approved transplant center, we believe that the application and approval procedure would allow sufficient time for us to determine appropriate weights for the LTC-DRGs affected. At the present time, we would only include these six transplant LTC-DRGs in the GROUPER program for administrative purposes. Because we use the same GROUPER program for LTCHs as is used under the IPPS, removing these LTC-DRGs would be administratively burdensome.

Again, we note that as this system is dynamic, it is entirely possible that the number of proposed LTC-DRGs with a zero volume of LTCH cases based on the system will vary in the future. We used the best most recent available claims data in the MedPAR file to identify zero volume LTC-DRGs and to determine the proposed relative weights in this proposed rule.

Table 11 in the Addendum to this proposed rule lists the proposed LTC-DRGs and their respective proposed relative weights, geometric mean length of stay, and five-sixths of the geometric mean length of stay (to assist in the determination of short-stay outlier payments under § 412.529) for FY 2006.

**E. Proposed Add-On Payments for New Services and Technologies**

(If you choose to comment on issues in this section, please include the caption "New Technology Applications" at the beginning of your comment.)

## 1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that the process must apply to a new medical service or technology if, "based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate."

The regulations implementing this provision establish three criteria for new medical services and techniques to receive an additional payment. First, § 412.87(b)(2) defines when a specific medical service or technology will be considered new for purposes of new medical service or technology add-on payments. The statutory provision contemplated the special payment treatment for new medical services or technologies until such time as data are available to reflect the cost of the technology in the DRG weights through recalibration. There is a lag of 2 to 3 years from the point a new medical service or technology is first introduced on the market and when data reflecting the use of the medical service or technology are used to calculate the DRG weights. For example, data from discharges occurring during FY 2004 are used to calculate the proposed FY 2006 DRG weights in this proposed rule. Section 412.87(b)(2) provides that a "medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new medical service or technology (depending on when a new code is assigned and data on the new medical service or technology become available for DRG recalibration). After CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered 'new' under the criterion for this section."

The 2-year to 3-year period during which a technology or medical service can be considered new would ordinarily begin with FDA approval, unless there was some documented delay in bringing the product onto the market after that approval (for instance, component

production or drug production had been postponed until FDA approval due to shelf life concerns or manufacturing issues). After the DRGs have been recalibrated to reflect the costs of an otherwise new medical service or technology, the special add-on payment for new medical services or technology ceases (§ 412.87(b)(2)). For example, an approved new technology that received FDA approval in October 2004 and entered the market at that time may be eligible to receive add-on payments as a new technology until FY 2007 (discharges occurring before October 1, 2006), when data reflecting the costs of the technology would be used to recalibrate the DRG weights. Because the FY 2007 DRG weights will be calculated using FY 2005 MedPAR data, the costs of such a new technology would likely be reflected in the FY 2007 DRG weights.

Section 412.87(b)(3) further provides that, to receive special payment treatment, new medical services or technologies must be inadequately paid otherwise under the DRG system. To assess whether technologies would be inadequately paid under the DRGs, we establish thresholds to evaluate applicants for new technology add-on payments. In the FY 2004 IPPS final rule (68 FR 45385), we established the threshold at the geometric mean standardized charge for all cases in the DRG plus 75 percent of 1 standard deviation above the geometric mean standardized charge (based on the logarithmic values of the charges and transformed back to charges) for all cases in the DRG to which the new medical service or technology is assigned (or the case-weighted average of all relevant DRGs, if the new medical service or technology occurs in many different DRGs). Table 10 in the Addendum to the FY 2004 IPPS final rule (68 FR 45648) listed the qualifying threshold by DRG, based on the discharge data that we used to calculate the FY 2004 DRG weights.

However, section 503(b)(1) of Pub. L. 108-173 amended section 1886(d)(5)(K)(ii)(I) of the Act to provide for "applying a threshold \* \* \* that is the lesser of 75 percent of the standardized amount (increased to reflect the difference between cost and charges) or 75 percent of 1 standard deviation for the diagnosis-related group involved." The provisions of section 503(b)(1) apply to classification for fiscal years beginning with FY 2005. We updated Table 10 from the October 6, 2003 **Federal Register** correction document, which contains the thresholds that we used to evaluate applications for new service or

technology add-on payments for FY 2005, using the section 503(b)(1) measures stated above, and posted these new thresholds on our Web site at: <http://www.cms.hhs.gov/providers/hipps/newtech.asp>. In the FY 2005 IPPS final rule (in Table 10 of the Addendum), we included the final thresholds that are being used to evaluate applicants for new technology add-on payments for FY 2006. (Refer to section IV.D. of the preamble to the FY 2005 IPPS final rule (69 FR 49084) for a discussion of a revision of the regulations to incorporate the change made by section 503(b)(1) of Pub. L. 108-173.)

Section 412.87(b)(1) of our existing regulations provides that a new technology is an appropriate candidate for an additional payment when it represents an advance in medical technology that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. For example, a new technology represents a substantial clinical improvement when it reduces mortality, decreases the number of hospitalizations or physician visits or reduces recovery time compared to the technologies previously available. (See the September 7, 2001 final rule (66 FR 46902) for a complete discussion of this criterion.)

The new medical service or technology add-on payment policy provides additional payments for cases with high costs involving eligible new medical services or technologies while preserving some of the incentives under the average-based payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. Under § 412.88, Medicare pays a marginal cost factor of 50 percent for the costs of a new medical service or technology in excess of the full DRG payment. If the actual costs of a new medical service or technology case exceed the DRG payment by more than the 50-percent marginal cost factor of the new medical service or technology, Medicare payment is limited to the DRG payment plus 50 percent of the estimated costs of the new technology.

The report language accompanying section 533 of Pub. L. 106-554 indicated Congressional intent that the Secretary implement the new mechanism on a budget neutral basis (H.R. Conf. Rep. No. 106-1033, 106th Cong., 2nd Sess. at 897 (2000)). Section 1886(d)(4)(C)(iii) of the Act requires that the adjustments to annual DRG classifications and relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. Therefore, in

the past, we accounted for projected payments under the new medical service and technology provision during the upcoming fiscal year at the same time we estimated the payment effect of changes to the DRG classifications and recalibration. The impact of additional payments under this provision was then included in the budget neutrality factor, which was applied to the standardized amounts and the hospital-specific amounts.

Section 503(d)(2) of Pub. L. 108-173 amended section 1886(d)(5)(K)(ii)(III) of the Act to provide that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, add-on payments for new medical services or technologies for FY 2005 and later years will not be budget neutral.

Applicants for add-on payments for new medical services or technologies for FY 2007 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement, along with a significant sample of data to demonstrate the medical service or technology meets the high-cost threshold, no later than October 15, 2005. Applicants must submit a complete database no later than December 30, 2005. Complete application information, along with final deadlines for submitting a full application, will be available after publication of the FY 2006 final rule at our Web site: <http://www.cms.hhs.gov/providers/hipps/default.asp>. To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2007, the website will also list the tracking forms completed by each applicant.

## 2. Public Input Before Publication of This Notice of Proposed Rulemaking on Add-On Payments

Section 503(b)(2) of Pub. L. 108-173 amended section 1886(d)(5)(K) of the Act by adding a clause (viii) to provide for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial improvement or advancement. The revised process for evaluating new medical service and technology applications requires the Secretary to—

- Provide, before publication of a proposed rule, for public input

regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries.

- Make public and periodically update a list of the services and technologies for which an application for add-on payments is pending.

- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial improvement.

- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2006 before publication of this proposed rule, we published a notice in the **Federal Register** on December 30, 2004 (69 FR 78466) and held a town hall meeting at the CMS Headquarters Office in Baltimore, MD, on February 23, 2005. In the announcement notice for the meeting, we stated that the opinions and alternatives provided during the meeting would assist us in our evaluations of applications by allowing public discussions of the substantial clinical improvement criteria for each of the FY 2006 new medical service and technology add-on payment applications before the publication of this FY 2006 IPPS proposed rule.

Approximately 45 participants registered and attended in person, while additional participants listened over an open telephone line. The participants focused on presenting data on the substantial clinical improvement aspect of their products, as well as the need for additional payments to ensure access to Medicare beneficiaries. In addition, we received written comments regarding the substantial clinical improvement criterion for the applicants. We have considered these comments in our evaluation of each new application for FY 2006 in this proposed rule. We have summarized these comments or, if applicable, indicated that no comments were received, at the end of the discussion of the individual applications.

Section 503(c) of Pub. L. 108-173 amended section 1886(d)(5)(K) of the Act by adding a new clause (ix) requiring that, before establishing any

add-on payment for a new medical service or technology, the Secretary shall seek to identify one or more DRGs associated with the new technology, based on similar clinical or anatomical characteristics and the costs of the technology and assign the new technology into a DRG where the average costs of care most closely approximate the costs of care using the new technology. No add-on payment shall be made with respect to such a new technology.

At the time an application for new technology add-on payments is submitted, the DRGs associated with the new technology are identified. We only determine that a new technology add-on payment is appropriate when the reimbursement under these DRGs is not adequate for this new technology. The criterion for this determination is the cost threshold, which we discuss below. We discuss the assignments of several new technologies within the DRG payment system in section II.B. of this proposed rule.

In this proposed rule, we evaluate whether new technology add-on payments will continue in FY 2006 for the three technologies that currently receive such payments. In addition, we present our evaluations of eight applications for add-on payments in FY 2006. The eight applications for FY 2006 include two applications for products that were denied new technology add-on payments for FY 2005.

## 3. FY 2006 Status of Technology Approved for FY 2005 Add-On Payments

### a. INFUSE™ (Bone Morphogenetic Proteins (BMPs) for Spinal Fusions)

INFUSE™ was approved by FDA for use on July 2, 2002, and became available on the market immediately thereafter. In the FY 2004 IPPS final rule (68 FR 45388), we approved INFUSE™ for add-on payments under \$ 412.88, effective for FY 2004. This approval was on the basis of using INFUSE™ for single-level, lumbar spinal fusion, consistent with the FDA's approval and the data presented to us by the applicant. Therefore, we limited the add-on payment to cases using this technology for anterior lumbar fusions in DRGs 497 (Spinal Fusion Except Cervical With CC) and 498 (Spinal Fusion Except Cervical Without CC). Cases involving INFUSE™ that are eligible for the new technology add-on payment are identified by assignment to DRGs 497 and 498 as a lumbar spinal fusion, with the combination of ICD-9-CM procedure codes 84.51 (Insertion of

interbody spinal fusion device) and 84.52 (Insertion of recombinant bone morphogenetic protein).

The FDA approved INFUSE™ for use on July 2, 2002. For FY 2005, INFUSE™ was still within the 2-year to 3-year period during which a technology can be considered new under the regulations. Therefore, in the FY 2005 IPPS final rule (69 FR 49007 through 49009), we continued add-on payments for FY 2005 for cases receiving INFUSE™ for spinal fusions in DRGs 497 (Spinal Fusion Except Cervical With CC) and 498 (Spinal Fusion Except Cervical Without CC).

As we discussed in the September 7, 2001 final rule (66 FR 46915), an approval of a new technology for special payment should extend to all technologies that are substantially similar. Otherwise, our payment policy would bestow an advantage to the first applicant to receive approval for a particular new technology. In last year's final rule (69 FR 49008), we discussed another product, called OP-1 Putty, manufactured by Stryker Biotech, that promotes natural bone growth by using a closely related bone morphogenetic protein called rhBMP-7. (INFUSE™ is rhBMP-2.) We also stated in last year's final rule that we had determined that the costs associated with the OP-1 Putty are similar to those associated with INFUSE™. Because the OP-1 Putty became available on the market in May 2004 (when it received FDA approval for spinal fusions) for similar spinal fusion procedures and because this product also eliminates the need for the autograft bone surgery, we extended new technology add-on payments to this technology as well for FY 2005.

As noted above, the period for which technologies are eligible to receive new technology add-on payments is 2 to 3 years after the product becomes available on the market and data reflecting the cost of the technology are reflected in the DRG weights. The FDA approved INFUSE™ bone graft on July 2, 2002. Therefore, data reflecting the cost of the technology are now reflected in the DRG weights. In addition, by the end of FY 2005, the add-on payment will have been made for 2 years. Therefore, we are proposing to discontinue new technology add-on payment for INFUSE™ for FY 2006. Because we apply the same policies in making new technology payment for OP-1 Putty as we do for INFUSE™, we are proposing to discontinue new technology add-on payment for OP-1 Putty as well for FY 2006.

b. InSync® Defibrillator System (Cardiac Resynchronization Therapy With Defibrillation (CRT-D))

Cardiac Resynchronization Therapy (CRT), also known as bi-ventricular pacing, is a therapy for chronic heart failure. A CRT implantable system provides electrical stimulation to the right atrium, right ventricle, and left ventricle to coordinate or resynchronize ventricular contractions and improve cardiac output.

In the FY 2005 IPPS final rule (69 FR 49016), we determined that cardiac resynchronization therapy with defibrillator (CRT-D) was eligible for add-on payments in FY 2005. Cases involving CRT-D that are eligible for new technology add-on payments are identified by either one of the following two ICD-9-CM procedure codes: 00.51 (Implantation of Cardiac Resynchronization Defibrillator, Total System (CRT-D)) or 00.54 (Implantation or Replacement of Pulse Generator Device Only (CRT-D)). InSync® Defibrillation System received FDA approval on June 26, 2002. However, another manufacturer, Guidant, received FDA approval for its CRT-D device on May 2, 2002. As we discussed in the September 7, 2001 final rule (66 FR 46915), an approval of a new technology for special payment should extend to all technologies that are substantially similar. Otherwise, our payment policy would bestow an advantage to the first applicant to receive approval for a particular new technology. We also noted that we would extend new technology add-on payments for the entire FY 2005 even though the 2-3 year period of newness ended in May 2005 for CRT-D since predictability is an important aspect of the prospective payment methodology and, therefore, we believe it is appropriate to apply a consistent payment methodology for new technologies throughout the fiscal year (69 FR 49016).

As noted in the FY 2005 IPPS final rule (69 FR 49014), because CRT-Ds were available upon the initial FDA approval in May 2002, we considered the technology to be new from this date. As a result, for FY 2006, the CRT-D will be beyond the 2-3 year period during which a technology can be considered new. Therefore, we are proposing to discontinue add-on payments for the CRT-D for FY 2006.

c. Kinetra® Implantable Neurostimulator for Deep Brain Stimulation

Medtronic, Inc. submitted an application for approval of the Kinetra® implantable neurostimulator device for new technology add-on payments for FY

2005. The Kinetra® device was approved by the FDA on December 16, 2003. The Kinetra® implantable neurostimulator is designed to deliver electrical stimulation to the subthalamic nucleus (STN) or internal globus pallidus (GPI) in order to ameliorate symptoms caused by abnormal neurotransmitter levels that lead to abnormal cell-to-cell electrical impulses in Parkinson's Disease and essential tremor. Before the development of Kinetra®, treating bilateral symptoms of Parkinson's Disease required the implantation of two neurostimulators (in the form of a product called Soletra™, also manufactured by Medtronic): one for the right side of the brain (to control symptoms on the left side of the body), the other for the left side of the brain (to control symptoms on the right side of the body). Additional procedures were required to create pockets in the chest cavity to place the two generators required to run the individual leads. The Kinetra® neurostimulator generator, implanted in the pectoral area, is designed to eliminate the need for two devices by accommodating two leads that are placed in both the left and right sides of the brain to deliver the necessary impulses. The manufacturer argued that the development of a single neurostimulator that treats bilateral symptoms provides a less invasive treatment option for patients, and simpler implantation, follow up, and programming procedures for physicians.

In December 2003, the FDA approved the device. Therefore, for FY 2006, Kinetra® qualifies under the newness criterion because FDA approval was within the statutory timeframe of 2 to 3 years and its costs are not yet reflected in the DRG weights. Because there were no data available to evaluate costs associated with Kinetra®, in the FY 2005 IPPS final rule, we conducted the cost analysis using Soletra™, the predecessor technology used to treat this condition, as a proxy for Kinetra®. The preexisting technology provided the closest means to track cases that have actually used similar technology and served to identify the need and use of the new device. The manufacturer informed us that the cost of the Kinetra® device is twice the price of a single Soletra™ device. Because most patients would receive two Soletra™ devices if the Kinetra® device is not implanted, we believed data regarding the cost of Soletra™ would give a good measure of the actual costs that would be incurred. Medtronic submitted data for 104 cases that involved the Soletra™ device (26 cases in DRG 1 (Craniotomy Age > 17

With CC), and 78 cases in DRG 2 (Craniotomy Age > 17 Without CC)). These cases were identified from the FY 2002 MedPAR file using procedure codes 02.93 (Implantation, intracranial neurostimulator) and 86.09 (Other incision of skin and subcutaneous tissue). In the analysis presented by the applicant, the mean standardized charges for cases involving Soletra™ in DRGs 1 and 2 were \$69,018 and \$44,779, respectively. The mean standardized charge for these Soletra™ cases according to Medtronic's data was \$50,839.

Last year, we used the same procedure codes to identify 187 cases involving the Soletra™ device in DRGs 1 and 2 in the FY 2003 MedPAR file. Similar to the Medtronic data, 53 of the cases were found in DRG 1, and 134 cases were found in DRG 2. The average standardized charges for these cases in DRGs 1 and 2 were \$51,163 and \$44,874, respectively. Therefore, the case-weighted average standardized charge for cases that included implantation of the Soletra™ device was \$46,656. The new cost thresholds established under the revised criteria in Pub. L. 108-173 for DRGs 1 and 2 are \$43,245 and \$30,129, respectively. Accordingly, the case-weighted threshold to qualify for new technology add-on payment using the data we identified was determined to be \$33,846. Under this analysis, Kinetra® met the cost threshold.

We note that an ICD-9-CM code was approved for dual array pulse generator devices, effective October 1, 2004, for IPPS tracking purposes. The new ICD-9-CM code that will be assigned to this device is 86.95 (Insertion or replacement of dual array neurostimulator pulse generator), which includes dual array and dual channel generators for intracranial, spinal, and peripheral neurostimulators. The code will not separately identify cases with the Kinetra® device and will only be used to distinguish single versus dual channel-pulse generator devices. Because the code only became effective on October 1, 2004, we do not have any specific data regarding the costs of cases involving dual array pulse generator devices.

The manufacturer claimed that Kinetra® provides a range of substantial improvements beyond previously available technology. These include a reduced rate of device-related complications and hospitalizations or physician visits and less surgical trauma because only one generator implantation procedure is required. Kinetra® has a reed switch disabling function that physicians can use to prevent

inadvertent shutoff of the device, as occurs when accidentally tripped by electromagnetic interference (caused by common products such as metal detectors and garage door openers). Kinetra® also provides significant patient control, allowing patients to monitor whether the device is on or off, to monitor battery life, and to fine-tune the stimulation therapy within clinician-programmed parameters. While Kinetra® provides the ability for patients to better control their symptoms and reduce the complications associated with the existing technology, it does not eliminate the necessity for two surgeries. Because the patients who receive the device are often frail, the implantation generally occurs in two phases: the brain leads are implanted in one surgery, and the generator is implanted in another surgery, typically on another day. However, implanting Kinetra® does reduce the number of potential surgeries compared to its predecessor (which requires two surgeries to implant the two single-lead arrays to the brain and an additional surgery for implantation of the second generator). Therefore, the Kinetra® device reduces the number of surgeries from 3 to 2.

Last year, we solicited comments on (1) the issue of whether the device is sufficiently different from the previously used technology to qualify as a substantially improved treatment for the same patient symptoms; (2) the cost of the device; and (3) the approval of the device for add-on payment, given the uncertainty over the frequency with which the patients receiving the device have the generator implanted in a second hospital stay, and the frequency with which this implantation occurs in an outpatient setting. In the response, we received sufficient evidence to demonstrate that Kinetra® does represent a substantial clinical improvement over the previous Soletra™ device. Specifically, the increased patient control, reduced surgery, fewer complications, and elimination of environmental interference significantly improve patient outcomes. Therefore, we approved Kinetra® for new technology add-on payments for FY 2005.

Cases receiving Kinetra® for Parkinson's disease or essential tremor on or after October 1, 2004, are eligible to receive an add-on payment of up to \$8,285, or half the cost of the device, which is approximately \$16,570. These cases are identified by the presence of procedure codes 02.93 (Implantation or replacement of intracranial neurostimulator leads) and 86.95 (Insertion or replacement of dual array

neurostimulator pulse generator). If a claim has only the procedure code identifying the implantation of the intracranial leads, or if the claim identifies only insertion of the generator, no add-on payment will be made.

This technology received FDA approval on December 16, 2003, and remains within the 2 to 3 year period during which it can be considered new. Therefore, we are proposing to continue add-on payments for Kinetra® Implantable Neurostimulator for deep brain stimulation for FY 2006.

#### 4. FY 2006 Applications for New Technology Add-On

##### a. INFUSE™ Bone Graft (Bone Morphogenetic Proteins (BMPs) for Tibia Fractures)

Bone Morphogenetic Proteins (BMPs) have been shown to have the capacity to induce new bone formation and, therefore, to enhance the healing of fractures. Using recombinant techniques, some BMPs (also referred to as rhBMPs) can be produced in large quantities. This innovation has cleared the way for the potential use of BMPs in a variety of clinical applications such as in delayed union and nonunion of fractured bones and spinal fusions. One such product, rhBMP-2, is developed as an alternative to bone graft with spinal fusions.

Medtronic Sofamor Danek (Medtronic) resubmitted an application (previously submitted for consideration for FY 2005) for a new technology add-on payment in FY 2006 for the use of INFUSE™ Bone Graft in open tibia fractures. In cases of open tibia fractures, INFUSE™ is applied using an absorbable collagen sponge, which is then applied to the fractured bone to promote new bone formation and improved healing. The manufacturer contends that patient access to this technology is restricted due to the increased costs of treating these cases with INFUSE™. The FDA approved use of INFUSE™ for open tibia fractures on April 30, 2004.

Medtronic's first application for a new technology add-on payment for INFUSE™ Bone Graft in open tibia fractures was denied. As we discussed in the FY 2005 IPPS final rule (69 FR 49010), the FY 2005 application for INFUSE™ for open tibia fractures was denied because a similar product, OP-1, was approved in 2001 for the treatment of nonunion of tibia fractures.

*Comment:* In comments presented at the February 2005 new technology town hall meeting, Medtronic contended that there was no opportunity for public

comment on our decision regarding OP-1 Putty: "the public had no opportunity to comment on whether the follow-on products were 'substantially similar' to the primary technologies under consideration. The absence of such provisions led to unpredictability and confusion about the new-technology add-on program."

*Response:* In the FY 2005 IPPS final rule, we noted that a commenter brought the existence of the Stryker Biotech OP-1 product to our attention during the comment period on the IPPS proposed rule for FY 2005. The commenter noted OP-1's clinical similarity to INFUSE™ and contended that the products should be treated the same with respect to new technology payments when the product is used for tibia fractures. At that time, we determined that, despite the differences in indications under the respective FDA approvals, the two products were in use for many of the same kinds of cases. Specifically, clinical studies on the safety of OP-1 included patients with complicated fractures of the tibia, and those cases were similar to the cases described in the clinical trials for INFUSE™ for open tibia fractures. In addition, cases involving the use of OP-1 for long bone union and open tibia fractures are assigned to the same DRGs (DRGs 218 and 219 (Lower Extremity Procedures With and Without CC, respectively)) as cases involving INFUSE™. Therefore, we denied new technology add-on payments for INFUSE™ for open tibia fractures for FY 2005 on the grounds that the technology involving the use of bone morphogenetic proteins to treat severe long bone fractures (including open tibia fractures) and recalcitrant long bone fractures had been in use for more than 3 years.

We note that Medtronic had ample opportunity, prior to the issuance of the FY 2005 IPPS final rule, to bring to our attention the fact that there was a similar product on the market that was being used in long bone fractures. We based our decision for FY 2005 on the record that was placed at our disposal by the applicant and by commenters during the comment period. Nevertheless, we have considered the issues raised by these two products again in the course of evaluating Medtronic's new application for approval of INFUSE™ for new technology add-on payments in FY 2006.

As part of its FY 2006 application, Medtronic advanced several arguments designed to demonstrate that OP-1 and INFUSE™ are substantially different. The application cites data from several

studies as evidence of the clinical superiority of INFUSE™ over OP-1. Medtronic presented studies at the February 2005 new technology town hall meeting to provide evidence that INFUSE™ is superior to OP-1 in the time it takes for critical-sized defects to heal and in radiographic assessment, mechanical testing of the repaired bone, and histology of the union for trial subjects receiving INFUSE™ compared with OP-1. (Study subjects were canines whose ulnas had 2.5 cm each of bone removed and then equal amounts of OP-1 and INFUSE™ were put into the front legs in a head to head trial.) Medtronic has also argued that these studies demonstrate that OP-1 has been shown to be less effective than using the patient's own bone or the current standard of care (nail fixation with soft tissue medical management). Medtronic argued that the INFUSE™ product is not only superior to OP-1 for patients with open tibia fractures, but also that it is superior to any other treatment for these serious injuries.

Medtronic also pointed out that the FDA approved OP-1 for Humanitarian Device Exemption (HDE) status, whereas INFUSE™ received a Pre-Market Approval (PMA). To receive HDE approval, a product only needs to meet a safety standard, while standards of both safety and efficacy have to be met for a PMA approval. Medtronic argued that, because the only point the manufacturer of OP-1 was able to prove was that it did not harm those individuals that received it, the efficacy of OP-1 not only has not been demonstrated for the general population, but also more specifically, it has not been proven in the Medicare population. Medtronic presented arguments that INFUSE™ is a superior product to OP-1 because the INFUSE™ product has demonstrated safety and efficacy, while the OP-1 product has merely demonstrated that it is safe to use in humans. Medtronic pointed to the labeled indications and package inserts provided with the two products, stating that only INFUSE™ provides a substantial clinical improvement to patients receiving a BMP product.

We do not believe that the different types of FDA approvals for the two products are relevant to distinguish between the two products in determining whether either product should be considered for new technology add-on payments under the IPPS. Manufacturers seek different types of FDA approval for many different reasons, including timing, the availability of adequate studies, the availability of resources to pursue research studies, and the size of the

patient population that may be affected. The FDA has stated that the HDE approval process was established to address cases involving devices used in the treatment or diagnosis of diseases affecting fewer than 4,000 individuals in the United States per year: "A device manufacturer's research and development costs could exceed its market returns for diseases or conditions affecting small patient populations. FDA, therefore, developed and published [the regulation establishing the HDE process] to provide an incentive for the development of devices for use in the treatment or diagnosis of diseases affecting these populations." (<http://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfHDE/HDEInformation.cfm>). The fact that two products received different types of approval does not demonstrate either that they are substantially different for purposes of new technology add-on payments, or that one is new and the other is not. Nor do the different types of FDA approval imply that one product could meet our substantial clinical improvement criterion and the other could not. Neither type of FDA approval requires that products establish substantial clinical improvement, as is required for approval of new technology add-on payments. Theoretically, a product that receives an FDA HDE approval could subsequently meet our substantial clinical improvement criterion, while a product that receives an FDA PMA approval could fail to do so. We base our substantial clinical improvement determinations on the evidence presented in the course of the application process, and not on the type of FDA approval.

For purposes of determining whether the use of rhBMPs for open tibia fracture represents a new technology, the crucial consideration is whether the costs of this technology are represented in the weights of the relevant DRGs. Cases that involve treatment of non-healed and acute tibia fractures fall into the same DRGs. We have identified 10,047 cases involving the use of rhBMPs in the FY 2004 MedPAR data file. This use includes the approved indications for INFUSE™ in spinal fusions (6,712 cases) and tibia DRGs (77 cases). However, we note that an additional 3,258 cases involving the off-label use of rhBMPs were found in 47 DRGs in the FY 2004 MedPAR data. We also note that, in our analysis of the FY 2003 MedPAR data, an additional 890 cases of off-label use (identified by the presence of ICD-9-CM code 84.52) were found in 36 DRGs. Therefore, we note

that the use of rhBMPs, made by Medtronic or otherwise, has penetrated the cost data that were used to set the FY 2005 and FY 2006 DRG weights. Whether or not it is possible to differentiate between patient populations that would be eligible to receive the OP-1 Implant for nonunions or the INFUSE™ bone graft for open tibia fractures, the patient populations both fall into the same DRGs. In addition, we have determined that the costs associated with the two products are comparable (69 FR 49009). Therefore, because BMP products have been used in treating both types of fractures included in the same DRGs since 2001, we continue to believe that the hospital charge data used in developing the relative weights reflect the costs of these products.

**Comment:** In our **Federal Register** announcement of the February 23, 2005 new technology town hall meeting, held on February 23, 2005, we solicited comments on the issue of when products should be considered substantially similar. As a result, Medtronic recommended several criteria for determining whether two or more products are substantially similar and requested that we apply these criteria in determining whether OP-1 and INFUSE™ are similar for new technology add-on payment purposes. The three criteria recommended by Medtronic are:

- The technologies or services in question use the same, or a similar, mechanism of action to achieve the therapeutic outcome.
- The technologies or services are indicated for use in the same population for the same condition.
- The technologies or services achieve the same level of substantial improvement.

Medtronic has also argued that, according to its proposed criteria, OP-1 would fail on two of the three proposed tests for substantial similarity:

- According to Medtronic, the OP-1 implant "arguably" uses the same or a similar mechanism of action to achieve the therapeutic outcome.
- OP-1 and INFUSE™ are indicated for use in different population and different conditions. According to Medtronic, INFUSE™ Bone Graft has an indication for acute, open tibia fractures only, used within 14 days, and is to be used with an intramedullary (IM) nail as part of the primary procedure. There is no limitation on the number of patients that can receive the technology. OP-1 Implant is indicated only for recalcitrant long-bone nonunions that have failed to heal. The HDE approval also specifies that use of OP-

1 is limited to secondary procedures (as would be expected with nonunions). The number of patients able to receive the device is limited to 4,000 patients per year and with oversight from an Institutional Review Board.

- Medtronic argues the products do not achieve the same level of substantial improvement (as discussed above).

**Response:** We agree with Medtronic that the first proposed criterion has some relevance in determining whether products are substantially similar. In evaluating the application for new technology add-on payments last year, we made the determination that, while these products are not identical chemically, the products do use the same mechanism of action to achieve the therapeutic outcome. However, we do not agree that the other two criteria recommended by Medtronic are relevant considerations for this purpose. As we have discussed above, we believe that whether cases involving different products are assigned to the same DRGs is a more relevant consideration than whether the products have the same specific indications. In addition, as we have already stated, we continue to believe that the hospital charge data used in developing the relative weights of the relevant DRGs reflect the costs of these products. Furthermore, we do not necessarily agree that considerations about the degrees of clinical improvements offered by different products should enter into decisions about whether products are new. We have always based our decisions about new technology add-on payments on a logical sequence of determinations, moving from the newness criterion to the cost criterion and finally to the substantial clinical improvement criterion. Specifically, we do not make determinations about substantial improvement unless a product has already been determined to be new and to meet the cost criterion. Therefore, we are reluctant to import substantial clinical improvement considerations into the logical prior decision about whether technologies are new. Furthermore, while we may sometimes need to make separate determinations about whether similar products meet the substantial clinical improvement criterion, we do not believe that it would be appropriate to make determinations about whether one product or another is clinically superior. However, we welcome comments while we continue to consider these issues.

**Comment:** Medtronic suggested revisions to the application process that are designed to assist in identifying substantially similar products and provide the public with opportunity for

comment on specific instances in which substantial similarity is an issue. The suggested proposed revisions are:

- After receipt of all new applications for a fiscal year, CMS should publish a **Federal Register** notice specifically asking manufacturers to identify if they wish to receive consideration for products that may be substantially similar to applications received. Such notice would probably occur in January. Responses would be required by a date certain in advance of the new technology town hall meeting, and would include justification of how the products meet the "substantial similarity" criteria.
- The new technology town hall meeting should include a discussion of products identified by manufacturers as "substantially similar" to other approved products or pending applications.

- CMS should publish initial findings about "substantial similarity" in the proposed hospital inpatient rule, with opportunity for public comment.

- CMS should publish ultimate findings in the inpatient final rule.

Alternatively, Medtronic suggested that, if a manufacturer identifies a product that may be substantially similar to a technology with an approved add-on payment, the manufacturer may choose to submit an application under the normal deadlines for the add-on payment program.

**Response:** We appreciate Medtronic's suggestions for evaluating similar technologies for new technology add-on payment. We have stated on several occasions that we wish to avoid creating situations in which similar products receive different treatment because only one manufacturer has submitted an application for new technology add-on payments. As we discussed in the September 7, 2001 **Federal Register** (66 FR 46915), an approval of a new technology for special payment should extend to all technologies that are substantially similar. Otherwise, our payment policy would bestow an advantage to the first applicant to receive approval for a particular new technology.

In addition, we note that commenters on the FY 2005 proposed rule placed a great deal of emphasis on the fact that many manufacturers developing new technologies are not aware of the existence of the add-on payment provision or lack the resources to apply for add-on payment. Therefore, commenters on that proposed rule argued that the regulations we have established are already too stringent and cumbersome, especially for small manufacturers to access the new

technology add-on payment process. The proposal by Medtronic would place further burden on these small manufacturers, both to know that an application has been made for a similar product and to make representations on a product that may or may not be on the market. Therefore, we are reluctant to adopt a process that places the formal burden on a competitor to seek equal treatment. However, we welcome comments while we continue to consider these issues.

We note that Medtronic submitted data on 236 cases using INFUSE™ for open tibia fractures in the FY 2003 MedPAR data file, as identified by procedure code 79.36 (Reduction, fracture, open, internal fixation, tibia and fibula) and diagnosis codes of either 823.30 (Fracture of tibia alone, shaft, open) or 823.32 (Fracture of fibula and tibia, shaft, open). Medtronic also noted that the patients in clinical trials with malunion fractures (diagnosis code 733.81) or nonunion fractures (diagnosis code 733.82) would also be likely candidates to receive INFUSE™. Based on the data submitted by the applicant, INFUSE™ would be used primarily in two different DRGs: 218 and 219 (Lower Extremity and Humerus Procedures Except Hip, Foot, Femur Age > 17, With and Without CC, respectively). The analysis performed by the applicant resulted in a case-weighted cost threshold of \$24,461 for these DRGs. The average case-weighted standardized charge for cases using INFUSE™ in these DRGs would be \$39,537. Therefore, the applicant maintains that INFUSE™ for open tibia fractures meets the cost criterion.

However, because the costs of INFUSE™ and OP-1 are already reflected in the relevant DRGs, these products cannot be considered new. Therefore, we are proposing to deny new technology add-on payments for INFUSE™ bone graft for open tibia fractures for FY 2006.

b. Aquadex™ System 100 Fluid Removal System (System 100)

CHF Solutions, Inc. resubmitted an application (previously submitted for consideration for FY 2005) for the approval of the System 100 for new technology add-on payments for FY 2006. The System 100 is designed to remove excess fluid (primarily excess water) from patients suffering from severe fluid overload through the process of ultrafiltration. Fluid retention, sometimes to an extreme degree, is a common problem for patients with chronic congestive heart failure. This technology removes excess fluid without causing hemodynamic

instability. It also avoids the inherent nephrotoxicity and tachyphylaxis associated with aggressive diuretic therapy, the mainstay of current therapy for fluid overload in congestive heart failure.

The System 100 consists of: (1) An S-100 console; (2) a UF 500 blood circuit; (3) an extended length catheter (ELC); and (4) a catheter extension tubing. The System 100 is designed to monitor the extracorporeal blood circuit and to alert the user to abnormal conditions. Vascular access is established via the peripheral venous system, and up to 4 liters of excess fluid can be removed in an 8-hour period.

On June 3, 2002, FDA approved the System 100 for use with peripheral venous access. On November 20, 2003, FDA approved the System 100 for expanded use with central venous access and catheter extension use for infusion or withdrawal circuit line with other commercially applicable venous catheters. According to the applicant, although the FDA first approved System 100 in June 2002, it was not used by hospitals until August 2002 because of the substantial amount of time necessary to market and sell the device to hospitals. The applicant presented data and evidence demonstrating that the System 100 was not marketed until August 2002.

We note the applicant submitted an application for FY 2005 and was denied new technology add-on payments. Our review indicated that the applicant did not present sufficient objective clinical evidence to determine that the System 100 meets the substantial clinical improvement criterion (such as a large prospective, randomized clinical trial) even though it is indicated for use in patients with congestive heart failure, a common condition in the Medicare population. However, for FY 2006, we are proposing to deny System 100 new technology add-on payments on the basis of our determination that it is no longer new. Technology is no longer considered new 2 to 3 years after data reflecting its costs begin to become available. Because data on the costs of the System 100 first became available in 2002, the costs are currently reflected in the DRG weights and the device is no longer new.

The applicant also submitted information for the cost and substantial clinical improvement criteria. As stated last year, it is important to note at the outset of the cost analysis that the console is reusable and is, therefore, a capital cost. Only the circuits and catheters are components that represent operating expenses. Section 1886(d)(5)(K)(i) of the Act requires that

the Secretary establish a mechanism to recognize the costs of new medical services or technologies under the payment system established under subsection (d) of section 1886, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act, which makes no mention of any add-on payments for a new medical service or technology. Therefore, it is not appropriate to include capital costs in the add-on payments for a new medical service or technology and these costs should also not be considered in evaluating whether a technology meets the cost criterion. The applicant has applied for add-on payments for only the circuits and catheter, which represent the operating expenses of the device. However, as stated in the FY 2005 IPPS final rule, we believe that the catheters cannot be considered new technology for this device. As a result, we considered only the UF 500 disposable blood circuit as relevant to the evaluation of the cost criterion.

The applicant submitted data from the FY 2003 MedPAR file in support of its application for new technology add-on payments for FY 2006. The applicant used a combination of diagnosis codes to determine which cases could potentially use the System 100. The applicant found 28,155 cases with the following combination of ICD-9-CM diagnosis codes: 428.0 through 428.9 (Heart Failure), 402.91 (Unspecified with Heart Failure), or 402.11 (Hypertensive Heart Disease with Heart Failure), in combination with 276.6 (Fluid Overload) and 782.3 (Edema). The 28,155 cases were found among 148 DRGs with 50.1 percent of cases mapped across DRGs 88, 89, 127, 277 and 316. The applicant eliminated those DRGs with less than 150 cases, which resulted in a total of 22,620 cases that could potentially use the System 100. The case-weighted average standardized charge across all DRGs was \$13,619.32. The case-weighted threshold across all DRGs was \$16,125.42. Although the case-weighted threshold is greater than the case-weighted standardized charge, it is necessary to include the standardized charge for the circuits used in each case. In order to establish the charge per circuit, the applicant submitted data regarding 76 actual cases that used the System 100. Based on these 76 cases, the standardized charge per circuit was \$2,591. The applicant also stated that an average of two circuits are used per case. Therefore, adding \$5,182 for the charge of the two

circuits to the case-weighted average standardized charge of \$13,619.32 results in a total case-weighted standardized charge of \$18,801.32. This amount is greater than the case-weighted threshold of \$16,125.42.

The applicant contended that the System 100 represents a substantial clinical improvement for the following reasons: It removes excess fluid without the use of diuretics; it does not lead to electrolyte imbalance, hemodynamic instability or worsening renal function; it can restore diuretic responsiveness; it does not adversely affect the renin-angiotensin system; it reduces length of hospital stay for the treatment of congestive heart failure, and it requires only peripheral venous access. The applicant also noted that there are some clinical trials that have demonstrated the clinical safety and effectiveness as well as cost effectiveness of the System 100 in treating patients with fluid overload.

However, as stated above, we are proposing to deny new technology add-on payments for the System 100 because it does not meet the newness criterion.

We received no public comments regarding this application for add-on payments.

#### c. CHARITE™ Artificial Disc (CHARITE™)

DePuy Spine™ submitted an application for new technology add-on payments for the CHARITE™ Artificial Disc for FY 2006. This device is a prosthetic intervertebral disc. DePuy Spine™ stated that the CHARITE™ Artificial Disc is the first artificial disc approved for use in the United States. It is a 3-piece articulating medical device consisting of a sliding core that is placed between two metal endplates. The sliding core is made from a medical grade plastic and the endplates are made from medical grade cobalt chromium alloy. The endplates support the core and have small teeth that are secured to the vertebrae above and below the disc space. The sliding core fits in between the endplates.

On October 26, 2004, the FDA approved the CHARITE™ Artificial Disc for single level spinal arthroplasty in skeletally mature patients with degenerative disc disease (DDD) between L4 and S1. The FDA further stated that DDD is defined as discogenic back pain with degeneration of the disc confirmed by patient history and radiographic studies. These DDD patients should have no more than 3 mm of spondylolisthesis at an involved level. Patients receiving the CHARITE™ Artificial Disc should have failed at least 6 months of conservative treatment

prior to implantation of the CHARITE™ Artificial Disc. Because the device is within the statutory timeframe of 2 to 3 years and data is not yet reflected within the DRGs, we consider the CHARITE™ Artificial Disc to meet the newness criterion.

We note that an ICD-9-CM code was effective October 1, 2004, for IPPS tracking purposes. The code assigned to the CHARITE™ was 84.65 (Insertion of total spinal disc prosthesis, lumbosacral).

For analysis of the cost criterion, the applicant submitted two sets of data: one that used actual cases and one that used FY 2003 MedPAR cases. The applicant expects that cases using the CHARITE™ will map to DRGs 499 and 500. The applicant submitted 68 actual cases from 35 hospitals that used the CHARITE™. Of these 68 cases, only 3 were Medicare patients; the remaining cases were privately insured patients or patients for whom the payer was unknown. Using data from the 68 actual cases, the average standardized charge was \$40,722. The applicant maintained that this figure is well in excess of the thresholds for DRGs 499 and 500 (regardless of a case weighted threshold) of \$24,828 and \$17,299 respectively. Based on this analysis, the applicant maintained that the CHARITE™ meets the cost criterion because the average standardized charge exceeds the charge thresholds for DRGs 499 and 500.

In addition, as stated above, the applicant submitted cases from the FY 2003 MedPAR file. The applicant searched the MedPAR file for ICD-9-CM procedure codes 81.06, 81.07, and 81.08 in combination with diagnosis codes 722.10, 722.2, 722.5, 722.52, 722.6, 722.7, 722.73 and 756.12, to identify a patient population that could be eligible for the CHARITE™ Artificial Disc and found a total of 12,680 cases. However, these cases are from the FY 2003 MedPAR file and precede the effective date of ICD-9-CM code 84.65 that is currently used to track the device. Of these 12,680 cases, 55.5 percent were reported in DRG 497, and 44.5 percent were reported in DRG 498. The applicant stated that cases using the CHARITE™ device group to the DRGs for back and neck procedures that exclude spinal fusions (DRGs 499 and 500). However, the applicant argues that the CHARITE™ could be a substitute for spinal fusion procedures found in DRGs 497 and 498 and, therefore, used cases from these DRGs to evaluate whether the CHARITE™ meets the cost criterion and to argue that procedures using the technology should be grouped to the spinal fusion DRGs. The average standardized charge per case was

\$50,098 for DRG 497 and \$41,290 for DRG 498. Using revenue codes 272 and 278 from the MedPAR file, the applicant then subtracted the charges for surgical and medical supplies used in connection with spinal fusion procedures, which resulted in a standardized charge of all other charges of \$24,333 for DRG 497 and \$22,183 for DRG 498. Based on the actual cases above, the applicant then estimated the average standardized charge for surgical and medical supplies per case for the CHARITE™ was \$20,033. The applicant estimated that charges have grown by 15 percent from FY 2003 to FY 2005 and, therefore, deflated the average standardized charge for surgical and medical supplies of the CHARITE™ by 15 percent to \$17,420. The applicant then added the average standardized charge for surgical and medical supplies of the CHARITE™ to the standardized charge of all other charges for DRG 497 and 498 and also inflated the charges by 15 percent in order to update the data to FY 2005 charge levels. This amounted to a case-weighted average standardized charge of \$46,256. Although the analysis was completed with DRGs 497 and 498, it is necessary to compare the average standardized charge to the thresholds of DRGs 499 and 500 because the GROUPEr maps these cases to DRGs 499 and 500. As a result, the case-weighted threshold was \$21,480. Similar to the analysis above, the applicant stated that the case-weighted average standardized charge is greater than the case-weighted threshold and, as a result, the applicant maintained that the CHARITE™ meets the cost criterion.

The applicant also contended that the CHARITE™ represents a substantial clinical improvement over existing technology. Use of the CHARITE™ may eliminate the need for spinal fusion and the use of autogenous bone, and the applicant stated that, based on the Investigational Device Exemption (IDE) study, "A Prospective Randomized Multicenter Comparison of Artificial Disc vs. Fusion for Single Level Lumbar Degenerative Disc Disease" (Blumenthal, S, et al, National American Spine Society 2004 Abstract) that patients who received the CHARITE™ Artificial Disc were discharged from the hospital after an average of 3.7 days compared to 4.2 days in the fusion group. Furthermore, the applicant stated that patients who received the CHARITE™ Artificial Disc had a statistically greater improvement in Oswestry Disability Index scores and Visual Analog Scale Pain scores compared to the fusion group at 6 weeks

and 3, 6 and 12 months. The study also showed greater improvement from baseline compared to the fusion group on the Physical Component Score at 3, 6, and 23 months. In addition, the applicant states that patients receiving the CHARITE™ Artificial Disc returned to normal activities in half the time, compared to patients who underwent fusion, and at the 2 year follow up, 15 percent of patients who underwent a fusion were dissatisfied with the postoperative improvements compared to 2 percent who received the CHARITE™ Artificial Disc. Also, patients who received the CHARITE™ Artificial Disc returned to work on average of 12.3 weeks after surgery compared to 16.3 weeks after circumferential fusion and 14.4 weeks with Bagby and Kuslich cages. The applicant finally stated that the motion preserving technology of the CHARITE™ Artificial Disc may reduce the risk of increase of degenerative disc disease (DDD). The applicant explained that degeneration of adjacent discs due to increased stress has been strongly associated with spinal fusion utilizing instrumentation. In a followup of 100 patients (minimum 10 years) who received the CHARITE™ Artificial Disc, the incidence of adjacent level DDD was 2 percent.

We are continuing to review the information on whether the CHARITE™ Artificial Disc would appear to represent a substantial clinical improvement over existing technology for certain patient populations. Based on the studies submitted to the FDA and CMS, we remain concerned that the information presented may not definitively substantiate whether the CHARITE™ Artificial Disc is a substantial clinical improvement over spinal fusion. In addition, we are concerned that the cited IDE study enrolled no patients over 60 years of age, which excludes much of the Medicare population, and we are concerned that the device is contraindicated in patients with "significant osteoporosis," which is quite common in the Medicare population. We invite comment on both of these points and on the more general question of whether the device satisfies the substantial clinical improvement criterion.

Despite the issues mentioned above, we are still considering whether it is appropriate to approve new technology add-on payment status for the CHARITE™ Artificial Disc for FY 2006. If approved for add-on payments, the device would be reimbursed up to half of the costs for the device. Because the manufacturer has stated that the cost for

the CHARITE™ Artificial Disc would be \$11,500, the maximum add-on payment for the device would be \$5,750. In the final rule, we will make a final determination on whether the CHARITE™ Artificial Disc should receive new technology add-on payments for FY 2006 based on public comments and our continuing analyses.

We finally note that the applicant requested a DRG reassignment for cases of the CHARITE™ Artificial Disc from DRGs 499 (Back and Neck Procedures Except Spinal Fusion With CC) and 500 (Back and Neck Procedures Except Spinal Fusion Without CC) to DRGs 497 (Spinal Fusion Except Cervical With CC) and 498 (Spinal Fusion Except Cervical Without CC). The applicant argued that the costs associated with an artificial disc surgery are similar to spinal fusion and inclusion in DRGs 497 and 498 would obviate the need to make a new technology add-on payment. On October 1, 2004, we created new codes for the insertion of spinal disc prostheses (codes 84.60 through 84.69). In the FY 2005 IPPS proposed rule and the final rule, we described the new DRG assignments for these new codes in Table 6B of the Addendum to the rules. We received a number of comments recommending that we change the DRG assignments from DRGs 499 and 500 in MDC 8 to the DRGs for spinal fusion (DRGs 497 and 498). In the FY 2005 IPPS final rule (69 FR 48938), we indicated that DRGs 497 and 498 are limited to spinal fusion procedures. Because the surgery involving the CHARITE™ is not a spinal fusion, we decided not to include this procedure in these DRGs. However, we will continue to analyze this issue and are interested in public comments on both the new technology application for the CHARITE™ and the DRG assignment for spinal disc prostheses.

We received no public comments regarding this application for new technology add-on payments.

#### d. Endovascular Graft Repair of the Thoracic Aorta

Endovascular stent-grafting of the descending thoracic aorta (TA) provides a less invasive alternative to the traditional open surgical approach required for the management of descending thoracic aortic aneurysms. W.L. Gore & Associates, Inc. submitted an application for consideration of its Endovascular Graft Repair of the Thoracic Aorta (GORE TAG) for new technology add-on payments for FY 2006. The GORE TAG device is a tubular stent-graft mounted on a catheter-based delivery system, and it replaces the synthetic graft normally

sutured in place during open surgery. The device is identified using ICD-9-CM procedure code 39.79 (Other endovascular repair (of aneurysm) of other vessels). The applicant has requested a unique ICD-9-CM procedure code.

At this point the time of the initial application, the FDA had not yet approved this technology for general use. Subsequently, however, we were notified that FDA approval was granted on March 23, 2005. Although we discuss some of the data submitted with the application for new technology add-on payments below, we are unable to include a detailed analysis of cost data and substantial clinical improvement data in this proposed rule because FDA approval occurred too late for us to conduct a complete analysis.

The applicant submitted cost threshold information for the GORE TAG device. According to the manufacturer, cases using the GORE TAG device would fall into DRGs 110 and 111 (Major Cardiovascular Procedures With and Without CC, respectively). The applicant identified 185 cases in the FY 2003 MedPAR using procedure code 39.79 (Other endovascular repair (of aneurysm) of other vessels) and primary diagnosis codes 441.2 (Thoracic aneurysm, without mention of rupture), 441.1 (Thoracic aneurysm, ruptured), or 441.01 (Dissection of aorta, thoracic). The case-weighted standardized charge for 177 of these cases was \$60,905. According to the manufacturer, the case-weighted cost threshold for these DRGs is \$49,817. Based on this analysis, the manufacturer maintained that the technology meets our cost threshold.

The manufacturer argued that the GORE TAG represents a substantial clinical improvement over existing technology, primarily by avoiding the traditional open aneurysm repair procedure with its associated high morbidity and mortality. The applicant argued that a descending thoracic aorta aneurysm is a potentially life threatening condition that currently requires a major operative procedure for its treatment. The mortality and complication rates associated with this surgery are very high, and the surgery is frequently performed under urgent or emergent conditions. The applicant noted that such complications can increase the length of the hospital stay and can include neurological damage, paralysis, renal failure, pulmonary emboli, hemorrhage, and sepsis. The average time for patients undergoing surgical repair to return to normal activity is 3 to 4 months, but can be significantly longer.

In comparison, the applicant argued that endovascular stent-grafting done with the GORE TAG thoracic endoprosthesis is minimally invasive. The manufacturer noted that patients treated with the endovascular technique experience far less aneurysm-related mortality and morbidity, compared to those patients that receive the open procedure resulting in reduced overall length-of-stay, less intensive care unit days and less operative complications.

We received the following public comments, in accordance with section 503(b)(2) of Pub. L. 108-173, regarding this application for add-on payments.

*Comment:* Several commenters expressed support for approval of new technology add-on payments for the GORE TAG device. These commenters noted that the data presented to the FDA advisory panel for consideration for FDA approval of the device clearly demonstrate the safety and efficacy of the GORE TAG device. They also noted that nearly 200 patients have been treated with the endografts, with a highly significant difference in both postoperative mortality and a reduction in the incidence of spinal cord ischemic complications, with some commenters noting the trial results, which showed a reduction in the rate of paraplegia from 14 percent to 3 percent, compared to open surgery. The commenters also stressed the rigorous nature of the open surgery, which requires a left lateral thoracotomy, resulting in significant morbidity. The commenters further argued that, since many of the patients with degenerative aneurysm of the thoracic aorta are elderly or present with significant comorbidities, or both, it is "a common circumstance in clinical practice to deny repair to such patients because of the magnitude of the conventional open surgery." Other commenters stated that the 5-year mortality in all patients diagnosed with thoracic aortic aneurysm is as high as 80 percent in some groups of patients. Therefore, the commenters argued, the GORE TAG device for thoracic aortic aneurysm satisfies the criteria for substantial clinical improvement.

*Response:* We appreciate the commenters' input on this criterion. We will consider these comments regarding the substantial clinical improvement criterion in the final rule if we determine that the technology meets the other two criteria.

*Comment:* A representative of another device manufacturer stated at the town hall meeting that the manufacturer has a similar product awaiting FDA approval.

*Response:* As we discussed in the September 7, 2001 Federal Register (66

FR 46915), an approval of a new technology for special payment should extend to all technologies that are substantially similar. Otherwise, our payment policy would bestow an advantage to the first applicant to receive approval for a particular new technology. In this case, we will determine whether the GORE TAG device qualifies for new technology add-on payments in the FY 2006 final rule. In the event that this technology satisfies all the criteria, we would extend new technology payments to any substantially similar technology that also receives FDA approval prior to publication of the FY 2006 final rule. We welcome comments regarding this technology in light of its recent FDA approval, particularly with regard to the cost threshold and the substantial clinical improvement criteria.

#### e. Restore® Rechargeable Implantable Neurostimulator

Medtronic Neurological submitted an application for new technology add-on payments for its Restore® Rechargeable Implantable Neurostimulator. The Restore® Rechargeable Implantable Neurostimulator is designed to deliver electrical stimulation to the spinal cord for treatment of chronic, intractable pain.

Neurostimulation is designed to deliver electrical stimulation to the spinal cord to block the sensation of pain. The current technology standard for neurostimulators utilizes internal sealed batteries as the power source to generate the electrical current. These internal batteries have finite lives, and require replacement when their power has been completely discharged. According to the manufacturer, the Restore® Rechargeable Implantable Neurostimulator "represents the next generation of neurostimulator technology, allowing the physician to set the voltage parameters in such a way that fully meets the patient's requirements to achieve adequate pain relief without fear of premature depletion of the battery." The applicant stated that the expected life of the Restore® rechargeable battery is 9 years, compared to an average life of 3 years for conventional neurostimulator batteries. The applicant stated that this represents a significant clinical improvement because patients can use any power settings that are necessary to achieve pain relief with less concern for battery depletion and subsequent battery replacement.

This device has not yet received approval for use by the FDA; however, another manufacturer has received approval for a similar device.

(Advanced Bionics' Precision® Rechargeable Neurostimulator was approved by the FDA on April 27, 2004.)

Medtronic Neurological also provided data to determine whether the Restore® Rechargeable Implantable Neurostimulator meets the cost criterion. Medtronic Neurological stated that the cases involving use of the device would primarily fall into DRGs 499, 500, 531 and 532, which have a case-weighted threshold of \$24,090. The manufacturer stated that the anticipated average standardized charge per case involving the Restore® technology is \$59,265. This manufacturer derived this estimate by identifying cases in the FY 2003 MedPAR that reported procedure code 03.93 (Insertion or replacement of spinal neurostimulators). The manufacturer then added the total cost of the Restore® Rechargeable Implantable Neurostimulator to the average standardized charges for those cases. Of the applicable charges for the Restore® Rechargeable Implantable Neurostimulator, only the components that the applicant identified as new would be eligible for new technology add-on payments. Medtronic Neurological submitted information that distinguished the old and new components of the device and submitted data indicating that the neurostimulator itself is \$17,995 and the patient recharger, antenna, and belt are \$3,140. Thus, the total cost for new components would be \$21,135, with a maximum add-on amount of \$10,568 if the product were to be approved for new technology payments.

We note that we reviewed a technology for add-on payments for FY 2003 called Renew™ Radio Frequency Spinal Cord Stimulation (SCS) Therapy, made by Advanced Neuromodulation Systems (ANS). In the FY 2003 final rule, we discussed and subsequently denied an application for new technology add-on payment for Renew™ SCS because "Renew™ SCS was introduced in July 1999 as a device for the treatment of chronic intractable pain of the trunk and limbs." (67 FR 50019) We also noted, "[t]his system only requires one surgical placement and does not require additional surgeries to replace batteries as do other internal SCS systems."

The applicant also stated in its application for Restore® that cases where it is used will be identified by ICD-9-CM procedure code 03.93 (Insertion or replacement of spinal neurostimulators). As we discussed in the FY 2003 final rule (67 FR 50019), the Renew™ SCS is identified by the same ICD-9-CM procedure code. The

applicant has also applied for a new ICD-9-CM code for rechargeable neurostimulator pulse generator (We refer readers to Tables 6A through 6H in the Addendum to this proposed rule for information regarding ICD-9-CM codes.) Because both technologies are similar, we asked Medtronic to provide information that would demonstrate how the products were substantially different. The applicant noted that the Renew™ SCS, while programmable and rechargeable, is not a good option for those patients who have high energy requirements because of chronic intractable pain that will result in more battery wear and subsequent surgery to replace the device. Both systems rely on rechargeable batteries, and in the case of Renew™ SCS the energy is transmitted through the skin from a radiofrequency source for the purpose of recharging. The manufacturer of the Restore® device contends that it is superior to the Renew™ device because Renew™ requires an external component that uses a skin adhesive that is uncomfortable and inconvenient (causes skin irritation, is affected by moisture that will come from bathing, sweating, swimming, etc.), leading to patient noncompliance.

Because FDA approval has not yet been received for this device, we are making no decision concerning the Restore® application at this time. We will make a formal determination if FDA approval occurs in sufficient time for full consideration in the final FY 2006 rule. However, we have reservations about whether this technology is new for purposes of the new technology add-on payments because of its similarity to other products that are also used to treat the same conditions. Although we recognize the benefits of a more easily rechargeable neurostimulator system, we believe that the Restore® device may not be sufficiently different from predecessor devices to meet the newness criterion for the new technology add-on payment. As we discussed above, similar products have been on the market since 1999. Therefore, these technologies are already represented in the DRG weights and are not considered new for the purposes of the new technology add-on payment provision. We welcome comments on this issue, specifically regarding how the Restore® device may or may not be significantly different from previous devices. We also seek comments on whether the product meets the cost and significant improvement criteria.

We received no public comments regarding this application for add-on payments.

#### f. Safe-Cross® Radio Frequency Total Occlusion Crossing System (Safe-Cross®)

Intraluminal Therapeutics submitted an application for the Safe Cross® Radio Frequency (RF) Total Occlusion Crossing System. This device performs the function of a guidewire during percutaneous transluminal angioplasty of chronic total occlusions of peripheral and coronary arteries. Using fiberoptic guidance and radiofrequency ablation, it is able to cross lesions where a standard guidewire is unsuccessful. On November 21, 2003, the FDA approved the Safe Cross® for use in iliac and superficial femoral arteries. The device was approved by the FDA for all native peripheral arteries except carotids in August 2004. In January 2004, the FDA approved the Safe Cross® for coronary arteries as well. Because the device is within the statutory timeframe of 2 to 3 years for all approved uses and data regarding the cost of this device are not yet reflected within the DRG weights, we consider the Safe Cross® to meet the newness criterion.

We note that the applicant submitted an application for a distinctive ICD-9-CM code. The applicant noted in its application that the device is currently coded with ICD-9-CM procedure codes 36.09 (Other removal of coronary artery obstruction) and 39.50 (Angioplasty or atherectomy of other noncoronary vessels).

As we stated in last year's final rule, section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services or technologies under the payment system established under subsection (d) of section 1886, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act, which makes no mention of any add-on payments for a new medical service or technology. Therefore, it is not appropriate to include capital costs in the add-on payments for a new medical service or technology, and these costs should not be considered in evaluating whether a technology meets the cost criterion. As a result, we consider only the Safe Cross® crossing wire, ground pad, and accessories to be operating equipment that is relevant to the evaluation of the cost criterion.

The applicant submitted the following two analyses on the cost criterion. The first analysis contained 27 actual cases

from two hospitals. Of these 27 cases, 25.1 percent of the cases were reported in DRGs 24 (Seizure and Headache Age >17 With CC), 107 (Coronary Bypass With Cardiac Catheterization), 125 (Circulatory Disorders Except AMI, With Cardiac Catheterization and Without Complex Diagnosis), 518 (Percutaneous Cardiovascular Procedure Without Coronary Artery Stent or AMI), and 526 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent With AMI); and 74.9 percent were reported in DRG 527 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent Without AMI). This resulted in a case-weighted threshold of \$35,956 and a case-weighted average standardized charge of \$40,319. Because the case-weighted average standardized charge is greater than the case-weighted threshold, the applicant maintained that the Safe Cross® meets the cost criterion.

The applicant also submitted cases from the FY 2003 MedPAR. The applicant found a total of 1,274,535 cases that could be eligible for the Safe Cross® using diagnosis codes 411 through 411.89 (Other acute and subacute forms of ischemic heart disease) or 414 through 414.19 (Other forms of chronic ischemic heart disease) in combination with any of the following procedure codes: 36.01 (Single vessel percutaneous transluminal coronary angioplasty (PTCA) or coronary atherectomy without mention of thrombolytic agent), 36.02 (Single vessel PTCA or coronary atherectomy with mention of thrombolytic agent), 36.05 (Multiple vessel PTCA or coronary atherectomy performed during the same operation with or without mention of thrombolytic agent), 36.06 (Insertion of nondrug-eluting coronary artery stent(s)), 36.07 (Insertion of drug-eluting coronary artery stent(s)) and 36.09 (Other removal of coronary artery obstruction). A total of 59.40 percent of these cases fell into DRG 517 (Percutaneous Cardiovascular Procedure With Nondrug-Eluting Stent Without AMI), 16.4 percent of cases into DRG 516 (Percutaneous Cardiovascular Procedure With AMI), and 16.2 percent of cases into DRG 527, while the rest of the cases fell into the remaining DRGs 124, 518 and 526. The average case-weighted standardized charge per case was \$40,318. This amount included an extra \$6,000 for the charges related to the Safe Cross®. The case-weighted threshold across the DRGs mentioned above was \$35,955. Similar to the analysis above, because the case-weighted average standardized charge is greater than the case-weighted

threshold, the applicant maintained that the Safe Cross® meets the cost criterion.

The applicant maintained that the device meets the substantial clinical improvement criterion. The applicant explained that many traditional guidewires fail to cross a total arterial occlusion due to difficulty in navigating the vessel and to the fibrotic nature of the obstructing plaque. By using fiberoptic guidance and radiofrequency ablation, the Safe Cross® succeeds where standard guidewires fail. The applicant further maintained that in clinical trials where traditional guidewires failed, the Safe Cross® succeeded in 54 percent of cases of coronary artery chronic total occlusions (CTOs), and in 76 percent of cases of peripheral artery CTOs.

However, we note that we use similar standards to evaluate substantial clinical improvement in the IPPS and OPPS. The IPPS regulations provide that technology may be approved for add-on payments when it "represents an advance in medical technology that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries" (66 FR 46912). Under the OPPS, the standard for approval of new devices is "a substantial improvement in medical benefits for Medicare beneficiaries compared to the benefits obtained by devices in previously established (that is, existing or previously existing) categories or other available treatments" (67 FR 66782). Furthermore, the OPPS and IPPS employ identical language (for IPPS, see 66 FR 46914, and for OPPS, see 67 FR 66782) to explain and elaborate on the kinds of considerations that are taken into account in determining whether a new technology represents substantial improvement. In both systems, we employ the following kinds of considerations in evaluating particular requests for special payment for new technology:

- The device offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments.
- The device offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods. There must also be evidence that use of the device to make a diagnosis affects the management of the patient.
- Use of the device significantly improves clinical outcomes for a patient population as compared to currently

available treatments. Some examples of outcomes that are frequently evaluated in studies of medical devices are the following:

- Reduced mortality rate with use of the device.
- Reduced rate of device-related complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment because of the use of the device.
- Decreased pain, bleeding, or other quantifiable symptom.
- Reduced recovery time.

In a letter to the applicant dated October 25, 2004, we denied approval of the Safe Cross® for pass-through payments for the OPPS on the basis that the technology did not meet the substantial clinical improvement criterion. In particular, we found that studies failed to show long-term or intermediate-term results, and the device had a relatively low rate of successfully opening occlusions. Since that initial determination, the applicant has requested reconsideration for pass-through payments under the IPPS. However, on the basis of the original findings under the OPPS, we do not now believe that the technology can qualify for new technology add-on payments under the IPPS. Therefore, we are proposing to deny new technology add-on payment for FY 2006 for Safe Cross® on the grounds that it does not appear to be a substantial clinical improvement over existing technologies. We welcome further information on whether this device meets the substantial clinical improvement criterion, and we will consider any further information prior to making our final determination in the final rule.

We received no public comments regarding this application for add-on payments.

g. Trident® Ceramic Acetabular System

Stryker Orthopaedics submitted an application for new technology add-on payments for the Trident® Ceramic Acetabular System. This system is used to replace the "ball and socket" joint of a hip when a total hip replacement is performed for patients suffering from arthritis or related conditions. The applicant stated that, unlike conventional hip replacement systems, the Trident® system utilizes alumina ceramic-on-ceramic bearing surfaces

rather than metal-on-plastic or metal-on-metal. Alumina ceramic is the hardest material next to diamond. The Trident® System is a patented design that captures the ceramic insert in a titanium sleeve. This design increases the strength of the ceramic insert by 50 percent over other designs. The manufacturer stated that the alumina ceramic bearing of the device is a substantial clinical improvement because it is extremely hard and scratch resistant, has a low coefficient of friction and excellent wear resistance, has improved lubrication over metal or polyethylene, has no potential for metal ion release, and has less alumina particle debris. The manufacturer also stated that fewer hip revisions are needed when this product is used (2.7 percent of ceramic versus 7.5 percent for polyethylene). Stryker stated that the ceramic implant also causes less osteolysis (or bone loss from particulate debris). Due to these improvements over traditional hip implants, the manufacturer stated the Trident® Ceramic Acetabular System has demonstrated significantly lower wear versus the conventional plastic/metal system in the laboratory; therefore, it is anticipated that these improved wear characteristics will extend the life of the implant.

The Trident® Ceramic Acetabular System received FDA approval in February 3, 2003. However, this product was not available on the market until April 2003. The period that technologies are eligible to receive new technology add-on payment is no less than 2 years but not more than 3 years from the point the product comes on the market. At this point, we begin to collect charges reflecting the cost of the device in the MedPAR data. Because the device became available on the market in April 2003, charges reflecting the cost of the device may have been included in the data used to calculate the DRG weights in FY 2005 and the proposed DRG weights for FY 2006. Therefore, the technology may no longer be considered new for the purposes of new technology add-on payments. For this reason, we are proposing to deny add-on payments for the Trident® Ceramic Acetabular System for FY 2006.

Although we are proposing not to approve this application because the Trident® Ceramic Acetabular System does not meet the newness criterion, we note that the applicant submitted information on the cost and substantial clinical improvement criteria.

The applicant submitted cost threshold information for the Trident® Ceramic Acetabular System, stating that cases using the system would be

included in DRG 209 (Major Joint and Limb Reattachment Procedures of Lower Extremity). The manufacturer indicated that there is not an ICD-9-CM code specific to ceramic hip arthroplasty, but it is currently reported using code 81.51 (Total hip replacement). Of the applicable charges for the Trident® Ceramic Acetabular System, only the components that the applicant identified as new would be eligible for new technology add-on payments. The estimated cost of the new portions of the device, according to the information provided in the application, is \$6,009. The charge threshold for DRG 209 is \$34,195. The data submitted by Stryker Orthopaedics showed an average standardized charge, assuming a 28 percent implant markup, of \$34,230.

Regarding the issue of substantial clinical improvement, we recognize that the Trident® Ceramic Acetabular System represents an incremental advance in prosthetic hip technology. However, we also recognize that there are a number of other new prostheses available that utilize a variety of bearing surface materials that also offer increased longevity and decreased wear. For this reason, we do not believe that the Trident® system has demonstrated itself to be a clearly superior new technology.

We received the following public comments, in accordance with section 503(b)(2) of Pub. L. 108-173, regarding this application for add-on payments.

**Comment:** One commenter noted that clinical outcomes for the Trident® Ceramic Acetabular System are not a significant clinical improvement over similar devices on the market. A member of the orthopedic community noted at the new technology town hall meeting that this system is not the only new product that promises significantly improved results because of enhancements to materials and design. This commenter suggested that it may be inappropriate to recognize only one of these new hip replacement products for new technology add-on payments.

**Response:** We appreciate the commenter's input on this criterion. We will consider these comments regarding the substantial clinical improvement criterion. However, based on the observations provided at the town hall meeting, we are considering alternative methods of recognizing technological improvements in this area other than approving only one of these new technologies for add-on payments. For example, as discussed in section 11.B.6.a. of the preamble to this proposed rule, we are proposing to split DRG 209 to create a new DRG for revisions of hip and knee replacements. We would leave

all other replacements and attachment procedures in a separate, new DRG. We also stated that we will be reviewing these DRGs based on new procedure codes that will provide more detailed data on the specific nature of the revision procedures performed. In addition, we are creating new procedure codes that will identify the type of bearing surface of a hip replacement. As we obtain data from these new codes, we will consider additional DRG revisions to better capture the various types of joint procedures. We may consider a future restructuring of the joint replacement and revision DRGs that would better capture the higher costs of products that offer greater durability, extended life, and improved outcomes. In doing so, of course, we may need to create additional, more precise ICD-9-CM codes. We welcome comments on this issue, and generally on whether the Trident® Ceramic Acetabular System meets the criteria to qualify for new technology add-on payments.

#### h. Wingspan™ Stent System with Gateway™ PTA Balloon Catheter

Boston Scientific submitted an application for the Wingspan™ Stent System with Gateway™ PTA Balloon Catheter for new technology add-on payments. The device is designed for the treatment of patients with intracranial atherosclerotic disease who suffer from recurrent stroke despite medical management. The device consists of the following: a self-expanding nitinol stent, a multilumen over the wire delivery catheter, and a Gateway PTA Balloon Catheter. The device is used to treat stenoses that occur in the intracranial vessels. Prior to stent placement, the Gateway PTA Balloon is inflated to dilate the target lesion, and then the stent is deployed across the lesion to restore and maintain luminal patency. Effective October 1, 2004, two new ICD-9-CM procedure codes were created to code intracranial angioplasty and intracranial stenting procedures: procedure codes 00.62 (Percutaneous angioplasty or atherectomy of intracranial vessels) and 00.65 (Percutaneous insertion of intracranial vascular stents).

On January 9, 2004, the FDA designated the Wingspan™ as a Humanitarian Use Designation (HUD). The manufacturer has also applied for Humanitarian Device Exemption (HDE) status and expects approval from the FDA in July 2005. It is important to note that currently CMS has a noncoverage policy for percutaneous transluminal angioplasty to treat lesions of intracranial vessels. The applicant is

working closely with CMS to review this decision upon FDA approval. Because the device is neither FDA-approved nor Medicare-covered, we do not believe it is appropriate to present our full analysis on whether the technology meets the individual criteria for the new technology add-on payment. However, we note that the applicant did submit the following information below on the cost criterion and substantial clinical improvement criterion.

The manufacturer submitted data from MedPAR and non-MedPAR databases. The non-MedPAR data was from the 2003 patient discharge data from California's Office of Statewide Health Planning and Development database for hospitals in California and from the 2003 patient data from Florida's Agency for Health Care Administration for hospitals in Florida. The applicant identified cases that had a diagnosis code of 437.0 (Cerebral atherosclerosis), 437.1 (Other generalized ischemic cerebrovascular disease) or 437.9 (Unspecified) or any diagnosis code that begins with the prefix of 434 (Occlusion of cerebral arteries) in combination with procedure code 39.50 (Angioplasty or atherectomy of noncoronary vessel) or procedure code 39.90 (Insertion of nondrug-eluting, noncoronary artery stents). The applicant used procedure codes 39.50 and 39.90 because procedure codes 00.62 and 00.65 were not available until FY 2005. The applicant found cases in DRG 5 (Extracranial Vascular Procedures) (which previously existed under the Medicare IPPS, DRG system prior to a DRG split) and in DRGs 533 (Extracranial Procedure with CC) and 534 (Extracranial Procedure Without CC). Even though DRG 5 was split into DRGs 533 and 534 in FY 2003, some hospitals continued to use DRG 5 for non-Medicare cases. The applicant found 22 cases that had an intracranial PTA with a stent. The average (nonstandardized) charge per case was \$78,363.

The applicant also submitted data from the FY 2002 and FY 2003 MedPAR files. Using the latest data from the FY 2003 MedPAR and the same combination of diagnosis and procedure codes mentioned above to identify cases of intracranial PTA with stenting, the applicant found 116 cases in DRG 533 and 20 cases in DRG 534. The case-weighted average standardized charge per case was \$51,173. The average case-weighted threshold was \$25,394. Based on this analysis, the applicant maintained that the technology meets the cost criteria since the average case-weighted standardized charge per case

is greater than the average case-weighted threshold.

The applicant also maintained that the technology meets the substantial clinical improvement criterion. Currently, there is no available surgical or medical treatment for recurrent stroke that occurs despite optimal medical management. The Wingspan™ is the first commercially available PTA/stent system designed specifically for the intracranial vasculature. However, because the Wingspan™ does not have FDA approval or Medicare coverage, as stated above, we are proposing to deny add-on payment for this new technology.

We received no public comments regarding this application for add-on payments.

### III. Proposed Changes to the Hospital Wage Index

#### A. Background

Section 1886(d)(3)(E) of the Act requires that, as part of the methodology for determining prospective payments to hospitals, the Secretary must adjust the standardized amounts "for area differences in hospital wage levels by a factor (established by the Secretary) reflecting the relative hospital wage level in the geographic area of the hospital compared to the national average hospital wage level." In accordance with the broad discretion conferred under the Act, we currently define hospital labor market areas based on the definitions of statistical areas established by the Office of Management and Budget (OMB). A discussion of the proposed FY 2006 hospital wage index based on the statistical areas, including OMB's revised definitions of Metropolitan Areas, appears under section III.B. of this preamble.

Beginning October 1, 1993, section 1886(d)(3)(E) of the Act requires that we update the wage index annually. Furthermore, this section provides that the Secretary base the update on a survey of wages and wage-related costs of short-term, acute care hospitals. The survey should measure the earnings and paid hours of employment by occupational category, and must exclude the wages and wage-related costs incurred in furnishing skilled nursing services. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. The proposed adjustment for FY 2006 is discussed in section II.B. of the Addendum to this proposed rule.

As discussed below in section III.G. of this preamble, we also take into account the geographic reclassification of hospitals in accordance with sections 1886(d)(8)(B) and 1886(d)(10) of the Act when calculating the wage index. Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amounts so as to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. The proposed budget neutrality adjustment for FY 2006 is discussed in section II.B. of the Addendum to this proposed rule.

Section 1886(d)(3)(E) of the Act also provides for the collection of data every 3 years on the occupational mix of employees for short-term, acute care hospitals participating in the Medicare program, in order to construct an occupational mix adjustment to the wage index. A discussion of the proposed occupational mix adjustment that we are proposing to apply beginning October 1, 2005 (the proposed FY 2006 wage index) appears under section III.C. of this preamble.

#### B. Core-Based Statistical Areas Used for the Proposed Hospital Wage Index

(If you choose to comment on issues in this section, please include the caption "CBSAs" at the beginning of your comment.)

The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. In accordance with the broad discretion under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we define hospital labor market areas based on the Core-Based Statistical Areas (CBSAs) established by OMB and announced in December 2003 (69 FR 49027). OMB defines a CBSA, beginning in 2003, as "a geographic entity associated with at least one core of 10,000 or more population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties." The standards designate and define two categories of CBSAs: Metropolitan Statistical Areas (MSAs) and Micropolitan Statistical Areas (65 FR 82235).

According to OMB, MSAs are based on urbanized areas of 50,000 or more population, and Micropolitan Statistical Areas (referred to in this discussion as Micropolitan Areas) are based on urban clusters with a population of at least 10,000 but less than 50,000. Counties that do not fall within CBSAs are

deemed "Outside CBSAs." In the past, OMB defined MSAs around areas with a minimum core population of 50,000, and smaller areas were "Outside MSAs."

The general concept of the CBSAs is that of an area containing a recognized population nucleus and adjacent communities that have a high degree of integration with that nucleus. The purpose of the standards is to provide nationally consistent definitions for collecting, tabulating, and publishing Federal statistics for a set of geographic areas. CBSAs include adjacent counties that have a minimum of 25 percent commuting to the central counties of the area. (This is an increase over the minimum commuting threshold of 15 percent for outlying counties applied in the previous MSA definition.)

The new CBSAs established by OMB comprised MSAs and the new Micropolitan Areas based on Census 2000 data. (A copy of the announcement may be obtained at the following Internet address: <http://www.whitehouse.gov/omb/bulletins/fy04/b04-03.html>.) The definitions recognize 49 new MSAs and 565 new Micropolitan Areas, and extensively revised the composition of many of the existing MSAs.

The new area designations resulted in a higher wage index for some areas and lower wage index for others. Further, some hospitals that were previously classified as urban are now in rural areas. Given the significant payment impacts upon some hospitals because of these changes, we provided a transition period to the new labor market areas in the FY 2005 IPPS final rule (69 FR 49027 through 49034). As part of that transition, we allowed urban hospitals that became rural under the new definitions to maintain their assignment to the Metropolitan Statistical Area (MSA) where they were previously located for the 3-year period of FY 2005, FY 2006, and FY 2007. Specifically, these hospitals were assigned the wage index of the urban area to which they previously belonged. (For purposes of wage index computation, the wage data of these hospitals remained assigned to the statewide rural area in which they are located.) The hospitals receiving this transition will not be considered urban hospitals; rather they will maintain their status as rural hospitals. Thus, the hospital would not be eligible, for example, for a large urban add-on payment under the capital PPS. In other words, it is the wage index, but not the urban or rural status, of these hospitals that is being affected by this transition. The higher wage indices that these hospitals are receiving are also being taken into consideration in determining

whether they qualify for the out-commuting adjustment discussed in section III.I. of this preamble and the amount of any adjustment.

FY 2006 will be the second year of this transition period. We will continue to assign the wage index for the urban area in which the hospital was previously located through FY 2007. In order to ensure this provision remains budget neutral, we will continue to adjust the standardized amount by a transition budget neutrality factor to account for these hospitals. Doing so is consistent with the requirement of section 1886(d)(3)(E) of the Act that any "adjustments or updates [to the adjustment for different area wage levels] \* \* \* shall be made in a manner that assures that aggregate payments \* \* \* are not greater or less than those that would have been made in the year without such adjustment."

Beginning in FY 2008, these hospitals will receive their statewide rural wage index, although they will be eligible to apply for reclassification by the MGCRB, both during this transition period as well as in subsequent years.

In addition, in the FY 2005 IPPS final rule (69 FR 49032 through 49033), we provided a 1-year transition blend for hospitals that, due solely to the changes in the labor market definitions, experienced a decrease in their FY 2005 wage index compared to the wage index they would have received using the labor market areas included in calculating their FY 2004 wage index. Hospitals that experienced a decrease in their wage index as a result of adoption of the new labor market area changes received a wage index based on 50 percent of the CBSA labor market area definitions and 50 percent of the wage index that the provider would have received under the FY 2004 MSA boundaries (in both cases using the FY 2001 wage data). This blend applied to any provider experiencing a decrease

due to the new definitions, including providers who were reclassifying under MGCRB requirements, section 1886(d)(8)(B) of the Act, or section 508 of Pub. L. 108-173. In the FY 2005 IPPS final rule (69 FR 49027 through 49033), we described the determination of this blend in detail. We noted that this blend would not prevent a decrease in wage index due to any reason other than adoption of CBSAs, nor did it apply to hospitals that benefited from a higher wage index due to the new labor market definitions.

Consistent with the FY 2005 IPPS final rule, we are proposing that hospitals receive 100 percent of their wage index based upon the new CBSA configurations beginning in FY 2006. Specifically, we will determine for each hospital a new wage index employing wage index data from FY 2002 hospital cost reports and using the CBSA labor market definitions.

#### *C. Proposed Occupational Mix Adjustment to FY 2006 Index*

(If you choose to comment on issues in this section, please include the caption "Occupational Mix Adjustment" at the beginning of your comment.)

As stated earlier, section 1886(d)(3)(E) of the Act provides for the collection of data every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program, in order to construct an occupational mix adjustment to the wage index, for application beginning October 1, 2004 (the FY 2005 wage index). The purpose of the occupational mix adjustment is to control for the effect of hospitals' employment choices on the wage index. For example, hospitals may choose to employ different combinations of registered nurses, licensed practical nurses, nursing aides, and medical assistants for the purpose of providing nursing care to their patients. The varying labor costs

associated with these choices reflect hospital management decisions rather than geographic differences in the costs of labor.

#### *1. Development of Data for the Proposed Occupational Mix Adjustment*

In the FY 2005 IPPS final rule (69 FR 49034), we discussed in detail the data we used to calculate the occupational mix adjustment to the FY 2005 wage index. For the FY 2006 wage index, we are proposing to use the same CMS Wage Index Occupational Mix Survey and Bureau of Labor Statistics (BLS) data that we used for the FY 2005 wage index, with two exceptions. The CMS survey requires hospitals to report the number of total paid hours for directly hired and contract employees in occupations that provide the following services: nursing, physical therapy, occupational therapy, respiratory therapy, medical and clinical laboratory, dietary, and pharmacy. These services each include several standard occupational classifications (SOCs), as defined by the BLS' Occupational Employment Statistics (OES) survey. For the proposed FY 2006 wage index, we used revised survey data for 20 hospitals that took advantage of the opportunity we afforded hospitals to submit changes to their occupational mix data during the FY 2006 wage index data collection process (see discussion of wage data corrections process under section III.J. of this preamble). We also excluded survey data for hospitals that became designated as CAHs since the original survey data were collected and hospitals for which there are no corresponding cost report data for the proposed FY 2006 wage index. The proposed FY 2006 wage index includes occupational mix data from 3,563 out of 3,765 hospitals (94.6 percent response rate). The results of the occupational mix survey are included in the chart below:

## Medicare Occupational Mix Survey Results

| General Service Categories                             | Number of Employee Hours | Percent of Service Category Hours | Percent of Total Employee Hours |
|--|--------------------------|-----------------------------------|---------------------------------|
| <b>Nursing Services and Medical Assistant Services</b> |                          |                                   |                                 |
| Registered Nurses                                      | 1,417,185,853.99         | 70.53%                            | 26.71%                          |
| Licensed Practical Nurses                              | 149,668,932.85           | 7.45%                             | 2.82%                           |
| Nursing Aides, Orderlies, & Attendants                 | 370,250,786.25           | 18.43%                            | 6.98%                           |
| Medical Assistants                                     | 72,325,777.65            | 3.60%                             | 1.36%                           |
| <b>Total</b>   | <b>2,009,431,350.74</b>  | <b>100.00%</b>                    | <b>37.87%</b>                   |

2. Calculation of the Proposed FY 2006 Occupational Mix Adjustment Factor and the Proposed FY 2006 Occupational Mix Adjusted Wage Index

For the proposed FY 2006 wage index, we are proposing to use the same methodology that we used to calculate the occupational mix adjustment to the FY 2005 wage index (69 FR 49042). We are proposing to use the following steps for calculating the proposed FY 2006 occupational mix adjustment factor and the occupational mix adjusted wage index:

*Step 1*—For each hospital, the percentage of the general service category attributable to an SOC is determined by dividing the SOC hours by the general service category's total hours. Repeat this calculation for each of the 19 SOCs.

*Step 2*—For each hospital, the weighted average hourly rate for an SOC is determined by multiplying the percentage of the general service category (from Step 1) by the national average hourly rate for that SOC from the 2001 BLS OES survey, which was used in calculating the occupational mix adjustment for the FY 2005 wage index. The 2001 OES survey is BLS' latest available hospital-specific survey. (See Chart 4 in the FY 2005 IPPS final rule, 69 FR 49038.) Repeat this calculation for each of the 19 SOCs.

*Step 3*—For each hospital, the hospital's adjusted average hourly rate for a general service category is computed by summing the weighted hourly rate for each SOC within the general category. Repeat this calculation for each of the 7 general service categories.

*Step 4*—For each hospital, the occupational mix adjustment factor for a general service category is calculated by dividing the national adjusted average hourly rate for the category by the hospital's adjusted average hourly rate for the category. (The national adjusted average hourly rate is computed in the same manner as Steps 1 through 3, using instead, the total SOC and general service category hours for all hospitals in the occupational mix survey database.) Repeat this calculation for each of the 7 general service categories. If the hospital's adjusted rate is less than the national adjusted rate (indicating the hospital employs a less costly mix of employees within the category), the occupational mix adjustment factor will be greater than 1.0000. If the hospital's adjusted rate is greater than the national adjusted rate, the occupational mix adjustment factor will be less than 1.0000.

*Step 5*—For each hospital, the occupational mix adjusted salaries and wage-related costs for a general service category is calculated by multiplying the hospital's total salaries and wage-related costs (from Step 5 of the unadjusted wage index calculation in section F) by the percentage of the hospital's total workers attributable to the general service category and by the general service category's occupational mix adjustment factor (from Step 4 above). Repeat this calculation for each of the 7 general service categories. The remaining portion of the hospital's total salaries and wage-related costs that is attributable to all other employees of the hospital is not adjusted for occupational mix.

*Step 6*—For each hospital, the total occupational mix adjusted salaries and wage-related costs for a hospital are calculated by summing the occupational mix adjusted salaries and wage-related costs for the 7 general service categories (from Step 5) and the unadjusted portion of the hospital's salaries and wage-related costs for all other employees. To compute a hospital's occupational mix adjusted average hourly wage, divide the hospital's total occupational mix adjusted salaries and wage-related costs by the hospital's total hours (from Step 4 of the unadjusted wage index calculation in Section F).

*Step 7*—To compute the occupational mix adjusted average hourly wage for an urban or rural area, sum the total occupational mix adjusted salaries and wage-related costs for all hospitals in the area, then sum the total hours for all hospitals in the area. Next, divide the area's occupational mix adjusted salaries and wage-related costs by the area's hours.

*Step 8*—To compute the national occupational mix adjusted average hourly wage, sum the total occupational mix adjusted salaries and wage-related costs for all hospitals in the nation, then sum the total hours for all hospitals in the nation. Next, divide the national occupational mix adjusted salaries and wage-related costs by the national hours. The proposed national occupational mix adjusted average hourly wage for FY 2006 is \$27.9988.

*Step 9*—To compute the occupational mix adjusted wage index, divide each area's occupational mix adjusted average hourly wage (Step 7) by the national occupational mix adjusted average hourly wage (Step 8).

*Step 10*—To compute the Puerto Rico specific occupational mix adjusted wage index, follow the Steps 1 through 9 above. The proposed Puerto Rico occupational mix adjusted average hourly wage for FY 2006 is \$12.9875.

An example of the occupational mix adjustment was included in the FY 2005 IPPS final rule (69 FR 49043).

For the FY 2005 final wage index, we used the unadjusted wage data for hospitals that did not submit occupational mix survey data. For calculation purposes, this equates to applying the national SOC mix to the wage data for these hospitals, because hospitals having the same mix as the Nation would have an occupational mix adjustment factor equaling 1.0000. In the FY 2005 IPPS final rule (69 FR 49035), we noted that we would revisit this matter with subsequent collections of the occupational mix data. Because we are using essentially the same survey data for the proposed FY 2006 occupational mix adjustment that we used for FY 2005, with the only exceptions as stated in section III.C.1. of this preamble, we are proposing to treat the wage data for hospitals that did not respond to the survey in this same manner for the proposed FY 2006 wage index.

In implementing an occupational mix adjusted wage index based on the above calculation, the proposed wage index values for 14 rural areas (29.8 percent) and 206 urban areas (53.5 percent) would decrease as a result of the adjustment. Six (6) rural areas (12.8 percent) and 111 urban areas (28.8 percent) would experience a decrease of 1 percent or greater in their wage index values. The largest negative impact for a rural area would be 1.9 percent and for an urban area, 4.3 percent. Meanwhile, 33 rural areas (70.2 percent) and 179 urban areas (46.5 percent) would experience an increase in their wage index values. Although these results show that rural hospitals would gain the most from an occupational mix adjustment to the wage index, their gains may not be as great as might have been expected. Further, it might not have been anticipated that almost one-third of rural hospitals would actually fare worse under the adjustment. Overall, a fully implemented occupational mix adjusted wage index would have a redistributive effect on Medicare payments to hospitals.

In the FY 2005 IPPS, we indicated that, for future data collections, we would revise the occupational mix survey to allow hospitals to provide both salaries and hours data for each of the employment categories that are included on the survey. We also indicated that we would assess whether future occupational mix surveys should be based on the calendar year or if the data should be collected on a fiscal year basis as part of the Medicare cost report. (One logistical problem is that cost

report data are collected yearly, but occupational mix survey data are collected only every 3 years.) We are currently reviewing options for revising the occupational mix survey and improving the data collection process. We will publish any changes we make to the occupational mix survey in a **Federal Register** notice.

In our continuing efforts to meet the information needs of the public, we are providing three additional public use files for the proposed occupational mix adjusted wage index: (1) A file including each hospital's unadjusted and adjusted average hourly wage (FY 2006 Proposed Rule Occupational Mix Adjusted and Unadjusted Average Hourly Wage by Provider); (2) a file including each CBSA's adjusted and unadjusted average hourly wage (FY 2006 Proposed Rule Occupational Mix Adjusted and Unadjusted Average Hourly Wage and Pre-Reclassified Wage Index by CBSA); and (3) a file including each hospital's occupational mix adjustment factors by occupational category (Provider Occupational Mix Adjustment Factors for Each Occupational Category). These additional files are being released concurrently with the publication of this proposed rule and are posted on the Internet, at <http://www.cms.hhs.gov/providers/hipps/ippswage.asp>. We will also post these files with future applications of the occupational mix adjustment.

#### *D. Worksheet S-3 Wage Data for the Proposed FY 2006 Wage Index Update*

(If you choose to comment on issues in this section, please include the caption "Wage Data" at the beginning of your comment.)

The proposed FY 2006 wage index values (effective for hospital discharges occurring on or after October 1, 2005 and before October 1, 2006) in section VI. of the Addendum to this proposed rule are based on the data collected from the Medicare cost reports submitted by hospitals for cost reporting periods beginning in FY 2002 (the FY 2005 wage index was based on FY 2001 wage data).

The proposed FY 2006 wage index includes the following categories of data associated with costs paid under the IPPS (as well as outpatient costs):

- Salaries and hours from short-term, acute care hospitals (including paid lunch hours and hours associated with military leave and jury duty).
- Home office costs and hours.
- Certain contract labor costs and hours (which includes direct patient care, certain top management, pharmacy, laboratory, and nonteaching physician Part A services).

- Wage-related costs, including pensions and other deferred compensation costs.

The September 1, 1994 **Federal Register** (59 FR 45356) included a list of core wage-related costs that are included in the wage index, and discussed criteria for including other wage-related costs. In that discussion, we instructed hospitals to use generally accepted accounting principles (GAAPs) in developing wage-related costs for the wage index for cost reporting periods beginning on or after October 1, 1994. We discussed our rationale that "the application of GAAPs for purposes of compiling data on wage-related costs used to construct the wage index will more accurately reflect relative labor costs, because certain wage-related costs (such as pension costs), as recorded under GAAPs, tend to be more static from year to year."

Since publication of the September 1, 1994 rule, we have periodically received inquiries for more specific guidance on developing wage-related costs for the wage index. In response, we have provided clarifications in the IPPS rules (for example, health insurance costs (66 FR 39859)) and in the cost report instructions (Provider Reimbursement Manual (PRM), Part II, Section 3605.2). Due to recent questions and concerns we received regarding inconsistent reporting and overreporting of pension and other deferred compensation plan costs, as a result of an ongoing Office of Inspector General review, we are clarifying in this proposed rule that hospitals must comply with the PRM, Part I, sections 2140, 2141, and 2142 and related Medicare program instructions for developing pension and other deferred compensation plan costs as wage-related costs for the wage index. The Medicare instructions for pension costs and other deferred compensation costs combine GAAPs, Medicare payment principles, and other Federal labor requirements. We believe that the Medicare instructions allow for consistent reporting among hospitals and for the development of reasonable deferred compensation plan costs for purposes of the wage index.

Beginning with the FY 2007 wage index, hospitals and fiscal intermediaries must ensure that pension, post-retirement health benefits, and other deferred compensation plan costs for the wage index are developed according to the above terms.

Consistent with the wage index methodology for FY 2005, the proposed wage index for FY 2006 also excludes the direct and overhead salaries and hours for services not subject to IPPS payment, such as SNF services, home

health services, costs related to GME (teaching physicians and residents) and certified registered nurse anesthetists (CRNAs), and other subprovider components that are not paid under the IPPS. The proposed FY 2006 wage index also excludes the salaries, hours, and wage-related costs of hospital-based rural health clinics (RHCs), and Federally qualified health centers (FQHCs) because Medicare pays for these costs outside of the IPPS (68 FR 45395). In addition, salaries, hours and wage-related costs of CAHs are excluded from the wage index, for the reasons explained in the FY 2004 IPPS final rule (68 FR 45397).

Data collected for the IPPS wage index are also currently used to calculate wage indices applicable to other providers, such as SNFs, home health agencies, and hospices. In addition, they are used for prospective payments to rehabilitation, psychiatric, and long-term care hospitals, and for hospital outpatient services.

In the August 11, 2004 final rule, we stated that a commenter had asked CMS to designate provider-based clinics as IPPS-excluded areas in order to remove the costs from the wage index (69 FR 49049). The commenter noted that provider-based clinics are like physician private offices, which are excluded from the wage index calculation, and that services provided in the provider-based clinics are paid for not through the IPPS, but rather under the hospital outpatient PPS. In response to the comment, we stated that we were not prepared to grant the commenter's request without first studying the issue, and that we would explore the matter of salaries related to provider-based clinics in a future rule.

Regulations at 42 CFR 413.65 describe the criteria and procedures for determining whether a facility or organization is provider-based. Historically, under the Medicare program, some providers, referred to as "main providers," have functioned as single entities while owning and operating multiple provider-based departments, locations, and facilities that are treated as part of the main provider for Medicare purposes. Section 413.65(a)(2) defines various types of provider-based facilities, including "department of a provider." A "department of a provider" means a facility or organization that is either created by, or acquired by, a main provider for the purposes of furnishing health care services of the same type as those furnished by the main provider under the name, ownership, and financial and administrative control of the main provider \* \* \* a department

of a provider may not itself be qualified to participate in Medicare as a provider under § 489.2 \* \* \* the term 'department of a provider' does not include an RHC or \* \* \* an FQHC." Thus, if a facility offers services that are similar to those provided in a freestanding physician's office, and the facility meets the criteria to become provider-based under § 413.65, the facility would be considered a "department of a provider." More specifically, the facility would be part of the main provider's outpatient department, since the facility offers health care services of the same type as those furnished by the main provider, and because a physician's office would not be subject to a provider agreement or receive a Medicare provider number under § 489.2. (We note that a provider-based RHC or FQHC may, by itself, be qualified to participate in Medicare as a provider under § 489.2 and, thus, would be classified not as a "department of a provider" but as a "provider-based entity," as defined at § 413.65(a)(2)). This provider-based facility, or provider-based clinic, as the commenter referred to it, would be reported on the main provider's Medicare cost report as an outpatient service cost center, on Worksheet A, line 60. With the exception of RHC and FQHC salaries that have been excluded from the wage index beginning with FY 2004 (68 FR 45395, August 1, 2003), the salaries attributable to employees working in these outpatient service cost centers, including emergency departments, are included in the main provider's total salaries on Worksheet S-3, Part II, line 1, and accordingly, are included in the wage index calculation. We have historically included the salaries and wages of hospital employees working in the outpatient departments in the calculation of the hospital wage index since these employees often work in both the IPPS and in the outpatient areas of the hospital. Consistent with this longstanding treatment of outpatient salary costs in the wage index calculation, we believe it is appropriate to continue to include the salaries and wages of employees working in outpatient departments, including provider-based clinics, in the wage index calculation.

#### *E. Verification of Worksheet S-3 Wage Data*

(If you choose to comment on issues in this section, please include the caption "Wage Data" at the beginning of your comment.)

The wage data for the proposed FY 2006 wage index were obtained from Worksheet S-3, Parts II and III of the FY

2002 Medicare cost reports. Instructions for completing the Worksheet S-3, Parts II and III are in the Provider Reimbursement Manual, Part I, sections 3605.2 and 3605.3. The data file used to construct the proposed wage index includes FY 2002 data submitted to us as of February 23, 2005. As in past years, we performed an intensive review of the wage data, mostly through the use of edits designed to identify aberrant data.

We asked our fiscal intermediaries to revise or verify data elements that resulted in specific edit failures. Some unresolved data elements are included in the calculation of the proposed FY 2006 wage index, pending their resolution before calculation of the final FY 2006 index. We instructed the fiscal intermediaries to complete their data verification of questionable data elements and to transmit any changes to the wage data no later than April 15, 2005. We believe all unresolved data elements will be resolved by the date the final rule is issued. The revised data will be reflected in the final rule.

Also, as part of our editing process, we removed the data for 438 hospitals from our database: 402 hospitals became CAHs by the time we published the February public use file, and 28 hospitals were low Medicare utilization hospitals or failed edits that could not be corrected because the hospitals terminated the program or changed ownership. In addition, we removed the wage data for 8 hospitals with incomplete or inaccurate data resulting in zero or negative, or otherwise aberrant, average hourly wages. We have notified the fiscal intermediaries of these hospitals and will continue to work with the fiscal intermediaries to correct these data until we finalize our database to compute the final wage index. The data for these hospitals will be included in the final wage index if we receive corrected data that passes our edits. As a result, the proposed FY 2006 wage index is calculated based on FY 2002 wage data from 3,765 hospitals.

In constructing the proposed FY 2006 wage index, we include the wage data for facilities that were IPPS hospitals in FY 2002, even for those facilities that have since terminated their participation in the program as hospitals, as long as those data do not fail any of our edits for reasonableness. We believe that including the wage data for these hospitals is, in general, appropriate to reflect the economic conditions in the various labor market areas during the relevant past period. However, we exclude the wage data for CAHs (as discussed in 68 FR 45397). The proposed wage index in this

proposed rule excludes hospitals that are designated as CAHs by February 1, 2005, the date of the latest available Medicare CAH listing at the time we released the proposed wage index public use file on February 25, 2005.

#### *F. Computation of the Proposed FY 2006 Unadjusted Wage Index*

(If you choose to comment on issues in this section, please include the caption "Wage Index" at the beginning of your comment.)

The method used to compute the proposed FY 2006 wage index without an occupational mix adjustment follows:

*Step 1*—As noted above, we based the proposed FY 2006 wage index on wage data reported on the FY 2002 Medicare cost reports. We gathered data from each of the non-Federal, short-term, acute care hospitals for which data were reported on the Worksheet S-3, Parts II and III of the Medicare cost report for the hospital's cost reporting period beginning on or after October 1, 2001 and before October 1, 2002. In addition, we included data from some hospitals that had cost reporting periods beginning before October 2001 and reported a cost reporting period covering all of FY 2002. These data were included because no other data from these hospitals would be available for the cost reporting period described above, and because particular labor market areas might be affected due to the omission of these hospitals. However, we generally describe these wage data as FY 2002 data. We note that, if a hospital had more than one cost reporting period beginning during FY 2002 (for example, a hospital had two short cost reporting periods beginning on or after October 1, 2001 and before October 1, 2002), we included wage data from only one of the cost reporting periods, the longer, in the wage index calculation. If there was more than one cost reporting period and the periods were equal in length, we included the wage data from the later period in the wage index calculation.

*Step 2*—*Salaries*—The method used to compute a hospital's average hourly wage excludes certain costs that are not paid under the IPPS. In calculating a hospital's average salaries plus wage-related costs, we subtracted from Line 1 (total salaries) the GME and CRNA costs reported on Lines 2, 4.01, 6, and 6.01, the Part B salaries reported on Lines 3, 5 and 5.01, home office salaries reported on Line 7, and excluded salaries reported on Lines 8 and 8.01 (that is, direct salaries attributable to SNF services, home health services, and other subprovider components not

subject to the IPPS). We also subtracted from Line 1 the salaries for which no hours were reported. To determine total salaries plus wage-related costs, we added to the net hospital salaries the costs of contract labor for direct patient care, certain top management, pharmacy, laboratory, and nonteaching physician Part A services (Lines 9 and 10), home office salaries and wage-related costs reported by the hospital on Lines 11 and 12, and nonexcluded area wage-related costs (Lines 13, 14, and 18).

We note that contract labor and home office salaries for which no corresponding hours are reported were not included. In addition, wage-related costs for nonteaching physician Part A employees (Line 18) are excluded if no corresponding salaries are reported for those employees on Line 4.

*Step 3—Hours*—With the exception of wage-related costs, for which there are no associated hours, we computed total hours using the same methods as described for salaries in Step 2.

*Step 4*—For each hospital reporting both total overhead salaries and total overhead hours greater than zero, we

then allocated overhead costs to areas of the hospital excluded from the wage index calculation. First, we determined the ratio of excluded area hours (sum of Lines 8 and 8.01 of Worksheet S-3, Part II) to revised total hours (Line 1 minus the sum of Part II, Lines 2, 3, 4.01, 5, 5.01, 6, 6.01, 7, and Part III, Line 13 of Worksheet S-3). We then computed the amounts of overhead salaries and hours to be allocated to excluded areas by multiplying the above ratio by the total overhead salaries and hours reported on Line 13 of Worksheet S-3, Part III. Next, we computed the amounts of overhead wage-related costs to be allocated to excluded areas using three steps: (1) We determined the ratio of overhead hours (Part III, Line 13) to revised hours (Line 1 minus the sum of Lines 2, 3, 4.01, 5, 5.01, 6, 6.01, 7, 8, and 8.01); (2) we computed overhead wage-related costs by multiplying the overhead hours ratio by wage-related costs reported on Part II, Lines 13, 14, and 18; and (3) we multiplied the computed overhead wage-related costs by the above excluded area hours ratio. Finally, we subtracted the computed overhead salaries, wage-related costs, and hours

associated with excluded areas from the total salaries (plus wage-related costs) and hours derived in Steps 2 and 3.

*Step 5*—For each hospital, we adjusted the total salaries plus wage-related costs to a common period to determine total adjusted salaries plus wage-related costs. To make the wage adjustment, we estimated the percentage change in the employment cost index (ECI) for compensation for each 30-day increment from October 14, 2001 through April 15, 2003 for private industry hospital workers from the Bureau of Labor Statistics' *Compensation and Working Conditions*. We use the ECI because it reflects the price increase associated with total compensation (salaries plus fringes) rather than just the increase in salaries. In addition, the ECI includes managers as well as other hospital workers. This methodology to compute the monthly update factors uses actual quarterly ECI data and assures that the update factors match the actual quarterly and annual percent changes. The factors used to adjust the hospital's data were based on the midpoint of the cost reporting period, as indicated below.

## MIDPOINT OF COST REPORTING PERIOD

| After      | Before     | Adjustment Factor |
|------------|------------|-------------------|
| 10/14/2001 | 11/15/2001 | 1.06469           |
| 11/14/2001 | 12/15/2001 | 1.06007           |
| 12/14/2001 | 1/15/2002  | 1.05566           |
| 01/14/2002 | 02/15/2002 | 1.05139           |
| 02/14/2002 | 03/15/2002 | 1.04725           |
| 03/14/2002 | 04/15/2002 | 1.04317           |
| 04/14/2002 | 05/15/2002 | 1.03907           |
| 05/14/2002 | 06/15/2002 | 1.03496           |
| 06/14/2002 | 07/15/2002 | 1.03083           |
| 07/14/2002 | 08/15/2002 | 1.02672           |
| 08/14/2002 | 09/15/2002 | 1.02261           |
| 09/14/2002 | 10/15/2002 | 1.01860           |
| 10/14/2002 | 11/15/2002 | 1.01478           |
| 11/14/2002 | 12/15/2002 | 1.01116           |
| 12/14/2002 | 01/15/2003 | 1.00757           |
| 01/14/2003 | 02/15/2003 | 1.00385           |
| 02/14/2003 | 03/15/2003 | 1.0000            |
| 03/14/2003 | 04/15/2003 | 0.99613           |

For example, the midpoint of a cost reporting period beginning January 1, 2002 and ending December 31, 2002 is June 30, 2002. An adjustment factor of 1.03083 would be applied to the wages of a hospital with such a cost reporting period. In addition, for the data for any cost reporting period that began in FY 2002 and covered a period of less than 360 days or more than 370 days, we annualized the data to reflect a 1-year cost report. Dividing the data by the number of days in the cost report and then multiplying the results by 365 accomplishes annualization.

*Step 6*—Each hospital was assigned to its appropriate urban or rural labor market area before any reclassifications under section 1886(d)(8)(B), section 1886(d)(8)(E), or section 1886(d)(10) of the Act. Within each urban or rural labor market area, we added the total adjusted salaries plus wage-related costs obtained in Step 5 for all hospitals in

that area to determine the total adjusted salaries plus wage-related costs for the labor market area.

*Step 7*—We divided the total adjusted salaries plus wage-related costs obtained under both methods in Step 6 by the sum of the corresponding total hours (from Step 4) for all hospitals in each labor market area to determine an average hourly wage for the area.

*Step 8*—We added the total adjusted salaries plus wage-related costs obtained in Step 5 for all hospitals in the nation and then divided the sum by the national sum of total hours from Step 4 to arrive at a national average hourly wage. Using the data as described above, the proposed national average hourly wage is \$27.9730.

*Step 9*—For each urban or rural labor market area, we calculated the hospital wage index value by dividing the area average hourly wage obtained in Step 7 by the national average hourly wage computed in Step 8.

*Step 10*—Following the process set forth above, we developed a separate Puerto Rico-specific wage index for purposes of adjusting the Puerto Rico standardized amounts. (The national Puerto Rico standardized amount is adjusted by a wage index calculated for all Puerto Rico labor market areas based on the national average hourly wage as described above.) We added the total adjusted salaries plus wage-related costs (as calculated in Step 5) for all hospitals in Puerto Rico and divided the sum by the total hours for Puerto Rico (as calculated in Step 4) to arrive at an overall proposed average hourly wage of \$12.9957 for Puerto Rico. For each labor market area in Puerto Rico, we calculated the Puerto Rico-specific wage index value by dividing the area average hourly wage (as calculated in Step 7) by the overall Puerto Rico average hourly wage.

*Step 11*—Section 4410 of Pub. L. 105-33 provides that, for discharges on or after October 1, 1997, the area wage index applicable to any hospital that is located in an urban area of a State may not be less than the area wage index applicable to hospitals located in rural areas in that State. Furthermore, this wage index floor is to be implemented in such a manner as to ensure that aggregate IPPS payments are not greater or less than those that would have been made in the year if this section did not apply. For FY 2006, this change affects 147 hospitals in 52 urban areas. The areas affected by this provision are identified by a footnote in Table 4A in the Addendum of this proposed rule.

#### *G. Computation of the Proposed FY 2006 Blended Wage Index*

(If you choose to comment on issues in this section, please include the caption "Blended Wage Index" at the beginning of your comments.)

For the final FY 2005 wage index, we used a blend of the occupational mix adjusted wage index and the unadjusted wage index. Specifically, we adjusted 10 percent of the FY 2005 wage index adjustment factor by a factor reflecting occupational mix. Given that 2003-2004 was the first time for the administration of the occupational mix survey, hospitals had a short timeframe for collecting their occupational mix survey data and documentation, the wage data were not in all cases from a 1-year period, and there was no baseline data for purposes of developing a desk review program, we found it prudent not to adjust the entire wage index factor by the occupational mix. However, we did find the data sufficiently reliable for applying an adjustment to 10 percent of the wage index. We found the data reliable because hospitals were given an opportunity to review their survey data and submit changes in the Spring of 2004, hospitals were already familiar with the BLS OES survey categories, hospitals were required to be able to provide documentation that could be used by fiscal intermediaries to verify survey data, and the results of our survey were consistent with the findings of the 2001 BLS OES survey, especially for nursing and physical therapy categories. In addition, we noted that we were moving cautiously with implementing the occupational mix adjustment in recognition of changing trends in hiring nurses, the largest group in the survey. We noted that some States had recently established floors on the minimum level of registered nurse staffing in hospitals in order to maintain licensure. In addition, in some rural

areas, we believed that hospitals might be accounting for shortages of physicians by hiring more registered nurses. (A complete discussion of the FY 2005 wage index adjustment factor can be found in section III.G. of the FY 2005 IPPS final rule (69 FR 49052)).

In the FY 2005 final rule, we noted that while the statute required us to collect occupational mix data every 3 years, the statute does not specify how the occupational mix adjustment is to be constructed or applied. We are clarifying in this proposed rule that the October 1, 2004 deadline for implementing an occupational mix adjustment is not codified in section 1886(d)(3)(E) of the Act, which requires only a collection and measurement of occupational mix data, but rather stems from the effective date provisions in section 304(c) of the Medicare, Medicaid and SCHIP Benefits Improvement and Protection Act of 2000, Pub. L. 106-554 (BIPA). Although we believe that applying the occupational mix to 10 percent of the wage index factor fully implements the occupational mix adjustment, we also interpret BIPA as requiring only that we begin applying an adjustment by October 1, 2004. BIPA required the Secretary to complete, "by not later than September 30, 2003, for application beginning October 1, 2004," both the collection of occupational mix data and the measurement of such data. (BIPA, section 304(c)(3).) Thus, even if adjusting 10 percent of the wage index for occupational mix were not (as we believe it to be) considered to be full implementation of the BIPA effective date, we certainly began our application of the adjustment as of October 1, 2004.

In addition, section 1886(d)(3)(E) of the Act provides broad authority for us to establish the factor we use to adjust hospital costs to take into account area differences in wage levels. The statute is clear that the wage index factor is to be "established by the Secretary." The occupational mix is only one part of this wage index factor, which, for the most part, is calculated on the basis of average hourly wage data submitted by all hospitals in the United States. In exercising the Secretary's broad discretion to establish the factor that adjusts for geographic wage differences, in FY 2005 we adjusted 10 percent of such factor to account for occupational mix.

Indeed, we have often used percentage figures or blended amounts in exercising the Secretary's authority to establish the factor that adjusts for wage differences. For example, in the FY 2005 final rule, we implemented new mapping boundaries for assigning

hospitals to the geographic labor market areas used for calculating the wage index. For hospitals that were harmed by the new geographic boundaries, we used a blended rate based on 50 percent of the wage index that would apply using the new geographic boundaries effective for FY 2005 and 50 percent of the wage index that would apply using the old geographic boundaries that were effective during FY 2004 (69 FR 49033). Similarly, beginning with FY 2000, we began phasing out costs related to GME and CRNAs from the wage index (64 FR 41505). Thus, for example, the FY 2001 wage index was based on a blend of 60 percent of an average hourly wage including these costs, and 40 percent of an average hourly wage excluding these costs (65 FR 47071).

For FY 2006, we are again proposing to adjust 10 percent of the wage index factor for occupational mix. In computing the occupational mix adjustment for the proposed FY 2006 wage index, we used the occupational mix survey data that we collected for the FY 2005 wage index, replacing the survey data for 20 hospitals that submitted revised data, and excluding the survey data for hospitals with no corresponding Worksheet S-3 wage data for FY 2006 wage index. While we considered adjusting 100 percent of the wage index by the occupational mix, we did not believe it was appropriate to use first-year survey data to make such a large adjustment. As hospitals gain additional experience with the occupational mix survey, and as we develop more information upon which to audit the data we receive, we expect to increase the portion of the wage index that is adjusted.

We also acknowledge the District Court opinion in *Bellevue Hospital Center v. Leavitt*, No. 04-8639 (S.D.N.Y., March 2005) finding that the statute requires full implementation of the occupational mix adjustment beginning October 1, 2004, and granting summary judgment to plaintiffs on the matter. At the time this proposed rule was written, an appeal had not yet been heard in the Circuit Court. Thus, because it was not yet clear whether the decision would be appealed, we determined that, for FY 2006, we would continue to propose the policy we believe to be most prudent in light of the survey data being used to adjust the wage index.

With 10 percent of the proposed FY 2006 wage index adjusted for occupational mix, the wage index values for 13 rural areas (27.7 percent) and 204 urban areas (53.0 percent) would decrease as a result of the adjustment. These decreases would be minimal; the largest negative impact for

a rural area would be 0.19 percent and for an urban area, 0.42 percent. Conversely, 34 rural areas (72.3 percent) and 181 urban areas (47.0 percent) would benefit from this adjustment, with 1 urban area increasing 2.1 percent and 1 rural area increasing 0.39 percent. As there are no significant differences between the FY 2005 and the FY 2006 occupational mix survey data and results, we believe it is appropriate to again apply the occupational mix to 10 percent of the proposed FY 2006 wage index. (See Appendix A to this proposed rule for further analysis of the impact of the occupational mix adjustment on the proposed FY 2006 wage index.)

The wage index values in Tables 4A, 4B, 4C, and 4F and the average hourly wages in Tables 2, 3A, and 3B in the Addendum to this proposed rule include the occupational mix adjustment.

#### *H. Proposed Revisions to the Wage Index Based on Hospital Redesignation*

(If you choose to comment on issues in this section, please include the caption "Hospital Redesignations and Reclassifications" at the beginning of your comment.)

##### 1. General

Under section 1886(d)(10) of the Act, the Medicare Geographic Classification Review Board (MGCRB) considers applications by hospitals for geographic reclassification for purposes of payment under the IPPS. Hospitals must apply to the MGCRB to reclassify by September 1 of the year preceding the year during which reclassification is sought. Generally, hospitals must be proximate to the labor market area to which they are seeking reclassification and must demonstrate characteristics similar to hospitals located in that area. The MGCRB issues its decisions by the end of February for reclassifications that become effective for the following fiscal year (beginning October 1). The regulations applicable to reclassifications by the MGCRB are located in §§ 412.230 through 412.280.

Section 1886(d)(10)(D)(v) of the Act provides that, beginning with FY 2001, a MGCRB decision on a hospital reclassification for purposes of the wage index is effective for 3 fiscal years, unless the hospital elects to terminate the reclassification. Section 1886(d)(10)(D)(vi) of the Act provides that the MGCRB must use the 3 most recent years' average hourly wage data in evaluating a hospital's reclassification application for FY 2003 and any succeeding fiscal year.

Section 304(b) of Pub. L. 106-554 provides that the Secretary must establish a mechanism under which a statewide entity may apply to have all of the geographic areas in the State treated as a single geographic area for purposes of computing and applying a single wage index, for reclassifications beginning in FY 2003. The implementing regulations for this provision are located at § 412.235.

Section 1886(d)(8)(B) of the Act requires the Secretary to treat a hospital located in a rural county adjacent to one or more urban areas as being located in the MSA to which the greatest number of workers in the county commute if: the rural county would otherwise be considered part of an urban area under the standards for designating MSAs if the commuting rates used in determining outlying counties were determined on the basis of the aggregate number of resident workers who commute to (and, if applicable under the standards, from) the central county or counties of all contiguous MSAs. In light of the new CBSA definitions and the Census 2000 data that we implemented for FY 2005 (69 FR 49027), we undertook to identify those counties meeting these criteria. The eligible counties are identified below under section III.H.5. of this preamble.

##### 2. Effects of Reclassification

Section 1886(d)(8)(C) of the Act provides that the application of the wage index to redesignated hospitals is dependent on the hypothetical impact that the wage data from these hospitals would have on the wage index value for the area to which they have been redesignated. These requirements for determining the wage index values for redesignated hospitals is applicable both to the hospitals located in rural counties deemed urban under section 1886(d)(8)(B) of the Act and hospitals that were reclassified as a result of the MGCRB decisions under section 1886(d)(10) of the Act. Therefore, as provided in section 1886(d)(8)(C) of the Act,<sup>3</sup> the wage index values were

<sup>3</sup> Although section 1886(d)(8)(C)(iv)(I) of the Act also provides that the wage index for an urban area may not decrease as a result of redesignated hospitals if the urban area wage index is already below the wage index for rural areas in the State in which the urban area is located, the provision was effectively made moot by section 4410 of Pub. L. 105-33, which provides that the area wage index applicable to any hospital that is located in an urban area of a State may not be less than the area wage index applicable to hospitals located in rural areas in that State. Also, section 1886(d)(8)(C)(iv)(II) of the Act provides that an urban area's wage index may not decrease as a result of redesignated hospitals if the urban area is located in a State that is composed of a single urban area.

determined by considering the following:

- If including the wage data for the redesignated hospitals would reduce the wage index value for the area to which the hospitals are redesignated by 1 percentage point or less, the area wage index value determined exclusive of the wage data for the redesignated hospitals applies to the redesignated hospitals.

- If including the wage data for the redesignated hospitals reduces the wage index value for the area to which the hospitals are redesignated by more than 1 percentage point, the area wage index determined inclusive of the wage data for the redesignated hospitals (the combined wage index value) applies to the redesignated hospitals.

- If including the wage data for the redesignated hospitals increases the wage index value for the urban area to which the hospitals are redesignated, both the area and the redesignated hospitals receive the combined wage index value. Otherwise, the hospitals located in the urban area receive a wage index excluding the wage data of hospitals redesignated into the area.

- The wage data for a reclassified urban hospital is included in both the wage index calculation of the area to which the hospital is reclassified (subject to the rules described above) and the wage index calculation of the urban area where the hospital is physically located.

- Rural areas whose wage index values would be reduced by excluding the wage data for hospitals that have been redesignated to another area continue to have their wage index values calculated as if no redesignation had occurred (otherwise, redesignated rural hospitals are excluded from the calculation of the rural wage index).

- The wage index value for a redesignated rural hospital cannot be reduced below the wage index value for the rural areas of the State in which the hospital is located.

##### 3. Proposed Application of Hold Harmless Protection for Certain Urban Hospitals Redesignated as Rural

Section 401(a) of Pub. L. 106-113 (the Balanced Budget Refinement Act of 1999) amended section 1886(d)(8) of the Act by adding paragraph (E). Section 401(a) created a mechanism that permits an urban hospital to apply to the Secretary to be treated, for purposes of subsection (d), as being located in the rural area of the State in which the hospital is located. A hospital that is granted redesignation under section 1886(d)(8)(E) of the Act, as added by section 401 of Pub. L. 106-113 is, therefore, treated as a rural hospital for

all purposes of payment under the Medicare IPPS, including the standardized amount, wage index, and disproportionate share calculations as of the effective date of the redesignation. Under current policy, as a result of an approved redesignation of an urban hospital as a rural hospital, the wage index data are excluded from the wage index calculation for the area where the urban hospital is geographically located and included in the rural hospital wage index calculation.

Last year, we became aware of an instance where the approved redesignation of an urban hospital as rural under section 1886(d)(8)(E) of the Act resulted in the hospital's data having an adverse impact on the rural wage index. We received a public comment noting that specific "hold harmless" provisions apply to reclassifications that occur under section 1886(d)(8)(B) and section 1886(d)(10) of the Act. That is, if a hospital is granted geographic reclassification under section 1886(d)(8)(B) or section 1886(d)(10) of the Act, there are certain rules that apply when the inclusion of the hospital's data results in a reduction of the reclassification area's wage index, and these rules are slightly different for urban areas versus rural areas. These rules are more fully described in the FY 2005 IPPS final rule (69 FR 49053). Generally stated, these rules prevent a rural area from being adversely affected as a result of reclassification. That is, if excluding the reclassifying hospitals' wage data would decrease the wage index of the rural area, the reclassifying hospitals are included in the rural area's wage index. Otherwise, the reclassifying hospitals are excluded. For hospitals reclassifying out of urban areas, the rules provide that the wage data for the reclassified urban hospital is included in the wage index calculation of the urban area where the hospital is physically located.

The commenter recommended that we revise our regulations and apply similar hold harmless provisions and treat hospitals redesignated under 1886(d)(8)(E) of the Act in the same manner as reclassifications under section 1886(d)(8)(B) and section 1886(d)(10) of the Act. In our continued effort to promote consistency, equity and to simplify our rules with respect to how we construct the wage indexes of rural and urban areas, we are persuaded that there is a need to modify our policy when hospital redesignations occur under section 1886(d)(8)(E) of the Act. Therefore, for the FY 2006 wage index, we are proposing to apply the hold harmless rule that currently applies

when rural hospitals are reclassifying out of the rural area (from rural to urban) to situations where hospitals are reclassifying into the rural area (from urban to rural under section 1886(d)(8)(E) of the Act). Thus, the rule would be that the wage data of the urban hospital reclassifying into the rural area is included in the rural area's wage index, if including the urban hospital's data increases the wage index of the rural area. Otherwise, the wage data is excluded. Similarly, we are proposing to apply to these cases the rule that currently applies when urban hospitals reclassify under the MGCRB process. Thus, the wage data for an urban hospital reclassifying under section 1886(d)(8)(E) of the Act is always included in the wage index of the urban area where the hospital is located, and can also be included in the wage index of the rural area to which it is reclassifying (if doing so increases the rural area's wage index). We believe this proposal provides uniformity in the way geographic areas are treated under all types of reclassifications. In addition, our proposal promotes predictability by alleviating fluctuations in the wage indexes due to a section 401 redesignation.

We are including in the Addendum to this proposed rule Table 9C, which shows hospitals redesignated under section 1886(d)(8)(E) of the Act.

#### 4. FY 2006 MGCRB Reclassifications

At the time this proposed rule was constructed, the MGCRB had completed its review of FY 2006 reclassification requests. There were 295 hospitals approved for wage index reclassifications by the MGCRB for FY 2006. Because MGCRB wage index reclassifications are effective for 3 years, hospitals reclassified during FY 2004 or FY 2005 are eligible to continue to be reclassified based on prior reclassifications to current MSAs during FY 2006. There were 395 hospitals reclassified for wage index for FY 2005, and 94 hospitals reclassified for wage index in FY 2004. Some of the hospitals that reclassified in FY 2004 and FY 2005 have elected not to continue their reclassifications in FY 2006 because, under the new labor market area definitions, they are now physically located in the areas to which they previously reclassified. Of all of the hospitals approved for reclassification for FY 2004, FY 2005, and FY 2006, 672 hospitals will be in a reclassification status for FY 2006.

Prior to FY 2004, hospitals had been able to apply to be reclassified for purposes of either the wage index or the standardized amount. Section 401 of

Pub. L. 108-173 established that all hospitals will be paid on the basis of the large urban standardized amount, beginning with FY 2004. Consequently, all hospitals are paid on the basis of the same standardized amount, which made such reclassifications moot. Although there could still be some benefit in terms of payments for some hospitals under the DSH payment adjustment for operating IPPS, section 402 of Pub. L. 108-173 equalized DSH payment adjustments for rural and urban hospitals, with the exception that the rural DSH adjustment is capped at 12 percent (except that RRCs have no cap). (A detailed discussion of this application appears in section IV.I. of the preamble of the FY 2005 IPPS final rule (69 FR 49085).)

#### 5. Proposed FY 2006 Redesignations Under Section 1886(d)(8)(B) of the Act

Beginning October 1, 1988, section 1886(d)(8)(B) of the Act required us to treat a hospital located in a rural county adjacent to one or more urban areas as being located in the MSA if certain criteria were met. Prior to FY 2005, the rule was that a rural county adjacent to one or more urban areas would be treated as being located in the MSA to which the greatest number of workers in the county commute, if the rural county would otherwise be considered part of an urban area under the standards published in the **Federal Register** on January 3, 1980 (45 FR 956) for designating MSAs (and NECMAs), and if the commuting rates used in determining outlying counties (or, for New England, similar recognized areas) were determined on the basis of the aggregate number of resident workers who commute to (and, if applicable under the standards, from) the central county or counties of all contiguous MSAs (or NECMAs). Hospitals that met the criteria using the January 3, 1980 version of these OMB standards were deemed urban for purposes of the standardized amounts and for purposes of assigning the wage data index.

On June 6, 2003, OMB announced the new CBSAs based on Census 2000 data. For FY 2005, we used OMB's 2000 CBSA standards and the Census 2000 data to identify counties qualifying for redesignation under section 1886(d)(8)(B) for the purpose of assigning the wage index to the urban area. We presented this listing, effective for discharges occurring on or after October 1, 2004 (FY 2005), in Chart 6 of the FY 2005 final rule (69 FR 49057). However, Chart 6 in the FY 2005 final rule contained a printing error in which we misidentified rural counties that qualified for redesignation under

section 1886(d)(8)(B) of the Act. The list of rural counties qualifying to be urban in that Chart 6 incorrectly included Monroe, PA and Walworth, WI. This error was made only in the chart and not in the application of the rules; that is, we correctly applied the rules to the correct rural counties qualifying to be urban for FY 2005.

In addition, we discovered that, in the FY 2005 IPPS final rule, we had erroneously printed the names of the

entire Metropolitan Statistical Areas rather than the Metropolitan Division names. Because we recognized Metropolitan Divisions as MSAs in the FY 2005 IPPS final rule (69 FR 49029), we should have printed the division names for the following counties: Henry, FL; Starke, IN; Henderson, TX; Fannin, TX; and Island, WA.

The chart below contains the corrected listing of the rural counties designated as urban under section

1886(d)(8)(B) of the Act that we are proposing to use for FY 2006. We are proposing that, for discharges occurring on or after October 1, 2005, hospitals located in the first column of this chart will be redesignated for purposes of using the wage index of the urban area listed in the second column.

BILLING CODE 4120-01-P

**Rural Counties Redesignated as Urban under  
Section 1886(d)(8)(B) of the Act  
(Based on CBSAs and Census 2000 Data)**

| Rural County          | CBSA                                     |
|-----------------------|--|
| Cherokee, AL          | Rome, GA                                 |
| Macon, AL             | Auburn-Opelika, AL                       |
| Talladega, AL         | Anniston-Oxford, AL                      |
| Hot Springs, AR       | Hot Springs, AR                          |
| Litchfield, CT        | Hartford-West Hartford-East Hartford, CT |
| Windham, CT           | Hartford-West Hartford-East Hartford, CT |
| Bradford, FL          | Gainesville, FL                          |
| Flagler, FL           | Deltona-Daytona Beach-Ormond Beach, FL   |
| Hendry, FL            | West Palm Beach-Boca Raton-Boynton, FL   |
| Levy, FL              | Gainesville, FL                          |
| Walton, FL            | Fort Walton Beach-Crestview-Destin, FL   |
| Banks, GA             | Gainesville, GA                          |
| Chattooga, GA         | Chattanooga, TN-GA                       |
| Jackson, GA           | Atlanta-Sandy Springs-Marietta, GA       |
| Lumpkin, GA           | Atlanta-Sandy Springs-Marietta, GA       |
| Morgan, GA            | Atlanta-Sandy Springs-Marietta, GA       |
| Peach, GA             | Macon, GA                                |
| Polk, GA              | Atlanta-Sandy Springs-Marietta, GA       |
| Talbot, GA            | Columbus, GA-AL                          |
| Bingham, ID           | Idaho Falls, ID                          |
| Christian, IL         | Springfield, IL                          |
| DeWitt, IL            | Bloomington-Normal, IL                   |
| Iroquois, IL          | Kankakee-Bradley, IL                     |

| Walworth, WI   | Milwaukee-Waukesha-West Allis, WI       |

As in the past, hospitals redesignated under section 1886(d)(8)(B) of the Act are also eligible to be reclassified to a different area by the MGCRCB. Affected hospitals are permitted to compare the reclassified wage index for the labor market area in Table 4C in the Addendum of this proposed rule into which they have been reclassified by the MGCRCB to the wage index for the area to which they are redesignated under section 1886(d)(8)(B) of the Act. Hospitals may withdraw from an MGCRCB reclassification within 45 days of the publication of this proposed rule.

#### 6. Reclassifications Under Section 508 of Pub. L. 108-173

Under section 508 of Pub. L. 108-173, a qualifying hospital could appeal the wage index classification otherwise applicable to the hospital and apply for reclassification to another area of the State in which the hospital is located (or, at the discretion of the Secretary, to an area within a contiguous State). We implemented this process through notices published in the **Federal Register** on January 6, 2004 (69 FR 661) and February 13, 2004 (69 FR 7340). Such reclassifications are applicable to discharges occurring during the 3-year period beginning April 1, 2004 and ending March 31, 2007. Under section 508(b), reclassifications under this process do not affect the wage index computation for any area or for any other hospital and cannot be effected in a budget neutral manner.

We show the reclassifications effective under the one-time appeal process in Table 9B in the Addendum to this proposed rule.

#### 1. Proposed FY 2006 Wage Index Adjustment Based on Commuting Patterns of Hospital Employees

(If you choose to comment on issues in this section, please include the caption "Out-Migration Adjustment" at the beginning of your comment.)

In accordance with the broad discretion under section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108-173, beginning with FY 2005, we established a process to make adjustments to the hospital wage index based on commuting patterns of hospital employees. The process, outlined in the FY 2005 IPPS final rule (69 FR 49061), provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county but work in a different county (or counties) with a higher wage index. Such adjustments to the wage index are effective for 3 years, unless a hospital requests to waive the application of the adjustment. A county will not lose its status as a qualifying county due to wage index changes during the 3-year period, and counties will receive the same wage index increase for those 3 years. However, a county that qualifies in any given year may no longer qualify after the 3-year period, or it may qualify but receive a different adjustment to the wage index level. Hospitals that receive this adjustment to their wage index are not eligible for reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act. Adjustments under this provision are not subject to the IPPS budget neutrality requirements at section 1886(d)(3)(E) or section 1886(d)(8)(D) of the Act.

Hospitals located in counties that qualify for the wage index adjustment are to receive an increase in the wage

index that is equal to the average of the differences between the wage indexes of the labor market area(s) with higher wage indexes and the wage index of the resident county, weighted by the overall percentage of hospital workers residing in the qualifying county who are employed in any labor market area with a higher wage index. We have employed the prereclassified wage indexes in making these calculations.

We are proposing that hospitals located in the qualifying counties identified in Table 4J in the Addendum to this proposed rule that have not already reclassified through section 1886(d)(10) of the Act, redesignated through section 1886(d)(8) of the Act, received a section 508 reclassification, or requested to waive the application of the out-migration adjustment would receive the wage index adjustment listed in the table for FY 2006. We used the same formula described in the FY 2005 final rule (69 FR 49064) to calculate the out-migration adjustment. This proposed adjustment was calculated as follows:

*Step 1.* Subtract the wage index for the qualifying county from the wage index for the higher wage area(s).

*Step 2.* Divide the number of hospital employees residing in the qualifying county who are employed in such higher wage index area by the total number of hospital employees residing in the qualifying county who are employed in any higher wage index area. Multiply this result by the result obtaining in Step 1.

*Step 3.* Sum the products resulting from Step 2 (if the qualifying county has workers commuting to more than one higher wage area).

*Step 4.* Multiply the result from Step 3 by the percentage of hospital employees who are residing in the qualifying county and who are

employed in any higher wage index area.

The proposed adjustments calculated for qualifying hospitals are listed in Table 4J in the Addendum to this proposed rule. These proposed adjustments would be effective for each county for a period of 3 fiscal years. Hospitals that received the adjustment in FY 2005 will be eligible to retain that same adjustment for FY 2006 and FY 2007. For hospitals in newly qualified counties, adjustments to the wage index would be effective for 3 years, beginning with discharges occurring on or after October 1, 2005.

As previously noted, hospitals receiving the wage index adjustment under section 1886(d)(13)(F) of the Act are not eligible for reclassification under section 1886(d)(10) of the Act or reclassifications under section 508 of Pub. L. 108-173. Hospitals that wish to waive the application of this wage index adjustment must notify CMS within 45 days of the publication of this proposed rule. Waiver notification should be sent to the following address: Centers for Medicare and Medicaid Services, Center for Medicare Management, Attention: Wage Index Adjustment Waivers, Division of Acute Care, Room C4-08-06, 7500 Security Boulevard, Baltimore, MD 21244-1850. We will assume that hospitals that have been redesignated under section 1886(d)(8) of the Act or reclassified under section 886(d)(10) of the Act or under section 508 of Pub. L. 108-173 would prefer to keep their redesignation/reclassification unless they explicitly notify CMS that they would like to receive the out-migration adjustment instead. In addition, hospitals that wish to retain their redesignation/reclassification (instead of receiving the out-migration adjustment) for FY 2006 do not need to submit a formal request to CMS, and will automatically retain their redesignation/reclassification status for FY 2006. However, consistent with § 412.273, hospitals that have been reclassified by the MGCRB are permitted to withdraw their applications within 45 days of the publication of this proposed rule. Hospitals that have been reclassified by the MGCRB (including reclassifications under section 508 of Pub. L. 108-173) may terminate an existing 3-year reclassification within 45 days of the publication of this proposed rule in order to receive the wage index adjustment under this provision. Hospitals that are eligible to receive the wage index adjustment and that withdraw their application for reclassification will then automatically receive the wage index adjustment listed in Table 4J in the Addendum to

this proposed rule. The request for withdrawal of an application for reclassification or termination of an existing 3-year reclassification that would be effective in FY 2006 must be received by the MGCRB within 45 days of the publication of this proposed rule. Hospitals should carefully review the wage index adjustment that they would receive under this provision (as listed in Table 2 in the Addendum to this proposed rule) in comparison to the wage index adjustment that they would receive under the MGCRB reclassification (Table 9 in the Addendum to this proposed rule).

#### *J. Process for Requests for Wage Index Data Corrections*

(If you choose to comment on issues in this section, please include the caption "Wage Index Data Corrections" at the beginning of your comment.)

In the FY 2005 IPPS final rule (68 FR 27194), we revised the process and timetable for application for development of the wage index, beginning with the FY 2005 wage index. The preliminary and unaudited Worksheet S-3 wage data and occupational mix survey files were made available on October 8, 2004 through the Internet on the CMS Web site at: <http://cms.hhs.gov/providers/hipps/ippswage.asp>. In a memorandum dated October 6, 2004, we instructed all Medicare fiscal intermediaries to inform the IPPS hospitals they service of the availability of the wage index data files and the process and timeframe for requesting revisions (including the specific deadlines listed below). We also instructed the fiscal intermediaries to advise hospitals that these data are also made available directly through their representative hospital organizations.

If a hospital wished to request a change to its data as shown in the October 8, 2004 wage and occupational mix data files, the hospital was to submit corrections along with complete, detailed supporting documentation to its fiscal intermediary by November 29, 2004. Hospitals were notified of this deadline and of all other possible deadlines and requirements, including the requirement to review and verify their data as posted on the preliminary wage index data file on the Internet, through the October 6, 2004 memorandum referenced above.

In the October 6, 2004 memorandum, we also specified that a hospital could only request revisions to the occupational mix data for the reporting period that the hospital used in its original FY 2005 wage index occupational mix survey. That is, a hospital that submitted occupational

mix data for the 12-month reporting period could not switch to submitting data for the 4-week reporting period and vice versa. Further, a hospital could not submit an occupational mix survey for the periods beginning before January 1, 2003, or after January 11, 2004. In addition, a hospital that did not submit an occupational mix survey for the FY 2005 wage index was not permitted to submit a survey for the FY 2006 wage index.

The fiscal intermediaries notified the hospitals by mid-February 2005 of any changes to the wage index data as a result of the desk reviews and the resolution of the hospitals' late November 2004 change requests. The fiscal intermediaries also submitted the revised data to CMS by mid-February 2005. CMS published the proposed wage index public use files that included hospitals' revised wage data on February 25, 2005. In a memorandum also dated February 25, 2005, we instructed fiscal intermediaries to notify all hospitals regarding the availability of the proposed wage index public use files and the criteria and process for requesting corrections and revisions to the wage index data. Hospitals had until March 14, 2005 to submit requests to the fiscal intermediaries for reconsideration of adjustments made by the fiscal intermediaries as a result of the desk review, and to correct errors due to CMS's or the fiscal intermediary's mishandling of the wage index data. Hospitals were also required to submit sufficient documentation to support their requests.

After reviewing requested changes submitted by hospitals, fiscal intermediaries are to submit any additional revisions resulting from the hospitals' reconsideration requests by April 15, 2005. The deadline for a hospital to request CMS intervention in cases where the hospital disagrees with the fiscal intermediary's policy interpretations is April 22, 2005.

Hospitals should also examine Table 2 in the Addendum to this proposed rule. Table 2 contains each hospital's adjusted average hourly wage used to construct the wage index values for the past 3 years, including the FY 2002 data used to construct the FY 2006 wage index. We note that the hospital average hourly wages shown in Table 2 only reflect changes made to a hospital's data and transmitted to CMS by February 23, 2005.

We will release a final wage index data public use file in early May 2005 to hospital associations and the public on the Internet at <http://www.cms.hhs.gov/providers/hipps/>

*ippswage.asp*. The May 2005 public use file will be made available solely for the limited purpose of identifying any potential errors made by CMS or the fiscal intermediary in the entry of the final wage data that result from the correction process described above (revisions submitted to CMS by the fiscal intermediaries by April 15, 2005). If, after reviewing the May 2005 final file, a hospital believes that its wage data were incorrect due to a fiscal intermediary or CMS error in the entry or tabulation of the final wage data, it should send a letter to both its fiscal intermediary and CMS that outlines why the hospital believes an error exists and provide all supporting information, including relevant dates (for example, when it first became aware of the error). CMS and the fiscal intermediaries must receive these requests no later than June 10, 2005. Requests mailed to CMS should be sent to:

Centers for Medicare & Medicaid Services, Center for Medicare Management, Attention: Wage Index Team, Division of Acute Care, C4-08-06, 7500 Security Boulevard, Baltimore, MD 21244-1850.

Each request also must be sent to the fiscal intermediary. The fiscal intermediary will review requests upon receipt and contact CMS immediately to discuss its findings.

At this point in the process, that is, after the release of the May 2005 wage index data file, changes to the hospital wage data will only be made in those very limited situations involving an error by the fiscal intermediary or CMS that the hospital could not have known about before its review of the final wage index data file. Specifically, neither the intermediary nor CMS will approve the following types of requests:

- Requests for wage data corrections that were submitted too late to be included in the data transmitted to CMS by fiscal intermediaries on or before April 15, 2005.
- Requests for correction of errors that were not, but could have been, identified during the hospital's review of the February 25, 2005 wage index data file.
- Requests to revisit factual determinations or policy interpretations made by the fiscal intermediary or CMS during the wage index data correction process.

Verified corrections to the wage index received timely by CMS and the fiscal intermediaries (that is, by June 10, 2005) will be incorporated into the final wage index to be published by August 1, 2005, and to be effective October 1, 2005.

We created the processes described above to resolve all substantive wage index data correction disputes before we finalize the wage and occupational mix data for the FY 2006 payment rates. Accordingly, hospitals that do not meet the procedural deadlines set forth above will not be afforded a later opportunity to submit wage index data corrections or to dispute the fiscal intermediary's decision with respect to requested changes. Specifically, our policy is that hospitals that do not meet the procedural deadlines set forth above will not be permitted to challenge later, before the Provider Reimbursement Review Board, the failure of CMS to make a requested data revision (*See W. A. Foote Memorial Hospital v. Shalala*, No. 99-CV-75202-DT (E.D. Mich. 2001), also *Palisades General Hospital v. Thompson*, No. 99-1230 (D.D.C. 2003)).

Again, we believe the wage index data correction process described above provides hospitals with sufficient opportunity to bring errors in their wage index data to the fiscal intermediaries' attention. Moreover, because hospitals will have access to the final wage index data by early May 2005, they have the opportunity to detect any data entry or tabulation errors made by the fiscal intermediary or CMS before the development and publication of the final FY 2006 wage index by August 1, 2005, and the implementation of the FY 2006 wage index on October 1, 2005. If hospitals avail themselves of the opportunities afforded to provide and make corrections to the wage data, the wage index implemented on October 1 should be accurate. Nevertheless, in the event that errors are identified by hospitals and brought to our attention after June 10, 2005, we retain the right to make midyear changes to the wage index under very limited circumstances.

Specifically, in accordance with § 412.64(k)(1) of our existing regulations, we make midyear corrections to the wage index for an area only if a hospital can show that: (1) The fiscal intermediary or CMS made an error in tabulating its data; and (2) the requesting hospital could not have known about the error or did not have an opportunity to correct the error, before the beginning of the fiscal year. For purposes of this provision, "before the beginning of the fiscal year" means by the June deadline for making corrections to the wage data for the following fiscal year's wage index. This provision is not available to a hospital seeking to revise another hospital's data that may be affecting the requesting hospital's wage index for the labor market area. As indicated earlier, since

CMS makes the wage data available to a hospital on the CMS website prior to publishing both the proposed and final IPPS rules, and the fiscal intermediaries notify hospitals directly of any wage data changes after completing their desk reviews, we do not expect that midyear corrections would be necessary. However, under our current policy, if the correction of a data error changes the wage index value for an area, the revised wage index value will be effective prospectively from the date the correction is made.

We are proposing to revise § 412.64(k)(2) to specify that a change to the wage index can be made retroactive to the beginning of the Federal fiscal year only when: (1) The fiscal intermediary or CMS made an error in tabulating data used for the wage index calculation; (2) the hospital knew about the error and requested that the fiscal intermediary and CMS correct the error using the established process and within the established schedule for requesting corrections to the wage data, before the beginning of the fiscal year for the applicable IPPS update (that is, by the June 10, 2005 deadline for the FY 2006 wage index); and (3) CMS agreed that the fiscal intermediary or CMS made an error in tabulating the hospital's wage data and the wage index should be corrected. We are proposing this change because there may be instances in which a hospital identifies an error in its wage data and submits a correction request using all appropriate procedures and by the June deadline, CMS agrees that the fiscal intermediary or CMS caused the error in the hospital's wage data and that the wage index must be corrected, but CMS fails to publish or implement the corrected wage index value by the beginning of the Federal fiscal year. We believe that the above proposed revision to § 412.64(k)(2) is appropriate and fair. We also believe that unlike a generalized retroactive policy, the situations where this will occur will be minimal, thus minimizing the administrative burden associated with such retroactive corrections. In those circumstances where a hospital requests a correction to its wage data before CMS calculates the final wage index (that is, by the June deadline), and CMS acknowledges that the error in the hospital's wage data caused by CMS's or the fiscal intermediary's mishandling of the data, we believe that the hospital should not be penalized by our delay in publishing or implementing the correction. As with our current policy, this provision would not be available to a hospital seeking to revise another

hospital's data. In addition, the provision could not be used to correct prior years' wage data; it could only be used for the current Federal fiscal year. In other situations, we continue to believe that it is appropriate to make prospective corrections to the wage index in those circumstances where a hospital could not have known about or did not have the opportunity to correct the fiscal intermediary's or CMS's error before the beginning of the fiscal year (that is, by the June deadline).

We are proposing to make this change to § 412.64(k)(2) effective on October 1, 2005, that is, beginning with the FY 2006 wage index. We note that, as with prospective changes to the wage index, the proposed retroactive correction would be made irrespective of whether the change increases or decreases a hospital's payment rate. In addition, we note that the policy of retroactive adjustment would still apply in those instances where a judicial decision reverses a CMS denial of a hospital's wage data revision request.

In addition, we are proposing to correct the FY 2005 wage index retroactively (that is, from October 1, 2004) on a one-time only basis for a limited circumstance using the authority provided under section 903(a)(1) of Pub. L. 108-173. This provision authorizes the Secretary to make retroactive changes to items and services if failure to apply such changes would be contrary to the public interest. However, as indicated, our current regulations at § 412.64(k)(1) allow only for a prospective correction to the hospitals' area wage index values. We are proposing to correct the FY 2005 wage index retroactively in the limited circumstance where a hospital meets all of the following criteria: (1) The fiscal intermediary or CMS made an error in tabulating a hospital's FY 2005 wage index data; (2) the hospital informed the fiscal intermediary or CMS, or both, about the error, following the established schedule and process for requesting corrections to its FY 2005 wage index data; and (3) CMS agreed before October 1 that the fiscal intermediary or CMS made an error in tabulating the hospital's wage data and the wage index should be corrected by the beginning of the Federal fiscal year (that is, by October 1, 2004), but CMS was unable to publish the correction by the beginning of the fiscal year.

On December 30, 2004, we published in the *Federal Register* a correction notice to the FY 2005 IPPS final rule that included the corrected wage data for four hospitals that meet all of the three above stated criteria (69 FR 78526). These corrections were effective

January 1, 2005. As noted, our current regulations allow only for a prospective correction to the hospitals' area wage index values. However, we believe that, in the limited circumstance mentioned above, a retroactive correction to the FY 2005 wage index is appropriate and meets the condition of section 903(a)(1) of Pub. L. 108-173 that "failure to apply the change retroactively would be contrary to the public interest."

#### IV. Proposed Rebasing and Revision of the Hospital Market Baskets

(If you choose to comment on issues in this section, please include the caption "Hospital Market Basket" at the beginning of your comment.)

##### A. Background

Effective for cost reporting periods beginning on or after July 1, 1979, we developed and adopted a hospital input price index (that is, the hospital market basket for operating costs). Although "market basket" technically describes the mix of goods and services used to produce hospital care, this term is also commonly used to denote the input price index (that is, cost category weights and price proxies combined) derived from that market basket. Accordingly, the term "market basket" as used in this document refers to the hospital input price index.

The terms "rebasing" and "revising," while often used interchangeably, actually denote different activities. "Rebasing" means moving the base year for the structure of costs of an input price index (for example, in this proposed rule, we are proposing to shift the base year cost structure for the IPPS hospital index from FY 1997 to FY 2002). "Revising" means changing data sources, or price proxies, used in the input price index.

The percentage change in the market basket reflects the average change in the price of goods and services hospitals purchase in order to furnish inpatient care. We first used the market basket to adjust hospital cost limits by an amount that reflected the average increase in the prices of the goods and services used to provide hospital inpatient care. This approach linked the increase in the cost limits to the efficient utilization of resources.

Since the inception of the IPPS, the projected change in the hospital market basket has been the integral component of the update factor by which the prospective payment rates are updated every year. An explanation of the hospital market basket used to develop the prospective payment rates was published in the *Federal Register* on September 1, 1983 (48 FR 39764). We

also refer the reader to the August 1, 2002 *Federal Register* (67 FR 50032) in which we discussed the previous rebasing of the hospital input price index.

The hospital market basket is a fixed weight, Laspeyres-type price index that is constructed in three steps. First, a base period is selected (in this proposed rule, FY 2002) and total base period expenditures are estimated for a set of mutually exclusive and exhaustive spending categories based upon type of expenditure. Then the proportion of total operating costs that each category represents is determined. These proportions are called cost or expenditure weights. Second, each expenditure category is matched to an appropriate price or wage variable, referred to as a price proxy. In nearly every instance, these price proxies are price levels derived from publicly available statistical series that are published on a consistent schedule, preferably at least on a quarterly basis.

Finally, the expenditure weight for each cost category is multiplied by the level of its respective price proxy. The sum of these products (that is, the expenditure weights multiplied by their price levels) for all cost categories yields the composite index level of the market basket in a given period. Repeating this step for other periods produces a series of market basket levels over time. Dividing an index level for a given period by an index level for an earlier period produces a rate of growth in the input price index over that time period.

The market basket is described as a fixed-weight index because it describes the change in price over time of the same mix of goods and services purchased to provide hospital services in a base period. The effects on total expenditures resulting from changes in the quantity or mix of goods and services (intensity) purchased subsequent to the base period are not measured. For example, shifting a traditionally inpatient type of care to an outpatient setting might affect the volume of inpatient goods and services purchased by the hospital, but would not be factored into the price change measured by a fixed weight hospital market basket. In this manner, the market basket measures only the pure price change. Only when the index is rebased using a more recent base period would the quantity and intensity effects be captured in the cost weights. Therefore, we rebase the market basket periodically so the cost weights reflect changes in the mix of goods and services that hospitals purchase (hospital inputs) to furnish inpatient care between base periods. We last

rebased the hospital market basket cost weights effective for FY 2003 (67 FR 50032, August 1, 2002), with FY 1997 data used as the base period for the construction of the market basket cost weights.

*B. Rebasings and Revising the Hospital Market Basket*

1. Development of Cost Categories and Weights

a. Medicare Cost Reports

The major source of expenditure data for developing the proposed rebased and revised hospital market basket cost weights is the FY 2002 Medicare cost

reports. These cost reports are from IPPS hospitals only. They do not reflect data from hospitals excluded from the IPPS or CAHs. The IPPS cost reports yield seven major expenditure or cost categories: wages and salaries, employee benefits, contract labor, pharmaceuticals, professional liability insurance (malpractice), blood and blood products, and a residual "all other."

**Chart 1: Major Cost Categories found in Medicare Cost Reports**

| Major Cost Categories                          | FY 1997-Based Market Basket | Proposed FY 2002-Based Market Basket |
|--|-----------------------------|--------------------------------------|
| Wages and salaries                             | 48.965                      | 45.590                               |
| Employee benefits                              | 10.597                      | 11.189                               |
| Contract labor                                 | 2.094                       | 3.214                                |
| Professional Liability Insurance (Malpractice) | 0.840                       | 1.589                                |
| Pharmaceuticals                                | 5.416                       | 5.855                                |
| Blood and blood products                       | 0.875                       | 1.082                                |
| All other                                      | 31.213                      | 31.481                               |

b. Other Data Sources

In addition to the Medicare cost reports, other sources of data used in developing the market basket weights are the Benchmark Input-Output Tables (I-Os) created by the Bureau of Economic Analysis, U.S. Department of Commerce, and the Business Expenses Survey developed by the Bureau of the Census, U.S. Department of Commerce, from its Economic Census.

New data for these Census sources are scheduled for publication every 5 years, but often take up to 7 years after the reference year. Only an Annual I-O is produced each year, but the Annual I-O contains less industry detail than does the Benchmark I-O. When we rebased the market basket using FY 1997 data in the FY 2003 IPPS final rule, the 1997 Benchmark I-O was not yet available. Therefore, we did not incorporate data from that source into the FY 1997-based market basket (67 FR 50033). However, we did use a secondary source, the 1997 Annual Input-Output tables. The third source of data, the 1997 Business Expenditure Survey (now known as the Business Expenses Survey) was used to develop weights for the utilities and telephone services categories.

The 1997 Benchmark I-O data are a much more comprehensive and complete set of data than the 1997

Annual I-O estimates. The 1997 Annual I-O is an update of the 1992 I-O tables, while the 1997 Benchmark I-O is an entirely new set of numbers derived from the 1997 Economic Census. The 2002 Benchmark Input-Output tables are not yet available. Therefore, we are proposing to use the 1997 Benchmark I-O data in the proposed FY 2002-based market basket, to be effective for FY 2006. Instead of using the less detailed, less accurate Annual I-O data, we aged the 1997 Benchmark I-O data forward to FY 2002. The methodology we used to age the data involves applying the annual price changes from the price proxies to the appropriate cost categories. We repeat this practice for each year.

The "all other" cost category is further divided into other hospital expenditure category shares using the 1997 Benchmark Input-Output tables. Therefore, the "all other" cost category expenditure shares are proportional to their relationship to "all other" totals in the I-O tables. For instance, if the cost for telephone services were to represent 10 percent of the sum of the "all other" I-O (see below) hospital expenditures, then telephone services would represent 10 percent of the market basket's "all other" cost category.

2. PPS—Selection of Price Proxies

After computing the FY 2002 cost weights for the proposed rebased hospital market basket, it is necessary to select appropriate wage and price proxies to reflect the rate-of-price change for each expenditure category. With the exception of the Professional Liability proxy, all the indicators are based on Bureau of Labor Statistics (BLS) data and are grouped into one of the following BLS categories:

- **Producer Price Indexes—Producer Price Indexes (PPIs)** measure price changes for goods sold in other than retail markets. PPIs are preferable price proxies for goods that hospitals purchase as inputs in producing their outputs because the PPIs would better reflect the prices faced by hospitals. For example, we use a special PPI for prescription drugs, rather than the Consumer Price Index (CPI) for prescription drugs because hospitals generally purchase drugs directly from the wholesaler. The PPIs that we use measure price change at the final stage of production.
- **Consumer Price Indexes—Consumer Price Indexes (CPIs)** measure change in the prices of final goods and services bought by the typical consumer. Because they may not represent the price faced by a producer, we used CPIs only if an appropriate PPI

was not available, or if the expenditures were more similar to those of retail consumers in general rather than purchases at the wholesale level. For example, the CPI for food purchased away from home is used as a proxy for contracted food services.

• **Employment Cost Indexes—** Employment Cost Indexes (ECIs) measure the rate of change in employee wage rates and employer costs for employee benefits per hour worked. These indexes are fixed-weight indexes and strictly measure the change in wage

rates and employee benefits per hour. Appropriately, they are not affected by shifts in employment mix.

We evaluated the price proxies using the criteria of reliability, timeliness, availability, and relevance. Reliability indicates that the index is based on valid statistical methods and has low sampling variability. Timeliness implies that the proxy is published regularly, at least once a quarter. Availability means that the proxy is publicly available. Finally, relevance means that the proxy is applicable and representative of the

cost category weight to which it is applied. The CPIs, PPIs, and ECIs selected meet these criteria.

Chart 2 sets forth the complete proposed market basket including cost categories, weights, and price proxies. For comparison purposes, the corresponding FY 1997-based market basket is listed as well. A summary outlining the choice of the various proxies follows the chart.

**BILLING CODE 4120-01-P**

**Chart 2: Proposed FY 2002-Based PPS Hospital Market Basket Cost Categories, Weights, and Proxies with FY 1997-Based Market Basket Used for Comparison**

| Expense Categories                  | FY 1997-Based Hospital Market Basket Weights | Proposed Rebased FY 2002-Based Hospital Market Basket Weights | Proposed Rebased FY 2002-Based Hospital Market Basket Price Proxies |
|-------------------------------------|--|---|---|
| 1. Compensation                     | 61.656                                       | 59.993  | --  |
| A. Wages and Salaries*              | 50.686                                       | 48.171  | ECI-Wages and Salaries, Civilian Hospital Workers                   |
| B. Employee Benefits*               | 10.970                                       | 11.822  | ECI-Benefits, Civilian Hospital Workers                             |
| 2. Professional Fees*               | 5.401  | 5.510   | ECI - Compensation for Professional, Specialty & Technical Workers  |
| 3. Utilities                        | 1.353  | 1.251   | --  |
| A. Fuel, Oil, and Gasoline          | 0.284  | 0.206   | PPI Refined Petroleum Products                                      |
| B. Electricity                      | 0.833  | 0.669   | PPI Commercial Electric Power                                       |

\*Labor-Related

\*\* Blood and blood products, previously a separate cost category, is now contained within Miscellaneous Products in the proposed FY 2002-based market basket.

BILLING CODE 4120-01-C

a. Wages and Salaries

For measuring the price growth of wages in the proposed FY 2002-based market basket, we are proposing to use the ECI for wages and salaries for civilian hospital workers as the proxy for wages in the hospital market basket. This same proxy was used for the 1997-based market basket.

b. Employee Benefits

The proposed FY 2002-based hospital market basket uses the ECI for employee benefits for civilian hospital workers. This is the same proxy that was used in the FY 1997-based market basket.

c. Nonmedical Professional Fees

The ECI for compensation for professional and technical workers in private industry is applied to this category because it includes occupations such as management and consulting, legal, accounting and engineering services. The same proxy was used in the FY 1997-based market basket.

d. Fuel, Oil, and Gasoline

The percentage change in the price of gas fuels as measured by the PPI (Commodity Code #0552) is applied to this component. The same proxy was used in the FY 1997-based market basket.

e. Electricity

The percentage change in the price of commercial electric power as measured by the PPI (Commodity Code #0542) is applied to this component. The same proxy was used in the FY 1997-based market basket.

f. Water and Sewerage

The percentage change in the price of water and sewerage maintenance as measured by the CPI for all urban consumers (CPI Code #CUUR0000SEHG01) is applied to this component. The same proxy was used in the FY 1997-based market basket.

g. Professional Liability Insurance

The proposed FY 2002-based index uses the percentage change in the hospital professional liability insurance (PLI) premiums as estimated by the CMS Hospital Professional Liability Index, which we use as a proxy in the Medicare Economic Index (68 FR 63244), for the proxy of this category. Similar to the Physicians Professional Liability Index, we attempt to collect commercial insurance premiums for a fixed level of coverage, holding nonprice factors constant (such as a change in the level of coverage). In the FY 1997-based market basket, the same price proxy was used.

We continue to research options for improving our proxy for professional liability insurance. This research includes exploring various options for expanding our current survey, including the identification of another entity that would be willing to work with us to collect more complete and comprehensive data. We are also exploring other options such as third party or industry data that might assist us in creating a more precise measure of PLI premiums. At this time, we have not yet identified a preferred option. Therefore, we are not proposing to make any changes to the proxy in this proposed rule.

h. Pharmaceuticals

The percentage change in the price of prescription drugs as measured by the PPI (PPI Code #PPI283D#RX) is used as a proxy for this category. This is a special index produced by BLS and is the same proxy used in the 1997-based index.

i. Food: Direct Purchases

The percentage change in the price of processed foods and feeds as measured by the PPI (Commodity Code #02) is applied to this component. The same proxy was used in the FY 1997-based market basket.

j. Food: Contract Services

The percentage change in the price of food purchased away from home as measured by the CPI for all urban consumers (CPI Code #CUUR0000SEFV) is applied to this component. The same proxy was used in the FY 1997-based market basket.

k. Chemicals

The percentage change in the price of industrial chemical products as measured by the PPI (Commodity Code #061) is applied to this component. While the chemicals hospitals purchase include industrial as well as other types of chemicals, the industrial chemicals component constitutes the largest proportion by far. Thus, we believe that Commodity Code #061 is the appropriate proxy. The same proxy was used in the FY 1997-based market basket.

l. Medical Instruments

The percentage change in the price of medical and surgical instruments as

measured by the PPI (Commodity Code #1562) is applied to this component. The same proxy was used in the FY 1997-based market basket.

m. Photographic Supplies

The percentage change in the price of photographic supplies as measured by the PPI (Commodity Code #1542) is applied to this component. The same proxy was used in the FY 1997-based market basket.

n. Rubber and Plastics

The percentage change in the price of rubber and plastic products as measured by the PPI (Commodity Code #07) is applied to this component. The same proxy was used in the FY 1997-based market basket.

o. Paper Products

The percentage change in the price of converted paper and paperboard products as measured by the PPI (Commodity Code #0915) is used. The same proxy was used in the FY 1997-based market basket.

p. Apparel

The percentage change in the price of apparel as measured by the PPI (Commodity Code #381) is applied to this component. The same proxy was used in the FY 1997-based market basket.

q. Machinery and Equipment

The percentage change in the price of machinery and equipment as measured by the PPI (Commodity Code #11) is applied to this component. The same proxy was used in the FY 1997-based market basket.

r. Miscellaneous Products

The percentage change in the price of all finished goods less food and energy as measured by the PPI (Commodity

Code #SOP3500) is applied to this component. Using this index removes the double-counting of food and energy prices, which are already captured elsewhere in the market basket. The same proxy was used in the FY 1997-based index. The weight for this cost category is higher than in the FY 1997-based index because the weight for blood and blood products (1.082) is added to it. In the FY 1997-based market basket, we included a separate cost category for blood and blood products, using the BLS PPI (Commodity Code #063711) for blood and derivatives as a price proxy. A review of recent trends in the PPI for blood and derivatives suggests that its movements may not be consistent with the trends in blood costs faced by hospitals. While this proxy did not match exactly with the product hospitals are buying, its trend over time appears to be reflective of the historical price changes of blood purchased by hospitals. However, an apparent divergence over recent periods led us to reevaluate whether the PPI for blood and derivatives was an appropriate measure of the changing price of blood. We ran test market baskets classifying blood in three separate cost categories: blood and blood products, contained within chemicals as was done for the FY 1992-based index, and within miscellaneous products. These categories use as proxies the following PPIs: The PPI for blood and blood products, the PPI for chemicals, and the PPI for finished goods less food and energy, respectively. Of these three proxies, the PPI for finished goods less food and energy moved most like the recent blood cost and price trends. In addition, the impact on the overall market basket by using different proxies for blood was negligible, mostly due to the relatively small weight for blood in the market basket. Therefore, we chose

the PPI for finished goods less food and energy for the blood proxy because we believe it will best be able to proxy price changes (not quantities or required tests) associated with blood purchased by hospitals. We will continue to evaluate this proxy for its appropriateness and will explore the development of alternative price indexes to proxy the price changes associated with this cost.

s. Telephone

The percentage change in the price of telephone services as measured by the CPI for all urban consumers (CPI Code # CUUR0000SEED) is applied to this component. The same proxy was used in the FY 1997-based market basket.

t. Postage

The percentage change in the price of postage as measured by the CPI for all urban consumers (CPI Code # CUUR0000SEEC01) is applied to this component. The same proxy was used in the FY 1997-based market basket.

u. All Other Services: Labor Intensive

The percentage change in the ECI for compensation paid to service workers employed in private industry is applied to this component. The same proxy was used in the FY 1997-based market basket.

v. All Other Services: Nonlabor Intensive

The percentage change in the all-items component of the CPI for all urban consumers (CPI Code # CUUR0000SA0) is applied to this component. The same proxy was used in the FY 1997-based market basket.

For further discussion of the rationales for choosing many of the specific price proxies, we refer the reader to the August 1, 2002 final rule (67 FR 50037).

**Chart 3: FY 1997-Based and Proposed FY 2002-Based Prospective Payment Hospital Operating Index Percent Change, FY 2000 through FY 2008**

| Fiscal Year (FY)      | Proposed Rebased FY 2002-Based Hospital Market Basket | FY 1997-Based Market Basket |
|-----------------------|---|-----------------------------|
| Historical data:      |   |                             |
| FY 2000               | 3.2   | 3.3                         |
| FY 2001               | 4.1   | 4.3                         |
| FY 2002               | 3.7   | 3.8                         |
| FY 2003               | 4.0   | 3.9                         |
| FY 2004               | 3.9   | 3.8                         |
| Average FYs 2000-2004 | 3.8   | 3.8                         |

### 3. Labor-Related Share

(If you choose to comment on issues in this section, please include the caption "Labor-Related Share" at the beginning of your comment.)

Under section 1886(d)(3)(E) of the Act, the Secretary estimates from time to time the proportion of payments that are labor-related. "The Secretary shall adjust the proportion (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs of the DRG prospective payment rates. \* \* \* We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the "labor-related share."

The labor-related share is used to determine the proportion of the national PPS base payment rate to which the area wage index is applied. We are proposing to continue to use our current methodology of defining the labor-related share as the national average proportion of operating costs that are related to, influenced by, or vary with the local labor markets. We believe that the operating cost categories that are related to, influenced by, or vary with the local labor markets are wages and salaries, fringe benefits, professional fees, contract labor, and labor intensive services. Therefore, we are proposing to calculate the labor-related share by adding the relative weights for these

operating cost categories. After we reviewed all cost categories in the proposed IPPS market basket using this definition of labor-related, we removed postage costs from the proposed FY 2002-based labor-related share because we no longer believe these costs are likely to vary with the local labor market. Using the cost category weights that we determined in section IV.B. of this preamble, we calculated a labor-related share of 69.731 percent, using the FY 2002-based PPS market basket. Accordingly, we are proposing to implement a labor-related share of 69.7 percent for discharges occurring on or after October 1, 2005. We note that section 403 of Pub. L. 108-173 amended sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act to provide that the Secretary must employ 62 percent as the labor-related share unless this employment "would result in lower payments than would otherwise be made."

We also are proposing an update to the labor-related share for Puerto Rico. Consistent with our methodology for determining the national labor-related share, we are proposing to add the Puerto Rico-specific relative weights for wages and salaries, fringe benefits, and contract labor. Because there are no Puerto Rico-specific relative weights for professional fees and labor intensive services, we are proposing to use the

national weights. Alternatively, we could apply the national labor-related share to the Puerto Rico-specific rate. We note that we are still reviewing our data and have not yet calculated the updated Puerto Rico-specific labor-related share percentage. Therefore, the labor-related and nonlabor-related portions of the Puerto Rico-specific standardized amount listed in Table 1C of the Addendum to this proposed rule reflect the current (FY 2005) labor-related share for Puerto Rico of 71.3 percent. Once we have calculated the updated labor-related share for Puerto Rico, we will post it on the CMS website at <http://www.cms.hhs.gov/providers/hipps>. In addition, if we adopt this proposal, we would publish the updated Puerto Rico labor-related share in the IPPS final rule. We welcome comments on our proposal to update the labor-related share for Puerto Rico.

Unlike the 1997 Annual I-O which was based on Standard Industrial Codes (SIC), the 1997 Benchmark I-O is categorized using the North American Industrial Classification System (NAICS). This change required us to classify all cost categories under NAICS, including a reevaluation of labor-related costs on the NAICS definitions. Chart 4 compares the FY 1992-based labor-related share, the current measure, with the FY 2002-based labor-related share. When we rebased the market basket to

reflect FY 1997 data, we did not change the labor-related share (67 FR 50041).

Therefore, the FY 1992-based labor-related share is the current measure.

**Chart 4.--Labor-Related Share: FY 1992-Based and FY 2002-Based**

| Cost Category                    | FY 1992-Based Weight | Proposed FY 2002-Based Weight | Difference |
|----------------------------------|----------------------|-------------------------------|------------|
| Wages and salaries               | 50.244               | 48.171                        | -2.073     |
| Fringe benefits                  | 11.146               | 11.822                        | 0.676      |
| Nonmedical professional fees     | 2.127                | 5.510                         | 3.383      |
| Postal services*                 | 0.272                | --                            | -0.272     |
| Other labor-intensive services** | 7.277                | 4.228                         | -3.049     |
| Total labor-related              | 71.066               | 69.731                        | -1.335     |
| Total nonlabor-related           | 28.934               | 30.269                        | 1.335      |

\* No longer considered to be labor-related.

\*\*Other labor-intensive services includes landscaping services, services to buildings, detective and protective services, repair services, laundry services, advertising, auto parking and repairs, physical fitness facilities, and other government enterprises.

Although we are proposing to continue to calculate the labor-related share by adding the relative weights of the labor-related operating cost categories, we continue to evaluate alternative methodologies. In the May 9, 2002 *Federal Register* (67 FR 31447), we discussed our research on the methodology for the labor-related share. This research involved analyzing the compensation share (the sum of wages and salaries and benefits) separately for urban and rural hospitals, using regression analysis to determine the proportion of costs influenced by the area wage index, and exploring alternative methodologies to determine whether all or only a portion of professional fees and nonlabor intensive services should be considered labor-related.

Our original analysis, which appeared in the May 9, 2002 *Federal Register* (67 FR 31447) and which focused mainly on edited FY 1997 hospital data, found that the compensation share of costs for hospitals in rural areas was higher on average than the compensation share for hospitals in urban areas. We also researched whether only a proportion of the costs in professional fees and labor-intensive services should be considered labor-related, not the entire cost categories. However, there was not enough information available to make this determination.

Our finding that the average compensation share of costs for rural hospitals was higher than the average compensation for urban hospitals was

validated consistently through our regression analysis. Regression analysis is a statistical technique that determines the relationship between a dependent variable and one or more independent variables. We tried several regression specifications in an effort to determine the proportion of costs that are influenced by the area wage index. Furthermore, MedPAC raised the possibility that regression may be an alternative to the current market basket methodology. Our initial regression specification (in log form) was Medicare operating cost per Medicare discharge as the dependent variable and the independent variables being the area wage index, the case-mix index, the ratio of residents per bed (as proxy for IME status), and a dummy variable that equals one if the hospital is located in a metropolitan area with a population of 1 million or more. (A dummy variable represents the presence or absence of a particular characteristic.) This regression produced a coefficient for all hospitals for the area wage index of 0.638 (which is equivalent to the labor share and can be interpreted as an elasticity because of the log specification) with an adjusted R-squared of 64.3. (Adjusted R-squared is a measure of how well the regression model fits the data.) While, on the surface, this appeared to be a reasonable result, this same specification for urban hospitals had a coefficient of 0.532 (adjusted R-squared = 53.2) and a coefficient of 0.709 (adjusted R-squared = 36.4) for rural hospitals. This

highlighted some apparent problems with the specification because the overall regression results appear to be masking underlying problems. It did not seem reasonable that urban hospitals would have a labor share below their actual compensation share or that the discrepancy between urban and rural hospitals would be this large. When we standardized the Medicare operating cost per Medicare discharge for case mix, the fit, as measured by adjusted R-squared, fell dramatically and the urban/rural discrepancy became even larger.

Based on this initial result, we tried two modifications to the FY 1997 regressions to correct for the underlying problems. First, we edited the data differently to determine if a few reports were causing the inconsistent results. We found when we tightened the edits, the wage index coefficient was lower and the fit was worse. When we loosened the edits, we found higher wage index coefficients and still a worse fit. Second, we added additional variables to the regression equation to attempt to explain some of the variation that was not being captured. We found the best fit occurred when the following variables were added: The occupancy rate, the number of hospital beds, a dummy variable that equals one if the hospital is privately owned and zero otherwise, a dummy variable that equals one if the hospital is government-controlled and zero otherwise, the Medicare length-of-stay, the number of FTEs per bed, and the age of fixed

assets. The result of this specification was a wage index coefficient of 0.620 (adjusted R-squared = 68.7), with the regression on rural hospitals having a coefficient of 0.772 (adjusted R-squared = 45.0) and the regression on urban hospitals having a coefficient of 0.474 (adjusted R-squared = 60.9). Neither of these alternatives seemed to help the underlying difficulties with the regression analysis.

Subsequent to the work described above, we have undertaken the research necessary to reevaluate the current assumptions used in determining the labor-related share. We ran regressions applying the previous specifications to more recent data (FY 2001 and FY 2002), and, as described below, we ran regressions using alternative specifications. Once again we encourage comments on this research and any information that is available to help determine the most appropriate measure.

The first step in our regression analysis to determine the proportion of hospitals' costs that varied with labor-related costs was to edit the data, which had significant outliers in some of the variables we used in the regressions. We originally began with an edit that excluded the top and bottom 5 percent of reports based on average Medicare cost per discharge and number of discharges. We also used edits to exclude reports that did not meet basic criteria for use, such as having costs greater than zero for total, operating, and capital for the overall facility and just the Medicare proportion. We also required that the hospital occupancy rate, length-of-stay, number of beds, FTEs, and overall and Medicare discharges be greater than zero. Finally, we excluded reports with occupancy rates greater than one.

Our regression specification (in log form) was Medicare operating cost per Medicare discharge as the dependent variable (the same dependent variable we used in the regression analysis described in the May 9, 2002 *Federal Register*) with the independent variables being the compensation per FTE, the ratio of interns and residents per bed (as proxy for LME status), the occupancy rate, the number of hospital beds, a dummy variable that equals one if the hospital is privately owned and is zero otherwise, a dummy variable that equals one if the hospital is government-controlled and is zero otherwise, the Medicare length-of-stay, the number of FTEs per bed, the age of fixed assets, and a dummy variable that equals one if the hospital is located in a metropolitan area with a population of 1 million or more. This is a similar

model to the one described in the May 9, 2002 *Federal Register* (67 FR 31447) as having the best fit, with two notable exceptions. First, the area wage index is replaced by compensation per FTE, where compensation is the sum of hospital wages and salaries, contract labor costs, and benefits. The area wage index is a payment variable computed by averaging wages across all hospitals within each MSA, whereas compensation per FTE differs from one hospital to the next. Second, the case-mix index is no longer included as a regressor because it is correlated with other independent variables in the regression. In other words, the other independent variables are capturing part of the effect of the case-mix index. We made these two specification changes in an attempt to only use cost variables to explain the variation in Medicare operating costs per discharge. We believe this is appropriate in order to compare to the results we are getting from the market basket methodology, which is based solely on cost data. As we will show below, the use of payment variables on the right-hand side of the equation appears to be producing less reasonable results when cost data are used.

The revised specification for FY 2002 produced a coefficient for all hospitals for compensation per FTE of 0.673 (which is roughly equivalent to the labor share and can be interpreted as an elasticity because of the log specification) with an adjusted R-squared of 63.7. The coefficient result for FY 2001 is 64.5, with an adjusted R-squared of 65.2. (For comparison, a separate regression for FY 2002 with the log area wage index and log case-mix index included in the set of regressors displays a log area wage index coefficient of 75.6 (adjusted R-squared = 67.7).) For FY 2001, the coefficient for the log area wage index is 72.3 (adjusted R-squared = 67.9). On the surface, these seem to be reasonable results. However, a closer look reveals some problems. In FY 2001, the coefficient for urban hospitals was 59.6 (adjusted R-squared = 57.3), and the coefficient for rural hospitals was 61.3 (adjusted R-squared = 50.6). On the other hand, in FY 2002, the coefficient for urban hospitals increased to 69.2 (adjusted R-squared = 55.9), and the coefficient for rural hospitals decreased to 58.2 (adjusted R-squared = 46.0). The results for FY 2001 seem reasonable, but not when compared with the results for FY 2002. Furthermore, for FY 2002 the compensation share of costs for hospitals in rural areas was higher on average than the compensation share for

hospitals in urban areas. Rural areas had an average compensation share of 63.3 percent, while urban areas had a share of 60.5 percent. This compares to a share of 61.2 percent for all hospitals.

Due to these problems, we do not believe the regression analysis is producing sound enough evidence at this point for us to make the decision to change from the current method for calculating the labor-related share. We continue to analyze these data and work on alternative specifications, including working with MedPAC, who in the past have done similar analysis in their studies of payment adequacy. Comments on this approach would be welcomed, given the difficulties we have encountered.

We also continue to look into ways to refine our market basket approach to more accurately account for the proportion of costs influenced by the local labor market. Specifically, we are looking at the professional fees and labor-intensive cost categories to determine if only a proportion of the costs in these categories should be considered labor-related, not the entire cost category. Professional fees include management and consulting fees, legal services, accounting services, and engineering services. Labor-intensive services are mostly building services, but also include other maintenance and repair services.

We conducted preliminary research into whether the various types of professional fees are more or less likely to be purchased in local labor markets. Through contact with a handful of hospitals in only two States, we asked for the percentages of their advertising, legal, and management and consulting services that they purchased in either local, regional, or national labor markets. The results were quite consistent across all of the hospitals, indicating most advertising and legal services are purchased in local or regional markets and nearly all management and consulting services are purchased in national labor markets. This suggested we may be appropriately reflecting advertising and legal services in the labor-related share, but we plan to investigate further whether management and consulting services are appropriately reflected. We do not believe that this limited effort produced enough evidence for us to change our methodology. However, we do plan to expand our efforts in this area to ensure we appropriately determine the labor-related share. We are soliciting data or studies that would be helpful in this analysis. We are unsure if we will be able to finish this analysis in time for inclusion in the FY 2006 IPPS final rule.

As mentioned previously, we are proposing to continue to calculate the labor-related share by adding the relative weights of the operating cost categories that are related to, influenced by, or vary with the local labor markets. These categories include wages and salaries, fringe benefits, professional fees, contract labor and labor-intensive services. Since we no longer believe that postage costs meet our definition of labor-related, we are excluding them from the labor-related share. Using this methodology, we calculated a labor-related share of 69.731. Therefore, we are proposing a labor-related share of 69.731.

#### *C. Separate Market Basket for Hospitals and Hospital Units Excluded from the IPPS*

(If you choose to comment on issues in this section, please include the caption "Excluded Hospital Market Basket" at the beginning of your comment.)

##### 1. Hospitals Paid Based on Their Reasonable Costs

On August 7, 2001, we published a final rule in the **Federal Register** (66 FR 41316) establishing the PPS for IRFs, effective for cost reporting periods beginning on or after January 1, 2002. On August 30, 2002, we published a final rule in the **Federal Register** (67 FR 55954) establishing the PPS for LTCHs, effective for cost reporting periods beginning on or after October 1, 2002. On November 15, 2004, we published a final rule in the **Federal Register** (69 FR 66922) establishing the PPS for the IPFs, effective for cost reporting periods beginning on or after January 1, 2005.

Prior to being paid under a PPS, IRFs, LTCHs, and IPFs were reimbursed solely under the reasonable cost-based system under § 413.40 of the regulations, which impose rate-of-increase limits. Children's and cancer hospitals and religious nonmedical health care institutions (RNHCIs) are still reimbursed solely under the reasonable cost-based system, subject to the rate-of-increase limits. Under these limits, an annual target amount (expressed in terms of the inpatient operating cost per discharge) is set for each hospital based on the hospital's own historical cost experience trended forward by the applicable rate-of-increase percentages. To the extent a LTCH or IPF receives a blend of reasonable cost-based payment and the Federal prospective payment rate amount, the reasonable cost portion of the payment is also subject to the applicable rate-of-increase percentage. Section 1886(b)(3)(B)(ii) of the Act sets

the percentage increase of the limits, which in certain years was based upon the market basket percentage increase. Beginning in FY 2003 and subsequent years, the applicable rate-of-increase is the market basket percentage increase. The market basket currently (and historically) used is the excluded hospital operating market basket, representing the cost structure of rehabilitation, long-term care, psychiatric, children's, and cancer hospitals (FY 2003 final rule, 67 FR 50042).

Because IRFs, LTCHs, and some IPFs are now paid under a PPS, we are considering developing a separate market basket for these hospitals that contains both operating and capital costs. We would publish any proposal to use a revised separate market basket for each of these types of hospitals when we propose the next update of their respective PPS rates. Children's and cancer hospitals are two of the remaining three types of hospitals excluded from the IPPS that are still being paid based solely on their reasonable costs, subject to target amounts. (RNHCIs, the third type of IPPS-excluded entity still subject to target amounts, are reimbursed under § 403.752(a) of the regulations.) Because there are a small number of children's and cancer hospitals and RNHCIs, which receive in total less than 1 percent of all Medicare payments to hospitals and because these hospitals provide limited Medicare cost report data, we are not proposing to create a separate market basket specifically for these hospitals. Under the broad authority in sections 1886(b)(3)(A) and (B), 1886(b)(3)(E), and 1871 of the Act, we are proposing to use the proposed FY 2002 IPPS operating market basket percentage increase to update the target amounts for children's and cancer hospitals reimbursed under sections 1886(b)(3)(A) and (b)(3)(E) of the Act and the market basket for RNHCIs under § 403.752(a) of the regulations. This proposal reflects our belief that it is best to use an index that most closely represents the cost structure of children's and cancer hospitals and RNHCIs. The FY 2002 cost weights for wages and salaries, professional liability, and "all other" for children's and cancer hospitals are noticeably closer to those in the IPPS operating market basket than those in the excluded hospital market basket, which is based on the cost structure of IRFs, LTCHs, IPFs, and children's and cancer hospitals and RNHCIs. Therefore, we believe it is more appropriate to use the IPPS operating market basket for

children's and cancer hospitals and RNHCIs. However, when we compare the weights for LTCHs and IPFs to the weights for IPPS hospitals, we did not find them comparable. Therefore, we do not believe it is appropriate to use the IPPS market basket for LTCHs and IPFs.

For similar reasons, we are considering at some other date proposing a separate market basket to update the adjusted Federal payment amount for IRFs, LTCHs, and IPFs. We expect that these changes would be proposed in separate proposed rules for each of these three hospital types. We envision that these changes should apply to the adjusted Federal payment rate, and not the portion of the payment that is based on a facility-specific (or reasonable cost) payment to the extent such a hospital or unit is paid under a blend methodology. In other words, to the extent any of these hospitals are paid under a blend methodology whereby a percentage of the payment is based on reasonable cost principles, we would not propose to make changes to the existing methodology for developing the market basket for the reasonable cost portion of the payment because this portion of the payment is being phased out, if it is not already a nonexistent feature of the PPSs for IRFs, LTCHs, and IPFs. We do not believe that it makes sense to propose to create an entirely new methodology for creating the "reasonable cost" portion of a blend methodology since the "reasonable cost portion" will last at most for just 1 or 3 additional years (1 year for LTCHs paid under a blend methodology since LTCHs only have 1 year remaining in their transition, and 3 years for IPFs since IPFs paid under a blend methodology only have 3 years remaining under a blend methodology). However, the same cannot be said for the adjusted Federal payment amount. In the case of the IRF PPS, all IRFs are paid at 100 percent of the adjusted Federal payment amount and will continue to be paid based on 100 percent of this amount for perpetuity. In the LTCH PPS, most LTCHs (98 percent) are already paid at 100 percent of the adjusted Federal payment amount. In the case of the few LTCHs that are paid under a blend methodology for cost reporting periods beginning on or after October 1, 2006, payment will be based entirely on the adjusted Federal prospective payment rate. In the case of IPFs, new IPFs (as defined in § 412.426(c)) will be paid at 100 percent of the adjusted Federal prospective payment rate (the Federal per diem payment amount), while all others will

continue to transition to 100 percent of the Federal per diem payment amount. In any event, even those transitioning will be at 100 percent of the adjusted Federal prospective payment rate in 3 years.

Chart 5 compares the updates for the FY 2002-based IPPS operating market basket, our proposed index used to update the target amounts for children's and cancer hospitals, and RNHCIs, with a FY 2002-based excluded hospital market basket that is based on the current methodology (that is, based on the cost structure of IRFs, LTCHs, IPFs, and children's and cancer hospitals).

Although the percent change in the IPPS operating market basket is typically lower than the percent change in the FY 2002-based excluded hospital market basket (see charts), we believe it is important to propose using the market basket that most closely reflects the cost structure of children's and cancer hospitals. We invite comments on our proposal to use the proposed FY 2002 IPPS operating market basket to update the target amounts for children's and cancer hospitals reimbursed under sections 1886(b)(3)(A) and (b)(3)(E) of the Act and the market basket for

RNHCIs under § 403.752(a) of the regulations.

Chart 5 shows the historical and forecasted updates under both the proposed FY 2002-based IPPS operating market basket and the proposed FY 2002-based excluded hospital market basket. The forecasts are based on Global Insight, Inc. 4th quarter, 2004 forecast with historical data through the 3rd quarter of 2004. Global Insight, Inc. is a nationally recognized economic and financial forecasting firm that contracts with CMS to forecast the components of the market baskets.

## 2. Excluded Hospitals Paid Under a Blend Methodology

As we discuss in greater detail in Appendix B to this proposed rule, in the past, hospitals and hospital units excluded from the IPPS have been paid based on their reasonable costs, subject to TEFRA limits. However, some of these categories of excluded hospitals and hospital units are now paid under their own PPSs. Specifically, some

LTCHs and most IPFs are or will be transitioning from reasonable cost-based payments (subject to the TEFRA limits) to prospective payments under their respective PPSs. Under the respective transition period methodologies for the LTCH PPS and the IPF PPS, which are described below, payment is based, in part, on a decreasing percentage of the reasonable cost-based payment amount, which is subject to the TEFRA limits

and an increasing percentage of the Federal prospective payment rate. For those LTCHs and IPFs whose PPS payment is comprised in part of a reasonable cost-based payment will have those reasonable cost-based payment amounts limited by the hospital's TEFRA ceiling.

Effective for cost reporting periods beginning on or after October 1, 2002, LTCHs are paid under the LTCH PPS,

which was implemented with a 5-year transition period, transitioning existing LTCHs to a payment based on the fully Federal prospective payment rate (August 30, 2002; 67 FR 55954). However, a LTCH may elect to be paid at 100 percent of the Federal prospective rate at the start of any of its cost reporting periods during the 5-year transition period. A "new" LTCH, as defined in § 412.23(e)(4), are paid based on 100 percent of the standard Federal rate. Effective for cost reporting periods beginning on or after January 1, 2005, IPFs are paid under the IPF PPS under which they receive payment based on a prospectively determined Federal per diem rate that is based on the sum of the average routine operating, ancillary, and capital costs for each patient day of psychiatric care in an IPF, adjusted for budget neutrality. During a 3-year transition period, existing IPFs are paid based on a blend of the reasonable cost-based payments and the Federal prospective per diem base rate. For cost reporting periods beginning on or after January 1, 2008, existing IPFs are to be paid based on 100 percent of the Federal per diem rate. A "new" IPF, as defined in § 412.426(c), are paid based on 100 percent of the Federal per diem payment amount. Any LTCHs or IPFs that receive a PPS payment that includes a reasonable cost-based payment during its respective transition period will have that portion of its payment subject to the TEFRA limits.

Under the broad authority of section 1886(b)(3)(A) and (b)(3)(B) of the Act, for LTCHs and IPFs that are transitioning to the fully Federal prospective payment rate, we are proposing to use the rebased FY 2002 based-excluded hospital market basket to update the reasonable cost-based

portion of their payments. The proposed market basket update is described in detail below. We do not believe the IPPS operating market basket should be used for the proposed update to the reasonable cost-based portion of the payments to LTCHs or IPFs because this market basket does not reflect the cost structure of LTCHs and IPFs.

### 3. Development of Cost Categories and Weights for the Proposed FY 2002-Based Excluded Hospital Market Basket

#### a. Medicare Cost Reports

The major source of expenditure data for developing the proposed rebased and revised excluded hospital market basket cost weights is the FY 2002 Medicare cost reports. We choose FY 2002 as the base year because we believe this is the most recent, relatively complete year (with a 90-percent reporting rate) of Medicare cost report data. These cost reports are from rehabilitation, psychiatric, long-term care, children's, cancer, and religious nonmedical excluded hospitals. They do not reflect data from IPPS hospitals or CAHs. These are the same hospitals included in the FY 1997-based excluded hospital market basket, except for religious nonmedical hospitals. Due to insufficient Medicare cost report data for these excluded hospitals, their cost reports yield only four major expenditure or cost categories: Wages and salaries, pharmaceuticals, professional liability insurance (malpractice), and a residual "all other."

Since the cost weights for the FY 2002-based excluded hospital market basket are based on facility costs, we are proposing to use those cost reports for IRFs, LTCHs, and children's, cancer, and RNHCIs whose Medicare average length of stay is within 15 percent (that

is, 15 percent higher or lower) of the total facility average length of stay for the hospital. We are proposing to use a less stringent edit for Medicare length of stay for IPFs, requiring the average length of stay to be within 30 or 50 percent (depending on the total facility average length of stay) of the total facility length of stay. This allows us to increase our sample size by over 150 reports and produce a cost weight more consistent with the overall facility. The edit we applied to IPFs when developing the FY 1997-based excluded hospital market basket was based on the best available data at the time.

We believe that limiting our sample to hospitals with a Medicare average length of stay within a comparable range of the total facility average length of stay provides a more accurate reflection of the structure of costs for Medicare treatments. Our method results in including in our data set hospitals with a share of Medicare patient days relative to total patient days that was approximately three times greater than for those hospitals excluded from our sample. Our goal is to measure cost shares that are reflective of case-mix and practice patterns associated with providing services to Medicare beneficiaries.

Cost weights for benefits, contract labor and blood and blood products were derived using the proposed FY 2002-based IPPS market basket. This is necessary because these data are poorly reported in the cost reports for non-IPPS hospitals. For example, the ratio of the benefit cost weight to the wages and salaries cost weight was applied to the proposed excluded hospital wages and salaries cost weight to derive a benefit cost weight for the proposed excluded hospital market basket.

**Chart 6: Major Cost Categories Found in Excluded Hospital Medicare Cost Reports**

| Major Cost Categories                          | FY 1997-Based Excluded Hospital Market Basket | Proposed FY 2002-Based Excluded Hospital Market Basket |
|--|---|--|
| Wages and salaries                             | 51.998  | 57.037   |
| Professional Liability Insurance (Malpractice) | 0.805   | 1.504  |
| Pharmaceuticals                                | 6.940   | 5.940  |
| All other                                      | 40.257  | 35.519   |

#### b. Other Data Sources

In addition to the Medicare cost reports, the other source of data used in developing the excluded hospital market basket weights is the Benchmark Input-Output Tables (I-Os) created by the Bureau of Economic Analysis, U.S. Department of Commerce.

New data for this source are scheduled for publication every 5 years, but often take up to 7 years after the reference year. Only an Annual I-O is produced each year, but the Annual I-O contains less industry detail than does the Benchmark I-O. When we rebased the excluded hospital market basket using FY 1997 data in the FY 2003 IPPS final rule, the 1997 Benchmark I-O was not yet available. Therefore, we did not incorporate data from that source into the FY 1997-based excluded hospital market basket (67 FR 50033). However, we did use a secondary source the 1997 Annual Input-Output tables. The third source of data, the 1997 Business Expenditure Survey (now known as the Business Expenses Survey), was used to develop weights for the utilities and telephone services categories.

The 1997 Benchmark I-O data are a much more comprehensive and complete set of data than the 1997 Annual I-O estimates. The 1997 Annual I-O is an update of the 1992 I-O tables, while the 1997 Benchmark I-O is an entirely new set of numbers derived from the 1997 Economic Census. The 2002 Benchmark Input-Output tables are not yet available. Therefore, we are proposing to use the 1997 Benchmark I-O data in the proposed FY 2002-based excluded hospital market basket, to be effective for FY 2006. Instead of using the less detailed, less accurate Annual I-O data, we aged the 1997 Benchmark I-O data forward to FY 2002. The methodology we used to age the data involves applying the annual price changes from the price proxies to the appropriate cost categories. We repeat this practice for each year.

The "all other" cost category is further divided into other hospital expenditure category shares using the 1997 Benchmark Input-Output tables. Therefore, the "all other" cost category expenditure shares are proportional to their relationship to "all other" totals in the I-O tables. For instance, if the cost for telephone services were to represent 10 percent of the sum of the "all other" I-O (see below) hospital expenditures, then telephone services would represent 10 percent of the market basket's "all other" cost category. The remaining detailed cost categories under the residual "all other" cost category were derived using the 1997 Benchmark Input-Output Tables aged to FY 2002 using relative price changes.

#### 4. Proposed 2002-Based Excluded Hospital Market Basket—Selection of Price Proxies

After computing the FY 2002 cost weights for the proposed rebased excluded hospital market basket, it is necessary to select appropriate wage and price proxies to reflect the rate-of-price change for each expenditure category. With the exception of the Professional Liability proxy, all the indicators are based on Bureau of Labor Statistics (BLS) data and are grouped into one of the following BLS categories:

- **Producer Price Indexes—**Producer Price Indexes (PPIs) measure price changes for goods sold in other than retail markets. PPIs are preferable price proxies for goods that hospitals purchase as inputs in producing their outputs because the PPIs would better reflect the prices faced by hospitals. For example, we use a special PPI for prescription drugs, rather than the Consumer Price Index (CPI) for prescription drugs because hospitals generally purchase drugs directly from the wholesaler. The PPIs that we use measure price change at the final stage of production.

- **Consumer Price Indexes—**Consumer Price Indexes (CPIs) measure

change in the prices of final goods and services bought by the typical consumer. Because they may not represent the price faced by a producer, we used CPIs only if an appropriate PPI was not available, or if the expenditures were more similar to those of retail consumers in general rather than purchases at the wholesale level. For example, the CPI for food purchased away from home is used as a proxy for contracted food services.

- **Employment Cost Indexes—**Employment Cost Indexes (ECIs) measure the rate of change in employee wage rates and employer costs for employee benefits per hour worked. These indexes are fixed-weight indexes and strictly measure the change in wage rates and employee benefits per hour. Appropriately, they are not affected by shifts in employment mix.

We evaluated the price proxies using the criteria of reliability, timeliness, availability, and relevance. Reliability indicates that the index is based on valid statistical methods and has low sampling variability. Timeliness implies that the proxy is published regularly, at least once a quarter. Availability means that the proxy is publicly available. Finally, relevance means that the proxy is applicable and representative of the cost category weight to which it is applied. The CPIs, PPIs, and ECIs selected meet these criteria and, therefore, we believe they continue to be the best measure of price changes for the cost categories to which they are applied.

Chart 7 sets forth the complete proposed FY 2002-based excluded hospital market basket including cost categories, weights, and price proxies. For comparison purposes, the corresponding FY 1997-based excluded hospital market basket is listed as well. A summary outlining the choice of the various proxies follows the charts.

\*Labor-Related

\*\* Blood and blood products, previously a separate cost category, is now contained within Miscellaneous Products in the proposed FY 2002-based excluded hospital market basket.

BILLING CODE 4120-01-C

a. Wages and Salaries

For measuring the price growth of wages in the proposed FY 2002-based excluded hospital market basket, we are proposing to use the ECI for wages and salaries for civilian hospital workers as the proxy for wages. This same proxy was used for the FY 1997-based excluded hospital market basket.

b. Employee Benefits

The proposed FY 2002-based excluded hospital market basket uses the ECI for employee benefits for civilian hospital workers. This is the same proxy that was used in the FY 1997-based excluded hospital market basket.

c. Nonmedical Professional Fees

The ECI for compensation for professional and technical workers in private industry is applied to this category because it includes occupations such as management and consulting, legal, accounting and engineering services. The same proxy was used in the FY 1997-based excluded hospital market basket.

**d. Fuel, Oil, and Gasoline**

The percentage change in the price of gas fuels as measured by the PPI (Commodity Code #0552) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**e. Electricity**

The percentage change in the price of commercial electric power as measured by the PPI (Commodity Code #0542) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**f. Water and Sewerage**

The percentage change in the price of water and sewerage maintenance as measured by the CPI for all urban consumers (CPI Code # CUUR0000SEHG01) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**g. Professional Liability Insurance**

The proposed FY 2002-based excluded hospital market basket uses the percentage change in the hospital professional liability insurance (PLI) premiums as estimated by the CMS Hospital Professional Liability Index for the proxy of this category. Similar to the Physicians Professional Liability Index, we attempt to collect commercial insurance premiums for a fixed level of coverage, holding nonprice factors constant (such as a change in the level of coverage). In the FY 1997-based excluded hospital market basket, the same price proxy was used.

We continue to research options for improving our proxy for professional liability insurance. This research includes exploring various options for expanding our current survey, including the identification of another entity that would be willing to work with us to collect more complete and comprehensive data. We are also exploring other options such as third party or industry data that might assist us in creating a more precise measure of PLI premiums. At this time, we have not yet identified a preferred option. Therefore, we are not proposing to make any changes to the proxy in this proposed rule.

**h. Pharmaceuticals**

The percentage change in the price of prescription drugs as measured by the PPI (PPI Code #PPI283D#RX) is used as a proxy for this category. This is a special index produced by BLS and is the same proxy used in the FY 1997-based excluded hospital market basket.

**i. Food: Direct Purchases**

The percentage change in the price of processed foods and feeds as measured by the PPI (Commodity Code #02) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**j. Food: Contract Services**

The percentage change in the price of food purchased away from home as measured by the CPI for all urban consumers (CPI Code # CUUR0000SEFV) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**k. Chemicals**

The percentage change in the price of industrial chemical products as measured by the PPI (Commodity Code #061) is applied to this component. While the chemicals hospitals purchase include industrial as well as other types of chemicals, the industrial chemicals component constitutes the largest proportion by far. Thus, we believe that Commodity Code #061 is the appropriate proxy. The same proxy was used in the FY 1997-based excluded hospital market basket.

**l. Medical Instruments**

The percentage change in the price of medical and surgical instruments as measured by the PPI (Commodity Code #1562) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**m. Photographic Supplies**

The percentage change in the price of photographic supplies as measured by the PPI (Commodity Code #1542) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**n. Rubber and Plastics**

The percentage change in the price of rubber and plastic products as measured by the PPI (Commodity Code #07) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**o. Paper Products**

The percentage change in the price of converted paper and paperboard products as measured by the PPI (Commodity Code #0915) is used. The same proxy was used in the FY 1997-based excluded hospital market basket.

**p. Apparel**

The percentage change in the price of apparel as measured by the PPI

(Commodity Code #381) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**q. Machinery and Equipment**

The percentage change in the price of machinery and equipment as measured by the PPI (Commodity Code #11) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

**r. Miscellaneous Products**

The percentage change in the price of all finished goods less food and energy as measured by the PPI (Commodity Code #SOP3500) is applied to this component. Using this index removes the double-counting of food and energy prices, which are already captured elsewhere in the market basket. The same proxy was used in the FY 1997-based excluded hospital market basket. The weight for this cost category is higher than in the FY 1997-based index because it also includes blood and blood products. In the FY 1997-based excluded hospital market basket, we included a separate cost category for blood and blood products, using the BLS PPI (Commodity Code #063711) for blood and derivatives as a price proxy. A review of recent trends in the PPI for blood and derivatives suggests that its movements may not be consistent with the trends in blood costs faced by hospitals. While this proxy did not match exactly with the product hospitals are buying, its trend over time appears to be reflective of the historical price changes of blood purchased by hospitals. However, an apparent divergence over recent periods led us to reevaluate whether the PPI for blood and derivatives was an appropriate measure of the changing price of blood. We ran test market baskets classifying blood in three separate cost categories: blood and blood products, contained within chemicals as was done for the FY 1992-based index, and within miscellaneous products. These categories use as proxies the following PPIs: the PPI for blood and blood products, the PPI for chemicals, and the PPI for finished goods less food and energy, respectively. Of these three proxies, the PPI for finished goods less food and energy moved most like the recent blood cost and price trends. In addition, the impact on the overall market basket by using different proxies for blood was negligible, mostly due to the relatively small weight for blood in the market basket. Therefore, we chose the PPI for finished goods less food and energy for the blood proxy because we believe it will best be able to proxy price

changes (not quantities or required tests) associated with blood purchased by hospitals. We will continue to evaluate this proxy for its appropriateness and will explore the development of alternative price indexes to proxy the price changes associated with this cost.

s. Telephone

The percentage change in the price of telephone services as measured by the CPI for all urban consumers (CPI Code #CUUR0000SEED) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

t. Postage

The percentage change in the price of postage as measured by the CPI for all urban consumers (CPI Code #CUUR0000SEEC01) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

u. All Other Services: Labor Intensive

The percentage change in the ECI for compensation paid to service workers employed in private industry is applied to this component. The same proxy was

used in the FY 1997-based excluded hospital market basket.

v. All Other Services: Nonlabor Intensive

The percentage change in the all-items component of the CPI for all urban consumers (CPI Code #CUUR0000SA0) is applied to this component. The same proxy was used in the FY 1997-based excluded hospital market basket.

For further discussion of the rationale for choosing many of the specific price proxies, we refer the reader to the August 1, 2002 final rule (67 FR 50037).

**Chart 8: FY 1997-Based and Proposed FY 2002-Based Excluded Hospital Operating Index Percent Change, FY 2000 through FY 2008**

| Fiscal Year (FY)      | Proposed FY 2002-Based Excluded Hospital Market Basket | FY 1997-Based Excluded Hospital Market Basket |

**D. Frequency of Updates of Weights in IPPS Hospital Market Basket**

Section 404 of Pub. L. 108-173 (MMA) requires CMS to report in this proposed rule the research that has been done to determine a new frequency for rebasing the hospital market basket. Specifically, section 404 states:

“(a) *More frequent updates in weights.* After revising the weights used in the hospital market basket under section 1886(b)(3)(B)(iii) of the Social Security Act (42 U.S.C. 1395ww(b)(3)(B)(iii)) to reflect the most current data available, the Secretary shall establish a frequency for revising such weights, including the labor share, in such market basket to reflect the most current data available

more frequently than once every 5 years; and

“(b) *Incorporation of explanation in rulemaking.* The Secretary shall include in the publication of the final rule for payment for inpatient hospital services under section 1886(d) of the Social Security Act (42 U.S.C. 1395ww(d)) for fiscal year 2006, an explanation of the reasons for, and options considered, in determining the frequency established under subsection (a).”

This section of the proposed rule discusses the research we have done to fulfill this requirement, and proposes a rebasing frequency that makes optimal use of available data.

Our past practice has been to monitor the appropriateness of the market basket

on a consistent basis in order to rebase and revise the index when necessary. The decision to rebase and revise the index has been driven in large part by the availability of the data necessary to produce a complete index. In the past, we have supplemented the Medicare cost report data that are available on an annual basis with Bureau of the Census hospital expense data that are typically available only every 5 years (usually in years ending in 2 and 7). Because of this, we have generally rebased the index every 5 years. However, prior to the requirement associated with section 404 of Pub. L. 108-173, there was no legislative requirement regarding the timing of rebasing the hospital market basket nor was there a hard rule that we

used in determining this frequency. ProPAC, one of MedPAC's predecessor organizations, did a report to the Secretary on April 1, 1985, that supported periodic rebasing at least every 5 years.

The most recent rebasing of the hospital market basket was just 3 years ago, for the FY 2003 update. Since its inception with the hospital PPS in FY 1984, the hospital market basket has been rebased several times (FY 1987 update, FY 1991 update, FY 1997 update, FY 1998 update, and FY 2003 update). One of the reasons we believe it appropriate to rebase the index on a periodic basis is that rebasing (as opposed to revising, as explained in section IV.A. of this preamble) tends to have only a minor impact on the actual percentage increase applied to the PPS update. There are two major reasons for this: (1) The cost category weights tend to be relatively stable over shorter term periods (3 to 5 years); and (2) the update is based on a forecast, which means the individual price series tend not to grow as differently as they have in some historical periods.

We focused our research in two major areas. First, we reviewed the frequency and availability of the data needed to produce the market basket. Second, we analyzed the impact on the market basket of determining the market basket weights under various frequencies. We did this by developing market baskets that had base years for every year between 1997 and 2002, and then analyzed how different the market

basket percent changes were over various periods. We used the results from these areas of research to assist in our determination of a new rebasing frequency. Based on this analysis, we are proposing to rebase the hospital market basket every 4 years. This would mean the next rebasing would occur for the FY 2010 update.

As we have described in numerous **Federal Register** documents over the past few decades, the hospital market basket weights are the compilation of data from more than one data source. When we are discussing rebasing the weights in the hospital market basket, there are two major data sources: (1) The Medicare cost reports; and (2) expense surveys from the Bureau of the Census (the Economic Census is used to develop data for the Bureau of Economic Analysis' input-output series). We will explore the future availability of each of these data sources.

Each Medicare-participating hospital submits a Medicare cost report to CMS on an annual basis. It takes roughly 2 years before "nearly complete" Medicare cost report data are available. For example, approximately 90 percent of FY 2002 Medicare cost report data were available in October 2004 (only 50 percent of FY 2003 data was available), although only 20 percent of these reports were settled. We choose FY 2002 as the base year because we believe this is the most recent, relatively complete year (with a 90 percent reporting rate) of Medicare cost report data. In

developing the hospital market basket weights, we have used the Medicare cost reports to determine the weights for six major cost categories (wages, benefits, contract labor, pharmaceuticals, professional liability, and blood). In FY 2002, these six categories accounted for 68.5 percent of the hospital market basket. Therefore, it is possible to develop a new set of market basket weights for these categories on an annual basis, but with a substantial lag (for the FY 2006 update, we consider the latest year of historical data to be FY 2002).

The second source of data is the U.S. Department of Commerce, Bureau of Economic Analysis' Benchmark Input-Output (I-O) table. These data are published every 5 years with a more significant lag than the Medicare cost reports. For example, the 1997 Benchmark I-O tables were not published until the beginning of 2003. We have sometimes used data from a third data source, the Bureau of the Census' Business Expenses Survey (BES), which is also published every 5 years. The BES data are used as an input into the I-O data, and thus are published a few months prior to the release of the I-O. However, the BES contains only a fraction of the detail contained in the I-O.

Chart 9 below takes into consideration the expected availability of these major data sources and summarizes how they could be incorporated into the development of future market basket weights.

**Chart 9: Expected Future Data Availability for Major Data Sources used in the Hospital Market Basket**

|                                     |         |         |         |         |         |         |
|-------------------------------------|---------|---------|---------|---------|---------|---------|
| PPS FY Update                       | FY 2006 | FY 2007 | FY 2008 | FY 2009 | FY 2010 | FY 2011 |
| Market Basket Base Year             | FY 2002 | FY 2003 | FY 2004 | FY 2005 | FY 2006 | FY 2007 |
| Medicare Cost Report Data Available | FY 2002 | FY 2003 | FY 2004 | FY 2005 | FY 2006 | FY 2007 |
| I-O Data Available                  | 1997    | 1997    | 1997    | 1997    | 1997    | 2002    |
| BES Data Available                  | 1997    | 1997    | 1997    | 1997    | 1997    | 2002    |
| Number of Years Data Must Be Aged   | 5       | 6       | 7       | 8       | 9       | 5       |

|                                     |         |         |         |         |         |
|-------------------------------------|---------|---------|---------|---------|---------|
| FPS FY Update                       | FY 2012 | FY 2013 | FY 2014 | FY 2015 | FY 2016 |
| Market Basket Base Year             | FY 2008 | FY 2009 | FY 2010 | FY 2011 | FY 2012 |
| Medicare Cost Report Data Available | FY 2008 | FY 2009 | FY 2010 | FY 2011 | FY 2012 |
| I-O Data Available                  | 2002    | 2002    | 2002    | 2002    | 2007    |
| BES Data Available                  | 2002    | 2002    | 2002    | 2002    | 2007    |
| Number of Years Data Must Be Aged   | 6       | 7       | 8       | 9       | 5       |

It would be necessary to age the I-O or BES data to the year for which cost report data are available using the price changes between those periods. While not a preferred method in developing the market basket weights, we have done this in the past when rebasing the index. We are proposing to age the 1997 Benchmark I-O data for this proposed rule.

As the table clearly indicates, the most optimal rebasing frequency from a data availability standpoint is every 5 years. That is, if we were to next rebase for the FY 2011 update, we could use the 2002 Benchmark I-O data that would recently be available. In order to match the Medicare cost report data that would be available at that time (FY 2007 data), we would have to age the I-O data to FY 2007. However, this would be aging the data only 5 years, whereas if the rebasing frequency was determined to be every 4 years, we would have to age 1997 I-O data to FY 2006. While aging data over 5 years is problematic

(there can be significant utilization and intensity changes over that length period, as opposed to only a year or two), it would be significantly worse to age data over an 8-year or 9-year period. If we were on a 5-year rebasing frequency, for the FY 2016 update, we would use cost report data for FY 2012 and the newly available 2007 I-O data. Again, the I-O data would have to be aged only 5 years to match the cost report data.

We can look at the implications of determining a rebasing frequency of every 3 or 4 years. Considering a frequency of 3 years first, we would next rebase for the FY 2009 update using FY 2005 Medicare cost report data and 1997 I-O data (the same data currently being used in the proposed FY 2002-based market basket). This is problematic because the 1997 I-O data would need to be aged 8 years to match the cost report data. The next two rebasings would be for the FY 2012 update (using FY 2008 cost report data

and 2002 I-O data) and FY 2015 (using FY 2011 cost report data and 2002 I-O data). This means that while we are making optimal use of the Medicare cost report data, we would be forced to use the same I-O data in consecutive rebasings and would have to age that data as much as 9 years to use the same year as the cost report data.

For a rebasing frequency of every 4 years, our next rebasing would be for the FY 2010 update using FY 2006 Medicare cost report data and 1997 I-O data. This is also problematic because the 1997 I-O data would need to be aged 9 years to match the cost report data. The next two rebasings would be for the FY 2014 update (using FY 2010 cost report data and 2002 I-O data) and FY 2018 (using FY 2014 cost report data and 2007 I-O data). Again, this frequency would make optimal use of the Medicare cost report data but would require aging of the I-O data between 7 and 9 years in order to match the cost report data.

It is clear from this analysis that neither the 3-year nor 4-year rebasing frequencies makes as good use of all the data as rebasing every 5 years. In addition, when comparing the 3-year and 4-year rebasing frequencies, no one method stands out as being significantly improved over another. Thus, this analysis does not lead us to draw any definitive conclusions as to a rebasing frequency more appropriate than every 5 years.

Our second area of research in determining a new rebasing frequency was to analyze the impact on the market basket of determining the market basket weights under various frequencies. We

did this by using the current historical data that are available (both Medicare cost report and I-O) to develop market baskets with base year weights for each year between FY 1997 and FY 2002. We then analyzed how differently the market baskets moved over various historical periods.

Approaching the analysis this way allowed us to develop six hypothetical market baskets with different base years (FY 1997, FY 1998, FY 1999, FY 2000, FY 2001, and FY 2002). As we have done when developing the official market baskets, we used Medicare cost report data where available. Thus, cost report data were used to determine the

weights for wages and salaries, benefits, contract labor, pharmaceuticals, blood and blood products, and all other costs. We used the 1997 Benchmark I-O data to fill out the remainder of the market basket weights (note that this produces a different index for FY 1997 than the official FY 1997-based hospital market basket that used the Annual 1997 I-O data), aging the data to the appropriate year to match the cost report data. This means the FY 2002-based index used in this analysis matches the FY 2002-based market basket we are proposing in this rule. Chart 10 shows the weights from these hypothetical market baskets:

**Chart 10: Comparison Weights from Hypothetical Market Baskets,  
Base Years FY 1997 through FY 2002**

| Cost Category                    | FY 1997<br>(BMK I-O) | FY 1998 | FY 1999 | FY 2000 | FY 2001 | FY 2002 |
|----------------------------------|----------------------|---------|---------|---------|---------|---------|
| Compensation                     | 61.656               | 60.830  | 60.920  | 59.717  | 60.057  | 59.993  |
| Wages                            | 50.686               | 50.248  | 49.684  | 49.127  | 49.029  | 48.171  |

\* Blood and blood products contained within Miscellaneous Products.

\*\*May not add due to rounding.

Note that the weights remain relatively stable between periods. It is for this reason that we believe defining the market basket as a Laspeyres-type, fixed-weight index is appropriate. Because the weights in the market basket are generally for aggregated costs (for example, wages and salaries for all employees), there is not much volatility in the weights between periods, especially over shorter time spans. As

the results of this analysis will show, it is for this reason that rebasing the market basket more frequently than every 5 years is expected to have little impact on the overall percent change in the hospital market basket.

Using these hypothetical market baskets, we can produce market basket percent changes over historical periods to determine what is the impact of using various base periods. In our analysis, we

consider the hypothetical FY 1997-based index to be the benchmark measure and the other indexes to indicate the impact of rebasing over various frequencies. The hypothetical FY 2000-based index would reflect the impact of rebasing every 3 years, the hypothetical FY 2001-based index would reflect the impact of rebasing every 4 years, and the hypothetical FY 2002-based index would reflect the

impact of rebasing every 5 years. Chart 11 shows the results of these comparisons.

**Chart 11: Comparison of Hypothetical Market Baskets, FY 1997 through FY 2002 Base Years, Percent Changes, FY 1998 through FY 2004**

| Federal Fiscal Year | Percent Change in Hypothetical Market Baskets |               |               |               |               |               |
|---------------------|---|---------------|---------------|---------------|---------------|---------------|

It is clear from this comparison that there is little difference between the indexes, and, for some FYs, there would be no difference in the market basket update factor if we had rebased the market basket more frequently. In particular, there is no difference in the hypothetical indexes based between FY 2000 and FY 2002. This suggests that setting the rebasing frequency to 3, 4, or 5 years will have little or no impact on the resulting market basket. As we found when analyzing data availability, this portion of our research does not suggest that rebasing the market basket more frequently than every 5 years results in an improved market basket or that there is any noticeable difference between rebasing every 3 or 4 years.

Market basket rebasing is a 1-year to 2-year long process that includes data processing, analytical work, methodology reevaluation, and regulatory process. After developing a rebased and revised market basket, there are extensive internal review processes that a rule must undergo, both in proposed and final form. Once the proposed rule has been published, there is a 60-day comment period set aside for the public to respond to the proposed rule. After comments are received, we then need adequate time to research and reply to all comments submitted. The last part of the regulatory process is the 60-day requirement—the final rule must

be published 60 days before the provisions of the rule can become effective.

We would like to rebase all of our indexes (PPS operating, PPS capital, excluded hospital with capital, SNFs, HHAs, and Medicare Economic Index) on a regular schedule. Therefore, if we were to choose a 3-year rebasing schedule, we would have to rebase more than one index at a time. This may potentially limit the amount of time we could devote to the market basket rebasing process. In addition, we recognize that, in the future, we may be required to develop additional market baskets that would require frequent rebasing.

Given the number of market baskets we are responsible for rebasing and revising, the regulatory process for each, and the availability of source data, we believe that while it is not necessary, rebasing and revising the hospital market baskets every 4 years is the most appropriate frequency to meet the legislative requirement.

#### *E. Capital Input Price Index Section*

The Capital Input Price Index (CIPI) was originally described in the September 1, 1992 *Federal Register* (57 FR 40016). There have been subsequent discussions of the CIPI presented in the May 26, 1993 (58 FR 30448), September 1, 1993 (58 FR 46490), May 27, 1994 (59

FR 27876), September 1, 1994 (59 FR 45517), June 2, 1995 (60 FR 29229), September 1, 1995 (60 FR 45815), May 31, 1996 (61 FR 27466), and August 30, 1996 (61 FR 46196) issues of the *Federal Register*. The August 1, 2002 (67 FR 50032) rule discussed the most recent revision and rebasing of the CIPI to a FY 1997 base year, which reflects the capital cost structure facing hospitals in that year.

We are proposing to revise and rebase the CIPI to a FY 2002 base year to reflect the more recent structure of capital costs in hospitals. Unlike the PPS operating market basket, we do not have FY 2002 Medicare cost report data available for the development of the capital cost weights, due to a change in the FY 2002 cost reporting requirements. Rather, we used hospital capital expenditure data for the capital cost categories of depreciation, interest, and other capital expenses for FY 2001 and aged these data to a FY 2002 base year using the relevant vintage-weighted price proxies. As with the FY 1997-based index, we have developed two sets of weights in order to calculate the proposed FY 2002-based CIPI. The first set of proposed weights identifies the proportion of hospital capital expenditures attributable to each expenditure category, while the second set of proposed weights is a set of relative vintage weights for depreciation

and interest. The set of vintage weights is used to identify the proportion of capital expenditures within a cost category that is attributable to each year over the useful life of the capital assets in that category. A more thorough discussion of vintage weights is provided later in this section.

Both sets of proposed weights are developed using the best data sources available. In reviewing source data, we determined that the Medicare cost reports provided accurate data for all capital expenditure cost categories. We are proposing to use the FY 2001 Medicare cost reports for PPS hospitals, aged to FY 2002, excluding expenses from hospital-based subproviders, to determine weights for all three cost categories: depreciation, interest, and other capital expenses. We compared the weights determined from the Medicare cost reports to the 2002 Bureau of the Census' Business Expenses Survey and found the weights to be similar to those developed from the Medicare cost reports.

Lease expenses are not broken out as a separate cost category in the CIPI, but

are distributed among the cost categories of depreciation, interest, and other, reflecting the assumption that the underlying cost structure of leases is similar to capital costs in general. As was done in previous rebasings of the CIPI, we assumed 10 percent of lease expenses are overhead and assigned them to the other capital expenses cost category as overhead. The remaining lease expenses were distributed to the three cost categories based on the proportion of depreciation, interest, and other capital expenses to total capital costs excluding lease expenses.

Depreciation contains two subcategories: building and fixed equipment and movable equipment. The split between building and fixed equipment and movable equipment was determined using the Medicare cost reports. This methodology was also used to compute the FY 1997-based index.

Total interest expense cost category is split between government/nonprofit and profit interest. The FY 1997-based CIPI allocated 85 percent of the total interest cost weight to government/nonprofit

interest, proxied by average yield on domestic municipal bonds, and 15 percent to for-profit interest, proxied by average yield on Moody's Aaa bonds (67 FR 50044). The methodology used to derive this split is explained in the June 2, 1995 issue of the **Federal Register** (60 FR 29233). We are proposing to derive the split using the relative FY 2001 Medicare cost report data on interest expenses for government/nonprofit and profit hospitals. Based on these data, we are proposing a 75/25 split between government/nonprofit and profit interest. We believe it is important that this split reflects the latest relative cost structure of interest expenses. The proposed split of 75/25 had little (less than 0.1 percent in any given year) or no effect on the annual capital market basket percent change in both the historical and forecasted periods.

Chart 12 presents a comparison of the proposed FY 2002-based CIPI capital cost weights and the FY 1997-based CIPI capital cost weights.

**Chart 12: Comparison of FY 1997-Based and Proposed FY 2002-Based CIPI Cost Category Weights**

| Expense Categories                        | Proposed FY 2002 Weights | FY 1997 Weights | Price Proxy  |
|---|--------------------------|-----------------|--|
| Total                                     | 100.00                   | 100.00          |  |
| Total depreciation                        | 74.58                    | 71.35           |  |
| Building and fixed equipment depreciation | 36.23                    | 34.22           | Boeckh Institutional Construction Index--vintage weighted (23 years)                         |
| Movable equipment depreciation            | 38.35                    | 37.13           | PPI for machinery and equipment--vintage weighted (11 years)                                 |
| Total interest                            | 19.86                    | 23.46           |  |
| Government/nonprofit interest             | 14.90                    | 19.94           | Average yield on domestic municipal bonds (Bond Buyer 20 bonds)--vintage weighted (23 years) |
| For-profit interest                       | 4.97                     | 3.52            | Average yield on Moody's Aaa bonds--vintage weighted (23 years)                              |
| Other                                     | 5.55                     | 5.19            | CPI-U - Residential Rent   |

Because capital is acquired and paid for over time, capital expenses in any given year are determined by both past and present purchases of physical and financial capital. The vintage-weighted CIPI is intended to capture the long-term consumption of capital, using vintage weights for depreciation (physical capital) and interest (financial capital). These vintage weights reflect the proportion of capital purchases attributable to each year of the expected life of building and fixed equipment, movable equipment, and interest. We used the vintage weights to compute vintage-weighted price changes associated with depreciation and interest expense.

Vintage weights are an integral part of the CIPI. Capital costs are inherently complicated and are determined by complex capital purchasing decisions, over time, based on such factors as interest rates and debt financing. In addition, capital is depreciated over time instead of being consumed in the same period it is purchased. The CIPI accurately reflects the annual price changes associated with capital costs, and is a useful simplification of the actual capital investment process. By accounting for the vintage nature of capital, we are able to provide an accurate, stable annual measure of price changes. Annual nonvintage price changes for capital are unstable due to the volatility of interest rate changes and, therefore, do not reflect the actual annual price changes for Medicare capital-related costs. CMS' CIPI reflects the underlying stability of the capital acquisition process and provides hospitals with the ability to plan for changes in capital payments.

To calculate the vintage weights for depreciation and interest expenses, we needed a time series of capital purchases for building and fixed equipment and movable equipment. We found no single source that provides the best time series of capital purchases by hospitals for all of the above components of capital purchases. The early Medicare cost reports did not have sufficient capital data to meet this need. While the AHA Panel Survey provided a consistent database back to 1963, it did not provide annual capital purchases. The AHA Panel Survey provided a time series of depreciation expenses through 1997 which could be used to infer capital purchases over time. From 1998 to 2001, hospital depreciation expenses were calculated by multiplying the AHA Annual Survey total hospital expenses by the ratio of depreciation to total hospital expenses from the Medicare cost reports. Beginning in 2001, the AHA Annual

Survey began collecting depreciation expenses. We hope to be able to use these data in future rebasings.

In order to estimate capital purchases from AHA data on depreciation expenses, the expected life for each cost category (building and fixed equipment, movable equipment, and interest) is needed to calculate vintage weights. We used FY 2001 Medicare cost reports to determine the expected life of building and fixed equipment and movable equipment. The expected life of any piece of equipment can be determined by dividing the value of the asset (excluding fully depreciated assets) by its current year depreciation amount. This calculation yields the estimated useful life of an asset if depreciation were to continue at current year levels, assuming straight-line depreciation. From the FY 2001 cost reports, the expected life of building and fixed equipment was determined to be 23 years, and the expected life of movable equipment was determined to be 11 years. The FY 1997-based CIPI showed the same expected life for the two categories of depreciation.

Although we are proposing to use this methodology for deriving the useful life of an asset, we intend to conduct a further review of the methodology between the publication of this proposed rule and the final rule. We plan to review alternate data sources, if available, and analyze in more detail the hospital's capital cost structure reported in the Medicare cost reports.

We are proposing to use the building and fixed equipment and movable equipment weights derived from FY 2001 Medicare cost reports to separate the depreciation expenses into annual amounts of building and fixed equipment depreciation and movable equipment depreciation. Year-end asset costs for building and fixed equipment and movable equipment were determined by multiplying the annual depreciation amounts by the expected life calculations from the FY 2001 Medicare cost reports. We then calculated a time series back to 1963 of annual capital purchases by subtracting the previous year asset costs from the current year asset costs. From this capital purchase time series, we were able to calculate the vintage weights for building and fixed equipment and movable equipment. Each of these sets of vintage weights is explained in detail below.

For building and fixed equipment vintage weights, the real annual capital purchase amounts for building and fixed equipment derived from the AHA Panel Survey were used. The real annual purchase amount was used to

capture the actual amount of the physical acquisition, net of the effect of price inflation. This real annual purchase amount for building and fixed equipment was produced by deflating the nominal annual purchase amount by the building and fixed equipment price proxy, the Boeckh Institutional Construction Index. Because building and fixed equipment have an expected life of 23 years, the vintage weights for building and fixed equipment are deemed to represent the average purchase pattern of building and fixed equipment over 23-year periods. With real building and fixed equipment purchase estimates available back to 1963, we averaged sixteen 23-year periods to determine the average vintage weights for building and fixed equipment that are representative of average building and fixed equipment purchase patterns over time. Vintage weights for each 23-year period are calculated by dividing the real building and fixed capital purchase amount in any given year by the total amount of purchases in the 23-year period. This calculation is done for each year in the 23-year period, and for each of the sixteen 23-year periods. We are proposing to use the average of each year across the sixteen 23-year periods to determine the 2002 average building and fixed equipment vintage weights for the FY 2002-based CIPI.

For movable equipment vintage weights, the real annual capital purchase amounts for movable equipment derived from the AHA Panel Survey were used to capture the actual amount of the physical acquisition, net of price inflation. This real annual purchase amount for movable equipment was calculated by deflating the nominal annual purchase amount by the movable equipment price proxy, the PPI for Machinery and Equipment. Based on our determination that movable equipment has an expected life of 11 years, the vintage weights for movable equipment represent the average expenditure for movable equipment over an 11-year period. With real movable equipment purchase estimates available back to 1963, twenty-eight 11-year periods were averaged to determine the average vintage weights for movable equipment that are representative of average movable equipment purchase patterns over time. Vintage weights for each 11-year period are calculated by dividing the real movable capital purchase amount for any given year by the total amount of purchases in the 11-year period. This calculation was done for each year in the 11-year period, and for

each of the twenty-eight 11-year periods. We are proposing to use the average of each year across the twenty-eight 11-year periods to determine the average movable equipment vintage weights for the FY 2002-based CIPI.

For interest vintage weights, the nominal annual capital purchase amounts for total equipment (building and fixed, and movable) derived from the AHA Panel and Annual Surveys were used. Nominal annual purchase amounts were used to capture the value of the debt instrument. Because we have

determined that hospital debt instruments have an expected life of 23 years, the vintage weights for interest are deemed to represent the average purchase pattern of total equipment over 23-year periods. With nominal total equipment purchase estimates available back to 1963, sixteen 23-year periods were averaged to determine the average vintage weights for interest that are representative of average capital purchase patterns over time. Vintage weights for each 23-year period are

calculated by dividing the nominal total capital purchase amount for any given year by the total amount of purchases in the 23-year period. This calculation is done for each year in the 23-year period and for each of the sixteen 23-year periods. We are proposing to use the average of each year across the sixteen 23-year periods to determine the average interest vintage weights for the FY 2002-based CIPI. The vintage weights for the FY 1997 CIPI and the proposed FY 2002 CIPI are presented in Chart 13.

**Chart 13: Current and Proposed Vintage Weights for Capital-Related Price Proxies**

| Year  | Building and Fixed Equipment |                                 | Movable Equipment   |                                 | Interest            |                                 |

After the capital cost category weights were computed, it was necessary to select appropriate price proxies to

reflect the rate of increase for each expenditure category. Our proposed price proxies for the FY 2002-based CIPI

are the same as those used in the FY 1997-based CIPI. We still believe these are the most appropriate proxies for

hospital capital costs that meet our selection criteria of relevance, timeliness, availability, and reliability. We ran the proposed FY 2002-based index using the Moody's Aaa bonds average yield and then using the

Moody's Baa bonds average yield as proxy for the for-profit interest cost category. There was no difference in the two sets of index percent changes either historically or forecasted. The rationale for selecting these price proxies is

explained more fully in the August 30, 1996 final rule (61 FR 46196). The proposed proxies are presented in Chart 14.

**Chart 14: Comparison of FY 1997-Based and Proposed FY 2002-Based Capital Input Price Index, Percent Change, FY 1998 through FY 2007**

| Federal Fiscal Year | CIPI, FY 1997-based | Proposed CIPI, FY 2002-based |
|---------------------|---------------------|------------------------------|
| 1998                | 0.9                 | 1.0                          |
| 1999                | 0.9                 | 0.9                          |
| 2000                | 1.1                 | 1.0                          |
| 2001                | 0.9                 | 0.9                          |
| 2002                | 0.8                 | 0.7                          |

Global Insight, Inc. forecasts a 0.7 percent increase in the FY 2002-based CIPI for 2006, as shown in Chart 15. This is the result of a 1.3 percent increase in projected depreciation prices

(building and fixed equipment, and movable equipment) and a 2.7 percent increase in other capital expense prices, partially offset by a 2.3 percent decrease in vintage-weighted interest rates in FY

2006, as indicated in Chart 15. Accordingly, we are proposing a 0.7 percent increase in the CIPI.

**Chart 15: CMS Proposed Capital Input Price Index Percent Changes, Total and Components, FYs 1995 through 2007**

| Fiscal Year     | Total | Total Depreciation | Depreciation, building and fixed equipment | Depreciation, movable equipment | Interest | Other  |
|-----------------|-------|--------------------|--|---------------------------------|----------|--------|

| 1995      | 1.7 | 2.7 | 4.0 | 1.6  | -1.2 | 2.5 |
| 1996      | 1.4 | 2.5 | 3.8 | 1.4  | -1.8 | 2.6 |
| 1997      | 1.3 | 2.3 | 3.7 | 1.2  | -2.0 | 2.8 |
| 1998      | 1.0 | 2.1 | 3.4 | 0.9  | -2.6 | 3.2 |
| 1999      | 0.9 | 1.9 | 3.2 | 0.7  | -2.6 | 3.2 |
| 2000      | 1.0 | 1.7 | 3.1 | 0.4  | -1.7 | 3.4 |
| 2001      | 0.9 | 1.5 | 3.0 | 0.2  | -2.2 | 4.3 |
| 2002      | 0.7 | 1.3 | 2.9 | 0.0  | -2.4 | 4.3 |
| 2003      | 0.5 | 1.3 | 2.8 | -0.2 | -3.0 | 3.1 |
| 2004      | 0.5 | 1.3 | 2.8 | -0.2 | -3.3 | 2.7 |
| Forecast: |     |     |     |      |      |     |
| 2005      | 0.5 | 1.3 | 2.8 | -0.1 | -3.4 | 2.9 |
| 2006      | 0.7 | 1.3 | 2.6 | -0.1 | -2.3 | 2.7 |
| 2007      | 0.8 | 1.3 | 2.5 | -0.1 | -2.0 | 2.1 |

Rebasing the CIPI from FY 1997 to FY 2002 decreased the percent change in the FY 2006 forecast by 0.1 percentage point, from 0.8 to 0.7, as shown in Chart 12. The difference is caused mostly by changes in the relationships between the cost category weights within depreciation and interest. The fixed depreciation cost weight relative to the movable depreciation cost weight and the nonprofit/government interest cost weight relative to the for-profit interest cost weight are both less in the FY 2002-based CIPI. The changes in these relationships have a small effect on the FY 2002-based CIPI percent changes. However, when added together, they are responsible for a negative one-tenth percentage point difference between the FY 2002-based CIPI and the FY 1997-based CIPI.

#### V. Other Decisions and Proposed Changes to the IPPS for Operating Costs and GME Costs

##### A. Postacute Care Transfer Payment Policy (§ 412.4)

(If you choose to comment on issues in this section, please include the

caption "Postacute Care Transfers" at the beginning of your comment.)

##### 1. Background

Existing regulations at § 412.4(a) define discharges under the IPPS as situations in which a patient is formally released from an acute care hospital or dies in the hospital. Section 412.4(b) defines transfers from one acute care hospital to another, and § 412.4(c) defines transfers to certain postacute care providers. Our policy provides that, in transfer situations, full payment is made to the final discharging hospital and each transferring hospital is paid a per diem rate for each day of the stay, not to exceed the full DRG payment that would have been made if the patient had been discharged without being transferred.

The per diem rate paid to a transferring hospital is calculated by dividing the full DRG payment by the geometric mean length of stay for the DRG. Based on an analysis that showed that the first day of hospitalization is the most expensive (60 FR 45804), our policy provides for payment that is double the per diem amount for the first

day (§ 412.4(f)(1)). Transfer cases are also eligible for outlier payments. The outlier threshold for transfer cases is equal to the fixed-loss outlier threshold for nontransfer cases, divided by the geometric mean length of stay for the DRG, multiplied by the length of stay for the case, plus one day. The purpose of the IPPS transfer payment policy is to avoid providing an incentive for a hospital to transfer patients to another hospital early in the patients' stay in order to minimize costs while still receiving the full DRG payment. The transfer policy adjusts the payments to approximate the reduced costs of transfer cases.

##### 2. Changes to DRGs Subject to the Postacute Care Transfer Policy (§§ 412.4(c) and (d))

Section 1886(d)(5)(J) of the Act provides that, effective for discharges on or after October 1, 1998, a "qualified discharge" from one of 10 DRGs selected by the Secretary to a postacute care provider would be treated as a transfer case. This section required the Secretary to define and pay as transfers all cases assigned to one of 10 DRGs selected by the Secretary, if the

individuals are discharged to one of the following postacute care settings:

- A hospital or hospital unit that is not a subsection 1886(d) hospital. (Section 1886(d)(1)(B) of the Act identifies the hospitals and hospital units that are excluded from the term "subsection (d) hospital" as psychiatric hospitals and units, rehabilitation hospitals and units, children's hospitals, long-term care hospitals, and cancer hospitals.)

- A SNF (as defined at section 1819(a) of the Act).

- Home health services provided by a home health agency, if the services relate to the condition or diagnosis for which the individual received inpatient hospital services, and if the home health services are provided within an appropriate period (as determined by the Secretary).

In the July 31, 1998 IPSS final rule (63 FR 40975 through 40976), we specified that a patient discharged to home would be considered transferred to postacute care if the patient received home health services within 3 days after the date of discharge. In addition, in the July 31, 1998 final rule, we did not include patients transferred to a swing-bed for skilled nursing care in the definition of postacute care transfer cases (63 FR 40977).

Section 1886(d)(5)(J) of the Act directed the Secretary to select 10 DRGs based upon a high volume of discharges to postacute care and a disproportionate use of postacute care services. As discussed in the July 31, 1998 final rule, these 10 DRGs were selected in 1998 based on the MedPAR data from FY 1996. Using that information, we identified and selected the first 20 DRGs that had the largest proportion of discharges to postacute care (and at least 14,000 such transfer cases). In order to select 10 DRGs from the 20 DRGs on our list, we considered the volume and percentage of discharges to postacute care that occurred before the mean length of stay and whether the discharges occurring early in the stay were more likely to receive postacute care. We identified 10 DRGs to be subject to the postacute care transfer rule starting in FY 1999.

Section 1886(d)(5)(J)(iv) of the Act authorizes the Secretary to expand the postacute care transfer policy for FY 2001 or subsequent fiscal years to additional DRGs based on a high volume of discharges to postacute care facilities and a disproportionate use of postacute care services. In the FY 2004 IPSS final rule (68 FR 45412), we expanded the postacute care transfer policy to include additional DRGs. We established the following criteria that a

DRG must meet, for both of the 2 most recent years for which data are available, in order to be included under the postacute care transfer policy:

- At least 14,000 postacute care transfer cases;
- At least 10 percent of its postacute care transfers occurring before the geometric mean length of stay;
- A geometric mean length of stay of at least 3 days; and
- If a DRG is not already included in the policy, a decline in its geometric mean length of stay during the most recent 5-year period of at least 7 percent.

In the FY 2004 IPSS final rule, we identified 21 new DRGs that met these criteria. We also determined that one DRG from the original group of 10 DRGs (DRG 263) no longer met the volume criterion of 14,000 transfer cases. Therefore, we removed DRGs 263 and 264 (DRG 264 is paired with DRG 263) from the policy and expanded the postacute care transfer policy to include payments for transfer cases in the new 21 DRGs, effective October 1, 2003. As a result, a total of 29 DRGs were subject to the postacute care transfer policy in FY 2004. In the FY 2004 IPSS final rule, we indicated that we would review and update this list periodically to assess whether additional DRGs should be added or existing DRGs should be removed (68 FR 45413).

For FY 2005, we analyzed the available data from the FY 2003 MedPAR file. For the 2 most recent years of available data (FY 2002 and FY 2003), we found that no additional DRGs qualified under the four criteria set forth in the IPSS final rule for FY 2004. We also analyzed the DRGs included under the policy for FY 2004 to determine if they still met the criteria to remain under the policy. In addition, we analyzed the special circumstances arising from a change to one of the DRGs included under the policy in FY 2004.

In the FY 2005 IPSS final rule (69 FR 48942), we deleted DRG 483 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth, and Neck Diagnosis) and established the following new DRGs as replacements: DRG 541 (Tracheostomy With Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth and Neck Diagnoses With Major O.R. Procedure) and DRG 542 (Tracheostomy with Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth and Neck Diagnoses Without Major O.R. Procedure). Cases in the existing DRG 483 were assigned to the new DRGs 541 and 542 based on the presence or absence of a major O.R.

procedure, in addition to the tracheostomy code that was previously required for assignment to DRG 483. Specifically, if the patient's case involves a major O.R. procedure (a procedure whose code is included on the list that is assigned to DRG 468 (Extensive O.R. Procedure Unrelated to Principal Diagnosis), except for tracheostomy codes 31.21 and 31.29), the case is assigned to the DRG 541. If the patient does not have an additional major O.R. procedure (that is, if there is only a tracheostomy code assigned to the case), the case is assigned to DRG 542.

Based on data analysis, we determined that neither DRG 541 nor DRG 542 would have enough cases to meet the existing threshold of 14,000 transfer cases for inclusion in the postacute care transfer policy. Nevertheless, we believed the cases that would be incorporated into these two DRGs remained appropriate candidates for application of the postacute care transfer policy and that the subdivision of DRG 483 should not change the original application of the postacute care transfer policy to the cases once included in that DRG. Therefore, for FY 2005, we proposed alternate criteria to be applied in cases where DRGs do not satisfy the existing criteria, for discharges occurring on or after October 1, 2004 (69 FR 28273 and 28374). The proposed new criteria were designed to address situations such as those posed by the split of DRG 483, where there remain substantial grounds for inclusion of cases within the postacute care transfer policy, although one or more of the original criteria may no longer apply. Under the proposed alternate criteria, DRGs 430, 541, and 542 would have qualified for inclusion in the postacute care transfer policy.

In the response to comments on our FY 2005 proposal, we decided not to adopt the proposed alternate criteria for including DRGs under the postacute care transfer policy in the FY 2005 IPSS final rule. Instead we adopted the policy of simply grandfathering, for a period of 2 years, any cases that were previously included within a DRG that has split, when the split DRG qualified for inclusion in the postacute care transfer policy for both of the previous 2 years. Under this policy, the cases that were previously assigned to DRG 483 and that now fall into DRGs 541 and 542 continue to be subject to the policy. Therefore, effective for discharges on or after October 1, 2004, 30 DRGs, including new DRGs 541 and 542, are subject to the postacute care transfer policy. We indicated that we would monitor the frequency with which these

cases are transferred to postacute care settings and the percentage of these cases that are short-stay transfer cases. Because we did not adopt the proposed alternate criteria for DRG inclusion in the postacute care transfer policy, DRG 430 (Psychoses) did not meet the criteria for inclusion and has not been subject to the postacute care transfer policy for FY 2005. We also invited comments on how to treat the cases formerly included in a split DRG after the grandfathering period.

We note that some commenters also suggested that, in place of the proposed alternate criteria, we should adopt a policy of permanently applying the postacute care transfer policy to a DRG once it has initially qualified for inclusion in the policy. These commenters noted that removing DRGs from the postacute care transfer policy makes the payment system less stable and results in inconsistent incentives over time. They also argued that "a drop in the number of transfers to postacute care settings is to be expected after the

transfer policy is applied to a DRG, but the frequency of transfers may well rise again if the DRG is removed from the policy." We indicated that we would consider adopting this general policy once we had evaluated the experience with the specific cases that are subject to the grandfathering policy for FY 2005 and FY 2006.

In the May 18, 2004 proposed rule, we also called attention to the data concerning DRG 263, which was subject to the postacute care transfer policy until FY 2004. We removed DRG 263 from the postacute care transfer policy for FY 2004 because it did not have the minimum number of cases (14,000) transferred to postacute care (13,588 transfer cases in FY 2002, with more than 50 percent of transfer cases being short-stay transfers). The FY 2003 MedPAR data show that there were 15,602 transfer cases in the DRG in FY 2003, of which 46 percent were short-stay transfers. Because we removed the DRG from the postacute care transfer policy in FY 2004, it must meet all

criteria to be included under the policy in subsequent fiscal years. Because the geometric mean length of stay for DRG 263 showed only a 6-percent decrease since 1999, DRG 263 did not qualify to be added to the policy for FY 2005 under the existing criteria that were included in last year's rule. DRG 263 would have qualified under the volume threshold and percent of short-stay transfer cases under the proposed new alternate criteria contained in the FY 2005 proposed rule. However, it still would not have met the proposed required decline in length of stay to qualify to be added to the policy for FY 2005. We indicated that we would continue to monitor the experience with DRG 263, especially in light of the comment that recommended a general policy of grandfathering cases that qualify under the criteria for inclusion in the postacute care transfer policy.

The table below displays the 30 DRGs that are included in the postacute care transfer policy, effective for discharges occurring on or after October 1, 2004.

| DRG                   | DRG Title  |
|-----------------------|--|
| 12                    | Degenerative Nervous System Disorders  |
| 14                    | Intracranial Hemorrhage and Stroke with Infarction   |
| 24                    | Seizure and Headache Age >17 With CC   |
| 25                    | Seizure and Headache Age >17 Without CC  |
| 88                    | Chronic Obstructive Pulmonary Disease  |
| 89                    | Simple Pneumonia and Pleurisy Age > 17 With CC   |
| 90                    | Simple Pneumonia and Pleurisy Age >17 Without CC   |
| 113                   | Amputation for Circulatory System Disorders Except Upper Limb and Toe  |
| 121                   | Circulatory Disorders With AMI and Major Complication, Discharged Alive  |
| 122                   | Circulatory Disorders With AMI Without Major Complications Discharged Alive  |
| 127                   | Heart Failure & Shock  |
| 130                   | Peripheral Vascular Disorders With CC  |
| 131                   | Peripheral Vascular Disorders Without CC   |
| 209                   | Major Joint and Limb Reattachment Procedures of Lower Extremity  |
| 210                   | Hip and Femur Procedures Except Major Joint Age >17 With CC  |
| 211                   | Hip and Femur Procedures Except Major Joint Age >17 Without CC   |
| 236                   | Fractures of Hip and Pelvis  |
| 239                   | Pathological Fractures and Musculoskeletal and Connective Tissue Malignancy  |
| 277                   | Cellulitis Age >17 With CC   |

For this year's proposed rule, we have conducted an extensive analysis of the FY 2003 and FY 2004 MedPAR data to monitor the effects of the postacute care transfer policy. We have also conducted an overall assessment of the postacute care transfer policy since its inception in FY 1999. Specifically, we have

examined the relationship between rates of postacute care utilization and the geometric mean length of stay and the relationship between a high volume and a high proportion of postacute care transfers within a DRG in light of experience under the current policy. Specifically, we examined whether a

decline in the geometric mean length of stay is associated with an increase in the volume and proportion of total cases in a DRG that are discharges to postacute care. We analyzed these data as part of determining whether to retain the criteria that a DRG must have a decline in the geometric mean length of stay of

at least 7 percent in the previous 5-year period to be included under the postacute care transfer policy.

Our current criteria for inclusion in the postacute care transfer policy include a requirement that, if a DRG is not already included in the policy, there must be a decline of at least 7 percent

in the DRG's geometric mean length of stay during the most recent 5-year period. It has come to our attention that not all DRGs that experience an increase in postacute care utilization also experience a decrease in geometric mean length of stay. In fact, some DRGs with increases in postacute care

utilization during the past several years have also experienced an increase in the geometric mean length of stay. The table below lists a number of DRGs that experienced increases in postacute care utilization and increases in the geometric mean length of stay from FY 2002 through FY 2004:

| DRG | DRG Title   | Percent Change in Geometric Mean Length of Stay | Percent Change in Postacute Care Utilization |
|-----|---|---|--|
| 1   | Craniotomy Age >17 With CC  | 5.26  | 2.70   |
| 6   | Carpal Tunnel Release   | 4.76  | 56.92  |
| 15  | Nonspecific CVA and Precerebral Occlusion Without Infarction              | 30.00   | 27.75  |
| 40  | Extraocular Procedures Except Orbit Age >17                               | 12.50   | 15.47  |
| 42  | Intraocular Procedures Except Retina, Iris, and Lens                      | 12.75   | 6.71   |
| 51  | Salivary Gland Procedures Except Sialoadenectomy                          | 5.56  | 20.00  |
| 55  | Miscellaneous Ear, Nose, Mouth, and Throat Procedures                     | 11.11   | 22.22  |
| 113 | Amputation for Circulatory System disorders Except Upper Limb and Toe     | 2.04  | 21.25  |
| 118 | Cardiac Pacemaker Device Replacement                                      | 11.11   | 30.29  |
| 223 | Major Shoulder/Elbow Procedure or Other Upper Extremity Procedure With CC | 4.76  | 36.17  |
| 317 | Admittance for Renal Dialysis   | 20.00   | 80.84  |
| 319 | Kidney and Urinary Tract Neoplasms Without CC                             | 4.76  | 24.49  |
| 345 | Other Male Reproductive System O.R. Procedure Except for Malignancy       | 11.11   | 94.34  |
| 447 | Allergic Reactions Age >17  | 5.56  | 16.81  |
| 494 | Laparoscopic Cholecystectomy Without C.D.E. Without CC                    | 5.26  | 26.39  |

Our current criteria also include a requirement that a DRG have at least 14,000 total postacute care transfer cases in order to be included in the policy. We have examined the data on the numbers of transfers and the percentage of postacute care transfer cases across DRGs. Among the 30 DRGs currently included within the postacute care transfer policy, the percentage of postacute care transfer cases ranges from a low of 15 percent to a high of 76 percent. Among DRGs that are not currently included within the policy, many have a relatively high percentage

of postacute care transfer cases in proportion to the total volume of cases for the DRG or a relatively high volume of discharges to postacute care facilities, or both. For this reason, we reviewed the data for all DRGs before proposing a change to the postacute care transfer payment policy. As part of this review, we found that:

- Of 550 DRGs, 26 have been deactivated and 17 have no cases in the FY 2004 MedPAR files. We are not proposing any changes for these DRGs because application of the postacute

care transfer policy to them would have no effect.

- Of the remaining 507 DRGs, 220 have geometric mean lengths of stay that are less than 3.0 days. Because the transfer payment policy provides 2 times the per diem rate for the first day of care (due to the large proportion of charges incurred on the first day of a patient's treatment), including these DRGs in the transfer policy would be relatively meaningless as they would all receive a full DRG payment. For this reason, we are not proposing any

changes to the postacute care transfer policy for these DRGs.

- Of the remaining 287 DRGs, 64 have fewer than 100 short-stay transfer cases. In addition, 39 of these 64 DRGs have fewer than 50 short-stay transfer cases. Consistent with the statutory guidance, we are not proposing any change to how we apply the postacute care transfer payment policy to these DRGs because we believe that these DRGs do not have a high volume of discharges to postacute care facilities or involve a disproportionate use of postacute care services.

Once we eliminated the DRGs cited above from consideration for the postacute care transfer policy, we examined the characteristics of the remaining 223 DRGs. We found that these DRGs had three common characteristics:

- The DRG had at least 2,000 total postacute care transfer cases.
- At least 20 percent of all cases in the DRG were discharged to postacute care settings.
- 10 percent of all discharges to postacute care were prior to the geometric mean length of stay for the DRG.

Consistent with the statutory guidance giving the Secretary the authority to make a DRG subject to the postacute care transfer policy based on a high volume of discharges to postacute care facilities and a disproportionate use of postacute care services, we believe these DRGs have characteristics that make them appropriate for inclusion in the postacute care transfer policy.

As a result of our analysis, we believe that it is appropriate to consider major revisions to the criteria for including a DRG within the postacute care transfer policy. First, our analysis calls into question the requirement that a DRG experience a decline in the geometric mean length of stay over the most recent 5-year period. Our findings that some DRGs with increases in postacute care utilization during the past several years have also experienced increases in geometric mean length of stay indicate that this criterion is no longer effective to identify those DRGs that should be subject to the postacute care transfer policy. In addition, our findings about the number of DRGs with relatively high volumes (at least 2,000 cases) and relatively high proportions (at least 20 percent) of postacute care utilization suggest that we should revise the

requirement that a DRG have at least 14,000 total postacute care transfer cases to be included within the postacute care transfer policy.

Our analysis does confirm that it is appropriate to maintain the requirement that a DRG must have a geometric mean length of stay of at least 3.0 days in order to be included within the postacute care transfer policy. We believe that this policy should be retained because, under the transfer payment methodology, hospitals receive the entire payment for cases in these DRGs in the first 2 days of the stay. Lowering the limit below 3.0 days would, therefore, have no effect on payment for DRGs with geometric mean lengths-of-stay in this range. For the reasons discussed in the May 19, 2003 proposed rule (68 FR 27199) and because it is a common characteristic of DRGs with a large number of cases discharged to postacute care, we also continue to believe that it is appropriate to retain the criterion that at least 10 percent of all cases that are transferred to postacute care should be short-stay cases where the patient is transferred before the geometric mean length of stay for the DRG. We also continue to believe that both DRGs in a CC/non-CC pair should be subject to the postacute care transfer policy if one of the DRGs meets the criteria for inclusion. By including both DRGs in a CC/non-CC pair, our policy will preclude an incentive for hospitals to code cases in ways designed to avoid triggering the application of the policy, for example, by excluding codes that would identify a complicating or comorbid condition in order to assign a case to a non-CC DRG that is not subject to the policy.

Therefore, we are considering substantial revisions to the four criteria that are currently used to determine whether a DRG qualifies for inclusion in the postacute care transfer policy. The current criteria provide that, in order to be included within the policy, a DRG must have, for both of the 2 most recent years for which data are available:

- At least 14,000 total postacute care transfer cases;
- At least 10 percent of its postacute care transfers occurring before the geometric mean length of stay;
- A geometric mean length of stay of at least 3 days;
- If a DRG is not already included in the policy, a decline in its geometric mean length of stay during the most

recent 5-year period of at least 7 percent; and

- If the DRG is one of a paired set of DRGs based on the presence or absence of a comorbidity or complication, both paired DRGs are included if either one meets the first three criteria above.

As a result of our analysis, we considered two options for revising the current criteria. Option 1 is to include all DRGs within the postacute care transfer policy. This option has the advantage of providing consistent treatment of all DRGs. However, as we discussed above, our analysis tends to indicate that, at a minimum, it may be appropriate to maintain the requirement that a DRG must have a geometric mean length of stay of at least 3.0 days because, under the transfer payment methodology, hospitals receive the entire payment for these DRGs in the first 2 days of the stay. Lowering the limit below 3.0 days, would therefore have little or no effect on payment for DRGs with geometric mean lengths of stay in this range.

Option 2 that we considered is to expand the application of the postacute care transfer policy by applying the policy to any DRG that meets the following criteria:

- The DRG has at least 2,000 postacute care transfer cases;
- At least 20 percent of the cases in the DRG are discharged to postacute care;
- Out of the cases discharged to postacute care, at least 10 percent occur before the geometric mean length of stay for the DRG;
- The DRG has a geometric mean length of stay of at least 3.0 days;
- If the DRG is one of a paired set of DRGs based on the presence or absence of a comorbidity or complication, both paired DRGs are included if either one meets the first three criteria above.

Option 2 would expand the application of the postacute care transfer policy to 223 DRGs that have both a relatively high volume and a relatively high proportion of postacute care utilization. The proposed change would also avoid applying the postacute care transfer policy to DRGs with only a small number or proportion of cases transferred to postacute care. The table below shows the DRGs that would be included in the postacute care transfer policy under this option:

| DRG | DRG Title   |
|-----|---|
| 1   | Craniotomy Age >17 With CC  |
| 2   | Craniotomy Age >17 Without CC   |

We believe that the analysis that we have conducted suggest that substantial revisions to the criteria for including a DRG within the postacute care transfer policy are warranted. In this proposed rule, we are formally proposing Option 2 as presented above. However, we invite comments on both of these options and on the analysis that we have presented.

The impact section in Appendix A of this proposed rule discusses our findings on the effects of adopting

Option 2. The proposed DRG relative weights included in Tables 5 and 7 of the Addendum to this proposed rule also include the effect of changing the postacute care transfer policy as described in Option 2 above. We note that if we adopt either option discussed above, or a variation based on comments submitted, we would follow procedures similar to those that are currently followed for treating cases identified as transfers in the DRG recalibration process. That is, as described in the

discussion of DRG recalibration in section II.C. of the preamble to this proposed rule, additional transfer cases would be counted as a fraction of a case based on the ratio of a hospital's transfer payment under the per diem payment methodology to the full DRG payment for nontransfer cases.

Section 1886(d)(5)(J)(i) of the Act recognizes that, in some cases, a substantial portion of the cost of care is incurred in the early days of the inpatient stay. Similar to the policy for

transfers between two acute care hospitals, transferring hospitals receive twice the per diem rate for the first day of treatment and the per diem rate for each following day of the stay before the transfer, up to the full DRG payment, for cases discharged to postacute care. However, three of the DRGs subject to the postacute care transfer policy exhibit an even higher share of costs very early in the hospital stay in postacute care transfer situations. For these DRGs, hospitals receive 50 percent of the full DRG payment plus the single per diem (rather than double the per diem) for the first day of the stay and 50 percent of the per diem for the remaining days of the stay, up to the full DRG payment.

In previous years, we determined that DRGs 209 and 211 met this cost threshold and qualified to receive this special payment methodology. Because DRG 210 is paired with DRG 211, we include payment for cases in that DRG for the same reason we include paired DRGs in the postacute care transfer policy (to eliminate any incentive to code incorrectly in order to receive higher payment for those cases). The FY 2004 MedPAR data show that DRGs 209 and 211 continue to have charges on the first day of the stay that are higher than 50 percent of the average charges in the DRGs. In addition, several of the DRGs that may be added to the postacute care transfer policy under the options that we are considering may also meet the 50 percent threshold in their average charges. We have identified those additional DRGs that are subject to the special payment methodology in Tables 5 and 7 of the Addendum to this proposed rule.

**B. Reporting of Hospital Quality Data for Annual Hospital Payment Update (§ 412.64(d)(2))**

(If you choose to comment on issues in this section, please include the caption "Hospital Quality Data" at the beginning of your document.)

**1. Background**

Section 1886(b)(3)(B)(vii) of the Act, as added by section 501(b) of Pub. L. 108-173 revised the mechanism used to update the standardized amount of payment for inpatient hospital operating costs. Specifically, the statute provides for a reduction of 0.4 percentage points to the update percentage increase (also known as the market basket update) for each of FYs 2005 through 2007 for any "subsection (d) hospital" that does not submit data on a set of 10 quality indicators established by the Secretary as of November 1, 2003. The statute also provides that any reduction will apply

only to the fiscal year involved, and will not be taken into account in computing the applicable percentage increase for a subsequent fiscal year. This measure establishes an incentive for IPPS hospitals to submit data on the quality measures established by the Secretary.

We initially implemented section 1886(b)(3)(B)(vii) of the Act in the FY 2005 IPPS final rule (August 11, 2004, 69 FR 49078) in continuity with the Department's Hospital Quality Initiative as described at the CMS Web site: <http://www.cms.hhs.gov/quality/hospitals>. At a press conference on December 12, 2002, the Secretary of the Department of Health and Human Services (HHS) announced a series of steps that HHS and its collaborators were taking to promote public reporting of hospital quality information. These collaborators include the American Hospital Association, the Federation of American Hospitals, the Association of American Medical Colleges, the Joint Commission on Accreditation of Healthcare Organizations (JCAHO), the National Quality Forum, the American Medical Association, the Consumer-Purchaser Disclosure Project, the American Association of Retired Persons, the American Federation of Labor-Congress of Industrial Organizations, the Agency for Healthcare Research and Quality, as well as CMS, Quality Improvement Organizations (QIOs), and others.

In July 2003, CMS began the National Voluntary Hospital Reporting Initiative (NVHRI), now known as the Hospital Quality Alliance (HQA): Improving Care through Information. Data from this initiative have been used to populate a professional Web site providing data to healthcare professionals. This website will be followed by the development of a consumer Web site in an easy-to-use format. The consumer Web site is intended to be an important tool for individuals to use in making decisions about health care options. This information will assist beneficiaries by providing comparison information for consumers who need to select a hospital. It will also serve as a way to encourage accountability of hospitals for the care they provide to patients.

The 10 measures that were employed in this voluntary initiative as of November 1, 2003, are:

- Heart Attack (Acute Myocardial Infarction)
  - Was aspirin given to the patient upon arrival to the hospital?
  - Was aspirin prescribed when the patient was discharged?
  - Was a beta-blocker given to the patient upon arrival to the hospital?
  - Was a beta-blocker prescribed when the patient was discharged?

Was an ACE inhibitor given for the patient with heart failure?

- Heart failure
  - Did the patient get an assessment of his or her heart function?
  - Was an ACE inhibitor given to the patient?
- Pneumonia
  - Was an antibiotic given to the patient in a timely way?
  - Had a patient received a pneumococcal vaccination?
  - Was the patient's oxygen level assessed?

These measures have been endorsed by the National Quality Forum (NQF) and are a subset of the same measures currently collected for the JCAHO by its accredited hospitals. The Secretary adopted collection of data on these 10 quality measures in order to: (1) provide useful and valid information about hospital quality to the public; (2) provide hospitals with a sense of predictability about public reporting expectations; (3) begin to standardize data and data collection mechanisms; and (4) foster hospital quality improvement. Many hospitals are currently participating in the National Voluntary Hospital Reporting Initiative (NVHRI), and are submitting data to the QIO Clinical Warehouse for that purpose.

Over the next several years, hospitals are encouraged to take steps toward the adoption of electronic medical records (EMRs) that will allow for reporting of clinical quality data from the electronic record directly to a CMS data repository. CMS intends to begin working toward creating measures specifications and a system or mechanism, or both, that will accept the data directly without requiring the transfer of the raw data into an XML file as currently exists. The Department is presently working cooperatively with other Federal agencies in the development of Federal health architecture data standards. CMS encourages hospitals that are developing systems to conform them to both industry standards and the Federal health architecture data standards, and to ensure that they would capture the data necessary for quality measures. Ideally, such systems will also provide point-of-care decision support that enables high levels of performance on the measures. Hospitals using EMRs to produce data on quality measures will be held to the same performance expectations as hospitals not using EMRs. We are exploring requirements for the submission of electronically produced data and other options to encourage the submission of such data, and invite comments on this issue.

## 2. Requirements for Hospital Reporting of Quality Data

The procedures for participating in the Reporting Hospital Quality Data for the Annual Payment Update (RHQDAPU) program created in accordance with section 501(b) of Pub. L. 108-173 can be found on the QualityNet Exchange at the Web site: <http://www.qnetexchange.org> in the "Reporting Hospital Quality Data for Annual Payment Update Reference Checklist". This checklist also contains all of the forms to be completed by hospitals participating in the program. In order to participate in the hospital reporting initiative, hospitals must follow these steps:

- The hospital must identify a QualityNet Exchange Administrator who follows the registration process and submits the information through the QIO. This must be done regardless of whether the hospital uses a vendor for transmission of data.
- All participants must first register with the QualityNet Exchange, regardless of the method used for data submission. If a hospital is currently participating in the voluntary reporting initiative, re-registration on QualityNet Exchange is unnecessary. However, the hospital must complete the Reporting Hospital Quality Data for Annual Payment Update Notice of Participation form. All hospitals must send this form to their QIOs.
- The hospital must collect data for all 10 measures and submit the data to the QIO Clinical Warehouse either using the CMS Abstraction & Reporting Tool (CART), the JCAHO Oryx Core Measures Performance Measurement System (PMS), or another third-party vendor that has met the measurement specification requirements for data transmission to QualityNet Exchange. The QIO Clinical Warehouse will submit the data to CMS on behalf of the hospitals. The submission will be done through QualityNet Exchange, which is a secure site that voluntarily meets or exceeds all current Health Insurance Portability and Accountability Act (HIPAA) requirements, while maintaining QIO confidentiality as required under the relevant regulations and statutes. The information in the Clinical Warehouse is considered QIO data and, therefore, is subject to the stringent QIO confidentiality regulations in 42 CFR Part 480.

For the first year of the program, FY 2005, hospitals were required to begin the submission of data by July 1, 2004, under the provisions of section 1886(b)(3)(B)(vii)(II) of the Act, as added by section 501(b) of Pub. L. 108-173.

Because section 501(b) of Pub. L. 108-173 granted a 30-day grace period for submission of data for purposes of the FY 2005 update, hospitals were given until August 1, 2004, for completed submissions to be successfully accepted into the QIO Clinical Warehouse. Hospitals were required to submit data for the first calendar quarter of 2004. We received data from over 98 percent of the eligible hospitals.

For FY 2006, we are proposing that hospitals must continuously submit the required 10 measures each quarter according to the schedule found on the Web site at <http://www.qnetexchange.org>. New facilities must submit the data using the same schedule, as dictated by the quarter they begin discharging patients. We will expect that all hospitals will have submitted data to the QIO Clinical Warehouse for discharges through the fourth quarter of calendar year 2004 (October to December 2004). Hospitals have 4½ months from the end of the fourth quarter until the closing of the warehouse (from December 31, 2004, until May 15, 2005) to make sure there are no errors in the submitted data. The warehouse is closed at that time in order to draw the validation sample and to begin preparing the public file for Hospital Compare public reporting. Data from fourth quarter 2004 discharges (October through December 2004) will be the last quarter of data with a submission deadline (May 15, 2005) that precedes our deadline for certifying the hospitals eligible to receive the full update for FY 2006. As we required for FY 2005, the data for each quarter must be submitted on time and pass all of the edits and consistency checks required in the clinical warehouse. Hospitals that do not treat a condition or have very few discharges will not be penalized and will receive the full annual payment update if they submit all the data they do possess.

New hospitals should begin collecting and reporting data immediately and complete the registration requirements for the RHQDAPU. New hospitals will be held to the same standard as established facilities when determining the expected number of discharges for the calendar quarters covered for each fiscal year. The annual payment updates would be based on the successful submission of data to CMS via the QIO Clinical Warehouse by the established deadlines.

For FY 2005, hospitals could withdraw from RHQDAPU at any time up to August 1, 2004. Hospitals withdrawing from the program did not receive the full market basket update and, instead, received a reduction of 0.4

percentage points in their update. By law, a hospital's actions each year will not affect its update in a subsequent year. Therefore, a hospital must meet the requirements for RHQDAPU each year the program is in effect. Failure of a hospital to receive the full update in one year does not affect its update in a succeeding year.

For the first year, FY 2005, there were no chart-audit validation criteria in place. Based upon our experience from the FY 2005 submissions, and upon our requirement for reliable and valid data, we are proposing to place the following additional requirements on hospitals for the data for the FY 2006 payment update. These requirements, as well as additional information on validation requirements, will be placed on QualityNet Exchange.

- The hospital must have passed our validation requirement of a minimum of 80 percent reliability, based upon our chart-audit validation process, for the third quarter data of calendar year 2004 in order to receive the full market basket update in FY 2006. These data were due to the clinical warehouse by February 15, 2005. We will use appropriate confidence intervals to determine if a hospital has achieved an 80-percent reliability. The use of confidence intervals will allow us to establish an appropriate range below the 80-percent reliability threshold that will demonstrate a sufficient level of validity to allow the data to still be considered valid. We will estimate the percent reliability based upon a review of five charts and then calculate the upper 95 percent confidence limit for that estimate. If this upper limit is above the required 80 percent, the hospital data will be considered validated. We are proposing to use the design specific estimate of the variance for the confidence interval calculation, which, in this case, is a single stage cluster sample, with unequal cluster sizes. (For reference, see Cochran, William G. (1977) Sampling Techniques, John Wiley & Sons, New York, chapter 3, section 3.12.)

We will use a two-step process to determine if a hospital is submitting valid data. At the first step, we will calculate the percent agreement for all of the variables submitted in all of the charts, whether or not they are related to the 10 measures. If a hospital falls below the 80 percent cutoff, we will then restrict the comparison to those variables associated with the 10 measures required under section 501(b) of Pub. L. 108-173. We will recalculate the percent agreement and the estimated 95 percent confidence interval and again compare to the 80 percent cutoff

point. If a hospital passes under this restricted set of variables, the hospital will be considered to be submitting valid data for purposes of this proposed rule.

Under the standard appeal process, all hospitals are given the detailed results of the Clinical Data Abstraction Center (CDAC) reabstraction along with their estimated percent reliability and the upper bound of the 95 percent confidence interval. If a hospital disagrees with any of the abstraction results from the CDAC, the hospital has 10 days to appeal these results to their QIO. The QIO will review the appeal with the hospital and, if the QIO review agrees with the hospital's original abstraction, the QIO will forward the appeal to the CDAC for a final determination. If the QIO does not agree with the hospital's appeal, then the original results stand. When the CDAC has made its final determination, the new results will be provided to the hospital through the usual processes and the validation described previously will be repeated. This process is described in detail at the following Web site: <http://www.qnetexchange.org>. Hospitals that fail to receive the required 80-percent reliability after the standard appeals process may ask that CMS accept the fourth quarter of calendar year 2004 validation results as a final attempt to present evidence of reliability. However, in order to process the fourth quarter data in time to meet our internal deadlines, these hospitals will need to submit the charts requested for reabstraction as soon as possible, but no later than August 1, 2005, in order for us to guarantee consideration of this information. Hospitals that make the early submission of these data and pass the 80-percent reliability minimum level will satisfy this requirement. In reviewing the data for these hospitals, we plan to combine the 5 cases from the third quarter and the 5 cases from the fourth quarter into a single sample to determine whether the 80 percent reliability level is met. This gives us the greatest accuracy when estimating the reliability level. The confidence interval approach accounts for the variation in coding among the 5 charts pulled each quarter and for the entire year around the overall hospital mean score (on all individual data elements compared). The closer each case's reliability score is to the hospital mean score, the tighter the confidence interval established for that hospital. A hospital may code each chart equally inaccurately, achieve a tight confidence interval, and fail to pass even though its overall score is just below the passing threshold (75 percent,

for example). A hospital with more variation among charts will achieve a broader confidence interval, which may allow it to pass even though some charts score very low and others very high. As we gain experience with this system, we will adjust it as appropriate over time as we build our sample of validated cases and learn more about hospital performance against the thresholds we establish.

We believe we have adopted the most suitable statistical tests for the hospital data we are trying to validate, but we invite public comments on this and any other approaches hospitals choose to comment on. We are particularly interested in comments from hospitals on the initial starting points for the passing threshold, the confidence interval established, and the sampling approach. Because we will be receiving data each quarter from hospitals, our information on the sampling methodology will improve with each quarter's submissions. We will analyze this information to determine if any changes in our methodology are required. We will make any necessary revisions to the sampling methodology and the statistical approach through manual issuances and other guidance to hospitals.

- The hospital must have two consecutive quarters of publishable data. The information collected by CMS through this rule will be displayed for public viewing on the Internet. Prior to this display, hospitals are permitted to preview their information as we have it recorded. In our previous experience, a number of hospitals requested that this information not be displayed due to errors in the submitted data that were not of the sort that could be detected by the normal edit and consistency checks. We acquiesced to these requests in the public interest and because of our own desire to present correct data. However, we still believe that the hospital bears the responsibility of submitting correct data that can serve as valid and reliable information. Therefore, in order to receive the full market basket update for IPPS, we are proposing to establish a requirement for two consecutive quarters of publishable data. We published the first quarter of calendar year 2004 data in November 2004. The first two quarters of calendar year 2004 data were published in March 2005. Our plans are to publish the first three quarters of calendar year 2004 in August 2005. For the FY 2006 update, we will expect that all hospitals receiving the full market basket update for FY 2006 to have published data for all of the required 10 measures for both the March and August 2005 publications.

Allowances would be made for hospitals that do not treat a particular condition and for new hospitals that have not had the opportunity to provide the required data.

*C. Sole Community Hospitals (SCHs) and Medicare Dependent Hospitals (MDHs) (§§ 412.73, 412.75, 412.77, 412.92 and 412.108)*

(If you choose to comment on issues in this section, please include the caption "Sole Community Hospitals and Medicare Dependent Hospitals" at the beginning of your comments.)

#### 1. Background

Under the IPPS, special payment protections are provided to a sole community hospital (SCH). Section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that, by reason of factors such as isolated location, weather conditions, travel conditions, absence of other like hospitals (as determined by the Secretary), or historical designation by the Secretary as an essential access community hospital, is the sole source of inpatient hospital services reasonably available to Medicare beneficiaries. The regulations that set forth the criteria that a hospital must meet to be classified as an SCH are located in § 412.92 of the regulations. Although SCHs and MDHs are paid under a special payment methodology, they are hospitals that are paid under section 1886(d) of the Act. Like all IPPS hospitals paid under section 1886(d) of the Act, SCHs and MDHs are paid for their discharges based on the DRG weights calculated under section 1886(d)(4) of the Act.

Effective with hospital cost reporting periods beginning on or after October 1, 2000, section 1886(d)(5)(D)(i) of the Act (as amended by section 6003(e) of Pub. L. 101-239) and section 1886(b)(3)(1) of the Act (as added by section 405 of Pub. L. 106-113 and further amended by section 213 of Pub. L. 106-554), provide that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment to the hospital for the cost reporting period:

- The Federal rate applicable to the hospital;
- The updated hospital-specific rate based on FY 1982 costs per discharge;
- The updated hospital-specific rate based on FY 1987 costs per discharge; or
- The updated hospital-specific rate based on FY 1996 costs per discharge.

For purposes of payment to SCHs for which the FY 1996 hospital-specific rate yields the greatest aggregate payment, payments for discharges during FYs 2001, 2002, and 2003 were based on a

blend of the FY 1996 hospital-specific rate and the greater of the Federal rate or the updated FY 1982 or FY 1987 hospital-specific rate. For discharges during FY 2004 and subsequent fiscal years, payments based on the FY 1996 hospital-specific rate are 100 percent of the updated FY 1996 hospital-specific rate.

For each cost reporting period, the fiscal intermediary determines which of the payment options will yield the highest rate of payment. Payments are automatically made at the highest rate using the best data available at the time the fiscal intermediary makes the determination. However, it may not be possible for the fiscal intermediary to determine in advance precisely which of the rates will yield the highest payment by year's end. In many instances, it is not possible to forecast the outlier payments, the amount of the DSH adjustment, or the IME adjustment, all of which are applicable only to payments based on the Federal rate. The fiscal intermediary makes a final adjustment at the close of the cost reporting period to determine precisely which of the payment rates would yield the highest payment to the hospital.

If a hospital disagrees with the fiscal intermediary's determination regarding the final amount of program payment to which it is entitled, it has the right to appeal the fiscal intermediary's decision in accordance with the procedures set forth in subpart R of part 400, which concern provider payment determinations and appeals.

Under section 1886(d)(5)(G) of the Act, Medicare dependent hospitals (MDHs) are paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982 or FY 1987 costs per discharge, whichever is higher. MDHs do not have the option to use their FY 1996 hospital-specific rate. The regulations that set forth the criteria that a hospital must meet to be classified as an MDH are located in § 412.108.

## 2. Budget Neutrality Adjustment to Hospital Payments Based on Hospital-Specific Rate

Under section 1886(d)(4)(C)(i) of the Act, beginning in FY 1988 and for each fiscal year thereafter, the Secretary is required to adjust the DRG classifications and weighting factors established under sections 1886(d)(4)(A) and (d)(4)(B) of the Act to reflect changes in treatment patterns, technology, and other factors that may change the use of hospital resources. For discharges beginning in FY 1991,

section 1886(d)(4)(C)(iii) of the Act requires the Secretary to ensure that adjustments to DRG classifications and weighting factors result in aggregate DRG payments that are budget neutral (not greater or less than the aggregate payments without the adjustments). In addition, section 1886(d)(3)(E) of the Act requires the Secretary to update the hospital wage index annually in a manner that does not affect aggregate payments to hospitals under section 1886(d) of the Act.

As discussed in the May 9, 1990 IPPS proposed rule (55 FR 19466), we normalize the proposed recalibrated DRG weights by an adjustment factor so that the average case weight after recalibration is equal to the average case weight prior to recalibration. While this adjustment is intended to ensure that recalibration does not affect total payments to hospitals under section 1886(d) of the Act, our analysis has indicated that the normalization adjustment does not achieve budget neutrality with respect to aggregate payments to hospitals under section 1886(d) of the Act. In order to comply with the requirement of section 1886(d)(4)(C)(iii) of the Act that the DRG reclassification changes and recalibration of the relative weights be budget neutral and the requirement of section 1886(d)(3)(E) of the Act that the updated wage index be implemented in a budget neutral manner, we compare the estimated aggregate payments using the current year's relative weights and wage index factors to aggregate payments using the prior year's weights and factors. Based on this comparison, we compute a budget neutrality adjustment factor. This budget neutrality adjustment factor is then applied to the standardized per discharge payment amount. Beginning in FY 1994, in applying the current year's budget neutrality adjustment factor to both the standard Federal rate and hospital-specific rates, we do not remove the prior years' budget neutrality adjustment factors because estimated aggregate payments after the changes in the DRG relative weights and wage index factors must equal estimated aggregate payments prior to the changes. If we removed the prior year adjustment, we would not satisfy this condition. (58 FR 30269)

We are bound by the Act to ensure that aggregate payments to hospitals under section 1886(d) of the Act are projected to neither increase nor decrease as a result of the annual updates to the DRG classifications and weighting factors and for the updated wage indices. However, we have broad authority under the statute to determine

the method for implementing budget neutrality. We have maintained since 1991 that the budget neutrality adjustment is applied, as described above, to all hospitals paid under section 1886(d) of the Act, including those that are paid based on a hospital-specific rate. Thus, the budget neutrality factor applies to payments to SCHs and MDHs.

Hospitals that are paid under section 1886(d) of the Act based on a hospital-specific rate are subject to the DRG reclassification and recalibration factor component of the budget neutrality adjustment because, as IPPS hospitals, they are paid based on DRGs. As described above, changes in DRG relative weights from one year to the next affect aggregate SCH and MDH payments, which in turn affect total Medicare payments to hospitals under section 1886(d) of the Act. Because SCHs and MDHs are paid under section 1886(d) of the Act, we believe their DRG payments should be factored into the DRG reclassification and recalibration factor component of the budget neutrality adjustment to ensure that recalibration does not affect total payments to hospitals under section 1886(d) of the Act. Therefore, we continue to believe it is appropriate to apply the DRG reclassification and recalibration factor component of the budget neutrality adjustment to SCHs and MDHs. Furthermore, consistent with the requirement of section 1886(d)(4)(C)(iii) of the Act that DRG reclassification changes and recalibration of relative weights be budget neutral, we continue to believe it is appropriate to apply this adjustment without removing the previous year's adjustment factor.

In the May 9, 1990 proposed rule (55 FR 19466), we discussed the rationale behind our decision to apply the wage index portion of the budget neutrality adjustment factors to hospitals that are paid under section 1886(d) of the Act based on a hospital-specific rate. We described how, even though the wage index is only applicable to those hospitals that are paid based on the Federal rate, the changes in wage index can cause changes in the payment basis for some SCHs and MDHs. That is, depending on the size of the increase in their wage index values, some hospitals that had been paid based on the hospital-specific rate could now be paid based on the Federal rate when the wage index-adjusted Federal rate exceeds the hospital-specific rate. In some instances, hospitals that had previously been paid based on the Federal rate may be paid based on the hospital-specific rate if the Federal rate is adjusted by a lower wage

index and the hospital-specific rate now exceeds the Federal rate. These shifts in the payment basis affect aggregate program payments and, therefore, are taken into account in the budget neutrality adjustment. In addition, we maintained that because we apply the adjustment to all hospitals paid based on the Federal rate under section 1886(d) of the Act, it would be fair to apply it to hospitals that are paid under section 1886(d) of the Act based on hospital-specific rates. We believed that if we did not apply the budget neutrality factor to hospitals paid based on their hospital-specific rate, hospitals that are paid on the Federal rate would be subject to larger reductions to make up for not adjusting payments to hospitals that are paid based on hospital-specific rates.

Concerns have been raised that hospitals under section 1886(d) of the Act whose reimbursement is based on a hospital-specific rate should not be subject to the wage index component of the budget neutrality adjustment. Hospital-specific rates reflect the effects of hospitals' area wage levels and, therefore, are not adjusted by an area wage index. Accordingly, the concern is that a budget neutrality factor for changes in the wage index should not be applied to hospitals that are paid based on a hospital-specific rate. In addition, it has been suggested that the budget neutrality adjustment that CMS applies to hospitals paid on a hospital-specific rate should be similar to the budget neutrality adjustment made to hospitals in Puerto Rico. Hospitals in Puerto Rico that are paid under the IPPS are paid based on a blend of the national prospective payment rate and the Puerto Rico-specific prospective payment rate (42 CFR 412.212). Beginning in FY 1991, the Puerto Rico-specific standardized amount became subject to a budget neutrality adjustment. This budget neutrality adjustment included both the DRG reclassification and recalibration factor component and the wage index component. However, beginning in FY 1998, the Puerto Rico-specific rate has been subject only to the DRG reclassification and recalibration factor component of the budget neutrality adjustment (62 FR 46038) and not to the wage index component of the budget neutrality adjustment. In other words, beginning in FY 1998, the budget neutrality adjustment for the Puerto Rico-specific rate reflects only the DRG reclassification and recalibration factor component. This adjustment is computed, as described above, for all hospitals paid under section 1886(d) of

the Act, without removing the previous year's budget neutrality adjustment.

We have considered the concern that it is inappropriate to apply a budget neutrality factor that includes a component for changes in the wage index to a hospital with a payment rate that is not adjusted by a wage index adjustment. In cases in which a hospital's payments are ultimately based on a hospital-specific rate, that portion of the payment is not adjusted by a wage index. We believe that our current policy is valid, for the reasons indicated above and in previous rulemaking documents, but we recognize that there are also valid grounds to review the regulations and consider other approaches. Accordingly, we are revisiting this policy. After further consideration of these issues, we are proposing to remove the wage index component from the budget neutrality adjustment applied to the hospital-specific rate for hospitals paid under section 1886(d) of the Act. The DRG reclassification and recalibration factor component of the budget neutrality adjustment would still apply to these hospitals, as payments to SCHs and MDHs are based on DRGs and affect total Medicare payments to hospitals under section 1886(d) of the Act. In applying this budget neutrality adjustment factor, which would include only the DRG reclassification and recalibration factor component, to the hospital-specific rate, we would not remove the prior years' budget neutrality adjustment factors. This would satisfy the statutory requirement that estimated aggregate payments after the changes in the DRG relative weights equal estimated aggregate payments prior to the changes. We are proposing that the wage index portion of the budget neutrality adjustment would not be applied to hospital-specific amounts, as these amounts are not adjusted by an area wage index. While this may result in a slightly higher budget neutrality adjustment applied to all other IPPS hospitals, because these hospitals actually are paid based on the revised wage indices and are affected by wage index changes, we believe this is appropriate. In addition, we note that in FY 1990 when this policy was first discussed, we did not calculate a budget neutrality factor that reflected only the DRG changes. Because we now calculate such a budget neutrality factor for Puerto Rico hospitals, it would not be administratively burdensome to apply the same budget neutrality factor to SCHs and MDHs.

We are proposing to add a new paragraph (f) to § 412.73, a new paragraph (i) to § 412.75, and a new

paragraph (j) to § 412.77 relating to the computation of the hospital-specific rate to clarify our longstanding policy that CMS makes an adjustment to the hospital-specific rate to ensure that changes to the DRG reclassifications and recalibrations of the DRG relative weights are made in a manner so that aggregate payments to hospitals under section 1886(d) of the Act are not affected, and that this adjustment is made without removing the budget neutrality adjustment for the prior year. These provisions are cross-referenced in § 412.92 for SCHs and § 412.108 for MDHs for purposes of computing the hospital-specific rates for these hospitals. This proposed regulatory text will reflect the proposed changes to the way CMS applies the budget neutrality adjustment to hospitals paid under section 1886(d) of the Act based on the hospital-specific rate. Specifically, it would indicate that the budget neutrality adjustment made to hospitals paid under section 1886(d) of the Act based on the hospital-specific rate will only account for the DRG reclassification and recalibration factor component. The budget neutrality adjustment would no longer include the wage index factor component.

### 3. Technical Change

In the September 4, 1990 IPPS final rule (55 FR 36056), we made changes to the regulations at § 412.92 to incorporate the provisions of section 6003(e) of Pub. L. 101-239. Section 6003(e) of Pub. L. 101-239 provided for a permanent payment methodology for SCHs that recognized distortions in operating costs in years subsequent to the implementation of the IPPS and provided for opportunity for payment based on a new base year. As a result of this legislation, we deleted from the regulations a special provision that we had included under § 412.92(g) that provided for a payment adjustment to compensate SCHs reasonably for the increased operating costs resulting from the addition of new services or facilities.

We have discovered that, in making the changes to § 412.92 in the September 4, 1990 final rule to remove paragraph (g), we inadvertently failed to make a conforming change to paragraph (d)(3) that references the provisions of paragraph (g) relating to a payment adjustment for significant increases in a SCH's operating costs. In this proposed rule, we are proposing to make this technical correction by revising paragraph (d)(3).

#### *D. Rural Referral Centers (§ 412.96)*

(If you choose to comment on issues in this section, please include the

caption "Rural Referral Centers" at the beginning of your document.)

Under the authority of section 1886(d)(5)(C)(i) of the Act, the regulations at § 412.96 set forth the criteria that a hospital must meet in order to qualify under the IPPS as a rural referral center. For discharges occurring before October 1, 1994, rural referral centers received the benefit of payment based on the other urban standardized amount rather than the rural standardized amount. Although the other urban and rural standardized amounts are the same for discharges occurring on or after October 1, 1994, rural referral centers continue to receive special treatment under both the DSH payment adjustment and the criteria for geographic reclassification.

Section 402 of Pub. L. 108-173 raised the DSH adjustment for other rural hospitals with less than 500 beds and rural referral centers. Other rural hospitals with less than 500 beds are subject to a 12-percent cap on DSH payments. Rural referral centers are not subject to the 12.0 percent cap on DSH payments that is applicable to other rural hospitals (with the exception of rural hospitals with 500 or more beds). Rural referral centers are not subject to the proximity criteria when applying for geographic reclassification, and they do not have to meet the requirement that a hospital's average hourly wage must exceed 106 percent of the average hourly wage of the labor market area where the hospital is located.

Section 4202(b) of Pub. L. 105-33 states, in part, "[a]ny hospital classified as a rural referral center by the Secretary \* \* \* for fiscal year 1991 shall be classified as such a rural referral center for fiscal year 1998 and each subsequent year." In the August 29, 1997 final rule with comment period (62 FR 45999), we also reinstated rural referral center status for all hospitals that lost the status due to triennial review or MGCRB reclassification, but not to hospitals that lost rural referral center status because

they were now urban for all purposes because of the OMB designation of their geographic area as urban. However, subsequently, in the August 1, 2000 final rule (65 FR 47089), we indicated that we were revisiting that decision. Specifically, we stated that we would permit hospitals that previously qualified as a rural referral center and lost their status due to OMB redesignation of the county in which they are located from rural to urban to be reinstated as a rural referral center. Otherwise, a hospital seeking rural referral center status must satisfy the applicable criteria. For FYs 1984 through 2004, we used the definitions of "urban" and "rural" in § 412.63. For FY 2005 and subsequent years, the revised definitions of "urban" and "rural" in § 412.64 apply.

One of the criteria under which a hospital may qualify as a rural referral center is to have 275 or more beds available for use (§ 412.96(b)(1)(ii)). A rural hospital that does not meet the bed size requirement can qualify as a rural referral center if the hospital meets two mandatory prerequisites (a minimum case-mix index and a minimum number of discharges) and at least one of three optional criteria (relating to specialty composition of medical staff, source of inpatients, or referral volume) (§ 412.96(c)(1) through (c)(5)). (See also the September 30, 1988 *Federal Register* (53 FR 38513)). With respect to the two mandatory prerequisites, a hospital may be classified as a rural referral center if—

- The hospital's case-mix index is at least equal to the lower of the median case-mix index for urban hospitals in its census region, excluding hospitals with approved teaching programs, or the median case-mix index for all urban hospitals nationally; and
- The hospital's number of discharges is at least 5,000 per year, or, if fewer, the median number of discharges for urban hospitals in the census region in which the hospital is located. (The number of

discharges criterion for an osteopathic hospital is at least 3,000 discharges per year, as specified in section 1886(d)(5)(C)(i) of the Act.)

#### 1. Case-Mix Index

Section 412.96(c)(1) provides that CMS will establish updated national and regional case-mix index values in each year's annual notice of prospective payment rates for purposes of determining rural referral center status. The methodology we use to determine the proposed national and regional case-mix index values is set forth in regulations at § 412.96(c)(1)(ii). The proposed national median case-mix index value for FY 2006 includes all urban hospitals nationwide, and the proposed regional values for FY 2006 are the median values of urban hospitals within each census region, excluding those hospitals with approved teaching programs (that is, those hospitals receiving indirect medical education payments as provided in § 412.105). These proposed values are based on discharges occurring during FY 2004 (October 1, 2003 through September 30, 2004) and include bills posted to CMS' records through December 2004.

We are proposing that, in addition to meeting other criteria, if they are to qualify for initial rural referral center status for cost reporting periods beginning on or after October 1, 2005, rural hospitals with fewer than 275 beds must have a case-mix index value for FY 2004 that is at least—

- 1.3659; or
- The median case-mix index value (not transfer-adjusted) for urban hospitals (excluding hospitals with approved teaching programs as identified in § 412.105) calculated by CMS for the census region in which the hospital is located.

The proposed median case-mix index values by region are set forth in the following table:

| Region   | Case-Mix Index Value |
|--|----------------------|
| 1. New England (CT, ME, MA, NH, RI, VT)                | 1.2253               |
| 2. Middle Atlantic (PA, NJ, NY)                        | 1.2427               |
| 3. South Atlantic (DE, DC, FL, GA, MD, NC, SC, VA, WV) | 1.3276               |
| 4. East North Central (IL, IN, MI, OH, WI)             | 1.2768               |
| 5. East South Central (AL, KY, MS, TN)                 | 1.2836               |
| 6. West North Central (IA, KS, MN, MO, NE, ND, SD)     | 1.2175               |
| 7. West South Central (AR, LA, OK, TX)                 | 1.3406               |
| 8. Mountain (AZ, CO, ID, MT, NV, NM, UT, WY)           | 1.3603               |
| 9. Pacific (AK, CA, HI, OR, WA)                        | 1.3151               |

The preceding numbers will be revised in the final rule to the extent required to reflect the updated FY 2004 MedPAR file, which will contain data from additional bills through March 31, 2005.

Hospitals seeking to qualify as rural referral centers or those wishing to know how their case-mix index value compares to the criteria should obtain hospital-specific case-mix index values (not transfer-adjusted) from their fiscal intermediaries. Data are available on the Provider Statistical and Reimbursement (PS&R) System. In keeping with our policy on discharges, these case-mix index values are computed based on all

Medicare patient discharges subject to DRG-based payment.

#### 2. Discharges

Section 412.96(c)(2)(i) provides that CMS will set forth the national and regional numbers of discharges in each year's annual notice of prospective payment rates for purposes of determining rural referral center status. As specified in section 1886(d)(5)(C)(ii) of the Act, the national standard is set at 5,000 discharges. We are proposing to update the regional standards based on discharges for urban hospitals' cost reporting periods that began during FY 2002 (that is, October 1, 2001 through September 30, 2002), which is the latest

available cost report data we have at this time.

Therefore, we are proposing that, in addition to meeting other criteria, a hospital, if it is to qualify for initial rural referral center status for cost reporting periods beginning on or after October 1, 2005, must have as the number of discharges for its cost reporting period that began during FY 2002 a figure that is at least—

- 5,000 (3,000 for an osteopathic hospital); or
- The median number of discharges for urban hospitals in the census region in which the hospital is located, as indicated in the following table:

| Region   | Number of Discharges |
|--|----------------------|
| 1. New England (CT, ME, MA, NH, RI, VT)                | 5,607                |
| 2. Middle Atlantic (PA, NJ, NY)                        | 8,010                |
| 3. South Atlantic (DE, DC, FL, GA, MD, NC, SC, VA, WV) | 6,765                |
| 4. East North Central (IL, IN, MI, OH, WI)             | 4,941                |
| 5. East South Central (AL, KY, MS, TN)                 | 3,186                |
| 6. West North Central (IA, KS, MN, MO, NE, ND, SD)     | 1,876                |
| 7. West South Central (AR, LA, OK, TX)                 | 2,774                |
| 8. Mountain (AZ, CO, ID, MT, NV, NM, UT, WY)           | 3,384                |
| 9. Pacific (AK, CA, HI, OR, WA)                        | 6,047                |

These numbers will be revised in the final rule based on the latest available cost report data.

We reiterate that if an osteopathic hospital is to qualify for rural referral center status for cost reporting periods beginning on or after October 1, 2005, the hospital would be required to have at least 3,000 discharges for its cost reporting period that began during FY 2002.

### 3. Technical Change

In the FY 1998 IPPS final rule (62 FR 46028), we removed paragraph (f) from § 412.96. Paragraph (f) was removed when the requirement for triennial reviews of rural referral centers was terminated (62 FR 45998 through 45600, 46028 through 46029). However, we inadvertently failed to address all of the related cross-references to paragraph (f) in the entire § 412.96. Therefore, we are proposing to revise § 412.96 to remove paragraphs (h)(4) and (i)(4), consistent with the removal of paragraph (f).

#### *E. Payment Adjustment for Low-Volume Hospitals (§ 412.101)*

(If you choose to comment on issues in this section, please include the caption "Low-Volume Hospital Payment Adjustment" at the beginning of your comment.)

Section 1886(d)(12) of the Act, as added by section 406 of Pub. L. 108-173, provides for a payment adjustment to account for the higher costs per discharge of low-volume hospitals under the IPPS. Section 1886(d)(12)(C)(i) of the Act defines a low-volume hospital as a "subsection (d) hospital \* \* \* that the Secretary determines is located more than 25 road miles from another subsection (d) hospital and that has less than 800 discharges during the fiscal year." Section 1886(d)(12)(C)(ii) of the Act further stipulates that the term "discharge" refers to total discharges, and not merely to Medicare discharges. Specifically, the term refers to the "inpatient acute care discharge of an individual regardless of whether the individual is entitled to benefits under part A." Finally, the provision requires the Secretary to determine an applicable percentage increase for these low-volume hospitals based on the "empirical relationship" between "the standardized cost-per-case for such hospitals and the total number of discharges of these hospitals and the amount of the additional incremental costs (if any) that are associated with such number of discharges." The statute thus mandates the Secretary to develop an empirically justifiable adjustment based on the relationship between costs

and discharges for these low-volume hospitals. The statute also limits the adjustment to no more than 25 percent.

According to the analysis conducted for the FY 2005 IPPS final rule (69 FR 49099 through 49102), a 25 percent low-volume adjustment to all qualifying hospitals with less than 200 discharges was found to be most consistent with the statutory requirement to provide relief to low-volume hospitals where there is empirical evidence that higher incremental costs are associated with low numbers of total discharges. However, we acknowledged that the empirical evidence did not provide robust support for that conclusion and indicated that we would reexamine the empirical evidence for the FY 2006 IPPS final rule with the intention of modifying or even eliminating the adjustment if the empirical evidence indicates that it is appropriate to do so.

In the FY 2005 IPPS final rule (69 FR 49102), we indicated that our analysis showed that there are fewer than 100 hospitals with less than 200 total discharges. At that time, we were unable to determine how many of these hospitals also meet the requirement that a low-volume hospital be more than 25 road miles from the nearest IPPS hospital in order to qualify for the adjustment. Our data systems currently indicate that 10 hospitals are receiving the low-volume adjustment.

As indicated in the FY 2005 IPPS final rule, we have now conducted a more detailed multivariate analysis on the empirical basis for a low-volume adjustment for FY 2006. In order to further evaluate the need for a proposed change in the development of the low-volume adjustment, we replicated much of the analysis conducted for the FY 2005 IPPS final rule, using updated data. We again empirically modeled the relationship between hospital costs-per-case and total discharges in several ways. We used both regression analysis and straight-line statistics to examine this relationship.

We conducted three different regression analyses. For all of the analyses, we simulated the FY 2005 cost environment by inflating FY 2002 and FY 2003 hospital cost report data to FY 2005 using the full hospital market basket updates. We note that, at the time of this analysis, we only had cost report data from FY 2003 for approximately 57 percent of the IPPS hospitals. Therefore, we have placed a greater weight on the results from the simulated FY 2002 cost data, which are significantly more complete. We again simulated the FY 2005 payment environment because payments have undergone several changes between FY 2002 and FY 2003

and FY 2005, making the results of the earlier data less relevant. Furthermore, many of these policy changes may already have helped increase payments to low-volume hospitals. We were unable to simulate the FY 2006 environment because payment factors for FY 2006 were not available at the time of our analysis.

In the first regression analysis, we used a dummy variable approach to model the relationship between standardized costs and total discharges. Using FY 2002 cost data, we found some evidence for a low-volume payment adjustment for hospitals with up to 199 discharges, consistent with our current policy. Using FY 2003 cost data, the empirical evidence only supported an adjustment for hospitals with up to 99 total discharges.

We also used a descriptive analysis approach to understand empirically the relationship between costs and total discharges. We grouped all hospitals by their total discharges and compared the mean Medicare per discharge payment to Medicare per discharge cost ratios. Hospitals with less than 800 total discharges were split into 24 cohorts based on increments of 25 discharges. When using the FY 2002 cost report data, the mean payment-to-cost ratios were below one (implying that Medicare per discharge costs exceeded Medicare per discharge payments) for all cohorts of hospitals with less than 200 discharges, after which the ratio was consistently above one. When using the FY 2003 cost report data, the mean payment-to-cost ratios were below one for all but two cohorts up to those with less than 175 total discharges, after which the ratio was consistently above one. No obvious increasing trend in the ratios, from which it would be possible to infer a formula to generate adjustments for hospitals based upon the number of discharges, was evident. Because more than 70 percent of hospitals with less than 200 discharges had ratios below 0.80, this analysis supports applying the highest payment adjustment to all providers with less than 200 discharges that are eligible for the low-volume adjustment.

The second regression analysis modeled the Medicare per discharge cost to Medicare per discharge payment ratio as a function of total discharges. The cost-to-payment ratio model more explicitly accounts for the relative values of per discharge costs and per discharge payments. These models provided some evidence for a statistically significant negative relationship between the cost-to-payment ratio and total discharges. However, that result was limited to FY

2002 data. FY 2003 data displayed no significant relationship between the cost-to-payment ratio and total discharges.

The third regression analysis employed per discharge costs minus per discharge payments as the dependent variable and total discharges as an explanatory variable. The results of this analysis were similar to the other regression analyses: some evidence was provided for an adjustment with the FY 2002 data, but not with the FY 2003 data, simulated for FY 2005. In fact, the FY 2003 data results suggest (with a positive intercept and positive coefficient on total discharges) that payments are greater than costs for all hospitals, including the low-volume hospitals.

Based upon these multivariate analyses using the FY 2002 cost report data, a case can be made that hospitals with fewer than 200 total discharges have per discharge costs that are statistically significantly higher relative to their Medicare per discharge payments in comparison to hospitals with 200 or more total discharges. Therefore, we are proposing to extend the existing low-volume adjustment for FY 2006. That is, a low-volume adjustment would again be provided for qualifying hospitals with less than 200 discharges. As noted above, the descriptive data do not reveal any pattern that could provide a formula for calculating an adjustment in relation to the number of discharges. However, the descriptive analysis of the data does indicate that, for a large majority of the hospitals with less than 200 discharges, the maximum adjustment of 25 percent would be appropriate because, for example, the payment-to-cost ratios for more than 70 percent of these hospitals are 0.80 or less. The maximum adjustment of 25 percent would still leave most of these hospitals with payment-to-cost ratios below 1.00. Because a large majority of hospitals with less than 200 discharges have payment-to-cost ratios below 1.00, we are proposing to again provide hospitals with less than 200 total discharges in the most recent submitted cost report an adjustment of 25 percent on each Medicare discharge. This policy is consistent with the existing language in § 412.101(a) and (b).

However, the initial analysis of the FY 2003 data does not seem to provide strong empirical evidence for a relationship between Medicare per discharge costs and total discharges. Therefore, we will reevaluate the appropriateness of the low-volume adjustment in the FY 2007 proposed rule.

#### F. Indirect Medical Education (IME) Adjustment (§ 412.105)

(If you choose to comment on issues in this section, please include the caption "IME Adjustment" at the beginning of your comment.)

##### 1. Background

Section 1886(d)(5)(B) of the Act provides that prospective payment hospitals that have residents in an approved graduate medical education (GME) program receive an additional payment to reflect the higher indirect costs of teaching hospitals relative to nonteaching hospitals. The regulations regarding the calculation of this additional payment, known as the indirect medical education (IME) adjustment, are located at § 412.105. The IME adjustment to the DRG payment is based in part on the applicable IME adjustment factor. The IME adjustment factor is calculated using a hospital's ratio of residents to beds, which is represented as  $r$ , and a formula multiplier, which is represented as  $c$ , in the following equation:  $c \times \{1 + r\}^{.405} - 1$ . The formula is traditionally described in terms of a certain percentage increase in payment for every 10-percent increase in the resident-to-bed ratio.

##### 2. IME Adjustment for TEFRA Hospitals Converting to IPPS Hospitals

The Balanced Budget Act of 1997 (Pub. L. 105-33) established a limit on the number of allopathic and osteopathic residents that a hospital may include in its full-time equivalent (FTE) count for direct GME and IME payment purposes. Under section 1886(h)(4)(F) of the Act, a hospital's unweighted FTE count of residents may not exceed the hospital's unweighted FTE count for its most recent cost reporting period ending on or before December 31, 1996. Under section 1886(d)(5)(B)(v) of the Act, the limit on the FTE resident count for IME purposes is effective for discharges occurring on or after October 1, 1997. A similar limit is effective for direct GME purposes for cost reporting periods beginning on or after October 1, 1997.

When these provisions were enacted, hospitals reported their weighted FTE resident count for direct GME and their unweighted FTE resident count for IME on the Medicare cost report. The cost report was subsequently modified to require reporting of unweighted FTE resident counts for both direct GME and IME. However, for cost reporting periods ending on or before December 31, 1996 (the cost report on which the FTE limit is based), hospitals were not

required to report unweighted FTE resident counts for direct GME purposes. Therefore, a separate data collection effort was required to obtain the unweighted FTE resident counts. The fiscal intermediaries worked with hospitals to determine the unweighted FTE resident counts for direct GME for cost-reporting periods ending on or before December 31, 1996, for purposes of implementing the FTE cap.

During this process, the fiscal intermediaries did not determine IME FTE resident counts for hospitals that were excluded from the IPPS (that is, psychiatric hospitals, LTCHs, rehabilitation hospitals, children's hospitals, and cancer hospitals) because these hospitals were not paid under the IPPS and, therefore, did not receive any IME payment adjustments. Only the FTE resident data related to direct GME payments were relevant for these excluded hospitals and, therefore, only those data were collected. However, it has come to our attention that some hospitals that were excluded from the IPPS during the cost reporting period ending on or before December 31, 1996 (that is, the cost reporting period during which the hospital's FTE resident limit was established under section 1886(h)(4)(F) of the Act for purposes of direct GME payments) have either failed to continue to qualify for exclusion from the IPPS or deliberately changed their operations in a way to become subject to the IPPS and, as a result, have subsequently become subject to the IME payment adjustment provisions of the IPPS. For example, a provider that was a rehabilitation hospital during its cost reporting period ending on December 31, 1996, but no longer meets the regulatory criteria to qualify as a rehabilitation hospital would become subject to the IPPS and be able to receive IME payments. However, because no IME FTE resident count for the cost reporting period ending on or before December 31, 1996, was determined, such a hospital does not have an unweighted FTE resident limit for IME.

To address this situation, we are proposing to incorporate in the regulations (proposed § 412.105(f)(1)(xiii)) CMS' existing policy in such situations which provides for the establishment of an IME FTE cap for a hospital that was excluded from the IPPS during its base year and that subsequently became subject to the IPPS. We are clarifying and proposing to adopt into regulations our existing policy that, in such a situation, the fiscal intermediary would determine an IME FTE cap for the hospital, applicable beginning with the

hospital's payments under the IPPS, based on the FTE count of residents during the cost reporting period(s) used to determine the hospital's direct GME FTE cap in accordance with existing § 412.105(f) of the regulations. The new IPPS hospital's IME FTE cap would be subject to the same rules and adjustments as any IPPS hospital's IME FTE cap in accordance with § 412.105(f) of the regulations.

While calculation of the IME FTE cap for a TEFRA hospital that converts to an IPPS hospital may require that fiscal intermediaries obtain information from cost reporting periods that are closed, allowing a fiscal intermediary to obtain this information should not be understood as allowing a fiscal intermediary to reopen closed cost reports that are beyond the normal reopening period in order to carry out the provisions of this proposed regulation.

Finally, there may be situations where the data necessary to carry out this policy are not available. For example, under this proposal, if a children's hospital converts to an IPPS hospital on July 1, 2007, the fiscal intermediary may need to determine the count of FTE residents for IME purposes training at the hospital during the most recent cost reporting period ending on or before December 31, 1996, in order to establish an IME FTE cap for the hospital, effective for discharges occurring on or after October 1, 2007. However, the count of FTE residents for IME purposes from the cost reporting period ending on or before December 31, 1996, may no longer be available, as the minimum time that hospitals are required to retain records is 5 years from the date the hospital submits the cost report. We believe this problem may not occur with sufficient frequency to warrant specific regulatory action. We are specifically soliciting comments as to whether and how hospitals believe this is a problem that needs to be addressed.

In some cases, a hospital that was previously excluded from the IPPS may become subject to the IPPS as a result of a merger between two or more hospitals where the surviving hospital is subject to the IPPS (and not creating an IPPS hospital with an excluded unit). In such cases, CMS policy is that the FTE resident cap for the surviving hospital should reflect the combined FTE resident caps for the hospitals that merged. If two or more hospitals merge after the conclusion of each hospital's base year for purposes of calculating resident FTE caps, the surviving hospital's FTE resident cap is an aggregation of the FTE resident cap for each hospital participating in the

merger. When a merger involves an IPPS-excluded hospital, the base year IME FTE count for the IPPS-excluded hospital has not been determined. We are clarifying and proposing to codify in regulations our existing policy that, in such cases, the fiscal intermediary would determine an IME FTE cap for the IPPS-excluded hospital for purposes of determining the merged hospital's IME FTE cap in accordance with § 412.105(f) of the regulations. Once this cap is determined, the aggregate IME FTE cap of the surviving entity may be calculated in accordance with existing CMS policy for mergers.

We note that we would compute an IME cap for an IPPS-excluded hospital only in cases of a merger between an IPPS-excluded hospital and an acute care IPPS hospital, where the entire surviving entity is subject to the IPPS. No such IME FTE cap would be computed for an IPPS-excluded hospital in instances where an IPPS-excluded hospital and an acute care IPPS hospital agree to form a Medicare GME affiliated group for purposes of aggregating FTE resident caps. In cases where an IPPS-excluded hospital enters into a Medicare GME affiliation agreement with other IPPS hospitals, the IPPS-excluded hospital can contribute only its direct GME FTE cap to the aggregate FTE cap for the group. This is because, as long as a hospital remains excluded from the IPPS, that hospital will not have an FTE resident cap established for purposes of IME. Under no circumstances may an IPPS-excluded hospital be considered to contribute any FTE residents to a Medicare GME affiliation group for purposes of the aggregate IME FTE resident cap. IPPS-excluded hospitals do not currently, and would not under this proposed policy, have an IME FTE resident cap.

### 3. Section 1886(d)(8)(E) Teaching Hospitals That Withdraw Rural Reclassification

In section V.I. of this preamble, we discuss situations in which an urban hospital may become rural under a reclassification request under section 1886(d)(8)(E) of the Act. Under section 1886(d)(8)(E) of the Act, an urban hospital may file an application to be treated as being located in a rural area. Becoming rural under this provision affects only payments under section 1886(d) of the Act. If the hospital is a teaching hospital, the hospital could not receive adjustments to its direct GME FTE cap because payments for direct GME are made under section 1886(h) of the Act and the section 1886(d)(8)(E) reclassifications affect only the payments that are made under section

1886(d) of the Act. Therefore, an urban hospital that reclassifies as rural under this provision may receive the 130-percent adjustment to its IME FTE resident cap. In addition, its IME FTE cap may be adjusted for any new programs (similar to a hospital that is actually located in an area designated as rural) under section 1886(d)(5)(B)(v) of the Act, as amended by section 407 of Pub. L. 106-113 (BBRA).

An urban hospital treated as rural under section 1886(d)(8)(E) of the Act may subsequently withdraw its election and return to its urban status under the regulations at § 412.103. We are proposing that, effective with discharges occurring on or after October 1, 2005, hospitals that rescind their section 1886(d)(8)(E) reclassifications and return to being urban would not be eligible for permanent increases in their IME caps. Rather, any adjustments the hospitals received to their IME caps due to their rural status would be forfeited upon returning to urban status. Although we read the relevant IME FTE cap provisions in section 1886(d)(5)(B) of the Act as effecting a permanent increase to the FTE cap, we believe we have the statutory authority under section 1886(d)(5)(l) of the Act to make necessary adjustments to these caps that we believe are appropriate. Section 1886(d)(5)(l)(i) of the Act grants the Secretary authority to provide by regulation for "such other exceptions and adjustments to such payment amounts under this subsection as the Secretary deems appropriate." We believe it is appropriate that a section 1886(d)(8)(E) hospital forfeit the adjustments it received solely due to its reclassification to rural status when it returns to being urban. Otherwise, urban hospitals might reclassify to rural areas under section 1886(d)(8)(E) of the Act for a short period of time solely as a means of receiving an increase to their IME FTE caps. These hospitals could reclassify for as little as one year, simply in order to receive a permanent increase to their IME FTE caps. Because section 1886(d)(8)(E) hospitals have control over when they switch in and out of rural status, we believe any other policy would be subject to gaming and inappropriate usage of the section 1886(d)(8)(E) authority. In contrast, hospitals that become urban due to the OMB-revised labor area designations have no control in the matter, and therefore would not be subject to the same type of manipulation of payment rates we believe would exist with the section 1886(d)(8)(E) hospitals.

(We note that the above proposed policy would have no effect on rural track resident training programs.

Section 1886(h)(4)(H)(iv) of the Act, which governs direct GME, provides that an urban hospital may receive adjustments to its FTE caps for establishing "separately accredited approved medical residency training programs (or rural tracks) in an [sic] rural area." The provisions governing IME state that "Rules similar to the rules of subsection (h)(4)(H) shall apply for purposes of" determining FTE resident caps (section 1886(d)(5)(B)(viii) of the Act). Since the requirement that the hospital be located in a rural area is found in the provisions governing direct GME (section 1886(h) of the Act), not the provision governing IME, and since hospitals cannot reclassify as rural for purposes of section 1886(h) of the Act, we believe that, as provided in section 1886(h) of the Act, the hospital with which the urban hospital establishes the rural track must be physically located in an area designated as rural. We do not believe we would be properly incorporating the rules of section 1886(h) of the Act or creating a rule similar to that used in section 1886(h) of the Act if we were to allow counting of such reclassified hospitals.)

For the reasons stated above, we are proposing to amend the regulations at § 412.105 by adding a new paragraph (f)(1)(xiv) to provide that a hospital that rescinds its section 1886(d)(8)(E) reclassification will forfeit any

adjustments to its IME FTE cap it received due to its rural status. Thus, for example, a hospital that reclassified as rural under section 1886(d)(8)(e) of the Act with an IME FTE cap of 10 would have received a 130 percent adjustment to its IME cap (that is, 10 FTEs × 1.3). Furthermore, if this hospital, while reclassified as rural, started a new 3-year residency program with 2 residents in each program year, its FTE cap would have been increased by an additional 6 FTEs to 19 FTEs (that is, 13 FTEs + 6 FTEs). However, once this hospital rescinds its reclassification under section 1886(d)(8)(E) of the Act to become urban again, its IME FTE cap would return to 10 FTEs (its original pre-reclassification IME FTE cap).

*G. Payment to Disproportionate Share Hospitals (DSHs) (§ 412.106)*

(If you choose to comment on issues in this section, please include the caption "DSH Adjustment Data" at the beginning of your comment.)

1. Background

Section 1886(d)(5)(F) of the Act provides for additional payments to subsection (d) hospitals that serve a disproportionate share of low-income patients. The Act specifies two methods for a hospital to qualify for the Medicare disproportionate share hospital (DSH) adjustment. Under the first method,

$$\text{DSH Patient Percentage} = \frac{\text{Medicare, SSI Days}}{\text{Total Medicare Days}} + \frac{\text{Medicaid, Non-Medicare Days}}{\text{Total Patient Days}}$$

2. Implementation of Section 951 of Pub. L. 108-173 (MMA)

Section 951 of Pub. L. 108-173 requires the Secretary to arrange to furnish the data necessary for hospitals to compute the number of patient days used in calculating the disproportionate patient percentages. The provision is not specific as to whether it applies to the patient day data used to determine the Medicare fraction or the Medicaid fraction. We are interpreting section 951 to require the Secretary to arrange to furnish to hospitals the data necessary to calculate both the Medicare and Medicaid fractions. With respect to both the Medicare and Medicaid fractions, we also are interpreting section 951 to require CMS to arrange to furnish the personally identifiable information that would enable a hospital to compare and verify its records, in the case of the Medicare fraction, against the CMS' records, and in the case of the Medicaid fraction, against the State Medicaid

agency's records. Currently, as explained in more detail below, CMS provides the Medicare SSI days to certain hospitals that request these data. Hospitals are currently required under the regulation at § 412.106(b)(4)(iii) to provide the data adequate to prove eligibility for the Medicaid, non-Medicare days.

As indicated above, the numerator of the Medicare fraction includes the number of patient days furnished by the hospital to patients who were entitled to both Medicare Part A and SSI benefits. This number is divided by the hospital's total number of patient days furnished to patients entitled to benefits under Medicare Part A. In order to determine the numerator of this fraction for each hospital, CMS obtains a data file from the Social Security Administration (SSA). CMS matches personally identifiable information from the SSI file against its Medicare Part A entitlement information for the fiscal year to determine the number of

hospitals that are located in an urban area and have 100 or more beds may receive a DSH payment adjustment if the hospital can demonstrate that, during its cost reporting period, more than 30 percent of its net inpatient care revenues are derived from State and local government payments for care furnished to indigent patients. These hospitals are commonly known as "Pickle hospitals." The second method, which is also the most commonly used method for a hospital to qualify, is based on a complex statutory formula under which payment adjustments are based on the level of the hospital's DSH patient percentage, which is the sum of two fractions: the "Medicare fraction" and the "Medicaid fraction." The Medicare fraction is computed by dividing the number of patient days that are furnished to patients who were entitled to both Medicare Part A and Supplemental Security Income (SSI) benefits by the total number of patient days furnished to patients entitled to benefits under Medicare Part A. The Medicaid fraction is computed by dividing the number of patient days furnished to patients who, for those days, were eligible for Medicaid but were not entitled to benefits under Medicare Part A by the number of total hospital patient days in the same period.

Medicare SSI days for each hospital during each fiscal year. These data are maintained in the MedPAR Limited Data Set (LDS) as described in more detail below and discussed in a notice published on August 18, 2000 in the **Federal Register** (65 FR 50548). The number of patient days furnished by the hospital to Medicare beneficiaries entitled to SSI is divided by the hospital's total number of Medicare days (the denominator of the Medicare fraction). CMS determines this number from Medicare claims data; hospitals also have this information in their records. The Medicare fraction for each hospital is posted on the CMS Web site (<http://www.cms.hhs.gov>) under the SSI/Medicare Part A Disproportionate Share Percentage File. Under current regulations at § 412.106(b)(3), a hospital may request to have its Medicare fraction recomputed based on the hospital's cost reporting period if that year differs from the Federal fiscal year. This request may be made only once per

cost reporting period, and the hospital must accept the resulting DSH percentage for that year, whether or not it is a more favorable number than the DSH percentage based on the Federal fiscal year.

In accordance with section 951 of Pub. L. 108-173, we are proposing to change the process that we use to make Medicare data used in the DSH calculation available to hospitals. Currently, as stated above, CMS calculates the Medicare fraction for each section 1886(d) hospital using data from the MedPAR LDS (as established in a notice published in the August 18, 2000 **Federal Register** (65 FR 50548)). The MedPAR LDS contains a summary of all services furnished to a Medicare beneficiary, from the time of admission through discharge, for a stay in an inpatient hospital or skilled nursing facility, or both; SSI eligibility information; and enrollment data on Medicare beneficiaries. The MedPAR LDS is protected by the Privacy Act of 1974 (5 U.S.C. 552a) and the Privacy Rule of the Health Insurance Portability and Accountability Act of 1996 (Pub. L. 104-191). The Privacy Act allows us to disclose information without an individual's consent if the information is to be used for a purpose that is compatible with the purpose(s) for which the information was collected. Any such compatible use of data is known as a "routine use." In order to obtain this privacy-protected data, the hospital must qualify under the routine use that was described in the August 18, 2000 **Federal Register**. Currently, a hospital qualifies under the routine use if it has an appeal properly pending before the Provider Reimbursement Review Board (PRRB) or before an intermediary on the issue of whether it is entitled to DSH payments, or the amount of such payments. Once determined eligible to receive the data under the routine use, the hospital is then required to sign a data use agreement with CMS to ensure that the data are appropriately used and protected, and pay the requisite fee.

Beginning with cost reporting periods that include December 8, 2004 (within one year of the date of enactment of Pub. L. 108-173), we are proposing to furnish MedPAR LDS data for a hospital's patients eligible for both SSI and Medicare at the hospital's request, regardless of whether there is a properly pending appeal relating to DSH payments. We are proposing to make the information available for either the Federal fiscal year or, if the hospital's fiscal year differs from the Federal fiscal year, for the months included in the two Federal fiscal years that encompass the

hospital's cost reporting period. Under our proposal, the hospital could use these data to calculate and verify its Medicare fraction, and to decide whether it prefers to have the fraction determined on the basis of its fiscal year rather than a Federal fiscal year. The data set made available to hospitals would be the same data set CMS uses to calculate the Medicare fractions for the Federal fiscal year.

Because we interpret section 951 to require the Secretary to arrange to furnish these data, we do not believe that it will continue to be appropriate to charge hospitals to access the data. These proposed changes would require CMS to modify the current routine use for the MedPAR LDS to reflect changes in the data provided and the circumstances under which they are made available to hospitals. In a future **Federal Register** document, we will publish the details of any necessary modifications to the current routine use to implement section 951 of Pub. L. 108-173. We welcome comments on all aspects of these proposed changes.

The numerator of the Medicaid fraction includes hospital inpatient days that are furnished to patients who, for those days, were eligible for Medicaid but were not entitled to benefits under Medicare Part A. Under the regulation at § 412.106(b)(4)(iii), hospitals are responsible for proving Medicaid eligibility for each Medicaid patient day and verifying with the State that patients were eligible for Medicaid on the claimed days. The number of Medicaid, non-Medicare days is divided by the hospital's total number of inpatient days in the same period. Total inpatient days are reported on the Medicare cost report. (This number is also available in the hospital's own records.)

Much of the data used to calculate the Medicaid fraction of the DSH patient percentage are available to hospitals from their own records or from the States. We recognize that Medicaid State plans are only permitted to use and disclose information concerning applicants and recipients for "purposes directly connected with the administration of the [State] plan" under section 1902(a)(7) of the Act. Regulations at 42 CFR 431.302 define these purposes to include establishing eligibility (§ 431.302(a)) and determining the amount of medical assistance (§ 431.302(b)). Thus, State plans are permitted under the currently applicable statutory and regulatory provisions governing the disclosure of individually identifiable data on Medicaid applicants and recipients to provide hospitals the data needed to

meet their obligation under § 412.106(b)(4)(iii) in the context of either an "eligibility inquiry" with the State plan or in order to assist the hospital, and thus the State plan, in determining the amount of medical assistance.

In the process of developing a plan for implementing section 951 with respect to the data necessary to calculate the Medicaid fraction, we asked our regional offices to report on the availability of this information to hospitals and on any problems that hospitals face in obtaining the information that they need. The information we received suggested that, in the vast majority of cases, there are established procedures for hospitals or their authorized representatives to obtain the information needed for hospitals to meet their obligation under § 412.106(b)(4)(iii) and to calculate their Medicaid fraction. There is no uniform national method for hospitals to verify Medicaid eligibility for a specific patient on a specific day. For instance, some States, such as Arizona, have secure online systems that providers may use to check eligibility information. However, in most States, providers send a list of patients to the State Medicaid office for verification. Other States, such as Hawaii, employ a third party private company to maintain the Medicaid database and run eligibility matches for providers. The information that providers submit to State plans (or third party contractors) differs among States as well. Most States require the patient's name, date of birth, gender, social security number, Medicaid identification, and admission and discharge dates. States or the third parties may respond with either "Yes/No" or with more detailed Medicaid enrollment and eligibility information such as whether or not the patient is a dual-eligible, whether the patient is enrolled in a fee-for-service or HMO plan, and under which State assistance category the individual qualified for Medicaid.<sup>4</sup>

We note that we have been made aware of at least one instance in which a State is concerned about providing hospitals with the requisite eligibility data. We understand that the basis for the State's objections is section 1902(a)(7) of the Act. The State is concerned that section 1902(a)(7) of the Act prohibits the State from providing eligibility data for any purpose other than a purpose related to State plan

<sup>4</sup> Bear in mind that States and hospitals should, in keeping with the HIPAA Privacy Rule, limit the data exchanged in the context of these inquiries and responses to the minimum necessary to accomplish the task.

administration. However, as described above, we believe that States are permitted to verify Medicaid eligibility for hospitals as a purpose directly related to State plan administration under § 431.302.

In addition, we believe it is reasonable to continue to place the burden of furnishing the data adequate to prove eligibility for each Medicaid patient day claimed for DSH percentage calculation purposes on hospitals because, since they have provided inpatient care to these patients for which they billed the relevant payors, including the State Medicaid plan, they will necessarily already be in possession of much of this information. We continue to believe hospitals are best situated to provide and verify Medicaid eligibility information. Although we believe the mechanisms are currently in place to enable hospitals to obtain the data necessary to calculate their Medicaid fraction of the DSH patient percentage, there is currently no mandatory requirement imposed upon State Medicaid agencies to verify eligibility for hospitals. At this point, we believe there is no need to modify the Medicaid State plan regulations to require that State plans verify Medicaid eligibility for hospitals. However, should we find that States are not voluntarily providing or verifying Medicaid eligibility information for hospitals, we will consider amending the State plan regulations to add a requirement that State plans provide certain eligibility information to hospitals.

#### H. Geographic Reclassifications (§§ 412.103 and 412.230)

(If you choose to comment on issues in this section, please include the caption "Geographic Reclassifications" at the beginning of your comment.)

##### 1. Background

With the creation of the MGCRB, beginning in FY 1991, under section 1886(d)(10) of the Act, hospitals could request reclassification from one geographic location to another for the purpose of using the other area's standardized amount for inpatient operating costs or the wage index value, or both (September 6, 1990 interim final rule with comment period (55 FR 36754), June 4, 1991 final rule with comment period (56 FR 25458), and June 4, 1992 proposed rule (57 FR 23631)). As a result of legislative changes under section 402(b) of Pub. L. 108-7, Pub. L. 108-89, and section 401 of Pub. L. 108-173, the standardized amount reclassification criterion for large urban and other areas is no longer

necessary or appropriate and has been removed from our reclassification policy (69 FR 49103). We implemented this provision in the FY 2005 IPPS final rule (69 FR 49103). As a result, hospitals can request reclassification for the purposes of the wage index only and not the standardized amount. Implementing regulations in Subpart L of Part 412 (§§ 412.230 et seq.) set forth criteria and conditions for reclassifications for purposes of the wage index from rural to urban, rural to rural, or from an urban area to another urban area, with special rules for SCBs and rural referral centers.

Under section 1886(d)(8)(E) of the Act, an urban hospital may file an application to be treated as being located in a rural area if certain conditions are met. The regulations implementing this provision are located under § 412.103.

Effective with reclassifications for FY 2003, section 1886(d)(10)(D)(vi)(II) of the Act provides that the MGCRB must use the average of the 3 years of hourly wage data from the most recently published data for the hospital when evaluating a hospital's request for reclassification. The regulations at § 412.230(d)(2)(ii) stipulate that the wage data are taken from the CMS hospital wage survey used to construct the wage index in effect for prospective payment purposes. To evaluate applications for wage index reclassifications for FY 2006, the MGCRB used the 3-year average hourly wages published in Table 2 of the August 11, 2004 IPPS final rule (69 FR 49295). These average hourly wages are taken from data used to calculate the wage indexes for FY 2003, FY 2004, and FY 2005, based on cost reporting periods beginning during FY 1999, FY 2000, and FY 2001, respectively.

##### 2. Multicampus Hospitals (§ 412.230)

As discussed in section III.B. of this preamble, on June 6, 2003, the OMB announced the new CBSAs, comprised of Metropolitan Statistical Areas (MSAs) and Micropolitan Statistical Areas, based on Census 2000 data. Effective October 1, 2004, for the IPPS, we implemented new labor market areas based on the CBSA definitions of MSAs. In some cases, the new CBSAs resulted in previously existing MSAs being divided into two or more separate labor market areas. In the FY 2005 IPPS final rule (69 FR 48916), we acknowledged that the implementation of the new MSAs would have a considerable impact on hospitals. Therefore, we made every effort to implement transitional provisions that would mitigate the negative effects of the new labor market areas on hospitals that

request reclassification to another area for purposes of the wage index and on all hospitals.

Subsequent to the publication of the FY 2005 IPPS final rule, we became aware of a situation in which, as a result of the new labor market areas, a multicampus hospital previously located in a single MSA is now located in more than one CBSA. Under our current policy, a multicampus hospital with campuses located in the same labor market area receives a single wage index. However, if the campuses are located in more than one labor market area, payment for each discharge is determined using the wage index value for the MSA (or metropolitan division, where applicable) in which the campus of the hospital is located. In addition, the current provision set forth in section 2779F of the Medicare State Operations Manual provides that, in the case of a merger of hospitals, if the merged facilities operate as a single institution, the institution must submit a single cost report, which necessitates a single provider identification number. This provision does not differentiate between merged facilities in a single wage index area or in multiple wage index areas. As a result, the wage index data for the merged facility is reported for the entire entity on a single cost report.

The current criteria for a hospital being reclassified to another wage area by the MGCRB do not address the circumstances under which a single campus of a multicampus hospital may seek reclassification. That is, a hospital must provide data from the CMS hospital wage survey for the average hourly wage comparison that is used to support a request for reclassification. However, because a multicampus hospital is required to report data for the entire entity on a single cost report, there is no wage survey data for the individual hospital campus that can be used in a reclassification application. In an effort to remedy this situation, for FY 2007 and subsequent year reclassifications, we are proposing to allow a campus of a multicampus hospital system that wishes to seek geographic reclassification to another labor market area to report campus-specific wage data using a supplemental Form S-3 (CMS' manual version of Worksheet S-3) for purposes of the wage data comparison. These data would then constitute the appropriate wage data under § 412.232(d)(2) for purposes of comparing the hospital's wages to the wages of hospitals in the area to which it seeks reclassification as well as the area in which it is located. Before the data could be used in a reclassification application, the

hospital's fiscal intermediary would have to review the allocation of the entire hospital's wage data among the individual campuses.

For FY 2006 reclassification applications, we are proposing to allow a campus of a multicampus hospital system to use the average hourly wage data submitted for the entire multicampus hospital system as its appropriate wage data under § 412.232(d)(2). We are establishing this special rule for FY 2006 reclassifications because the deadline for submitting an application to the MGCRB was September 1, 2004, and there no longer is an opportunity to provide a Supplemental Form S-3 that allocates the wage data by individual hospital campus. This special rule will be applied only to an individual campus of a multicampus hospital system that made an application for reclassification for FY 2006 and that otherwise meets all of the reclassification criteria. We do not believe that the special rule is necessary for reclassifications for FY 2007 because the deadline for making those applications has not yet passed and a hospital seeking reclassification will be able to provide the Supplemental Form S-3 that allocates the wage data by individual hospital campus. We are proposing to apply these new criteria to geographic reclassification applications that were received by September 1, 2004, and that will take effect for FY 2006.

We are proposing to revise the regulations at § 412.230(d)(2) by redesignating paragraph (d)(2)(iii) as paragraph (d)(2)(v) and adding new paragraph (d)(2)(iii) and (d)(2)(iv) to incorporate the proposed new criteria for multicampus hospitals.

### 3. Urban Group Hospital Reclassifications

In FY 2005 IPPS final rule (69 FR 49104), we set forth, under § 412.234(a)(3)(ii), revised criteria for urban hospitals to be reclassified as a group. After the publication of the final rule, we became aware that portions of our policy discussion with respect to the implementing decision were inadvertently omitted. This policy was corrected in the October 7, 2004, correction to the final rule (69 FR 60248). The correction specified that "hospitals located in counties that are in the same Combined Statistical Area (under the MSA definitions announced by the OMB on June 6, 2003); or in the same Consolidated Metropolitan Statistical Area (CMSA) (under the standards published by the OMB on March 30, 1990) as the urban area to which they seek redesignation qualify as

meeting the proximity requirement for reclassification to the urban area to which they seek redesignation."

In making the determination to revise our urban group reclassification policy, we took into consideration the magnitude of the changes that would have resulted from our adoption of the new labor market areas. The resulting policy was intended to preserve the reclassification opportunities for urban county groups; in other words, an eligible urban county group would have to meet either the CSA or CMSA criteria, but not both to be eligible for consideration.

As a result of adopting the new labor market area definitions, we reexamined the appropriateness of the FY 2005 changes with emphasis on determining whether including "\*" or in the same Consolidated Metropolitan Statistical Area (CMSA) (under the standards published by the OMB on March 30, 1990)" as a qualifying criterion, is necessary or consistent with our plans to fully implement the new labor market area definitions.

Based on our experiences now that the new labor market areas are in effect and since we revised the urban county group regulations, we no longer think it is necessary to retain use of a 1990-based standard as a criterion for determining whether an urban county group is eligible for reclassification. We believe it is reasonable to use the area definitions that are based on the most recent statistics; in other words, the CSA standard. Therefore, we are proposing to delete § 412.234(a)(3)(ii) to remove reference to the CMSA eligibility criterion. Beginning with FY 2006, we are proposing to require that hospitals must be located in counties that are in the same Combined Statistical Area (under the MSA definitions announced by the OMB on June 6, 2003) as the urban area to which they seek redesignation to qualify as meeting the proximity requirement for reclassification to the urban area to which they seek redesignation. We believe that this proposed change would improve the overall consistency of our policies by using a single labor market area definition for all aspects of the wage index and reclassification.

### 4. Clarification of Goldsmith Modification Criterion for Urban Hospitals Seeking Reclassification as Rural

Under section 1886(d)(8)(E) of the Act, certain urban hospitals may file an application for reclassification as rural if the hospital meets certain criteria. One of these criteria is that the hospital is located in a rural census tract of a

CBSA, as determined under the most recent version of the Goldsmith Modification as determined by the Office of Rural Health Policy. This provision is implemented in our regulations at § 412.103(a)(1).

The original Goldsmith Modification was developed using data from the 1980 census. In order to more accurately reflect current demographic and geographic characteristics of the Nation, the Office of Rural Health Policy, in partnership with the Department of Agriculture's Economic Research Service and the University of Washington, has developed the Rural-Urban Commuting Area codes (RUCAs) (69 FR 47518 through 47529, August 5, 2004). Rather than being limited to large area metropolitan counties (LAMCs), RUCAs use urbanization, population density, and daily commuting data to categorize every census tract in the country. RUCAs are the updated version of the Goldsmith Modification and are used to identify rural census tracts in all metropolitan counties.

We are proposing to update the Medicare regulations at § 412.103(a)(1) to incorporate this change in the identification of rural census tracts. We are also proposing to update the website and the agency location at which the RUCA codes are accessible.

### 5. Cross-Reference Changes

In the FY 2005 IPPS final rule, in conjunction with changes made by various sections of Pub. L. 108-173 and changes in the OMB standards for defining labor market areas, we established a new § 412.64 governing rules for establishing Federal rates for inpatient operating costs for FY 2005 and subsequent years. In this new section, we included definitions of "urban" and "rural" for the purpose of determining the geographic location or classification of hospitals under the IPPS. These definitions were previous located in § 412.63(b), applicable to FYs 1985 through 2004, and in § 412.62(f), applicable to FY 1984. References to the definitions under § 412.62(f) and § 412.63(b), appear throughout 42 CFR Chapter IV. However, when we finalized the provisions of § 412.64, we inadvertently omitted updating some of these cross-references to reflect the change in the location of the two definitions for FYs 2005 and subsequent years. We are proposing to change the cross-references to the definitions of "urban" and "rural" to reflect their current locations in Subpart D of Part 412, as applicable.

### I. Payment for Direct Graduate Medical Education (§ 413.79)

(If you choose to comment on issues in this section, please include the caption "Graduate Medical Education" at the beginning of your comment.)

#### 1. Background

Section 1886(h) of the Act, as added by section 9202 of the Consolidated Omnibus Budget Reconciliation Act (COBRA) of 1985 (Pub. L. 99-272) and implemented in regulations at existing §§ 413.75 through 413.83, establishes a methodology for determining payments to hospitals for the costs of approved graduate medical education (GME) programs. Section 1886(h)(2) of the Act, as added by COBRA, sets forth a payment methodology for the determination of a hospital-specific, base-period per resident amount (PRA) that is calculated by dividing a hospital's allowable costs of GME for a base period by its number of residents in the base period. The base period is, for most hospitals, the hospital's cost reporting period beginning in FY 1984 (that is, the period of beginning between October 1, 1983, through September 30, 1984). Medicare direct GME payments are calculated by multiplying the PRA times the weighted number of full-time equivalent (FTE) residents working in all areas of the hospital (and nonhospital sites, when applicable), and the hospital's Medicare share of total inpatient days. In addition, as specified in section 1886(h)(2)(D)(ii) of the Act, for cost reporting periods beginning on or after October 1, 1993, through September 30, 1995, each hospital-specific PRA for the previous cost reporting period is not updated for inflation for any FTE residents who are not either a primary care or an obstetrics and gynecology resident. As a result, hospitals that train primary care and obstetrics and gynecology residents, as well as nonprimary care residents in FY 1994 or FY 1995, have two separate PRAs: One for primary care and obstetrics and gynecology residents and one for nonprimary care residents.

Pub. L. 106-113 amended section 1886(h)(2) of the Act to establish a methodology for the use of a national average PRA in computing direct GME payments for cost reporting periods beginning on or after October 1, 2000, and on or before September 30, 2005. Pub. L. 106-113 established a "floor" for hospital-specific PRAs equal to 70 percent of the locality-adjusted national average PRA. In addition, the BBRA established a "ceiling" that limited the annual adjustment to a hospital-specific PRA if the PRA exceeded 140 percent of

the locality-adjusted national average PRA. Section 511 of the BIPA (Pub. L. 106-554) increased the floor established by the BBRA to equal 85 percent of the locality-adjusted national average PRA. Existing regulations at § 413.77(d)(2)(iii) specify that, for purposes of calculating direct GME payments, each hospital-specific PRA is compared to the floor and the ceiling to determine whether a hospital-specific PRA should be revised.

Section 1886(h)(4)(F) of the Act established limits on the number of allopathic and osteopathic residents that hospitals may count for purposes of calculating direct GME payments. For most hospitals, the limits were the number of allopathic and osteopathic FTE residents training in the hospital's most recent cost reporting period ending on or before December 31, 1996.

#### 2. Direct GME Initial Residency Period (IRP) § 413.79(a)(10)

##### a. Background

As we have generally described above, the amount of direct GME payment to a hospital is based in part on the number of FTE residents the hospital is allowed to count for direct GME purposes during a year. The number of FTE residents, and thus the amount of direct GME payment to a hospital, is directly affected by CMS policy on how "initial residency periods" are determined for residents. Section 1886(h)(4)(C)(ii) of the Act, implemented at § 413.79(b)(1), provides that while a resident is in the "initial residency period" (IRP), the resident is weighted at 1.00. Section 1886(h)(4)(C)(iii) of the Act, implemented at § 413.79(b)(2), requires that if a resident is not in the resident's IRP, the resident is weighted at .50 FTE resident.

Section 1886(h)(5)(F) of the Act defines "initial residency period" as the "period of board eligibility," and, subject to specific exceptions, limits the initial residency period to an "aggregate period of formal training" of no more than 5 years for any individual. Section 1886(h)(5)(G) of the Act generally defines "period of board eligibility" for a resident as "the minimum number of years of formal training necessary to satisfy the requirements for initial board eligibility in the particular specialty for which the resident is training." Existing § 413.79(a) of the regulations generally defines "initial residency period" as the "minimum number of years required for board eligibility." Existing § 413.79(a)(5) provides that "time spent in residency programs that do not lead to certification in a specialty or subspecialty, but that otherwise meet

the definition of approved programs \* \* \* is counted toward the initial residency period limitation." Section 1886(h)(5)(F) of the Act further provides that "the initial residency period shall be determined, with respect to a resident, as of the time the resident enters the residency training program."

The IRP is determined as of the time the resident enters the "initial" or first residency training program and is based on the period of board eligibility associated with that medical specialty. Thus, these provisions limit the amount of FTE resident time that may be counted for a resident who, after entering a training program in one specialty, switches to a program in a specialty with a longer period of board eligibility or completes training in one specialty training program and then continues training in a subspecialty (for example, cardiology and gastroenterology are subspecialties of internal medicine).

##### b. Direct GME Initial Residency Period Limitation: Simultaneous Match

We understand that there are numerous programs, including anesthesiology, dermatology, psychiatry, and radiology, that require a year of generalized clinical training to be used as a prerequisite for the subsequent training in the particular specialty. For example, in order to become board eligible in anesthesiology, a resident must first complete a generalized training year and then complete 3 years of training in anesthesiology. This first year of generalized residency training is commonly known as the "clinical base year." Often, the clinical base-year requirement is fulfilled by completing either a preliminary year in internal medicine (although the preliminary year can also be in other specialties such as general surgery or family practice), or a transitional year program (which is not associated with any particular medical specialty).

In many cases, during the final year of medical school, medical students apply for training in specialty residency training programs. Typically, a medical student who wants to train to become a specialist is "matched" to both the clinical base year program and the specialty residency training program at the same time. For example, the medical student who wants to become an anesthesiologist will apply and "match" simultaneously for a clinical base year in an internal medicine program for year 1 and for an anesthesiology training program beginning in year 2.

Prior to October 1, 2004, CMS' policy was that the IRP is determined for a

resident based on the program in which he or she participates in the resident's first year of training, without regard to the specialty in which the resident ultimately seeks board certification. Therefore, for example, a resident who chooses to fulfill the clinical base year requirement for an anesthesiology program with a preliminary year in an internal medicine program will be "labeled" with the IRP associated with internal medicine, that is, 3 years (3 years of training are required to become board eligible in internal medicine), even though the resident may seek board certification in anesthesiology, which requires a minimum of 4 years of training to become board eligible. As a result, this resident would have an IRP of 3 years and, therefore, be weighted at 0.5 FTE in his or her fourth year of anesthesiology training for purposes of direct GME payment.

Effective with cost reporting periods beginning on or after October 1, 2004, to address programs that require a clinical base year, we revised our policy in the FY 2005 IPPS final rule (69 FR 49170 through 49174) concerning the IRP. Specifically, under the revised policy, if a hospital can document that a particular resident matches simultaneously for a first year of training in a clinical base year in one medical specialty, and for additional year(s) of training in a different specialty program, the resident's IRP will be based on the period of board eligibility associated with the specialty program in which the resident matches for the subsequent year(s) of training and not on the period of board eligibility associated with the clinical base year program. This change in policy is codified at § 413.79(a)(10) of the regulations.

This policy applies regardless of whether the resident completes the first year of training in a separately accredited transitional year program or in a preliminary (or first) year in another residency training program such as internal medicine.

In addition, because programs that require a clinical base year are nonprimary care specialties, we specified in § 413.79(a)(10) that the nonprimary care PRA would apply for the entire duration of the initial residency period. By treating the first year as part of a nonprimary care specialty program, the hospital will be paid at the lower nonprimary care PRA rather than the higher primary care PRA, even if the residents are training in a primary care program during the clinical base year.

In the FY 2005 IPPS final rule (69 FR 49170 and 49171), we also defined

"residency match" to mean, for purposes of direct GME, a national process by which applicants to approved medical residency programs are paired with programs on the basis of preferences expressed by both the applicants and the program directors.

These policy changes, which were effective October 1, 2004, are only applicable to residents that simultaneously match in both a clinical base year program and a longer specialty residency program. We have become aware of situations where residents, upon completion of medical school, only match for a program beginning in the second residency year in an advanced specialty training program but fail to match for a clinical base year of training. Residents that match into an advanced program but fail to match into a clinical base year program may independently pursue unfilled residency positions in preliminary year programs after the match process is complete. However, because these residents do not "simultaneously match" into both a preliminary year and an advanced program, currently their IRP cannot be determined based on the period of board eligibility associated with the advanced program, as specified in § 413.79(a)(10). Rather, the IRP for such residents would continue to be determined based on the specialty associated with the preliminary year program. For example, a student in the final year of medical school may match into a radiology program that begins in the second residency year, but not match with any clinical base year program. Under our current policy, if subsequent to conclusion of the match process, this resident secured a preliminary year position in an internal medicine program, the resident would not have met the requirements at § 413.79(a)(10) for a simultaneous match and the IRP for this resident would be based on the length of time required to complete an internal medicine program (3 years) rather than the length of the radiology program (4 years).

The intent of the "simultaneous match" provision of § 413.79(a)(10) is to identify in a verifiable manner the specialty associated with the program in which the resident will initially train and seek board certification. It is also the intent of § 413.79(a)(10) that a resident's IRP would not change if the resident, after initially entering a training program in one specialty, changes programs to train in another medical specialty. The "simultaneous match" provisions of § 413.79(a)(10) allow CMS to both identify the specialty associated with the program in which the resident is ultimately expected to

train and seek board certification and prevent inappropriate revision of the IRP in cases where a resident changes specialties subsequent to beginning residency training. However, we note that when a medical student in his or her final year of medical school matches into an advanced program (for example, anesthesiology) for the second program year, but fails to match in a clinical base year, and obtains a preliminary year position outside the match process, we can still identify the specialty associated with the program in which the resident is ultimately expected to train and seek board certification and prevent inappropriate changes to the IRP if the resident changes specialties subsequent to beginning residency training.

Therefore, we are proposing to revise § 413.79(a)(10) to state that, when a hospital can document that a resident matched in an advanced residency training program beginning in the second residency year prior to commencement of any residency training, the resident's IRP will be determined based on the period of board eligibility for the specialty associated with the advanced program, without regard to the fact that the resident had not matched for a clinical base year training program.

We note that this proposed policy change would not result in a policy to determine the IRP for all residents who must complete a clinical base year during the second residency training year based on the specialty associated with that second residency training year. That is, we are *not* proposing that, for any resident whose first year of training is completed in a program that provides a general clinical base year as required by the ACGME for certain specialties, an IRP should be assigned in the second year based on the specialty the resident enters in the second year of training. As we stated in the FY 2005 IPPS final rule (69 FR 49172), a "second year" policy would not allow CMS to distinguish between those residents who, in their second year of training, match in a specialty program prior to their first year of training, those residents who participated in a clinical base year in a specialty and then continued training in that specialty, and those residents who simply switched specialties in their second year. Rather, we are proposing that, if a hospital can document that a particular resident had matched in an advanced specialty program that requires completion of a clinical base year prior to the resident's first year of training, the IRP would not be determined based on the period of board eligibility for the specialty associated with the clinical base year

program, for purposes of direct GME payment. Rather, under those circumstances, the IRP would be determined based upon the period of board eligibility associated with the specialty program in which the resident has matched and is expected to begin training in the second program year.

### 3. New Teaching Hospitals' Participation in Medicare GME Affiliated Groups (§ 413.79(e)(1))

In the August 29, 1997 final rule (62 FR 46005 through 46006) and the May 12, 1998 final rule (63 FR 26331 through 26336), we established rules for applying the FTE resident limit (or "FTE cap") for calculating Medicare direct GME and IME payments to hospitals. We added regulations, currently at § 413.79(e), to provide for an adjustment to the FTE cap for certain hospitals that begin training residents in new medical residency training programs. For purposes of this provision, a new program is one that receives initial accreditation or begins training residents on or after January 1, 1995. Although we refer only to the direct GME provision throughout the remainder of this discussion, a similar cap adjustment is made under § 412.105(f) for IME purposes. Therefore, this proposal applies to both IME and direct GME.

A new teaching hospital is one that had no allopathic or osteopathic residents in its most recent cost reporting period ending on or before December 31, 1996. Under § 413.79(e)(1), if a new teaching hospital establishes one or more new medical residency training programs, the hospital's unweighted FTE caps for both direct GME and IME will be based on the product of the highest number of FTE residents in any program year in the third year of the hospital's first new program and the number of years in which residents are expected to complete the program(s), based on the minimum number of years of training that are accredited for the type of program(s).

The regulations at § 413.79(e)(1)(iv) specify that hospitals in urban areas that qualify for an FTE cap adjustment for residents in newly approved programs under § 413.79(e)(1) are not permitted to be part of a Medicare GME affiliated group for purposes of establishing an aggregate FTE cap. (A Medicare GME affiliated group is defined in the regulations at § 413.75(b).) We established this policy because of our concern that hospitals with existing medical residency training programs could otherwise, with the cooperation of new teaching hospitals, circumvent the

statutory FTE resident caps by establishing new medical residency programs in the new teaching hospitals solely for the purpose of affiliating with the new teaching hospitals to receive an upward adjustment to their FTE cap under an affiliation agreement. This would effectively allow existing teaching hospitals to achieve an increase in their FTE resident caps beyond the number allowed by their statutory caps.

In contrast, hospitals in rural areas that qualify for an adjustment under § 413.79(e)(1)(v) are allowed to enter into a Medicare GME affiliation. Although we recognize that rural hospitals would not be immune from the kind of "gaming" arrangement described above, we allow new rural teaching hospitals that begin training residents in new programs, and thereby increase their FTE cap, to affiliate because we understand that rural hospitals may not have a sufficient volume of patient care utilization at the rural hospital site to be able to support a training program that meets accreditation standards. Securing sufficient patient volumes to meet accreditation requirements may necessitate rotations of the residents to another hospital. Accordingly, the regulations allow new teaching hospitals in rural areas to enter into Medicare GME affiliation agreements. However, an affiliation is only permitted if the rural hospital provides training for at least one-third of the FTE residents participating in all of the joint programs of the affiliated hospitals because, as we stated in the May 12, 1998 *Federal Register* (63 FR 26333), we believe that requiring at least one-third of the training to take place in the rural area allows operation of programs that focus on, but are not exclusively limited to, training in rural areas.

Through comment and feedback from industry trade groups and hospitals, we understand that, while these rules were meant to prevent gaming on the part of existing teaching hospitals, they could also preclude affiliations that clearly are designed to facilitate additional training at the new teaching hospital.

For example, Hospital A had no allopathic or osteopathic residents in its most recent cost reporting period ending on or before December 31, 1996. As such, Hospital A's caps for direct GME and IME are both zero. Hospital A and Hospital B enter into a Medicare GME affiliation for the academic year beginning on July 1, 2003, and ending on June 30, 2004. On July 1, 2003, Hospital A begins training residents from an existing family medicine program located at Hospital B. This

rotation will result in 5 FTE residents training at Hospital A. Through the affiliation agreement, Hospital A receives a positive adjustment of 5 FTE's for both its direct GME and IME caps. Hospital B receives a corresponding negative adjustment of 5 FTEs under the affiliation agreement. Hospital A's Board of Directors is interested in starting a new residency program in Internal Medicine that would begin training residents at Hospital A on July 1, 2005. If Hospital A establishes the new program, under existing Medicare regulations, Hospital A will have its direct GME and IME caps (which were both previously established at zero) permanently adjusted to reflect the additional residents training in the newly approved program in accordance with § 413.79(e)(1). However, under existing regulations, Hospital A may no longer enter into an affiliation with Hospital B after it receives the adjustment to its FTE caps under § 413.79(e)(1).

We are proposing to revise § 413.79(e)(1)(iv) so that new urban teaching hospitals that qualify for an adjustment under § 413.79(e)(1) may enter into a Medicare GME affiliation agreement under certain circumstances. Specifically, a new urban teaching hospital that qualifies for an adjustment to its FTE caps for a newly approved program may enter into a Medicare GME affiliation agreement, but only if the resulting adjustments to its direct GME and IME caps are "positive adjustments." "Positive adjustment" means, for the purpose of this policy, that there is an *increase* in the new teaching hospital's caps as a result of the affiliation agreement. At no time would the caps of a hospital located in an urban area that qualifies for adjustment to its FTE caps for a new program under § 413.79(e)(1), be allowed to *decrease* as a result of a Medicare GME affiliation agreement. We believe this proposed policy change would allow new urban teaching hospitals flexibility to start new teaching programs without jeopardizing their ability to count additional FTE residents training at the hospital under an affiliation agreement.

We remain concerned that hospitals with existing medical residency training programs could cooperate with a new teaching hospital to circumvent the statutory FTE caps by establishing new programs at the new teaching hospital, and, through a Medicare GME affiliation agreement, moving most or all of the new residency program to its own hospital, thereby receiving an upward adjustment to its FTE caps. For this reason, we are proposing to revise

§ 413.79(e)(1)(iv) of the regulations to provide that a hospital that qualifies for an adjustment to its caps under § 413.79(e)(1) would not be permitted to enter into an affiliation agreement that would produce a negative adjustment to its FTE resident cap.

Continuing the example shown above, under the proposed change in policy, Hospital A and Hospital B would be able to continue the Medicare GME affiliation agreement under which Hospital A trained residents from Hospital B's family practice program because Hospital A would receive an increase in its direct GME or IME caps under an affiliation after qualifying for a new program adjustment under § 413.79(e)(1). However, Hospital B would not be able to receive an increase in its caps as a result of a Medicare GME affiliation agreement with Hospital A.

Thus, we are proposing the above policy change to provide some flexibility to hospitals that are currently prohibited from entering into a Medicare GME affiliation agreement, while continuing to protect the statutory FTE resident caps from being undermined by gaming. We solicit comments on the proposed change.

#### 4. GME FTE Cap Adjustment for Rural Hospitals (§ 413.79(c) and (k))

As stated earlier under section V.I.1. of this preamble, Medicare makes both direct and indirect GME payments to hospitals for the training of residents. Direct GME payments are made in accordance with section 1886(h) of the Act, based generally on the hospital-specific PRA, the number of FTE residents a hospital trains, and the hospital's percentage of Medicare inpatient utilization. Indirect GME payments (referred to as IME) are made in accordance with section 1886(d)(5)(B) of the Act as an adjustment to DRG payment and are based generally on the ratio of the hospital's FTE residents to the number of hospital beds. It is well-established that the calculation of both direct GME and IME payments is affected by the number of FTE residents a hospital is allowed to count; generally, the greater the number of FTE residents a hospital counts, the greater the amount of Medicare direct GME and IME payments the hospital will receive.

Effective October 1, 1997, Congress instituted caps on the number of allopathic and osteopathic residents a hospital is allowed to count for direct GME and IME purposes at sections 1886(h)(4)(F) (direct GME) and 1886(d)(5)(B)(v) (IME) of the Act. These caps were instituted in an attempt to end the implicit incentive for hospitals to increase the number of FTE residents.

Dental and podiatric residents were not included in these statutorily mandated caps.

Congress provided certain exceptions for rural hospitals when establishing the 1996 caps "with the intent of encouraging physician training and practice in rural areas" (65 FR 47032). For example, the statute states at section 1886(h)(4)(H)(i) that, in promulgating rules regarding application of the FTE caps to training programs established after January 1, 1995, "the Secretary shall give special consideration to facilities that meet the needs of underserved rural areas." Accordingly, in implementing this provision, we provided in the regulations under § 413.86(g)(6)(i)(C) (now § 413.79(e)(1)(iii)) that "except for rural hospitals, the cap will not be adjusted for new programs established more than 3 years after the first program begins training residents. In other words, only hospitals located in rural areas (that is, areas that are not designated as an MSA), receive adjustments to their unweighted FTE caps to reflect residents in new medical residency training programs past the third year after the first residency program began training in that hospital (62 FR 46006).

Section 413.79(e)(1) specifies the new program adjustment as the "product of the highest number of residents in any program year during the third year of the \* \* \* program's existence \* \* \* and the number of years in which residents are expected to complete the program based on the minimum accredited length for the type of program." The regulation applies only to new programs (as defined under § 413.79(1)) established by rural hospitals, not for expansion of previously existing programs. For example, if a rural hospital has an unweighted FTE cap for direct GME of 100 and begins training residents in a new 3-year residency program that has 10 residents in each of its first 3 program years (for a total of 30 residents in the entire program in the program's third year), the hospital's direct GME FTE cap of 100 would be permanently adjusted at the conclusion of the third program year by 30, and the hospital's new FTE cap would be 130. A similar adjustment would be made to the hospital's FTE cap for IME in accordance with the regulations at § 412.105(f)(1)(iv)(A). However, the rural hospital would not be able to receive adjustments to its FTE cap for any expansion of a preexisting program.

In 1999, Congress passed an additional provision under section 407 of Pub. L. 106-113 (BBRA) to promote physician training in rural areas.

Section 407 of the Pub. L. 106-113 amended the FTE caps provision at sections 1886(h)(4)(F) and 1886(d)(5)(B)(v) of the Act to provide that "effective for cost reporting periods beginning on or after April 1, 2000, [a rural hospital's FTE cap] is 130 percent of the unweighted FTE count \* \* \* for those residents for the most recent cost reporting period ending on or before December 31, 1996." In other words, the otherwise applicable FTE caps for rural hospitals were multiplied by 1.3 to encourage rural hospitals to expand preexisting residency programs. (As described above, even prior to the BBRA change, rural hospitals were able to receive FTE cap adjustments for new programs.) For example, a hospital that was rural as of April 1, 2000, and had a direct GME cap of 100 FTEs would receive a permanent cap adjustment of 30 FTEs (100 FTEs  $\times$  1.3 = 130 FTEs) and effective for cost reporting periods beginning on or after April 1, 2000, its FTE for direct GME would be 130. (A similar adjustment would be made to the FTE cap for IME for discharges occurring on or after April 1, 2000.)

We recently received questions regarding the application of the 130-percent FTE cap adjustment and the new program adjustment for rural hospitals in instances in which a rural teaching hospital is later redesignated as an urban hospital or reclassified back to being an urban hospital after having been classified as rural. We are aware of two circumstances when a rural hospital may subsequently be reclassified as urban. The first circumstance involves labor market area changes, and the second involves urban hospitals, after having been reclassified as rural through section 1886(d)(8)(E) of the Act, that elect to be considered urban again. In both situations, if the hospital in question was a teaching hospital, its FTE caps would have been subject to the 130 percent and new program FTE cap adjustments while it was designated or classified as rural. The issue is whether the adjusted caps would continue to apply after the hospital becomes urban or returns to being treated as urban. Below we first address hospitals that lost their status as urban hospitals due to new labor market areas. We then address hospitals that rescinded their section 1886(d)(8)(E) reclassifications. (We note that reclassification by the MGCRB under section 1886(d)(10) of the Act, as well as reclassifications under section 1886(d)(8)(B) of the Act, are effective only for purposes of the wage index and would not affect the hospital's IME or direct GME payments).

a. Formerly Rural Hospitals That Became Urban Due to the New CBSA Labor Market Areas

In the FY 2005 IPPS final rule, we adopted the new CBSA-based labor market areas announced by OMB on June 6, 2003, and these areas became effective October 1, 2004. As a result of these new labor market areas, a number of hospitals that previously were located outside of an MSA and therefore considered rural are now located in a CBSA that is designated as urban and considered urban.

We believe that previously rural hospitals that received adjustments due to establishing new medical training programs should not now be required to forego such adjustments simply because they have now been redesignated as urban. Such hospitals added and received accreditation for new medical training programs under the assumption that such programs would effect a permanent increase in their FTE caps. Indeed, we believe it would be nonsensical to view the fact that these hospitals are now urban as causing them to lose the adjustments that stemmed directly from the permissible and encouraged establishment of new medical training programs. Such hospitals cannot reach back into the past and alter whether they added the new programs or not. Nor would it be reasonable to prohibit them from counting FTE residents training in new programs that they worked to accredit. (We note that the hospitals would not be required to close the programs. Rather, if they were not permitted to retain the adjustments to their FTE caps they received as a result of having established new programs, they would no longer be permitted to count FTE residents that exceeded their original, preadjustment FTE caps for purposes of direct GME and IME payments. The effect might be that the hospital would have to close the program(s) as a result of decreased Medicare funding, but the hospital would be free to continue to operate the program(s).)

For these reasons, we believe the best reading of our regulation at § 413.79(e)(3), which states that if a hospital "is located in a rural area," it may adjust its FTE cap to reflect residents training in new programs, is that hospitals were permitted to receive a permanent adjustment to their FTE caps if, at the time of adding a new program, the hospitals were rural. A hospital's subsequent designation as urban or rural due to labor market area changes becomes irrelevant, because the central question is whether the hospital is rural at the time it adds the new

programs. Therefore, we are clarifying in this proposed rule our policy that hospitals that became urban in FY 2005 due to the new labor market areas would nevertheless be permitted to retain the adjustments they received for new programs as long as they were rural at the time they received them. (Once such hospitals receive a designation as "urban," they may no longer seek FTE cap adjustments relating to new training programs; they may only retain the adjustments they received for the new programs they added when they were rural.)

Similarly, we believe that rural hospitals that received the statutorily mandated 130 percent adjustment to their FTE caps would be disadvantaged if we were to rescind this adjustment due to new urban designation. Such hospitals expanded their already existing training programs under the assumption that these expansions would cause a permanent increase in their FTE caps. Many of these hospitals expanded their programs only once the BBRA became effective (in 2000). Thus, they have had only a few years to expand their programs and receive the cap adjustment mandated by statute. For these reasons, we believe it is permissible to read sections 1886(h)(4)(F)(i) and 1886(d)(5)(B)(v) of the Act as permitting a permanent adjustment to the FTE caps at the time a rural hospital adds residents to its already existing program(s). The language states that the total number of FTE residents with respect to a "hospital's approved medical residency training program in the fields of allopathic medicine and osteopathic medicine may not exceed the number (or, 130 percent of such number in the case of a hospital located in a rural area) of such full-time equivalent residents for the hospital's most recent cost reporting period ending on or before December 31, 1996." As with the addition of new programs, we interpret the language "130 percent of such number in the case of a hospital located in a rural area," as meaning only that the hospital was required to be rural at the time it received the 30-percent increase. Once the hospital received such increase, the increase became a permanent increase in the FTE cap and should not be rescinded based on subsequent designation as an urban hospital.

We believe our interpretations are consistent with legislative intent. Congress provided for these FTE cap adjustments for rural hospitals with the intent of encouraging physician training and practice in rural areas. If rural hospitals had believed that new CBSAs

would cause them to lose the adjustments, they would not have had the incentives Congress wished to increase the number of FTE residents training in their programs. These hospitals might have feared losing the adjustments as a result of new labor market areas, and therefore not carried out Congress' intent to expand their already existing residency training programs or add new residency training programs.

To provide an example of the how the above statutory interpretations would be applied, a hospital located in a rural area prior to October 1, 2004, with an unweighted direct GME FTE cap of 100 would have received a 30-percent increase in its FTE cap so that its adjusted cap was 130 FTEs. The rural hospital also could have received an adjustment for any new medical residency program. If this hospital, while rural, started a new 3-year residency program with 10 residents in each program year, its FTE cap would have been increased by an additional 30 FTEs to 160 FTEs (that is,  $100 \text{ FTEs} \times 1.3 + 30 \text{ FTEs} = 160 \text{ FTEs}$ ). Under our reading of the statute, if this hospital is now located in an urban area due to the new CBSAs, it would retain this cap of 160 FTEs.

We also believe that the statute should be interpreted as permitting urban hospitals with rural track training programs to retain the adjustment they received for such programs at § 413.79(k), even if the "rural" tracks as of October 1, 2004, are now located in urban areas due to the new OMB labor market areas. As explained in the FY 2001 IPPS final rule (66 FR 47033), we provided that an urban hospital that establishes a separately accredited medical residency training program in a rural area (that is, a rural track) may receive an adjustment to reflect the number of residents in that program (existing § 413.79(k)). Section 1886(h)(4)(H)(iv) of the Act states: "In the case of a hospital that is not located in a rural area but establishes separately accredited approved medical residency training programs (or rural tracks) in an (sic) rural area or has an accredited training program with an integrated rural track, the Secretary shall adjust the limitation under subparagraph (F) in an appropriate manner insofar as it applies to such programs in such rural areas in order to encourage the training of physicians in rural areas."

Again, we believe that the reading that best carries out Congressional intent is one that allows the adjustment for rural tracks to remain permanent as long as the rural track training programs continue, even if the once-rural tracks

are now urban due to new labor market area boundaries. Congress clearly intended to encourage the training of physicians in the rural tracks identified by the statute. However, if the FTE cap adjustments were merely temporary, and hospitals could not rely on retaining the adjustments relating to the rural training programs in which they invested, then Congress' wishes to encourage rural training programs might not have been realized. Hospitals would always need to speculate as to whether the FTE cap adjustments relating to the rural track programs they established would be lost each time new labor market areas were adopted (which normally occurs once every 10 years). Thus, we believe the statutory language should be interpreted as allowing an urban hospital to retain its FTE cap adjustment for rural track programs as long as the tracks were actually located in rural areas at the time the urban hospital received its adjustment. However, if the urban hospital wants to receive a cap adjustment for a new rural track residency program, the rural track must involve rural hospitals that are located in rural areas based on the most recent OMB labor market designations as specified in the FY 2005 IPPS final rule. We are proposing to add a new paragraph (k)(7) to § 413.79 to incorporate this proposal.

#### b. Section 1886(d)(8)(E) Hospitals

As stated above, a second situation exists where a hospital that is treated as rural returns to being urban under section 1886(d)(8)(E) of the Act (§ 412.103 of the regulations). Under this provision, an urban hospital may file an application to be treated as being located in a rural area. A hospital's reclassification as located in a rural area under this provision affects only payments under section 1886(d) of the Act. Accordingly, a hospital that is treated as rural under this provision can receive the FTE cap adjustments that any other rural hospital receives, but only to the FTE cap that applies for purposes of IME payments, which are made under section 1886(d) of the Act. The hospital could not receive adjustments to its direct GME FTE cap because payments for direct GME are made under section 1886(h) of the Act and the section 1886(d)(8)(E) reclassifications affect only the payments that are made under that section 1886(d) of the Act. Therefore, a hospital that reclassifies as rural under section 1886(d)(8)(E) of the Act may receive the 130-percent adjustment to its IME FTE cap and its IME FTE cap may be adjusted for any new programs, similar to hospitals that are actually

located in a rural location. A hospital treated as rural under section 1886(d)(8)(E) of the Act may subsequently withdraw its election and return to its urban status under the regulations at § 412.103. We are proposing that, effective with discharges occurring on or after October 1, 2005, a different policy should apply for hospitals that reclassify under section 1886(d)(8)(E) of the Act than the policy that applies to rural hospitals redesignated as urban due to changes in labor market areas, as discussed in section IV.F.3 of this preamble.

#### 5. Technical Changes: Cross References

- In the FY 2005 IPPS final rule (69 FR 49234), we redesignated the contents of § 413.86 as §§ 413.75 through 413.83. We also updated cross-references to § 413.86 that were located in various sections under 42 CFR Parts 400 through 499. We inadvertently did not capture all of the needed cross-reference changes. In this proposed rule, we are proposing to correct the additional cross-references in 42 CFR Parts 405, 412, 413, 415, 419, and 422 that were not made in the August 11, 2004 final rule.

- When we redesignated § 413.86 as §§ 413.75 through 413.83 in the FY 2005 IPPS final rule, we also made a corresponding redesignation of § 413.80 as § 413.89. We are proposing to correct cross-references to § 413.80 in 42 CFR Parts 412, 413, 417, and 419 to reflect the redesignation of this section as § 413.89.

#### J. Provider-Based Status of Facilities and Organizations Under Medicare

(If you choose to comment on issues in this section, please include the caption "Provider-Based Entities" at the beginning of your comment.)

##### 1. Background

Since the beginning of the Medicare program, some providers, which we refer to as "main providers," have functioned as a single entity while owning and operating multiple provider-based departments, locations, and facilities that were treated as part of the main provider for Medicare purposes. Having clear criteria for provider-based status is important because this designation can result in additional Medicare payments for services furnished at the provider-based facility, and may also increase the coinsurance liability of Medicare beneficiaries for those services.

To set forth Medicare policies with regard to the provider-based status of facilities and organizations, we have

published a number of **Federal Register** documents as follows:

- In a proposed rule published in the **Federal Register** on September 8, 1998 (63 FR 47552), we proposed specific and comprehensive criteria for determining whether a facility or organization is provider-based. In the preamble to the proposed rule, we explained why we believed meeting each criterion would be necessary to a finding that a facility or organization qualifies for provider-based status. After considering public comments on the September 8, 1998 proposed rule and making appropriate revisions, on April 7, 2000 (65 FR 18504), we published a final rule setting forth the provider-based regulations at 42 CFR 413.65.

- Before the regulations that were issued on April 7, 2000 could be implemented, Congress enacted the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA), Pub. L. 106-544. Section 404 of BIPA delayed implementation of the April 7, 2000 provider-based rules with respect to many providers, and mandated changes in the criteria at § 413.65 for determining provider-based status.

- In order to conform our regulations to the requirements of section 404 of BIPA and to codify certain clarifications of provider-based policy that had previously been posted on the CMS Web site, we published another proposed rule on August 24, 2001 (66 FR 44672). After considering public comments on the August 24, 2001 proposed rule and making appropriate revisions, we published a final rule on November 30, 2001 setting forth the provider-based regulations (66 FR 59909).

- On May 9, 2002, we proposed further significant revisions to the provider-based regulations at § 413.65 (67 FR 31480). After considering public comments on the May 9, 2002 proposed rule and making appropriate revisions, on August 1, 2002, we published a final rule specifying the criteria that must be met to qualify for provider-based status (67 FR 50078). These regulations remain in effect and continue to be codified at § 413.65.

Following is a discussion of the major provisions of the provider-based regulations: Section 413.65(a) of the regulations describes the scope of that section and provides definitions of key terms used in the regulations. Paragraph (b) describes the procedure for making provider-based determinations, and paragraph (c) imposes requirements for reporting material changes in relationships between main providers and provider-based facilities or organizations. In paragraph (d), we

specify the requirements that are applicable to all facilities or organizations seeking provider-based status, and in paragraph (e), we describe the additional requirements applicable to off-campus facilities or organizations (generally, those located more than 250 yards from the provider's main buildings). Paragraphs (f) through (o) set forth policies regarding joint ventures, obligations of provider-based facilities, facilities operated under management contracts or providing all services under arrangements, procedures in connection with certain provider-based determinations, and specific types of facilities such as Indian Health Service (IHS) and Tribal facilities and Federally qualified health centers (FQHCs).

## 2. Limits on the Scope of the Provider-Based Regulations—Facilities for Which Provider-Based Determinations Will Not Be Made

In § 413.65(a)(1)(ii), we list specific types of facilities and organizations for which determinations of provider-based status will not be made. We previously concluded that provider-based determinations should not be made for these facilities because the outcome of the determination (that is, whether a facility, unit, or department is found to be freestanding or provider-based) would not affect the methodology used to make Medicare or Medicaid payment, the scope of benefits available to a Medicare beneficiary in or at the facility, or the deductible or coinsurance liability of a Medicare beneficiary in or at the facility.

We have now concluded that, under the principle stated above, rural health clinics affiliated with hospitals having 50 or more beds should be added to the list of facilities for which provider-based status determinations are not made. Therefore, we are proposing to revise § 413.65(a)(1)(ii) to add rural health clinics with hospitals having 50 or more beds to the listing of the types of facilities for which a provider-based status determination will not be made. We believe this proposed revision to § 413.65(a)(1)(ii) is appropriate because all rural health clinics affiliated with hospitals having 50 or more beds are paid on the same basis as rural health clinics not affiliated with any hospital, and the scope of Medicare Part B benefits and beneficiary liability for Medicare Part B deductible and coinsurance amounts would be the same, regardless of whether the rural health clinic was found to be provider-based or freestanding.

In setting forth this proposal, we recognize that rural health clinics affiliated with hospitals report their

costs using the hospital's cost report rather than by filing a separate rural health clinic cost report, and that whether or not a rural health clinic is hospital-affiliated will affect the selection of a fiscal intermediary for the clinic. However, we do not believe these administrative differences provide a sufficient reason to make provider-based determinations for such rural health clinics.

## 3. Location Requirement for Off-Campus Facilities: Application to Certain Neonatal Intensive Care Units

As we stated in the preamble to May 9, 2002 proposed rule for changes in the provider-based rules (67 FR 31485), we recognize that provider-based status is not limited to on-campus facilities or organizations and that facilities or organizations located off the main provider campus may also be sufficiently integrated with the main provider to justify a provider-based designation. However, the off-campus location of the facilities or organizations may make such integration harder to achieve, and such integration should not simply be presumed to exist. Therefore, to ensure that off-campus facilities or organizations seeking provider-based status are appropriately integrated, we have adopted certain requirements regarding the location of off-campus facilities or organizations. These requirements are set forth in § 413.65(e)(3). Section 413.65(e)(3) specifies that a facility or organization not located on the main campus of the potential main provider can qualify for provider-based status only if it is located within a 35-mile radius of the campus of the hospital or CAH that is the potential main provider, or meets any one of the following requirements.

- The facility or organization is owned and operated by a hospital or CAH that has a disproportionate share adjustment (as determined under § 412.106) greater than 11.75 percent or is described in § 412.106(c)(2) of the regulations which implement section 1886(e)(5)(F)(i)(II) of the Act and is—
  - Owned or operated by a unit of State or local government;
  - A public or nonprofit corporation that is formally granted governmental powers by a unit of State or local government; or
  - A private hospital that has a contract with a State or local government that includes the operation of clinics located off the main campus of the hospital to assure access in a well-defined service area to health care services for low-income individuals who are not entitled to benefits under Medicare (or medical assistance under

a Medicaid State plan).  
(§ 413.65(e)(3)(i))

- The facility or organization demonstrates a high level of integration with the main provider by showing that it meets all of the other provider-based criteria and demonstrates that it serves the same patient population as the main provider, by submitting records showing that, during the 12-month period immediately preceding the first day of the month in which the application for provider-based status is filed with CMS, and for each subsequent 12-month period—

- At least 75 percent of the patients served by the facility or organization reside in the same zip code areas as at least 75 percent of the patients served by the main provider (§ 413.65(e)(3)(ii)(A)); or
- At least 75 percent of the patients served by the facility or organization who required the type of care furnished by the main provider received that care from that provider (for example, at least 75 percent of the patients of a rural health clinic seeking provider-based status received inpatient hospital services from the hospital that is the main provider (§ 413.65(e)(3)(ii)(B)).

Section 413.65(e)(3)(ii)(C) of the regulations allows new facilities or organizations to qualify as provider-based entities. Under this section, if a facility or organization is unable to meet the criteria in § 413.65(e)(3)(ii)(A) or (e)(3)(ii)(B) because it was not in operation during all of the 12-month period before the start of the period for which provider-based status is sought, the facility or organization may nevertheless meet the location requirement of paragraph (e)(3) of § 413.65 if it is located in a zip code area included among those that, during all of the 12-month period before the start of the period for which provider-based status is sought, accounted for at least 75 percent of the patients served by the main provider.

CMS has been advised that, in some cases, the location requirements in current regulations may inadvertently impede the delivery of intensive care services to newborn infants in areas where there is no nearby children's hospital with a neonatal intensive care unit (NICU). According to those who expressed this concern, hospitals participating in the Medicare program as children's hospitals establish off-site neonatal intensive care units (NICUs) which they operate and staff but which are located in space leased from other hospitals. The hospitals in which the offsite NICUs are housed typically are

short-term, acute care hospitals located in rural areas. According to comments that CMS has received, the nearest children's hospital in a rural area is usually located a considerable distance from individual rural communities, which prevents infants in these rural communities from having ready access to the specialized care offered by NICUs.

We have received a suggestion that this configuration (that of a hospital participating in the Medicare program as a hospital whose inpatients are predominantly individuals under 18 years of age under section 1886(d)(1)(B)(iii) of the Act, establishing an offsite NICU which it operates and staffs but which is located in space leased from another hospital) can be very helpful in making neonatal intensive care more quickly available in areas where community hospitals are located. In addition, this configuration can offer relief to families who otherwise would be required to travel long distances to obtain this care for their infants. However, offsite NICUs would not be able to qualify for provider-based status under the location criteria in our current regulations if they are located more than 35 miles from the children's hospital that would be the main provider, are not owned and operated by a hospital meeting the requirements of § 413.65(e)(3)(i), and cannot meet either of the "75 percent tests" for service to the same patient population as the potential main provider that are specified in existing § 413.65(e)(3)(ii)(A) and § 413.65(e)(3)(ii)(B).

We understand the concern that requiring a patient to be transported to an NICU located on the campus of a distant children's hospital could create an unacceptable medical risk to the life of a newborn at a most critical time. To help us better understand this issue and determine what action, if any, CMS should take on it, we are soliciting specific public comment on the following question:

- Is the problem as described above actually occurring and, if so, in what locations? We are particularly interested in learning which areas of which States are experiencing such a problem, and in receiving specific information, such as the rates of transfer of newborns from community hospitals to children's hospital on-campus NICUs relative to adult or non-neonatal pediatric transfers for intensive care services, which describe the problem objectively. Such objective information will be much more useful than expressions of opinion or anecdotes.

We also wish to ask those who believe such a problem is currently occurring to

comment on which of the following approaches would be most effective in resolving it. The proposed approaches on which we are soliciting specific comments are:

- A change in the Medicare provider-based regulations to create an exception to the location requirements for NICUs located in community hospitals that are more than 35 miles from the children's hospital that is the potential main provider. The exception might take the form of a more generous mileage allowance (such as being within 50 miles of the potential main provider) or could require other criteria to be met. However, the exception would be available only if there is no other NICU within 35 miles of the community hospital.

- A change in the national Medicaid regulations to allow off-campus NICUs that meet other provider-based requirements under § 413.65 to qualify as provider-based for purposes of payment under Medicaid, even though those facilities would not qualify as provider-based under Medicare. (We note that under 42 CFR 440.10(a)(3)(iii), services are considered to be "inpatient hospital services" under the Medicaid program only if they are furnished in an institution that meets the requirements for participation in Medicare as a hospital. Because of the age of the patients they serve, NICUs typically have no Medicare utilization but a substantial proportion of their patients may be Medicaid patients.)

- A change in individual State's Medicaid plans that would provide enhanced financial incentives for community hospitals to establish NICUs, possibly in collaboration with children's hospitals.

- The establishment of children's hospitals that meet the requirements for being hospitals-within-hospitals under 42 CFR 412.22(e). (We note that this option, unlike the three above, would not require any revision of Medicare or Medicaid regulations or individual State Medicaid plans).

We also welcome suggestions for specific options other than those listed above.

#### 4. Technical and Clarifying Changes to § 413.65

a. *Definitions.* In paragraph (a)(2) of § 413.65, we state that the term "Provider-based entity" means a provider of health care services, or an RHC as defined in § 405.2401(b), that is either created by, or acquired by, a main provider for the purpose of furnishing health care services of a different type from those of the main provider under the name, ownership and administrative

and financial control of the main provider, in accordance with the provisions of § 413.65. In recognition of the fact that provider-based entities, unlike departments of a provider, offer a type of services different from those of the main provider and participate separately in Medicare, we are proposing to revise this requirement by deleting the word "name" from this definition. This change would simplify compliance with the provider-based criteria since entities that do not now operate under the potential main provider's name will not be obligated to change their names in order to be treated as provider-based.

b. *Provider-based determinations.* In paragraph (b)(3)(ii) of § 413.65, we state that, in the case of a facility not located on the campus of the potential main provider, the provider seeking a determination would be required to submit an attestation stating that the facility meets the criteria in paragraphs (d) and (e) of § 413.65, and if the facility is operated as a joint venture or under a management contract, the requirements of paragraph (f) or paragraph (h) of § 413.65, as applicable. However, paragraph (f), which sets forth rules regarding provider-based status for joint ventures, states clearly that a facility or organization operated as a joint venture may qualify for provider-based status only if it is located on the main campus of the potential main provider. To avoid any misunderstanding regarding the content of attestations for off-campus facilities, we are proposing to revise paragraph (b)(3)(ii) by removing the reference to compliance with requirements in paragraph (f) for joint ventures. We also are proposing to add a sentence to paragraph (b)(3)(i), regarding attestations for on-campus facilities, to state that if the facility is operated as a joint venture, the attestation by the potential main provider regarding that facility would also have to include a statement that the provider will comply with the requirements of paragraph (f) of § 413.65.

c. *Additional requirements applicable to off-campus facilities or organizations—Operation under the ownership and control of the main provider.* In paragraph (e)(1)(i), regarding 100 percent ownership by the main provider of the business enterprise that constitutes the facility or organization seeking provider-based status, we are proposing to add the word "main" before the word "provider", to clarify that the main provider must own and control the facility or organization seeking provider-based status. We are also proposing, for purposes of

clarifying the requirements in paragraph (e)(1), to add the word "main" before the word "provider" in paragraphs (e)(1)(ii) and (e)(1)(iii).

d. *Additional requirements applicable to off-campus facilities or organizations—Location.* We are proposing several clarifying changes to this paragraph, as follows:

Currently, the opening sentence of § 413.65(e)(3) states that a facility or organization for which provider-based status is sought must be located within a 35-mile radius of the campus of the hospital or CAH that is the potential main provider, except when the requirements in paragraph (e)(3)(i), (e)(3)(ii), or (e)(3)(iii) of that section are met. However, the regulation text that follows does not contain a paragraph designation as paragraph (e)(3)(iii). We are proposing to correct this error by redesignating existing paragraph (e)(3)(ii)(C) as paragraph (e)(3)(iv). We are also proposing to revise this sentence to state that the facility or organization must meet the requirements in paragraph (e)(3)(i), (e)(3)(ii), (e)(3)(iii), (e)(3)(iv) or, in the case of an RHC, paragraph (e)(3)(v) of § 413.65 and the requirements in paragraph (e)(3)(vi) of § 413.65.

We are proposing to revise the opening sentence of § 413.65(e)(3) to reflect the changes in the coding of this paragraph as described above.

We are also proposing to redesignate paragraph (v) of § 413.65(e)(3) as paragraph (e)(3)(vi) and correct a drafting error by adding the word "that" before "has fewer than 50 beds". This proposed addition is a grammatical change that is intended only to clarify the size of the hospital with which a rural health clinic must have a provider-based relationship in order to qualify under the special location requirement in that paragraph.

e. *Paragraph (g)—Obligations of hospital outpatient departments and hospital-based entities.* We are proposing to revise the first sentence of paragraph (g)(7), regarding beneficiary notices of coinsurance liability, to clarify that notice must be given only if the service is one for which the beneficiary will incur a coinsurance liability for both an outpatient visit to the hospital and the physician service. This should help to make it clear that notice is not required for visits that do not result in additional coinsurance liability. In addition, we are proposing to reorganize the subsequent paragraphs of that section for clarity.

#### K. Rural Community Hospital Demonstration Program

(If you choose to comment on issues in this section, please include the caption "Rural Community Hospital Demonstration Program" at the beginning of your comments.)

In accordance with the requirements of section 410A(a) of Pub. L. 108-173, the Secretary has established a 5-year demonstration (beginning with selected hospitals' first cost reporting period beginning on or after October 1, 2004) to test the feasibility and advisability of establishing "rural community hospitals" for Medicare payment purposes for covered inpatient hospital services furnished to Medicare beneficiaries. A rural community hospital, as defined in section 410A(f)(1), is a hospital that—

- Is located in a rural area (as defined in section 1886(d)(2)(D) of the Act) or treated as being so located under section 1886(d)(8)(E) of the Act;
- Has fewer than 51 beds (excluding beds in a distinct part psychiatric or rehabilitation unit) as reported in its most recent cost report;
- Provides 24-hour emergency care services; and
- Is not designated or eligible for designation as a CAH.

As we indicated in the FY 2005 IPPS final rule (69 FR 49078), in accordance with sections 410A(a)(2) and (4) of Pub. L. 108-173 and using 2002 data from the U.S. Census Bureau, we identified 10 States with the lowest population density from which to select hospitals: Alaska, Idaho, Montana, Nebraska, Nevada, New Mexico, North Dakota, South Dakota, Utah, and Wyoming. (Source: U.S. Census Bureau Statistical Abstract of the United States: 2003) Thirteen rural community hospitals located within these States are participating in the demonstration.

Under the demonstration, participating hospitals are paid the reasonable costs of providing covered inpatient hospital services (other than services furnished by a psychiatric or rehabilitation unit of a hospital that is a distinct part), applicable for discharges occurring in the first cost reporting period beginning on or after the October 1, 2004 implementation date of the demonstration program. Payment will be the lesser amount of reasonable cost or a target amount in subsequent cost reporting periods. The target amount in the second cost reporting period is defined as the reasonable costs of providing covered inpatient hospital services in the first cost reporting period, increased by the inpatient prospective payment update

factor (as defined in section 1886(b)(3)(B) of the Act) for that particular cost reporting period. The target amount in subsequent cost reporting periods is defined as the preceding cost reporting period's target amount, increased by the inpatient prospective payment update factor (as defined in section 1886(b)(3)(B) of the Act) for that particular cost reporting period.

Covered inpatient hospital services means inpatient hospital services (defined in section 1861(b) of the Act) and includes extended care services furnished under an agreement under section 1883 of the Act.

Section 410A of Pub. L. 108-173 requires that "in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented." Generally, when CMS implements a demonstration on a budget neutral basis, the demonstration is budget neutral in its own terms; in other words, aggregate payments to the participating providers do not exceed the amount that would be paid to those same providers in the absence of the demonstration. This form of budget neutrality is viable when, by changing payments or aligning incentives to improve overall efficiency, or both, a demonstration may reduce the use of some services or eliminate the need for others, resulting in reduced expenditures for the demonstration participants. These reduced expenditures offset increased payments elsewhere under the demonstration, thus ensuring that the demonstration as a whole is budget neutral or yields savings. However, the small scale of this demonstration, in conjunction with the payment methodology, makes it extremely unlikely that this demonstration could be viable under the usual form of budget neutrality. Specifically, cost-based payments to 13 small rural hospitals are likely to increase Medicare outlays without producing any offsetting reduction in Medicare expenditures elsewhere. Therefore, a rural community hospital's participation in this demonstration is unlikely to yield benefits to the participant if budget neutrality were to be implemented by reducing other payments for these providers.

In order to achieve budget neutrality for this demonstration, we are proposing to adjust national inpatient PPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we apply budget neutrality

across the payment system as a whole rather than merely across the participants of this demonstration. As we discussed in the FY 2005 IPPS final rule (69 FR 49183), we believe that the language of the statutory budget neutrality requirements permits the agency to implement the budget neutrality provision in this manner. For FY 2006, using the most recent cost report data (that is, data for FY 2003), adjusted for increased estimated cost for the 13 participating hospitals, we are proposing that the estimated adjusted amount would be \$12,706,334. This adjusted amount reflects the estimated difference between cost and IPPS payment based on data from hospitals' cost reports. We discuss the proposed payment rate adjustment that would be required to ensure the budget neutrality of the demonstration in section II.A.4. of the Addendum to this proposed rule.

The data collection instrument for the demonstration has been approved by OMB under the title "Medicare Waiver Demonstration Application," under OMB approval number 0938-0880, with a current expiration date of July 30, 2006.

#### L. Definition of a Hospital in Connection With Specialty Hospitals

(If you choose to comment on issues in this section, please include the caption "Specialty Hospitals" at the beginning of your comment.)

Section 1861(e) of the Act provides a definition for a "hospital" for purposes of participating in the Medicare program. In order to be a Medicare-participating hospital, an institution must, among other things, be primarily engaged in furnishing services to inpatients. This requirement is incorporated in our regulations on conditions of participation for hospitals at 42 CFR 482.1. An institution that applies for a Medicare provider agreement as a hospital but is unable to meet this requirement will have its application denied in accordance with our authority at 42 CFR 489.12. In addition, institutions that have a Medicare hospital provider agreement but are no longer primarily engaged in furnishing services to inpatients are subject to having their provider agreements terminated pursuant to 42 CFR 489.53. Although compliance with this requirement is not problematic for most hospitals, the issue of whether an institution is primarily engaged in providing care to inpatients has recently come to our attention in two arisen two contexts. First, an institution has applied to be certified as an "emergency hospital," yet the institution has 29 outpatient beds for emergency patients,

including observation and post-anesthesia care, and only 2 inpatient beds. Emergency treatment by nature does not usually involve overnight stays. Second, the issue has also arisen in the area of "specialty hospitals." (For purposes of this discussion, "specialty hospitals" are those hospitals specifically defined as such in section 507 of Pub. L. 108-173 (MMA), that is, those hospitals that are primarily or exclusively engaged in the care and treatment of:

- (i) Patients with a cardiac condition;
- (ii) patients with an orthopedic condition; or
- (iii) patients receiving a surgical procedure.)

"Specialty hospitals" are of interest partly because of section 507 of Pub. L. 108-173, which amended the hospital ownership exception to the physician self-referral prohibition statute, section 1877 of the Act. Prior to the enactment of Pub. L. 108-173, the "whole hospital" exception contained in section 1877(d)(3) of the Act allowed a physician to refer Medicare patients to a hospital in which the physician (or an immediate family member of the physician) had an ownership or investment interest, if the physician was authorized to perform services at the hospital and the ownership or investment interest was in the entire hospital and not a subdivision of the hospital. Section 507 of Pub. L. 108-173 added an additional criterion to the whole hospital exception, specifying that for the 18-month period beginning on December 8, 2003 and ending on June 8, 2005, physician ownership and investment interests in "specialty hospitals" would not qualify for the whole hospital exception. The term "specialty hospital" does not include any hospital determined by the Secretary to be in operation or "under development" as of November 18, 2003.

In our advisory opinions that we issue as to whether a requesting entity is subject to the 18-month moratorium described above, we inform the requesting entity that, among other things, it must meet the definition of a hospital that is contained in section 1861(e) of the Act. It has come to our attention that some institutions entities that describe themselves as surgical or orthopedic specialty hospitals may be primarily primarily engaged in furnishing services to outpatients, and thus would not meet the definition of a hospital as contained in section 1861(e) of the Act. Therefore, although an institution entity may satisfy the "under development" criteria for purposes of being excepted from the moratorium on physician-owner referrals to specialty hospitals, if we

were to determine such entity is not primarily engaged in inpatient care at the time it seeks certification to participate in the Medicare program, its application for a provider agreement as a hospital would be denied and it would not be eligible for the whole hospital exception to the prohibition on physician self-referrals. Further, if we were to determine that a specialty hospital that is operating under an existing Medicare provider agreement but is not, or is no longer, primarily engaged in treating inpatients, the hospital is subject to having its provider agreement terminated; in this event, it could no longer take advantage of and lose the protection of the whole hospital exception.

#### VI. PPS for Capital-Related Costs

(If you choose to comment on issues in this section, please include the caption "Capital-Related Costs" at the beginning of your comment.)

In this proposed rule, we are not proposing any changes in the policies governing the determination of the payment rates for capital-related costs for short-term acute care hospitals under the IPPS. However, for the readers' benefit, we are providing a summary of the statutory basis for the PPS for hospital capital-related costs and the methodology used to determine capital-related payments to hospitals. A discussion of the proposed rates and factors for FY 2006 (determined under our established methodology) can be found in section III. of the Addendum of this proposed rule.

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient acute hospital services "in accordance with a PPS established by the Secretary." Under the statute, the Secretary has broad authority in establishing and implementing the PPS for hospital inpatient capital-related costs. We initially implemented the PPS for capital-related costs in the August 30, 1991 IPPS final rule (56 FR 43358), in which we established a 10-year transition period to change the payment methodology for Medicare hospital inpatient capital-related costs from a reasonable cost-based methodology to a prospective methodology (based fully on the Federal rate).

Federal fiscal year (FY) 2001 was the last year of the 10-year transition period established to phase in the PPS for hospital inpatient capital-related costs. For cost reporting periods beginning in FY 2002, capital PPS payments are based solely on the Federal rate for most acute care hospitals (other than certain new hospitals and hospitals receiving certain exception payments). The basic

methodology for determining capital prospective payments using the Federal rate is set forth in § 412.312. For the purpose of calculating payments for each discharge, the standard Federal rate is adjusted as follows:

(Standard Federal Rate) × (DRG Weight) × (Geographic Adjustment Factor (GAF)) × (Large Urban Add-on, if applicable) × (COLA Adjustment for hospitals located in Alaska and Hawaii) × (1 + Capital DSH Adjustment Factor + Capital IME Adjustment Factor, if applicable)

Hospitals also may receive outlier payments for those cases that qualify under the thresholds established for each fiscal year as specified in § 412.312(c) of the regulations.

The regulations at § 412.348(f) provide that a hospital may request an additional payment if the hospital incurs unanticipated capital expenditures in excess of \$5 million due to extraordinary circumstances beyond the hospital's control. This policy was originally established for hospitals during the 10-year transition period, but as we discussed in the August 1, 2002 IPPS final rule (67 FR 50102), we revised the regulations at § 412.312 to specify that payments for extraordinary circumstances are also made for cost reporting periods after the transition period (that is, cost reporting periods beginning on or after October 1, 2001). Additional information on the exceptions payment for extraordinary circumstances in § 412.348(f) can be found in the FY 2005 IPPS final rule (69 FR 49185 through 49186).

During the transition period, under §§ 412.348(b) through (e), eligible hospitals could receive regular exception payments. These exception payments guaranteed a hospital a minimum payment percentage of its Medicare allowable capital-related costs depending on the class of hospital (§ 412.348(c)), but were available only during the 10-year transition period. After the end of the transition period, eligible hospitals can no longer receive this exception payment. However, even after the transition period, eligible hospitals receive additional payments under the special exceptions provisions at § 412.348(g), which guarantees all eligible hospitals a minimum payment of 70 percent of its Medicare allowable capital-related costs provided that special exceptions payments do not exceed 10 percent of total capital IPPS payments. Special exceptions payments may be made only for the 10 years from the cost reporting year in which the hospital completes its qualifying project, and the hospital must have completed the project no later than the

hospital's cost reporting period beginning before October 1, 2001. Thus, an eligible hospital may receive special exceptions payments for up to 10 years beyond the end of the capital PPS transition period. Hospitals eligible for special exceptions payments were required to submit documentation to the intermediary indicating the completion date of their project. (For more detailed information regarding the special exceptions policy under § 412.348(g), refer to the August 1, 2001 IPPS final rule (66 FR 39911 through 39914) and the August 1, 2002 IPPS final rule (67 FR 50102).)

Under the PPS for capital-related costs, § 412.300(b) of the regulations defines a new hospital as a hospital that has operated (under current or previous ownership) for less than 2 years. (For more detailed information see the August 30, 1991 final rule (56 FR 43418).) During the 10-year transition period, a new hospital was exempt from the capital PPS for its first 2 years of operation and was paid 85 percent of its reasonable costs during that period. Originally, this provision was effective only through the transition period and, therefore, ended with cost reporting periods beginning in FY 2002. Because we believe that special protection to new hospitals is also appropriate even after the transition period, as discussed in the August 1, 2002 IPPS final rule (67 FR 50101), we revised the regulations at § 412.304(c)(2) to provide that, for cost reporting periods beginning on or after October 1, 2002, a new hospital (defined under § 412.300(b)) is paid 85 percent of its allowable Medicare inpatient hospital capital-related costs through its first 2 years of operation, unless the new hospital elects to receive fully-prospective payment based on 100 percent of the Federal rate. (Refer to the August 1, 2001 IPPS final rule (66 FR 39910) for a detailed discussion of the statutory basis for the system, the development and evolution of the system, the methodology used to determine capital-related payments to hospitals both during and after the transition period, and the policy for providing exception payments.)

Section 412.374 provides for the use of a blended payment amount for prospective payments for capital-related costs to hospitals located in Puerto Rico. Accordingly, under the capital PPS, we compute a separate payment rate specific to Puerto Rico hospitals using the same methodology used to compute the national Federal rate for capital-related costs. In general, hospitals located in Puerto Rico are paid a blend of the applicable capital PPS Puerto

Rico rate and the applicable capital PPS Federal rate.

Prior to FY 1998, hospitals in Puerto Rico were paid a blended capital PPS rate that consisted of 75 percent of the applicable capital PPS Puerto Rico specific rate and 25 percent of the applicable capital PPS Federal rate. However, effective October 1, 1997 (FY 1998), in conjunction with the change to the operating PPS blend percentage for Puerto Rico hospitals required by section 4406 of Pub. L. 105-33, we revised the methodology for computing capital PPS payments to hospitals in Puerto Rico to be based on a blend of 50 percent of the Puerto Rico rate and 50 percent of the Federal rate. Similarly, effective beginning in FY 2005, in conjunction with the change in operating PPS payments to hospitals in Puerto Rico for FY 2005 required by section 504 of Pub. L. 108-173, we again revised the methodology for computing capital PPS payments to hospitals in Puerto Rico to be based on a blend of 25 percent of the Puerto Rico rate and 75 percent of the Federal rate for discharges occurring on or after October 1, 2004.

#### VII. Proposed Changes for Hospitals and Hospital Units Excluded From the IPPS

(If you choose to comment on issues in this section, please include the caption "Excluded Hospitals and Units" at the beginning of your comment.)

##### A. Payments to Existing Hospitals and Hospital Units (§§ 413.40(c), (d), and (f))

###### 1. Payments to Existing Excluded Hospitals and Hospital Units

Section 1886(b)(3)(H) of the Act (as amended by section 4414 of Pub. L. 105-33) established caps on the target amounts for cost reporting periods beginning on or after October 1, 1997 through September 30, 2002, for certain existing hospitals and hospital units excluded from the IPPS. Section 413.40(c)(4)(iii) of the implementing regulations states that "In the case of a psychiatric hospital or unit, rehabilitation hospital or unit, or long-term care hospital, the target amount is the lower of amounts specified in paragraph (c)(4)(iii)(A) or (c)(4)(iii)(B) of this section." Accordingly, in general, for hospitals and units within these three classes of providers for the applicable 5-year period, the target amount is the lower of either: the hospital-specific target amount (§ 413.40(c)(4)(iii)(A)) or the 75th percentile cap (§ 413.40(c)(4)(iii)(B)). (We note that, in the case of LTCHs, for cost reporting periods beginning during

FY 2001, the hospital-specific target amount is the net allowable cost in a base period increased by the applicable update factors multiplied by 1.25.)

Questions have been raised as to whether § 413.40(c)(4)(iii) (specifically paragraph (c)(4)(iii)(A)) continues to apply beyond FY 2002. In order to clarify the policy for periods after FY 2002, we note that § 413.40(c)(4)(iii) applies only to cost reporting periods beginning on or after October 1, 1997 through September 30, 2002, for psychiatric hospitals and units, rehabilitation hospitals and units, and LTCHs. We discussed this applicable time period in the May 12, 1998 *Federal Register* (63 FR 26344) when we discussed implementing the caps. Specifically, we clarified our regulations to indicate that the target amount for FYs 1998 through 2002 is equal to the lower of the hospital-specific target amount or the 75th percentile of target amounts for hospitals in the same class for cost reporting periods ending during FY 1996, increased by the applicable market basket percentage for the subject period. We did not intend for the provisions of § 413.40(c)(4)(iii) to apply beyond FY 2002, as we specifically included an ending date; that is, we stated that the target amount calculation provisions were for FYs 1998 through 2002. More recently, in the FY 2003 IPPS final rule (67 FR 50103), we clarified again how the target amount for FY 2003 was to be determined by stating that: “\* \* \* for cost reporting periods beginning in FY 2003, the hospital or unit should use its previous year’s target amount, updated by the appropriate rate-of-increase percentage.” Thus, the time-limited provision of § 413.40(c)(4)(iii) is neither a new policy nor a change in policy.

For cost reporting periods beginning on or after October 1, 2002, to the extent one of the above-mentioned excluded hospitals or units has all or a portion of its payment determined under reasonable cost principles, the target amounts for the reasonable cost-based portion of the payment are determined in accordance with section 1886(b)(3)(A)(ii) of the Act and the regulations at § 413.40(c)(4)(ii). Section 413.40(c)(4)(ii) states, “Subject to the provisions of [§ 413.40] paragraph (c)(4)(iii) of this section, for subsequent cost reporting periods, the target amount equals the hospital’s target amount for the previous cost reporting period increased by the update factor for the subject cost reporting period unless the provisions of [§ 413.40] paragraph (c)(5)(ii) of this section apply.” Thus, since § 413.40(c)(4)(ii) indicates that the provisions of that paragraph are subject

to the provisions of § 413.40(c)(4)(iii), which are applicable only for cost reporting periods beginning on or after October 1, 1997 through September 30, 2002, the target amount for FY 2003 is determined by updating the target amount for FY 2002 (the target amount from the previous period) by the applicable update factor. Accordingly, we are proposing to make a change to the language in § 413.40(c)(4)(iii) to clarify that the provisions of this paragraph relating to the caps on target amounts are for a specific period of time only, that is, cost reporting periods beginning on or after October 1, 1997, and before October 1, 2002.

The inpatient operating costs of children’s hospitals and cancer hospitals that are excluded from the IPPS are subject to the rate-of-increase limits established under the authority of section 1886(b) of the Act and implemented in the regulations at § 413.40. Under these limits, an annual target amount (expressed in terms of the inpatient operating cost per discharge) is set for each hospital, based on the hospital’s own historical cost experience, trended forward by the applicable percentage increase. This target amount is applied as a ceiling on the allowable costs per discharge for the hospital’s cost reporting period. (We note that, in accordance with § 403.752(a) of the regulations, RNHCIs are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

## 2. Updated Caps for New Excluded Hospitals and Units

Section 1886(b)(7) of the Act established the method for determining the payment amount for new rehabilitation hospitals and units, psychiatric hospitals and units, and LTCHs that first received payment as a hospital or unit excluded from the IPPS on or after October 1, 1997. However, effective for cost reporting periods beginning on or after October 1, 2002, this payment amount (or “new provider cap”) no longer applies to any new rehabilitation hospital or unit because they now are paid 100 percent of the Federal prospective rate under the IRF PPS.

In addition, LTCHs that meet the definition of a new LTCH under § 412.23(e)(4) are also paid 100 percent of the fully Federal prospective payment rate under the LTCH PPS. In contrast, those “new” LTCHs that meet the criteria under § 413.40(f)(2)(ii) (that is, that were not paid as an excluded hospital prior to October 1, 1997), but were paid as a LTCH before October 1, 2002, may be paid under the LTCH PPS

transition methodology with the reasonable cost portion of the payment subject to § 413.40(f)(2)(ii). Finally, LTCHs that existed prior to October 1, 1997, may also be paid under the LTCH PPS transition methodology with the reasonable cost portion of the payment subject to § 413.40(c)(4)(ii). (The last LTCHs that were subject to the payment amount limitation for “new” LTCHs were new LTCHs that had their first cost reporting period beginning on September 30, 2002. In that case, the payment amount limitation remained applicable for the next 2 years—September 30, 2002 through September 29, 2003, and September 30, 2003 through September 29, 2004. This is because, under existing regulations at § 413.40(f)(2)(ii), a “new hospital” would be subject to the same payment (target amount) in its second cost reporting period that was applicable to the LTCH in its first cost reporting period. Accordingly, for these hospitals, the updated payment amount limitation that we published in the FY 2003 IPPS final rule (67 FR 50103) applied through September 29, 2004. Consequently, there is no longer a need to publish updated payment amounts for new (§ 413.40(f)(2)(ii)) LTCHs. A discussion of how the payment limitations were calculated can be found in the August 29, 1997 final rule with comment period (62 FR 46019); the May 12, 1998 final rule (63 FR 26344); the July 31, 1998 final rule (63 FR 41000); and the July 30, 1999 final rule (64 FR 41529).

A freestanding inpatient rehabilitation hospital, an inpatient rehabilitation unit of an acute care hospital, and an inpatient rehabilitation unit of a CAH are referred to as IRFs. Effective for cost reporting periods beginning on or after October 1, 2002, this payment limitation is also no longer applicable to new rehabilitation hospitals and units because they are paid 100 percent of the Federal prospective rate under the IRF PPS. Therefore, it is also no longer necessary to update the payment limitation for new rehabilitation hospitals or units.

For psychiatric hospitals and units, under the IPF PPS, there is a 3-year transition period during which existing IPFs will receive a blended payment of the Federal per diem payment amount and the payment amount that IPFs would receive under the reasonable cost-based payment (TEFRA) methodology. However, new IPFs (those facilities that under present or previous ownership (or both) have their first cost reporting period as an IPF begin on or after January 1, 2005, are paid the fully Federal per diem payment amount rather than a blended payment amount.

(See section VII.A.5. of the preamble of this proposed rule for further discussion of the IPF PPS.) Thus, the payment limitations under the TEFRA payment system are not applicable for new IPFs that meet the definition in § 412.426(c).

However, "new" IPFs that meet the criteria under § 413.40(f)(2)(ii) (that is, that were not paid as an excluded hospital prior to October 1, 1997), but were paid as an IPF before January 1, 2005, are paid under the IPF PPS transition methodology with the reasonable cost portion of the payment determined according to § 413.40(f)(2)(ii), that is, subject to the payment amount limitation. The last "new" IPFs that were subject to the payment amount limitation were IPFs that had their first cost reporting period beginning on December 31, 2004. For these hospitals, the payment amount limitation that was published in the FY 2005 IPPS final rule (69 FR 49189) for cost reporting periods beginning on or after October 1, 2004, and before January 1, 2005, remains applicable for the IPF's first two cost reporting periods. IPFs with a first cost reporting period beginning on or after January 1, 2005, are paid 100 percent of the Federal rate and are not subject to the payment amount limitation. Therefore, since the last IPFs eligible for a blended payment have a cost reporting period beginning on December 31, 2004, the payment limitation published for FY 2005 remains applicable for these IPFs, and publication of the updated payment amount limitation is no longer needed. We note that IPFs that existed prior to October 1, 1997, may also be paid under the IPF transition methodology with the reasonable cost portion of the payment subject to § 413.40(c)(4)(ii).

The payment limitations for new hospitals under TEFRA do not apply to new LTCHs, IRFs, or IPFs, that is, these hospitals with their first cost reporting period beginning on or after the date that the particular class of hospitals implemented their respective PPS. Therefore, for the reasons noted above, we are proposing to discontinue publishing Tables 4G and 4H (Pre-Reclassified Wage Index for Urban and Rural Areas, respectively) in the annual proposed and final IPPS rules.

### 3. Implementation of a PPS for IRFs

Section 1886(j) of the Act, as added by section 4421(a) of Pub. L. 105-33, provided for the phase-in of a case-mix adjusted PPS for inpatient hospital services furnished by a rehabilitation hospital or a rehabilitation hospital unit (referred to in the statute as rehabilitation facilities) for cost reporting periods beginning on or after

October 1, 2000, and before October 1, 2002, with payments based entirely on the adjusted Federal prospective payment for cost reporting periods beginning on or after October 1, 2002. Section 1886(j) of the Act was amended by section 125 of Pub. L. 106-113 to require the Secretary to use a discharge as the payment unit under the PPS for inpatient hospital services furnished by rehabilitation facilities and to establish classes of patient discharges by functional-related groups. Section 305 of Pub. L. 106-554 further amended section 1886(j) of the Act to allow rehabilitation facilities, subject to the blend methodology, to elect to be paid the full Federal prospective payment rather than the transitional period payments specified in the Act.

On August 7, 2001, we issued a final rule in the *Federal Register* (66 FR 41316) establishing the PPS for inpatient rehabilitation facilities, effective for cost reporting periods beginning on or after January 1, 2002. There was a transition period for cost reporting periods beginning on or after January 1, 2002 and ending before October 1, 2002. For cost reporting periods beginning on or after October 1, 2002, payments are based entirely on the Federal prospective payment rate determined under the IRF PPS.

### 4. Implementation of a PPS for LTCHs

In accordance with the requirements of section 123 of Pub. L. 106-113, as modified by section 307(b) of Pub. L. 106-554, we established a per discharge, DRG-based PPS for LTCHs as described in section 1886(d)(1)(B)(iv) of the Act for cost reporting periods beginning on or after October 1, 2002, in a final rule issued on August 30, 2002 (67 FR 55954). The LTCH PPS uses information from LTCH hospital patient records to classify patients into distinct LTC-DRGs based on clinical characteristics and expected resource needs. Separate payments are calculated for each LTC-DRG with additional adjustments applied.

We published in the *Federal Register* on May 7, 2004, a final rule (69 FR 25673) that updated the payment rates for the upcoming rate year LTCH PPS and made policy changes effective as of July 1, 2004. The 5-year transition period to the fully Federal prospective rate will end with cost reporting periods beginning on or after October 1, 2005 and before October 1, 2006. For cost reporting periods beginning on or after October 1, 2006, payment is based entirely on the adjusted Federal prospective payment rate. However, existing hospitals can elect payment under 100 percent of the adjusted

Federal prospective payment rate. Moreover, LTCHs as defined in § 412.23(e)(4) are paid under 100 percent of the adjusted Federal prospective payment rate.

### 5. Implementation of a PPS for IPFs

In accordance with section 124 of the BBRA and section 405(g)(2) of Pub. L. 108-173, we established a PPS for inpatient hospital services furnished in psychiatric hospitals and psychiatric units of acute care hospitals and CAHs (inpatient psychiatric facilities (IPFs)). On November 15, 2004, we issued in the *Federal Register* a final rule (69 FR 66922) that established the IPF PPS, effective for IPF cost reporting periods beginning on or after January 1, 2005. Under the final rule, we compute a Federal per diem base rate to be paid to all IPFs for inpatient psychiatric services based on the sum of the average routine operating, ancillary, and capital costs for each patient day of psychiatric care in an IPF, adjusted for budget neutrality. The Federal per diem base rate is adjusted to reflect certain patient characteristics, including age, specified DRGs, selected high-cost comorbidities, and day of the stay, and certain facility characteristics, including a wage index adjustment, rural location, indirect teaching costs, the presence of a full-service emergency department, and cost-of-living adjustments for IPFs located in Alaska and Hawaii. We have established a 3-year transition period during which IPFs will be paid based on a blend of reasonable cost-based payment and IPF PPS payments. For cost reporting periods beginning on or after January 1, 2008, IPFs will be paid 100 percent of the Federal per diem payment amount.

### B. Critical Access Hospitals (CAHs)

(If you choose to comment on issues in this section, please include the caption "Critical Access Hospitals" at the beginning of your comment.)

#### 1. Background

Section 1820 of the Act provides for the establishment of Medicare Rural Hospital Flexibility Programs (MRHFPs), under which individual States may designate certain facilities as critical access hospitals (CAHs). Facilities that are so designated and meet the CAH conditions of participation (CoPs) under 42 CFR Part 485, Subpart F, will be certified as CAHs by CMS. Regulations governing payments to CAHs for services to Medicare beneficiaries are located in 42 CFR Part 413.

## 2. Proposed Policy Change Relating to Continued Participation by CAHs in Lugar Counties

Criteria for the designation of a CAH under the MRHFP at section 1820(c)(2)(b)(i) of the Act require that a hospital be located in a rural area as defined in section 1886(d)(2)(D) of the Act or be treated as being located in a rural area in accordance with section 1886(d)(8)(E) of the Act. The regulations at § 485.610 further define "rural area" for purposes of being a CAH. Under § 485.610(b), a CAH must meet any one of the following three location requirements. First, a CAH must not be located in an MSA as defined by the Office of Management and Budget, not be deemed to be located in an urban area under 42 CFR 412.63(b), and not be reclassified by CMS or the MGCRB as urban for purposes of the standardized payment amount, nor be a member of a group of hospitals reclassified to an urban area under 42 CFR 412.232. Second, if a CAH does not meet the first criterion, if located in an MSA, a CAH will be treated as rural if it has been reclassified under 42 CFR 412.103. Third, as we stated in the FY 2005 IPPS final rule, if the CAH cannot meet either of the first two requirements and is located in a revised labor market area (CBSA) under the standards announced by OMB on June 6, 2003 and adopted by CMS effective October 1, 2004, it has until September 30, 2006, to meet one of the other classification requirements without losing its CAH status.

Under section 1886(d)(8)(B) of the Act, hospitals that are located in a rural county that is adjacent to one or more urban counties are considered to be located in the urban MSA to which the greatest number of workers in the county commute, if certain conditions, specified in section 1886(d)(8)(B) of the Act, are met. Regulations implementing this provision are set forth in 42 CFR 412.62(f)(1) (for FY 1984), 42 CFR 412.63(b)(3) (for FYs 1985 through 2004), and at 42 CFR 412.64(b)(3) (for FY 2005 and subsequent fiscal years). The provision (section 1886(d)(8)(B) of the Act) is referred to as the "Lugar provision" and the counties described by it are referred to as the "Lugar counties."

As explained more fully in the FY 2005 IPPS final rule (69 FR 48916), certain counties that previously were not considered Lugar counties were, effective October 1, 2004, redesignated as Lugar counties as a result of the most recent census data and the new labor market area definitions announced by OMB on June 6, 2003. Some CAHs located in these newly designated Lugar

counties are now unable to meet the rural location requirements described above, even though they were in full compliance with the location requirements in effect at the time they converted from short-term acute care hospital to CAH status.

We have received comments that suggest that it would be inappropriate for a facility to be required to terminate participation as a CAH and resume participating as a short-term acute care hospital because of a change in county classification that did not result from any change in functioning by the CAH. After consideration of these comments, we are clarifying our policy with respect to facilities located in Lugar counties. As we noted in the FY 2005 IPPS final rule, we believe it is appropriate to allow facilities located in counties that began to be considered part of MSAs effective October 1, 2004, as a result of data from the 2000 census and implementation of the new labor market area definitions announced by OMB on June 6, 2003, an opportunity to obtain rural designations under applicable State law or regulations from their State legislatures or regulatory agencies. Similarly, we believe that when a CAH's status as being located in a Lugar county occurs as a result of changes that the CAH did not originate and that were beyond its control, such as a change in the OMB standards for labor market area definitions, it is appropriate for the CAH to be allowed a reasonable opportunity to reclassify to rural status. Thus, we are clarifying our policy to note that CAHs in counties that were designated as Lugar counties effective October 1, 2004, because of implementation of the new labor market area definitions announced by OMB on June 6, 2003, are to be given the same reclassification opportunity. Of course, the opportunity to reclassify would not be available to a CAH if the CAH itself were to initiate some change, such as a redesignation as urban rather than rural under State law or regulations, which would invalidate a prior § 412.103 reclassification. As a result, we are proposing to make changes to § 485.610(b) of the regulations that would permit CAHs located in a county that, in FY 2004, was not part of a Lugar county, but as of FY 2005 was included in such a county as a result of the new labor market area definitions, to maintain their CAH status until September 30, 2006. These changes, if adopted in final form, would permit CAHs in newly designated Lugar counties to continue participating in Medicare as CAHs until September 30, 2006. We expect that this will provide these CAHs with sufficient

time to seek reclassification as rural facilities under the current regulations at § 412.103. In other words, after October 1, 2006, these facilities must meet at least one of the criteria in § 412.103(a)(1) through (a)(3) to be eligible to reclassify from urban to rural status. Once the § 412.103 reclassification is approved, the facilities would meet the CAH rural location requirements in § 485.610(b)(2). In addition, consistent with the clarification of the policy, we are proposing to amend the regulations at § 412.103(a)(4) to reflect the proposed change in the text of the CAH location regulations at § 485.610(b)(3).

In addition, we are making a technical amendment to § 485.610(b)(1)(ii) by replacing the reference to 42 CFR 412.63(b) with 42 CFR 412.64(b). This proposed technical amendment would conform the regulations to reflect the rules governing geographic reclassification (found at § 412.64) that are already in place for fiscal years beginning on or after October 1, 2004 (69 FR 49242).

## 3. Proposed Policy Change Relating to Designation of CAHs as Necessary Providers

Section 405(h) of Pub. L. 108-173 amended section 1820(c)(2)(B)(i)(II) of the Act by adding language that terminated a State's authority to waive the location requirement for a CAH by designating the CAH as a necessary provider, effective January 1, 2006. Currently, a CAH is required to be located more than a 35-mile drive (or in the case of mountainous terrain or secondary roads, a 15-mile drive) from a hospital or another CAH, unless the CAH is certified by the State as a necessary provider of health care services to residents in the area. Under this provision, after January 1, 2006, States will no longer be able to designate a CAH based upon a determination that it is a necessary provider of health care. In addition, section 405(h) of Pub. L. 108-173 amended section 1820(h) of the Act to include a grandfathering provision for CAHs that are certified as necessary providers prior to January 1, 2006. In the FY 2005 IPPS final rule (69 FR 49220), we incorporated these amendments in our regulations at § 485.610 (c). Under that regulation, any CAH that is designated as a necessary provider in its State rural health plan prior to January 1, 2006, will be permitted to maintain its necessary provider designation. However, the regulations are limited to CAHs that were necessary providers as of January 1, 2006, and does not address the

situation where the CAH is no longer the same facility due to relocation, cessation of business, or a substitute facility. Currently, CMS Regional Offices make the decision for continued certification following relocation of a certified facility on a case-by-case basis.

The criteria used to qualify a CAH as a necessary provider were established by each State in its MRHFP. The State's MRHFP defined those CAHs that provide necessary services to a particular patient community in the event that the facility did not meet the required 35-mile (or 15-mile with stated exceptions) distance requirement from the nearest hospital or CAH. Each State's criteria are different, but the criteria share certain similarities and all define a necessary provider related to the facility location. Therefore, it becomes crucial to define whether the necessary provider designation remains pertinent in the event the certified CAH builds in a different location. Accordingly, the first step of this process is to determine whether building a new CAH facility in a different location is a replacement of an existing facility in essentially the same location, a relocation of the facility in a new location, or a cessation of business at one location and establishment of new business at another location.

#### a. Determination of the Relocation Status of a CAH

(1) *Replacement in the same location.* Under this approach, we are proposing that, if the CAH is constructing renovation of the same building in the same location, the renovation is considered to be a replacement of the same provider and not relocation. We would consider a construction of the CAH to be a replacement if construction was undertaken within 250 yards of the current building, as set by prior precedence in defining a hospital campus. In addition, if the replacement is constructed on land that is contiguous to the current CAH, and that land was owned by the CAH prior to enactment of Pub. L. 108-173, and the CAH is operating under a State-issued necessary provider waiver that is grandfathered by Pub. L. 108-173, we would consider that construction to be a replacement of the existing provider and the provisions of the grandfathered necessary provider designation would continue to apply regardless of when the construction or renovation work commenced and was completed.

(2) *Relocation of a CAH.* Under our proposed approach, if the CAH is constructing a new facility in a location that does not qualify the construction as replacement of an existing facility in the

same location under the criteria in the preceding paragraph, we would need to determine if this building would be a relocation of the current provider or a cessation of business at one location and establishment of a new business at another location. In the event of relocation, the CAH must ensure that the provider is functioning as essentially the same provider in order to operate under the same provider agreement. A provider that is changing location is considered to have closed the old facility if the original community or service area can no longer be expected to be served at the new location. The distance of the moved CAH from its old location will be considered, but it will not be the sole determining factor in granting the relocation of a CAH under the same provider agreement. For example, a specialty hospital may move a considerable distance and still care for generally the same inpatient population, while the relocation of a CAH at a relatively short distance within a rural area may greatly affect the community served.

In the event that CMS determines the rebuilding of the CAH in a different location to be a relocation, the provider agreement would continue to apply to the CAH at the new location. In addition to the relocation being within the same service area, serving the same population, the CAH would need to be providing essentially the same services with the same staff; that is, at least 75 percent of the same staff and 75 percent of the range of services are maintained in the new location as the same provider of services. We are proposing the use of a 75-percent threshold because we believe it indicates that the CAH that is relocating demonstrates that it will maintain a high level of involvement, as opposed to just a majority involvement, in the current community. We note that CMS has also used a 75-percent threshold in other provider designation policies such as the provider-based policies at § 413.65(e)(3)(ii).

In all cases of relocation, the CAH must continue to meet all of the CoPs found at 42 CFR Part 485, Subpart F, including location in a rural area as provided for at § 485.610.

(3) *Cessation of business at one location.* Under existing CMS policy, if the CAH relocation results in the cessation of furnishing services to the same community, we would not consider this to be a relocation, but instead would consider such a scenario a cessation of business at one location and establishment of a new business at another location. Cessation of business is a basis for voluntary termination of the provider agreement under 42 CFR

Part 489. If the proposed move constitutes a cessation of business, the CMS Regional Office may assist the provider in obtaining an agreement to participate under a new provider number. Furthermore, in such a situation, the regulations require the provider to give advanced notice to CMS and the public regarding its intent to stop providing medical services to the community. There is no appeals process for a voluntary termination. Under our current policies, the cessation of business by a CAH automatically terminates the CAH designation, regardless of whether the designation was obtained through a necessary provider determination.

#### b. Relocation of a CAH Using a Necessary Provider Designation To Meet the CoP for Distance

Once it has been determined that constructing a new facility will cause the CAH to relocate, the second step is to determine if the CAH that has a necessary provider designation can maintain this designation after relocating.

We recognize that § 485.610(c) relating to location relative to other facilities or necessary provider certification states that, after January 1, 2006, the "necessary provider" designation will no longer be used to waive the mileage requirements. In addition, CMS policy regarding a change of size or location of a provider states that there may be situations where the facility relocation is so far removed from the originally approved site that we would conclude that this is a different provider or supplier, for example, it has different employees, services, and patients. Furthermore, the language of section 1820(c)(2)(i) of the Act allows a State to waive the mileage requirement and designate a facility as a necessary provider of health care services to residents in the area. We have interpreted "services to residents in the area" to mean that the necessary provider designation does not automatically follow the provider if the facility relocates to a different location because it is no longer furnishing "services to patients" in the area determined to need a necessary provider.

We do not intend to change this policy. Our proposal, noted below, is intended to establish a methodology to be used by all CMS Regional Offices in making such a decision consistent with the statutory provisions concerning necessary provider designation.

In this proposed rule, we are proposing to amend the regulations at § 485.610 to set forth the criteria by

which those relocated CAHs designated as necessary providers that embarked on a replacement facility project before the sunset provision was enacted on December 8, 2003, but find that they cannot be operational in the replacement facility by January 1, 2006, can retain their necessary provider status. As required by statute, no additional CAHs will be certified as a necessary provider on or after January 1, 2006. We recognize that the statute refers to a facility designated as a CAH while relocation of a facility may result in a different building. However, to provide flexibility for a facility designated as a CAH whose location may change, but is essentially the same facility in a different location, we are proposing to amend the regulations to account for this scenario. Essentially, we recognize that the necessary provider designation may need to be applied to certain relocated CAHs. To this end, we are proposing to use the specified relocation criteria as the initial step to determine continuing necessary provider status. Specifically, in this proposed rule, we are proposing that, when a CAH is determined to have relocated, it may nonetheless continue to operate under its necessary provider designation that exempts the distance from other providers only if the following conditions are met:

(1) The relocated CAH has submitted an application to the State agency for relocation prior to the January 1, 2006, sunset date. If the CAH is applying under a grandfathered status under section 1820(h)(3) of the Act, the following items would need to be included in the application:

- A demonstration that the CAH will meet the same State criteria for the necessary provider designation that were established when the waiver was originally issued. For example, if the location waiver was granted because the CAH was located in a health professional shortage area (HPSA), the CAH must remain in that HPSA.

- Assurance that, after the relocation, the CAH will be servicing the same community and will be operating essentially the same services with essentially the same staff (that is, a demonstration that it is serving at least 75 percent of the same service area, with 75 percent of the same services offered, and staffed by 75 percent of the same staff, including medical staff, contracted staff, and employees). This is essentially the same criteria used in determining whether the CAH has relocated.

- Assurance that the CAH will remain in compliance with all of the CoPs at 42 CFR Part 485 in the new location. Compliance will be established with a

full survey in the new location to include the Life Safety Code and would include any off-site locations and rehabilitation or psychiatric distinct part units.

- A demonstration that construction plans were "under development" prior to the effective date of Pub. L. 108-173 (December 8, 2003) in the application the CAH submits to continue using a necessary provider designation. Supporting documentation could include the drafting of architectural specifications, the letting of bids for construction, the purchase of land and building supplies, documented efforts to secure financing for construction, expenditure of funds for construction, and compliance with state requirements for construction such as zoning requirements, application for a certificate of need, and architectural review. However, we recognize that it may not have been feasible for a CAH to have completed all of these activities noted above as examples prior to December 8, 2003. Thus, we expect the CMS Regional Offices to consider all of the criteria and make case-by-case determinations of whether a relocated CAH continues to warrant necessary provider status. We note that we have also used the above documentation guidelines in Publication 100-20 for grandfathered specialty hospitals to determine if construction plans were "under development."

In proposing these criteria, our intent in clarifying the sunset of the necessary provider designation provision is to allow CAHs to complete construction projects that were initiated prior to the enactment of Pub. L. 108-173, which we believe is consistent with the statutory language of section 405(h) of Pub. L. 108-173.

(2) In the application, the CAH demonstrates that the replacement will facilitate the access to care and improve the delivery of services to Medicare beneficiaries. We are soliciting comments on how a necessary provider CAH should demonstrate that the replacement will improve access to care.

These guidelines are meant to be applied to the relocated CAH that meets the CoP in the new location and wishes to maintain a necessary provider designation in order to meet the distance requirement at § 485.610(c). They are not meant to preclude a CAH from relocating at any time if the CAH does not seek to maintain the necessary provider designation. Any CAH may relocate at any time if the CAH meets the definition of relocation and can meet all the CoPs at 42 CFR part 485, subpart F, as determined by the CMS Regional Offices on a case-by-case basis.

Accordingly, we are proposing to revise § 485.610 of the regulations by adding a new paragraph (d) to incorporate this proposal. Specifically, the proposed new paragraph (d) would specify that a CAH may maintain its necessary provider certification provided for under § 485.610(c) if the new facility meets the requirements for either a replacement facility that is constructed within 250 yards of the current building or contiguous to the current CAH on land owned by the CAH prior to December 8, 2003; or as a relocated CAH if, at the relocated site, the CAH provides essentially (75 percent) the same services to the same service area with essentially the same staff. The CAH that plans to relocate must provide documentation demonstrating that its plans to rebuild in the relocated area were undertaken prior to December 8, 2003. We are also proposing that if a CAH that has a necessary provider certification from the State places a new facility in service on or after January 1, 2006, and does not meet either the requirements for a replacement facility or a relocated facility, as specified in the regulations, the action will be considered a cessation of business.

#### VIII. Payment for Blood Clotting Factor Administered to Hemophilia Inpatients

(If you choose to comment on issues in this section, please include the caption "Blood Clotting Factor" at the beginning of your comment.)

Section 1886(a)(4) of the Act excludes the costs of administering blood clotting factors to individuals with hemophilia from the definition of "operating costs of inpatient hospital services." Section 6011(b) of Pub. L. 101-239 (the Omnibus Budget Reconciliation Act of 1989) states that the Secretary of Health and Human Services shall determine the payment amount made to hospitals under Part A of Title XVIII of the Act for the costs of administering blood clotting factors to individuals with hemophilia by multiplying a predetermined price per unit of blood clotting factor by the number of units provided to the individual. The regulations governing payment for blood clotting factor furnished to hospital inpatients are located in §§ 412.2(f)(8) and 412.115(b).

Consistent with the rates paid under section 1842(o) of the Act for Medicare Part B drugs (including blood clotting factor furnished to individuals who are not inpatients), in FY 2005, we made payments for blood clotting factors furnished to inpatients at 95 percent of average wholesale price (AWP). Section 303 of Pub. L. 108-173 established

section 1847A of the Act which requires that almost all Medicare Part B drugs not paid on a cost or prospective basis be paid at 106 percent of average sales price (ASP) and provided for payment of a furnishing fee for blood clotting factor, effective January 1, 2005. On November 15, 2004, we issued regulations in the *Federal Register* (69 FR 66299) that implemented the provisions of section 1847A for payment for Medicare Part B drugs using the 106 percent of ASP payment methodology and for payment of the furnishing fee. These regulations are codified at 42 CFR 410.63 and subpart K of Part 414.

To ensure consistency in payment for Medicare Part A and Medicare Part B drugs, we are proposing to revise §§ 412.2(f)(8) and 412.115(b) of the regulations governing the IPPS to specify that, for discharges occurring on or after October 1, 2005, the additional payment for the blood clotting factor administered to hemophilia inpatients is made based on the average sales price methodology specified in subpart K of 42 CFR part 414 and the furnishing fee specified in § 410.63.

The proposed payment amount per unit and the unit payment for the furnishing fee for blood clotting factor administered to hospital inpatients who have hemophilia that we are proposing to apply under the IPPS for FY 2006 are specified in section V. of the Addendum to this proposed rule.

#### IX. MedPAC Recommendations

(If you choose to comment on issues in this section, please include the caption "MedPAC Recommendations" at the beginning of your comment.)

We are required by section 1886(e)(4)(B) of the Act to respond to MedPAC's IPPS recommendations in our annual proposed IPPS rule. In March 2005, MedPAC released the following two reports to Congress, which included IPPS recommendations: "Report to Congress: Medicare Payment Policy" and "Report to Congress: Physician-Owned Specialty Hospitals." We have reviewed each of these reports and have given them careful consideration in conjunction with the policies set forth in this document. These recommendations and our responses are set forth below. For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653-7220, or visit MedPAC's Web site at: <http://www.medpac.gov>.

##### A. Medicare Payment Policy

MedPAC's Recommendation 2A-1 concerning the update factor for inpatient hospital operating costs and

for hospitals and distinct-part hospital units excluded from the IPPS is discussed in Appendix B to this proposed rule.

*Recommendation 4A:* The Congress should establish a quality incentive payment policy for hospitals in Medicare.

*Response:* We are exploring provider payment policies that link quality to Medicare reimbursement in a cost neutral manner under our demonstration authority. We currently have demonstrations underway that will identify and examine the components of such a policy.

##### B. Physician-Owned Specialty Hospitals

*Recommendation 1:* The Secretary should improve payment accuracy in the hospital inpatient PPS by:

- Refining the current DRGs to more fully capture differences in severity of illness among patients.
- Basing the DRG relative weights on the estimated cost of providing care rather than on charges.
- Basing the weights on the national average of hospitals' relative values in each DRG.

In making this recommendation, MedPAC recognized several implementation issues regarding potential low volume DRGs and potential changes in hospital coding and reporting behavior. In particular, MedPAC recommended that the Secretary project the likely effect of reporting improvements on total payments and make an offsetting adjustment to the standardized amounts.

*Response:* We expect to make changes to the DRGs to better reflect severity of illness. The following discussion briefly describes some of the options we are considering. As we discussed in section II.B. of this preamble, there is a standard list of diagnoses that are considered complications or comorbidities (CC). These conditions, when present as a secondary diagnosis, may result in payment using a higher weighted DRG. Currently, 3,285 diagnosis codes on this list, and 121-paired DRGs are differentiated based on the presence or absence of a CC. Our analysis indicates that the majority of cases assigned to these DRGs fall into the "with CC" DRGs. We believe that it is possible that the CC distinction has lost much of its ability to differentiate the resource needs of patients, given the long period of time since the original CC list was developed and the incremental nature of subsequent changes in an environment of major changes in the way inpatient care is delivered.

We are planning a comprehensive and systematic review of the CC list for the IPPS rule for FY 2007. As part of this process, we will consider revising the standard for determining when a condition is a CC. For instance, we expect to use an alternative to the current method of classifying a condition as a CC based on how it affects the length of stay of a case. Similar to other aspects of the DRG system, we expect to consider the effect of a specific secondary diagnosis on the charges or costs of a case to evaluate whether to include the condition on the CC list.

Another option we are considering is a selective review of the specific DRGs, such as cardiac, orthopedic, and surgical DRGs, that are alleged to be overpaid and that create incentives for physicians to form specialty hospitals. We expect to selectively review particular DRGs based on statistical criteria such as the range or standard deviation among charges for cases included within the DRG. It is possible specific DRGs have high variation in resource costs and that a better recognition of severity would reduce incentives for hospitals to select the least costly and most profitable patients within these DRGs. Any analysis we perform would balance the goal of making payment based on an accurate coding system that recognizes severity of illness with the premise that the IPPS is a system of payment based on averages. We agree with MedPAC that, in refining the DRGs, we must continue to be mindful of issues such as the instability of small volume DRGs and the potential impact of changes in hospital coding and reporting behavior. As MedPAC noted, previous refinements to DRG definitions have led to unanticipated increases in payment because of more complete reporting of patients' diagnoses and procedures. As part of our analysis of possible refinements to the DRGs, we have concerns with our ability to account for the effect of changes in coding behavior on payment.

We are also considering the use of alternative DRG systems such as the all patient refined diagnosis related groups (APR-DRGs) in place of Medicare's current DRG system. The APR-DRGs have a greater number of DRGs that could relate payment rates more closely to patient resource needs, and thus reduce the advantages of selection of desirable patients within DRGs by specialty hospitals. However, any large change to the DRGs could have substantial effects across all hospitals. Therefore, we believe we must thoroughly analyze such options and

their impacts on the various types of hospitals before making any proposal. In addition, as noted above, we are concerned about our ability to account for the effect of changes in coding behavior on payment if we were to significantly expand the number of DRGs. Therefore, in light of the above, we must consider how to mitigate the risk of paying significantly more for the alternatives discussed above while measuring the benefit for Medicare beneficiaries.

In response to MedPAC's recommendation that we improve payment accuracy by basing the DRG relative weights on the estimated cost of providing care rather than on charges, we note that we do not have access to any information that would provide a direct measure of the costs of individual discharges. Claims filed by hospitals do provide information on the charges for individual cases. At present, we use this information to set the relative weights for the DRGs. We obtain information on costs from the hospital cost reports, but this information is at best at the department level; it does not include information about the costs of individual cases. Consequently, the most straightforward way to estimate costs of an individual case is to calculate a cost-to-charge ratio for some body of claims (for example, for a hospital's radiology department), and then apply this ratio to the charges for that department.

However, this procedure is not without disadvantages because assignment of costs to departments is not uniform from hospital to hospital, given the variability of hospital accounting systems, and because cost information is not available until a year or more after claims information. In addition, the application of a cost-to-charge ratio that is uniform across any body of claims may result in biased estimates of individual costs if hospital charging behavior is not uniform. Thus, it is alleged that hospitals mark up lower cost services less than higher cost services, and to the extent they do so, application of a uniform cost-to-charge ratio will result in underestimates of the costs of higher cost services and vice versa. We use estimated costs, based on hospital-specific, department-level cost-to-charge ratios, in the hospital outpatient prospective payment system. The accuracy of this procedure has generated some concern, and without further analysis, the extent to which accuracy of inpatient payments would be improved by adopting this method is not obvious.

We will closely analyze the impact of such a change from the current charge-

based DRG weights to cost-based DRG weights. We note that such a change is complex and would require further analysis. With this in mind, CMS will consider the following issues in performing this analysis:

- The effect of using cost-to-charge ratio data, which is frequently older than the claims data we use to set the charge-based weights, and the impact on these data of any changes in hospitals' charging behavior that resulted from the recent modifications to the outlier payment methodology (68 FR 34494; June 9, 2003);

- Whether using this method has different effects on DRGs that have experienced substantial technological change compared to DRGs with more stable procedures for care;

- The effect of using a routine cost-to-charge ratio and department-level ancillary cost-to-charge data as compared to either an overall hospital cost-to-charge ratio or a routine cost-to-charge ratio and an overall ancillary cost-to-charge ratio, particularly in considering earlier studies performed for the Prospective Payment Assessment Commission, the predecessor to MedPAC, indicating that an overall ancillary cost-to-charge ratio led to more accurate estimates of case level costs;<sup>5</sup>

- Whether developing relative weights by estimating costs from charges multiplied by cost-to-charge ratios versus whether the sole use of charges improves payment accuracy; and

- How payments to hospitals would be affected by MedPAC's suggestion intended to simplify recalibration, to recalibrate weights based on costs every few years, and to calculate an adjustment to charge-based weights for the intervening periods.

In response to the recommendation that the Secretary should improve payment accuracy in the IPPS by basing the weights on the national average of hospitals' relative values in each DRG, we note that presently we set the relative weights using standardized charges (adjusted to remove the effects of differences in area wage costs and in IME and DSH payments). In contrast, MedPAC proposes that Medicare set the DRG relative weights using unstandardized, hospital-specific charges. Each hospital's unstandardized

<sup>5</sup> Cost Accounting for Health Care Organizations, Technical Report Series, 1-93-01, ProPAC, March 1993, page 6. Using a cost report package, the contractor simulated single and multiple ancillary cost-to-charge ratios and found that inpatient ancillary costs were 2.5 percent understated relative to what hospitals thought their costs were with the single cost-to-charge ratio, and 4.9 percent understated with the multiple cost-to-charge ratios.

charges would become the basis for determining the relative weights for the DRGs for that hospital. These relative weights would be adjusted by the hospital's case-mix index when combining each hospital's relative weights to determine a national relative weight for all hospitals. This adjustment is designed to reduce the influence that a single hospital's charge structure could have on determining the relative weight when it provides a high proportion of the total, nationwide number of discharges in a particular DRG.

We will analyze the possibility of moving to hospital specific relative values while conducting the analysis outlined above in response to the recommendations regarding improved severity adjustment and using charges adjusted to estimated cost using cost-to-charge ratios to set the relative weights. We note that we use this method at present to set weights for the LTCH PPS. We use this method for LTCHs because of the small volume of providers and the possibility that only a few providers provide care for certain DRGs. The charges of one or a few hospitals could thus materially affect the relative weights for these DRGs. In this event, looking at relative values within hospitals first can smooth out the hospital-specific effects on DRG weights. A 1993 Rand Report on hospital specific relative values noted the possibility of DRG compression (or the undervaluing of high-cost cases and the overvaluing of low-cost cases) if we were to shift to a hospital-specific relative value method from the current method for determining DRG weights. We will need to consider whether the resultant level of compression is appropriate.

**Recommendation 2:** The Congress should amend the law to give the Secretary authority to adjust the DRG relative weights to account for differences in the prevalence of high-cost outlier cases.

**Response:** While MedPAC's language suggests that the law would need to be amended for us to adopt this suggestion, we believe the statute may give the Secretary broad discretion to consider all factors that change the relative use of hospital resources in calculating the DRG relative weights. We believe that MedPAC's recommendation springs from a concern that including high-charge outlier cases in the relative-weight calculation results in overvaluing DRGs that have a high prevalence of outlier cases. However, we believe that excluding outlier cases completely in calculating the relative weights would be inappropriate. Doing

so would undervalue the relative weight for a DRG with a high percentage of outliers by not including that portion of hospital charges that is above the median but below the outlier threshold. We believe it would be preferable to adjust the charges used for calculating the relative weights to exclude the portion of charges above the outlier threshold but to include the charges up to the outlier threshold. At this time, we expect to further analyze these ideas as we consider the other changes recommended by MedPAC and welcome public comments on this issue.

Finally, we believe that the recommendations made by MedPAC, or some variants of them, have significant promise in improving the accuracy of rates in the inpatient payment prospective payment system. We agree with MedPAC that they should be pursued even in the absence of concerns about the proliferation of specialty hospitals. However, until we have completed further analysis of these options and their effects, we cannot predict the extent to which they will provide payment equity between specialty and general hospitals. In fact, we must caution that any system that groups cases and provides a standard payment for cases in the group (that is, the IPPS among other Medicare payment systems) will always present some opportunities for providers to specialize in cases where they believe margins may be better. Improving payment accuracy should reduce these opportunities, and it may do so to the extent that Medicare payments no

longer provide a significant impetus to further development of specialty hospitals.

*Recommendation 3:* The Congress and the Secretary should implement the case-mix measurement and outlier policies over a transitional period.

*Response:* Before proposing any changes to the DRGs, we would need to model the impact of any specific proposal and our authority under the statute to determine whether any changes should be implemented immediately or over a period of time. We do note that with regard to revising the existing DRG system with a new DRG system that fully captures differences in severity, there would likely be unique complexities in creating a transition from one DRG system to another. Our payment would be a blend of two different relative weights that would have to be determined using two different systems of DRGs. The systems and legal implications of such a transition or any other major change to the DRGs could be significant.

#### C. Other MedPAC Recommendations

MedPAC also made the following recommendations that we will address in our Report to Congress on Specialty Hospitals:

*Recommendation 4:* The Congress should extend the current [Pub. L. 108-173] moratorium on physician-owned single specialty hospitals until January 1, 2007.

*Recommendation 5:* The Congress should grant the Secretary the authority to allow gainsharing arrangements

between physicians and hospitals and to regulate those arrangements to protect the quality of care and minimize financial incentives that could affect physician referrals.

#### X. Other Required Information

##### A. Requests for Data From the Public

In order to respond promptly to public requests for data related to the prospective payment system, we have established a process under which commenters can gain access to raw data on an expedited basis. Generally, the data are available in computer tape or cartridge format; however, some files are available on diskette as well as on the Internet at <http://www.cms.hhs.gov/providers/hipps>. Data files and the cost for each file, if applicable, are listed below. Anyone wishing to purchase data tapes, cartridges, or diskettes should submit a written request along with a company check or money order (payable to CMS-PUF) to cover the cost to the following address: Centers for Medicare & Medicaid Services, Public Use Files, Accounting Division, P.O. Box 7520, Baltimore, MD 21207-0520, (410) 786-3691. Files on the Internet may be downloaded without charge.

##### 1. CMS Wage Data

This file contains the hospital hours and salaries for FY 2002 used to create the FY 2006 prospective payment system wage index. The file will be available by the beginning of February for the NPRM and the beginning of May for the final rule.

| Processing Year | Wage Data Year | PPS Fiscal Year |
|-----------------|----------------|-----------------|
| 2005            | 2002           | 2006            |
| 2004            | 2001           | 2005            |
| 2003            | 2000           | 2004            |
| 2002            | 1999           | 2003            |
| 2001            | 1998           | 2002            |
| 2000            | 1997           | 2001            |
| 1999            | 1996           | 2000            |
| 1998            | 1995           | 1999            |
| 1997            | 1994           | 1998            |
| 1996            | 1993           | 1997            |
| 1995            | 1992           | 1996            |
| 1994            | 1991           | 1995            |
| 1993            | 1990           | 1994            |
| 1992            | 1989           | 1993            |
| 1991            | 1988           | 1992            |

These files support the following:

- NPRM published in the **Federal Register**.
- Final Rule published in the **Federal Register**.

*Media:* Diskette/most recent year on the Internet.

*File Cost:* \$165.00 per year.

*Periods Available:* FY 2006 PPS Update.

## 2. CMS Hospital Wages Indices (Formerly: Urban and Rural Wage Index Values Only)

This file contains a history of all wage indices since October 1, 1983.

*Media:* Diskette/most recent year on the Internet.

*File Cost:* \$165.00 per year.

*Periods Available:* FY 2006 PPS Update.

## 3. FY 2006 Proposed Rule Occupational Mix Adjusted and Unadjusted AHW by Provider

This file includes each hospital's adjusted and unadjusted average hourly wage.

*Media:* Internet.

*Periods Available:* FY 2006 PPS Update.

## 4. FY 2006 Proposed Rule Occupational Mix Adjusted and Unadjusted AHW and Pre-Reclassified Wage Index by CBSA

This file includes each CBSA's adjusted and unadjusted average hourly wage.

*Media:* Internet.

*Periods Available:* FY 2006 PPS Update.

## 5. Provider Occupational Mix Adjustment Factors for Each Occupational Category

This file contains each hospital's occupational mix adjustment factors by occupational category.

*Media:* Internet.

*Periods Available:* FY 2006 PPS Update.

## 6. PPS SSA/FIPS MSA State and County Crosswalk.

This file contains a crosswalk of State and county codes used by the Social Security Administration (SSA) and the Federal Information Processing Standards (FIPS), county name, and a historical list of Metropolitan Statistical Areas (MSAs).

*Media:* Diskette/Internet.

*File Cost:* \$165.00 per year.

*Periods Available:* FY 2006 PPS Update.

## 7. Reclassified Hospitals New Wage Index (Formerly: Reclassified Hospitals by Provider Only)

This file contains a list of hospitals that were reclassified for the purpose of assigning a new wage index. Two versions of these files are created each year. They support the following:

- NPRM published in the **Federal Register**.
- Final Rule published in the **Federal Register**.

*Media:* Diskette/Internet.

*File Cost:* \$165.00 per year.

*Periods Available:* FY 2006 PPS Update.

## 8. PPS-IV to PPS-XII Minimum Data Set

The Minimum Data Set contains cost, statistical, financial, and other information from Medicare hospital cost reports. The data set includes only the most current cost report (as submitted, final settled, or reopened) submitted for a Medicare participating hospital by the Medicare fiscal intermediary to CMS. This data set is updated at the end of each calendar quarter and is available on the last day of the following month.

*Media:* Tape/Cartridge.

*File Cost:* \$770.00 per year.

|          | Periods beginning on or after | and before |
|----------|-------------------------------|------------|
| PPS-IV   | 10/01/86                      | 10/01/87   |
| PPS-V    | 10/01/87                      | 10/01/88   |
| PPS-VI   | 10/01/88                      | 10/01/89   |
| PPS-VII  | 10/01/89                      | 10/01/90   |
| PPS-VIII | 10/01/90                      | 10/01/91   |
| PPS-IX   | 10/01/91                      | 10/01/92   |
| PPS-X    | 10/01/92                      | 10/01/93   |
| PPS-XI   | 10/01/93                      | 10/01/94   |
| PPS-XII  | 10/01/94                      | 10/01/95   |

(Note: The PPS-XIII, PPS-XIV, PPS-XV, PPS-XVI, PPS-XVII, PPS-XVIII, and PPS-XIX Minimum Data Sets are part of the PPS-XIII, PPS-XIV, PPS-XV, PPS-XVI, PPS-XVII, PPS-XVIII, PPS-XIX, and PPS-XX Hospital Data Set Files (refer to item 7 below).)

## 9. PPS-IX to PPS-XII Capital Data Set

The Capital Data Set contains selected data for capital-related costs, interest expense and related information and complete balance sheet data from the Medicare hospital cost report. The data set includes only the most current cost report (as submitted, final settled or

reopened) submitted for Medicare certified hospital by the Medicare fiscal intermediary to CMS. This data set is updated at the end of each calendar quarter and is available on the last day of the following month.

*Media:* Tape/Cartridge.

*Fine Cost:* \$770.00 per year.

|         | Periods beginning on or after | and before |
|---------|-------------------------------|------------|
| PPS-IX  | 10/01/91                      | 10/01/92   |
| PPS-X   | 10/01/92                      | 10/01/93   |
| PPS-XI  | 10/01/93                      | 10/01/94   |
| PPS-XII | 10/01/94                      | 10/01/95   |

(Note: The PPS-XIII, PPS-XIV, PPS-XV, PPS-XVI, PPS-XVII, PPS-XVIII, and PPS-XIX Capital Data Sets are part of the PPS-XIII, PPS-XIV, PPS-XV, PPS-XVI, PPS-XVII, PPS-XVIII, PPS-XIX, and PPS-XX Hospital Data Set Files (refer to item 7 below).)

#### 10. PPS-XIII to PPS-XX Capital Data Set

The file contains costs, statistical, financial, and other data from the Medicare Hospital Cost Report. The data set includes only the most current cost report (as submitted, final settled or reopened) submitted for Medicare-

certified-hospital by the Medicare fiscal intermediary to CMS. This data set is updated at the end of each calendar quarter and is available on the last day of the following month.

*Media:* Diskette/Internet.

*Fine Cost:* \$2,500.00.

|           | Periods beginning on or after | and before |
|-----------|-------------------------------|------------|
| PPS-XIII  | 10/01/95                      | 10/01/96   |
| PPS-XIV   | 10/01/96                      | 10/01/97   |
| PPS-XV    | 10/01/97                      | 10/01/98   |
| PPS-XVI   | 10/01/98                      | 10/01/99   |
| PPS-XVII  | 10/01/99                      | 10/01/00   |
| PPS-XVIII | 10/01/00                      | 10/01/01   |
| PPS-XIX   | 10/01/01                      | 10/01/02   |
| PPS-XX    | 10/01/02                      | 10/01/03   |

#### 11. Provider-Specific File

This file is a component of the PRICER program used in the fiscal intermediary's system to compute DRG payments for individual bills. The file contains records for all prospective payment system eligible hospitals, including hospitals in waiver States, and data elements used in the prospective payment system recalibration processes and related activities. Beginning with December 1988, the individual records were enlarged to include pass-through per diems and other elements.

*Media:* Diskette/Internet.

*File Cost:* \$265.00.

*Periods Available:* FY 2006 PPS Update.

#### 12. CMS Medicare Case-Mix Index File

This file contains the Medicare case-mix index by provider number as published in each year's update of the Medicare hospital inpatient prospective payment system. The case-mix index is a measure of the costliness of cases treated by a hospital relative to the cost of the national average of all Medicare hospital cases, using DRG weights as a measure of relative costliness of cases. Two versions of this file are created each year. They support the following:

- NPRM published in the **Federal Register**.
- Final rule published in the **Federal Register**.

*Media:* Diskette/most recent year on Internet.

*Price:* \$165.00 per year/per file.

*Periods Available:* FY 1985 through FY 2006.

#### 13. DRG Relative Weights (Formerly Table 5 DRG)

This file contains a listing of DRGs, DRG narrative description, relative weights, and geometric and arithmetic mean lengths of stay as published in the **Federal Register**. The hard copy image has been copied to diskette. There are two versions of this file as published in the **Federal Register**:

- NPRM.
  - Final rule.
- Media:* Diskette/Internet.  
*File Cost:* \$165.00.

*Periods Available:* FY 2006 PPS Update.

#### 14. PPS Payment Impact File

This file contains data used to estimate payments under Medicare's hospital inpatient prospective payment systems for operating and capital-related costs. The data are taken from various sources, including the Provider-Specific File, Minimum Data Sets, and prior

impact files. The data set is abstracted from an internal file used for the impact analysis of the changes to the prospective payment systems published in the **Federal Register**. This file is available for release 1 month after the proposed and final rules are published in the **Federal Register**.

*Media:* Diskette/Internet.

*File Cost:* \$165.00.

*Periods Available:* FY 2006 PPS Update.

#### 15. AOR/BOR Tables

This file contains data used to develop the DRG relative weights. It contains mean, maximum, minimum, standard deviation, and coefficient of variation statistics by DRG for length of stay and standardized charges. The BOR tables are "Before Outliers Removed" and the AOR is "After Outliers Removed." (Outliers refers to statistical outliers, not payment outliers.)

Two versions of this file are created each year. They support the following:

- NPRM published in the **Federal Register**.
- Final rule published in the **Federal Register**.

*Media:* Diskette/Internet.

*File Cost:* \$165.00.

*Periods Available:* FY 2006 PPS Update.

#### 16. Prospective Payment System (PPS) Standardizing File

This file contains information that standardizes the charges used to calculate relative weights to determine payments under the prospective payment system. Variables include wage index, cost-of-living adjustment (COLA), case-mix index, disproportionate share, and the Metropolitan Statistical Area (MSA). The file supports the following:

- NPRM published in the **Federal Register**.
- Final rule published in the **Federal Register**.

*Media:* Internet.

*File Cost:* No charge.

*Periods Available:* FY 2006 PPS Update.

For further information concerning these data tapes, contact the CMS Public Use Files Hotline at (410) 786-3691.

Commenters interested in obtaining or discussing any other data used in constructing this rule should contact Mark Hartstein at (410) 786-4548.

#### *B. Collection of Information Requirements*

Under the Paperwork Reduction Act of 1995 (PRA), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to evaluate fairly whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

Therefore, we are soliciting public comments on each of these issues for the information collection requirements discussed below.

The following information collection requirements included in this proposed rule and their associated burdens are subject to the PRA.

#### Section 412.64 Federal Rates for Inpatient Operating Costs for Federal Fiscal Year 2005 and Subsequent Fiscal Years

Section 412.64(d)(2) requires hospitals to submit quality data on a

quarterly basis to CMS, as specified by CMS. In this document, we are setting out the specific requirements related to the data that must be submitted. The burden associated with this section is the time and effort associated with collecting, copying and submitting this data. We estimate that there will be approximately 4,000 respondents per year. Of this number, approximately 3,600 hospitals are JCAHO accredited and are currently collecting measures and submitting data to the JCAHO on a quarterly basis. Of the JCAHO accredited hospitals, approximately 3,300 are collecting the same measures CMS will be collecting for public reporting. Therefore, there will be no additional burden for these hospitals. Only approximately 300 of the JCAHO accredited hospitals will need to collect an additional topic in addition to the data already collected for maintaining JCAHO accreditation. In addition, there are approximately 400 hospitals that do not participate in the JCAHO accreditation process. These hospitals will have the additional burden of collecting data on all three topics.

For JCAHO accredited hospitals that are not already collecting all of the required measures, we estimate it will take 25 hours per month per topic for collection. We expect the burden for all of these hospitals to total 102,000 hours per year, including time allotted for overhead. For non-JCAHO accredited hospitals, we estimate the burden to be 136,000 hours per year. This estimate also includes overhead. The total number of burden hours for all hospitals combined is 238,000. The number of responders will vary according to the level of voluntary participation. One hundred percent of the data may be collected electronically.

In the preamble to this proposed rule, we are proposing additional validation criteria to ensure that the quality data being sent to CMS are accurate. Our validation process requires participating hospitals to submit five charts per quarter. The burden associated with this requirement is the time and effort associated with collecting, copying, and submitting these charts. It will take approximately 2 hours per hospital to submit the 5 charts per quarter. There will be a total of approximately 19,000 charts (3,800 hospitals × charts per hospital) submitted by the hospitals to CMS per quarter for a total burden of 7,600 hours per quarter and a total annual burden of 30,400 hours.

#### Section 413.65 Requirements for a Determination That a Facility or an Organization Has Provider-Based Status

Proposed § 413.65(b)(3)(i) requires potential main providers seeking a determination of provider-based status for a facility that is located on the campus of the potential main provider to submit an attestation stating that the facility meets the criteria in paragraph (d) of § 413.65 and, if it is a hospital, to also attest that it will fulfill the obligations of hospital outpatient departments and hospital-based entities described in paragraph (g) of § 413.65. We are also proposing to amend this paragraph to require that in the case of a facility that is operated as a joint venture, the potential main provider attest that it will comply with the requirements of paragraph (f) of § 413.65.

Proposed § 413.65(b)(3)(ii) provides that, if a facility is not located on the campus of the potential main provider, the potential main provider must submit an attestation stating that the facility meets the criteria in paragraph (d) and (e) of § 413.65 and, if it is a hospital, to also attest that it will fulfill the obligations of hospital outpatient departments and hospital-based entities described in paragraph (g) of § 413.65. If the facility is operated under a management contract, the potential main provider also attest that the facility meets the requirements of paragraph (h) of § 413.65.

Proposed § 413.65(e)(3) requires that a facility or organization for which provider-based status is sought that is not located on the campus of a potential main provider must (i) be located within a 35-mile radius of the campus of the hospital or CAH that is the potential main provider, or (ii) be owned and operated by a hospital or CAH that has a disproportionate share adjustment (as determined under § 412.106 of this chapter) greater than 11.75 percent and is described in § 412.106(c)(2) of this chapter implementing section 1886(e)(5)(F)(i)(II) of the Act and is (A) owned or operated by a unit of State or local government, (B) a public or nonprofit corporation formally granted governmental powers by a unit of State or local government; or (C) a private hospital having a contract with a State or local government that includes the operation of clinics located off the main campus of the hospital to assure access in a well-defined service area to health care services for low-income individuals who are not entitled to benefits under Medicare (or medical assistance under a Medicaid State plan), or (iii) demonstrate a high level of integration

with the main provider by showing that it meets all of the other provider-based criteria and demonstrate that it serves the same patient population as the main provider, by submitting certain records showing the information contained in paragraphs (e)(3)(iii)(A) and (e)(3)(iii)(B) of this section or (iv) if the facility or organization is unable to meet the criteria in paragraph (e)(3)(iii)(A) or paragraph (e)(3)(iii)(B) because it was not in operation during all of the 12-month period described in paragraph (e)(3)(iii), be located in a zip code area included among those that, during all of the 12-month period described in paragraph (e)(3)(iii), accounted for at least 75 percent of the patients served by the main provider, or (v) in the case of another RHC, (A) be an RHC that is otherwise qualified as a provider-based entity of a hospital that has fewer than 50 beds, and (B) the hospital with which the facility or organization has a provider-based relationship be located in a rural area, and (vi) be located in the same State as the main provider or, when consistent with the laws of both States, in adjacent States.

Section 413.65(g)(7) provides that when a Medicare beneficiary is treated in a hospital outpatient department that is not located on the main provider's campus, the treatment is not required to be provided by the antidumping rules of section 489.24, and the beneficiary will incur a coinsurance liability for an outpatient visit to the hospital, as well as for the physician service the hospital must provide written notice to the beneficiary, before delivery of services of the amount of the beneficiary's potential financial liability. If the exact type and extent of care is not known, the hospital must provide written notice to the beneficiary that explains that the beneficiary will incur a coinsurance liability to the hospital that he or she would not incur if the facility were not provider-based, an estimate based on typical or average charges for visits to the facility, and a statement that the patient's actual liability will depend upon the actual services furnished by the hospital.

While the information collection requirements contained in this section are subject to the PRA, the burden associated with this requirement is currently approved under OMB approval no. 0938-0798.

#### Section 485.610 Condition of Participation: Status and Location

In order to be considered a relocation, we are proposing under § 485.610(d)(2)(ii) to require a CAH to provide documentation demonstrating that its plans to rebuild in a relocated

area were undertaken prior to December 8, 2003. This requirement does impose an information collection requirement. However, because this burden would be imposed on less than 10 CAHs, under 5 CFR 1320.2(c), these requirements are exempt from the PRA.

We have submitted a copy of this proposed rule to OMB for its review of the information collection requirements described above.

If you have any comments on the information collection and recordkeeping requirements, please mail the copies directly to the following:

Centers for Medicare & Medicaid Services, Office of Strategic Operations and Regulatory Affairs, Security and Standards Group, Regulations Development and Issuances Group, Room C4-24-02, 7500 Security Boulevard, Baltimore, MD 21244-1850, Attn.: James Wickliffe, CMS-1500-P.  
Office of Information and Regulatory Affairs, Office of Management and Budget, Room 3001, New Executive Office Building, Washington, DC 20503, Attn: Christopher Martin, CMS Desk Officer.

Comments submitted to OMB may also be e-mailed to the following address: [Christopher\\_Martin@omb.eop.gov](mailto:Christopher_Martin@omb.eop.gov), or faxed to OMB at (202) 395-6974 or (202) 395-5167. Attn.: CMS-1500-P.

#### C. Public Comments

Because of the large number of items of correspondence we normally receive on a proposed rule, we are not able to acknowledge or respond to them individually. However, in preparing the final rule, we will consider all comments concerning the provisions of this proposed rule that we receive by the date and time specified in the DATES section of this preamble and respond to those comments in the preamble to that rule. We emphasize that section 1886(e)(5) of the Act requires the final rule for FY 2006 to be published by August 1, 2005, and we will consider only those comments that deal specifically with the matters discussed in this proposed rule.

#### List of Subjects

##### 42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping requirements, Rural area, X-rays.

##### 42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare,

Puerto Rico, Reporting and recordkeeping requirements.

##### 42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

##### 42 CFR Part 415

Health facilities, Health professions, Medicare, and reporting and recordkeeping requirements.

##### 42 CFR Part 419

Hospitals, Medicare, Reporting and recordkeeping requirements.

##### 42 CFR Part 422

Health maintenance organizations (HMO), Medicare+Choice, Provider sponsored organizations (PSO).

##### 42 CFR Part 485

Grant programs-health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements.

For the reasons stated in the preamble of this proposed rule, the Centers for Medicare & Medicaid Services is proposing to amend 42 CFR chapter IV as follows:

#### PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

A. Part 405 is amended as follows:

1. The authority citation for Part 405 continues to read as follows:

**Authority:** Secs. 1102, 1861, 1862(a), 1871, 1874, 1881, and 1886(k) of the Social Security Act (42 U.S.C. 1302, 1395x, 1395y(a), 1395hh, 1395kk, 1395rr, and 1395ww(k)), and sec. 353 of the Public Health Service Act (42 U.S.C. 263a).

##### § 405.2468 [Amended]

2. In § 405.2468(f)(1), the reference “§ 413.86(b)” is removed and the reference “§ 413.75(b)” is added in its place.

#### PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

B. Part 412 is amended as follows:

1. The authority citation for Part 412 continues to read as follows:

**Authority:** Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

##### § 412.1 [Amended]

2. In § 412.1(a)(1), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

##### § 412.2 [Amended]

3. In § 412.2—

a. In paragraph (f)(7), remove the reference “§ 413.86” and add in its place the reference “§§ 413.75 through 413.83”.

b. At the end of paragraph (f)(8), add the following sentence: “For discharges occurring on or after October 1, 2005, the additional payment is made based on the average sales price methodology specified in Subpart K, Part 414 of this subchapter and the furnishing fee specified in § 410.63 of this subchapter.”

4. Section 412.64 is amended by revising paragraph (k)(2) to read as follows:

**§ 412.64 Federal rates for inpatient operating costs for Federal fiscal year 2005 and subsequent fiscal years.**

\* \* \* \* \*

(k) *Midyear corrections to the wage index.*

\* \* \* \* \*

(2)(i) Except as provided in paragraph (k)(2)(ii) of this section, a midyear correction to the wage index is effective prospectively from the date the change is made to the wage index.

(ii) Effective October 1, 2005, a change to the wage index may be made retroactively to the beginning of the Federal fiscal year, if, for the fiscal year in question, CMS determines all of the following—

(A) The fiscal intermediary or CMS made an error in tabulating data used for the wage index calculation;

(B) The hospital knew about the error in its wage data and requested the fiscal intermediary and CMS to correct the error both within the established schedule for requesting corrections to the wage data (which is at least before the beginning of the fiscal year for the applicable update to the hospital inpatient prospective payment system) and using the established process; and

(C) CMS agreed before October 1 that the fiscal intermediary or CMS made an error in tabulating the hospital's wage data and the wage index should be corrected.

\* \* \* \* \*

5. Section 412.73 is amended by adding a new paragraph (f) to read as follows:

**§ 412.73 Determination of the hospital-specific rate based on a Federal fiscal year 1982 base period.**

\* \* \* \* \*

(f) *Maintaining budget neutrality.* CMS makes an adjustment to the hospital-specific rate to ensure that changes to the DRG classifications and recalibrations of the DRG relative weights are made in a manner so that aggregate payments to section 1886(d) hospitals are not affected.

6. Section 412.75 is amended by adding a new paragraph (i) to read as follows:

**§ 412.75 Determination of the hospital-specific rate for inpatient operating costs based on a Federal fiscal year 1987 base period.**

\* \* \* \* \*

(i) *Maintaining budget neutrality.* CMS makes an adjustment to the hospital-specific rate to ensure that changes to the DRG classifications and recalibrations of the DRG relative weights are made in a manner so that aggregate payments to section 1886(d) hospitals are not affected.

7. Section 412.77 is amended by—

a. Revising paragraph (a)(1).

b. Adding a new paragraph (j).

The revision and addition read as follows:

**§ 412.77 Determination of the hospital-specific rate for inpatient operating costs for sole community hospitals based on a Federal fiscal year 1996 base period.**

(a) *Applicability.* (1) This section applies to a hospital that has been designated as a sole community hospital, as described in § 412.92. If the 1996 hospital-specific rate exceeds the rate that would otherwise apply, that is, either the Federal rate under § 412.64 (or under § 412.63 for periods prior to FY 2005) or the hospital-specific rates for either FY 1982 under § 412.73 or FY 1987 under § 412.75, this 1996 rate will be used in the payment formula set forth in § 412.92(d)(1).

\* \* \* \* \*

(j) *Maintaining budget neutrality.* CMS makes an adjustment to the hospital-specific rate to ensure that changes to the DRG classifications and recalibrations of the DRG relative weights are made in a manner so that aggregate payments to section 1886(d) hospitals are not affected.

8. Section 412.90 is amended by revising paragraph (e)(1) to read as follows:

**§ 412.90 General rules.**

\* \* \* \* \*

(e) *Hospitals located in areas that are reclassified from urban to rural.* (1) CMS adjusts the rural Federal payment amounts for inpatient operating costs for hospitals located in geographic areas that are reclassified from urban to rural as defined in subpart D of this part. This adjustment is set forth in § 412.102.

\* \* \* \* \*

9. Section 412.92 is amended by—

a. In paragraph (a) introductory text, removing the reference “§ 412.83(b)” and adding in its place the reference “§ 412.64”.

b. Revising paragraph (d)(1)(i).

c. Revising paragraph (d)(3).

The revisions and addition read as follows:

**§ 412.92 Special treatment: Sole community hospitals.**

\* \* \* \* \*

(d) *Determining prospective payment rates for inpatient operating costs for sole community hospitals.* (1) \* \* \*

(i) The Federal payment rate applicable to the hospitals as determined under subpart D of this part.

\* \* \* \* \*

(3) *Adjustment to payments.* A sole community hospital may receive an adjustment to its payments to take into account a significant decrease in the number of discharges, as described in paragraph (e) of this section.

\* \* \* \* \*

10. Section 412.96 is amended by—

a. Revising paragraph (b)(1)

introductory text.

b. Revising paragraph (c) introductory text.

c. In paragraph (c)(1) introductory text, removing the reference “paragraph (g)” and adding in its place the reference “paragraph (h)”.

d. In paragraph (c)(2)(i), removing the reference “paragraph (h)” and adding in its place the reference “paragraph (i)”.

e. Revising paragraph (g)(1).

f. In the introductory text of paragraph (h), removing the phrase “paragraphs (g)(1) through (g)(4)” and adding in its place the phrase “paragraphs (h)(1) through (h)(4)”.

g. In paragraph (h)(2), removing the reference “(g)(1)” and adding in its place the reference “(h)(1)”.

h. Removing paragraph (h)(4).

i. In paragraph (i)(2), removing the reference “(h)(1)” and adding in its place the reference “(i)(1)”.

j. Removing paragraph (i)(4).

The revisions read as follows:

**§ 412.96 Special treatment: Referral centers.**

\* \* \* \* \*

(b) *Criteria for cost reporting periods beginning on or after October 1, 1983.* \* \* \*

(1) The hospital is located in a rural area (as defined in subpart D of this part) and has the following number of beds, as determined under the provisions of § 412.105(b) available for use:

\* \* \* \* \*

(c) *Alternative criteria.* For cost reporting periods beginning on or after October 1, 1985, a hospital that does not meet the criteria of paragraph (b) of this section is classified as a referral center if it is located in a rural area (as defined

in subpart D of this part) and meets the criteria specified in paragraphs (c)(1) and (c)(2) of this section and at least one of the three criteria specified in paragraphs (c)(3), (c)(4), and (c)(5) of this section.

\* \* \* \* \*

(g) *Hospital cancellation of referral center status.* (1) A hospital may at any time request cancellation of its status as a referral center and be paid prospective payments per discharge based on the applicable rural rate, as determined in accordance with subpart D of this part.

\* \* \* \* \*

11. Section 412.103 is amended by revising paragraphs (a)(1) and (a)(4) to read as follows:

**§ 412.103 Special treatment: Hospitals located in urban areas and that apply for reclassification as rural.**

(a) \* \* \*

(1) The hospital is located in a rural census tract of a Metropolitan Statistical Area (MSA) as determined under the most recent version of the Goldsmith Modification, the Rural-Urban Commuting Area codes, as determined by the Office of Rural Health Policy (ORHP) of the Health Resources and Services Administration, which is available via the ORHP Web site at: <http://www.ruralhealth.hrsa.gov> or from the U.S. Department of Health and Human Services, Health Resources and Services Administration, Office of Rural Health Policy, 5600 Fishers Lane, Room 9A-55, Rockville, MD 20857.

\* \* \* \* \*

(4) For any period after September 30, 2004 and before October 1, 2006, a CAH in a county that, in FY 2004, was not part of an MSA as defined by the Office of Management and Budget and was not considered to be urban under § 412.64(b)(3) of this chapter, but as of FY 2005 was included as part of an MSA or was considered to be urban under § 412.64(b)(3) of this chapter as a result of the most recent census data and implementation of the new MSA definitions announced by OMB on June 6, 2003, may be reclassified as being located in a rural area for purposes of meeting the rural location requirement under § 485.610(b) of this chapter if it meets any of the requirements in paragraphs (a)(1), (a)(2), or (a)(3) of this section.

\* \* \* \* \*

12. Section 412.105 is amended by—

a. Adding a new paragraph

(f)(1)(iv)(D).

b. Adding a new paragraph (f)(1)(xiii).

c. Adding a new paragraph (f)(1)(xiv).

The additions read as follows:

**§ 412.105 Special treatment: Hospitals that incur indirect costs for graduate medical education programs.**

\* \* \* \* \*

(f) *Determining the total number of full-time equivalent residents for cost reporting periods beginning on or after July 1, 1991.* (1) \* \* \*

(iv) \* \* \*

(D) A rural hospital redesignated as urban after September 30, 2004, as a result of the most recent census data and implementation of the new labor market area definitions announced by OMB on June 6, 2003, may retain the increases to its full-time equivalent resident cap that it received under paragraphs (f)(1)(iv)(A) and (f)(1)(vii) of this section while it was located in a rural area.

\* \* \* \* \*

(xiii) For a hospital that was excluded from the hospital inpatient prospective payment system under Part 413 of this chapter and that subsequently changed to a hospital subject to the hospital inpatient prospective payment system for cost reporting periods ending on or before December 31, 1996, the total number of full-time equivalent residents for payment purposes is determined in accordance with the provisions of this paragraph (f). In the case of a merger of two or more hospitals, for purposes of this paragraph, the surviving hospital's number of full-time equivalent residents for payment purposes is equal to the aggregate number of the full-time equivalent resident count of each of the merged hospitals as determined in accordance with the provisions of this paragraph (f).

(xiv) Effective for discharges occurring on or after October 1, 2005, an urban hospital that reclassifies to a rural area under § 412.103 and then subsequently elects to revert back to urban classification will not be allowed to retain the adjustment to its IME FTE resident cap that it received as a result of being reclassified as rural.

\* \* \* \* \*

13. Section 412.108 is amended by revising paragraph (c)(1) to read as follows:

**§ 412.108 Special treatment: Medicare-dependent, small rural hospitals.**

\* \* \* \* \*

(c) *Payment methodology.* \* \* \*

(1) The Federal payment rate applicable to the hospital, as determined under subpart D of this part, subject to the regional floor defined in § 412.70(c)(6).

\* \* \* \* \*

14. Section 412.109 is amended by revising paragraph (b)(2) to read as follows:

**§ 412.109 Special treatment: Essential access community hospitals (EACHs).**

\* \* \* \* \*

(b) *Location in a rural area.* \* \* \*

(2) Is not deemed to be located in an urban area under subpart D of this part.

\* \* \* \* \*

**§ 412.113 [Amended]**

15. In § 412.113—

a. In paragraph (b)(2), the reference “§ 413.86 of this chapter.” is removed and the reference “§§ 413.75 through 413.83 of this subchapter.” is added in its place.

b. In paragraph (b)(3), the reference “§ 413.86(c) of this chapter,” is removed and the reference “§ 413.75(c) of this subchapter,” is added in its place.

**§ 412.115 [Amended]**

16. In § 412.115—

a. In paragraph (a), the reference “§ 413.80” is removed and the reference “§ 413.89” is added in its place.

b. At the end of paragraph (b), add the following sentence: “For discharges occurring on or after October 1, 2005, the additional payment is made based on the average sales price methodology specified in subpart K, part 414 of this chapter and the furnishing fee specified in § 410.63 of this subchapter.”

17. Section 412.230 is amended by—

a. Redesignating paragraph (d)(2)(iii) as paragraph (d)(2)(v).

b. Adding new paragraphs (d)(2)(iii) and (d)(2)(iv).

The additions read as follows:

**§ 412.230 Criteria for an individual hospital seeking redesignation to another rural area or an urban area.**

\* \* \* \* \*

(d) *Use of urban or other rural area's wage index.*—\* \* \*

(2) *Appropriate wage data.* \* \* \*

(iii) For applications submitted for reclassifications effective in FY 2006, a campus of a multicampus hospital system may seek reclassification to another CBSA. As part of its reclassification request, the requesting entity may submit the composite wage data for the entire multicampus hospital system as its hospital-specific data.

(iv) For applications submitted for reclassifications effective in FY 2007 and subsequent years, a campus of a multicampus hospital system may seek reclassification to another CBSA. As part of its reclassification request, the requesting entity must submit campus-specific wage data for purposes of the wage index comparison.

\* \* \* \* \*

18. Section 412.234 is amended by—

a. In paragraph (a)(3)(ii), removing the phrase “fiscal years 2006 and thereafter”

and adding in its place the phrase "fiscal year 2006".

b. Adding a new paragraph (a)(3)(iii).

c. In paragraph (b)(1), removing the phrase "or NECMA".

The addition reads as follows:

**§ 412.234 Criteria for all hospitals in an urban county seeking redesignation to another urban area.**

(a) \* \* \*

(3) \* \* \*

(iii) For Federal fiscal year 2007 and thereafter, hospitals located in counties that are in the same Consolidated Statistical Area (CSA) (under the MSA definitions announced by the OMB on June 6, 2003) as the urban area to which they seek redesignation qualify as meeting the proximity requirement for reclassification to the urban area to which they seek redesignation.

\* \* \* \* \*

**§ 412.278 [Amended]**

19. In § 412.278(b)(1), the phrase "Office of Payment Policy" is removed and the phrase "Hospital and Ambulatory Policy Group" is added in its place.

20. Section 412.304 is amended by revising paragraph (a) to read as follows:

**§ 412.304 Implementation of the capital prospective payment system.**

(a) *General rule.* As described in §§ 412.312 through 412.370, effective with cost reporting periods beginning on or after October 1, 1991, CMS pays an amount determined under the capital prospective payment system for each inpatient hospital discharge as defined in § 412.4. This amount is in addition to the amount payable under the prospective payment system for inpatient hospital operating costs as determined under subpart D of this part.

\* \* \* \* \*

**§ 412.521 [Amended]**

21. In § 412.521—  
a. Under paragraph (b)(2)(i), the reference "§§ 413.85, 413.86, and 413.87 of this subchapter." is removed and the reference "§§ 413.75 through 413.83, 413.85, and 413.87 of this subchapter." is added in its place.

b. Under paragraph (b)(2)(ii), the reference "§ 413.80" is removed and the reference "§ 413.89" is added in its place.

**PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES**

C. Part 413 is amended as follows:

1. The authority citation for Part 413 continued to read as follows:

**Authority:** Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1871, 1881, 1883, and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395hh, 1395rr, 1395tt, and 1395ww).

**§ 413.13 [Amended]**

2. In § 413.13 (d)(1), the reference "§ 413.80" is removed and the reference "§ 413.89" is added in its place.

3. Section 413.40 is amended by—

a. In paragraph(a)(3), under the definition of "Net inpatient operating costs", removing the reference "§§ 413.85 and 413.86" and adding in its place the reference "§§ 413.75 through 413.83 and 413.85".

b. Revising paragraph (c)(4)(iii).

**§ 413.40 Ceiling on the rate of increase in hospital inpatient costs.**

\* \* \* \* \*

(c) *Costs subject to the ceiling.* \* \* \*

(4) *Target amounts.* \* \* \*

(iii) For cost reporting periods beginning on or after October 1, 1997 through September 30, 2002, in the case of a psychiatric hospital or unit, rehabilitation hospital or unit, or long-term care hospital, the target amount is the lower of the amounts specified in paragraph (c)(4)(iii)(A) or paragraph (c)(4)(iii)(B) of this section.

\* \* \* \* \*

4. Section 413.65 is amended by—  
a. Reprinting the introductory text of paragraph (a)(1)(ii) and adding a new paragraph (a)(1)(ii)(L).

b. Revising the definition of "Provider-based entity" under paragraph (a)(2).

c. Revising paragraphs (b)(3)(i) and (b)(3)(ii).

d. Revising paragraphs (e)(1) introductory text and (e)(1)(i).

e. Revising paragraph (e)(3).

f. Revising paragraph (g)(7).

The addition and revision read as follows:

**§ 413.65 Requirements for a determination that a facility or an organization has provider-based status.**

(a) *Scope and definitions.* \* \* \*

(1) \* \* \*

(ii) The determinations of provider-based status for payment purposes described in this section are not made as to whether the following facilities are provider-based:

\* \* \* \* \*

(L) Rural health clinics (RHCs) affiliated with hospitals having 50 or more beds.

\* \* \* \* \*

(2) *Definitions.* \* \* \*

*Provider-based entity* means a provider of health care services, or an RHC as defined in § 405.2401(b) of this chapter, that is either created by, or acquired by, a main provider for the purpose of furnishing health care services of a different type from those of the main provider under the ownership and administrative and financial control of the main provider, in accordance with the provisions of this section. A provider-based entity comprises both the specific physical facility that serves as the site of services of a type for which payment could be claimed under the Medicare or Medicaid program, and the personnel and equipment needed to deliver the services at that facility. A provider-based entity may, by itself, be qualified to participate in Medicare as a provider under § 489.2 of this chapter, and the Medicare conditions of participation do apply to a provider-based entity as an independent entity.

\* \* \* \* \*

(b) *Provider-based determinations.*—

\* \* \*

(3)(i) Except as specified in paragraphs (b)(2) and (b)(5) of this section, if a potential main provider seeks a determination of provider-based status for a facility that is located on the campus of the potential main provider, the provider would be required to submit an attestation stating that the facility meets the criteria in paragraph (d) of this section and, if it is a hospital, also attest that it will fulfill the obligations of hospital outpatient departments and hospital-based entities described in paragraph (g) of this section. The provider seeking such a determination would also be required to maintain documentation of the basis for its attestations and to make that documentation available to CMS and to CMS contractors upon request. If the facility is operated as a joint venture, the provider would also have to attest that it will comply with the requirements of paragraph (f) of this section.

(ii) If the facility is not located on the campus of the potential main provider, the provider seeking a determination would be required to submit an attestation stating that the facility meets the criteria in paragraphs (d) and (e) of this section, and if the facility is operated under a management contract, the requirements of paragraph (h) of this section. If the potential main provider is a hospital, the hospital also would be required to attest that it will fulfill the obligations of hospital outpatient departments and hospital-based entities described in paragraph (g) of this section. The provider would be required

to supply documentation of the basis for its attestations to CMS at the time it submits its attestations.

\* \* \* \* \*

(e) \* \* \*

(1) *Operation under the ownership and control of the main provider.* The facility or organization seeking provider-based status is operated under the ownership and control of the main provider, as evidenced by the following:

(i) The business enterprise that constitutes the facility or organization is 100 percent owned by the main provider.

\* \* \* \* \*

(3) *Location.* The facility or organization meets the requirements in paragraph (e)(3)(i), (e)(3)(ii), (e)(3)(iii), (e)(3)(iv), or, in the case of an RHC, paragraph (e)(3)(v) of this section, and the requirements in paragraph (e)(3)(vi) of this section.

(i) The facility or organization is located within a 35-mile radius of the campus of the hospital or CAH that is the potential main provider.

(ii) The facility or organization is owned and operated by a hospital or CAH that has a disproportionate share adjustment (as determined under § 412.106 of this chapter) greater than 11.75 percent and is described in § 412.106(c)(2) of this chapter implementing section 1886(e)(5)(F)(i)(II) of the Act and is—

(A) Owned or operated by a unit of State or local government;

(B) A public or nonprofit corporation that is formally granted governmental powers by a unit of State or local government; or

(C) A private hospital that has a contract with a State or local government that includes the operation of clinics located off the main campus of the hospital to assure access in a well-defined service area to health care services for low-income individuals who are not entitled to benefits under Medicare (or medical assistance under a Medicaid State plan).

(iii) The facility or organization demonstrates a high level of integration with the main provider by showing that it meets all of the other provider-based criteria and demonstrates that it serves the same patient population as the main provider, by submitting records showing that, during the 12-month period immediately preceding the first day of the month in which the application for provider-based status is filed with CMS, and for each subsequent 12-month period—

(A) At least 75 percent of the patients served by the facility or organization reside in the same zip code areas as at

least 75 percent of the patients served by the main provider; or

(B) At least 75 percent of the patients served by the facility or organization who required the type of care furnished by the main provider received that care from that provider (for example, at least 75 percent of the patients of an RHC seeking provider-based status received inpatient hospital services from the hospital that is the main provider).

(iv) If the facility or organization is unable to meet the criteria in paragraph (e)(3)(iii)(A) or paragraph (e)(3)(iii)(B) of this section because it was not in operation during all of the 12-month period described in paragraph (e)(3)(iii) of this section, the facility or organization is located in a zip code area included among those that, during all of the 12-month period described in paragraph (e)(3)(iii) of this section, accounted for at least 75 percent of the patients served by the main provider.

(v) Both of the following criteria are met:

(A) The facility or organization is an RHC that is otherwise qualified as a provider-based entity of a hospital that has fewer than 50 beds, as determined under § 412.105(b) of this chapter; and

(B) The hospital with which the facility or organization has a provider-based relationship is located in a rural area, as defined in Subpart D of Part 412 of this subchapter.

(vi) A facility or organization may qualify for provider-based status under this section only if the facility or organization and the main provider are located in the same State or, when consistent with the laws of both States, in adjacent States.

\* \* \* \* \*

(g) *Obligations.* \* \* \*

(7) When a Medicare beneficiary is treated in a hospital outpatient department that is not located on the main provider's campus, the treatment is not required to be provided by the antidumping rules in § 489.24 of this chapter, and the beneficiary will incur a coinsurance liability for an outpatient visit to the hospital as well as for the physician service, the following requirements must be met:

(i) The hospital must provide written notice to the beneficiary, before the delivery of services, of—

(A) The amount of the beneficiary's potential financial liability; or

(B) If the exact type and extent of care needed are not known, an explanation that the beneficiary will incur a coinsurance liability to the hospital that he or she would not incur if the facility were not provider-based, an estimate based on typical or average charges for

visits to the facility, and a statement that the patient's actual liability will depend upon the actual services furnished by the hospital.

(ii) The notice must be one that the beneficiary can read and understand.

(iii) If the beneficiary is unconscious, under great duress, or for any other reason unable to read a written notice and understand and act on his or her own rights, the notice must be provided, before the delivery of services, to the beneficiary's authorized representative.

(iv) In cases where a hospital outpatient department provides examination or treatment that is required to be provided by the antidumping rules of § 489.24 of this chapter, notice, as described in this paragraph (g)(7), must be given as soon as possible after the existence of an emergency has been ruled out or the emergency condition has been stabilized.

\* \* \* \* \*

5. Section 413.75 is amended in paragraph (b) by revising paragraph (1) under the definition of "Medicare GME affiliated group" to read as follows:

**§ 413.75 Direct GME payments: General requirements.**

\* \* \* \* \*

(b) \* \* \*

*Medicare GME affiliated group means—*

(1) Two or more hospitals that are located in the same urban or rural area (as those terms are defined in subpart D of part 412 of this subchapter.

\* \* \* \* \*

**§ 413.77 [Amended]**

6. In § 413.77, under paragraph (e)(1)(iii), the reference "§ 412.62(f)(1)(i) of this chapter." is removed and the reference "subpart D of part 412 of this subchapter" is added in its place.

7. Section 413.79 is amended by—

a. Revising paragraph (a)(10).

b. Revising the introductory text of paragraph (c)(2).

c. In paragraph (c)(3)(i), removing the reference "§ 412.62(f)(iii)" and adding in its place the reference "subpart D of part 412 of this subchapter".

d. Adding a new paragraph (c)(6).

e. Revising paragraph (e)(1)(iv).

f. In the introductory text of paragraph (k), removing the reference "(k)(6)" and adding in its place the reference "(k)(7)".

g. Adding a new paragraph (k)(7).

The revisions and additions read as follows:

**§ 413.79 Direct GME payments: Determination of the weighted number of FTE residents.**

\* \* \* \* \*

(a) \* \* \*

(10) Effective for portions of cost reporting periods beginning on or after October 1, 2004, if a hospital can document that a resident simultaneously matched for one year of training in a particular specialty program, and for a subsequent year(s) of training in a different specialty program, the resident's initial residency period will be determined based on the period of board eligibility for the specialty associated with the program for which the resident matched for the subsequent year(s) of training. Effective for cost reporting periods beginning on or after October 1, 2005, if a hospital can document that a particular resident, prior to beginning the first year of residency training, matched in a specialty program for which training would begin at the conclusion of the first year of training, that resident's initial residency period will be determined in the resident's first year of training based on the period of board eligibility associated with the specialty program for which the resident matched for subsequent training year(s).

\* \* \* \* \*

(c) *Unweighted FTE counts.* \* \* \*

(2) *Determination of the FTE resident cap.* Subject to the provisions of paragraphs (c)(3) through (c)(6) of this section and § 413.81, for purposes of determining direct GME payment—

\* \* \* \* \*

(6) *FTE resident caps for rural hospitals that are reclassified as urban.* A rural hospital redesignated as urban after September 30, 2004, as a result of the most recent census data and implementation of the new MSA definitions announced by OMB on June 6, 2003, may retain the increases to its FTE resident cap that it received under paragraphs (c)(2)(i), (e)(1)(iii), and (e)(3) of this section while it was located in a rural area.

\* \* \* \* \*

(e) *New medical residency training programs.* \* \* \*

(1) \* \* \*

(iv) An urban hospital that qualifies for an adjustment to its FTE cap under paragraph (e)(1) of this section is permitted to be part of a Medicare GME affiliated group for purposes of establishing an aggregate FTE cap only if the adjustment that results from the affiliation is an increase to the urban hospital's FTE cap.

\* \* \* \* \*

(k) *Residents training in rural track programs.* \* \* \*

(7) If an urban hospital had established a rural track training program under the provisions of this

paragraph (k) with a hospital located in a rural area and that rural area subsequently becomes an urban area due to the most recent census data and implementation of the new labor market area definitions announced by OMB on June 6, 2003, the urban hospital may continue to adjust its FTE resident limit in accordance with this paragraph (k) for the rural track programs established prior to the adoption of such new labor market area definitions. In order to receive an adjustment to its FTE resident cap for a new rural track residency program, the urban hospital must establish a rural track program with hospitals that are designated rural based on the most recent geographical location designations adopted by CMS.

\* \* \* \* \*

#### § 413.87 [Amended]

8. In § 413.87(d) introductory text, the reference “§ 413.86(d)(4)” is removed and the reference “§ 413.76(d)(4)” is added in its place.

#### § 413.178 [Amended]

9. In § 413.178—

a. In paragraph (a), the reference “§ 413.80(b)” is removed and the reference “§ 413.89(b)” is added in its place.

b. In paragraph (b), the reference “§ 413.80” is removed and the reference “§ 413.89” is added in its place.

#### PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

D. Part 415 is amended as follows:

1. The authority citation for part 415 continued to read as follows:

**Authority:** Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

#### § 415.55 [Amended]

2. In § 415.55(a)(5), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

#### § 415.70 [Amended]

3. In § 415.70(a)(2), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

#### § 415.102 [Amended]

4. In § 415.102(c)(1), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

#### § 415.150 [Amended]

5. In § 415.150(b), the reference “§ 413.86” is removed and the phrase

“§§ 413.75 through 413.83” is added in its place.

#### § 415.152 [Amended]

6. In § 415.152—

a. In paragraph (2) of the definition of “Approved graduate medical education (GME) program”, the reference “§ 413.86(b)” is removed and the reference “§ 413.75(b)” is added in its place.

b. In the definition of “Teaching setting”, the reference “§ 413.86,” is removed and the reference “§§ 413.75 through 413.83,” is added in its place.

#### § 415.160 [Amended]

7. In § 415.160—

a. In paragraph (c)(2), the reference “§ 413.86” is removed and the reference “§ 413.78” is added in its place.

b. In paragraph (d)(2), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

#### § 415.174 [Amended]

8. In § 415.174(a)(1), the reference “§ 413.86.” is removed and the phrase “§§ 413.75 through 413.83.” is added in its place.

#### § 415.200 [Amended]

9. In § 415.200(a), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

#### § 415.204 [Amended]

10. In § 415.204(a)(2), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

#### § 415.206 [Amended]

11. In § 415.206(a), the reference “§ 413.86(f)(1)(iii)” is removed and the reference “§ 413.78” is added in its place.

#### § 415.208 [Amended]

12. In § 415.208—

a. In paragraph (b)(1), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

b. In paragraph (b)(4), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

#### PART 419—PROSPECTIVE PAYMENT SYSTEM FOR OUTPATIENT DEPARTMENT SERVICES

F. Part 419 is amended as follows:

1. The authority citation for part 419 continues to read as follows:

**Authority:** Secs. 1102, 1833(t), and 1871 of the Social Security Act (42 U.S.C. 1302, 1395(t), and 1395hh).

**§ 419.2 [Amended]**

2. In § 419.2—

a. In paragraph (c)(1), the reference “§ 413.86” is removed and the reference “§§ 413.75 through 413.83” is added in its place.

b. In paragraph (c)(6), the reference “§ 413.80(b)” is removed and the reference “§ 413.89(b)” is added in its place.

**PART 422—SPECIAL RULES FOR SERVICES FURNISHED BY NONCONTRACT PROVIDERS**

G. Part 422 is amended as follows:

1. The authority citation of part 422 continues to read as follows:

**Authority:** Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

**§ 422.214 [Amended]**

2. In § 422.214—

a. In paragraph (b), the phrase “§§ 412.105(g) and 413.86(d)” is removed and the phrase “§§ 412.105(g) and 413.76)” is added in its place.

b. In paragraph (b), the phrase “Section 413.86 (d)” is removed and the phrase “Section 413.76” is added in its place.

**§ 422.216 [Amended]**

3. In § 422.216(a)(4), the reference “§§ 412.105(g) and 413.86(d)” is removed and the reference “§§ 412.105(g) and 413.76” is added in its place.

**PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS**

G. Part 485 is amended as follows:

1. The authority citation for Part 485 continues to read as follows:

**Authority:** Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395(hh)).

2. Section 485.610 is amended by—

a. In paragraph (b)(1)(i), removing the reference “§ 412.62(f)” and adding in its place the reference “§ 412.64(b)”.

b. In paragraph (b)(1)(ii), removing the reference “§ 412.63(b)” and adding in its place the reference “§ 412.64(b)”.

c. Revising paragraph (b)(3).

d. Adding a new paragraph (d).

The revisions and additions read as follows:

**§ 485.610 Condition of participation: Status and location.**

\* \* \* \* \*

(b) \* \* \*

(3) Effective only for October 1, 2004 through September 30, 2006, the CAH does not meet the location requirements in either paragraph (b)(1) or paragraph

(b)(2) of this section and is located in a county that, in FY 2004, was not part of a Metropolitan Statistical Area as defined by the Office of Budget Management and was not considered to be urban under § 412.63(b)(3) of this chapter, but as of FY 2005 was included as part of such an MSA or was considered to be urban under § 412.64(b)(3) of this chapter, as a result of the most recent census data and implementation of the new MSA definitions announced by OMB on June 6, 2003.

\* \* \* \* \*

(d) *Standard: Relocation of CAHs with a necessary provider designation.* A CAH that has a necessary provider certification from the State and places a new facility in service after January 1, 2006, can continue to meet the location requirement of paragraph (c) of this section based on the necessary provider certification only if the new facility meets either the requirement for replacement in the same location in paragraph (d)(1) of this section or the requirement for a relocation of a CAH in paragraph (d)(2) of this section.

(1) A new construction of a CAH will be considered as a replacement facility if the construction is undertaken within 250 yards of the current building or contiguous to the current CAH on land owned by the CAH prior to December 8, 2003.

(2) A new facility CAH will be considered as a relocation of a CAH if, at the relocated site—

(i) The CAH serves at least 75 percent of the same service area that it served prior to its relocation, provides at least 75 percent of the same services that it provided prior to the relocation, and is staffed by 75 percent of the same staff (including medical staff, contracted staff, and employees); and

(ii) The CAH provides documentation demonstrating that its plans to rebuild in the relocated area were undertaken prior to December 8, 2003.

(3) If a CAH that has a necessary provider certification from the State places a new facility in service on or after January 1, 2006, and does not meet either the requirements in paragraph (d)(1) or paragraph (d)(2) of this section, the action will be considered a cessation of business as described in § 489.52(b)(3).

(Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance; and Program No. 93.774, Medicare—Supplementary Medical Insurance Program)

Dated: April 19, 2005.

**Mark B. McClellan,**  
*Administrator, Centers for Medicare & Medicaid Services.*

Dated: April 22, 2005.

**Michael O. Leavitt,**  
*Secretary.*

[**Editorial Note:** The following Addendum and appendixes will not appear in the Code of Federal Regulations.]

**Addendum—Proposed Schedule of Standardized Amount Effective With Discharges Occurring On or After October 1, 2005 and Update Factors and Rate-of-Increase Percentages Effective With Cost Reporting Periods Beginning On or After October 1, 2005**

(If you choose to comment on issues in this section, please include the caption “Operating Payment Rates” at the beginning of your comment.)

**I. Summary and Background**

In this Addendum, we are setting forth the proposed amounts and factors for determining prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs. We are also setting forth the proposed rate-of-increase percentages for updating the target amounts for hospitals and hospital units excluded from the IPPS.

For discharges occurring on or after October 1, 2005, except for SCHs, MDHs, and hospitals located in Puerto Rico, each hospital’s payment per discharge under the IPPS will be based on 100 percent of the Federal national rate, which will be based on the national adjusted standardized amount. This amount reflects the national average hospital costs per case from a base year, updated for inflation.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal national rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; or the updated hospital-specific rate based on FY 1996 costs per discharge.

Under section 1886(d)(5)(G) of the Act, MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982 or FY 1987 costs per discharge, whichever is higher. MDHs do not have the option to use their FY 1996 hospital-specific rate.

For hospitals in Puerto Rico, the payment per discharge is based on the sum of 25 percent of a Puerto Rico rate that reflects base year average costs per case of Puerto Rico hospitals and 75 percent of the Federal national rate. (See section II.D.3. of this Addendum for a complete description.)

As discussed below in section II. of this Addendum, we are proposing to make changes in the determination of the prospective payment rates for Medicare inpatient operating costs for FY 2006. The proposed changes, to be applied

prospectively effective with discharges occurring on or after October 1, 2005, affect the calculation of the Federal rates. In section III. of this Addendum, we discuss our proposed changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2006. Section IV. of this Addendum sets forth our proposed changes for determining the rate-of-increase limits for hospitals excluded from the IPPS for FY 2006. Section V. of this Addendum sets forth policies on payment for blood clotting factors administered to hemophilia patients. The tables to which we refer in the preamble of this proposed rule are presented in section VI. of this Addendum.

## II. Proposed Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for FY 2006

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for FY 2005 and subsequent fiscal years is set forth at § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth at §§ 412.211 and 412.212. Below we discuss the factors used for determining the prospective payment rates.

In summary, the proposed standardized amounts set forth in Tables 1A, 1B, 1C, and 1D of section VI. of this Addendum reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv) of the Act, updated by the applicable percentage increase required under sections 1886(b)(3)(B)(i)(XIX) and 1886(b)(3)(B)(vii) of the Act.
- The two labor-related shares that are applicable to the standardized amounts, depending on whether the hospital's payments would be higher with a lower (in the case of a wage index below 1.0000) or higher (in the case of a wage index above 1.0000) labor share, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act;
- Updates of 3.2 percent for all areas (that is, the full market basket percentage increase of 3.2 percent, as required by section 1886(b)(3)(B)(i)(XIX) of the Act, and reflecting the requirements of section 1886(b)(3)(B)(vii) of the Act to reduce the applicable percentage increase by 0.4 percentage points for hospitals that fail to submit data, in a form and manner specified by the Secretary, relating to the quality of inpatient care furnished by the hospital;
- An adjustment to ensure the proposed DRG recalibration and wage index update and changes are budget neutral, as provided for under sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, by applying new budget neutrality adjustment factors to the standardized amount;
- An adjustment to ensure the effects of the special transition measures adopted in relation to the implementation of new labor market areas are budget neutral;

- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for in section 1886(d)(8)(D) of the Act, by removing the FY 2005 budget neutrality factor and applying a revised factor;
- An adjustment to apply the new outlier offset by removing the FY 2005 outlier offset and applying a new offset;
- An adjustment to ensure the effects of the rural community hospital demonstration required under section 410A of Pub. L. 108–173 are budget neutral, as required under section 410A(c)(2) of Pub. L. 108–173.

### A. Calculation of the Adjusted Standardized Amount

#### 1. Standardization of Base-Year Costs or Target Amounts

The national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act) or, for Puerto Rico, adjusted target amounts from a base period (section 1886(d)(9)(B)(i) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established in the initial development of standardized amounts for the IPPS. The September 1, 1987 final rule (52 FR 33043 and 33066) contains a detailed explanation of how the target amounts were determined, and how they are used in computing the Puerto Rico rates.

Sections 1886(d)(2)(B) and (d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, indirect medical education costs, and costs to hospitals serving a disproportionate share of low-income patients.

Under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time-to-time, the proportion of hospitals' costs that are attributable to wages and wage-related costs. The standardized amount is divided into labor-related and nonlabor-related amounts; only the proportion considered the labor-related amount is adjusted by the wage index. Section 403 of Pub. L. 108–173 revises the proportion of the standardized amount that is considered labor-related. Specifically, section 1886(d)(3)(E) of the Act (as amended by section 403 of Pub. L. 108–173) requires that 62 percent of the standardized amount be adjusted by the wage index, unless doing so would result in lower payments to a hospital than would otherwise be made. (Section 403(b) of Pub. L. 108–173 extended this provision to the Puerto Rico standardized amounts.) We are proposing to update the labor-related share to 69.7 percent for FY 2006, as discussed in section IV.B.3. of the preamble to this proposed rule. We note that the revised labor-related share that we are proposing for FY 2006 was determined to be 69.731, as discussed in

section IV of the preamble to this proposed rule. We are proposing to continue with our previous methodology and round the labor-related share to 69.7 percent for purposes of establishing the labor-related and nonlabor-related portions of the standardized amount. As discussed in section IV. of the preamble to this proposed rule, we are also proposing to rebase the current labor-related share for the Puerto Rico-specific amounts for FY 2006. Since the proposed rebased Puerto Rico labor-related share has not yet been calculated, the proposed standardized amounts that appear in Table 1C of this Addendum for providers with a wage index greater than 1.0000 reflect the current (FY 2005) labor-related share for the Puerto Rico-specific amounts of 71.3 percent for FY 2006. However, in the final rule, if we adopt our proposal to rebase the labor-related share for Puerto Rico, these amounts would reflect this revised labor-related share. We are proposing to adjust 62 percent of the national standardized amount and 62 percent of the Puerto Rico-specific amount by the wage index for all hospitals whose wage indexes are less than or equal to 1.0000. For all hospitals whose wage values are greater than 1.0000, we are proposing to adjust the national standardized amount by a labor-related share of 69.7 percent.

#### 2. Computing the Average Standardized Amount

Sections 1886(d)(3)(A)(iv) of the Act previously required the Secretary to compute the following two average standardized amounts for discharges occurring in a fiscal year: One for hospitals located in large urban areas and one for hospitals located in other areas. In accordance with section 1886(b)(3)(B)(i) of the Act, the large urban average standardized amount was 1.6 percent higher than the other area average standardized amount. In addition, under sections 1886(d)(9)(B)(iii) and 1886(d)(9)(C)(i) of the Act, the average standardized amounts per discharge were determined for hospitals located in urban and rural areas in Puerto Rico.

Section 402(b) of Pub. L. 108–7 required that, effective for discharges occurring on or after April 1, 2003, and before October 1, 2003, the Federal rate for all IPPS hospitals would be based on the large urban standardized amount. Subsequently, Pub. L. 108–89 extended section 402(b) of Pub. L. 108–7 beginning with discharges on or after October 1, 2003 and before March 31, 2004. Finally, section 401(a) of Pub. L. 108–173 amended section 1886(d)(3)(A)(iv) of the Act to require that, beginning with FY 2004 and thereafter, an equal standardized amount is to be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage update. This provision in effect makes permanent the equalization of the standardized amounts at the level of the previous standardized amount for large urban hospitals. Section 401(c) of Pub. L. 108–173 also amended section 1886(d)(9)(A) of the Act to equalize the Puerto Rico-specific urban and rural area rates. Accordingly, we are providing in this proposed rule for a single national standardized amount and a

single Puerto Rico standardized amount for FY 2006.

### 3. Updating the Average Standardized Amount

In accordance with section 1886(d)(3)(A)(iv)(II) of the Act, we are proposing to update the equalized standardized amount for FY 2006 by the full estimated market basket percentage increase for hospitals in all areas, as specified in section 1886(b)(3)(B)(i)(XIX) of the Act, as amended by section 501 of Pub. L. 108-173. The percentage change in the market basket reflects the average change in the price of goods and services purchased by hospitals to furnish inpatient care. The most recent forecast of the hospital market basket increase for FY 2006 is 3.2 percent. Thus, for FY 2006, the proposed update to the average standardized amount is 3.2 percent for hospitals in all areas.

Section 1886(b)(3)(B) of the Act specifies the mechanism used to update the standardized amount for payment for inpatient hospital operating costs. Section 1886(b)(3)(B)(vii) of the Act, as amended by section 501(b) of Pub. L. 108-173, provides for a reduction of 0.4 percentage points to the update percentage increase (also known as the market basket update) for each of FYs 2005 through 2007 for any "subsection (d) hospital" that does not submit data on a set of 10 quality indicators established by the Secretary as of November 1, 2003. The statute also provides that any reduction will apply only to the fiscal year involved, and will not be taken into account in computing the applicable percentage increase for a subsequent fiscal year. This measure establishes an incentive for hospitals to submit data on quality measures established by the Secretary. The proposed standardized amounts in Tables 1A through 1D of section VI. of this Addendum reflect these differential amounts.

Although the update factors for FY 2006 are set by law, we are required by section 1886(e)(3) of the Act to report to the Congress our initial recommendation of update factors for FY 2006 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Our recommendation on the update factors (which is required by sections 1886(e)(4)(A) and (e)(5)(A) of the Act) is set forth as Appendix B of this proposed rule.

### 4. Other Adjustments to the Average Standardized Amount

As in the past, we are proposing to adjust the FY 2006 standardized amount to remove the effects of the FY 2005 geographic reclassifications and outlier payments before applying the FY 2006 updates. We then apply the new offsets for outliers and geographic reclassifications to the standardized amount for FY 2006.

We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG weights and for updated wage data because, in accordance with section 1886(d)(4)(C)(iii) of the Act, estimated aggregate payments after the changes in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year adjustment, we would not satisfy this condition.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making the changes that are required to be budget neutral (for example, reclassifying and recalibrating the DRGs, updating the wage data, and geographic reclassifications). We include outlier payments in the payment simulations because outliers may be affected by changes in these payment parameters.

We are also proposing to adjust the standardized amount this year by an amount estimated to ensure that aggregate IPPS payments do not exceed the amount of payments that would have been made in the absence of the rural community hospital demonstration required under section 410A of Pub. L. 108-173. This demonstration is required to be budget neutral under section 410A(c)(2) of Pub. L. 108-173.

#### a. Recalibration of DRG Weights and Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II. of the preamble, we normalized the recalibrated DRG weights by an adjustment factor, so that the average case weight after recalibration is equal to the average case weight prior to recalibration. However, equating the average case weight after recalibration to the average case weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case weight. Therefore, as we have done in past years, we are proposing to make a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

Section 1886(d)(3)(E) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. For FY 2006, we are proposing to continue to adjust 10 percent of the wage index factor for occupational mix. We describe the proposed occupational mix adjustment in section III.C. of the preamble to this proposed rule. Because section 1886(d)(3)(E) of the Act requires us to update the wage index on a budget neutral basis, we are including the effects of this proposed occupational mix adjustment on the wage index in our budget neutrality calculations.

In FY 2005, those urban hospitals that became rural under the new labor market area definitions were assigned the wage index of the urban area in which they were located under the previous labor market definitions for a 3-year period of FY 2005, FY 2006, and FY 2007. Because we are in the second year of this 3-year transition, we are proposing to adjust the standardized amounts for FY 2006 to ensure budget neutrality for this policy. We discuss this adjustment in section III.B. of the preamble to this proposed rule.

Section 4410 of Pub. L. 105-33 provides that, for discharges on or after October 1, 1997, the area wage index applicable to any hospital that is not located in a rural area may not be less than the area wage index applicable to hospitals located in rural areas in that State. This provision is required by section 4410(b) of Pub. L. 105-33 to be budget neutral. Therefore, we include the effects of this provision in our calculation of the wage update budget neutrality factor. As discussed in the FY 2005 IPPS final rule (69 FR 49110), we are in the second year of the 3-year provision that uses an imputed wage index floor for States that have no rural areas and States that have geographic rural areas, but that have no hospitals actually classified as rural. We are also adjusting for the effects of this provision in our calculation of the wage update budget neutrality factor.

To comply with the requirement that DRG reclassification and recalibration of the relative weights be budget neutral, and the requirement that the updated wage index be budget neutral, we used FY 2004 discharge data to simulate payments and compared aggregate payments using the FY 2005 relative weights and wage index to aggregate payments using the proposed FY 2006 relative weights and wage index. The same methodology was used for the FY 2005 budget neutrality adjustment.

Based on this comparison, we computed a proposed budget neutrality adjustment factor equal to 1.002494. We also are proposing to adjust the Puerto Rico-specific standardized amount for the effect of DRG reclassification and recalibration. We computed a proposed budget neutrality adjustment factor for the Puerto Rico-specific standardized amount equal to 0.999003. These proposed budget neutrality adjustment factors are applied to the standardized amounts without removing the effects of the FY 2005 budget neutrality adjustments. In addition, as discussed in section V.C.2. of the preamble to this proposed rule, we are proposing to apply the same DRG reclassification and recalibration budget neutrality factor of 0.999003 to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2005.

Using the same data, we calculated a transition budget neutrality adjustment to account for the "hold harmless" policy under which urban hospitals that became rural under the new labor market area definitions were assigned the wage index of the urban area in which they were located under the previous labor market area definitions for a 3-year period of FY 2005, FY 2006, and FY 2007 (see Table 2 in section VI. of this Addendum). Using the prereclassified wage index, we simulated payments under the new labor market area definitions and compared them to simulated payments under the "hold harmless" policy. Based on this comparison, we computed a proposed transition budget neutrality adjustment of 0.999529.

#### b. Reclassified Hospitals—Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that, effective with discharges occurring on or after October 1, 1988, certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for

the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. (We note that neither the wage index reclassifications provided under section 508 of Pub. L. 108-173 nor the wage index adjustments provided under section 505 of Pub. L. 108-173 are budget neutral. Section 508(b) of Pub. L. 108-173 provides that the wage index reclassifications approved under section 508(a) of Pub. L. 108-173 "shall not be effected in a budget neutral manner." Section 505(a) of Pub. L. 108-173 similarly provides that any increase in a wage index under that section shall not be taken into account "in applying any budget neutrality adjustment with respect to such index" under section 1886(d)(8)(D) of the Act.) To calculate this proposed budget neutrality factor, we used FY 2004 discharge data to simulate payments, and compared total IPPS payments prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act to total IPPS payments after such reclassifications. Based on these simulations, we are proposing to apply an adjustment factor of 0.992905 to ensure that the effects of this reclassification are budget neutral.

The proposed adjustment factor is applied to the standardized amount after removing the effects of the FY 2005 budget neutrality adjustment factor. We note that the proposed FY 2006 adjustment reflects FY 2006 wage index reclassifications approved by the MGCRB or the Administrator, and the effects of MGCRB reclassifications approved in FY 2004 and FY 2005 (section 1886(d)(10)(D)(v) of the Act makes wage index reclassifications effective for 3 years).

#### c. Outliers

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for "outlier" cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs above a fixed-loss cost threshold amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for outlier payment). To determine whether the costs of a case exceed the fixed-loss threshold, a hospital's cost-to-charge ratio is applied to the total covered charges for the case to convert the charges to costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the costs above the threshold.

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments plus outlier payments. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated proportion of total DRG payments made to outlier cases. Similarly,

section 1886(d)(9)(B)(iv) of the Act requires the Secretary to reduce the average standardized amounts applicable to hospitals in Puerto Rico to account for the estimated proportion of total DRG payments made to outlier cases. More information on outlier payments may be found on the CMS Web site at <http://www.cms.hhs.gov/providers/hipps/ippsothr.asp>.

i. Proposed FY 2006 outlier fixed-loss threshold. For FY 2006, we are proposing a new methodology to calculate the outlier fixed-loss threshold. For FY 2004, we simulated outlier payments by applying FY 2004 rates and policies using cases from the FY 2002 MedPAR file. In order to determine the FY 2004 outlier fixed-loss threshold, it was necessary to inflate the charges on the MedPAR claims by 2 years, from FY 2002 to FY 2004. In order to determine the FY 2004 threshold, we used the 2-year average annual rate-of-change in charges per case to inflate FY 2002 charges to approximate FY 2004 charges. (We refer the reader to the FY 2004 IPPS final rule (67 FR 45476) for a complete discussion of the FY 2004 methodology.) In the IPPS proposed rule for FY 2005 (69 FR 28376), we proposed to use the same methodology we used for determining the FY 2004 outlier fixed-loss threshold to determine the FY 2005 outlier threshold. We further noted that the rate-of-increase in the 2-year average annual rate-of-change in charges derived from the period before the changes we made to the policy affecting the applicable cost-to-charge ratios (68 FR 34494) and, therefore, they may have represented rates-of-increase that could be higher than the rates-of-increase under our new policy. As a result, we welcomed comments on the data we were using to update charges for purposes of the threshold and specifically encouraged commenters to provide recommendations for data that might better reflect current trends in charge increases.

In response to the many comments we received on this proposed FY 2005 methodology, in the IPPS final rule for FY 2005 (69 FR 49275), we revised that proposed methodology and used the following methodology to calculate the final FY 2005 outlier fixed-loss threshold. Instead of using the 2-year average annual rate-of-change in charges per case from FY 2001 to FY 2002 and FY 2002 to FY 2003, we used more recent data to determine the annual rate-of-change in charges for the FY 2005 outlier threshold. Specifically, we compared the rate-of-increase in charges from the first half-year of FY 2003 to the first half-year of FY 2004. We stated that we believed this methodology would result in a more accurate determination of the rate-of-change in charges per case between FY 2003 and FY 2005. Although a full year of data was available for FY 2003, we did not have a full year of FY 2004 data at the time we set the FY 2005 outlier threshold. Therefore, we stated that we believed it was optimal to employ comparable periods in determining the rate-of-change from one year to the next. We also stated that we believed this methodology was the best methodology for determining the rate-of-change in charges per case because it used the most recent charge data available. Using this methodology, we

established a fixed-loss cost outlier threshold for FY 2005 equal to the prospective payment rate for the DRG, plus any IME and DSH payment, and any add-on payment for new technology, plus \$25,800.

For FY 2006, we are proposing to use a new methodology to calculate the outlier threshold that will take into account the lower inflation in hospital charges that is occurring as a result of the June 9, 2003 outlier final rule (68 FR 34505), which changed our methodology for determining outlier payments by implementing the use of more current and accurate cost-to-charge ratios when paying for outliers. As we have done in the past, to calculate the proposed FY 2006 outlier thresholds, we simulated payments by applying proposed FY 2006 rates and policies using cases from the FY 2004 MedPAR files. Therefore, in order to determine the appropriate proposed FY 2006 outlier threshold, it was necessary to inflate the charges on the MedPAR claims by 2 years, from FY 2004 to FY 2006.

However, we are not proposing to inflate charges using a 2-year average annual rate-of-change in charges per case from FY 2002 to FY 2003 and FY 2003 to FY 2004 because of the distortion in FY 2002 and FY 2003 charge data caused by the exceptionally high rate of hospital charge inflation during those years. Instead, we are proposing to use more recent data that reflect changes under the new outlier policy. However, we will continue to consider other methodologies in the future when calculating the outlier threshold once we have 2 complete years of charge data under the new outlier policy.

Specifically, we are proposing to establish the proposed FY 2006 outlier threshold as follows: Using the latest data available, the 1-year average annualized rate-of-change in charges per case from the last quarter of FY 2003 in combination with the first quarter of FY 2004 (July 1, 2003 through December 31, 2003) to the last quarter of FY 2004 in combination with the first quarter of FY 2005 (July 1, 2004 through December 31, 2004) was 8.65 percent (1.0865), or 18.04 percent (1.1804) over 2 years. As we have done in the past, we are proposing to use hospital cost-to-charge ratios from the most recent Provider Specific File, in this case the December 2004 update, in establishing the proposed FY 2006 outlier threshold. This file includes cost-to-charge ratios that reflect implementation of the changes to the policy for determining the applicable cost-to-charge ratios that became effective August 8, 2003 (68 FR 34494).

Using this methodology, we are proposing to establish a fixed-loss cost outlier threshold for FY 2006 equal to the prospective payment rate for the DRG, plus any IME and DSH payments, and any add-on payments for new technology, plus \$26,675. In addition, as stated in the June 9, 2003 outlier final rule (68 FR 34505), we believe the use of charge inflation is more appropriate than our previous methodology of cost inflation because charges tend to increase at a much faster rate than costs. Although charges have increased at a slower rate since the implementation of changes to our outlier payment methodology in 2003, we believe the use of charges is still appropriate because this trend is still evident.

As we did in establishing the FY 2005 outlier threshold (69 FR 49278), we are not including in the calculation of the outlier threshold the possibility that hospitals' cost-to-charge ratios and outlier payments may be reconciled upon cost report settlement. We believe that, due to the policy implemented in the June 9, 2003 outlier final rule, cost-to-charge ratios will no longer fluctuate significantly and, therefore, few hospitals, if any, will actually have these ratios reconciled upon cost report settlement. In addition, it is difficult to predict which specific hospitals will have cost-to-charge ratios and outlier payments reconciled in their cost reports in any given year. We also note that reconciliation occurs because hospitals' actual cost-to-charge ratios for the

cost reporting period are different than the interim cost-to-charge ratios used to calculate outlier payments when a bill is processed. Our simulations assume cost-to-charge ratios accurately measure hospital costs and, therefore, are more reflective of post-reconciliation than pre-reconciliation outlier payments. As a result, we omitted any assumptions about the effects of reconciliation from the outlier threshold calculation.

ii. Other changes concerning outliers. As stated in the September 1, 1993 final rule (58 FR 46348), we establish outlier thresholds that are applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier

payments, we found that using a common set of thresholds resulted in a lower percentage of outlier payments for capital-related costs than for operating costs. We project that the proposed thresholds for FY 2006 will result in outlier payments equal to 5.1 percent of operating DRG payments and 5.03 percent of capital payments based on the Federal rate.

In accordance with section 1886(d)(3)(B) of the Act, we reduced the proposed FY 2005 standardized amount by the same percentage to account for the projected proportion of payments paid to outliers.

The proposed outlier adjustment factors that would be applied to the standardized amount for FY 2006 are as follows:

|             | Operating<br>Standardized Amounts | Capital Federal Rate |
|-------------|-----------------------------------|----------------------|
| National    | 0.948994                          | 0.949652             |
| Puerto Rico | 0.976257                          | 0.975914             |

We are proposing to apply the outlier adjustment factors to the FY 2006 rates after removing the effects of the FY 2005 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we apply hospital-specific cost-to-charge ratios to the total covered charges for the case. Operating and capital costs for the case are calculated separately by applying separate operating and capital cost-to-charge ratios. These costs are then combined and compared with the fixed-loss outlier threshold.

The June 9, 2003 outlier final rule (68 FR 34494) eliminated the application of the statewide average for hospitals whose cost-to-charge ratios fall below 3 standard deviations from the national mean cost-to-charge ratio. However, for those hospitals for which the fiscal intermediary computes operating cost-to-charge ratios greater than 1.220 or capital cost-to-charge ratios greater than 0.169, or hospitals for whom the fiscal intermediary is unable to calculate a cost-to-charge ratio (as described at § 412.84(i)(3) of our regulations), we are still using statewide average ratios to calculate costs to determine whether a hospital qualifies for outlier payments.<sup>6</sup> Table 8A in section VI. of this Addendum contains the proposed statewide average operating cost-to-charge ratios for urban hospitals and for rural hospitals for which the fiscal intermediary is unable to compute a hospital-specific cost-to-charge ratio within the above range. Effective for discharges occurring on or after October 1, 2005, these proposed statewide average ratios would replace the ratios published in the IPPS final rule for FY 2005 (69 FR 49687). Table 8B in section VI. of this Addendum contains the proposed comparable statewide average capital cost-to-charge ratios. Again, the

<sup>6</sup> These figures represent 3.0 standard deviations from the mean of the log distribution of cost-to-charge ratios for all hospitals.

proposed cost-to-charge ratios in Tables 8A and 8B would be used during FY 2006 when hospital-specific cost-to-charge ratios based on the latest settled cost report are either not available or are outside the range noted above.

iii. FY 2004 and FY 2005 outlier payments. In the FY 2005 IPPS final rule, we stated that, based on available data, we estimated that actual FY 2004 outlier payments would be approximately 3.6 percent of actual total DRG payments (69 FR 49278, as corrected at 69 FR 60252). This estimate was computed based on simulations using the FY 2003 MedPAR file (discharge data for FY 2003 bills). That is, the estimate of actual outlier payments did not reflect actual FY 2004 bills, but instead reflected the application of FY 2004 rates and policies to available FY 2003 bills.

Our current estimate, using available FY 2004 bills, is that actual outlier payments for FY 2004 were approximately 3.5 percent of actual total DRG payments. Thus, the data indicate that, for FY 2004, the percentage of actual outlier payments relative to actual total payments is lower than we projected before FY 2004 (and, thus, is less than the percentage by which we reduced the standardized amounts for FY 2004). We note that, for FY 2005, the outlier threshold was lowered to \$25,800 compared to \$31,000 for FY 2004. The outlier threshold was lower in FY 2005 than FY 2004 as a result of slower growth in hospital charge inflation. We believe that this slower growth was due to changes in hospital charge practices following implementation of the outlier final rule published on June 9, 2003. Nevertheless, consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not plan to make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2004 are equal to 5.1 percent of total DRG payments.

We currently estimate that actual outlier payments for FY 2005 will be approximately

4.4 percent of actual total DRG payments, 0.7 percentage points lower than the 5.1 percent we projected in setting outlier policies for FY 2005. This estimate is based on simulations using the FY 2004 MedPAR file (discharge data for FY 2004 bills). We used these data to calculate an estimate of the actual outlier percentage for FY 2005 by applying FY 2005 rates and policies, including an outlier threshold of \$25,800 to available FY 2004 bills.

d. Rural Community Hospital Demonstration Program Adjustment (Section 410A of Pub. L. 108-173)

Section 410A of Pub. L. 108-173 requires the Secretary to establish a demonstration that will modify reimbursement for inpatient services for up to 15 small rural hospitals. Section 410A(c)(2) of Pub. L. 108-173 requires that "in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented." As discussed in section V.K. of the preamble to this proposed rule, we are proposing to satisfy this requirement by adjusting national IPPS rates by a factor that is sufficient to account for the added costs of this demonstration. We estimate that the average additional annual payment that will be made to each participating hospital under the demonstration will be approximately \$977,410. We based this estimate on the recent historical experience of the difference between inpatient cost and payment for hospitals that are participating in the demonstration. For 13 participating hospitals, the total annual impact of the demonstration program is estimated to be \$12,706,334. The required adjustment to the Federal rate used in calculating Medicare inpatient prospective payments as a result of the demonstration is 0.999863.

In order to achieve budget neutrality, we are proposing to adjust national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we are proposing to apply budget neutrality across the payment system as a whole rather than merely across the participants of this demonstration. We believe that the language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. This is because the statutory language requires that "aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration \* \* \* was not implemented," but does not identify the range across which aggregate payments must be held equal.

#### 5. Proposed FY 2006 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B in section VI. of this Addendum contain the national standardized amount that we are proposing to apply to all hospitals, except hospitals in Puerto Rico. The amounts shown in the two tables differ only in that the labor-related share applied to the standardized amounts in

Table 1A is 69.7 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are applying the labor-related share of 62 percent, unless the application of that percentage would result in lower payments to a hospital than would otherwise be made. The effect of this proposed application is that the labor-related share of the standardized amount is 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

As discussed in section IV.B.3. of the preamble to this proposed rule (reflecting the Secretary's current estimate of the proportion of costs that are attributable to wages and wage-related costs), we are proposing to set the labor-related share of the standardized amount at 69.7 percent for hospitals whose wage indexes are greater than 1.0000. In addition, Tables 1A and 1B include proposed standardized amounts reflecting the full 3.2 percent update for FY 2006, and proposed standardized amounts reflecting the 0.4 percentage point reduction to the update applicable for hospitals that fail to submit quality data consistent with section 501(b) of Pub. L. 108-173. (Tables 1C and 1D show the

proposed standardized amounts for Puerto Rico for FY 2006, reflecting the different labor-related shares that apply, that is, 71.3 percent or 62 percent.)

The following table illustrates the proposed changes from the FY 2005 national average standardized amount. The first column shows the proposed changes from the FY 2005 standardized amounts for hospitals that satisfy the quality data submission requirement for receiving the full update (3.2 percent). The second column shows the proposed changes for hospitals receiving the reduced update (2.8 percent). The first row of the table shows the proposed updated (through FY 2005) average standardized amount after restoring the FY 2005 offsets for outlier payments, demonstration budget neutrality, the wage index transition budget neutrality and geographic reclassification budget neutrality. The DRG reclassification and recalibration and wage index budget neutrality factor is cumulative. Therefore, the FY 2005 factor is not removed from the amount in the table. We have added separate rows to this table to reflect the different labor-related shares that apply to hospitals.

**Comparison of FY 2005 Standardized Amounts to Proposed FY 2006 Single Standardized Amount with Full Update and Reduced Update**

|  | <b>Full Update<br/>(3.2 percent)</b>      | <b>Reduced Update<br/>(2.8 percent)</b>   |
|--|---|---|
| FY 2005 Base Rate, after removing reclassification budget neutrality, demonstration budget neutrality, wage index transition budget neutrality factors and outlier offset (based on the proposed labor and nonlabor market share percentage for FY 2006) | Labor: \$3,373.02<br>Nonlabor: \$1,466.32 | Labor: \$3,373.02<br>Nonlabor: \$1,466.32 |
| Proposed FY 2006 Update Factor   | 1.032                                     | 1.028                                     |
| Proposed FY 2006 DRG Recalibrations and Wage Index Budget Neutrality Factor  | 1.002494                                  | 1.002494                                  |
| Proposed FY 2006 Reclassification Budget Neutrality Factor   | 0.992905                                  | 0.992905                                  |

Under section 1886(d)(9)(A)(ii) of the Act, the Federal portion of the Puerto Rico payment rate is based on the discharge-weighted average of the national large urban standardized amount (as set forth in Table 1A). The labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals are set

forth in Table 1C of section VI. of this Addendum. This table also includes the Puerto Rico standardized amounts. The labor-related share applied to the Puerto Rico standardized amount is 71.3 percent, or 62 percent, depending on which is more advantageous to the hospital. (Section 1886(d)(9)(C)(iv) of the Act, as amended by

section 403(b) of Pub. L. 108-173, provides that the labor-related share for hospitals in Puerto Rico will be 62 percent, unless the application of that percentage would result in lower payments to the hospital.)

### B. Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1D, as set forth in section VI. of this Addendum, contain the labor-related and nonlabor-related shares that we are proposing to use to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico. This section addresses two types of adjustments to the standardized amounts that are made in determining the proposed prospective payment rates as described in this Addendum.

#### 1. Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we

make an adjustment to the labor-related portion of the national and Puerto Rico prospective payment rates, respectively, to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. In section III. of the preamble to this proposed rule, we discuss the data and methodology for the proposed FY 2006 wage index. The proposed FY 2006 wage indexes are set forth in Tables 4A, 4B, 4C, and 4F of section VI. of this Addendum.

#### 2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act authorizes an adjustment to take into account the

unique circumstances of hospitals in Alaska and Hawaii. Higher labor-related costs for these two States are taken into account in the adjustment for area wages described above. For FY 2006, we are proposing to adjust the payments for hospitals in Alaska and Hawaii by multiplying the nonlabor-related portion of the standardized amount by the appropriate adjustment factor contained in the table below. If the Office of Personnel Management releases revised cost-of-living adjustment factors before July 1, 2005, we will publish them in the final rule and use them in determining FY 2006 payments.

**Table of Cost-of-Living Adjustment Factors,  
Alaska and Hawaii Hospitals**

| Area               | Cost of Living Adjustment Factor |
|--------------------|----------------------------------|
| Alaska-All areas   | 1.25                             |
| Hawaii:            |                                  |
| County of Honolulu | 1.25                             |
| County of Hawaii   | 1.165                            |
| County of Kauai    | 1.2325                           |
| County of Maui     | 1.2375                           |
| County of Kalawao  | 1.2375                           |

(The above factors are based on data obtained from the U.S. Office of Personnel Management.)

### C. DRG Relative Weights

As discussed in section II. of the preamble, we have developed a classification system for all hospital discharges, assigning them into DRGs, and have developed relative weights for each DRG that reflect the resource utilization of cases in each DRG relative to Medicare cases in other DRGs. Table 5 of section VI. of this Addendum contains the relative weights that we are proposing to use for discharges occurring in FY 2006. These factors have been recalibrated as explained in section II. of the preamble of this proposed rule.

### D. Calculation of Proposed Prospective Payment Rates for FY 2006

#### General Formula for Calculation of Prospective Payment Rates for FY 2006

The proposed operating prospective payment rate for all hospitals paid under the IPPS located outside of Puerto Rico, except SCHs and MDHs, equals the Federal rate based on the corresponding amounts in Table 1A or Table 1B in section VI. of this Addendum.

The proposed prospective payment rate for SCHs equals the higher of the applicable Federal rate (from Table 1A or Table 1B) or the hospital-specific rate as described below. The proposed prospective payment rate for

MDHs equals the higher of the Federal rate, or the Federal rate plus 50 percent of the difference between the Federal rate and the hospital-specific rate as described below. The proposed prospective payment rate for Puerto Rico equals 25 percent of the Puerto Rico rate plus 75 percent of the applicable national rate from Table 1C or Table 1D in section VI. of this Addendum.

#### 1. Federal Rate

For discharges occurring on or after October 1, 2005 and before October 1, 2006, except for SCHs, MDHs, and hospitals in Puerto Rico, payment under the IPPS is based exclusively on the Federal rate.

The Federal rate is determined as follows:

Step 1—Select the appropriate average standardized amount considering the applicable wage index (Table 1A for wage indexes greater than 1.0000 and Table 1B for wage indexes less than or equal to 1.0000) and whether the hospital has submitted qualifying quality data (full update for qualifying hospitals, update minus 0.4 percentage points for nonqualifying hospitals).

Step 2—Multiply the labor-related portion of the standardized amount by the applicable wage index for the geographic area in which the hospital is located or the area to which

the hospital is reclassified (see Tables 4A, 4B, and 4C of section VI. of this Addendum).

Step 3—For hospitals in Alaska and Hawaii, multiply the nonlabor-related portion of the standardized amount by the appropriate cost-of-living adjustment factor.

Step 4—Add the amount from Step 2 and the nonlabor-related portion of the standardized amount (adjusted, if appropriate, under Step 3).

Step 5—Multiply the final amount from Step 4 by the relative weight corresponding to the appropriate DRG (see Table 5 of section VI. of this Addendum).

The Federal rate as determined in Step 5 may then be further adjusted if the hospital qualifies for either the IME or DSH adjustment.

#### 2. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)

##### a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal rate; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; or the updated hospital-specific rate based on FY 1996 costs per discharge.

Section 1886(d)(5)(G) of the Act provides that MDHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal rate or the Federal rate plus 50 percent of the difference between the Federal rate and the greater of the updated hospital-specific rates based on either FY 1982 or FY 1987 costs per discharge. MDHs do not have the option to use their FY 1996 hospital-specific rate.

Hospital-specific rates have been determined for each of these hospitals based on the FY 1982 costs per discharge, the FY 1987 costs per discharge, or, for SCHs, the FY 1996 costs per discharge. For a more detailed discussion of the calculation of the hospital-specific rates, we refer the reader to the September 1, 1983 interim final rule (48 FR 39772); the April 20, 1990 final rule with comment (55 FR 15150); the September 4, 1990 final rule (55 FR 35994); and the August 1, 2000 final rule (65 FR 47082). In addition, for both SCHs and MDHs, the hospital-specific rate is adjusted by the proposed budget neutrality adjustment factor (that is, by the recalibration budget neutrality factor of 0.999003) as discussed in section V.C.2. of the preamble to this proposed rule. The resulting rate would be used in determining the payment rate an SCH or MDH would receive for its discharges beginning on or after October 1, 2005.

b. Updating the FY 1982, FY 1987, and FY 1996 Hospital-Specific Rates for FY 2005

We are proposing to increase the hospital-specific rates by 3.2 percent (the hospital market basket percentage increase) for SCHs and MDHs for FY 2006. Section 1886(b)(3)(C)(iv) of the Act provides that the update factor applicable to the hospital-specific rates for SCHs is equal to the update factor provided under section 1886(b)(3)(B)(iv) of the Act, which, for SCHs in FY 2006, is the market basket rate of increase. Section 1886(b)(3)(D) of the Act provides that the update factor applicable to the hospital-specific rates for MDHs also equals the update factor provided under section 1886(b)(3)(B)(iv) of the Act, which, for FY 2006, is the market basket rate-of-increase.

3. General Formula for Calculation of Proposed Prospective Payment Rates for Hospitals Located in Puerto Rico Beginning On or After October 1, 2005 and Before October 1, 2006

Under section 504 of Pub. L. 108-173, effective for discharges occurring on or after October 1, 2004, hospitals located in Puerto Rico are paid based on a blend of 75 percent of the national prospective payment rate and 25 percent of the Puerto Rico-specific rate.

a. Puerto Rico Rate

The Puerto Rico prospective payment rate is determined as follows:

Step 1—Select the appropriate average standardized amount considering the applicable wage index (see Table 1C).

Step 2—Multiply the labor-related portion of the standardized amount by the appropriate Puerto Rico-specific wage index (see Table 4F of section VI. of the Addendum).

Step 3—Add the amount from Step 2 and the nonlabor-related portion of the standardized amount.

Step 4—Multiply the amount from Step 3 by the appropriate DRG relative weight.

Step 5—Multiply the result in Step 4 by 25 percent (see Table 5 of section VI. of the Addendum).

b. National Rate

The national prospective payment rate is determined as follows:

Step 1—Select the appropriate average standardized amount considering the applicable wage index (see Table 1C).

Step 2—Add the amount from Step 1 and the nonlabor-related portion of the national average standardized amount.

Step 3—Multiply the amount from Step 2 by the appropriate DRG relative weight (see Table 5 of section VI. of the Addendum).

Step 4—Multiply the result in Step 3 by 75 percent.

The sum of the Puerto Rico rate and the national rate computed above equals the prospective payment for a given discharge for a hospital located in Puerto Rico. This rate may then be further adjusted if the hospital qualifies for either the IME or DSH adjustment.

III. Proposed Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2006

(If you choose to comment on issues in this section, please include the caption "Capital Payment Rate" at the beginning of your comment.)

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. Effective with that cost reporting period, hospitals were paid during a 10-year transition period (which extended through FY 2001) to change the payment methodology for Medicare acute care hospital inpatient capital-related costs from a reasonable cost-based methodology to a prospective methodology (based fully on the Federal rate).

The basic methodology for determining Federal capital prospective rates is set forth in regulations at §§ 412.308 through 412.352. Below we discuss the factors that we are proposing to use to determine the capital Federal rate for FY 2006, which would be effective for discharges occurring on or after October 1, 2005. The 10-year transition period ended with hospital cost reporting periods beginning on or after October 1, 2001 (FY 2002). Therefore, for cost reporting periods beginning in FY 2002, all hospitals (except "new" hospitals under § 412.304(c)(2)) are paid based on 100 percent of the capital Federal rate. For FY 1992, we computed the standard Federal payment rate for capital-related costs under the IPPS by updating the FY 1989 Medicare inpatient capital cost per case by an actuarial estimate of the increase in Medicare inpatient capital costs per case. Each year after FY 1992, we update the capital standard Federal rate, as provided at § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) provide that the capital Federal rate is adjusted annually by a factor

equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for (regular and special) exceptions under § 412.348. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor are budget neutral.

For FYs 1992 through 1995, § 412.352 required that the capital Federal rate also be adjusted by a budget neutrality factor so that aggregate payments for inpatient hospital capital costs were projected to equal 90 percent of the payments that would have been made for capital-related costs on a reasonable cost basis during the fiscal year. That provision expired in FY 1996. Section 412.308(b)(2) describes the 7.4 percent reduction to the capital rate that was made in FY 1994, and § 412.308(b)(3) describes the 0.28 percent reduction to the capital rate made in FY 1996 as a result of the revised policy of paying for transfers. In FY 1998, we implemented section 4402 of Pub. L. 105-33, which required that, for discharges occurring on or after October 1, 1997, and before October 1, 2002, the unadjusted capital standard Federal rate is reduced by 17.78 percent. As we discussed in the FY 2003 IPPS final rule (67 FR 50102) and implemented in § 412.308(b)(6)), a small part of that reduction was restored effective October 1, 2002.

To determine the appropriate budget neutrality adjustment factor and the regular exceptions payment adjustment during the 10-year transition period, we developed a dynamic model of Medicare inpatient capital-related costs; that is, a model that projected changes in Medicare inpatient capital-related costs over time. With the expiration of the budget neutrality provision, the capital cost model was only used to estimate the regular exceptions payment adjustment and other factors during the transition period. As we explained in the FY 2002 IPPS final rule (66 FR 39911), beginning in FY 2002, an adjustment for regular exception payments is no longer necessary because regular exception payments were only made for cost reporting periods beginning on or after October 1, 1991, and before October 1, 2001 (see § 412.348(b)). Because, effective with cost reporting periods beginning in FY 2002, payments are no longer being made under the regular exception policy, we no longer use the capital cost model. The capital cost model and its application during the transition period are described in Appendix B of the FY 2002 IPPS final rule (66 FR 40099).

Section 412.374 provides for the use of a blended payment system for payments to Puerto Rico hospitals under the PPS for acute care hospital inpatient capital-related costs. Accordingly, under the capital PPS, we compute a separate payment rate specific to Puerto Rico hospitals using the same methodology used to compute the national Federal rate for capital-related costs. In

accordance with section 1886(d)(9)(A) of the Act, under the IPPS for acute care hospital operating costs, hospitals located in Puerto Rico are paid for operating costs under a special payment formula. Prior to FY 1998, hospitals in Puerto Rico were paid a blended operating rate that consisted of 75 percent of the applicable standardized amount specific to Puerto Rico hospitals and 25 percent of the applicable national average standardized amount. Similarly, prior to FY 1998, hospitals in Puerto Rico were paid a blended capital rate that consisted of 75 percent of the applicable capital Puerto Rico specific rate and 25 percent of the applicable capital Federal rate. However, effective October 1, 1997, in accordance with section 4406 of Pub. L. 105-33, operating payments to hospitals in Puerto Rico were revised to be based on a blend of 50 percent of the applicable standardized amount specific to Puerto Rico hospitals and 50 percent of the applicable national average standardized amount. In conjunction with this change to the operating blend percentage, effective with discharges occurring on or after October 1, 1997, we also revised the methodology for computing capital payments to hospitals in Puerto Rico to be based on a blend of 50 percent of the Puerto Rico capital rate and 50 percent of the capital Federal rate.

As we discussed in the FY 2005 IPPS final rule (69 FR 49185), section 504 of Pub. L. 108-173 increased the national portion of the operating IPPS payments for Puerto Rico hospitals from 50 percent to 62.5 percent and decreased the Puerto Rico portion of the operating IPPS payments from 50 percent to 37.5 percent for discharges occurring on or after April 1, 2004 through September 30, 2004 (see the March 26, 2004 One-Time Notification (Change Request 3158)). In addition, section 504 of Pub. L. 108-173 provided that the national portion of operating IPPS payments for Puerto Rico hospitals is equal to 75 percent and the Puerto Rico portion of operating IPPS payments is equal to 25 percent for discharges occurring on or after October 1, 2004. Consistent with that change in operating IPPS payments to hospitals in Puerto Rico, for FY 2005 (as we discussed in the FY 2005 IPPS final rule), we revised the methodology for computing capital payments to hospitals located in Puerto Rico to be based on a blend of 25 percent of the Puerto Rico capital rate and 75 percent of the capital Federal rate for discharges occurring on or after October 1, 2004.

#### *A. Determination of Proposed Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update*

In the FY 2005 IPPS final rule (69 FR 49283) and corrected in a December 30, 2004 correction notice (69 FR 78532), we established a capital Federal rate of \$416.53 for FY 2005.

In the discussion that follows, we explain the factors that were used to determine the proposed FY 2006 capital Federal rate. In particular, we explain why the proposed FY 2006 capital Federal rate would increase 0.7 percent compared to the FY 2005 capital Federal rate. We also estimate aggregate capital payments would decrease by 0.1

percent during this same period. This decrease is due to several factors, including a projected decrease in the number of Medicare fee-for-service hospital admissions, and a decrease in the proposed geographic adjustment factor (GAF) values (which are based on the proposed wage index values). Our Office of the Actuary projects a decrease in Medicare fee-for-service Part A enrollment, in part, because of a projected increase in Medicare managed care enrollment as a result of the implementation of several provisions of Pub. L. 108-173. We are projecting a slight increase in the proposed GAF values (based on the proposed wage index) for some hospitals as a result of the completion of the transition to the CBSA-based labor market area definitions (as discussed in section III. of the preamble of this proposed rule). Thus, we are projecting that capital PPS payments would remain relatively unchanged from FY 2005 to FY 2006.

Total payments to hospitals under the IPPS are relatively unaffected by changes in the capital prospective payments. Since capital payments constitute about 10 percent of hospital payments, a 1-percent change in the capital Federal rate yields only about 0.1 percent change in actual payments to hospitals. Aggregate payments under the capital IPPS are estimated to decrease slightly in FY 2006 compared to FY 2005, as discussed above.

#### **1. Projected Capital Standard Federal Rate Update**

##### **a. Description of the Update Framework**

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we have adjusted the projected CIPI rate-of-increase as appropriate each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The proposed update factor for FY 2006 under that framework is 0.7 percent based on the best data available at this time. The proposed update factor is based on a projected 0.7 percent increase in the CIPI, a 0.0 percent adjustment for intensity, a 0.0 percent adjustment for case-mix, a 0.0 percent adjustment for the FY 2004 DRG reclassification and recalibration, and a forecast error correction of 0.0 percent. As discussed below in section III.C. of this Addendum, we believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2006 CIPI projection in that same section of this Addendum. Below we describe the proposed policy adjustments that have been applied.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons:

- The average resource use of Medicare patients changes ("real" case-mix change);

- Changes in hospital coding of patient records result in higher weight DRG assignments ("coding effects"); and
- The annual DRG reclassification and recalibration changes may not be budget neutral ("reclassification effect").

We define real case-mix change as actual changes in the mix (and resource requirements) of Medicare patients as opposed to changes in coding behavior that result in assignment of cases to higher weighted DRGs but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2005 IPPS proposed rule for FY 2005 (69 FR 28816)). (We are no longer using an update framework in making a recommendation for updating the operating IPPS standardized amounts as discussed in section III. of Appendix B of this proposed rule.)

For FY 2006, we are projecting a 1.0 percent total increase in the case-mix index. We estimate that the real case-mix increase would also equal 1.0 percent in FY 2006. The net adjustment for change in case-mix is the difference between the projected increase in real case-mix and the projected total increase in real case-mix. Therefore, the net proposed adjustment for case-mix change in FY 2006 is 0.0 percentage points.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year changes to the DRG classifications and relative weights, in order to retain budget neutrality for all case-mix index-related changes other than those due to patient severity. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, we are adjusting for the effects of the FY 2004 DRG reclassification and recalibration as part of our proposed update for FY 2006. We estimate that FY 2004 DRG reclassification and recalibration would result in a 0.0 percent change in the case-mix when compared with the case-mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, we are proposing to make a 0.0 percent adjustment for DRG reclassification and recalibration in the update for FY 2006 to maintain budget neutrality.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is off by 0.25 percentage points or more. There is a 2-year

lag between the forecast and the measurement of the forecast error. A forecast error of -0.1 percentage points was calculated for the FY 2004 update. That is, current historical data indicate that the forecasted FY 2004 CIPI used in calculating the FY 2004 update factor (0.7 percent) slightly overstated the actual realized price increases (0.6 percent) by 0.1 percentage points. This slight overprediction was mostly due to a prediction of the cuts in the interest rate by the Federal Reserve Board in 2004. However, the Federal Reserve Board did not cut interest rates during 2004, which impacted the interest component of the CIPI. However, since this estimation of the change in the CIPI is less than 0.25 percentage points, it is not reflected in the update recommended under this framework. Therefore, we are proposing to make a 0.0 percent adjustment for forecast error in the update for FY 2006.

Under the capital IPPS system framework, we also make an adjustment for changes in intensity. We calculate this adjustment using the same methodology and data that are used in the framework for the operating PPS. The intensity factor for the operating update framework reflects how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes in within-DRG severity, and for expected modification of practice patterns to remove noncost-effective services.

We calculate case-mix constant intensity as the change in total charges per admission, adjusted for price level changes (the CPI for hospital and related services) and changes in real case-mix. The use of total charges in the calculation of the intensity factor makes it a total intensity factor; that is, charges for capital services are already built into the calculation of the factor. Therefore, we have incorporated the intensity adjustment from the operating update framework into the capital update framework. Without reliable estimates of the proportions of the overall annual intensity increases that are due, respectively, to ineffective practice patterns and to the combination of quality-enhancing new technologies and within-DRG complexity, we assume, as in the operating update framework, that one-half of the

annual increase is due to each of these factors. The capital update framework thus provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for within-DRG severity increases and the adoption of quality-enhancing technology.

We have developed a Medicare-specific intensity measure based on a 5-year average. Past studies of case-mix change by the RAND Corporation (Has DRG Creep Crept Up? Decomposing the Case Mix Index Change Between 1987 and 1988 by G.M. Carter, J.P. Newhouse, and D.A. Relles, R-4098-HCFA/ProPAC (1991)) suggest that real case-mix change was not dependent on total change, but was usually a fairly steady 1.0 to 1.4 percent per year. We use 1.4 percent as the upper bound because the RAND study did not take into account that hospitals may have induced doctors to document medical records more completely in order to improve payment.

We calculate case-mix constant intensity as the change in total charges per admission, adjusted for price level changes (the CPI for hospital and related services), and changes in real case-mix. As we noted above, in accordance with § 412.308(c)(1)(ii), we began updating the capital standard Federal rate in FY 1996 using an update framework that takes into account, among other things, allowable changes in the intensity of hospital services. For FYs 1996 through 2001, we found that case-mix constant intensity was declining and we established a 0.0 percent adjustment for intensity in each of those years. For FYs 2002 and 2003, we found that case-mix constant intensity was increasing and we established a 0.3 percent adjustment and 1.0 percent adjustment for intensity, respectively. For FYs 2004 and 2005, we found that the charge data appeared to be skewed (as discussed in greater detail below) and we established a 0.0 percent adjustment in each of those years. Furthermore, we stated that we would continue to apply a 0.0 percent adjustment for intensity until any increase in charges can be tied to intensity rather than attempts to maximize outlier payments.

Using the methodology described above, for FY 2006 we examined the change in total

charges per admission, adjusted for price level changes (the CPI for hospital and related services), and changes in real case-mix for FYs 1999 through 2004. We found that, over this period and in particular the last 4 years of this period (FYs 2000 through 2003), the charge data appear to be skewed. More specifically, we found a dramatic increase in hospital charges for FYs 2000 through 2004 without a corresponding increase in the hospital case-mix index. These findings are similar to the considerable increase in hospitals' charges, which we found when we were determining the intensity factor in the FY 2004 and FY 2005 update recommendations as discussed in the FY 2004 IPPS final rule (68 FR 45482) and the FY 2005 IPPS final rule (69 FR 49285), respectively. If hospitals were treating new or different types of cases, which would result in an appropriate increase in charges per discharge, then we would expect hospitals' case-mix to increase proportionally.

As we discussed in the FY 2005 IPPS final rule (69 FR 49285), because our intensity calculation relies heavily upon charge data and we believe that these charge data may be inappropriately skewed, we established a 0.0 percent adjustment for intensity for FY 2005. We believed that it was appropriate to apply a zero intensity adjustment until we believe that any increase in charges can be tied to intensity rather than to attempts to maximize outlier payments. As discussed above, we believe that the most recently available charge data used to make this determination may still be inappropriately skewed. Therefore, we are proposing a 0.0 percent adjustment for intensity for FY 2006. In the past (FYs 1996 through 2001) when we found intensity to be declining, we believed a zero (rather than negative) intensity adjustment was appropriate. Similarly, we believe that it is appropriate to propose to apply a zero intensity adjustment for FY 2006 until any increase in charges can be tied to intensity rather than to attempts to maximize outlier payments.

Above we described the basis of the components used to develop the proposed 0.7 percent capital update factor for FY 2006 as shown in the table below.

### CMS Proposed FY 2006 Update Factor to the Capital Federal Rate

|  |      |
|--|------|
| Capital Input Price Index                            | 0.7  |
| Intensity:   | 0.0  |
| Case-Mix Adjustment Factors:                         |      |
| Real Across DRG Change                               | 1.0  |
| Projected Case-Mix Change                            | -1.0 |
| Subtotal   | 0.0  |
| Effect of FY 2004 Reclassification and Recalibration | 0.0  |
| Forecast Error Correction                            | 0.0  |
| Total Proposed Update                                | 0.7  |

#### b. Comparison of CMS and MedPAC Update Recommendation

In the past, MedPAC has included update recommendations for capital PPS in a Report to Congress. In its March 2005 Report to Congress, MedPAC did not make an update recommendation for capital PPS payments for FY 2006. However, in that same report, MedPAC made an update recommendation for hospital inpatient and outpatient services (page 40). MedPAC reviews inpatient and outpatient services together since they are so closely interrelated. MedPAC recommended an increase in the payment rate for the operating IPPS by the projected increase in the hospital market basket index, less 0.4 percent for FY 2006, based on their assessment of beneficiaries' access to care, volume of services, access to capital, quality of care, and the relationship of Medicare payments and costs. In addition, the Commission considered the efficient provision of services in making its FY 2006 update recommendations. (MedPAC's Report to the Congress: Medicare Payment Policy, March 2005, page 44.)

#### 2. Proposed Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier methodology for inpatient operating and inpatient capital-related costs. A single set of thresholds is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital related outlier payments to total inpatient capital-related PPS payments. The outlier thresholds are set so that operating outlier payments are projected to be 5.1 percent of total operating DRG payments.

In the FY 2005 IPPS final rule (69 FR 49286), we estimate that outlier payments for capital will equal 4.94 percent of inpatient capital-related payments based on the capital Federal rate in FY 2005. Based on the thresholds as set forth in section II.A.4.c. of this Addendum, we estimate that outlier payments for capital would equal 5.03 percent for inpatient capital-related payments based on the proposed Federal rate in FY 2006. Therefore, we are proposing to apply an outlier adjustment factor of 0.9497 to the capital Federal rate. Thus, the percentage of capital outlier payments to total capital standard payments for FY 2006 would be higher than the percentages for FY 2005.

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in

determining the capital Federal rate. The proposed FY 2006 outlier adjustment of 0.9497 is a -0.09 percent change from the FY 2005 outlier adjustment of 0.9506. The net change in the proposed outlier adjustment to the capital Federal rate for FY 2006 is 0.9991 (0.9497/0.9506). Thus, the proposed outlier adjustment decreases the FY 2006 capital Federal rate by 0.09 percent compared with the FY 2005 outlier adjustment.

#### 3. Proposed Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes.

Since we implemented a separate GAF for Puerto Rico, we apply separate budget neutrality adjustments for the national GAF and the Puerto Rico GAF. We apply the same budget neutrality factor for DRG reclassifications and recalibration nationally and for Puerto Rico. Separate adjustments were unnecessary for FY 1998 and earlier because the GAF for Puerto Rico was implemented in FY 1998.

In the past, we used the actuarial capital cost model (described in Appendix B of the FY 2002 IPPS final rule (66 FR 40099)) to estimate the aggregate payments that would have been made on the basis of the capital Federal rate with and without changes in the DRG classifications and weights and in the GAF to compute the adjustment required to maintain budget neutrality for changes in DRG weights and in the GAF. During the transition period, the capital cost model was also used to estimate the regular exception payment adjustment factor. As we explain in section III.A.4. of this Addendum, beginning in FY 2002, an adjustment for regular exception payments is no longer necessary. Therefore, we are no longer using the capital cost model. Instead, we are using historical data based on hospitals' actual cost experiences to determine the exceptions payment adjustment factor for special exceptions payments.

To determine the proposed factors for FY 2006, we compared (separately for the national capital rate and the Puerto Rico capital rate) estimated aggregate capital Federal rate payments based on the FY 2005 DRG relative weights and the average FY 2005 GAF (that is, the weighted average of

the GAFs applied from October 2004 through December 2004 and the GAFs applied from January 2005 through September 2005) to estimated aggregate capital Federal rate payments based on the proposed FY 2006 relative weights and the proposed FY 2006 GAF. As we established in the FY 2005 IPPS final rule (69 FR 49287), the budget neutrality factors were 0.9914 for the national capital rate and 0.9895 for the Puerto Rico capital rate for discharges occurring on or after October 1, 2004 through December 31, 2004 (the first quarter of FY 2005). As a result of the corrections to the FY 2005 GAF values established in the December 30, 2004 correction notice (69 FR 78531), effective for January 1, 2005 through September 30, 2005 (the last three quarters of FY 2005), the budget neutrality factor for the national capital rate is 0.9912 and the budget neutrality factor for the Puerto Rico capital rate remained unchanged (0.9895). For FY 2005, the weighted average budget neutrality adjustment factors were 0.9912 ( $0.9914 \times \frac{1}{4} + 0.9912 \times \frac{3}{4}$ ) for the national capital rate (calculations were done on unrounded numbers) and 0.9895 for the Puerto Rico capital rate. In making the comparison, we set the regular and special exceptions reduction factors to 1.00. To achieve budget neutrality for the changes in the national GAF, based on calculations using updated data, we are proposing to apply an incremental budget neutrality adjustment of 1.0022 for FY 2006 to the weighted average of the previous cumulative FY 2005 adjustments of 0.9912 (yielding a proposed adjustment of 0.9934) through FY 2006 (calculations done on unrounded numbers). For the Puerto Rico GAF, we are proposing to apply an incremental budget neutrality adjustment of 1.0240 for FY 2006 to the previous cumulative FY 2005 adjustment of 0.9895, yielding a proposed cumulative adjustment of 1.0132 through FY 2006.

We then compared estimated aggregate capital Federal rate payments based on the FY 2005 DRG relative weights and the average FY 2005 GAF to estimated aggregate capital Federal rate payments based on the proposed FY 2006 DRG relative weights and the proposed FY 2006 GAF. The proposed incremental adjustment for DRG classifications and changes in relative weights is 0.9998 both nationally and for Puerto Rico. The proposed cumulative adjustments for DRG classifications and changes in relative weights and for changes in the GAF through FY 2005 are 0.9931 nationally and 1.013 for Puerto Rico. The following table summarizes the adjustment factors for each fiscal year:

## BUDGET NEUTRALITY ADJUSTMENT FOR DRG RECLASSIFICATIONS AND RECALIBRATION AND THE GEOGRAPHIC ADJUSTMENT FACTORS

| Fiscal Year        | National                     |   |                       |            | Puerto Rico                  |   |                      |            |
|--------------------|------------------------------|---|-----------------------|------------|------------------------------|---|----------------------|------------|
|                    | Incremental Adjustment       |   |                       | Cumulative | Incremental Adjustment       |   |                      | Cumulative |
|                    | Geographic Adjustment Factor | DRG Reclassifications and Recalibration | Combined              |            | Geographic Adjustment Factor | DRG Reclassifications and Recalibration | Combined             |            |
| 1992               | ---                          | ---                                     | ---                   | 1.00000    | ---                          | ---                                     | ---                  | ---        |
| 1993               | ---                          | ---                                     | 0.99800               | 0.99800    | ---                          | ---                                     | ---                  | ---        |
| 1994               | ---                          | ---                                     | 1.00531               | 1.00330    | ---                          | ---                                     | ---                  | ---        |
| 1995               | ---                          | ---                                     | 0.99980               | 1.00310    | ---                          | ---                                     | ---                  | ---        |
| 1996               | ---                          | ---                                     | 0.99940               | 1.00250    | ---                          | ---                                     | ---                  | ---        |
| 1997               | ---                          | ---                                     | 0.99873               | 1.00123    | ---                          | ---                                     | ---                  | ---        |
| 1998               | ---                          | ---                                     | 0.99892               | 1.00015    | ---                          | ---                                     | ---                  | 1.00000    |
| 1999               | 0.99944                      | 1.00335                                 | 1.00279               | 1.00294    | 0.99898                      | 1.00335                                 | 1.00233              | 1.00233    |
| 2000               | 0.99857                      | 0.99991                                 | 0.99848               | 1.00142    | 0.99910                      | 0.99991                                 | 0.99901              | 1.00134    |

<sup>12</sup> Incremental factors are applied to average of the cumulative factors for the first half (October 1, 2003 through March 31, 2004) and second half (April 1, 2004 through September 30, 2004) of FY 2004.

<sup>13</sup> Factors effective for the last three quarters of FY 2005 (January 2005 through September 2005).

<sup>14</sup> Incremental factors are applied to average of the cumulative factors for 2005.

The methodology used to determine the proposed recalibration and geographic (DRG/GAF) budget neutrality adjustment factor for FY 2006 is similar to that used in establishing budget neutrality adjustments under the PPS for operating costs. One difference is that, under the operating PPS, the budget neutrality adjustments for the effect of geographic reclassifications are determined separately from the effects of other changes in the hospital wage index and the DRG relative weights. Under the capital

PPS, there is a single DRG/GAF budget neutrality adjustment factor (the national capital rate and the Puerto Rico capital rate are determined separately) for changes in the GAF (including geographic reclassification) and the DRG relative weights. In addition, there is no adjustment for the effects that geographic reclassification has on the other payment parameters, such as the payments for serving low-income patients, indirect medical education payments, or the large urban add-on payments.

In the FY 2005 IPPS final rule (69 FR 49288), we calculated a GAF/DRG budget neutrality factor of 1.0006 for FY 2005. As we noted above, as a result of the revisions to the GAF effective for discharges occurring on or after January 1, 2005 established in the December 30, 2004 correction notice (69 FR 78351), we calculated a GAF/DRG budget neutrality factor of 1.0004 for discharges occurring in the remainder of FY 2005. For FY 2006, we are proposing a GAF/DRG budget neutrality factor of 1.0019. The GAF/

DRG budget neutrality factors are built permanently into the capital rates; that is, they are applied cumulatively in determining the capital Federal rate. This follows from the requirement that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAF. The proposed incremental change in the adjustment from the average from FY 2005 to FY 2006 is 1.0019. The proposed cumulative change in the capital Federal rate due to this adjustment is 0.9931 (the product of the incremental factors for FYs 1993 through 2005 and the proposed incremental factor of 1.0019 for FY 2006). (We note that averages of the incremental factors that were in effect during FYs 2004 and 2005, respectively, were used in the calculation of the proposed cumulative adjustment of 0.9931 for FY 2006.)

This proposed factor accounts for DRG reclassifications and recalibration and for changes in the GAF. It also incorporates the effects on the GAF of FY 2006 geographic reclassification decisions made by the MGCRB compared to FY 2005 decisions. However, it does not account for changes in payments due to changes in the DSH and IME adjustment factors or in the large urban add-on.

#### 4. Proposed Exceptions Payment Adjustment Factor

Section 412.308(c)(3) requires that the capital standard Federal rate be reduced by an adjustment factor equal to the estimated proportion of additional payments for both regular exceptions and special exceptions under § 412.348 relative to total capital PPS payments. In estimating the proportion of regular exception payments to total capital PPS payments during the transition period, we used the actuarial capital cost model originally developed for determining budget neutrality (described in Appendix B of the FY 2002 IPPS final rule (66 FR 40099)) to determine the exceptions payment adjustment factor, which was applied to both the Federal and hospital-specific capital rates.

An adjustment for regular exception payments is no longer necessary in determining the proposed FY 2006 capital Federal rate because, in accordance with § 412.348(b), regular exception payments were only made for cost reporting periods beginning on or after October 1, 1991 and before October 1, 2001. Accordingly, as we explained in the FY 2002 IPPS final rule (66 FR 39949), in FY 2002 and subsequent fiscal years, no payments will be made under the regular exceptions provision. However, in accordance with § 412.308(c), we still need to compute a budget neutrality adjustment for special exception payments under § 412.348(g). We describe our methodology for determining the special exceptions

adjustment used in calculating the proposed FY 2006 capital Federal rate below.

Under the special exceptions provision specified at § 412.348(g)(1), eligible hospitals include SCHs, urban hospitals with at least 100 beds that have a disproportionate share percentage of at least 20.2 percent or qualify for DSH payments under § 412.106(c)(2), and hospitals with a combined Medicare and Medicaid inpatient utilization of at least 70 percent. An eligible hospital may receive special exceptions payments if it meets (1) a project need requirement as described at § 412.348(g)(2), which, in the case of certain urban hospitals, includes an excess capacity test as described at § 412.348(g)(4); (2) an age of assets test as described at § 412.348(g)(3); and (3) a project size requirement as described at § 412.348(g)(5).

Based on information compiled from our fiscal intermediaries, six hospitals have qualified for special exceptions payments under § 412.348(g). Since we have cost reports ending in FY 2004 for all of these hospitals, we calculated the proposed adjustment based on actual cost experience. Using data from cost reports ending in FY 2004 from the December 2004 update of the HCRIS data, we divided the capital special exceptions payment amounts for the six hospitals that qualified for special exceptions by the total capital PPS payment amounts (including special exception payments) for all hospitals. Based on the data from cost reports ending in FY 2004, this ratio is rounded to 0.0003. Because we have not received all cost reports ending in FY 2004, we also divided the FY 2004 special exceptions payments by the total capital PPS payment amounts for all hospitals with cost reports ending in FY 2003. This ratio also rounds to 0.0003. Because special exceptions are budget neutral, we are proposing to offset the capital Federal rate by 0.03 percent for special exceptions payments for FY 2006. Therefore, the proposed exceptions adjustment factor is equal to 0.9997 (1 - 0.0003) to account for special exceptions payments in FY 2006.

In the FY 2005 IPPS final rule (69 FR 49288), we estimated that total (special) exceptions payments for FY 2005 would equal 0.04 percent of aggregate payments based on the capital Federal rate. Therefore, we applied an exceptions adjustment factor of 0.9996 (1 - 0.0004) in determining the FY 2005 capital Federal rate. As we stated above, we estimate that exceptions payments in FY 2006 would equal 0.03 percent of aggregate payments based on the proposed FY 2006 capital Federal rate. Therefore, we are proposing to apply an exceptions payment adjustment factor of 0.9997 to the capital Federal rate for FY 2006. The proposed exceptions adjustment factor for FY 2006 is 0.01 percent higher than the factor for FY 2005 published in the FY 2005 IPPS final rule (69 FR 49288). The exceptions reduction factors are not built permanently into the

capital rates; that is, the factors are not applied cumulatively in determining the capital Federal rate. Therefore, the proposed net change in the exceptions adjustment factor used in determining the proposed FY 2006 capital Federal rate is 1.0001 (0.9997/0.9996).

#### 5. Proposed Capital Standard Federal Rate for FY 2006

In the FY 2005 IPPS final rule (69 FR 49283) and corrected in a December 30, 2004 correction notice (69 FR 78532), we established a capital Federal rate of \$416.53 for FY 2005. In this proposed rule, we are proposing to establish a capital Federal rate of \$419.90 for FY 2006. The proposed capital Federal rate for FY 2006 was calculated as follows:

- The proposed FY 2006 update factor is 1.0070; that is, the update is 0.7 percent.
- The proposed FY 2006 budget neutrality adjustment factor that is applied to the capital standard Federal payment rate for changes in the DRG relative weights and in the GAF is 1.0019.
- The proposed FY 2006 outlier adjustment factor is 0.9497.
- The proposed FY 2006 (special) exceptions payment adjustment factor is 0.9997.

Because the proposed capital Federal rate has already been adjusted for differences in case-mix, wages, cost-of-living, indirect medical education costs, and payments to hospitals serving a disproportionate share of low-income patients, we are proposing to make no additional adjustments in the capital standard Federal rate for these factors, other than the budget neutrality factor for changes in the DRG relative weights and the GAF.

We are providing a chart that shows how each of the proposed factors and adjustments for FY 2006 affected the computation of the proposed FY 2006 capital Federal rate in comparison to the average FY 2005 capital Federal rate. The proposed FY 2006 update factor has the effect of increasing the capital Federal rate by 0.70 percent compared to the average FY 2005 Federal rate. The proposed GAF/DRG budget neutrality factor has the effect of increasing the capital Federal rate by 0.19 percent. The proposed FY 2006 outlier adjustment factor has the effect of decreasing the capital Federal rate by 0.09 percent compared to the average FY 2005 capital Federal rate, and the proposed FY 2006 exceptions payment adjustment factor has the effect of increasing the capital Federal rate by 0.01 percent compared to the exceptions payment adjustment factor for the FY 2005 capital Federal rate. The combined effect of all the proposed changes is to increase the capital Federal rate by 0.81 percent compared to the average FY 2005 capital Federal rate.

**Comparison of Factors and Adjustments:  
FY 2005 Capital Federal Rate and  
Proposed FY 2006 Capital Federal Rate**

|   | FY 2005  | Proposed<br>FY 2006 | Proposed<br>Change | Percent<br>Change |
|---|----------|---------------------|--------------------|-------------------|
| Update factor <sup>1</sup>                | 1.0070   | 1.0070              | 1.0070             | 0.70              |
| GAF/DRG Adjustment Factor <sup>1</sup>    | 1.0004   | 1.0019              | 1.0019             | 0.19              |
| Outlier Adjustment Factor <sup>2</sup>    | 0.9506   | 0.9497              | 0.9991             | -0.09             |
| Exceptions Adjustment Factor <sup>2</sup> | 0.9996   | 0.9997              | 0.0001             | 0.01              |
| Capital Federal Rate                      | \$416.53 | \$419.90            | 1.0081             | 0.81              |

<sup>1</sup> The update factor and the GAF/DRG budget neutrality factors are built permanently into the capital rates. Thus, for example, the proposed incremental change from FY 2005 to FY 2006 resulting from the application of the proposed 1.0019 GAF/DRG budget neutrality factor for FY 2006 is 1.0019.

<sup>2</sup> The outlier reduction factor and the exceptions adjustment factor are not built permanently into the capital rates; that is, these factors are not applied cumulatively in determining the capital rates. Thus, for example, the proposed net change resulting from the application of the proposed FY 2006 outlier adjustment factor is 0.9497/0.9506, or 0.9991.

**6. Proposed Special Capital Rate for Puerto Rico Hospitals**

Section 412.374 provides for the use of a blended payment system for payments to Puerto Rico hospitals under the PPS for acute care hospital inpatient capital-related costs. Accordingly, under the capital PPS, we compute a separate payment rate specific to Puerto Rico hospitals using the same methodology used to compute the national Federal rate for capital-related costs. Under the broad authority of section 1886(g) of the Act, as discussed in section VI. of the preamble of this proposed rule, beginning with discharges occurring on or after October 1, 2004, capital payments to hospitals in Puerto Rico are based on a blend of 25 percent of the Puerto Rico capital rate and 75 percent of the capital Federal rate. The Puerto Rico capital rate is derived from the costs of Puerto Rico hospitals only, while the capital Federal rate is derived from the costs of all acute care hospitals participating in the IPPS (including Puerto Rico).

To adjust hospitals' capital payments for geographic variations in capital costs, we apply a GAF to both portions of the blended capital rate. The GAF is calculated using the operating IPPS wage index and varies, depending on the labor market area or rural area in which the hospital is located. We use the Puerto Rico wage index to determine the GAF for the Puerto Rico part of the capital-blended rate and the national wage index to determine the GAF for the national part of the blended capital rate.

Because we implemented a separate GAF for Puerto Rico in FY 1998, we also apply separate budget neutrality adjustments for the national GAF and for the Puerto Rico GAF. However, we apply the same budget neutrality factor for DRG reclassifications and recalibration nationally and for Puerto Rico. As we stated above in section III.A.4. of this Addendum, for Puerto Rico, the proposed GAF budget neutrality factor is 1.0240, while

the proposed DRG adjustment is 0.9998, for a combined cumulative adjustment of 1.0130.

In computing the payment for a particular Puerto Rico hospital, the Puerto Rico portion of the capital rate (25 percent) is multiplied by the Puerto Rico-specific GAF for the labor market area in which the hospital is located, and the national portion of the capital rate (75 percent) is multiplied by the national GAF for the labor market area in which the hospital is located (which is computed from national data for all hospitals in the United States and Puerto Rico). In FY 1998, we implemented a 17.78 percent reduction to the Puerto Rico capital rate as a result of Pub. L. 105-33. In FY 2003, a small part of that reduction was restored.

For FY 2005, before application of the GAF, the special capital rate for Puerto Rico hospitals was \$199.01 for discharges occurring on or after October 1, 2004 through September 30, 2005. With the changes we are proposing to the factors used to determine the capital rate, the proposed FY 2006 special capital rate for Puerto Rico is \$205.64.

**B. Calculation of Proposed Inpatient Capital-Related Prospective Payments for FY 2006**

Because the 10-year capital PPS transition period ended in FY 2001, all hospitals (except "new" hospitals under § 412.324(b) and under § 412.304(c)(2)) are paid based on 100 percent of the capital Federal rate in FY 2006. The applicable proposed capital Federal rate was determined by making adjustments as follows:

- For outliers, by dividing the proposed capital standard Federal rate by the proposed outlier reduction factor for that fiscal year; and
- For the payment adjustments applicable to the hospital, by multiplying the hospital's proposed GAF, disproportionate share adjustment factor, and IME adjustment factor, when appropriate.

For purposes of calculating payments for each discharge during FY 2006, the capital standard Federal rate is adjusted as follows:

(Standard Federal Rate) × (DRG weight) × (GAF) × (Large Urban Add-on, if applicable) × (COLA adjustment for hospitals located in Alaska and Hawaii) × (1 + Disproportionate Share Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the thresholds established for each fiscal year. Section 412.312(c) provides for a single set of thresholds to identify outlier cases for both inpatient operating and inpatient capital-related payments. The proposed outlier thresholds for FY 2006 are in section II.A.4.c. of this Addendum. For FY 2006, a case qualifies as a cost outlier if the cost for the case plus the IME and DSH payments is greater than the prospective payment rate for the DRG plus \$26,675.

An eligible hospital may also qualify for a special exceptions payment under § 412.348(g) for up through the 10th year beyond the end of the capital transition period if it meets: (1) A project need requirement described at § 412.348(g)(2), which in the case of certain urban hospitals includes an excess capacity test as described at § 412.348(g)(4); and (2) a project size requirement as described at § 412.348(g)(5). Eligible hospitals include SCHs, urban hospitals with at least 100 beds that have a DSH patient percentage of at least 20.2 percent or qualify for DSH payments under § 412.106(c)(2), and hospitals that have a combined Medicare and Medicaid inpatient utilization of at least 70 percent. Under § 412.348(g)(8), the amount of a special exceptions payment is determined by comparing the cumulative payments made to the hospital under the capital PPS to the cumulative minimum payment level. This amount is offset by: (1) Any amount by which a hospital's cumulative capital payments exceed its cumulative minimum payment levels applicable under the regular exceptions process for cost reporting periods

beginning during which the hospital has been subject to the capital PPS; and (2) any amount by which a hospital's current year operating and capital payments (excluding 75 percent of operating DSH payments) exceed its operating and capital costs. Under § 412.348(g)(6), the minimum payment level is 70 percent for all eligible hospitals.

During the transition period, new hospitals (as defined under § 412.300) were exempt from the capital PPS for their first 2 years of operation and were paid 85 percent of their reasonable costs during that period. Effective with the third year of operation through the remainder of the transition period, under § 412.324(b), we paid the hospitals under the appropriate transition methodology. If the hold-harmless methodology were applicable, the hold-harmless payment for assets in use during the base period would extend for 8 years, even if the hold-harmless payments extend beyond the normal transition period. Under § 412.304(c)(2), for cost reporting periods beginning on or after October 1, 2002, we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to pay all other hospitals subject to the capital PPS).

### C. Capital Input Price Index

#### 1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year.

We periodically update the base year for the operating and capital input prices to reflect the changing composition of inputs for operating and capital expenses. The CIPI was last rebased to FY 1997 in the FY 2003 IPPS final rule (67 FR 50044). (We note that we are proposing a rebasing to FY 2002 in section IV. of the preamble of this proposed rule.)

#### 2. Forecast of the CIPI for FY 2006

Based on the latest forecast by Global Insight, Inc. (first quarter of 2005), we are forecasting the CIPI to increase 0.7 percent in FY 2006. This reflects a projected 1.3 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment) and a 2.7 percent increase in other capital expense prices in FY 2006, partially offset by a 2.3 percent decline in vintage-weighted interest expenses in FY 2006. The weighted average of these three

factors produces the 0.7 percent increase for the CIPI as a whole in FY 2006.

### IV. Proposed Changes to Payment Rates for Excluded Hospitals and Hospital Units: Rate-of-Increase Percentages

(If you choose to comment on issues in this section, please include the caption "Excluded Hospitals Rate-of-Increase" at the beginning of your comment.)

#### A. Payments to Existing Excluded Hospitals and Units

As discussed in section VII. of the preamble of this proposed rule, in accordance with section 1886(b)(3)(H)(i) of the Act and effective for cost reporting periods beginning on or after October 1, 2002, payments to existing psychiatric hospitals and units, rehabilitation hospitals and units, and long-term care hospitals (LTCHs) excluded from the IPPS are no longer subject to a cap on a hospital-specific target amount (expressed in terms of the inpatient operating cost per discharge under TEFRA) that is set for each hospital, based on the hospital's own historical cost experience trended forward by the applicable percentage increase. However, the inpatient operating costs of children's hospitals and cancer hospitals that are excluded from the IPPS continue to be subject to the rate-of-increase limits established under the authority of section 1886(b) of the Act and § 413.40 of the regulations. This target amount is applied as a ceiling on the allowable costs per discharge for the hospital's cost reporting period.

Effective for cost reporting periods beginning on or after October 1, 2002, rehabilitation hospitals and units are paid 100 percent of the adjusted Federal prospective payment rate under the IRP PPS. Effective for cost reporting periods beginning on or after October 1, 2002, LTCHs also are no longer paid on a reasonable cost basis, but are paid under a LTCH DRG-based PPS. In implementing the LTCH PPS for existing LTCHs, we established a 5-year transition period from reasonable cost-based payments (subject to the TEFRA limit) to fully Federal prospective payment amounts during which a LTCH may receive a blended payment consisting of two payment components—one based on reasonable cost under the TEFRA payment system, and the other based on the standard Federal prospective payment rate. However, an existing LTCH may elect to be paid based on 100 percent of the standard Federal prospective payment rate during the transition period.

IPFs that have their first cost reporting period beginning on or after January 1, 2005, are not paid on a reasonable cost basis but paid under a prospective per diem payment system. As part of the PPS for existing IPFs, we have established a 3-year transition period during which IPFs will be paid based on a blend of reasonable cost-based payment (subject to the TEFRA limit) and the prospective per diem payment rate. For cost reporting periods beginning on or after January 1, 2008, IPFs will be paid 100 percent of the Federal prospective per diem payment amount.

Excluded psychiatric hospitals and units as well as LTCHs that are paid under a blended

methodology will have the reasonable cost-based portion of their payment subject to a hospital target amount and, if applicable, the payment amount limitation.

#### B. Updated Caps for New Excluded Hospitals and Units

Section 1886(b)(7) of the Act established the method for determining the payment amount for new rehabilitation hospitals and units, psychiatric hospitals and units, and LTCHs that first received payment as a hospital or unit excluded from the IPPS on or after October 1, 1997. However, due to the implementation of the IRF PPS, effective for cost reporting periods beginning on or after October 1, 2002, this payment amount (or "new provider cap") no longer applies to any new rehabilitation hospital or unit because they now are paid 100 percent of the Federal prospective rate under the IRF PPS. In addition, LTCHs that meet the definition of a new LTCH under § 412.23(e)(4) are paid 100 percent of the fully Federal prospective payment rate. In contrast, those "new" LTCHs that meet the criteria under § 413.40(f)(2)(ii) (that is, that were not paid as an excluded hospital prior to October 1, 1997, but were paid as a LTCH before October 1, 2002), may be paid under the LTCH PPS transition methodology, with the reasonable cost portion of the payment subject to § 413.40(f)(2)(ii). Finally, LTCHs that existed prior to October 1, 1997, may also be paid under the LTCH PPS transition methodology, with the reasonable cost portion subject to § 413.40(c)(4)(ii). (The last LTCHs that were subject to the payment amount limitation for "new" LTCHs were new LTCHs that had their first cost reporting period beginning on September 30, 2002. In that case, the payment amount limitation remained applicable for the next 2 years—September 30, 2002 through September 29, 2003, and September 30, 2003 through September 29, 2004. This is because, under existing regulations at § 413.40(f)(2)(ii), the "new hospital" would be subject to the same payment (target amount) in its second cost reporting period that was applicable to the LTCH in its first cost reporting period. Accordingly, for this hospital, the updated payment amount limitation that we published in the FY 2003 IPPS final rule (67 FR 50103) applied through September 29, 2004. Consequently, there is no longer a need to publish updated payment amounts for new (§ 413.40(f)(2)(iii)) LTCHs. A discussion of how the payment limitations were calculated can be found in the August 29, 1997 final rule with comment period (62 FR 46019); the May 12, 1998 final rule (63 FR 26344); the July 31, 1998 final rule (63 FR 41000); and the July 30, 1999 final rule (64 FR 41529).

With the implementation of the LTCH PPS, payment limitations do not apply to any new LTCHs that meet the definition at § 412.23(e)(4) because they are paid 100 percent of the Federal prospective payment rate.

A freestanding inpatient rehabilitation hospital, an inpatient rehabilitation unit of an acute care hospital, and an inpatient rehabilitation unit of a CAH are referred to as IRFs. Effective for cost reporting periods beginning on or after October 1, 2002, this

payment limitation is also no longer applicable to new rehabilitation hospitals and units because they are paid 100 percent of the Federal prospective rate under the IRF PPS. Therefore, it is also no longer necessary to update the payment limitation for new rehabilitation hospitals or units.

Under the IPF PPS, there is a 3-year transition period during which existing IPFs will receive a blended payment of the Federal per diem payment amount and the payment amount that IPFs would receive under the reasonable cost-based payment (TEFRA) methodology. IPFs that were "new" under § 413.40(f)(2)(ii) (that is, that were not paid as an excluded hospital prior to October 1, 1997, but were paid as an IPF prior to January 1, 2005), would have the reasonable cost portion of the transition period payment subject to the payment amount limitation as determined according to § 413.40(f)(2)(ii). The last "new" IPFs that were subject to the payment amount limitation were IPFs that had their first cost reporting period beginning on December 31, 2004. For these hospitals, the payment amount limitation that was published in the FY 2005 IPPS final rule (69 FR 49189) for cost reporting periods beginning on or after October 1, 2004, and before January 1, 2005, remains applicable for the IPF's first two cost reporting periods. IPFs with a first cost reporting period beginning on or after January 1, 2005, are paid 100 percent of the Federal rate and are not subject to the payment amount limitation. Therefore, since the last IPFs eligible for a blended payment have a cost reporting period beginning on December 31, 2004, the payment limitation published for FY 2005 remains applicable for these IPFs, and publication of the updated payment amount limitation is no longer needed. We note that IPFs that existed prior to October 1, 1997, may also be paid under the IPF transition methodology with the reasonable cost portion of the payment subject to § 413.40(c)(4)(ii).

The payment limitations for new hospitals under TEFRA do not apply to new LTCHs, IRFs, or IPFs, that is, these hospitals with their first cost reporting period beginning on or after the date that the particular class of hospitals implemented the respective PPS. Therefore, for the reasons noted above, we are proposing to discontinue publishing Tables 4G and 4H (Pre-Reclassified Wage Index for Urban and Rural Areas, respectively) in the annual proposed and final IPPS rules.

#### V. Payment for Blood Clotting Factor Administered to Hemophilia Inpatients

(If you choose to comment on issues in this section, please include the caption "Payment for Blood Clotting Factor" at the beginning of your comments.)

As discussed in section VIII. of the preamble to this proposed rule, section 1886(a)(4) of the Act excludes the costs of administering blood clotting factors to individuals with hemophilia from the definition of "operating costs of inpatient hospital services." Section 6011(b) of Pub. L. 101-239 (the Omnibus Budget Reconciliation Act of 1989) provides that the Secretary shall determine the payment amount made to

hospitals under Part A of Title XVIII of the Act for the costs of administering blood clotting factors to individuals with hemophilia by multiplying a predetermined price per unit of blood clotting factor by the number of units provided to the individual. Currently, we use the average wholesale price (AWP) methodology used to determine rates paid for Medicare Part B drugs to price blood clotting factors administered to inpatients who have hemophilia under Medicare Part A. Section 303 of Pub. L. 108-173 amended the Act by adding section 1847A, which changed the drug pricing system under Medicare Part B. Effective January 1, 2005, section 1847A of the Act established a payment methodology based on average sales price (ASP) under which almost all Medicare Part B drugs and biologicals not paid on a cost or prospective basis are paid at 106 percent of the ASP.

In the FY 2005 IPPS final rule (69 FR 49292), we had instructed the fiscal intermediaries for FY 2005 to continue to use the Single Drug Pricer (SDP) to establish the pricing limits for the blood clotting factor administered to hemophilia inpatients at 95 percent of the AWP. We did not use the new ASP pricing methodology for Part A blood clotting factor in FY 2005 because the IPPS final rule was published in advance of final regulations implementing the ASP payment methodology for Part B drugs and biologicals. Final regulations establishing the ASP methodology and the furnishing fee for blood clotting factor under Medicare Part B were published on November 15, 2004 (69 FR 66299). Therefore, we believe that a consistent methodology should be used to pay for blood clotting factor administered under both Medicare Part A and Part B. For this reason, we are proposing for FY 2006 that the fiscal intermediaries make payment for blood clotting factor using 106 percent of ASP and make payment for the furnishing fee at \$0.14 per individual unit (I.U.) that is currently used for Medicare Part B drugs. The ASP will be updated quarterly. The furnishing fee will be updated annually based on the consumer price index.

#### VI. Tables

This section contains the tables referred to throughout the preamble to this proposed rule and in this Addendum. Tables 1A, 1B, 1C, 1D, 2, 3A, 3B, 4A, 4B, 4C, 4F, 4J, 5, 6A, 6B, 6C, 6D, 6E, 6F, 6G, 6H, 7A, 7B, 8A, 8B, 9A, 9B, 9C, 10, and 11 are presented below. The tables presented below are as follows:

- Table 1A—National Adjusted Operating Standardized Amounts, Labor/Nonlabor (69.7 Percent Labor Share/30.3 Percent Nonlabor Share If Wage Index Is Greater Than 1);
- Table 1B—National Adjusted Operating Standardized Amounts, Labor/Nonlabor (62 Percent Labor Share/38 Percent Nonlabor Share If Wage Index Is Less Than or Equal To 1);
- Table 1C—Adjusted Operating Standardized Amounts for Puerto Rico, Labor/Nonlabor;
- Table 1D—Capital Standard Federal Payment Rate;
- Table 2—Hospital Case-Mix Indexes for Discharges Occurring in Federal Fiscal

Year 2004; Hospital Average Hourly Wage for Federal Fiscal Years 2004 (2000 Wage Data), 2005 (2001 Wage Data), and 2006 (2002 Wage Data) Wage Indexes and 3-Year Average of Hospital Average Hourly Wages;

- Table 3A—FY 2006 3-Year Average Hourly Wage for Urban Areas by CBSA;
- Table 3B—FY 2006 and 3-Year Average Hourly Wage for Rural Areas by CBSA;
- Table 4A—Wage Index and Capital Geographic Adjustment Factor (GAF) for Urban Areas by CBSA;
- Table 4B—Wage Index and Capital Geographic Adjustment Factor (GAF) for Rural Areas by CBSA;
- Table 4C—Wage Index and Capital Geographic Adjustment Factor (GAF) for Hospitals That Are Reclassified by CBSA;
- Table 4F—Puerto Rico Wage Index and Capital Geographic Adjustment Factor (GAF) by CBSA;
- Table 4J—Out-Migration Adjustment—FY 2006;
- Table 5—List of Diagnosis Related Groups (DRGs), Relative Weighting Factors, Geometric and Arithmetic Mean Length of Stay;
- Table 6A—New Diagnosis Codes;
- Table 6B—New Procedure Codes;
- Table 6C—Invalid Diagnosis Codes;
- Table 6D—Invalid Procedure Codes;
- Table 6E—Revised Diagnosis Code Titles;
- Table 6F—Revised Procedure Code Titles;
- Table 6G—Additions to the CC Exclusions List;
- Table 6H—Deletions from the CC Exclusions List;
- Table 7A—Medicare Prospective Payment System Selected Percentile Lengths of Stay FY 2004 MedPAR Update December 2004 GROUPE V22.0;
- Table 7B—Medicare Prospective Payment System Selected Percentile Lengths of Stay FY 2004 MedPAR Update December 2004 GROUPE V23.0;
- Table 8A—Statewide Average Operating Cost-to-Charge Ratios—March 2005;
- Table 8B—Statewide Average Capital Cost-to-Charge Ratios—March 2005;
- Table 9A—Hospital Reclassifications and Redesignations by Individual Hospital and CBSA—FY 2006;
- Table 9B—Hospital Reclassifications and Redesignations by Individual Hospital Under Section 508 of Pub. L. 108-173—FY 2006;
- Table 9C—Hospitals Redesignated as Rural under Section 1886(s)(8)(E) of the Act—FY 2006;
- Table 10—Geometric Mean Plus the Lesser of .75 of the National Adjusted Operating Standardized Payment Amount (Increased to Reflect the Difference Between Costs and Charges) or .75 of One Standard Deviation of Mean Charges by Diagnosis-Related Groups (DRGs)—March 2005;
- Table 11—Proposed FY 2006 LTC-DRGs, Relative Weights, Geometric Average Length of Stay, and 5/6ths of the Geometric Average Length of Stay.

TABLE 1A.—NATIONAL ADJUSTED OPERATING STANDARDIZED AMOUNTS, LABOR/NONLABOR  
[69.7 Percent labor share/30.3 percent nonlabor share if wage index greater than 1]

| Full update (3.2 Percent) |                  | Reduced update (2.8 Percent) |                  |
|---------------------------|------------------|------------------------------|------------------|
| Labor-related             | Nonlabor-related | Labor-related                | Nonlabor-related |
| \$3,286.14                | \$1,428.55       | \$3,273.40                   | \$1,423.01       |

TABLE 1B.—NATIONAL ADJUSTED OPERATING STANDARDIZED AMOUNTS, LABOR/NONLABOR  
[62 Percent labor share/38 percent nonlabor share if wage index less than or equal to 1]

| Full update (3.2 Percent) |                  | Reduced update (2.8 Percent) |                  |
|---------------------------|------------------|------------------------------|------------------|
| Labor-related             | Nonlabor-related | Labor-related                | Nonlabor-related |
| \$2,923.11                | \$1,791.58       | \$2,911.78                   | \$1,784.63       |

TABLE 1C.—ADJUSTED OPERATING STANDARDIZED AMOUNTS FOR PUERTO RICO, LABOR/NONLABOR

| Rates if wage index greater than 1 | Labor      | Nonlabor   | Rates if wage index less than or equal to 1 |            |
|------------------------------------|------------|------------|---|------------|
|                                    |            |            | Labor                                       | Nonlabor   |
| National .....                     | \$3,286.14 | \$1,428.55 | \$2,923.11                                  | \$1,791.58 |
| Puerto Rico .....                  | \$1,608.99 | \$647.66   | \$1,431.24                                  | \$812.25   |

TABLE 1D.—CAPITAL STANDARD FEDERAL PAYMENT RATE

|                   | Rate     |
|-------------------|----------|
| National .....    | \$419.90 |
| Puerto Rico ..... | \$205.64 |

TABLE 2.—HOSPITAL CASE-MIX INDEXES FOR DISCHARGES OCCURRING IN FEDERAL FISCAL YEAR 2004; HOSPITAL AVERAGE HOURLY WAGE FOR FEDERAL FISCAL YEARS 2004 (2000 WAGE DATA), 2005 (2001 WAGE DATA), AND 2006 (2002 WAGE DATA) WAGE INDEXES AND 3-YEAR AVERAGE OF HOSPITAL AVERAGE HOURLY WAGES

| Provider number           | Case-mix index | Wage index FY 2006 | Average hourly wage FY 2004 | Average hourly wage FY 2005 | Average hourly wage FY 2006 | Average hourly wage** (3 years) |

Continued

| CBSA code | Nonurban area | Wage index | GAF    |
|-----------|---------------|------------|--------|
| 53        | Wyoming       | 0.9207     | 0.9450 |

<sup>1</sup> All counties within the State are classified as urban, with the exception of Massachusetts. Massachusetts has area(s) designated as rural, however, no short-term, acute care hospitals are located in the area(s) for FY 2006.  
Massachusetts, New Jersey, and Rhode Island rural floors are imputed as discussed in section III. H. of the preamble of this proposed rule.

The following list represents all hospitals that are eligible to have their wage index increased by the out-migration adjustment listed in this table.

Hospitals cannot receive the out-migration adjustment if they are reclassified under section 1886(d)(10) of the Act or redesignated under section

1886(d)(8)(B) of the Act. Hospitals that have already been reclassified under section 1886(d)(10) of the Act or redesignated under section

1886(d)(8)(B) of the Act are designated with an asterisk. Hospitals have the opportunity to use the new additional 30-day period to review their individual situation to determine whether to submit a request to withdraw their reclassification/redesignation and receive the out-migration adjustment instead. We will automatically assume that hospitals that have already been reclassified under section 1886(d)(10) of the Act or redesignated under section 1886(d)(8)(B) of the Act wish to retain their reclassification/redesignation status and waive the application of the out-migration adjustment. Hospitals are not required to provide CMS with any type of formal notification that they wish to remain reclassified/redesignated.

\*Medicare data has been supplemented by data from 19 States for low-volume DRGs.

\*\*DRGs 469 and 470 contain cases which could not be assigned to valid DRGs.

Note: Geometric mean is used only to determine payment for transfer cases.

Note: Arithmetic means are presented for informational purposes only.

Note: Relative weights are based on Medicare patient data and may not be appropriate for other patients.

<sup>5</sup> Proposed relative weights for these proposed LTC—DRGs were determined by assigning these cases to proposed low-volume quintile quintile

5.

<sup>6</sup> Proposed relative weights for these proposed LTC—DRGs were assigned a value of 0.0000.

<sup>7</sup> Proposed relative weights for these proposed LTC—DRGs were determined by assigning these cases to the appropriate proposed low volume quintile because there are no LTCH cases in the FY 2004 MedPAR file.

<sup>8</sup> Proposed relative weights for these proposed LTC—DRGs were determined after adjusting to account for nonmonotonicity (see step 5 above).

## Appendix A—Regulatory Analysis of Impacts

(If you choose to comment on issues in this section, please include the caption "Impact Analyses" at the beginning of your comment.)

### I. Background and Summary

We have examined the impacts of this proposed rule as required by Executive Order 12866 (September 1993, Regulatory Planning and Review) and the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-

354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4), and Executive Order 13132.

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major

rules with economically significant effects (\$100 million or more in any 1 year).

We have determined that this proposed rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the total impact of these proposed changes for FY 2006 payments compared to FY 2005 payments to be approximately a \$2.40 billion increase. This amount does not reflect changes in hospital admissions or case-mix intensity, which would also affect overall payment changes.

The RFA requires agencies to analyze options for regulatory relief of small

businesses. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and government agencies. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of \$5 million to \$25 million in any 1 year. For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis for any proposed rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we previously defined a small rural hospital as a hospital with fewer than 100 beds that is located outside of a Metropolitan Statistical Area (MSA) or New England County Metropolitan Area (NECMA). However, under the new labor market definitions, we no longer employ NECMAs to define urban areas in New England. Therefore, we now define a small rural hospital as a hospital with fewer than 100 beds that is located outside of a Metropolitan Statistical Area (MSA). Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98-21) designated hospitals in certain New England counties as belonging to the adjacent NECMA. Thus, for purposes of the IPPS, we continue to classify these hospitals as urban hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4) also requires that agencies assess anticipated costs and benefits before issuing any proposed rule (or a final rule that has been preceded by a proposed rule) that may result in an expenditure in any one year by State, local, or tribal governments, in the aggregate, or by the private sector, of \$110 million. This proposed rule will not mandate any requirements for State, local, or tribal governments.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have reviewed this proposed rule in light of Executive Order 13132 and have determined that it would not have any negative impact on the rights, roles, and responsibilities of State, local, or tribal governments.

In accordance with the provisions of Executive Order 12866, this proposed rule was reviewed by the Office of Management and Budget.

The following analysis, in conjunction with the remainder of this document, demonstrates that this proposed rule is consistent with the regulatory philosophy and principles identified in Executive Order 12866, the RFA, and section 1102(b) of the Act. The proposed rule will affect payments to a substantial number of small rural hospitals, as well as other classes of

hospitals, and the effects on some hospitals may be significant.

## II. Objectives

The primary objective of the IPPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs. In addition, we share national goals of preserving the Medicare Trust Fund.

We believe the proposed changes in this proposed rule will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these proposed changes will ensure that the outcomes of this payment system are reasonable and equitable while avoiding or minimizing unintended adverse consequences.

## III. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our proposed policy changes, as well as statutory changes effective for FY 2006, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case while holding all other payment policies constant. We use the best data available, but we do not attempt to predict behavioral responses to our policy changes, and we do not make adjustments for future changes in such variables as admissions, lengths of stay, or case-mix. As we have done in the previous proposed rules, we are soliciting comments and information about the anticipated effects of these proposed changes on hospitals and our methodology for estimating them. Any comments that we receive in response to this proposed rule will be addressed in the final rule.

## IV. Hospitals Included In and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital-related costs encompass nearly all general short-term, acute care hospitals that participate in the Medicare program. There were 35 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment method for these hospitals. Among other short-term, acute care hospitals, only the 46 such hospitals in Maryland remain excluded from the IPPS under the waiver at section 1814(b)(3) of the Act.

As of March 2005, there are 3,693 IPPS hospitals to be included in our analysis. This represents about 63 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There are also approximately 974 critical access hospitals (CAHs). These small, limited service hospitals are paid on the basis of reasonable costs rather than under the IPPS. There are also 1,138 specialty hospitals and units that are excluded from the IPPS. These specialty hospitals include psychiatric hospitals and units, rehabilitation hospitals and units, long-term care hospitals, children's hospitals, and cancer hospitals.

The impacts of our proposed policy changes on these hospitals are discussed below.

## V. Impact on Excluded Hospitals and Hospital Units

As of March 2005, there were 1,138 specialty hospitals excluded from the IPPS. Of these 1,138 specialty hospitals, 467 psychiatric hospitals, 80 children's, 11 cancer hospitals, and 21 LTCHs that are paid under the LTCH PPS blend methodology are being paid, in whole or in part, on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. The remaining providers—218 IRFs and 361 LTCHs are paid 100 percent of the Federal prospective rate under the IRF PPS and the LTCH PPS, respectively. In addition, there were 1,342 psychiatric units (paid on a blend of the IPF PPS per diem payment and the TEFRA reasonable cost-based payment) and 1,006 rehabilitation units (paid under the IRF PPS) in hospitals otherwise subject to the IPPS. Under § 413.40(a)(2)(i)(A), the rate-of-increase ceiling is not applicable to the 46 specialty hospitals and units in Maryland that are paid in accordance with the waiver at section 1814(b)(3) of the Act.

In the past, hospitals and units excluded from the IPPS have been paid based on their reasonable costs subject to limits as established by the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA). Hospitals that continue to be paid based on their reasonable costs are subject to TEFRA limits for FY 2006. For these hospitals, the proposed update is the percentage increase in the excluded hospital market basket, currently estimated at 3.4 percent.

Inpatient rehabilitation facilities (IRFs) are paid under a prospective payment system (IRF PPS) for cost reporting periods beginning on or after January 1, 2002. For cost reporting periods beginning during FY 2005, the IRF PPS is based on 100 percent of the adjusted Federal IRF prospective payment amount, updated annually. Therefore, these hospitals are not impacted by this proposed rule.

Effective for cost reporting periods beginning on or after October 1, 2002, LTCHs are paid under a LTCH PPS, based on a Federal prospective payment amount that is updated annually. LTCHs will receive a blended payment that consists of the Federal prospective payment rate and a reasonable cost-based payment rate over a 5-year transition period. However, under the LTCH PPS, a LTCH may also elect to be paid at 100 percent of the Federal prospective rate at the beginning of any of its cost reporting periods during the 5-year transition period. For purposes of the update factor, the portion of the LTCH PPS transition blend payment based on reasonable costs for inpatient operating services would be determined by updating the LTCH's TEFRA limit by the estimate of the excluded hospital market basket (or 3.4 percent).

Section 124 of the Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA) required the development of a per diem prospective payment system (PPS) for payment of inpatient hospital services furnished in psychiatric hospitals and psychiatric units of acute care hospitals and

CAHs (inpatient psychiatric facilities (IPFs)). We published a final rule to implement the IPF PPS on November 15, 2004 (69 FR 66922). The final rule established a 3-year transition to the IPF PPS during which some providers will receive a blend of the IPF PPS per diem payment and the TEFRA reasonable cost-based payment. For purposes of determining what the TEFRA payment to the IPF would be, we are proposing that the IPF's TEFRA limit will be updated by the estimate of the excluded hospital market basket (or 3.4 percent).

The impact on excluded hospitals and hospital units of the update in the rate-of-increase limit depends on the cumulative cost increases experienced by each excluded hospital or unit since its applicable base period. For excluded hospitals and units that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these hospitals and hospital units receive. Conversely, for excluded hospitals and hospital units with per-case cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that will not be reimbursed.

We note that, under § 413.40(d)(3), an excluded hospital or unit whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus 50 percent of the difference between its reasonable costs and 110 percent of the limit, not to exceed 110 percent of its limit. In addition, under the various provisions set forth in § 413.40, certain excluded hospitals and hospital units can obtain payment adjustments for justifiable increases in operating costs that exceed the limit. However, at the same time, by generally limiting payment increases, we continue to provide an incentive for excluded hospitals and hospital units to restrain the growth in their spending for patient services.

## VI. Quantitative Impact Analysis of the Policy Changes Under the IPPS for Operating Costs

### A. Basis and Methodology of Estimates

In this proposed rule, we are announcing policy changes and payment rate updates for the IPPS for operating costs. Changes to the capital payments are discussed in section VIII. of this Appendix. Based on the overall percentage change in payments per case estimated using our payment simulation model (a 2.5 percent increase), we estimate the total impact of these proposed changes for FY 2006 operating payments compared to FY 2005 operating payments to be approximately a \$2.41 billion increase. This amount does not reflect changes in hospital admissions or case-mix intensity, which would also affect overall payment changes.

We have prepared separate impact analyses of the proposed changes to each system. This section deals with proposed changes to the operating prospective payment system. Our payment simulation model relies on the most recent available data to enable us to estimate the impacts on payments per case of certain changes we are proposing in this rule. However, there are other changes we are proposing for which we do not have data

available that would allow us to estimate the payment impacts using this model. For those proposed changes, we have attempted to predict the payment impacts of those proposed changes based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented below are taken from the FY 2004 MedPAR file and the most current Provider-Specific File that is used for payment purposes. Although the analyses of the changes to the operating PPS do not incorporate cost data, data from the most recently available hospital cost report were used to categorize hospitals. Our analysis has several qualifications. First, we do not make adjustments for behavioral changes that hospitals may adopt in response to the proposed policy changes, and we do not adjust for future changes in such variables as admissions, lengths of stay, or case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each proposed change. Third, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases in the FY 2004 MedPAR file, we simulated payments under the operating IPPS given various combinations of payment parameters. Any short-term, acute care hospitals not paid under the IPPS (Indian Health Service hospitals and hospitals in Maryland) were excluded from the simulations. The impact of payments under the capital IPPS, or the impact of payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of proposed FY 2006 changes to the capital IPPS are discussed in section VIII of this Appendix.

The proposed changes discussed separately below are the following:

- The effects of the annual reclassification of diagnoses and procedures and the recalibration of the DRG relative weights required by section 1886(d)(4)(C) of the Act.
- The effects of the proposed changes in hospitals' wage index values reflecting wage data from hospitals' cost reporting periods beginning during FY 2002, compared to the FY 2001 wage data.
- The effect of the proposed change in the way we use the wage data for hospitals that reclassify as rural under section 401 of the BBRA to compute wage indexes.
- The effect of the proposed wage and recalibration budget neutrality factors.
- The effect of the remaining labor market area transition for those hospitals that were urban under the old labor market area designations and are now considered rural hospitals.
- The effects of geographic reclassifications by the MGCRB that will be effective in FY 2006.
- The effects of section 505 of Pub. L. 108-173, which provides for an increase in a

hospital's wage index if the hospital qualifies by meeting a threshold percentage of residents of the county where the hospital is located who commute to work at hospitals in counties with higher wage indexes.

- The total change in payments based on proposed FY 2006 policies and MMA-imposed changes relative to payments based on FY 2005 policies.

To illustrate the impacts of the proposed FY 2006 changes, our analysis begins with a FY 2006 baseline simulation model using: the proposed update of 3.2 percent; the FY 2005 DRG GROUPER (version 22.0); the CBSA designations for hospitals based on OMB's June 2003 MSA definitions; the FY 2005 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating DRG and outlier payments.

Section 1886(b)(3)(B)(vii) of the Act, as added by section 501(b) of Pub. L. 108-173, provides that, for FYs 2005 through 2007, the update factors will be reduced by 0.4 percentage points for any hospital that does not submit quality data. For purposes of the FY 2006 simulations in this proposed impact analysis, we are assuming all hospitals will qualify for the full update.

Each proposed and statutory policy change is then added incrementally to this baseline model, finally arriving at an FY 2006 model incorporating all of the proposed changes. This allows us to isolate the effects of each proposed change.

Our final comparison illustrates the percent change in payments per case from FY 2005 to FY 2006. Three factors not discussed separately have significant impacts here. The first is the update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we have updated standardized amounts for FY 2006 using the most recently forecasted hospital market basket increase for FY 2006 of 3.2 percent. (Hospitals that fail to comply with the quality data submission requirement to receive the full update will receive an update reduced by 0.4 percentage points to 2.8 percent.) Under section 1886(b)(3)(B)(iv) of the Act, the updates to the hospital-specific amounts for sole community hospitals (SCHs) and for Medicare-dependent small rural hospitals (MDHs) are also equal to the market basket increase, or 3.2 percent.

A second significant factor that impacts changes in hospitals' payments per case from FY 2005 to FY 2006 is the change in MGCRB status from one year to the next. That is, hospitals reclassified in FY 2005 that are no longer reclassified in FY 2006 may have a negative payment impact going from FY 2005 to FY 2006; conversely, hospitals not reclassified in FY 2005 that are reclassified in FY 2006 may have a positive impact. In some cases, these impacts can be quite substantial, so if a relatively small number of hospitals in a particular category lose their reclassification status, the percentage change in payments for the category may be below the national mean. However, this effect is alleviated by section 1886(d)(10)(D)(v) of the Act, which provides that reclassifications for purposes of the wage index are for a 3-year period.

A third significant factor is that we currently estimate that actual outlier

payments during FY 2005 will be 4.4 percent of total DRG payments. When the FY 2005 final rule was published, we projected FY 2005 outlier payments would be 5.1 percent of total DRG plus outlier payments; the average standardized amounts were offset correspondingly. The effects of the lower than expected outlier payments during FY 2005 (as discussed in the Addendum to this proposed rule) are reflected in the analyses below comparing our current estimates of FY 2005 payments per case to estimated FY 2006 payments per case (with outlier payments projected to equal 5.1 percent of total DRG payments).

#### *B. Analysis of Table I*

Table I displays the results of our analysis of proposed changes for FY 2006. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,693 hospitals included in the analysis. This number is 204 fewer hospitals than were included in the impact analysis in the FY 2005 final rule (69 FR 49758).

The next four rows of Table I contain hospitals categorized according to their geographic location: All urban, which is further divided into large urban and other urban; and rural. There are 2,537 hospitals located in urban areas included in our analysis. Among these, there are 1,399

hospitals located in large urban areas (populations over 1 million), and 1,138 hospitals in other urban areas (populations of 1 million or fewer). In addition, there are 1,156 hospitals in rural areas. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The final groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2006 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the number of hospitals paid based on these categorizations after consideration of geographic reclassifications are 2,575, 1,410, 1,165, and 1,118, respectively.

The next three groupings examine the impacts of the proposed changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive DSH payments, or some combination of these two adjustments. There are 2,615 nonteaching hospitals in our analysis, 841 teaching hospitals with fewer than 100 residents, and 237 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next

category groups hospitals considered urban after geographic reclassification, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next five rows examine the impacts of the proposed changes on rural hospitals by special payment groups (SCHs, rural referral centers (RRCs), and Medicare dependant hospitals (MDHs)), as well as rural hospitals not receiving a special payment designation. There were 134 RRCs, 405 SCHs, 158 MDHs, and 73 hospitals that are both SCH and RRC.

The next two groupings are based on type of ownership and the hospital's Medicare utilization expressed as a percent of total patient days. These data are taken primarily from the FY 2002 Medicare cost report files, if available (otherwise FY 2001 data are used).

The next series of groupings concern the geographic reclassification status of hospitals. The first grouping displays all hospitals that were reclassified by the MGCRB for FY 2006. The next two groupings separate the hospitals in the first group by urban and rural status. The final two rows in Table I contain hospitals located in rural counties but deemed to be urban under section 1886(d)(8)(B) of the Act and hospitals located in urban counties, but deemed to be rural under section 1886(d)(8)(E) of the Act.

<sup>1</sup> Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2003, and hospital cost report data are from reporting periods beginning in FY 2002 and FY 2001.

<sup>2</sup> This column displays the payment impact of the proposed change to the post acute care transfer policy.

<sup>3</sup> This column displays the payment impact of the recalibration of the DRG weights based on FY 2003 MedPAR data and the DRG reclassification changes, in accordance with section 1886(d)(4)(C) of the Act.

<sup>4</sup> This column displays the impact of updating the wage index with wage data from hospitals' FY 2002 cost reports. It also displays the impact of moving into the second year of the transition from MSA to CBSA. For FY 2005, the wage index was a 50/50 blend of the MSA and CBSA based wage index in areas where the CBSA wage index was lower than the MSA; For FY 2006 the blend percentage is 100 percent CBSA wage index.

<sup>5</sup> This column displays the impact of changing the way wage data from section 1886(d)(8)(E) redesignations is treated in determining pre-reclassified wage index values.

<sup>6</sup> This column shows the payment impact of the budget neutrality adjustment factor for DRG and wage index changes, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act. Thus, it represents the combined impacts shown in Columns 3, 4 and 5, and the proposed FY 2006 budget neutrality factor of 1.002494 (the change to the postacute transfer policy shown in Column 2 is not included in the budget neutrality calculation). The effects of adopting an imputed floor for all-urban States are included in this column.

<sup>7</sup> Shown here are the effects of providing rural hospitals formerly located in urban areas with urban wage index values in FY 2006. The effects reflected here are budget neutral; this column therefore includes the effect of the 0.999529 adjustment that we have applied to the rates to ensure budget neutrality.

<sup>8</sup> Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGCRB). The effects demonstrate the FY 2006 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2006. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the geographic budget neutrality factor of 0.992905.

<sup>9</sup> This column displays the impact of the FY 2006 proposed implementation of section 505 of Pub. L. 108-173, which provides for an increase in a hospital's wage index if the hospital qualifies by meeting a threshold percentage of residents of the county where the hospital is located who commute to work at hospitals in counties with higher wage indexes.

<sup>10</sup> This column shows changes in payments from FY 2005 to FY 2006. It incorporates all of the changes displayed in Columns 2, 5, 7, 8, and 9 (the changes displayed in Columns 3, 4 and 5 are included in Column 6). It also reflects the impact of the FY 2006 update, changes in hospitals' reclassification status in FY 2006 compared to FY 2005, and the changes in payments as a result of continuing the reclassifications under section 508 of Pub. L. 108-173. The sum of these impacts may be different from the percentage changes shown here due to rounding and interactive effect.

## BILLING CODE 4120-01-C

*C. Impact of the Proposed Changes to the Postacute Care Transfer Policy (Column 2)*

In Column 2 of Table I, we present the effects of Option 2 for the proposed expansion of the postacute care transfer policy, as discussed in section V.A. of the preamble to this proposed rule. We compared aggregate payments using the FY 2005 DRG relative weights (GROUPEr version 22.0) and Option 2 for the proposed expansion of the postacute care transfer policy to aggregate payments using the FY 2005 DRG relative weights (GROUPEr version 22.0) and the FY 2005 postacute care transfer policy. The changes we are proposing are estimated to result in a 1.1 percent decrease in payments to hospitals overall. We estimate the total savings at approximately \$880 million.

To simulate the impact of this proposed policy, we calculated two sets of transfer-adjusted discharges and case-mix index values for hospitals. The first set was based on the FY 2005 transfer policy rules and the second was based on Option 2 for the proposed expanded transfer policy discussed in the preamble to this proposed rule. Estimated payments were computed for both sets of data and were then compared. The transfer-adjusted discharge fraction is calculated in one of two ways, depending on the transfer payment methodology. Under the transfer payment methodology in place in FY 2005, for all but the three DRGs receiving special payment consideration (DRGs 209, 210, and 211), this adjustment is made by adding 1 to the length of stay and dividing that amount by the geometric mean length of stay for the DRG (with the resulting fraction not to exceed 1.0). For example, a transfer after 3 days from a DRG with a geometric mean length of stay of 6 days would have a transfer-adjusted discharge fraction of 0.667 ((3+1)/6).

For transfers from any one of the three DRGs receiving the alternative payment methodology, the transfer-adjusted discharge fraction is 0.5 (to reflect that these cases receive half the full DRG amount the first day), plus one half of the result of dividing 1 plus the length of stay prior to transfer by the geometric mean length of stay for the DRG. There are 88 DRGs (including 210, 211) that would qualify to receive the special payment consideration. DRG 209 which formerly received the special payment has been split into two new DRGs 544 and 545. Both DRG 544 and DRG 545 are included in the 88 special payment DRGs as they continue to qualify to receive the alternative payment methodology. As with the above adjustment, the result is equal to the lesser of the transfer adjusted discharge fraction or 1.

The transfer-adjusted case-mix index values are calculated by summing the transfer-adjusted DRG weights and dividing by the transfer-adjusted discharges. The transfer-adjusted DRG weights are calculated by multiplying the DRG weight by the lesser of 1 or the transfer-adjusted discharge fraction for the case, divided by the geometric mean length of stay for the DRG. In this way, simulated payments per case can be compared before and after the proposed change to the transfer policy.

This proposed expansion of the policy, which represents a significant change from our prior policy, has a negative 1.1 percent payment impact overall among both urban and rural hospitals. There is only small variation among all of the hospital categories from this negative 1.1 percent impact. The areas that are most dramatically impacted are urban areas, with urban New England experiencing a 1.9 percent decline in payments and the Middle Atlantic experiencing a 1.2 percent decline. Although rural New England hospitals are losing 1.1 percent, most of the other rural regions lose less than 1 percent from this policy change. Urban areas tend to have a greater concentration of postacute care facilities to which to discharge patients than do rural areas and are, therefore, more likely to be impacted by this policy proposal.

*D. Impact of the Proposed Changes to the DRG Reclassifications and Recalibration of Relative Weights (Column 3)*

In Column 3 of Table I, we present the combined effects of the DRG reclassifications and recalibration, as discussed in section II. of the preamble to this proposed rule. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes and to recalibrate the DRG weights in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

We compared aggregate payments using the FY 2005 DRG relative weights (GROUPEr version 22.0) to aggregate payments using the proposed FY 2006 DRG relative weights (GROUPEr version 23.0). We note that, consistent with section 1886(d)(4)(C)(iii) of the Act, we have applied a budget neutrality factor to ensure that the overall payment impact of the DRG changes (combined with the wage index changes) is budget neutral. This proposed budget neutrality factor of 1.002494 is applied to payments in Column 6. Because this is a combined DRG reclassification and recalibration and wage index budget neutrality factor, it is not applied to payments in Column 3.

The major DRG classification changes we are proposing include: reassigning procedure code 35.52 (Repair of atrial septal defect with prosthesis, closed technique) from DRG 108 to DRG 518 (Percutaneous Cardiovascular Procedure Without Coronary Artery Stent or AMI); reassigning procedure code 37.26 (Cardiac electrophysiologic stimulation and recording studies) from DRGs 535 and 536 to DRGs 515 (Cardiac Defibrillator Implant Without Cardiac Catheterization); splitting DRG 209 into two new DRGs based on the presence or absence of the procedure codes for major joint replacement or reattachment of lower extremity and revision of hip or knee replacement, DRG 545 (Revision of Hip or Knee Replacement) and DRG 544 (Major Joint Replacement or Reattachment of Lower Extremity); reassigning procedure code 26.12 (Open biopsy of salivary gland or duct) from DRG 468 to DRG 477 (Non-Extensive O.R. Procedure Unrelated To Principal Diagnosis); reassigning the principal diagnosis codes for curvature of the spine or malignancy from DRGs 497 and 498 to new DRG 546 (Spinal

Fusion Except Cervical with PDX of Curvature of the Spine or Malignancy); splitting DRGs 516 and 526 into four new DRGs based on the presence or absence of a CC, DRG 547 (Percutaneous Cardiovascular Procedure With AMI With CC), DRG 548 (Percutaneous Cardiovascular Procedure With AMI Without CC), DRG 549 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent With AMI With CC), DRG 550 (Percutaneous Cardiovascular Procedure With Drug-Eluting Stent With AMI Without CC); reassigning procedure code 39.65 (Extracorporeal membrane oxygenation [ECMO]) from DRGs 104 and 105 to DRG 541 (ECMO or Tracheostomy with Mechanical Ventilation 96+ Hours or Principal Diagnosis Except Face, Mouth and Neck Diagnoses With Major Operating Room Procedure).

In the aggregate, these proposed changes would result in a 0.1 percent increase in overall payments to hospitals. On average, the impacts of these changes on any particular hospital group are very small, with urban hospitals experiencing a 0.2 percent increase and rural hospitals experiencing a 0.1 percent decrease. The largest impact is a 0.4 percent increase among urban hospitals in New England. This is in part due to the residual effects of the proposed change to the postacute care transfer policy on the relative weights. Including a DRG in the postacute care transfer group reduces the number of cases in the DRG (cases that qualify as transfers are only counted as a fraction of a case) which in turn increases the average charge for the DRG and the weight.

*E. Impact of Proposed Wage Index Changes (Column 4)*

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the proposed wage index for FY 2006 is based on data submitted for hospital cost reporting periods beginning on or after October 1, 2001 and before October 1, 2002. The impact of the new data on hospital payments is isolated in Column 4 by holding the other payment parameters constant in this simulation. That is, Column 4 shows the percentage changes in payments when going from a model using the FY 2005 wage index, based on FY 2001 wage data, to a model using the FY 2006 pre-reclassification wage index, based on FY 2002 wage data. The FY 2005 wage index baseline incorporated a blended wage index of 50 percent of the MSA wage index and 50 percent of the CBSA wage index in areas where the CBSA wage index was lower than the MSA wage index to reflect the transition policy that was in effect in FY 2005. The wage data collected on the FY 2002 cost report is the same as the FY 2001 wage data that were used to calculate the FY 2005 wage index.

Column 4 shows the impacts of updating the wage data using FY 2002 cost reports. Overall, the new wage data will lead to a 0.4 percent decrease for all hospitals and for hospitals in urban areas. This decrease is due to both fluctuations in the wage data itself and the fact that the transition blended wage index, which benefited areas that were negatively impacted by the labor market

transition is no longer in effect for FY 2006. Among regions, the largest increase is in the rural New England which is experiencing a 1.0 percent increase. The largest decline from updating the wage data is seen in the urban New England region (a 1.1 percent decrease).

In looking at the wage data itself, the national average hourly wage increased 6.1 percent compared to FY 2005. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match

the national 6.1 increase in average hourly wage. Of the 3,617 hospitals with wage index values in both FYs 2005 and 2006, 1,642, or 45.4 percent, also experienced an average hourly wage increase of 6.1 percent or more.

The following chart compares the shifts in wage index values for hospitals for FY 2006 relative to FY 2005. Among urban hospitals, 58 will experience an increase of between 5 percent and 10 percent and 24 will experience an increase of more than 10

percent. A total of 14 rural hospitals would experience increases greater than 5 percent, but none will experience increases of greater than 10 percent. On the negative side, 56 urban hospitals will experience decreases in their wage index values of at least 5 percent, but less than 10 percent. Fourteen urban hospitals will experience decreases in their wage index values greater than 10 percent.

The following chart shows the projected impact for urban and rural hospitals.

| Percentage Change in Area Wage Index Values           | Number of Hospitals |       |
|---|---------------------|-------|
|   | Urban               | Rural |
| Increase more than 10 percent                         | 24                  | 0     |
| Increase more than 5 percent and less than 10 percent | 58                  | 14    |
| Increase or decrease less than 5 percent              | 2,584               | 1,141 |
| Decrease more than 5 percent and less than 10 percent | 56                  | 12    |
| Decrease more than 10 percent                         | 14                  | 0     |

**F. Impact of Proposed Change in Treatment of Section 1886(d)(8)(E) Wage Data (Column 5)**

For the FY 2006 wage index, we are proposing to leave the wage data for a hospital redesignated as rural under section 1886(d)(8)(E) of the Act in the urban area in which the hospital is geographically located for purposes of calculating the wage index of those areas. We are proposing to move the wage data for these hospitals into the rural wage index only if it increases the wage index in the rural area. In this way, the rural floor is only affected by the wage data for these redesignated hospitals if it would increase the rural wage index and thus reset the rural floor at a higher value. Previously, the wage data for these redesignated hospitals was moved into the rural area wage index calculations regardless of whether it increased or decreased the rural wage index, and this caused the rural floor for several States to be lower than it would have been had the redesignated providers' data not been included.

Column 5 shows the impact of adopting this policy. In aggregate, this policy proposal has no effect on payments to providers. Hospitals in the urban New England region experience an increase in payments of 0.2 percent, which indicates that CBSAs in that region that receive the rural floor are now receiving a higher wage index. Hospitals in West North Central are shown to experience a 0.2 decline. However, when the redesignated data are added to the rural wage index, their rural floor increases and they do not actually experience a loss from this policy. Hospitals reclassified as rural under section 1886(d)(8)(E) of the Act will experience a 0.2 percent increase.

**G. Combined Impact of Proposed DRG and Wage Index Changes, Including Budget Neutrality Adjustment (Column 6)**

The impact of the DRG reclassifications and recalibration on aggregate payments is required by section 1886(d)(4)(C)(iii) of the Act to be budget neutral. In addition, section 1886(d)(3)(E) of the Act specifies that any updates or adjustments to the wage index are to be budget neutral. As noted in the Addendum to this proposed rule compared simulated aggregate payments using the FY 2005 DRG relative weights and wage index to simulated aggregate payments using the proposed FY 2006 DRG relative weights and blended wage index.

We computed a proposed wage and recalibration budget neutrality factor of 1.002494. The 0.0 percent impact for all hospitals demonstrates that these changes, in combination with the budget neutrality factor, are budget neutral. In Table I, the combined overall impacts of the effects of both the DRG reclassifications and recalibration and the updated wage index are shown in Column 6. The changes in this column are the sum of the proposed changes in Columns 3, 4, and 5, combined with the budget neutrality factor and the wage index floor for urban areas required by section 4410 of Pub. L. 105-33 to be budget neutral. There also may be some variation of plus or minus 0.1 percentage point due to rounding.

Among urban regions, the largest impacts are in the West North Central region and Puerto Rico, with 0.3 and 0.4 percent declines, respectively. The Pacific region experiences the largest increase of 1.1 percent. Among rural regions, the New England region benefits the most with a 1.3 percent increase, while the Mountain region experiences the largest decline (1.2 percent).

**H. Impact of Allowing Urban Hospitals That Were Converted to Rural as a Result of the CBSA Designations To Maintain the Wage Index of the MSA Where They Are Located (Column 7)**

To help alleviate the decreased payments for urban hospitals that became rural under the new labor market area definitions, for purposes of the wage index, we adopted a policy in FY 2005 to allow them to maintain the wage index assignment of the MSA where they were located for the 3-year period FY 2005, FY 2006, and FY 2007. Column 7 shows the impact of the remaining labor market area transition, for those hospitals that were urban under the old labor market area designations and are now considered rural hospitals. Section 1886(d)(3)(E) of the Act specifies that any updates or adjustments to the wage index are to be budget neutral. Therefore, we applied an adjustment of 0.999529 to ensure that the effects of reclassification are budget neutral as indicated by the zero effect on payments to hospitals overall. The rural hospital row shows a 0.3 percent benefit from this provision as these hold harmless hospitals are now considered geographically rural.

**I. Impact of MGCRB Reclassifications (Column 8)**

Our impact analysis to this point has assumed hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on bases other than where they are geographically located, such as hospitals in rural counties that are deemed urban under section 1886(d)(8)(B) of the Act). The changes in Column 8 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2006. These decisions affect hospitals' standardized amount and wage index area assignments.

By February 28 of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital's reclassification request for the purpose of using another area's wage index value. The proposed FY 2006 wage index values incorporate all of the MGCRB's reclassification decisions for FY 2006. The wage index values also reflect any decisions made by the CMS Administrator through the appeals and review process through February 28, 2005. Additional changes that result from the Administrator's review of MGCRB decisions or a request by a hospital to withdraw its application will be reflected in the final rule for FY 2006.

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, we applied an adjustment of 0.992905 to ensure that the effects of reclassification are budget neutral. (See section II.A.4.b. of the Addendum to this proposed rule.)

As a group, rural hospitals benefit from geographic reclassification. We estimate that their payments will rise 2.0 percent in Column 8. Payments to urban hospitals will decline by 0.3 percent. Hospitals in other urban areas will experience an overall decrease in payments of 0.2 percent, while large urban hospitals will lose 0.4 percent. Among urban hospital groups (that is, bed size, census division, and special payment status), payments generally would decline.

A positive impact is evident among all of the rural hospital groups. The smallest increase among the rural census divisions is 0.5 for the Mountain and New England regions. The largest increases are in the rural East South Central region, with an increase of 3.0 percent and in the West South Central region, which would experience an increase of 2.5 percent.

Urban hospitals reclassified for FY 2006 are expected to receive an increase of 2.3 percent, while rural reclassified hospitals are expected to benefit from the MGCRB changes with a 3.7 percent increase in payments. Payments to urban and rural hospitals that did not reclassify are expected to decrease slightly due to the MGCRB changes, decreasing by 0.6 percent for urban hospitals and 0.3 percent for rural hospitals.

#### *J. Impacts of the Proposed Wage Index Adjustment for Out-Migration (Column 9)*

Section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108-173, provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment are to receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. Using our established criteria, 345 counties and 688 hospitals

qualify to receive a commuting adjustment in FY 2006.

Due to the statutory formula to calculate the adjustment and the small number of counties that qualify, the impact on hospitals is minimal, with an overall impact on all hospitals of 0.1 percent.

#### *K. All Changes (Column 10)*

Column 10 compares our estimate of payments per case, incorporating all changes reflected in this proposed rule for FY 2006 (including statutory changes), to our estimate of payments per case in FY 2005. This column includes all of the proposed policy changes. Because the reclassifications shown in Column 8 do not reflect FY 2005 reclassifications, the impacts of FY 2006 reclassifications only affect the impacts from FY 2005 to FY 2006 if the reclassification impacts for any group of hospitals are different in FY 2006 compared to FY 2005.

• Column 10 reflects all FY 2006 changes relative to FY 2005, shown in Columns 2 through 9 and those not applied until the final rates are calculated. The average increase for all hospitals is approximately 2.5 percent. This increase includes the effects of the proposed 3.2 percent market basket update. It also reflects the 0.7 percentage point difference between the projected outlier payments in FY 2005 (5.1 percent of total DRG payments) and the current estimate of the percentage of actual outlier payments in FY 2005 (4.4 percent), as described in the introduction to this Appendix and the Addendum to this proposed rule. As a result, payments are projected to be 0.7 percentage point lower in FY 2005 than originally estimated, resulting in a 0.7 percentage point greater increase for FY 2006 than would otherwise occur. In addition, the impact of section 505 adjustments accounted for a 0.1 percent increase. Payment decreases of 1.5 percent are primarily attributable to the impact of expanding the postacute care transfer policy (-1.1 percent). Indirect medical education formula changes for teaching hospitals under section 502 of Pub. L. 108-173, changes in payments due to the difference between the FY 2005 and FY 2006 wage index values assigned to providers reclassified under section 508 of Pub. L. 108-173, and changes in the incremental increase in payments from section 505 of Pub. L. 108-173 out migration adjustments account for the remaining -0.4 percent.

Section 213 of Pub. L. 106-554 provides that all SCHs may receive payment on the basis of their costs per case during their cost reporting period that began during 1996. For FY 2006, eligible SCHs receive 100 percent of their 1996 hospital-specific rate. In addition, in this proposed rule we are proposing to revise the budget neutrality adjustment applied to the hospital-specific rates to reflect only the payment changes resulting from DRG recalibration. Previously, we had also adjusted the hospital-specific rates to reflect payment changes based on area wage levels. The impact of this provision is modeled in Column 10 as well. In addition, section 402 of Pub. L. 108-173 increases the DSH adjustment for hospitals that serve a disproportionate share of low-

income Medicare and Medicaid patients, which include rural hospitals and urban hospitals with fewer than 100 beds, SCHs, rural referral centers, and rural hospitals with less than 500 beds. The increase in DSH payments became effective for discharges occurring on or after April 1, 2004. As provided in the new Medicare law, the cap on DSH payment adjustments increased from 5.25 percent to 12 percent for urban hospitals with fewer than 100 beds, SCHs, and rural hospitals with less than 500 beds. There is no cap on rural referral centers, large urban hospitals over 100 beds, or rural hospitals over 500 beds.

There might also be interactive effects among the various factors comprising the payment system that we are not able to isolate. For these reasons, the values in Column 10 may not equal the sum of the changes described above.

The overall change in payments per case for hospitals in FY 2006 would increase by 2.5 percent. Hospitals in urban areas would experience a 2.5 percent increase in payments per case compared to FY 2005. Hospitals in rural areas, meanwhile, would experience a 2.6 percent payment increase. Hospitals in large urban areas would experience a 2.4 percent increase in payments and hospitals in other urban areas would experience a 2.7 percent increase in payments.

Among urban census divisions, the largest payment increase would be 4.0 percent in the Pacific region. Hospitals in the urban East South Central and West South Central regions would experience the next largest overall increases of 3.0 percent and 3.1 percent, respectively. The smallest urban increase would occur in the New England region, with an increase of 1.0 percent.

Among rural regions in Column 10, no hospital category will experience overall payment decreases. The Pacific and Middle Atlantic regions will benefit the most, with 3.3 and 3.2 percent increases, respectively. The smallest increase will occur in the West South Central region, with 2.2 percent increases in payments.

Among special categories of rural hospitals in Column 10, those hospitals receiving payment under the hospital-specific methodology (SCHs, MDHs, and SCH/RRCs) would experience payment increases of 2.8 percent, 2.4 percent, and 2.7 percent, respectively. This outcome is primarily related to the fact that, for hospitals receiving payments under the hospital-specific methodology, there were several increases to payments made in relation to implementation of the Pub. L. 108-173.

Urban hospitals reclassified for FY 2006 are anticipated to receive an increase of 3.0 percent, while rural reclassified hospitals are expected to benefit from reclassification with a 2.8 percent increase in payments. Those hospitals located in rural counties, but deemed to be urban under section 1886(d)(8)(B) of the Act, are expected to receive an increase in payments of 1.4 percent.

<sup>1</sup> These payment amounts per case do not reflect any estimates of annual case-mix increase.

Table II presents the projected impact of the proposed changes for FY 2006 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated payments per case for FY 2005 with the average estimated per case payments for FY 2006, as calculated under our models. Thus, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The percentage changes shown in the last column of Table

II equal the percentage changes in average payments from Column 10 of Table I.

#### VII. Impact of Other Proposed Policy Changes

In addition to those proposed changes discussed above that we are able to model using our IPPS payment simulation model, we are proposing various other changes in this proposed rule. Generally, we have limited or no specific data available with which to estimate the impacts of these

changes. Our estimates of the likely impacts associated with these other proposed changes are discussed below.

#### A. Impact of Proposed LTC-DRG Reclassifications and Relative Weights for LTCHs

In section II.D. of the preamble of this proposed rule, we discuss the proposed changes in the LTC-DRG relative weights for FY 2006 based on the proposed version 23.0 of the CMS GROUPER (including the

proposed changes in the classifications, relative weights and geometric mean length of stay for each LTC-DRG). Based on LTCH cases in the FY 2004 MedPAR file, we estimate that the proposed changes would result in an aggregate decrease in LTCH payments of approximately 4.7 percent. When we compared the version 22 (FY 2005) LTC-DRG relative weights to the proposed version 23 (FY 2006) LTC-DRG relative weights, we found that approximately 72 percent of the LTC-DRGs had higher relative weights under version 22 in comparison to the proposed version 23. We also found that the version 22 LTC-DRG relative weights were, on average, approximately 16 percent higher than the proposed version 23 LTC-DRG relative weights.

In addition, based on an analysis of the most recent available LTCH claims data from the FY 2004 MedPAR file, we continue to observe that the proposed average LTC-DRG relative weight decreases due to an increase of relatively lower charge cases being assigned to LTC-DRGs with higher relative weights in the prior year. Contributing to this increase in these relatively lower charge cases being assigned to LTC-DRGs with higher relative weights in the prior year are improvements in coding practices, which are typically found when moving from a reasonable cost-based payment system to a PPS. The impact of including cases with relatively lower charges into LTC-DRGs that had a relatively higher relative weight in the version 22.0 (FY 2005) GROUPER is a decrease in the average relative weight for those LTC-DRGs in the proposed GROUPER version 23.0. We also found that there is over a 15 percent increase in the average LTCH charge across all LTC-DRGs from FY 2003 to FY 2004. For some LTC-DRGs in which the average charge within the LTC-DRG increase is less than 15 percent, the relative weights for those LTC-DRGs will decrease because the average charge for each of those LTC-DRGs is being divided by a larger number (that is, the average charge across all LTC-DRGs). For the reasons discussed above, we believe that the proposed changes in the LTC-DRG relative weights, which include a number of proposed LTC-DRGs with lower proposed relative weights, would result in approximately a 4.6 percent decrease in aggregate LTCH PPS payments.

#### *B. Impact of Proposed New Technology Add-On Payments*

We are no longer required to ensure that any add-on payments for new technology under section 1886(d)(5)(K) of the Act are budget neutral (see section II.E. of the preamble to this proposed rule). However, we are still providing an estimate of the payment increases here, as they will have a significant impact on total payments made in FY 2006. New technology add-on payments are limited to the lesser of 50 percent of the costs of the technology, or 50 percent of the costs in excess of the DRG payment for the case. Because it is difficult to predict the actual new technology add-on payment for each case, we are estimating the increase in payment for FY 2006 as if every claim with these add-on payments will receive the maximum add-on payment. As discussed in

section II.E. of the preamble of this proposed rule, we are not proposing to approve any of the new technology applications that were filed for FY 2006. However, we are proposing to continue to make add-on payments in FY 2006 for an FY 2005 new technology: Kinetra™ implants. We estimate this approval would increase overall payments by \$12.8 million. The increase in payments for this new technology is not reflected in the tables.

#### *C. Impact of Requirements for Hospital Reporting of Quality Data for Annual Hospital Payment Update*

In section V.B. of the preamble to this proposed rule, we discuss our implementation of section 1886(b)(3)(B)(vii) of the Act, as added by section 501(b) of Pub. L. 108-173, which revised the mechanism used to update the standardized amount of payment for inpatient hospital operating costs. Specifically, section 1886(b)(3)(B)(vii) of the Act provides for a reduction of 0.4 percentage points to the update percentage increase (also known as the market basket update) for each of FYs 2005 through 2007 for any subsection (d) hospital that does not submit data on a set of 10 quality indicators established by the Secretary as of November 1, 2003. The statute also provides that any reduction will apply only to the year involved, and will not be taken into account in computing the applicable percentage increase for a subsequent fiscal year. We are unable to precisely estimate the effect of this provision because, while receiving the full update for those years is conditional upon the submission of quality data by a hospital, the submitted data must also be validated, as described in section V.B. above. The final date for submission of quality data for purposes of receiving the full adjustment in FY 2006 is May 15, 2005. Preliminary results indicate that over 98 percent of IPPS hospitals have submitted quality data. The QIOs are still in the process of validating that data and certifying those hospitals eligible to receive the full update for FY 2006. We have continued our efforts to ensure that QIOs provide assistance to all hospitals that wish to submit data. In the preamble to this proposed rule, we are proposing additional validation criteria to ensure that the quality data being sent to CMS are accurate. Our validation process requires participating hospitals to submit five charts per quarter. We reimburse each hospital for the cost of sending charts to the Clinical Data Abstraction Center at the rate of 12 cents per page for copying and approximately \$4.00 per chart for postage. Based on our experience, the average size of a chart is 140 pages. Therefore, we estimate our expenditures for chart collection at \$380,000 per quarter. Because we provide reimbursement to hospitals for the costs of chart submission, we believe that this requirement represents a minimal burden to participating hospitals. Based on test applications of these validation criteria to quality data that have been submitted thus far, we currently estimate that approximately 5 percent of hospitals will fail the edits and receive the reduced market basket update to the standardized amount. Based on this

reduced payment to some hospitals, we estimate savings to the Medicare program of approximately \$20 million for FY 2006.

#### *D. Impact of Proposed Policy on Payment Adjustments for Low-Volume Hospitals*

In section V.E. of the preamble to this proposed rule, we discussed our proposed FY 2006 implementation of section 1886(d)(12) of the Act, as added by section 406 of Pub. L. 108-173, which provides for a payment adjustment to account for the higher costs per discharge of low-volume hospitals under the IPPS. For FY 2006, we are proposing to continue to apply the low-volume adjustment criteria that we specified in the FY 2005 IPPS final rule (69 FR 49099). Currently, our fiscal intermediaries have identified 10 providers that are eligible for the low-volume adjustment. We estimate that the impact of these providers receiving the additional 25 percent payment increase to be approximately \$1.5 million.

#### *E. Impact of Proposed Policies on Payment for Indirect Costs of Graduate Medical Education*

##### *1. IME Adjustment for TEFRA Hospitals Converting to IPPS Hospitals*

In section V.F.2. of the preamble of this proposed rule, we discuss our proposal to incorporate into regulations our existing policy regarding the IME adjustment for TEFRA hospitals converting to IPPS hospitals. We establish an FTE resident cap for TEFRA hospitals converting to an IPPS hospital for IME payment purposes as if the hospital had been an IPPS hospital during the base year used to compute the hospital's direct GME FTE resident cap. We are only aware of four hospitals where this issue has arisen. The proposed addition to the regulations clarifies the established policy for computing an IME FTE resident cap for these hospitals. Because this is a proposal to clarify existing policy and codify it in regulations, there is no financial impact for FY 2006.

##### *2. Section 1886(d)(8)(E) Teaching Hospitals That Withdraw Rural Reclassification*

In section V.F.3. of the preamble to this proposed rule, we present our proposal to adjust the IME FTE resident caps of hospitals that rescind their section 1886(d)(8)(E) rural reclassifications so that they do not continue to receive the increase in the FTE resident cap that is applied for rural teaching hospitals. The purpose of this policy is to prevent urban hospitals from reclassifying to rural areas under section 1886(d)(8)(E) of the Act for a short period of time, solely as a means of receiving a permanent increase to their IME FTE caps. The impact of this policy is that section 1886(d)(8)(E) hospitals may receive decreased IME payments if they return to urban status. This impact cannot be quantified because we are unable to determine the number of hospitals that would otherwise game the system in the absence of this proposal and we are not aware of any teaching hospitals that became rural under the provision of section 1886(d)(8)(E) of the Act that have subsequently reverted to urban status.

#### *F. Impact of Proposed Policy Relating to Geographic Reclassifications of Multicampus Hospitals*

In section V.H. of the preamble of this proposed rule, we discuss the impact of our implementation of the new labor market areas on multicampus hospital systems. Under our current policy, a multicampus hospital with campuses located in the same labor market area receives a single wage index. However, if the campuses are located in more than one labor market area, payment for each discharge is determined using the wage index value for the labor market area in which the campus of the hospital is located. In addition, current provisions provide that, in the case of a merger of hospitals, if the merged facilities operate as a single institution, the institution must submit a single cost report, which necessitates a single provider identification number. This provision also does not differentiate between merged facilities in a single wage index area or in multiple wage index areas. As a result, the wage index data for the merged facility is reported for the entire entity on a single cost report.

The current criteria for a hospital being reclassified to another wage area by the MGCRB do not address the circumstances under which a single campus of a multicampus hospital may seek reclassification.

Specifically, we are proposing that for reclassification applications submitted for FY 2006 (that is, applications received by September 1, 2004), we would allow a campus or campuses of a multicampus hospital system to seek geographic reclassification on the basis of the average hourly wage data submitted for the entire hospital system. For reclassification applications that would take effect for FY 2007 (that is, applications received by September 1, 2005) and thereafter, a campus of a multihospital system could not use the wage data of the entire hospital system, but rather, would have the opportunity to separate out campus-specific wage data for purposes of seeking reclassification for such campus. We estimate that this proposal will apply to fewer than 12 multicampus hospital systems nationwide and, therefore, will not lead to additional program expenditures because hospital geographic reclassifications are budget neutral under section 1886(d)(8)(D) of the Act.

#### *G. Impact of Proposed Policy on Payment for Direct Costs of Graduate Medical Education*

##### *1. GME Initial Residency—Match for Second Year*

In section V.I.2. of the preamble to this proposed rule, we discuss our proposed changes related to the initial residency period for residents that match into an advanced residency program, but fail to match into a clinical base year of training. We are proposing that, in instances where a hospital can document that, prior to commencement of any residency training, a resident matched into an advanced program that begins in the second residency year, that resident's initial residency period will be determined based on the period of board eligibility for the advanced program, without

regard to the fact that the resident had not matched for a clinical base year training program. For purposes of this proposed rule, we have estimated the impact of this proposed rule change for FY 2006, using assumptions about the national average per resident amount, the number of affected residents, and the national average Medicare utilization rate. We estimate that this provision will affect approximately 600 residents. Using a national average per resident amount of \$92,000, and an average Medicare utilization rate of 35 percent, we estimate that, for FY 2006, the impact of treating those residents as a full FTE rather than .50 FTE. Medicare payments for direct GME will increase by approximately \$9.7 million.

##### *2. New Teaching Hospitals' Participation in Medicare GME Affiliated Groups*

In section V.I.3. of the preamble to this proposed rule, we discuss our proposed changes related to new teaching hospitals' participation in Medicare GME affiliated groups. Under current regulations, a new teaching hospital located in an urban area that establishes an FTE resident cap under § 413.79(e) may not participate in a Medicare GME affiliated group. We are proposing to revise the regulations to allow a new teaching hospital located in an urban area to participate in a Medicare GME affiliated group, but only if any adjustments made by the Medicare GME affiliation agreement result in an increase to the new teaching hospital's adjusted resident FTE resident caps for purposes of IME and direct GME payment. There is no estimated increase in program payments related to this proposed change because any additional residents that would be counted at the new teaching hospitals as a result of this change could have been counted prior to the affiliation for Medicare GME payment purposes at the hospital that is losing slots under the affiliation agreement.

#### *H. Impact of Policy on Rural Community Hospital Demonstration Program*

In section V.K. of the preamble to this proposed rule, we discuss our implementation of section 410A of Pub.L. 108-173 that required the Secretary to establish a demonstration that will modify reimbursement for inpatient services for up to 15 small rural hospitals. Section 410A(c)(2) requires that "in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented." As discussed in section V.K. of the preamble to this proposed rule, we are satisfying this requirement by adjusting national IPPS rates by a factor that is sufficient to account for the added costs of this demonstration. We estimate that the average additional annual payment for FY 2006 that will be made to each participating hospital under the demonstration will be approximately \$977,410. We based this estimate on the recent historical experience of the difference between inpatient cost and payment for hospitals that have applied for

the demonstration. For 13 participating hospitals, the total annual impact of the demonstration program is estimated to be \$12,706,334. We describe the budget neutrality adjustment required for this purpose in the Addendum to this proposed rule.

#### *I. Impact of Proposed Policy on CAH Relocation Provisions*

In section VII.B.3. of the preamble to this proposed rule, we discuss the proposed change to the necessary provider provision as it applies to CAHs. As required by statute, no additional CAHs will be certified as a necessary provider on or after January 1, 2006. We are proposing to revise the regulations to allow some flexibility for those CAHs previously designated as necessary providers that embarked on a replacement facility project before the sunset provision was enacted on December 8, 2003, but find that they cannot be operational in the replacement facility by January 1, 2006. We are proposing that, when a CAH is determined to have relocated, it may continue to operate under its existing necessary provider designation that exempts CAHs from the distance from another provider requirement only if certain conditions are met. The proposed clarification to the sunset of the necessary provider provision is intended to allow CAHs to complete construction projects that were initiated prior to the enactment of Pub. L. 108-173. The Health Resources Services Administration (HRSA) estimates that this proposal will apply to fewer than six CAHs nationwide. The average cost of construction of a new 25 bed CAH is approximately \$25 million. Given a depreciation schedule based on a 25 useful life and Medicare utilization of approximately 50 percent, the additional capital costs for six CAHs would be \$3 million. However, the actual cost to the program would be further reduced since those 6 CAH are currently being reimbursed for their existing capital costs and also the increased operating costs that are associated with operating an aged facility. Accordingly, the budgetary impact for the proposed change on the affected CAHs is estimated at between \$1 million and \$2 million. Expressed on a per-facility basis, the budgetary impact of this proposed change is estimated at between \$167,000 and \$333,000 per CAH.

#### *VIII. Impact of Proposed Changes in the Capital PPS*

##### *A. General Considerations*

Fiscal year (FY) 2001 was the last year of the 10-year transition period established to phase in the PPS for hospital capital-related costs. During the transition period, hospitals were paid under one of two payment methodologies: fully prospective or hold harmless. Under the fully prospective methodology, hospitals were paid a blend of the capital Federal rate and their hospital-specific rate (see § 412.340). Under the hold-harmless methodology, unless a hospital elected payment based on 100 percent of the capital Federal rate, hospitals were paid 85 percent of reasonable costs for old capital costs (100 percent for SCHs) plus an amount

for new capital costs based on a proportion of the capital Federal rate (see § 412.344). As we state in section VI. of the preamble of this proposed rule, with the 10-year transition period ending with hospital cost reporting periods beginning on or after October 1, 2001 (FY 2002), beginning in FY 2002 capital prospective payment system payments for most hospitals are based solely on the capital Federal rate. Therefore, we no longer include information on obligated capital costs or projections of old capital costs and new capital costs, which were factors needed to calculate payments during the transition period, for our impact analysis.

In accordance with § 412.312, the basic methodology for determining a capital PPS payment is:

(Standard Federal Rate) × (DRG weight) × (Geographic Adjustment Factor (GAF)) × (Large Urban Add-on, if applicable) × (COLA adjustment for hospitals located in Alaska and Hawaii) × (1 + 3 Disproportionate Share (DSH) Adjustment Factor + Indirect Medical Education (IME) Adjustment Factor, if applicable).

In addition, hospitals may also receive outlier payments for those cases that qualify under the threshold established for each fiscal year.

The data used in developing the impact analysis presented below are taken from the December 2004 update of the FY 2004 MedPAR file and the December 2004 update of the Provider Specific File that is used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the December 2004 update of the most recently available hospital cost report data (FY 2003) to categorize hospitals. Our analysis has several qualifications. First, we do not make adjustments for behavioral changes that hospitals may adopt in response to policy changes. Second, due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. Third, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the December 2004 update of the FY 2004 MedPAR file, we simulated payments under the capital PPS for FY 2005 and FY 2006 for a comparison of total payments per case. Any short-term, acute care hospitals not paid under the general IPPS (Indian Health Service hospitals and hospitals in Maryland) are excluded from the simulations.

As we explain in section III.A.4. of the Addendum of this proposed rule, payments are no longer made under the regular exceptions provision under §§ 412.348(b) through (e). Therefore, we no longer use the actuarial capital cost model (described in Appendix B of the August 1, 2001 proposed rule (66 FR 40099)). We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital's

case-mix. We then added estimated payments for indirect medical education, disproportionate share, large urban add-on, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- We estimate that the Medicare case-mix index would increase by 1.0 percent in both FYs 2005 and 2006.
- We estimate that the Medicare discharges will be 13.5 million in FY 2005 and 13.3 million in FY 2006 for a 1.5 percent decrease from FY 2005 to FY 2006.
- The capital Federal rate was updated beginning in FY 1996 by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. The proposed FY 2006 update is 0.7 percent (see section III.A.1.a. of the Addendum to this proposed rule).
- In addition to the proposed FY 2006 update factor, the proposed FY 2006 capital Federal rate was calculated based on a proposed GAF/DRG budget neutrality factor of 1.0019, a proposed outlier adjustment factor of 0.9497, and a proposed (special) exceptions adjustment factor of 0.9997.

## 2. Results

In the past, in this impact section we presented the redistributive effects that were expected to occur between "hold-harmless" hospitals and "fully prospective" hospitals and a cross-sectional summary of hospital groupings by the capital PPS transition period payment methodology. We are no longer including this information because all hospitals (except new hospitals under § 412.324(b) and under § 412.304(c)(2)) will be paid 100 percent of the capital Federal rate in FY 2006.

We used the actuarial model described above to estimate the potential impact of our changes for FY 2006 on total capital payments per case, using a universe of 3,693 hospitals. As described above, the individual hospital payment parameters are taken from the best available data, including the December 2004 update of the FY 2004 MedPAR file, the December 2004 update to the Provider-Specific File, and the most recent cost report data from the December 2004 update of HCRIS. In Table III, we present a comparison of total payments per case for FY 2005 compared to FY 2006 based on the proposed FY 2006 payment policies. Column 2 shows estimates of payments per case under our model for FY 2005. Column 3 shows estimates of payments per case under our model for FY 2006. Column 4 shows the total percentage change in payments from FY 2005 to FY 2006. The change represented in Column 4 includes the 0.7 percent update to the capital Federal rate, a 1.0 percent increase in case-mix, changes in the adjustments to the capital Federal rate (for example, the effect of the new hospital wage index on the GAF), and reclassifications by the MGCRB, as well as changes in special exception payments. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case can be expected to increase 1.7 percent in FY 2006. In addition to the 0.7 percent increase due to the capital market basket update, this projected increase in capital payments per case is largely attributable to an estimated increase in outlier payments in FY 2006. Our comparison by geographic location shows that urban hospitals are expected to experience a 1.8 percent increase in IPPS capital payments per case, while rural hospitals are only expected to experience a 1.2 percent increase in capital payments per case. This difference is mostly due to a projection that urban hospitals would experience a larger increase in estimated outlier payments from FY 2005 to FY 2006 compared to rural hospitals.

All regions are estimated to receive an increase in total capital payments per case from FY 2005 to FY 2006. Changes by region vary from a minimum increase of 0.1 percent (Middle Atlantic rural region) to a maximum increase of 3.3 percent (Pacific urban region). The relatively small increase in projected capital payments per discharge for hospitals located in the Middle Atlantic rural region is largely attributable to the proposed changes in the GAF values (that is, the proposed GAFs for most of these hospitals for FY 2006 are lower than the weighted average of the GAFs for FY 2005). The relatively large increase in capital payments per discharge for hospitals located in the Pacific urban region is largely due to the proposed changes in the GAF values (that is, the proposed GAFs for most of these hospitals for FY 2006 are higher than the average of the GAFs for FY 2005) and a larger than average increase in estimated outlier payments for FY 2006.

Hospitals located in Puerto Rico are expected to experience an increase in total capital payments per case of 1.0 percent. This slightly lower than average increase in payment per case for hospitals located in Puerto Rico is largely due to the proposed changes in the proposed GAF values (that is, the proposed GAFs for most of these hospitals for FY 2006 are higher than the average of the GAFs for FY 2005).

By type of ownership, government hospitals are projected to have the largest rate of increase of total payment changes (2.0 percent). Similarly, payments to voluntary and proprietary hospitals are expected to increase 1.6 percent and 1.8 percent, respectively. As noted above, this slightly larger projected increase in capital payments per case for government hospitals is mostly due to the larger than average increase in projected outlier payments for FY 2006 and a smaller than average decrease in the proposed GAF values.

Section 1886(d)(10) of the Act established the MGCRB. Previously, hospitals could apply for reclassification for purposes of the standardized amount, wage index, or both. Section 401(c) of Pub. L. 108-173 equalized the standardized amounts under the operating IPPS. Therefore, beginning in FY 2005, there is no longer reclassification for the purposes of the standardized amounts; hospitals may apply for reclassification for purposes of the wage index in FY 2006. Reclassification for wage index purposes also

affects the GAF because that factor is constructed from the hospital wage index.

To present the effects of the hospitals being reclassified for FY 2006 compared to the effects of reclassification for FY 2005, we show the average payment percentage increase for hospitals reclassified in each fiscal year and in total. The reclassified groups are compared to all other nonreclassified hospitals. These categories

are further identified by urban and rural designation.

Hospitals reclassified for FY 2006 as a whole are projected to experience a 2.0 percent increase in payments. Payments to nonreclassified hospitals in FY 2006 are expected to increase 1.7 percent. Hospitals reclassified during both FY 2005 and FY 2006 are projected to experience an increase in payments of 1.3 percent. Hospitals

reclassified during FY 2006 only are projected to receive an increase in payments of 3.2 percent. This relatively large increase is primarily due to the proposed changes in the GAF values (that is, the proposed GAFs for most of these hospitals for FY 2006 are higher than the average of the GAFs for FY 2005).

BILLING CODE 4120-01-P

TABLE III.—COMPARISON OF TOTAL PAYMENTS PER CASE  
(FY 2005 Payments Compared To Proposed FY 2006 Payments)

|   | Number of hospitals | Average FY 2005 payments/case | Average FY 2006 payments/case | Change |
|---|---------------------|-------------------------------|-------------------------------|--------|
| <b>By Geographic Location:</b>                              |                     |                               |                               |        |
| All hospitals .....   | 3,693               | 727                           | 739                           | 1.7    |
| Large urban areas (populations over 1 million) .....        | 1,399               | 810                           | 825                           | 1.8    |
| Other urban areas (populations of 1 million of fewer) ..... | 1,138               | 720                           | 733                           | 1.8    |
| Rural areas .....   | 1,156               | 501                           | 507                           | 1.2    |
| Urban hospitals .....                                       | 2,537               | 769                           | 783                           | 1.8    |
| 0-99 beds .....   | 611                 | 581                           | 589                           | 1.4    |
| 100-199 beds .....  | 877                 | 650                           | 660                           | 1.6    |
| 200-299 beds .....  | 479                 | 726                           | 739                           | 1.7    |
| 300-499 beds .....  | 408                 | 810                           | 823                           | 1.6    |
| 500 or more beds .....                                      | 162                 | 974                           | 997                           | 2.3    |
| Rural hospitals .....                                       | 1,156               | 501                           | 507                           | 1.2    |
| 0-49 beds .....   | 473                 | 415                           | 419                           | 1.0    |
| 50-99 beds .....  | 387                 | 461                           | 467                           | 1.2    |
| 100-149 beds .....  | 188                 | 510                           | 516                           | 1.4    |
| 150-199 beds .....  | 61                  | 560                           | 565                           | 0.9    |
| 200 or more beds .....                                      | 47                  | 627                           | 635                           | 1.4    |
| <b>By Region:</b>   |                     |                               |                               |        |
| Urban by Region .....                                       | 2,537               | 769                           | 783                           | 1.8    |
| New England .....   | 129                 | 834                           | 843                           | 1.1    |
| Middle Atlantic .....                                       | 356                 | 834                           | 847                           | 1.5    |
| South Atlantic .....  | 386                 | 736                           | 748                           | 1.5    |
| East North Central .....                                    | 400                 | 761                           | 771                           | 1.4    |
| East South Central .....                                    | 165                 | 696                           | 709                           | 1.9    |
| West North Central .....                                    | 155                 | 763                           | 774                           | 1.4    |
| West South Central .....                                    | 344                 | 723                           | 738                           | 2.1    |
| Mountain .....  | 138                 | 771                           | 786                           | 1.9    |
| Pacific .....   | 412                 | 874                           | 903                           | 3.3    |
| Puerto Rico .....   | 52                  | 339                           | 342                           | 1.0    |
| Rural by Region .....                                       | 1,156               | 501                           | 507                           | 1.2    |

## Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

(If you choose to comment on issues in this section, please include the caption "Update Factors" at the beginning of your comment.)

### I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of the Medicare Payment Advisory Commission (MedPAC), recommend update factors for inpatient

hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final rule. Accordingly, this Appendix provides the recommendations of appropriate update factors for the IPPS standardized amount, the hospital-specific rates for SCHs and MDHs, and the rate-of-increase limits and Federal prospective payment amounts for hospitals and hospitals units excluded from the IPPS. We also

discuss our update framework and respond to MedPAC's recommendations concerning the update factors.

### II. Secretary's Recommendations

Section 1886(b)(3)(B)(i)(XIX) of the Act sets the FY 2006 percentage increase in the operating cost standardized amount equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas subject to the hospital submitting quality information under rules established by the Secretary under section 1886(b)(3)(B)(vii) of the Act. For hospitals that do not provide these data, the update is equal to the market

basket percentage increase less 0.4 percentage points. Based on the Office of the Actuary's fourth quarter 2004 forecast of the FY 2006 market basket increase, we are proposing an update to the standardized amount<sup>1</sup> of 3.2 percent (that is, the market basket rate-of-increase) for hospitals in all areas, provided the hospital submits quality data in accordance with our rules.

Section 1886(b)(3)(B)(iv) of the Act sets the FY 2006 percentage increase in the hospital-specific rates applicable to SCHs and MDHs equal to the rate set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS, or the rate-of-increase in the market basket). Therefore, the proposed update to the hospital-specific rate applicable to SCHs and MDHs is also 3.2 percent.

Section 1886(b)(3)(B)(ii) of the Act sets the FY 2006 percentage increase in the rate-of-increase limits for various hospitals and hospital units excluded from the IPPS, that is, certain psychiatric hospitals and units (now referred to as inpatient psychiatric facilities (IPFs)), certain LTCHs, cancer hospitals, and children's hospitals, equal to the market basket percentage increase. In the past, hospitals and hospital units excluded from the IPPS have been paid based on their reasonable costs subject to TEFRA limits. However, some of these categories of excluded hospitals and units are currently, or soon will be, paid under their own prospective payment systems. Currently, children's and cancer hospitals and RNHCIs are the remaining three types of hospitals still reimbursed fully under reasonable costs. Those psychiatric hospitals and units of hospitals not yet paid under a PPS are still reimbursed fully on a reasonable cost basis subject to TEFRA limits. In addition, those LTCHs and IPFs paid under a blend methodology have the TEFRA portion of that payment subject to the TEFRA limits. Hospitals and units that receive any reasonable cost-based payments will have those payments determined subject to the TEFRA limits for FY 2006.

As we discuss in section IV. of the preamble and in section IV. of the Addendum to this proposed rule, we are proposing to use the estimated FY 2006 IPPS operating market basket percentage increase (3.2 percent) to update the target limits for children's hospitals, cancer hospitals, and religious nonmedical institutions.

As described in greater detail below, under their respective PPSs, LTCHs and IPFs are in a transition period during which some LTCHs and IPFs are paid a blend of reasonable cost-based payments (subject to the TEFRA limits) and a Federal prospective payment amount. Under the respective transition period methodologies for the LTCH PPS and IPF PPS, which are described below, payment is based, in part, on a decreasing percentage of the reasonable cost-based payment amount. As we discuss in section IV. of the preamble of this proposed rule, we are proposing to rebase the market basket used to determine the reasonable cost-based payment amount for LTCHs and IPFs. We are proposing that the portion of payments to LTCHs and IPFs that are reasonable cost-based will be determined using the FY 2002-

based excluded hospital market basket (currently estimated at 3.4 percent).

Effective for cost reporting periods beginning FY 2003, LTCHs are paid under the LTCH PPS, which was implemented with a 5-year transition period. (Refer to the August 30, 2002 final rule (67 FR 55954).) A LTCH may elect to be paid on 100 percent of the Federal prospective rate at the start of any of its cost reporting periods during the 5-year transition period. For purposes of the update factor for inpatient operating services for FY 2006, the portion of the LTCH PPS transition blend payment that is based on reasonable costs would be determined by updating the LTCH's TEFRA limit by the current estimate of the FY 2002-based excluded hospital market basket (or 3.4 percent).

Effective for cost reporting periods beginning on or after January 1, 2005, IPFs are paid under the IPF PPS under which they receive payment based on a Federal per diem rate that is based on the sum of the average routine operating, ancillary, and capital costs for each patient day of psychiatric care in an IPF, adjusted for budget neutrality. During a transition period between January 1, 2005 and January 1, 2008, some IPFs are paid based on a blend of the reasonable cost-based payments, subject to the TEFRA limit, and the Federal per diem base rate. For cost reporting periods beginning on or after January 1, 2008, IPFs will be paid based on 100 percent of the Federal per diem rate. For purposes of the update factor for FY 2006, the portion of the IPF PPS transitional blend payment based on reasonable costs would be determined by updating the IPF's TEFRA limit by the current estimate of the FY 2002-based excluded hospital market basket (or 3.4 percent).

IRFs are paid under the IRF PPS for cost reporting periods beginning on or after January 1, 2002. For cost reporting periods beginning during FY 2004, and thereafter, the Federal prospective payments to IRFs are based on 100 percent of the adjusted Federal IRF prospective payment amount, updated annually. (Refer to the July 30, 2004 final rule (69 FR 45721).)

### III. Update Framework

Consistent with the current law, for FY 2006, for IPPS hospitals, we are recommending an update of 3.2 percent, which reflects the CMS Office of the Actuary's most recent (fourth quarter) 2004 forecast of the FY 2006 market basket increase. In previous years, in making a recommendation, we included an update framework that analyzed hospital productivity, scientific and technological advances, practice pattern changes, changes in case mix, the effects of reclassification on recalibration and forecast error correction. Although we have used this framework in past years, we are no longer including this analysis in our recommendation for the update. We are not discussing the framework because the productivity measure cannot be adequately computed for FY 2006 because of the anticipated effects on admissions due to the expected increases in enrollment in Medicare Advantage plans. The increased enrollment in Medicare Advantage plans has

the effect of causing admissions to decline. However, we do not have information on how hospital employment will be affected for our methodology. Thus, in the absence of data to predict the effect of a decline in hospital admissions on hospital employment, we cannot appropriately reflect productivity in our framework. As a result, based on the discussion above, we believe it is appropriate to recommend an update of 3.2 percent, based on the Office of the Actuary's fourth quarter 2004 forecast of the FY 2006 market basket percentage increase.

We note that, although we are not using the framework for our recommendation to update the operating standardized amounts due to the reasons above, we continue to use the framework to calculate the capital standardized amounts as discussed in section III.A.1.a. of the Addendum to this proposed rule. This is due to the fact that the framework for the capital standardized amounts is calculated without a productivity factor and, therefore, the reasons discussed above do not apply to the update framework of the capital standardized amounts.

We also note that section 1886(e)(3) of the Act directs the Secretary to report to Congress an initial estimate of the recommendation of an appropriate payment inflation update for inpatient hospital services for the upcoming fiscal year. Earlier this year, the Secretary reported to Congress that the initial estimate of the recommendation of an update factor was 3.3 percent, which was the market basket update for the IPPS standardized amount in the President's FY 2006 budget. The difference between the Secretary's initial estimate and the update we are recommending in this proposed rule (3.2 percent) is due to the availability and use of more recent data for the market basket than were available at the time the Secretary's initial estimate was developed. In addition, the Secretary's initial estimate was based on the FY 1997-based hospital market basket, while the proposed update in this proposed rule (the current update recommendation) is based on the proposed FY 2002-based hospital market basket.

Aside from making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, it is necessary to make a recommendation of the update factor for all other types of hospitals. Consistent with current law, for FY 2006, for SCHs and MDHs, we are recommending an update of 3.2 percent, which reflects the CMS Office of the Actuary's most recent (fourth quarter) 2004 forecast of the FY 2006 market basket percentage increase.

Consistent with our proposal in section IV. of the preamble of this proposed rule, for FY 2006, for cancer hospitals, religious nonmedical health care institutions, and children's hospitals, we are recommending an update of 3.2 percent to the target limits. Consistent with our proposal in the February 3, 2005 LTCH PPS proposed rule (70 FR 5735), we are recommending an update factor of 3.1 percent for rate year (RY) 2006. For LTCHs that currently may be paid during a transition period a blend of reasonable cost-based payments (subject to the TEFRA limits) and Federal prospective payment amounts,

we are recommending an update factor of 3.4 percent for the portion of the payment that is based on reasonable costs, subject to the TEFRA limits, consistent with our proposal in section IV. of the preamble of this proposed rule. For the Federal portion of this same blended payment amount, we are recommending an update of 3.1 percent. Because the IPF PPS was effective for cost reporting periods beginning on or after January 1, 2005, and the base rates are effective until July 1, 2006, we are recommending an update of zero for IPFs (69 FR 66922). Finally, for the IRF PPS, we have not published a proposed rule proposing an update for FY 2006. As a result, we are recommending an update of 3.1 percent to IRF PPS for FY 2006, the same update used for FY 2005.

#### IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In the past, MedPAC has suggested specific adjustments to its update recommendation for each of the factors discussed under section III. of this Appendix. In its March 2005 Report to Congress, MedPAC assessed the adequacy of current payments and costs and the relationship between payments and an appropriate cost base, utilizing an established methodology used by the Commission in the past several years. MedPAC stressed that the issue at hand was whether payments were too high or too low, and not how they became either too high or too low.

In the first portion of MedPAC's analysis on the assessment of payment adequacy, the Commission reviewed the relationship between costs and payments. MedPAC's indicator of the relationship between payments and costs is the overall Medicare margin. The overall Medicare margin is calculated as the difference between payments and costs divided by payments. Based on the latest cost report data available, MedPAC estimated an inpatient hospital Medicare operating margin for FY 2003 of 1.3 percent (down from 5.9 percent and 9.8 percent for FY 2002 and FY 2001, respectively).

MedPAC also projected margins for FY 2005, making certain assumptions about changes in payments and costs. On the payment side, MedPAC applied the annual payment updates (as specified by law for FYs 2001 through 2005), and then modeled the effects of other policy changes that have affected the level of payments. On the cost side, MedPAC estimated the increases in cost per unit of output over the same time period at the rate of inflation as measured by the applicable market basket index generated by CMS.

In addition to considering the relationship between estimated payments and costs, MedPAC also considered the following three factors to assess whether current payments are adequate:

- Changes in access to or quality of care;
- Changes in the volume of services or number of providers; and

- Change in providers' access to capital.

MedPAC's recommendation was to increase payments under the IPPS by the projected increase in the hospital market basket index, less 0.4 percent, for FY 2006. MedPAC noted that the indicators of payment adequacy present a mixed picture. MedPAC was concerned about the trend of falling hospital margins, which may result in hospitals having a limited financial cushion for dealing with pressures that may arise in the coming year. On the other hand, MedPAC stated that the current cost trend was unsustainable and may have been driven by a lack of cost containment. Therefore, MedPAC concluded that an update of the hospital market basket index minus 0.4 percent is appropriate.

*Response:* As described above, we are recommending a full market basket update for FY 2006 consistent with current law. We believe this will appropriately balance incentives for hospitals to operate efficiently with the need to provide sufficient payments to maintain access to quality care for Medicare beneficiaries.

In addition, because the operating and capital prospective payment systems remain separate, we are proposing to continue to use separate updates for operating and capital payments. The proposed update to the capital payment rate is discussed in section III. of the Addendum to this proposed rule. [FR Doc. 05-8507 Filed 4-25-05; 4:12 pm]

## Department of Housing and Urban Development

---

Notice of Funding Availability (NOFA) for  
the Enhancement of Public Housing  
HOPE VI Communities Through  
Mentoring Demonstration Program  
Grants; Notices

**DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT**

[Docket No. FR-4979-N-01]

**Notice of Funding Availability (NOFA) for the Enhancement of Public Housing HOPE VI Communities Through Mentoring Demonstration Program Grants**

**AGENCY:** Office of the Assistant Secretary for Public and Indian Housing, HUD.

**ACTION:** Notice of funding availability.

**Overview Information**

A. *Federal Agency Name.* Department of Housing and Urban Development, Office of Public and Indian Housing.

B. *Funding Opportunity Title.* Notice of Funding Availability (NOFA) for the Enhancement of Public Housing HOPE VI communities through Mentoring Demonstration Program grants.

C. *Announcement Type.* Initial announcement.

D. *Funding Opportunity Number.* The **Federal Register** number for this NOFA is: FR-4979-N-01. The OMB approval number for this program is: 2577-0208.

E. *Catalog of Federal Domestic Assistance (CFDA) Number.* The CFDA number for this NOFA is 14.866, for the "Enhancement of Public Housing HOPE VI communities through Mentoring demonstration program."

**F. Dates.**

1. *Application Submission Date:* The application submission date shall be July 7, 2005. See the General Section of the SuperNOFA (70 FR 13576) for application submission, and timely receipt requirements.

2. *Estimated Grant Award Date:* The estimated award date will be approximately September 1, 2005.

**G. Additional Overview Content Information.**

1. This NOFA announces the availability of \$525,000 for HOPE VI grantees to create Mentoring demonstration programs.

2. The maximum amount of each grant award is \$175,000. It is anticipated that approximately 4 grant awards will be made.

3. All public housing authorities (PHAs) with HOPE VI Revitalization Grants are eligible to apply. PHAs that do not have a HOPE VI Revitalization grant or manage only a HCV program, tribal PHAs and tribally-designated housing entities are not eligible. PHAs that administer Family Self Sufficiency Programs are encouraged to apply.

4. The HOPE VI Mentoring demonstration program is a demonstration program that will assist

HUD in determining if a Mentoring assistance model improves the results of self-sufficiency type programs (e.g., Family Self Sufficiency and HOPE VI Community Supportive Services) for participating residents.

5. There must be two separate, equally sized groups of resident families, a group that receives Mentoring services and a control group that does not.

6. Through these mentoring demonstration programs, PHAs with HOPE VI Revitalization grants will partner with grassroots, faith-based and other community-based organizations (FB&CBOs) that provide services to transitioning families (i.e., families transitioning from traditional Public Housing to re-developed Mixed-Income communities). Through these partnerships, PHAs and FB&CBOs will match participating residents with mentors from the FB&CBO who will assist the residents to achieve their goals/benchmarks. The FB&CBOs will receive grant funds on a fee-for-service basis according to the number of benchmarks completed by participating HOPE VI residents.

7. A match of five percent of the total grant request is required.

8. Each applicant may submit only one application.

9. Application materials may be obtained over the Internet from the Grants.gov web site. Technical corrections and frequently asked questions will also be posted on this web site.

10. HUD's general policy requirements apply to all HUD federal financial assistance NOFAs for Fiscal Year (FY) 2005. These policies cover those NOFAs issued under HUD's Super Notice of Funding Availability (SuperNOFA) (70 FR 13576, published March 21, 2005) as well as those issued after publication of the SuperNOFA.

**Full Text of Announcement**

**I. Funding Opportunity Description**

**A. Program Description**

1. HOPE VI grantees are encouraged to work cooperatively with grassroots, faith-based and other community-based organizations as part of their Community and Supportive Services programs. FB&CBOs are vital entities in local neighborhoods and too often their strengths are not tapped as HOPE VI grantees work to help their residents achieve economic self-sufficiency. This NOFA will provide additional funding to HOPE VI grantees to study the development of innovative supportive service delivery through grassroots, faith-based and other community-based organizations.

2. The HOPE VI Mentoring demonstration program is a demonstration program that will assist HUD in determining if a mentoring assistance model improves the results of self-sufficiency type programs (e.g. HOPE VI Community Supportive Services (CSS) and Family Self Sufficiency (FSS)) for participating residents. Specifically, the grant awards will be awarded to Public Housing Authorities (PHAs) with current HOPE VI Revitalization grants in order to determine if providing mentoring services to residents already participating in self-sufficiency programs (e.g., CSS) increases their likelihood of achieving self-sufficiency, as compared to residents participating in self-sufficiency programs who do not receive mentoring services. The likelihood of achieving self-sufficiency will be evaluated primarily by certain outcome measures: Net change in earnings and a net change in the participant's credit rating, as well as residents' accomplishment of their other goals/benchmarks.

3. There must be two separate, equally-sized groups of resident families, a group that receives Mentoring services and a control group that does not. All participants in both groups will be chosen by random sampling of the current CSS-eligible participants.

4. Through these demonstration programs, PHAs with HOPE VI Revitalization grants will partner with grassroots, faith-based and other community-based organizations (FB&CBOs) that provide services to transitioning families (i.e., families transitioning from traditional Public Housing to re-developed Mixed-Income communities). Through these partnerships, PHAs and FB&CBOs will match participating residents with mentors from the FB&CBO who will assist the residents to achieve various self-sufficiency benchmarks (e.g., increasing their income, improving their credit rating, obtaining a job, achieving a GED, purchasing a home). The FB&CBOs will receive grant funds on a fee-for-service basis according to the number of benchmarks completed by participating HOPE VI residents. As the public housing resident family achieves each individual goal, payment for service will go to the sponsoring FB&CBO.

5. Each HOPE VI grantee shall partner with at least two FB&CBOs.

6. Examples of HOPE VI grantee/FB&CBO partnership. A typical family might have five benchmarks, and as the family reaches each benchmark, the FB&CBO will be paid for that

achievement. Payment would not go to the individual mentor. A PHA might randomly select 20 public housing families participating in its CSS program to take part in the demonstration program and to receive mentoring services (as opposed to the control group which would not receive mentoring services), and the partnering FB&CBO would select 20 people to become mentors. For every goal met by the family from the group receiving mentoring services, the FB&CBO would receive one unit of funding from the PHA. Assuming that each family would have to meet five established goals, the FB&CBO would be paid for 100 units of service. (20 families  $\times$  5 benchmarks = 100 units of service.)

7. The programs will be evaluated with the University or other research facility presently partnering with the PHA to evaluate the HOPE VI Revitalization program. The evaluation will entail outcome measures of a net change in earnings and a net change in the participant's credit rating, based on the resident's Fair Isaac Corporation (FICO) score from Equifax, Experian, and TransUnion.

#### B. Authority

The program authority for the HOPE VI Program is section 24 of the 1937 Act (42 U.S.C. 1437v). The funding authority for the Mentoring demonstration program comes from the several Appropriations Acts, from 1997 to 2001, (Public Laws 104-204, 105-65, 105-276, 106-74, and 106-377), under, "Revitalization of Severely Distressed Public Housing" (HOPE VI).

#### C. Definition of Terms

1. *Community and Supportive Services.* The CSS component of the HOPE VI program encompasses all activities that are designed to promote upward mobility, self-sufficiency, and improved quality of life for the residents of the public housing project involved (e.g., employment training, credit counseling, educational activities, homeownership counseling, transportation assistance, etc.). For purposes of this grant, the relevant CSS activities are those in the applicant's CSS Plan, as approved by HUD.

2. *Match.* Means at least five percent (5%) of the requested grant amount is required to be donated from sources other than federal funding for Mentoring demonstration program uses. Community Development Block Grant (CDBG) funds are considered local funds, not federal funds. This match may be measured by in-kind services. If volunteer time is being committed it should be calculated using the number

of hours to be committed multiplied by the normal professional rate for the local area or, if these are not applicable, the national minimum wage rate. The commitment must be viewed as in-kind services to the program.

3. *Mentoring Program Coordinator* is a PHA staff person who is responsible for coordinating the activities proposed for this application to ensure that their implementation will achieve the overall grant goals and objectives.

4. *Nonprofit organization.* A nonprofit organization is an organization that is exempt from federal taxation. A nonprofit can be organized for the following purposes: Charitable, religious, educational, scientific, literary, and other purposes. In order to qualify to become a nonprofit, an organization must be a corporation, community chest, fund, or foundation. An individual or partnership will not qualify. To obtain nonprofit status, qualified organizations must file an application with the Internal Revenue Service (IRS) and receive designation as such by the IRS. For more information, go to <http://www.irs.gov>. Proposed subgrantees that are in the process of applying for nonprofit status, but have not yet received nonprofit designation from the IRS on the application submission date, will not be considered nonprofit organizations and will not be considered for mentoring demonstration program grants.

5. *Mentor* is the designee from the faith-based or community organization who will assist the public housing family (for the duration of the grant) to successful completion of each benchmark.

6. *Person with disabilities* means a person who:

- a. Has a condition defined as a disability in section 223 of the Social Security Act;
- b. Has a developmental disability as defined in section 102 of the Developmental Disabilities Assistance Bill of Rights Act; or
- c. Is determined to have a physical, mental, or emotional impairment which:
  - (1) Is expected to be of long-continued and indefinite duration;
  - (2) Substantially impedes his or her ability to live independently; and
  - (3) Is of such a nature that such ability could be improved by more suitable housing conditions.

d. The term "person with disabilities" does not exclude persons who have acquired immunodeficiency syndrome (AIDS) or any conditions arising from the etiologic agent for AIDS. In addition, no individual shall be considered a person with disabilities, for purposes of eligibility for low-income housing,

solely because of any drug or alcohol dependence.

e. The definition provided above for persons with disabilities is the proper definition for determining program qualifications. However, the definition of a person with disabilities contained in section 504 of the Rehabilitation Act of 1973 and its implementing regulations must be used for purposes of reasonable accommodations.

#### II. Award Information

A. A total of \$525,000 is available for funding. HUD anticipates awarding up to four (4) grants as a part of this initial announcement. Each applicant may request up to \$175,000. If funds remain after all grants are awarded, HUD may divide these funds equally among the grant recipients. This may result in grant amounts larger than \$175,000. HUD reserves the right to award less than the requested amount of funds.

B. The grant term for funding shall be 18 months.

#### III. Eligibility Information

##### A. Eligible Applicants

Eligible applicants include, and are limited to PHAs with current HOPE VI Revitalization grants that include Community and Supportive Services components and other economic development activities that promote the economic self-sufficiency of residents under the revitalization program, in accordance with Section 24(d)(1)(G) of the United States Housing Act of 1937 (42 U.S.C. 1437, *et seq.*). Eligible applicants must already have a relationship established with the FB&CBO(s) described in the application, or have identified and committed the FB&CBO(s) they will partner with as of the application submission date. PHAs that administer Family Self Sufficiency Programs are encouraged to apply. See Section IV. for documentation of commitment. If the applicant is not eligible, its application will not be considered for funding.

##### B. Cost Sharing or Matching

*Match.* Applicants must have a match requirement equal to 5% of the award amount (see definition in Section I). This match may be measured by in-kind services. If volunteer time is being committed it should be calculated using the number of hours to be committed multiplied by the normal professional rate for the local area or, if these are not applicable, the national minimum wage rate should be used. The commitment must be viewed as in-kind services to the program. If the application does not include sufficient Match donations, the

application will not be considered for funding.

#### C. Other

##### 1. Threshold Criteria:

If you have not met a threshold, or have not included in the application the complete, correct, required documentation that demonstrates the threshold has been met, the application will not be considered for funding.

a. Evaluation by Higher Education or Research Facility. The applicant must have an active agreement as of the publication date of this NOFA with a University or other research facility to review and evaluate results achieved by the applicant's HOPE VI Revitalization grant(s). The applicant must use the same University or other research facility to review and evaluate a grant from this NOFA. See Section IV.B. of this NOFA for required documentation.

b. Other Requirements and Procedures Applicable to All Program: The requirements and procedures listed in Section III.C. of the General Section apply to this NOFA.

##### 2. Program Requirements:

a. Demonstration. The HOPE VI Mentoring demonstration program is a demonstration program that will assist HUD in determining if a Mentoring assistance model improves the results of self-sufficiency type programs (e.g. Family Self Sufficiency and HOPE VI Community Supportive Services) for participating residents. Applicants must propose a demonstration program that addresses this purpose.

b. Random Sampling. There must be two separate, equally sized groups of resident families, a group that receives Mentoring services and a control group that does not. The two groups of residents must be chosen, at random, from an initial pool of residents that need similar levels of, and types of, FSS or CSS services. To the greatest extent possible, the initial pool of residents must be representative of the resident community as a whole, i.e., the initial pool should not include only residents that are more likely to succeed at self-sufficiency efforts than the typical HOPE VI resident.

c. Services to Residents. Mentoring demonstration programs under this NOFA should be developed to assist residents pursue their goals of increasing their income and improving their FICO credit rating through FSS and CSS programs, along with other goals such as: Participating in job training opportunities; gaining employment; achieving promotions in the workplace; completing GED, college, and other educational programs; participating in homeownership

programs; graduating from HUD subsidized low-rent programs, or other indices of progress towards self-sufficiency.

d. Resident Assessment. Applicants must have a case management system in place that has assessed residents' needs and interests so that program activities and benchmarks can be designed to address their needs.

e. Goals and Outcomes. The Demonstration will compare five (5) specific indicators (i.e., goals and outcomes) for each of the above participant groups. Two of the indicators are mandatory for grants from this NOFA and three will be at the discretion of the applicant. Grantees will be required to gather this indicator information from the participants and report on them to the evaluator and ultimately to HUD. The two mandatory indicators are:

(1) Change in adjusted family income, adjusted for family size and other factors as established by HUD, and including factors specifically related to the applicant's FSS program (provided such factors apply to all participants, in both the Mentored and Control resident groups.). The HUD form 50058, "Family Report," will be used in evaluation of this indicator; and

(2) Change in FICO credit rating. The FICO score to be tracked shall be the middle score of the scores assigned by each of the three major U.S. credit bureaus: Equifax, Trans Union and Experian.

f. Payment of Mentor FB&CBOs. The FB&CBOs will receive grant funds on a fee-for-service basis according to the number of benchmarks completed by participating HOPE VI residents. As the public housing resident family achieves each individual goal, payment for service will go to the sponsoring FB&CBO. Payment may not go to the individual mentor. Mentoring services may be donated or paid for by leverage and grant funds. If the Mentoring services are donated, their value as in-kind services should be included in this application as Leverage Resources. If the Mentoring services are to be paid for by leverage cash or grant funds, payment must be results-oriented, based upon the measured goals and outcomes in Section e. above. See "Funding Restrictions," Section IV.E. of this NOFA.

g. Minimum FB&CBO Partners Required. Each HOPE VI grantee must partner with at least two FB&CBOs.

h. Non FB&CBO partners. Applicants should partner with local businesses, schools, libraries, banks, employment agencies, or other organizations, that will help mentors in providing support to those public housing families they

will mentor. These organizations can provide additional expertise, volunteers, office supplies, training materials, software, equipment, and other resources.

##### 3. Eligible Activities:

a. Mentoring demonstration programs and Services. Eligible activities for the Mentoring demonstration program are programs and services that are designed to meet residents' needs. Eligible activities may include, but are not limited to: assisting with job training and other employment-related activities in order to increase earnings; assisting with activities to improve credit scores; helping residents transition from welfare to work; counseling residents in attaining homeownership; assisting school-age children and youth with homework and other educational activities; providing guidance and preparatory programming to high school students (or other interested residents) for post-secondary education (college or trade schools); assisting adults with adult educational activities; offering training on such topics as parenting, consumer education, and family budgeting; assisting with transportation needs; and providing other services as deemed necessary by results obtained from case managers and resident surveys. See applicant's HUD-approved CSS plan for other eligible CSS activities. Innovative approaches that promote increased income, improved credit scores, sustained employment, homeownership or excellence in education will receive higher scores.

b. Mentoring demonstration program funds may be used to pay for the salary of a Mentoring Demonstration Program Coordinator (the PHA staff person who coordinates the Mentoring Demonstration Program). See section IV.F. for funding restrictions.

c. The PHA shall be responsible for ensuring that Mentoring demonstration program funds are used only for eligible activities. The PHA is responsible for ensuring that the mentoring demonstration program achieves the goals and objectives stated in this application and the subsequent grant agreement (if awarded), including the following activities:

- (1) Marketing the program to residents;
- (2) Meeting with case managers to assess participating residents' needs for supportive services (e.g. childcare, transportation), interests, skills and job readiness;
- (3) Designing and coordinating grant activities based on residents' needs;
- (4) Monitoring the progress of program participants and evaluating the overall success of the program. A

portion of the grant funds should be reserved to ensure that an evaluation by the partner University or other research facility can be completed for all participants who received assistance through this program. For more information on how to measure performance, please see rating factor four.

(5) Determining payment levels and timing to FB&CBOs.

4. General Section References: The following subsections of Section III of the General Section are hereby incorporated by reference:

a. Additional Non-discrimination and Other Requirements;

(1) Civil Rights Laws, including the Americans with Disabilities Act of 1990 (42 U.S.C. 1201 *et seq.*);

(2) The Age Discrimination Act of 1974 (42 U.S.C. 6101 *et seq.*); and

(3) Title IX of the Education Amendments Act of 1972 (20 U.S.C. 1681 *et seq.*);

b. Affirmatively Furthering Fair Housing;

c. Ensuring the Participation of Small Businesses, Small Disadvantaged Businesses, and Women-Owned Businesses;

d. Executive Order 13166, Improving Access to Services for Persons With Limited English Proficiency (LEP);

e. Executive Order 13279, "Equal Protection of the Laws for Faith-Based and Community Organizations";

f. Procurement of Recovered Materials;

g. Participation in HUD-Sponsored Program Evaluation;

h. Salary Limitation for Consultants;

i. OMB Circulars and Government-wide Regulations Applicable to Financial Assistance Programs;

j. Drug-Free Workplace; and

k. Safeguarding Resident/Client Files.

#### IV. Application and Submission Information

##### A. Addresses to Request Application Package

This section describes how you may obtain application forms, additional information about the General Section, this NOFA, and technical assistance.

1. Copies of this NOFA and related application forms may be downloaded from the Grants.gov Web site at <http://www.grants.gov/> or if you have difficulty accessing the information you may receive customer support from Grants.gov by calling their help line at (800) 518-GRANTS or sending an e-mail to [support@grants.gov](mailto:support@grants.gov). The operators will assist you in accessing the information. If you do not have Internet access and you need to obtain

a copy of this NOFA, you can contact HUD's NOFA Information Center toll-free at (800) HUD-8929. Persons with hearing or speech impairments may also call toll-free at (800) HUD-2209.

2. This announcement contains all an applicant will need to apply. Application kits will not be used with this NOFA. All the information you need to apply will be in the NOFA and available on <http://www.grants.gov>.

##### B. Content and Form of Application Submission

###### 1. Number of Applications Permitted.

Each applicant may submit only one application. Joint applications are not permitted. However, as described in this NOFA, it is expected that applicants will enter into partnerships with FB&CBOs in order to achieve the goals and objectives of the proposed mentoring demonstration program.

2. *Documentation, Minimum Proposal Requirements.* The only narrative portion of the application is the applicant's response to the rating factors. Within that narrative, applicants should submit information that will clearly describe the proposed mentoring demonstration program, including a description of:

a. How mentors and public housing residents will be recruited.

b. How mentors will be trained.

c. The methods of payment disbursements to FB&CBOs.

d. How the activities of the mentors will be documented.

e. Description of the voluntary and paid staffing.

f. How eligible participants will be selected for the mentoring demonstration program, including the control group.

g. How services will be made available to residents who have already been relocated, if relocated residents will be included in the mentoring and control groups.

h. How benchmarks will be established and evaluated.

###### 3. *Documentation of Match and Leverage Resources.*

a. Leveraged funds and in-kind services ("Donations") must be firmly committed. "Firmly committed" means that the amount of Match or leveraged resources and their dedication to the mentoring demonstration program activities must be explicit, in writing and signed by a person authorized to make the commitment. Letters of commitment or Memoranda of Understanding (MOU) must be on organization letterhead, and signed by a person authorized to make the stated commitment whether it is for cash or in-kind services. The letters of

commitment or MOU must indicate the annual level and/or amount of commitment in dollars, and indicate how the commitment will relate to the proposed mentoring demonstration programs program. See Section IV.F of the General Section regarding the procedures for submitting third party documents.

b. Commitment documents must be submitted to HUD with the NOFA application. If a commitment document is not included in the application, the donation will not be counted toward the Match threshold or to the Leverage Resources factor. Missing commitment documents are not considered "technical deficiencies" and cannot be submitted after the submission date.

4. *Documentation of Monitoring and Evaluation Partner.* The application must contain a commitments letter or MOU from the University or other research facility partner that is evaluating the applicant's HOPE VI Revitalization grant. The letter or MOU must state that the University or other research facility is committed to providing evaluation of the applicant's Mentoring Demonstration program. Letters of commitment or Memoranda of Understanding (MOU) must be on organization letterhead, and signed by a person authorized to make the stated commitment whether it is for cash or in-kind services. (Note that third party documents must be submitted using the process described in Section IV.F. of the General Section. Although facsimile of the letter or MOU will be accepted by HUD, HUD prefers that the letter or MOU be converted into .pdf format and be submitted to Grants.gov with the rest of the application.)

5. *Maximum Length of Application.* The maximum length of the rating factor response portion of the application is 20 pages. A page is defined as 23 double-spaced lines with a maximum length of 6½ inches, in Times New Roman 12-point font. Forms or documents required by the NOFA, e.g., commitment letters and MOUs, are not included in this 20-page limit. Resumes and other staff information are included in this 20-page limit. Applicants should make every effort to submit only what is necessary in terms of supporting documentation.

6. *Application Format.* The only narrative portion of the application is the applicant's response to the rating factors. To ensure proper credit for information applicable to each rating factor, the applicant should include application Section references, with searchable key words or phrases, to support the documentation when addressing the rating factors, and when

preparing related forms and supporting documentation. Applicants' rating factor responses should be as descriptive as possible, ensuring that every requested item is addressed. Applicants should make sure to include all requested information, according to the instructions of this NOFA. This will help ensure a fair and accurate review of your application. Although information from all parts of the application will be taken into account in rating the various factors, if supporting information cannot be found by the reviewer, it cannot be used to support a factor's rating.

7. *Separate Electronic Files.* When submitting your application via Grants.gov, you should provide the following information as separate electronic files. See Section IV.F. of this NOFA for details. If a waiver to the electronic application submission requirement is granted by HUD (see Section IV.F. of this NOFA and the General Section for details), your application submission should be structured as follows using tabs to separate the documents submitted.

a. TAB 1: Forms Required by HUD:

(1) Acknowledgement of Application Receipt (HUD-2993) (only use if you are granted a waiver to the electronic application submission requirement).

(2) HOPE VI Mentoring Demonstration Program Application Checklist.

(3) Application for Federal Assistance (SF-424).

(4) Grant Application Detailed Budget (HUD-424-CB).

(5) Grant Application Detailed Budget Worksheet (HUD-424-CBW), only the following categories: 1., 2., 3.a., 5., 6., 7., 9., and 10.

(6) Applicant/Recipient Disclosure/Update Report (HUD-2880).

(7) Disclosure of Lobbying Activities (SF-LLL), if applicable.

(8) Program Outcome Logic Model (HUD-96010).

(9) America's Affordable Communities Initiative (HUD-27300), if applicable.

(10) Client Comments and Suggestions (HUD 2994) (Optional).

(11) Facsimile Transmittal (HUD-96011).

Copies of these forms are included in Appendix B to the General Section.

b. TAB 2: Executive Summary.

c. TAB 3: Response for Rating Factor

- 1.
- d. TAB 4: Response for Rating Factor
- 2.
- e. TAB 5: Response for Rating Factor
- 3.
- f. TAB 6: Response for Rating Factor
- 4.

g. TAB 7: Response for Rating Factor

5. h. TAB 8: Response to Rating Factor

6. i. TAB 9: Documentation of Match/Leverage Commitment:

(1) Letters or MOUs from partners attesting to leveraged donations; See Section IV.B. of this NOFA for documentation requirements (note that third party documents must be submitted using the process described in Section IV.F. of the General Section).

j. TAB 10: Documentation of evaluation partnership.

8. *Budget Forms:* The Grant Application Detailed Budget (HUD-424-CB) contains information that will add to your application. To assist you in filling out the form, HUD has available for your voluntary use a Grant Application Detailed Budget Worksheet (HUD-424-CBW) and Grant Application Detailed Budget Worksheet Instructions (HUD-424-CBWI). They can be downloaded from <http://www.grants.gov>.

9. *Application Packaging.* If you are granted a waiver to the application submission requirement, package the application as securely and simply as possible. Two-hole punch the pages at the top with a 2-3/4" center. Do not use a three ring binder.

C. *Submission Dates and Times*

*Application Submission Date.*

Mentoring grant application submission date is July 7, 2005. If you are granted a waiver to the electronic application submission requirements, you must mail your application, using the United States Postal Service only, by midnight of the application submission date to be considered. Submit your application early to avoid missing the deadline and being disqualified by unanticipated delays or other related problems.

D. *Intergovernmental Review*

Executive Order 12372 was issued to foster intergovernmental partnership and strengthen federalism by relying on state and local processes for the coordination and review of federal financial assistance and direct federal development. The order allows each state to designate an entity to perform a state review function. The official listing of state points of contact (SPOC) for this review process can be found at: <http://www.whitehouse.gov/omb/grants/spoc.html>. States that are not listed on the website have chosen not to participate in the intergovernmental review process, and therefore do not have a SPOC. If you are located within one of those states, you may send applications directly to HUD.

If your state has a SPOC, you should contact it to see if it is interested in reviewing your application prior to submission to HUD. Please make sure that you allow ample time for this review process when developing and submitting your application.

E. *Funding Restrictions*

1. *Administrative costs.*

Administrative costs to the PHA are allowable but limited to 15% of the grant amount. For example, Mentoring demonstration program funds may be used to pay for the salary of a Mentoring Demonstration Program Coordinator (the PHA staff person who coordinates the Mentoring Demonstration Program). Administrative costs must adhere to OMB Circular A-87. You must use form HUD-424-CBW to itemize your administrative costs in your application.

2. *Ineligible Activities.*

a. Payment of wages and/or salaries to participants receiving supportive services and/or programs.-

b. Purchase, lease, or rental of land, real property (including homeownership housing units) and other space with grant funds, match funds or leverage funds.

c. Purchase, lease, or rental of vehicles.

d. Purchase, lease, or rental of office equipment.

e. Cost of application preparation or other pre-award activities.

f. Construction, rehabilitation, revitalization, or modernization of housing units or other physical structures with grant funds, match funds or leverage funds.

g. Payment of Legal Fees.

h. Incurring other costs that are not allowable under the HOPE VI NOFA grant award and are not stated as allowable under this NOFA.

i. Payment may not go to the individual mentor. Payment may only go to the FB&CBO on a fee-for-service basis.

The FB&CBOs will receive grant funds on a fee-for-service basis according to the number of benchmarks completed by participating HOPE VI residents. As the public housing resident family achieves each individual goal, payment for service will go to the sponsoring FB&CBO. Mentoring services may be donated or paid for by leverage and grant funds. If the Mentoring services are to be paid for by leverage cash or grant funds, payment must be results-oriented, based upon the measured goals and outcomes in Section e. above. See "Funding Restrictions," Section IV.E. of this NOFA.

3. *Payment of Mentor FB&CBOs.* The FB&CBOs will receive grant funds on a

fee-for-service basis according to the number of benchmarks completed by participating HOPE VI residents. As the public housing resident family achieves each individual goal, payment for service will go to the sponsoring FB&CBO. Mentoring services may be donated or paid for by leverage and grant funds.

a. If the Mentoring services are donated, their value as in-kind services should be included in this application as Leverage Resources.

b. If the Mentoring services are to be paid for by leverage cash or grant funds, payment must be results-oriented, based upon the five (5) measured goals and outcomes referred to in "Program Requirements," Section III.C.2. of this NOFA.

4. *Transfer of Funds.* HUD does not have the discretion to transfer funds available through this NOFA to any other program, grant, or area of the applicant's current HOPE VI grant. The funds must be used for the HOPE VI Mentoring Demonstration Program for FB&CBOs.

5. *Deobligation of Funds.* HUD shall recover (take back) any grant funds where the activity has not been initiated or completed within the required 18-month grant term, which begins as of the grant agreement execution date. The grant agreement will set forth, in detail, circumstances under which funds may be recovered and other sanctions imposed. The PHA is encouraged to plan for sustainability of successful aspects of its mentoring demonstration program. Such sustained activities may extend beyond the 18-month grant term (e.g., using other funding/in-kind resources).

#### F. Other Submission Requirements

This section provides the application submission and receipt instructions for HUD program applications. Please read the following instructions carefully and completely, as failure to comply with these procedures may disqualify your application. See Section IV.F. of the General Section for more detailed information.

1. *Electronic Delivery.* HUD requires applicants to submit their applications electronically through <http://www.grants.gov>. HUD will not accept or consider any applications that have been submitted through any other method, unless a waiver is granted.

2. *Electronic Signature.* Applications submitted through [grants.gov](http://www.grants.gov) constitute submission as electronically signed applications. The registration and authentication process establishes the Authorized Organization Representative. When you submit the

application through [Grants.gov](http://www.grants.gov), the name of your authorized organization representative on file will be inserted into the signature line of the application. Applicants must register the individual who is able to make legally binding commitments for the applicant organization as the Authorized Organization Representative.

3. *Waiver of Electronic Submission Requirement.* HUD will only accept electronic applications submitted through <http://www.grants.gov> unless the applicant has received a waiver from the Department. HUD regulations at 24 CFR 5.110, permit waivers of regulatory requirements to be granted for cause. If you are unable to submit your application electronically, you may, in writing, request a waiver from this requirement. Your waiver request must state the basis for the request and explain why electronic submission is not possible. The basis for waivers for cause may include but are not limited to: (a) lack of available internet access in the geographic location in which the applicant is located or, (b) the physical disability of the applicant prevents the applicant from accessing or responding to the electronic application. See Section IV.F. of the General Section for more detailed information.

4. *No Facsimiles of Entire Application.* HUD will not accept fax transmissions from applicants who receive a waiver to submit a paper copy application. Paper applications must be complete and submitted in their entirety, via the USPS Express Mail.

#### V. Application Review Information

##### A. Criteria: Factors for Award Used to Evaluate and Rate Mentoring Demonstration Programs Applications

The factors for rating and ranking applicants and maximum points for each factor are provided below. The maximum number of points available for this program is one hundred.

1. Rating Factor 1: Capacity of the Applicant, FB&CBO and Relevant Organizational Staff (32 Points)

*Description.* This factor addresses whether the applicant has the organizational resources necessary to successfully implement the proposed activities within the grant period. In rating this factor, HUD will consider the extent to which the proposal demonstrates that the applicant will have qualified and experienced staff dedicated to administering the program.

a. Proposed Program Staffing. Staff Experience (13 Points)

(1) This factor evaluates the knowledge and experience of the proposed Mentoring Demonstration Program Coordinator, and other HOPE VI staff in designing and successfully managing programs similar to the program for which funding is being requested. Experience will be judged in terms of recent, relevant, and successful experience of the team to undertake eligible program activities. In rating this factor, HUD will consider experience within the last 5 years to be recent. Experience should relate specific activities and specific accomplishments.

(2) Scoring:

(a) If the application demonstrates and documents the success of the PHA's CSS or comparable program, the application will receive up to 13 points. Applicants must provide quantifiable evidence to support their assertion of success and show how this success is attributable to their staffing structure.

(b) If the application demonstrates and documents the PHA has implemented a CSS or comparable program, but do not yet have positive results to report, the application will receive up to 8 points. Applicants must provide quantifiable evidence to support their assertion of results and show how this is related to their staffing structure.

(c) If the application demonstrates the PHA has never implemented a CSS or comparable program, the application will receive zero points.

b. FB&CBO Partner Capacity and Experience (15 Points)

(1) The application will be evaluated based on the capacity of the designated partners (FB&CBOs), their experience in implementing similar programs, and their ability to assemble a team of mentors who will work with HOPE VI families. The application will also be evaluated on whether the FB&CBO partners will be able to quickly access enough qualified mentors, to deliver the proposed activities in a timely and effective fashion.

(2) Scoring:

(a) If, as of the application submission date, partners/FB&CBOs have staff in place, an identified group of individuals willing to become mentors, and have experience in implementing similar programs, the application will receive up to a maximum of 15 points;

(b) If, as of the application submission date, the partner/FB&CBO has an identified group of individuals willing to become mentors, but lacks either the experience or a staff person to

coordinate the program, the application will receive up to a maximum of 8 points:

(c) If, as of the application submission date, the partner/FB&CBO has not identified group of individuals willing to become mentors, the application will receive zero points.

**c. Program Administration and Fiscal Management (4 Points)**

(1) Describe how the program will be managed; how HUD can be sure that there will be program and financial accountability; and describe staff or team members' roles and responsibilities. The applicant must provide the following:

(a) A complete description of the fiscal management structure, including fiscal controls that are in place;

(b) A description of goals, interim and final program outcomes, and their timeframes;

(c) A list of any findings (HUD Inspector General, management review, fiscal, etc.), material weaknesses, and methods used to address them.

(2) Scoring:

(a) If the application shows a fiscal management structure and controls that are adequate to manage a grant from this Mentoring NOFA, and does not have any outstanding findings, the applicant will receive up to 4 points.

(b) If the application shows a fiscal management structure and controls that are adequate to manage a grant from this NOFA, but has outstanding findings (or does not address findings), the applicant will receive up to 2 points.

(c) If the applicant does not describe its fiscal management structure and show that they are adequate, the applicant will receive 0 points.

**2. Rating Factor 2: Soundness of Approach (25 Points)**

*Description.* This factor addresses both the quality and cost-effectiveness of your Mentoring Demonstration Program plan, as proposed in your application. Your factor responses must indicate a clear relationship between your proposed activities, the targeted population's needs, and the purpose of the program funding.

In rating this factor HUD will consider:

**a. Specific Mentoring Services and/or Activities (5 Points)**

(1) *Description.* Your response must describe in detail the specific mentoring services and activities you plan to offer, who will benefit from them and how they will benefit from them. You should tie specific services or activities to specific sub-groups within your public

housing resident and low-income communities.

(2) Scoring:

(a) If you show a strong, comprehensive network of grassroots, faith-based and other community-based organizations that have the capacity to provide needed services to the participants, and describe how the services will benefit different participant sub-groups, you will receive up to 5 points.

(b) If you show a variety of individual faith-based and community organizations, courses or services that will benefit different participant sub-groups, but not a network that responds comprehensively to the range resident needs, you will receive up to 2 points.

(c) If you do not show the relationship of FB&CBOs, courses or services to planned participant goals and outcomes, you will receive 0 points.

**b. Feasibility (10 Points)**

(1) *Description.* This factor examines whether your overall application is logical, feasible, and likely to achieve its stated purpose during the term of the grant. You will be evaluated based on whether your application requests funds commensurate with the level of effort necessary to accomplish your goals and anticipated results.

(2) Scoring:

(a) If the application shows financial feasibility, the ability to work with the target group of residents and low-income families, a logical plan to provide mentoring services to the participants and that the amount of requested funds is commensurate with the level of effort necessary to accomplish your goals and anticipated results, the applicant will receive up to 10 points.

(b) If the application shows some but not all of the element described in 2.a. above, the applicant will receive up to 6 points.

(c) If the application shows only one element, or none of the elements described in 2.a. above, the applicant will receive up to 2 points.

(d) If the application as a whole is not logical and shows poor planning, the applicant will receive 0 points.

**c. Resident Self Sufficiency (10 Points)**

(1) *Description.* In order to receive points in this category, responses to the factors and Mentoring Demonstration Program plan must indicate the types of activities and training programs your FB&CBOs/mentors will offer which can help residents successfully transition from welfare to work and/or complete their desired goal. These activities

should be geared to all members of the family.

(2) Scoring:

(a) If the applicant shows a comprehensive set of goals, courses/services that considers the needs of the entire family (every member) of participants, which may include the attainment of higher earnings, improved credit scores, permanent employment, buying a home, changing negative behaviors, and improving poor performance in school, the application will receive up to 10 points.

(b) If the applicant proposes goals, courses/services that consider the needs of fewer than every family member, the application will receive up to 5 points.

(c) If the applicant does not show that the program will contribute to resident self-sufficiency, the application will receive 0 points.

**3. Rating Factor 3: Leveraging Resources (20 Points)**

*a. Description.* This factor addresses your ability to secure community resources that can be combined with HUD's grant resources to achieve program purposes. In rating this factor, HUD will look at the extent to which you and your partner coordinate and leverage your services with other organizations serving the same or similar populations.

(1) Leverage may be cash or other resources or services that can be donated, and may include: In-kind services, contributions or administrative costs provided to the applicant; funds from federal sources (not including Public Housing or HOPE VI funds) as allowed by statute, including for example CDBG; funds from any state or local government sources; and funds from private contributions.

(2) Leveraged funds and in-kind services ("Donations") must be firmly committed. "Firmly committed" means that the amount of leveraged resources and their dedication to the Mentoring Demonstration Program activities must be explicit, in writing and signed by a person authorized to make the commitment.

(3) Donations that were included in your HOPE VI NOFA application may not also be included in your Mentoring Demonstration Program NOFA application. In order to be counted toward this rating factor, the related commitment document must address services specific to this NOFA.

(4) If volunteer time is being donated, it should be calculated using the number of hours to be donated, multiplied by the normal professional rate for the local area or, if these are not applicable, the national minimum wage

rate. The commitment must be in place at time of award. Public Housing funds of any kind are not an eligible donation. Applicant staff time is not an eligible donation. Applicants shall annotate the Form HUD-424-CB to list the sources and amount of each donation.

(5) Points for this factor will be awarded based on the documented evidence of partnerships and firm commitments and the ratio of requested funding to the total proposed grant budget. See Section IV.B. of this NOFA for documentation requirements.

**b. Scoring:**

(1) Applicants that document firm commitments to obtain extra funding equal to 50% or more of the requested amount will receive the full 20 points.

(2) Applicants that document firm commitments to obtain extra funding equal to from 25% to 49.9% of the requested amount will receive 10 points.

(3) Applications that document firm commitments to obtain from 10% to 24.9% of the requested amount will receive 5 points

(4) Applications that document firm commitments to obtain less than 10% or less of the requested amount will receive 0 points.

**4. Rating Factor 4: Achieving Results and Evaluation Methods (20 Points)**

**a. Description.** Under this rating factor, applicants must demonstrate how they propose to measure their success and outcomes. This rating factor requires that the applicant identify goals, interim and final program outcomes, and their timeframes. Required outcome measures must include, at a minimum:

- (1) Changes in participants' income; and
- (2) Changes in participants' credit ratings.

Timeframes for outcomes should take into account the due date of the required periodic report to HUD and items that will be planned into the Mentoring Demonstration Program.

Performance indicators should be objectively quantifiable and should measure actual achievements against anticipated achievements. The narrative should identify what you are going to measure, how you are going to measure it, and the steps you have in place to adjust your plans if outcomes are not met within the established 18-month grant term timeframe. The Logic Model will be used as part of the evaluation of this rating factor.

**b. Scoring:**

(1) If the applicant shows interim and final measurable outcomes and/or benchmarks, with timeframes, and plans

for measuring the required outcomes in both the Mentored group and control group, and shows plans for adjusting the program, the application will receive up to 20 points.

(2) If the applicant shows interim and final measurable outcomes or benchmarks, with timeframes, and plans for measuring the required outcomes in both the Mentored group and control group but without plans for adjusting the program, the application will receive up to 10 points.

(3) If the application does not show periodic and final measurable outcomes or benchmarks, with timeframes, or does not show plans to measure the required outcomes, the application will receive 0 points.

**5. Rating Factor 5: Family Self-Sufficiency (2 Points)**

**a. Scoring:**

(1) Applicants that can demonstrate that the participants in both the Mentored and the control groups will all be also enrolled in the PHA's Family Self-Sufficiency program within 60 days after the date of notification of grant award, will receive 2 Points.

(2) Applicants that will not enroll the participants in both the Mentored and control groups in a Family Self-Sufficiency program within 60 days after notification of grant award, will receive 0 points.

**6. Rating Factor 6: Energy Star (1 Point)**

**a. Description.** HUD has adopted a wide-ranging energy action plan for improving energy efficiency in all program areas. See, "Participation in Energy Star," Section V.B.2.h. of the General Section of the SuperNOFA. Promotion of Energy Star compliance is a HOPE VI Revitalization program requirement. See Section III.C. of this NOFA.

**b. Scoring:**

(1) You will receive 1 Point if your application demonstrates that you will include Energy Star in homeownership counseling.

(2) You will receive 0 Points if your application does not demonstrate that you will include Energy Star in homeownership counseling.

**B. Review and Selection Process**

1. Two levels of review will be conducted:

a. A technical review by individual reviewers to confirm eligibility and rate the application based on the four rating factors provided in this section; and,

b. A technical review by a Review Committee to ensure uniform rating treatment by the individual reviewers. HUD will select for grant award the

highest ranked application first and continue down in ranking until funds are exhausted.

2. **Response to Factors as Narrative:** The responses to the rating factors constitute the narrative portion of the application. The rating factor responses should include information and references to the Mentoring Demonstration Program Plan and other documentation in the application. The factors cover key personnel, target audience, services, and activities, how the services or activities match the needs of the target audience, program evaluation, and financial controls. A narrative separate from the rating factor responses will not be reviewed. Repeating information is not necessary.

**3. Corrections to Deficient Applications:**

a. Consistent with its regulations at 24 CFR part 4, subpart B, HUD will not consider any unsolicited information, you the applicant may want to provide after the application submission date. HUD may contact you to clarify an item in your application or to correct technical deficiencies. HUD may not seek clarification of items or responses that improve the substantive quality of your response to the rating factors. In order not to unreasonably exclude applications from being rated and ranked, HUD may contact applicants to ensure proper completion of the application and will do so on a uniform basis for all applicants. Examples of curable (correctable) technical deficiencies include failure to submit the proper certifications, failure to submit an application that contains a signature or, when required, an original signature, by an authorized official. In each case, HUD will notify you in writing of a technical deficiency. HUD will notify applicants by facsimile or by the United States Postal Service. It is very important that the fax number listed on the Application Receipt is correct so that the notification gets to the right person on your staff. Clarifications or corrections of technical deficiencies in accordance with the information requested by HUD must be submitted within seven calendar days of the date you receive HUD notification. (If the submission date falls on a Saturday, Sunday, or a federal holiday, your correction must be received by HUD on the next day that is not a Saturday, Sunday, or a federal holiday.) If the deficiency is not corrected within this time period, HUD will reject the application as incomplete and it will not be considered for funding.

b. **Unacceptable Applications.** After the 7-day technical deficiency correction period, HUD will disapprove

all applications that it determines are not acceptable for processing. HUD's notification of rejection will state the basis for the decision.

## VI. Award Administration Information

### A. Award Notices

1. The HUD Reform Act prohibits HUD from notifying you as to whether or not you have been selected to receive a grant until it has announced all grant recipients. If your application has been found to be ineligible or if it did not receive enough Points to be funded, you will not be notified until the successful applicants have been notified. HUD will provide written notification to all applicants, whether or not they have been selected for funding.

2. **Authorizing Document.** The notice of award signed by the Assistant Secretary for Public and Indian Housing (grants officer) is the authorizing document. This notice will be delivered by fax and the U.S. Postal Service.

3. **Grant Agreement.** When you are selected to receive a Mentoring grant, HUD will send you a Grant Agreement, which constitutes the contract between you and HUD to carry out and fund public housing revitalization activities. Both you and HUD will sign the cover sheet of the grant agreement. It is effective on the date of HUD's signature.

4. **Applicant Debriefing.** HUD will provide an applicant a copy of the total score received by their application and the score received for each rating factor.

### B. Administrative and National Policy Requirements

1. **Timeliness of Development Activity.** Grantees must proceed within a reasonable timeframe, to complete the goals and objectives within the 18-month grant term. The PHA is encouraged to plan for sustainability of successful aspects of its mentoring demonstration program. Such sustained activities may extend beyond the 18-month grant term (e.g., using other funding/in-kind resources) but the applicant should be reminded that the unused grant funds associated with this grant will be deobligated after the end of the grant term, as noted under section IV.E.

#### 2. Match.

a. Grantees will be required to show evidence that matching resources were actually received and used for their intended purposes. Sources of matching funds may be substituted after grant award, as long as the dollar requirement is met.

b. Grantees must pursue and enforce any commitment (including commitments for services) obtained

from any public or private entity for any contribution or commitment to the project or surrounding area that was part of the match amount.

3. **LOCCS Requirements.** The grantee must record all obligations and expenditures in LOCCS.

4. **Conflict of Interest in Grant Activities.**

a. **Prohibition.** In addition to the conflict of interest requirements in 24 CFR part 85, no person who is an employee, agent, consultant, officer, or elected or appointed official of a grantee and who exercises or has exercised any functions or responsibilities with respect to activities assisted under a HOPE VI grant, or who is in a position to participate in a decision-making process or gain inside information with regard to such activities, may obtain a financial interest or benefit from the activity, or have an interest in any contract, subcontract, or agreement with respect thereto, or the proceeds thereunder, either for himself or herself or for those with whom he or she has family or business ties, during his or her tenure or for one year thereafter.

b. **HUD-Approved Exception.**

(1) **Standard.** HUD may grant an exception to the prohibition in Section a. above on a case-by-case basis when it determines that such an exception will serve to further the purposes of HOPE VI and its effective and efficient administration.

(2) **Procedure.** HUD will consider granting an exception only after the grantee has provided a disclosure of the nature of the conflict, accompanied by:

- (a) An assurance that there has been public disclosure of the conflict;
- (b) A description of how the public disclosure was made; and
- (c) An opinion of the grantee's attorney that the interest for which the exception is sought does not violate state or local laws.

(d) **Consideration of Relevant Factors.** In determining whether to grant a requested exception under Section a. above, HUD will consider the cumulative effect of the following factors, where applicable:

- (i) Whether the exception would provide a significant cost benefit or an essential degree of expertise to the plan and demolition activities that would otherwise not be available;
- (ii) Whether an opportunity was provided for open competitive bidding or negotiation;
- (iii) Whether the person affected is a member of a group or class intended to be the beneficiaries of the plan and the exception will permit such person to receive generally the same interests or

benefits as are being made available or provided to the group or class;

(iv) Whether the affected person has withdrawn from his or her functions or responsibilities, or the decision making process, with respect to the specific activity in question;

(v) Whether the interest or benefit was present before the affected person was in a position as described in Section (iii) above;

(vi) Whether undue hardship will result either to the grantee or the person affected when weighed against the public interest served by avoiding the prohibited conflict; and

(vii) Any other relevant considerations.

5. **Final Audit.** Recipients who receive \$500,000 or more of Federal funding in a single year, in aggregate, are required to obtain a complete final closeout audit of the recipient's financial statements by a certified public accountant (CPA), in accordance with generally accepted government audit standards. A written report of the audit must be forwarded to HUD within 60 days of issuance. Grant recipients must comply with the requirements of 24 CFR part 84 or 24 CFR part 85 as stated in OMB Circulars A-110, A-87, and A-122, as applicable.

6. **Policy Requirements.**

a. **OMB Circulars and Administrative Requirements.** You must comply with the following administrative requirements related to the expenditure of federal funds. OMB circulars can be found at <http://www.whitehouse.gov/omb/circulars/index.html>. Copies of the OMB circulars may be obtained from EOP Publications, Room 2200, New Executive Office Building, Washington, DC 20503; telephone (202) 395-7332 (this is not a toll-free number). The Code of Federal Regulations can be found at <http://www.access.gpo.gov/nara/cfr/index.html>.

(1) Administrative requirements applicable to PHAs are:

(a) 24 CFR part 85 (Administrative Requirements for Grants and Cooperative Agreements to State, Local, and Federally Recognized Indian Tribal Governments), as modified by 24 CFR 941 or successor part, subpart F, relating to the procurement of partners in mixed finance developments.

(b) OMB Circular A-87 (Cost Principles for State, Local, and Indian Tribal Governments);

(c) 24 CFR 85.26 (audit requirements).

(2) Administrative requirements applicable to nonprofit organizations are:

(a) 24 CFR part 84 (Grants and Agreements with Institutions of Higher Education, Hospitals, and other Nonprofit Organizations);

(b) OMB Circular A-122 (Cost Principles for Nonprofit Organizations);  
 (c) 24 CFR 84.26 (audit requirements).  
 (3) Administrative requirements applicable to for profit organizations are:

(a) 24 CFR part 84 (Grants and Agreements with Institutions of Higher Education, Hospitals, and other Nonprofit Organizations);

(b) 48 CFR part 31 (contract cost principles and procedures);

(c) 24 CFR 84.26 (audit requirements).

7. Environmental Exclusion. In accordance with 24 CFR 50.19(b)(3), (9), (12) and (13) of the HUD regulations, activities assisted under this program are categorically excluded from the requirements of the National Environmental Policy Act and are not subject to environmental review under the related laws and authorities.

8. Federalism Impact. Executive Order 13132 (captioned "Federalism") prohibits, to the extent practicable and permitted by law, an agency from promulgating a regulation that has Federalism implications and either imposes substantial direct compliance costs on state and local governments and is not required by statute, or preempts state law, unless the relevant requirements of section 6 of the Executive Order are met. None of the provisions in this NOFA will have Federalism implications and they will not impose substantial direct compliance costs on state and local governments or preempt state law within the meaning of the Executive Order. As a result, the notice is not subject to review under the Order.

9. Accountability in the Provision of HUD Assistance. Section 102 of the Department of Housing and Urban Development Reform Act of 1989 (HUD Reform Act) and the regulations in 24 CFR part 4, subpart A contain a number of provisions that are designed to ensure greater accountability and integrity in the provision of certain types of assistance administered by HUD. On January 14, 1992, (57 FR 1942), HUD published a notice that also provides information on the implementation of section 102. HUD will comply with the documentation, public access, and disclosure requirements of section 102 with regard to the assistance awarded under this NOFA, as follows:

a. *Documentation and public access requirements.* HUD will ensure that documentation and other information regarding each application submitted pursuant to this NOFA are sufficient to indicate the basis upon which assistance was provided or denied. This material, including any letters of support, will be made available for

public inspection for a 5-year period beginning not less than 30 days after the award of the assistance. Material will be made available in accordance with the Freedom of Information Act (5 U.S.C. 552) and HUD's implementing regulations at 24 CFR part 15. In addition, HUD will include the recipients of assistance pursuant to this NOFA in its **Federal Register** notice of all recipients of HUD assistance awarded on a competitive basis.

b. *Disclosures.* HUD will make available for public inspection all applications and related documentation, including letters of support, for 5 years beginning not less than 30 days following the award or allocation. All reports, both applicant disclosures and updates, will be made available in accordance with the Freedom of Information Act (5 U.S.C. 552) and HUD's implementing regulations at 24 CFR part 15.

10. Section 103 HUD Reform Act. HUD will comply with section 103 of the Department of Housing and Urban Development Reform Act of 1989 and HUD's implementing regulations in subpart B of 24 CFR part 4 with regard to the funding competition. These requirements continue to apply until the announcement of the selection of successful applicants. HUD employees involved in the review of applications and in the making of funding decisions are limited by section 103 from providing advance information to any person (other than an authorized employee of HUD) concerning funding decisions, or from otherwise giving any applicant an unfair competitive advantage. Persons who apply for assistance in this competition should confine their inquiries to the subject areas permitted under section 103 and subpart B of 24 CFR part 4.

Applicants or employees who have ethics-related questions should contact the HUD Ethics Law Division at (202) 708-3815. (This is not a toll-free number.) For HUD employees who have specific program questions, such as whether particular subject matter can be discussed with persons outside HUD, the employee should contact the appropriate Field Office Counsel.

11. Prohibition Against Lobbying Activities. Applicants for funding under this NOFA are subject to the provisions of section 319 of the Department of Interior and Related Agencies Appropriation Act for Fiscal Year 1991 (31 U.S.C. 1352) (the Byrd Amendment) and to the provisions of the Lobbying Disclosure Act of 1995 (Pub. L. 104-65; approved December 19, 1995).

The Byrd Amendment, which is implemented in regulations at 24 CFR

part 87, prohibits applicants for federal contracts and grants from using appropriated funds to attempt to influence federal executive or legislative officers or employees in connection with obtaining such assistance, or with its extension, continuation, renewal, amendment, or modification. The Byrd Amendment applies to the funds that are the subject of this NOFA. Therefore, applicants must file a certification stating that they have not made and will not make any prohibited payments, and, if any payments or agreement to make payments of non-appropriated funds for these purposes have been made, a form SF-LLL disclosing such payments must be submitted.

The Lobbying Disclosure Act of 1995 (Pub. L. 104-65; approved December 19, 1995), which repealed section 112 of the HUD Reform Act, requires all persons and entities who lobby covered executive or legislative branch officials to register with the Secretary of the Senate and the Clerk of the House of Representatives and file reports concerning their lobbying activities.

### C. Reporting

1. *Performance Reports.* The grantee shall submit a performance report to HUD one year after receiving the award and at the completion of the program. These progress reports shall include financial reports (SF-269A) and a narrative describing milestones or benchmarks, program progress, problems encountered and methods used to address these problems. Grantees shall use quantifiable data to measure performance against goals and objectives outlined in its Mentoring Demonstration Program grant plan (Logic Model), and in accordance with the Program Requirements for Goals and Outcomes (see Section III of this NOFA). If reports are not received by the submission date, grant funds will not be authorized for expenditure until reports are received. The final narrative and financial report shall be due to HUD 90 days after the full expenditure of funds or when the Mentoring Demonstration Program activities are complete.

2. *Logic Model Reporting.* The reporting shall include submission of a completed logic model indicating results achieved against the proposed output goal(s) for output and proposed outcome(s) which the applicant stated in the applicant's approved application and agreed upon with HUD. The submission of the logic model and required information should be in accord with the Program Schedule time frames as identified in the application and Grant Agreement.

**VII. Agency Contacts**

Technical Assistance. HUD staff is not permitted to assist in preparing your application. If you have a question or need clarification, you may call, fax, or write Ronald Ashford, Director, HOPE VI Community and Supportive Services, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 4130, Washington, DC 20410; telephone (202) 401-8812; fax (202) 401-2370. Persons with hearing or speech impairments may call the Federal Information Relay Service TTY at (800) 877-8339.

**VIII. Other Information**

1. Frequently asked questions, clarifications, and any technical corrections will be posted to the HUD home page at <http://www.hud.gov>. In

addition, all materials related to this NOFA will be posted to the HOPE VI Web site at <http://www.hud.gov>. Any technical corrections will also be published in the **Federal Register**. Applicants are responsible for monitoring these sites and the **Federal Register** during the application preparation period.

2. *Paperwork Reduction Act Statement*. The information collection requirements contained in this document have been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520) and assigned OMB control number 2577-0208. In accordance with the Paperwork Reduction Act, HUD may not conduct or sponsor, and a person is not required to respond to, a collection of information

unless the collection displays a currently valid OMB control number. Public reporting burden for the collection of information is estimated to average 20 hours per annum per respondent for the application and grant administration. This includes the time for collecting, reviewing, and reporting the data for the application, semi-annual reports and final report. The information will be used for grantee selection and monitoring the administration of funds. Response to this request for information is required in order to receive the benefits to be derived.

Dated: April 23, 2005.

### Department of Health and Human Services

---

Centers for Medicare & Medicaid Services

---

42 CFR Part 416

Medicare Program; Update of Ambulatory  
Surgical Center List of Covered  
Procedures; Interim Final Rule

**DEPARTMENT OF HEALTH AND HUMAN SERVICES****Centers for Medicare & Medicaid Services****42 CFR Part 416****[CMS-1478-IFC]****Medicare Program; Update of Ambulatory Surgical Center List of Covered Procedures****AGENCY:** Centers for Medicare & Medicaid Services (CMS), HHS.**ACTION:** Interim final rule with comment period.

**SUMMARY:** This interim final rule with comment period revises the list of procedures that are covered when furnished in an ambulatory surgery center (ASC) in accordance with section 1833(i)(1) of the Social Security Act. We published our proposed deletions and additions in the *Federal Register* on November 26, 2004.

In this interim final rule, we respond to public comments and make final additions to and deletions from the current list of Medicare approved ambulatory surgical center (ASC) procedures.

**DATES:** *Effective date:* These regulations are effective on July 5, 2005.

*Comment date:* To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on July 5, 2005.

**ADDRESSES:** In commenting, please refer to file code CMS-1478-IFC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of three ways (no duplicates, please):

1. *Electronically.* You may submit electronic comments on specific issues in this regulation to <http://www.cms.hhs.gov/regulations/ecomments>. (Attachments should be in Microsoft Word, WordPerfect, or Excel; however, we prefer Microsoft Word.)

2. *By mail.* You may mail written comments (one original and two copies) to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-1478-IFC, PO Box 8017, Baltimore, MD 21244-8017.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments (one original and two copies) before the close of the

comment period to one of the following addresses. If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786-7195 in advance to schedule your arrival with one of our staff members. Room 445-G, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201; or 7500 Security Boulevard, Baltimore, MD 21244-1850.

(Because access to the interior of the HHH Building is not readily available to persons without Federal Government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

**FOR FURTHER INFORMATION CONTACT:** Dana Burley, (410) 786-0378.

**SUPPLEMENTARY INFORMATION:**

*Submitting Comments:* We will consider comments from the public regarding the addition of procedures to the ASC list, deletion of procedures from the ASC list, and the ASC payment group assignment for newly-added procedures that are identified with an asterisk in Addendum A to signify that the procedure was not proposed for addition or deletion in the November 26, 2004 rule. You can assist us by referencing the file code CMS-1478-IFC and the specific "issue identifier" that precedes the section on which you choose to comment.

*Inspection of Public Comments:* All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all electronic comments received before the close of the comment period on its public website as soon as possible after they have been received. Hard copy comments received timely will be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an

appointment to view public comments, phone 1-800-743-3951.

**I. Background**

[If you choose to comment on issues in this section, please include the caption "Background" at the beginning of your comments.]

**A. Legislative History**

Section 1832(a)(2)(F)(i) of the Social Security Act (the Act) provides that benefits under the Medicare Supplementary Medical Insurance program (Part B) include payment for facility services furnished in connection with surgical procedures we specify and which are performed in an ambulatory surgical center (ASC). To participate in the Medicare program as an ASC, a facility must meet the standards specified in section 1832(a)(2)(F)(i) of the Act; in 42 CFR 416.25, which sets forth general conditions and requirements for ASCs; and, in 42 CFR 416, subpart C, which provides specific conditions for coverage for ASCs.

There are two primary elements in the total cost of performing a surgical procedure—the cost of the physician's professional services in performing the procedure and the cost of items and services furnished by the facility where the procedure is performed (for example, surgical supplies and equipment and nursing services). This interim final rule with comment period addresses the second element, the coverage and payment of facility fees for ASC services under the current payment system. As we note below, section 626(b) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108-173, enacted on December 8, 2003) requires that we develop a revised payment system for ASC facility services that would be implemented no earlier than January 1, 2006. This interim final rule addresses additions to and deletions from the list of Medicare approved ASC procedures before the implementation of that revised payment system.

Under the current ASC facility services payment system, the ASC payment rate is a standard overhead amount established on the basis of our estimate of a fair fee that takes into account the costs incurred by ASCs generally in providing facility services in connection with performing a specific procedure. The report of the Conference Committee accompanying section 934 of the Omnibus Budget Reconciliation Act of 1980 (OBRA) (Pub. L. 96-499), which enacted the ASC benefit in December 1980, states that this overhead factor is expected to be calculated on a prospective basis

using sample survey and similar techniques to establish reasonable estimated overhead allowances, which take account of volume (within reasonable limits), for each of the listed procedures. (See H.R. Rep. No. 96-1479, at 134 (1980)).

To establish those reasonable estimated allowances for services furnished before implementation of the revised payment system mandated by the MMA, section 626(b)(1) of the MMA amended section 1833(i)(2)(A)(i) of the Act to require us to take into account the audited costs incurred by ASCs to perform a procedure, in accordance with a survey. Payment for ASC facility services is subject to the usual Medicare Part B deductible and coinsurance requirements, and the amounts paid by Medicare must be 80 percent of the standard fee.

Section 1833(i)(1) of the Act requires us to specify, in consultation with appropriate medical organizations, surgical procedures that can be safely performed in an ASC and to review and update the list of ASC procedures at least every two years.

Section 141(b) of the Social Security Act Amendments of 1994 (SSAA 1994) requires us to establish a process for reviewing the appropriateness of the payment amount provided under section 1833(i)(2)(A)(iii) of the Act for intraocular lenses (IOLs) for a class of new-technology IOLs. That process was the subject of a separate final rule entitled "Adjustment in Payment Amounts for New Technology Intraocular Lenses Furnished by Ambulatory Surgical Centers," published on June 16, 1999 in the *Federal Register* (64 FR 32198).

#### B. Summary of Updates of the ASC List

Section 934 of the Omnibus Budget Reconciliation Act of 1980 amended sections 1832(a)(2) and 1833 of the Act to authorize the Secretary to specify surgical procedures that, although appropriately performed in an inpatient hospital setting, can also be performed safely on an ambulatory basis in an ASC, a hospital outpatient department, or a rural primary care hospital. The report accompanying the legislation explained that the Congress intended procedures currently performed on an ambulatory basis in a physician's office that do not generally require the more elaborate facilities of an ASC not be included in the list of covered procedures (H.R. Rep. No. 96-1167, at 390, reprinted in 1980 U.S.C.C.A.N. 5526, 5753). In a final rule published August 5, 1982 in the *Federal Register* (47 FR 34082), we established regulations that included criteria for

specifying which surgical procedures were to be included for purposes of implementing the ASC facility benefit.

Subsequently, in accordance with § 416.65(c), we published an update of the ASC list in the *Federal Register* on March 28, 2003 (68 FR 15268).

During years when we do not update the list in the *Federal Register*, we revise the list to be consistent with annual calendar year changes in codes established by the American Medical Association (AMA) Current Procedural Terminology (CPT), removing from the ASC list codes that are deleted by CPT and adding new codes that replace codes already on the ASC list. These annual CPT updates are implemented through program instructions to carriers who process ASC claims.

#### C. Regulatory Requirements

##### 1. Sections 416.65(a), (b), and (c)

Section 416.65(a) specifies general standards for procedures on the ASC list. ASC procedures are those surgical and medical procedures that are—

- Commonly performed on an inpatient basis but may be safely performed in an ASC;
- Not of a type that are commonly performed or that may be safely performed in physicians' offices;
- Limited to procedures requiring a dedicated operating room or suite and generally requiring a post-operative recovery room or short term (not overnight) convalescent room; and
- Not otherwise excluded from Medicare coverage.

Specific standards in § 416.65(b) limit ASC procedures to those that do not generally exceed 90 minutes operating time and a total of 4 hours recovery or convalescent time. If anesthesia is required, the anesthesia must be local or regional anesthesia, or general anesthesia of not more than 90 minutes duration.

Section 416.65(c) excludes from the ASC list procedures that generally result in extensive blood loss, that require major or prolonged invasion of body cavities, that directly involve major blood vessels, or that are generally emergency or life-threatening in nature.

##### 2. Criteria for Additions To or Deletions From the ASC List

In April 1987, we adopted quantitative criteria as tools for identifying procedures that were commonly performed either in a hospital inpatient setting or in a physician's office. Collectively, commenters responding to a notice published on February 16, 1984 in the *Federal Register* (49 FR 6023) had

recommended that virtually every surgical CPT code be included on the ASC list. Consulting with other specialist physicians and medical organizations as appropriate, our medical staff reviewed the recommended additions to the list to determine which code or series of codes were appropriately performed on an ambulatory basis within the framework of the regulatory criteria in § 416.65. However, when we arrayed the proposed procedures by the site where they were most frequently performed according to our claims payment data files (1984 Part B Medicare Data (BMAD)), we found that many codes were not commonly performed on an inpatient basis or were performed in a physician's office the majority of the time, and, thus, would not meet the standards in our regulations. Therefore, we decided that if a procedure was performed on an inpatient basis 20 percent of the time or less, or in a physician's office 50 percent of the time or more, it would be excluded from the ASC list. (See *Federal Register*, April 21, 1987 (52 FR 13176).)

At the time, we believed that these utilization thresholds best reflected the legislative objectives of moving procedures from the more expensive hospital inpatient setting to the less expensive ASC setting without encouraging the migration of procedures from the less expensive physician's office setting to the ASC. We applied these quantitative standards not only to codes proposed for addition to the ASC list, but also to the codes that were currently on the list, to delete codes that did not meet the thresholds.

The trend towards performing surgery on an ambulatory or outpatient basis grew steadily, and by 1995, we discovered that a number of procedures that were on the ASC list at the time fell short of the 20 percent and 50 percent thresholds even though the procedures were obviously appropriate in the ASC setting. The most notable of these was cataract extraction with intraocular lens insertion, very few cases of which were being performed on an inpatient basis by the early 1990s. The thresholds would also have excluded from the ASC list certain newer procedures, such as CPT code 66825, Repositioning of intraocular lens prosthesis, requiring an incision (separate procedure), that were rarely performed on a hospital inpatient basis but that were appropriate for the ASC setting. Strict adherence to the same 20 percent and 50 percent thresholds both to add and remove procedures did not provide latitude for minor fluctuations in utilization across settings or errors that could occur in the

site-of-service data drawn from the National Claims History File that we were then using, replacing BMAD data, for analysis.

In an effort to avoid these anomalies but still retain a relatively objective standard for determining which procedures should comprise the ASC list, we adopted in the *Federal Register* notice published on January 26, 1995 (60 FR 5185) a modified standard for deleting procedures already on the list. We deleted from the list only those procedures whose combined inpatient, hospital outpatient, and ASC site of service volume was less than 46 percent of the procedure's total volume and that were either performed 50 percent of the time or more in the physician's office or 10 percent of the time or less in an inpatient hospital setting. We retained the 20 percent and 50 percent standard to determine which procedures would be appropriate additions to the ASC list.

*D. Office of the Inspector General Recommendations, January 2003*

In January 2003, the Office of the Inspector General (OIG) issued the results of a study entitled "Payments for Procedures in Outpatient Departments and Ambulatory Surgical Centers" (OEI-05-00-00340). The objective of that study was to determine the extent to which Medicare payments for the same procedures continue to vary between hospital outpatient departments and ambulatory surgical centers and to assess the effect of this variance on the Medicare program.

The OIG concluded, as a result of its study, that there should be a greater parity of payments for services performed in an outpatient setting and those performed in ASCs. The OIG based this conclusion both on its belief that the Congress intended Medicare to be a prudent purchaser of services and to pay only for those costs that are necessary for the efficient delivery of needed health services and on its finding that disparities in Medicare payment amounts for the same services furnished in ASCs and hospital outpatient departments resulted in an estimated \$1.1 billion in additional Medicare program payments. The OIG also found that our failure to remove certain procedure codes from the list of ASC-approved procedures resulted in an estimated \$8 to \$14 million in additional Medicare program payments.

The OIG recommended that we—

- Seek authority to set rates that are consistent across sites and reflect only the costs necessary for the efficient delivery of health services;

- Conduct surveys and use timely ASC survey data to reevaluate ASC payment rates; and
- Remove the procedure codes that meet our criteria for removal from the ASC list of covered procedures. (In its final report, the OIG included a list of 72 CPT codes that it found, based on its analysis of calendar year 1999 data, met our criteria for deletion from the ASC list.)

In our response to the OIG's recommendations, we indicated that we would consider the OIG's first recommendation as we develop future legislative proposals. In response to the second recommendation, we indicated our concerns about using survey data as the basis for setting ASC payment rates and that we were considering how to implement the survey requirement. (Enactment of section 626(b) of the MMA repealing the survey requirement and mandating implementation of a revised payment system in accordance with certain requirements set forth in the MMA supersedes our earlier response to this OIG recommendation.)

*E. Current ASC Payment Rates*

Procedures on the ASC list are assigned to one of nine payment groups based on our estimate of the costs incurred by the facility to perform a procedure. Payment groups 1 through 8 were first implemented in September 1990, based on a survey of ASC costs conducted in 1986 (55 FR 4539). Payment group 9 was added on December 31, 1991 (56 FR 67666) to establish a payment rate for extracorporeal shockwave lithotripsy (ESWL). There is no clinical consistency among the procedures in a payment group. Rather, assignment to a payment group is based solely on an estimate of facility costs associated with performing the procedures.

In a proposed rule published on June 12, 1998 in the *Federal Register* (63 FR 32290), we proposed a new ratesetting methodology based on ambulatory payment classification (APC) groups that were proposed for the new hospital outpatient prospective payment system (OPPS). We used data from a survey of ASC costs collected in 1994 as the basis for the APC payment rates in the June 12, 1998 proposed rule. The Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106-113) required us to phase in full implementation of the proposed ASC rates over a 3-year period. The Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106-554) prohibited implementation of a revised prospective payment system for ASCs before January 1, 2002 and required

that, by January 1, 2003, ASC rates be rebased using data from a 1999 or later Medicare survey of ASC costs.

We discuss in the final rule published on March 28, 2003 in the *Federal Register* (68 FR 15270) the reasons why we did not implement the requirements set forth in BBRA and BIPA with regard to rebasing ASC payment rates. The March 28, 2003 final rule with comment period implemented additions to and deletions from the ASC list that had been proposed in the June 12, 1998 proposed rule, but did not implement any of the other proposed changes, including the proposed ratesetting methodology. We indicated that we were studying approaches to ratesetting, some of which may require legislative changes.

Section 626(b) of MMA repeals the requirement that we conduct a survey of ASC costs as the basis for rebasing ASC rates and requires us to implement a revised payment system between January 1, 2006 and January 1, 2008, that takes into account recommendations in the report to the Congress that was to be submitted by January 1, 2005 by the Comptroller General of the United States. Since section 626(b)(1) amends section 1833(i)(2) of Act, we are required to base payment for ASC services on survey data before implementation of the revised payment system. Therefore, the additions to the ASC list in this interim final rule are assigned to one of the existing nine ASC payment groups and rates that are derived from data collected in the 1986 survey of ASC costs, updated for inflation. The payment group for each addition to the ASC list in this interim final rule is based on the payment group to which procedures currently on the list, which our medical advisors judged to be similar in terms of time and resource inputs, are assigned. As of April 1, 2004, in accordance with the requirements in section 626(a) of MMA and instructions that we issued to our contractors who process ASC claims in Transmittal 51, Change Request 3082, on February 6, 2004, the ASC payment rates are the following:

|             |                                  |
|-------------|----------------------------------|
| Group 1 ... | \$333                            |
| Group 2 ... | \$446                            |
| Group 3 ... | \$510                            |
| Group 4 ... | \$630                            |
| Group 5 ... | \$717                            |
| Group 6 ... | \$826 (\$676 plus \$150 for IOL) |
| Group 7 ... | \$995                            |
| Group 8 ... | \$973 (\$823 plus \$150 for IOL) |
| Group 9 ... | \$1339                           |

#### F. Summary of the Provisions of the Proposed Rule

In the November 26, 2004 proposed rule, we proposed to delete 54 procedures from the ASC list based on the OIG recommendations. An additional 46 deletions were proposed based on data that indicated that either the physician office or the inpatient setting was the predominant site of service or based on recommendations from specialty organizations that there were beneficiary safety concerns associated with furnishing the procedure(s) in the ASC.

We also proposed to add to the list 25 procedures that were recommended by commenters and other interested parties.

#### II. Analysis of and Responses to Public Comments Received on the November 26, 2004 Proposed Rule and Provisions of This Interim Final Rule With Comment Period

[If you choose to comment on issues in this section, please include the caption "ANALYSIS OF AND RESPONSES TO PUBLIC COMMENTS RECEIVED ON THE NOVEMBER 26, 2004 PROPOSED RULE AND PROVISIONS OF THIS INTERIM FINAL RULE WITH COMMENT PERIOD" at the beginning of your comments.]

##### A. General Comments

Summaries of the public comments and our responses to those comments are set forth in the various sections of this preamble under the appropriate headings.

We received a number of general public comments on our proposed changes to the ASC list.

*Comment:* The comments we received expressed opposition to our proposed deletions. Although we received many comments requesting that we not delete specific procedures, we also received many from individual physicians, ASCs, professional and trade associations, and medical societies and organizations expressing their belief that our proposed deletion of 100 procedures from the ASC list was misguided. The overwhelming response from the public was that there are many beneficiaries for whom the ASC setting is the safest and most appropriate setting for a number of surgical procedures. The commenters were especially concerned about our proposals to delete procedures based on either the OIG recommendations or high physician office utilization.

They stated that there were several detrimental effects that would likely result from deletion of the codes as proposed. They believe that deleting the

procedures will result in beneficiaries' decreased access to the most appropriate care, increased costs for the Medicare program and for beneficiaries because the procedures will have to be furnished in the more costly hospital outpatient department if the ASC is not an option, and creation of incentives to perform procedures in inappropriate settings.

*Response:* As will be discussed in more detail in other sections of this interim final rule, we recognize the validity of the arguments and clinical evidence that was provided to us by commenters. As a result, we will delete fewer procedures from the ASC list than we proposed.

*Comment:* We also received a number of comments that expressed disappointment that we have not adopted new criteria for determining which procedures are to be included on the ASC list. The commenters stated that the current criteria are obsolete and are in need of updating to account for new clinical practices and technological advances. Furthermore, many commenters objected to having an ASC list of procedures. They believe that we should adopt an exclusionary list instead.

*Response:* We are embarking on development of a new payment system as mandated by section 626 of the MMA. As part of that process, we will review the criteria for determining which procedures are eligible for inclusion on the ASC list.

*Comment:* We received several comments that expressed doubt about our proposals for ASC list additions and deletions based on reimbursement. The commenters believe that we are overstepping our authority in considering payment levels before we add codes to the ASC list. Specifically, they use as an example our decision to exclude from the ASC list procedures that would be paid significantly more by Medicare under the ASC payment system than they are currently being paid under the hospital outpatient prospective system.

*Response:* As discussed in our March 28, 2003 final rule (68 FR 15270), we do not add procedures to the lowest ASC payment group that would be paid significantly more in an ASC than the same procedure is paid in the hospital outpatient department. We believe that our process is consistent with the law and its intent. The legislative history of section 934 of the Omnibus Reconciliation Act of 1980 (Pub. L. 96-499), which created the ASC benefit, indicates congressional intent to encourage performance of surgery in lower cost settings. Thus, we believe it

is antithetical to the statutory mandate to create incentives which could shift those procedures to an ASC setting for increased Medicare payment. Similarly, we try not to add procedures to the list that would be significantly underpaid in the highest ASC payment group.

In the June 1998 proposed rule, we proposed the addition of CPT code 50590, Extracorporeal shock wave lithotripsy to what would have been the highest payment group. The American Lithotripsy Society disagreed with the addition payment rate and, through litigation, avoided that addition. We now are embarking on development of a new payment system for ASCs, and so are not adopting any revisions to our rate-setting method before that development. At this time, we are updating the list of procedures on the ASC list, and it is beyond the scope of this rule to create payment groups that would provide payments closer to the costs of procedures that are either much more costly or much less costly than the existing highest and lowest ASC payment group.

In the November 26, 2004 ASC proposed rule, we proposed to delete 100 procedures from the ASC list, most of which were being performed in the office setting in more than half the number of cases. We also proposed to add 25 new procedures to the ASC list. Comments on the proposed rule indicate that the ASC cases for codes proposed for deletion from the ASC list will migrate to the outpatient hospital setting rather than to the physician office setting because the procedures performed in ASCs involve patients who need anesthesia, or who have significant comorbidities or anatomic abnormalities, or who require a sterile operating room.

Based in part on the convincing arguments and clinical evidence submitted by commenters, we are deleting only five procedures from the ASC list out of the original 100 procedures that we proposed to delete. We have noted minimal shifts among ambulatory sites of service over the past decade even though most of the codes that we proposed to delete have been on the ASC list throughout that period. In other words, the availability of these procedures in ASCs has not induced substantial shifts in the site of service. We are also adding 67 procedures to the ASC list, based on commenters' recommendations.

Over the past several years, the number of small, physician-owned specialty hospitals specializing in surgical and orthopedic services has grown rapidly. We have investigated this set of hospitals as part of our

research in support of a report to the Congress mandated by section 507(c) of the MMA. Among other findings, we discovered that the surgical and orthopedic hospitals that billed the program in 2003 had an average daily census of 4.5. The predominant services in these hospitals appeared to be outpatient services rather than inpatient services. We speculate that physicians may be participating in the ownership of small hospitals rather than ASCs partly in order to take advantage of payment differences: Under Medicare's current payment systems, outpatient services in many instances receive higher payments under the outpatient prospective payment system than under the ASC fee schedule.

Section 626 of the MMA requires and sets parameters for a revision to the ASC fee schedule. The existing fee schedule is comparatively crude, with only nine payment rates used for approximately 2500 different surgical procedures. Consequently, each payment cell spans a broad set of clinically heterogeneous services. In addition, the basic structure of rates has not been updated since 1990. This combination of factors has resulted, among other things, in incentives to perform procedures in a hospital outpatient setting rather than an ASC, or the converse, when payment rates for particular procedures diverge significantly from the resources consumed in connection with the procedures. Reforming the ASC fee schedule can materially reduce these divergences and mitigate inappropriate incentives from this quarter that favor proliferation of specialty hospitals.

The MMA requires that the new payment system be implemented after December 2005 and not later than 2008. GAO has prepared and is about to

conduct a survey to determine the relative costs associated with procedures performed in ASCs as part of a report to Congress required under the MMA. We are to take into account the recommendations contained in the GAO report. Given the need to collect and analyze data and to complete full notice-and-comment rulemaking, we plan to implement the ASC payment reform January 1, 2008. Flowing from the MMA requirement that the GAO compare the relative costs of procedures furnished in ASCs to the relative costs of procedures furnished in hospital outpatient departments, we are exploring relating the ASC fee schedule to the outpatient prospective payment system, using the same or very similar ambulatory payment classifications. Linking the two systems could provide a mechanism for automatic updates of weights in the ASC system and reduce divergences between the two payments to an average percentage value.

*B. Proposed Deletions*

In accordance with the statutory requirement that we review and update the ASC list at least every 2 years, we, in consultation with our medical advisors, reviewed the current ASC list against the criteria. In this review, we also considered deletions recommended by medical specialty societies and other commenters. Further, we reviewed the codes that the OIG recommended for deletion from the ASC list. In most cases, our medical advisors agreed that the procedures recommended by the OIG for deletion no longer met the criteria for ASC procedures, and we proposed to delete most of them from the ASC list. We removed the following seven procedures recommended for deletion by the OIG from the ASC list:

CPT codes 21920, 42104, 51725, 56405, 56605, 62367, and 62368.

However, there were 11 procedures the OIG recommended for deletion that our medical advisors determined, for health and safety reasons, should be retained on the list:

TABLE 1.—PROCEDURES OIG RECOMMENDED FOR DELETION NOT PROPOSED FOR DELETION

| CPT code | Short descriptor             |
|----------|------------------------------|
| 30802    | Cauterization, inner nose.   |
| 31525    | Diagnostic laryngoscopy.     |
| 31570    | Laryngoscopy with injection. |
| 45305    | Proctosigmoidoscopy w/bx.    |
| 46050    | Incision of anal abscess.    |
| 51710    | Change of bladder tube.      |
| 51726    | Complex cystometrogram.      |
| 51772    | Urethra pressure profile.    |
| 52285    | Cystoscopy and treatment.    |
| 67031    | Laser surgery, eye strands.  |
| 67921    | Repair eyelid defect.        |

We received no comments about this proposal, and we are making final our proposal to retain these procedures on the ASC list.

Based on our review of other procedures on the ASC list, we proposed to delete from the ASC list those listed in Table 2, for the reasons specified.

Rationale for deletion is indicated as follows:

1. Procedure is performed in physician's office more than 50 percent of the time.
2. Medical specialty organizations recommended deletion because of safety concerns.
3. Procedure is performed predominantly in the inpatient setting.
4. OIG recommended for deletion and CMS medical advisors concur.

TABLE 2.—PROPOSED DELETIONS FROM THE ASC LIST

| CPT code | Short descriptor          | Rationale |
|----------|---------------------------|-----------|
| 11404    | Removal of skin lesion    | 4         |

| 69725    | Release facial nerve       | 1         |
| 69740    | Repair facial nerve        | 2         |
| 69745    | Repair facial nerve        | 2         |
| 69840    | Revise inner ear window    | 1         |

As displayed in Table 2, among the codes we proposed to delete from the ASC list were CPT codes 52000, Cystourethroscopy, 52281, Cystourethroscopy, with calibration and/or dilation of urethral stricture or stenosis, with or without meatotomy, with or without injection procedure for cystography, and 55700, Biopsy, prostate; needle or punch, single or multiple, any approach. We proposed deletion of these codes from the list in response to the recommendations of the OIG. The study recommended that Medicare be a prudent purchaser of services and only pay for those that are necessary for the efficient delivery of needed health services. The OIG found that discrepancies in the payment amounts between services furnished in the ASC and in the hospital outpatient setting resulted in additional and unnecessary program payments. The OIG also asserted that retention of these codes was inconsistent with our criteria for procedures that are appropriately performed in an ASC. Based on their study findings, the OIG recommended that procedures be removed from the ASC list with the expectation that those deleted services would then be furnished in the physician office setting at a lower cost to Medicare.

These procedures have been on the list of Medicare-approved ASC procedures since its inception. However, in our review of the procedures on the ASC list for the

biennial update, we found that the codes did not satisfy our criteria for inclusion on the list and, in addition, the OIG's report recommendation made it clear that we should propose removal of the procedures.

*Comment:* We received several hundred comments from the public opposing the deletion of these three codes. The commenters provided a number of arguments for retaining the codes on the ASC list. They asserted that there are circumstances when clinically compelling reasons require that these procedures be performed in a facility setting rather than in the physician office. Examples of those circumstances include the need for general anesthesia and the need for access to more highly qualified staff and a full spectrum of emergency equipment for patients with various comorbidities. Many Medicare beneficiaries have diabetes, prior myocardial infarctions, renal insufficiency or urological malignancies, any of which may indicate performance of the procedure in a facility setting.

The commenters also questioned our estimated cost savings as a result of the deletions. They stated that the procedures would not shift from the ASC to the physician office as assumed by the OIG, but would instead shift to the hospital outpatient department in most cases. Further, they asserted that deletion of the codes from the ASC list will impose a barrier to access for those

beneficiaries with limited access to a hospital outpatient facility. They asserted that the deletion of these codes would actually result in additional costs for the Medicare program.

*Response:* We have considered the comments and conclude that CPT codes 52000, 52281, and 55700 should be retained on the ASC list. We find the clinical arguments contained in the comments to be compelling, and we believe that protecting patient safety and access to appropriate care is our primary responsibility.

We examined Medicare site of service data for the past 10 years and found that the pattern for the site of service for the procedures generally was stable. Consistently, the physician office is the predominant service setting even though the procedures were included on the ASC list. As exhibited in Table 3 below, in 1992, 70 percent of cystourethroscopies (52,000) were furnished in the physician office, 17.5 percent in the outpatient department and 3.3 percent in the ASC. The change in distribution across sites of service for this procedure from 1992 through 2003 is minimal. Generally, the data show a trend of decreasing volume in the hospital outpatient department accompanied by an increased volume in the physician office. With the exception of CY 2000, volume in the ASC setting has remained significantly less than 10 percent of the total cases.

TABLE 3.—SITE OF SERVICE FOR CYSTOURETHROSCOPIES (CPT 52000), 1992–2003

| Year | Office  | Percent (total) | OPD     | Percent (total) | ASC    | Percent (total) | Total   |
|------|---------|-----------------|---------|-----------------|--------|-----------------|---------|
| 1992 | 563,548 | 70.0            | 140,805 | 17.5            | 26,369 | 3.3             | 804,683 |
| 1995 | 581,672 | 72.1            | 133,024 | 16.5            | 41,990 | 5.2             | 807,302 |
| 2000 | 618,984 | 74.1            | 102,109 | 12.2            | 79,116 | 9.5             | 835,669 |
| 2003 | 725,000 | 80.1            | 92,981  | 10.3            | 55,543 | 6.1             | 904,860 |

We found similar patterns in the Medicare site of service data for the other two high volume urology procedures, CPT codes 52281 and 55700, that we proposed to delete. We believe that the relative stability of the

utilization and site of service is evidence that the inclusion of the codes on the ASC list has not influenced the physician's selection of setting for performance of the procedures and provides strong evidence that there is a

small but consistent population of beneficiaries for whom the ASC setting is the most appropriate for these procedures.

In light of the evidence presented to us in the comments, we agree with

commenters that these procedures should be retained on the ASC list in spite of the high percentage of cases performed in the physician office setting. Moreover, in light of our plans to develop and implement a new payment system for ASCs by 2008 and our expectation that the criteria for inclusion on the ASC list will be reviewed as part of developing the new payment system, we believe that deleting these codes at this time could cause undue confusion and hardship for many beneficiaries.

If we accept the commenters' assertions that many of the procedures currently furnished in the ASC must be performed in a facility setting, as we have, we must reconsider the cost savings estimates that we assumed when we proposed deletion of these codes. If a significant portion of the procedures will migrate to the hospital outpatient department rather than to the physician office, then we may have diminished cost saving estimates compared to those included in our proposed rule, with resultant increased payment by the Medicare program rather than savings. See section IV of this interim final rule for a full discussion of cost savings estimates.

*Comment:* In addition to the comments requesting that we not delete the three procedures, CPT codes 52000, 52281, and 55700, we received about 100 comments requesting that we not delete CPT codes 11404 through 15740, as listed in Table 2. These commenters made many of the same points discussed above regarding deletion of this range of procedure codes. The same concerns regarding patient safety and access to appropriate care were consistently raised.

The commenters presented equally compelling clinical arguments opposing deletion of these procedures. They assert that it is often difficult to schedule these non-emergent procedures in outpatient departments but that the need for sterile conditions for the procedures requires a facility setting rather than the physician office. Many patients require heavy sedation or general anesthesia because of the delicate nature of many of the procedures, and need a facility setting due to Medicare patient comorbidities. Further, commenters cited a number of

CPT coding definitions that make it impossible to identify important information about specific procedures that are performed. That is, one code describes a number of different procedures, some of which are significantly more complex than others reported using the same CPT code. For example, CPT code 31233, Nasal/sinus endoscopy, diagnostic with maxillary sinusoscopy (via inferior meatus or canine fossa puncture), describes a procedure that may be accomplished by either of two distinct approaches, one of which may require no anesthesia while the other (requiring insertion of a trochar through the roof of the patient's mouth) does require sedation in a facility setting.

Further, they assert that the deletion of the codes as proposed will not result in cost savings for the Medicare program but will result in diminished beneficiary access to appropriate care and to cost increases because the cases currently performed in the ASC will shift to hospital outpatient departments.

*Response:* We find the commenters' arguments convincing. We examined the site of service for these procedures over the past 5 years, and, as was the case for the urology codes, we found that the patterns for provision of these services were generally unchanged during that time. In light of the clinical evidence presented in the comments and our finding that the percent of procedures that are being performed in the ASC today is no greater than it was in 1999, we conclude that these procedures should be retained on the ASC list, and we will not make final our proposal to delete them.

Further, we believe that the estimated cost savings included in the proposed rule may have been over-stated. Therefore, we performed cost analyses using predicted site of service distribution changes that we believe are more realistic than those we used in the proposed rule. A full discussion of the cost estimates is presented in section V of this rule.

*Comment:* We received comments opposing the deletion of almost every procedure we proposed to delete in the proposed rule. The reasons provided were generally the same as those presented by the commenters regarding the urology and skin codes discussed

above: that there is a portion of the Medicare patient population who, due to clinical characteristics or due to limitations on access, is best served by having access to these procedures in an ASC.

*Response:* We have examined the comments, the site of service data, and the list of proposed deletions, and we have decided that the evidence supplied by the commenters regarding the three urology procedures and the skin procedures, combined with the impending implementation of a new payment system in 2008 argue against making major changes in the ASC list at this time. Maintaining a degree of stability in the ASC list until the new payment system is implemented will minimize the risk of limiting beneficiary access to needed services as well as unintended incentives that could result in significant shifts of procedures to the generally more costly hospital outpatient setting.

Therefore, we will delete only the five codes about which we received no comments. CPT codes 21440, 23600, and 23620 are all procedures that are performed in the office setting more than half of the time. CPT code 69725 is performed as an inpatient procedure 100 percent of the time. The resources required to perform CPT code 53850 significantly exceed the highest ASC payment group. Therefore, we are making final our proposal to delete the five codes listed in Table 4.

TABLE 4.—FINAL LIST OF CODES DELETED FROM THE ASC LIST

| CPT code    | Descriptor                    |
|-------------|-------------------------------|
| 21440 ..... | Treat dental ridge fracture.  |
| 23600 ..... | Treat humerus fracture.       |
| 23620 ..... | Treat humerus fracture.       |
| 53850 ..... | Prostatic microwave thermotx. |
| 69725 ..... | Release facial nerve.         |

#### C. Proposed Additions

##### 1. Additions Recommended by Commenters and Other Interested Parties

In response to public comments and our medical staff review, we proposed to add the procedures displayed in Table 5 to the list of Medicare-approved ASC procedures.

TABLE 5.—PROPOSED ADDITIONS RECOMMENDED BY COMMENTERS AND OTHER INTERESTED PARTIES

| HCPCS code  | Short descriptor                   | Proposed payment group |
|-------------|------------------------------------|------------------------|
| 15001 ..... | Skin graft add-on .....            | 1                      |
| 15836 ..... | Excise excessive skin tissue ..... | 3                      |

TABLE 5.—PROPOSED ADDITIONS RECOMMENDED BY COMMENTERS AND OTHER INTERESTED PARTIES—Continued

| HCPCS code | Short descriptor             | Proposed payment group |
|------------|------------------------------|------------------------|
| 15839      | Excise excessive skin tissue | 3                      |
| 21120      | Reconstruction of chin       | 7                      |
| 21125      | Augmentation, lower jaw bone | 7                      |
| 29873      | Knee arthroscopy/surgery     | 3                      |
| 30220      | Insert nasal septal button   | 3                      |
| 31500      | Insert emergency airway      | 1                      |
| 31603      | Incision of windpipe         | 1                      |
| 35475      | Repair arterial blockage     | 9                      |
| 35476      | Repair venous blockage       | 9                      |
| 36834      | Repair AV aneurysm           | 3                      |
| 37205      | Transcatheter stent          | 9                      |
| 37206      | Transcatheter stent add-on   | 9                      |
| 37500      | Endoscopy ligate perf veins  | 3                      |
| 42665      | Ligation of salivary duct    | 7                      |
| 44397      | Colonoscopy w/stent          | 1                      |
| 45327      | Proctosigmoidoscopy w/stent  | 1                      |
| 45341      | Sigmoidoscopy w/ultrasound   | 1                      |
| 45342      | Sigmoidoscopy w/us guide bx  | 1                      |
| 45345      | Sigmoidoscopy w/stent        | 1                      |
| 45387      | Colonoscopy w/stent          | 1                      |
| 57288      | Repair bladder defect        | 5                      |
| 62264      | Epidural lysis on single day | 1                      |
| 67343      | Release eye tissue           | 7                      |

*Comment:* We received many comments in support of the proposed additions to the ASC list. However, we received one comment that opposed the additions of CPT codes 37205, 37206, 35475, and 35476. The commenter stated that these procedures were not appropriate for the ASC setting and would allow for potential substandard care.

*Response:* Our medical staff's reconsideration of these procedures led to our decision not to add them to the ASC list. The procedures involve major

vessels and therefore do not meet our criteria for inclusion on the ASC list.

CPT code 31500, Insert emergency airway, also will be removed from the list of additions to be made final. We will not add this procedure to the ASC list because it would be significantly overpaid even in the lowest ASC payment group. As discussed in our March 2003, final rule (68 FR 15270), our policy is not to add procedures for which significant overpayments would result.

However, we will make final our proposal to add the other codes in Table 5. The final list of all procedures to be

added to the ASC list is in section II, Table 7.

*Comment:* We also received a number of comments requesting higher payment levels than those proposed for some of the codes. Table 6 provides a summary display of the procedure codes and the proposed payment group assignments and the commenter-requested payment group assignments for the codes for which a specific group was identified. For several procedures, there was variation among commenters regarding payment group requests and so more than one payment group is identified.

TABLE 6.—PAYMENT GROUP ASSIGNMENTS PROPOSED AND AS REQUESTED BY COMMENTERS

| HCPCS code | Short descriptor             | NPRM payment group | Requested payment group |
|------------|------------------------------|--------------------|-------------------------|
| 15836      | Excise excessive skin tissue | 3                  | 5                       |
| 15839      | Excise excessive skin tissue | 3                  | 5                       |
| 29873      | Knee arthroscopy/surgery     | 3                  | 4                       |
| 37500      | Endoscopy ligate perf veins  | 3                  | N/A                     |
| 44397      | Colonoscopy w/stent          | 1                  | 3                       |
| 45327      | Proctosigmoidoscopy w/stent  | 1                  | 3                       |
| 45341      | Sigmoidoscopy w/ultrasound   | 1                  | 2, 3 & 9                |
| 45342      | Sigmoidoscopy w/us guide bx  | 1                  | 2, 3 & 9                |
| 45345      | Sigmoidoscopy w/stent        | 1                  | 2, 3 & 9                |
| 45387      | Colonoscopy w/stent          | 1                  | 3                       |
| 57288      | Repair bladder defect        | 1                  | 9                       |
| 62264      | Epidural lysis on single day | 1                  | N/A                     |

*Response:* We considered each of these requests and believe that the payment groups that we proposed are appropriate. In making the proposed

assignments, we considered the assignments of codes already on the ASC list that the proposed additions most closely resembled in terms of

clinical work and resource inputs such as equipment, supplies, and time required in the operating suite. To the extent possible, we assigned the

additions to the list to the same payment groups to which comparable procedures are currently assigned. We will make no changes at this time and will make final the payment groups as proposed.

#### D. Procedures Requested for Addition in Comments

We also received a large number of comments requesting that we add procedures to the ASC list in addition to those we proposed to add in the November 26, 2004 proposed rule. Following is a discussion of each of those requests.

*Comment:* We received a comment requesting that we add CPT codes 10061, Incision and drainage of abscess, complicated or multiple, and 10081, Incision and drainage of pilonidal cyst, complicated, to the Medicare list of procedures covered in the ASC.

*Response:* We reviewed the site of service data for these procedures and discussed the request with our medical staff. CPT codes 10061 and 10081 are performed most of the time in the physician office, and we believe that they are most appropriately performed there and do not believe that they are procedures that should be added to the ASC list.

*Comment:* Several commenters requested that we add CPT code 61795 (stereotactic computer assisted volumetric (navigational) procedure). The commenters stated that this procedure is reported with other procedures on the list and is already reimbursed by most commercial payors in most settings, including ASCs. They stated that Medicare also reimburses this technology in both the inpatient and outpatient setting and that it is appropriate for an ASC.

*Response:* CPT code 61795 is for coding the use of equipment, is not a surgical procedure, and is therefore, not an appropriate addition to the ASC list. We will not add this to the ASC list of covered procedures.

*Comment:* Many commenters requested that we add CPT code 30220 (insertion, nasal septal prosthesis) to the ASC list. They stated that it was clinically appropriate for the ASC setting.

*Response:* This procedure meets our criteria for inclusion on the ASC list. We agree that it is appropriate for the ASC list and are adding this procedure to payment group 3.

*Comment:* We received a request to add CPT code 31040 (pterygomaxillary fossa surgery). The commenters stated that it is clinically similar to CPT code 30920, Ligation arteries: internal maxillary artery transantral, a procedure

already on the list and meets our criteria for inclusion on the ASC list.

*Response:* Our medical staff do not agree that these two codes are comparable. CPT code 30920 is furnished as an inpatient procedure 61 percent of the time and was proposed for deletion from the list in the November 26, 2004 proposed rule. CPT code 31040 is predominantly an office procedure (66 percent of the time). We do not believe that CPT code 31040 is an appropriate addition to the ASC list at this time.

*Comment:* Many commenters requested that we add CPT code 31545 (Laryngoscopy, direct, operative, w/ operating microscope or telescope, w/ submucosal removal of non-neoplastic lesion of vocal cord, reconstruction local tissue flap); and CPT code 31546 (Laryngoscopy, direct, operative, w/ operating microscope or telescope, w/ submucosal removal of non-neoplastic lesion of vocal cord, reconstruction with graft (incl. obtaining autograft)). They stated that these procedures are clinically similar to the procedures in the CPT codes 31615 through 31656 range, many of which are currently on the list.

*Response:* Our medical staff agrees that CPT codes 31545 and 31546 are clinically similar to some endoscopic lesion removal and skin flap or grafting procedures that are already on the list. We are adding both of these procedures to the ASC list in payment group 4.

*Comment:* We received a few requests to add CPT code 40812 (Excision of lesion of mucosa and submucosa, vestibule of mouth; with simple repair).

*Response:* We are not adding the procedure to the ASC list. This is primarily an office procedure. Data show that the procedure does not meet our criteria for office volume percentage and does not typically require the resources of a facility setting. For the small percentage of times that a facility setting is warranted, the procedure could be furnished in the hospital outpatient department.

*Comment:* A few commenters requested that we add CPT codes 42842 (Radical resection, tonsil, tonsillar pillars, &/or retromolar trigone; w/o closure); and 42844 (Radical resection, tonsil, tonsillar pillars, &/or retromolar trigone; closure w/loca). The commenters stated that these procedures meet our criteria and are appropriate for an ASC.

*Response:* Clinically, these procedures typically require the resources of the hospital inpatient setting. While these procedures are also performed on an outpatient basis, the risks of complication require the ability

to initiate an immediate inpatient response making these procedures inappropriate in the ASC setting.

*Comment:* We received several comments requesting that we add CPT code 43761, Repositioning of the gastric feeding tube, any method, through the duodenum for enteric nutrition, to the Medicare ASC list. The commenters believe that the addition is warranted in order to provide more latitude to physicians and patients to choose the site of service for performance of this procedure.

*Response:* This procedure is most often performed in the inpatient hospital setting, and our medical staff do not believe that CPT code 43761 is an appropriate procedure for the ASC setting.

*Comment:* Several commenters requested that the following eight CPT codes be added to the Medicare ASC list.

- 45300 Proctosigmoidoscopy, rigid; diagnostic, with or without collection of specimen(s) by brushing or washing
- 45303 Proctosigmoidoscopy, rigid; diagnostic, with dilation (for example, balloon, guide wire, bougie)
- 45330 Sigmoidoscopy, flexible; diagnostic, with or without collection of specimen(s) by brushing or washing
- 46604 Anoscopy, diagnostic, with or without collection of specimen(s) by brushing or washing, with dilation (for example, balloon, guide wire, bougie)
- 46614 Anoscopy, diagnostic, with or without collection of specimen(s) by brushing or washing, with control bleeding (for example, injection, bipolar cautery, unipolar cautery, laser, heater probe)
- 46900 Destruction of lesion(s), anus, simple; chemical
- 46910 Destruction of lesion(s), anus, simple; electrodesiccation
- 46916 Destruction of lesion(s), anus, simple; cryosurgery

The commenter believes the codes should be added to the ASC list to afford more latitude to patients and physicians with regard to choice of site of service. They point out that although these procedures are usually performed in the physician office, there are circumstances under which a facility environment that is sterile and in which administration of general anesthesia is safe, is required. They believe that the ASC should be one of the options available.

*Response:* With the exception of CPT code 45303, all of these procedures are performed in the physician office more than half of the time, and we do not believe that adding them to the ASC list is appropriate.

*Comment:* We received a number of comments requesting that we add CPT codes 47562, Laparoscopic cholecystectomy; 47563, Laparoscopic cholecystectomy with cholangiography; and 47564, Laparoscopic cholecystectomy with exploration of the common bile duct. The commenters believe that these procedures qualify for performance in the ASC setting because the procedures usually take less than 60 minutes and the recovery time is usually less than 2 hours. The commenters say that laparoscopic cholecystectomies are substantially similar to laparoscopic cholangiography (CPT codes 47561 and 47562), that are on the ASC procedure list.

*Response:* After consultation with our medical staff, we decided that laparoscopic cholecystectomies are not appropriate for addition to the Medicare list of procedures for performance in an ASC. There is a substantial risk that the laparoscopic approach will not be successful and that an open procedure will have to be performed instead. If an open procedure is required, the patient will have to be transported to a hospital for the procedure and subsequent hospital admission. The potential jeopardy to the beneficiary resulting from undergoing an emergency transfer is significant and far outweighs any benefit of covering these procedures in ASCs. For this reason we believe that laparoscopic cholecystectomies should continue to be performed in a hospital setting (either inpatient or outpatient) as is the current practice.

*Comment:* We received several comments requesting that we add CPT codes 46221, Hemorrhoidectomy, by simple ligature; 46946, Ligation of internal hemorrhoids, multiple procedures; and 46947, Hemorrhoidopexy by stapling, to the Medicare list of ASC procedures. The commenters stated that these procedures are commonly performed on non-Medicare beneficiaries in the ASC setting. Further, they write that, although the procedures often are performed in the physician office setting, there are circumstances under which a facility setting is warranted. For example, for patients with certain comorbidities, it may be best to perform the surgery in a setting where anesthesia can be safely administered and emergency response capabilities are available and so should be performed in a facility. The physician and patient should have more latitude to make site of service determinations.

*Response:* The most common site of service for hemorrhoidectomy by simple ligature (CPT code 46221) and ligation of internal hemorrhoids (CPT code

46946) is the physician office, and we do not believe that there is a clinical basis for adding either of these codes to the ASC list. Hemorrhoidopexy by stapling is a new procedure for 2005, and our medical staff believe that the procedure is of a complexity substantially similar to other procedures (for example, CPT code 46257, hemorrhoidectomy, internal and external, with fissurectomy) assigned to payment group 3, and so we will add CPT code 46947 to the ASC list and will assign it to payment group 3.

*Comment:* We received a comment requesting that we add CPT codes 45391, Colonoscopy with endoscopic ultrasound guidance; and 45392, Colonoscopy with transendoscopic U.S. guided intramural or transmural fine needle aspiration/biopsy, to the ASC list. These are new codes for 2005, and the commenter believes that the procedures are appropriate for performance in the ASC setting.

*Response:* Colonoscopy CPT codes 45378 through 45387 are included on the list for ASCs. We believe that the new codes are comparable to the colonoscopy procedures currently included on the list, and so we will add CPT codes 45391 and 45392 as well. We will assign these two codes to payment group 2.

*Comment:* We received a comment requesting that we add CPT code 46230, Excision of external hemorrhoid tags and/or multiple papillae, to the ASC list. The commenter believes that this code is appropriate for the ASC list because its performance is consistent with the criteria we have set for inclusion on the ASC list.

*Response:* Examination of the site of service data reveals that this procedure is performed 48 percent of the time in the physician office and 41 percent of the time in the outpatient department. We believe that it is comparable to CPT code 46220, Papillectomy or excision of single tag, anus, which is included in the ASC list. We agree with the commenter that this is an appropriate addition to the list. Therefore, we will add it and assign it to group 1.

*Comment:* One commenter requested that we add CPT code 46706, Repair of anal fistula with fibrin glue, to the list because the aspects associated with performance of the procedure are consistent with the criteria for inclusion of the procedure on the ASC list.

*Response:* The site of service data for this procedure show that it is performed 86 percent of the time in the outpatient department and only 1 percent of the time in the physician office setting. We agree with the commenter that this procedure is appropriate for addition to

the ASC list. We will add the procedure and will assign it to payment group 1.

*Comment:* One commenter requested that we add CPT code 49419, Insertion of intraperitoneal cannula or catheter, with subcutaneous reservoir, permanent, to the ASC list. The commenter stated that since CPT codes 49420, Insertion of intraperitoneal cannula or catheter for drainage or dialysis; temporary, 49421, Insertion of intraperitoneal cannula or catheter for drainage or dialysis; permanent, and 49422, Removal of permanent intraperitoneal cannula or catheter, are on the ASC list, CPT code 49419 should also be included.

*Response:* We agree with the commenter that CPT code 49419 should also be added to the ASC list. We will add it to the list in payment group 1 with CPT codes 49420, 49421 and 49422.

*Comment:* Several commenters requested that we add CPT code 52301, Cystourethroscopy; with resection or fulguration of ectopic ureterocele(s), unilateral or bilateral, to the ASC list. They stated that, due to patient discomfort, the procedure should be offered in the ASC where general anesthesia can be administered. They also noted that the procedure meets the ASC list criteria since it takes only 60 minutes of intra-operative time, 45 to 60 minutes of recovery time, involves only minimal blood loss and is similar to at least one other procedure that is on the ASC list, CPT code 52214, Cystourethroscopy, with ejaculatory duct catheterization, with or without irrigation, instillation or duct radiography, exclusive of radiologic service.

*Response:* We agree with the commenter that this procedure is very similar to other cystoscopic procedures on the ASC list and that it be added to the list. We will add it to the list and assign it to payment group 3.

*Comment:* We received a comment requesting that we add CPT code 52402, Cystourethroscopy with transurethral resection or incision of ejaculatory ducts, to the ASC list.

*Response:* This is a new code for 2005 but we believe that it is similar enough to other existing procedures that we can make a decision about adding it to the list. Our medical staff believes that it is an appropriate procedure for inclusion on the list, and we will add it and assign it to payment group 3.

*Comment:* We received a few comments requesting that we add CPT code 57287, Removal or revision of sling for stress incontinence, to the ASC list.

*Response:* This is an open surgical procedure and our medical staff believes

that more than 4 hours are needed for recovery time. Therefore, we do not believe that this is an appropriate addition to the ASC list.

*Comment:* We received a comment requesting that we add CPT code 51992, Laparoscopy, surgical; sling operation for stress incontinence, to the ASC list. The commenter believes that it meets our criteria for addition.

*Response:* This procedure is performed most of the time in the hospital setting, either inpatient or outpatient, and our medical staff believe that it is an appropriate procedure for inclusion on the ASC list. We will add it to the ASC list and assign it to payment group 5.

*Comment:* We received comments requesting that we add CPT codes 64517, Injection, anesthetic agent; superior hypogastric plexus; and 64681, Destruction by neurolytic agent, with or without radiologic monitoring; superior hypogastric plexus, to the ASC list. The commenter stated that these CPT codes were established in 2004 to add more specificity to the coding and that before that they were included on the ASC list under CPT code 64520, Injection, anesthetic agent; lumbar or thoracic (paravertebral sympathetic). The commenter stated that CPT codes 64517 and 64681 should be included on the list as is CPT code 64520.

*Response:* We do not have site of service data for these two procedures but agree with the commenter that they are similar to CPT code 64520 for which site of service data indicate that it is appropriately included on the ASC list. Therefore, we will add both of these codes to the list and will assign them to payment group 2.

*Comment:* We received several comments requesting that we add CPT codes 62290, Injection procedure for discography, lumbar, and 62291, Injection procedure for discography, cervical or thoracic, to the Medicare ASC list. The commenters state that CPT codes 62290 and 62291 are similar to CPT codes 62287, Aspiration or decompression procedure, percutaneous, of nucleus pulposus of intervertebral disk; and 62294, Injection procedure, arterial, for occlusion of arteriovenous malformation, which are included on the ASC list. The commenters wrote that in both procedures the physician places a needle into the intervertebral disk while the patient is under conscious sedation. The procedures typically involve X-ray to guide the needle placement, and most physician offices are not equipped for these services. Although most Medicare patients (about 65 percent) go to the outpatient hospital setting for the

procedures, most non-Medicare patients are able to have the procedures in ASCs. They believe that Medicare beneficiaries should have the same treatment options.

*Response:* We consider the procedures coded 62290 and 62291 to be integral to radiologic studies and are never performed alone and, as such, are not appropriate for addition to the ASC list. Radiologic studies that do not include an intervention are not considered surgical procedures and are not included on the list of ASC procedures. The procedures that are currently included on the ASC list that the commenters have chosen for comparison, CPT codes 62287 and 62294, are interventional procedures and are, therefore, not valid comparatives for this purpose.

*Comment:* Several commenters requested that CPT codes 62367, Electronic analysis of programmable implanted pump for intrathecal or epidural drug infusion, without reprogramming; and 62368, Electronic analysis of programmable implanted pump for intrathecal or epidural drug infusion, with reprogramming, be added to the ASC list. They stated that because the procedures require X-ray imaging and because most physician offices are not adequately equipped for the services, Medicare beneficiaries typically go to the hospital for these services. They believe that Medicare beneficiaries should have the same site of service options as does the non-Medicare population.

*Response:* Our data show that more than 75 percent of these services are provided to Medicare beneficiaries in the office setting. We believe that this is appropriate. These are not surgical procedures and are not of a level of complexity to warrant addition to the ASC list.

*Comment:* We received one comment requesting that CPT codes 64561, Percutaneous implantation of neurostimulator electrodes, sacral nerve; 64581, Incision for implant of neurostimulator electrodes, sacral nerve; and 95972, Intra-operative programming of implanted neurostimulator, be added to the ASC list. The commenter stated that these codes should be included because CPT code 64590, Insertion or replacement of peripheral neurostimulator pulse generator or receiver, direct or inductive coupling, is on the list.

*Response:* We agree with the commenter that CPT codes 64561 and 64581 are appropriate additions to the ASC list. We will add them to the list and assign them to payment group 3. We do not agree that CPT code 95972 is an appropriate addition because it is

an analysis of the implanted device and is not a surgical procedure, and therefore, does not meet the criteria for the ASC list of procedures.

*Comment:* A number of commenters requested that we add CPT code 31040, Pterygomaxillary fossa surgery, to the ASC list. They believe that the procedure is similar to CPT code 30920, Ligation internal maxillary artery, transantral, which is included on the list, and that beneficiaries and their physicians should have ASCs as an option for site of service.

*Response:* According to our data, the site of service for these two procedures is very different. Pterygomaxillary fossa surgery is performed in the physician office 66 percent of the time and on an inpatient basis 19 percent of the time compared to only 2 percent in the physician office and 61 percent in the inpatient setting for ligation of internal maxillary artery, transantral. We will not add CPT code 31040 to the list at this time because it is primarily an office-based procedure.

*Comment:* We received several comments requesting that we add CPT Level II code G0289, Arthroscopy, knee, surgical, for removal of loose body, foreign body, debridement/shaving or articular cartilage (chondroplasty) at the time of other surgical knee arthroscopy in a different compartment of the same knee, to the ASC list of procedures. The commenters believe that the additional time (at least 15 minutes) represented by this code should be recognized for payment in the ASC setting.

*Response:* By definition, the procedure represented by CPT Level II code G0289 is part of another procedure and is never furnished as a separate procedure. For this reason, we will not add it to the ASC list.

*Comment:* We received a number of comments requesting the addition of CPT codes 21030, Excision of benign tumor or cyst of maxilla or zygoma by enucleation and curettage; 21031, Excision of torus mandibularis; and 21032, Excision of maxillary torus palatinus, to the ASC list. The commenters stated that although these procedures are often furnished in the physician office, occasionally a facility setting is required for a patient who requires a deeper level of anesthesia or monitoring or whose condition warrants a sterile environment.

*Response:* Our data indicate that these services are furnished in the physician office more than 80 percent of the time, and therefore we will not add these to the list at this time.

*Comment:* We received a number of comments requesting that we add CPT codes 22520, Percutaneous

vertebroplasty, one vertebral body, uni- or bi-lateral injection; thoracic; 22521, Percutaneous vertebroplasty, one vertebral body, uni- or bi-lateral injection; lumbar; and 22522, Percutaneous vertebroplasty, one vertebral body, uni- or bi-lateral injection; each additional thoracic or lumbar vertebral body, to the ASC list. The commenters stated that the procedures require about one hour per vertebra, that the recovery time also is about 1 hour and that the procedures can be safely furnished in the ASC.

*Response:* Our medical staff reviewed these procedures and determined that there is often an overnight stay required for patients who undergo vertebroplasty procedures. We believe that the recovery period usually is longer than 4 hours and so will not add these to the list of ASC procedures at this time.

*Comment:* We received several comments requesting that CPT code 27096, Injection procedure for sacroiliac joint, arthrography and/or anesthetic steroid, be added to the Medicare ASC list. The commenters stated that the procedure is typically required to ensure proper placement of the needle

into the sacroiliac joint and that most physician offices do not have the appropriate equipment for this, forcing Medicare beneficiaries to go to hospital outpatient departments, whereas non-Medicare patients may go to ASCs for this service.

*Response:* This is a radiological service that is furnished in the physician office setting more than half the time. We do not believe that it is an appropriate addition to the ASC list.

*Comment:* A number of commenters requested that we add CPT codes 27412, Autologous chondrocyte implantation, knee; and 27415, Osteochondral allograft, knee, open, to the ASC list because these new procedure codes meet our clinical procedure criteria for addition.

*Response:* The CPT codes 27412 and 27415 are new in 2005, and we have no site of service data on which to base our decision. However, our medical staff believes that these are still predominantly inpatient procedures and should not be added to the ASC list at this time. Therefore, we will not add these to the ASC list.

*Comment:* Several commenters asked that we add new CPT codes 29866,

Arthroscopy, knee, surgical; osteochondral autograft(s); 29867, Arthroscopy, knee, surgical; osteochondral allograft; and 29868, Arthroscopy, knee, surgical; meniscal transplantation (includes arthrotomy for meniscal insertion), to the Medicare ASC list. The commenters stated that these procedures meet our clinical criteria for inclusion on the list and that they are similar to other knee arthroscopy procedures that currently are included on the list.

*Response:* The CPT codes 29866, 29867, 29868 are new in 2005, and, therefore, we have no site of service data on which to base our decisions. Our medical staff believes that the procedures are most often performed in the inpatient setting, however, and as such are not appropriate for addition to the ASC list. Therefore, we will not add these procedures to the ASC list.

*Comment:* We received one comment requesting that we add a number of CPT codes to the ASC list. For one of the codes, CPT code 63030, we received several requests for addition to the list. The requested additions are as follows:

| CPT code    | Descriptor   | Percent inpatient |
|-------------|--|-------------------|
| 63001 ..... | Laminectomy with exploration &/or decompression of spinal cord &/or cauda equina, w/o facetectomy, foraminotomy, or discectomy, 1 or 2 vertebral segments; cervical.   | 97                |
| 63003 ..... | Laminectomy with exploration &/or decompression of spinal cord &/or cauda equina, w/o facetectomy, foraminotomy or discectomy, 1 or 2 vertebral segments; thoracic.  | 98                |
| 63005 ..... | Laminectomy with exploration &/or decompression of spinal cord &/or cauda equina, w/o facetectomy, foraminotomy, or discectomy, 1 or 2 vertebral segments; lumbar, except for spondylolisthesis.                                   | 95                |
| 63011 ..... | Laminectomy with exploration &/or decompression of spinal cord &/or cauda equina, w/o facetectomy, foraminotomy, or discectomy, 1 or 2 vertebral segments; sacral.   | 98                |
| 63020 ..... | Laminotomy, (hemilaminectomy), w/decompression of nerve root(s), incl partial facetectomy, foraminotomy &/or excision of herniated intervertebral disk; one interspace, cervical.  | 88                |
| 63030 ..... | Laminotomy, (hemilaminectomy), w/decompression of nerve root(s), incl partial facetectomy, foraminotomy &/or excision of herniated intervertebral disk; one interspace, lumbar (incl. Open or endoscopically-assisted approach).   | 84                |
| 63035 ..... | Laminotomy, (hemilaminectomy), w/decompression of nerve root(s), incl partial facetectomy, foraminotomy &/or excision of herniated intervertebral disk; each additional interspace, cervical or lumbar.                            | 93                |
| 63040 ..... | Laminotomy, (hemilaminectomy), w/decompression of nerve root(s), incl partial facetectomy, foraminotomy &/or excision of herniated intervertebral disk; reexploration, single interspace, cervical.                                | 94                |
| 63042 ..... | Laminotomy, (hemilaminectomy), w/decompression of nerve root(s), incl partial facetectomy, foraminotomy &/or excision of herniated intervertebral disk; reexploration, single interspace, lumbar.                                  | 93                |
| 63045 ..... | Laminotomy, (hemilaminectomy), facetectomy and foraminotomy (uni- or bi-lateral w/decompression of spinal cord, cauda equina &/or nerve root(s)), single vertebral segment, cervical.  | 96                |
| 63046 ..... | Laminotomy, (hemilaminectomy), facetectomy and foraminotomy (uni- or bi-lateral w/decompression of spinal cord, cauda equina &/or nerve root(s)), single vertebral segment, thoracic.  | 97                |
| 63047 ..... | Laminotomy, (hemilaminectomy), facetectomy and foraminotomy (uni- or bi-lateral w/decompression of spinal cord, cauda equina &/or nerve root(s)), single vertebral segment, lumbar.  | 94                |
| 63048 ..... | Laminotomy, (hemilaminectomy), facetectomy and foraminotomy (uni- or bi-lateral w/decompression of spinal cord, cauda equina &/or nerve root(s)), single vertebral segment, each additional segment, cervical, thoracic or lumbar. | 96                |

The commenter asserted that, although these are usually furnished as inpatient procedures, the commenter believes that they meet the criteria for

inclusion on the ASC list because they do not involve major or prolonged invasion of a body cavity, do not involve major blood loss, intra-operative

time is less than 90 minutes, and recovery time is only 60 minutes.

*Response:* As displayed, the procedures that the commenter has requested as additions to the ASC list

are performed predominantly as inpatient procedures. Even CPT code 63030, the procedure for which addition was requested by several commenters, is performed in the outpatient department only 14 percent of the time and is otherwise performed on an inpatient basis. We do not believe that any of these is appropriate for addition to the ASC list.

*Comment:* We received comments requesting that we add CPT code 65820, Goniotomy, to the Medicare ASC list. The commenters believe that addition of this procedure to the list is appropriate so that beneficiaries who require an inpatient setting due to comorbid conditions or the need for general anesthesia will have the ASC as a choice for the procedure setting.

*Response:* The site of service data indicate that this procedure is furnished in the physician office 40 percent of the time, in the outpatient department 25 percent of the time, and in the ASC 34 percent of the time. We believe that adding it to the Medicare ASC list is appropriate at this time. We will assign CPT code 65820 to payment group 1.

*Comment:* We received a few requests that we add CPT code 65771, Radial keratotomy, to the ASC list.

*Response:* Radial keratotomy is not a Medicare-covered procedure and will not be added to the Medicare ASC list.

*Comment:* We received a number of comments requesting that we add to the list the following laser procedures that treat some of the most common forms of vision loss and blindness in elderly Americans:

- 65855 Trabeculoplasty by laser surgery
- 66711 Ciliary body destruction; cyclophotocoagulation endoscopic
- 66761 Iridotomy/iridectomy by laser surgery
- 67028 Intravitreal injection of a pharmacologic agent
- 67105 Repair retinal detachment, photocoagulation
- 67110 Repair retinal detachment by injection of air or other gas
- 67145 Prophylaxis of retinal detachment, photocoagulation
- 67210 Destruction of retinal lesions, photocoagulation
- 67220 Destruction of localized lesion of choroid; photocoagulation
- 67221 Destruction of localized lesion of choroid, photodynamic therapy
- 67228 Destruction of extensive or progressive retinopathy, photocoagulation

The commenters stated that these procedures should be added to the list because they meet the criteria for inclusion. The intra-operative time is 15 to 20 minutes, recovery time is 40 to 60

minutes, no major blood vessels are encountered during the procedures, and anesthesia is rarely required. Further, commenters stated that, because CPT code 66821, Dissection of secondary membranous cataract, laser surgery, is on the list, the other laser procedures should be included as well.

*Response:* We reviewed these codes and, with the exception of new CPT code 66711, all of these codes usually are performed in the physician office. The new CPT code 66711 is a procedure that has been included on the ASC list as part of CPT code 66710, Ciliary body destruction, cyclophotocoagulation, until January 2005 when CPT code 66710 was redefined and CPT code 66711 was implemented. For the other procedures the commenter listed, except for CPT code 66761, the physician office is the site of service for the procedures more than 80 percent of the time. The predominant site of service for CPT code 66761 also is the office, with 68 percent of procedures furnished in that setting. Therefore, we will add only 66711 to the ASC list at this time.

*Comment:* A number of commenters requested that we add CPT code 67445, Orbitotomy with bone flap or window, with removal of bone for decompression, to the Medicare ASC list.

*Response:* The procedure is performed 58 percent of the time in the outpatient department and is virtually never performed in the physician office. We agree with the commenter and will add CPT code 67445 to the ASC list and will assign it to payment group 5.

*Comment:* We received a comment requesting that we add CPT code 67570, Optic nerve decompression, to the ASC list.

*Response:* The procedure is performed 66 percent of the time in the outpatient department and is virtually never performed in the physician office. We agree with the commenter and will add CPT code 67570 to the Medicare ASC list and will assign it to payment group 4.

*Comment:* Several commenters requested that we add CPT codes 67810, Biopsy of eyelid; 67825, Trichiasis, epilation by other than forceps; 67840, Excision of lesion of eyelid without closure or with simple direct closure; and 67850, Destruction of lesion of lid margin, to the Medicare ASC list.

*Response:* These codes are performed in the physician office 88 to 95 percent of the time. Because these procedures are seldom performed in any other setting, we will not add them to the ASC list.

*Comment:* Several commenters requested that we add CPT code 67912, Correction of lagophthalmos, with

implantation of upper eyelid load, to the Medicare ASC list. They stated that the procedure is commonly performed to treat paralyzed upper eyelids that are sometimes the result of cardiovascular accidents (stroke). The procedure should be performed in a sterile environment and, although general anesthesia is rarely used, performance of the procedure in an operating room is preferable in many cases.

*Response:* This was a new code for 2004, but using CPT code 67911, Correction of lid retraction, as a comparative, we examined the site of service data. We discovered that CPT code 67911 is performed in the physician office only 8 percent of the time; the rest of the time it is performed in outpatient settings. For this reason, we believe that CPT code 67912 should be added to the ASC list, and we will assign it to payment group 3.

*Comment:* A few commenters wrote to request that we add CPT codes 68100, Biopsy of conjunctiva; and 68110, Excision of lesion, conjunctiva, to the Medicare ASC list.

*Response:* These two procedures are performed in the physician office more than 50 percent of the time and so will not be added to the ASC list.

*Comment:* We received a few requests to add CPT codes 68400, Incision, drainage lacrimal gland; 68420, Incision, drainage of lacrimal sac; and 68530, Removal of foreign body or dacryolith, lacrimal passages, to the Medicare ASC list.

*Response:* These procedures are performed in the physician office more than 80 percent of the time and so will not be added to the ASC list.

*Comment:* We received one comment requesting that CPT codes 65780, Ocular surface reconstruction; amniotic membrane transplantation; 65781, Ocular surface reconstruction; limbal stem cell allograft; and 65782, Ocular surface reconstruction; limbal conjunctival autograft, be added to the Medicare ASC list.

*Response:* These were new codes in 2004 and, based on the site of service data for other corneal procedures and the judgment of our medical staff, we believe that these procedures should be included on the Medicare ASC list, and we will assign them to payment group 5.

*Comment:* We received a comment requesting that we add CPT code 68371, Harvesting conjunctival allograft, living donor, to the ASC list.

*Response:* This code was new for 2004, and we have no site of service data to use in our decision-making. Our medical staff determined, however, that this procedure is appropriate for

addition to the ASC list, consistent with other procedures currently on the list, CPT codes 68360, Conjunctival flap; bridge or partial; and 68362, Conjunctival flap; total. We will add it to the ASC list and assign it to payment group 2.

*Comment:* We also received comments requesting that several other ophthalmology codes be added to the list. These are: CPT codes 66990, Use of ophthalmic endoscope; 21386, Open treatment of orbital floor blowout fracture; periorbital approach; 21390,

Open treatment orbital floor blowout fracture; periorbital approach, with alloplastic or other implant; 21406, Open treatment of fracture of orbit; except blowout; without implant; and 21407, Open treatment of fracture of orbit; except blowout; with implant. The commenters asserted that these procedures are not performed in the physician office and that they qualify as procedures suitable for the ASC.

*Response:* CPT code 66990 does not represent a surgical procedure, and we do not believe that it is an appropriate

addition to the ASC list. The code is used to recognize the use of equipment that is integral to surgical procedures. The three CPT codes, 21390, 21406, and 21407, are performed predominantly in the hospital setting. Our medical staff believes that these procedures require more than 4 hours of recovery time and that the hospital site of service is the most appropriate. Therefore, we will not add them to the list.

*Comment:* We received one comment requesting that we add the following procedures to the Medicare ASC list:

| CPT code | Short descriptor             | Percent furnished as an in-patient procedure |
|----------|------------------------------|--|
| 33206    | Insertion of heart pacemaker | 81.4   |
| 33207    | Insertion of heart pacemaker | 85.6   |
| 33208    | Insertion of heart pacemaker | 86.7   |
| 33212    | Insertion of pulse generator | 43.4   |
| 33213    | Insertion of pulse generator | 40.3   |
| 33214    | Upgrade of pacemaker system  | 68.5   |
| 33215    | Reposition pacing-defib lead | 77.3   |
| 33216    | Insert lead pace-defib, one  | 73.3   |
| 33217    | Insert lead pace-defib, dual | 76.7   |
| 33233    | Removal of pacemaker system  | 47.4   |
| 33234    | Removal of pacemaker system  | 79.6   |
| 33235    | Removal pacemaker electrode  | 84.3   |

The commenter requested that we add these codes and create a new payment group to accommodate the costs for these procedures.

*Response:* With the exception of CPT codes 33212, 33213, and 33233, we do not believe that these codes are

appropriate for the ASC setting because they are performed predominantly on an inpatient basis. However, our medical staff agrees that the procedures coded as CPT codes 33212, 33213, and 33233 are appropriate for inclusion of the ASC list. We will add these codes and will

assign CPT codes 33212 and 33213 to payment group 3 and CPT code 33233 to payment group 2.

*Comment:* We received one comment requesting that we add the following codes to the Medicare ASC list:

| CPT code | Short descriptor          | Percent furnished as an in-patient procedure |
|----------|---------------------------|--|
| 35470    | Repair arterial blockage  | 67.5   |
| 35471    | Repair arterial blockage  | 57.3   |
| 35472    | Repair arterial blockage  | 60.8   |
| 35473    | Repair arterial blockage  | 54.2   |
| 35474    | Repair arterial blockage  | 56.2   |
| 35490    | Atherectomy, percutaneous | 59.5   |
| 35491    | Atherectomy, percutaneous | 78.9   |
| 35492    | Atherectomy, percutaneous | 69.7   |
| 35493    | Atherectomy, percutaneous | 66.2   |
| 35494    | Atherectomy, percutaneous | 53.1   |
| 35495    | Atherectomy, percutaneous | 67.2   |
| 36200    | Place catheter in aorta   | 45.7   |
| 36215    | Place catheter in artery  | 46.7   |
| 36216    | Place catheter in artery  | 47.2   |
| 36217    | Place catheter in artery  | 59.1   |
| 36218    | Place catheter in artery  | 55.0   |
| 36245    | Place catheter in artery  | 55.5   |
| 36246    | Place catheter in artery  | 51.5   |
| 36247    | Place catheter in artery  | 57.7   |
| 36248    | Place catheter in artery  | 60.5   |

The commenter believes that the listed procedures are appropriate for performance in an ASC setting because

they meet the clinical criteria for inclusion.

Specifically, the commenter stated that CPT codes 35470, 35471, 35473, and 35474 are less invasive than CPT

codes 37205, Transcatheter placement of an intravascular stent(s), (except coronary, carotid, and vertebral vessel) percutaneous, initial vessel; and 37206 Transcatheter placement of an intravascular stent(s), (except coronary, carotid, and vertebral vessel) percutaneous, each additional vessel, which we proposed to add to the ASC list in the November 26, 2004 proposed rule. The commenters also stated that CPT codes 35490, 35491, 35492, 35493, 35494, and 35495 should be added if we are making final our proposal to add CPT codes 35475, Transluminal balloon angioplasty; brachiocephalic trunk or branches; and 35476, Transluminal balloon angioplasty; venous, to the list.

*Response:* We are reluctant to add CPT codes 35470, 35471, 35473, 35474, 35490, 35491, 35492, 35493, 35494, or 35495 to the ASC list. The procedures are performed in either the outpatient or inpatient departments of the hospital; and the distribution between the two settings is about even although most are performed somewhat more frequently on an inpatient basis. There is almost no utilization of the ASC or physician office settings. We believe that this is indicative of a level of clinical complexity that requires immediate access to the facilities available in the hospital and are not available in either the office or ASC settings. These procedures require more than 4 hours of recovery time and involve major blood vessels and do not meet our clinical criteria for inclusion on the ASC list. We will not add these procedures to the ASC list at this time. Furthermore, as explained in section II above, we reevaluated our proposal to add CPT codes 35475, 35476, 37205, and 37206 to the ASC list and have determined that they are more appropriately limited to the hospital outpatient and inpatient settings at this time.

Similarly, based on their clinical judgment and site of service data, our clinical staff considers all of the other procedures on this list to be predominantly inpatient procedures and not appropriate for addition to the ASC list.

*Comment:* We received a comment requesting that we add new CPT codes 36475, Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; first vein, 36476, Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; second and subsequent veins in single

extremity, each through separate access sites; 36478, Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, laser; first vein; and 36479, Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, laser; second and subsequent veins treated in a single extremity, each through separate access sites, to the ASC list. The commenter believes that the thermal ablation procedures are appropriate for performance in the ASC.

*Response:* The codes represent a new technology, and we do not have site of service data for these codes or comparable codes to use to support our decision to add them to the list of procedures on the ASC list. Based on clinical information and indications for use of the procedures, our medical staff believes that these codes are appropriate for the ASC setting and recommends that we add them to the ASC list. We will assign the codes to payment group 3 consistent with other procedures with similar clinical indications.

*Comment:* We received one comment requesting that we add CPT codes 36100, Introduction of needle or intracatheter, carotid or vertebral artery; 36120, Introduction of needle or intracatheter; retrograde brachial artery; 36140, Introduction of needle or intracatheter; extremity artery; and 36145, Introduction of needle or intracatheter; arteriovenous shunt created for dialysis, to the Medicare ASC list. The commenter believes that these procedures satisfy our criteria for inclusion on the list because they are integral to the surgical procedures for stent placement and other surgeries. The commenter believes that these procedures should receive separate payment in the ASC.

*Response:* These codes represent procedures that are components of other procedures and are not typically performed alone. As components of other procedures, they do not qualify as appropriate additions to the ASC list. Similar to the OPPS, the ASC payment system does not recognize for separate payment procedures that are integral to the performance of the primary surgical procedure.

*Comment:* We received one comment requesting that we add CPT Level III code 0020T, Extracorporeal shock wave therapy for plantar fasciitis, to the ASC list. The commenter stated that this procedure was recently approved by the CPT Editorial Panel to be changed to a

Category I code in 2006 and therefore, we should add the new code, CPT code 2825X, to the ASC list. The commenter believes that because the equipment necessary to perform this treatment is expensive, the service is not typically available in physician offices and is more common in the ASC setting.

*Response:* Although there will be a Level I CPT code for this service in 2006, there is not one now and so, we will not add this procedure to the list.

*Comment:* A commenter requested that we add CPT code 28108, Excision or curettage of bone cyst or benign tumor, phalanges of foot, to the ASC list because all of the other related CPT codes (28106, 28107, 28110, etc.) are on the list. The commenter believes that CPT code 28108 is like the codes that are already on the list.

*Response:* We agree with the commenter that CPT code 28108 is very similar to other CPT codes in that group, and we will add it to the list in payment group 2.

*Comment:* One commenter requested that we add CPT codes 28230, Tenotomy, open, tendon flexor; foot, single or multiple tendon(s); and 28232, Tenotomy, open, tendon flexor; toe, single tendon, to the list because they are comparable to CPT code 28234, which is on the list.

*Response:* CPT codes 28230 and 28232 are components of other procedures and are not comparable to CPT code 28234, which is a separate, stand-alone procedure. Because the procedures are components of other procedures, we do not believe it is appropriate to add these codes to the ASC list for separate payment.

*Comment:* We received a few comments requesting that we add CPT code 58565, Hysteroscopy, with bilateral fallopian tube cannulation to induce occlusion by placement of permanent implants, to the ASC list. This is a new code for 2005 and was created to allow for more coding specificity.

*Response:* Our medical staff determined that this code is an appropriate addition to the ASC list based on the other hysteroscopy codes currently included on the list. We will add it to the ASC list and assign it to payment group 4.

*Comment:* We received one comment requesting that we add a number of urologic and gynecologic codes. The codes requested for addition are displayed in the table below:

| CPT code | Descriptor  |
|----------|---|
| 51741    | Complex uroflowmetry.   |
| 51784    | Electromyography studies (EMG) of anal or urethral sphincter, other than needle.                        |
| 51795    | Voiding pressure studies (VP); bladder voiding pressure   |
| 51797    | Voiding pressure studies; intrabdominal voiding pressure (AP).  |
| 58260    | Vaginal hysterectomy, for uterus < 250 gms.   |
| 58262    | Vaginal hysterectomy, w/removal of tube(s), &/or ovary(s).  |
| 58263    | Vaginal hysterectomy, w/removal of tube(s), &/or ovary(s), w/repair enterocele.                         |
| 58267    | Vaginal hysterectomy, w/colpo-urethrocystopexy with or w/o endoscopic.                                  |
| 58270    | Vaginal hysterectomy, w/repair enterocele.  |
| 58275    | Vaginal hysterectomy, w/total or partial vaginectomy.   |
| 58280    | Vaginal hysterectomy, w/total or partial vaginectomy, w/repair enterocele.                              |
| 58290    | Vaginal hysterectomy, for uterus > 250 gms.   |
| 58291    | Vaginal hysterectomy for uterus > 250 gms w/removal of tube(s) &/or ovary(s).                           |
| 58292    | Vaginal hysterectomy for uterus > 250 gms w/removal of tube(s) &/or ovary(s), w/repair of enterocele.   |
| 58293    | Vaginal hysterectomy for uterus > 250 gms, w/colpo-urethrocystopexy with or w/o endoscopic control.     |
| 58294    | Vaginal hysterectomy for uterus > 250 gms, w/repair of enterocele.                                      |
| 58356    | Endometrial cryoablation w/ultrasonic guidance, including endometrial curettage.                        |
| 58552    | Laparoscopy surgical, w/vaginal hysterectomy, for uterus ≤ 250 gms, w/removal of tube(s) &/or ovary(s). |
| 58553    | Laparoscopy surgical, w/vaginal hysterectomy, for uterus ≥ 250 gms.                                     |
| 58554    | Laparoscopy surgical, w/vaginal hysterectomy, for uterus ≤ 250 gms, w/removal of tube(s) &/or ovary(s). |

Generally, the commenter believes that the listed codes should be added to the ASC list because the physician should be allowed to select the most appropriate setting for performance of procedures. The commenter identified a few codes that are included on the ASC list that the commenter believes are comparable to several of the codes for which addition is being solicited. For example, the commenter indicates that because CPT code 58550, Laparoscopy surgical, with vaginal hysterectomy for

uterus 250 grams or less, is included on the list, CPT codes 58552, 58553, and 58554 also should be included and that the inclusion of CPT code 51772, urethral pressure profile studies is an indication that CPT code 51741 should be added to the list.

*Response:* We do not believe that any of the codes listed is appropriate for addition to the ASC list. CPT codes 51741, 51784, 51795, and 51797 are performed in the physician office setting 80 percent or more of the time and so

do not meet our criteria for inclusion on the ASC list. The other listed procedures are furnished as inpatient procedures most of the time and require more than 4 hours of recovery time and so do not meet the criteria for inclusion on the ASC list. We do not believe that addition to the ASC list is appropriate for these codes at this time.

*Comment:* We received one comment requesting the addition to the ASC list of the following procedures:

| CPT code | Descriptor   |
|----------|--|
| 58970    | Follicle puncture for oocyte retrieval.                        |
| 58974    | Embryo transfer, intrauterine.                                 |
| 58976    | Gamete, zygote, or embryo intrafallopian transfer, any method. |

The commenter believes that the physician should have the freedom to select the most appropriate site of service for performance of these procedures.

*Response:* These procedures are performed predominantly in the outpatient department, and we believe

that they satisfy the criteria for inclusion on the ASC list. We will add the procedures to the list and assign all of them to payment group 1.

*Comment:* We received a comment requesting that we add CPT code 64435, Injection, anesthetic agent; paracervical (uterine) nerve, to the ASC list.

*Response:* This is a procedure that is predominantly performed in the physician office and as such is not appropriate for inclusion of the ASC list.

*Comment:* We received several comments asking us to add brachytherapy codes:

| CPT code | Descriptor   |
|----------|--|
| 13153    | Repair, complex, eyelids, nose, ears and/or lips;each additional 5cm or less.  |
| 19295    | Image guided placement, metallic localization clip, percutaneous, during breast biopsy.  |
| 19296    | Placement of radiotherapy afterloading balloon catheter into the breast for interstitial radioelement application following partial mastectomy, includes imaging guidance; on date separate from partial mastectomy. |
| 19297    | Placement of radiotherapy afterloading balloon catheter into the breast for interstitial radioelement application following partial mastectomy, includes imaging guidance; concurrent with partial mastectomy.       |
| 19298    | Placement of radiotherapy afterloading brachytherapy catheters into the breast for interstitial radioelement application following partial mastectomy, includes imaging guidance.                                    |
| 57155    | Insertion of uterine tandems and/or vaginal ovoids for clinical brachytherapy.   |
| 58346    | Insertion of Heyman capsules for clinical brachytherapy.   |

*Response:* Procedures represented by CPT codes 13153, 19295, and 19297 are "add-on" procedures that are included

in another procedure and are not performed on their own. We do not typically approve this type of procedure

for addition to the ASC list as the facility costs for the additional work included in the procedure is not usually

significant. That is, the resources required to perform a procedure with or without also performing an "add-on" procedure are not significantly different. Time in the operating suite, supplies, and other resources that Medicare pays for in the ASC, are not significantly increased by performance of the additional procedure. Therefore, under the current rate-setting method, we cannot accurately identify a separate price for "add-on" procedures. We will not add CPT codes 13153, 19295, or 19297 to the ASC list.

However, we agree with the commenters that CPT codes 19296, 19298, 57155, and 58346 meet our criteria and should be added to the ASC list. We also agree that uterine and breast brachytherapy are appropriate services for the ASC setting. While we are adding these procedure codes to the list, these codes alone do not comprise a brachytherapy procedure. Similar to the performance of prostate brachytherapy, the codes for uterine and breast brachytherapy are among several

procedures that may be furnished in the performance of uterine or breast brachytherapy and do not include the application of seeds.

We are currently trying to resolve a number of payment options related to the performance of prostate brachytherapy and the extent to which those services could be paid for when furnished in an ASC under existing regulations related both to ASCs and other payment systems such as the Medicare physician fee schedule. The issues are very complex, and we are still exploring various options. Until we address them comprehensively through national instructions, payment for uterine or breast brachytherapy performed in an ASC is determined by local carriers.

*Comment:* We received one comment requesting that we place CPT code 50590, Extracorporeal Shock Wave Lithotripsy, on the list of approved ASC procedures.

*Response:* We had proposed to add this code in our June 1998 proposed rule with a proposed payment of \$2,107.

The American Lithotripsy Society opposed the \$2,107 payment rate. In *American Lithotripsy Society v. Sullivan*, 785 F. Supp. 1035 (D.D.C. 1992), the District Court ordered that we "publish the data and other information we are relying on in setting a (lithotripsy) rate and allow time for comment before issuing a final notice \* \* \*." The data and other information that we would rely on in setting a payment rate for ESWL are part of the ratesetting methodology that we proposed in the June 1998 proposed rule. Because we are not making that ratesetting methodology final at this time, we might not be in compliance with the District Court order if we were to add CPT code 50590 to the ASC list in this interim final rule under the current payment rate structure. Therefore, we are not adding CPT code 50590 to the ASC list at this time.

BILLING CODE 4120-01-C

### III. Collection of Information Requirements

This document does not impose information collection and recordkeeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 35).

### IV. Waiver of Proposed Rulemaking

We ordinarily publish this list and propose payment amounts for new items and propose deletions of items in a notice of proposed rulemaking, subject to public comments. We published such a notice in November 2004. In response to the proposed rule, we received and acted upon a large number of public comments. Commenters requested the addition of a number of procedures to the list; we have added a number of procedures to the list, and we have assigned them to payment groups. Despite the fact that we view these additions as logical outgrowths of our proposed rule, we have decided to provide an opportunity for public comment on the procedures and payment group assignments which were not contained in the proposed rule. Nonetheless, payment will be made,

beginning July 5, 2005, based on the list and payment groups contained in this rule.

With respect to the procedures added to the ASC list since the proposed rule, we are waiving our usual notice and comment process. Those procedures will be used effective July 5, 2005 as though they had been included in the proposed rule. We believe that waiving the notice and comment process with respect to those procedures is in the public interest. If notice and comment were not waived, we could not add the procedures suggested by public comments to the list of procedures that may be performed in ASCs. This result could be detrimental to beneficiaries, who might be unable to receive the procedures in an ambulatory setting. Therefore, we find good cause to waive notice and opportunity for comment with regard to the changes being made to the ASC list which were not published in the proposed rule.

### V. Regulatory Impact Statement

[If you choose to comment on issues in this section, please include the caption "REGULATORY IMPACT STATEMENT" at the beginning of your comments.]

### A. Overall Impact

We have examined the impact of this rule as required by Executive Order 12866 (September 1993, Regulatory Planning and Review), the Regulatory Flexibility Act (RFA) (September 16, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4), and Executive Order 13132.

Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). Our actuary has prepared a fiscal impact estimate. As shown in the table below, for fiscal years 2005 through 2009, the estimated effect on Medicare program expenditures that result from the additions to and deletions from the ASC list made final in this rule are estimated to have zero impact in 2005, increasing to \$5 million savings per year for 2006 through 2009. We expect the estimated savings to result from approximately 10 percent of

the procedures proposed for addition moving to a less costly ASC setting from the hospital. This interim final rule will not have a major impact on the Medicare budget.

| FY         | Cost (Tens of \$ millions) |
|------------|----------------------------|
| 2005 ..... | 0                          |
| 2006 ..... | -5                         |
| 2007 ..... | -5                         |
| 2008 ..... | -5                         |
| 2009 ..... | -5                         |

The RFA requires agencies to analyze options for regulatory relief of small businesses. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and government agencies. Most hospitals and most other providers and suppliers are small entities, either because of their nonprofit status or because they have revenues of \$6 million to \$29 million in any 1 year. According to small business associations, approximately 73 percent of all ASCs are considered small entities because they have revenues of \$11.5 million or less. Individuals and States are not included in the definition of a small entity.

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a final rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 100 beds. This interim final rule does not have a significant impact on the operations of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule that may result in expenditure in any 1 year by State, local or tribal governments, in the aggregate, or by the private sector, of \$110 million. This rule will not have an effect on the governments mentioned, and the private sector costs will be less than the \$110 million threshold.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a final rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This rule will not have a substantial effect on State or local governments.

#### B. Anticipated Effects

The entities affected by this interim final rule are Medicare certified ASCs, physician offices and clinics, hospitals, and beneficiaries. No other providers are affected. This rule will not affect State or local governments. There are more than 4,000 ASCs currently certified by Medicare, nearly three-quarters of which fit the definition of a "small entity".

This interim final rule revises the ASC list by adding 67 procedures and deleting five. Professional societies, physicians, ASC administrators, and ASC associations recommended most of the codes proposed for addition to the ASC list. Currently, the procedures that we propose to add to the ASC list are performed predominantly in a hospital outpatient setting. Our medical advisors agree that the proposed additions meet the criteria for ASC procedures that are discussed in section II of this preamble and that they can be safely and appropriately performed in an ASC.

Currently, if a physician performed one of the 67 procedures before the effective date of this rule, Medicare would not allow payment to the ASC. Addition of these procedures to the ASC list may benefit ASCs because it will allow Medicare to pay the facility fee to the ASC when the procedures are furnished there. Further, the additional procedures may increase the number of beneficiaries to whom the ASC can offer its services.

Beneficiaries may benefit from the additions to the ASC list because they will have an additional service setting that they and their physicians may consider for elective surgical procedures and the copayment amounts for services furnished in the ASC setting may be lower than in the hospital outpatient department where many of these procedures currently are furnished.

We estimate that approximately 25 percent of the newly-added procedures that are currently furnished in the physician office will migrate to an ASC setting. This may increase Medicare program spending and beneficiary copayment amounts because the ASC facility fees for these procedures often exceed changes in the physician office setting.

To the extent that hospital outpatient utilization decreases and ASC utilization increases, the Medicare program will realize a savings because the ASC facility fee for most of the proposed additions to the ASC list is lower than the payment rate for the same procedures under the OPPIs. Because hospitals perform a much higher volume of ambulatory surgeries

overall than are performed in ASCs, we do not expect significant hospital revenue losses from procedures proposed for addition to the ASC list shifting to the ASC setting.

In addition, we are deleting five procedures from the existing ASC list. We proposed to delete these codes based on recommendations from physicians or specialty societies because the procedures do not meet our criteria; however, they do not represent a significant volume of procedures furnished in ASCs and so deleting them from the list will have no negative effect on ASCs or beneficiaries. As we explained above, three of the codes that we are proposing to delete are procedures that are being performed primarily in a physician office setting and do not require the more elaborate resources of an ASC to be safely performed, and one is furnished 100 percent of the time as an inpatient procedure. Therefore, we do not believe that deleting these procedures from the ASC list will limit beneficiary access or compromise patient safety. For the above reasons, we are not preparing analyses for either the RFA or section 1102(b) of the Act because we have determined, and we certify, that this interim final rule would not have a significant economic impact on a substantial number of small entities or a significant impact on the operations of a substantial number of small rural hospitals.

#### C. Alternatives Considered

We are issuing this interim final rule to meet a statutory requirement to update the list of approved ASC procedures biennially. We last updated the ASC list effective July 1, 2003. We implement the biennial update of the list through notice in the **Federal Register** and give interested parties an opportunity to comment on proposed additions to and deletions from the ASC list. If we do not update the ASC list by July 2005, we would be out of compliance with the statute, and we would be denying beneficiary access to surgical procedures in the ASC setting that meet our criteria and are safely and appropriately performed in an ASC.

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

## The President

---

Proclamation 7891—Law Day, U.S.A., 2005  
Proclamation 7892—Loyalty Day, 2005

**Presidential Documents**

Title 3—

Proclamation 7891 of April 29, 2005

The President

Law Day, U.S.A., 2005

By the President of the United States of America

**A Proclamation**

The American legal system helps preserve our constitutional principles and ensures justice for all our citizens. As we celebrate Law Day, we recognize our Nation's commitment to the rule of law and the rights and privileges that all Americans share.

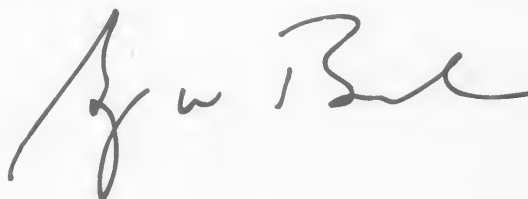

President Eisenhower established Law Day in 1958 to pay tribute to our heritage of liberty, justice, and equality under the law. Each year on Law Day, we recognize our Nation's commitment to a fair legal system and to protecting the rights and freedoms we cherish.

The theme of this year's Law Day, "The American Jury: We the People in Action," recognizes the imperative of self-government and the necessity of individuals' participation in the judicial process. By taking time away from their day-to-day responsibilities to serve on juries, Americans demonstrate their commitment to good citizenship and their willingness to uphold the laws of our Nation.

Since our founding, the jury has been a fundamental institution in American law and a pillar of our democracy. As we celebrate Law Day this year, we honor the continued role of the jury as a foundation of our legal system, and express our appreciation to all Americans who serve on juries.

NOW, THEREFORE, I, GEORGE W. BUSH, President of the United States of America, in accordance with Public Law 87-20, as amended, do hereby proclaim May 1, 2005, as Law Day, U.S.A. I also encourage Americans to observe May 1 through May 7, 2005, as National Juror Appreciation Week. I call upon the people of the United States to acknowledge the importance of our Nation's legal and judicial systems with appropriate ceremonies and activities, and to display the flag of the United States in support of this national observance.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-ninth day of April, in the year of our Lord two thousand five, and of the Independence of the United States of America the two hundred and twenty-ninth.

## Presidential Documents

Proclamation 7892 of April 29, 2005

Loyalty Day, 2005

By the President of the United States of America

### A Proclamation

Generations of men and women have sacrificed to defend the basic principles of liberty upon which our Nation was founded. This spirit of selfless service helps keep America strong and free. On Loyalty Day, we join together to celebrate this bond that makes our country great.

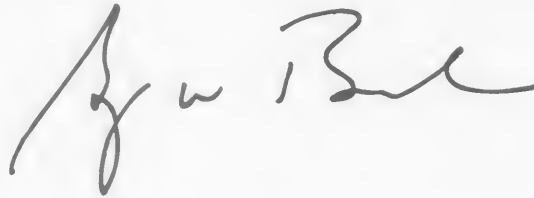

For more than two centuries, our military has given us examples of courage and patriotism that make every American proud. Today, more than a million Americans are stationed around the world, taking great risks and making personal sacrifices to secure the blessings of liberty for our country and to spread peace and freedom. These brave men and women are unrelenting in battle and unwavering in loyalty. Their service exemplifies our Nation's ideals, and they have our gratitude and support.

Volunteer service is also a proud American value. Our Nation relies on compassionate souls who look after their neighbors and surround the lost with love. Through good works, we can extend the promise of our country into every home and neighborhood. This year, I announced a new initiative, Helping America's Youth, led by First Lady Laura Bush, to help young people overcome the challenges they may face and emphasize the importance of loving, caring adults in every child's life. By educating and preparing today's young people to be the leaders of tomorrow, we strengthen our country and pass on the liberties we cherish to rising generations.

The Congress, by Public Law 85-529, as amended, has designated May 1 of each year as "Loyalty Day." On Loyalty Day, we honor our great Nation and the people who help keep it safe and strong. I ask all Americans to join me in this day of celebration and in reaffirming our allegiance to our Nation.

NOW, THEREFORE, I, GEORGE W. BUSH, President of the United States of America, do hereby proclaim May 1, 2005, as Loyalty Day. I call upon all the people of the United States to join in support of this national observance, and to display the flag of the United States on Loyalty Day.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-ninth day of April, in the year of our Lord two thousand five, and of the Independence of the United States of America the two hundred and twenty-ninth.

A handwritten signature in black ink, appearing to read "G. W. Bush". The signature is written in a cursive, flowing style with a large initial "G" and a long, sweeping underline.

#### LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. It

may be used in conjunction with "PLUS" (Public Laws Update Service) on 202-741-6043. This list is also available online at [http://www.archives.gov/federal\\_register/public\\_laws/public\\_laws.html](http://www.archives.gov/federal_register/public_laws/public_laws.html).

The text of laws is not published in the **Federal Register** but may be ordered in "slip law" (individual pamphlet) form from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 (phone, 202-512-1808). The text will also be made available on the Internet from GPO Access at <http://www.gpoaccess.gov/plaws/index.html>. Some laws may not yet be available.

#### H.R. 787/P.L. 109-10

To designate the United States courthouse located at 501 I Street in Sacramento, California, as the "Robert T. Matsui United States Courthouse". (Apr. 29, 2005; 119 Stat. 228)

Last List April 29, 2005

#### Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html>

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. PENS cannot respond to specific inquiries sent to this address.

# Public Laws

108th Congress

Pamphlet prints of public laws, often referred to as slip laws, are the initial publication of Federal laws upon enactment and are printed as soon as possible after approval by the President. Legislative history references appear on each law. Subscription service includes all public laws, issued irregularly upon enactment, for the 108th Congress.

Individual laws also may be purchased from the Superintendent of Documents, U.S. Government Printing Office. Prices vary. See Reader Aids Section of the Federal Register for announcements of newly enacted laws or access the online database at <http://www.access.gpo.gov/nara1/nara005.html>

**The United States Government Manual  
2004/2005**

As the official handbook of the Federal Government, the *Manual* is the best source of information on the activities, functions, organization, and principal officials of the agencies of the legislative, judicial, and executive branches. It also includes information on quasi-official agencies and international organizations in which the United States participates.

Particularly helpful for those interested in where to go and who to contact about a subject of particular concern is each agency's "Sources of Information" section, which provides addresses and telephone numbers for use in obtaining specifics on consumer activities, contracts and grants, employment, publications and films, and many other areas of citizen interest. The *Manual* also includes comprehensive name and agency/subject indexes.

Of significant historical interest is Appendix B, which lists the agencies and functions of the Federal Government abolished, transferred, or renamed subsequent to March 4, 1933.

The *Manual* is published by the Office of the Federal Register, National Archives and Records Administration.
