ILLINOIS

HISTORY

OF

GRANT COUNTY,

WISCONSIN,

CONTAINING

AN ACCOUNT OF ITS SETTLEMENT, GROWTH, DEVELOPMENT AND RESOURCES; AN EXTENSIVE AND
MINUTE SKETCH OF ITS CITIES, TOWNS AND VILLAGES—THEIR IMPROVEMENTS, INDUSTRIES,
MANUFACTORIES, CHURCHES, SCHOOLS AND SOCIETIES; ITS WAR RECORD, BIOGRAPH-
ICAL SKETCHES, PORTRAITS OF PROMINENT MEN AND EARLY SETTLERS;
THE WHOLE PRECEDED BY A HISTORY OF WISCONSIN, STATISTICS
OF THE STATE, AND AN ABSTRACT OF ITS LAWS AND CON-
STITUTION AND OF THE CONSTITUTION
OF THE UNITED STATES.

ILLUSTRATED.

PREFACE.

IN THE preparation of this work, the object sought after was to place upon permanent record the events which have given life and character to Grant County. The territory known as Wisconsin and the more circumscribed locality called the Lead Region have each been treated herein, briefly, but to a degree necessary in the complete development of the plan. The more local history is given ample space, and includes a biographical representation which will be recognized as one of the most valuable portions of the book. The glorious war history of Grant County is elaborately preserved. The reminiscences of early settlers and the characteristic deeds of prominent men find place in the volume, forming interesting and instructive pages. Patient labor has been devoted to the compilation and arrangement of historic facts. Herein is furnished a reflex of the by-gone days. The publisher has endeavored to do all in his power to secure accuracy—that prime essential to value in a work of this nature. In the consciousness of honest intentions and unsparing effort, he presents the history with confidence. Thanks are hereby expressed to the scores of pioneers, to the county officials, to the clergy and to the press, for the uniform courtesy extended the compilers.

JULY, 1881.

HISTORY OF WISCONSIN.

BY C. W. BUTTERFIELD.

I.—WISCONSIN ANTIQUITIES.

The first explorers of the valleys of the Great Lakes and the Mississippi and its tributaries, seem not to have noticed, to any considerable extent, the existence within these vast areas of monuments of an extinct race. Gradually, however, as the tide of emigration broke through the barriers of the Alleghanies and spread in a widely extended flow over what are now the States of the Northwest, these prehistoric vestiges attracted more and more the attention of the curious and the learned, until, at the present time, almost every person is presumed to have some general knowledge, not only of their existence, but of some of their striking peculiarities. Unfortunately, these signs of a long since departed people are fast disappearing by the never ceasing operations of the elements, and the constant encroachments of civilization. The earliest notices of the animal and vegetable kingdom of this region are to be found in its rocks; but Wisconsin's earliest records of men can only be traced in here and there a crumbling earth-work, in the fragment of a skeleton, or in a few stone and copper implements—dim and shadowy relics of their handicraft.

The ancient dwellers in these valleys, whose history is lost in the lapse of ages, are designated, usually, as the Mound-Builders; not that building mounds was probably their distinctive employment, but that such artificial elevations of the earth are, to a great extent, the only evidences remaining of their actual occupation of the country. As to the origin of these people, all knowledge must, possibly, continue to rest upon conjecture alone. Nor were the habitations of this race confined to the territory of which Wisconsin now forms a part. At one time, they must have been located in many ulterior regions. The earth-works, tumuli, or "mounds," as they are generally designated, are usually symmetrically raised and often inclosed in mathematical figures, such as the square, the octagon, and the circle, with long lines of circumvallation. Besides these earth-works, there are pits dug in the solid rock; rubbish heaps formed in the prosecution of mining operations; and a variety of implements and utensils, wrought in copper or stone, or moulded in clay. Whence came the inhabitants who left these evidences to succeeding generations? In other words, who were the Mound-Builders? Did they migrate from the Old World, or is their origin to be sought for elsewhere? And as to their manners and customs and civilization—what of these things? Was the race finally swept from the New World to give place to Red men, or was it the one from which the latter descended? These momentous questions are left for the ethnologist, the archæologist, and the antiquarian of the future to answer—if they can.

Inclosures and mounds of the prehistoric people, it is generally believed, constituted but parts of one system; the former being, in the main, intended for purposes of defense or religion; the latter, for sacrifice, for temple sites, for burial places, or for observatories. In selecting sites for many of these earth-works, the Mound-Builders appear to have been influenced by motives which prompt civilized men to choose localities for their great marts; hence, Cincinnati, St. Louis, Chicago, Milwaukee and other cities of the West are founded on ruins of pre-existing structures. River terraces and river bottoms seem to have been the favorite places for these earth-works. In such localities, the natural advantages of the country could be made available with much less trouble than in portions of the country lying at a distance from water-courses. In Wisconsin, therefore, as in other parts, the same general idea of selecting points contiguous to the principal natural thoroughfares is found to have prevailed with the Mound-Builders; for their works are seen in the basin of the Fox river of the Illinois, in that of Rock river and its branches, in the valley of Fox river of Green bay, in that of the Wisconsin, as well as near the waters of the Mississippi.

While a few circumvallations and immense mounds, such as are common to certain other portions of the United States, are discoverable in Wisconsin, yet by far the largest number of earthworks have one peculiarity not observable, except in a few instances, outside the State. This characteristic is a very striking one. The fact is revealed that they are imitative in form—resembling beasts, reptiles, birds, fish, man. All these, for convenience, are usually classed under the general name of “animal mounds,” although some are in the similitude of trees, some of war clubs, others of tobacco pipes. Generally, these figures are in groups, though sometimes they are seen alone. For what purpose these earth-works were heaped up—they rise above the surface two, four, and sometimes six feet—or what particular uses they were intended to subserve, is unknown. It is, however, safe to affirm that they had some significance. A number resemble the bear; a few, the buffalo; others, the raccoon. Lizards, turtles, and even tadpoles, are outlined in the forms of some. The war eagle, and the war club has each its representative. All this, of course, could not have been a mere happening—the work of chance. The sizes of these mounds are as various as their forms. One near Cassville, in Grant county, very complete in its representation of an animal, supposed to be of the elephant species, was found, upon measurement, to have a total length of one hundred and thirty-five feet. Another in Sauk county, quite perfect in its resemblance to the form of a man, was of equal length—a veritable colossus; prone, it is true, and soon to disappear, if it has not already been destroyed, by ravages of a superior civilization.

In portions of Wisconsin, as well as in a few places outside the State, are found earth-works of another kind, but quite as remarkable as the “animal mounds,” which, from their supposed use, have been styled “garden beds.” They are ridges, or beds, about six inches in height and four feet in width, ranged, with much apparent method, in parallel rows, sometimes rectangular in shape, sometimes of various but regular and symmetrical curves, and occupying fields of from ten to a hundred acres.

The Mound-Builders have left many relics, besides their earthworks, to attest their presence in Wisconsin in ages past. Scattered widely are found stone and copper axes, spear-heads, and arrow-heads, also various other implements—evidently their handiwork. As these articles are frequently discovered many feet beneath the surface, it argues a high antiquity for the artificers. Whether they had the skill to mould their copper implements is doubtful. Such as plainly show the work of hammering, indicate an art beyond that possessed by the Red men who peopled America upon its first discovery by Europeans. In a few instances, fragments of human skulls have been found so well preserved as to enable a comparison to be drawn between the crania of

this ancient race and those of modern ones; the results, however, of these comparisons throw little, if any, light upon "the dark backward and abysm" of mound-building times.

The evidences of an extinct people of superior intelligence is very strikingly exhibited in the ancient copper mines of the Lake Superior region. Here are to be found excavations in the solid rock; heaps of rubble and dirt; copper utensils fashioned into knives, chisels, and spear and arrow-heads; stone hammers; wooden bowls and shovels; props and levers for raising and supporting the mass copper; and ladders for ascending and descending the pits. These mines were probably worked by people not only inhabiting what is now the State of Wisconsin, but territory farther to the southward. The copper was here obtained, it is believed, which has been found in many places, even as far away as the northern shore of the Gulf of Mexico, wrought into various implements and utensils. But there are no traces in Wisconsin of a "copper age" succeeding a "stone age," discernible in any prehistoric relics. They all refer alike to one age—the indefinite past; to one people—the Mound-Builders.

II.—THE INDIAN TRIBES OF WISCONSIN.

When, as early, it is believed, as 1634, civilized man first set foot upon the territory now included within the boundaries of Wisconsin, he discovered, to his surprise, that upon this wide area met and mingled clans of two distinct and wide-spread families—the Algonquins and Sioux. The tribes of the former, moving westward, checked the advance of the latter in their excursions eastward. As yet there had been no representatives of the Huron-Iroquois seen west of Lake Michigan—the members of this great family, at that date dwelling in safety in the extensive regions northward and southward of the Erie and Ontario lakes. Already had the French secured a foot-hold in the extensive valley of the St. Lawrence; and, naturally enough, the chain of the Great Lakes led their explorers to the mouth of Green bay, and up that water-course and its principal tributary, Fox river, to the Wisconsin, an affluent of the Mississippi. On the right, in ascending this bay, was seen, for the first time, a nation of Indians, lighter in complexion than neighboring tribes, and remarkably well formed, now well known as the MEMOMONEES.

This nation is of Algonquin stock, but their dialect differed so much from the surrounding tribes of the same family, it having strange guttural sounds and accents, as well as peculiar inflections of verbs and other parts of speech, that, for a long time, they were supposed to have a distinct language. Their traditions point to an emigration from the East at some remote period. When first visited by the French missionaries, these Indians subsisted largely upon wild rice, from which they took their name. The harvest time of this grain was in the month of September. It grew spontaneously in little streams with slimy bottoms, and in marshy places. The harvesters went in their canoes across these watery fields, shaking the ears right and left as they advanced, the grain falling easily, if ripe, into the bark receptacle beneath. To clear it from chaff and strip it of a pellicle inclosing it, they put it to dry on a wooden lattice above a small fire, which was kept up for several days. When the rice was well dried, it was placed in a skin of the form of a bag, which was then forced into a hole, made on purpose, in the ground. They then tread it out so long and so well, that the grain being freed from the chaff, was easily winnowed. After this, it was pounded to meal, or left unpounded, and boiled in water seasoned with grease. It thus became a very palatable diet. It must not be inferred that this was the only food of the Menomonees; they were adepts in fishing, and hunted with skill the game which abounded in the forests.

For many years after their discovery, the Menomonees had their homes and hunting

grounds upon, or adjacent to, the Menomonee river. Finally, after the lapse of a century and a quarter, down to 1760, when the French yielded to the English all claims to the country, the territory of the Menomonees had shifted somewhat to the westward and southward, and their principal village was found at the head of Green bay, while a smaller one was still in existence at the mouth of their favorite stream. So slight, however, had been this change, that the country of no other of the surrounding tribes had been encroached upon by the movement.

In 1634, the Menomonees probably took part in a treaty with a representative of the French, who had thus early ventured so far into the wilds of the lake regions. More than a score of years elapsed before the tribe was again visited by white men,—that is to say, there are no authentic accounts of earlier visitations. In 1660, Father René Menard had penetrated the Lake Superior country as far, at least, as Kewenaw, in what is now the northern part of Michigan, whence some of his French companions probably passed down the Menomonee river to the waters of Green bay the following year; but no record of the Indians, through whose territory they passed, was made by these voyagers. Ten years more—1670—brought to the Menomonees (who doubtless had already been visited by French fur-traders) Father Claudius Allouez, to win them to Christianity. He had previously founded a mission upon the bay of Chegoimegon, now Chaquamegon, or Ashland bay, an arm of Lake Superior, within the present State of Wisconsin, in charge of which, at that date, was Father James Marquette. Proceeding from the "Sault" on the third of November, Allouez, early in December, 1669, reached the mouth of Green bay, where, on the third, in an Indian village of Sacs, Pottawattamies, Foxes and Winnebagoes, containing about six hundred souls, he celebrated the holy mass for the first time upon this new field of his labors,—eight Frenchmen, traders with the Indians, whom the missionary found there upon his arrival, taking part in the devotions. His first Christian work with the Menomonees was performed in May of the next year. Allouez found this tribe a feeble one, almost exterminated by war. He spent but little time with them, embarking, on the twentieth of that month, after a visit to some Pottawattamies and Winnebagoes, "with a Frenchman and a savage to go to Sainte Mary of the Sault." His place was filled by Father Louis André, who, not long after, erected a cabin upon the Menomonee river, which, with one at a village where his predecessor had already raised the standard of the cross, was soon burned by the savages; but the missionary, living almost constantly in his canoe, continued for some time to labor with the Menomonees and surrounding tribes. The efforts of André were rewarded with some conversions among the former; for Marquette, who visited them in 1673, found many good Christians among them.

The record of ninety years of French domination in Wisconsin—beginning in June, 1671, and ending in October, 1761—brings to light but little of interest so far as the Menomonees are concerned. Gradually they extended their intercourse with the white fur traders. Gradually and with few interruptions (one in 1728, and one in 1747 of a serious character) they were drawn under the banner of France, joining with that government in its wars with the Iroquois; in its contests, in 1712, 1729, 1730, and 1751, with the Foxes; and, subsequently, in its conflicts with the English.

The French post, at what is now Green Bay, Brown county, Wisconsin, was, along with the residue of the western forts, surrendered to the British in 1760, although actual possession of the former was not taken until the Fall of the next year. The land on which the fort stood was claimed by the Menomonees. Here, at that date, was their upper and principal village, the lower one being at the mouth of the Menomonee river. These Indians soon became reconciled to the English occupation of their territory, notwithstanding the machinations of French traders who endeavored to prejudice them against the new comers. The Menomonees, at this time, were very much reduced, having, but a short time previous, lost three hundred of their warriors.

by the small pox, and most of their chiefs in the late war in which they had been engaged by the then French commander there, against the English. They were glad to substitute English for French traders; as they could purchase supplies of them at one half the price they had previously paid. It was not long before the sincerity of the Menomonees was put to the test. Pontiac's War of 1763 broke out, and the post of Mackinaw was captured. The garrison, however, at Green bay was not only not attacked by the savages, but, escorted by the Menomonees and other tribes, crossed Lake Michigan in safety to the village of L'Arbre Croche; thence making their way to Montreal. The Menomonees continued their friendship to the English, joining with them against the Colonies during the Revolution, and fighting on the same side during the war of 1812-15.

When, in July, 1816, an American force arrived at Green bay to take possession of the country, the Menomonees were found in their village near by, very peaceably inclined. The commander of the troops asked permission of their chief to build a fort. "My Brother!" was the response, "how can we oppose your locating a council-fire among us? You are too strong for us. Even if we wanted to oppose you we have scarcely got powder and ball to make the attempt. One favor we ask is, that our French brothers shall not be disturbed. You can choose any place you please for your fort, and we shall not object." No trouble had been anticipated from the Menomonees, and the expectations of the government of the United States in that regard were fully realized. What added much to the friendship now springing up between the Menomonees and the Americans was the fact that the next year—1817—the annual contribution, which for many years had been made by the British, consisting of a shirt, leggins, breech-clout, and blanket for each member of the tribe, and for each family a copper kettle, knives, axes, guns and ammunition, was withheld by them.

It was found by the Americans, upon their occupation of the Menomonee territory, that some of the women of that tribe were married to traders and boatmen who had settled at the head of the bay, there being no white women in that region. Many of these were Canadians of French extraction; hence the anxiety that they should be well treated, which was expressed by the Menomonees upon the arrival of the American force. At this period there was a considerable trade carried on with these Indians at Prairie du Chien, as many of them frequently wintered on the Mississippi. The first regular treaty with this tribe was "made and concluded" on the thirtieth day of March, 1817, "by and between William Clark, Ninian Edwards, and Auguste Chouteau, commissioners on the part and behalf of the United States of America, of the one part," and the chiefs and warriors, deputed by the Menomonees, of the other part. By the terms of this compact all injuries were to be forgiven and forgotten; perpetual peace established; lands, heretofore ceded to other governments, confirmed to the United States; all prisoners to be delivered up; and the tribe placed under the protection of the United States, "and of no other nation, power, or sovereign, whatsoever." The Menomonees were now fully and fairly, and for the first time, entitled to be known as "American Indians," in contradistinction to the term which had been so long used as descriptive of their former allegiance—"British Indians."

The territory of the Menomonees, when the tribe was taken fully under the wing of the General Government, had become greatly extended. It was bounded on the north by the dividing ridge between the waters flowing into Lake Superior and those flowing south into Green bay and the Mississippi; on the east, by Lake Michigan; on the south, by the Milwaukee river, and on the west by the Mississippi and Black rivers. This was their territory; though they were practically restricted to the occupation of the western shore of Lake Michigan, lying between the mouth of Green bay on the north and the Milwaukee river on the south, and to a somewhat indefinite area west. Their general claim as late as 1825, was north to the Chippewa country:

east to Green bay and Lake Michigan; south to the Milwaukee river, and west to Black river. And what is most surprising is that the feeble tribe of 1761 had now, in less than three quarters of a century, become a powerful nation, numbering between three and four thousand.

The Menomonee territory, as late as 1831, still preserved its large proportions. Its eastern division was bounded by the Milwaukee river, the shore of Lake Michigan, Green bay, Fox river, and Winnebago lake; its western division, by the Wisconsin and Chippewa rivers on the west; Fox river on the south; Green bay on the east, and the high lands whence flow the streams into Lake Superior, on the north. This year, however, it was shorn of a valuable and large part by the tribe ceding to the United States all the eastern division, estimated at two and one half million acres. The following year, the Menomonees aided the General Government in the Black Hawk war.

That the Menomonees might, as much as possible, be weaned from their wandering habits, their permanent home was designated to be a large tract lying north of Fox river and east of Wolf river. Their territory farther west, was reserved for their hunting grounds until such time as the General Government should desire to purchase it. In 1836, another portion, amounting to four million acres, lying between Green bay on the east and Wolf river on the west, was disposed of to the United States, besides a strip three miles in width from near the portage north, on each side of the Wisconsin river and forty-eight miles long—still leaving them in peaceable possession of a country about one hundred and twenty miles long, and about eighty broad.

Finally, in 1848, the Menomonees sold all their lands in Wisconsin to the General Government, preparatory to their movement to a reservation beyond the Mississippi of six hundred thousand acres; but the latter tract was afterward re-ceded to the United States; for, notwithstanding there were treaty stipulations for the removal of the tribe to that tract, there were obstacles in the way of their speedy migration, resulting, finally, in their being permitted to remain in Wisconsin. Lands, to the amount of twelve townships, were granted them for their permanent homes, on the upper Wolf river, in what is now Shawano and Oconto counties—a portion, but a very small one, of what was once their extensive possessions. To this reservation they removed in October, 1852. Thus are the Menomonees, the only one of the original tribes of Wisconsin who, as a whole, have a local habitation within its limits. This tribe refused to join the Sioux in their outbreak in 1861, and several of their warriors served as volunteers in the United States army during the late civil war.

It is now over two centuries since the civilized world began to gain knowledge of the existence, in the far West, of a tribe of Indians known as the WINNEBAGOES—that is, *men of the sea*; pointing, possibly, to their early migration from the shores of the Mexican gulf, or the Pacific. The territory now included within the limits of Wisconsin, and so much of the State of Michigan as lies north of Green bay, Lake Michigan, the Straits of Mackinaw and Lake Huron were, in early times, inhabited by several tribes of the Algonquin race, forming a barrier to the Dakotas, or Sioux, who had advanced eastward to the Mississippi. But the Winnebagoes, although one of the tribes belonging to the family of the latter, had passed the great river, at some unknown period, and settled upon the head waters of Green bay. Here, this “sea-tribe,” as early, it is believed, as 1634, was visited by an agent of France and a treaty concluded with them. The tribe afterward called themselves Hochungara, or Ochunkoraw, but were styled by the Sioux, Hotanke, or Sturgeon. Nothing more is heard of the Ouenibigoutz, or Winnebegouk (as the Winnebagoes were early called by the Jesuit missionaries, and the Algonquin tribes, meaning men from the fetid or salt water, translated by the French, Puants) for the next thirty-five years, although there is no doubt that the tribe had been visited meanwhile by adventurous Frenchmen, when on the second of December, 1669, some of that nation were noted at a Sac (Sauk or Saukis) village on Green bay, by Father Allouez.

As early at least as 1670, the French were actively engaged among the Winnebagoes trading. "We found affairs," says one of the Jesuit missionaries, who arrived among them in September of that year, "we found affairs there in a pretty bad posture, and the minds of the savages much soured against the French, who were there trading; ill-treating them in deeds and words, pillaging and carrying away their merchandise in spite of them, and conducting themselves toward them with insupportable insolences and indignities. The cause of this disorder," adds the missionary, "is that they had received some bad treatment from the French, to whom they had this year come to trade, and particularly from the soldiers, from whom they pretended to have received many wrongs and injuries." It is thus made certain that the arms of France were carried into the territory of the Winnebagoes over two hundred years ago.

The Fox river of Green bay was found at that date a difficult stream to navigate. Two Jesuits who ascended the river in 1670, had "three or four leagues of rapids to contend with," when they had advanced "one day's journey" from the head of the bay, "more difficult than those which are common in other rivers, in this, that the flints, over which" they had to walk with naked feet to drag their canoes, were so "sharp and so cutting, that one has all the trouble in the world to hold one's self steady against the great rushing of the waters." At the falls they found an idol that the savages honored; "never failing, in passing, to make him some sacrifice of tobacco, or arrows, or paintings, or other things, to thank him that, by his assistance, they had, in ascending, avoided the dangers of the waterfalls which are in this stream; or else, if they had to ascend, to pray him to aid them in this perilous navigation." The devout missionaries caused the idol "to be lifted up by the strength of arm, and cast into the depths of the river, to appear no more" to the idolatrous savages.

The mission of St. Francis Xavier, founded in December, 1669, by Allouez, was a roving one among the tribes inhabiting the shores of Green bay and the interior country watered by the Fox river and its tributaries, for about two years, when its first mission-house was erected at what is now Depere, Brown county. This chapel was soon after destroyed by fire, but was rebuilt in 1676.

The Winnebagoes, by this time, had not only received considerable spiritual instruction from the Jesuit fathers, but had obtained quite an insight into the mysteries of trading and trafficking with white men; for, following the footsteps of the missionaries, and sometimes preceding them, were the ubiquitous French fur traders. It is impossible to determine precisely what territory was occupied by the Winnebagoes at this early date, farther than that they lived near the head of Green bay.

A direct trade with the French upon the St. Lawrence was not carried on by the Winnebagoes to any great extent until the beginning of the eighteenth century. As early as 1679, an advance party of La Salle had collected a large store of furs at the mouth of Green bay, doubtless in a traffic with this tribe and others contiguous to them; generally, however, the surrounding nations sold their peltries to the Ottawas, who disposed of them, in turn, to the French. The commencement of the eighteenth century found the Winnebagoes firmly in alliance with France, and in peace with the dreaded Iroquois. In 1718, the nation numbered six hundred. They were afterward found to have moved up Fox river, locating upon Winnebago lake, which stream and lake were their ancient seat, and from which they had been driven either by fear or the prowess of more powerful tribes of the West or Southwest. Their intercourse with the French was gradually extended and generally peaceful, though not always so, joining with them, as did the Menomonees, in their wars with the Iroquois, and subsequently in their conflicts with the English, which finally ended in 1760.

When the British, in October, 1761, took possession of the French post, at the head of

Green bay, the Winnebagoes were found to number one hundred and fifty warriors only; their nearest village being at the lower end of Winnebago lake. They had in all not less than three towns. Their country, at this period, included not only that lake, but all the streams flowing into it, especially Fox river; afterward extended to the Wisconsin and Rock rivers. They readily changed their course of trade—asking now of the commandant at the fort for English traders to be sent among them. In the Indian outbreak under Pontiac in 1763, they joined with the Menomonees and other tribes to befriend the British garrison at the head of the bay, assisting in conducting them to a place of safety. They continued their friendship to the English during the Revolution, by joining with them against the colonies, and were active in the Indian war of 1790-4, taking part in the attack on Fort Recovery, upon the Maumee, in the present State of Ohio, in 1793. They fought also on the side of the British in the war of 1812-15, aiding, in 1814, to reduce Prairie du Chien. They were then estimated at 4,500. When, in 1816, the government of the United States sent troops to take possession of the Green bay country, by establishing a garrison there, some trouble was anticipated from these Indians, who, at that date, had the reputation of being a bold and warlike tribe. A deputation from the nation came down Fox river and remonstrated with the American commandant at what was thought to be an intrusion. They were desirous of knowing why a fort was to be established so near them. The reply was that, although the troops were armed for war if necessary, their purpose was peace. Their response was an old one: "If your object is peace, you have too many men; if war, you have too few." However, the display of a number of cannon which had not yet been mounted, satisfied the Winnebagoes that the Americans were masters of the situation, and the deputation gave the garrison no farther trouble. On the 3d of June, 1816, at St. Louis, the tribe made a treaty of peace and friendship with the General Government; but they continued to levy tribute on all white people who passed up Fox river. English annuities also kept up a bad feeling. At this time, a portion of the tribe was living upon the Wisconsin river, away from the rest of the nation, which was still seated upon the waters flowing into Green bay. In 1820, they had five villages on Winnebago lake and fourteen on Rock river. In 1825, the claim of the Winnebagoes was an extensive one, so far as territory was concerned. Its southeast boundary stretched away from the source of Rock river to within forty miles of its mouth, in Illinois, where they had a village. On the west it extended to the heads of the small streams flowing into the Mississippi. To the northward, it reached Black river and the upper Wisconsin, in other words, to the Chippewa territory, but did not extend across Fox river, although they contended for the whole of Winnebago lake. In 1829, a large part of their territory in southwest Wisconsin, lying between Sugar river and the Mississippi, and extending to the Wisconsin river, was sold to the General Government; and, three years later all the residue lying south and east of the Wisconsin and the Fox river of Green bay; the Winnebago prophet having before that date supported the Sacs in their hostility. Finally, in the brief language of the treaty between this tribe (which had become unsettled and wasteful) and the United States, of the first of November, 1837, "The Winnebago Nation of Indians" ceded to the General Government "all their lands east of the Mississippi." Not an acre was reserved. And the Indians agreed that, within eight months from that date, they would move west of "the great river." This arrangement, however, was not carried out fully. In 1842, there were only 756 at Turkey river, Iowa, their new home, with as many in Wisconsin, and smaller bands elsewhere. All had become lawless, and roving. Some removed in 1848; while a party to the number of over eight hundred left the State as late as 1873. The present home of the tribe is in Nebraska, where they have a reservation north of and adjacent to the Omahas, containing over one hundred thousand acres. However, since their first removal beyond the Mississippi, they have several times

changed their place of abode. Their number, all told, is less than twenty-five hundred.

When the territory, now constituting the northern portion of Wisconsin, became very generally known to the civilized inhabitants of the eastern part of the United States, it was found to be occupied by Indians called the CHIPPEWAS. Their hunting-grounds extended south from Lake Superior to the heads of the Menomonee, the Wisconsin and Chippewa rivers; also farther eastward and westward. At an early day they were engaged in a war with the Sioux—a war indeed, which was long continued. The Chippewas, however, persistently maintained their position—still occupying the same region when the General Government extended its jurisdiction over the whole country south of the Great Lakes and west to the Mississippi.

By treaties with the Chippewas at different periods, down to the year 1827, the General Government had recognized them as the owners of about one quarter of what is now the entire State. The same policy was pursued toward this tribe as with neighboring ones, in the purchase of their lands by the United States. Gradually they parted with their extensive possessions, until, in 1842, the last acre within what is now Wisconsin was disposed of. It was the intention of the General Government to remove the several bands of the Chippewas who had thus ceded their lands to a tract reserved for them beyond the Mississippi; but this determination was afterward changed so as to allow them to remain upon certain reservations within the limits of their old-time hunting grounds. These reservations they continue to occupy. They are located in Bay-field, Ashland, Chippewa and Lincoln counties. The clans are known, respectively, as the Red Cliff band, the Bad River band, the Lac Courte Oreille band, and the Lac de Flambeau band.

Of all the tribes inhabiting what is now Wisconsin when its territory was first visited by white men, the SACS (Sauks or Saukies) and FOXES (Outagamies) are, in history, the most noted. They are of the Algonquin family, and are first mentioned in 1665, by Father Allouez, but as separate tribes. Afterward, however, because of the identity of their language, and their associations, they were and still are considered as one nation. In December, 1669, Allouez found upon the shores of Green bay a village of Sacs, occupied also by members of other tribes; and early in 1670 he visited a village of the same Indians located upon the Fox river of Green bay, at a distance of four leagues from its mouth. Here a device of these Indians for catching fish arrested the attention of the missionary. "From one side of the river to the other," he writes, "they made a barricade, planting great stakes, two fathoms from the water, in such a manner that there is, as it were, a bridge above for the fishes, who, by the aid of a little bow-net, easily take sturgeons and all other kinds of fish which this pier stops, although the water does not cease to flow between the stakes." When the Jesuit father first obtained, five years previous, a knowledge of this tribe, they were represented as savage above all others, great in numbers, and without any permanent dwelling place. The Foxes were of two stocks: one calling themselves Outagamies or Foxes, whence our English name; the other, Musquakink, or men of red clay, the name now used by the tribe. They lived in early times with their kindred the Sacs east of Detroit, and as some say near the St. Lawrence. They were driven west, and settled at Saginaw, a name derived from the Sacs. Thence they were forced by the Iroquois to Green bay; but were compelled to leave that place and settle on Fox river.

Allouez, on the twenty-fourth of April, 1670, arrived at a village of the Foxes, situated on Wolf river, a northern tributary of the Fox. "The nation," he declares, "is renowned for being numerous; they have more than four hundred men bearing arms; the number of women and children is greater, on account of polygamy which exists among them—each man having commonly four wives, some of them six, and others as high as ten." The missionary found that the Foxes had retreated to those parts to escape the persecutions of the Iroquois. Allouez established among these Indians his mission of St. Mark, rejoicing in the fact that in less than

two years he had baptized "sixty children and some adults." The Foxes, at the summons of De la Barre, in 1684, sent warriors against the Five Nations. They also took part in Denonville's more serious campaign; but soon after became hostile to the French. As early as 1693, they had plundered several on their way to trade with the Sioux, alleging that they were carrying arms and ammunition to their ancient enemies—frequently causing them to make portages to the southward in crossing from Lake Michigan to the Mississippi. Afterward they became reconciled to the French; but the reconciliation was of short duration. In 1712, Fort Detroit, then defended by only a handful of men, was attacked by them in conjunction with the Mascoutens and Kickapoos. However, in the end, by calling in friendly Indians, the garrison not only protected themselves but were enabled to act on the offensive, destroying the greater part of the besieging force.

The nation continued their ill will to the French. The consequence was that their territory in 1716 had been invaded and they were reduced to sue for peace. But their friendship was not of long continuance. In 1718, the Foxes numbered five hundred men and "abounded in women and children." They are spoken of at that date as being very industrious, raising large quantities of Indian corn. In 1728, another expedition was sent against them by the French. Meanwhile the Menomonees had also become hostile; so, too, the Sacs, who were now the allies of the Foxes. The result of the enterprise was, an attack upon and the defeat of a number of Menomonees; the burning of the wigwams of the Winnebagoes (after passing the deserted village of the Sacs upon the Fox river), that tribe, also, at this date being hostile; and the destruction of the fields of the Foxes. They were again attacked in their own country by the French, in 1730, and defeated. In 1734, both the Sacs and Foxes came in conflict with the same foe; but this time the French were not as successful as on previous expeditions. In 1736, the Sacs and Foxes were "connected with the government of Canada;" but it is certain they were far from being friendly to the French.

The conflict between France and Great Britain commencing in 1754, found the Sacs and Foxes allied with the former power, against the English, although not long previous to this time they were the bitter enemies of the French. At the close of that contest so disastrous to the interests of France in North America, these tribes readily gave in their adhesion to the conquerors, asking that English traders might be sent them. The two nations, then about equally divided, numbered, in 1761, about seven hundred warriors. Neither of the tribes took part in Pontiac's war, but they befriended the English. The Sacs had migrated farther to the westward; but the Foxes—at least a portion of them—still remained upon the waters of the river of Green bay, which perpetuates their name. A few years later, however, and the former were occupants of the upper Wisconsin; also, to a considerable distance below the portage, where their chief town was located. Further down the same stream was the upper village of the Foxes, while their lower one was situated near its mouth at the site of the present city of Prairie du Chien. At this date, 1766, the northern portion of what is now Wisconsin, including all that part watered by the streams flowing north into Lake Superior, was the home of the Chippewas. The country around nearly the whole of Green bay was the hunting ground of the Menomonees. The territory of Winnebago lake and Fox river was the seat of the Winnebagoes. The region of the Wisconsin river was the dwelling place of the Sacs and Foxes.

During the war of the Revolution, the Sacs and Foxes continued the firm friends of the English. At the commencement of the nineteenth century, only a small part of their territory was included in what is now Wisconsin, and that was in the extreme southwest. In 1804, they ceded this to the United States; so that they no longer were owners of any lands within this State. From that date, therefore, these allied tribes can not be considered as belonging to the

Indian nations of Wisconsin. A striking episode in their subsequent history — the Black Hawk War — comes in, notwithstanding, as a part, incidentally, of the annals of the State.

Deserving a place in a notice of the Indian tribes of Wisconsin is the nation known as the POTTAWATTAMIES. As early as 1639, they were the neighbors of the Winnebagoes upon Green bay. They were still upon its southern shore, in two villages, in 1670; and ten years subsequent to that date they occupied, at least in one village the same region. At the expiration of the first quarter of the eighteenth century, a part only of the nation were in that vicinity — upon the islands at the mouth of the bay. These islands were then known as the Pottawattamie islands, and considered as the ancient abode of these Indians. Already had a large portion of this tribe emigrated southward, one band resting on the St. Joseph of Lake Michigan, the other near Detroit. One peculiarity of this tribe — at least of such as resided in what is now Wisconsin — was their intimate association with neighboring bands. When, in 1669, a village of the Pottawattamies, located upon the southeast shore of Green bay, was visited by Allouez, he found with them Sacs and Foxes and Winnebagoes. So, also, when, many years subsequent to that date, a band of these Indians were located at Milwaukee, with them were Ottawas and Chippewas. These “united tribes” claimed all the lands of their respective tribes and of other nations, giving the United States, when possession was taken of the western country by the General Government, no little trouble. Finally, by a treaty, held at Chicago in 1833, their claims, such as they were, to lands along the western shore of Lake Michigan, within the present State of Wisconsin, extending westward to Rock river, were purchased by the United States, with permission to retain possession three years longer of their ceded lands, after which time this “united nation of Chippewas, Ottawas and Pottawattamies” began to disappear, and soon were no longer seen in southeastern Wisconsin or in other portions of the State.

Besides the five tribes — Menomonees, Winnebagoes, Chippewas, Sacs and Foxes, and Pottawattamies — many others, whole or in part, have, since the territory now constituting the State was first visited by white men, been occupants of its territory. Of these, some are only known as having once lived in what is now Wisconsin; others — such as the Hurons, Illinois, Kickapoos, Mascoutens, Miamis, Noquets, Ottawas and Sioux, are recognized as Indians once dwelling in this region; yet so transitory has been their occupation, or so little is known of their history, that they scarcely can be claimed as belonging to the State.

Commencing in 1822, and continuing at intervals through some of the following years, was the migration to Wisconsin from the State of New York of the remains or portions of four tribes: the Oneidas, Stockbridges, Munsees and Brothertowns. The Oneidas finally located west of Green Bay, where they still reside. Their reservation contains over 60,000 acres, and lies wholly within the present counties of Brown and Outagamie. The Stockbridges and Munsees, who first located above Green Bay, on the east side of Fox river, afterward moved to the east side of Winnebago lake. They now occupy a reservation joining the southwest township of the Menominee reservation, in Shawano county, and are fast becoming citizens. The Brothertowns first located on the east side of Fox river, but subsequently moved to the east side of Winnebago lake, where, in 1839, they broke up their tribal relations and became citizens of Wisconsin territory.

III.—PRE-TERRITORIAL ANNALS OF WISCONSIN.

When, in 1634, the first white man set foot upon any portion of the territory now constituting the State of Wisconsin, the whole country was, of course, a wilderness. Its inhabitants, the aboriginal Red men, were thinly but widely scattered over all the country. JOHN NICOLET, a Frenchman, who had been in Canada since 1618, and had spent several years among the

Indians, was the first of civilized men to unlock the mystery of its situation and people. French authorities upon the St. Lawrence sent him as an ambassador to the Winnebagoes, of whom he had heard strange stories. On his outward voyage he visited the Hurons—allies of the French—a tribe seated upon the eastern side of the lake which bears their name, and Nicolet was empowered to negotiate a peace with them. "When he approached the Winnebago town, he sent some of his Indian attendants to announce his coming, put on a robe of damask, and advanced to meet the expectant crowd with a pistol in each hand. The squaws and children fled, screaming that it was a manito, or spirit, armed with thunder and lightning; but the chiefs and warriors regaled him with so bountiful a hospitality, that a hundred and twenty beavers were devoured at a single feast." Such was the advent of the daring Frenchman into what is now the State of Wisconsin.

"Upon the borders of Green bay," wrote the Jesuit, Paul le Jeune, in 1640, "are the Menomonees; still farther on, the Winnebagoes, a sedentary people, and very numerous. Some Frenchmen," he continues, "call them the 'Nation of the Stinkards,' because the Algonquin word Winipeg signifies 'stinking water.' Now they thus call the water of the sea; therefore, these people call themselves 'Winnebagoes,' because they came from the shores of a sea of which we have no knowledge; consequently we must not call them the 'Nation of Stinkards,' but the 'Nation of the Sea.'" From these Men of the Sea, Nicolet passed westward, ascended Fox river of Green Bay, until nigh the portage to the Wisconsin, down which stream he could have floated easily to the Mississippi, the "great water" of his guides, which he mistook for the sea. This adventurous Frenchman, when so near re-discovering the river which has given immortality to De Soto, turned his face to the eastward; retraced his steps to Green bay, and finally returned in safety to Quebec. This was the first exploration of what is now Wisconsin—only fourteen years after the landing of the Pilgrims upon the wild shores of New England.

Wisconsin, for twenty-four years after its discovery, was left to its savage inhabitants. At length, in 1658, two daring fur traders penetrated to Lake Superior, and wintered there. They probably set foot upon what is now Wisconsin soil, as they made several trips among the surrounding tribes. They saw, among other things, at six days' journey beyond the lake, toward the southwest, Indians that the Iroquois had driven from their homes upon the eastern shores of Lake Huron. These Frenchmen heard of the ferocious Sioux, and of a great river—not the sea, as Nicolet had supposed—on which they dwelt. This was the Mississippi; and to these traders is the world indebted for a knowledge of its existence; as De Soto's discovery was never used, and soon became well-nigh, if not entirely, forgotten. From these upper countries, in the Summer of 1660, the two returned to Quebec, with three hundred Indians in sixty canoes, laden with peltry. This was, indeed, the dawn—though exceedingly faint—of what is now the commerce of the great Northwest. Nineteen years after flashed a more brilliant light; for, in 1679, the "Griffin," laden with furs, left one of the islands at the mouth of Green bay, on its return—spreading her sails for Niagara, but never more to be heard of.

Following in the footsteps of the fur traders came the Jesuit missionaries to Lake Superior; one of them, Father Menard, as early as 1660, reaching its southern shore as far to the westward, probably, as Kewenaw, in the present State of Michigan. There is no positive evidence, however, that he or his French companions, visited any portion of what is now Wisconsin; although the next year, 1661, some of his associates probably passed down the Menomonee river to Green bay. Following Menard came Father Claude Allouez, arriving on the first day of October, 1665, at "Chagowamigong," or "Chegoimegon," now Chequamegon, or Ashland Bay, "at the bottom of which," wrote the missionary, "is situated the great villages of the savages, who there plant their fields of Indian corn, and lead a stationary life." Near by he erected a small chapel of bark—the

first structure erected by civilized man in Wisconsin. At La Pointe, in the present Ashland county, he established the mission of the Holy Ghost.

The next Catholic mission in what is now Wisconsin was that of St. Francis Xavier, founded also by Allouez. Upon the second of December, 1669, he first attended to his priestly devotions upon the waters of Green bay. This mission, for the first two years of its existence, was a migratory one. The surrounding tribes were all visited, including the Pottawattamies, Menomonees, Winnebagoes, and Sacs and Foxes. However, in 1671, one hundred and five years before the Declaration of Independence, there was erected, at what is now Depere, Brown county, a chapel for the mission of St. Francis Xavier. Thus early did the Jesuit Fathers, in their plain garbs and unarmed, carry the cross to many of the benighted heathen occupying the country circumscribed by Lakes Michigan, Huron and Superior, and the "great river"—the Mississippi.

French domination in Wisconsin dates from the year 1671, the very year in which it seems the indomitable LaSalle, upon his first expedition, passed the mouth of Green bay, but did not enter it. France then took formal possession of the whole of the country of the upper lakes. By this time, the commerce with the western tribes had so attached them to her interests that she determined to extend her power to the utmost limits—vague and indeterminate as they were—of Canada. An agent—Daumont de St. Lussou—was dispatched to the distant tribes, proposing a congress of Indian nations at the Falls of Ste. Mary, between Lake Huron and Lake Superior. The invitation was extended far and near. The principal chiefs of Wisconsin tribes, gathered by Nicolas Perrot in Green bay, were present at the meeting. Then and there, with due ceremony, it was announced that the great Northwest was placed under the protection of the French government. And why not? She had discovered it—had to a certain extent explored it—had to a limited extent established commerce with it—and her missionaries had proclaimed the faith to the wondering savages. But none of her agents—none of the fur-traders—none of the missionaries—had yet reached the Mississippi, the "great river," concerning which so many marvels had been heard, although it is claimed that, in 1669, it had been seen by the intrepid La Salle. But the time for its discovery, or properly re-discovery, was at hand, if, indeed, it can be called, with propriety, a re-discovery, since its existence to the westward was already known to every white man particularly interested in matters appertaining to the Northwest. Now, however, for the first time, its upper half was to be, to a certain extent, explored. For the first time, a white man was to behold its vast tribute, above the Illinois river, rolling onward toward the Mexican gulf. Who was that man? His name was Louis Joliet; with him was Father James Marquette.

Born at Quebec, in 1645, educated by the Jesuits, and first resolving to be a priest, then turning fur-trader, Joliet had, finally, been sent with an associate to explore the copper mines of Lake Superior. He was a man of close and intelligent observation, and possessed considerable mathematical acquirements. At this time, 1673, he was a merchant, courageous, hardy, enterprising. He was appointed by French authorities at Quebec to "discover" the Mississippi. He passed up the lakes to Mackinaw, and found at Point St. Ignace, on the north side of the strait, Father James Marquette, who readily agreed to accompany him. Their outfit was very simple: two birch-bark canoes and a supply of smoked meat and Indian corn. They had a company of five men with them, beginning their voyage on the seventeenth of May, 1673. Passing the straits, they coasted the northern shores of Lake Michigan, moved up Green bay and Fox river to the portage. They crossed to the Wisconsin, down which they paddled their frail canoes, until, on the seventeenth of June, they entered—"discovered"—the Mississippi. So the northern, the eastern and the western boundary of what is now Wisconsin had been reached at this date; therefore, it may be said that its territory had been explored sufficiently for the forming of a

pretty correct idea of its general features as well as of its savage inhabitants. After dropping down the Mississippi many miles, Joliet and Marquette returned to Green bay, where the latter remained to recruit his exhausted strength, while Joliet descended to Quebec, to report his "discoveries" to his superiors.

Then followed the expedition of LaSalle to the west, from the St. Lawrence, when, in 1679, he and Father Louis Hennepin coasted along the western shore of Lake Michigan, frequently landing; then, the return of Henri de Tonty, one of LaSalle's party down the same coast to Green bay, in 1680, from the Illinois; the return, also, the same year, of Hennepin, from up the Mississippi, whither he had made his way from the Illinois, across what is now Wisconsin, by the Wisconsin and Fox rivers to Green bay, in company with DuLhut, or DuLuth, who, on his way down the "great river" from Lake Superior, had met the friar; and then, the voyage, in 1683, from Lake Michigan to the Mississippi river, by the same route, of LeSueur, and his subsequent establishment at La Pointe, in what is now Ashland county, Wisconsin, followed several years after by a trip up the Mississippi. The act of Daumont de St. Lussou, at the Sault Sainte Mary, in 1671, in taking possession of the country beyond Lake Michigan, not being regarded as sufficiently definite, Nicolas Perrot, in 1689, at Green bay, again took possession of that territory, as well as of the valleys of the Fox and Wisconsin rivers, and extending the dominion of New France over the country on the Upper Mississippi, and "to other places more remote." The voyage of St. Cosme, in 1699, when he and his companions frequently landed on the west coast of Lake Michigan, upon what is now territory of Wisconsin, completed the explorations in the west for the seventeenth century.

Following in the footsteps of early explorations, of self sacrificing attempts of the Jesuits to carry the cross to the wild tribes of the West, of the first visits of the lawless *coureurs de bois*, was the military occupation—if such it can be called—of what is now Wisconsin by the French. The ninety years of domination by France in this region were years of only nominal possession. The record of this occupation is made up of facts concerning the Indian policy of the French rulers; their contests with the Sacs and Foxes; their treaties, at various times, with different tribes; their interest in, and protection of, the fur trade, and kindred subjects. The Indian tribes were, at most, only the allies of France. Posts—mere stockades without cannon, more for protection to fur-traders than for any other purpose—were erected upon the Mississippi at two points at least, upon what is now territory of Wisconsin. On the west side of Fox river of Green bay, "half a league from its mouth," was a French post, as early as 1721, where resided, besides the commandant and an uncouth squad of soldiers, a Jesuit missionary; and near by were collected Indians of different tribes. Of course, the omnipresent fur-trader helped to augment the sum-total of its occupants. This post was, not long after, destroyed, but another was established there. When, however, France yielded her inchoate rights in the West to Great Britain—when, in 1761, the latter took possession of the country—there was not a French post within what is now Wisconsin. The "fort" near the head of Green bay, had been vacated for some years; it was found "rotten, the stockade ready to fall, and the houses without cover;" emblematic of the decay—the fast-crumbling and perishing state—of French supremacy, at that date, in America. Wisconsin, when England's control began, was little better than a howling wilderness. There was not within the broad limits of what is now the State, a single *bona fide* settler, at the time the French Government yielded up its possession to the English; that is to say, there were none according to the present acceptation of the term "settler."

The military occupation of Wisconsin by the British, after the Seven Years' War, was a brief one. La Bay—as the post at what is now the city of Fort Howard, Brown county, was called—was, on the twelfth of October, 1761, taken possession of by English troops, under Captain Belfour, of the Eightieth regiment. Two days after, that officer departed, leaving Lieutenant

James Gorrell, in command, with one sergeant, one corporal and fifteen privates. There also remained at the post a French interpreter and two English traders. The name of the fortification was changed to Fort Edward Augustus. This post was abandoned by the commandant on the twenty-first of June, 1763, on account of the breaking out of Pontiac's War and the capture of the fort at Mackinaw by the savages. The cause of this war was this: The Indian tribes saw the danger which the downfall of the French interests in Canada was sure to bring to them. They banded together under Pontiac to avert their ruin. The struggle was short but fierce—full of "scenes of tragic interest, with marvels of suffering and vicissitude, of heroism and endurance;" but the white man conquered. The moving incidents in this bloody drama were enacted to the eastward of what is now Wisconsin, coming no nearer than Mackinaw, which, as just mentioned, the savages captured; but it resulted in the evacuation of its territory by British troops, who never after took possession of it, though they continued until 1796 a nominal military rule over it, after Mackinaw was again occupied by them.

An early French Canadian trading station at the head of Green bay assumed finally the form of a permanent settlement—the first one in Wisconsin. To claim, however that any French Canadian is entitled to the honor of being the first permanent white settler is assuming for him more than the facts seem to warrant. The title of "The Father and Founder of Wisconsin" belongs to no man.

After Pontiac's War, one of the noted events in this region was the journey of Jonathan Carver, who, in 1766, passed up Fox river to the portage, and descended the Wisconsin to the Mississippi. He noticed the tumbling-down post at what is now Green Bay, Brown county. He saw a few families living in the fort, and some French settlers, who cultivated the land opposite, and appeared to live very comfortably. That was the whole extent of improvements in what is now Wisconsin. The organization of the Northwest Fur Company; the passage of an act by the British Parliament by which the whole Northwest was included in the Province of Quebec; the joining of the Indians in this region with the British, against the Americans, in the War of the Revolution; the exploration of the lead region of the Upper Mississippi by Julian Dubuque; the passage of the ordinance of 1787; the first settlement of the territory northwest of the River Ohio; and the Indian war which followed, are all incidents, during British occupation, of more or less interest for the student of Wisconsin history. He will find that, by the treaty of 1783 and of 1795, with Great Britain, all the inhabitants residing in this region were to be protected by the United States in the full and peaceable possession of their property, with the right to remain in, or to withdraw from it, with their effects, within one year. All who did not leave were to be deemed American citizens, allowed to enjoy all the privileges of citizenship, and to be under the protection of the General Government. He will also find that less than two years was the whole time of actual military occupation of what is now Wisconsin by British soldiers, and that English domination, which should have ended at the close of the Revolution, was arbitrarily continued until the Summer of 1796, when the western posts, none of which were upon territory circumscribed by Lakes Michigan and Superior and the Mississippi river, were delivered into the keeping of the United States. Thus the supremacy of Great Britain over the Northwest was, after an actual continuance of thirty-five years, at an end.

Although the General Government did not get possession of the region northwest of the Ohio, throughout its full extent, for thirteen years subsequent to its acquirement by the treaty of peace of 1783 with Great Britain, nevertheless, steps were taken, very soon, to obtain concessions from such of the colonies as had declared an ownership in any portion of it. None of the claimants, seemingly, had better rights than Virginia, who, by virtue of conquests, largely her own, of the Illinois settlements and posts, extended her jurisdiction over that country, erecting into a county

so much of the region northwest of the Ohio, as had been settled by Virginians or might afterward be settled by them. But as, previous to her yielding all rights to territory beyond that river, she had not carried her arms into the region north of the Illinois or made settlements upon what is now the soil of Wisconsin, nor included any portion of it within the bounds of an organized county, it follows that her dominion was not actually extended over any part of the area included within the present boundaries of this State; nor did she then claim jurisdiction north of the Illinois river, but on the other hand expressly disclaimed it.

Virginia and all the other claimants finally ceded to the United States their rights, such as they were, beyond the Ohio, except two reservations of limited extent; and the General Government became the undisputed owner of the "Great West," without any internal claims to possession save those of the Indians. Meanwhile, the United States took measures to extend its jurisdiction over the whole country by the passage of the famous ordinance of 1787, which established a government over "the territory of the United States, northwest of the River Ohio." But this organic law was, of course, nugatory over that portion of the region occupied by the British, until their yielding possession in 1796, when, for the first time, Anglo-American rule commenced, though nominally, in what is now Wisconsin. By the ordinance just mentioned, "the United States, in congress assembled," declared that the territory northwest of the Ohio should, for the purposes of temporary government, be one district, subject, however, to be divided into districts, as future circumstances might, in the opinion of Congress, make it expedient. It was ordained that a governor, secretary and three judges should be appointed for the Territory; a general assembly was also provided for; and it was declared that religion, morality, and knowledge, being necessary to good government and the happiness of mankind, schools and the means of education should forever be encouraged. It was also ordained that there should be neither slavery nor involuntary servitude in the said Territory, "otherwise than in the punishment of crimes whereof the party shall have been duly convicted." Thus was established the first Magna Charta for the five great States since that time formed out of "the territory northwest of the River Ohio," and the first rules and regulations for their government.

Under this act of Congress, Arthur St. Clair was appointed governor of the Northwestern Territory, as it was called, and Samuel H. Parsons, James M. Varnum, and John Armstrong, judges,—the latter not accepting the office, John Cleves Symmes was appointed in his place. Winthrop Sargeant was appointed secretary. At different periods, counties were erected to include various portions of the Territory. By the governor's proclamation of the 15th of August, 1796, one was formed to include the whole of the present area of Northern Ohio, west of Cleveland; also, all of what is now the State of Indiana, north of a line drawn from Fort Wayne "west-northerly to the southern part of Lake Michigan;" the whole of the present State of Michigan, except its extreme northwest corner on Lake Superior; a small corner in the northeast, part of what is now Illinois, including Chicago; and so much of the present State of Wisconsin as is watered by the streams flowing into Lake Michigan, which of course included an extensive portion, taking in many of its eastern and interior counties as now constituted. This vast county was named Wayne. So the few settlers then at the head of Green bay had their local habitations, constructively at least, in "Wayne county, Northwestern Territory." It was just at that date that Great Britain vacated the western posts, and the United States took quiet possession of them. But the western portion of what is now Wisconsin, including all its territory watered by streams flowing northward into Lake Superior, and westward and southwestward into the Mississippi, was as yet without any county organization; as the county of St. Clair, including the Illinois country to the southward, reached no farther north than the mouth of Little Mackinaw creek, where it empties into the River Illinois, in what is now the State of Illinois. The

“law of Paris,” which was in force under French domination in Canada, and which by the British Parliament in 1774, had been continued in force under English supremacy, was still “the law of the land” west of Lake Michigan, practically at least.

From and after the fourth day of July, 1800, all that part of the territory of the United States northwest of the Ohio river, which lay to the westward of a line beginning upon that stream opposite to the mouth of Kentucky river and running thence to what is now Fort Recovery in Mercer county, Ohio; thence north until it intersected the territorial line between the United States and Canada, was, for the purposes of temporary government, constituted a separate territory called INDIANA. It included not only the whole of the present State of Illinois and nearly all of what is now Indiana, but more than half of the State of Michigan as now defined, also a considerable part of the present Minnesota, and the whole of what is now Wisconsin.

The seat of government was established at “Saint Vincennes on the Wabash,” now the city of Vincennes, Indiana. To this extensive area was added “from and after” the admission of Ohio into the Union, all the territory west of that State, and east of the eastern boundary line of the Territory of Indiana as originally established; so that now all “the territory of the United States, northwest of the River Ohio,” was, excepting the State of Ohio, included in Indiana Territory. On the thirtieth day of June, 1805, so much of Indiana Territory as lay to the north of a line drawn east from the southerly bend or extreme of Lake Michigan to Lake Erie, and east of a line drawn from the same bend through the middle of the first mentioned lake to its northern extremity, and thence due north to the northern boundary of the United States, was, for the purpose of temporary government, constituted a separate Territory called MICHIGAN. Of course no part of the present State of Wisconsin was included therein; but the whole remained in the Territory of Indiana until the second day of March, 1809, when all that part of the last mentioned Territory which lay west of the Wabash river, and a direct line drawn from that stream and “Post Vincennes,” due north to the territorial line between the United States and Canada, was, by an act approved on the third of February previous, constituted a separate Territory, called ILLINOIS. Meanwhile jurisdiction had been extended by the authorities of Indiana Territory over the country lying west of Lake Michigan, to the extent, at least, of appointing a justice of the peace for each of the settlements of Green Bay and Prairie du Chien. All of what is now Wisconsin was transferred to the Territory of Illinois, upon the organization of the latter, except a small portion lying east of the meridian line drawn through Vincennes, which remained a part of Indiana Territory. This fraction included nearly the whole area between Green bay and Lake Michigan.

When, in 1816, Indiana became a State, “the territory of the United States northwest of the River Ohio,” contained, besides Ohio and Indiana, the Territories of Illinois and Michigan, only; so the narrow strip, formerly a part of Indiana Territory, lying east of a line drawn due north from Vincennes, and west of the western boundary line of Michigan Territory, belonged to neither, and was left without any organization. However, upon the admission of Illinois into the Union, in 1818, all “the territory of the United States, northwest of the River Ohio,” lying west of Michigan Territory and north of the States of Indiana and Illinois, was attached to and made a part of Michigan Territory; by which act the whole of the present State of Wisconsin came under the jurisdiction of the latter. During the existence of the Territory of Illinois, a kind of jurisdiction was had over the two settlements in what is now Wisconsin—rather more ideal than real, however.

In 1834, Congress greatly increased the limits of the Territory of Michigan, by adding to it, for judicial purposes, a large extent of country west of the Mississippi—reaching south as far as

the present boundary line between the present States of Iowa and Missouri; north, to the territorial line between the United States and Canada; and west, to the Missouri and White Earth rivers. It so continued down to the fourth of July, 1836.

A retrospective glance at the history of this region for forty years previous to the last mentioned year, including the time which elapsed after the surrender of the western posts, in 1796, by the British, discloses many facts of interest and importance.

The Anglo-Americans, not long after the region of country west of Lake Michigan became a part of Indiana Territory, began now and then to cast an eye, either through the opening of the Great Lakes or the Mississippi, upon its rolling rivers, its outspread prairies, and its dense forests, and to covet the goodly land; but the settlers at Green Bay and Prairie du Chien were mostly French Canadians at this date, although a few were Americans. The General Government, however, began to take measures preparatory to its occupation, by purchasing, in 1804, a tract in what is now the southwest portion of the State, of the Indians, and by holding the various tribes to a strict account for any murders committed by them on American citizens passing through their territories or trading with them. Comparative peace reigned in the incipient settlements at the head of Green bay and at the mouth of the Wisconsin, which was changed by the breaking out of the war of 1812, with Great Britain.

The English early succeeded in securing the Wisconsin Indian tribes as their allies in this war; and the taking of Mackinaw by the British in July, 1812, virtually put the latter in possession of what is now the eastern portion of the State. Early in 1814, the government authorities of the United States caused to be fitted out at St. Louis a large boat, having on board all the men that could be mustered and spared from the lower country, and sent up the Mississippi to protect the upper region and the few settlers therein. The troops landed at Prairie du Chien, and immediately proceeded to fortify. Not long after, Colonel McKay, of the British army, crossing the country by course of the Fox and Wisconsin rivers, with over five hundred British and Indians, received the surrender of the whole force. The officers and men were paroled and sent down the river. This was the only battle fought upon Wisconsin soil during the last war with England. The post at Prairie du Chien was left in command of a captain with two companies from Mackinaw. He remained there until after the peace of 1815, when the place was evacuated by the British.

When it became generally known to the Indian tribes in what is now Wisconsin, that the contest between the United States and Great Britain was at an end, they generally expressed themselves as ready and willing to make treaties with the General Government—eager, in fact, to establish friendly relations with the power they had so recently been hostile to. This was, therefore, a favorable moment for taking actual possession of the country between the Mississippi and Lake Michigan; and United States troops were soon ordered to occupy the two prominent points between Green Bay and Prairie du Chien. At the former place was erected Fort Howard; at the latter Fort Crawford. At Green Bay, half a hundred (or less) French Canadians cultivated the soil; at Prairie du Chien, there were not more than thirty houses, mostly occupied by traders, while on the prairie outside the village, a number of farms were cultivated. Such was Wisconsin when, at the close of the last war with Great Britain, it began in earnest to be occupied by Americans. The latter were few in number, but in 1818, they began to feel, now that the country was attached to Michigan Territory and the laws of the United States were extended over them, that they were not altogether beyond the protection of a government of their own, notwithstanding they were surrounded by savage tribes. Their happiness was increased upon the erection, by proclamation of Lewis Cass, governor of the Territory of Michigan, of three Territorial counties: Michilimackinac, Brown and Crawford. Their establishment dates

the twenty-sixth of October, 1818. The county of Michilimackinac not only included all of the present State of Wisconsin lying north of a line drawn due west from near the head of the Little Noquet bay, but territory east and west of it, so as to reach from Lake Huron to the Mississippi river. Its county seat was established "at the Borough of Michilimackinac." The whole area in Michigan Territory south of the county of Michilimackinac and west of Lake Michigan formed the two counties of Brown and Crawford: the former to include the area east of a line drawn due north and south through the middle of the portage between the Fox river of Green bay and the Wisconsin; the latter to include the whole region west of that line. Prairie du Chien was designated as the county seat of Crawford; Green Bay, of Brown county. On the 22d of December, 1826, a county named Chippewa was formed from the northern portions of Michilimackinac, including the southern shores of Lake Superior throughout its entire length, and extending from the straits leading from that lake into Lake Huron, west to the western boundary line of Michigan Territory, with the county seat "at such point in the vicinity of the Sault de Ste. Marie, as a majority of the county commissioners to be appointed shall designate." Embraced within this county,—its southern boundary being the parallel $46^{\circ} 31'$ north latitude,—was all the territory of the present State of Wisconsin now bordering on Lake Superior.

Immediately upon the erection of Brown and Crawford counties, they were organized, and their offices filled by appointment of the governor. County courts were established, consisting of one chief and two associate justices, either of whom formed a quorum. They were required to hold one term of court annually in their respective counties. These county courts had original and exclusive jurisdiction in all civil cases, both in law and equity, where the matter in dispute exceeded the jurisdiction of a justice of the peace, and did not exceed the value of one thousand dollars. They had, however, no jurisdiction in ejectment. They had exclusive cognizance of all offenses the punishment whereof was not capital, and the same power to issue remedial and other process, writs of error and mandamus excepted, that the supreme court had at Detroit. Appeals from justices of the peace were made to the county courts.

The establishing of Indian agencies by the General Government; the holding of treaties with some of the Indian tribes; the adjustment of land claims at Green Bay and Prairie du Chien; the appointment of postmasters at these two points, were all indications of a proper interest being taken by the United States in the affairs of the country. But a drawback to this region, was the fact that, in all civil cases of over a thousand dollars, and in criminal cases that were capital, as well as in actions of ejectment, and in the allowance of writs of error, and mandamus, recourse must be had to the supreme court at Detroit; the latter place being the seat of government of Michigan Territory. However, in January, 1823, an act of congress provided for a district court, and for the appointment of a judge, for the counties of Brown, Crawford, and Michilimackinac. This court had concurrent jurisdiction, civil and criminal, with the supreme court of the Territory, in most cases, subject, however, to have its decisions taken to the latter tribunal by a writ of error. The law provided for holding one term of court in each year, in each of the counties named in the act; so, at last, there was to be an administration of justice at home, and the people were to be relieved from all military arbitrations, which frequently had been imposed upon them. James Duane Doty was appointed judge of this court at its organization. A May term of the court was held in Prairie du Chien; a June term in Green Bay; a July term in "the Borough of Michilimackinac," in each year. In 1824, Henry S. Baird, of Brown county, was appointed district attorney. Doty held the office of judge until May, 1832, when he was succeeded by David Irvin. This court continued until 1836, when it was abrogated by the organization of the Territory of Wisconsin.

For a long time it had been known that there were lead mines in what is now the south-

western portion of the State; but it was not until the year 1825, and the two following years, that very general attention was attracted to them, which eventuated in the settlement of different places in that region, by Americans, who came to dig for lead ore. This rapid increase of settlers awakened the jealousy of the Winnebago Indians, at what they deemed an unauthorized intrusion upon their lands, which, with other causes operating unfavorably upon their minds, aroused them in June, 1827, to open acts of hostility. Murders became frequent. Finally, the militia of Prairie du Chien were called out. On the twenty-ninth of August, Brigadier-General Henry Atkinson, of the United States army, with a strong force of regulars, ascended the Wisconsin river to put an end to any further spread of Winnebago disturbances. He was joined on the first of September, by one hundred and thirty Galena volunteers, mounted, and under command of General Henry Dodge. The Winnebagoes were awed into submission. Thus ended the "Winnebago War." It was followed by the erection at the portage of Fort Winnebago, by the United States.

After the restoration of tranquillity, the United States proceeded by treaty with the Indians, to secure the right to occupy the lead regions. This was in 1828. The next year, the General Government purchased of the Winnebagoes, Southwestern Wisconsin, which put an end to all trouble on account of mining operations. On the ninth of October, 1829, a county was formed, by the legislative council of the Territory of Michigan, comprising all that part of Crawford county lying south of the Wisconsin river. This new county was called Iowa. The county seat was temporarily established at Mineral Point. Following this was a treaty in 1831, with the Menomonees, for all their lands east of Green bay, Winnebago lake, and the Fox and Milwaukee rivers.

There was now a crisis at hand. The most prominent event to be recorded in the pre-Territorial annals of Wisconsin is known as the Black Hawk War. This conflict of arms between the Sacs and Foxes and the United States arose from a controversy in regard to lands. By a treaty made at Fort Harmar, just across the River Muskingum from Marietta, Ohio, in January, 1789, the Pottawattamie and Sac tribes of Indians, among others, were received into the friendship of the General Government, and a league of peace and unity established between the contracting parties. On the third of November, 1804, a treaty at St. Louis stipulated that the united Sac and Fox tribes should be received into the friendship of the United States, and also be placed under their protection. These tribes also agreed to consider themselves under the protection of the General Government and of no other power whatsoever. At this treaty lands were ceded which were circumscribed by a boundary beginning at a point on the Missouri river opposite the mouth of the Gasconade, and running thence in a direct course so as to strike the River Jefferson at the distance of thirty miles from its mouth, and down that stream to the Mississippi. It then ran up the latter river to the mouth of the Wisconsin, and up that stream to a point thirty-six miles in a direct line from its mouth; thence by a straight course to a point where the Fox river of the Illinois leaves the small lake then called Sakaegan, and from that point down the Fox to the Illinois, and down the latter to the Mississippi. The consideration for this cession was the payment of goods to the value of two thousand two hundred and thirty-four dollars and fifty cents, and a yearly annuity of one thousand dollars—six hundred to be paid to the Sacs and four hundred to the Foxes—to be liquidated in goods valued at first cost. Afterward, Fort Madison was erected just above the Des Moines rapids in the Mississippi, on the territory ceded at the last mentioned treaty. Then followed the war with Great Britain, and the Sacs and Foxes agreed to take no part therein. However, a portion afterward joined the English against the Americans along with other Western tribes. At the restoration of peace the Sacs and Foxes held treaties with the United States. There was a renewal of the treaty of 1804.

Such in brief is a general outline of affairs, so far as those two tribes were concerned, down to the close of the last war with England. From this time, to the year 1830, several additional treaties were made with the Sacs and Foxes by the General Government: one in 1822, by which they relinquished their right to have the United States establish a trading house or factory at a convenient point at which the Indians could trade and save themselves from the imposition of traders, for which they were paid the sum of one thousand dollars in merchandise. Again, in 1824, they sold to the General Government all their lands in Missouri, north of Missouri river, for which they received one thousand dollars the same year, and an annuity of one thousand dollars for ten years. In 1830, they ceded to the United States a strip of land twenty miles wide from the Mississippi to the Des Moines, on the north side of their territory. The time had now come for the two tribes to leave the eastern shore of the Mississippi and retire across the "great water." Keokuk, the Watchful Fox, erected his wigwam on the west side of the river, and was followed by a large part of the two tribes. But a band headed by Ma-ka-tai-me-she-kia-kiah, or the Black Sparrow Hawk, commonly called Black Hawk, refused to leave their village near Rock Island. They contended that they had not sold their town to the United States; and, upon their return early in 1831, from a hunt across the Mississippi, finding their village and fields in possession of the whites, they determined to repossess their homes at all hazards. This was looked upon, or called, an encroachment by the settlers; so the governor of Illinois took the responsibility of declaring the State invaded, and asked the United States to drive the refractory Indians beyond the Mississippi. The result was, the Indian village was destroyed by Illinois volunteers. This and the threatened advance across the river by the United States commander, brought Black Hawk and his followers to terms. They sued for peace—agreeing to remain forever on the west side of the Mississippi. But this truce was of short duration.

Early in the Spring of 1832, Black Hawk having assembled his forces on the Mississippi, in the vicinity of the locality where Fort Madison had stood, crossed that stream and ascended Rock river. This was the signal for war. The governor of Illinois made a call for volunteers; and, in a brief space of time, eighteen hundred had assembled at Beardstown, Cass county. They marched for the mouth of Rock river, where a council of war was held by their officers and Brigadier-General Henry Atkinson, of the regular forces. The Indians were sent word by General Atkinson that they must return and recross the Mississippi, or they would be driven back by force. "If you wish to fight us, come on," was the laconic but defiant reply of the Sac chief. When the attempt was made to compel these Indians to go back across the "great river," a collision occurred between the Illinois militia and Black Hawk's braves, resulting in the discomfiture of the former with the loss of eleven men. Soon afterward the volunteers were discharged, and the first campaign of Black Hawk's War was at an end. This was in May, 1832.

In June following, a new force had been raised and put under the command of General Atkinson, who commenced his march up Rock river. Before this, there had been a general "forting" in the lead region, including the whole country in Southwest Wisconsin, notwithstanding which, a number of settlers had been killed by the savages, mostly in Illinois. Squads of volunteers, in two or three instances, had encountered the Indians; and in one with entire success—upon the Pecatonica, in what is now Lafayette county, Wisconsin—every savage (and there were seventeen of them) being killed. The loss of the volunteers was three killed and wounded. Atkinson's march up Rock river was attended with some skirmishing; when, being informed that Black Hawk and his force were at Lake Koshkonong, in the southwest corner of what is now Jefferson county, Wisconsin, he immediately moved thither with a portion of his army, where the whole force was ordered to concentrate. But the Sac chief with his people had flown. Colonels Henry Dodge and James D. Henry, with the forces under them, discovered the

trail of the savages, leading in the direction of the Wisconsin river. It was evident that the retreating force was large, and that it had but recently passed. The pursuing troops hastened their march. On the twenty-first of July, 1832, they arrived at the hills which skirt the left bank of that stream, in what is now Roxbury town (township), Dane county. Here was Black Hawk's whole force, including women and children, the aged and infirm, hastening by every effort to escape across the river. But that this might now be effected, it became necessary for that chief to make a firm stand, to cover the retreat. The Indians were in the bottom lands when the pursuing whites made their appearance upon the heights in their rear. Colonel Dodge occupied the front and sustained the first attack of the Indians. He was soon joined by Henry with his force, when they obtained a complete victory. The action commenced about five o'clock in the afternoon and ended at sunset. The enemy, numbering not less than five hundred, sustained a loss of about sixty killed and a large number wounded. The loss of the Americans was one killed and eight wounded. This conflict has since been known as the battle of Wisconsin Heights.

During the night following the battle, Black Hawk made his escape with his remaining force and people down the Wisconsin river. The women and children made their way down stream in canoes, while the warriors marched on foot along the shore. The Indians were pursued in their flight, and were finally brought to a stand on the Mississippi river, near the mouth of the Bad Axe, on the west boundary of what is now Vernon county, Wisconsin. About two o'clock on the morning of the second of August, the line of march began to the scene of the last conflict in the Black Hawk War. Dodge's command formed the advance, supported by regular troops, under Colonel Zachary Taylor, afterward president of the United States. Meanwhile an armed steamboat had moved up the Mississippi and lay in front of the savages; so they were attacked on all sides by the exasperated Americans. The battle lasted about two hours, and was a complete victory for the whites. Black Hawk fled, but was soon after captured. This ended the war.

The survey of public lands by the General Government; the locating and opening of land offices at Mineral Point and Green Bay; the erection of Milwaukee county from a part of Brown, to include all the territory bounded on the east and south by the east and south lines of the present State, on the north by what is now the north boundary of Washington and Ozaukee counties and farther westward on the north line of township numbered twelve, and on the west by the dividing line between ranges eight and nine; and the changing of the eastern boundary of Iowa county to correspond with the western one of Milwaukee county; — are some of the important events following the close of the Black Hawk war. There was an immediate and rapid increase of immigration, not only in the mining region but in various other parts of what is now Wisconsin, more especially in that portion bordering on Lake Michigan. The interior was yet sparsely settled. By the act of June 28, 1834, congress having attached to the Territory of Michigan, for judicial purposes, all the country "west of the Mississippi river, and north of the State of Missouri," comprising the whole of what is now the State of Iowa, all of the present State of Minnesota west of the Mississippi river, and more than half of what is now the Territory of Dakota, the legislative council of Michigan Territory extended her laws over the whole area, dividing it on the 6th of September, 1834, by a line drawn due west from the lower end of Rock island to the Missouri river into two counties: the country south of that line constituting the county of Des Moines; north of the line, to be known as the county of Dubuque. This whole region west of the Mississippi was known as the Iowa district. Immediately after the treaty of 1832 with the Sacs and Foxes, the United States having come into ownership of a large tract in this district, several families crossed the Mississippi, and settled on the purchase, but as

the time provided for the Indians to give possession was the first of June, 1833, these settlers were dispossessed by order of the General Government. So soon, however, as the Indians yielded possession, settlements began, but, from the date just mentioned until September, 1834, after the district was attached, for judicial purposes, to Michigan Territory, it was without any municipal law whatever. The organization of the counties of Dubuque and Des Moines on the sixth of that month, secured, of course a regular administration of justice. Before this time to facilitate intercourse between the two remote military posts of Fort Howard at Green Bay, and Fort Crawford at Prairie du Chien, a military road was commenced to connect the two points; so, one improvement followed another. On the 1st of January, 1836, a session (the first one) of the seventh legislative council of Michigan Territory — that is, of so much of it as lay to the westward of Lake Michigan—was held at Green Bay, and a memorial adopted, asking Congress for the formation of a new Territory west of that lake; to include all of Michigan Territory not embraced in the proposed State of Michigan. Congress, as will now be shown, very soon complied with the request of the memorialists.

IV.—WISCONSIN TERRITORY.

The establishing of a separate and distinct Territory west of Lake Michigan, was the result of the prospective admission of Michigan into the Union (an event which took place not until the twenty-sixth of January, 1837), as the population, in all the region outside of the boundaries determined upon by the people for that State, would otherwise be left without a government, or, at least, it would be necessary to change the capital of the old Michigan Territory farther to the westward; so it was thought best to erect a new territory, to be called WISCONSIN (an Indian word signifying wild rushing water, or channel, so called from the principal eastern tributary of the Mississippi within its borders), which was done by an act of congress, approved April 20, 1836, to take effect from and after the third day of July following. The Territory was made to include all that is now embraced within the States of Wisconsin, Iowa, Minnesota, and a part of the Territory of Dakota, more particularly described within boundaries commencing at the northeast corner of the State of Illinois, running thence through the middle of Lake Michigan to a point opposite the main channel of Green bay; thence through that channel and the bay to the mouth of the Menomonee river; thence up that stream to its head, which is nearest the lake of the Desert; thence to the middle of that lake; thence down the Montreal river to its mouth; thence with a direct line across Lake Superior to where the territorial line of the United States last touches the lake northwest; thence on the north, with the territorial line, to the White Earth river; on the west by a line drawn down the middle of the main channel of that stream to the Missouri river, and down the middle of the main channel of the last mentioned stream to the northwest corner of the State of Missouri; and thence with the boundaries of the States of Missouri and Illinois, as already fixed by act of congress, to the place or point of beginning. Its counties were Brown, Milwaukee, Iowa, Crawford, Dubuque, and Des Moines, with a portion of Chippewa and Michilimackinac left unorganized. Although, at this time, the State of Michigan was only engaged, so to speak, to the Union, to include the two peninsulas (many of its citizens preferring in lieu thereof the lower one only, with a small slice off the northern boundary of the State of Ohio as now constituted), yet the marriage ceremony was performed, as has been stated, a few months afterward.

The act of congress establishing the Territorial government of Wisconsin was very full and complete. It first determined its boundaries; then it declared that all authority of the government of Michigan over the new Territory should cease on the fourth day of July, 1836, with a

proper reservation of rights in favor of the Indians. It provided for subsequently dividing the Territory into one or more, should congress deem it wise so to do. It also declared that the executive power and authority in and over the Territory should be vested in a governor, at the same time defining his powers. It provided for the appointment of a secretary, stating what his duties should be. The legislative power was vested in the governor and legislative assembly, the latter to consist of a council and house of representatives, answering respectively to the senate and assembly, as states are usually organized. There was a provision for taking the census of the several counties, and one giving the governor power to name the time, place, and manner of holding the first election, and to declare the number of members of the council and house of representatives to which each county should be entitled. He was also to determine where the first legislative assembly should meet, and a wise provision was that the latter should not be in session in any one year more than seventy-five days.

One section of the act declared who should be entitled to vote and hold office; another defined the extent of the powers of the legislature, and a third provided that all laws should be submitted to congress for their approval or rejection. There was a section designating what offices should be elective and what ones should be filled by the governor. There were others regulating the judiciary for the Territory and declaring what offices should be appointed by the United States, providing for their taking the proper oaths of office and regulating their salaries. One, perhaps the most important of all, declared that the Territory should be entitled to and enjoy all the rights, privileges, and advantages granted by the celebrated ordinance of 1787. There was also a provision for the election of a delegate to the house of representatives of the United States; and a declaration that all suits and indictments pending in the old courts should be continued in the new ones. Five thousand dollars were appropriated for a library for the accommodation of the legislative assembly of the Territory and of its supreme court.

For the new Territory, Henry Dodge was, on the 30th of April, 1836, by Andrew Jackson, then President of the United States, commissioned governor. John S. Horner was commissioned secretary; Charles Dunn, chief justice; David Irvin and William C. Frazer, associate judges; W. W. Chapman, attorney, and Francis Gehon, marshal. The machinery of a territorial government was thus formed, which was set in motion by these officers taking the prescribed oath of office. The next important step to be taken was to organize the Territorial legislature. The provisions of the organic act relative to the enumeration of the population of the Territory were that previously to the first election, the governor should cause the census of the inhabitants of the several counties to be taken by the several sheriffs, and that the latter should make returns of the same to the Executive. These figures gave to Des Moines county, 6,257; Iowa county, 5,234; Dubuque county, 4,274; Milwaukee county, 2,893; Brown county, 2,706; Crawford county, 850. The entire population, therefore, of Wisconsin Territory in the summer of 1836, as given by the first census was, in precise numbers, twenty-two thousand two hundred and fourteen, of which the two counties west of the Mississippi furnished nearly one half. The apportionment, after the census had been taken, made by the governor, gave to the different counties thirteen councilmen and twenty-six representatives. Brown county got two councilmen and three representatives; Crawford, two representatives, but no councilmen; Milwaukee, two councilmen and three representatives; Iowa, Dubuque and Des Moines, each three councilmen; but of representatives, Iowa got six; Dubuque, five, and Des Moines, seven. The election was held on the tenth of October, 1836, exciting considerable interest, growing out, chiefly, of local considerations. The permanent location of the capital, the division of counties, and the location of county seats, were the principal questions influencing the voters. There were elected from the county of Brown, Henry S. Baird and John P. Arndt, members of the council; Ebenezer Childs, Albert

G. Ellis and Alexander J. Irwin, members of the house of representatives; from Milwaukee, the councilmen were Gilbert Knapp and Alanson Sweet; representatives, William B. Sheldon, Madison W. Cornwall and Charles Durkee: from Iowa, councilmen, Ebenezer Brigham, John B. Terry and James R. Vineyard; representatives, William Boyles, G. F. Smith, D. M. Parkinson, Thomas McKnight, T. Shanley and J. P. Cox: from Dubuque, councilmen, John Foley, Thomas McCraney and Thomas McKnight; representatives, Loring Wheeler, Hardin Nowlin, Hosea T. Camp, P. H. Engle and Patrick Quigley: from Des Moines, councilmen, Jeremiah Smith, Jr., Joseph B. Teas and Arthur B. Inghram; representatives, Isaac Leffler, Thomas Blair, Warren L. Jenkins, John Box, George W. Teas, Eli Reynolds and David R. Chance: from Crawford, representatives, James H. Lockwood and James B. Dallam.

Belmont, in the present county of LaFayette, then in Iowa county, was, by the governor, appointed the place for the meeting of the legislature; he also fixed the time—the twenty-fifth of October. A quorum was in attendance in both branches at the time decided upon for their assembling, and the two houses were speedily organized by the election of Peter Hill Fagle, of Dubuque, speaker of the house, and Henry S. Baird, of Brown, president of the council. Each of the separate divisions of the government—the executive, the judicial, and the legislative—was now in working order, except that it remained for the legislature to divide the Territory into judicial districts, and make an assignment of the judges; and for the governor to appoint a Territorial treasurer, auditor and attorney general. The act of congress establishing the Territory required that it should be divided into three judicial districts. The counties of Crawford and Iowa were constituted by the legislature the first district, to which was assigned Chief Justice Dunn. The second district was composed of the counties of Des Moines and Dubuque; to it was assigned Associate Judge Irvin. The third district was formed of the counties of Brown and Milwaukee, to which was assigned Associate Judge Frazer.

Governor Dodge, in his first message to the Territorial legislature, directed attention to the necessity for defining the jurisdiction and powers of the several courts, and recommended that congress should be memorialized to extend the right of pre-emption to actual settlers upon the public lands and to miners on mineral lands; also, to remove the obstructions in the rapids of the Upper Mississippi, to construct harbors and light-houses on Lake Michigan, to improve the navigation of Fox river and to survey the same from its mouth to Fort Winnebago, to increase the amount of lands granted to the Territory for school purposes, and to organize and arm the militia for the protection of the frontier settlements. The first act passed by the legislature was one privileging members from arrest in certain cases and conferring on themselves power to punish parties for contempt. The second one established the three judicial districts and assigned the judges thereto. One was passed to borrow money to defray the expenses of the session; others protecting all lands donated to the Territory by the United States in aid of schools, and creating a common school fund. A memorial to congress was adopted requesting authorization to sell the school-section in each township, and appropriate the money arising therefrom for increasing the fund for schools.

During this session, five counties were "set off" west of the Mississippi river: Lee, Van Buren, Henry, Louisa, Muscatine, and Cook; and fifteen east of that stream: Walworth, Racine, Jefferson, Dane, Portage, Dodge, Washington, Sheboygan, Fond du Lac, Calumet, Manitowoc, Marquette, Rock, Grant and Green.

The principal question agitating the legislature at its first session was the location of the capital. Already the people west of the Mississippi were speculating upon the establishment of a Territory on that side the river, prospects for which would be enhanced evidently, by placing the seat of government somewhat in a central position east of that stream, for Wisconsin

Territory. Now, as Madison was a point answering such requirements she triumphed over all competitors; and the latter numbered a dozen or more—including, among others, Fond du Lac, Milwaukee, Racine, Belmont, Mineral Point, Green Bay, and Cassville. The struggle over this question was one of the most exciting ever witnessed in the Territorial legislature. Madison was fixed upon as the seat of government, but it was provided that sessions of the legislature should be held at Burlington, in Des Moines county, until the fourth of March, 1839, unless the public buildings in the new capital should be sooner completed. After an enactment that the legislature should thereafter meet on the first Monday of November of each year, both houses, on the ninth day of December, 1836, adjourned *sine die*.

In the act of congress establishing the Territory of Wisconsin it was provided that a delegate to the house of representatives of the United States, to serve for the term of two years, should be elected by the voters qualified to elect members of the legislative assembly; and that the first election should be held at such time and place or places, and be conducted in such manner as the governor of the Territory should appoint and direct. In pursuance of this enactment, Governor Dodge directed that the election for delegate should be at the time and places appointed for the election of members of the legislative assembly—the 10th of October, 1836. The successful candidate for that office was George W. Jones, of Sinsinawa Mound, Iowa county—in that portion which was afterward “set off” as Grant county. Jones, under the act of 1819, had been elected a delegate for Michigan Territory, in October, 1835, and took his seat at the ensuing session, in December of that year. By the act of June 15, 1836, the constitution and State government which the people of Michigan had formed for themselves was accepted, ratified and confirmed, and she was declared to be one of the United States of America, so that the term of two years for which Jones had been elected was cut short, as, in the nature of the case, his term could not survive the existence of the Territory he represented. But, as he was a candidate for election to represent the new Territory of Wisconsin in congress as a delegate, and was successful, he took his seat at the commencement of the second session of the twenty-fourth congress—December 12, 1836, notwithstanding he had been elected only a little over two months.

The first term of the supreme court of the Territory was held at Belmont on the 8th day of December. There were present, Charles Dunn, chief justice, and David Irvin, associate judge. John Catlin was appointed clerk, and Henry S. Baird having previously been commissioned attorney general for the Territory by Governor Dodge, appeared before the court and took the oath of office. Causes in which the United States was party or interested were looked after by the United States attorney, who received his appointment from the president; while all cases in which the Territory was interested was attended to by the attorney general, whose commission was signed by the governor. The appointing of a crier and reporter and the admission of several attorneys to practice, completed the business for the term. The annual term appointed for the third Monday of July of the following year, at Madison, was not held; as no business for the action of the court had matured.

At the time of the complete organization of the Territory of Wisconsin, when the whole machinery had been put fairly in motion; when its first legislature at its first session had, after passing forty-two laws and three joint resolutions, in forty-six days, adjourned;—at this time, the entire portion west of the Mississippi had, in round numbers, a population of only eleven thousand; while the sparsely settled mineral region, the military establishments—Fort Crawford, Fort Winnebago, and Fort Howard—and the settlements at or near them, with the village of Milwaukee, constituted about all there was of the Territory east of that river, aggregating about twelve thousand inhabitants. There was no land in market, except a narrow strip along

the shore of Lake Michigan, and in the vicinity of Green bay. The residue of the country south and east of the Wisconsin and Fox rivers was open only to preëmption by actual settlers. The Indian tribes still claimed a large portion of the lands. On the north and as far west as the Red river of the north were located the Chippewas. The southern limits of their possessions were defined by a line drawn from a point on that stream in about latitude $46^{\circ} 30'$ in a southeasterly direction to the head of Lake St. Croix; thence in the same general direction to what is now Stevens Point, in the present Portage county, Wisconsin; thence nearly east to Wolf river; and thence in a direction nearly northeast to the Menomonee river. The whole country bounded by the Red river and Mississippi on the east; the parallel of about 43° of latitude on the south; the Missouri and White Earth river on the west; and the Territorial line on the north, was occupied by the Sioux. In the southwest part of the Territory, lying mostly south of latitude 43° — in the country reaching to the Missouri State boundary line south, and to the Missouri river west — were the homes of the Pottawattamies, the Iowas, and the Sacs and Foxes. Between the Wisconsin river and the Mississippi, and extending north to the south line of the Chippewas was the territory of the Winnebagoes. East of the Winnebagoes in the country north of the Fox river of Green bay were located the Menomonees, their lands extending to Wolf river. Such was the general outline of Indian occupancy in Wisconsin Territory at its organization. A portion of the country east of Wolf river and north of Green bay and the Fox river; the whole of the area lying south of Green bay, Fox river and the Wisconsin; and a strip of territory immediately west of the Mississippi, about fifty miles in width, and extending from the Missouri State line as far north as the northern boundary of the present State of Iowa, constituted the whole extent of country over which the Indians had no claim.

The second session of the first legislative assembly of the Territory began at Burlington, now the county seat of Des Moines county, Iowa, on the 6th of November, 1837. The governor, in his message, recommended a codification of the laws, the organization of the militia, and other measures of interest to the people. An act was passed providing for taking another census, and one abolishing imprisonment for debt. By a joint resolution, congress was urged to make an appropriation of twenty thousand dollars in money, and two townships of land for a "University of the Territory of Wisconsin." The money was not appropriated, but the land was granted — forty-six thousand and eighty acres. This was the fundamental endowment of the present State university, at Madison. A bill was also passed to regulate the sale of school lands, and to prepare for organizing, regulating and perfecting schools. Another act, which passed the legislature at this session, proved an apple of discord to the people of the Territory. The measure was intended to provide ways and means whereby to connect, by canals and slack-water, the waters of Lake Michigan with those of the Mississippi, by way of Rock river, the Catfish, the four lakes and the Wisconsin, by the incorporation of the Milwaukee and Rock river canal company. This company was given authority to apply to congress for an appropriation in money or lands to aid in the construction of the work, which was to have its eastern outlet in the Milwaukee river, and to unite at its western terminus with Rock river, near the present village of Jefferson, in Jefferson county. The result was that a grant of land of odd-numbered sections in a strip of territory five miles on each side of the line of the proposed canal was secured, and in July, 1839, over forty thousand acres were sold at the minimum price of two dollars and fifty cents per acre. However, owing mainly to the fact that purchasers were compelled to pay double the government price for their lands — owing also to the circumstance of an antagonism growing up between the officers of the canal company and the Territorial officers intrusted with the disposition of the lands, and to conflicts between the beneficiaries of

the grant and some of the leading politicians of the time—the whole scheme proved a curse and a blight rather than a blessing, and eventuating, of course, in the total failure of the project. There had been much Territorial and State legislation concerning the matter; but very little work, meanwhile, was done on the canal. It is only within the year 1875 that an apparent quietus has been given to the subject, and legislative enactments forever put at rest.

Fourteen counties were set off during this session of the legislature at Burlington—all west of the Mississippi. They were Benton, Buchanan, Cedar, Clinton, Delaware, Fayette, Jackson, Johnson, Jones, Keokuk, Linn, Slaughter, Scott and Clayton. One hundred and five acts and twenty joint resolutions were passed. On the 20th of January, 1838, both houses adjourned until the second Monday of June following.

The census of the Territory having been taken in May, the special session of the first legislature commenced on the eleventh of June, 1838, at Burlington, pursuant to adjournment, mainly for the purpose of making a new apportionment of members of the house. This was effected by giving twelve members to the counties east of the Mississippi, and fourteen to those west of that stream, to be contingent, however, upon the division of the Territory, which measure was not only then before congress, but had been actually passed by that body, though unknown to the Territorial legislature. The law made it incumbent on the governor, in the event of the Territory being divided before the next general election, to make an apportionment for the part remaining,—enacting that the one made by the act of the legislature should, in that case, have no effect. Having provided that the next session should be held at Madison, the legislative body adjourned *sine die* on the twenty-fifth of June, 1838, the public buildings at the new capital having been put under contract in April, previous. Up to this time, the officers of the Territory at large, appointed by the president of the United States at its organization, had remained unchanged, except that the secretary, John S. Horner, had been removed and his place given to William B. Slaughter, by appointment, dated February 16, 1837. Now there were two other changes made. On the nineteenth of June, Edward James was commissioned marshal, and on the fifth of July, Moses M. Strong was commissioned attorney of the United States for the Territory. By an act of congress, approved June 12, 1838, to divide the Territory of Wisconsin, and to establish a Territorial government west of the Mississippi, it was provided that from and after the third day of July following, all that part of Wisconsin Territory lying west of that river and west of a line drawn due north from its headwaters or sources to the Territorial line, for the purposes of a Territorial government should be set apart and known by the name of IOWA. It was further enacted that the Territory of Wisconsin should thereafter extend westward only to the Mississippi. It will be seen therefore that all that portion of the present State of Minnesota, extending eastward from the Mississippi to the St. Croix and northward to the United States boundary line, was then a part of Wisconsin Territory, even after the organization of the Territory of Iowa. The census taken in May, just previous to the passage of this act, gave a total population to the several counties of the Territory, east of the Mississippi, of 18,149.

On the third Monday of July, 1838, the annual terms of the supreme court—the first one after the re-organization of the Territory of Wisconsin—was held at Madison. There were present Chief Justice Dunn and Associate Judge Frazer. After admitting five attorneys to practice, hearing several motions, and granting several rules, the court adjourned. All the terms of the Supreme Court thereafter were held at Madison.

At an election held in the Territory on the tenth day of September, 1838, James Duane Doty received the highest number of votes for the office of delegate to congress, and was declared by Governor Dodge duly elected, by a certificate of election, issued on the twenty-seventh day of October following. Upon the commencement of the third session of the twenty-fifth congress

on Monday, December 10, 1838, Isaac E. Crary, member from Michigan, announced to the chair of the house of representatives that Doty was in attendance as delegate from Wisconsin Territory, and moved that he be qualified. Jones, the former delegate, then rose and protested against Doty's right to the seat, claiming that his (Jones') term had not expired. The basis for his claim was that under the act of 1817, a delegate must be elected only for one congress, and not for parts of two congressional terms; that his term as a delegate from Wisconsin did not commence until the fourth of March, 1837, and consequently would not expire until the fourth of March, 1839. The subject was finally referred to the committee of elections. This committee, on the fourteenth of January, 1839, reported in favor of Doty's right to his seat as delegate, submitting a resolution to that effect which passed the house by a vote of one hundred and sixty-five to twenty-five. Whereupon Doty was qualified as delegate from Wisconsin Territory, and took his seat at the date last mentioned.

On the 8th of November, Andrew G. Miller was appointed by Martin Van Buren, then president of the United States, associate judge of the supreme court, to succeed Judge Frazer, who died at Milwaukee, on the 18th of October. During this year, Moses M. Strong succeeded W. W. Chapman as United States attorney for the Territory.

On the 26th day of November, 1838, the legislature of the re-organized Territory of Wisconsin—being the first session of the second legislative assembly—met at Madison. Governor Dodge, in his message, recommended an investigation of the banks then in operation, memorializing congress for a grant of lands for the improvement of the Fox river of Green bay and the Wisconsin; the revision of the laws; the division of the Territory into judicial districts; the justice of granting to all miners who have obtained the ownership of mineral grounds under the regulations of the superintendent of the United States lead mines, either by discovery or purchase, the right of pre-emption; and the improvement of the harbors on Lake Michigan.

The attention of this Legislature was directed to the mode in which the commissioners of public buildings had discharged their duties. There was an investigation of the three banks then in operation in the Territory—one at Green Bay, one at Mineral Point, and the other at Milwaukee. A plan, also, for the revision of the laws of the Territory was considered. A new assignment was made for the holding of district courts. Chief Justice Dunn was assigned to the first district, composed of the counties of Iowa, Grant and Crawford; Judge Irvin to the second, composed of the counties of Dane, Jefferson, Rock, Walworth and Green; while Judge Miller was assigned to the third district, composed of Milwaukee, Brown and Racine counties—including therein the unorganized counties of Washington and Dodge, which, for judicial purposes, were, when constituted by name and boundary, attached to Milwaukee county, and had so remained since that date. The legislature adjourned on the 22d of December, to meet again on the 21st of the following month. "Although," said the president of the council, upon the occasion of the adjournment, "but few acts of a general character have been passed, as the discussions and action of this body have been chiefly confined to bills of a local nature, and to the passage of memorials to the parent government in behalf of the great interests of the Territory; yet it is believed that the concurrent resolutions of the two houses authorizing a revision of the laws, is a measure of infinite importance to the true interests of the people, and to the credit and character of the Territory."

The census of the Territory having been taken during the year 1838, showed a population of 18,130, an increase in two years of 6,447.

The second session of the second legislative assembly commenced on the twenty-first day of January, 1839, agreeable to adjournment. The most important work was the revision of the laws which had been perfected during the recess, by the committee to whom the work was intrusted,

consisting of three members from each house: from the council, M. L. Martin, Marshall M. Strong, and James Collins; from the house of representatives, Edward V. Whiton, Augustus Story, and Barlow Shackelford. The act legalizing the revision, took effect on the fourth day of July following. The laws as revised, composed the principal part of those forming the Revised Statutes of 1839, a valuable volume for all classes in the territory—and especially so for the courts and lawyers—during the next ten years. The *sine die* adjournment of this legislature took place on the 11th of March, 1839.

On the 8th of March of this year, Henry Dodge, whose term for three years as governor was about to expire, was again commissioned by the president of the United States, as governor of the Territory of Wisconsin. At the July term of the supreme court, all the judges were present, and several cases were heard and decided. A seal for the court was also adopted. The attorney general of the Territory at this time was H. N. Wells, who had been commissioned by Governor Dodge, on the 30th of March previous, in place of H. S. Baird, resigned. Wells not being in attendance at this term of the court, Franklin J. Munger was appointed by the judge attorney general for that session. The clerk, John Catlin having resigned, Simeon Mills was selected by the court to fill his place. From this time, the supreme court met annually, as provided by law, until Wisconsin became a State.

The next legislature assembled at Madison, on the second of December, 1839. This was the third session of the second legislative assembly of the Territory.¹ The term for which members of the house were elected, would soon expire; it was therefore desirable that a new apportionment should be made. As the census would be taken the ensuing June, by the United States, it would be unnecessary for the Territory to make an additional enumeration. A short session was resolved upon, and then an adjournment until after the completion of the census. One of the subjects occupying largely the attention of the members, was the condition of the capitol, and the conduct of the commissioners intrusted with the money appropriated by congress to defray the cost of its construction. The legislature adjourned on the thirteenth of January, 1840, to meet again on the third of the ensuing August. The completion of the census showed a population for the Territory of thirty thousand seven hundred and forty-four, against eighteen thousand one hundred and thirty, two years previous. Upon the re-assembling of the legislature—which is known as the extra session of the second legislative assembly—at the time agreed upon, some changes were made in the apportionment of members to the house of representatives; the session lasted but a few days, a final adjournment taking place on the fourteenth of August, 1840. At the July term of the supreme court, Simeon Mills resigned the office of clerk, and La Fayette Kellogg was appointed in his place. Kellogg continued to hold the position until the state judiciary was organized. At the ensuing election, James Duane Doty was re-elected Territorial delegate, taking his seat for the first time under his second term, on the eighth day of December, 1840, at the commencement of the second session of the twenty-sixth congress.

The first session of the third legislative assembly commenced on the seventh of December, 1840, with all new members in the house except three. All had recently been elected under the new apportionment. Most of the session was devoted to the ordinary routine of legislation. There was, however, a departure, in the passage of two acts granting divorces, from the usual current of legislative proceedings in the Territory. There was, also, a very interesting contested election case between two members from Brown county. Such was the backwardness in regard to the building of the capitol, at this date, that a large majority of the members stood ready to remove the seat of government to some other place. However, as no particular point could be agreed upon, it remained at Madison. The legislature adjourned on the nineteenth of February,

1841, having continued a term of seventy-five days, the maximum time limited by the organic act.

Francis J. Dunn, appointed by Martin Van Buren, was commissioned in place of William B. Slaughter, as secretary of the Territory, on the 25th of January, 1841, but was himself superseded by the appointment of A. P. Field, on the 23d day of April following. On the 15th of March, Daniel Hugunin was commissioned as marshal in place of Edward James, and on the 27th of April, Thomas W. Sutherland succeeded Moses M. Strong as United States attorney for the Territory. On the 26th of June, Governor Dodge commissioned as attorney general of the Territory, M. M. Jackson. On the 13th of September following, Dodge was removed from office by John Tyler, then president of the United States, and James Duane Doty appointed in his place. The appointment of Doty, then the delegate of the Territory in congress, by the president of the United States as governor, and the consequent resignation of the latter of his seat in the house of representatives, caused a vacancy which was filled by the election of Henry Dodge to that office, on the 27th of September, 1841; so that Doty and Dodge changed places. Dodge took his seat for the first time, at the commencement of the second session of the twenty-fifth congress—Monday, December 7, 1841.

About this time, the Milwaukee and Rock river canal imbroglio broke out afresh. The loan agent appointed by the governor to negotiate a loan of one hundred thousand dollars for the work, reported that he had negotiated fifty-six thousand dollars of bonds, which had been issued; but he did not report what kind of money was to be received for them. Now, the canal commissioners claimed that it was their right and duty not to recognize any loan which was to be paid in such currency as they disapproved of. This dispute defeated the loan, and stopped all work on the canal. During the year 1841, Thomas W. Sutherland succeeded Moses M. Strong as United States attorney. The second session of the third legislative assembly began at Madison, on the sixth of December, 1841. Governor Doty, in his message to that body, boldly avowed the doctrine that no law of the Territory was effective, until expressly approved by congress. "The act," said he, "establishing the government of Wisconsin, in the third section, requires the secretary of the Territory to transmit annually, on or before the first Monday in December, 'two copies of the laws to the speaker of the house of representatives, for the use of congress.' The sixth section provides that 'all laws of the governor and legislative assembly shall be submitted to, and, if disapproved by the congress of the United States, the same shall be null and of no effect.'" "These provisions," he added, "it seems to me, require the laws to be actually submitted to congress before they take effect. They change the law by which this country was governed while it was a part of Michigan. That law provided that the laws should be reported to congress, and that they should 'be in force in the district until the organization of the general assembly therein, unless disapproved of by congress.'" The governor concluded in these words: "The opinion of my predecessor, which was expressed to the first legislature assembled after the organization of this government, in his message delivered at Belmont on the twenty-sixth day of October, 1836, fully sustains this view of the subject which I have presented. He said: 'We have convened under an act of congress of the United States establishing the Territorial government of Wisconsin, for the purpose of enacting such laws as may be required for the government of the people of this Territory, after their approval by congress.'" This construction of the organic act resulted in a lengthy warfare between the governor and the legislative assembly.

At this session, the Milwaukee and Rock river canal again raised a tumult. "Congress had made a valuable grant of land to the Territory in trust. The Territory was the trustee; the canal company the *cestui que trust*. The trust had been accepted, and a large portion of the lands had been sold, one tenth of the purchase money received, and ample securities held

for the balance." The Territory now, by its legislature, repealed all the laws authorizing a loan, and all which contemplated the expenditure of any money on its part in constructing the canal. The legislature resolved that all connection ought to be dissolved, and the work on the canal by the Territory abandoned, and that the latter ought not further to execute the trust. They resolved also that the congress be requested to divert the grant to such other internal improvements as should be designated by the Territory, subject to the approval of congress; and that, if the latter should decline to make this diversion, it was requested to take back the grant, and dispose of the unsold lands. On the eleventh of February, 1842, a tragedy was enacted in the legislative council, causing great excitement over the whole Territory. On that day, Charles C. P. Arndt, a member from Brown county, was, while that body was in session, shot dead by James R. Vineyard, a member from Grant county. The difficulty grew out of a debate on motion to lay on the table the nomination of Enos S. Baker to the office of sheriff of Grant county. Immediately before adjournment of the council, the parties who had come together, after loud and angry words had been spoken, were separated by the by-standers. When an adjournment had been announced, they met again; whereupon Arndt struck at Vineyard. The latter then drew a pistol and shot Arndt. He died in a few moments. Vineyard immediately surrendered himself to the sheriff of the county, waived an examination, and was committed to jail. After a short confinement, he was brought before the chief justice of the Territory, on a writ of *habeas corpus*, and admitted to bail. He was afterward indicted for manslaughter, was tried and acquitted. Three days after shooting Arndt, Vineyard sent in his resignation as member of the council. That body refused to receive it, or to have it read even; but at once expelled him. The second and last session of the third legislative assembly came to a close on the eighteenth of February, 1842.

The first session of the fourth legislative assembly commenced on the fifth day of December, 1842. The members had been elected under a new apportionment based upon a census taken in the previous June, which showed a total population for the Territory of forty-six thousand six hundred and seventy-eight—an increase of nearly ten thousand in two years. A political count showed a decided democratic majority in each house. Governor Doty's political proclivities were with the whig party. The contest between him and the legislature now assumed a serious character. He refused to "hold converse" with it, for the reason that, in his opinion, no appropriation had been made by congress to defray the expenses of the session, and, as a consequence, none could be held. The legislature made a representation to congress, then in session, of the objections of the governor, and adjourned on the tenth of December, to meet again on the thirteenth of January, 1843. It was not until the fourth of February following that a quorum in both houses had assembled, when the legislature, through a joint committee, waited on the governor, and informed him that they had again met according to adjournment, and were then ready to proceed to business. Previous to this time, congress had made an appropriation to cover the expenses of the legislature now in session, which it was supposed would remove all conflict about its legality. But the governor had, on the thirtieth day of January previous, issued a proclamation, convening a special session of the legislature on the sixth of March, and still refused to recognize the present one as legal. Both houses then adjourned to the day fixed by the executive. A final adjournment took place on the seventeenth of April following.

The term of two years for which Henry Dodge was elected as delegate, having expired at the close of the third session of the twenty-seventh congress, he was, on the twenty-fifth of September, 1843, re-elected, taking his seat for the first time on his second term at the commencement of the first session of the twenty-eighth congress, Monday, December 4, 1843. On the thirtieth of October of this year, George Floyd was commissioned by President Tyler as

secretary of the Territory, in place of A. P. Field.

The second session of the fourth legislative assembly of the Territory, commencing on the fourth of December, 1843, and terminating on the thirty-first of January, 1844—a period of fifty-nine days—accomplished but little worthy of especial mention, except the submission of the question of the formation of a State government to a vote of the people, to be taken at the general election to be held in September following. The proposition did not succeed at the ballot-box. The third session of the fourth legislative assembly did not commence until the sixth of January, 1845, as the time had been changed to the first Monday in that month for annual meetings. Governor Doty having persisted in spelling Wisconsin with a “k” and an “a”—Wis-konsan—and some of the people having adopted his method, it was thought by this legislature a matter of sufficient importance to be checked. So, by a joint resolution, the orthography—Wisconsin—employed in the organic act, was adopted as the true one for the Territory, and has ever since been used. Before the commencement of this session Doty's term of office had expired. He was superseded as governor of the Territory by N. P. Tallmadge, the latter having been appointed on the twenty-first of June, 1844. On the thirty-first of August, Charles M. Prevost was appointed marshal of the Territory, in place of Daniel Hugunin. There was the utmost harmony between Governor Tallmadge and the legislature of the Territory at its session in 1845.

His message, which was delivered to the two houses in person, on the seventeenth of January, was well received. Among other items of interest to which he called the attention of the legislative assembly, was one concerning the construction of a railroad to connect Lake Michigan with the Mississippi. “The interests of the Territory,” said he, “seem imperiously to demand the construction of a railroad, or other communication, from some suitable point on Lake Michigan to the Mississippi river. Much difference of opinion seems to exist as to what it shall be, and how it is to be accomplished. There is a general impression,” continued the governor, “that the construction of the Milwaukee and Rock river canal, which was intended to connect those waters, is abandoned. It remains to be seen what shall be substituted for it.” The session terminated on the twenty-fourth of February, 1845.

James K. Polk having been inaugurated president of the United States on the fourth of March, 1845, Henry Dodge was again put into the gubernatorial chair of the Territory, receiving his appointment on the eighth of April, 1845. Other changes were made by the president during the same year, John B. Rockwell being, on the fourteenth of March, appointed marshal, and W. P. Lynde, on the fourteenth of July, United States attorney for the Territory, Governor Tallmadge, on the twenty-second of January of this year, having commissioned the latter also as attorney general. On the twenty-second of September, Morgan L. Martin was elected delegate to the twenty-ninth congress, as the successor of Henry Dodge.

The fourth and last session of the fourth legislative assembly was organized on the fifth of January, 1846. This session, although a short one, proved very important. Preliminary steps were taken for the formation of a State government. The first Tuesday in April next succeeding was the day fixed upon for the people to vote for or against the proposition. When taken it resulted in a large majority voting in favor of the measure. An act was passed providing for taking the census of the Territory, and for the apportionment by the governor of delegates to form a State constitution, based upon the new enumeration. The delegates were to be elected on the first Monday in September, and the convention was to assemble on the first Monday in October, 1846. The constitution when formed was to be submitted to the vote of the people for adoption or rejection, as, at the close of the session, the terms of members of the council who had been elected for four years, and of the house, who had been elected for two years, all ended. The legislature

re-organized the election districts, and conferred on the governor the power and duty of making an apportionment, based on the census to be taken, for the next legislative assembly, when, on the third of February, 1846, both houses adjourned *sine die*. On the twenty-second of January, Governor Dodge appointed A. Hyatt Smith attorney general of the Territory. On the twenty-fourth of February, John Catlin was appointed Territorial secretary by the president.

The census taken in the following June showed a population for the Territory of one hundred and fifty-five thousand two hundred and seventy-seven. Delegates having been elected to form a constitution for the proposed new State, met at Madison on the fifth day of October. After completing their labors, they adjourned. This event took place on the sixteenth of December, 1846. The constitution thus formed was submitted to a popular vote on the first Tuesday of April, 1847, and rejected. The first session of the fifth legislative assembly commenced on the fourth of January of that year. But little was done. Both houses finally adjourned on the eleventh of February, 1847. John H. Tweedy was elected as the successor of Morgan L. Martin, delegate to the thirtieth congress, on the sixth of September following. On the twenty-seventh of that month, Governor Dodge issued a proclamation for a special session of the legislature, to commence on the eighteenth of the ensuing month, to take action concerning the admission of Wisconsin into the Union. The two houses assembled on the day named in the proclamation, and a law was passed for the holding of another convention to frame a constitution; when, after nine days' labor, they adjourned. Delegates to the new convention were elected on the last Monday of November, and that body met at Madison on the fifteenth of December, 1847. A census of the Territory was taken this year, which showed a population of two hundred and ten thousand five hundred and forty-six. The result of the labors of the second constitutional convention was the formation of a constitution, which, being submitted to the people on the second Monday of March, 1848, was duly ratified.

The second and last session of the fifth legislative assembly — the last legislative assembly of Wisconsin Territory — commenced on the seventh of February, 1848, and adjourned *sine die* on the thirteenth of March following. On the twentieth of the same month, J. H. Tweedy, delegate from Wisconsin, introduced a bill in congress for its admission into the Union. The bill was finally passed; and on the twenty-ninth of May, 1848, Wisconsin became a State. There had been seventeen sessions of the legislative assembly of the Territory, of an average duration of forty days each: the longest one lasted seventy-six days; the shortest, ten days. So long as the Territory had an existence, the apportionment of thirteen members for the council, and twenty-six for the house of representatives, was continued, as provided in the organic act. There had been, besides those previously mentioned, nine additional counties "set off" by the legislative assembly of the Territory, so that they now numbered in all twenty-eight: Milwaukee, Waukesha, Jefferson, Racine, Walworth, Rock, Green, Washington, Sheboygan, Manitowoc, Calumet, Brown, Winnebago, Fond du Lac, Marquette, Sauk, Portage, Columbia, Dodge, Dane, Iowa, La Fayette, Grant, Richland, Crawford, Chippewa, St. Croix, and La Pointe.

V.—WISCONSIN AS A STATE.

FIRST ADMINISTRATION. — NELSON DEWEY, GOVERNOR—1848, 1849.

The boundaries prescribed in the act of congress, entitled "An Act to enable the people of Wisconsin Territory to form a Constitution and State Government, and for the admission of such State into the Union," approved August 6, 1846, were accepted by the convention which formed the constitution of Wisconsin, and are described in that instrument as "beginning at the northeast corner of the State of Illinois — that is to say, at a point in the center of Lake Michigan

where the line of forty-two degrees and thirty minutes of north latitude crosses the same ; thence running with the boundary line of the State of Michigan, through Lake Michigan [and] Green bay to the mouth of the Menomonee river ; thence up the channel of the said river to the Brule river ; thence up said last mentioned river to Lake Brule ; thence along the southern shore of Lake Brule, in a direct line to the center of the channel between Middle and South islands, in the Lake of the Desert ; thence in a direct line to the head waters of the Montreal river, as marked upon the survey made by Captain Cram ; thence down the main channel of the Montreal river to the middle of Lake Superior ; thence through the center of Lake Superior to the mouth of the St. Louis river ; thence up the main channel of said river to the first rapids in the same, above the Indian village, according to Nicollett's map ; thence due south to the main branch of the River St. Croix ; thence down the main channel of said river to the Mississippi ; thence down the center of the main channel of that river to the northwest corner of the State of Illinois ; thence due east with the northern boundary of the State of Illinois to the place of beginning." The territory included within these lines constitutes the STATE OF WISCONSIN, familiarly known as the "Badger State." All that portion of Wisconsin Territory, as formerly constituted, lying west of so much of the above mentioned boundary as extends from the middle of Lake Superior to the mouth of the St. Croix river, not being included in Wisconsin, the limits of the State are, of course, not identical with those of the Territory as they previously existed.

The State of Wisconsin, thus bounded, is situated between the parallel of forty-two degrees thirty minutes and that of forty-seven degrees, north latitude, and between the eighty-seventh and ninety-third degrees west longitude, nearly. For a portion of its northern border it has Lake Superior, the largest body of fresh water in the world ; for a part of its eastern boundary it has Lake Michigan, almost equal in size to Lake Superior ; while the Mississippi, the largest river in the world but one, forms a large portion of its western boundary. The State of Michigan lies on the east ; Illinois on the south ; Iowa and Minnesota on the west. Wisconsin has an average length of about two hundred and sixty miles ; an average breadth of two hundred and fifteen miles.

The constitution of Wisconsin, adopted by the people on the second Monday of March, 1848, provided for the election of a governor, lieutenant governor, secretary of state, treasurer, attorney general, members of the State legislature, and members of congress, on the second Monday of the ensuing May. On that day—the 8th of the month—the election was held, which resulted in the choice of Nelson Dewey, for governor ; John E. Holmes, for lieutenant governor ; Thomas McHugh, for secretary of state ; Jairus C. Fairchild, for state treasurer ; and James S. Brown, for attorney general. The State was divided into nineteen senatorial, and sixty-six assembly districts, in each of which one member was elected ; it was also divided into two congressional districts, in each of which one member of congress was elected—William Pitt Lynde in the first district, composed of the counties of Milwaukee, Waukesha, Jefferson, Racine, Walworth, Rock, and Green ; Mason C. Darling, in the second district, composed of the counties of Washington, Sheboygan, Manitowoc, Calumet, Brown, Winnebago, Fond du Lac, Marquette, Sauk, Portage, Columbia, Dodge, Dane, Iowa, La Fayette, Grant, Richland, Crawford, Chippewa, St. Croix, and La Pointe—the counties of Richland, Chippewa and La Pointe being unorganized.

The first session of the legislature of Wisconsin commenced at Madison, the seat of government for the State, on Monday, the 5th day of June, 1848. Ninean E. Whiteside was elected speaker of the assembly, and Henry Billings president of the senate, *pro tempore*. The democrats were largely in the majority in both houses. The legislature, in joint convention, on the 7th of June, canvassed, in accordance with the provisions of the constitution, the votes given on the 8th of May previous, for the State officers and the two representatives in congress. On the same

day, the governor, lieutenant governor, secretary of state, treasurer, and attorney general, were sworn into office in presence of both houses. All these officers, as well as the representatives in congress, were democrats. Dewey's majority over John H. Tweedy, whig, was five thousand and eighty-nine. William P. Lynde's majority in the first district, for congress, over Edward V. Whiton, whig, was two thousand four hundred and forty-seven. Mason C. Darling's majority in the second district, over Alexander L. Collins, whig, was two thousand eight hundred and forty-six. As the thirtieth congress, to which Lynde and Darling were elected would expire on the 4th of March, 1849, their terms of office would, of course, end on that day. The former took his seat on the 5th of June, the latter on the 9th of June, 1848.

The constitution vested the judicial power of the State in a supreme court, circuit courts, courts of probate, and in justices of the peace, giving the legislature power to vest such jurisdiction as should be deemed necessary in municipal courts; also, conferring upon it the power to establish inferior courts in the several counties, with limited civil and criminal jurisdiction. The State was divided into five judicial circuits; and judges were to be elected at a time to be provided for by the legislature at its first session. It was provided that there should be no election for a judge or judges, at any general election for State or county officers, nor within thirty days either before or after such election.

On the 8th of June, 1848, Governor Dewey delivered his first message to a joint convention of the two houses. It was clear, concise, and definite upon such subjects as, in his opinion demanded immediate attention. His views were generally regarded as sound and statesmanlike by the people of the State. "You have convened," said he, "under the provisions of the constitution of the State of Wisconsin, to perform as representatives of the people, the important duties contemplated by that instrument." "The first session of the legislature of a free people," continued the governor, "after assuming the political identity of a sovereign State, is an event of no ordinary character in its history, and will be fraught with consequences of the highest importance to its future welfare and prosperity. Wisconsin possesses the natural elements, fostered by the judicious system of legislation," the governor added, "to become one of the most populous and prosperous States of the American Union. With a soil unequaled in fertility, and productive of all the necessary comforts of life, rich in mineral wealth, with commercial advantages unsurpassed by any inland State, possessing extensive manufacturing facilities, with a salubrious climate, and peopled with a population enterprising, industrious, and intelligent, the course of the State of Wisconsin must be onward, until she ranks among the first of the States of the Great West. It is," concluded the speaker, "under the most favorable auspices that the State of Wisconsin has taken her position among the families of States. With a population numbering nearly one quarter of a million, and rapidly increasing, free from the incubus of a State debt, and rich in the return yielded as the reward of labor in all the branches of industrial pursuits, our State occupies an enviable position abroad, that is highly gratifying to the pride of our people." Governor Dewey then recommended a number of measures necessary, in his judgment, to be made upon changing from a Territorial to a State government.

The first important business of the legislature, was the election of two United States senators. The successful candidates were Henry Dodge and Isaac P. Walker, both democrats. Their election took place on the 8th of June, 1848, Dodge taking his seat in the senate on the 23d of June, and Walker on the 26th of June, 1848. The latter drew the short term; so that his office would expire on the 4th day of March, 1849, at the end of the thirtieth congress: Dodge drew the long term, his office to expire on the 4th day of March, 1851, at the end of the thirty-first congress. The residue of the session was taken up in passing such acts as were deemed necessary to put the machinery of the new State government, in all its branches, in fair

running order. One was passed providing for the annual meeting of the legislature, on the second Wednesday of January of each year; another prescribing the duties of State officers; one dividing the State into three congressional districts. The first district was composed of the counties of Milwaukee, Waukesha, Walworth, and Racine; the second, of the counties of Rock, Green, La Fayette, Grant, Dane, Iowa, Sauk, Richland, Crawford, Adams, Portage, Chippewa, La Pointe, and St. Croix; the third, of the counties of Washington, Sheboygan, Manitowoc, Brown, Winnebago, Calumet, Fond du Lac, Marquette, Dodge, Jefferson, and Columbia. Another act provided for the election of judges of the circuit courts, on the first Monday of August, 1848. By the same act, it was provided that the first term of the supreme court should be held in Madison on the second Monday of January, 1849, and thereafter at the same place on the same day, yearly; afterward changed so as to hold a January and June term in each year. An act was also passed providing for the election, and defining the duties of State superintendent of public instruction. That officer was to be elected at the general election to be holden in each year, his term of office to commence on the first Monday of January succeeding his election. Another act established a State university; another exempted a homestead from a forced sale; another provided for a revision of the statutes. The legislature, after a session of eighty-five days, adjourned *sine die* on the twenty-first of August, 1848.

The State, as previously stated, was divided into five judicial circuits: Edward V. Whiton being chosen judge at the election on the first Monday in August, 1848, of the first circuit, composed of the counties of Racine, Walworth, Rock, and Green, as then constituted; Levi Hubbell of the second, composed of Milwaukee, Waukesha, Jefferson, and Dane; Charles H. Larrabee, of the third, composed of Washington, Dodge, Columbia, Marquette, Sauk, and Portage, as then formed; Alexander W. Stow, of the fourth, composed of Brown, Manitowoc, Sheboygan, Fond du Lac, Winnebago, and Calumet; and Mortimer M. Jackson, of the fifth circuit, composed of the counties of Iowa, LaFayette, Grant, Crawford and St. Croix, as then organized; the county of Richland being attached to Iowa county; the county of Chippewa to the county of Crawford; and the county of LaPointe to the county of St. Croix, for judicial purposes.

In the ensuing Fall there was a presidential election. There were then three organized political parties in the State: whig, democratic, and free-soil—each of which had a ticket in the field. The democrats were in the majority, and their four electors cast their votes for Lewis Cass and William O. Butler. At this election, Eleazer Root was the successful candidate for State superintendent of public instruction. In his election party politics were not considered. There were also three members for the thirty-first congress chosen: Charles Durkee, to represent the first district; Orsamus Cole, the second; and James D. Doty, the third district. Durkee was a free-soiler; Cole, a whig; Doty, a democrat—with somewhat decided Doty proclivities.

The act of the legislature, exempting a homestead from forced sale of any debt or liability contracted after January 1, 1849, approved the twenty-ninth of July previous, and another act for a like exemption of certain personal property, approved August 10, 1848, were laws the most liberal in their nature passed by any State of the Union previous to those dates. It was prophesied that they would work wonderful changes in the business transactions of the new State—for the worse; but time passed, and their utility were soon evident: it was soon very generally acknowledged that proper exemption laws were highly beneficial—a real good to the greatest number of the citizens of a State.

So much of Wisconsin Territory as lay west of the St. Croix and the State boundary north of it, was, upon the admission of Wisconsin into the Union, left, for the time being, without a government—unless it was still “Wisconsin Territory.” Henry Dodge, upon being elected to the United States senate from Wisconsin, vacated, of course, the office of governor of this fraction. John H. Tweedy, delegate in congress at the time Wisconsin became a State, made a formal

resignation of his office, thus leaving the fractional Territory unrepresented. Thereupon John Catlin, secretary of the Territory of Wisconsin as a whole, and now claiming, by virtue of that office, to be acting governor of the fractional part, issued a proclamation as such officer for an election on the thirtieth of October, 1848, of a delegate in congress. Nearly four hundred votes were polled in the district, showing "Wisconsin Territory" still to have a population of not less than two thousand. H. H. Sibley was elected to that office. On the fifteenth of January, 1849, he was admitted to a seat as "delegate from Wisconsin Territory." This hastened the formation of the Territory of Minnesota—a bill for that purpose having become a law on the third of March, when "Wisconsin Territory" ceased finally to exist, being included in the new Territory.

The year 1848—the first year of the existence of Wisconsin as a State—was one of general prosperity to its rapidly increasing population. The National Government effected a treaty with the Menomonee Indians, by which their title was extinguished to the country north of the Fox river of Green bay, embracing all their lands in the State. This was an important acquisition, as it opened a large tract of country to civilization and settlement, which had been for a considerable time greatly desired by the people. The State government at the close of the year had been in existence long enough to demonstrate its successful operation. The electric telegraph had already reached the capital; and Wisconsin entered its second year upon a flood tide of prosperity.

Under the constitution, the circuit judges were also judges of the supreme court. An act of the legislature, approved June 29, 1848, providing for the election of judges, and for the classification and organization of the judiciary of the State, authorized the election, by the judges, of one of their number as chief justice. Judge Alexander W. Stow was chosen to that office, and, as chief justice, held, in conjunction with Associate Judges Whiton, Jackson, Larrabee, and Hubbell, the first session of the supreme court at Madison, commencing on the eighth day of January, 1849.

The second session of the State legislature commenced, according to law, on the tenth of January, 1849, Harrison C. Hobart being elected speaker of the assembly. Governor Dewey, in his message, sent to both houses on the 11th, referred to the rapidly increasing population of the State, and the indomitable energy displayed in the development of its productive capacity. He recommended the sale of the university lands on a long credit, the erection of a State prison, and the modification of certain laws. On the seventeenth of January, the two houses met in joint convention to elect an United States senator in place of Isaac P Walker, who had drawn the short term. The democrats had a small majority on joint ballot. Walker was re-elected; this time, for a full term of six years, from the 4th of March, 1849. The legislature at this session passed many acts of public utility; some relating to the boundaries of counties; others, to the laying out of roads; eighteen, to the organization of towns. The courts were cared for; school districts were organized; special taxes were authorized, and an act passed relative to the sale and superintendence of the school and university lands, prescribing the powers and duties of the commissioners who were to have charge of the same. These commissioners, consisting of the secretary of state, treasurer of state, and attorney general, were not only put in charge of the school and university lands held by the State, but also of funds arising from the sale of them. This law has been many times amended and portions of it repealed. The lands at present subject to sale are classified as school lands, university lands, agricultural college lands, Marathon county lands, normal school lands, and drainage lands, and are subject to sale at private entry on terms fixed by law. Regulations concerning the apportionment and investment of trust funds are made by the commissioners in pursuance of law. All lands now the property of the State subject to sale, or that have been State lands and sold, were derived from the Gen-

eral Government. Lands owned by the State amount, at the present time, to about one and one half million acres.

A joint resolution passed the legislature on the 31st of March, 1849, instructing Isaac P. Walker to resign his seat as United States senator, for "presenting and voting for an amendment to the general appropriation bill, providing for a government in California and New Mexico, west of the Rio Grande, which did not contain a provision forever prohibiting the introduction of slavery or involuntary servitude" in those Territories. The senator refused to regard these instructions. The legislature adjourned on the second of April, 1849, after a session of eighty-three days.

In July, 1848, the legislature of Wisconsin elected M. Frank, Charles C. Jordan, and A. W. Randall, commissioners to collate and revise all the public acts of the State, of a general and permanent nature in force at the close of the session. Randall declining to act, Charles M. Baker was appointed by the governor in his place. The commissioners commenced their labors in August, 1848, and were engaged in the revision the greater part of the time until the close of the session of the legislature of 1849. It was found impossible for the revisers to conclude their labors within the time contemplated by the act authorizing their appointment; so a joint select committee of the two houses at their second session was appointed to assist in the work. The laws revised by this committee and by the commissioners, were submitted to, and approved by, the legislature. These laws, with a few passed by that body, which were introduced by individual members, formed the Revised Statutes of Wisconsin of 1849—a volume of over nine hundred pages.

At the general election held in November of this year, Dewey was re-elected governor. S. W. Beall was elected lieutenant governor; William A. Barstow, secretary of state; Jairus C. Fairchild was re-elected treasurer; S. Park Coon was elected attorney general; and Eleazer Root, re-elected superintendent of public instruction. All these officers were chosen as democrats, except Root, who ran as an independent candidate, the term of his office having been changed so as to continue two years from the first day of January next succeeding his election. By the revised statutes of 1849, all State officers elected for a full term went into office on the first of January next succeeding their election.

The year 1849 developed in an increased ratio the productive capacity of the State in every department of labor. The agriculturist, the artisan, the miner, reaped the well-earned reward of his honest labor. The commercial and manufacturing interests were extended in a manner highly creditable to the enterprise of the people. The educational interest of the State began to assume a more systematic organization. The tide of immigration suffered no decrease during the year. Within the limits of Wisconsin, the oppressed of other climes continued to find welcome and happy homes.

SECOND ADMINISTRATION.—NELSON DEWEY, GOVERNOR (SECOND TERM)—1850, 1851.

On the first day of January, 1850, Nelson Dewey took the oath of office, and quietly entered upon his duties as governor, for the second term. The third legislature convened on the ninth. Moses M. Strong was elected speaker of the assembly. Both houses had democratic majorities. Most of the business transacted was of a local character. By an act approved the fifth of February, the "January term" of the supreme court was changed to December. The legislature adjourned after a session of only thirty-four days. An act was passed organizing a sixth judicial circuit, from and after the first Monday in July, 1850, consisting of the counties of Crawford, Chippewa, Bad Axe, St. Croix and La Pointe, an election for judge to be holden on the same day. Wiram Knowlton was elected judge of that circuit.

The first charitable institution in Wisconsin, incorporated by the State, was the "Wisconsin Institute for the Education of the Blind." A school for that unfortunate class had been opened in Janesville, in the latter part of 1859, receiving its support from the citizens of that place and vicinity. By an act of the legislature, approved February 9, 1850, this school was taken under the care of the Institute, to continue and maintain it, at Janesville, and to qualify, as far as might be, the blind of the State for the enjoyment of the blessings of a free government; for obtaining the means of subsistence; and for the discharge of those duties, social and political, devolving upon American citizens. It has since been supported from the treasury of the State. On the seventh of October, 1850, it was opened for the reception of pupils, under the direction of a board of trustees, appointed by the governor. The Institute, at the present time, has three departments: in one is given instruction such as is usually taught in common schools; in another, musical training is imparted; in a third, broom-making is taught to the boys,—sewing, knitting and various kinds of fancy work to the girls, and seating cane-bottomed chairs to both boys and girls. On the thirteenth of April, 1874, the building of the Institute was destroyed by fire. A new building has since been erected.

The taking of the census by the United States, this year, showed a population for Wisconsin of over three hundred and five thousand—the astonishing increase in two years of nearly ninety-five thousand! In 1840, the population of Wisconsin Territory was only thirty thousand. This addition, in ten years, of two hundred and seventy-five thousand transcended all previous experience in the settlement of any portion of the New World, of the same extent of territory. It was the result of a steady and persistent flow of men and their families, seeking permanent homes in the young and rising State. Many were German, Scandinavian and Irish; but the larger proportion were, of course, from the Eastern and Middle States of the Union. The principal attractions of Wisconsin were the excellency and cheapness of its lands, its valuable mines of lead, its extensive forests of pine, and the unlimited water-power of its numerous streams.

By the Revised Statutes of 1849, Wisconsin was divided into three congressional districts—the second congressional apportionment—each of which was entitled to elect one representative in the congress of the United States. The counties of Milwaukee, Waukesha, Walworth and Racine constituted the first district; the counties of Rock, Green, La Fayette, Grant, Iowa, Dane, Sauk, Adams, Portage, Richland, Crawford, Chippewa, St. Croix and La Pointe, the second district; the counties of Washington, Sheboygan, Manitowoc, Brown, Winnebago, Calumet, Fond du Lac, Marquette, Columbia, Dodge and Jefferson, the third district. At the general election in the Autumn of this year, Charles Durkee, of the first district; Benjamin C. Eastman, of the second; and John B. Macy, of the third district, were elected to represent the State in the thirty-second congress of the United States. Durkee, it will be remembered, represented the same district in the previous congress: he ran the second time as an independent candidate. Eastman and Macy were elected upon democratic tickets. The General Government this year donated to the State all the swamp and overflowed lands within its boundaries.

The year 1850 to the agriculturist of Wisconsin was not one of unbounded prosperity, owing to the partial failure of the wheat crop. In the other branches of agriculture there were fair returns. The State was visited during the year by cholera; not, however, to a very alarming extent.

The fourth session of the legislature of the State commenced on the 8th of January, 1851. Frederick W. Horn was elected speaker of the assembly. The majority in the legislature was democratic. Governor Dewey, in his message, referred to the death of the president of the United States, Zachary Taylor; said that the treasury and finances of the State were in a

sound condition; and then adverted to many topics of interest and importance to the people of Wisconsin. It was an able document. One of the important measures of the session was the election of an United States senator, in the place of Henry Dodge, whose term of office would expire on the 4th of March, next ensuing. In joint convention of the legislature held on the 20th of January, Dodge was re-elected for a full term of six years. On the 22d, the governor approved a joint resolution of the legislature, rescinding not only so much of the joint resolution of the legislative assembly of Wisconsin, passed March 31, 1849, as censured Isaac J. Walker, but also the instructions in those resolutions relative to his resigning his seat in the senate of the United States.

Among the important bills passed at this session of the legislature was one providing for the location and erection of a State prison. Another one—the apportionment bill—was vetoed by the governor, and having been passed on the last day of the session, failed to become a law. The legislature adjourned on the eighteenth of March, 1851, after a session of seventy days.

On the 1st day of January, 1851, Timothy O. Howe took his seat as one of the associate judges of the supreme court, he having been elected judge of the fourth circuit in place of Alexander W. Stow. The office of chief justice of the supreme court, which had been filled by Judge Stow, therefore became vacant, and so remained until the commencement of the next term—June 18, 1851—when Levi Hubbell, judge of the second circuit, was, by the judges present, pursuant to the statute, elected to that office.

By an act of the legislature approved March 14, 1851, the location and erection of a State prison for Wisconsin was provided for—the point afterward determined upon as a suitable place for its establishment being Waupun, Dodge county. By a subsequent act, the prison was declared to be the general penitentiary and prison of the State for the reformation as well as for the punishment of offenders, in which were to be confined, employed at hard labor, and governed as provided for by the legislature, all offenders who might be committed and sentenced according to law, to the punishment of solitary imprisonment, or imprisonment therein at hard labor. The organization and management of this the first reformatory and penal State institution in Wisconsin, commenced and has been continued in accordance with the demands of an advanced civilization and an enlightened humanity.

On the 29th of September, 1851, Judge Hubbell was re-elected for the full term of six years as judge of the second judicial circuit, to commence January 1, 1852.

At the general election in November, 1851, Leonard J. Farwell was chosen governor; Timothy Burns, lieutenant governor; Charles D. Robinson, secretary of State; E. H. Janssen, State treasurer; E. Estabrook, attorney general; and Azel P. Ladd, superintendent of public instruction. All these officers were elected as democrats except Farwell, who ran as a whig; his majority over D. A. J. Upham, democrat, was a little rising of five hundred.

THIRD ADMINISTRATION.—L. J. FARWELL, GOVERNOR—1852—1853.

Governor Farwell's administration commenced on the fifth day of January, 1852. Previous to this—on the third day of the month—Edward V. Whiton was chosen by the judges of the supreme court, chief justice, to succeed Judge Hubbell. On the fourteenth of that month, the legislature assembled at Madison. This was the beginning of the fifth annual session. James McM. Shafter was elected speaker of the assembly. In the senate, the democrats had a majority; in the assembly, the whigs. The governor, in his message, recommended the memorializing of congress to cause the agricultural lands within the State to be surveyed and brought into market; to cause, also, the mineral lands to be surveyed and geologically examined, and offered for sale; and to make liberal appropriations for the improvement of rivers and harbors. The question of "bank or no bank" having been submitted to the people in November previous,

and decided in favor of banks, under the constitution, the power was thereby given to the legislature then in session to grant bank charters, or to pass a general banking law. Farwell recommended that necessary measures be taken to carry into effect this constitutional provision. A larger number of laws was passed at this session than at any previous one. By a provision of the constitution, the legislature was given power to provide by law, if they should think it expedient and necessary, for the organization of a separate supreme court, to consist of one chief justice and two associate justices, to be elected by the qualified electors of the State, at such time and in such manner as the legislature might provide. Under this authority, an act was passed at this session providing for the election of a chief justice and two associates, on the last Monday of the September following, to form a supreme court of the State, to supplant the old one, provision for the change being inserted in the constitution. There was also an act passed to apportion and district anew the members of the senate and assembly, by which the number was increased from eighty-five to one hundred and seven: twenty-five for the senate; eighty-two for the assembly. An act authorizing the business of banking passed the legislature and was approved by the governor, on the 19th of April. By this law, the office of bank-comptroller was created—the officer to be first appointed by the governor, and to hold his office until the first Monday in January, 1854. At the general election in the Fall of 1853, and every two years thereafter, the office was to be filled by vote of the people. Governor Farwell afterward, on the 20th of November, appointed James S. Baker to that office. The legislature adjourned on the nineteenth of April, 1852.

The second charitable institution incorporated by the State was the "Wisconsin Institute for the Education of the Deaf and Dumb." It was originally a private school for deaf mutes, near, and subsequently in, the village of Delavan, Walworth county. By an act of the legislature approved April 19, 1852, it was made the object and duty of the corporation to establish, continue and maintain this school for the education of the deaf and dumb, "at or near the village of Delavan, to qualify, as near as might be, that unfortunate class of persons for the enjoyment of the blessings of a free government, obtaining the means of subsistence, and the discharge of those duties, social and political, devolving upon American citizens." It has since been supported by annual appropriations made by the legislature. A complete organization of the school was effected in June, 1852, under the direction of a board of trustees appointed by the governor of the State. The institute has for its design the education of such children of the State as, on account of deafness, can not be instructed in common schools. Instruction is given by signs, by the manual alphabet, by written language, and to one class by articulation. Two trades are taught: cabinet-making and shoe-making.

During this year, considerable interest was manifested in the projecting of railroads. At the September election, E. V. Whiton was elected chief justice of the new supreme court and Samuel Crawford and Abram D. Smith associate justices. Under the law, the chief justice was to serve a term of four years from the first day of June next ensuing; while the two associates were to cast lots—one to serve for six years, the other for two years, from June 1, 1853. Crawford drew the short term—Smith the long term. At the subsequent general election for members to the thirty-third congress, Daniel Wells, Jr., was chosen from the first district, B. C. Eastman from the second: and J. B. Macy from the third district. All were democrats. A democratic electoral ticket was chosen at the same time. The electors cast their votes for Pierce and Butler.

During 1852, the citizens of Wisconsin enjoyed unusual prosperity in the ample products and remuneration of their industry and enterprise. Abundant harvests and high markets; an increase in moneyed circulation, and the downward tendency of the rates of interest: a prevailing confidence among business men and in business enterprises; a continual accession to the

population of the State by immigration; the energetic prosecution of internal improvements under the skillful management of companies; the extension of permanent agricultural improvements; and the rapid growth of the various cities and villages; were among the encouraging prospects of the year.

The sixth session of the Wisconsin legislature commenced on the twelfth of January, 1853. On the twenty-sixth of the same month, William K. Wilson, of Milwaukee, preferred charges in the assembly against Levi Hubbell, judge of the second judicial circuit of the State, of divers acts of corruption and malfeasance in the discharge of the duties of his office. A resolution followed appointing a committee to report articles of impeachment, directing the members thereof to go to the senate and impeach Hubbell. Upon the trial of the judge before the senate, he was acquitted. An act was passed to provide for the election of a State prison commissioner by the legislature at that session—to hold his office until the first day of the ensuing January. The office was then to be filled by popular vote at the general election in November, 1853—and afterwards biennially—the term of office to be two years from the first day of January next succeeding the election by the people. On the 28th of March, the legislature, in joint convention, elected John Taylor to that office. The legislature adjourned on the fourth day of April until the sixth of the following June, when it again met, and adjourned *sine die* on the thirteenth of July, both sessions aggregating one hundred and thirty-one days.

By an act of the legislature approved February 9, 1853, the "Wisconsin State Agricultural Society," which had been organized in March, 1851, was incorporated, its object being to promote and improve the condition of agriculture, horticulture, and the mechanical, manufacturing and household arts. It was soon after taken under the fostering care of the State by an appropriation made by the legislature, to be expended by the society in such manner as it might deem best calculated to promote the objects of its incorporation; State aid was continued down to the commencement of the rebellion. No help was extended during the war nor until 1873; since which time there has been realized annually from the State a sum commensurate with its most pressing needs. The society has printed seventeen volumes of transactions and has held annually a State fair, except during the civil war. Besides these fairs, its most important work is the holding annually, at the capital of the State, a convention for the promotion of agriculture generally. The meetings are largely participated in by men representing the educational and industrial interests of Wisconsin.

By an act of the legislature approved March 4, 1853, the "State Historical Society of Wisconsin" was incorporated—having been previously organized—the object being to collect, embody, arrange and preserve in authentic form, a library of books, pamphlets, maps, charts, manuscripts, papers, paintings, statuary and other materials illustrative of the history of the State; to rescue from oblivion the memory of its early pioneers, and to obtain and preserve narratives of their exploits, perils, and hardy adventures; to exhibit faithfully the antiquities, and the past and present condition, and resources of Wisconsin. The society was also authorized to take proper steps to promote the study of history by lectures, and to diffuse and publish information relating to the description and history of the State. The legislature soon after took the society under its fostering care by voting a respectable sum for its benefit. Liberal State aid has been continued to the present time. The society, besides collecting a library of historical books and pamphlets the largest in the West, has published eight volumes of collections and a catalogue of four volumes. Its rooms are in the capitol at Madison, and none of its property can be alienated without the consent of the State. It has a valuable collection of painted portraits and bound newspaper files; and in its cabinet are to be found many prehistoric relics.

On the first day of June, 1853, the justices of the new supreme court went into office: Associate

Justice Crawford, for two years; Chief Justice Whiton, for four years, Associate Justice Smith for six years as previously mentioned. The first (June) term was held at Madison. La Fayette Kellogg was appointed and qualified as clerk. On the 21st of September, Timothy Burns, lieutenant governor of Wisconsin, died at La Crosse. As a testimonial of respect for the deceased the several State departments, in accordance with a proclamation of the governor, were closed for one day—October 3, 1853. In the Fall of this year, democrats, whigs and free-soilers, each called a convention to nominate candidates for the various State offices to be supported by them at the ensuing election in November. The successful ticket was, for governor, William A. Barstow; for lieutenant governor, James T. Lewis, for secretary of State, Alexander T. Gray, for State treasurer, Edward H. Janssen; for attorney general, George B. Smith; for superintendent of public instruction, Hiram A. Wright; for State prison commissioner, A. W. Starks; and for bank comptroller, William M. Dennis. They were all democrats.

The year 1853 was, to the agriculturists of the State, one of prosperity. Every branch of industry prospered. The increase of commerce and manufactures more than realized the expectations of the most sanguine.

FOURTH ADMINISTRATION.—WILLIAM A. BARSTOW, GOVERNOR—1854-1855.

On Monday, the second of January, 1854, William A. Barstow took the oath of office as governor of Wisconsin.

The legislature commenced its seventh regular session on the eleventh of January. Frederick W. Horn was elected speaker of the assembly. Both houses were democratic. The legislature adjourned on the 3d of April following, after a session of eighty-three days.

In the early part of March, a fugitive slave case greatly excited the people of Wisconsin. A slave named Joshua Glover, belonging to B. S. Garland of Missouri, had escaped from his master and made his way to the vicinity of Racine. Garland, learning the whereabouts of his personal chattel, came to the State, obtained, on the 9th of March, 1854, from the judges of the district court of the United States for the district of Wisconsin, a warrant for the apprehension of Glover, which was put into the hands of the deputy marshal of the United States. Glover was secured and lodged in jail in Milwaukee. A number of persons afterward assembled and rescued the fugitive. Among those who took an active part in this proceeding was Sherman M. Booth, who was arrested therefor and committed by a United States commissioner, but was released from custody by Abram D. Smith, one of the associate justices of the supreme court of Wisconsin, upon a writ of *habeas corpus*. The record of the proceedings was thereupon taken to that court in full bench by a writ of *certiorari* to correct any error that might have been committed before the associate justice. At the June term, 1854, the justices held that Booth was entitled to be discharged, because the commitment set forth no cause for detention.

Booth was afterward indicted in the United States district court and a warrant issued for his arrest. He was again imprisoned; and again he applied to the supreme court—then, in term time—for a writ of *habeas corpus*. This was in July, 1854. In his petition to the supreme court, Booth set forth that he was in confinement upon a warrant issued by the district court of the United States and that the object of the imprisonment was to compel him to answer an indictment then pending against him therein. The supreme court of the State held that these facts showed that the district court of the United States had obtained jurisdiction of the case and that it was apparent that the indictment was for an offense of which the federal courts had exclusive jurisdiction. They could not therefore interfere; and his application for a discharge was denied.

Upon the indictment, Booth was tried and convicted, fined and imprisoned, for a violation of the fugitive slave law. Again the prisoner applied to the supreme court of Wisconsin,—his

last application bearing date January 26, 1855. He claimed discharge on the ground of the unconstitutionality of the law under which he had been indicted. The supreme court held that the indictment upon which he had been tried and convicted contained three counts, the first of which was to be considered as properly charging an offense within the act of congress of September 18, 1850, known as the "fugitive slave law," while the second and third counts did not set forth or charge an offense punishable by any statute of the United States; and as, upon these last-mentioned counts he was found guilty and not upon the first, he must be discharged.

The action of the supreme court of Wisconsin in a second time discharging Booth, was afterward reversed by the supreme court of the United States; and, its decision being respected by the State court, Booth was re-arrested in 1860, and the sentence of the district court of the United States executed in part upon him, when he was pardoned by the president.

By an act of the legislature, approved March 30, 1854, a "State Lunatic Asylum" was directed to be built at or in the vicinity of Madison, the capital of the State, upon land to be donated or purchased for that purpose. By a subsequent act, the name of the asylum was changed to the "Wisconsin State Hospital for the Insane." This was the third charitable institution established by the State. The hospital was opened for patients in July, 1860, under the direction of a board of trustees appointed by the governor. All insane persons, residents of Wisconsin, who, under the law providing for admission of patients into the hospital for treatment, become residents therein, are maintained at the expense of the State, provided the county in which such patient resided before being brought to the hospital pays the sum of one dollar and fifty cents a week for his or her support. Any patient can be supported by relatives, friends or guardians, if the latter desire to relieve the county and State from the burden, and can have special care and be provided with a special attendant, if the expense of the same be borne by parties interested. The hospital is beautifully located on the north shore of Lake Mendota, in Dane county, about four miles from Madison.

At the general election in the Fall of 1854, for members from Wisconsin to the thirty-fourth congress, Daniel Wells, Jr. was chosen from the first district; C. C. Washburn, from the second, and Charles Billingshurst from the third district. Billingshurst and Washburn were elected as republicans—that party having been organized in the Summer previous. Wells was a democrat.

The year 1854 was one of prosperity for Wisconsin, to all its industrial occupations. Abundant crops and increased prices were generally realized by the agriculturist. It was a year also of general health. It was ascertained that the amount of exports during the year, including lumber and mineral, exceeded thirteen millions of dollars.

The eighth regular session of the State legislature commenced on the 10th of January, 1855. C. C. Sholes was elected speaker of the assembly. The senate was democratic; the assembly, republican. On joint ballot, the republicans had but one majority. On the 1st of February, Charles Durkee, a republican, was elected United States senator for a full term of six years from the 4th of March next ensuing, to fill the place of Isaac P. Walker whose term would expire on that day. Among the bills passed of a general nature, was one relative to the rights of married women, providing that any married woman, whose husband, either from drunkenness or profligacy, should neglect or refuse to provide for her support, should have the right, in her own name, to transact business, receive and collect her own earnings, and apply the same for her own support, and education of her children, free from the control and interference of her husband. The legislature adjourned *sine die* on the second of April, after a session of eighty-three days. Orsamus Cole having been elected in this month an associate justice of the supreme court in place of Judge Samuel Crawford, whose term of office would expire on the thirty-first of May of that year, went into office on the first day of June following, for a term of six years. His office would therefore end on the thirty-first of May, 1861.

On the 27th of May, 1855, Hiram A. Wright, superintendent of public instruction, died at Prairie du Chien. On the 18th of June following, the governor appointed A. Constantine Barry to fill his place. On the 5th of July, Garland, the owner of the rescued fugitive slave Glover, having brought suit in the United States district court for the loss of his slave, against Booth, the trial came on at Madison, resulting in the jury bringing in a verdict under instructions from the judge, of one thousand dollars, the value of a negro slave as fixed by act of congress of 1850.

The constitution of the State requiring the legislature to provide by law for an enumeration of the inhabitants in the year 1855, an act was passed by that body, approved March 31, of this year, for that purpose. The result showed a population for Wisconsin of over five hundred and fifty-two thousand. In November, at the general election, the democratic ticket for State officers was declared elected: William A. Barstow, for governor; Arthur McArthur, for lieutenant governor; David W. Jones, for secretary of State; Charles Kuehn, for State treasurer; William R. Smith, for attorney general; A. C. Barry, for superintendent of public instruction; William M. Dennis, for bank comptroller; and Edward McGarry for State prison commissioner. The vote for governor was very close; but the State canvassers declared Barstow elected by a small majority. The opposing candidate for that office was Coles Bashford, who ran as a republican

The year 1855 was a prosperous one to the farmers of Wisconsin as well as to all industrial occupations. There were abundant crops and unexampled prices were realized.

FIFTH ADMINISTRATION.—COLES BASHFORD, GOVERNOR—1856-1857.

On the seventh day of January, 1856, William A. Barstow took and subscribed an oath of office as governor of Wisconsin, while Coles Bashford, who had determined to contest the right of Barstow to the governorship, went, on the same day, to the supreme court room, in Madison, and had the oath of office administered to him by Chief Justice Whiton. Bashford afterward called at the executive office and made a formal demand of Barstow that he should vacate the gubernatorial chair; but the latter respectfully declined the invitation. These were the initiatory steps of "*Bashford vs. Barstow*," for the office of governor of Wisconsin.

The fight now commenced in earnest. On the eleventh, the counsel for Bashford called upon the attorney general and requested him to file an information in the nature of a *quo warranto* against Barstow. On the fifteenth that officer complied with the request. Thereupon a summons was issued to Barstow to appear and answer. On the twenty-second, Bashford, by his attorney, asked the court that the information filed by the attorney general be discontinued and that he be allowed to file one, which request was denied by the court. While the motion was being argued, Barstow, by his attorneys, entered his appearance in the case.

On the second of February, Barstow moved to quash all proceedings for the reason that the court had no jurisdiction in the matter. This motion was denied by the court; that tribunal at the same time deciding that the filing of the motion was an admission by Barstow that the allegations contained in the information filed by the attorney general were true.

On the twenty-first of February, the time appointed for pleading to the information, Barstow, by his attorneys, presented to the court a stipulation signed by all the parties in the case, to the effect that the board of canvassers had determined Barstow elected governor; that the secretary of State had certified to his election; and that he had taken the oath of office. They submitted to the court whether it had jurisdiction, beyond the certificates, of those facts and the canvass so made to inquire as to the number of votes actually given for Barstow,—Bashford offering to prove that the certificates were made and issued through mistake and fraud, and that he, instead of Barstow, received the greatest number of votes. This stipulation the court declined to entertain or to pass upon the questions suggested; as they were not presented in legal form. Barstow

was thereupon given until the twenty-fifth of February to answer the information that had been filed against him by the attorney general.

On the day appointed, Barstow filed his plea to the effect that, by the laws of Wisconsin regulating the conducting of general election for State officers, it was the duty of the board of canvassers to determine who was elected to the office of governor; and that the board had found that he was duly elected to that office. It was a plea to the jurisdiction of the court. A demurrer was interposed to this plea, setting forth that the matters therein contained were not sufficient in law to take the case out of court; asking, also, for a judgment against Barstow, or that he answer further the information filed against him. The demurrer was sustained; and Barstow was required to answer over within four days; at the expiration of which time the counsel for Barstow withdrew from the case, on the ground, as they alleged, that they had appeared at the bar of the court to object to the jurisdiction of that tribunal in the matter, and the court had determined to proceed with the case, holding and exercising full and final jurisdiction over it; and that they could take no further steps without conceding the right of that tribunal so to hold. Thereupon, on the eighth of March, Barstow entered a protest, by a communication to the supreme court, against any further interference with the department under his charge by that tribunal, "either by attempting to transfer its powers to another or direct the course of executive action." The counsel for Bashford then moved for judgment upon the default of Barstow.

A further hearing of the case was postponed until March 18, when the attorney general filed a motion to dismiss the proceedings; against which Bashford, by his counsel, protested as being prejudicial to his rights. It was the opinion of the court that the attorney general could not dismiss the case, that every thing which was well pleaded for Bashford in his information was confessed by the default of Barstow. By strict usage, a final judgment ought then to have followed; but the court came to the conclusion to call upon Bashford to bring forward proof, showing his right to the office. Testimony was then adduced at length, touching the character of the returns made to the State canvassers; after hearing of which it was the opinion of the court that Bashford had received a plurality of votes for governor and that there must be a judgment in his favor and one of ouster against Barstow; which were rendered accordingly.

The ninth regular session of the legislature of Wisconsin commenced on the ninth of January, 1856. William Hull was elected speaker of the assembly. The senate had a republican majority, but the assembly was democratic. On the eleventh Barstow sent in a message to a joint convention of the two houses. On the twenty-first of March he tendered to the legislature his resignation as governor, giving for reasons the action of the supreme court in "Bashford *vs.* Barstow," which tribunal was then hearing testimony in the case. On the same day Arthur McArthur, lieutenant governor, took and subscribed an oath of office as governor of the State, afterwards sending a message to the legislature, announcing that the resignation of Barstow made it his duty to take the reins of government. On the twenty-fifth, Bashford called on McArthur, then occupying the executive office, and demanded possession—at the same time intimating that he preferred peaceable measures to force, but that the latter would be employed if necessary. The lieutenant governor thereupon vacated the chair, when the former took the gubernatorial seat, exercising thereafter the functions of the office until his successor was elected and qualified. His right to the seat was recognized by the senate on the twenty-fifth, and by the assembly on the twenty-seventh of March, 1856. This ended the famous case of "Bashford *vs.* Barstow," the first and only "war of succession" ever indulged in by Wisconsin.

The legislature, on the thirty-first of March, adjourned over to the third of September, to dispose of a congressional land grant to the State. Upon re-assembling, an important measure was taken up—that of a new apportionment for the legislature. It was determined to increase the

number of members from one hundred and seven to one hundred and twenty-seven. The session closed on the thirteenth of October. The general election for members to the thirty-fifth congress, held in November, resulted in the choice of John H. Potter, from the first district; C. C. Washburn, from the second; and Charles Billinghamurst, from the third district. They were all elected as republicans. The presidential canvass of this year was an exciting one in the State. The republicans were successful. Electors of that party cast their five votes for Fremont and Dayton.

The year 1856 was not an unprosperous one, agriculturally speaking, although in some respects decidedly unfavorable. In many districts the earlier part of the season was exceedingly dry, which materially diminished the wheat crop. Other industrial interests were every where in a flourishing condition.

The legislature commenced its tenth regular session at Madison, on the fourteenth day of January, 1857, with a republican majority in both houses. Wyman Spooner was elected speaker of the assembly. For the first time since the admission of the State into the Union, a majority of the members of both houses, together with the governor, were opposed to the democratic party. On the twenty-third the senate and assembly met in joint convention, for the purpose of electing a United States senator in place of Henry Dodge, whose term of office would expire on the fourth of March next ensuing. James R. Doolittle, republican, was the successful candidate for that office, for a full term of six years, from the fourth of March, 1857. The legislature adjourned on the ninth of March, 1857. At the Spring election, Judge Whiton was re-elected chief justice of the supreme court for a term of six years.

The second reformatory State institution established in Wisconsin, was, by an act of the legislature, approved March 7, 1857, denominated a House of Refuge for Juvenile Delinquents, afterward called the State Reform School, now known as the Wisconsin Industrial School for Boys, and is located at Waukesha, the county seat of Waukesha county. The courts and several magistrates in any county in Wisconsin may, in their discretion, sentence to this school any male child between the ages of ten and sixteen years, convicted of vagrancy, petit larceny, or any misdemeanor; also of any offense which would otherwise be punishable by imprisonment in the State prison; or, of incorrigible or vicious conduct in certain cases. The term of commitment must be to the age of twenty-one years.

At the State election held in November of this year, the republicans elected A. W. Randall governor; S. D. Hastings, State treasurer, and Edward M. McGraw, State prison commissioner. The democrats elected E. D. Campbell, lieutenant governor; D. W. Jones, secretary of State; Gabriel Bouck, attorney general; L. C. Draper, superintendent of public instruction, and J. C. Squires, bank comptroller.

The year 1857 was a disastrous one to Wisconsin, as well as to the whole country, in a financial point of view. Early in the Fall a monetary panic swept over the land. A number of prominent operators in the leading industrial pursuits were obliged to succumb. Agriculturally the year was a fair one for the State.

SIXTH ADMINISTRATION.—ALEXANDER W. RANDALL, GOVERNOR—1858—1859.

Randall's administration began on the fourth day of January, 1858, when for the first time he was inaugurated governor of the State. On the eleventh of January the legislature commenced its eleventh regular session, with a republican majority in both houses. Frederick S. Lovell was elected speaker of the assembly. The legislature adjourned *sine die* on the seventeenth of March, after an unusually long session of one hundred and twenty-five days. "That a large majority of the members were men of integrity, and disposed for the public weal, can not

be doubted; but they were nearly all new members, and without former legislative experience. They set out to accomplish a great good, by holding up to public scorn and execration the wholesale briberies and iniquities of the immediate past; but they lacked concentration of effort, and, for want of union and preconcerted action, they failed to achieve the great triumph they sought, by providing a 'sovereign remedy' for the evils they exposed."

At the regular session of the legislature of 1856, an act was passed for a general revision of the laws of the State. Under this, and a subsequent act of the adjourned session of that year, three commissioners—David Taylor, Samuel J. Todd, and F. S. Lovell—were appointed "to collect, compile and digest the general laws" of Wisconsin. Their report was submitted to the legislature of 1858, and acted upon at a late day of the session. The laws revised, which received the sanction of the legislature, were published in one volume, and constitute what is known as the Revised Statutes of 1858.

At the Fall election, John F. Potter from the first district, and C. C. Washburn from the second district, both republicans, were elected to the thirty-sixth congress; while C. H. Larrabee, democrat, was elected to represent the third district.

The twelfth regular session of the Wisconsin legislature commenced on the twelfth of January, 1859, with a republican majority in both houses. William P. Lyon was elected speaker of the assembly. The legislature adjourned *sine die* on the twenty-first of March, 1859, after a session of sixty-nine days. At the regular spring election, Byron Paine was chosen associate justice of the supreme court, for a full term of six years, as the successor of Associate Justice Smith. As it was a question when the term of the latter ended—whether on the 31st day of May, 1859, or on the first Monday in January, 1860—he went through with the formality of resigning his office, and the governor of appointing Paine as his successor, on the 20th of June, 1859. On the twelfth of April, 1859, Edward V. Whiton, chief justice of the supreme court, died at his residence in Janesville. The office was filled by executive appointment on the 19th of the same month—the successor of Judge Whiton being Luther S. Dixon. Late in the Summer both political parties put into the field a full state ticket. The republicans were successful—electing for governor, Alexander W. Randall; for lieutenant governor, B. G. Noble; for secretary of state, L. P. Harvey; for state treasurer, S. D. Hastings, for attorney general, James H. Howe; for bank comptroller, G. Van Steenwyck; for superintendent of public instruction, J. L. Pickard; for state prison commissioner, H. C. Heg.

SEVENTH ADMINISTRATION.—ALEXANDER W. RANDALL, GOVERNOR (SECOND TERM), 1860—1861.

Alexander W. Randall was inaugurated the second time as governor of Wisconsin, on Monday, January 2, 1860. One week subsequent, the thirteenth regular session of the legislature commenced at Madison. For the first time the republicans had control, not only of all the State offices, but also of both branches of the legislature. William P. Lyon was elected speaker of the assembly. A new assessment law was among the most important of the acts passed at this session. The legislature adjourned on the second of April. At the spring election, Luther S. Dixon, as an independent candidate, was elected chief justice of the supreme court for the unexpired term of the late Chief Justice Whiton. In the presidential election which followed, republican electors were chosen—casting their five votes, in the electoral college, for Lincoln and Hamlin. At the same election, John F. Potter, from the first district; Luther Hanchett, from the second, and A. Scott Sloan, from the third district, were elected members of the thirty-seventh congress. Hanchett died on the twenty-fourth of November, 1862, when, on the twentieth of December following, W. D. McIndoe was elected to fill the vacancy. All these congressional representatives were republicans. Wisconsin, in 1860, was a strong repub-

lican State. According to the census of this year, it had a population of over seven hundred and seventy-seven thousand.

On the ninth of January, 1861, the fourteenth regular session of the State legislature commenced at Madison. Both branches were republican. Amasa Cobb was elected speaker of the assembly. On the tenth, both houses met in joint convention to hear the governor read his annual message. It was a remarkable document. Besides giving an excellent synopsis of the operations of the State government for 1860, the governor entered largely into a discussion of the question of secession and disunion, as then proposed by some of the southern states of the Union. These are his closing words:

“The right of a State to secede from the Union can never be admitted. The National Government can not treat with a State while it is in the Union, and particularly while it stands in an attitude hostile to the Union. So long as any State assumes a position foreign, independent and hostile to the government, there can be no reconciliation. The government of the United States can not treat with one of its own States as a foreign power. The constitutional laws extend over every State alike. They are to be enforced in every State alike. A State can not come into the Union as it pleases, and go out when it pleases. Once in, it must stay until the Union is destroyed. There is no coercion of a State. But where a faction of a people arrays itself, not against one act, but against all laws, and against all government, there is but one answer to be made: ‘*The Government must be sustained; the laws shall be enforced!*’”

On the twenty-third of January the legislature met in joint convention to elect a United States senator to fill the place of Charles Durkee, whose term of office would expire on the fourth of March next ensuing. The successful candidate was Timothy O. Howe, republican, who was elected for a full term of six years from the 4th of March, 1861. One of the important acts passed at this session of the legislature apportioned the State into senate and assembly districts, by which the whole number of members in both houses was increased from one hundred and twenty-seven to one hundred and thirty-three. Another act apportioned the State into six congressional districts instead of three. By this — the third congressional apportionment — each district was to elect one representative. The first district was composed of the counties of Milwaukee, Waukesha, Walworth, Racine, and Kenosha; the second, of the counties of Rock, Jefferson, Dane, and Columbia; the third, of Green, La Fayette, Iowa, Grant, Crawford, Richland, and Sauk; the fourth, of Ozaukee, Washington, Dodge, Fond du Lac, and Sheboygan; the fifth, Manitowoc, Calumet, Winnebago, Green Lake, Marquette, Waushara, Waupaca, Outagamie, Brown, Kewaunee, Door, Oconto, and Shawano; and the sixth, of the counties of Bad Axe, La Crosse, Monroe, Juneau, Adams, Portage, Wood, Jackson, Trempealeau, Buffalo, Pepin, Pierce, St. Croix, Dunn, Eau Claire, Clark, Marathon, Chippewa, Dallas, Polk, Burnett, Douglas, La Pointe, and Ashland. The legislature adjourned on the seventeenth of April, 1861.

At the spring elections of this year, Orsamus Cole was re-elected as associate justice of the supreme court. On the ninth of May following, Governor Randall issued a proclamation convening the legislature in extra session on the fifteenth of the same month. “The extraordinary condition of the country,” said he, “growing out of the rebellion against the government of the United States, makes it necessary that the legislature of this State be convened in special session, to provide more completely for making the power of the State useful to the government and to other loyal States.” The fifteenth or extra session began on the fifteenth of May, as designated in the governor’s proclamation. The message of the governor was devoted entirely to the war. “At the close of the last annual session of the legislature,” said he, “to meet a sudden emergency, an act was passed authorizing me to respond to the call of the president of the United States, ‘for aid in maintaining the Union and the supremacy of the laws, or to suppress rebellion

or insurrection, or to repel invasion within the United States,' and I was authorized, and it was made my duty, to take such measures as, in my judgment, should provide in the speediest and most efficient manner for responding to such call: and to this end I was authorized to accept the services of volunteers for active service, to be enrolled in companies of not less than seventy-five men each, rank and file, and in regiments of ten companies each. I was also authorized to provide for uniforming and equipping such companies as were not provided with uniforms and equipments." "The first call of the president for immediate active service," continued the governor, "was for one regiment of men. My proclamation, issued immediately after the passage of the act of the legislature, was answered within less than ten days, by companies enough, each containing the requisite number of men, to make up at least five regiments instead of one. I then issued another proclamation, announcing the offers that had been made, and advising that thereafter companies might be enrolled to stand as minute men, ready to answer further calls, as they might be made, but without expense to the State, except as they were mustered into service. In less than one month from the date of my first proclamation, at least five thousand men, either as individuals or enrolled companies, have offered their services for the war, and all appear anxious for active service in the field." "The time for deliberation," concludes the governor, "must give way to the time for action. The constitution of the United States must be sustained in all its first intent and wholeness. The right of the people of every State to go into every other State and engage in any lawful pursuit, without unlawful interference or molestation; the freedom of speech and of the press; the right of trial by jury; security from unjustifiable seizure of persons or papers, and all constitutional privileges and immunities, must receive new guarantees of safety."

The extra session of the legislature passed, with a single exception, no acts except such as appertained to the military exigencies of the times. Both houses adjourned *sine die* on the twenty-seventh of May, 1861. As the administration of Governor Randall would close with the year, and as he was not a candidate for re-election, there was much interest felt throughout the State as to who his successor should be. Three State tickets were put in nomination: union, republican, and democratic. The republican ticket was successful, electing Louis P. Harvey, governor; Edward Salomon, lieutenant governor; James T. Lewis, secretary of state; S. D. Hastings, state treasurer; James H. Howe, attorney general; W. H. Ramsey, bank controller; J. L. Pickard, superintendent of public instruction; and A. P. Hodges, state prison commissioner.

THE WAR OF SECESSION — LAST YEAR OF RANDALL'S ADMINISTRATION.

When Wisconsin was first called upon to aid the General Government in its efforts to sustain itself against the designs of the secession conspirators, the commercial affairs of the State were embarrassed to a considerable degree by the depreciation of the currency. The designs of the secessionists were so far developed at the ending of the year 1860 as to show that resistance to the national authority had been fully determined on. It is not a matter of wonder, then, that Governor Randall in his message to the legislature, early in January, 1861, should have set forth the dangers which threatened the Union, or should have denied the right of a State to secede from it. "Secession," said he, "is revolution; revolution is war; war against the government of the United States is treason." "It is time," he continued, "now, to know whether we have any government, and if so, whether it has any strength. Is our written constitution more than a sheet of parchment? The nation must be lost or preserved by its own strength. Its strength is in the patriotism of the people. It is time now that politicians became patriots; that men show their love of country by every sacrifice, but that of principle, and by

unwavering devotion to its interests and integrity." "The hopes," added the governor, most eloquently, "of civilization and Christianity are suspended now upon the answer to this question of dissolution. The capacity for, as well as the right of, self-government is to pass its ordeal, and speculation to become certainty. Other systems have been tried, and have failed; and all along, the skeletons of nations have been strewn, as warnings and land-marks, upon the great highway of historic overnment. Wisconsin is true, and her people steadfast. She will not destroy the Union, nor consent that it shall be done. Devised by great, and wise, and good men, in days of sore trial, it must stand. Like some bold mountain, at whose base the great seas break their angry floods, and around whose summit the thunders of a thousand hurricanes have rattled—strong, unmoved, immovable—so may our Union be, while treason surges at its base, and passions rage around it, unmoved, immovable—here let it stand forever." These are the words of an exalted and genuine patriotism. But the governor did not content himself with eloquence alone. He came down to matters of business as well. He urged the necessity of legislation that would give more efficient organization to the militia of the State. He warned the legislators to make preparations also for the coming time that should try the souls of men. "The signs of the times," said he, "indicate that there may arise a contingency in the condition of the government, when it will become necessary to respond to a call of the National Government for men and means to maintain the integrity of the Union, and to thwart the designs of men engaged in organized *treason*. While no unnecessary expense should be incurred, yet it is the part of wisdom, both for individuals and States, in revolutionary times, to be prepared to defend our institutions to the last extremity." It was thus the patriotic governor gave evidence to the members of both houses that he "scented the battle afar off."

On the 16th of January, a joint resolution of the legislature was passed, declaring that the people of Wisconsin are ready to co-operate with the friends of the Union every where for its preservation, to yield a cheerful obedience to its requirements, and to demand a like obedience from all others; that the legislature of Wisconsin, profoundly impressed with the value of the Union, and determined to preserve it unimpaired, hail with joy the recent firm, dignified and patriotic special message of the president of the United States; that they tender to him, through the chief magistrate of their own State, whatever aid, in men and money, may be required to enable him to enforce the laws and uphold the authority of the Federal Government, and in defense of the more perfect Union, which has conferred prosperity and happiness on the American people. "Renewing," said they, "the pledge given and redeemed by our fathers, we are ready to devote our lives, our fortunes, and our sacred honors in upholding the Union and the constitution."

The legislature, in order to put the State upon a kind of "war footing," passed an act for its defense, and to aid in enforcing the laws and maintaining the authority of the General Government. It was under this act that Governor Randall was enabled to organize the earlier regiments of Wisconsin. By it, in case of a call from the president of the United States to aid in maintaining the Union and the supremacy of the laws to suppress rebellion or insurrection, or to repel invasion within the United States, the governor was authorized to provide, in the most efficient manner, for responding to such call—to accept the services of volunteers for service, in companies of seventy-five men each, rank and file, and in regiments of ten companies each, and to commission officers for them. The governor was also authorized to contract for uniforms and equipments necessary for putting such companies into active service. One hundred thousand dollars were appropriated for war purposes; and bonds were authorized to be issued for that amount, to be negotiated by the governor, for raising funds. It will be seen, therefore, that the exigencies of the times—for Fort Sumter had not yet been surrendered—

were fully met by the people's representatives, they doing their whole duty, as they then understood it, in aid of the perpetuity of the Union.

Having defended Fort Sumter for thirty-four hours, until the quarters were entirely burned, the main gates destroyed, the gorge-wall seriously injured, the magazine surrounded by flames, and its door closed from the effects of the heat, four barrels and three cartridges of powder only being available, and no provisions but pork remaining, Robert Anderson, major of the first artillery, United States army, accepted terms of evacuation offered by General Beauregard, marched out of the fort on Sunday afternoon, the fourteenth of April, 1861, with colors flying and drums beating, bringing away company and private property, and saluting his flag with fifty guns. This, in brief, is the story of the fall of Sumter and the opening act of the War of the Rebellion.

"Whereas," said Abraham Lincoln, president, in his proclamation of the next day, "the laws of the United States have been for some time past, and now are, opposed, and the execution thereof obstructed, in the States of South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas, by combinations too powerful to be suppressed by the ordinary course of judicial proceedings, or by the powers vested in the marshals by law." Now, in view of that fact, he called forth the militia of the several States of the Union, to the aggregate number of seventy-five thousand, in order to suppress those combinations, and to cause the laws to be duly executed. "A call is made on you by to-night's mail for one regiment of militia for immediate service," telegraphed the secretary of war to Randall, on the same day.

In Wisconsin, as elsewhere, the public pulse quickened under the excitement of the fall of Sumter. "The dangers which surrounded the nation awakened the liveliest sentiments of patriotism and devotion. For the time, party fealty was forgotten in the general desire to save the nation. The minds of the people soon settled into the conviction that a bloody war was at hand, and that the glorious fabric of our National Government, and the principles upon which it is founded, were in jeopardy, and with a determination unparalleled in the history of any country, they rushed to its defense. On every hand the National flag could be seen displayed, and the public enthusiasm knew no bounds; in city, town, and hamlet, the burden on every tongue was war." "We have never been accustomed," said Governor Randall, "to consider the military arm as essential to the maintenance of our government, but an exigency has arisen that demands its employment." "The time has come," he continued, "when parties and platforms must be forgotten, and all good citizens and patriots unite together in putting down rebels and traitors." "What is money," he asked, "what is life, in the presence of such a crisis?" Such utterances and such enthusiasm could but have their effect upon the legislature, which, it will be remembered, was still in session; so, although that body had already voted to adjourn, *sine die*, on the fifteenth of April, yet, when the moment arrived, and a message from the governor was received, announcing that, owing to the extraordinary exigencies which had arisen, an amendment of the law of the thirteenth instant was necessary, the resolution to adjourn was at once rescinded. The two houses thereupon not only increased the amount of bonds to be issued to two hundred thousand dollars, but they also passed a law exempting from civil process, during the time of service, all persons enlisting and mustering into the United States army from Wisconsin. When, on the seventeenth, the legislature did adjourn, the scene was a remarkable one. Nine cheers were given for the star spangled banner and three for the Governor's Guard, who had just then tendered their services—the first in the State—under the call for a regiment of men for three months' duty.

"For the first time in the history of this federal government," are the words of the governor, in a proclamation issued on the sixteenth of April, "organized treason has manifested itself within several States of the Union, and armed rebels are making war against it." "The treasuries of the country," said he, "must no longer be plundered; the public property must be

protected from aggressive violence; that already seized must be retaken, and the laws must be executed in every State of the Union alike." "A demand," he added, "made upon Wisconsin by the president of the United States, for aid to sustain the federal arm, must meet with a prompt response." The patriotism of the State was abundantly exhibited in their filling up a regiment before some of the remote settlements had any knowledge of the call. On the twenty-second, Governor Randall reported to the secretary of war that the First regiment was ready to go into rendezvous. The place designated was "Camp Scott," at Milwaukee; the day, the twenty-seventh of April. Then and there the several companies assembled—the regiment afterward completing its organization.

With a wise foresight, Governor Randall ordered, as a reserve force and in advance of another call for troops by the president, the formation of two more regiments—the Second and Third, and, eventually, the Fourth. Camps at Madison, Fond du Lac, and Racine, were formed for their reception, where suitable buildings were erected for their accommodation. Companies assigned to the Second regiment were ordered to commence moving into "Camp Randall," at Madison, on the first day of May. On the seventh, the secretary of war, under call of the president of the United States for forty-two thousand additional volunteers—this time for three years, or during the war—telegraphed Governor Randall that no more three months' volunteers were wanted; that such companies as were recruited must re-enlist for the new term or be disbanded.

At the extra session of the legislature of Wisconsin, which, as already mentioned, commenced on the fifteenth of May, called by Governor Randall immediately upon his being notified of the second call of the president for troops, on the third of May, the law hurriedly passed at the close of the regular session, and under which the governor had organized the First regiment, was found inadequate to meet the second call for troops. "A bill was introduced, and became a law, authorizing the governor to raise six regiments of infantry, inclusive of those he had organized or placed at quarters. When the six regiments were mustered into the United States service, he was authorized to raise two additional regiments, and thus to keep two regiments continually in reserve to meet any future call of the General Government. He was authorized to quarter and subsist volunteers at rendezvous—to transport, clothe, subsist and quarter them in camp at the expense of the State. Arms and munitions were to be furnished by the United States. Recruits were to be mustered into State service, and into United States service, for three years. Two assistant surgeons to each regiment were to be appointed, and paid by the State. The regiments, as they came into camp, were to be instructed in drill and various camp duties, to secure efficiency in the field. The troops, so called in, were to be paid monthly by the State, the same pay and emoluments as the soldiers in the United States army, from the date of enlistment. The paymaster general was authorized to draw funds from the State treasury for the payment of the State troops, and the expense incurred in subsisting, transporting and clothing them. The governor was authorized to purchase military stores, subsistence, clothing, medicine, field and camp equipage, and the sum of one million dollars was appropriated to enable the governor to carry out the law."

Other laws were passed relating to military matters. One authorized the governor to purchase two thousand stand of arms; and fifty thousand dollars were appropriated to pay for the same. Another authorized counties, towns, cities and incorporated villages to levy taxes for the purpose of providing for the support of families of volunteers residing in their respective limits. The one passed at the previous session, exempting volunteers from civil process while in the service, was amended so as to include all who might thereafter enlist. One granted five dollars per month as extra pay to enlisted volunteers having families dependent upon them for support, payable to their families. Another authorized the governor to employ such aids, clerks and

messengers, as he deemed necessary for the public interests. Still another authorized the payment of those who had enlisted for three months, but had declined to go in for three years. The expenses of the extra session were ordered to be paid out of the "war fund." One million dollars in bonds were authorized to be issued for war purposes to form that fund. The governor, secretary of state and state treasurer were empowered to negotiate them. By a joint resolution approved the twenty-first of May, the consent of the legislature was given to the governor to be absent from the State during the war, for as long a time as in his discretion he might think proper or advisable, in connection with the military forces of the State. For liberality, zeal and genuine patriotism, the members of the Wisconsin legislature, for the year 1861, deserve a high commendation. All that was necessary upon their final adjournment at the close of the extra session to place the State upon a "war footing," was the organization by the governor of the various military departments. These he effected by appointing Brigadier General William L. Utley, adjutant general; Brigadier General W. W. Tredway, quartermaster general; Colonel Edwin R. Wadsworth, commissary general; Brigadier General Simeon Mills, paymaster general; Brigadier General E. B. Wolcott, surgeon general; Major E. L. Buttrick, judge advocate; and Colonel William H. Watson, military secretary.

On the seventeenth of May, the First regiment, at "Camp Scott," was mustered into the United States service, and the war department informed that it awaited marching orders. The regimental officers were not all in accordance with the law and mode adopted afterwards. On the seventh of the month Governor Randall had appointed Rufus King a brigadier general, and assigned the First, Second, Third and Fourth regiments to his command as the Wisconsin brigade; although at that date only the First and Second had been called into camp. This brigade organization was not recognized by the General Government. The secretary of war telegraphed the governor of Wisconsin that the quota of the State, under the second call of the president, was two regiments—so that the whole number under both calls was only three—one (the First) for three months, two (the Second and Third) for three years. Notwithstanding this, Governor Randall proceeded to organize the Fourth.

As a number of the companies ordered into "Camp Randall" on the first day of May to form the Second regiment had only enlisted for three months, the order of the secretary of war of the seventh of that month making it imperative that all such companies must re-enlist for three years or during the war, or be disbanded, the question of extending their term of enlistment was submitted to the companies of the regiment, when about five hundred consented to the change. The quota of the regiment was afterward made up, and the whole mustered into the service of the United States for three years or during the war, under the president's second call for troops. This was on the eleventh of June, 1861. The Third regiment having had its companies assigned early in May, they were ordered in June into "Camp Hamilton" at Fond du Lac, where the regiment was organized, and, on the twenty-ninth of June, mustered into the United States' service as a three years regiment. This filled Wisconsin's quota under the second call of President Lincoln. By this time war matters in the State began to assume a systematic course of procedure—thanks to the patriotism of the people, the wisdom of the legislature, and the untiring energy and exertions of the governor and his subordinates.

The determination of the secretary of war to accept from Wisconsin only two three-years regiments under the second call for troops was soon changed, and three more were authorized, making it necessary to organize the Fourth, Fifth and Sixth. The Fourth was called into "Camp Utley" at Racine on the sixth of June, and was mustered into the service of the United States on the ninth of the following month. By the twenty-eighth of June, all the companies of the Fifth had assembled at "Camp Randall," and on the thirteenth of July were mustered in as

United States troops. By the first of July, at the same place, the complement for the Sixth regiment had been made up, and the companies were mustered for three years into the service of the General Government, on the sixteenth of the same month. Governor Randall did not stop the good work when six regiments had been accepted, but assigned the necessary companies to form two more regiments—the Seventh and Eighth; however, he wisely concluded not to call them into camp until after harvest, unless specially required to do so. “If they are needed sooner,” said the governor, in a letter to the president on the first of July, “a call will be immediately responded to, and we shall have their uniforms and equipments ready for them.” “By the authority of our legislature,” added the writer, “I shall, after the middle of August, keep two regiments equipped and in camp ready for a call to service, and will have them ready at an earlier day if needed.”

About the latter part of June, W. P. Alexander, of Beloit, a good marksman, was commissioned captain to raise a company of sharpshooters for Berdan's regiment. He at once engaged in the work. The company was filled to one hundred and three privates and three officers. It left the State about the middle of September under Captain Alexander, and was mustered into the service at Wehawken on the twenty-third day of that month, as Company “G” of Berdan's regiment of sharpshooters. On the twenty-sixth of July, a commission was issued to G. Van Deutsch, of Milwaukee, to raise a company of cavalry. He succeeded in filling his company to eighty-four men. He left the State in September, joining Fremont. The company was afterward attached to the fifth cavalry regiment of Missouri.

About the 20th of August, Governor Randall was authorized to organize and equip as rapidly as possible five regiments of infantry and five batteries of artillery, and procure for them necessary clothing and equipments according to United States regulations and prices, subject to the inspection of officers of the General Government. The five regiments were to be additional to the eight already raised. One regiment was to be German. During the last week of August the companies of the Seventh regiment were ordered into “Camp Randall,” at Madison. They were mustered into the service soon after arrival. On the 28th of August orders were issued for the reorganization of the First regiment for three years, its term of three months having expired. The secretary of war having signified his acceptance of the regiment for the new term, its mustering into the service was completed on the nineteenth of October. This made six infantry regiments in addition to the eight already accepted, or fourteen in all. On the same day orders were issued assigning companies to the Eighth regiment,—the whole moving to “Camp Randall,” at Madison, the first week in September, where their mustering in was finished on the thirteenth.

The Ninth, a German regiment, was recruited in squads, and sent into camp, where they were formed into companies, and the whole mustered in on the 26th of October, 1861, at “Camp Sigel,” Milwaukee. Companies were assigned the Tenth regiment on the 18th of September, and ordered into camp at Milwaukee, where it was fully organized about the first of October, being mustered into the service on the fourteenth of that month. The Tenth infantry was enlisted in September, 1861, and mustered in on the fourteenth of October, 1861, at “Camp Holton,” Milwaukee. The Eleventh regiment was called by companies into “Camp Randall” the latter part of September and first of October, 1861, and mustered in on the eighteenth. The Twelfth was called in to the same camp and mustered in by companies between the twenty-eighth of October and the fifth of November, 1861. The Thirteenth rendezvoused at “Camp Treadway,” Janesville, being mustered into the United States service on the seventeenth of October, 1861. These thirteen regiments were all that had been accepted and mustered into the United States service while Randall was governor.

From the commencement of the rebellion a great desire had been manifested for the organ-

ization of artillery companies in Wisconsin, and this desire was finally gratified. Each battery was to number one hundred and fifty men, and, as has been shown, five had been authorized by the General Government to be raised in Wisconsin. The First battery was recruited at La Crosse, under the superintendence of Captain Jacob T. Foster, and was known as the "La Crosse Artillery." It rendezvoused at Racine early in October, 1861, where on the tenth of that month, it was mustered into the United States service. The Second battery, Captain Ernest Herzberg, assembled at "Camp Utley," Racine, and was mustered in with the First battery on the tenth. The Third, known as the "Badger Battery," was organized by Captain L. H. Drury, at Madison and Berlin, and was mustered into the service on the same day and at the same place as the First and Second. The Fourth battery, recruited and organized at Beloit, under the supervision of Captain John F. Vallee, was mustered in on the first of October, 1861, at Racine. The Fifth battery was recruited at Monroe, Green county, under the superintendence of Captain Oscar F. Pinney, moving afterward to "Camp Utley," Racine, where, on the first of October, it was mustered in, along with the Fourth. So brisk had been the recruiting, it was ascertained by the governor that seven companies had been raised instead of five, when the secretary of war was telegraphed to, and the extra companies—the Sixth and Seventh accepted; the Sixth, known as the "Buena Vista Artillery," being recruited at Lone Rock, Richland county, in September, Captain Henry Dillon, and mustered in on the second of October, 1861, at Racine; the Seventh, known as the "Badger State Flying Artillery," having organized at Milwaukee, Captain Richard R. Griffiths, and mustered in on the fourth of the same month, going into camp at Racine on the eighth. This completed the mustering in of the first seven batteries, during Governor Randall's administration; the whole mustered force being thirteen regiments of infantry; one company of cavalry; one of sharpshooters; and these seven artillery companies. "Wisconsin," said the governor, in response to a request as to the number of regiments organized, "sent one regiment for three months,—officers and men eight hundred and ten. The other regiments for the war up to the Thirteenth (including the First, re-organized), will average one thousand men each; one company of sharpshooters for Berdan's regiment, one hundred and three men; and seven companies of light artillery." Of cavalry from Wisconsin, only Deutsch's company had been mustered into the United States, although three regiments had been authorized by the General Government before the close of Randall's administration. The governor, before the expiration of his office, was empowered to organize more artillery companies—ten in all; and five additional regiments of infantry—making the whole number eighteen. On the tenth of December, he wrote: "Our Fourteenth infantry is full and in camp. * * * Fifteenth has five companies in camp, and filling up. Sixteenth has eight companies in camp, and will be full by the 25th of December. Seventeenth has some four hundred men enlisted. Eighteenth will be in camp, full, by January 1. Seven maximum companies of artillery in camp. * * * Three regiments of cavalry—two full above the maximum; the third, about eight hundred men in camp." It will be seen, therefore, that a considerable number of men in the three branches of the service was then in camp that had not been mustered into the service; and this number was considerably increased by the 6th of January, 1862, the day that Randall's official term expired; but no more men were mustered in, until his successor came into office, than those previously mentioned.

The First regiment—three months'—left "Camp Scott," Milwaukee, on the ninth of June, 1861, for Harrisburg, Pennsylvania—eight hundred and ten in number; John C. Starkweather, colonel. The regiment returned to Milwaukee on the seventeenth of August, 1861, and was mustered out on the twenty-second.

The First regiment re-organized at "Camp Scott," Milwaukee. Its mustering into the service, as previously mentioned, was completed on the nineteenth of October. On the twenty-

eighth, it started for Louisville, Kentucky—nine hundred and forty-five strong—under command of its former colonel, John C. Starkweather. The Second regiment, with S. Park Coon as colonel, left “Camp Randall, Madison, for Washington city, on the eleventh of June, 1861—numbering, in all, one thousand and fifty-one. The Third regiment started from “Camp Hamilton,” Fond du Lac, for Harrisburg, Pennsylvania, under command of Charles S. Hamilton, as colonel, on the twelfth of July, 1861, with a numerical strength of nine hundred and seventy-nine. The Fourth regiment—Colonel Halbert E. Payne—with a numerical strength of one thousand and fifty-three, departed on the fifteenth of July, 1861, from “Camp Utley,” Racine, for Baltimore, Maryland. The Fifth regiment left “Camp Randall,” Madison, one thousand and fifty-eight strong, commanded by Colonel Amasa Cobb, on the twenty-fourth of July, 1861, for Washington city. On the twenty-eighth of July, 1861, the Sixth regiment, numbering one thousand and eighty-four, moved from Madison, having been ordered to Washington city. It was commanded by Colonel Lysander Cutter. The Seventh regiment—Joseph Van Dor, Colonel—with a numerical strength of one thousand and sixteen men—officers and privates, received orders, as did the Fifth and Sixth, to move forward to Washington. They started from Madison on the morning of the twenty-first of September, 1861, for active service. The Eighth infantry, nine hundred and seventy-three strong, commanded by Colonel Robert C. Murphy, left Madison, *en route* for St. Louis, Missouri, on the morning of the twelfth of October, 1861. The Ninth, or German regiment, with Frederick Salomon in command as colonel, did not leave “Camp Sigel,” for active service, while Randall was governor. The Tenth infantry moved from “Camp Holton,” Milwaukee, commanded by Colonel Alfred R. Chapin, on the ninth of November, 1861, destined for Louisville, Kentucky, with a total number of nine hundred and sixteen officers and privates. On the twentieth of November, 1861, the Eleventh regiment “broke camp” at Madison, starting for St. Louis, under command of Charles L. Harris, as colonel. Its whole number of men was nine hundred and sixteen. The Twelfth regiment, at “Camp Randall,” Madison—Colonel George E. Bryant, and the Thirteenth, at “Camp Tredway,” Janesville—Colonel Maurice Maloney—were still in camp at the expiration of the administration of Governor Randall: these, with the Ninth, were all that had not moved out of the State for active service, of those mustered in previous to January 6, 1861,—making a grand total of infantry sent from Wisconsin, up to that date, by the governor, to answer calls of the General Government, for three years’ service or during the war, of nine thousand nine hundred and ninety-one men, in ten regiments, averaging very nearly one thousand to each regiment. Besides these ten regiments of infantry for three years’ service, Wisconsin had also sent into the field the First regiment, for three months’ service, numbering eight hundred and ten men; Alexander’s company of sharpshooters, one hundred and six; and Deutsch’s company of cavalry, eighty-four: in all, one thousand. Adding these to the three years’ regiments, and the whole force, in round numbers, was eleven thousand men, furnished by the State in 1861.

EIGHTH ADMINISTRATION.—LOUIS P. HARVEY AND EDWARD SALOMON, GOVERNORS—1862–1863.

Louis P. Harvey was inaugurated governor of Wisconsin on the sixth of January, 1862. The fifteenth regular session of the legislature of the State began on the eighth of the same month. In the senate, the republicans were in the majority; but in the assembly they had only a plurality of members, there being a number of “Union” men in that branch—enough, indeed, to elect, by outside aid, J. W. Beardsley, who ran for the assembly, upon the “Union” ticket, as speaker. Governor Harvey, on the tenth, read his message to the legislature in joint convention. “No previous legislature,” are his opening words, “has convened under equal incentives to a disinterested zeal in the public service. . . . The occasion,” he adds, “pleads

with you in rebuke of all the meaner passions, admonishing to the exercise of a conscientious patriotism, becoming the representatives of a Christian people, called in God's providence to pass through the furnace of a great trial, of their virtue, and of the strength of the Government." On the seventh of April following, the legislature adjourned until the third of June next ensuing. Before it again assembled, an event occurred, casting a gloom over the whole State. The occasion was the accidental drowning of Governor Harvey.

Soon after the battle of Pittsburgh Landing, on the seventh of April, 1862, the certainty that some of the Wisconsin regiments had suffered severely, induced the governor to organize a relief party, to aid the wounded and suffering soldiers from the State. On the tenth, Harvey and others started on their tour of benevolence. Arriving at Chicago, they found a large number of boxes had been forwarded there from different points in the State, containing supplies of various kinds. At Mound City, Paducah, and Savannah, the governor and his party administered to the wants of the sick and wounded Wisconsin soldiers. Having completed their mission of mercy, they repaired to a boat in the harbor of Savannah, to await the arrival of the *Minnehaha*, which was to convey them to Cairo, on their homeward trip. It was late in the evening of the nineteenth of April, 1862, and very dark when the boat arrived which was to take the governor and his friends on board; and as she rounded to, the bow touching the *Dunleith*, on which was congregated the party ready to depart, Governor Harvey, by a misstep, fell overboard between the two boats, into the Tennessee river. The current was strong, and the water more than thirty feet deep. Every thing was done that could be, to save his life, but all to no purpose. His body was subsequently found and brought to Madison for interment. Edward Salomon, lieutenant governor, by virtue of a provision of the constitution of the State, upon the death of Harvey, succeeded to the office of governor of Wisconsin. On the third day of June, the legislature re-assembled in accordance with adjournment on the seventh of April previous, Governor Salomon, in his message of that day, to the senate and assembly, after announcing the sad event of the death of the late governor, said: "The last among the governors elected by the people of this State, he is the first who has been removed by death from our midst. The circumstances leading to and surrounding the tragic and melancholy end of the honored and lamented deceased, are well known to the people, and are, with his memory, treasured up in their hearts." He died," added Salomon, "while in the exercise of the highest duties of philanthropy and humanity, that a noble impulse had imposed upon him." The legislature, on the thirteenth of June, by a joint resolution, declared that in the death of Governor Harvey, the State had "lost an honest, faithful, and efficient public officer, a high-toned gentleman, a warm-hearted philanthropist, and a sincere friend." Both houses adjourned *sine die*, on the seventeenth of June, 1862.

Business of great public importance, in the judgment of the governor, rendering a special session of the legislature necessary, he issued, on the twenty-ninth of August, 1862, his proclamation to that effect, convening both houses on the tenth of September following. On that day he sent in his message, relating wholly to war matters. He referred to the fact that since the adjournment of the previous session, six hundred thousand more men had been called for by the president of the United States, to suppress the rebellion. "It is evident," said he, "that to meet further calls, it is necessary to rely upon a system of drafting or conscription, in Wisconsin." The governor then proceeded to recommend such measures as he deemed necessary to meet the exigencies of the times. The legislature levied a tax to aid volunteering, and passed a law giving the right of suffrage to soldiers in the military service. They also authorized the raising of money for payment of bounties to volunteers. The legislature adjourned on the twenty-sixth of September, 1862, after a session of sixteen days, and the enacting of seventeen laws.

On the 7th of October, James H. Howe, attorney general, resigned his office to enter the army. On the 14th of that month, Winfield Smith was appointed by the governor to fill the vacancy.

At the general election in the Fall of this year, six congressmen were elected to the thirty-eighth congress: James S. Brown from the first district; I. C. Sloan, from the second; Amasa Cobb, from the third; Charles A. Eldredge, from the fourth; Ezra Wheeler, from the fifth; and W. D. McIndoe, from the sixth district. Sloan, Cobb, and McIndoe, were elected as republicans; Brown, Eldridge, and Wheeler, as democrats.

The sixteenth regular session of the Wisconsin legislature, commenced on the fourteenth of January, 1863. J. Allen Barber was elected speaker of the assembly. The majority in both houses was republican. Governor Salomon read his message on the fifteenth, to the joint convention, referring, at length, to matters connected with the war of the rebellion. A large number of bills were passed by the legislature for the benefit of soldiers and their families. On the twenty-second, the legislature re-elected James R. Doolittle, to the United States senate for six years, from the fourth of March next ensuing. The legislature adjourned *sine die* on the second of April following. In the Spring of this year, Luther S. Dixon was re-elected chief justice of the supreme court, running as an independent candidate.

By a provision of the Revised Statutes of 1858, as amended by an act passed in 1862, and interpreted by another act passed in 1875, the terms of the justices of the supreme court, elected for a full term, commence on the first Monday in January next succeeding their election.

At the Fall election there were two tickets in the field: democratic and union republican. The latter was successful, electing James T. Lewis, governor; Wyman Spooner, lieutenant governor; Lucius Fairchild, secretary of state; S. D. Hastings, state treasurer; Winfield Smith, attorney general; J. L. Pickard, state superintendent; W. H. Ramsay, bank comptroller; and Henry Cordier, state prison commissioner.

WAR OF SECESSION—HARVEY AND SALOMON'S ADMINISTRATION.

When Governor Randall turned over to his successor in the gubernatorial chair, the military matters of Wisconsin, he had remaining in the State, either already organized or in process of formation, the Ninth infantry, also the Twelfth up to the Nineteenth inclusive; three regiments of cavalry; and ten batteries—First to Tenth inclusive. Colonel Edward Daniels, in the Summer of 1861, was authorized by the war department to recruit and organize one battalion of cavalry in Wisconsin. He was subsequently authorized to raise two more companies. Governor Randall, in October, was authorized to complete the regiment—the First cavalry—by the organization of six additional companies. The organization of the Second cavalry regiment was authorized in the Fall of 1861, as an "independent acceptance," but was finally turned over to the State authorities. Early in November, 1861, the war department issued an order discontinuing enlistments for the cavalry service, and circulars were sent to the different State executives to consolidate all incomplete regiments. Ex-Governor Barstow, by authority of General Fremont, which authority was confirmed by the General Government, had commenced the organization of a cavalry regiment—the Third Wisconsin—when Governor Randall received information that the authority of Barstow had been revoked. The latter, however, soon had his authority restored. In October, Governor Randall was authorized by the war department to raise three additional companies of artillery—Eighth to Tenth inclusive. These three batteries were all filled and went into camp by the close of 1861. Governor Randall, therefore, besides sending out of the State eleven thousand men, had in process of formation, or fully organized, nine regiments of infantry, three regiments of cavalry, and ten companies of artillery, left behind in

various camps in the State, to be turned over to his successor.

The military officers of Wisconsin were the governor, Louis P. Harvey, commander-in-chief; Brigadier General Augustus Gaylord, adjutant general; Brigadier General W. W. Tredway, quartermaster general; Colonel Edwin R. Wadsworth, commissary general; Brigadier General Simeon Mills, paymaster general; Brigadier General E. B. Wolcott, surgeon general; Major M. H. Carpenter, judge advocate; and Colonel William H. Watson, military secretary. As the General Government had taken the recruiting service out of the hands of the executives of the States, and appointed superintendents in their place, the offices of commissary general and paymaster general were no longer necessary; and their time, after the commencement of the administration in Wisconsin of 1862, was employed, so long as they continued their respective offices, in settling up the business of each. The office of commissary general was closed about the first of June, 1862; that of paymaster general on the tenth of July following. On the last of August, 1862, Brigadier General Tredway resigned the position of quartermaster general, and Nathaniel F. Lund was appointed to fill his place.

Upon the convening of the legislature of the State in its regular January session of this year—1862, Governor Harvey gave, in his message to that body, a full statement of what had been done by Wisconsin in matters appertaining to the war, under the administration of his predecessor. He stated that the State furnished to the service of the General Government under the call for volunteers for three months, one regiment—First Wisconsin; under the call for volunteers for three years, or the war, ten regiments, numbering from the First re-organized to the Eleventh, excluding the Ninth or German regiment. He gave as the whole number of officers, musicians and privates, in these ten three-year regiments, ten thousand one hundred and seventeen. He further stated that there were then organized and awaiting orders, the Ninth, in "Camp Sigel," Milwaukee, numbering nine hundred and forty men, under Colonel Frederick Salomon; the Twelfth, in "Camp Randall," one thousand and thirty-nine men, under Colonel George E. Bryant; the Thirteenth, in "Camp Tredway," Janesville, having nine hundred and nineteen men, commanded by Colonel M. Maloney; and the Fourteenth, at "Camp Wood," Fond du Lac, eight hundred and fifty men, under Colonel D. E. Wood.

The Fifteenth or Scandinavian regiment, Colonel H. C. Heg, seven hundred men, and the Sixteenth, Colonel Benjamin Allen, nine hundred men, were at that time at "Camp Randall," in near readiness for marching orders. The Seventeenth (Irish) regiment, Colonel J. L. Doran, and the Eighteenth, Colonel James S. Alban, had their full number of companies in readiness, lacking one, and had been notified to go into camp—the former at Madison, the latter at Milwaukee. Seven companies of artillery, numbering together one thousand and fifty men, had remained for a considerable time in "Camp Utley," Racine, impatient of the delays of the General Government in calling them to move forward. Three additional companies of artillery were about going into camp, numbering three hundred and thirty-four men. Besides these, the State had furnished, as already mentioned, an independent company of cavalry, then in Missouri, raised by Captain Von Deutsch, of eighty-one men; a company of one hundred and four men for Berdan's sharpshooters; and an additional company for the Second regiment, of about eighty men. Three regiments of cavalry—the First, Colonel E. Daniels; the Second, Colonel C. C. Washburn; and the Third, Colonel W. A. Barstow; were being organized. They numbered together, two thousand four hundred and fifty men. The Nineteenth (independent) regiment was rapidly organizing under the direction of the General Government, by Colonel H. T. Sanders, Racine. Not bringing this last regiment into view, the State had, at the commencement of Governor Harvey's administration, including the First, three-months' regiment, either in the service of the United States or organizing for it, a total of twenty-one thousand seven hundred and eighty-three men.

The legislature at its regular session of 1862, passed a law making it necessary to present all claims which were made payable out of the war fund, within twelve months from the time they accrued; a law was also passed authorizing the investment of the principal of the school fund in the bonds of the state issued for war purposes; another, amendatory of the act of the extra session of 1861, granting exemption to persons enrolled in the military service, so as to except persons acting as fiduciary agents, either as executors or administrators, or guardians or trustees, or persons defrauding the State, or any school district of moneys belonging to the same; also authorizing a stay of proceedings in foreclosures of mortgages, by advertisements. "The State Aid Law" was amended so as to apply to all regiments of infantry, cavalry, artillery and sharpshooters, defining the rights of families, fixing penalties for the issue of false papers, and imposing duties on military officers in the field to make certain reports. These amendments only included regiments and companies organized up to and including the Twentieth, which was in process of organization before the close of the session. A law was also passed suspending the sale of lands mortgaged to the State, or held by volunteers; another defining the duties of the allotment commissioners appointed by the president of the United States, and fixing their compensation. One authorized the issuing of bonds for two hundred thousand dollars for war purposes; one authorized a temporary loan from the general fund to pay State aid to volunteers; and one, the appointment of a joint committee to investigate the sale of war bonds; while another authorized the governor to appoint surgeons to batteries, and assistant surgeons to cavalry regiments.

The legislature, it will be remembered, took a recess from the seventh of April to the third of June, 1862. Upon its re-assembling, an act was passed providing for the discontinuance of the active services of the paymaster general, quartermaster general and commissary general. Another act appropriated twenty thousand dollars to enable the governor to care for the sick and wounded soldiers of the State. There was also another act passed authorizing the auditing, by the quartermaster general, of bills for subsistence and transportation of the Wisconsin cavalry regiments. At the extra session called by Governor Salomon, for the tenth of September, 1862, an amendment was made to the law granting aid to families of volunteers, by including all regiments of cavalry, infantry, or batteries of artillery before that time raised in the State, or that might afterward be raised and mustered into the United States service. It also authorized the levying of a State tax of two hundred and seventy-five thousand dollars to be placed to the credit of the war fund and used in the payment of warrants for "State Aid" to families of volunteers. Another law authorized commissioned officers out of the State to administer oaths and take acknowledgments of deeds and other papers. One act authorized soldiers in the field, although out of the State, to exercise the right of suffrage; and another gave towns, cities, incorporated villages and counties the authority to raise money to pay bounties to volunteers.

On the fifth of August, 1862, Governor Salomon received from the war department a dispatch stating that orders had been issued for a draft of three hundred thousand men to be immediately called into the service of the United States, to serve for nine months unless sooner discharged; that if the State quota under a call made July 2, of that year, for three hundred thousand volunteers, was not filled by the fifteenth of August, the deficiency would be made up by draft; and that the secretary of war would assign the quotas to the States and establish regulations for the draft. On the eighth of that month, the governor of the State was ordered to immediately cause an enrollment of all able-bodied citizens between eighteen and forty-five years of age, by counties. Governor Salomon was authorized to appoint proper officers, and the United States promised to pay all reasonable expenses. The quota for Wisconsin, under the call for nine months' men, was eleven thousand nine hundred and four. The draft was made by the governor in obedience to the order he had received from Washington; but such had been the volunteering under the stim-

ulus caused by a fear of it, that only four thousand five hundred and thirty-seven men were drafted. This was the first and only draft made in Wisconsin by the State authorities. Subsequent ones were made under the direction of the provost marshal general at Washington.

The enlisting, organization and mustering into the United States service during Randall's administration of thirteen regiments of infantry—the First to the Thirteenth inclusive, and the marching of ten of them out of the State before the close of 1861, also, of one company of cavalry under Captain Von Deutsch and one company of sharpshooters under Captain Alexander, constituted the effective aid abroad of Wisconsin during that year to suppress the rebellion. But for the year 1862, this aid, as to number of organizations, was more than doubled, as will now be shown.

The Ninth regiment left "Camp Sigel," Milwaukee, under command of Colonel Frederick Salomon, on the twenty-second of January, 1862, numbering thirty-nine officers and eight hundred and eighty-four men, to report at Fort Leavenworth, Kansas.

The Twelfth infantry left Wisconsin under command of Colonel George E. Bryant, ten hundred and forty-five strong, the eleventh of January, 1862, with orders to report at Weston, Missouri.

The Thirteenth regiment—Colonel Maurice Maloney—left "Camp Tredway," Janesville, on the eighteenth of January, 1862, nine hundred and seventy strong, under orders to report at Leavenworth, Kansas, where it arrived on the twenty-third.

The Fourteenth regiment of infantry departed from "Camp Wood," Fond du Lac, under command of Colonel David E. Wood, for St. Louis, Missouri, on the eighth of March, 1862, it having been mustered into the United States service on the thirtieth of January previous. Its total strength was nine hundred and seventy officers and men. It arrived at its destination on the tenth of March, and went into quarters at "Benton Barracks."

The Fifteenth regiment, mostly recruited from the Scandinavian population of Wisconsin, was organized at "Camp Randall," Madison—Hans C. Heg as colonel. Its muster into the United States service was completed on the fourteenth of February, 1862, it leaving the State for St. Louis, Missouri, on the second of March following, with a total strength of eight hundred and one officers and men.

The Sixteenth regiment was organized at "Camp Randall," and was mustered into the service on the last day of January, 1862, leaving the State, with Benjamin Allen as colonel, for St. Louis on the thirteenth of March ensuing, having a total strength of one thousand and sixty-six.

The regimental organization of the Seventeenth infantry (Irish), Colonel John L. Doran, was effected at "Camp Randall," and the mustering in of the men completed on the fifteenth of March, 1862, the regiment leaving the State on the twenty-third for St. Louis.

The Eighteenth regiment organized at "Camp Trowbridge," Milwaukee—James S. Alban, colonel—completed its muster into the United States service on the fifteenth of March, 1862, and left the State for St. Louis on the thirtieth, reaching their point of destination on the thirty-first.

The Nineteenth infantry rendezvoused at Racine as an independent regiment, its colonel, Horace T. Sanders, being commissioned by the war department. The men were mustered into the service as fast as they were enlisted. Independent organizations being abolished, by an order from Washington, the Nineteenth was placed on the same footing as other regiments in the State. On the twentieth of April, 1862, the regiment was ordered to "Camp Randall" to guard rebel prisoners. Here the mustering in was completed, numbering in all nine hundred and seventy-three. They left the State for Washington on the second of June.

The muster into the United States service of the Twentieth regiment—Bertine Pinckney, colonel—was completed on the twenty-third of August, 1862, at "Camp Randall," the original strength being nine hundred and ninety. On the thirtieth of August the regiment left the State for St. Louis.

The Twenty-first infantry was organized at Oshkosh, being mustered in on the fifth of September, 1862, with a force of one thousand and two, all told—Benjamin J. Sweet, colonel—leaving the State for Cincinnati on the eleventh.

The Twenty-second regiment—Colonel William L. Utley—was organized at "Camp Utley," Racine, and mustered in on the second of September, 1862. Its original strength was one thousand and nine. It left the State for Cincinnati on the sixteenth.

On the thirtieth of August, 1862, the Twenty-third regiment—Colonel Joshua J. Guppy—was mustered in at "Camp Randall," leaving Madison for Cincinnati on the fifteenth.

The Twenty-fourth infantry rendezvoused at "Camp Sigel," Milwaukee. Its muster in was completed on the twenty-first of August, 1862, the regiment leaving the State under Colonel Charles H. Larrabee, for Kentucky, on the fifth of September, one thousand strong.

On the fourteenth of September, 1862, at "Camp Salomon," LaCrosse, the Twenty-fifth regiment was mustered into the service—Milton Montgomery, colonel. They left the State on the nineteenth with orders to report to General Pope, at St. Paul, Minnesota, to aid in suppressing the Indian difficulties in that State. Their entire strength was one thousand and eighteen. The regiment, after contributing to the preservation of tranquillity among the settlers, and deterring the Indians from hostilities, returned to Wisconsin, arriving at "Camp Randall" on the eighteenth of December, 1862.

The Twenty-sixth—almost wholly a German regiment—was mustered into the service at "Camp Sigel," Milwaukee, on the seventeenth of September, 1862. The regiment, under command of Colonel William H. Jacobs, left the State for Washington city on the sixth of October, one thousand strong.

The Twenty-seventh infantry was ordered to rendezvous at "Camp Sigel," Milwaukee, on the seventeenth of September, 1862; but the discontinuance of recruiting for new regiments in August left the Twenty-seventh with only seven companies full. An order authorizing the recruiting of three more companies was received, and under the supervision of Colonel Conrad Krez the organization was completed, but the regiment at the close of the year had not been mustered into the service.

On the twenty-fourth of October, 1862, the Twenty-eighth regiment—James M. Lewis, of Oconomowoc, colonel—was mustered into the United States service at "Camp Washburn," Milwaukee. Its strength was nine hundred and sixty-one. In November, the regiment was employed in arresting and guarding the draft rioters in Ozaukee county. It left the State for Columbus, Kentucky, on the twentieth of December, where they arrived on the twenty-second; remaining there until the fifth of January, 1863.

The Twenty-ninth infantry—Colonel Charles R. Gill—was organized at "Camp Randall," where its muster into the United States service was completed on the twenty-seventh of September, 1862, the regiment leaving the State for Cairo, Illinois, on the second of November.

The Thirtieth regiment, organized at "Camp Randall" under the supervision of Colonel Daniel J. Dill, completed its muster into the United States service on the twenty-first of October, 1862, with a strength of nine hundred and six. On the sixteenth of November, one company of the Thirtieth was sent to Green Bay to protect the draft commissioner, remaining several weeks. On the eighteenth, seven companies moved to Milwaukee to assist in enforcing the draft in Milwaukee county, while two companies remained in "Camp Randall" to guard Ozaukee rioters.

On the twenty-second, six companies from Milwaukee went to West Bend, Washington county, one company returning to "Camp Randall." After the completion of the draft in Washington county, four companies returned to camp, while two companies were engaged in gathering up the drafted men.

The final and complete organization of the Thirty-first infantry—Colonel Isaac E. Messmore—was not concluded during the year 1862.

The Thirty-second regiment, organized at "Camp Bragg," Oshkosh, with James H. Howe as colonel, was mustered into the service on the twenty-fifth of September, 1862; and, on the thirtieth of October, leaving the State, it proceeded by way of Chicago and Cairo to Memphis, Tennessee, going into camp on the third of November. The original strength of the Thirty-second was nine hundred and ninety-three.

The Thirty-third infantry—Colonel Jonathan B. Moore—mustered in on the eighteenth of October, 1862, at "Camp Utley," Racine, left the State, eight hundred and ninety-two strong, moving by way of Chicago to Cairo.

The Thirty-fourth regiment, drafted men, original strength nine hundred and sixty-one—Colonel Fritz Anneke—had its muster into service for nine months completed at "Camp Washburn," Milwaukee, on the last day of the year 1862.

Of the twenty-four infantry regiments, numbered from the Twelfth to the Thirty-fourth inclusive, and including also the Ninth, three—the Ninth, Twelfth, and Thirteenth—were mustered into the United States service in 1861. The whole of the residue were mustered in during the year 1862, except the Twenty-seventh and the Thirty-first. All were sent out of the State during 1862, except the last two mentioned and the Twenty-fifth, Thirtieth, and Thirty-fourth.

The First regiment of cavalry—Colonel Edward Daniels—perfected its organization at "Camp Harvey," Kenosha. Its muster into the United States service was completed on the eighth of March, 1862, the regiment leaving the State for St. Louis on the seventeenth, with a strength of eleven hundred and twenty-four.

The muster of the Second Wisconsin cavalry was completed on the twelfth of March, 1862, at "Camp Washburn," Milwaukee, the regiment leaving the State for St. Louis on the twenty-fourth, eleven hundred and twenty-seven strong. It was under the command of Cadwallader C. Washburn as colonel.

The Third Wisconsin cavalry—Colonel William A. Barstow—was mustered in at "Camp Barstow," Janesville. The muster was completed on the 31st of January, 1862, the regiment leaving the State on the 26th of March for St. Louis, with a strength of eleven hundred and eighty-six.

The original project of forming a regiment of light artillery in Wisconsin was overruled by the war department, and the several batteries were sent from the State as independent organizations.

The First battery—Captain Jacob T. Foster—perfected its organization at "Camp Utley," where the company was mustered in, it leaving the State with a strength of one hundred and fifty-five, on the 23d of January, 1862, for Louisville, where the battery went into "Camp Irvine," near that city. The Second battery—Captain Ernest F. Herzberg—was mustered into the service at "Camp Utley," October 10, 1861, the company numbering one hundred and fifty-three. It left the State for Baltimore, on the 21st of January, 1862. The Third battery—Captain L. H. Drury—completed its organization of one hundred and seventy at "Camp Utley," and was mustered in October 10, 1861, leaving the State for Louisville, on the 23d of January, 1862. The Fourth battery—Captain John F. Vallee—rendezvoused at "Camp Utley." Its muster in was completed on the 1st of October, 1861, its whole force being one hundred and fifty one. The company left the State for Baltimore on the 21st of January, 1862. The Fifth bat-

tery, commanded by Captain Oscar F. Pinney, was mustered in on the 1st of October, 1861, at "Camp Utley," leaving the State for St. Louis, on the 15th of March, 1862, one hundred and fifty-five strong. The Sixth battery—Captain Henry Dillon—was mustered in on the 2d of October, 1861, at "Camp Utley," leaving the State for St. Louis, March 15, 1862, with a numerical strength of one hundred and fifty-seven. The Seventh battery—Captain Richard R. Griffiths—was mustered in on the 4th of October, 1861, at "Camp Utley," and proceeded on the 15th of March, 1862, with the Fifth and Sixth batteries to St. Louis. The Eighth battery, commanded by Captain Stephen J. Carpenter, was mustered in on the 8th of January, 1862, at "Camp Utley," and left the State on the 18th of March following, for St. Louis, one hundred and sixty-one strong. The Ninth battery, under command of Captain Cyrus H. Johnson, was organized at Burlington, Racine county. It was mustered in on the 7th of January, 1862, leaving "Camp Utley" for St. Louis, on the 18th of March. At St. Louis, their complement of men— one hundred and fifty-five—was made up by the transfer of forty-five from another battery. The Tenth battery—Captain Yates V. Bebee—after being mustered in at Milwaukee, on the 10th of February, 1862, left "Camp Utley," Racine, on the 18th of March for St. Louis, one hundred and seventeen strong. The Eleventh battery—Captain John O'Rourke—was made up of the "Oconto Irish Guards" and a detachment of Illinois recruits. The company was organized at "Camp Douglas," Chicago, in the Spring of 1862. Early in 1862, William A. Pile succeeded in enlisting ninety-nine men as a company to be known as the Twelfth battery. The men were mustered in and sent forward in squads to St. Louis. Captain Pile's commission was revoked on the 18th of July. His place was filled by William Zickrick. These twelve batteries were all that left the State in 1862. To these are to be added the three regiments of cavalry and the nineteen regiments of infantry, as the effective force sent out during the year by Wisconsin.

The military officers of the State, at the commencement of 1863, were Edward Salomon, governor and commander-in-chief; Brigadier General Augustus Gaylord, adjutant general; Colonel S. Nye Gibbs, assistant adjutant general; Brigadier General Nathaniel F. Lund, quartermaster general; Brigadier General E. B. Wolcott, surgeon general; and Colonel W. H. Watson, military secretary. The two incomplete regiments of 1862—the Twenty-seventh and Thirty-first volunteers—were completed and in the field in March, 1863. The former was mustered in at "Camp Sigel"—Colonel Conrad Krez—on the 7th of March, and left the State, eight hundred and sixty-five strong, on the 16th for Columbus, Kentucky; the latter, under command of Colonel Isaac E. Messmore, with a strength of eight hundred and seventy-eight, left Wisconsin on the 1st of March, for Cairo, Illinois. The Thirty-fourth (drafted) regiment left "Camp Washburn," Milwaukee, on the 31st of January, 1863, for Columbus, Kentucky, numbering nine hundred and sixty-one, commanded by Colonel Fritz Anneke. On the 17th of February, 1863, the Twenty-fifth regiment left "Camp Randall" for Cairo, Illinois. The Thirtieth regiment remained in Wisconsin during the whole of 1863, performing various duties—the only one of the whole thirty-four that, at the end of that year, had not left the State.

On the 14th of January, 1863, the legislature of Wisconsin, as before stated, convened at Madison. Governor Salomon, in his message to that body, gave a summary of the transactions of the war fund during the calendar year; also of what was done in 1862, in the recruiting of military forces, and the manner in which the calls of the president were responded to. There were a number of military laws passed at this session. A multitude of special acts authorizing towns to raise bounties for volunteers, were also passed.

No additional regiments of infantry besides those already mentioned were organized in 1863, although recruiting for old regiments continued. On the 3d of March, 1863, the congress of the United States passed the "Conscription Act." Under this act, Wisconsin was divided

into six districts. In the first district, I. M. Bean was appointed provost marshal; C. M. Baker, commissioner; and J. B. Dousman, examining surgeon. Headquarters of this district was at Milwaukee. In the second district, S. J. M. Putnam was appointed provost marshal; L. B. Caswell, commissioner; and Dr. C. R. Head, examining surgeon. Headquarters of this district was at Janesville. In the third district, J. G. Clark was appointed provost marshal; E. E. Byant, commissioner; and John H. Vivian, examining surgeon. Headquarters at Prairie du Chien. In the fourth district, E. L. Phillips was appointed provost marshal; Charles Burchard, commissioner; and L. H. Cary, examining surgeon. Headquarters at Fond du Lac. In the fifth district, C. R. Merrill was appointed provost marshal; William A. Bugh, commissioner; and H. O. Crane, examining surgeon. Headquarters at Green Bay. In the sixth district, B. F. Cooper was appointed provost marshal; L. S. Fisher, commissioner; and D. D. Cameron, examining surgeon. Headquarters at LaCrosse. The task of enrolling the State was commenced in the month of May, and was proceeded with to its completion. The nine months' term of service of the Thirty-fourth regiment, drafted militia, having expired, the regiment was mustered out of service on the 8th of September.

The enrollment in Wisconsin of all persons liable to the "Conscription" amounted to 121,202. A draft was ordered to take place in November. Nearly fifteen thousand were drafted, only six hundred and twenty-eight of whom were mustered in; the residue either furnished substitutes, were discharged, failed to report, or paid commutation.

In the Summer of 1861, Company "K," Captain Langworthy, of the Second Wisconsin infantry, was detached and placed on duty as heavy artillery. His company was designated as "A," First Regiment Heavy Artillery. This was the only one organized until the Summer of 1863; but its organization was effected outside the State. Three companies were necessary to add to company "A" to complete the battalion. Batteries "B," "C" and "D" were, therefore, organized in Wisconsin, all leaving the State in October and November, 1863.

NINTH ADMINISTRATION—JAMES T. LEWIS, GOVERNOR—1864-1865.

James T. Lewis, of Columbia county, was inaugurated governor of Wisconsin on the fourth of January, 1864. In an inaugural address, the incoming governor pledged himself to use no executive patronage for a re-election; declared he would administer the government without prejudice or partiality; and committed himself to an economical administration of affairs connected with the State. On the thirteenth the legislature met in its seventeenth regular session. W. W. Field was elected speaker of the assembly. The republican and union men were in the majority in this legislature. A number of acts were passed relative to military matters.

On the 1st day of October, J. L. Pickard having resigned as superintendent of public instruction, J. G. McMynn was, by the governor, appointed to fill the vacancy. On the fifteenth of November, Governor Lewis appointed Jason Downer an associate justice of the supreme court, to fill a vacancy caused by the resignation of Judge Byron Paine, who had resigned his position to take effect on that day, in order to accept the position of lieutenant colonel of one of the regiments of Wisconsin, to which he had been commissioned on the tenth of August previous. The November elections of this year were entered into with great zeal by the two parties, owing to the fact that a president and vice president of the United States were to be chosen. The republicans were victorious. Electors of that party cast their eight votes for Lincoln and Johnson. The members elected to the thirty-ninth congress from Wisconsin at this election were: from the first district, H. E. Paine; from the second, I. C. Sloan; from the third, Amasa Cobb; from the fourth, C. A. Eldredge; from the fifth, Philetus Sawyer; and

from the sixth district, W. D. McIndoe. All were republicans except Eldredge, who was elected as a democrat.

The Eighteenth regular session of the Wisconsin legislature began in Madison on the eleventh of January, 1865. W. W. Field was elected speaker of the assembly. The legislature was, as to its political complexion, "Republican Union." On the tenth of April, the last day of the session, Governor Lewis informed the legislature that General Lee and his army had surrendered. "Four years ago," said he, "on the day fixed for adjournment, the sad news of the fall of Fort Sumter was transmitted to the legislature. To-day, thank God! and next to Him the brave officers and soldiers of our army and navy, I am permitted to transmit to you the official intelligence, just received, of the surrender of General Lee and his army, the last prop of the rebellion. Let us rejoice, and thank the Ruler of the Universe for victory and the prospects of an honorable peace." In February preceding, both houses ratified the constitutional amendment abolishing slavery in the United States. At the Spring election, Jason Downer was chosen associate justice of the supreme court for a full term of six years. The twentieth of April was set apart by the governor as a day of thanksgiving for the overthrow of the rebellion and restoration of peace. At the Fall election both parties, republican and democratic, had tickets in the field. The republicans were victorious, electing Lucius Fairchild, governor; Wyman Spooner, lieutenant governor; Thomas S. Allen, secretary of state; William E. Smith, state treasurer; Charles R. Gill, attorney general; John G. McMynn, superintendent of public instruction; J. M. Rusk, bank comptroller; and Henry Cordier, state prison commissioner.

WAR OF SECESSION — LEWIS' ADMINISTRATION.

The military officers for 1864 were besides the governor (who was commander-in-chief) Brigadier General Augustus Gaylord, adjutant general; Colonel S. Nye Gibbs, assistant adjutant general; Brigadier General Nathaniel F. Lund, quartermaster and commissary general, and chief of ordnance; Brigadier General E. B. Wolcott, surgeon general; and Colonel Frank H. Firmin, military secretary. The legislature met at Madison on the 13th of January, 1864. "In response to the call of the General Government," said the governor, in his message to that body, "Wisconsin had sent to the field on the first day of November last, exclusive of three months' men, thirty-four regiments of infantry, three regiments and one company of cavalry, twelve batteries of light artillery, three batteries of heavy artillery, and one company of sharpshooters, making an aggregate of forty-one thousand seven hundred and seventy-five men."

Quite a number of laws were passed at this session of the legislature relative to military matters: three were acts to authorize towns, cities and villages to raise money by tax for the payment of bounties to volunteers; one revised, amended and consolidated all laws relative to extra pay to Wisconsin soldiers in the service of the United States; one provided for the proper reception by the State, of Wisconsin volunteers returning from the field of service; another repealed the law relative to allotment commissioners. One was passed authorizing the governor to purchase flags for regiments or batteries whose flags were lost or destroyed in the service: another was passed amending the law suspending the sale of lands mortgaged to the State or held by volunteers, so as to apply to drafted men; another provided for levying a State tax of \$200,000 for the support of families of volunteers. A law was passed authorizing the governor to take care of the sick and wounded soldiers of Wisconsin, and appropriated ten thousand dollars for that purpose. Two other acts authorized the borrowing of money for repelling invasion, suppressing insurrection, and defending the State in time of war. One act prohibited the taking of fees for procuring volunteers' extra bounty; another one defined the residence of certain soldiers from this State in the service of the United States, who had received

local bounties from towns other than their proper places of residence.

At the commencement of 1864, there were recruiting in the State the Thirty-fifth regiment of infantry and the Thirteenth battery. The latter was mustered in on the 29th of December, 1863, and left the State for New Orleans on the 28th of January, 1864. In February, authority was given by the war department to organize the Thirty-sixth regiment of infantry. On the 27th of that month, the mustering in of the Thirty-fifth was completed at "Camp Washburn"—Colonel Henry Orff—the regiment, one thousand and sixty-six strong, leaving the State on the 18th of April, 1864, for Alexandria, Louisiana. The other regiments, recruited and mustered into the service of the United States during the year 1864, were: the Thirty-sixth—Colonel Frank A. Haskell; the Thirty-seventh—Colonel Sam Harriman; the Thirty-eighth—Colonel James Bintliff; the Thirty-ninth—Colonel Edwin L. Buttrick; the Fortieth—Colonel W. Augustus Ray; the Forty-first—Lieutenant Colonel George B. Goodwin; the Forty-second—Colonel Ezra T. Sprague; the Forty-third—Colonel Amasa Cobb.

The regiments mustered into the service of the United States during the year 1865 were: the Forty-fourth—Colonel George C. Symes; the Forty-fifth—Colonel Henry F. Belitz; Forty-sixth—Colonel Frederick S. Lovell; Forty-seventh—Colonel George C. Ginty; Forty-eighth—Colonel Uri B. Pearsall; Forty-ninth—Colonel Samuel Fallows; Fiftieth—Colonel John G. Clark; Fifty-first—Colonel Leonard Martin; Fifty-second—Lieutenant Colonel Hiram J. Lewis; and Fifty-third—Lieutenant Colonel Robert T. Pugh.

All of the fifty-three regiments of infantry raised in Wisconsin during the war, sooner or later moved to the South and were engaged there in one way or other, in aiding to suppress the rebellion. Twelve of these regiments were assigned to duty in the eastern division, which constituted the territory on both sides of the Potomac and upon the seaboard from Baltimore to Savannah. These twelve regiments were: the First (three months), Second, Third, Fourth, Fifth, Sixth, Seventh, Nineteenth, Twenty-sixth, Thirty-sixth, Thirty-seventh, and Thirty-eighth. Ten regiments were assigned to the central division, including Kentucky, Tennessee, Northern Alabama, and Georgia. These ten were: the Tenth, Twenty-first, Twenty-second, Twenty-fourth, Thirtieth, Forty-third, Forty-fourth, Forty-fifth, Forty-sixth, and Forty-seventh. Added to these was the First (re-organized). Thirty-one regiments were ordered to the western division, embracing the country west and northwest of the central division. These were: the Eighth, Ninth, Eleventh, Twelfth, Thirteenth, Fourteenth, Fifteenth, Sixteenth, Seventeenth, Eighteenth, Twentieth, Twenty-third, Twenty-fifth, Twenty-seventh, Twenty-eighth, Twenty-ninth, Thirty-first, Thirty-second, Thirty-third, Thirty-fourth, Thirty-fifth, Thirty-ninth, Fortieth, Forty-first, Forty-second, Forty-eighth, Forty-ninth, Fiftieth, Fifty-first, Fifty-second, and Fifty-third. During the war several transfers were made from one district to another. There were taken from the eastern division, the Third and Twenty-sixth, and sent to the central division; also the Fourth, which was sent to the department of the gulf. The Twelfth, Thirteenth, Fifteenth, Sixteenth, Seventeenth, Eighteenth, Twenty-fifth, Thirtieth, Thirty-first and Thirty-second were transferred from the western to the central department.

The four regiments of cavalry were assigned to the western division—the First regiment being afterward transferred to the central division. Of the thirteen batteries of light artillery, the Second, Fourth, and Eleventh, were assigned to the eastern division; the First and Third, to the central division; the Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Twelfth, and Thirteenth, to the western division. During the war, the First was transferred to the western division; while the Fifth, Sixth, Eighth, Tenth, and Twelfth, were transferred to the central division. Of the twelve batteries of the First regiment of heavy artillery—"A," "E," "F," "G," "H," "I," "K," "L," and "M," were assigned to duty in the eastern division; "B" and "C," to the central

division; and "D," to the western division. Company "G," First regiment Berdan's sharpshooters, was assigned to the eastern division.

The military officers of the State for 1865 were the same as the previous year, except that Brigadier General Lund resigned his position as quartermaster general, James M. Lynch being appointed in his place. The legislature of this year met in Madison on the 11th of January. "To the calls of the Government for troops," said Governor Lewis, in his message, "no State has responded with greater alacrity than has Wisconsin. She has sent to the field, since the commencement of the war, forty-four regiments of infantry, four regiments and one company of cavalry, one regiment of heavy artillery, thirteen batteries of light artillery, and one company of sharpshooters, making an aggregate (exclusive of hundred day men) of seventy-five thousand one hundred and thirty-three men."

Several military laws were passed at this session: one authorizing cities, towns, and villages to pay bounties to volunteers; another, incorporating the Wisconsin Soldiers' Home; two others, amending the act relative "to the commencement and prosecution of civil actions against persons in the military service of the country." One was passed authorizing the payment of salaries, clerk hire, and expenses, of the offices of the adjutant general and quartermaster general from the war fund; another, amending the act authorizing commissioned officers to take acknowledgment of deeds, affidavits and depositions; another, amending the act extending the right of suffrage to soldiers in the field. One act provides for correcting and completing the records of the adjutant general's office, relative to the military history of the individual members of the several military organizations of this State; another fixes the salary of the adjutant general and the quartermaster general, and their clerks and assistants; another prohibits volunteer or substitute brokerage. One act was passed supplementary and explanatory of a previous one of the same session, authorizing towns, cities, or villages, to raise money to pay bounties to volunteers; another, amending a law of 1864, relating to the relief of soldiers' families; and another, providing for the establishment of State agencies for the relief and care of sick, wounded, and disabled Wisconsin soldiers. There was an act also passed, authorizing the borrowing of money for a period not exceeding seven months, to repel invasion, suppress insurrection, and defend the State in time of war,—the amount not to exceed \$850,000.

On the 13th of April, 1865, orders were received to discontinue recruiting in Wisconsin, and to discharge all drafted men who had not been mustered in. About the first of May, orders were issued for the muster out of all organizations whose term of service would expire on or before the first of the ensuing October. As a consequence, many Wisconsin soldiers were soon on their way home. State military officers devoted their time to the reception of returning regiments, to their payment by the United States, and to settling with those who were entitled to extra pay from the State. Finally, their employment ceased—the last soldier was mustered out—the War of the Rebellion was at an end. Wisconsin had furnished to the federal army during the conflict over ninety thousand men, a considerable number more than the several requisitions of the General Government called for. Nearly eleven thousand of these were killed or died of wounds received in battle, or fell victims to diseases contracted in the military service, to say nothing of those who died after their discharge, and whose deaths do not appear upon the military records. Nearly twelve million dollars were expended by the State authorities, and the people of the several counties and towns throughout the State, in their efforts to sustain the National Government.

Wisconsin feels, as well she may, proud of her record made in defense of national existence. Shoulder to shoulder with the other loyal States of the Union, she stood—always ranking among the foremost. From her workshops, her farms, her extensive pineries, she poured forth stalwart

men, to fill up the organizations which she sent to the field. The blood of these brave men drenched almost every battle-field from Pennsylvania to the Rio Grande, from Missouri to Georgia. To chronicle the deeds and exploits—the heroic achievements—the noble enthusiasm—of the various regiments and military organizations sent by her to do battle against the hydra-headed monster secession—would be a lengthy but pleasant task; but these stirring annals belong to the history of our whole country. Therein will be told the story which, to the latest time in the existence of this republic, will be read with wonder and astonishment. But an outline of the action of the State authorities and their labors, and of the origin of the various military organizations, in Wisconsin, to aid in the suppression of the rebellion, must needs contain a reference to other helps employed—mostly incidental, in many cases wholly charitable, but none the less effective: the sanitary operations of the State during the rebellion.

Foremost among the sanitary operations of Wisconsin during the war of the rebellion was the organization of the surgeon general's department—to the end that the troops sent to the field from the State should have a complete and adequate supply of medicine and instruments as well as an efficient medical staff. In 1861, Governor Randall introduced the practice of appointing agents to travel with the regiments to the field, who were to take charge of the sick. The practice was not continued by Governor Harvey. On the 17th of June, 1862, an act of the legislature became a law authorizing the governor to take care of the sick and wounded soldiers of Wisconsin, and appropriated twenty thousand dollars for that purpose. Under this law several expeditions were sent out of the State to look after the unfortunate sons who were suffering from disease or wounds. Soldiers' aid societies were formed throughout the State soon after the opening scenes of the rebellion. When temporary sanitary operations were no longer a necessity in Wisconsin, there followed two military benevolent institutions intended to be of a permanent character: the Soldiers' Home at Milwaukee, and the Soldiers' Orphans' Home at Madison. The latter, however, has been discontinued. The former, started as a State institution, is now wholly under the direction and support of the General Government.

Whether in the promptitude of her responses to the calls made on her by the General Government, in the courage or constancy of her soldiery in the field, or in the wisdom and efficiency with which her civil administration was conducted during the trying period covered by the war of the rebellion, Wisconsin proved herself the peer of any loyal State.

TABULAR STATEMENT.

We publish on the following pages the report of the Adjutant General at the close of the war, but before all the Wisconsin organizations had been mustered out. It shows how many brave men courageously forsook homes, friends and the comforts of peaceful avocations, offering their lives in defense of their country's honor. Twenty-two out of every hundred either died, were killed or wounded. Thirteen out of every hundred found a soldier's grave, while only 60 per cent of them marched home at the end of the war. Monuments may crumble, cities fall into decay, the tooth of time leave its impress on all the works of man, but the memory of the gallant deeds of the army of the Union in the great war of the rebellion, in which the sons of Wisconsin bore so conspicuous a part, will live in the minds of men so long as time and civilized governments endure.

Table showing total number of Volunteers originally in the several organizations from the State, and numerical strength at the close of war.

* November 1, 1865. † October 1, 1865.
 ‡ Drafted men who paid commutation; volunteers, substituted and drafted men, mustered out before assignment; musters in the field reported by the War Department, without eating organization.
 § To the number of 615 remaining in the service, November 1, 1865, should be added 145 transferred from the Twentieth and Twenty-third Regiments.

TENTH ADMINISTRATION.—LUCIUS FAIRCHILD, GOVERNOR—1866—1867.

The inauguration of the newly elected State officers took place on Monday, January 1, 1866. The legislature, in its nineteenth regular session, convened on the tenth. H. D. Barron was elected speaker of the assembly. The "Union" and "Republican" members were in a majority in both branches of the legislature. "Our first duty," said Governor Fairchild in his message, "is to give thanks to Almighty God for all His mercies during the year that is past." "The people of no nation on earth," he continued, "have greater cause to be thankful than have our people. The enemies of the country have been overthrown in battle. The war has settled finally great questions at issue between ourselves." Among the joint resolutions passed at this session was one submitting the question of a constitutional convention to frame a new constitution for the State, to the people. The legislature adjourned on the twelfth of April, having been in session ninety-three days. At the general election in November of this year, there were elected to the Fortieth congress: H. E. Paine, from the first district; B. F. Hopkins, from the second; Amasa Cobb, from the third; C. A. Eldredge, from the fourth; Philetus Sawyer, from the fifth, and C. C. Washburn, from the sixth district. All were republicans except Eldredge, who was elected as a democrat. The proposition for a constitutional convention was voted upon by the people at this election, but was defeated.

The twentieth session of the legislature commenced on the ninth of January, 1867. Angus Cameron was elected speaker of the assembly. The legislature was strongly "Republican-Union." The message of Governor Fairchild was read by him in person, on the tenth. On the twenty-third, the two houses, in joint convention, elected Timothy O. Howe United States senator for the term of six years, commencing on the fourth of March next ensuing. This legislature passed an act submitting to the people at the next Fall election an amendment to section twenty-one of article four of the constitution of the State, providing for paying a salary of three hundred and fifty dollars to each member of the legislature, instead of a *per diem* allowance, as previously given. A *sine die* adjournment took place on the eleventh of April, after a service of ninety-three days.

To provide for the more efficient collection of license fees due the State, an act, approved on the day of adjournment, authorized the governor to appoint an agent of the treasury, to superintend and enforce the collection of fees due for licenses fixed by law. This law is still in force, the agent holding his office at the pleasure of the executive of the State.

On the 27th of March, Chief Justice Dixon resigned his office, but was immediately appointed by the governor to the same position. At the election in April following, associate Justice Cole was re-elected, without opposition, for six years from the first Monday in January following. On the 16th of August, Associate Justice Downer having resigned, Byron Paine was appointed by the governor in his place.

The republican State ticket, in the Fall, was elected over the democratic—resulting in the choice of Lucius Fairchild for governor; Wyman Spooner, for lieutenant governor; Thomas S. Allen, Jr., secretary of state; William E. Smith, for state treasurer; Charles R. Gill, for attorney general; A. J. Craig, for superintendent of public instruction; Jeremiah M. Rusk, for bank comptroller, and Henry Cordier, for state prison commissioner. Except Craig, all these officers were the former incumbents. The amendment to section 21 of article 4 of the constitution of the State, giving the members a salary instead of a *per diem* allowance, was adopted at this election. As it now stands, each member of the legislature receives, for his services, three hundred and fifty dollars per annum, and ten cents for every mile he travels in going to and returning from the place of the meetings of the legislature. on the most

usual route. In case of any extra session of the legislature, no additional compensation shall be allowed to any member thereof, either directly or indirectly.

ELEVENTH ADMINISTRATION.—LUCIUS FAIRCHILD, GOVERNOR (SECOND TERM)—1868-1869.

The Eleventh Administration in Wisconsin commenced at noon on the 6th day of January, 1868. This was the commencement of Governor Fairchild's second term. On the eighth of January, 1868, began the twenty-first regular session of the legislature of Wisconsin. A. M. Thomson was elected speaker of the assembly. Of the laws of a general nature passed by this legislature, was one abolishing the office of bank comptroller, transferring his duties to the state treasurer, and another providing for the establishing of libraries in the various townships of the State. A visible effect was produced by the constitutional amendment allowing members a salary, in abbreviating this session, though not materially diminishing the amount of business transacted. A *sine die* adjournment took place on the sixth of March.

At the election in April, 1868, Chief Justice Dixon was chosen for the unexpired balance of his own term, ending on the first Monday of January, 1870. At the same election, Byron Paine was chosen associate justice for the unexpired balance of Associate Justice Downer's term, ending the 1st day of January, 1872.

At the Fall election in this year, republican electors were chosen over those upon the democratic ticket, for president and vice president; and, as a consequence, Grant and Colfax received the vote of Wisconsin. Of the members elected at the same time, to the forty-first congress, all but one were republicans—Eldredge being a democrat. The successful ticket was: H. E. Paine, from the first district; B. F. Hopkins, from the second; Amasa Cobb, from the third; C. A. Eldredge, from the fourth; Philetus Sawyer, from the fifth, and C. C. Washburn, from the sixth district. These were all members, from their respective districts, in the previous congress—the only instance since Wisconsin became a State of a re-election of all the incumbents.

On the thirteenth of January, 1869, began the twenty-second regular session of the State legislature. A. M. Thomson was elected speaker of the assembly. A very important duty imposed upon both houses was the election of a United States senator in the place of James R. Doolittle. The republicans having a majority in the legislature on joint ballot, the excitement among the members belonging to that party rose to a high pitch. The candidates for nomination were Matthew H. Carpenter and C. C. Washburn. The contest was, up to that time, unparalleled in Wisconsin for the amount of personal interest manifested. Both gentlemen had a large lobby influence assembled at Madison. Carpenter was successful before the republican nominating convention, on the sixth ballot. On the twenty-seventh of January, the two houses proceeded to ratify the nomination by electing him United States senator for six years, from the fourth of March following. One of the most important transactions entered into by the legislature of 1869 was the ratification of the suffrage amendment to the constitution of the United States. Both houses adjourned *sine die* on the eleventh of March—a very short session. At the spring election, on the 6th of April, Luther S. Dixon was re-elected without opposition, chief justice of the supreme court, for a term of six years, from the first Monday in January next ensuing. In the Fall, both democrats and republicans put a State ticket in the field for the ensuing election: the republicans were successful, electing Lucius Fairchild, governor; Thaddeus C. Pound, lieutenant governor; Llywelyn Breese, secretary of state; Henry Baetz, state treasurer; S. S. Barlow, attorney general; George F. Wheeler, state prison commissioner; and A. L. Craig, superintendent of public instruction. The office of bank comptroller expired on the 31st day of December, 1869, the duties of the office being transferred to the state treasurer.

At this election, an amendment to sections 5 and 9 of article five of the constitution of the State was ratified and adopted by the people. Under this amendment, the governor receives, during his continuance in office, an annual compensation of five thousand dollars, which is in full for all traveling or other expenses incident to his duties. The lieutenant governor receives, during his continuance in office, an annual compensation of one thousand dollars.

TWELFTH ADMINISTRATION.—LUCIUS FAIRCHILD, GOVERNOR (THIRD TERM)—1870-1871.

On the third of January, 1870, commenced the twelfth administration in Wisconsin, Governor Fairchild thus entering upon his third term as chief executive of the State; the only instance since the admission of Wisconsin into the Union, of the same person being twice re-elected to that office. It was an emphatic recognition of the value of his services in the gubernatorial chair. On the twelfth of January, the twenty-third regular session of the legislature of the State commenced at Madison. James M. Bingham was elected speaker of the assembly. Before the expiration of the month, Governor Fairchild received official information that over two hundred thousand dollars of the war claim of Wisconsin upon the General Government had been audited, considerable more than one hundred thousand having the previous year been allowed. In the month of March, an energetic effort was made in the legislature, by members from Milwaukee, to remove the seat of government from Madison to their city; but the project was defeated by a considerable majority in the assembly voting to postpone the matter indefinitely. According to section eight of article one of the constitution, as originally adopted, no person could be held to answer for a criminal offense unless on the presentment or indictment of a grand jury, except in certain cases therein specified. The legislature of 1869 proposed an amendment against the "grand jury system" of the constitution, and referred it to the legislature of 1870 for their approval or rejection. The latter took up the proposition and agreed to it by the proper majority, and submitted it to the people at the next election for their ratification. The *sine die* adjournment of both houses took place on the seventeenth of March, 1870. On the first day of January, previous, the member of congress from the second district of the State, B. F. Hopkins, died, and David Atwood, republican, was elected to fill the vacancy on the fifteenth of February following.

Early in 1870, was organized the "Wisconsin Academy of Sciences, Arts and Letters." By an act of the legislature approved March 16, of that year, it was incorporated, having among its specific objects, researches and investigations in the various departments of the material, metaphysical, ethical, ethnological and social sciences; a progressive and thorough scientific survey of the State, with a view of determining its mineral, agricultural and other resources; the advancement of the useful arts, through the application of science, and by the encouragement of original invention; the encouragement of the fine arts, by means of honors and prizes awarded to artists for original works of superior merit; the formation of scientific, economical and art museums; the encouragement of philological and historical research; the collection and preservation of historic records, and the formation of a general library; and the diffusion of knowledge by the publication of original contributions to science, literature and the arts. The academy has already published four volumes of transactions, under authority of the State.

The fourth charitable institution established by Wisconsin was the "Northern Hospital for the Insane," located at Oshkosh, Winnebago county. It was authorized by an act of the legislature approved March 10, 1870. The law governing the admission of patients to this hospital is the same as to the Wisconsin State Hospital.

On the third day of July, 1870, A. J. Craig, superintendent of public instruction, died of consumption, and Samuel Fallows was, on the 6th of that month, appointed by the governor to fill the place made vacant by his death. The census taken this year by the General Government, showed the population of Wisconsin to be over one million sixty-four thousand. At the Fall election for members to the forty-second congress, Alexander Mitchell was chosen to represent the first district; G. W. Hazelton, the second; J. A. Barber, the third; C. A. Eldredge, the fourth; Philetus Sawyer, the fifth; and J. M. Rusk, the sixth district. Mitchell and Eldredge were democrats; the residue were republicans. The amendment to section 8, of article 7 of the constitution of the State, abolishing the grand jury system was ratified by a large majority. Under it, no person shall be held to answer for a criminal offense without due process of law, and no person, for the same offense, shall be put twice in jeopardy of punishment, nor shall be compelled in any criminal case to be a witness against himself. All persons shall, before conviction, be bailable by sufficient sureties, except for capital offenses when the proof is evident and the presumption great; and the privilege of the writ of *habeas corpus* shall not be suspended unless, when in cases of rebellion or invasion, the public safety may require it.

Governor Fairchild, in his last annual message to the legislature, delivered to that body at its twenty-fourth regular session beginning on the eleventh of January, 1871, said that Wisconsin State polity was so wisely adapted to the needs of the people, and so favorable to the growth and prosperity of the commonwealth, as to require but few changes at the hands of the legislature, and those rather of detail than of system. At the commencement of this session, William E. Smith was elected speaker of the assembly. A very carefully-perfected measure of this legislature was one providing for the trial of criminal offenses on information, without the intervention of a Grand Jury. A state commissioner of immigration, to be elected by the people, was provided for. Both bodies adjourned *sine die* on the twenty-fifth of March. On the thirteenth of January preceding, Associate Justice Byron Paine, of the supreme court, died; whereupon the governor, on the 20th of the same month, appointed in his place, until the Spring election should be held, William Penn Lyon. The latter, at the election in April, was chosen by the people to serve the unexpired time of Associate Justice Paine, ending the first Monday of January, 1872, and for a full term of six years from the same date. On the 3d of April, Ole C. Johnson was appointed by the governor state commissioner of immigration, to serve until his successor at the next general election could be chosen by the people. To the end that the administration of public charity and correction should thereafter be conducted upon sound principles of economy, justice and humanity, and that the relations existing between the State and its dependent and criminal classes might be better understood, there was, by an act of the legislature, approved March 23, 1871, a "state board of charities and reform" created—to consist of five members to be appointed by the governor of the State, the duties of the members being to investigate and supervise the whole system of charitable and correctional institutions supported by the State or receiving aid from the State treasury, and on or before the first day of December in each year to report their proceedings to the executive of the State. This board was thereafter duly organized and its members have since reported annually to the governor their proceedings and the amount of their expenses, as required by law.

The "Wisconsin State Horticultural Society," although previously organized, first under the name of the "Wisconsin Fruit Growers' Association," was not incorporated until the 24th of March, 1871—the object of the society being to improve the condition of horticulture, rural adornment and landscape gardening. By a law of 1863, provision was made for the publication of the society's transactions in connection with the State agricultural society; but by the act

of 1871, this law was repealed and an appropriation made for their yearly publication in separate form; resulting in the issuing, up to the present time, of nine volumes. The society holds annual meetings at Madison.

At the November election both republicans and democrats had a full ticket for the suffrages of the people. The republicans were successful, electing for governor, C. C. Washburn; M. H. Pettitt, for lieutenant governor; Llywelyn Breese, for secretary of state; Henry Baetz, for state treasurer; Samuel Fallows, for superintendent of public instruction; S. S. Barlow, for attorney general; G. F. Wheeler, for state prison commissioner; and O. C. Johnson, for state commissioner of immigration. At this election an amendment to article four of the constitution of the State was ratified and adopted by the people. As it now stands, the legislature is prohibited from enacting any special or private laws in the following cases: 1st. For changing the names of persons or constituting one person the heir-at-law of another. 2d. For laying out, opening, or altering highways, except in cases of State roads extending into more than one county, and military roads to aid in the construction of which lands may be granted by congress. 3d. For authorizing persons to keep ferries across streams, at points wholly within this State. 4th. For authorizing the sale or mortgage of real or personal property of minors or others under disability. 5th. For locating or changing any county seat. 6th. For assessment or collection of taxes or for extending the time for the collection thereof. 7th. For granting corporate powers or privileges, except to cities. 8th. For authorizing the apportionment of any part of the school fund. 9th. For incorporating any town or village, or to amend the charter thereof. The legislature shall provide general laws for the transaction of any business that may be prohibited in the foregoing cases, and all such laws shall be uniform in their operation throughout the State.

Industrially considered, the year 1871 had but little to distinguish it from the average of previous years in the State, except that the late frosts of Spring and the drouth of Summer diminished somewhat the yield of certain crops. With the exception of slight showers of only an hour or two's duration, in the month of September, no rain fell in Wisconsin from the eighth of July to the ninth of October—a period of three months. The consequence was a most calamitous event which will render the year 1871 memorable in the history of the State.

The great drouth of the Summer and Fall dried up the streams and swamps in Northern Wisconsin. In the forests, the fallen leaves and underbrush which covered the ground became very ignitable. The ground itself, especially in cases of alluvia^l or bottom lands, was so dry and parched as to burn readily to the depth of a foot or more. For many days preceding the commencement of the second week in October fires swept through the timbered country, and in some instances over prairies and “openings.” Farmers, saw-mill owners, railroad men and all others interested in exposed property, labored day and night in contending against the advance of devouring fires, which were destroying, notwithstanding the ceaseless energies of the people, an occasional mill or house and sweeping off, here and there, fences, haystacks and barns. Over the counties lying upon Green bay and a portion of those contiguous thereto on the south, southwest and west, hung a general gloom. No rain came. All energies were exhausted from “fighting fire.” The atmosphere was every where permeated with smoke. The waters of the bay and even Lake Michigan, in places, were so enveloped as to render navigation difficult and in some instances dangerous. It finally became very difficult to travel upon highways and on railroads. Time drew on—but there came no rain. The ground in very many places was burned over. Persons sought refuge—some in excavations in the earth, others in wells.

The counties of Oconto, Brown, Kewaunee, Door, Manitowoc, Outagamie and Shawano were all more or less swept by this besom of destruction; but in Oconto county, and for some distance into Menomonee county, Michigan, across the Menomonee river, on the west shore of

the bay and throughout the whole length and breadth of the peninsula,—that is, the territory lying between the bay and Lake Michigan,—the fires were the most devastating. The first week in October passed; then came an actual whirlwind of fire—ten or more miles in width and of indefinite length. The manner of its progress was extraordinary. It destroyed a vast amount of property and many lives. It has been described as a tempestuous sea of flame, accompanied by a most violent hurricane, which multiplied the force of the destructive element. Forests, farm improvements and entire villages were consumed. Men, women and children perished—awfully perished. Even those who fled and sought refuge from the fire in cleared fields, in swamps, lakes and rivers, found, many of them, no safety there, but were burned to death or died of suffocation.

This dreadful and consuming fire was heralded by a sound likened to that of a railroad train—to the roar of a waterfall—to the noise of a battle at a distance. Not human beings only, but horses, oxen, cows, dogs, swine—every thing that had life—ran to escape the impending destruction. The smoke was suffocating and blinding; the roar of the tempest deafening; the atmosphere scorching. Children were separated from their parents, and trampled upon by crazed beasts. Husbands and wives rushed in wild dismay, they knew not where. Death rode triumphantly upon that devastating, fiery flood. More than one thousand men, women and children perished. More than three thousand were rendered destitute—utterly beggared. Mothers were left with fatherless children; fathers with motherless children. Every where were homeless orphans. All around lay suffering, helpless humanity, burned and maimed. Such was the sickening spectacle after the impetuous and irresistible wave of fire swept over that portion of the State. This appalling calamity happened on the 8th and 9th of October. The loss of property has been estimated at four million dollars.

At the tidings of this fearful visitation, Governor Fairchild hastened to the burnt district, to assist, as much as was in his power, the distressed sufferers. He issued, on the 13th of the month, a stirring appeal to the citizens of Wisconsin, for aid. It was promptly responded to from all portions of the State outside the devastated region. Liberal contributions in money, clothing and provisions were sent—some from other States, and even from foreign countries. Northwestern Wisconsin also suffered severely, during these months of drouth, from large fires.

A compilation of the public statutes of Wisconsin was prepared during the year 1871, by David Taylor, and published in two volumes, generally known as the Revised Statutes of 1871. It was wholly a private undertaking; but the legislature authorized the secretary of state to purchase five hundred copies for the use of the State, at its regular session in 1872.

THIRTEENTH ADMINISTRATION.—C. C. WASHBURN, GOVERNOR—1872-1873.

The thirteenth gubernatorial administration in Wisconsin commenced on Monday, January 1, 1872. The only changes made, in the present administration from the previous one, were in the offices of governor and lieutenant governor.

The twenty-fifth regular session of the legislature began on the 10th of January, with a republican majority in both houses. Daniel Hall was elected speaker of the assembly. The next day the governor delivered to a joint convention of the legislature his first annual message—a lengthy document, setting forth in detail the general condition of State affairs. The recent great conflagrations were referred to, and relief suggested. The work of this session of the Legislature was peculiarly difficult, owing to the many general laws which the last constitutional amendment made necessary. The apportionment of the State into new congressional districts was another perplexing and onerous task. Eight districts were formed instead of six, as at the commencement of the last decade. By this, the fourth congressional apportionment, each district

elects one member. The first district consists of the counties of Rock, Racine, Kenosha, Walworth, and Waukesha; the second, of Jefferson, Dane, Sauk, and Columbia; the third, of Grant, Iowa, LaFayette, Green, Richland, and Crawford; the fourth, of Milwaukee, Ozaukee, and Washington; the fifth, of Dodge, Fond du Lac, Sheboygan and Manitowoc; the sixth, of Green Lake, Waushara, Waupaca, Outagamie, Winnebago, Calumet, Brown, Kewaunee and Door; the seventh, of Vernon, La Crosse, Monroe, Jackson, Trempealeau, Buffalo, Pepin, Pierce, St. Croix, Eau Claire, and Clark; the eighth, of Oconto, Shawano, Portage, Wood, Juneau, Adams, Marquette, Marathon, Dunn, Chippewa, Barron, Polk, Burnett, Bayfield, Douglas, and Ashland. To this district have since been added the new counties of Lincoln, Taylor, Price, Marinette and New.

After a session of seventy-seven days, the legislature finished its work, adjourning on the twenty-seventh of March. At the ensuing November election, the republican ticket for president and vice president of the United States was successful. The ten electors chosen cast their votes in the electoral college for Grant and Wilson. In the eight congressional districts, six republicans and two democrats were elected to the forty-third congress; the last mentioned from the fourth and fifth districts. C. G. Williams represented the first district; G. W. Hazelton the second; J. Allen Barber the third; Alexander Mitchell the fourth; C. A. Eldredge the fifth; Philetus Sawyer the sixth; J. M. Rusk the seventh; and A. G. McDill the eighth district.

Throughout Wisconsin, as in all portions of the Union outside the State, a singular pestilence prevailed among horses in the months of November and December, 1872, very few escaping. Horses kept in warm, well ventilated stables, avoiding currents of air, with little or no medicine, and fed upon nutritious and laxative food, soon recovered. Although but few died, yet the loss to the State was considerable, especially in villages and cities, resulting from the difficulty to substitute other animals in the place of the horse during the continuance of the disease.

The twenty-sixth regular session of the State legislature commenced on the eighth day of January, 1873, with a republican majority in both houses. Henry D. Barron was elected speaker of the assembly. On the ninth, Governor Washburn's message—his second annual one—was delivered to the two houses. It opened with a brief reference to the abundant returns from agricultural pursuits, to the developments of the industries of the state, to the advance in manufacturing, to the rapid extension in railways, and to the general and satisfactory progress in education, throughout Wisconsin. He followed with several recommendations—claiming that “many vast and overshadowing corporations in the United States are justly a source of alarm,” and that “the legislature can not scan too closely every measure that should come before it which proposed to give additional rights and privileges to the railways of the state.” He also recommended that the “granting of passes to the class of state officials who, through their public office, have power to confer or withhold benefits to a railroad company, be prohibited.” The message was favorably commented upon by the press of the state, of all parties. “If Governor Washburn,” says one of the opposition papers of his administration, “is not a great statesman, he is certainly not a small politician.” One of the first measures of this legislature was the election of United States senator, to fill the place of Timothy O. Howe, whose term of office would expire on the fourth of March next ensuing. On the twenty-second of January the two houses met in joint convention, when it was announced that by the previous action of the senate and assembly, Timothy O. Howe was again elected to that office for the term of six years. On the twentieth of March, the legislature adjourned *sine die*, after a session of seventy-two days.

Milton H. Pettitt, the lieutenant governor, died on the 23d day of March following the adjournment. By this sudden and unexpected death, the State lost an upright and conscientious public officer.

Among the important acts passed by this legislature was one providing for a geological survey of the State, to be begun in Ashland and Douglas counties, and completed within four years, by a chief geologist and four assistants, to be appointed by the governor, appropriating for the work an annual payment of thirteen thousand dollars. An act providing for a geological survey, of the State, passed by the legislature, and approved March 25, 1853, authorized the governor to appoint a state geologist, who was to select a suitable person as assistant geologist. Their duties were to make a geological and mineralogical survey of the State. Under this law Edward Daniels, on the first day of April, 1853, was appointed state geologist, superseded on the 12th day of August, 1854, by James G. Percival, who died in office on the 2d of May, 1856, at Hazel Green. By an act approved March 3, 1857, James Hall, Ezra Carr and Edward Daniels were appointed by the legislature geological commissioners. By an act approved April 2, 1860, Hall was made principal of the commission. The survey was interrupted by a repeal, March 21, 1862, of previous laws promoting it. However, to complete the survey, the matter was reinstated by the act of this legislature, approved March 29, the governor, under that act, appointing as chief geologist Increase A. Lapham, April 10, 1873.

Another act changed the management of the state prison — providing for the appointment by the governor of three directors; one for two years, one for four years, and one for six years, in place of a state prison commissioner, who had been elected by the people every two years, along with other officers of the State.

At the Spring election, Orsamus Cole, who had been eighteen years upon the bench, was re-elected, without opposition, an associate justice of the supreme court, for a term of six years from the first Monday in January following. The two tickets in the field at the Fall election were the republican and the people's reform. The latter was successful; the political scepter passing out of the hands of the republicans, after a supremacy in the State continuing unbroken since the beginning of the seventh administration, when A. W. Randall (governor for a second term) and the residue of the State officers were elected — all republicans.

The general success among the cultivators of the soil throughout the state during the year, notwithstanding "the crisis," was marked and satisfactory; but the financial disturbances during the latter part of the Fall and the first part of the Winter, resulted in a general depreciation of prices.

FOURTEENTH ADMINISTRATION. — WILLIAM R. TAYLOR, GOVERNOR — 1874-75.

The fourteenth administration of Wisconsin commenced at noon on Monday, the fifth day of January, 1874, by the inauguration of William R. Taylor as governor; Charles D. Parker, lieutenant governor; Peter Doyle, secretary of state; Ferdinand Kuehn, state treasurer; A. Scott Sloan, attorney general; Edward Searing, superintendent of public instruction; and Martin J. Argard, state commissioner of immigration. These officers were not elected by any distinctive political party as such, but as the representatives of a new political organization, including "all Democrats, Liberal Republicans, and other electors of Wisconsin, friendly to genuine reform through equal and impartial legislation, honesty in office, and rigid economy in the administration of affairs." Among the marked characteristics of the platform agreed upon by the convention nominating the above-mentioned ticket was a declaration by the members that they would "vote for no candidate for office whose nomination is the fruit of his own importunity, or of a corrupt combination among partisan leaders;" another, "that the sovereignty of the State over corporations of its own creation shall be sacredly respected, to the full extent of protecting the people against every form of monopoly or extortion," not denying, however, an encouragement to wholesome enterprise on the part of aggre-

gated capital—this “plank” having special reference to a long series of alleged grievances assumed to have been endured by the people on account of discriminations in railroad charges and a consequent burdensome taxation upon labor—especially upon the agricultural industry of the State.

The twenty-seventh regular session of the Wisconsin legislature commenced at Madison on the fourteenth of January. The two houses were politically antagonistic in their majorities; the senate was republican, while the assembly had a “reform” majority. In the latter branch, Gabriel Bouck was elected speaker. Governor Taylor, on the fifteenth, met the legislature in joint convention and delivered his message. “An era,” said he, “of apparent prosperity without parallel in the previous history of the nation, has been succeeded by financial reverses affecting all classes of industry, and largely modifying the standard of values.” “Accompanying these financial disturbances,” added the governor, “has come an imperative demand from the people for a purer political morality, a more equitable apportionment of the burdens and blessings of government, and a more rigid economy in the administration of public affairs.”

Among the important acts passed by this legislature was one generally known as the “Potter Law,” from the circumstance of the bill being introduced by Robert L. D. Potter, senator, representing the twenty-fifth senatorial district of the state. The railroad companies for a number of years had, as before intimated, been complained of by the people, who charged them with unjust discriminations and exorbitantly high rates for the transportation of passengers and merchandize. All the railroad charters were granted by acts at different times of the State legislature, under the constitution which declares that “corporations may be formed under general laws, but shall not be created by a special act, except for municipal purposes and in cases where, in the judgment of the legislature, the objects of the corporations can not be attained under general laws. All general laws, or special acts, enacted under the provisions of this section, may be altered or repealed by the legislature at any time after their passage.” The complaints of the people seem to have remained unheeded, resulting in the passage of the “Potter Law.” This law limited the compensation for the transportation of passengers, classified freight, and regulated prices for its transportation within the State. It also required the governor on or before the first of May, 1874, by and with the consent of the senate, to appoint three railroad commissioners; one for one year, one for two years, and one for three years, whose terms of office should commence on the fourteenth day of May, and that the governor, thereafter, on the first day of May, of each year, should appoint one commissioner for three years. Under this law, the governor appointed J. H. Osborn, for three years; George H. Paul, for two years; and J. W. Hoyt, for one year. Under executive direction, this commission inaugurated its labors by compiling, classifying, and putting into convenient form for public use for the first time, all the railroad legislation of the State.

At the outset the two chief railroad corporations of the State—the Chicago, Milwaukee and St. Paul, and the Chicago and Northwestern—served formal notice upon the governor of Wisconsin that they would not respect the provisions of the new railroad law. Under his oath of office, to support the constitution of the State, it was the duty of Governor Taylor to expedite all such measures as should be resolved upon by the legislature, and to take care that the laws be faithfully executed. No alternative, therefore, was left the chief executive but to enforce the law by all the means placed in his hands for that purpose. He promptly responded to the notification of the railroad companies by a proclamation, dated May 1, 1874, in which he enjoined compliance with the statute, declaring that all the functions of his office would be exercised in faithfully executing the laws, and invoking the aid of all good citizens thereto. “The law of the land,” said Governor Taylor, “must be respected and obeyed.” “While none,” continued he,

“are so weak as to be without its protection, none are so strong as to be above its restraints. If provisions of the law be deemed oppressive, resistance to its mandates will not abate, but rather multiply the anticipated evils.” “It is the right,” he added, “of all to test its validity through the constituted channels, but with that right is coupled the duty of yielding a general obedience to its requirements until it has been pronounced invalid by competent authority.”

The railroad companies claimed not merely the unconstitutionality of the law, but that its enforcement would bankrupt the companies, and suspend the operation of their lines. The governor, in reply, pleaded the inviolability of his oath of office and his pledged faith to the people. The result was an appeal to the courts, in which the State, under the direction of its governor, was compelled to confront an array of the most formidable legal talent of the country. Upon the result in Wisconsin depended the vitality of much similar legislation in neighboring States, and Governor Taylor and his associate representatives of State authority were thus compelled to bear the brunt of a controversy of national extent and consequence. The contention extended both to State and United States courts, the main question involved being the constitutional power of the State over corporations of its own creation. In all respects, the State was fully sustained in its position, and, ultimately, judgments were rendered against the corporations in all the State and federal courts, including the supreme court of the United States, and establishing finally the complete and absolute power of the people, through the legislature, to modify or altogether repeal the charters of corporations.

Another act of the session of 1874 abolished the office of State commissioner of immigration, “on and after” the first Monday of January, 1876. The legislature adjourned on the twelfth of March, 1874, after a session of fifty-eight days.

The office of state prison commissioner having, by operation of law, become vacant on the fifth day of January, 1874, the governor, on the twenty-third of that month, appointed for State prison directors, Joel Rich, for two years; William E. Smith, for four years; and Nelson Dewey, for six years: these to take the place of that officer.

On the sixteenth of June, Chief Justice Dixon, whose term of office would have expired on the first Monday in January, 1876, resigned his seat upon the bench of the supreme court, Governor Taylor appointing Edward G. Ryan in his place until his successor should be elected and qualified. At the November election of this year, the members chosen to the forty-fourth congress were—Charles G. Williams, from the first district; Lucian B. Caswell, from the second; Henry S. Magoon, from the third; William Pitt Lynde, from the fourth; Samuel D. Burchard, from the fifth; A. M. Kimball, from the sixth; Jeremiah M. Rusk, from the seventh, and George W. Cate, from the eighth district. Lynde, Burchard and Cate were “reform;” the residue were republican.

At the same election, an amendment to section 3 of article 11 of the constitution of the State was duly ratified and adopted by the people. Under this section, as it now stands, it is the duty of the legislature, and they are by it empowered, to provide for the organization of cities and incorporated villages, and to restrict their power of taxation, assessment, borrowing money, contracting debts, and loaning their credit, so as to prevent abuses in assessments and taxation, and in contracting debts, by such municipal corporations. No county, city, town, village, school district, or other municipal corporation, shall be allowed to become indebted in any manner, or for any purpose, to any amount, including existing indebtedness in the aggregate, exceeding five per centum on the value of the taxable property therein, to be ascertained by the last assessment for State and county taxes previous to the incurring of such indebtedness. Any county, city, town, village, school district, or other municipal corporation, incurring any indebtedness as aforesaid, shall, before, or at the time of doing so, provide for the collection of a direct

annual tax sufficient to pay the interest on such debt as it falls due, and also to pay and discharge the principal thereof within twenty years from the time of contracting the same.

In 1872, the first appropriation for fish culture in Wisconsin was made by the legislature, subject to the direction of the United States commissioner of fisheries. In 1874, a further sum was appropriated, and the governor of the State authorized to appoint three commissioners, whose duties were, upon receiving any spawn or fish, by or through the United States commissioner of fish and fisheries, to immediately place such spawn in the care of responsible pisciculturists of the State, to be hatched and distributed in the different waters in and surrounding Wisconsin. Two more members have since been added by law to the commission; their labors have been much extended, and liberal appropriations made to further the object they have in view—with flattering prospects of their finally being able to stock the streams and lakes of the State with the best varieties of food fish.

The year 1874, in Wisconsin, was characterized as one of general prosperity among farmers, excepting the growers of wheat. The crop of that cereal was light, and, in places, entirely destroyed by the chinch-bug. As a consequence, considerable depression existed in business in the wheat-growing districts. Trade and commerce continued throughout the year at a low ebb, the direct result of the monetary crisis of 1873.

The legislature commenced its twenty-eighth regular session on the thirteenth of January, 1875, with a republican majority in both houses. F. W. Horn was elected speaker of the assembly. The governor delivered his message in person, on the fourteenth, to the two houses. "Thanking God for all His mercies," are his opening words, "I congratulate you that order and peace reign throughout the length and breadth of our State. Our material prosperity has not fulfilled our anticipations. But let us remember that we bear no burden of financial depression not common to all the States, and that the penalties of folly are the foundation of wisdom." In regard to the "Potter Law," the governor said, "It is not my opinion that this law expressed the best judgment of the legislature which enacted it. While the general principles upon which it is founded command our unqualified approbation, and can never be surrendered, it must be conceded that the law is defective in some of its details. . . . The great object sought to be accomplished by our people," continued the speaker, "is not the management of railroad property by themselves, but to prevent its mismanagement by others." Concerning the charge that Wisconsin was warring upon railways within her limits, the governor added, "She has never proposed such a war. She proposes none now. She asks only honesty, justice and the peace of mutual good will. To all men concerned, her people say in sincerity and in truth that every dollar invested in our State shall be lawfully entitled to its just protection, whencesoever the danger comes. In demanding justice for all, the State will deny justice to none. In forbidding mismanagement, the State will impose no restraints upon any management that is honest and just. In this, the moral and hereditary instincts of our people furnish a stronger bond of good faith than the judgments of courts or the obligations of paper constitutions. Honest capital may be timid and easily frightened; yet it is more certain to seek investment among a people whose laws are at all times a shield for the weak and a reliance for the strong—where the wholesome restraints of judicious legislation are felt alike by the exalted and the humble, the rich and the poor."

The first important business to be transacted by this legislature was the election of a United States senator, as the term for which M. H. Carpenter had been elected would expire on the fourth of March ensuing. Much interest was manifested in the matter, not only in the two houses, but throughout the State. There was an especial reason for this; for, although the then

incumbent was a candidate for re-election, with a republican majority in the legislature, yet it was well-known that enough members of that party were pledged, before the commencement of the session, to vote against him, to secure his defeat, should they stand firm to their pledges. The republicans met in caucus and nominated Carpenter for re-election; but the recalcitrant members held themselves aloof. Now, according to usual precedents, a nomination by the dominant party was equivalent to an election; not so, however, in this case, notwithstanding the friends of the nominee felt sanguine of his election in the end. The result of the first ballot, on the twenty-sixth of January, was, in the senate, thirteen for the republican candidate; in the assembly, forty-six votes, an aggregate of only fifty-nine. He lacked four votes in the assembly and an equal number in the senate, of having a majority in each house. On the twenty-seventh, the two houses, in joint convention, having met to compare the record of the voting the day previous, and it appearing that no one person had received a majority of the votes in each house for United States senator, they proceeded to their first joint ballot. The result was, no election. The balloting was continued each day, until the third of February, when, on the eleventh joint trial, Angus Cameron, of LaCrosse, having received sixty-eight votes, to Carpenter's fifty-nine, with five scattering, was declared elected.

As in the previous session so in this,—one of the most absorbing subjects before the legislature was that of railroads; the "Potter Law" receiving a due share of attention in both houses. The result was an amendment in some important particulars without changing the right of State control: rates were modified. The law as amended was more favorable to the railroad companies and was regarded as a compromise. The legislature adjourned *sine die* on the 6th of March. This was the shortest session ever held in the State except one of twenty-five years previous.

On the 16th of February, O. W. Wight was appointed by the governor chief geologist of Wisconsin, in place of I. A. Lapham, whose appointment had not been acted upon by the Senate. On the 24th of the same month, J. W. Hoyt was appointed railroad commissioner for three years from the first day of May following, on which day his one-year term in the same office would expire. At the regular Spring election on the 6th of April following, Edward G. Ryan was elected, without opposition, chief justice of the supreme court for the unexpired term of Chief Justice Dixon, ending the first Monday in January, 1876, and for a full term of six years from the last mentioned date; so that his present term of office will expire on the 1st Monday in January, 1882. An act providing for taking the census of Wisconsin on or before the 1st of July, 1875, was passed by the legislature and approved the 4th of March previous. It required an enumeration of all the inhabitants of the State except Indians, who were not entitled to the right of suffrage. The result of this enumeration gave a total population to Wisconsin of one million two hundred and thirty-six thousand seven hundred and twenty-nine.

At the November election, republican and "reform" tickets were in the field for State officers, resulting in the success of the latter, except as to governor. For this office Harrison Ludington was chosen by a majority, according to the State board of canvassers, over William R. Taylor, of eight hundred and forty-one. The rest of the candidates elected were: Charles D. Parker, lieutenant governor; Peter Doyle, secretary of state; Ferdinand Kuehn, treasurer of state, A. Scott Sloan, attorney general; and Edward Searing, superintendent of public instruction. The act abolishing the office of state commissioner of immigration was to take effect "on and after" the close of this administration; so, of course, no person was voted for to fill that position at the Fall election of 1875.

During this administration the principle involved in a long-pending controversy between the State and Minnesota relating to valuable harbor privileges at the head of Lake Superior, was successfully and finally settled in favor of Wisconsin. The influence of the executive was largely

instrumental in initiating a movement which resulted in securing congressional appropriations amounting to \$800,000 to the Fox and Wisconsin river improvement. A change was inaugurated in the whole system of timber agencies over State and railroad lands, by which the duties of agents were localized, and efficiency was so well established that many important trespasses were brought to light from which over \$60,000 in penalties was collected and paid into the Treasury, while as much more was subsequently realized from settlements agreed upon and proceedings instituted. By decisive action on the part of the governor an unsettled printing claim of nearly a hundred thousand dollars was met and defeated in the courts. During this period also appropriations were cut down, and the rate of taxation diminished. Governor Taylor bestowed unremitting personal attention to details of business with a view of promoting the public interests with strict economy, while his countenance and support was extended to all legitimate enterprises. He required the Wisconsin Central railroad company to give substantial assurance that it would construct a branch line from Stevens Point to Portage City as contemplated by congress, before issuing certificates for its land grants.

The closing year of the century of our national existence—1875, was one somewhat discouraging to certain branches of the agricultural interests of Wisconsin. The previous Winter had been an unusually severe one. A greater breadth of corn was planted than in any previous year in the State, but the unusually late season, followed by frosts in August and September, entirely ruined thousands of acres of that staple.

FIFTEENTH ADMINISTRATION.—HARRISON LUDINGTON, GOVERNOR—1876—1877.

The fifteenth administration of Wisconsin commenced at noon on Monday, January 3, 1876, by the inauguration of State officers—Harrison Ludington, as previously stated, having been elected upon the republican ticket, to fill the chief executive office of the State; the others, to the residue of the offices, upon the democratic reform ticket: the governor, like three of his predecessors—Farwell, Bashford, and Randall (first term)—having been chosen by a majority less than one thousand; and, like two of his predecessors—Farwell and Bashford—when all the other State officers differed with him in politics.

The twenty-ninth regular session of the legislature of Wisconsin began on the 12th of January, 1876, at Madison. The republicans were in the majority in both houses. Samuel S. Fifield was elected speaker of the assembly. On the 13th, Governor Ludington delivered in person, to a joint convention of that body, his message, communicating the condition of affairs of the State, and recommending such matters for the consideration of the legislators as were thought expedient: it was brief; its style condensed; its striking peculiarity, a manly frankness. "It is not the part of wisdom," said he, in his concluding remarks, "to disguise the fact that the people of this State, in common with those of all sections of the Union, have suffered some abatement of the prosperity that they have enjoyed in the past." "We have entered," he continued, "upon the centennial of our existence as an independent nation. It is fit that we should renew the spirit in which the Republic had its birth, and our determination that it shall endure to fulfill the great purposes of its existence, and to justify the noble sacrifices of its founders." The legislature adjourned *sine die* on the 14th of March, 1876, after a session of sixty-three days. The chief measures of the session were: The amendment of the railroad laws, maintaining salutary restrictions while modifying those features which were crippling and crushing an important interest of the State; and the apportionment of the State into senate and assembly districts. It is a provision of the constitution of the State that the number of the members of the assembly shall never be less than fifty-four, nor more than one hundred; and that the senate shall consist of a number not more than one-third nor less than one-fourth of the number of the members of the

assembly. Since the year 1862, the aggregate allotted to both houses had been one hundred and thirty-three, the maximum allowed by the constitution; one hundred in the assembly and thirty-three in the senate. The number of this representation was not diminished by the apportionment of 1876. One of the railroad laws abolished the board of railroad commissioners, conferring its duties upon a railroad commissioner to be appointed by the governor every two years. Under this law, Dana C. Lamb was appointed to that office, on the 10th of March, 1876. On the 2d day of February, previous, George W. Burchard was by the governor appointed state prison director for six years, in place of Joel Rich, whose term of office had expired. On the same day T. C. Chamberlin was appointed chief geologist of Wisconsin in place of O. W. Wight.

The application of Miss Lavinia Goodell, for admission to the bar of Wisconsin, was rejected by the supreme court of the State, at its January term, 1876. "We can not but think," said Chief Justice Ryan, in the decree of refusal, "we can not but think the common law wise in excluding women from the profession of the law." "The profession," he added, "enters largely into the well-being of society, and, to be honorably filled, and safely to society, exacts the devotion of life. The law of nature destines and qualifies the female sex for the bearing and nurture of the children of our race, and for the custody of the homes of the world, and their maintenance in love and honor. And all life-long callings of women inconsistent with these radical and social duties of their sex, as is the profession of the law, are departures from the order of Nature, and, when voluntary, are treason against it." By a law since passed, no person can be denied admission to any court in the State on account of sex; and Miss Goodell has been admitted to practice in the Supreme Court.

By an act of the legislature, approved March 13, 1876, a State board of health was established, the appointment of a superintendent of vital statistics, was provided for, and certain duties were assigned to local boards of health. The State board was organized soon after; the governor having previously appointed seven persons as its members. The object of the organization, which is supported by the State, is, to educate the people of Wisconsin into a better knowledge of the nature and causes of disease, and a better knowledge and observance of hygienic laws.

By a law passed in 1868, as amended in 1870 and 1873, the secretary of state, state treasurer, and attorney general, were constituted a State board of assessment, to meet in the city of Madison, on the third Wednesday in May, 1874, and biennially thereafter, to make an equalized valuation of the property in the State, as a guide to assessment for taxation. In the tables of equalized valuations compiled by this board in 1876, the whole amount of taxable property in Wisconsin, is set down at \$423,596,290; of which sum \$337,073,148, represents real estate and \$86,523,142 personal property.

This being the year for the election of president and vice president of the United States, the two political parties in Wisconsin—republican and democratic—had tickets in the field. At the election on Tuesday, November 7, the republican presidential electors received a majority of the votes cast in the State, securing Wisconsin for Hayes and Wheeler. The eight congressional districts elected the same day their members to the forty-fifth congress, whose terms of office would expire on the 4th of March, 1879. Charles G. Williams was elected in the first district; Lucien B. Caswell, in the second; George C. Hazelton, in the third; William P. Lynde, in the fourth; Edward S. Bragg, in the fifth; Gabriel Bouck, in the sixth; H. L. Humphrey, in the seventh; and Thad. C. Pound, in the eighth district. A majority of the delegation was republican, the representatives from the fourth, fifth and sixth districts only, being democrats.

There was a general and spontaneous exhibition of patriotic impulses throughout the length and breadth of Wisconsin, on the part of both native and foreign-born citizens, at the commencement of the centennial year, and upon the fourth of July. The interest of the people of the State generally, in the Exposition at Philadelphia, was manifested in a somewhat remarkable manner from its inception to its close. By an act of congress, approved March 3, 1871, provision was made for celebrating the one hundredth anniversary of American Independence, by holding in that city, in 1876, an exhibition of arts, manufactures, and the products of the soil and mines of the country. A centennial commission, consisting of one commissioner and one alternate commissioner, from each State and Territory, was authorized to be appointed, to carry out the provisions of the act. David Atwood, as commissioner, and E. D. Holton, as alternate, were commissioned by the president of the United States, from Wisconsin. This commission gradually made progress in preparing for an international exposition. "The commission has been organized," said Governor Washburn, in his message to the legislature in January, 1873, "and has made considerable progress in its work. The occasion will be one to which the American people can not fail to respond in the most enthusiastic manner." The president of the United States, by proclamation, in July, 1873, announced the exhibition and national celebration, and commended them to the people of the Union, and of all nations. "It seems fitting," said Governor Taylor, in his message to the Wisconsin legislature in 1874, "that such a celebration of this important event, should be held, and it is hoped it will be carried out in a manner worthy of a great and enlightened nation." By the close of 1874, a large number of foreign governments had signified their intention to participate in the exhibition.

The legislature of Wisconsin, at its session in 1875, deeming it essential that the State, with its vast resources in agricultural, mineral, lumbering, manufacturing, and other products and industries, should be fully represented at Philadelphia, passed an act which was approved March 3, 1875, to provide for a "Board of State Centennial Managers." Two thousand dollars were appropriated to pay its necessary expenses. The board was to consist of five members to be appointed by the governor; and there were added thereto, as ex-officio members, the United States centennial commissioner and his alternate. The duties of the members were to disseminate information regarding the Exhibition; to secure the co-operation of industrial, scientific, agricultural, and other associations in the State; to appoint co-operative local committees, representing the different industries of the State; to stimulate local action on all measures intended to render the exhibition successful, and a worthy representation of the industries of the country; to encourage the production of articles suitable for the Exhibition; to distribute documents issued by the centennial commission among manufacturers and others in the State; to render assistance in furthering the financial and other interests of the exhibition; to furnish information to the commission on subjects that might be referred to the board; to care for the interests of the State and of its citizens in matters relating to the exhibition; to receive and pronounce upon applications for space; to apportion the space placed at its disposal among the exhibitors from the State; and to supervise such other details relating to the representation of citizens of Wisconsin in the Exhibition, as might from time to time be delegated by the United States centennial commission.

The board was required to meet on the first Wednesday of April, 1875, at the capitol, in Madison, to organize and adopt such by-laws and regulations as might be deemed necessary for the successful prosecution of the work committed to their charge. Governor Taylor appointed Eli Stilson, J. I. Case, J. B. Parkinson, T. C. Pound, and E. A. Calkins, members of the board. Its organization was perfected, at the appointed time, by the election of J. B. Parkinson as president, and W. W. Field, secretary. The ex-officio members of the board, were David Atwood,

United States commissioner, and E. D. Holton, alternate From this time forward, the board was untiring in its efforts to secure a full and proper representation of the varied interests of Wisconsin in the centennial exhibition of 1876. E. A. Calkins having resigned his position as member of the board, Adolph Meinecke took his place by appointment of the governor July 24, 1875. Governor Ludington, in his message to the legislature in January, 1876, spoke in commendation of the coming exhibition. "The occasion," said he, "will afford an excellent opportunity to display the resources and products of the State, and to attract hither capital and immigration."

Soon after the organization of the United States centennial commission, a national organization of the women of the country was perfected. A lady of Philadelphia was placed at its head; and a presiding officer from each State was appointed. Mrs. A. C. Thorp assumed the duties of chairman for Wisconsin, in March, 1875, appointing assistants in various parts of the State, when active work was commenced. This organization was efficient in Wisconsin in arousing an interest in the general purposes and objects of the exhibition.

By an act of the legislature, approved March 3, 1876, the sum of twenty thousand dollars was appropriated to the use of the board of centennial managers, for the purpose of arranging for, and making a proper exhibition of, the products, resources, and advantages of the State at the exposition. The treasurer of Wisconsin was, by this act, made an ex-officio member of the board. By this and previous action of the legislature—by efforts put forth by the board of managers—by individual enterprise—by the untiring labors of the "Women's Centennial Executive Committee," to whom, by an act of the legislature, approved the 4th of March, 1875, one thousand dollars were appropriated—Wisconsin was enabled to take a proud and honorable position in the Centennial Exposition—a gratification not only to the thousands of her citizens who visited Philadelphia during its continuance, but to the people generally, throughout the State.

In Wisconsin, throughout the centennial year, those engaged in the various branches of agriculture and other useful avocations, were reasonably prosperous. The crop of wheat and oats was a light yield, and of poor quality; but the corn crop was the largest ever before raised in the State, and of superior quality. The dairy and hog product was large, and commanded remunerative prices. Fruits were unusually plenty. Trade and business enterprises, however, generally remained depressed.

By section five of article seven of the constitution of Wisconsin, the counties of the State were apportioned into five judicial circuits: the county of Richland being attached to Iowa, Chippewa to Crawford, and La Pointe to St. Croix. In 1850, the fifth circuit was divided, and a sixth circuit formed. In 1864, Crawford and Richland were made part of the fifth circuit. By an act which took effect in 1854, a seventh circuit was formed. On the first day of January, 1855, the sixth circuit was divided, and an eighth and ninth circuit formed, the county of Columbia being made a part of the last mentioned one. In the same year was also formed a tenth circuit; and, in 1858, Winnebago county was attached to it; but, in 1870, that county was attached to the third circuit. In 1858, Kewaunee county was attached to the fourth circuit. An eleventh circuit was formed in 1864, from which, in 1865, Dallas county was detached, and made part of the eighth. By an act which took effect on the first day of January, 1871, the twelfth circuit was formed. In 1876, a thirteenth circuit was "constituted and re-organized."

At that time, the whole sixty counties of the State stood apportioned in the thirteen judicial circuits as follows: First circuit, Walworth, Racine, and Kenosha; second circuit, Milwaukee, and Waukesha, third circuit, Green Lake, Dodge, Washington, Ozaukee, and Winnebago; fourth circuit, Sheboygan, Calumet, Kewaunee, Fond du Lac, and Manitowoc; fifth circuit,

Grant, Iowa, La Fayette, Richland, and Crawford; sixth circuit, Clark, Jackson, Monroe, La Crosse, and Vernon; seventh circuit, Portage, Marathon, Waupaca, Wood, Waushara, Lincoln, and Taylor; eighth circuit, Dunn, Pepin, Pierce, and St. Croix; ninth circuit, Adams, Columbia, Dane, Juneau, Sauk and Marquette; tenth circuit, Outagamie, Oconto, Shawano, Door, and Brown; eleventh circuit, Ashland, Barron, Bayfield, Burnett, Chippewa, Douglas, and Polk; twelfth circuit, Rock, Green, and Jefferson; and the thirteenth circuit, Buffalo, Eau Claire, and Trempeleau, Marinette and New are now in the tenth; Price is in the seventh circuit.

The thirtieth regular session of the legislature of Wisconsin commenced, pursuant to law, on the 10th of January, 1877. The republicans had working majorities in both houses. J. B. Cassoday was elected Speaker of the Assembly. Governor Ludington delivered his message to the joint convention of the legislature the following day. "We should not seek," said he, in his concluding remarks, "to conceal from ourselves the fact that the prosperity which our people have enjoyed for a number of years past, has suffered some interruption. Agriculture has rendered less return; labor in all departments has been less productive, and trade has consequently been less active, and has realized a reduced percentage of profit." "These adverse circumstances," continued the governor, "will not be wholly a misfortune if we heed the lesson that they convey. This lesson is the necessity of strict economy in public and private affairs. We have been living upon a false basis; and the time has now come when we must return to a solid foundation." The legislature adjourned *sine die* on the 8th of March, after a session of fifty-eight days, passing three hundred and one acts—one hundred and thirteen less than at the session of 1876. The most important of these, as claimed by the dominant party which passed it, is one for the maintenance of the purity of the ballot box, known as the "Registry Law." On the 3d day of April, at the regular Spring election, William P. Lyon was re-elected, without opposition, an associate justice of the supreme court for six years from the first Monday in January, 1878, his term of office expiring on the first Monday of January, 1884.

Under a law of 1876, to provide for the revision of the statutes of the State, the justices of the supreme court were authorized to appoint three revisors. The persons receiving the appointment were David Taylor, William F. Vilas and J. P. C. Cottrill. By an amendatory law of 1877, for the purpose of having the revision completed for the session of 1878, the justices of the supreme court were authorized to appoint two additional revisors, and assign them special duties on the commission. H. S. Orton was appointed to revise the criminal law and proceedings, and J. H. Carpenter to revise the probate laws.

Governor Ludington declined being a candidate for renomination. His administration was characterized as one of practical efficiency. As the chief executive officer of Wisconsin, he kept in view the best interests of the State. In matters coming under his control, a rigid system of economy prevailed.

There were three tickets in the field presented to the electors of Wisconsin for their suffrages at the general election held on the sixth of November, 1877: republican, democratic, and the "greenback" ticket. The republicans were successful, electing William E. Smith, governor; James M. Bingham, lieutenant governor; Hans B. Warner, secretary of state; Richard Guenther, treasurer; Alexander Wilson, attorney general; and William C. Whitford, state superintendent of public instruction. At the same election two amendments to the constitution of the State were voted upon and both adopted. The first one amends section four of article seven; so that, hereafter, "the supreme court shall consist of one chief justice and four associate justices, to be elected by the qualified electors of the State. The legislature shall, at its first session after the adoption of this amendment, provide by law for the election of two associate justices of said court, to hold their offices respectively for terms ending two and four years, respectively after the

end of the term of the justice of the said court then last to expire. And thereafter the chief justices and associate justices of said court shall be elected and hold their offices respectively for the term of ten years." The second one amends section two of article eight; so that, hereafter, "no money shall be paid out of the treasury except in pursuance of an appropriation by law. No appropriation shall be made for the payment of any claim against the State, except claims of the United States, and judgments, unless filed within six years after the claim accrued."

The year 1877, in Wisconsin, was notable for excellent crops. A depression in monetary matters continued, it is true, but not without a reasonable prospect of a change for the better within the near future.

SIXTEENTH ADMINISTRATION.—WILLIAM E. SMITH, GOVERNOR—1878—1879.

At noon, on Monday, January 7, 1878, began the sixteenth administration of Wisconsin, by the inauguration of the State officers elect. On the 9th of the same month, commenced the thirty-first regular session of the Legislature. A. R. Barrows was elected Speaker of the Assembly. On the day following, Governor Smith delivered his message—a calm, business-like document—to the Legislature. Both Houses adjourned *sine die* on the 21st of March following. On the 1st day of April, Harlow S. Orton and David Taylor were elected Associate Justices of the Supreme Court; the term of the first named to expire on the first Monday of January, 1888; that of the last mentioned, on the first Monday of January, 1886. In obedience to a proclamation of the Governor, the Legislature convened on the 4th day of June, A. D. 1878, in extra session, to revise the statutes, A. R. Barrows was elected Speaker of the Assembly. The Legislature adjourned *sine die* on the 7th of the same month. In November following, the members chosen to the Forty-sixth Congress were C. G. Williams, in the First District; L. B. Caswell, in the Second; George C. Hazelton, in the Third; P. V. Deuster, in the Fourth; E. S. Bragg, in the Fifth; Gabriel Bouck, in the Sixth; H. L. Humphrey, in the Seventh; and T. C. Pound, in the Eighth. The thirty-second regular session of the Legislature commenced on the 8th day of January, 1879. D. M. Kelly was elected Speaker of the Assembly; the next day, the message of the Governor—a brief, but able State paper—was delivered to both Houses. On the 21st, Matthew H. Carpenter was elected United States Senator for six years, from the 4th of March thereafter, in place of Timothy O. Howe. The Legislature adjourned *sine die* on the 5th of March, 1879. On the 1st day of April following, Orsamus Cole was elected Associate Justice of the Supreme Court, for a term of ten years.

Wisconsin has many attractive features. It is a healthy, fertile, well-watered and well-wooded State. Every where within its borders the rights of each citizen are held sacred. Intelligence and education are prominent characteristics of its people. All the necessities and many of the comforts and luxuries of life are easily to be obtained. Agriculture, the chief source of wealth to so many nations, is here conducted with profit and success. Generally speaking, the farmer owns the land he cultivates. Here, the laboring man, if honest and industrious, is most certain to secure a competence for himself and family. Few States have made more ample provisions for the unfortunate—the deaf and dumb, the blind, and the insane—than has Wisconsin. Nor has she been less interested in her reformatory and penal institutions. In her educational facilities, she already rivals the most advanced of her sister States. Her markets are easily reached by railways and water-navigation, so that the products of the country find ready sale. Her commerce is extensive; her manufactures remunerative; her natural resources great and manifold. In morality and religion, her standard is high. Her laws are lenient, but not lax, securing the greatest good to those who are disposed to live up to their requirements. Wisconsin has, in fact, all the essential elements of prosperity and good government. Exalted and noble, therefore, must be her future career.

TOPOGRAPHY AND GEOLOGY.

BY T. C. CHAMBERLIN, A. M., STATE GEOLOGIST.

The surface features of Wisconsin are simple and symmetrical in character, and present a configuration intermediate between the mountainous, on the one hand, and a monotonous level, on the other. The highest summits within the state rise a little more than 1,200 feet above its lowest surfaces. A few exceptional peaks rise from 400 to 600 feet above their bases, but abrupt elevations of more than 200 or 300 feet are not common. Viewed as a whole, the state may be regarded as occupying a swell of land lying between three notable depressions; Lake Michigan on the east, about 578 feet above the mean tide of the ocean, Lake Superior on the north, about 600 feet above the sea, and the valley of the Mississippi river, whose elevation at the Illinois state line is slightly below that of Lake Michigan. From these depressions the surface slopes upward to the summit altitudes of the state. But the rate of ascent is unequal. From Lake Michigan the surface rises by a long, gentle acclivity westward and northward. A similar slope ascends from the Mississippi valley to meet this, and their junction forms a north and south arch extending nearly the entire length of the state. From Lake Superior the surface ascends rapidly to the watershed, which it reaches within about thirty miles of the lake.

If we include the contiguous portion of the upper peninsula of Michigan, the whole elevation may be looked upon as a very low, rude, three-sided pyramid, with rounded angles. The apex is near the Michigan line, between the headwaters of the Montreal and Brule rivers. The northern side is short and abrupt. The southeastward and southwestward sides are long, and decline gently. The base of this pyramid may be considered as, in round numbers, 600 feet above the sea, and its extreme apex 1,800 feet.

Under the waters of Lake Michigan the surface of the land passes below the sea level before the limits of the state are reached. Under Lake Superior the land-surface descends to even greater depths, but probably not within the boundaries of the state. The regularity of the southward slopes is interrupted in a very interesting way by a remarkable diagonal valley occupied by Green bay and the Fox and Wisconsin rivers. This is a great groove, traversing the state obliquely, and cutting down the central elevation half its height. A line passing across the surface, from Lake Michigan to the Mississippi, at any other point, would arch upward from about 400 to 1,000 feet, according to the location, while along the trough of this valley it would reach an elevation barely exceeding 200 feet. On the northwest side of this trough, in general, the surface rises somewhat gradually, giving at most points much amplitude to the valley, but on the opposite side, the slope ascends rapidly to a well marked watershed that stretches across the state parallel to the valley. At Lake Winnebago, this diagonal valley is connected with a scarcely less notable one, occupied by the Rock river. Geologically, this Green-bay-Rock-

river valley is even more noticeable, since it lies along the trend of the underlying strata, and was in large measure plowed out of a soft stratum by glacial action. Where it crosses the watershed, near Horicon marsh, it presents the same general features that are seen at other points, and in an almost equally conspicuous degree. Except in the southern part of the state, this valley is confined on the east by an abrupt ascent, and, at many points, by a precipitous, rocky acclivity, known as "The Ledge"—which is the projecting edge of the strata of the Niagara limestone. On the watershed referred to—between the St. Lawrence and Mississippi basins—this ledge is as conspicuous and continuous as at other points, so that we have here again the phenomenon of a valley formed by excavation, running up over an elevation of 300 feet, and connecting two great systems of drainage.

On the east side of this valley, as already indicated, there is a sharp ascent of 200 feet, on an average, from the crest of which the surface slopes gently down to Lake Michigan. The uniformity of this slope is broken by an extended line of drift hills, lying obliquely along it and extending from Kewaunee county southward to the Illinois line and known as the Kettle range. A less conspicuous range of similar character branches off from this in the northwest corner of Walworth county and passes across the Rock river valley, where it curves northward, passing west of Madison, crossing the great bend in the Wisconsin river, and bearing northeastward into Oconto county, where it swings round to the westward and crosses the northern part of the state. As a general topographical feature it is not conspicuous and is rather to be conceived as a peculiar chain of drift hills winding over the surface of the state, merely interrupting in some degree the regularity of its slopes. There will be occasion to return to this feature in our discussion of the drift. It will be observed that the southeastward slope is interrupted by valleys running *across* it, rudely parallel to Lake Michigan, and directing its drainage northward and southward, instead of directing it down the slope into the lake.

The Mississippi slope presents several conspicuous ridges and valleys, but their trend is *toward* the great river, and they are all due, essentially, to the erosion of the streams that channel the slope. One of these ridges constitutes the divide south of the Wisconsin river, already referred to. Another of these, conspicuous by reason of its narrowness and sharpness, lies between the Kickapoo and the Mississippi, and extends through Crawford, Vernon and Monroe counties. Still another is formed by the quartzite ranges of Sauk county and others of less prominence give a highly diversified character to the slope.

Scattered over the surface of the state are prominent hills, some swelling upward into rounded domes, some rising symmetrically into conical peaks, some ascending precipitously into castellated towers, and some reaching prominence without regard to beauty of form or convenience of description. A part of these hills were formed by the removal by erosion of the surrounding strata, and a part by the heaping up of drift material by the glacial forces. In the former case, they are composed of rock; in the latter, of clay, sand, gravel and bowlders. The two forms are often combined. The highest peak in the southwestern part of the state is the West Blue mound, which is 1,151 feet above Lake Michigan; in the eastern part, Lapham's peak, 824 feet, and in the central part, Rib hill, 1263 feet. The crest of Penokee range in the northern part of the state rises 1,000 feet, and upwards, above Lake Michigan.

The drainage systems correspond in general to these topographical features, though several minor eccentricities are to be observed. The streams of the Lake Superior system plunge rapidly down their steep slopes, forming numerous falls, some of them possessing great beauty, prominent among which are those of the Montreal river. On the southern slope, the rivers, in the upper portion of their courses, likewise descend rapidly, though less so, producing a succession of rapids and cascades, and an occasional cataract. In the lower part of their courses, the

descent becomes much more gentle and many of them are navigable to a greater or less extent. The rivers west of the Wisconsin pursue an essentially direct course to the Mississippi, attended of course with minor flexures. The Wisconsin river lies, for the greater part of its course, upon the north and south arch of the state, but on encountering the diagonal valley above mentioned it turns southwestward to the "Father of Waters." The streams east of the Wisconsin flow southerly and southeasterly until they likewise encounter this valley when they turn in the opposite direction and discharge northeasterly into Lake Michigan, through Green bay. Between the Green-bay-Rock-river valley and Lake Michigan, the drainage is again in the normal southeasterly direction. In the southern part of the state, the rivers flow in a general southerly direction, but, beyond the state, turn westward toward the Mississippi.

If the courses of the streams be studied in detail, many exceedingly interesting and instructive features will be observed, due chiefly to peculiarities of geological structure, some of which will be apparent by inspecting the accompanying geological map. Our space, however, forbids our entering upon the subject here.

The position of the watershed between the great basins of the Mississippi and the St. Lawrence is somewhat peculiar. On the Illinois line, it lies only three and one half miles from Lake Michigan and about 160 feet above its surface. As traced northward from this point, it retires from the lake and ascends in elevation till it approaches the vicinity of Lake Winnebago, when it recurves upon itself and descends to the portage between the Fox and the Wisconsin rivers, whence it pursues a northerly course to the heights of Michigan, when it turns westward and passes in an undulating course across the northern part of the state. It will be observed that much the greater area of the state is drained by the Mississippi system.

The relationship which the drainage channels have been observed to sustain to the topographical features is partly that of cause and partly that of effect. The general arching of the surface, giving rise to the main slopes, is due to deep-seated geological causes that produce an upward swelling of the center of the state. This determined the general drainage systems. On the other hand, the streams, acting upon strata of varying hardness, and presenting different attitudes, wore away the surface unequally and cut for themselves anomalous channels, leaving corresponding divides between, which gave origin to the minor irregularities that diversify the surface. In addition to this, the glacier—that great ice stream, the father of the drift—planned and plowed the surface and heaped up its *debris* upon it, modifying both the surface and drainage features. Looked at from a causal standpoint, we see the results of internal forces elevating, and external agencies cutting down, or, in a word, the face of the state is the growth of geologic ages furrowed by the teardrops of the skies.

GEOLOGICAL HISTORY OF WISCONSIN.

In harmony with the historical character of this atlas, it may be most acceptable to weave our brief sketch of the geological structure of the state into the form of a narrative of its growth.

THE ARCHÆAN AGE.

LAURENTIAN PERIOD.

The physical history of Wisconsin can be traced back with certainty to a state of complete submergence beneath the waters of the ancient ocean, by which the material of our oldest and deepest strata were deposited. Let an extensive but shallow sea, covering the whole of the present territory of the state, be pictured to the mind, and let it be imagined to be depositing

mud and sand, as at the present day, and we have before us the first authentic stage of the history under consideration. Back of that, the history is lost in the mists of geologic antiquity. The thickness of the sediments that accumulated in that early period was immense, being measured by thousands of feet. These sediments occupied of course an essentially horizontal position, and were, doubtless, in a large degree hardened into beds of impure sandstone, shale, and other sedimentary rock. But in the progress of time an enormous pressure, attended by heat, was brought to bear upon them laterally, or edgewise, by which they were folded and crumpled, and forced up out of the water, giving rise to an island, the nucleus of Wisconsin. The force which produced this upheaval is believed to have arisen from the cooling and consequent contraction of the globe. The foldings may be imaged as the wrinkles of a shrinking earth. But the contortion of the beds was a scarcely more wonderful result than the change in the character of the rock which seems to have taken place simultaneously with the folding, indeed, as the result of the heat and pressure attending it. The sediments, that seem to have previously taken the form of impure sandstone and shale for the most part, underwent a change, in which re-arrangement and crystalization of the ingredients played a conspicuous part. By this metamorphism, granite, gneiss, mica schist, syenite, hornblende rocks, chloritic schists and other crystalline rocks were formed. These constitute the Laurentian formation and belong to the most ancient period yet distinctly recognized in geology, although there were undoubtedly more ancient rocks. They are therefore very fittingly termed Archæan—ancient—rocks (formerly Azoic.) No remains of life have been found in this formation in Wisconsin, but from the nature of rocks elsewhere, believed to be of the same age, it is probable that the lowest forms of life existed at this time. It is not strange that the great changes through which the rocks have passed should have so nearly obliterated all traces of them. The original extent of this Laurentian island can not now be accurately ascertained, but it will be sufficiently near the truth for our present purposes to consider the formation as it is now exposed, and as it is represented on the maps of the geological survey, as showing approximately the original extent. This will make it include a large area in the north-central portion of the state and a portion of the Upper Peninsula of Michigan. All the rest of the state was beneath the ocean, and the same may be said of the greater portion of the United States. The height of this island was doubtless considerable, as it has since been very much cut down by denuding agencies. The strata, as now exposed, mostly stand in highly inclined attitudes and present their worn edges to view. The tops of the folds, of which they are the remnants, seem to have been cut away, and we have the nearly vertical sides remaining.

HURONIAN PERIOD.

As soon as the Laurentian island had been elevated, the waves of the almost shoreless ocean began to beat against it, the elements to disintegrate it, and the rains of the then tropical climate to wash it; and the sand, clay and other *debris*, thus formed, were deposited beneath the waters around its base, giving rise to a new sedimentary formation. There is no evidence that there was any vegetation on the island: the air and water were, doubtless, heavily charged with carbonic acid, an efficient agent of disintegration: the climate was warm and doubtless very moist—circumstances which combined to hasten the erosion of the island and increase the deposition in the surrounding sea. In addition to these agencies, we judge from the large amount of carbonaceous matter contained in some of the beds, that there must have been an abundance of marine vegetation, and, from the limestone beds that accumulated, it is probable that there was marine animal life also, since in later ages that was the chief source of limestone strata. The joint accumulations from these several sources gave rise to a series of shales, sandstones and limestones, whose combined thickness was several thousand feet.

At length the process of upheaval and metamorphism that closed the Laurentian period was repeated, and these sandstones became quartzites; the limestones were crystalized, the shales were changed to slates or schists, and intermediate grades of sediments became diorites, quartz-porphyrries and other forms of crystalline rocks. The carbonaceous matter was changed in part to graphite. There were also associated with these deposits extensive beds of iron ore, which we now find chiefly in the form of magnetite, hematite and specular ore. These constitute the Huronian rocks. From the amount of iron ore they contain, they are also fittingly termed the iron-bearing series. As in the preceding case, the strata were contorted, flexed and folded, and the whole island was further elevated, carrying with it these circumjacent strata, by which its extent was much enlarged. The area of the island after receiving this increment was considerably greater than the surface represented as Laurentian and Huronian on the accompanying map, since it was subsequently covered to a considerable extent by later formations. Penokee range, in Ashland county, is the most conspicuous development of the Huronian rocks in the state. The upturned edge of the formation forms a bold rampart, extending across the country for sixty miles, making the nearest approach to a mountain range to be found within the state. A belt of magnetic schist may be traced nearly its entire length. In the northern part of Oconto county, there is also an important development of this formation, being an extension of the Menomonee iron-bearing series. A third area is found in Barron county, which includes deposits of pipestone. In the south central part of the state there are a considerable number of small areas and isolated outliers of quartzite and quartz-porphry, that, without much doubt, belong to this series. The most conspicuous of these are the Baraboo quartzite ranges, in Sauk and Columbia counties, and from thence a chain of detached outliers extends northeasterly through several counties. The most southerly exposure of the formation is near Lake Mills, in Jefferson county.

THE COPPER-BEARING SERIES.

Previous to the upheaval of the Huronian strata, there occurred in the Lake Superior region events of peculiar and striking interest. If we may not speak with absolute assurance, we may at least say with reasonable probability, that the crust of the earth was fissured in that region, and that there issued from beneath an immense mass of molten rock, that spread itself over an area of more than three hundred miles in length and one hundred miles in width. The action was not confined to a single overflow, but eruption followed eruption, sometimes apparently in quick succession, sometimes evidently at long intervals. Each outpouring, when solidified, formed a stratum of trap rock, and where these followed each other without any intervening deposit, a series of trapean beds were formed. In some cases, however, an interval occurred, during which the waves, acting upon the rock previously formed, produced a bed of sand, gravel and clay, which afterward solidified into sandstone, conglomerate and shale. The history of these beds is lithographed on their surface in beautiful ripple-marks and other evidences of wave-action. After the cessation of the igneous eruptions, there accumulated a vast thickness of sandstone, shale and conglomerate, so that the whole series is literally miles in thickness.

The eruptive portions have been spoken of as traps, for convenience; but they do not now possess the usual characteristics of igneous rocks, and appear to have undergone a chemical metamorphism by which the mineral ingredients have been changed, the leading ones now being an iron chlorite and a feldspar, with which are associated, as accessory minerals, quartz, epidote, prenite, calcite, laumontite, analcite, datolite, magnetite, native copper and silver, and, more rarely, other minerals. The rock, as a whole, is now known as a melaphyr. The upper portion of each bed is usually characterized by almond-sized cells filled with the minerals above mentioned, giving to the rock an amygdaloidal nature. The native copper was not injected in a

molten state, as has very generally been supposed, but was deposited by chemical means after the beds were formed and after a portion of the chemical change of the minerals above mentioned had been accomplished. The same is true of the silver. The copper occurs in all the different forms of rock—the melaphyrs, amygdaloids, sandstones, shales and conglomerates, but most abundantly in the amygdaloids and certain conglomerates.

This series extends across the northern portion of the state, occupying portions of Ashland, Bayfield, Douglas, Burnett and Polk counties. When the Huronian rocks were elevated, they carried these up with them, and they partook of the folding in some measure. The copper-bearing range of Keweenaw Point, Michigan, extends southwestward through Ashland, Burnett and Polk counties, and throughout this whole extent the beds dip north-northwesterly toward Lake Superior, at a high angle; but in Douglas and Bayfield counties there is a parallel range in which the beds incline in the opposite direction, and undoubtedly form the opposite side of a trough formed by a downward flexure of the strata.

PALEOZOIC TIME—SILURIAN AGE.

POTSDAM SANDSTONE.

After the great Archæan upheaval, there followed a long period, concerning which very little is known—a “lost interval” in geological history. It is only certain that immense erosion of the Archæan strata took place, and that in time the sea advanced upon the island, eroding its strata and redepositing the wash and wear beneath its surface. The more resisting beds withstood this advance, and formed reefs and rocky islands off the ancient shore, about whose bases the sands and sediments accumulated, as they did over the bottom of the surrounding ocean. The breakers, dashing against the rocky cliffs, threw down masses of rock, which imbedded themselves in the sands, or were rolled and rounded on the beach, and at length were buried, in either case, to tell their own history, when they should be again disclosed by the ceaseless gnawings of the very elements that had buried them. In addition to the accumulations of wash and wear that have previously been the main agents of rock-formations, abundant life now swarms in the ocean, and the sands become the great cemetery of its dead. Though the contribution of each little being was small, the myriad millions that the waters brought forth, yielded by their remains, a large contribution to the accumulating sediments. Among plants, there were sea-weeds, and among animals, protozoans, radiates, mollusks and articulates, all the sub-kingdoms except the vertebrates. Among these, the most remarkable, both in nature and number, were the trilobites, who have left their casts in countless multitudes in certain localities. The result of the action of these several agencies was the formation of extensive beds of sandstone, with interstratified layers of limestone and shale. These surrounded the Archæan nucleus on all sides, and reposed on its flanks. On the Lake Superior margin, the sea acted mainly upon the copper and iron-bearing series, which are highly ferruginous, and the result was the red Lake Superior sandstone. On the opposite side of the island, the wave-action was mainly upon quartzites, porphyries and granites, and resulted in light-colored sandstones. The former is confined to the immediate vicinity of Lake Superior; the latter occupies a broad, irregular belt bordering the Archæan area on the south, and, being widest in the central part of the state, is often likened to a rude crescent. The form and position of the area will be best apprehended by referring to the accompanying map. It will be understood from the foregoing description, that the strata of this formation lie in a nearly horizontal position, and repose unconformably upon the worn surface of the crystalline rocks. The close of this period was not marked by any great upheaval; there

was no crumpling or metamorphism of the strata, and they have remained to the present day very much as they were originally deposited, save a slight arching upward in the central portion of the state. The beds have been somewhat compacted by the pressure of superincumbent strata and solidified by the cementing action of calcareous and ferruginous waters, and by their own coherence, but the original character of the formation, as a great sand-bed, has not been obliterated. It still bears the ripple-marks, cross-lamination, worm-burrows, and similar markings that characterize a sandy beach. Its thickness is very irregular, owing to the unevenness of its Archæan bottom, and may be said to range from 1,000 feet downward. The strata slope gently away from the Archæan core of the state and underlie all the later formations, and may be reached at any point in southern Wisconsin by penetrating to a sufficient depth, which can be calculated with an approximate correctness. As it is a water-bearing formation, and the source of fine Artesian wells, this is a fact of much importance. The interbedded layers of limestone and shale, by supplying impervious strata, very much enhance its value as a source of fountains.

LOWER MAGNESIAN LIMESTONE.

During the previous period, the accumulation of sandstone gave place for a time to the formation of limestone, and afterward the deposit of sandstone was resumed. At its close, without any very marked disturbance of existing conditions, the formation of limestone was resumed, and progressed with little interruption till a thickness ranging from 50 to 250 feet was attained. This variation is due mainly to irregularities of the upper surface of the formation, which is undulating, and in some localities, may appropriately be termed billowy, the surface rising and falling 100 feet, in some cases, within a short distance. This, and the preceding similar deposit, have been spoken of as limestones simply, but they are really dolomites, or magnesian limestones, since they contain a large proportion of carbonate of magnesia. This rock also contains a notable quantity of silica, which occurs disseminated through the mass of the rock; or, variously, as nodules or masses of chert; as crystals of quartz, filling or lining drusy cavities, forming beautiful miniature grottos; as the nucleus of oölitic concretions, or as sand. Some argillaceous matter also enters into its composition, and small quantities of the ores of iron, lead and copper, are sometimes found, but they give little promise of value. The evidences of life are very scanty. Some sea-weeds, a few mollusks, and an occasional indication of other forms of life embrace the known list, except at a few favored localities where a somewhat ampler fauna is found. But it is not, therefore, safe to assume the absence of life in the depositing seas, for it is certain that most limestone has originated from the remains of animals and plants that secrete calcareous material, and it is most consistent to believe that such was the case in the present instance, and that the distinct traces of life were mostly obliterated. This formation occupies an irregular belt skirting the Potsdam area. It was, doubtless, originally a somewhat uniform band swinging around the nucleus of the state already formed, but it has since been eroded by streams to its present jagged outline.

ST. PETER'S SANDSTONE.

At the close of this limestone-making period, there appears to have been an interval of which we have no record, and the next chapter of the history introduces us to another era of sand accumulation. The work began by the leveling up of the inequalities of the surface of the Lower Magnesian limestone, and it ceased before that was entirely accomplished in all parts of the State, for a few prominences were left projecting through the sand deposits. The material laid down consisted of a silicious sand, of uniform, well-rounded—doubtless well-rolled—grains. This was evidently deposited horizontally upon the uneven limestone surface, and so rests in a sense

unconformably upon it. Where the sandstone abuts against the sides of the limestone prominences, it is mingled with material derived by wave action from them, which tells the story of its formation. But aside from these and other exceptional impurities, the formation is a very pure sandstone, and is used for glass manufacture. At most points, the sandstone has never become firmly cemented and readily crumbles, so that it is used for mortar, the simple handling with pick and shovel being sufficient to reduce it to a sand. Owing to the unevenness of its bottom, it varies greatly in thickness, the greatest yet observed being 212 feet, but the average is less than 100 feet. Until recently, no organic remains had ever been found in it, and the traces now collected are very meager indeed, but they are sufficient to show the existence of marine life, and demonstrate that it is an oceanic deposit. The rarity of fossils is to be attributed to the porous nature of the rock, which is unfavorable to their preservation. This porosity, however, subserves a very useful purpose, as it renders this pre-eminently a water-bearing horizon, and supplies some of the finest Artesian fountains in the state, and is competent to furnish many more. It occupies but a narrow area at the surface, fringing that of the Lower Magnesian limestone on the south.

TRENTON LIMESTONE.

A slight change in the oceanic conditions caused a return to limestone formation, accompanied with the deposit of considerable clayey material, which formed shale. The origin of the limestone is made evident by a close examination of it, which shows it to be full of fragments of shells, corals, and other organic remains, or the impressions they have left. Countless numbers of the lower forms of life flourished in the seas, and left their remains to be comminuted and consolidated into limestone. A part of the time, the accumulation of clayey matter predominated, and so layers of shale alternate with the limestone beds, and shaly leaves and partings occur in the limestone layers. Unlike the calcareous strata above and below, a portion of these are true limestone, containing but a very small proportion of magnesia. A sufficient amount of carbonaceous matter is present in some layers to cause them to burn readily. This formation is quite highly metalliferous in certain portions of the lead region, containing zinc especially, and considerable lead, with less quantities of other metals. The formation abounds in fossils, many of them well preserved, and, from their great antiquity, they possess uncommon interest. All the animal sub-kingdoms, except vertebrates, are represented. The surface area of this rock borders the St. Peter's sandstone, but, to avoid too great complexity on the map, it is not distinguished from the next formation to which it is closely allied. Its thickness reaches 120 feet.

THE GALENA LIMESTONE.

With scarcely a change of oceanic conditions, limestone deposit continued, so that we find reposing upon the surface of the Trenton limestone, 250 feet, or less, of a light gray or buff colored highly magnesian limestone, occurring in heavy beds, and having a sub-crystalline structure. In the southern portion of the state, it contains but little shaly matter, but in the northeastern part, it is modified by the addition of argillaceous layers and leaves, and presents a bluish or greenish-gray aspect. It receives its name from the sulphide of lead,—galena, of which it contains large quantities, in the southwestern part of the state. Zinc ore is also abundant, and these minerals give to this and the underlying formation great importance in that region. Elsewhere, although these ores are present in small quantities, they have not developed economic importance. This limestone, though changing its nature, as above stated, occupies a large area in the southwestern part of the state, and a broad north and south belt in east-central Wisconsin. It will be seen that our island is growing apace by concentric additions, and that, as the several formations sweep around the central nucleus of Archæan rocks, they swing off into adjoining states, whose formation was somewhat more tardy than that of Wisconsin.

CINCINNATI SHALES.

A change ensued upon the formation of the Galena limestone, by virtue of which there followed the deposition of large quantities of clay, accompanied by some calcareous material, the whole reaching at some points a thickness of more than 200 feet. The sediment has never become more than partially indurated, and a portion of it is now only a bed of compact clay. Other portions hardened to shale or limestone according to the material. The shales are of various gray, green, blue, purple and other hues, so that where vertical cliffs are exposed, as along Green bay, a beautiful appearance is presented. As a whole, this is a very soft formation, and hence easily eroded. Owing to this fact, along the east side of the Green-bay-Rock-river valley, it has been extensively carried away, leaving the hard overlying Niagara limestone projecting in the bold cliffs known as "The Ledge." The prominence of the mounds in the southwestern part of the state are due to a like cause. Certain portions of this formation abound in astonishing numbers of well preserved fossils, among which corals, bryozoans, and brachiopods, predominate, the first named being especially abundant. A little intelligent attention to these might have saved a considerable waste of time and means in an idle search for coal, to which a slight resemblance to some of the shales of the coal measures has led. This formation underlies the mounds of the lead region, and forms a narrow belt on the eastern margin of the Green-bay-Rock-river valley. This was the closing period of the Lower Silurian Age.

CLINTON IRON ORE.

On the surface of the shales just described, there were accumulated, here and there, beds of peculiar lenticular iron ore. It is probable that it was deposited in detached basins, but the evidence of this is not conclusive. In our own state, this is chiefly known as Iron Ridge ore, from the remarkable development it attains at that point. It is made up of little concretions, which from their size and color are fancied to resemble flax seed, and hence the name "seed ore," or the roe of fish, and hence oölitic ore. "Shot ore" is also a common term. This is a soft ore occurring in regular horizontal beds which are quarried with more ease than ordinary limestone. This deposit attains, at Iron Ridge, the unusual thickness of twenty-five feet, and affords a readily accessible supply of ore, adequate to all demands for a long time to come. Similar, but much less extensive beds, occur at Hartford, and near Depere, besides some feeble deposits elsewhere. Large quantities of ore from Iron Ridge have been shipped to various points in this and neighboring States for reduction, in addition to that smelted in the vicinity of the mines.

NIAGARA LIMESTONE.

Following the period of iron deposit, there ensued the greatest limestone-forming era in the history of Wisconsin. During its progress a series of beds, summing up, at their points of greatest thickness, scarcely less than eight hundred feet, were laid down. The process of formation was essentially that already described, the accumulation of the calcareous secretions of marine life. Toward the close of the period, reefs appeared, that closely resemble the coral reefs of the present seas, and doubtless have a similar history. Corals form a very prominent element in the life of this period, and with them were associated great numbers of mollusks, one of which (*Pentamerus oblongus*) sometimes occurs in beds not unlike certain bivalves of to-day, and may be said to have been the oyster of the Silurian seas. At certain points, those wonderful animals, the stone lilies (*Crinoids*), grew in remarkable abundance, mounted on stems like a plant, yet true animals. Those unique crustaceans, the trilobites, were conspicuous in numbers and variety, while the gigantic cephalopods held sway over the life of the seas. In the vicinity of the reefs,

there seem to have been extensive calcareous sand flats and areas over which fine calcareous mud sett'ed, the former resulting in a pure granular dolomite, the latter in a compact close-textured stone. The rock of the reefs is of very irregular structure. Of other portions of the formation, some are coarse heavy beds, some fine, even-bedded, close-grained layers, and some, again, irregular, impure and cherty. All are highly magnesian, and some are among the purest dolomites known. The Niagara limestone occupies a broad belt lying adjacent to Lake Michigan.

LOWER HELDERBERG LIMESTONE.

On Mud creek, near Milwaukee, there is found a thin-bedded slaty limestone, that is believed to represent this period. It has neglected, however, to leave us an unequivocal record of its history, as fossils are extremely rare, and its stratigraphical relations and lithographical character are capable of more than one interpretation. Near the village of Waubeka in Ozaukee county, there is a similar formation, somewhat more fossiliferous, that seems to represent the same period. The area which these occupy is very small and they play a most insignificant part in the geology of the state. They close the record of the Silurian age in Wisconsin. During its progress the land had been gradually emerging from the ocean and increasing its amplitude by concentric belts of limestone, sandstone and shale. There had been no general disturbance, only those slight oscillations which changed the nature of the forming rock and facilitated deposition. At its close the waters retired from the borders of the state, and an interval supervened, during which no additions are known to have been made to its substructure.

DEVONIAN AGE.

HAMILTON CEMENT ROCK.

After a lapse of time, during which the uppermost Silurian and the lowest Devonian strata, as found elsewhere, were formed, the waters again advanced slightly upon the eastern margin of the state and deposited a magnesian limestone mingled with silicious and aluminous material, forming a combination of which a portion has recently been shown to possess hydraulic properties of a high degree of excellence. With this deposition there dawned a new era in the life-history of Wisconsin. While multitudes of protozoans, radiates, mollusks and articulates swarmed in the previous seas, no trace of a vertebrate has been found. The Hamilton period witnessed the introduction of the highest type of the animal kingdom into the Wisconsin series. But even then only the lowest class was represented—the fishes. The lower orders of life, as before, were present, but the species were of the less ancient Devonian type. Precisely how far the deposit originally extended is not now known, as it has undoubtedly been much reduced by the eroding agencies that have acted upon it. That portion which remains, occupies a limited area on the lake shore immediately north of Milwaukee, extending inland half a dozen miles. The cement rock proper is found on the Milwaukee river just above the city. At the close of the Hamilton period the oceanic waters retired, and, if they ever subsequently encroached upon our territory, they have left us no permanent record of their intrusion.

The history of the formation of the substructure of the state was, it will be observed, in an unusual degree, simple and progressive. Starting with a firm core of most ancient crystalline rocks, leaf upon leaf of stony strata were piled around it, adding belt after belt to the margin of the growing island until it extended itself far beyond the limits of our state, and coalesced with the forming continent. An ideal map of the state would show the Archæan nucleus surrounded by concentric bands of the later formations in the order of their deposition. But during all the

vast lapse of time consumed in their growth, the elements were gnawing, carving and channeling the surface, and the outcropping edges of the formations were becoming more and more jagged, and now, after the last stratum had been added, and the whole had been lifted from the waters that gave it birth, there ensued perhaps a still vaster era, during which the history was simply that of surface erosion. The face of the state became creased with the wrinkles of age. The edges of her rocky wrappings became ragged with the wear of time. The remaining Devonian periods, the great Carboniferous age, the Mesozoic era, and the earlier Tertiary periods passed, leaving no other record than that of denudation.

THE GLACIAL PERIOD.

With the approach of the great Ice Age, a new chapter was opened. An immense sheet of ice moved slowly, but irresistibly, down from the north, planing down the prominences, filling up the valleys, polishing and grooving the strata, and heaping up its rubbish of sand, gravel, clay and boulders over the face of the country. It engraved the lines of its progress on the rocks, and, by reading these, we learn that one prodigious tongue of ice plowed along the bed of Lake Michigan, and a smaller one pushed through the valley of Green bay and Rock river, while another immense ice-stream flowed southwestward through the trough of Lake Superior and onward into Minnesota. The diversion of the glacier through these great channels seems to have left the southwestern portion of the state intact, and over it we find no drift accumulations. With the approach of a warmer climate, the ice-streams were melted backward, leaving their *debris* heaped promiscuously over the surface, giving it a new configuration. In the midst of this retreat, a series of halts and advances seem to have taken place in close succession, by which the drift was pushed up into ridges and hills along the foot of the ice, after which a more rapid retreat ensued. The effect of this action was to produce that remarkable chain of drift hills and ridges, known as the Kettle range, which we have already described as winding over the surface of the state in a very peculiar manner. It is a great historic rampart, recording the position of the edge of the glacier at a certain stage of its retreat, and doubtless at the same time noting a great climatic or dynamic change.

The melting of the glacier gave rise to large quantities of water, and hence to numerous torrents, as well as lakes. There occurred about this time a depression of the land to the northward, which was perhaps the cause, in part or in whole, of the retreat of the ice. This gave origin to the great lakes. The waters advanced somewhat upon the land and deposited the red clay that borders Lakes Michigan and Superior and occupies the Green bay valley as far up as the vicinity of Fond du Lac. After several oscillations, the lakes settled down into their present positions. Wherever the glacier plowed over the land, it left an irregular sheet of commingled clay, sand, gravel and boulders spread unevenly over the surface. The depressions formed by its irregularities soon filled with water and gave origin to numerous lakelets. Probably not one of the thousands of Wisconsin lakes had an existence before the glacial period. Wherever the great lakes advanced upon the land, they leveled its surface and left their record in lacustine clays and sandy beach lines.

With the retreat of the glacier, vegetation covered the surface, and by its aid and the action of the elements our fertile drift soils, among the last and best of Wisconsin's formations, were produced. And the work still goes on.

CLIMATOLOGY OF WISCONSIN.

BY PROF. H. H. OLDENHAGE.

The climate of a country, or that peculiar state of the atmosphere in regard to heat and moisture which prevails in any given place, and which directly affects the growth of plants and animals, is determined by the following causes: 1st. Distance from the equator. 2d. Distance from the sea. 3d. Height above the sea. 4th. Prevailing winds; and 5th. Local influences, such as soil, vegetation, and proximity to lakes and mountains.

Of these causes, the first, distance from the equator, is by far the most important. The warmest climates are necessarily those of tropical regions where the sun's rays are vertical. But in proceeding from the equator toward the poles, less and less heat continues to be received by the same extent of surface, because the rays fall more and more obliquely, and the same amount of heat-rays therefore spread over an increasing breadth of surface; while, however, with the increase of obliquity, more and more heat is absorbed by the atmosphere, as the amount of air to be penetrated is greater. If the earth's surface were either wholly land or water, and its atmosphere motionless, the gradations of climate would run parallel with the latitudes from the equator to the poles. But owing to the irregular distribution of land and water, and the prevailing winds, such an arrangement is impossible, and the determination of the real climate of a given region, and its causes, is one of the most difficult problems of science.

On the second of these causes, distance from the sea, depends the difference between oceanic and continental climates. Water is more slowly heated and cooled than land; the climates of the sea and the adjacent land are therefore much more equable and moist than those of the interior.

A decrease of temperature is noticeable in ascending high mountains. The rate at which the temperature falls with the height above the sea is a very variable quantity, and is influenced by a variety of causes, such as latitude, situation, moisture, or dryness, hour of the day and season of the year. As a rough approximation, however, the fall of 1° of the thermometer for every 300 feet is usually adopted.

Air in contact with any part of the earth's surface, tends to acquire the temperature of that surface. Hence, winds from the north are cold; those from the south are warm. Winds from the sea are moist, and winds from the land are usually dry. Prevailing winds are the result of the relative distribution of atmospheric pressure blowing *from* places where the pressure is highest, *toward* places where it is lowest. As climate practically depends on the temperature and moisture of the air, and as these again depend on the prevailing winds which come charged with the temperature and moisture of the regions they have traversed, it is evident that charts showing the mean pressure of the atmosphere give us the key to the climates of the different regions of the world. The effect of prevailing winds is seen in the moist and equable climate of Western Europe, especially Great Britain, owing to the warm and moist southwest winds; and in the extremes of the eastern part of North America, due to the warm and moist winds prevailing in summer and the Arctic blasts of winter.

Among local influences which modify climate, the nature of the soil is one of the most important. As water absorbs much heat, wet, marshy ground usually lowers the mean temperature. A sandy waste presents the greatest extremes. The extremes of temperature are also modified by extensive forests, which prevent the soil from being as much warmed and cooled as it would be if bare. Evaporation goes on more slowly under the trees, since the soil is screened from the sun. And as the air among the trees is little agitated by the wind, the vapor is left to accumulate, and hence the humidity of the air is increased. Climate is modified in a similar manner by lakes and other large surfaces of water. During summer the water cools the air and reduces the temperature of the locality. In winter, on the other hand, the opposite effect is produced. The surface water which is cooled sinks to lower levels; the warmer water rising to the surface, radiates heat into the air and thus raises the temperature of the neighboring region. This influence is well illustrated, on a great scale, in our own state by Lake Michigan.

It is, lastly, of importance whether a given tract of country is diversified by hills, valleys and mountains. Winds with their warm vapor strike the sides of mountains and are forced up into higher levels of the atmosphere, where the vapor is condensed into clouds. Air coming in contact, during the night or in winter, with the cooled declivities of hills and rising grounds becomes cooled and consequently denser and sinks to the low-lying grounds, displacing the warmer and lighter air. Hence, frosts often occur at these places, when no trace of them can be found at higher levels. For the same reason the cold of winter is generally more intense in ravines and valleys than on hill tops and high grounds, the valleys being a receptacle for the cold-air currents which descend from all sides. These currents give rise to gusts and blasts of cold wind, which are simply the out-rush of cold air from such basins. This is a subject of great practical importance to fruit-growers.

In order to understand the principal features of the climate of Wisconsin, and the conditions on which these depend, it is necessary to consider the general climatology of the eastern United States. The chief characteristic of this area as a whole is, that it is subject to great extremes—to all those variations of temperature which prevail from the tropical to the Arctic regions. This is principally due to the topographical conditions of our continent. The Rocky mountains condensing the moisture of the warm winds from the Pacific and preventing them from reaching far inland, separate the climate of the Mississippi valley widely from that of the Pacific slope. Between the Gulf of Mexico and the Arctic sea there is no elevation to exceed 2,000 feet to arrest the flow of the hot southerly winds of summer, or the cold northerly winds of winter. From this results a variation of temperature hardly equaled in any part of the world.

In determining the climates of the United States, western Europe is usually taken as the basis of comparison. The contrast between these regions is indeed very great. New York is in the same latitude with Madrid, Naples and Constantinople. Quebec is not so far north as Paris. London and Labrador are equi-distant from the equator; but while England, with her mild, moist climate, produces an abundance of vegetation, in Labrador all cultivation ceases. In the latitude of Stockholm and St. Petersburg, at the 60th parallel, we find in eastern North America vast ice-fields which seldom melt. The moist and equable climate of western Europe in high latitudes is due to the Gulf Stream and the southwest winds of the Atlantic, which spread their warmth and moisture over the western coast. Comparison, however, shows that the climate of the Pacific coast of North America is quite as mild as that of western Europe; and this is due to the same kind of influences, namely, to the warm, moist winds and the *currents* of the Pacific. And to continue the comparison still further, in proceeding on both continents from west to east, or from ocean into the interior, we find a general resemblance of climatic conditions, modified greatly, it is true, by local influences.

The extreme summer climate of the eastern United States is owing to the southerly and southwesterly winds, which blow with great regularity during this season, and, after traversing great areas of tropical seas, bear the warmth and moisture of these seas far inland, and give this region the peculiar semi-tropical character of its summers. The average temperature of summer varies between 80° for the Gulf states, and 60° for the extreme north. While in the Gulf states the thermometer often rises to 100° , in the latitude of Wisconsin this occurs very seldom. During winter the prevailing winds are from the northwest. These cold blasts from the Arctic sea are deflected by the Rocky mountains, sweep down unopposed into lower latitudes, and produce all the rigors of an arctic winter. The mean temperature for this season varies between 60° for the Gulf coast and 15° for the extreme northern part of Wisconsin. In the northern part of the valley the cold is sometimes so intense that the thermometer sinks to the freezing point of mercury.

The extreme of heat and cold would give a continental climate if this extreme were not accompanied by a profusion of rain. The southerly winds, laden with moisture, distribute this moisture with great regularity over the valley. The amount of rainfall, greater in summer than in winter, varies, from the Gulf of Mexico to Wisconsin, from 63 inches to 30 inches. On the Atlantic coast, where the distribution is more equal throughout the year on account of its proximity to the ocean, the amount varies, from Florida to Maine, from 63 to 40 inches. The atmospheric movements on which, to a great extent, the climatic conditions of the eastern United States depend, may be summed up as follows:

"1. That the northeast trades, deflected in their course to south and southeast winds in their passage through the Carribean Sea and the Gulf of Mexico, are the warm and moist winds which communicate to the Mississippi valley and the Atlantic slope their fertility.

"2. That the prevalence of these winds from May to October communicates to this region a sub-tropical climate.

"3. That in the region bordering on the Gulf of Mexico, the atmospheric disturbances are propagated from south to north; but in the northern and middle states, owing to a prevailing upper current, from west to east.

"4. That while this upper current is cool and dry, and we have the apparent anomaly of rain storms traveling from west to east, at the same time the moisture supplying them comes from the south.

"5. That, in the winter, the south and southeast winds rise into the upper current, while the west and northwest winds descend and blow as surface winds, accompanied by an extraordinary depression of temperature, creating, as it were, an almost arctic climate.

"6. That the propagation of the cold winds from west to east is due to the existence of a warmer and lighter air to the eastward.

"7. That in summer the westerly currents seldom blow with violence, because, in passing over the heated plains, they acquire nearly the same temperature as the southerly currents, but in winter the conditions are reversed."

The line of conflict of these aerial currents, produced by unequal atmospheric pressure, shift so rapidly that the greatest changes of temperature, moisture, and wind, are experienced within a few hours, these changes usually affecting areas of great extent. In the old world, on the other hand, the mountain systems, generally running from east to west, offer an impediment, especially to the polar currents, and the weather is therefore not so changeable.

Wisconsin, situated in the upper and central part of the Mississippi valley, is subject to the same general climatic conditions which give this whole area its peculiar climate.

The highest mean summer temperature is 72° Fahrenheit in the southwestern part of the

state, and the lowest 64° at Bayfield, Lake Superior. During the months of June, July and August, the thermometer often rises as high as 90° , seldom to 100° . In 1874 the mercury reached this high point twice at LaCrosse, and three times at Dubuque, Iowa. There are usually two or three of these "heated terms" during the summer, terminated by abrupt changes of temperature.

The isotherm of 70° (an isotherm being a line connecting places having the same mean temperature) enters this state from the west, in the northern part of Grant county, touches Madison, takes a southerly direction through Walworth county, passes through southern Michigan, Cleveland, and Pittsburg, reaching the Atlantic ocean a little north of New York city. From this it is seen that southern Wisconsin, southern and central Michigan, northern Ohio, central Pennsylvania, and southern New York have nearly the same summer temperature. Northwestward this line runs through southern Minnesota and along the Missouri to the foot of the mountains. Eastern Oregon, at $47^{\circ} 30'$ north latitude, has the same average summer temperature; the line then returns and touches the Pacific coast at San Diego.

The remarkable manner in which so large a body of water as Lake Michigan modifies the temperature has been carefully determined, so far as it relates to Wisconsin, by the late Dr. Lapham, of Milwaukee. It is seen by the map that the average summer temperature of Racine is the same as that of St. Paul. The weather map for July, 1875, in the signal service report for 1876, shows that the mean temperature for July was the same in Rock county, in the southern part of the state, as that of Breckenridge, Minn., north of St. Paul. The moderating effect of the lake during hot weather is felt in the adjacent region during both day and night.

Countries in the higher latitudes having an extreme summer temperature are usually characterized by a small amount of rain-fall. The Mississippi valley, however, is directly exposed in spring and summer to the warm and moist winds from the south, and as these winds condense their moisture by coming in contact with colder upper currents from the north and west, it has a profusion of rain which deprives the climate largely of its continental features. As already stated, the average amount of rain-fall in Wisconsin is about 30 inches annually. Of this amount about one-eighth is precipitated in winter, three-eighths in summer, and the rest is equally distributed between spring and autumn — in other words, rain is abundant at the time of the year when it is most needed. In Wisconsin the rainfall is greatest in the southwestern part of the state; the least on and along the shore of Lake Michigan. This shows that the humidity of the air of a given area can be greater, and the rainfall less, than that of some other.

In comparison with western Europe, even where the mean temperature is higher than in the Mississippi valley, the most striking fact in the climatic conditions of the United States is the great range of plants of tropical or sub-tropical origin, such as Indian corn, tobacco, etc. The conditions on which the character of the vegetation depends are temperature and moisture, and the mechanical and chemical composition of the soil.

"The basis of this great capacity (the great range of plants) is the high curve of heat and moisture for the summer, and the fact that the measure of heat and of rain are almost or quite tropical for a period in duration from one to five months, in the range from Quebec to the coast of the Gulf." Indian corn attains its full perfection between the summer isotherms 72° and 77° , in Illinois, Iowa, Missouri, and Kansas; but it may be grown up to the line of 65° , which includes the whole of Wisconsin. The successful cultivation of this important staple is due to the intense heat of summer and a virgin soil rich in nitrogen.

While Milwaukee and central Wisconsin have a mean annual temperature of 45° , that of southern Ireland and central England is 50° ; the line of 72° , the average temperature for July, runs from Walworth county to St. Paul, while during the same month Ireland and England have a mean temperature of only 60° . In Wisconsin the thermometer rises as high as 90° and above,

while the range above the mean in England is very small. It is the tropical element of our summers, then, that causes the grape, the corn, etc., to ripen, while England, with a higher mean temperature, is unable to mature them successfully. Ireland, where southern plants may remain out-doors, unfrosted, the whole winter, can not mature those fruits and grasses which ripen in Wisconsin. In England a depression of 2° below the mean of 60° will greatly reduce the quantity, or prevent the ripening of wheat altogether, 60° being essential to a good crop. Wheat, requiring a lower temperature than corn, is better adapted to the climate of Wisconsin. This grain may be grown as far north as Hudson bay.

Autumn, including September, October and November, is of short duration in Wisconsin. North of the 42d parallel, or the southern boundary line of the state, November belongs properly to the winter months, its mean temperature being about 32° . The decrease of heat from August to September is generally from 8° to 9° ; 11° from September to October, and 14° from October to November. The average temperature for these three months is about 45° . A beautiful season, commonly known as Indian summer, frequently occurs in the latter part of October and in November. This period is characterized by a mild temperature and a hazy, calm atmosphere. According to Loomis, this appears to be due to "an uncommonly tranquil condition of the atmosphere, during which the air becomes filled with dust and smoke arising from numerous fires, by which its transparency is greatly impaired." This phenomenon extends as far north as Lake Superior, but it is more conspicuous and protracted in Kansas and Missouri, and is not observed in the southern states.

Destructive frosts generally occur in September, and sometimes in August. "A temperature of 36° to 40° at sunrise is usually attended with frosts destructive to vegetation, the position of the thermometer being usually such as to represent less than the actual refrigeration at the open surface." In 1875, during October, at Milwaukee, the mercury fell seven times below the freezing point, and twice below zero in November, the lowest being 14° .

The winters are generally long and severe, but occasionally mild and almost without snow. The mean winter temperature varies between 23° in the southeastern part of the state, and 16° at Ashland, in the northern. For this season the extremes are great. The line of 20° is of importance, as it marks the average temperature which is fatal to the growth of all the tender trees, such as the pear and the peach. In the winter of 1875 and 1876, the mean temperature for December, January and February, in the upper lake region, was about 4° above the average mean for many years, while during the previous winter the average temperature for January and February was about 12° below the mean for many years, showing a great difference between cold and mild winters. In the same winter, 1875-'76, at Milwaukee, the thermometer fell only six times below zero, the lowest being 12° , while during the preceding winter the mercury sank thirty-six times below zero, the lowest being 23° . In the northern and northwestern part of the state the temperature sometimes falls to the freezing point of mercury. During the exceptionally cold Winter of 1872-3, at La Crosse, the thermometer sank nearly fifty times below zero; on December 24, it indicated 37° below, and on January 18, 43° below zero, averaging about 12° below the usual mean for those months. The moderating effect of Lake Michigan can be seen by observing how the lines indicating the mean winter temperature curve northward as they approach the lake. Milwaukee, Sheboygan, Manitowoc, Two Rivers, and the Grand Traverse region of Michigan, have the same average winter temperature. The same is true regarding Galena, Ill., Beloit, and Kewaunee. A similar influence is noticed in all parts of the state. Dr. Lapham concludes that this is not wholly due to the presence of Lake Michigan, but that the mountain range which extends from a little west of Lake Superior to the coast of Labrador (from 1,100 to 2,240 feet high) protects the lake region in no inconsiderable degree from the excessive cold of winter.

According to the same authority, the time at which the Milwaukee river was closed with ice, for a period of nine years, varied between November 15 and December 1; the time at which it became free from ice, between March 3 and April 13. In the lake district, snow and rain are interspersed through all the winter months, rain being sometimes as profuse as at any other season. In the northwestern part the winter is more rigid and dry. Northern New York and the New England states usually have snow lying on the ground the whole winter, but in the southern lake district it rarely remains so long. In 1842-'43, however, sleighing commenced about the middle of November, and lasted till about the same time in April — five months.

The average temperature for the three months of spring, March, April and May, from Walworth county to St. Paul, is about 45°. In central Wisconsin the mean for March is about 27°, which is an increase of nearly 7° from February. The lowest temperature of this month in 1876 was 40° above zero. April shows an average increase of about 9° over March. In 1876 the line of 45° for this month passed from LaCrosse to Evanston, Ill., touching Lake Erie at Toledo, showing that the interior west of Lake Michigan is warmer than the lake region. The change from winter to spring is more sudden in the interior than in the vicinity of the lakes. "In the town of Lisbon, fifteen miles from Lake Michigan," says Dr. Lapham, "early spring flowers show themselves about ten days earlier than on the lake. In spring vegetation, in places remote from the lakes, shoots up in a very short time, and flowers show their petals, while on the lake shore the cool air retards them and brings them more gradually into existence." The increase from April to May is about 15°. In May, 1876, Pembina and Milwaukee had nearly the same mean temperature, about 55°.

The extremes of our climate and the sudden changes of temperature no doubt have a marked influence, both physically and mentally, on the American people. And though a more equable climate may be more conducive to perfect health, the great range of our climate from arctic to tropical, and the consequent variety and abundance of vegetable products, combine to make the Mississippi valley perhaps one of the most favorable areas in the world for the development of a strong and wealthy nation.

During the months of summer, in the interior of the eastern United States, at least three-fourths of the rain-fall is in showers usually accompanied by electrical discharges and limited to small areas. But in autumn, winter, and spring nearly the whole precipitation takes place in general storms extending over areas of 300, 500 and sometimes over 1,000 miles in diameter, and generally lasting two or three days. An area of low atmospheric pressure causes the wind to blow toward that area from all sides, and when the depression is sudden and great, it is accompanied by much rain or snow. On account of the earth's rotation, the wind blowing toward this region of low pressure is deflected to the right, causing the air to circulate around the center with a motion spirally inward. In our latitude the storm commences with east winds. When the storm center, or area of lowest barometer, is to the south of us, the wind gradually veers, as the storm passes from west to east with the upper current, round to the northwest by the north point. On the south side of the storm center, the wind veers from southeast to southwest, by the south point. The phenomena attending such a storm when we are in or near the part of its center are usually as follows: After the sky has become overcast with clouds, the wind from the northeast generally begins to rise and blows in the opposing direction to the march of the storm. The clouds which are now moving over us, discharge rain or snow according to circumstances. The barometer continues to fall, and the rain or snow is brought obliquely down from the northern quarter by the prevailing wind. After a while the wind changes slightly in direction and then ceases. The thermometer rises and the barometer has reached its lowest point. This is the center of the storm. After the calm the wind has changed its direction to northwest or west. The

wind blows again, usually more violently than before, accompanied by rain or snow, which is now generally of short duration. The sky clears, and the storm is suddenly succeeded by a temperature 10 or 20 degrees below the mean. Most of the rain and snow falls with the east winds, or before the center passes a given point. The path of these storms is from west to east, or nearly so, and only seldom in other directions. These autumn, winter, and spring rains are generally first noticed on the western plains, but may originate at any point along their path, and move eastward with an average velocity of about 20 miles an hour in summer and 30 miles in winter, but sometimes attaining a velocity of over 50 miles, doing great damage on the lakes. In predicting these storms, the signal service of the army is of incalculable practical benefit, as well as in collecting data for scientific conclusions.

A subject of the greatest importance to every inhabitant of Wisconsin is the influence of forests on climate and the effects of disrobing a county of its trees. The general influence of forests in modifying the extremes of temperature, retarding evaporation and the increased humidity of the air, has already been mentioned. That clearing the land of trees increases the temperature of the ground in summer, is so readily noticed that it is scarcely necessary to mention it; while in winter the sensible cold is never so extreme in woods as on an open surface exposed to the full force of the winds. "The lumbermen in Canada and the northern United States labor in the woods without inconvenience, when the mercury stands many degrees below zero, while in the open grounds, with only a moderate breeze, the same temperature is almost insupportable." "In the state of Michigan it has been found that the winters have greatly increased in severity within the last forty years, and that this increased severity seems to move along even-paced with the destruction of the forests. Thirty years ago the peach was one of the most abundant fruits of that State; at that time frost, injurious to corn at any time from May to October, was a thing unknown. Now the peach is an uncertain crop, and frost often injures the corn." The precise influence of forests on temperature may not at present admit of definite solution, yet the mechanical screen which they furnish to the soil often far to the leeward of them, is sufficiently established, and this alone is enough to encourage extensive planting wherever this protection is wanting.

With regard to the quantity of rain-fall, "we can not positively affirm that the total annual quantity of rain is even locally diminished or increased by the destruction of the woods, though both theoretical considerations and the balance of testimony strongly favor the opinion that more rain falls in wooded than in open countries. One important conclusion, at least, upon the meteorological influence of forests is certain and undisputed: the proposition, namely, that, within their own limits, and near their own borders, they maintain a more uniform degree of humidity in the atmosphere than is observed in cleared grounds. Scarcely less can it be questioned that they tend to promote the frequency of showers, and, if they do not augment the amount of precipitation, they probably equalize its distribution through the different seasons."

There is abundant and undoubted evidence that the amount of water existing on the surface in lakes and rivers, in many parts of the world, is constantly diminishing. In Germany, observations of the Rhine, Oder, Danube, and the Elbe, in the latter case going back for a period of 142 years, demonstrate beyond doubt, that each of these rivers has much decreased in volume, and there is reason to fear that they will eventually disappear from the list of navigable rivers.

"The 'Blue-Grass' region of Kentucky, once the pride of the West, has now districts of such barren and arid nature that their stock farmers are moving toward the Cumberland mountains, because the creeks and old springs dried up, and their wells became too low to furnish water for their cattle." In our own state "such has been the change in the flow of the Milwau-

kee river, even while the area from which it receives its supply is but partially cleared, that the proprietors of most of the mills and factories have found it necessary to resort to the use of steam, at a largely increased yearly cost, to supply the deficiency of water-power in dry seasons of the year." "What has happened to the Milwaukee river, has happened to all the other water courses in the state from whose banks the forest has been removed; and many farmers who selected land upon which there was a living brook of clear, pure water, now find these brooks dried up during a considerable portion of the year."

Districts stripped of their forest are said to be more exposed than before to loss of harvests, to droughts and frost. "Hurricanes, before unknown, sweep unopposed over the regions thus denuded, carrying terror and devastation in their track." Parts of Asia Minor, North Africa, and other countries bordering on the Mediterranean, now almost deserts, were once densely populated and the granaries of the world. And there is good reason to believe "that it is the destruction of the forests which has produced this devastation." From such facts Wisconsin, already largely robbed of its forests, should take warning before it is too late.

TREES, SHRUBS AND VINES.

By P. R. HOY, M.D.

It is not the purpose of this article to give a botanical description, but merely brief notes on the economical value of the woods, and the fitness of the various indigenous trees, shrubs and vines for the purpose of ornament, to be found in Wisconsin.

WHITE OAK—*Quercus Alba*.—This noble tree is the largest and most important of the American oaks. The excellent properties of the wood render it eminently valuable for a great variety of uses. Wherever strength and durability are required, the white oak stands in the first rank. It is employed in making wagons, coaches and sleds; staves and hoops of the best quality for barrels and casks are obtained from this tree; it is extensively used in architecture, ship-building, etc.; vast quantities are used for fencing; the bark is employed in tanning. The domestic consumption of this tree is so great that it is of the first importance to preserve the young trees wherever it is practicable, and to make young plantations where the tree is not found. The white oak is a graceful, ornamental tree, and worthy of particular attention as such; found abundantly in most of the timbered districts.

BURR OAK—*Q. Macrocarpa*.—This is perhaps the most ornamental of our oaks. Nothing can exceed the graceful beauty of these trees, when not crowded or cramped in their growth, but left free to follow the laws of their development. Who has not admired these trees in our extensive burr oak openings? The large leaves are a dark green above and a bright silvery white beneath, which gives the tree a singularly fine appearance when agitated by the wind. The wood is tough, close-grained, and more durable than the white oak, especially when exposed to frequent changes of moisture and drying; did the tree grow to the same size, it would be preferred for most uses. Abundant, and richly worthy of cultivation, both for utility and ornament.

SWAMP WHITE OAK—*Q. Bicolor*.—Is a valuable and ornamental tree, not quite so large or as common as the burr oak. The wood is close-grained, durable, splits freely, and is well worthy of cultivation in wet, swampy grounds, where it will thrive.

POST OAK—*Q. Obtusiloba*.—Is a scraggy, small tree, found sparingly in this state. The timber is durable, and makes good fuel. Not worthy of cultivation.

SWAMP CHESTNUT OAK—*Q. Prinus*.—This species of chestnut oak is a large, graceful tree, wood rather open-grained, yet valuable for most purposes to which the oaks are applied; makes the best fuel of any of this family. A rare tree, found at Janesville and Brown's lake, near Burlington. Worthy of cultivation.

RED OAK—*Q. Rubra*.—The red oak is a well-known, common, large tree. The wood is coarse-grained, and the least durable of the oaks, nearly worthless for fuel, and scarcely worthy of cultivation, even for ornament.

PIN OAK—*Q. Palustris*.—This is one of the most common trees in many sections of the state. The wood is of little value except for fuel. The tree is quite ornamental, and should be sparingly cultivated for this purpose.

SHINGLE OAK—*Q. Imbricaria*.—Is a tree of medium size, found sparingly as far north as Wisconsin. It is ornamental, and the wood is used for shingles and staves.

SCARLET OAK—*Q. Coccinea*.—This is an ornamental tree, especially in autumn, when its leaves turn scarlet, hence the name. Wood of little value; common.

SUGAR MAPLE—*Acer Saccharium*.—This well-known and noble tree is found growing abundantly in many sections of the state. The wood is close-grained and susceptible of a beautiful polish, which renders it valuable for many kinds of furniture, more especially the varieties known as bird's-eye and curled maples. The wood lacks the durability of the oak; consequently is not valuable for purposes where it will be exposed to the weather. For fuel it ranks next to hickory. The sugar manufactured from this tree affords no inconsiderable resource for the comfort and even wealth of many sections of the northern states, especially those newly settled, where it would be difficult and expensive to procure their supply from a distance. As an ornamental tree it stands almost at the head of the catalogue. The foliage is beautiful, compact, and free from the attacks of insects. It puts forth its yellow blossoms early, and in the autumn the leaves change in color and show the most beautiful tints of red and yellow long before they fall. Worthy of especial attention for fuel and ornament, and well adapted to street-planting.

RED MAPLE—*A. Rubrum*.—Is another fine maple of more rapid growth than the foregoing species. With wood rather lighter, but quite as valuable for cabinet-work — for fuel not quite so good. The young trees bear transplanting even better than other maples. Though highly ornamental, this tree hardly equals the first-named species. It puts forth, in early spring, its scarlet blossoms before a leaf has yet appeared. Well adapted to street-planting.

MOUNTAIN MAPLE—*A. Spicatum*.—Is a small branching tree, or rather shrub, found growing in clumps. Not worthy of much attention.

SILVER MAPLE—*A. Dasycarpum*.—This is a common tree growing on the banks of streams, especially in the western part of the state, grown largely for ornament, yet for the purpose it is the least valuable of the maples. The branches are long and straggling, and so brittle that they are liable to be injured by winds.

BOX MAPLE—*Negundo Aceroides*.—This tree is frequently called box elder. It is of a rapid growth and quite ornamental. The wood is not much used in the arts, but is good fuel. Should be cultivated. It grows on Sugar and Rock rivers.

WHITE ELM—*Ulmus Americana*.—This large and graceful tree stands confessedly at the head of the list of ornamental deciduous trees. Its wide-spreading branches and long, pendulous branchlets form a beautiful and conspicuous head. It grows rapidly, is free from disease and the destructive attacks of insects, will thrive on most soils, and for planting along streets, in public grounds or lawns, is unsurpassed by any American tree. The wood is but little used in the arts; makes good firewood; should be planted along all the roads and streets, near every dwelling, and on all public grounds.

SLIPPERY ELM—*V. Fulva*.—This smaller and less ornamental species is also common. The wood, however, is much more valuable than the white elm, being durable and splitting readily. It makes excellent rails, and is much used for the framework of buildings; valuable for fuel; should be cultivated.

WILD BLACK CHERRY—*Cerasus Serotina*.—This large and beautiful species of cherry is one of the most valuable of American trees. The wood is compact, fine-grained, and of a brilliant reddish color, not liable to warp, or shrink and swell with atmospheric changes; extensively employed by cabinet-makers for every species of furnishing. It is exceedingly durable, hence is valuable for fencing, building, etc. Richly deserves a place in the lawn or timber plantation.

BIRD CHERRY—*C. Pennsylvanica*.—Is a small northern species, common in the state and worthy of cultivation for ornament.

CHOKER CHERRY—*C. Virginiana*.—This diminutive tree is of little value, not worth the trouble of cultivation.

WILD PLUM—*Prunus Americana*.—The common wild plum when in full bloom is one of the most ornamental of small flowering trees, and as such should not be neglected. The fruit is rather agreeable, but not to be compared to fine cultivated varieties, which may be engrafted on the wild stock to the very best advantage. It is best to select small trees, and work them on the roots. The grafts should be inserted about the middle of April.

HACKBERRY—*Celtis Occidentalis*.—This is an ornamental tree of medium size; wood hard, close-grained and elastic; makes the best of hoops, whip-stalks, and thills for carriages. The Indians formerly made great use of the hackberry wood for their bows. A tree worthy of a limited share of attention.

AMERICAN LINDEN OR BASSWOOD—*Tilia Americana*.—Is one of the finest ornamental trees for public grounds, parks, etc., but will not thrive where the roots are exposed to bruises; for this reason it is not adapted to planting along the streets of populous towns. The wood is light and tough, susceptible of being bent to almost any curve; durable if kept from the weather; takes paint well, and is considerably used in the arts; for fuel it is of little value. This tree will flourish in almost any moderately rich, damp soil; bears transplanting well; can be propagated readily from layers.

WHITE THORN—*Crataegus Coccinea*, and DOTTED THORN—*C. Punctata*.—These two species of thorn are found everywhere on the rich bottom lands. When in bloom they are beautiful, and should be cultivated for ornament. The wood is remarkably compact and hard, and were it not for the small size of the tree, would be valuable.

CRAB APPLE—*Pyrus Coronaria*.—This common small tree is attractive when covered with its highly fragrant rose-colored blossoms. Wood hard, fine, compact grain, but the tree is too small for the wood to be of much practical value. Well worthy of a place in extensive grounds.

MOUNTAIN ASH—*P. Americana*.—This popular ornament to our yards is found growing in the northern part of the state and as far south as 43°. The wood is useless.

WHITE ASH—*Fraxinus Acuminata*.—Is a large, interesting tree, which combines utility with beauty in an eminent degree. The wood possesses strength, suppleness and elasticity, which renders it valuable for a great variety of uses. It is extensively employed in carriage manufacturing; for various agricultural implements; is esteemed superior to any other wood for oars; excellent for fuel. The white ash grows rapidly, and in open ground forms one of the most lovely trees that is to be found. The foliage is clean and handsome, and in autumn turns from its bright green to a violet purple hue, which adds materially to the beauty of our autumnal sylvan scenery. It is richly deserving our especial care and protection, and will amply repay all labor and expense bestowed on its cultivation.

BLACK ASH—*F Sambucifolia*.—This is another tall, graceful and well-known species of ash. The wood is used for making baskets, hoops, etc. ; when thoroughly dry, affords a good article of fuel. Deserves to be cultivated in low, rich, swampy situations, where more useful trees will not thrive.

BLACK WALNUT—*Juglans Nigra*.—This giant of the rich alluvial bottom lands claims special attention for its valuable timber. It is among the most durable and beautiful of American woods ; susceptible of a fine polish ; not liable to shrink and swell by heat and moisture. It is extensively employed by the cabinet-makers for every variety of furniture. Walnut forks, are frequently found which rival in richness and beauty the far-famed mahogany. This tree, in favorable situations, grows rapidly ; is highly ornamental, and produces annually an abundant crop of nuts.

BUTTERNUT—*J. Cinerea*.—This species of walnut is not as valuable as the above, yet for its beauty, and the durability of its wood, it should claim a small portion of attention. The wood is rather soft for most purposes to which it otherwise might be applied. When grown near streams, or on moist side-hills, it produces regularly an ample crop of excellent nuts. It grows rapidly.

SHELL-BARK HICKORY—*Carya Alba*.—This, the largest and finest of American hickories, grows abundantly throughout the state. Hickory wood possesses probably the greatest strength and tenacity of any of our indigenous trees, and is used for a variety of purposes, but, unfortunately, it is liable to be eaten by worms, and lacks durability. For fuel, the shell-bark hickory stands unrivaled. The tree is ornamental and produces every alternate year an ample crop of the best of nuts.

SHAG-BARK HICKORY—*C. Inclata*.—Is a magnificent tree, the wood of which is nearly as valuable as the above. The nuts are large, thick-shelled and coarse, not to be compared to the *C. alba*. A rare tree in Wisconsin ; abundant further south.

PIGNUT HICKORY—*C. Glabra*.—This species possesses all the bad and but few of the good qualities of the shell-bark. The nuts are smaller and not so good. The tree should be preserved and cultivated in common with the shell-bark. Not abundant.

BITTERNUT—*C. Amara*.—Is an abundant tree, valuable for fuel, but lacking the strength and elasticity of the preceding species. It is, however, quite as ornamental as any of the hickories.

RED BEECH—*Fagus Ferruginea*.—This is a common tree, with brilliant, shining light-green leaves, and long, flexible branches. It is highly ornamental, and should be cultivated for this purpose, as well as for its useful wood, which is tough, close-grained and compact. It is much used for plane-stocks, tool handles, etc., and as an article of fuel is nearly equal to maple.

WATER BEECH—*Carpinus Americana*.—Is a small tree, called hornbeam by many. The wood is exceedingly hard and compact, but the small size of the tree renders it almost useless.

IRON WOOD—*Ostrya Virginica*.—This small tree is found disseminated throughout most of our woodlands. It is, to a considerable degree, ornamental, but of remarkably slow growth. The wood possesses valuable properties, being heavy and strong, as the name would indicate ; yet, from its small size, it is of but little use.

BALSAM POPLAR—*Populus Candicans*.—This tree is of medium size, and is known by several names : Wild balm of Gilead, cottonwood, etc. It grows in moist, sandy soil, on river bottoms. It has broad, heart-shaped leaves, which turn a fine yellow after the autumn frosts. It grows more rapidly than any other of our trees ; can be transplanted with entire success when eight or nine inches in diameter, and makes a beautiful shade tree—the most ornamental of poplars. The wood is soft, spongy, and nearly useless.

QUAKING ASPEN—*P. Tremuloides*.—Is a well-known, small tree. It is rather ornamental, but scarcely worth cultivating.

LARGE ASPEN—*P. Grandidentata*.—Is the largest of our poplars. It frequently grows to the height of sixty or seventy feet, with a diameter of two and one-half feet. The wood is soft, easily split, and used for frame buildings. It is the most durable of our poplars.

COTTON WOOD—*P. Monolifera*.—This is the largest of all the poplars; abundant on the Mississippi river. Used largely for fuel on the steamboats. The timber is of but little use in the arts.

SYCAMORE OR BUTTONWOOD—*Platanus Occidentalis*.—This, the largest and most majestic of our trees, is found growing only on the rich alluvial river bottoms. The tree is readily known, even at a considerable distance, by its whitish smooth branches. The foliage is large and beautiful, and the tree one of the most ornamental known. The wood speedily decays, and when sawed into lumber warps badly; on these accounts it is but little used, although susceptible of a fine finish. As an article of fuel it is of inferior merit.

CANOE BIRCH—*Betula Papyracea*.—Is a rather elegant and interesting tree. It grows abundantly in nearly every part of the state. The wood is of a fine glossy grain, susceptible of a good finish, but lacks durability and strength, and, therefore, is but little used in the mechanical arts. For fuel it is justly prized. It bears transplanting without difficulty. The Indians manufacture their celebrated bark canoes from the bark of this tree.

CHERRY BIRCH—*B. Lenta*.—This is a rather large, handsome tree, growing along streams. Leaves and bark fragrant. Wood, fine-grained, rose-colored; used largely by the cabinet-makers.

YELLOW BIRCH—*B. Lutea*.—This beautiful tree occasionally attains a large size. It is highly ornamental, and is of value for fuel; but is less prized than the preceding species for cabinet work.

KENTUCKY COFFEE TREE—*Gymnocladus Canadensis*.—This singularly beautiful tree is only found sparingly, and on rich alluvial lands. I met with it growing near the Peccatonica, in Green county. The wood is fine-grained, and of a rosy hue; is exceedingly durable, and well worth cultivating.

JUNE BERRY—*Amelanchier Canadensis*.—Is a small tree which adds materially to the beauty of our woods in early spring, at which time it is in full bloom. The wood is of no particular value, and the tree interesting only when covered with its white blossoms.

WHITE PINE—*Pinus Strobus*.—This is the largest and most valuable of our indigenous pines. The wood is soft, free from resin, and works easily. It is extensively employed in the mechanical arts. It is found in great profusion in the northern parts of the state. This species is readily known by the leaves being in *fives*. It is highly ornamental, but in common with all pines, will hardly bear transplanting. Only small plants should be moved.

NORWAY OR RED PINE—*P. Resinosa*, and YELLOW PINE—*P. Mittis*.—These are two large trees, but little inferior in size to the white pine. The wood contains more resin, and is consequently more durable. The leaves of both these species are in *twos*. Vast quantities of lumber are yearly manufactured from these two varieties and the white pine. The extensive pineries of the state are rapidly diminishing.

SHRUB PINE—*P. Banksiana*.—Is a small, low tree; only worthy of notice here for the ornamental shade it produces. It is found in the northern sections of the state.

BALSAM FIR—*Abies Balsamea*.—This beautiful evergreen is multiplied to a great extent on the shores of Lake Superior, where it grows forty or fifty feet in height. The wood is of but

little value The balsam of fir, or Canadian balsam, is obtained from this tree.

DOUBLE SPRUCE—*A. Nigra*.—This grows in the same localities with the balsam fir, and assumes the same pyramidal form, but is considerably larger. The wood is light and possesses considerable strength and elasticity, which renders it one of the best materials for yards and top-masts for shipping. It is extensively cultivated for ornament.

HEMLOCK—*A. Canadensis*.—The hemlock is the largest of the genus. It is gracefully ornamental, but the wood is of little value. The bark is extensively employed in tanning.

TAMARACK—*Larix Americana*.—This beautiful tree grows abundantly in swampy situations throughout the state. It is not quite an evergreen. It drops its leaves in winter, but quickly recovers them in early spring. The wood is remarkably durable and valuable for a variety of uses. The tree grows rapidly, and can be successfully cultivated in peaty situations, where other trees would not thrive.

ARBOR VITÆ—*Thuja Occidentalis*.—This tree is called the white or flat cedar. It grows abundantly in many parts of the state. The wood is durable, furnishing better fence posts than any other tree, excepting the red cedar. Shingles and staves of a superior quality are obtained from these trees. A beautiful evergreen hedge is made from the young plants, which bear transplanting better than most evergreens. It will grow on most soils if sufficiently damp.

RED CEDAR — *Juniperus Virginiana*.—Is a well known tree that furnishes those celebrated fence posts that "last forever." The wood is highly fragrant, of a rich red color, and fine grained; hence it is valuable for a variety of uses. It should be extensively cultivated.

DWARF JUNIPER — *J. Sabina*.—This is a low trailing shrub. Is considerably prized for ornament. Especially worthy of cultivation in large grounds.

SASSAFRAS — *Sassafras officinale*.—Is a small tree of fine appearance, with fragrant leaves bark. Grows in Kenosha county. Should be cultivated.

WILLOWS.—There are many species of willows growing in every part of the state, several of which are worthy of cultivation near streams and ponds.

WHITE WILLOW — *Salix alba*.—Is a fine tree, often reaching sixty feet in height. The wood is soft, and makes the best charcoal for the manufacture of gun-powder. Grows rapidly.

BLACK WILLOW — *S. Nigra*.—This is also a fine tree, but not quite so large as the foregoing. It is used for similar purposes.

There are many shrubs and vines indigenous to the state worthy of note. I shall, however, call attention to only a few of the best.

DOGWOODS. — There are several species found in our forests and thickets. All are ornamental when covered with a profusion of white blossoms. I would especially recommend: *corus sericea*, *C. stolonifera*, *C. paniculata*, and *C. alternifolia*. All these will repay the labor of transplanting to ornamental grounds.

VIBURNUMS.—These are very beautiful. We have *viburnum lentago*, *V. prunifolium*, *V. nudum*, *V. dentatum*, *V. pubescens*, *V. acerifolium*, *V. pauciflorum*, and *V. opulus*. The last is known as the cranberry tree, and is a most beautiful shrub when in bloom, and also when covered with its red, acid fruit. The common snow-ball tree is a cultivated variety of the *V. opulus*.

WITCH HAZEL — *Hamamelis Virginica*.—Is an interesting, tall shrub that flowers late in autumn, when the leaves are falling, and matures the fruit the next summer. It deserves more attention than it receives.

BURNING BUSH — *Euonymus atropurpureus*. — This fine shrub is called the American strawberry, and is exceedingly beautiful when covered with its load of crimson fruit, which remains during winter.

SUMACH — *Rhus typhina*. — Is a tall shrub, well known, but seldom cultivated. When well grown it is ornamental and well adapted for planting in clumps.

HOP TREE — *Ptelea trifoliata*. — This is a showy shrub with shining leaves, which should be cultivated. Common in rich, alluvial ground.

BLADDER NUT — *Staphylea trifolia*. — Is a fine, upright, showy shrub, found sparingly all over the state. Is ornamental, with greenish striped branches and showy leaves.

VINES.

VIRGINIA CREEPER — *Ampelopsis quinquefolia*. — This is a noble vine, climbing extensively by disc-bearing tendrils, so well known as to require no eulogy. Especially beautiful in its fall colors.

BITTER SWEET — *Celastrus scandens*. — Is a stout twining vine, which would be an ornament to any grounds. In the fall and early winter it is noticeable for its bright fruit. Common.

YELLOW HONEYSUCKLE — *Lonicera flava*. — Is a fine native vine, which is found climbing over tall shrubs and trees. Ornamental. There are several other species of honeysuckle; none, however, worthy of special mention.

FROST GRAPE — *Vitis cordifolia*. — This tall-growing vine has deliciously sweet blossoms, which perfume the air for a great distance around. For use as a screen, this hardy species will be found highly satisfactory.

FAUNA OF WISCONSIN.

By P. R. HOY, M.D.

FISH AND FISH CULTURE.

Fish are cold blooded aquatic vertebrates, having fins as organs of progression. They have a two-chambered heart; their bodies are mostly covered with scales, yet a few are entirely naked, like catfish and eels; others again are covered with curious plates, such as the sturgeon. Fish inhabit both salt and fresh water. It is admitted by all authority that fresh-water fish are more universally edible than those inhabiting the ocean. Marine fish are said to be more highly flavored than those inhabiting fresh waters; an assertion I am by no means prepared to admit. As a rule, fish are better the colder and purer the water in which they are found, and where can you find those conditions more favorable than in the cold depths of our great lakes? We have tasted, under the most favorable conditions, about every one of the celebrated salt-water fish, and can say that whoever eats a whitefish just taken from the pure, cold water of Lake Michigan will have no reason to be envious of the dwellers by the sea.

Fish are inconceivably prolific; a single female deposits at one spawn from one thousand to one million eggs, varying according to species.

Fish afford a valuable article of food for man, being highly nutritious and easy of digestion; they abound in phosphates, hence are valuable as affording nutrition to the osseous and nervous system, hence they have been termed, not inappropriately, brain food—certainly a very desirable article of diet for some people. They are more savory, nutritious and easy of digestion when just taken from the water; in fact, the sooner they are cooked after being caught the better. No fish should be more than a few hours from its watery element before being placed upon the table. For convenience, I will group our fish into families as a basis for what I shall offer. Our bony fish,

having spine rays and covered with comb-like scales, belong to the perch family—a valuable family; all take the hook, are gamey, and spawn in the summer.

The yellow perch and at least four species of black or striped bass have a wide range, being found in all the rivers and lakes in the state. There is a large species of fish known as Wall-eyed pike (*Leucoperca americana*) belonging to this family, which is found sparingly in most of our rivers and lakes. The pike is an active and most rapacious animal, devouring fish of considerable size. The flesh is firm and of good flavor. It would probably be economical to propagate it to a moderate extent.

The six-spined bass (*Pomoxys hexacanthus*, Agas.) is one of the most desirable of the spine-rayed fish found in the State. The flesh is fine flavored, and as the fish is hardy and takes the hook with avidity, it should be protected during the spawning season and artificially propagated. I have examined the stomachs of a large number of these fish and in every instance found small crawfish, furnishing an additional evidence in its favor. Prof. J. P. Kirtland, the veteran ichthyologist of Ohio, says that this so-called "grass bass" is the fish for the million.

The white bass (*Roccus chrysops*) is a species rather rare even in the larger bodies of water, but ought to be introduced into every small lake in the State, where I am certain they would flourish. It is an excellent fish, possessing many of the good qualities and as few of the bad as any that belong to the family. There is another branch of this family, the sunfish, *Pomotis*, which numbers at least six species found in Wisconsin. They are beautiful fish, and afford abundant sport for the boys; none of them, however, are worth domesticating (unless it be in the *aquarium*) as there are so many better.

The carp family (*Cyprinidæ*) are soft finned fish without maxillary teeth. They include by far the greater number of fresh-water fish. Some specimens are not more than one inch, while others are nearly two feet in length. Our chubs, silversides and suckers are the principal members of this family. Dace are good pan-fish, yet their small size is objectionable; they are the children's game fish. The *Cyprinidæ* all spawn in the spring, and might be profitably propagated as food for the larger and more valuable fish.

There are six or seven species of suckers found in our lakes and rivers. The red horse, found every where, and at least one species of the buffalo, inhabiting the Mississippi and its tributaries, are the best of the genus *Catostomus*. Suckers are bony, and apt to taste suspiciously of mud; they are only to be tolerated in the absence of better. The carp (*Cyprinius carpo*) has been successfully introduced into the Hudsonriver.

The trout family (*Salmonidæ*) are soft-finned fish with an extra dorsal adipose fin without rays. They inhabit northern countries, spawning in the latter part of fall and winter. Their flesh is universally esteemed. The trout family embrace by far the most valuable of our fish, including, as it does, trout and whitefish. The famous speckled trout (*Salmo fontinalis*) is a small and beautiful species which is found in nearly every stream in the northern half of the State. Wherever there is a spring run or lake, the temperature of which does not rise higher than sixty-five or seventy in the summer, there trout can be propagated in abundance. The great salmon trout (*Sal. amethystus*) of the great lakes is a magnificent fish weighing from ten to sixty pounds. The *Siscowit salmo siscowit* of Lake Superior is about the same size, but not quite so good a fish, being too fat and oily. They will, no doubt, flourish in the larger of the inland lakes.

The genus *Coregonus* includes the true whitefish, or lake shad. In this genus, as now restricted, the nose is square and the under jaw short, and when first caught they have the fragrance of fresh cucumbers. There are at least three species found in Lake Michigan. In my

opinion these fish are more delicately flavored than the celebrated Potomac shad; but I doubt whether they will thrive in the small lakes, owing to the absence of the small *crustacea* on which they subsist. The closely allied genus *Argyrosomus* includes seven known species inhabiting the larger lakes, and one, the *Argyrosomus sisco*, which is found in several of the lesser lakes. The larger species are but little inferior to the true whitefish, with which they are commonly confounded. The nose is pointed, the under jaw long, and they take the hook at certain seasons with activity. They eat small fish as well as insects and *crustaceans*.

Of the pickerel family, we have three or four closely allied species of the genus *Esox*, armed with prodigious jaws filled with cruel teeth. They lie motionless ready to dart, swift as an arrow, upon their prey. They are the sharks of the fresh water. The pickerel are so rapacious that they spare not their own species. Sometimes they attempt to swallow a fish nearly as large as themselves, and perish in consequence. Their flesh is moderately good, and as they are game to the backbone, it might be desirable to propagate them to a moderate extent under peculiar circumstances.

The catfish (*Siluridae*) have soft fins, protected by sharp spines, and curious fleshy barbels floating from their lips, without scales, covered only with a slimy coat of mucus. The genus *Pimlodus* are scavengers among fish, as vultures among birds. They are filthy in habit and food. There is one interesting trait of the catfish—the vigilant and watchful motherly care of the young by the male. He defends them with great spirit, and herds them together when they straggle. Even the mother is driven far off; for he knows full well that she would not scruple to make a full meal off her little black tadpole-like progeny. There are four species known to inhabit this State—one peculiar to the great lakes, and two found in the numerous affluents of the Mississippi. One of these, the great yellow catfish, sometimes weighs over one hundred pounds. When in good condition, stuffed and well baked, they are a fair table fish. The small bull-head is universally distributed.

The sturgeons are large sluggish fish, covered with plates instead of scales. There are at least three species of the genus *Acipenser* found in the waters of Wisconsin. Being so large and without bones, they afford a sufficiently cheap article of food; unfortunately, however, the quality is decidedly bad. Sturgeons deposit an enormous quantity of eggs; the roe not unfrequently weighs one fourth as much as the entire body, and numbers, it is said, many millions. The principal commercial value of sturgeons is found in the roe and swimming bladder. The much prized caviare is manufactured from the former, and from the latter the best of isinglass is obtained.

The gar-pikes (*Lepidosteus*) are represented by at least three species of this singular fish. They have long serpentine bodies, with jaws prolonged into a regular bill, which is well provided with teeth. The scales are composed of bone covered on the outside with enamel, like teeth. The alligator gar, confined to the depths of the Mississippi, is a large fish, and the more common species, *Lepidosteus bison*, attains to a considerable size. The *Lepidosteus*, now only found in North America, once had representatives all over the globe. Fossils of the same family of which the gar-pike is the type, have been found all over Europe, in the oldest fossiliferous beds, in the strata of the age of coal, in the new red sandstone, in oölitic deposits, and in the chalk and tertiary formations—being one of the many living evidences that North America was the first country above the water. For all practical purposes, we should not regret to have the gar-pikes follow in the footsteps of their aged and illustrious predecessors. They could well be spared.

There is a fish (*Lota maculose*) which belongs to the cod-fish family, called by the fishermen the "lawyers," for what reason I am not able to say—at any rate, the fish is worthless. There are a great number of small fish, interesting only to the naturalist, which I shall omit to mention here.

Fish of the northern countries are the most valuable, for the reason that the water is colder and purer. Wisconsin, situated between forty-two thirty, and forty-seven degrees of latitude, bounded on the east and north by the largest lakes in the world, on the west by the "Great river," traversed by numerous fine and rapid streams, and sprinkled all over with beautiful and picturesque lakes, has physical conditions certainly the most favorable, perhaps of any State, for an abundant and never-failing supply of the best fish. Few persons have any idea of the importance of the fisheries of Lake Michigan. It is difficult to collect adequate data to form a correct knowledge of the capital invested and the amount of fish taken; enough, however, has been ascertained to enable me to state that at Milwaukee alone \$100,000 are invested, and not less than two hundred and eighty tons of dressed fish taken annually. At Racine, during the entire season of nine months, there are, on an average, one thousand pounds of whitefish and trout, each, caught and sold daily, amounting to not less than \$16,000. It is well known that, since the adoption of the gill-net system, the fishermen are enabled to pursue their calling ten months of the year.

When the fish retire to the deep water, they are followed with miles of nets, and the poor fish are entangled on every side. There is a marked falling off in the number and size of whitefish and trout taken, when compared with early years. When fish were only captured with seines, they had abundant chance to escape and multiply so as to keep an even balance in number. Only by artificial propagation and well enforced laws protecting them during the spawning season, can we hope now to restore the balance. In order to give some idea of the valuable labors of the state fish commissioners, I will state briefly that they have purchased for the state a piece of property, situated three miles from Madison, known as the Nine Springs, including forty acres of land, on which they have erected a dwelling-house, barn and hatchery, also constructed several ponds, in which can be seen many valuable fish in the enjoyment of perfect health and vigor. As equipped, it is, undoubtedly, one of the best, if not *the best*, hatchery in the states. In this permanent establishment the commission design to hatch and distribute to the small lakes and rivers of the interior the most valuable of our indigenous fish, such as bass, pike, trout, etc., etc., as well as many valuable foreign varieties. During the past season, many fish have been distributed from this state hatchery. At the Milwaukee Water Works, the commission have equipped a hatchery on a large scale, using the water as pumped directly from the lake. During the past season there was a prodigious multitude of young trout and whitefish distributed from this point. The success of Superintendent Welcher in hatching whitefish at Milwaukee has been the best yet gained, nearly ninety per cent. of the eggs "laid down" being hatched. Pisciculturists will appreciate this wonderful success, as they well know how difficult it is to manage the spawn of the whitefish.

I append the following statistics of the number of fish hatched and distributed from the Milwaukee hatchery previous to 1878:

Total number of fish hatched, 8,000,000 — whitefish, 6,300,000; salmon trout, 1,700,000.

They were distributed as follows, in the month of May, 1877: Whitefish planted in Lake Michigan, at Racine, 1,000,000; at Milwaukee, 3,260,000; between Manitowoc and Two Rivers 1,000,000; in Green bay, 1,000,000; in Elkhart lake, 40,000.

Salmon trout were turned out as follows: Lake Michigan, near Milwaukee, 600,000; Brown's lake, Racine county, 40,000; Delavan lake, Walworth county, 40,000; Troy lake, Walworth county, 40,000; Pleasant lake, Walworth county, 40,000; Lansdale lake, Walworth county, 40,000; Ella lake, Milwaukee county, 16,000; Cedar lake, Washington county, 40,000; Elkhart lake, Sheboygan county, 40,000; Clear lake, Rock county, 40,000; Ripley lake,

Jefferson county, 40,000; Mendota lake, Dane county, 100,000; Fox lake, Dodge county, 40,000; Swan and Silver lakes, Columbia county, 40,000; Little Green lake, Green Lake county, 40,000; Big Green lake, Green Lake county, 100,000; Bass lake, St. Croix county, 40,000; Twin lakes, St. Croix county, 40,000; Long lake, Chippewa county, 40,000; Oconomowoc lake, Waukesha county, 100,000; Pine lake, Waukesha county, 40,000; Pewaukee lake, Waukesha county, 100,000; North lake, Waukesha county, 40,000; Nagawicka lake, Waukesha county, 40,000; Okanche lake, Waukesha county, 40,000.

LARGE ANIMALS.—TIME OF THEIR DISAPPEARANCE.

Fifty years ago, the territory now included in the state of Wisconsin, was nearly in a state of nature, all the large wild animals were then abundant. Now, all has changed. The ax and plow, gun and dog, railway and telegraph, have metamorphosed the face of nature. Most of the large quadrupeds have been either exterminated, or have hid themselves away in the wilderness. In a short time, all of these will have disappeared from the state. The date and order in which animals become extinct within the boundaries of the state, is a subject of great interest. There was a time when the antelope, the woodland caribou, the buffalo, and the wild turkey, were abundant, but are now no longer to be found.

The Antelope, *Antilocarpa Americana*, now confined to the Western plains, did, two hundred years ago, inhabit Wisconsin as far east as Michigan. In October, 1679, Father Hennepin, with La Salle and party, in four canoes, coasted along the Western shore of Lake Michigan. In Hennepin's narrative, he says; "The oldest of them" (the Indians) "came to us the next morning with their calumet of peace, and brought some *wild goats*." This was somewhere north of Milwaukee. "Being in sore distress, we saw upon the coast a great many ravens and eagles" (turkey vultures), "from whence we conjectured there was some prey, and having landed upon that place, we found above the half of a fat *wild goat*, which the wolves had strangled. This provision was very acceptable to us, and the rudest of our men could not but praise the Divine Providence which took so particular care of us." This must have been somewhere near Racine. "On the 16th" (October, 1679), "we met with abundance of game. A savage we had with us, killed several stags (deer) and *wild goats*, and our men a great many turkeys, very fat and big." This must have been south of Racine. These *goats* were undoubtedly antelopes. Schoolcraft mentions antelopes as occupying the Northwest territory.

When the last buffalo crossed the Mississippi is not precisely known. It is certain they lingered in Wisconsin in 1825. It is said there was a buffalo shot on the St. Croix river as late as 1832, so Wisconsin claims the last buffalo. The woodland caribou—*Rangifer caribou*—were never numerous within the limits of the state. A few were seen not far from La Pointe in 1845. The last wild turkey in the eastern portion of the state, was in 1846. On the Mississippi, one was killed in 1856. I am told by Dr. Walcott, that turkeys were abundant in Wisconsin previous to the hard winter of 1842-3, when snow was yet two feet deep in March, with a stout crust, so that the turkeys could not get to the ground. They became so poor and weak, that they could not fly, and thus became an easy prey to the wolves, foxes, wild cats, minks, etc., which exterminated almost the entire race. The Doctor says he saw but one single individual the next winter. Elk were on Hay river in 1863, and I have little doubt a few yet remain. Moose are not numerous, a few yet remain in the northwestern part of the state. I saw moose tracks on the Montreal river, near Lake Superior, in the summer of 1845. A few panthers may still inhabit the wilderness of Wisconsin. Benjamin Bones, of Racine, shot one on the headwaters of

Black river, December, 1863. Badgers are now nearly gone, and in a few years more, the only badgers found within the state, will be two legged ones. Beavers are yet numerous in the small lakes in the northern regions. Wolverines are occasionally met with in the northern forests. Bears, wolves, and deer, will continue to flourish in the northern and central counties, where underbrush, timber, and small lakes abound.

All large animals will soon be driven by civilization out of Wisconsin. The railroad and improved firearms will do the work, and thus we lose the primitive denizens of the forest and prairies.

PECULIARITIES OF THE BIRD FAUNA.

The facts recorded in this paper, were obtained by personal observations within fifteen miles of Racine, Wisconsin, latitude $42^{\circ} 46'$ north, longitude $87^{\circ} 48'$ west. This city is situated on the western shore of Lake Michigan, at the extreme southern point of the heavy lumbered district, the base of which rests on Lake Superior. Racine extends six miles further into the lake than Milwaukee, and two miles further than Kenosha. At this point the great prairie approaches near the lake from the west. The extreme rise of the mercury in summer, is from 90° to 100° Fahrenheit. The isothermal line comes further north in summer, and retires further south in winter than it does east of the great lakes, which physical condition will sufficiently explain the remarkable peculiarities of its animal life, the overlapping, as it were, of two distinct faunas. More especially is this true of birds, that are enabled to change their locality with the greatest facility. Within the past thirty years, I have collected and observed over three hundred species of birds, nearly half of all birds found in North America. Many species, considered rare in other sections, are found here in the greatest abundance. A striking peculiarity of the ornithological fauna of this section, is that southern birds go farther north in summer, while northern species go farther south in winter than they do east of the lakes. Of summer birds that visit us, I will enumerate a few of the many that belong to a more southern latitude in the Atlantic States. Nearly all nest with us, or, at least, did some years ago.

Yellow-breasted chat, *Icteria virdis*; mocking bird, *Mimus polyglottus*; great Carolina wren, *Thriothorus ludovicianus*; prothonotary warbler, *Protonotaria citrea*; summer red bird, *Pyrangia æstiva*; wood ibis, *Tantalus loeulator*.

Among Arctic birds that visit us in winter are:

Snowy owl, *Nyctea nivea*; great gray owl, *Syrnium cineris*; hawk owl, *Surnia ulula*; Arctic three-toed woodpecker, *Picoides arcticus*; banded three-toed woodpecker, *Picoides hirsutus*; magpie, *Pica hudsonica*; Canada jay, *Perisoreus canadensis*; evening grosbeak, *Hesperiphona vespertina*; Hudson titmouse, *Parus hudsonicus*; king eider, *Somateria spectabilis*; black-throated diver, *Colymbus arcticus*; glaucous gull, *Laurus glaucus*.

These examples are sufficient to indicate the rich avi fauna of Wisconsin. It is doubtful if there is another locality where the Canada jay and its associates visit in winter where the mocking bird nests in summer, or where the hawk owl flies silently over the spot occupied during the warmer days by the summer red bird and the yellow-breasted chat. But the ax has already leveled much of the great woods, so that there is now a great falling off in numbers of our old familiar feathered friends. It is now extremely doubtful if such a collection can ever again be made within the boundaries of this state, or indeed, of any other.

EDUCATIONAL HISTORY.

By PROF. EDWARD SEARING, STATE SUPERINTENDENT OF PUBLIC INSTRUCTION.

From the time of the earliest advent of the families of French traders into the region now known as Wisconsin, to the year 1818, when that region became part of Michigan territory, education was mostly confined to private instruction, or was sought by the children of the wealthier in the distant cities of Quebec, Montreal, and Detroit. The early Jesuit missionaries, and—subsequently to 1816, when it came under the military control of the United States—representatives of various other religious denominations, sought to teach the Indian tribes of this section. In 1823, Rev. Eleazar Williams, well known for his subsequent claim to be the Dauphin of France, and who was in the employ of the Episcopal Missionary Society, started a school of white and half-breed children on the west side of Fox river, opposite "Shanty-Town." A Catholic mission school for Indians was organized by an Italian priest near Green Bay, in 1830. A clause of the treaty with the Winnebago Indians, in 1832, bound the United States to maintain a school for their children near Prairie du Chien for a period of twenty-seven years.

THE ORIGINAL SCHOOL CODE.

From 1818 to 1836, Wisconsin formed part of Michigan territory. In the year 1837, Michigan was admitted into the Union as a state, and Wisconsin, embracing what is now Minnesota, Iowa, and a considerable region still further westward, was, by act of congress approved April 20th of the year previous, established as a separate territory. The act provided that the existing laws of the territory of Michigan should be extended over the new territory so far as compatible with the provisions of the act, subject to alteration or repeal by the new government created. Thus with the other statutes, the school code of Michigan became the original code of Wisconsin, and it was soon formally adopted, with almost no change, by the first territorial legislature, which met at Belmont. Although modified in some of its provisions almost every year, this imperfect code continued in force until the adoption of the state constitution in 1848. The first material changes in the code were made by the territorial legislature at its second session, in 1837, by the passage of a bill "to regulate the sale of school lands, and to provide for organizing, regulating, and perfecting common schools." It was provided in this act that as soon as twenty electors should reside in a surveyed township, they should elect a board of three commissioners, holding office three years, to lay off districts, to apply the proceeds of the leases of school lands to the payment of teachers' wages, and to call school meetings. It was also provided that each district should elect a board of three directors, holding office one year, to locate school-houses, hire teachers for at least three months in the year, and levy taxes for the support of schools. It was further provided that a third board of five inspectors should be elected annually in each town to examine and license teachers and inspect the schools. Two years subsequently (1839) the law was revised and the family, instead of the electors, was made the basis of the town organization. Every town with not less than ten families was made a school district and required to provide a competent teacher. More populous towns were divided into two or more districts. The office of town commissioner was abolished, its duties with certain others being transferred to the inspectors. The rate-bill system of taxation, previously in existence, was repealed, and a tax on the whole county for building school-houses and support-

ing schools was provided for. One or two years later the office of town commissioners was restored, and the duties of the inspectors were assigned to the same. Other somewhat important amendments were made at the same time.

In 1840, a memorial to congress from the legislature represented that the people were anxious to establish a common-school system, with suitable resources for its support. From lack of sufficient funds many of the schools were poorly organized. The rate-bill tax or private subscription was often necessary to supplement the scanty results of county taxation. Until a state government should be organized, the fund accruing from the sale of school lands could not be available. Congress had made to Wisconsin, as to other new states, for educational purposes, a donation of lands. These lands embraced the sixteenth section in every township in the state, the 500,000 acres to which the state was entitled by the provisions of an act of congress passed in 1841, and any grant of lands from the United States, the purposes of which were not specified. To obtain the benefits of this large fund was a leading object in forming the state constitution.

AGITATION FOR FREE SCHOOLS.

Shortly before the admission of the state the subject of free schools began to be quite widely discussed. In February, 1845, Col. M. Frank, of Kenosha, a member of the territorial legislature, introduced a bill, which became a law, authorizing the legal voters of his own town to vote taxes on all the assessed property for the full support of its schools. A provision of the act required its submission to the people of the town before it could take effect. It met with strenuous opposition, but after many public meetings and lectures held in the interests of public enlightenment, the act was ratified by a small majority in the fall of 1845, and thus the first free school in the state was legally organized. Subsequently, in the legislature, in the two constitutional conventions, and in educational assemblies, the question of a free-school system for the new state soon to be organized provoked much interest and discussion. In the constitution framed by the convention of 1846, was provided the basis of a free-school system similar to that in our present constitution. The question of establishing the office of state superintendent, more than any other feature of the proposed school system, elicited discussion in that body. The necessity of this office, and the advantages of free schools supported by taxation, were ably presented to the convention by Hon. Henry Barnard, of Connecticut, in an evening address. He afterward prepared, by request, a draft of a free-school system, with a state superintendent at its head, which was accepted and subsequently embodied in the constitution and the school law. In the second constitutional convention, in 1848, the same questions again received careful attention, and the article on education previously prepared, was, after a few changes, brought into the shape in which we now find it. Immediately after the ratification by the people, of the constitution prepared by the second convention, three commissioners were appointed to revise the statutes. To one of these, Col. Frank, the needed revision of the school laws was assigned. The work was acceptably performed, and the new school code of 1849, largely the same as the present one, went into operation May first of that year.

THE SCHOOL SYSTEM UNDER THE STATE GOVERNMENT.

In the state constitution was laid the broad foundation of our present school system. The four corner stones were: (1) The guaranteed freedom of the schools; (2) the school fund created; (3) the system of supervision; (4) a state university for higher instruction. The school fund has five distinct sources for its creation indicated in the constitution: (1) Proceeds from the sale of lands granted to the state by the United States for educational purposes; (2)

all moneys accruing from forfeiture or escheat; (3) all fines collected in the several counties for breach of the penal laws; (4) all moneys paid for exemption from military duty; (5) five per cent. of the sale of government lands within the state. In addition to these constitutional sources of the school fund, another and sixth source was open from 1856 to 1870. By an act of the state legislature in the former year, three-fourths of the net proceeds of the sales of the swamp and overflowed lands, granted to the state by congress, Sept. 28, 1850, were added to the common-school fund, the other fourth going into a fund for drainage, under certain circumstances; but if not paid over to any town for that purpose within two years, to become a part of the school fund. The following year one of these fourths was converted into the normal-school fund, leaving one-half for the common-school fund. In 1858, another fourth was given to the drainage fund, thus providing for the latter one-half the income from the sales, and leaving for the school fund, until the year 1865, only the remaining one-fourth. In the latter year this was transferred to the normal-school fund, with the provision, however, that one-fourth of the income of this fund should be transferred to the common-school fund until the annual income of the latter fund should reach \$200,000. In 1870 this provision was repealed, and the whole income of the normal fund left applicable to the support of normal schools and teachers' institutes.

At the first session of the state legislature in 1848, several acts were passed which carried out in some degree the educational provisions of the constitution. A law was enacted to provide for the election, and to define the duties, of a state superintendent of public instruction. A district board was created, consisting of a moderator, director, and treasurer; the office of town superintendent was established, and provision was made for the creation of town libraries, and for the distribution of the school fund. The present school code of Wisconsin is substantially that passed by the legislature of 1848, and which went into operation May 1, 1849. The most important change since made was the abolition of the office of town superintendent, and the substitution therefor of the county superintendency. This change took effect January 1, 1862.

THE SCHOOL-FUND INCOME.

The first annual report of the state superintendent, for the year 1849, gives the income of the school fund for that year as \$588, or eight and three-tenth mills per child. Milwaukee county received the largest amount, \$69.63, and St. Croix county the smallest, twenty-four cents. The average in the state was forty-seven cents per district. The following table will show at a glance the quinquennial increase in the income of the fund, the corresponding increase in the number of school children, and the apportionment per child, from 1849 to 1875, inclusive; also, the last published apportionment, that for 1878. It will be seen that since 1855 the increase of the fund has not kept pace with the increase of school population:

YEAR.	NO. CHILDREN OF SCHOOL-AGE.	INCOME OF SCHOOL FUND	RATE PER CHILD.	YEAR.	NO. CHILDREN OF SCHOOL-AGE.	INCOME OF SCHOOL FUND	RATE PER CHILD.
1849--	70,457	\$588 00	\$0.0083	1865..	335,582	151,816 34	.46
1850--	92,105	47,716 00	.518	1870..	412,481	159,271 38	.40
1855--	186,085	125,906 02	.67	1875..	450,304	184,624 64	.41
1860..	288,084	184,949 76	.64	1878..	478,692	185,546 01	.39

The amount of productive school fund reported September 30, 1878, was \$2,680,703.27. The portion of the fund not invested at that date, was \$58,823.70.

THE STATE UNIVERSITY.

In his message to the first territorial legislature, in 1836, Governor Dodge recommended asking from congress aid for the establishment of a state educational institution, to be governed by the legislature. This was the first official action looking to the establishment of a state university. The same legislature passed an act to establish and locate the Wisconsin university at Belmont, in the county of Iowa. At its second session, the following year, the legislature passed an act, which was approved January 19, 1838, establishing "at or near Madison, the seat of government, a university for the purpose of educating youth, the name whereof shall be 'The University of the Territory of Wisconsin.'" A resolution was passed at the same session, directing the territorial delegate in congress to ask of that body an appropriation of \$20,000 for the erection of the buildings of said university, and also to appropriate two townships of vacant land for its endowment. Congress accordingly appropriated, in 1838, seventy-two sections, or two townships, for the support of a "seminary of learning in the territory of Wisconsin," and this was afterward confirmed to the state for the use of the university. No effectual provision, however, was made for the establishment of the university until ten years later, when the state was organized. Congress, as has been said, had made a donation of lands to the territory for the support of such an institution. but these lands could not be made available for that purpose until the territory should become a state. The state constitution, adopted in 1848, declared that provision should be made for the establishment of a state university, and that the proceeds of all lands donated by the United States to the state for the support of a university should remain a perpetual fund, the interest of which should be appropriated to its support.

The state legislature, at its first session, passed an act, approved July 26, 1848, establishing the University of Wisconsin, defining its location, its government, and its various departments, and authorizing the regents to purchase a suitable site for the buildings, and to proceed to the erection of the same, after having obtained from the legislature the approval of plans. This act repealed the previous act of 1838. The regents were soon after appointed, and their first annual report was presented to the legislature, January 30, 1849. This report announced the selection of a site, subject to the approval of the legislature, announced the organization of a preparatory department, and the election of a chancellor or president. The university was thus organized, with John H. Lathrop, president of the University of Missouri, as its first chancellor, and John W. Sterling as principal of the preparatory department, which was opened February 5, 1849. Chancellor Lathrop was not formally inaugurated until January 16, 1850.

Owing to the short-sighted policy of the state in locating without due care, and in appraising and selling so low the lands of the original grant, the fund produced was entirely inadequate to the support of the institution. Congress, therefore, made, in 1854, an additional grant of seventy-two sections of land for its use. These, however, were located and sold in the same inconsiderate and unfortunate manner, for so low a price as to be a means of inducing immigration, indeed, but not of producing a fund adequate for the support of a successful state university. Of the 92,160 acres comprised in the two grants, there had been sold prior to September 30, 1866, 74,178 acres for the sum of \$264,570.13, or at an average price of but little more than \$3.50 per acre.* Besides this, the state had allowed the university to anticipate its income to the extent of over \$100,000 for the erection of buildings. By a law of 1862 the sum of \$104,339.43 was taken from its fund (already too small) to pay for these buildings. The resulting embarrassment made necessary the re-organization of 1866, which added to the slender resources of the institution the agricultural college fund, arising from the sale of lands donated to the state by the congressional act of 1862.

*Compare the price obtained for the lands of the University of Michigan. The first sale of those lands averaged \$22.85 per acre, and brought in a single year (1837) \$150,447.90. Sales were made in succeeding years at \$15, \$17, and \$19 per acre.

The first university building erected was the north dormitory, which was completed in 1851. This is 110 feet in length by 40 in breadth, and four stories in height. The south dormitory, of the same size, was completed in 1855. The main central edifice, known as University Hall, was finished in 1859. The Ladies' College was completed in 1872. This latter was built with an appropriation of \$50,000, made by the legislature in 1870—the first actual donation the university had ever received from the state. The legislature of 1875 appropriated \$80,000 for the erection of Science Hall, a building to be devoted to instruction in the physical sciences. This was completed and ready for occupancy at the opening of the fall term of 1877.

The growth of this institution during the past fourteen years, and especially since its reorganization in 1866, has been rapid and substantial. Its productive fund on the 30th day of September, 1877, aside from the agricultural college fund, was \$223,240 32. The combined university and agricultural funds amounted, at the same date, to \$464,032 22. An act of the legislature in 1867 appropriated to the university income for that year, and annually for the next ten years, the sum of \$7,303.76, being the interest upon the sum taken from the university fund by the law of 1862 for the erection of buildings, as before mentioned. Chapter 100 of the general laws of 1872 also provided for an annual state tax of \$10,000 to increase the income of the university. Chapter 119 of the laws of 1876 provides for an annual state tax of one-tenth of one mill on the taxable property of the state for the increase of the university fund income, this tax to be "*in lieu* of all other appropriations before provided for the benefit of said fund income," and to be "deemed a full compensation for all deficiencies in said income arising from the disposition of the lands donated to the state by congress, in trust, for the benefit of said income." The entire income of the university from all sources, including this tax (which was \$42,359.62), was, for the year ending September 30, 1878, \$81,442.63. The university has a faculty of over thirty professors and instructors, and during the past year—1877-8—it had in its various departments 388 students. The law department, organized in 1868, has since been in successful operation. Ladies are admitted into all the departments and classes of the university.

AGRICULTURAL COLLEGE.

The agricultural college fund, granted to the state by the congressional act of 1862, was by a subsequent legislative enactment (1866) applied to the support, not of a separate agricultural college, but of a department of agriculture in the existing university, thus rendering it unnecessary for the state to erect separate buildings elsewhere. Under the provisions of chapter 114, laws of 1866, the county of Dane issued to the state, for the purpose of purchasing an experimental farm, bonds to the amount of \$40,000. A farm of about 200 acres, adjoining the university grounds, was purchased, and a four years' course of study provided, designed to be thorough and extensive in the branches that relate to agriculture, in connection with its practical application upon the experimental farm.

The productive agricultural college fund has increased from \$8,061.86, in 1866, to \$244,263.18, in 1878.

NORMAL SCHOOLS.

The propriety of making some special provision for the instruction of teachers was acknowledged in the very organization of the state, a provision for normal schools having been embodied in the constitution itself, which ordains that after the support and maintenance of the

common schools is insured, the residue of the school fund shall be appropriated to academies and normal schools. The state legislature, in its first session in 1848, in the act establishing the University of Wisconsin, declared that one of the four departments thereof should be a department of the theory and practice of elementary instruction. The first institution ever chartered in the state as a normal school was incorporated by the legislature at its second session — 1849 — under the title of the "Jefferson County Normal School." This, however, was never organized.

The regents, when organizing the university, at their meeting in 1849, ordained the establishment of a normal professorship, and declared that in organizing the normal department it was their fixed intention "to make the University of Wisconsin subsidiary to the great cause of popular education, by making it, through its normal department, the nursery of the educators, of the popular mind, and the central point of union and harmony to the educational interests of the commonwealth." They declared that instruction in the normal department should be free to all suitable candidates. Little was accomplished, however, in this direction during the next ten years. In 1857 an act was passed by the legislature appropriating twenty-five per cent. of the income of the swamp-land fund "to normal institutes and academies under the supervision and direction of a board of regents of normal schools," who were to be appointed in accordance with the provisions of the act. Distribution of this income was made to such colleges, academies, and high schools as maintained a normal class, in proportion to the number of pupils passing a successful examination conducted by an agent of the board. In 1859, Dr. Henry Barnard, who had become chancellor of the university, was made agent of the normal regents. He inaugurated a system of teachers' institutes, and gave fresh vigor to the normal work throughout the state. Resigning, however, on account of ill-health, within two years, Professor Chas. H. Allen, who had been conducting institutes under his direction, succeeded him as agent of the normal regents, and was elected principal of the normal department of the university, entering upon his work as the latter in March, 1864. He managed the department with signal ability and success, but at the end of one or two years resigned. Meantime the educational sentiment of the state had manifested itself for the establishment of separate normal schools.

In 1865, the legislature passed an act repealing that of two years before, and providing instead that one-half of the swamp-land fund should be set apart as a normal-school fund, the income of which should be applied to establishing and supporting normal schools under the direction and management of the board of normal regents, with a proviso, however, that one-fourth of such income should be annually transferred to the common-school fund income, until the latter should amount annually to \$200,000. This proviso was repealed by the legislature of 1870, and the entire income of one-half the swamp-land fund has since been devoted to normal-school purposes. During the same year proposals were invited for aid in the establishment of a normal school, in money, land, or buildings, and propositions from various places were received and considered. In 1866, the board of regents was incorporated by the legislature. In the same year Platteville was conditionally selected as the site of a school, and as there was already a productive fund of about \$600,000, with an income of over \$30,000, and a prospect of a steady increase as the lands were sold, the board decided upon the policy of establishing several schools, located in different parts of the state. In pursuance of this policy, there have already been completed, and are now in very successful operation, the Platteville Normal School, opened October 9, 1866; the Whitewater Normal School, opened April 21, 1868; the Oshkosh Normal School, opened September 19, 1871, and the River Falls Normal School, opened September 2, 1875. Each assembly district in the state is entitled to eight representatives in the normal schools. These are nominated by county and city superintendents. Tuition is free to all normal students. There are in the normal schools two courses of study — an

elementary course of two years, and an *advanced course* of four years. The student completing the former, receives a certificate; the one completing the latter, a diploma. The certificate, when the holder has successfully taught one year after graduation, may be countersigned by the superintendent of public instruction, when it becomes equivalent to a five-years' state certificate. The diploma, when thus countersigned, after a like interval, is equivalent to a permanent state certificate.

It is believed that the normal-school system of Wisconsin rests upon a broader and more secure basis than the corresponding system of any other state. That basis is an independent and permanent fund, which has already reached a million dollars. The precise amount of this securely invested and productive fund, September 30, 1878, was \$1,004,907.67, and the sum of \$33,290.88 remained uninvested.

TEACHERS' INSTITUTES.

In addition to the work of the normal schools, the board of regents is authorized to expend \$5,000 annually to defray the expenses of teachers' institutes. A law of 1871, amended in 1876, provides for normal institutes, which shall be held for not less than two consecutive weeks, and appropriates from the state treasury a sum not exceeding \$2,000 per annum for their support. There were held in the State, in 1878, sixty-six institutes, varying in length from one to two weeks. The total number of persons enrolled as attendants was 4,944

GRADED SCHOOLS.

Including those in the cities, the graded schools of the State number about four hundred. The annual report of the State superintendent for 1878 gives the number with two departments as 207, and the number with three or more as 225.

A law of March, 1872, provided that "all graduates of any graded school of the state, who shall have passed an examination at such graded school satisfactory to the faculty of the university for admission into the sub-freshman class and college classes of the university, shall be at once and at all times entitled to free tuition in all the colleges of the university." A considerable number of graduates of graded schools entered the university under this law during the next four years, but it being deemed an unwise discrimination in favor of this class of students, in 1876, in the same act which provided for the tax of one tenth of one mill, the legislature provided that from and after the 4th of July of that year no student, except students in law and those taking extra studies, should be required to pay any fees for tuition. Few graded schools of the state are able as yet to fully prepare students for entrance into the regular classes of the classical department of the university. The larger number prepared by them still enter the scientific department or the sub-freshman class.

THE TOWNSHIP SYSTEM.

In 1869 the legislature passed a law authorizing towns to adopt by vote the "township system of school government." Under this system each town becomes one school district, and the several school districts already existing become sub-districts. Each sub-district elects a clerk, and these clerks constitute a body corporate under the name of the "board of school directors," and are invested with the title and custody of all school houses, school-house sites, and other property belonging to the sub-districts, with power to control them for the best interests of the schools of the town. The law provides for an executive committee to execute the orders of the

board, employ teachers, etc., and for a secretary to record proceedings of the board, have immediate charge and supervision of the schools, and perform other specified duties. But few towns have as yet made trial of this system, although it is in successful operation in Pennsylvania, Massachusetts, and some other states, and where fully and fairly tried in our own, has proved entirely satisfactory. It is the general belief of our enlightened educational men that the plan has such merits as ought to secure its voluntary adoption by the people of the state.

FREE HIGH SCHOOLS.

In 1875 the legislature enacted that any town, incorporated village, or city, may establish and maintain not more than two free high schools, and provided for an annual appropriation of not to exceed \$25,000, to refund one-half of the actual cost of instruction in such schools, but no school to draw in any one year more than \$500. At the session of 1877 the benefits of the act were extended to such high schools already established as shall show by a proper report that they have conformed to the requirements of the law. If towns decline to establish such a school, one or more adjoining districts in the same have the privilege of doing so. The law has met with much favor. For the school year ending August 31, 1876 (the first year in which it was in operation), twenty such schools reported, and to these the sum of \$7,466.50 was paid, being an average of \$373.32 per school. For the year ending August 31, 1878, eighty-five schools reported and received a pro rata division of the maximum appropriation. The high school law was primarily designed to bring to rural neighborhoods the twofold advantages of (1) a higher instruction than the common district schools afford, and (2) a better class of teachers for these schools. It was anticipated, however, from the first that the *immediate* results of the law would be chiefly the improvement of existing graded schools in the larger villages and in cities.

SCHOOL OFFICERS.

The school officers of Wisconsin are, a state superintendent of public instruction, sixty-four county superintendents, twenty-eight city superintendents, and a school board in each district, consisting of a director, treasurer, and clerk. The state and county superintendents hold office two years, the district officers three years. In each independent city there is a board of education, and the larger cities have each a city superintendent, who in some cases is also principal of the high school. He is appointed for one year. The county board of supervisors determine, within certain limits, the amount of money to be raised annually in each town and ward of their county for school purposes, levy an additional amount for the salary of the county superintendents, may authorize a special school tax, and may under certain circumstances determine that there shall be two superintendents for their county. The town board of supervisors have authority to form and alter school districts, to issue notice for first meeting, to form union districts for high school purposes, and appoint first boards for the same, to locate and establish school-house sites under certain circumstances, to extinguish districts that have neglected to maintain school for two years, and to dispose of the property of the same. The district clerks report annually to the town clerks, the town clerks to the county superintendents, and the county and city superintendents to the state superintendent, who in turn makes an annual report to the governor.

STATE TEACHERS' CERTIFICATES.

The state superintendent is authorized by law "to issue state certificates of high grade to teachers of eminent qualifications." Two grades of these are given, one unlimited, and the other good for five years. The examination is conducted by a board of three examiners, appointed annually by the state superintendent, and acting under rules and regulations prescribed by him.

TEACHERS' ASSOCIATIONS.

Besides the Wisconsin State Teachers' Association, holding its annual session in the summer and a semi-annual or "executive" session in the winter, there are, in several parts of the state, county or district associations, holding stated meetings. The number of such associations is annually increasing.

LIBRARIES.

The utility of public libraries as a part of the means of popular enlightenment, was early recognized in this state. The constitution, as set forth in 1848, required that a portion of the income of the school fund should be applied to the "purchase of suitable libraries and apparatus" for the common schools. The same year the legislature of the state, at its first session, enacted that as soon as this income should amount to \$60,000 a year (afterwards changed to \$30,000), each town superintendent might devote one tenth of the portion of this income received by his town annually, to town library purposes, the libraries thus formed to be distributed among the districts, in sections, and in rotation, once in three months. Districts were also empowered to raise money for library books. The operation of this discretionary and voluntary system was not successful. In ten years (1858) only about one third of the districts (1,121) had libraries, embracing in all but 38,755 volumes, and the state superintendent, Hon. Lyman C. Draper, urged upon the legislature a better system, of "town libraries," and a state tax for their creation and maintenance. In 1857, the legislature enacted that ten per cent. of the yearly income of the school fund should be applied to the purchase of town school libraries, and that an annual tax of one tenth of one mill should be levied for the same purpose. The law was left incomplete, however, and in 1862, before the system had been perfected, the exigencies of the civil war led to the repeal of the law, and the library fund which had accumulated from the ten per cent. of the school fund income, and from the library tax, amounting in all to \$88,784.78, was transferred to the general fund. This may be considered a debt to the educational interests of the state that should be repaid. Meanwhile the single district library system languishes and yearly grows weaker. The re-enacting of a town library system, in which local effort and expenditure shall be stimulated and supplemented by State aid, has been recommended by the State Teachers' Association, and will, it is hoped, be secured, at no distant day, as a part of a complete town system of schools and of public education.

LIST OF STATE SUPERINTENDENTS.

The act creating the office was passed at the first session of the state legislature, in 1848. The incumbents up to the present time have been as follows :

NAME OF INCUMBENT.	DURATION OF INCUMBENCY.
Hon. E. Root.....	Three years—1849-50-51.
Hon. A. P. Ladd.....	Two years—1852-53.
Hon. H. A. Wright*.....	One year and five months—1854-55.
Hon. A. C. Barry.....	Two years and seven months—1855-56-57.
Hon. L. C. Draper.....	Two years—1858-59.
Hon. J. L. Pickard†.....	Three years and nine months—1860-61-62-63.
Hon. J. G. McMynn.....	Four years and three months—1863-64-65-66-67.
Hon. A. J. Craig‡.....	Two years and six months—1868-69-70.
Hon. Samuel Fallows.....	Three years and six months—1870-71-72-73.
Hon. Edward Searing.....	Four years—1874-75-76-77.
Hon. W. C. Whitford.....	Two years—1878-79.

* Died, May 29, 1845.

† Resigned, October 1, 1863.

‡ Died, July 3, 1870.

SKETCHES OF COLLEGES IN WISCONSIN.*

Beloit College was founded in 1847, at Beloit, under the auspices of the Congregational and Presbyterian churches of Wisconsin and northern Illinois. In 1848, Rev. Joseph Emerson and Rev. J. J. Bushnell were appointed professors, and in 1849, Rev. A. L. Chapin was appointed president, and has continued such until the present time. The institution has had a steady growth, has maintained a high standard of scholarship and done excellent work, both in its preparatory and college departments. Two hundred and thirty-six young men have graduated. Its lands and buildings are valued at \$78,000, and its endowments and funds amount to about \$122,000.

Lawrence University, at Appleton, under the patronage of the Methodist church, was organized as a college in 1850, having been an "institute" or academy for three years previous, under the Rev. W. H. Sampson. The first president was Rev. Edward Cook; the second, R. Z. Mason; the present one is the Rev. George M. Steele, D. D. It is open to both sexes, and has graduated 130 young men, and 68 young women. It still maintains a preparatory department. It has been an institution of great benefit in a new region of country, in the northeastern part of the state. Receiving a liberal donation at the outset from the Hon. Amos A. Lawrence, of Boston, it has land and buildings valued at \$47,000, at Appleton, and funds and endowments amounting to \$60,000.

Milton College, an institution under the care of the Seventh Day Baptists, was opened as a college in 1867, having been conducted as an academy since 1844. Rev. W. C. Whitford, the president, was for many years the principal of the academy. The institution has done much valuable work, particularly in preparing teachers for our public schools. The college has graduated 38 young men and women, having previously graduated 93 academic students. It has lands, buildings and endowments to the amount of about \$50,000.

Ripon College, which was known till 1864 as Brockway College, was organized in 1853, at Ripon, and is supported by the Congregational church. Since its re-organization, in 1863, it has graduated 77 students (of both sexes) in the college courses, and has always maintained a large and flourishing preparatory department. Under its present efficient head, the Rev. E. H. Merrell, A. M., it is meeting with continued success. Its property amounts to about \$125,000.

Racine College was founded by the Episcopal Church, at Racine, in 1852, under the Rev. Roswell Park, D. D., as its first President. It was for a long time under the efficient administration of Rev. James De Koven, D. D., now deceased, who was succeeded by Rev. D. Stevens Parker. It maintains a large boys' school also, and a preparatory department. It was designed, in part, to train young men for the Nashotah Theological Seminary. It has property, including five buildings, to the amount of about \$180,000, and has graduated ninety-nine young men. Its principal work, in which it has had great success, is that of a boys' school, modeled somewhat after the English schools.

The Seminary of St. Francis of Sales, an ecclesiastical school, was established at St. Francis Station, near Milwaukee, chiefly by the combined efforts of two learned and zealous priests, the Rev. Michael Heiss, now bishop of La Crosse, and the Rev. Joseph Salzmänn. It was opened in January, 1856, with Rev. M. Heiss as rector, and with 25 students. Rev. Joseph Salzmänn was rector from September, 1868, to the time of his death, January 17, 1874, since which time Rev. C. Wapelhorst has held the rectorship. The latter is now assisted by twelve professors, and the students number 267, of whom 105 are theologians, 31 students of philosophy, and the rest classical students.

Pio Nono College is a Roman Catholic institution, at St. Francis Station, in the immediate neighborhood of the Seminary of St. Francis. It was founded in 1871, by Rev. Joseph Salzmänn,

* The statistics in this division were obtained in 1877, and are for the previous year.

who was the first rector. He was succeeded in 1874 by the present rector, Rev. Thomas Brue-ner, who is assisted by a corps of seven professors. Besides the college proper, there is a normal department, in which, in addition to the education that qualifies for teaching in common and higher schools, particular attention is given to church music. There is also, under the same management, but in an adjoining building, an institution for the instruction of the deaf and dumb. The pupils in the latter, both boys and girls, numbering about 30, are taught to speak by sounds, and it is said with the best success.

An institution was organized in 1865, at Prairie du Chien, under the name of Prairie du Chien College, and under the care of J. T. Lovewell, as principal. In the course of two or three years it passed into the hands of the Roman Catholic church, and is now known as St. John's College. It has so far performed principally preparatory work.

Sinsinawa Mound College, a Roman Catholic institution, was founded in 1848, through the labors of Father Mazzuchelli, but after doing a successful work, was closed in 1863, and in 1867 the St. Clara academy was opened in the same buildings.

The Northwestern University, which is under the Lutheran church, was organized in 1865, at Watertown, under Rev. August F. Ernst, as president. It has graduated 21 young men, and has a preparatory department. Its property is valued at \$50,000.

Galesville University was organized in 1859, under the patronage of the Methodist church at Galesville, in the northwest part of the state. The first president was the Rev. Samuel Fal-lows, since state superintendent. It has graduated ten young men and eight young women, its work hitherto having been mostly preparatory. It is now under the patronage of the Pres-by-terian denomination, with J. W. McLaury, A. M., as president. It has property valued at \$30,000, and an endowment of about \$50,000.

Carroll College was established at Waukesha, by the Presbyterian church, in 1846. Prof. J. W. Sterling, now of the state university, taught its primary classes that year. Under President John A. Savage, D.D., with an able corps of professors, it took a high rank and graduated classes; but for several years past it has confined its work principally to academic studies. Under W. L. Rankin, A. M., the present principal, the school is doing good service.

Wayland University was established as a college, by the Baptists, at Beaver Dam, in 1854, but never performed much college work. For three years past, it has been working under a new charter as an academy and preparatory school, and is now known as Wayland Institute.

In 1841, the Protestant Episcopal church established a mission in the wilds of Waukesha county, and, at an early day, steps were taken to establish in connection therewith an institution of learning. This was incorporated in 1847, by the name of Nashotah House. In 1852 the classical school was located at Racine, and Nashotah House became distinctively a theological seminary. It has an endowment of one professorship, the faculty and students being otherwise sustained by voluntary contributions. It has a faculty of five professors, with Rev. A. D. Cole, D.D., as president, buildings pleasantly situated, and has graduated 185 theological students.

FEMALE COLLEGES.

Two institutions have been known under this designation. The Milwaukee Female College was founded in 1852, and ably conducted for several years, under the principalship of Miss Mary Mortimer, now deceased. It furnished an advanced grade of secondary instruction. The Wis-consin Female College, located at Fox Lake, was first incorporated in 1855, and re-organized in 1863. It has never reached a collegiate course, is now known as Fox Lake Seminary, and admits both sexes. Rev. A. O. Wright, A. M., is the present principal.

ACADEMIES AND SEMINARIES.

The following institutions of academic grade, are now in operation: Albion Academy; Benton Academy; Big Foot Academy; Elroy Seminary; Fox Lake Seminary; two German and English academies in Milwaukee; Janesville Academy; Kemper Hall, Kenosha; Lake Geneva Seminary, Geneva; Lakeside Seminary, Oconomowoc; Marshall Academy, Marshall; Merrill Institute, Fond du Lac; Milwaukee Academy; Racine Academy; River Falls Institute; Rochester Seminary; St. Catherine's Academy, Racine; St. Clara Academy; Sinsinawa Mound; St. Mary's Institute, Milwaukee; Sharon Academy; and Wayland Institute, Beaver Dam. Similar institutions formerly in operation but suspended or merged in other institutions, were: Allen's Grove Academy; Appleton Collegiate Institute; Baraboo Collegiate Institute; Beloit Female Seminary; Beloit Seminary; Brunson Institute, Mount Hope; Evansville Seminary; Janesville Academy (merged in the high school); Kilbourn Institute; Lancaster Institute; Milton Academy; Platteville Academy; Southport Academy (Kenosha); Waterloo Academy; Waukesha Seminary; Wesleyan Seminary, Eau Claire; and Patch Grove Academy. The most important of these were the Milton and Platteville Academies, the former merged in Milton College, the latter in the Platteville Normal School. Of the others, several were superseded by the establishment of public high schools in the same localities.

COMMERCIAL SCHOOLS.

Schools of this character, aiming to furnish what is called a business education, exist in Milwaukee, Janesville, Madison, LaCrosse, Green Bay, Oshkosh and Fond du Lac. The oldest and largest is in Milwaukee, under the care of Prof. R. C. Spencer, and enrolls from two to three hundred students annually.

AGRICULTURE.

By W. W. DANIELLS, M.S., PROF. OF CHEMISTRY AND AGRICULTURE AT THE UNIVERSITY OF WISCONSIN.

The trend of the earliest industries of a country, is the result of the circumstances under which those industries are developed. The attention of pioneers is confined to supplying the immediate wants of food, shelter, and clothing. Hence, the first settlers of a country are farmers, miners, trappers, or fishermen, according as they can most readily secure the means of present sustenance for themselves and their families. In the early history of Wisconsin this law is well exemplified. The southern part of the state, consisting of alternations of prairie and timber, was first settled by farmers. As the country has developed, wealth accumulated, and means of transportation have been furnished, farming has ceased to be the sole interest. Manufactories have been built along the rivers, and the mining industry of the southwestern part of the state has grown to one of considerable importance. The shore of Lake Michigan was first mainly settled by fishermen, but the later growth of agriculture and manufactures has nearly overshadowed the fishing interest; as has the production of lumber, in the north half of the state, eclipsed the trapping and fur interests of the first settlers. That the most important industry of Wisconsin is farming, may be seen from the following statistics of the occupation of the people as given by the United States census. Out of each one hundred inhabitants, of all occupations, 68 were

farmers, in 1840; 52 in 1850; 54 in 1860; 55 in 1870. The rapid growth of the agriculture of the state is illustrated by the increase in the number of acres of improved land in farms, and in the value of farms and of farm implements and machinery, as shown by the following table, compiled from the United States census :

YEAR.	ACRES IMPROVED LAND IN FARMS.		VALUE OF FARMS, INCLUDING IMPROV- ED AND UNIMPROV- ED LANDS.	VALUE OF FARM IMPLEMENTS AND MACHINERY.
	TOTAL.	TO EACH INHAB.		
1850	1,045,499	3.4	\$ 28,528,563	\$ 1,641,568
1860	3,746,167	4.8	131,117,164	5,758,847
1870	5,899,343	5.6	300,414,064	14,239,364

Farming, at the present time, is almost entirely confined to the south half of the state, the northern half being still largely covered by forests. A notable exception to this statement is found in the counties on the western border, which are well settled by farmers much farther north. The surface of the agricultural portion of the state is for the most part gently undulating, affording ready drainage, without being so abruptly broken as to render cultivation difficult. The soil is varied in character, and mostly very fertile. The southern portion of the state consists of undulating prairies of variable size—the largest being Rock prairie—alternating with oak openings. The prairies have the rich alluvial soil so characteristic of the western prairies, and are easily worked. The soil of the “openings” land is usually a sandy loam, readily tilled, fertile, but not as “strong” as soils having more clay. The proportion of timber to prairie increases passing north from the southern boundary of the state, and forests of maple, basswood and elm, replace, to some extent, the oak lands. In these localities, the soil is more clayey, is strong and fertile, not as easily tilled, and not as quickly exhausted as are the more sandy soils of the oak lands. In that portion of the state known geologically as the “driftless” region, the soil is invariably good where the surface rock is limestone. In some of the valleys, however, where the lime-rock has been removed by erosion, leaving the underlying sandstone as the surface rock, the soil is sandy and unproductive, except in those localities where a large amount of alluvial matter has been deposited by the streams. The soils of the pine lands of the north of the state, are generally sandy and but slightly fertile. However, where pine is replaced by maple, oak, birch, elm and basswood, the soil is “heavier” and very fertile, even to the shores of Lake Superior.

The same natural conditions that make Wisconsin an agricultural state, determined that during its earlier years the main interest should be grain-growing. The fertile prairies covering large portions of the southern part of the state had but to be plowed and sowed with grain to produce an abundant yield. From the raising of cereals the pioneer farmer could get the quickest returns for his labor. Hence in 1850, two years after its admission to the Union, Wisconsin was the ninth state in order in the production of wheat, while in 1860 this rank was raised to third, Illinois and Indiana only raising more. The true rank of the state is not shown by these figures. Were the number of inhabitants and the number of acres of land in actual cultivation taken into account in the comparison, the state would stand still higher in rank than is here indicated. There is the same struggle for existence, and the same desire for gain the world over, and hence the various phases of development of the same industry in different civilized countries is mainly the result of the widely varying economical conditions imposed upon that industry. Land is thoroughly cultivated in Europe, not because the Europeans have any inherent love for good cultivation, but because there land is scarce and costly, while labor is superabundant and cheap. In America, on the other hand, and especially in the newer states,

land is abundant and cheap, while labor is scarce and costly. In its productive industries each country is alike economical in the use of the costly element in production, and more lavish in the use of that which is cheaper. Each is alike economically wise in following such a course, when it is not carried to too great extremes. With each the end sought is the greatest return for the expenditure of a given amount of capital. In accordance with this law of economy, the early agriculture of Wisconsin was mere land-skimming. Good cultivation of the soil was never thought of. The same land was planted successively to one crop, as long as it yielded enough to pay for cultivation. The economical principle above stated was carried to an extreme. Farming as then practiced was a quick method of land exhaustion. It was always taking out of the purse, and never putting in. No attention was paid to sustaining the soil's fertility. The only aim was to secure the largest crop for the smallest outlay of capital, without regard to the future. Manures were never used, and such as unavoidably accumulated was regarded as a great nuisance, often rendering necessary the removal of stables and outbuildings. Straw-stacks were invariably burned as the most convenient means of disposing of them. Wheat, the principal product, brought a low price, often not more than fifty cents a bushel, and had to be marketed by teams at some point from which it could be carried by water, as this was, at an early day, the only means of transportation. On account of the sparse settlement of the country, roads were poor, and the farmer, after raising and threshing his wheat, had to spend, with a team, from two to five days, marketing the few bushels that a team could draw. So that the farmer had every obstacle to contend with except cheap and very fertile land, that with the poorest of cultivation gave a comparatively abundant yield of grain. Better tillage, accompanied with the use of manures and other fertilizers, would not, upon the virgin soils, have added sufficiently to the yield to pay the cost of applying them. Hence, to the first farmers of the state, *poor* farming was the only profitable farming, and consequently the only *good* farming, an agriculturo-economical paradox from which there was no escape. Notwithstanding the fact that farmers could economically follow no other system than that of land-exhaustion, as described, such a course was none the less injurious to the state, as it was undermining its foundation of future wealth, by destroying the fertility of the soil, that upon which the permanent wealth and prosperity of every agricultural community is first dependent. Besides this evil, and together with it, came the habit of loose and slovenly farming acquired by pioneers, which continued after the conditions making that method a necessity had passed away. With the rapid growth of the northwest came better home markets and increased facilities for transportation to foreign markets, bringing with them higher prices for all products of the farm. As a consequence of these better conditions, land in farms in the state increased rapidly in value, from \$9.58 per acre in 1850, to \$16.61 in 1860, an increase of 62 per cent., while the total number of acres in farms increased during the same time from 2,976,658 acres to 7,893,587 acres, or 265 per cent. With this increase in the value of land, and the higher prices paid for grain, should have come an improved system of husbandry which would prevent the soil from deteriorating in fertility. This could have been accomplished either by returning to the soil, in manures and fertilizers, those ingredients of which it was being rapidly drained by continued grain-growing, or by the adoption of a system of mixed husbandry, which should include the raising of stock and a judicious rotation of crops. Such a system is sure to come. Indeed, it is now slowly coming. Great progress upon the earlier methods of farming have already been made. But so radical and thorough a change in the habits of any class of people as that from the farming of pioneers to a rational method that will preserve the soil's fertility and pay for the labor it demands, requires many years for its full accomplishment. It will not even keep pace with changes in those economical conditions which

favor it. In the rapid settlement of the northwestern states this change has come most rapidly with the replacement of the pioneer farmers by immigrants accustomed to better methods of culture. In such cases the pioneers usually "go west" again, to begin anew their frontier farming upon virgin soil, as their peculiar method of cultivation fails to give them a livelihood. In Wisconsin as rapid progress is being made in the system of agriculture as, all things considered, could reasonably be expected. This change for the better has been quite rapid for the past ten years, and is gaining in velocity and momentum each year. It is partly the result of increased intelligence relating to farming, and partly the result of necessity caused by the unprofitableness of the old method.

The estimated value of all agricultural products of the state, including that of orchards, market gardens, and betterments, was, in 1870, as given in the census of that year, \$79,072,967, which places Wisconsin twelfth in rank among the agricultural states of the Union. In 1875, according to the "Report of the Commissioner of Agriculture," the value of the principal farm crops in this state was \$58,957,050. According to this estimation the state ranks ninth in agricultural importance. As has been before stated, Wisconsin is essentially a grain-growing state. This interest has been the principal one, not because the soil is better adapted to grain-growing than to general, stock, or dairy farming, but rather because this course, which was at an early day most immediately profitable, has been since persistently followed from force of habit, even after it had failed to be remunerative.

The following table shows the bushels of the different grains raised in the state for the years indicated:

YEAR.	WHEAT.	RYE.	CORN.	OATS.	BARLEY.	BUCK- WHEAT.
1850----	4,286,131	81,253	1,988,979	3,414,672	209,672	79,878
1860----	15,657,458	888,544	7,517,300	11,059,260	707,307	38,987
1870----	25,606,344	1,325,294	15,033,988	20,180,016	1,645,019	408,897
1875*----	25,200,000	1,340,000	15,200,000	26,600,000	2,200,000	275,000

From these statistics it will be seen that the increase in the production of grain was very rapid up to 1870, while since that time it has been very slight. This rapid increase in grain raising is first attributable to the ease with which this branch of farming was carried on upon the new and very rich soils of the state, while in the older states this branch of husbandry has been growing more difficult and expensive, and also to the fact that the war in our own country so increased the demand for grain from 1861 to 1866 as to make this course the most immediately profitable. But with the close of the war came a diminished demand. Farmers were slow to recognize this fact, and change the character of their productions to accord with the wants of the market, but rather continued to produce the cereals in excess of the demand. The chinch bug and an occasional poor season seriously injured the crops, leaving those who relied principally upon the production of grain little or nothing for their support. Hard times resulted from these poor crops. More wheat and corn was the farmer's usual remedy for hard times. So that more wheat and corn were planted. More crop failures with low prices brought harder times, until gradually the farmers of the state have opened their eyes to the truth that they can succeed in other branches of agriculture than grain growing, and to the necessity of catering to the

*Estimated in report of commissioner of agriculture.

demands of the market. The value in 1869 of all farm products and betterments of the state was \$79,072,967. There were raised of wheat the same year 25,606,344 bushels, which at \$1.03 per bushel, the mean price reported by the Milwaukee board of trade, for No. 2 wheat (the leading grade), for the year ending July 31, 1870, amounts to \$26,374,524, or one third the value of all agricultural products and betterments. The average production per acre, as estimated by the commissioner of agriculture, was 14 bushels. Hence there were 1,829,024 acres of land devoted to this one crop, nearly one third of all the improved land in the state. Of the wheat crop of 1869 24,375,435 bushels were spring wheat, and 1,230,909 bushels were winter wheat, which is 19.8 bushels of spring to 1 bushel of winter wheat. The latter is scarcely sown at all on the prairies, or upon light opening soils. In some of the timbered regions hardy varieties do well, but it is not a certain crop, as it is not able to withstand the winters, unless covered by snow or litter. It is not injured as seriously by the hard freezing, as by the alternate freezing and thawing of February and March.

The continued cropping of land with grain is a certain means of exhausting the soil of the phosphates, and of those nitrogenous compounds that are essential to the production of grain, and yet are present even in the most fertile soils in but small quantities. To the diminished yield, partly attributable to the overcropping of the land, and partially to poor seasons and chinch bugs, and to the decline in prices soon after the war, owing to an over production of wheat, may largely be attributed the hard times experienced by the grain growing farmers of Wisconsin from 1872 to 1877. The continued raising of wheat upon the same land, alternated, if any alternation occurred, with barley, oats, or corn, has produced its sure results. The lesson has cost the farmers of the state dearly, but it has not been altogether lost. A better condition of affairs has already begun. Wheat is gradually losing its prestige as the farmers' sole dependence, while stock, dairy, and mixed farming are rapidly increasing. The number of bushels of wheat raised to each inhabitant in the state was in 1850 fourteen, in 1860 twenty-three and eight tenths, in 1870 twenty-four, and in 1875 twenty and four tenths. These figures do not indicate a diminished productiveness of the state, but show, with the greatly increased production in other branches of husbandry, that farmers are changing their system to one more diversified and rational. Straw stacks are no longer burned, and manure heaps are not looked upon as altogether useless. Much more attention is now paid to the use of fertilizers. Clover with plaster is looked upon with constantly increasing favor, and there is a greater seeking for light upon the more difficult problems of a profitable agriculture.

Corn is raised to a large extent, although Wisconsin has never ranked as high in corn, as in wheat growing. Sixteen states raised more corn in 1870 than this state, and in 1875, seventeen states raised more. Corn requires a rich, moist soil, with a long extended season of warm sunshine. While this crop can be raised with great ease in the larger portion of the state, it will always succeed better farther south, both on account of the longer summers and the greater amount of rainfall. According to the statistics of the commissioner of agriculture, the average yield per acre for a period of ten years, is about 30 bushels. Corn is an important crop in the economy of the farmer, as from it he obtains much food for his stock, and it is his principal dependence for fattening pork. On these accounts it will, without doubt, retain its place in the husbandry of the state, even when stock and dairy farming are followed to a much greater extent than at present. Barley is cultivated largely throughout the state, but five states produced more in 1870, than Wisconsin. The great quantity of beer brewed here, furnishes a good home market for this grain. Barley succeeds best in a rather moist climate, having a long growing season. The dry, short summers of Wisconsin, are not well adapted to its growth. Hence the average

yield is but a medium one, and the quality of the grain is only fair. According to the returns furnished the commissioner of agriculture, the average yield for a period of ten years, is 22 bushels per acre.

Next to wheat, more bushels of oats are raised than of any other grain. Wisconsin was, in 1860, fifth in rank among the oat-growing states; in 1870, sixth. The rich soils of the state raise an abundant crop of oats with but little labor, and hence their growth in large quantities is not necessarily an indication of good husbandry. They will bear poor cultivation better than corn, and are frequently grown upon land too weedy to produce that grain. It is a favorite grain for feeding, especially to horses. With the best farmers, oats are looked upon with less favor than corn, because it is apt to leave land well seeded with weeds which are difficult to exterminate. In the production of rye, Wisconsin ranked seventh in 1860, and fourth in 1870. It is a much surer crop in this state than winter wheat, as it is less easily winter-killed when not protected by snow, than is that grain. Besides, it ripens so early as not to be seriously injured by drouth in summer, and succeeds well even upon the poorer soils. The average yield per acre is about 16 bushels.

But few hops were grown in Wisconsin, up to 1860, when owing to an increased demand by the breweries of the state, there was a gradual but healthful increase in hop culture. A few years later the advent of the hop louse, and other causes of failure at the east, so raised the price of hops as to make them a very profitable crop to grow. Many acres were planted in this state from 1863 to 1865, when the total product was valued at nearly \$350,000. The success of those engaged in this new branch of farming, encouraged others to adopt it. The profits were large. Wheat growing had not for several years been remunerative, and in 1867 and 1868, the "hop fever" became an epidemic, almost a plague. The crop of Sauk county alone was estimated at over 4,000,000 pounds, worth over \$2,000,000. The quality of the crop was excellent, the yield large, and the price unusually high. The secretary of the State Agricultural society says, in his report for that year, "Cases are numerous in which the first crop has paid for the land and all the improvements." To many farmers hop raising appeared to offer a sure and speedy course to wealth. But a change came quickly. The hop louse ruined the crop, and low prices caused by over production, aided in bringing ruin to many farmers. In 1867, the price of hops was from 40 to 55 cents per pound, while in 1869 it was from 10 to 15 cents, some of poor quality selling as low as 3 cents. Many hop yards were plowed up during 1869 and 1870. The area under cultivation to this crop in 1875, was, according to the "Report of the Secretary of State," 10,932 acres.

The production of tobacco has greatly increased since 1860, when there were raised in the state 87,340 pounds. In 1870, the product was 960,813 pounds. As is well known, the quality of tobacco grown in the northern states is greatly inferior for chewing and smoking, to that grown in the south, although varieties having a large, tough leaf, suitable for cigar wrappers, do well here. The variety principally grown is the Connecticut seed leaf. Tobacco can only be grown successfully on rich, fertile soils, and it is very exhausting to the land. Of the amount produced in 1870, there were raised in Rock county 645,408 pounds, and in Dane county, 229,568 pounds; the entire remaining portion of the state raised but 85,737 pounds. According to the report of the secretary of state, the whole number of acres planted to tobacco in 1875, was 3,296. Of this amount Rock county planted 1,676 acres, and Dane county, 1,454 acres, leaving for the remainder of the state but 166 acres. While the crop has been fairly productive and profitable, these statistics show that up to the present time tobacco-raising has been a merely local interest.

The production of flax is another merely local industry, it being confined principally to the

counties of Kenosha, Grant, Iowa and LaFayette. Of flax fibre, Kenosha county raised in 1869, nearly four fifths of the entire amount grown in the state, the total being 497,398 pounds. With the high price of labor and the low price of cotton now ruling, it is scarcely possible to make the raising of flax fibre profitable. Flax seed is raised to a small extent in the other counties mentioned. The present price of oil makes this a fairly profitable crop. If farmers fully appreciated that in addition to the oil, the oil cake is of great value as a food for cattle and sheep, and also that the manure made by the animals eating it, is of three times the value of that made by animals fed upon corn, doubtless much more flax seed would be raised than is at present. American oil-cake finds a ready market in England, at prices which pay well for its exportation. If English farmers can afford to carry food for their stock so far, American farmers may well strive to ascertain if they can afford to allow the exportation of so valuable food. When greater attention is paid in our own country to the quality of the manure made by our stock, more oil-cake will be fed at home, and a much smaller proportion of that made here will be exported.

The amount of maple sugar produced diminishes as the settlement of the state increases, and is now scarcely sufficient in amount to be an item in the state's productions. The increase in the price of sugar from 1861 to 1868 caused many farmers to try sorghum raising. But the present low prices of this staple has caused an abandonment of the enterprise. Two attempts have been made in Wisconsin to manufacture beet-root sugar, the first at Fond du Lac in 1867 the second at Black Hawk, Sauk county, in 1870. The Fond du Lac company removed their works to California in 1869, not having been successful in their efforts. The Black Hawk company made, in 1871, more than 134,000 pounds of sugar, but have since abandoned the business. Both these failures may be attributed to several causes, first of which was the want of sufficient capital to build and carry on a factory sufficiently large to enable the work to be done economically; secondly, the difficulty of sufficiently interesting farmers in the business to induce them to raise beets on so large a scale as to warrant the building of such a factory; and, thirdly, the high price of labor and the low price of sugar. The quality of beets raised was good, the polarization test showing in many instances as high as sixteen per cent. of sugar. The larger proportion of hay made in the state is from the natural meadows, the low lands or marshes, where wild grasses grow in abundance, and hay only costs the cutting and curing. Cultivated grasses do well throughout the state, and "tame hay" can be made as easily here as elsewhere. The limestone soils, where timber originally grew, are of the uplands, most natural to grass, and, consequently, furnish the richest meadows, and yield the best pasturage. The only soils where grasses do not readily grow, are those which are so sandy and dry as to be nearly barrens. Clover grows throughout the state in the greatest luxuriance. There is occasionally a season so dry as to make "seeding down" a failure, and upon light soils clover, when not covered with snow, is apt to winter-kill. Yet it is gaining in favor with farmers, both on account of the valuable pasturage and hay it affords, and on account of its value as a soil renovator. In wheat-growing regions, clover is now recognized to be of the greatest value in a "rotation," on account of its ameliorating influence upon the soil. Throughout the stock and dairy regions, clover is depended upon to a large extent for pasturage, and to a less extent for hay.

There has been a growing interest in stock raising for the past ten years, although the increase has not been a rapid one. Many of the herds of pure-blood cattle in the state rank high for their great excellence. The improvement of horses has been less rapid than that of cattle, sheep, and swine; yet this important branch of stock farming is improving each year. The most attention is given to the improvement of draught and farm horses, while roadsters and fast horses are not altogether neglected. There are now owned in the state a large number of horses of the heavier English and French breeds, which are imparting to their progeny their own characteristics

of excellence, the effects of which are already visible in many of the older regions of the state. Of the different breeds of cattle, the Short-horns, the Ayrshires, the Devons, and the Jerseys are well represented. The Short-horns have met with most favor with the general farmer, the grades of this breed being large, and possessing in a high degree the quiet habits and readiness to fatten, so characteristic of the full-bloods. Without doubt, the grade Short-horns will continue in the high favor in which they are now held, as stock-raising becomes a more important branch of the husbandry of the state. Of pure blood Short-horns there are many herds, some of which are of the very highest excellence. At the public sales of herds from this state, the prices have ranked high universally, and in a few cases have reached the highest of "fancy" prices, showing the estimate placed by professional breeders upon the herds of Wisconsin. The Ayrshires are increasing in numbers, and are held in high esteem by many dairymen. They are not yet, however, as generally disseminated over the state, as their great merit as a milking breed would warrant. The rapid growth of the dairy interest will doubtless increase their numbers greatly, at least as grades, in the dairying region. Of pure bred Devons and Jerseys, there are fewer than of the former breeds. The latter are principally kept in towns and cities to furnish milk for a single family. The following table shows the relative importance of stock raising in the state for the years mentioned. The figures are an additional proof to those already given, that the grain industry has held sway in Wisconsin to the detriment of other branches of farming, as well as to the state's greatest increase in wealth.

YEAR.	WHOLE NUMBER OF NEAT CATTLE.	NO. TO EACH 100 ACRES OF IMPROVED LAND.	WHOLE NUMBER OF SHEEP.	NUMBER TO EACH 100 ACRES OF IMPROVED LAND.	POUNDS OF WOOL PRODUCED.	POUNDS OF WOOL PER HEAD.
1850-----	183,433	17	124,896	12	253,963	2.03
1860-----	521,860	14	332,954	9	1,011,933	3.04
1870-----	693,294	12	1,069,282	18	4,090,670	3.82
1875*-----	922,900	11	1,162,800	14	(?)	(?)

* Estimated in report of commissioner of agriculture.

The growth and present condition of sheep husbandry, compare much more favorably with the general development of the state than does that of cattle raising. In a large degree this may be accounted for by the impetus given to wool raising during our civil war by the scarcity of cotton, and the necessary substitution to a great extent, of woolen for cotton goods. This great demand for wool for manufacturing purposes produced a rapid rise in the price of this staple, making its production a very profitable branch of farming. With the close of the war came a lessened demand, and consequently lower prices. Yet at no time has the price of wool fallen below that at which it could be profitably produced. This is the more notably true when the value of sheep in keeping up the fertility and productiveness of land, is taken into account. The foregoing table shows the improvement in this branch of husbandry since 1850

Although many more sheep might profitably be kept in the state, the above figures show that the wool interest is fairly developed, and the average weight of fleece is an assurance of more than ordinarily good stock. The fine-wooled sheep and their grades predominate, although there are in the state some excellent stock of long-wools—mostly Cotswold—and of South-downs.

Of all the agricultural interests of the state, no other has made as rapid growth during the last ten years, as has that of dairying. With the failure of hop-growing, began the growth of the factory system of butter and cheese making, and the downfall of the one was scarcely more rapid than has been the upbuilding of the other. The following statistics of the production of butter and cheese illustrate this rapid progress. It will be remembered that for the years 1850,

1860, and 1870 the statistics are from the U. S. census, and hence include all the butter and cheese made in the state, while for the remaining years, only that made by factories and professional dairymen as reported to the secretary of the State Dairymen's Association, is included. It has been found impossible to obtain the statistics of butter, except for the census years.

YEAR.	BUTTER.	CHEESE.
	lbs.	lbs.
1850	3,633,750	400,283
1860	13,611,328	1,104,300
1870	22,473,036	1,591,798
1874	-----	13,000,000
1875	-----	15,000,000
1876	-----	17,000,000

The quality of Wisconsin dairy products is excellent, as may be judged by the fact that, at the Centennial Exhibition, Wisconsin cheese received twenty awards, a larger number than was given to any other state except New York, and for butter Wisconsin received five awards. No state received more, and only New York and Illinois received as many. Wisconsin received one award for each fourteen cheeses on exhibition. No other state received so large a proportion. New York received the largest number of awards, viz., twenty-one, but only secured one award for each thirty cheeses on exhibition. The number of cheese and butter factories is increasing each year, and there is being made in the better grazing regions of the state, as rapid a transition from grain to dairy-farming as is consistent with a healthful growth. This interest, which is now an important one in the state's industrial economy, has before it a promising future, both in its own development, and in its indirect influence upon the improvement of the agriculture of the state.

The history of the earlier attempts in fruit raising in Wisconsin would be little more than a record of failures. The pioneers planted apple, peach, plum, and cherry trees, but they gathered little or no fruit. As was natural, they planted those varieties that were known to do well in the older states of the same latitude. Little was known of the climate, and there was no apparent reason why those varieties should not do well here. The first orchards died. The same varieties were replanted, and again the orchards died. Gradually, through the costly school of experience, it was learned that the climate was different from that of the eastern states, and that to succeed here varieties of fruit must be such as were adapted to the peculiar climate of this state. These peculiarities are hot, and for the most part, dry summers, cold and dry winters. The dryness of the climate has been the greatest obstacle to success, as this is indirectly the cause of the great extremes of temperature experienced here. The summers are often so dry that the growth of the trees is not completed, and the wood sufficiently well ripened to enable it to withstand the rigors of winter. And the clear, dry atmosphere of winter allows the sun's rays to pass through it so unobstructedly as to warm the body of the tree upon the sunny side, above the freezing point, even though the temperature of the air is much lower. The alternate thawing and freezing ruptures the tender cells connecting the bark and wood, producing a complete separation of these parts, and often besides bursts the bark. The separation of bark and wood destroys the circulation of the sap upon that side of the tree, thus enfeebling the entire plant. The tree is not able to form new bark over the ruptured part, and a diseased spot results. Such a plant makes but a feeble growth of poorly ripened wood, and soon dies

altogether. Besides the above cause, the extreme cold weather occasionally experienced will kill healthy trees of all varieties not extremely hardy. Notwithstanding these natural obstacles, a good degree of success has been attained in the raising of apples and grapes. This success has been the result of persevering effort upon the part of the horticulturists of the state, who have sought the causes of failure in order that they might be removed or avoided. It is thus by intelligent observation that the fruit growers have gained the experience which brings with it a creditable success. The first requisite to success is the planting of varieties sufficiently hardy to withstand our severe winters. This has been accomplished by selecting the hardiest of the old varieties, and by raising seedlings, having besides hardiness, qualities sufficiently valuable to make them worthy of cultivation. The second requisite to success is in the selection of a situation having suitable soil and exposure, and thirdly, proper care after planting. Among the hardy varieties of apples regarded with greatest favor are Tetofski, Red Astrachan, and Duchess of Oldenberg, all Russian varieties, and Fameuse from Canada. Besides these there are a few American varieties so hardy as to prove reliable in the south half of the state. Among these are a few seedlings that have originated in Wisconsin. Apple trees are less apt to be injured by the winter upon a site sloping to the northeast or north, where they are less directly exposed to the rays of the winter's sun. High ground is much better than low, and a good, strong, not too rich soil is best. Apples do better upon soils where timber originally grew than on the prairies, and they are grown more easily along the border of Lake Michigan than in the interior of the state. Pears are raised to but a slight extent, as only a few of the hardiest varieties will succeed at all, and these only in favorable situations. Grapes are grown in great abundance, and in great perfection, although not of the more tender varieties. The Concord, on account of its hardiness and excellent bearing qualities, is cultivated most generally. Next to this comes the Delaware, while many other varieties, both excellent and prolific, are raised with great ease. The season is seldom too short to ripen the fruit well, and the only precaution necessary to protect the vines during the winter is a covering of earth or litter. Cranberries grow spontaneously upon many marshes in the interior of the state. Within a few years considerable attention has been given to improving these marshes, and to the cultivation of this most excellent fruit. Doubtless within a few years the cranberry crop will be an important one among the fruit productions of the state. All of the small fruits adapted to this latitude are cultivated in abundance, and very successfully, the yield being often times exceedingly large. Altogether, the horticultural interests of the state are improving, and there is a bright prospect that in the near future fruit growing will not be looked upon with the disfavor with which it has been regarded heretofore.

Of the associations for advancing the agricultural interests of the state, the first organized was the "State Agricultural Society." The earliest efforts to establish such an organization were made at Madison in December, 1846, during the session of the first constitutional convention of the territory. A constitution was adopted, but nothing further was done. In February, 1849, another meeting was held in Madison, at which it was "Resolved, That in view of the great importance of agriculture in the west, it is expedient to form a state agricultural society in Wisconsin." Another constitution was adopted, and officers were elected, but no effectual organization resulted from this second attempt. The "Wisconsin State Agricultural Society"—the present organization—had its inception in a meeting held at Madison, March 8, 1851, at which a committee was appointed to report a constitution and by-laws, and to nominate persons to fill the various offices of said society. At its organization, the society was composed of annual members, who paid one dollar dues each year, and of life members, who, upon the payment of ten dollars, were exempt from the annual contribution. The annual membership was afterward

abolished, and in 1869 the fee constituting one a life member was raised to twenty dollars. The first annual fair of the society was held in Janesville, in October, 1851. Fairs have been held annually since, except during the years 1861, 1862 and 1863. In 1851 premiums were paid to the amount of only \$140, while at the present time they amount to nearly \$10,000. In 1851 there were five life members. At the present time there are over seven hundred, representing all the various industries of the state. The fairs held under the auspices of this society have been of excellent character, and have been fruitful of good to all the industries of the state, but more especially to the farmers. The state has been generous in aid of this society, having furnished commodious rooms for its use in the capitol building, printed the annual report of the secretary, a volume of about 500 pages, and donated annually, for many years, \$2,000 toward its support. Besides its annual fairs, for the past five years there has been held an annual convention, under the auspices of this society, for the reading and discussing of papers upon topics of interest to farmers, and for a general interchange of ideas relating to farming. These conventions are held in high esteem by the better class of farmers, and have added greatly to the usefulness of the society. The "Wisconsin State Horticultural Society" was originally the "Wisconsin State Fruit Growers' Association," which was organized in December, 1853, at Whitewater. Its avowed object was "the collecting, arranging, and disseminating facts interesting to those engaged in the culture of fruits, and to embody for their use the results of the practice and experiments of fruit growers in all parts of the state." Exhibitions and conventions of the association were held annually up to 1860, after which the society was disorganized, owing to the breaking out of the war of the rebellion. A volume of "Transactions" was published by the association in 1855. In 1859 its transactions were published with those of the state agricultural society. From 1860 to 1865 no state horticultural association was in existence. In September of the latter year the "Wisconsin Fruit Growers' Association" was reorganized as the "Wisconsin State Horticultural Society." The legislature had previously provided for the publication of the proceedings of such a society, in connection with those of the State Agricultural Society. The new society has held annual exhibitions, usually in connection with those of the State Agricultural Society, and annual conventions for the reading of papers upon, and the discussion of, horticultural subjects. In 1871 an act was passed by the legislature incorporating the society, and providing for the separate printing of 2,000 copies annually of its transactions, of which there are now seven volumes. The most active, intelligent, and persevering of the horticulturists of the state are members of this association, and to their careful observation, to their enthusiasm and determined persistence in seeking means to overcome great natural difficulties, the state is largely indebted for the success already attained in horticulture. Besides these state associations, there are many local agricultural and horticultural societies, all of which have been useful in aiding the cause for which they were organized. Farmers' clubs and granges of the "Patrons of Husbandry" have also done much, both directly and indirectly, to promote the industrial interests of the state. By their frequent meetings, at which discussions are held, views compared, and experiences related, much valuable intelligence is gained, thought is stimulated, and the profession of farming advanced. As agriculture, like all kindred professions, depends upon intelligence to direct its advancement, all means intended to stimulate thought among farmers will, if wisely directed, aid in advancing this most complex of all industries. To those above named, and to other like associations, is in a large degree to be attributed the present favorable condition of the agriculture of the state.

Wisconsin is yet, comparatively, a new State. It was mainly settled by men who had little moneyed capital. Markets were distant, and means of transportation poor. The early settlers had consequently to struggle for a livelihood in the face of the greatest difficulties. When these opposing

circumstances are taken into account, and the improvement in methods of culture, and changes from grain to stock and dairy-farming that are now being made, are given their due weight, it must be acknowledged that the present condition of the agriculture of the state is excellent, and that the future of this most important industry is rich in promise of a steady, healthful growth, toward a completer development of all the agricultural resources of the state.

MINERAL RESOURCES.

By ROLAND D. IRVING, PROFESSOR OF GEOLOGY, ETC., AT THE UNIVERSITY OF WISCONSIN.

The useful mineral materials that occur within the limits of the state of Wisconsin, come under both of the two grand classes of such substances: the *metallic ores*, from which the metals ordinarily used in the arts are extracted; and the *non-metallic substances*, which are used in the arts for the most part without any preliminary treatment, or at least undergo only a very partial alteration before being utilized. Of the first class are found in Wisconsin the ores of *lead, zinc, iron and copper*, besides minute traces of the precious metals; of the second class, the principal substances found are *brick-clay, kaolin, cement-rock, limestone for burning into quick-lime, limestone for flux, glass sand, peat and building stone*.

LEAD AND ZINC.

These metals are considered together because they are found occurring together in the same region and under exactly the same circumstances, being even obtained from the same openings. Lead has for many years been the most important metallic production of Wisconsin, and, together with zinc, whose ores have been utilized only since 1860, still holds this prominent position, although the production is not so great as formerly. Small quantities of lead and zinc ores have been found in the crystalline (Archæan) rocks of the northern part of the state and in the copper-bearing rocks of the Lake Superior country, but there are no indications at present that these regions will ever produce in quantity. All of the lead and zinc obtained in Wisconsin comes then from that portion of the southwestern part of the state which lies west of Sugar river and south of the nearly east and west ridge that forms the southern side of the valley of the Wisconsin, from the head of Sugar river westward. This district is commonly known in Wisconsin as the "Lead Region," and forms the larger part of the "Lead Region of the Upper Mississippi," which includes also smaller portions of Iowa and Illinois.

What European first became acquainted with the deposits of lead in the upper portion of valley of the Mississippi is a matter of some doubt. Charlevoix (*Histoire de la Nouvelle France*, III, 397, 398.) attributes the discovery to Nicolas Perrot, about 1692; and states that in 1721 the deposits still bore Perrot's name. Perrot himself, however, in the only one of his writings that remains, makes no mention of the matter. The itinerary of Le Sueur's voyage up the Mississippi, 1700-1701, given in La Harpe's *History of Louisiana*, which was written early in the 18th century, shows that the former found lead on the banks of the Mississippi, not far from

the present southern boundary of Wisconsin, August 25, 1700. Captain Johathan Carver, 1766, found lead in abundance at the Blue Mounds, and found the Indians in all the country around in possession of masses of galena, which they had obtained as "float mineral," and which they were incapable of putting to any use. There is no evidence of any one mining before Julien Dubuque, who, 1788 to 1809, mined in the vicinity of the flourishing city which now bears his name. After his death in 1809 nothing more was done until 1821, when the attention of American citizens was first drawn to the rich lead deposits of this region. By 1827, the mining had become quite general and has continued to the present time, the maximum production having been reached, however, between the years 1845 and 1847.

The following table, prepared by the late Moses Strong, shows the mineral production of southwestern Wisconsin for the years 1860 to 1873 in pounds:

YEARS.	GALENA.	SMITHSONITE.	YEAR.	GALENA.	SMITHSONITE.	BLENDE.
1860	-----	320,000	1867	13,820,784	5,181,445	841,310
1861	-----	266,000	1868	13,869,619	4,302,383	3,078,435
1862	17,037,912	-----	1869	13,426,721	4,547,971	6,252,420
1863	15,105,577	1,120,000	1870	13,754,159	4,429,585	7,414,022
1864	13,014,210	3,173,333	1871	13,484,210	16,618,160	9,393,625
1865	14,337,895	4,198,200	1872	11,622,668	27,021,383	16,256,970
1866	14,029,192	7,373,333	1873	9,919,734	18,528,906	15,074,664

Until within the last decade the lead mines of the Mississippi valley, including now both the "Upper" and the "Lower" regions—the latter one of which lies wholly within the limits of the state of Missouri—have far eclipsed the rest of the United States in the production of lead, the district being in fact one of the most important of the lead districts in the world. Of late years, however, these mines are far surpassed in production by the "silver-lead" mines of Utah and other Rocky Mountain regions, which, though worked especially for their silver, produce incidentally a very large amount of lead. Nevertheless, the mines of the Mississippi valley will long continue to be a very important source of this metal. The lead ore of the Wisconsin lead region is of one kind only, the sulphide known as *galena*, or *galenite*. This ore, when free from mechanically mingled impurities, contains 86.6 per cent. of lead, the balance being sulphur. Small quantities of other lead ores are occasionally found in the uppermost portions of the deposits, having been produced by the oxidizing influence of the atmosphere. The chief one of these oxidation products is the earthy carbonate known as *cerussite*. Galena almost always contains some silver, commonly enough to pay for its extraction. The Wisconsin galenas, however, are unusually free from silver, of which they contain only the merest trace.

The zinc ores are of two kinds, the most abundant being the ferruginous sulphide, or the "black-jack" of the miners. The pure sulphide, *sphalerite*, contains 67 per cent. of zinc, but the iron-bearing variety, known mineralogically as *marmatite*, generally contains 10 per cent. or more of iron. A ferruginous variety of the carbonate, *smithsonite*, also occurs in abundance, and is known to the miners as "dry-bone," the name being suggested by the peculiar structure of the ore.

Both lead and zinc ores occur in limited deposits in a series of limestone beds belonging to the Lower Silurian series. The lead region is underlaid by a nearly horizontal series of strata, with an aggregate thickness of 2,000 feet, which lie upon an irregular surface of ancient crystalline rocks (gneiss, granite, etc.). The names and order of succession of the several strata are indicated in the following scheme, the last named being the lowest in the series:

	<i>Formation,</i>	<i>Thickness.</i>
	Niagara dolomitic limestone.....	300— 300 feet.
	Cincinnati shales.....	60— 100 "
Lead Horizon	Galena dolomitic limestone.....	250— 275 "
	Blue limestone.....	50— 75 "
	Buff dolomitic limestone.....	15— 20 "
	Lower Magnesian (dolomitic) limestone.....	250 "
	Potsdam sandstone series.....	800—1000 "

The first two of these layers, in the Wisconsin part of the lead region, are met with only in a few isolated peaks and ridges. The prevailing surface rock is the Galena limestone, through which, however, the numerous streams cut in deep and narrow valleys which not unfrequently are carved all the way into the Lower Magnesian.

The lead and zinc ores are entirely confined to the Galena, Blue and Buff limestones, an aggregate vertical thickness of some 350 to 375 feet. The upper and lower strata of the series are entirely barren. Zinc and lead ores are found in the same kind of deposits, and often together; by far the larger part of the zinc ores, however, come from the Blue and Buff limestones, and the lowest layers of the Galena, whilst the lead ores, though obtained throughout the whole thickness of the mining ground, are especially abundant in the middle and upper layers of the Galena beds.

The ore deposits are of two general kinds, which may be distinguished as vertical crevices and flat crevices, the former being much the most common. The simplest form of the vertical crevice is a narrow crack in the rock, having a width of a few inches, an extension laterally from a few yards to several hundred feet, and a vertical height of 20 to 40 feet, thinning out to nothing in all directions, and filled from side to side with highly crystalline, brilliant, large-surfaced galena, which has no accompanying metallic mineral, or gangue matter. Occasionally the vertical extension exceeds a hundred feet, and sometimes a number of these sheets are close together and can be mined as one. Much more commonly the vertical crevice shows irregular expansions, which are sometimes large caves, or openings in certain layers, the crevice between retaining its normal character, while in other cases the expansion affects the whole crevice, occasionally widening it throughout into one large opening. These openings are rarely entirely filled, and commonly contain a loose, disintegrated rock, in which the galena lies loose in large masses, though often adhering to the sides of the cavity in large stalactites, or in cubical crystals. The vertical crevices show a very distinct arrangement parallel with one another, there being two systems, which roughly trend east and west, and north and south. The east and west crevices are far the most abundant and most productive of ore. The vertical crevices are confined nearly altogether to the upper and middle portions of the Galena, and are not productive of zinc ores. They are evidently merely the parallel joint cracks which affect every great rock formation, filled by chemical action with the lead ore. The crevices with openings have evidently been enlarged by the solvent power of atmospheric water carrying carbonic acid, and from the way in which the ore occurs loose in the cavities, it is evident that this solving action has often been subsequent to the first deposition of lead ore in the crevice.

The "flat crevices," "flat sheets," and "flat openings," are analogous to the deposits just described, but have, as indicated by the names, a horizontal position, being characteristic of certain layers, which have evidently been more susceptible to chemical action than others, the dissolving waters having, moreover, been directed along them by less pervious layers above and below. The flat openings differ from the vertical crevices also, in having associated with the

galena much of either the black-jack or dry-bone zinc ores, or both, the galena not unfrequently being entirely wanting. Cleavable calcite also accompanies the ores in these openings in large quantities, and the same is true of the sulphide of iron, which is the variety known as *marcasite*. These materials have sometimes a symmetrical arrangement on the bottom and top of the opening, the central portion being empty. The flat openings characterize the Blue and Buff and lower Galena beds, and from them nearly all the zinc ore is obtained.

It is not possible, in the limits of this short paper, even to mention the various mining districts. It may merely be said that the amount of galena raised from single crevices has often been several hundred thousand, or even over a million pounds, and that one of the principal mining districts is in the vicinity of Mineral Point, where there are two furnaces constantly engaged in smelting. Between the years 1862 and 1873, these two establishments have produced 23,903,260 pounds of metallic lead, or an average of 1,991,938 pounds, the maximum being, in 1869, 2,532,710 pounds, the minimum, in 1873, 1,518,888 pounds.

The zinc ores were formerly rejected as useless, and have only been utilized since 1860. An attempt to smelt them at Mineral Point was not successful, because the amount needed of fuel and clay, both of which have to come from a distance, exceeding even the amount of ore used, caused a very heavy expense for transportation. The ores are therefore now taken altogether to LaSalle, Illinois, where they meet the fuel and clay, and the industry at that place has become a flourishing one. The amount of zinc ore in the Wisconsin lead region is, beyond doubt, very great, and will be a source of wealth for a long time to come.

Since the ores of zinc and lead in this region are confined to such a small thickness of strata greatly eroded by the atmospheric waters, the entire thickness having frequently been removed, it becomes a matter of great importance to know how much of the mining ground remains at every point throughout the district. The very excellent topographic-geological maps of the region, made by Mr. Moses Strong, and since published by the State in the Report of the Geological Survey, make this knowledge accessible to all.

IRON.

Iron mining in Wisconsin is yet in its infancy, although some important deposits are producing a considerable quantity of ore. A number of blast furnaces have sprung up in the eastern part of the state, but these smelt Michigan ores almost entirely. Much remains yet to be done in the way of exploration, for the most promising iron fields are in the heavily timbered and unsettled regions of the north part of the state, and are as yet imperfectly known. It appears probable, however, that iron ores will, in the near future, be the most important mineral production of Wisconsin. The several ores will be noted in the order of their *present* importance.

RED HEMATITES.

The iron in these ores exists as an anhydrous sesquioxide, which is, however, in an earthy condition, and entirely without the brilliant metallic luster that characterizes the specular hematites. Pure hematite contains seventy per cent. of metallic iron, but the red hematites, as mined, are always so largely mingled with mechanical impurities that they rarely contain more than fifty per cent. The most important red hematite mined in Wisconsin is that known as the *Clinton iron ore*, the name coming from the formation in which the ore occurs. This formation is a member of the Upper Silurian series, and is named from a locality in Oneida county, New York, where it was first recognized. Associated with its rocks, which are limestones and shales, is constantly found a peculiar red hematite, which is so persistent in its characters, both physical and

and chemical, that one familiar with it from any one locality can hardly fail to recognize it when coming from others. The iron produced from it is always "cold-short," on account of the large content of phosphorus; but, mingled with siliceous ores free from phosphorus, it yields always a most excellent foundry iron. It is mined at numerous points from New York to Tennessee, and at some points reaches a very great total thickness. In Wisconsin the Clinton rocks merge into the great Niagara limestone series of the eastern part of the state, but at the bottom of the series, in a few places, the Clinton ore is found immediately overlying the Cincinnati shales. The most important locality is that known as Iron Ridge, on sections twelve and thirteen in the town of Hubbard, in Dodge county. Here a north-and-south ledge of Niagara limestone overlooks lower land to the west. Underneath, at the foot of the ridge, is the ore bed, fifteen to eighteen feet in thickness, consisting of horizontally bedded ore, in layers three to fourteen inches thick. The ore has a concretionary structure, being composed of lenticular grains, one twenty-fifth of an inch in diameter, but the top layer is without this structure, having a dark purplish color, and in places a slight metallic appearance. Much of the lower ore is somewhat hydrated. Three quarters of a mile north of Iron Ridge, at Mayville, there is a total thickness of as much as forty feet. According to Mr. E. T. Sweet, the percentages of the several constituents of the Iron Ridge ore are as follows: iron peroxide, 66.38; carbonate of lime, 10.42; carbonate of magnesia, 2.79; silica, 4.72; alumina, 5.54; manganese oxide, 0.44; sulphur, 0.23; phosphoric acid, 0.73; water, 8.75 = 100: metallic iron, 46.66.

Two small charcoal furnaces at Mayville and Iron Ridge smelt a considerable quantity of these ores alone, producing an iron very rich in phosphorus. An analysis of the Mayville pig iron, also by Mr. Sweet, shows the following composition: iron, 95.784 per cent; phosphorus, 1.675; carbon, 0.849; silicon, 0.108 = 100.286. The average furnace yield of the ore is forty-five per cent. By far the larger part of the ore, however, is sent away to mingle with other ores. It goes to Chicago, Joliet and Springfield, Ill., St. Louis, Mo., Wyandotte and Jackson, Mich., and Appleton, Green Bay and Milwaukee, Wis. In 1872, the Iron Ridge mines yielded 82,371 tons. The Clinton ore is found at other places farther north along the outcrop of the base of the Niagara formation in Wisconsin; but no one of these appears to promise any great quantity of good ore. Red hematite is found at numerous places in Wisconsin, highly charging certain layers of the Potsdam sandstone series, the lowest one of the horizontal Wisconsin formations. In the eastern part of the town of Westfield, Sauk county, the iron ore excludes the sandstone, forming an excellent ore. No developments have been made in this district, so that the size of the deposit is not definitely known.

BROWN HEMATITES.

These ores contain their iron as the hydrated, or brown, sesquioxide, which, when pure, has about sixty per cent. of the metal; the ordinary brown hematites, however, seldom contain over forty per cent. *Bog iron ore*, a porous brown hematite that forms by deposition from the water of bogs, occurs somewhat widely scattered underneath the large marshes of Portage, Wood and Juneau counties. Very excellent bog ore, containing nearly 50 per cent. of iron, is found near Necedah, Juneau county, and near Grand Rapids, Wood county, but the amount obtainable is not definitely known. The Necedah ore contains: silica, 8.52; alumina, 3.77; iron peroxide, 71.40; manganese oxide, 0.27; lime, 0.58; magnesia, trace; phosphoric acid, 0.21; sulphur, 0.02; organic matter, 1.62; water, 13.46 = 99.85; metallic iron, 49.98—according to Mr. E. T. Sweet's analysis. An ore from section 34, twp. 23, range 6 east, Wood county, yielded, to Mr. Oliver Matthews, silica, 4.81; alumina, 1.00; iron peroxide, 73.23; lime, 0.11; magnesia, 0.25; sulphuric acid, 0.07; phosphoric acid, 0.10; organic matter, 5.88; water,

14.24; =99.69: metallic iron, 51.26.

Brown hematite, mingled with more or less red ore, occurs also in some quantity filling cracks and irregular cavities in certain portions of the Potsdam series in northwestern Sauk county and the adjoining portion of Richland. A small charcoal furnace has been in operation on this ore at Ironton, Sauk county, for a number of years, and recently another one has been erected at Cazenovia in the same district.

MAGNETIC ORES AND SPECULAR HEMATITES.

These are taken together here, because their geological occurrence is the same, the two ores occurring not only in the same group of rocks, but even intimately mingled with one another. These ores are not now produced in Wisconsin; but it is quite probable that they may before many years become its principal mineral production. In magnetic iron ore, the iron is in the shape of the mineral *magnetite*, an oxide of iron containing 72.4 per cent of iron when pure, and this is the highest percentage of iron that any ore can ever have. Specular hematite is the same as red hematite, but is crystalline, has a bright, metallic luster, and a considerable hardness. As mined the richest magnetic and specular ores rarely run over 65 per cent., while in most regions where they are mined they commonly do not reach 50 per cent. The amount of rich ores of this kind in the northern peninsula of Michigan is so great, however, that an ore with less than 50 per cent. finds no sale; and the same must be true in the adjoining states. So largely does this matter of richness affect the value of an ore, that an owner of a mine of 45 per cent. "hard" ore in Wisconsin would find it cheaper to import and smelt Michigan 65 per cent. ore, than to smelt his own, even if his furnace and mine were side by side.

The specular and magnetic ores of Wisconsin occur in two districts — the Penokee iron district, ten to twenty miles south of Lake Superior, in Bayfield, Ashland and Lincoln counties, and the Menomonee iron district, near the head waters of the Menomonee river, in township 40, ranges 17 and 18 east, Oconto county. Specular iron in veins and nests is found in small quantities with the quartz rocks of the Baraboo valley, Sauk county, and Necedah, Juneau county; and very large quantities of a peculiar quartz-schist, charged with more or less of the magnetic and specular iron oxides, occur in the vicinity of Black River Falls, Jackson county; but in none of these places is there any promise of the existence of valuable ore.

In the Penokee and Menomonee regions, the iron ores occur in a series of slaty and quartzose rocks known to geologists as the Haronian series. The rocks of these districts are really the extensions westward of a great rock series, which in the northern Michigan peninsula contains the rich iron ores that have made that region so famous. In position, this rock series may be likened to a great elongated parabola, the head of which is in the Marquette iron district and the two ends in the Penokee and Menomonee regions of Wisconsin. In all of its extent, this rock series holds great beds of lean magnetic and specular ores. These contain large quantities of quartz, which, from its great hardness, renders them very resistant to the action of atmospheric erosion. As a result, these lean ores are found forming high and bold ridges. Such ridges of lean ores have deceived many explorers, and not a few geologists. In the same rock series, for the most part occupying portions of a higher layer, are found, however, ores of extraordinary richness and purity, which, from their comparative softness, very rarely outcrop. The existence in quantity of these very rich ores in the Menomonee region has been definitely proven. One deposit, laid open during the Summer of 1877, shows a width of over 150 feet of first class specular ore; and exceeding in size the greatest of the famous deposits of Michigan. In the Penokee region, however, though the indications are favorable, the existence of the richer ores is as yet an inference only. The Penokee range itself is a wonderful development of

lean ore, which forms a continuous belt several hundred feet in width and over thirty miles in length. Occasionally portions of this belt are richer than the rest, and become almost merchantable ores. The probability is, however, that the rich ores of this region will be found in the lower country immediately north of the Penokee range, where the rocks are buried beneath heavy accumulations of drift material.

COPPER.

The only copper ore at present raised in Wisconsin is obtained near Mineral Point, in the lead region of the southwestern part of the state, where small quantities of *chalcopyrite*, the yellow sulphide of copper and iron, are obtained from pockets and limited crevices in the Galena limestone. Copper pyrites is known to occur in this way throughout the lead region, but it does not appear that the quantity at any point is sufficient to warrant exploration.

Copper occurs also in the northernmost portions of Wisconsin, where it is found under altogether different circumstances. The great copper-bearing series of rocks of Keweenaw point and Isle Royale stretch southwestward into and entirely across the state of Wisconsin, in two parallel belts. One of these belts enters Wisconsin at the mouth of the Montreal river, and immediately leaving the shore of Lake Superior, crosses Ashland and Bayfield counties, and then widening greatly, occupies a large area in Douglas, St. Croix, Barron and Chippewa counties. The other belt forms the backbone of the Bayfield peninsula, and crosses the northern part of Douglas county, forming a bold ridge, to the Minnesota line. The rocks of this great series appear to be for the most part of igneous origin, but they are distinctly bedded, and even interstratified with sandstone, shales, and coarse boulder-conglomerate, the whole series having generally a tilted position. In veins crossing the rock-beds, and scattered also promiscuously through the layers of both conglomerates and igneous rocks, pure metallic copper in fine flakes is often found. Mining on a small scale has been attempted at numbers of points where the rivers flowing northward into Lake Superior make gorges across the rock series, but at none of them has sufficient work been done to prove or disprove the existence of copper in paying quantity.

GOLD AND SILVER.

Small traces of gold have been detected by the writer in quartz from the crystalline rocks of Clark county, but there is no probability that any quantity of this metal will ever be found in the state. Traces of silver have also been found in certain layers of the copper series in Ashland county. Judging from the occurrence of silver in the same series not far to the east in Michigan, it seems not improbable that this metal may be found also in Wisconsin.

BRICK CLAYS.

These constitute a very important resource in Wisconsin. Extending inland for many miles from the shores of Lakes Michigan and Superior are stratified beds of clay of lacustrine origin, having been deposited by the lakes when greatly expanded beyond their present sizes. All of these clays are characterized by the presence of a large amount of carbonate of lime. Along Lake Superior they have not yet been utilized, but all through the belt of country bordering Lake Michigan they are dug and burned, fully 50,000,000 bricks being made annually in this region. A large proportion of these bricks are white or cream-colored, and these are widely known under the name of "Milwaukee brick," though by no means altogether made at Milwaukee. Others are ordinary red brick. The difference between the light-colored and red bricks is ordinarily attributed to the greater amount of iron in the clay from which the latter are

burned, but it has been shown by Mr. E. T. Sweet that the white bricks are burned from clay which often contains more iron than that from which the red bricks are made, but which also contains a very large amount of carbonate of lime. The following analyses show (1) the composition of the clay from which cream-colored brick are burned at Milwaukee, (2) the composition of a red-brick clay from near Madison, and (3) the composition of the unutilized clay from Ashland, Lake Superior. Nos. 1 and 2 are by Mr. E. T. Sweet, No. 3 by Professor W. W. Daniells:

	(1)	(2)	(3)		(1)	(2)	(3)
Silica.....	38.22	75.80	58.08	Potash.....	2.16	1.74	-----
Alumina.....	9.75	11.07	25.38	Soda.....	0.65	0.40	-----
Iron peroxide....	2.84	3.53	4.44	Water.....	0.95	1.54	} 4.09

Magnesia.....	7.54	.08					
Carbonic acid....	18.50	1.09	-----				

At Milwaukee 24,000,000 cream-colored brick are made annually; at Racine, 3,500,000; at Appleton and Menasha, 1,800,000 each; at Neenah, 1,600,000; at Clifton, 1,700,000; at Watertown, 1,600,000; and in smaller quantities at Jefferson, Ft. Atkinson, Edgerton, Whitewater, Geneva, Ozaukee, Sheboygan Falls, Manitowoc, Kewaunee, and other places. In most cases the cream-colored bricks are made from a bright-red clay, although occasionally the clay is light-colored. At Whitewater and other places tile and pottery are also made from this clay.

Although these lacustrine clays are much the most important in Wisconsin, excellent brick clays are also found in the interior of the state. In numbers of places along the Yahara valley, in Dane county, an excellent stratified clay occurs. At Madison this is burned to a red brick; at Stoughton and Oregon to a fine cream-colored brick. At Platteville, Lancaster, and other points in the southwestern part of the state, red bricks are made from clays found in the vicinity.

KAOLIN (PORCELAIN-CLAY—FIRE-CLAY).

The word "kaolin" is applied by geologists to a clay-like material which is used in making chinaware in this country and in Europe. The word is of Chinese origin, and is applied by the Chinese to the substance from which the famous porcelain of China is made. Its application to the European porcelain-clay was made under the mistaken idea—one which has prevailed among scientists until very recently—that the Chinese material is the same as the European. This we now know to be an error, the Chinese and Japanese wares being both made altogether from a solid rock.

True kaolin, using the word in its European sense, is unlike other ordinary clays, in being the result of the disintegration of felspathic crystalline rocks "in place," that is without being removed from the place of its first formation. The base of kaolin is a mineral known as *kaolinite*, a compound of silica, alumina and water, which results from a change or decay of the felspar of felspar-bearing rocks. Felspar contains silica, alumina, and soda or potash, or both. By percolation through the rocks of surface water carrying carbonic acid, the potash and soda are removed and kaolinite results. Mingled with the kaolinite are, however, always the other ingredients of the rock, quartz, mica, etc., and also always some undecomposed, or only partly decomposed felspar. These foreign ingredients can all, however, be more or less perfectly removed by a system of levigation, when a pure white clay results, composed almost wholly of the scales of

the mineral kaolinite. Prepared in this way the kaolin has a high value as a refractory material, and for forming the base of fine porcelain wares.

The crystalline rocks, which, by decomposition, would produce a kaolin, are widely spread over the northern part of Wisconsin; but over the most of the region occupied by them there is no sign of the existence of kaolin, the softened rock having apparently been removed by glacial action. In a belt of country, however, which extends from Grand Rapids on the Wisconsin, westward to Black river, in Jackson county, the drift is insignificant or entirely absent; the glacial forces have not acted, and the crystalline rocks are, or once were, overlaid by sandstone, along whose line of junction with the underlying formation numerous water-courses have existed, the result being an unusual amount of disintegration. Here we find, in the beds of the Wisconsin, Yellow, and Black rivers, large exposures of crystalline rocks, which between the rivers are overlaid by sandstone. The crystalline rocks are in distinct layers, tilted at high angles, and in numerous places decomposed into a soft white kaolin. Inasmuch as these layers strike across the country in long, straight lines, patches of kaolin are found ranging themselves into similar lines. The kaolin patches are most abundant on the Wisconsin in the vicinity of the city of Grand Rapids, in Wood county. They vary greatly in size, one deposit even varying from a fraction of an inch to a number of feet in thickness. The kaolin varies, also, greatly in character, some being quite impure and easily fusible from a large content of iron oxide or from partial decomposition only, while much of it is very pure and refractory. There is no doubt, however, that a large amount of kaolin exists in this region, and that by selection and levigation an excellent material may be obtained, which, by mingling with powdered quartz, may be made to yield a fire-brick of unusual refractoriness, and which may even be employed in making fine porcelain ware.

The following table gives the composition of the raw clay, the fine clay obtained from it by levigation, and the coarse residue from the same operation, the sample having been taken from the opening on the land of Mr. C. B. Garrison, section 5, town 22, range 6 east, Wood county:

	RAW CLAY.	LEVIGATION PRODUCTS.			RAW CLAY.	LEVIGATION PRODUCTS.	
		FINE CLAY.	COARSE RESIDUE.			FINE CLAY.	COARSE RESIDUE.

CEMENT - ROCK.

Certain layers of the Lower Magnesian limestone, as at Ripon, and other points in the eastern part of the state, are known to produce a lime which has in some degree the hydraulic property, and the same is true of certain layers of the Blue limestone of the Trenton group, in the southwestern part of the state; the most valuable material of this kind, however, that is as yet known to exist in Wisconsin, is found near Milwaukee, and has become very recently somewhat widely known as the "Milwaukee" cement-rock. This rock belongs to the Hamilton formation, and is found near the Washington street bridge, at Brown Deer, on the lake shore at Whitefish

bay, and at other points in the immediate vicinity of Milwaukee. The quantity attainable is large, and a very elaborate series of tests by D. J. Whittemore, chief engineer of the Milwaukee and St. Paul railroad, shows that the cement made from it exceeds all native and foreign cements in strength, except the famous English "Portland" cement. The following are three analyses of the rock from different points, and they show that it has a very constant composition :

	1.	2.	3.
Carbonate of Lime.....	45.54	48.29	41.34

LIMESTONE FOR MAKING QUICK - LIME.

Quick-lime is made from all of the great limestone formations of Wisconsin, but more is burnt from the Lower Magnesian and Niagara formations, than from the others. The Lower Magnesian yields a very strong mortar, but the lime burned from it is not very white. It is burned largely in the region about Madison, one of the largest quarries being on the south line of section 33 of that town, where some 20,000 bushels are produced annually, in two kilns. The lime from this place has a considerable local reputation under the name of "Madison lime." The Trenton limestone is burned at a few points, but yields an inferior lime. The Galena is not very generally burned, but yields a better lime than the Trenton. In the region about Watertown and White-water, some 40,000 to 50,000 barrels are made annually from this formation.

The Niagara, however, is the great lime furnisher of the northwest. From its purity it is adapted to the making of a most admirable lime. It is burned on a large scale at numbers of points in the eastern part of the state, among which may be mentioned, Pellon's kilns, Pewaukee, where 12,000 barrels are made weekly and shipped to Chicago, Grand Haven, Des Moines, etc.; and Holick & Son's kilns, Racine, which yield 60,000 to 75,000 barrels annually. A total of about 400,000 barrels is annually made from the Niagara formation in eastern Wisconsin.

LIMESTONE FOR FLUX IN IRON SMELTING.

The limestones of Wisconsin are rarely used as a flux, because of their prevalent magnesian character. The stone from Schoonmaker's quarry, near Milwaukee, is used at the Bay View iron works, and is one of the few cases. There are certain layers, however, in the Trenton limestone, widely spread over the southern part of the state, which are non-magnesian, and frequently sufficiently free from earthy impurities to be used as a flux. These layers deserve the attention of the iron masters of the state.

GLASS SAND.

Much of the St. Peter's sandstone is a purely siliceous, loose, white sand, well adapted to the making of glass. It is now being put to this use at points in the eastern part of the state.

PEAT.

Peat exists in large quantities and of good quality underneath the numerous marshes of the eastern and central parts of the state. Whether it can be utilized in the future as a fuel, will depend altogether upon the cost of its preparation, which will have to be very low in order that it may compete with superior fuels. As a fertilizer, peat has always a great value, and requires no preliminary treatment.

BUILDING STONES.

All the rocky formations of Wisconsin are used in building, and even the briefest synopsis of the subject of the building stones of the state, would exceed the limits of this paper. A few of the more prominent kinds only are mentioned.

Granite occurs in protruding masses, and also grading into gneiss, in the northern portions of the state, at numerous points. In many places on the Wisconsin, Yellow, and Black rivers, and especially at Big Bull Falls, Yellow river, red granites of extraordinary beauty and value occur. These are not yet utilized, but will in the future have a high value.

The handsomest and most valuable sandstone found in Wisconsin, is that which extends along the shore of Lake Superior, from the Michigan to the Minnesota line, and which forms the basement rock of the Apostle islands. On one of these islands a very large quarry is opened, from which are taken masses of almost any size, of a very close-grained, uniform, dark brown stone, which has been shipped largely to Chicago and Milwaukee. At the latter place, the well known court house is built of this stone. An equally good stone can be obtained from the neighboring islands, and from points on the mainland. A very good white to brown, indurated sandstone is obtained from the middle portions of the Potsdam series, at Stevens Point, Portage county; near Grand Rapids, Wood county; at Black River Falls, Jackson county; at Packwaukee, Marquette county; near Wautoma, Waushara county; and at several points in the Baraboo valley, Sauk county. A good buff-colored, calcareous sandstone is quarried and used largely in the vicinity of Madison, from the uppermost layers of the Potsdam series.

All of the limestone formations of the state are quarried for building stone. A layer known locally as the "Mendota" limestone, included in the upper layers of the Potsdam series, yields a very evenly bedded, yellow, fine-grained rock, which is largely quarried along the valley of the lower Wisconsin, and also in the country about Madison. In the town of Westport, Dane county, a handsome, fine-grained, cream-colored limestone is obtained from the Lower Magnesian. The Trenton limestone yields an evenly bedded, thin stone, which is frequently used for laying in wall. The Galena and Niagara are also utilized, and the latter is capable, in much of the eastern part of the state, of furnishing a durable, easily dressed, compact, white stone.

In preparing this paper, I have made use of Professor Whitney's "Metallic Wealth of the United States," and "Report on the Geology of the Lead Region;" of the advance sheets of Volume II of the Reports of the State Geological Survey, including Professor T. C. Chamberlin's Report on the Geology of Eastern Wisconsin, my own Report on the Geology of Central Wisconsin, and Mr. Strong's Report on the Geology of the Lead Region; Mr. E. T. Sweet's account of the mineral exhibit of the state at the Centennial Exposition; and of my unpublished reports on the geology of the counties bordering Lake Superior.

WISCONSIN RAILROADS.

By Hon. H. H. GILES.

The territory of Wisconsin offered great advantages to emigrants. Explorers had published accounts of the wonderful fertility of its soil, the wealth of its broad prairies and forest openings, and the beauty of its lakes and rivers. Being reached from the older states by way of the lakes and easily accessible by a long line of lake coast, the hardships incident to weeks of land travel were avoided. Previous to 1836 but few settlements had been made in that part of the then territory of Michigan, that year organized into the territory of Wisconsin, except as mining camps in the southwestern part, and scattered settlers in the vicinity of the trading posts and military stations. From that time on, with the hope of improving their condition, thousands of the enterprising yeomanry of New England, New York and Ohio started for the land of promise. Germans, Scandinavians and other nationalities, attracted by the glowing accounts sent abroad, crossed the ocean on their way to the new world; steamers and sail-craft laden with families and their household goods left Buffalo and other lake ports, all bound for the new Eldorado. It may be doubted if in the history of the world any country was ever peopled with the rapidity of southern and eastern Wisconsin. Its population in 1840 was 30,749; in 1850, 304,756; in 1860, 773,693; in 1870, 1,051,351; in 1875, 1,236,729. With the development of the agricultural resources of the new territory, grain raising became the most prominent interest, and as the settlements extended back from the lake shore the difficulties of transportation of the products of the soil were seriously felt. The expense incurred in moving a load of produce seventy or eighty miles to a market town on the lake shore frequently exceeded the gross sum obtained for the same. All goods, wares and merchandise, and most of the lumber used must also be hauled by teams from Lake Michigan. Many of our early settlers still retain vivid recollections of trying experiences in the Milwaukee woods and other sections bordering on the lake shore, from the south line of the state to Manitowoc and Sheboygan. To meet the great want—better facilities for transportation—a valuable land grant was obtained from congress, in 1838, to aid in building a canal from Milwaukee to Rock river. The company which was organized to construct it, built a dam across Milwaukee river and a short section of the canal; then the work stopped and the plan was finally abandoned. It was early seen that to satisfy the requirements of the people, railroads, as the most feasible means of communication within their reach, were an indispensable necessity.

CHICAGO, MILWAUKEE & ST. PAUL RAILWAY.

Between the years 1838 and 1841, the territorial legislature of Wisconsin chartered several railroad companies, but with the exception of the "Milwaukee & Waukesha Railroad Company," incorporated in 1847, none of the corporations thus created took any particular shape. The commissioners named in its charter met November 23, 1847, and elected a president, Dr. L. W. Weeks, and a secretary, A. W. Randall (afterward governor of Wisconsin). On the first Monday of February, 1848, they opened books of subscription. The charter of the company provided

that \$100,000 should be subscribed and five per cent. thereof paid in before the company should fully organize as a corporation. The country was new. There were plenty of active, energetic men, but money to build railroads was scarce, and not until April 5, 1849, was the necessary subscription raised and percentage paid. A board of directors was elected on the 10th day of May, and Byron Kilbourn chosen president. The charter had been previously amended, in 1848, authorizing the company to build a road to the Mississippi river, in Grant county, and in 1850, its name was changed to the "Milwaukee & Mississippi Railroad Company." After the company was fully organized, active measures were taken to push the enterprise forward to completion. The city of Milwaukee loaned its credit, and in 1851 the pioneer Wisconsin railroad reached Waukesha, twenty miles out from Milwaukee. In the spring of 1852, Edward H. Broadhead, a prominent engineer, from from the state of New York, was put in charge of the work as chief engineer and superintendent. Under his able and energetic administration the road was pushed forward in 1852 to Milton, in 1853 to Stoughton, in 1854 to Madison, and in 1856 to the Mississippi river, at Prairie du Chien. In 1851 John Catlin of Madison, was elected president in place of Kilbourn.

The proposed length of this article will not admit of any detailed statement of the trials, struggles and triumphs of the men who projected, and finally carried across the state, from the lake to the river, this first Wisconsin railroad. Mitchell, Kilbourn, Holton, Tweedy, Catlin, Walker, Broadhead, Crocker and many others, deserve to be remembered by our people as benefactors of the state. In 1859 and 1860, the company defaulted in the payment of the interest on its bonds. A foreclosure was made and a new company, called the "Milwaukee & Prairie du Chien," took its place, succeeding to all its rights and property.

The "Southern Wisconsin Railway Company" was chartered in 1852, and authorized to build a road from Milton to the Mississippi river. When the Milwaukee and Mississippi road reached Milton in 1852, it was not authorized by its charter to go to Janesville, but, under the charter of the Southern Wisconsin, a company was organized that built the eight miles to Janesville in 1853. Under a subsequent amendment to the charter, the Milwaukee and Mississippi company was authorized to build from Milton to the Mississippi river. The Janesville branch was then purchased and extended to Monroe, a distance of about thirty-four miles, or forty-two miles west of Milton. Surveys were made and a line located west of Monroe to the river. The people of La Fayette and Grant counties have often been encouraged to expect a direct railroad communication with the city of Milwaukee. Other and more important interests, at least so considered by the railroad company, have delayed the execution of the original plan, and the road through the counties mentioned still remains unbuilt.

The "LaCrosse & Milwaukee Railroad Company" was chartered in 1852, to construct a road from LaCrosse to Milwaukee. During the year in which the charter was obtained, the company was organized, and the first meeting of the commissioners held at LaCrosse. Among its projectors were Byron Kilbourn and Moses M. Strong. Kilbourn was elected its first president. No work was done upon this line until after its consolidation with the "Milwaukee, Fond du Lac & Green Bay Railroad Company" in 1854. The latter company was chartered in 1853, to build a road from Milwaukee *via* West Bend to Fond du Lac and Green Bay. It organized in the spring of 1853, and at once commenced active operations under the supervision of James Kneeland, its first president. The city of Milwaukee loaned its credit for \$200,000, and gave city bonds. The company secured depot grounds in Milwaukee, and did considerable grading for the first twenty-five miles out. Becoming embarrassed in January, 1854, the Milwaukee, Fond du Lac & Green Bay consolidated with the LaCrosse & Milwaukee company. Work was at once resumed on the partially graded line. In 1855 the road was completed to Horicon, fifty miles.

The Milwaukee & Watertown company was chartered in 1851, to build from Milwaukee to Watertown. It soon organized, and began the construction of its line from Brookfield, fourteen miles west of Milwaukee, and a point on the Milwaukee & Mississippi road leading through Oconomowoc to Watertown. The charter contained a provision that the company might extend its road by way of Portage to La Crosse. It reached Watertown in 1856, and was consolidated with the LaCrosse & Milwaukee road in the autumn of the same year.

In the spring of 1856 congress made a grant of land to the state of Wisconsin, to aid in the building of a railroad from Madison, or Columbus, *via* Portage City, to the St. Croix river or lake, between townships 25 and 31. and from thence to the west end of Lake Superior, and to Bayfield. An adjourned session of the Wisconsin legislature met on September 3 of that year, to dispose of the grant. The disposal of this grant had been generally discussed by the press, and the public sentiment of the state seemed to tend toward its bestowal upon a new company. There is little doubt but that this was also the sentiment of a large majority of the members of both houses when the session commenced. When a new company was proposed a joint committee of twenty from the senate and assembly was appointed to prepare a bill, conferring the grant upon a company to be created by the bill itself. The work of the committee proceeded harmoniously until the question of who should be incorporators was to be acted upon, when a difference of opinion was found to exist, and one that proved difficult to harmonize. In the meantime the LaCrosse and Watertown companies had consolidated, and a sufficient number of the members of both houses were "propitiated" by "pecuniary compliments" to induce them to pass the bill, conferring the so called St. Croix grant upon the LaCrosse & Milwaukee railroad company. The vote in the assembly in the passage of the bill was, ayes 62, noes 7. In the senate it stood, ayes 17, noes 7.

At the session of the legislature of 1858 a committee was raised to investigate the matter, and their report demonstrated that bonds were set apart for all who voted for the LaCrosse bill; to members of assembly \$5,000 each, and members of senate \$10,000 each. A few months after the close of the legislative session of 1856 the land grant bonds of the LaCrosse road became worthless. Neither the LaCrosse company nor its successors ever received any portion of the lands granted to the state. During the year 1857 the La Crosse company completed its line of road through Portage City to LaCrosse, and its Watertown line to Columbus.

The "Milwaukee & Horicon Railroad Company" was chartered in 1852. Between the years 1855 and 1857 it built through Waupun and Ripon to Berlin, a distance of forty-two miles. It was, in effect, controlled by the LaCrosse & Milwaukee company, although built as a separate branch. This line was subsequently merged in the LaCrosse company, and is now a part of the northern division of the Chicago, Milwaukee & St. Paul railway.

The "Madison, Fond du Lac & Lake Michigan Railroad Company" was chartered in 1855, to build a road from Madison *via* Fond du Lac to Lake Michigan. In 1857 it bought of the LaCrosse company that portion of its road acquired by consolidation with the Milwaukee & Watertown company. Its name was then changed to "Milwaukee & Western Railroad Company." It owned a line of road from Brookfield to Watertown, and branches from the latter place to Columbus and Sun Prairie, in all about eighty miles in length.

In 1858 and 1859 the La Crosse & Milwaukee and the Milwaukee & Horicon companies defaulted in the payment of the interest on their bonded debts. In the same years the bondholders of the two companies instituted foreclosure proceedings on the different trust deeds given to secure their bonds. Other suits to enforce the payment of their floating debts were also commenced. Protracted litigation in both the state and federal courts resulted in a final settlement in 1868, by a decision of the supreme court of the United States. In the meantime, in 1862 and

1863, both roads were sold, and purchased by an association of the bondholders, who organized the "Milwaukee & St. Paul Railway Company." The new company succeeded to all the rights of both the La Crosse and Horicon companies, and soon afterward, in 1863, purchased the property of the Milwaukee & Western company, thus getting control of the roads from Milwaukee to La Crosse, from Horicon to Berlin, from Brookfield to Watertown, and the branches to Columbus and Sun Prairie. In 1864 it built from Columbus to Portage, from Brookfield to Milwaukee, and subsequently extended the Sun Prairie branch to Madison, in 1869. It also purchased the Ripon & Wolf River road, which had been built fifteen miles in length, from Ripon to Omro, on the Fox river, and extended it to Winneconne on the Wolf river, five miles farther, and twenty miles from Ripon. In 1867 the Milwaukee & St. Paul railway company obtained control of the Milwaukee & Prairie du Chien railroad. The legislature of 1857 had passed an act, authorizing all stock-holders in all incorporated companies to vote on shares of stock owned by them. The directors of the Milwaukee & St. Paul company had secured a majority of the common stock, and, at the election of 1867, elected themselves a board of directors for the Prairie du Chien company. All the rights, property and interests of the latter company came under the ownership and control of the former.

In 1865, Alexander Mitchell, of Milwaukee, was elected president, and S. S. Merrill general manager of the Milwaukee & St. Paul railway company. They were retained in their respective positions by the new organization, and still continue to hold these offices, a fact largely owing to the able and efficient manner that has characterized their management of the company's affairs. The company operates eight hundred and thirty-four miles of road in Wisconsin, and in all two thousand two hundred and seven miles. Its lines extend to St. Paul and Minneapolis in Minnesota, and to Algona in Iowa, and over the Western Union to Savanna and Rock Island in the State of Illinois.

The "Oshkosh & Mississippi Railroad Company" was chartered in 1866 to build a road from the city of Oshkosh to the Mississippi river. Its construction to Ripon in 1872 was a move on the part of citizens of Oshkosh to connect their town with the Milwaukee & St. Paul road. It is twenty miles in length and leased to the Chicago, Milwaukee & St. Paul company.

In 1871 and 1872 the "Wisconsin Union Railroad Company," of which John W. Cary was president, built a road from Milwaukee to the state line between Wisconsin and Illinois, to connect with a road built from Chicago to the state line of Illinois. This new line between Milwaukee and Chicago was built in the interest of, and in fact by, the Milwaukee & St. Paul company to afford a connection between its Wisconsin, Iowa and Minnesota system of roads, and the eastern trunk lines centering in Chicago. It runs parallel with the shore of Lake Michigan and from three to six miles from it, and is eighty-five miles in length.

THE CHICAGO & NORTHWESTERN RAILWAY.

The territorial legislature of 1848 chartered the "Madison & Beloit Railroad Company" with authority to build a railroad from Beloit to Madison only. In 1850, by an act of the legislature, the company was authorized to extend the road to the Wisconsin river and La Crosse, and to a point on the Mississippi river near St. Paul, and also from Janesville to Fond du Lac. Its name was changed, under legislative authority, to the "Rock River Valley Union Railroad Company." In 1851, the line from Janesville north not being pushed as the people expected, the legislature of Illinois chartered the "Illinois & Wisconsin Railroad Company" with authority to consolidate with any road in Wisconsin. In 1855, an act of the Wisconsin legislature consolidated the Illinois and Wisconsin companies with the "Rock River Valley Union Railroad Company," and the new organization took the name of the "Chicago, St. Paul & Fond du Lac Rail-

road Company." In 1854, and previous to the consolidation, the company had failed and passed into the hands of the bondholders, who foreclosed and took stock for their bonds. The old management of A. Hyatt Smith and John B. Macy was superseded, and Wm. B. Ogden was made president. Chicago was all along deeply interested in reaching the rich grain fields of the Rock river valley, as well as the inexhaustible timber and mineral wealth of the northern part of Wisconsin and that part of Michigan bordering on Lake Superior, called the Peninsula. It also sought a connection with the upper Mississippi region, then being rapidly peopled, by a line of railroad to run through Madison to St. Paul, in Minnesota. Its favorite road was started from Chicago on the wide (six feet) gauge, and so constructed seventy miles to Sharon on the Wisconsin state line. This was changed to the usual (four feet, eight and one-half inches) width, and the work was vigorously pushed, reaching Janesville in 1855 and Fond du Lac in 1858. The Rock River Valley Union railroad company had, however, built about thirty miles from Fond du Lac south toward Minnesota Junction before the consolidation took place. The partially graded line on a direct route between Janesville and Madison was abandoned. In 1852 a new charter had been obtained, and the "Beloit & Madison Railroad Company" had been organized to build a road from Beloit *via* Janesville to Madison. A subsequent amendment to this charter had left out Janesville as a point, and the Beloit branch was pushed through to Madison, reaching that city in 1864.

The "Galena and Chicago Union Railroad Company" had built a branch of the Galena line from Belvedere to Beloit previous to 1854. In that year, it leased the Beloit & Madison road, and from 1856 operated it in connection with the Milwaukee & Mississippi, reaching Janesville by way of Hanover Junction, a station on its Southern Wisconsin branch, eight miles west of Janesville. The consolidation of the Galena & Chicago Union and the Chicago, St. Paul & Fond du Lac companies was effected and approved by legislative enactment in 1855, and a new organization called the "Chicago & Northwestern Railway Company" took their place.

The "Green Bay, Milwaukee & Chicago Railroad Company" was chartered in 1851 to build a road from Milwaukee to the state line of Illinois to connect with a road from Chicago, called the Chicago & Milwaukee railroad. Both roads were completed in 1855, and run in connection until 1863, when they were consolidated under the name of the "Chicago & Milwaukee Railroad Company." To prevent its falling into the hands of the Milwaukee & St. Paul, the Chicago & Northwestern secured it by perpetual lease, May 2, 1866, and it is now operated as its Chicago division.

The "Kenosha & Beloit Railroad Company" was incorporated in 1853 to build a road from Kenosha to Beloit, and was organized soon after its charter was obtained. Its name was afterward changed to the "Kenosha, Rockford & Rock Island Railroad Company," and its route changed to run to Rockford instead of Beloit. The line starts at Kenosha, and runs through the county of Kenosha and crosses the state line near the village of Genoa in the county of Walworth, a distance of thirty miles in the state of Wisconsin, and there connects with a road in Illinois running to Rockford, and with which it consolidated. Kenosha and its citizens were the principal subscribers to its capital stock. The company issued its bonds, secured by the usual mortgage on its franchises and property. Failing to pay its interest, the mortgage was foreclosed, and the road was sold to the Chicago & Northwestern company in 1863, and is now operated by it as the Kenosha division. The line was constructed from Kenosha to Genoa in 1862.

The "Northwestern Union Railway Company" was organized in 1872, under the general railroad law of the state, to build a line of road from Milwaukee to Fond du Lac, with a branch to Lodi. The road was constructed during the years 1872 and 1873 from Milwaukee to Fond du Lac. The Chicago & Northwestern company were principally interested in its being built, to

shorten its line between Chicago and Green Bay, and now uses it as its main through line between the two points.

The "Baraboo Air-Line Railroad Company" was incorporated in 1870, to build a road from Madison, Columbus, or Waterloo *via* Baraboo, to La Crosse, or any point on the Mississippi river. It organized in the interest of the Chicago & Northwestern, with which company it consolidated, and the work of building a connecting line between Madison and Winona Junction was vigorously pushed forward. Lodi was reached in 1870, Baraboo in 1871, and Winona Junction in 1874. The ridges between Elroy and Sparta were tunneled at great expense and with much difficulty. In 1874 the company reported an expenditure for its three tunnels of \$476,743.32, and for the 129 1-10 miles between Madison and Winona Junction of \$5,342,169.96, and a large expenditure yet required to be made on it. In 1867 the Chicago & Northwestern company bought of D. N. Barney & Co. their interest in the Winona & St. Peters railway, a line being built westerly from Winona in Minnesota, and of which one hundred and five miles had been built. It also bought of the same parties their interest in the La Crosse, Trempealeau & Prescott railway, a line being built from Winona Junction, three miles east of La Crosse, to Winona, Minn. The latter line was put in operation in 1870, and is twenty-nine miles long. With the completion of its Madison branch to Winona junction, in 1873, it had in operation a line from Chicago, *via* Madison and Winona, to Lake Kampeska, Minn., a distance of six hundred and twenty-three miles.

In the year 1856 a valuable grant of land was made by congress to the state of Wisconsin to aid in the construction of railroads. The Chicago, St. Paul & Fond du Lac company claimed that the grant was obtained through its efforts, and that of right it should have the northeastern grant, so-called. At the adjourned session of the legislature of 1856, a contest over the disposition of the grant resulted in conferring it upon the "Wisconsin & Superior Railroad Company," a corporation chartered for the express purpose of giving it this grant. It was generally believed at the time that the new company was organized in the interest of the Chicago, St. Paul & Fond du Lac company, and at the subsequent session, in the following year, it was authorized to consolidate with the new company, which it did in the spring of that year, and thus obtained the grant of 3,840 acres per mile along its entire line, from Fond du Lac northerly to the state line between Wisconsin and Michigan. It extended its road to Oshkosh in 1859, to Appleton in 1861, and in 1862 to Fort Howard, forming a line two hundred and forty-two miles long. The line from Fort Howard to Escanaba, one hundred and fourteen miles long, was opened in December, 1872, and made a connection with the peninsular railroad of Michigan. It now became a part of the Chicago & Northwestern, extending from Escanaba to the iron mines, and thence to Lake Superior at Marquette. Albert Keep, of Chicago, is president, and Marvin Hughitt, a gentleman of great railroad experience, is general superintendent. The company operates five hundred and sixty-seven miles of road in Wisconsin, and in all sixteen hundred and sixteen miles. Its lines extend into five different states. Over these lines its equipment is run in common, or transferred from place to place, as the changes in business may temporarily require.

WISCONSIN CENTRAL RAILROAD.

The "Milwaukee & Northern Railway Company" was incorporated in 1870, to build a road from Milwaukee to some point on the Fox river below Winnebago lake, and thence to Lake Superior, with branches. It completed its road to Menasha, one hundred and two miles from Milwaukee, with a branch from Hilbert to Green Bay, twenty-seven miles, in 1873, and in that year leased its line to the "Wisconsin Central Railroad Company," which is still operating it. In

1864 congress made a grant of land to the state of Wisconsin to aid in the construction of a railroad from Berlin, Doty's Island, Fond du Lac, or Portage, by way of Stevens Point, to Bayfield or Superior, granting the odd sections within ten miles on each side of the line, with an indemnity limit of twenty miles on each side. The legislature of 1865 failed to dispose of this grant, but that of 1866 provided for the organization of two companies, one to build from Portage City by way of Berlin to Stevens Point, and the other from Menasha to the same point, and then jointly to Bayfield and Lake Superior. The former was called the "Winnebago and Lake Superior Railroad Company," and the latter the "Portage & Superior Railroad Company." In 1869 an act was passed consolidating the two companies, which was done under the name of the "Portage, Winnebago & Superior Railroad Company." In 1871 the name of the company was changed to the "Wisconsin Central Railroad Company." The Winnebago & Lake Superior company was organized under Hon. George Reed as president, and at once commenced the construction of its line of road between Menasha and Stevens Point. In 1871 the Wisconsin Central consolidated with the "Manitowoc & Mississippi Railroad Company." The articles of consolidation provided that Gardner Colby, a director of the latter company, should be president, and that George Reed, a director of the former, should be vice president of the new organization; with a further provision that Gardner Colby, George Reed, and Elijah B. Phillips should be and remain its executive committee.

In 1871, an act was passed incorporating the "Phillips and Colby Construction Company," which created E. B. Phillips, C. L. Colby, Henry Pratt, and such others as they might associate with them, a body corporate, with authority to build railroads and do all manner of things relating to railroad construction and operation. Under this act the construction company contracted with the Wisconsin Central railroad company, to build its line of road from Menasha to Lake Superior. In November, 1873, the Wisconsin Central leased of the Milwaukee & Northern company its line of road extending from Schwartzburg to Menasha, and the branch to Green Bay, for the term of nine hundred and ninety-nine years, and also acquired the rights of the latter company to use the track of the Chicago, Milwaukee & St. Paul company between Schwartzburg and Milwaukee, and to depot facilities in Milwaukee. The construction of the land grant portion of this important line of road was commenced in 1871, and it was completed to Stevens Point in November of that year. It was built from Stevens Point north one hundred miles to Worcester in 1872. During 1872 and 1873, it was built from Ashland south to the Penoka iron ridge, a distance of thirty miles. The straight line between Portage City and Stevens Point, authorized by an act of the legislature of 1875, was constructed between October 1, 1875, and October, 1876, seventy-one miles in length. The gap of forty-two miles between Worcester and Penoka iron ridge was closed in June, 1877. E. B. Phillips, of Milwaukee, is president and general manager. This line of road passes through a section of our state hitherto unsettled. It has been pushed through with energy, and opened up for settlement an immense region of heavily timbered land, and thus contributed to the growth and prosperity of the state.

THE WESTERN UNION RAILROAD.

The "Racine, Janesville & Mississippi Railroad Company" was chartered in 1852, to build a road from Racine to Beloit, and was organized the same year. The city of Racine issued its bonds for \$300,000 in payment for that amount of stock. The towns of Racine, Elkhorn, Delavan and Beloit gave \$190,000, and issued their bonds, and farmers along the line made liberal subscriptions and secured the same by mortgages on their farms. The road was built to Burlington in 1855, to Delavan early in 1856, and to Beloit, sixty-eight miles from Racine, during the same year. Failing to meet the interest on its bonds and its floating indebtedness, it was sur-

rendered by the company to the bond-holders in 1859, who completed it to Freeport during that year, and afterward built to the Mississippi river at Savannah, and thence to Rock Island. The bond-holders purchased and sold the road in 1866, and a new organization was had as the "Western Union Railroad Company," and it has since been operated under that name. In 1869, it built a line from Elkhorn to Eagle, seventeen miles, and thus made a connection with Milwaukee over the Chicago, Milwaukee & St. Paul line. The latter company owns a controlling interest in its line. Alexander Mitchell is the president of the company, and D. A. Olin, general superintendent.

WEST WISCONSIN RAILROAD.

The lands granted by congress in 1856 to aid in the construction of a railroad in Wisconsin, from Tomah to Superior and Bayfield, were disposed of as mentioned under the history of the Chicago, Milwaukee & St. Paul company. The La Crosse company, as we have seen, prevailed in the legislature of 1856, and secured legislation favorable to its interests; but it failed to build the line of road provided for, and forfeited its right to lands granted. In 1863, the "Tomah & Lake St. Croix Railroad Company" was incorporated, with authority to construct a railroad from some point in the town of Tomah in Monroe county, to such point on Lake St. Croix, between townships 25 and 31 as the directors might determine. To the company, by the act creating it, was granted all the interest and estate of this state, to so much of the lands granted by the United States to the state of Wisconsin, known as the St. Croix grant, as lay between Tomah and Lake St. Croix. A few months after its organization, the company passed substantially into the hands of D. A. Baldwin and Jacob Humbird, who afterward built a line of road from Tomah, *via* Black River Falls, and Eau Claire to Hudson, on Lake St. Croix, one hundred and seventy-eight miles. Its name was afterward changed to the "West Wisconsin Railroad Company." In 1873, it built its road from Warren's Mills *via* Camp Douglass, on the St. Paul road to Elroy, and took up its track from the first-named place, twelve miles, to Tomah. A law-suit resulted, which went against the railroad company, and the matter was finally compromised by the payment of a sum of money by the company to the town of Tomah. The road was built through a new and sparsely settled country, and its earnings have not been sufficient to enrich its stock-holders. It connects at Camp Douglass with the Chicago, Milwaukee & St. Paul road, and at Elroy with the Chicago & Northwestern railway company's line, which gives the latter a through line to St. Paul. It is operated in connection with the Chicago & Northwestern railway, and managed in its interest. It is now in the hands of Wm. H. Ferry, of Chicago, as receiver; H. H. Potter, of Chicago, as president; and E. W. Winter, of Hudson, superintendent.

THE MILWAUKEE, LAKE SHORE & WESTERN RAILWAY.

In 1870, the "Milwaukee, Manitowoc & Green Bay Railroad Company" was chartered to build a road from Milwaukee to Green Bay by way of Manitowoc. It built its line from Milwaukee to Manitowoc in 1873, when its name was changed to "Milwaukee, Lake Shore & Western Railroad Company." Under a decree of foreclosure, it was sold Dec. 10, 1875, and its name was changed to "Milwaukee, Lake Shore & Western Railway Company," by which name it is still known.

In 1866, the "Appleton & New London Railroad Company" was incorporated to build a road from Appleton to New London, and thence to Lake Superior. A subsequent amendment to its charter authorized it to extend its road to Manitowoc. It built most of the line from Appleton to that city, and then, under legislative authority, sold this extension to the Milwau-

kee, Lake Shore & Western railroad company. The last-named company extended it to New London, on the Wolf river, twenty-one miles, in 1876, where it connects with the Green Bay & Minnesota road. It now operates one hundred and forty-six miles of road, extending from Milwaukee to New London, passing through Sheboygan, Manitowoc and Appleton, which includes a branch line six miles in length from Manitowoc to Two Rivers. F. W. Rhineland, of New York, is its president, and H. G. H. Reed, of Milwaukee, superintendent.

THE GREEN BAY & MINNESOTA RAILROAD.

The line of road operated by this company extends from Fort Howard to the Mississippi river, opposite Winona, Minnesota. It is two hundred and sixteen miles in length, and was built through a sparsely settled and heavily timbered section of the state. It began under most discouraging circumstances, yet was pushed through by the energy of a few men at Green Bay and along its line. It was originally chartered in 1866 as the "Green Bay & Lake Pepin Railroad Company" to build a road from the mouth of the Fox river near Green Bay to the Mississippi river opposite Winona. But little was done except the making of preliminary surveys in 1870. During 1870 and 1871, forty miles were constructed and put in operation. In 1872, one hundred and fourteen miles were graded, the track laid, and the river reached, sixty-two miles farther, in 1873. In 1876, it acquired the right to use the "Winona cut-off" between Winona and Onalaska, and built a line from the latter point to La Crosse, seven miles, thus connecting its road with the chief city of Wisconsin on the Mississippi river. The city of La Crosse aided this extension by subscribing \$75,000 and giving its corporation bonds for that amount. Henry Ketchum, of New London, is president of the company, and D. M. Kelly, of Green Bay, general manager.

WISCONSIN VALLEY ROAD.

The "Wisconsin Valley Railroad Company" was incorporated in 1871 to build a road from a point on or near the line of the Milwaukee & La Crosse railroad, between Kilbourn City and the tunnel in said road to the village of Wausau, in the county of Marathon, and the road to pass not more than one mile west of the village of Grand Rapids, in the county of Wood. The road was commenced at Tomah, and graded to Centralia in 1872, and opened to that village in 1873, and during 1874 it was completed to Wausau, ninety miles in its whole length. Boston capitalists furnished the money, and it is controlled in the interest of the Dubuque & Minnesota railroad, through which the equipment was procured. The lumber regions of the Wisconsin river find an outlet over it, and its junction with the Chicago, Milwaukee & St. Paul road at Tomah enables a connection with the railroads of Iowa and Minnesota. It gives the people of Marathon county an outlet long needed for a large lumber traffic, and also enables them to receive their goods and supplies of various kinds for the lumbering region tributary to Wausau. James F. Joy, of Detroit, is president, and F. O. Wyatt, superintendent.

SHEBOYGAN & FOND DU LAC RAILROAD.

The "Sheboygan & Mississippi Railroad Company" was incorporated in 1852, to build a road from Sheboygan to the Mississippi river. It was completed from Sheboygan to Plymouth in 1858, to Glenbeulah in 1860, to Fond du Lac in 1868, and to Princeton in 1872. The extension from Fond du Lac to Princeton was built under authority of an act passed in 1871.

Under a foreclosure in 1861 the line from Sheboygan to Fond du Lac was sold, and the name of the company changed to "Sheboygan & Fond du Lac Railroad Company." The length of

the line is seventy-eight miles, and it passes through a fertile agricultural country. The city of Sheboygan, county, city and town of Fond du Lac, and the towns of Riverdale, Ripon, Brooklyn, Princeton, and St. Marie, aided in its building to an amount exceeding \$250,000. D. L. Wells is president, and Geo. P. Lee, superintendent.

THE MINERAL POINT RAILROAD.

The "Mineral Point Railroad Company" was chartered in 1852, to build a road from Mineral Point, in the county of Iowa, to the state line, in township number one, in either the county of Green or LaFayette. It was completed to Warren, in the state of Illinois, thirty-two miles, in 1855, making a connection at that point with the Illinois Central, running from Chicago to Galena. Iowa county loaned its credit and issued its bonds to aid in its construction. It was sold under foreclosure in 1856. Suits were brought against Iowa county to collect the amount of its bonds, and judgment obtained in the federal courts. Much litigation has been had, and ill feeling engendered, the supervisors of the county having been arrested for contempt of the decree of the court. Geo. W. Cobb, of Mineral Point, is the general manager.

The Dubuque, Platteville & Milwaukee railroad was completed in July, 1870, and extends from Calamine, a point on the Mineral Point railroad, to the village of Platteville, eighteen miles, and is operated by the Mineral Point railroad company.

MADISON & PORTAGE RAILROAD.

The legislature of 1855 chartered the "Sugar River Valley Railroad Company" to build a road from a point on the north side of the line of the Southern Wisconsin road, within the limits of Green county, to Dayton, on the Sugar river. In 1857 it was authorized to build south to the state line, and make its northern terminus at Madison. In 1861 it was authorized to build from Madison to Portage City, and from Columbus to Portage City, and so much of the land grant act of 1856, as related to the building of the road from Madison, and from Columbus to Portage City, was annulled and repealed, and the rights and privileges that were conferred upon the LaCrosse company were given to the Sugar River Valley railroad company, and the portion of the land grant, applicable to the lines mentioned, was conferred upon the last named company. Under this legislation about twenty miles of the line between Madison and Portage were graded, and the right of way secured for about thirty of the thirty-nine miles. The La Crosse company had done considerable grading before its right was annulled. In 1866 the company was relieved from constructing the road from Columbus to Portage City. In 1870 the purchasers of that part of the Sugar River Valley railroad lying between Madison and Portage City were incorporated as the "Madison & Portage Railroad Company," and to share all the rights, grants, etc., that were conferred upon the Sugar River railroad company by its charter, and amendments thereto, so far as related to that portion of the line.

Previous to this time, in 1864 and 1865, judgments had been obtained against the Sugar River Valley company; and its right of way, grading and depot grounds sold for a small sum. James Campbell, who had been a contractor with the Sugar River Valley company, with others, became the purchasers, and organized under the act of 1870, and, during the year 1871, completed it between Madison and Portage City, and in March, 1871, leased it to the Milwaukee & St. Paul company, and it is still operated by that corporation. In 1871 the Madison & Portage company was authorized to extend its road south to the Illinois state line, and north from Portage City to Lake Winnebago. The same year it was consolidated with the "Rockford Central

Railroad Company," of Illinois, and its name changed to the "Chicago & Superior Railroad Company," but still retains its own organization. The Madison & Portage railroad company claims a share in the lands granted by acts of congress in 1856, and have commenced proceedings to assert its claim, which case is still pending in the federal courts.

NORTH WISCONSIN RAILROAD.

The "North Wisconsin Railroad Company" was incorporated in 1869, to build a road from Lake St. Croix, or river, to Bayfield on Lake Superior. The grant of land by congress in 1856, to aid in building a road from Lake St. Croix to Bayfield on Lake Superior, under the decision of the federal court, was yet at the disposal of the state. This company, in 1871, built a short section of its line of road, with the expectation of receiving the grant. In 1873, the grant was conferred upon the Milwaukee & St. Paul company, but under the terms and restrictions contained in the act, it declined to accept it. The legislature of 1874 gave it to the North Wisconsin company, and it has built forty miles of its road, and received the lands pertaining thereto. Since 1876, it has not completed any part of its line, but is trying to construct twenty miles during the present year. The company is authorized to construct a road both to Superior and to Bayfield, but the act granting the lands confers that portion from Superior to the intersection of the line to Bayfield upon the Chicago & North Pacific air-line railroad. This last-named company have projected a line from Chicago to the west end of Lake Superior, and are the owners of an old grade made through Walworth and Jefferson counties, by a company chartered in 1853 as the "Wisconsin Central," to build a road from Portage City to Geneva, in the county of Walworth. The latter company had also graded its line between Geneva and the state line of Illinois. This grade was afterward appropriated by the Chicago & Northwestern, and over it they now operate their line from Chicago to Geneva.

PRAIRIE DU CHIEN & MCGREGOR RAILROAD.

This is a line two miles in length, connecting Prairie du Chien in Wisconsin, with McGregor in Iowa. It is owned and operated by John Lawler, of the latter-named place. It extends across both channels of the Mississippi river, and an intervening island. The railroad bridge consists of substantial piling, except a pontoon draw across each navigable channel. Each pontoon is four hundred feet long and thirty feet wide, provided with suitable machinery and operated by steam power. Mr. Lawler has secured a patent on his invention of the pontoon draw for railroad bridges. His line was put in operation in April, 1874.

THE CHIPPEWA FALLS & WESTERN RAILROAD.

This road was built in 1874, by a company organized under the general law of the state. It is eleven miles in length, and connects the "Falls" with the West Wisconsin line at Eau Claire. It was constructed by the energetic business men and capitalists of Chippewa Falls, to afford an outlet for the great lumber and other interests of that thriving and prosperous city. The road is substantially built, and the track laid with steel rails.

NARROW GAUGE RAILROADS.

The "Galena & Southern Wisconsin Railroad Company" was incorporated in 1857. Under its charter, a number of capitalists of the city of Galena, in the state of Illinois, commenced

the construction of a narrow (three feet) gauge road, running from that city to Platteville, thirty-one miles in length, twenty miles in Wisconsin. It runs through a part of La Fayette county to Platteville, in Grant county, and was completed to the latter point in 1875. Surveys are being made for an extension to Wingville, in Grant county.

The "Fond du Lac, Amboy & Peoria Railway Company" was organized under the general law of the state, in 1874, to build a narrow gauge road from the city of Fond du Lac to the south line of the state in the county of Walworth or Rock, and it declared its intention to consolidate with a company in Illinois that had projected a line of railroad from Peoria, in Illinois, to the south line of the state of Wisconsin. The road is constructed and in operation from Fond du Lac to Iron Ridge, a point on the Chicago, Milwaukee & St. Paul railway, twenty-nine miles from Fond du Lac.

The "Pine River & Steven's Point Railroad Company" was organized by the enterprising citizens of Richland Center, and has built a narrow gauge road from Lone Rock, a point on the Chicago, Milwaukee & St. Paul road, in Richland county, to Richland Center, sixteen miles in length. Its track is laid with wooden rails, and it is operated successfully.

The "Chicago & Tomah Railroad Company" organized under the general railroad law of the state, in 1872, to construct a narrow gauge road from Chicago, in Illinois, to the city of Tomah, in Wisconsin. Its president and active manager is D. R. Williams, of Clermont, Iowa, and its secretary is L. M. Culver, of Wauzeka. It has graded about forty-five miles, extending from Wauzeka up the valley of the Kickapoo river, in Crawford county, Wisconsin. It expects to have fifty-four miles in operation, to Bloomingdale, in Vernon county, the present year (1877). The rolling stock is guaranteed, and the president is negotiating for the purchase of the iron. South of Wauzeka the line is located to Belmont, in Iowa county. At Wauzeka it will connect with the Chicago, Milwaukee & St. Paul line.

The public-spirited citizens of Necedah, in Juneau county, have organized under the general law of the state, and graded a road-bed from their village to New Lisbon, on the Chicago, Milwaukee & St. Paul company's line. The latter company furnish and lay the iron, and will operate the road. It is thirteen miles in length.

CONCLUSION.

The railroads of Wisconsin have grown up under the requirements of the several localities that have planned and commenced their construction, and without regard to any general system. Frequently the work of construction was begun before adequate means were provided, and bankruptcy overtook the roads in their early stages. The consolidation of the various companies, as in the cases of the Chicago, Milwaukee & St. Paul, the Chicago & Northwestern, and others, has been effected to give through lines and the public greater facilities, as well as to introduce economy in management. At times the people have become apprehensive, and by legislative action prohibited railroads from consolidating, and have sought to control and break down the power of these corporations and to harmonize the interests of the companies and the public. The act of 1874, called the "Potter law," was the assertion, by the legislative power of the state, of its right to control corporations created by itself, and limit the rates at which freight and passengers should be carried. After a long and expensive contest, carried through the state and federal courts, this right has been established, being finally settled by the decision of the supreme court of the United States.

Quite all the railroads of Wisconsin have been built with foreign capital. The plan pursued after an organization was effected, was to obtain stock subscriptions from those immediately

interested in the enterprise, procure the aid of counties and municipalities, and then allure the farmers, with the prospect of joint ownership in railroads, to subscribe for stock and mortgage their farms to secure the payment of their subscriptions. Then the whole line was bonded and a mortgage executed. The bonds and mortgages thus obtained, were taken to the money centers of New York, London, Amsterdam and other places, and sold, or hypothecated to obtain the money with which to prosecute the work. The bonds and mortgages were made to draw a high rate of interest, and the earnings of these new roads, through unsettled localities, were insufficient to pay more than running and incidental expenses, and frequently fell short of that. Default occurring in the payment of interest, the mortgages were foreclosed and the property passed into the hands and under the control of foreign capitalists. Such has been the history of most of the railroads of our state. The total number of farm mortgages given has been 3,785, amounting to \$4,079,433; town, county and municipal bonds, amounting to \$6,910,652. The total cost of all the railroads in the state, as given by the railroad commissioner in his report for 1876, has been \$98,343,453.67. This vast sum is, no doubt, greatly in excess of what the cost should have been, but the roads have proved of immense benefit in the development of the material resources of the state.

Other lines are needed through sections not yet traversed by the iron steed, and present lines should be extended by branch roads. The questions upon which great issues were raised between the railway corporations and the people, are now happily settled by securing to the latter their rights; and the former, under the wise and conciliatory policy pursued by their managers, are assured of the safety of their investments. An era of good feeling has succeeded one of distrust and antagonism. The people must use the railroads, and the railroads depend upon the people for sustenance and protection. This mutuality of interest, when fully recognized on both sides, will result in giving to capital a fair return and to labor its just reward.

LUMBER MANUFACTURE.

By W. B. JUDSON.

Foremost among the industries of Wisconsin is that of manufacturing lumber. Very much of the importance to which the state has attained is due to the development of its forest wealth. In America, agriculture always has been, and always will be, the primary and most important interest; but no nation can subsist upon agriculture alone. While the broad prairies of Illinois and Iowa are rich with a fertile and productive soil, the hills and valleys of northern Wisconsin are clothed with a wealth of timber that has given birth to a great manufacturing interest, which employs millions of capital and thousands of men, and has peopled the northern wilds with energetic, prosperous communities, built up enterprising cities, and crossed the state with a network of railways which furnish outlets for its productions and inlets for the new populations which are ever seeking for homes and employment nearer to the setting sun.

If a line be drawn upon the state map, from Green Bay westward through Stevens Point, to where it would naturally strike the Mississippi river, it will be below the southern boundary of the pine timber regions, with the single exception of the district drained by the Yellow river, a tributary of the Wisconsin, drawing its timber chiefly from Wood and Juneau counties. The territory north of this imaginary line covers an area a little greater than one half of the state. The pine timbered land is found in belts or ridges, interspersed with prairie openings, patches of hardwood and hemlock, and drained by numerous water-courses. No less than seven large

rivers traverse this northern section, and, with their numerous tributaries, penetrate every county, affording facilities for floating the logs to the mills, and, in many instances, the power to cut them into lumber. This does not include the St. Croix, which forms the greater portion of the boundary line between Wisconsin and Minnesota, and, by means of its tributaries, draws the most and best of its pine from the former state. These streams divide the territory, as far as lumbering is concerned, into six separate and distinct districts: The Green bay shore, which includes the Wisconsin side of the Menomonee, the Peshtigo and Oconto rivers, with a number of creeks which flow into the bay between the mouths of the Oconto and Fox rivers; the Wolf river district; the Wisconsin river, including the Yellow, as before mentioned; the Black river; the Chippewa and Red Cedar; and the Wisconsin side of the St. Croix.

Beginning with the oldest of these, the Green bay shore, a brief description of each will be attempted. The first saw-mill built in the state, of which there is now any knowledge, was put in operation in 1809, in Brown county, two or three miles east from Depere, on a little stream which was known as East river. It was built by Jacob Franks, but probably was a very small affair. Of its machinery or capacity for sawing, no history has been recorded, and it is not within the memory of any inhabitant of to-day. In 1829, John P. Arndt, of Green Bay, built a water-power mill on the Pensaukee river at a point where the town of Big Suamico now stands. In 1834, a mill was built on the Wisconsin side of the Menomonee, and, two years later, one at Peshtigo. Lumber was first shipped to market from this district in 1834, which must be termed the beginning of lumbering operations on the bay shore. The lands drained by the streams which flow into Green bay are located in Shawano and Oconto counties, the latter being the largest in the state. In 1847, Willard Lamb, of Green Bay, made the first sawed pine shingles in that district; they were sold to the Galena railroad company for use on depot buildings, and were the first of the kind sold in Chicago. Subsequently Green Bay became one of the greatest points for the manufacture of such shingles in the world. The shores of the bay are low, and gradually change from marsh to swamp, then to level dry land, and finally become broken and mountainous to the northward. The pine is in dense groves that crowd closely upon the swamps skirting the bay, and reach far back among the hills of the interior. The Peshtigo flows into the bay about ten miles south of the Menomonee, and takes its rise far back in Oconto county, near to the latter's southern tributaries. It is counted a good logging stream, its annual product being from 40,000,000 to 60,000,000 feet. The timber is of a rather coarse quality, running but a small percentage to what the lumbermen term "uppers." About ten per cent. is what is known as Norway pine. Of the whole amount of timber tributary to the Peshtigo, probably about one third has been cut off to this date. The remainder will not average of as good quality, and only a limited portion of the land is of any value for agricultural purposes after being cleared of the pine. There are only two mills on this stream, both being owned by one company. The Oconto is one of the most important streams in the district. The first saw-mill was built on its banks about the year 1840, though the first lumbering operations of any account were begun in 1845 by David Jones. The business was conducted quite moderately until 1856, in which year several mills were built, and from that date Oconto has been known as quite an extensive lumber manufacturing point. The timber tributary to this stream has been of the best quality found in the state. Lumber cut from it has been known to yield the extraordinarily high average of fifty and sixty per cent. uppers. The timber now being cut will not average more than half that. The proportion of Norway is about five per cent. It is estimated that from three fourths to four fifths of the timber tributary to the Oconto has been cut away, but it will require a much longer time to convert the balance into lumber than was necessary to cut its equivalent in amount, owing to its remote location. The annual production

of pine lumber at Oconto is from 50,000,000 to 65,000,000 feet. The whole production of the district, exclusive of the timber which is put into the Menomonee from Wisconsin, is about 140,000,000 feet annually.

The Wolf river and its tributaries constitute the next district, proceeding westward. The first saw logs cut on this stream for commercial purposes were floated to the government mill at Neenah in 1835. In 1842, Samuel Farnsworth erected the first saw-mill on the upper Wolf near the location of the present village of Shawano, and in the following spring he sent the first raft of lumber down the Wolf to Oshkosh. This river also rises in Oconto county, but flows in a southerly direction, and enters Winnebago lake at Oshkosh. Its pineries have been very extensive, but the drain upon them within the past decade has told with greater effect than upon any other district in the state. The quality of the timber is very fine, and the land is considered good for agricultural purposes, and is being occupied upon the lines of the different railways which cross it. The upper waters of the Wolf are rapid, and have a comparatively steady flow, which renders it a very good stream for driving logs. Upon the upper river, the land is quite rolling, and about the head-waters is almost mountainous. The pine timber that remains in this district is high up on the main river and branches, and will last but a few years longer. A few years ago the annual product amounted to upward of 250,000,000 feet; in 1876 it was 138,000,000. The principal manufacturing points are Oshkosh and Fond du Lac; the former has 21 mills, and the latter 10.

Next comes the Wisconsin, the longest and most crooked river in the state. It rises in the extreme northern sections, and its general course is southerly until, at Portage City, it makes a grand sweep to the westward and unites with the Mississippi at Prairie du Chien. It has numerous tributaries, and, together with these, drains a larger area of country than any other river in the state. Its waters flow swiftly and over numerous rapids and embryo falls, which renders log-driving and raft-running very difficult and even hazardous. The timber is generally near the banks of the main stream and its tributaries, gradually diminishing in extent as it recedes from them and giving place to the several varieties of hard-woods. The extent to which operations have been carried on necessitates going further up the stream for available timber, although there is yet what may be termed an abundant supply. The first cutting of lumber on this stream, of which there is any record, was by government soldiers, in 1828, at the building of Fort Winnebago. In 1831, a mill was built at Whitney's rapids, below Point Bass, in what was then Indian territory. By 1840, mills were in operation as high up as Big Bull falls, and Wausau had a population of 350 souls. Up to 1876, the product of the upper Wisconsin was all sent in rafts to markets on the Mississippi. The river above Point Bass is a series of rapids and eddies; the current flows at the rate of from 10 to 20 miles an hour, and it can well be imagined that the task of piloting a raft from Wausau to the dells was no slight one. The cost of that kind of transportation in the early times was actually equal to the present market price of the lumber. With a good stage of water, the length of time required to run a raft to St. Louis was 24 days, though quite frequently, owing to inability to get out of the Wisconsin on one rise of water, several weeks were consumed. The amount of lumber manufactured annually on this river is from 140,000,000 to 200,000,000 feet.

Black river is much shorter and smaller than the Wisconsin, but has long been known as a very important lumbering stream. It is next to the oldest lumber district in the state. The first saw-mill west of Green Bay was built at Black River Falls in 1819 by Col. John Shaw. The Winnebago tribe of Indians, however, in whose territory he was, objected to the innovation of such a fine art, and unceremoniously offered up the mill upon the altar of their outraged

solitude. The owner abruptly quitted that portion of the country. In 1839 another attempt to establish a mill on Black river was more successfully made. One was erected at the same point by two brothers by the name of Wood, the millwright being Jacob Spaulding, who eventually became its possessor. His son, Mr. Dudley J. Spaulding, is now a very extensive operator upon Black river. La Crosse is the chief manufacturing point, there being ten saw-mills located there. The annual production of the stream ranges from 150,000,000 to 225,000,000 feet of logs, less than 100,000,000 feet being manufactured into lumber on its banks. The balance is sold in the log to mills on the Mississippi. It is a very capricious river to float logs in, which necessitates the carrying over from year to year of a very large amount, variously estimated at from 150,000,000 to 200,000,000 feet, about equal to an entire season's product. This makes the business more hazardous than on many other streams, as the loss from depreciation is very great after the first year. The quality of the timber is fine, and good prices are realized for it when sold within a year after being cut.

The Chippewa district probably contains the largest and finest body of white pine timber now standing, tributary to any one stream, on the continent. It has been claimed, though with more extravagance than truth, that the Chippewa pineries hold one-half the timber supply of the state. The river itself is a large one, and has many tributaries, which penetrate the rich pine district in all directions. The character of the tributary country is not unlike that through which the Wisconsin flows. In 1828 the first mill was built in the Chippewa valley, on Wilson's creek, near its confluence with the Red Cedar. Its site is now occupied by the village of Menomonee. In 1837 another was built on what is the present site of the Union Lumbering Company's mill at Chippewa Falls. It was not until near 1865 that the Chippewa became very prominent as a lumber-making stream. Since that date it has been counted as one of the foremost in the northwest. Upon the river proper there are twenty-two saw-mills, none having a capacity of less than 3,500,000 feet per season, and a number being capable of sawing from 20,000,000 to 25,000,000. The annual production of sawed lumber is from 250,000,000 to 300,000,000 feet; the production of logs from 400,000,000 to 500,000,000 feet. In 1867 the mill-owners upon the Mississippi, between Winona and Keokuk, organized a corporation known as the Beef Slough Manufacturing, Log-Driving and Transportation Company. Its object was to facilitate the handling of logs cut upon the Chippewa and its tributaries, designed for the Mississippi mills. At the confluence of the two rivers various improvements were made, constituting the Beef Slough boom, which is capable of assorting 200,000,000 feet of logs per season. The Chippewa is the most difficult stream in the northwest upon which to operate. In the spring season it is turbulent and ungovernable, and in summer, almost destitute of water. About its head are numerous lakes which easily overflow under the influence of rain, and as their surplus water flows into the Chippewa, its rises are sudden and sometimes damaging in their extent. The river in many places flows between high bluffs, and, under the influence of a freshet, becomes a wild and unmanageable torrent. Logs have never been floated in rafts, as upon other streams, but are turned in loose, and are carried down with each successive rise, in a jumbled and confused mass, which entails much labor and loss in the work of assorting and delivering to the respective owners. Previous to the organization of the Eagle Rapids Flooding Dam and Boom Company, in 1872, the work of securing the stock after putting it into the river was more difficult than to cut and haul it. At the cities of Eau Claire and Chippewa Falls, where most of the mills are located, the current, under the influence of high water, is very rapid, and for years the problem was, how to stop and retain the logs, as they would go by in great masses and with almost resistless velocity. In 1847 is recorded one of the most sudden and disastrous floods in the history of log-running streams. In the month of June the Chippewa rose twelve feet in a single night,

and, in the disastrous torrent that was created, piers, booms, or "pockets" for holding logs at the mills, together with a fine new mill, were swept away, and the country below where Eau Claire now stands was covered with drift-wood, saw-logs, and other *debris*. Such occurrences led to the invention of the since famous sheer boom, which is a device placed in the river opposite the mill boom into which it is desired to turn the logs. The sheer boom is thrown diagonally across the river, automatically, the action of the current upon a number of ingeniously arranged "fins" holding it in position. By this means the logs are sheered into the receptacle until it is filled, when the sheer boom, by closing up the "fins" with a windlass, falls back and allows the logs to go on for the next mill to stop and capture its pocket full in like manner. By this method each mill could obtain a stock, but a great difficulty was experienced from the fact that the supply was composed of logs cut and owned by everybody operating on the river, and the process of balancing accounts according to the "marks," at the close of the season, has been one prolific of trouble and legal entanglements. The building of improvements at Eagle Rapids by the company above mentioned remedied the difficulty to some extent, but the process of logging will always be a difficult and hazardous enterprise until adequate means for holding and assorting the entire log product are provided. Upon the Yellow and Eau Claire rivers, two important branches of the Chippewa, such difficulties are avoided by suitable improvements. The entire lumber product of the Chippewa, with the exception of that consumed locally, is floated in rafts to markets upon the Mississippi, between its mouth and St. Louis. The quality of the timber is good, and commands the best market price in the sections where it seeks market.

West of the Chippewa district the streams and timber are tributary to the St. Croix, and in all statistical calculations the entire product of that river is credited to Minnesota, the same as that of the Menomonee is given to Michigan, when in fact about one half of each belongs to Wisconsin. The important branches of the St. Croix belonging in this state are the Apple Clam, Yellow, Namekogan, Totagatic and Eau Claire. The sections of country through which they flow contain large bodies of very fine pine timber. The St. Croix has long been noted for the excellence of its dimension timber. Of this stock a portion is cut into lumber at Stillwater, and marketed by rail, and the balance is sold in the log to mills on the Mississippi.

Such is a brief and somewhat crude description of the main lumbering districts of the state. Aside from these, quite extensive operations are conducted upon various railway lines which penetrate the forests which are remote from log-running streams. In almost every county in the state, mills of greater or less capacity may be found cutting up pine or hard-woods into lumber, shingles, or cooperage stock. Most important, in a lumbering point of view, of all the railroads, is the Wisconsin Central. It extends from Milwaukee to Ashland, on Lake Superior, a distance of 351 miles, with a line to Green Bay, 113 miles, and one from Stevens Point to Portage, 71 miles, making a total length of road, of 449 miles. It has only been completed to Ashland within the last two years. From Milwaukee to Stevens Point it passes around to the east and north of Lake Winnebago, through an excellent hard-wood section. There are many stave mills in operation upon and tributary to its line, together with wooden-ware establishments and various manufactories requiring either hard or soft timber as raw material. From Stevens Point northward, this road passes through and has tributary to it one of the finest bodies of timber in the state. It crosses the upper waters of Black river and the Flambeau, one of the main tributaries of the Chippewa. From 30,000,000 to 50,000,000 feet of lumber is annually manufactured on its line, above Stevens Point. The Wisconsin Valley railroad extends from Tomah to Wausau, and was built to afford an outlet, by rail, for the lumber produced at the latter point.

The extent of the timber supply in this state has been a matter of much speculation, and

is a subject upon which but little can be definitely said. Pine trees can not be counted or measured until reduced to saw-logs or lumber. It is certain that for twenty years the forests of Wisconsin have yielded large amounts of valuable timber, and no fears are entertained by holders of pine lands that the present generation of owners will witness an exhaustion of their supply. In some sections it is estimated that the destruction to the standing timber by fires, which periodically sweep over large sections, is greater than by the axes of the loggers. The necessity for a state system of forestry, for the protection of the forests from fires, has been urged by many, and with excellent reason; for no natural resource of the state is of more value and importance than its wealth of timber. According to an estimate recently made by a good authority, and which received the sanction of many interested parties, there was standing in the state in 1876, an amount of pine timber approximating 35,000,000,000 feet.

The annual production of lumber in the districts herein described, and from logs floated out of the state to mills on the Mississippi, is about 1,200,000,000 feet. The following table gives the mill capacity per season, and the lumber and shingles manufactured in 1876:

DISTRICT.	SEASON CAPACITY.	LUMBER MANUFACTURED IN 1876.	SHINGLES MANUFACTURED IN 1876.
Green Bay Shore.....	206,000,000	138,250,000	85,400,000
Wolf River.....	258,500,000	138,645,077	123,192,000
Wisconsin Central Railroad.....	72,500,000	31,530,000	132,700,000
Green Bay & Minnesota Railroad.....	34,500,000	17,700,000	10,700,000
Wisconsin River.....	222,000,000	139,700,000	106,250,000
Black River.....	101,000,000	70,852,747	37,675,000
Chippewa River.....	311,000,000	255,866,999	79,250,000
Mississippi River — using Wisconsin logs..	509,000,000	380,067,000	206,977,000
Total.....	1,714,500,000	1,172,611,823	782,144,000

If to the above is added the production of mills outside of the main districts and lines of railway herein described, the amount of pine lumber annually produced from Wisconsin forests would reach 1,500,000,000 feet. Of the hard-wood production no authentic information is obtainable. To cut the logs and place them upon the banks of the streams, ready for floating to the mills, requires the labor of about 18,000 men. Allowing that, upon an average, each man has a family of two persons besides himself, dependent upon his labor for support, it would be apparent that the first step in the work of manufacturing lumber gives employment and support to 54,000 persons. To convert 1,000,000 feet of logs into lumber, requires the consumption of 1,200 bushels of oats, 9 barrels of pork and beef, 10 tons of hay, 40 barrels of flour, and the use of 2 pairs of horses. Thus the fitting out of the logging companies each fall makes a market for 1,800,000 bushels of oats, 13,500 barrels of pork and beef, 15,000 tons of hay, and 60,000 barrels of flour. Before the lumber is sent to market, fully \$6,000,000 is expended for the labor employed in producing it. This industry, aside from furnishing the farmer of the west with the cheapest and best of materials for constructing his buildings, also furnishes a very important market for the products of his farm.

The question of the exhaustion of the pine timber supply has met with much discussion during the past few years, and, so far as the forests of Wisconsin are concerned, deserves a brief notice. The great source of supply of white pine timber in the country is that portion of the northwest between the shores of Lake Huron and the banks of the Mississippi, comprising the

northern portions of the states of Michigan, Wisconsin and Minnesota. For a quarter of a century these fields have been worked by lumbermen, the amount of the yearly production having increased annually until it reached the enormous figure of 4,000,000,000 feet. With all of this tremendous drain upon the forests, there can be pointed out but one or two sections that are actually exhausted. There are, however, two or three where the end can be seen and the date almost foretold. The pineries of Wisconsin have been drawn upon for a less period and less amount than those of Michigan, and, it is generally conceded, will outlast them at the present proportionate rate of cutting. There are many owners of pine timber lands who laugh at the prospect of exhausting their timber, within their lifetime. As time brings them nearer to the end, the labor of procuring the logs, by reason of the distance of the timber from the water-courses, will increase, and the work will progress more slowly.

In the future of this industry there is much promise. Wisconsin is the natural source of supply for a very large territory. The populous prairies of Illinois and Iowa are near-by and unfailing markets. The broad plains of Kansas and the rich valleys of Nebraska, which are still in the cradle of development, will make great drafts upon her forests for the material to construct cities in which the first corner-stone is yet unlaid. Minnesota, notwithstanding the fact that large forests exist within her own confines, is even now no mean customer for Wisconsin lumber, and the ambitious territory of Dakota will soon clamor for material to build up a great and wealthy state. In the inevitable progress of development and growth which must characterize the great west, the demand for pine lumber for building material will be a prominent feature. With the growth of time, changes will occur in the methods of reducing the forests. With the increasing demand and enhancing values will come improvements in manipulating the raw material, and a stricter economy will be preserved in the handling of a commodity which the passage of time only makes more valuable. Wisconsin will become the home of manufactories, which will convert her trees into finished articles of daily consumption, giving employment to thousands of artisans where it now requires hundreds, and bringing back millions of revenue where is now realized thousands. Like all other commodities, lumber becomes more valuable as skilled labor is employed in its manipulation, and the greater the extent to which this is carried, the greater is the growth in prosperity, of the state and its people.

BANKING IN WISCONSIN.

By JOHN P. MCGREGOR.

Wisconsin was organized as a territory in 1836, and the same year several acts were passed by the territorial legislature, incorporating banks of issue. Of these, one at Green Bay and another at Mineral Point went into operation just in time to play their part in the great panic of 1837. The bank at Green Bay soon failed and left its bills unredeemed. The bank at Mineral Point is said to have struggled a little longer, but both these concerns were short lived, and their issues were but a drop in the great flood of worthless wild-cat bank notes that spread over the whole western country in that disastrous time. The sufferings of the people of Wisconsin, from this cause, left a vivid impression on their minds, which manifested its results in the legislation of the territory and in the constitution of the state adopted in 1848. So jealous were the legislatures of the territory, of banks and all their works, that, in every act of incorporation for any purpose, a clause was inserted to the effect that nothing in the act contained should be

taken to authorize the corporation to assume or exercise any banking powers; and this proviso was even added to acts incorporating church societies. For some years there can hardly be said to have been any banking business done in the territory; merchants and business men were left to their own devices to make their exchanges, and every man was his own banker.

In the year 1839 an act was passed incorporating the "Wisconsin Marine and Fire Insurance Company," of Milwaukee. This charter conferred on the corporation, in addition to the usual powers of a fire and marine insurance company, the privilege of *receiving deposits, issuing certificates of deposit* and lending money,—and wound up with the usual prohibition from doing a banking business. This company commenced business at once under the management of George Smith as president and Alexander Mitchell as secretary. The receiving deposits, issuing certificates of deposit and lending money, soon outgrew and overshadowed the insurance branch of the institution, which accordingly gradually dried up. In fact, the certificates of deposit had all the appearance of ordinary bank notes, and served the purposes of an excellent currency, being always promptly redeemed in coin on demand. Gradually these issues attained a great circulation all through the west, as the people gained more and more confidence in the honesty and ability of the managers; and though "runs" were several times made, yet being successfully met, the public finally settled down into the belief that these bills were good beyond question, so that the amount in circulation at one time, is said, on good authority, to have been over \$2,000,000.

As the general government required specie to be paid for all lands bought of it, the Wisconsin Marine and Fire Insurance company, by redemption of its "certificates of deposit," furnished a large part of the coin needed for use at the Milwaukee land office, and more or less for purchases at land offices in other parts of the state, and its issues were of course much in request for this purpose. For many years this institution furnished the main banking facilities for the business men of the territory and young state, in the way of discounts and exchanges. Its right to carry on the operations it was engaged in, under its somewhat dubious and inconsistent charter, was often questioned, and, in 1852, under the administration of Governor Farwell, some steps were taken to test the matter; but as the general banking law had then been passed by the legislature, and was about to be submitted to the people, and as it was understood that the company would organize as a bank under the law, if approved, the legal proceedings were not pressed. While this corporation played so important a part in the financial history and commercial development of Wisconsin, the writer is not aware of any available statistics as to the amount of business transacted by it before it became merged in the "Wisconsin Marine and Fire Insurance Company's Bank."

In 1847, the foundation of the present well-known firm of Marshall & Ilsley was laid by Samuel Marshall, who, in that year, opened a private banking office in Milwaukee, and was joined in 1849 by Charles F. Ilsley. This concern has always held a prominent position among the banking institutions of our state. About this time, at Mineral Point, Washburn & Woodman (C. C. Washburn and Cyrus Woodman) engaged in private banking, as a part of their business. After some years they were succeeded by Wm. T. Henry, who still continues the banking office. Among the early private bankers of the state were Mr. Kellogg, of Oshkosh; Ulmann and Bell, of Racine; and T. C. Shove, of Manitowoc. The latter still continues his business, while that of the other firms has been wound up or merged in organized banks.

In 1848, Wisconsin adopted a state constitution. This constitution prohibited the legislature from incorporating banks and from conferring banking powers on any corporation; but provided the question of "banks or no banks" might be submitted to a vote of the electors, and, if the decision should be in favor of banks, then the legislature might charter banks or might enact a

general banking law, but no such special charter or general banking law should have any force until submitted to the electors at a general election, and approved by a majority of votes cast on that subject. In 1851, the legislature submitted this question to the people, and a majority of the votes were cast in favor of "banks." Accordingly the legislature, in 1852, made a general banking law, which was submitted to the electors in November of that year, and was approved by them. This law was very similar to the free banking law of the state of New York, which had then been in force about fifteen years, and was generally approved in that state. Our law authorized any number of individuals to form a corporate association for banking purposes, and its main provisions were intended to provide security for the circulating notes, by deposit of state and United States stocks or bonds with the state treasurer, so that the bill holders should sustain no loss in case of the failure of the banks. Provision was made for a bank comptroller, whose main duty it was to see that countersigned circulating notes were issued to banks only in proper amounts for the securities deposited, and upon compliance with the law, and that the banks kept these securities good.

The first bank comptroller was James S. Baker, who was appointed by Governor Farwell.

The first banks organized under the new law were the "State Bank," established at Madison by Marshall & Hsley, and the "Wisconsin Marine and Fire Insurance Company's Bank," established at Milwaukee under the old management of that company. These banks both went into operation early in January, 1853, and, later in that year, the "State Bank of Wisconsin" (now Milwaukee National Bank of Wisconsin), and the "Farmers' and Millers' Bank" (now First National Bank of Milwaukee), were established, followed in January, 1854, by the "Bank of Milwaukee" (now National Exchange Bank of Milwaukee). From this time forward banks were rapidly established at different points through the state, until in July, 1857, they numbered sixty — with aggregate capital, \$4,205,000; deposits, \$3,920,238; and circulation, \$2,231,829. In October, the great revulsion and panic of 1857 came on, and in its course and effects tried pretty severely the new banks in Wisconsin. Some of them succumbed to the pressure, but most of them stood the trial well.

The great source of loss and weakness at that time was found in the rapid decline of the market value of the securities deposited to protect circulation, which were mostly state bonds, and largely those of the southern states; so that this security, when it came to be tried, did not prove entirely sufficient. Another fault of the system, or of the practice under it, was developed at this time. It was found that many of the banks had been set up without actual working capital, merely for the purpose of issuing circulating notes, and were located at distant and inaccessible points in what was then the great northern wilderness of the state; so that it was expensive and in fact impracticable to present their issues for redemption. While these evils and their remedies were a good deal discussed among bankers, the losses and inconveniences to the people were not yet great enough to lead to the adoption of thorough and complete measures of reform. The effect of these difficulties, however, was to bring the bankers of the state into the habit of consulting and acting together in cases of emergency, the first bankers' convention having been held in 1857. This was followed by others from time to time, and it would be difficult to overvalue the great good that has resulted, at several important crises from the harmonious and conservative action of the bankers of our state. Partly, at least, upon their recommendations the legislature, in 1858, adopted amendments to the banking law, providing that no bank should be located in a township containing less than two hundred inhabitants; and that the comptroller should not issue circulating notes, except to banks doing a regular discount deposit and exchange business in some inhabited town, village, city, or where the ordinary business of inhabited towns, villages and cities was carried on. These amendments were approved by the people at the fall

election of that year.

Banking matters now ran along pretty smoothly until the election in 1860, of the republican presidential ticket, and the consequent agitation in the southern states threatening civil war, the effects of which were speedily felt; first, in the great depreciation of the bonds of the southern states, and then in a less decline in those of the northern states. At this time (taking the statement of July, 1860,) the number of banks was 104, with aggregate capital, \$6,547,000; circulation, \$4,075,918; deposits, \$3,230,252.

During the winter following, there was a great deal of uneasiness in regard to our state currency, and continuous demand upon our banks for the redemption of their circulating notes in coin. Many banks of the wild-cat sort failed to redeem their notes, which became depreciated and uncurrent; and, when the rebellion came to a head by the firing on Fort Sumter, the banking interests of the state were threatened with destruction by compulsory winding up and enforced sale at the panic prices then prevailing, of the securities deposited to secure circulation. Under these circumstances, on the 17th of April, 1861, the legislature passed "an act to protect the holders of the circulating notes of the authorized banks of the state of Wisconsin." As the banking law could not be amended except by approval of the electors, by vote at a general election, a practical suspension of specie payment had to be effected by indirect methods. So this act first directed the bank comptroller to suspend all action toward banks for failing to redeem their circulation. Secondly, it prohibited notaries public from protesting bills of banks until Dec 1, 1861. Thirdly, it gave banks until that date to answer complaints in any proceeding to compel specie payment of circulating notes. This same legislature also amended the banking law, to cure defects that had been developed in it. These amendments were intended to facilitate the presentation and protest of circulating notes, and the winding up of banks failing to redeem them, and provided that the bank comptroller should not issue circulating notes except to banks having actual cash capital; on which point he was to take evidence in all cases; that after Dec. 1, 1861, all banks of the state should redeem their issues either at Madison or Milwaukee, and no bonds or stocks should be received as security for circulation except those of the United States and of the state of Wisconsin.

Specie payment of bank bills was then practically suspended, in our state, from April 17 to December 1, 1861, and there was no longer any plain practical test for determining which were good, and which not. In this condition of things, bankers met in convention, and, after discussion and inquiry as to the condition and resources of the different banks, put forth a list of those whose issues were to be considered current and bankable. But things grew worse, and it was evident that the list contained banks that would never be able to redeem their circulation, and the issues of such were from time to time thrown out and discredited without any concert of action, so that the uneasiness of people in regard to the financial situation was greatly increased. The bankers finally met, gave the banks another sifting, and put forth a list of seventy banks, whose circulating notes they pledged themselves to receive, and pay out as current, until December 1. There had been so many changes that this pledge was thought necessary to allay the apprehensions of the public. But matters still grew worse instead of better. Some of the banks in the "current" list closed their doors to their depositors, and others were evidently unsound, and their circulation so insufficiently secured as to make it certain that it would never be redeemed. There was more or less sorting of the currency, both by banks and business men, all over the state, in the endeavor to keep the best and pay out the poorest. In this state of things, some of the Milwaukee banks, without concert of action, and acting under the apprehension of being loaded up with the very worst of the currency, which, it was feared, the country banks and merchants were sorting out and sending to Milwaukee, revised the list again, and

threw out ten of the seventy banks whose issues it had been agreed should be received as current. Other banks and bankers were compelled to take the same course to protect themselves. The consequence was a great disturbance of the public mind, and violent charges of bad faith on the part of the banks, which culminated in the bank riots of June 24, 1861. On that day, a crowd of several hundred disorderly people, starting out most probably only with the idea of making some sort of demonstration of their dissatisfaction with the action of the banks and bankers and with the failure to keep faith with the public, marched through the streets with a band of music, and brought up at the corner of Michigan and East Water streets.

The banks had just sufficient notice of these proceedings to enable them to lock up their money and valuables in their vaults, before the storm broke upon them. The mob halted at the place above mentioned, and for a time contented themselves with hooting, and showed no disposition to proceed to violence; but, after a little while, a stone was thrown through the windows of the Wisconsin Marine and Fire Insurance Company's Bank, situated at one corner of the above streets, and volleys of stones soon followed, not only against that bank, but also against the State Bank of Wisconsin, situated on the opposite corner. The windows of both these institutions and of the offices in the basements under them were effectually demolished. The mob then made a rush into these banks and offices, and completely gutted them, offering more or less violence to the inmates, though no person was seriously hurt. The broken furniture of the offices under the State Bank of Wisconsin was piled up, and the torch was applied by some of the rioters, while others were busy in endeavoring to break into the safes of the offices and the vaults of the banks. The *debris* of the furniture in the office of the Wisconsin Marine and Fire Insurance Company's Bank, was also set on fire, and it was plain that if the mob was not immediately checked, the city would be given up to conflagration and pillage—the worst elements, as is always the case with mobs, having assumed the leadership. Just at that juncture, the Milwaukee zouaves, a small military company, appeared on the scene, and with the help of the firemen who had been called out, the mob was put to flight, and the incipient fire was extinguished.

The damage so far done was not great in amount, and the danger for the moment was over; but the situation was still grave, as the city was full of threats, disturbance and apprehension. By the prompt action of the authorities, a number of companies of volunteers were brought from different places in the state, order was preserved, and, after muttering for three or four days, the storm died away. The effect of that disturbance and alarm was, however, to bring home to the bankers and business men the conviction that effectual measures must be taken to settle our state currency matters on a sound and permanent basis, and that the issues of all banks that could not be put in shape to meet specie payment in December, must be retired from circulation and be got out of the way. A meeting of the bankers was held; also of the merchants' association of Milwaukee, and arrangements were made to raise \$100,000, by these two bodies, to be used in assisting weak and crippled banks in securing or retiring their circulation. The bankers appointed a committee to take the matter in charge.

It happened that just at this time Governor Randall and State Treasurer Hastings returned from New York City, where they had been making unsuccessful efforts to dispose of \$800,000 of Wisconsin war bonds, which had been issued to raise funds to fit out Wisconsin volunteers.

Our state had never had any bonds on the eastern market. For other reasons, our credit was not high in New York, and it had been found impossible to dispose of these bonds for over sixty cents on the dollar. The state officers conferred with the bankers to see what could be done at home; and it was finally arranged that the bankers' committee should undertake to get the state banks to dispose of their southern and other depreciated state bonds on deposit to

secure circulation, for what they would bring in coin, in New York, and replace these bonds with those of our own state, which were to be taken by our banks nominally at par — seventy per cent. being paid in cash, and the different banks purchasing bonds, giving their individual obligation for the thirty per cent. balance, to be paid in semi-annual installments, with an agreement that the state should deduct these installments from the interest so long as these bonds should remain on deposit with the state. By the terms of the law, sixty per cent. of the proceeds of the bonds had to be paid in coin. The bankers' committee went to work, and with some labor and difficulty induced most of the banks to sell their southern securities at the existing low prices in New York, and thus produce the coin required to pay for our state bonds. From the funds provided by the merchants and bankers, they assisted many of the weaker banks to make good their securities with the banking department of the state. By the 19th of July, six of the ten rejected banks that had been the occasion of the riot, were made good, and restored to the list. The other four were wound up, and their issues redeemed at par, and, before the last of August, the value of the securities of all the banks on the current list were brought up to their circulation, as shown by the comptroller's report.

Wisconsin currency at the time of the bank riot was at a discount of about 15 per cent., as compared with gold or New York exchange. At the middle of July the discount was 10 to 12 per cent., and early in August it fell to 5 per cent. The bankers' committee continued their work in preparation for the resumption of specie payment on December 1. While the securities for the bank circulation had been made good, it was, nevertheless, evident that many of the banks on the current list would not be equal to the continued redemption of their bills in specie, and that they would have to be wound up and got out of the way in season. Authority was got from such institutions, as fast as possible, for the bankers' committee to retire their circulation and sell their securities. The Milwaukee banks and bankers took upon themselves the great burden of this business, having arranged among themselves to sort out and withhold from circulation the bills of these banks,—distributing the load among themselves in certain defined proportions. Instead of paying out these doubted bills, the different banks brought to the bankers' committee such amounts as they accumulated from time to time, and received from the committee certificates of deposit bearing seven per cent. interest, and these bills were locked up by the committee until the securities for these notes could be sold and the proceeds realized. Over \$400,000 of this sort of paper was locked up by the committee at one time; but, it was all converted into cash, and, when the first of December came, the remaining banks of this state were ready to redeem their issues in gold or its equivalent, and so continued to redeem until the issue of the legal-tender notes and the general suspension of specie payment in the United States.

In July, 1861, the number of our banks was 107, with capital, \$4,607,000; circulation, \$2,317,907; deposits, \$3,265,069.

By the contraction incident to the preparations for redemption in specie, the amount of current Wisconsin bank notes outstanding December 1, 1861, was reduced to about \$1,500,000. When that day came, there was quite a disposition manifested to convert Wisconsin currency into coin, and a sharp financial pinch was felt for a few days; but as the public became satisfied that the banks were prepared to meet the demand, the call for redemption rapidly fell off, and the banks soon began to expand their circulation, which was now current and in good demand all through the northwestern states. The amount saved to all the interests of our state, by this successful effort to save our banking system from destruction, is beyond computation. From this time our banks ran along quietly until prohibitory taxation by act of congress drove the bills of state banks out of circulation.

The national banking law was passed in 1863, and a few banks were soon organized under it in different parts of the country. The first in Wisconsin was formed by the re-organization of the Farmers' and Millers' Bank, in August, 1863, as the First National Bank of Milwaukee, with Edward D. Holton as president, and H. H. Camp, cashier. The growth of the new system, however, was not very rapid; the state banks were slow to avail themselves of the privileges of the national banking act, and the central authorities concluded to compel them to come in; so facilities were offered for their re-organization as national banks, and then a tax of ten per cent. was laid upon the issues of the state banks. This tax was imposed by act of March, 1865, and at once caused a commotion in our state. In July, 1864, the number of Wisconsin state banks was sixty-six, with capital \$3,147,000, circulation \$2,461,728, deposits \$5,483,205, and these figures were probably not very different in the spring of 1865. The securities for the circulating notes were in great part the bonds of our own state, which, while known by our own people to be good beyond question, had never been on the general markets of the country so as to be currently known there; and it was feared that in the hurried retirement of our circulation these bonds would be sacrificed, the currency depreciated, and great loss brought upon our banks and people. There was some excitement, and a general call for the redemption of our state circulation, but the banks mostly met the run well, and our people were disposed to stand by our own state bonds.

In April, 1861, the legislature passed laws, calling in the mortgage loans of the school fund, and directing its investment in these securities. The state treasurer was required to receive Wisconsin bank notes, not only for taxes and debts due the state, but also on deposit, and to issue certificates for such deposits bearing seven per cent. interest. By these and like means the threatened panic was stopped; and in the course of a few months Wisconsin state currency was nearly all withdrawn from circulation. In July, 1865, the number of state banks was twenty-six, with capital \$1,087,000, circulation \$192,323, deposits \$2,284,210. Under the pressure put on by congress, the organization of national banks, and especially the re-organization of state banks, under the national system, was proceeding rapidly, and in a short time nearly every town in our own state of much size or importance was provided with one or more of these institutions.

In the great panic of 1873, all the Wisconsin banks, both state and national (in common with those of the whole country), were severely tried; but the failures were few and unimportant; and Wisconsin went through that ordeal with less loss and disturbance than almost any other state.

We have seen that the history of banking in Wisconsin covers a stormy period, in which great disturbances and panics have occurred at intervals of a few years. It is to be hoped that a more peaceful epoch will succeed, but permanent quiet and prosperity can not rationally be expected in the present unsettled condition of our currency, nor until we have gone through the temporary stringency incidental to the resumption of specie payment.

According to the last report of the comptroller of the currency, the number of national banks in Wisconsin in November, 1876, was forty, with capital \$3,400,000, deposits \$7,145,360, circulation \$2,072,869.

At this time (July, 1877) the number of state banks is twenty-six, with capital \$1,288,231, deposits \$6,662,973. Their circulation is, of course, merely nominal, though there is no legal obstacle to their issuing circulating notes, except the tax imposed by congress.

COMMERCE AND MANUFACTURES.

BY HON. H. H. GILES.

The material philosophy of a people has to do with the practical and useful. It sees in iron, coal, cotton, wool, grain and the trees of the forest, the elements of personal comfort and sources of material greatness, and is applied to their development, production and fabrication for purposes of exchange, interchange and sale. The early immigrants to Wisconsin territory found a land teeming with unsurpassed natural advantages; prairies, timber, water and minerals, inviting the farmer, miner and lumberman, to come and build houses, furnaces, mills and factories. The first settlers were a food-producing people. The prairies and openings were ready for the plow. The ease with which farms were brought under cultivation, readily enabled the pioneer to supply the food necessary for himself and family, while a surplus was often produced in a few months. The hardships so often encountered in the settlement of a new country, where forests must be felled and stumps removed to prepare the soil for tillage, were scarcely known, or greatly mitigated.

During the decade from 1835 to 1845, so great were the demands for the products of the soil, created by the tide of emigration, that the settlers found a home market for all their surplus products, and so easily were crops grown that, within a very brief time after the first emigration, but little was required from abroad. The commerce of the country was carried on by the exchange of products. The settlers (they could scarcely be called farmers) would exchange their wheat, corn, oats and pork for the goods, wares and fabrics of the village merchant. It was an age of barter; but they looked at the capabilities of the land they had come to possess, and, with firm faith, saw bright promises of better days in the building up of a great state.

It is not designed to trace with minuteness the history of Wisconsin through the growth of its commercial and manufacturing interests. To do it justice would require a volume. The aim of this article will be to present a concise view of its present status. Allusion will only be incidentally made to stages of growth and progress by which it has been reached.

Few states in the Union possess within their borders so many, and in such abundance, elements that contribute to the material prosperity of a people. Its soil of unsurpassed fertility; its inexhaustible mines of lead, copper, zinc and iron; its almost boundless forests; its water-powers, sufficient to drive the machinery of the world; its long lines of lake shore on two sides, and the "Father of waters" on another,—need but enterprise, energy and capital to utilize them in building an empire of wealth, where the hum of varied industries shall be heard in the music of the sickle, the loom and the anvil.

The growth of manufacturing industries was slow during the first twenty-five years of our history. The early settlers were poor. Frequently the land they tilled was pledged to obtain means to pay for it. Capitalists obtained from twenty to thirty per cent. per annum for the use of their money. Indeed, it was the rule, under the free-trade ideas of the money-lenders for them to play the Shylock. While investments in bonds and mortgages were so profitable, few were ready to improve the natural advantages the country presented for building factories and work-shops.

For many years, quite all the implements used in farming were brought from outside the state. While this is the case at present to some extent with the more cumbersome farm machinery, quite a proportion of that and most of the simpler and lighter implements are made at home, while much farm machinery is now manufactured for export to other states.

FURS.

The northwest was visited and explored by French *voyageurs* and missionaries from Canada at an early day. The object of the former was trading and gain. The Jesuits, ever zealous in the propagation of their religion, went forth into the unknown wilderness to convert the natives to their faith. As early as 1624, they were operating about Lake Huron and Mackinaw. Father Menard, it is related, was with the Indians on Lake Superior as early as 1661. The early explorers were of two classes, and were stimulated by two widely different motives—the *voyageurs*, by the love of gain, and the missionaries, by their zeal in the propagation of their faith. Previous to 1679, a considerable trade in furs had sprung up with Indian tribes in the vicinity of Mackinaw and the northern part of “Ouisconsin.” In that year more than two hundred canoes, laden with furs, passed Mackinaw, bound for Montreal. The whole commerce of this vast region then traversed, was carried on with birch-bark canoes. The French used them in traversing wilds—otherwise inaccessible by reason of floods of water at one season, and ice and snow at another—also lakes and morasses which interrupted land journeys, and rapids and cataracts that cut off communication by water. This little vessel enabled them to overcome all difficulties. Being buoyant, it rode the waves, although heavily freighted, and, of light draft, it permitted the traversing of small streams. Its weight was so light that it could be easily carried from one stream to another, and around rapids and other obstructions. With this little vessel, the fur trade of the northwest was carried on, as well as the interior of a vast continent explored. Under the stimulus of commercial enterprise, the French traders penetrated the recesses of the immense forests whose streams were the home of the beaver, the otter and the mink, and in whose depths were found the martin, sable, ermine, and other fur-bearing animals. A vast trade in furs sprung up, and was carried on by different agents, under authority of the French government.

When the military possession of the northwestern domain passed from the government of France to that of Great Britain in 1760, the relationship of the fur trade to the government changed. The government of France had controlled the traffic, and made it a means of strengthening its hold upon the country it possessed. The policy of Great Britain was, to charter companies, and grant them exclusive privileges. The Hudson bay company had grown rich and powerful between 1670 and 1760. Its success had excited the cupidity of capitalists, and rival organizations were formed. The business of the company had been done at their trading-stations—the natives bringing in their furs for exchange and barter. Other companies sent their *voyageurs* into every nook and corner to traffic with the trappers, and even to catch the fur-bearing animals themselves. In the progress of time, private parties engaged in trapping and dealing in furs, and, under the competition created, the business became less profitable. In 1815, congress passed an act prohibiting foreigners from dealing in furs in the United States, or any of its territories. This action was obtained through the influence of John Jacob Astor. Mr. Astor organized the American fur company in 1809, and afterward, in connection with the Northwest company, bought out the Mackinaw company, and the two were merged in the Southwest company. The association was suspended by the war of 1812. The American re-entered the field in 1816. The fur trade is still an important branch of traffic in the northern part of the state, and, during eight months of the year, employs a large number of men.

LEAD AND ZINC.

In 1824, the lead ore in the southwestern part of Wisconsin began to attract attention. From 1826 to 1830, there was a great rush of miners to this region, somewhat like the Pike's Peak excitement at a later date. The lead-producing region of Wisconsin covers an area of about 2,200 square miles, and embraces parts of Grant, Iowa and La Fayette counties. Between 1829 and 1839, the production of lead increased from 5,000 to 10,000 tons. After the latter year it rose rapidly, and attained its maximum in 1845, when it reached nearly 25,000 tons. Since that time the production has decreased, although still carried on to a considerable extent.

The sulphate and carbonate of zinc abound in great quantities with the lead of southwest Wisconsin. Owing to the difficulty of working this class of ores, it was formerly allowed to accumulate about the mouths of the mines. Within a few years past, metallurgic processes have been so greatly improved, that the zinc ores have been largely utilized. At La Salle, in the state of Illinois, there are three establishments for smelting zinc ores. There is also one at Peru, Ill. To smelt zinc ores economically, they are taken where cheap fuel is available. Hence, the location of these works in the vicinity of coal mines. The works mentioned made in 1875, from ores mostly taken from Wisconsin, 7,510 tons of zinc. These metals are, therefore, important elements in the commerce of Wisconsin.

IRON.

The iron ores of Wisconsin occur in immense beds in several localities, and are destined to prove of great value. From their product in 1863, there were 3,735 tons of pig iron received at Milwaukee; in 1865, 4,785 tons; in 1868, 10,890 tons. Of the latter amount, 4,648 tons were from the iron mines at Mayville. There were shipped from Milwaukee, in 1868, 6,361 tons of pig iron. There were also received 2,500 tons of ore from the Dodge county ore beds. During 1869, the ore beds at Iron Ridge were developed to a considerable extent, and two large blast furnaces constructed in Milwaukee, at which place there were 4,695 tons of ore received, and 2,059 tons were shipped to Chicago and Wyandotte. In 1870, 112,060 tons of iron ore were received at Milwaukee, 95,000 tons of which were from Iron Ridge, and 17,060 tons from Escanaba and Marquette, in Michigan. The total product of the mines at Iron Ridge in 1871 was 82,284 tons. The Milwaukee iron company received by lake, in the same year, 28,094 tons of Marquette iron ore to mix with the former in making railroad iron. In 1872, there were received from Iron Ridge 85,245 tons of ore, and 5,620 tons of pig iron. Much of the metal made by the Wisconsin iron company in 1872 was shipped to St. Louis, to mix with the iron made from Missouri ore.

The following table shows the production of pig iron in Wisconsin, for 1872, 1873 and 1874, in tons:

FURNACES.	1872.	1873.	1874.
Milwaukee Iron Company, Milwaukee.....	21,818	29,326	33,000
Minerva Furnace Company, Milwaukee.....		5,822	
Wisconsin Iron Company, Iron Ridge.....	3,350	4,155	3,306
Northwestern Iron Company, Mayville.....	5,033	4,137	3,000
Appleton Iron Company, Appleton.....	4,888	8,044	6,500
Green Bay Iron Company, Green Bay.....	6,910	6,141	6,000
National Iron Company, Depere.....	3,420	7,999	6,500
Fox River Iron Company, W. Depere.....	5,600	6,832	7,000
Ironton Furnace, Sauk county.....	1,780	1,528	1,300
	52,797	73,980	66,600

The Milwaukee iron company, during the year 1872, entered into the manufacture of merchant iron — it having been demonstrated that the raw material could be reduced there cheaper than elsewhere. The Minerva furnace company built also during the same year one of the most compact and complete iron furnaces to be found any where in the country. During the year 1873, the iron, with most other material interests, became seriously prostrated, so that the total receipts of ore in Milwaukee in 1874 amounted to only 31,993 tons, against 69,418 in 1873, and 85,245 tons in 1872. There were made in Milwaukee in 1874, 29,680 tons of railroad iron. In 1875, 58,868 tons of ore were received at Milwaukee, showing a revival of the trade in an increase of 19,786 tons over the previous year. The operation of the works at Bay View having suspended, the receipts of ore in 1876, at Milwaukee, were less than during any year since 1869, being only 31,119 tons, of which amount only 5,488 tons were from Iron Ridge, and the total shipments were only 498 tons.

LUMBER.

The business of lumbering holds an important rank in the commerce of the state. For many years the ceaseless hum of the saw and the stroke of the ax have been heard in all our great forests. The northern portion of the state is characterized by evergreen trees, principally pine; the southern, by hard-woods. There are exceptional localities, but this is a correct statement of the general distribution. I think that, geologically speaking, the evergreens belong to the primitive and sandstone regions, and the hard wood to the limestone and clay formations. Northern Wisconsin, so called, embraces that portion of the state north of forty-five degrees, and possesses nearly all the valuable pine forests. The most thoroughly developed portion of this region is that lying along the streams entering into Green bay and Lake Michigan, and bordering on the Wisconsin river and other streams entering into the Mississippi. Most of the pine in the immediate vicinity of these streams has been cut off well toward their sources; still, there are vast tracts covered with dense forests, not accessible from streams suitable for log-driving purposes. The building of railroads into these forests will alone give a market value to a large portion of the pine timber there growing. It is well, perhaps, that this is so, for at the present rate of consumption, but a few years will elapse before these noble forests will be totally destroyed. Most of the lumber manufactured on the rivers was formerly taken to a market by being floated down the streams in rafts. Now, the railroads are transporting large quantities, taking it directly from the mills and unloading it at interior points in Iowa, Illinois and Wisconsin, and some of it in eastern cities. From five to eight thousand men are employed in the pineries in felling the trees, sawing them into logs of suitable length, and hauling them to the mills and streams during every winter in times of fair prices and favorable seasons. The amount of lumber sawed in 1860, as carefully estimated, was 355,055,155 feet. The amount of shingles made was 2,272,061, and no account was made of the immense number of logs floated out of the state, for manufacture into lumber elsewhere. The amount of logs cut in the winter of 1873 and 1874 was 987,000,000 feet. In 1876 and 1877 the Black river furnished 188,344,464 feet. The Chippewa, 90,000,000; the Red Cedar, 57,000,000. There passed through Beef Slough 129,384,000 feet of logs. Hon. A. H. Eaton, for fourteen years receiver of the United States land office at Stevens Point, estimated the acreage of pine lands in his district at 2,000,000, and, taking his own district as the basis, he estimated the whole state at 8,000,000 acres. Reckoning this at 5,000 feet to the acre, the aggregate pine timber of the state would be 40,000,000,000 feet. The log product annually amounts to an immense sum. In 1876, 1,172,611,823 feet were cut. This is about the average annual draft that is made on the pine lands. There seems to be no remedy for the

wholesale destruction of our pine forests, except the one alluded to, the difficulty of transportation, and this will probably save a portion of them for a long time in the future. At the rate of consumption for twenty years past, we can estimate that fifty years would see northern Wisconsin denuded of its pine forests; but our lumber product has reached its maximum, and will probably decrease in the coming years as the distance to be hauled to navigable streams increases. In the mean time lumber, shingles and lath will form an important factor in our commerce, both state and inter-state, and will contribute millions to the wealth of our citizens.

GRAIN.

Up to 1841, no grain was exported from Wisconsin to be used as food; but, from the time of its first settlement in 1836 to 1840, the supply of bread stuffs from abroad, upon which the people depended, was gradually diminished by the substitution of home products. In the winter of 1840 and 1841, E. D. Holton, of Milwaukee, purchased a small cargo of wheat (about 4,000 bushels), and in the spring of 1841, shipped it to Buffalo. This was the beginning of a traffic that has grown to immense proportions, and, since that time, wheat has formed the basis of the commerce and prosperity of the state, until the city of Milwaukee has become the greatest primary wheat mart of the world.

The following table gives the exports of flour and grain from Milwaukee for thirty-two years, commencing in 1845:

YEARS.	FLOUR, bbls.	WHEAT, bus.	CORN, bus.	OATS, bus.	BARLEY, bus.	RYE, bus.
1845	7,550	95,510	-----	-----	-----	-----
1846	15,756	213,448	-----	-----	-----	-----
1847	34,840	598,411	-----	-----	-----	-----
1848	92,732	602,474	-----	-----	-----	-----
1849	136,657	1,136,023	2,500	4,000	15,000	-----
1850	100,017	297,570	5,000	2,100	15,270	-----
1851	51,889	317,285	13,828	7,892	103,840	-----
1852	92,995	564,404	2,220	363,841	322,261	54,692
1853	104,055	956,703	270	131,716	291,890	80,365
1854	145,032	1,809,452	164,908	404,999	339,338	113,443
1855	181,568	2,641,746	112,132	13,833	63,379	20,030
1856	188,455	2,761,976	218	5,433	10,398	-----
1857	228,442	2,581,311	472	2,775	800	-----
1858	298,668	3,994,213	43,958	562,067	63,178	5,378
1859	282,956	4,732,957	41,364	299,002	53,216	11,577
1860	457,343	7,568,608	37,204	64,682	28,056	9,735
1861	674,474	13,300,495	1,485	1,200	5,220	29,810
1862	711,405	14,915,680	9,489	79,094	44,800	126,301
1863	603,525	12,837,620	88,989	831,600	133,449	84,047
1864	414,833	8,992,479	140,786	811,634	23,479	18,210
1865	567,576	10,479,777	71,203	326,472	29,597	51,444
1866	720,365	11,634,749	480,408	1,636,595	18,988	255,329
1867	921,663	9,598,452	266,249	622,469	30,822	106,795
1868	1,017,598	9,867,029	342,717	536,539	95,036	91,443
1869	1,220,058	14,272,799	93,806	351,768	120,662	78,035
1870	1,225,941	16,127,838	103,173	210,187	469,325	62,494
1871	1,211,427	13,409,467	419,133	772,929	576,453	208,896
1872	1,232,036	11,570,565	1,557,953	1,323,234	931,725	209,751
1873	1,805,200	24,994,266	197,920	990,525	688,455	255,928
1874	2,217,579	22,255,380	556,563	726,035	464,837	79,879
1875	2,163,346	22,681,020	226,895	1,160,450	867,970	98,923
1876	2,654,028	16,804,394	96,908	1,377,560	1,235,481	220,964

Up to 1856, the shipments were almost wholly of Wisconsin products; but with the completion of lines of railroad from Milwaukee to the Mississippi river, the commerce of Wisconsin became so interwoven with that of Iowa and Minnesota, that the data furnished by the transportation companies, give us no definite figures relating to the products of our own state.

DAIRY PRODUCTS.

Wisconsin is becoming largely interested in the dairy business. Its numerous springs, streams, and natural adaptability to grass, make it a fine grazing country, and stock thrives remarkably well. Within a few years, cheese-factories have become numerous, and their owners are meeting with excellent success. Wisconsin cheese is bringing the highest price in the markets, and much of it is shipped to England. Butter is also made of a superior quality, and is extensively exported. At the rate of progress made during the last few years, Wisconsin will soon take rank with the leading cheese and butter producing states. The counties most largely interested in dairying, are Kenosha, Walworth, Racine, Rock, Green, Waukesha, Winnebago, Sheboygan, Jefferson and Dodge. According to estimates by experienced dairymen, the manufacture of butter was 22,473,000 pounds in 1870; 50,130,000 in 1876; of cheese, 1,591,000 pounds in 1870, as against 17,000,000 in 1876, which will convey a fair idea of the increase of dairy production. The receipts of cheese in Chicago during 1876, were 23,780,000 pounds, against 12,000,000 in 1875; and the receipts of butter were 35,384,184, against 30,248,247 pounds in 1875. It is estimated that fully one-half of these receipts were from Wisconsin. The receipts of butter in Milwaukee were, in 1870, 3,779,114 pounds; in 1875, 6,625,863; in 1876, 8,938,137 pounds; of cheese, 5,721,279 pounds in 1875, and 7,055,573 in 1876. Cheese is not mentioned in the trade and commerce reports of Milwaukee until 1873, when it is spoken of as a new and rapidly increasing commodity in the productions of the state.

PORK AND BEEF.

Improved breeds, both of swine and cattle, have been introduced into the state during a few years past. The grade of stock has been rapidly bettered, and stock raisers generally are striving with commendable zeal to rival each other in raising the finest of animals for use and the market.

The following table shows the receipts of live hogs and beef cattle at Milwaukee for thirteen years:

YEARS.	LIVE HOGS.	BEEF CATTLE.	YEARS.	LIVE HOGS.	BEEF CATTLE.
1876-----	254,317	36,802	1869-----	52,296	12,521
1875-----	144,961	46,717	1868-----	48,717	13,200
1874-----	242,326	22,748	1867-----	76,758	15,527
1873-----	241,099	17,262	1866-----	31,881	12,955
1872-----	138,106	14,172	1865-----	7,546	14,230
1871-----	126,164	9,220	1864-----	42,250	18,345
1870-----	66,138	12,972	1863-----	56,826	14,655

The following table shows the movement of hog products and beef from Milwaukee since 1862.

Shipments by Rail and Lake.	PORK, HAMS, MIDDLES AND SHOULDERS.				LARD.		BEEF.

HOPS.

The culture of hops, as an article of commerce, received but little attention prior to 1860. In 1865, 2,864 bales only were shipped from Milwaukee. In addition, a large amount was used by the brewers throughout the state. In 1866, the amount exported was increased, and 5,774 bales were shipped to eastern markets. The price, from forty-five to fifty-five cents per pound, stimulated production, and the article became one of the staple products of the counties of Sauk, Columbia, Adams and Juneau, besides being largely cultivated in parts of some other counties. In 1867, 26,562 bales were received at Milwaukee, and the prices ranged from fifty to seventy cents per pound. The estimated crop of the state for 1867 was 35,000 bales, and brought over \$4,200,000. In 1868, not less than 60,000 bales were grown in the state. The crop everywhere was a large one, and in Wisconsin so very large that an over-supply was anticipated. But few, however, were prepared for the decline in prices, that far exceeded the worst apprehensions of those interested. The first sales were made at twenty-five to thirty-five cents per pound, and the prices were reluctantly accepted by the growers. The price continued to decline until the article was unsalable and unavailable in the market. Probably the average price did not exceed ten cents per pound. Notwithstanding the severe check which hop-growing received in 1868, by the unprofitable result, growers were not discouraged, and the crop of 1869 was a large one. So much of the crop of 1868 remained in the hands of the growers, that it is impossible to estimate that of 1869. The new crop sold for from ten to fifteen cents, and the old for from three to five cents per pound. Hop-cultivation received a check from over-production in 1868, from which it did not soon recover. A large proportion of the yards were plowed under in 1870. The crop of 1869 was much of it marketed during 1870, at a price of about two and one-half to three and one-half cents per pound, while that of 1870 brought ten to twelve and a half cents. During the year 1871, a great advance in the price, caused by the partial failure of the crop in some of the eastern states, and the decrease in price causing a decrease in production, what was left over of the crop of 1870 more than doubled in value before the new reached the market. The latter opened at thirty cents, and steadily rose to fifty and fifty-five for prime

qualities. The crop of 1872 was of good quality, and the market opened at forty to fifty-five cents as the selling price, and fell fifteen to twenty cents before the close of the year. A much larger quantity was raised than the year previous. In 1873 and 1874, the crop was fair and prices ruled from thirty-three to forty-five cents, with increased production. About 18,000 bales were reported as being shipped from the different railway stations of the state. Prices were extremely irregular during 1875, and, after the new crop reached market, fell to a point that would not pay the cost of production. In 1876, prices ruled low at the opening of the year, and advanced from five to ten cents in January to twenty-eight to thirty in November. Over 17,000 bales were received at Milwaukee, over 10,000 bales being of the crop of the previous year. Over 13,000 bales were shipped out of the state.

TOBACCO.

Tobacco raising is comparatively a new industry in Wisconsin, but is rapidly growing in importance and magnitude. It sells readily for from four to ten cents per pound, and the plant is easily raised. It is not regarded as of superior quality. It first appears as a commodity of transportation in the railway reports for the year 1871, when the Prairie du Chien division of the St. Paul road moved eastward 1,373,650 pounds. During the four years ending with 1876, there were shipped from Milwaukee an average of 5,118,530 pounds annually, the maximum being in 1874, 6,982,175 pounds; the minimum in 1875, 2,743,854 pounds. The crop of 1876 escaped the early frosts, and netted the producer from five to seven cents per pound. The greater part of it was shipped to Baltimore and Philadelphia. Comparatively little of the leaf raised in the state is used here or by western manufacturers. The crop of the present year, 1877, is a large one, and has been secured in good order. It is being contracted for at from four to six cents per pound.

CRANBERRIES.

The cranberry trade is yet in its infancy. But little, comparatively, has been done in developing the capabilities of the extensive bodies of marsh and swamp lands interspersed throughout the northern part of the state. Increased attention is being paid to the culture of the fruit; yet, the demand will probably keep ahead of the supply for many years to come. In 1851, less than 1,500 barrels were sent out of the state. In 1872, the year of greatest production, over 37,000 barrels were exported, and, in 1876, about 17,000 barrels. The price has varied in different years, and taken a range from eight to fifteen dollars a barrel.

SPIRITUOUS AND MALT LIQUORS.

The production of liquors, both spirituous and malt, has kept pace with the growth of population and with the other industries of the state. There were in Wisconsin, in 1872, two hundred and ninety-two breweries and ten distilleries. In 1876, there were two hundred and ninety-three of the former and ten of the latter, and most of them were kept running to their full capacity. Milwaukee alone produced, in 1876, 321,611 barrels of lager beer and 43,175 barrels of high wines. In 1865, it furnished 65,666 barrels of beer, and in 1870, 108,845 barrels. In 1865, it furnished 3,046 barrels of high wines; in 1870, 22,867 barrels; and in 1875, 39,005. A large quantity of the beer made was shipped to eastern and southern cities. The beer made in 1876 sold at the rate of ten dollars per barrel, the wholesale price of the brewers bringing the sum of \$3,216,110. The fame of Milwaukee lager beer is widely extended. This city has furnished since 1870, 1,520,308 barrels which, at the wholesale price, brought \$15,203,170. The total production of beer by all the two hundred and ninety-three breweries of the state for 1876, was 450,508 barrels.

In 1876, Milwaukee produced 43,175 barrels of high wines, or distilled spirits, and the state of Wisconsin 51,959 barrels. In 1870, the former produced 108,845 barrels of beer and 22,867 barrels of distilled spirits, and in the same year the state of Wisconsin produced 189,664 barrels of beer and 36,145 barrels of distilled spirits.

MISCELLANEOUS.

Porcelain clay, or kaolin, is found in numerous places in Wood and Marathon counties. The mineral is found in but few places in the United States in quantities sufficient to justify the investment of capital necessary to manufacture it. In the counties mentioned, the deposits are found in extensive beds, and only capital and enterprise are needed to make their development profitable. Clay of superior quality for making brick and of fair quality for pottery, is found in numerous localities: The famous "Milwaukee brick," remarkable for their beautiful cream color, is made from a fine clay which is abundant near Milwaukee, and is found in extensive beds at Watertown, Whitewater, Edgerton, Stoughton, and several places on the lake shore north of Milwaukee. At Whitewater and some other places the clay is used with success for the making of pottery ware. Water-lime, or hydraulic cement, occurs in numerous places throughout the state. An extensive bed covering between one and two hundred acres, and of an indefinite depth, exists on the banks of the Milwaukee river, and not over one and a half miles from the city limits of Milwaukee. The cement made from the rock of this deposit is first-class in quality, and between twenty and thirty thousand barrels were made and sold last year. The capacity of the works for reducing the rock to cement has been increased to 500 barrels per day. Stones suitable for building purposes are widely distributed throughout the state, and nearly every town has its available quarry. Many of these quarries furnish stone of fine quality for substantial and permanent edifices. The quarry at Prairie du Chien furnished the stone for the capital building at Madison, which equals in beauty that of any state in the Union. At Milwaukee, Waukesha, Madison, La Crosse, and many other places are found quarries of superior building stone. Granite is found in extensive beds in Marathon and Wood counties, and dressed specimens exhibited at the "Centennial" last year, attracted attention for their fine polish. Marbles of various kinds are likewise found in the state. Some of them are beginning to attract attention and are likely to prove valuable. The report of Messrs. Foster & Whitney, United States geologists, speaks of quarries on the Menomonee and Michigamig rivers as affording beautiful varieties and susceptible of a high polish. Richland county contains marble, but its quality is generally considered inferior.

WATER POWERS.

Wisconsin is fast becoming a manufacturing state. Its forests of pine, oak, walnut, maple, ash, and other valuable woods used for lumber, are well-nigh inexhaustible. Its water-power for driving the wheels of machinery is not equaled by that of any state in the northwest. The Lower Fox river between Lake Winnebago and Green Bay, a distance of thirty-five miles, furnishes some of the best facilities for manufacturing enterprise in the whole country. Lake Winnebago as a reservoir gives it a great and special advantage, in freedom from liability to freshets and droughts. The stream never varies but a few feet from its highest to its lowest stage, yet gives a steady flow. The Green Bay and Mississippi canal company has, during the last twenty-five years, constructed numerous dams, canals and locks, constituting very valuable improvements. All the property of that company has been transferred to the United States government, which has entered upon a system to render the Fox and Wisconsin rivers navigable to the Mississippi. The fall between the lake and Deperre is one hundred and fifty feet, and the water can be utilized

in propelling machinery at Neenah, Menasha, Appleton, Cedar, Little Chute, Kaukauna, Rapid Croche, Little Kaukauna and Depere. The water-power at Appleton in its natural advantages is pronounced by Hon. Hiram Barney, of New York, superior to those at Lowell, Paterson and Rochester, combined. The water-power of the Fox has been improved to a considerable extent, but its full capacity has hardly been touched. Attention has been drawn to it, however, and no doubt is entertained that in a few years the hum of machinery to be propelled by it, will be heard the entire length of the thirty-five miles. The facilities presented by its nearness to timber, iron, and a rich and productive agricultural region, give it an advantage over any of the eastern manufacturing points.

The Wisconsin river rises in the extreme northern part of the state, and has its source in a great number of small lakes. The upper portion abounds in valuable water privileges, only a few of which are improved. There are a large number of saw-mills running upon the power of this river. Other machinery, to a limited extent, is in operation.

The "Big Bull" falls, at Wausau, are improved, and a power of twenty-two feet fall is obtained. At Little Bull falls, below Wausau, there is a fall of eighteen feet, partially improved. There are many other water-powers in Marathon county, some of which are used in propelling flouring-mills and saw-mills. At Grand Rapids, there is a descent of thirty feet to the mile, and the water can be used many times. Each time, 5,000 horse-power is obtained. At Kilbourn City a large amount of power can be obtained for manufacturing purposes.

Chippewa river has its origin in small streams in the north part of the state. Explorers tell us that there are a large number of water powers on all the upper branches, but as the country is yet unsettled, none of them have been improved, and very few even located on our maps. Brunette falls and Ameger falls, above Chippewa Falls city, must furnish considerable water-power, but its extent is not known. At Chippewa Falls is an excellent water-power, only partially improved. The river descends twenty-six feet in three-fourths of a mile. At Duncan creek at the same place, there is a good fall, improved to run a large flouring mill. At Eagle Rapids, five miles above Chippewa Falls, \$120,000 has been expended in improving the fall of the Chippewa river. The city of Eau Claire is situated at the confluence of the Chippewa and Eau Claire rivers, and possesses in its immediate vicinity water-powers almost unrivaled. Some of them are improved. The citizens of Eau Claire have, for several years, striven to obtain legislative authority to dam the Chippewa river, so as to improve the water-power of the Dells, and a lively contest, known as the "Dells fight," has been carried on with the capitalists along the river above that town. There are immense water-powers in Dunn county, on the Red Cedar, Chippewa and Eau Galle rivers, on which there are many lumbering establishments. In Pepin county also there are good powers. The Black river and its branches, the La Crosse, Buffalo, Trempealeau, Beaver, and Tamaso, furnish many valuable powers. The St. Croix river is not excelled in the value of its water privileges by any stream in the state, except the Lower Fox river. At St. Croix Falls, the water of the river makes a descent of eighty-five feet in a distance of five miles, and the volume of water is sufficient to move the machinery for an immense manufacturing business, and the banks present good facilities for building dams, and the river is not subject to freshets. The Kinnekinnick has a large number of falls, some of them partially improved. Within twenty-five miles of its entrance into Lake St. Croix, it has a fall of two hundred feet, and the volume of water averages about three thousand cubic feet per minute. Rock river affords valuable water-privileges at Watertown (with twenty-four feet fall), and largely improved; at Jefferson, Indian Ford and Janesville, all of which are improved. Beloit also has an excellent water-power, and it is largely improved. Scattered throughout the state are many other water-powers, not alluded

to in the foregoing. There are several in Manitowoc county; in Marquette county, also. In Washington county, at West Bend, Berlin, and Cedar Creek, there are good water-powers, partly utilized. At Whitewater, in Walworth county, is a good power. In Dane county, there is a water-power at Madison, at the outlet of Lake Mendota; also, a good one at Stoughton, below the first, or Lake Kegonsa; also at Paoli, Bellville, Albany and Brodhead, on the Sugar river. In Grant county there are not less than twenty good powers, most of them well-developed. In Racine county, three powers of fine capacity at Waterford, Rochester and Burlington, all of which are improved. The Oconto, Peshtigo and Menomonee rivers furnish a large number of splendid water-powers of large capacity. The Upper Wolf river has scores of water-powers on its main stream and numerous branches; but most of the country is still a wilderness, though containing resources which, when developed, will make it rich and prosperous. There are numerous other streams of less consequence than those named, but of great importance to the localities they severally drain, that have had their powers improved, and their waterfalls are singing the songs of commerce. On the rivers emptying into Lake Superior, there are numerous and valuable water-powers. The Montreal river falls one thousand feet in a distance of thirty miles.

MANUFACTURES.

The mechanical and manufacturing industries of Wisconsin demonstrate that the people do not rely wholly upon agricultural pursuits, or lumbering, for subsistence, but aim to diversify their labors as much as possible, and to give encouragement to the skill and ingenuity of their mechanics and artisans. All our cities, and most of our villages, support establishments that furnish wares and implements in common use among the people. We gather from the census report for 1870 a few facts that will give us an adequate idea of what was done in a single year, remembering that the data furnished is six years old, and that great advancement has been made since the statistics were gathered. In 1870, there were eighty-two establishments engaged in making agricultural implements, employing 1,387 hands, and turning out products valued at \$2,393,400. There were one hundred and eighty-eight furniture establishments, employing 1,844 men, and making \$1,542,300 worth of goods. For making carriages and wagons there were four hundred and eighty-five establishments, employing 2,184 men, and their product was valued at \$2,596,534; for clothing, two hundred and sixty-three establishments, and value of product \$2,340,400; sash, doors and blinds, eighty-one shops, and value of product \$1,852,370; leather, eighty-five tanneries, employing 577 men, and value of products \$2,013,000; malt liquors, one hundred and seventy-six breweries, 835 men, and their products valued at \$1,790,273.

At many points the business of manufacturing is carried on more or less extensively; indeed, there is hardly a village in the state where capital is not invested in some kind of mechanical industry or manufacturing enterprise, and making satisfactory returns; but for details in this respect, the reader is referred to the department of local history.

The principal commodities only, which Wisconsin contributes to trade and commerce, have been considered. There remains quite a number of minor articles from which the citizens of the state derive some revenue, such as flax and maple sugar, which can not be separately considered in this paper.

CONCLUDING REMARKS.

Statistics are usually dry reading, but, to one desiring to change his location and seeking information regarding a new country and its capabilities, they become intensely interesting and of great value. The farmer wishes to know about the lands, their value and the productiveness of the soil; the mechanic about the workshops, the price of labor, and the demand for such wares

as he is accustomed to make; the capitalist, concerning all matters that pertain to resources, advantages, and the opportunities for investing his money. Our own people want all the information that can be gained by the collection of all obtainable facts. The sources of such information are now various, and the knowledge they impart fragmentary in its character.

Provision should be made by law, for the collection and publication of reliable statistics relating to our farming, manufacturing, mining, lumbering, commercial and educational interests. Several of the states of the Union have established a "Bureau of Statistics," and no more valuable reports emanate from any of their state departments than those that exhibit a condensed view of the material results accomplished each year. Most of the European states foster these agencies with as much solicitude as any department of their government. Indeed, they have become a social as well as a material necessity, for social science extends its inquiries to the physical laws of man as a social being; to the resources of the country; its productions; the growth of society, and to *all* those facts or conditions which may increase or diminish the strength, growth or happiness of a people. Statistics are the foundation and corner-stone of social science, which is the highest and noblest of all the sciences.

A writer has said that, "If God had designed Wisconsin to be chiefly a manufacturing state, instead of agricultural, which she claims to be, and is, it is difficult to see more than one particular in which He could have endowed her more richly for that purpose." She has all the material for the construction of articles of use and luxury, the means of motive power to propel the machinery, to turn and fashion, weave, forge, and grind the natural elements that abound in such rich profusion. She has also the men whose enterprise and skill have accomplished most surprising results, in not only building up a name for themselves, but in placing the state in a proud position of independence.

It is impossible to predict what will be the future growth and development of Wisconsin. From its commercial and manufacturing advantages, we may reasonably anticipate that she will in a few years lead in the front rank of the states of the Union in all that constitutes real greatness. Her educational system is one of the best. With her richly endowed State University, her colleges and high schools, and the people's colleges, the common schools, she has laid a broad and deep foundation for a great and noble commonwealth. It was early seen what were the capabilities of this their newly explored domain. The northwestern explorer, Jonathan Carver, in 1766, one hundred and thirteen years ago, after traversing Wisconsin and viewing its lakes of crystal purity, its rivers of matchless utility, its forests of exhaustless wealth, its prairies of wonderful fertility, its mines of buried treasure, recorded this remarkable prediction of which we see the fulfillment: "To what power or authority this new world will become dependent after it has arisen from its present uncultivated state, time alone can discover. But as the seat of empire from time immemorial has been gradually progressive toward the west, there is no doubt but that at some future period mighty kingdoms will emerge from these wildernesses, and stately palaces and solemn temples with gilded spires reaching to the skies supplant the Indian huts, whose only decorations are the barbarous trophies of their vanquished enemies."

" Westward the course of empire takes its way ;
 The four first acts already passed,
 A fifth shall close the drama with the day ;
 Time's noblest offspring is the last."

THE PUBLIC DOMAIN.

By D. S. DURRIE.

In the early part of the seventeenth century, all the territory north of the Ohio river, including the present state of Wisconsin, was an undiscovered region. As far as now known, it was never visited by white men until the year 1634, when Jean Nicolet came to the Green bay country as an ambassador from the French to the Winnebagoes. The Jesuit fathers in 1660 visited the south shore of Lake Superior; and, soon after, missions were established at various points in the northwest.

The French government appreciating the importance of possessing dominion over this section, M. Talon, intendant of Canada, took steps to carry out this purpose, and availed himself of the good feelings entertained toward the French by a number of the Indian tribes, to establish the authority of the French crown over this remote quarter. A small party of men led by Daumont de St. Lussou, with Nicolas Perrot as interpreter, set out from Quebec on this mission, in 1670, and St. Lussou sent to the tribes occupying a circuit of a hundred leagues, inviting the nations, among them the Wisconsin tribes inhabiting the Green bay country, by their chiefs and ambassadors, to meet him at the Sault Sainte Marie the following spring.

In the month of May, 1671, fourteen tribes, by their representatives, including the Miamis, Sacs, Winnebagoes, Menomonees, and Pottawattamies, arrived at the place designated. On the morning of the fourteenth of June, "St. Lussou led his followers to the top of the hill, all fully equipped and under arms. Here, too, in the vestments of their priestly office were four Jesuits: Claude Dablon, superior of the mission on the lakes, Gabriel Druilletes, Claude Allouez, and André. All around, the great throng of Indians stood, or crouched, or reclined at length with eyes and ears intent. A large cross of wood had been made ready. Dablon, in solemn form, pronounced his blessing on it; and then it was reared and planted in the ground, while the Frenchmen, uncovered, sang the *Vexilla Regis*. Then a post of cedar was planted beside it, with a metal plate attached, engraven with the royal arms; while St. Lussou's followers sang the *exaudiat*, and one of the priests uttered a prayer for the king. St. Lussou now advanced, and, holding his sword in one hand, and raising with the other a sod of earth, proclaimed in a loud voice "that he took possession of all the country occupied by the tribes, and placed them under the king's protection.

This act, however, was not regarded as sufficiently definite, and on the eighth of May, 1689, Perrot, who was then commanding for the king at the post of Nadouesioux, near Lake Pepin on the west side of the Mississippi, commissioned by the Marquis de Denonville to manage the interests of commerce west of Green bay took possession, in the name of the king, with appropriate ceremonies, of the countries west of Lake Michigan as far as the river St. Peter. The papers were signed by Perrot and others.

By these solemn acts, the present limits of Wisconsin with much contiguous territory, came under the dominion of the French government, the possession of which continued until October, 1761—a period of ninety years from the gathering of the chiefs at the Sault Ste. Marie in 1671.

From the commencement of French occupancy up to the time when the British took possession, the district of country embraced within the present limits of this state had but few white inhabitants besides the roaming Indian traders; and of these few, the locations were separated by a distance of more than two hundred miles in a direct line, and nearly double that distance by

the usual water courses. There was no settlement of agriculturists; there were no missionary establishments; no fortified posts at other points, except at Depere and Green bay on Fox river, and perhaps at Prairie du Chien, near the junction of the Wisconsin and the Mississippi.

The French government made no grant of lands; gave no attention to settlers or agriculturists, and the occupation of the country was strictly military. There were, indeed, a few grants of lands made by the French governors and commanders, previous to 1750, to favored individuals, six of which were afterward confirmed by the king of France. There were also others which did not require confirmation, being made by Cardillac, commanding at Detroit, under special authority of the king; of this latter kind, one for a small piece of thirty acres bears with it, says a writer, "so many conditions, reservations, prohibitions of sale, and a whole cavalcade of feudal duties to be performed by the grantee, that in itself, it would be a host in opposition to the agricultural settlement of any country."

The grants just referred to, relate to that part of the French possessions outside the limits of the present state of Wisconsin. Within its limits there was a grant of an extensive territory including the fort at the head of Green bay, with the exclusive right to trade, and other valuable privileges, from the Marquis de Vaudreuil, in October, 1759, to M. Rigaud. It was sold by the latter to William Gould and Madame Vaudreuil, to whom it was confirmed by the king of France in January, 1760, at a very critical period, when Quebec had been taken by the British, and Montreal was only wanting to complete the conquest of Canada. This grant was evidently intended as a perquisite to entrap some unwary persons to give a valuable consideration for it, as it would be highly impolitic for the government to make such a grant, if they continued masters of the country, since it would surely alienate the affections of the Indians. The whole country had already been virtually conquered by Great Britain, and the grant of course was not confirmed by the English government.

Of the war between the French and English governments in America, known as the French and Indian war, it is not necessary to speak, except in general terms. The English made a determined effort to obtain the possessions claimed by the French. The capture of Quebec in 1759, and the subsequent capitulation of Montreal in 1760, extinguished the domination of France in the basin of the St. Lawrence; and by the terms of the treaty of Paris, concluded February 10, 1763, all the possessions in, and all the claims of the French nation to, the vast country watered by the Ohio and the Mississippi were ceded to Great Britain.

Among the first acts of the new masters of the country was the protection of the eminent domain of the government, and the restriction of all attempts on the part of individuals to acquire Indian titles to lands. By the King of England's proclamation of 1763, no more grants of land within certain prescribed limits could be issued, and all private persons were interdicted the liberty of purchasing lands from the Indians, or of making settlements within those prescribed limits. The indulgence of such a privilege as that of making private purchases of the natives, conduced to the most serious difficulties, and made way for the practice of the most reprehensible frauds. The policy pursued by the English government has been adopted and acted upon by the government of the United States in the extinguishment of the Indian title to lands in every part of the country.

In face of the proclamation of 1763, and within three years after its promulgation, under a pretended purchase from, or voluntary grant of the natives, a tract of country nearly one hundred miles square, including large portions of what is now northern Wisconsin and Minnesota, was claimed by Jonathan Carver, and a ratification of his title solicited from the king and council. This was not conceded; and the representatives of Carver, after the change of government had

brought the lands under the jurisdiction of the United States, for a series of years presented the same claims before congress, and asked for their confirmation. Such a demand under all the circumstances, could not justify an expectation of success; and, of course, has often been refused. But notwithstanding the abundant means which the public have had of informing themselves of the true nature and condition of Carver's claim, bargains and sales of portions of this tract have been made among visionary speculators for more than half a century past. It is now only a short period since the maps of the United States ceased to be defaced by a delineation of the "Carver Grant."

The mere transfer of the dominion over the country from the French to the English government, and the consequent occupation of the English posts by the new masters, did not in any great degree affect the social condition of the inhabitants. By the terms of capitulation, the French subjects were permitted to remain in the country, in the full enjoyment of their civil and religious privileges.

The English, however, did not hold peaceable possession of the territory acquired. The war inaugurated by Pontiac and his Indian allies on the military posts occupied by the English soon followed, and in the month of May, 1763, nine posts were captured with much loss of life. In the spring of 1764, twenty-two tribes who were more or less identified in the outbreak, concluded a treaty of peace with General Bradstreet at Niagara.

The expedition of Colonel George Rogers Clark to the Illinois country, and the conquest of the British posts in 1778 and 1779, had the effect to open the way for the emigration of the Anglo-American population to the Mississippi valley; and at the close of the revolutionary war, Great Britain renounced all claim to the whole territory lying east of the Mississippi river. The dominion of the English in the Illinois and Wabash countries, ceased with the loss of the military posts which commanded the Northwestern territory of the United States. As a result of the enterprise and success of Clark, Virginia obtained possession of the Illinois country; his expedition having been undertaken and carried forward under the auspices of that state.

Several of the eastern states under their colonial charters, laid claim to portions of the land comprised in the territory northwest of the Ohio river. The claim of Massachusetts was derived from a grant from King James of November 3, 1620; and included from lat. $42^{\circ} 2'$ to about lat. 45° , extending to the south sea; Connecticut claimed from lat. 41° north to $42^{\circ} 2'$. The claims of Virginia were from grants from King James, bearing date, respectively, April 10, 1606, May 23, 1609, and March 12, 1611, and an additional claim for the territory conquered by Clark in the Illinois country; but they extended no farther north than the southern end of Lake Michigan.

It is a popular impression that the territory of the present state of Wisconsin was comprehended in the lands northwest of the river Ohio, over which Virginia exercised jurisdiction, and, consequently, was included in her deed of cession of lands to the United States. This opinion so generally entertained by writers on American history, is a statement which does not appear to have any solid foundation in fact. Virginia never made any conquests or settlements in Wisconsin, and at no time prior to the proffer of her claims to the general government had she ever exercised jurisdiction over it. In fact, there were no settlements in Wisconsin except at Green Bay and Prairie du Chien before that time, and these were made by French settlers who were in no wise interfered with while the revolution continued. In Illinois it was otherwise; and the possession of its territory by Virginia was an undisputed fact. During the revolution the title of the sovereignty in Wisconsin was actually in Great Britain, and so remained until the definite treaty of peace in 1783; at which date England yielding her right constructively to the United States, retaining possession, however, until 1796; at which time the western posts were transferred to the United States.

All the claiming states finally ceded their interests to the general government, giving the latter a perfect title, subject only to the rights of the Indians. The deed of cession from Virginia was dated March 1, 1784. The other states ceded their claims, some before this date, others subsequent thereto.

Virginia made a number of stipulations in her deed of cession; among others, that the French and Canadian inhabitants and the neighboring villages who had professed themselves citizens of Virginia, should have their possessions and title confirmed to them, and be protected in the enjoyment of their rights and liberties; that 150,000 acres of land near the rapids of the Ohio, should be reserved for that portion of her state troops which had reduced the country; and about 3,500,000 acres between the rivers Scioto and Little Miami be reserved for bounties to her troops on the continental establishment.

In consequence of certain objectionable stipulations made by Virginia as to the division of the territory into states, the deed of cession was referred back to that state with a recommendation from congress that these stipulations should be altered. On the 30th of December, 1788, Virginia assented to the wish of congress, and formally ratified and confirmed the fifth article of compact which related to that subject, and tacitly gave her consent to the whole ordinance of 1787. The provisions of this ordinance have since been applied to all the territories of the United States lying north of the 36° 40'. After the adoption of the constitution of the United States the new congress, among its earliest acts, passed one, recognizing the binding force of the ordinance of 1787.

Of this ordinance it has been said: "It was based on the principles of civil liberty, maintained in the magna charta of England, re-enacted in the bill of rights, and incorporated in our different state constitutions. It was the fundamental law of the constitution, so to speak, of the great northwest, upon which were based, and with which harmonized all our territorial enactments, as well as our subsequent state legislation, and, moreover, it is to that wise, statesman-like document that we are indebted for much of our prosperity and greatness."

After the close of the revolutionary war, enterprising individuals traversed the whole country which had been ceded to the government, and companies were formed to explore and settle the fertile and beautiful lands beyond the Ohio; but the determination of the British cabinet not to evacuate the western posts, was well known, and had its effect on the people who were disposed to make settlements.

The western tribes were also dissatisfied and threatened war, and efforts were made by the government to settle the difficulties. A grand council was held at the mouth of Detroit river in December, 1787, which did not result favorably, and two treaties were subsequently held, which were not respected by the savages who were parties to them. Soon an Indian war ensued, which resulted at first disastrously to the American troops under Generals Harmar and St. Clair, but finally with success to the American arms under General Wayne. The treaty of Greenville followed. It was concluded August 3, 1795. At this treaty there were present eleven hundred and thirty chiefs and warriors. It was signed by eighty-four chiefs and General Anthony Wayne, sole commissioner of the United States. One of the provisions of the treaty was that in consideration of the peace then established, and the cessions and relinquishments of lands made by the tribes of Indians, and to manifest the liberality of the United States as the great means of rendering this peace strong and perpetual, the United States relinquished their claims to all other Indian lands northward of the river Ohio, eastward of the Mississippi, and westward and southward of the great lakes and the waters united by them, except certain reservations and portions before purchased of the Indians, none of which were within the present limits of this state. The Indian title to the whole of what is now Wisconsin, subject only to certain restrictions, became

absolute in the various tribes inhabiting it. By this treaty it was stipulated that, of the lands relinquished by the United States, the Indian tribes who have a right to those lands, were quietly to enjoy them; hunting, planting, and dwelling thereon so long as they pleased; but, when those tribes or any of them should be disposed to sell them, or any part of them, they were to be sold only to the United States, and until such sale, the United States would protect all of the tribes in the quiet enjoyment of their lands against all citizens of the United States, and all other white persons who might intrude on the same. At the same time all the tribes acknowledged themselves to be under the protection of the United States, and no other person or power whatsoever.

The treaty also prohibited any citizen of the United States, or any other white man, settling upon the lands relinquished by the general government; and such person was to be considered as out of the protection of the United States; and the Indian tribe on whose land the settlement might be made, could drive off the settler, or punish him in such manner as it might see fit.

It will be seen that the Indians were acknowledged to have an unquestionable title to the lands they occupied until that right should be extinguished by a voluntary cession to the general government; and the constitution of the United States, by declaring treaties already made, as well as those to be made, to be the supreme law of the land, adopted and sanctioned previous treaties with the Indian nations, and consequently admitted their rank among those powers who are capable of making treaties.

The several treaties which had been made between commissioners on the part of the United States and various nations of Indians, previous to the treaty of Greenville, were generally restricted to declarations of amity and friendship, the establishment and confirming of boundaries, and the protection of settlements on Indian lands; those that followed were generally for a cession of lands and provisions made for their payment. It is proposed to notice the several treaties that took place after that held at Greenville, showing in what way the territory of the present state, came into possession of the government. As will be seen hereafter, it required treaties with numerous tribes of Indians to obtain a clear, undisputed title, as well as many years before it was fully accomplished.

1. A treaty was held at St. Louis, November 3, 1804, between the Sacs and Foxes and the United States. William Henry Harrison was acting commissioner on the part of the government. By the provisions of the treaty, the chiefs and head men of the united tribes ceded to the United States a large tract on both sides of the Mississippi, extending on the east from the mouth of the Illinois to the head of that river, and thence to the Wisconsin; and including on the west considerable portions of Iowa and Missouri, from the mouth of the Gasconade northward. In what is now the state of Wisconsin, this grant embraced the whole of the present counties of Grant and La Fayette and a large portion of Iowa and Green counties. The lead region was included in this purchase. In consideration of this cession, the general government agreed to protect the tribes in the quiet enjoyment of their land, against its own citizens and all others who should intrude on them. The tribes permitted a fort to be built on the upper side of the Wisconsin river, near its mouth, and granted a tract of land two miles square, adjoining the same. The government agreed to give them an annuity of one thousand dollars per annum. The validity of this treaty was denied by one band of the Sac Indians, and this cession of land became, twenty-eight years after, the alleged cause of the Black Hawk war.

2. Another treaty was held at Portage des Sioux, now a village in St. Charles county, Missouri, on the Mississippi river, September 13, 1815, with certain chiefs of that portion of the Sac nation then residing in Missouri, who, they said, were compelled since the commencement of

the late war, to separate themselves from the rest of their nation. They gave their assent to the treaty made at St. Louis in 1804, and promised to remain separate from the Sacs of Rock river, and to give them no aid or assistance, until peace should be concluded between the United States and the Foxes of Rock river.

3. On the 14th of September, a treaty was made with the chiefs of the Fox tribe at the same place. They agreed that all prisoners in their hands should be delivered up to the government. They assented to, recognized, re-established and confirmed the treaty of 1804, to the full extent of their interest in the same.

4. A treaty was held at St. Louis, May 13, 1816, with the Sacs of Rock river, who affirmed the treaty of 1804, and agreed to deliver up all the property stolen or plundered, and in failure to do so, to forfeit all title to their annuities. To this treaty, Black Hawk's name appears with others. That chief afterward affirmed that though he himself had "touched the quill" to this treaty, he knew not what he was signing, and that he was therein deceived by the agent and others, who did not correctly explain the nature of the grant; and in reference to the treaty of St. Louis in 1804, and at Portage des Sioux in 1815, he said that he did not consider the same valid or binding on him or his tribe, inasmuch as by the terms of those treaties, territory was described which the Indians never intended to sell, and the treaty of 1804, particularly, was made by parties who had neither authority in the nation, nor power to dispose of its lands. Whether this was a true statement of the case, or otherwise, it is quite certain that the grant of lands referred to was often confirmed by his nation, and was deemed conclusive and binding by the government. The latter acted in good faith to the tribes, as well as to the settlers, in the disposition of the lands.

5. A treaty of peace and friendship was made at St. Louis, June 3, 1816, between the chiefs and warriors of that part of the Winnebagoes residing on the Wisconsin river. In this treaty the tribe state that they have separated themselves from the rest of their nation; that they, for themselves and those they represent, confirm to the United States all and every cession of land heretofore made by their nation, and every contract and agreement, as far as their interest extended.

6. On the 30th of March, 1817, the Menomonee tribe concluded a treaty of peace and friendship at St. Louis with the United States, and confirmed all and every cession of land before made by them within the limits of the United States.

7. On the 19th of August, 1825, at Prairie du Chien, a treaty was made with the Sioux, Chippewas, Sacs and Foxes, Winnebagoes, Ottawas and Pottawattamies, by which the boundary between the two first nations was agreed upon; also between the Chippewas, Winnebagoes and other tribes.

8. Another treaty was held August 5, 1826, at Fond du Lac of Lake Superior, a small settlement on the St. Louis river, in Itaska county, Minn., with the same tribes, by which the previous treaty was confirmed in respect to boundaries, and those of the Chippewas were defined, as a portion of the same was not completed at the former treaty.

9. A treaty was made and concluded August 1, 1827, at Butte des Morts, between the United States and the Chippewa, Menomonee and Winnebago tribes, in which the boundaries of their tribes were defined; no cession of lands was made.

10. A treaty was made at Green Bay, August 25, 1828, with the Winnebagoes, Pottawattamies and other tribes. This treaty was made to remove the difficulties which had arisen in consequence of the occupation by white men of that portion of the mining country in the southwestern part of Wisconsin which had not been ceded to the United States. A provisional

boundary was provided, and privileges accorded the government to freely occupy their territory until a treaty should be made for the cession of the same. This treaty was simply to define the rights of the Indians, and to give the United States the right of occupation.

11. Two treaties were made at Prairie du Chien, on the 29th of July, 1829, and August 1, 1829: at the first date, with the Chippewas, Ottawas and Pottawattamies, by which these nations ceded all their lands which they claimed in the northwestern part of Illinois; and at the latter date with the Winnebagoes, by which that nation ceded and relinquished all their right, title and claim to all their lands south of the Wisconsin river, thus confirming the purchase of the lead-mine region. Certain grants were made to individuals, which grants were not to be leased or sold by the grantees.

By this important treaty, about eight millions of acres of land were added to the public domain. The three tracts ceded, and forming one whole, extended from the upper end of Rock river to the mouth of the Wisconsin, from latitude $41^{\circ} 30'$ to latitude $43^{\circ} 15'$, on the Mississippi. Following the meanderings of the river, it was about two hundred and forty miles from west to east, extending along the Wisconsin and Fox rivers, affording a passage across the country from the Mississippi to Lake Michigan. The south part of the purchase extended from Rock Island to Lake Michigan.

12. Another important treaty was made at Green Bay, February 8, 1831, between the Menomonee Indians and the United States. That nation possessed an immense territory. Its eastern division was bounded by the Milwaukee river, the shore of Lake Michigan, Green bay, Fox river, and Lake Winnebago; its western division, by the Wisconsin and Chippewa rivers on the west, Fox river on the south, Green bay on the east, and the high lands which flow the streams into Lake Superior on the north. By this treaty all the eastern division, estimated at two and a half millions of acres, was ceded to the government. By certain other provisions, the tribe was to occupy a large tract lying north of Fox river and east of Wolf river. Their territory farther west was reserved for their hunting-grounds until such time as the general government should desire to purchase it. Another portion, amounting to four millions of acres, lying between Green bay on the east and Wolf river on the west, was also ceded to the United States, besides a strip of country, three miles in width, from near the portage of the Wisconsin and Fox rivers north, on each side of the Wisconsin river, and forty-eight miles long — still leaving the tribe in peaceable possession of a country about one hundred and twenty miles long, and about eighty broad. By supplementary articles to the treaty, provision was made for the occupancy of certain lands by the New York Indians — two townships on the east side of Lake Winnebago.

13. At the conclusion of the Black Hawk war, in 1832, for the purpose of clearing up the Indian title of the Winnebago nation in the country, a treaty was made and concluded at Fort Armstrong, September 15, 1832. All the territory claimed by this nation lying south and east of the Wisconsin and Fox river of Green bay, was ceded to the United States, and no band or party of Winnebagoes was allowed to reside, plant, fish or hunt on these grounds, after June 1, 1833, or on any part of the country therein ceded.

14. On the 27th of October, 1832, articles of agreement were made and concluded at Green Bay between the United States and the Menomonee Indians, by the terms of which that nation ceded to the New York Indians certain lands on Fox river.

15. An important treaty was made at Chicago, September 26, 1833, between the United States and the Chippewas, Ottawas and Pottawattamies. Those nations ceded to the government all their lands along the western shore of Lake Michigan, and between that lake and the land ceded to the United States by the Winnebago nation at the treaty at Fort Armstrong, September

15, 1832, bounded on the north by the country lately ceded by the Menomonees, and on the south by the country ceded at the treaty at Prairie du Chien, July 19, 1829—containing about five millions of acres.

16. On the 3d of September, 1836, a treaty was made at Cedar Point with the Menomonees, by which lands lying west of Green bay, and a strip on the upper Wisconsin, were ceded to the United States—the quantity of land ceded being estimated at four millions of acres in the Green bay portion; on the Wisconsin river, a strip three miles wide on each side of the river, running forty-eight miles north in a direct line, equivalent to 184,320 acres.

17. On the 29th of July, 1837, a treaty was made with the Chippewas of the Mississippi, at Fort Snelling, and the United States, the nation ceding to the government all their lands in Wisconsin lying south of the divide between the waters of Lake Superior and those of the Mississippi.

18. Certain chiefs and braves of the Sioux nation of the Mississippi, while visiting Washington, September 29, 1837, ceded to the United States all their lands east of the Mississippi, and all their islands in said river.

19. The Winnebago nation, by the chiefs and delegates, held a treaty with the government at Washington, November 1, 1837. That nation ceded all their lands east of the Mississippi, and obligated themselves to remove, within eight months after the ratification of the treaty, to certain lands west of the river Mississippi which were conveyed to them by the treaty of September 21, 1832.

20. The Oneida or New York Indians, residing near Green Bay, by their chief and representative, on the 3d of February, 1838, at Washington City, ceded to the United States their title and interest in the land set apart by the treaty made with the Menomonees, May 8, 1831, and the treaty made with the same tribe, October 7, 1832, reserving about 62,000 acres.

21. Another treaty was made at Stockbridge on the 3d of September, 1839, by which the Stockbridge and Munsee tribes (New York Indians) ceded and relinquished to the United States the east half of the tract of 46,080 acres which was laid off for their use on the east side of Lake Winnebago by treaty of October 7, 1832

22. On the 4th of October, 1842, a treaty was made at La Pointe, on Lake Superior, with the Chippewas. All their lands in the northern and northwestern parts of Wisconsin were ceded to the United States.

23. The Menomonee nation, on the 18th of October, 1848, at Pow-aw-hay-kon-nay, ceded and relinquished to the United States all their lands in the state, wherever situated—the government to furnish the nation as a home, to be held as Indian lands are held, all the country ceded to the United States by the Chippewa nation August 2, 1847, the consideration being the sum of \$350,000, to be paid according to the stipulations of the treaty. A supplementary treaty was made on the 24th of November, 1848, with the Stockbridges—the tribe to sell and relinquish to the United States the township of land on the east side of Lake Winnebago, secured to said tribe by treaty of February 8, 1831.

24. A treaty was made with the Menomonee nation, at the falls of Wolf river, May 12, 1854, being a supplementary treaty to one made October 18, 1848. All the lands ceded to that nation under the treaty last named was ceded to the United States—the Menomonees to receive from the United States a tract of country lying on Wolf river, being townships 28, 29 and 30, of ranges 13, 14, 15, 16.

25. A treaty was made with the Chippewas of Lake Superior, at La Pointe, on the 30th of September, 1854. That nation ceded to the United States all lands before owned by them in common with the Chippewas of the Mississippi—lying in the vicinity of Lake Superior in Wis-

consin and Minnesota.

26. On the 5th of February, 1856, a treaty was held with the Stockbridge and Munsee tribes, at Stockbridge. All the remaining right and title to lands in the town of Stockbridge, possessed by them, was ceded to the United States; and the said tribes were to receive in exchange a tract of land near the southern boundary of the Menomonee reservation, and by treaty made at Keshena, February 11, 1856, the Menomonees ceded two townships to locate the said tribes.

With this last treaty, the Indian title to all the lands of the present state of Wisconsin was ceded to the United States government, except a few small reservations to certain tribes, and a perfect, indefeasible title obtained to all the territory within its borders.

In the region of country which is now the state of Wisconsin, the settlements in early times were, as before stated, near Green Bay and at Prairie du Chien. Soon after the organization of the Northwest territory, the subject of claims to private property therein received much attention. By an act of congress approved March 3, 1805, lands lying in the districts of Vincennes, Kaskaskia and Detroit, which were claimed by virtue of French or British grants, legally and fully executed, or by virtue of grants issued under the authority of any former act of congress by either of the governors of the Northwest or Indiana territory, which had already been surveyed, were, if necessary, to be re-surveyed; and persons claiming lands under these grants were to have until November 1, 1805, to give notice of the same. Commissioners were to be appointed to examine, and report at the next session of congress. An act was also passed, approved April 25, 1806, to authorize the granting of patents for lands, according to government surveys that had been made, and to grant donation rights to certain claimants of land in the district of Detroit, and for other purposes. Another act was approved May 11, 1820, reviving the powers of the commissioners for ascertaining and deciding on claims in the district of Detroit, and for settling the claims to land at Green Bay and Prairie du Chien, in the territory of Michigan; the commissioners to have power to examine and decide on claims filed with the register of the land office, and not before acted on, in accordance with the laws respecting the same. The commissioners discharged the duties imposed on them, and in their report to congress in reference to the claims at Green Bay, they said that the antiquity of this settlement being, in their view, sufficiently established, and that they, being also satisfied that the Indian title must be considered to have been extinguished, decide favorably on the claims presented. About seventy-five titles were confirmed, and patents for the same were sent to the proper parties by the government. In relation to the Prairie du Chien titles, they reported "that they had met few difficulties in their investigations; that, notwithstanding the high antiquity which may be claimed for the settlement of that place, no one perfect title founded on French or British grant, legally authenticated, had been successfully made out; and that but few deeds of any sort have been exhibited." This they attribute to the carelessness of the Canadians in respect to whatever concerned their land titles, and accords with whatever is known in this regard, of the French population throughout the country. They therefore came to the conclusion that whatever claim the people of the place possessed, and might have for a confirmation of their land titles, they must be founded upon proof of continued possession since the year 1796. The commissioners further say, that "since the ancestors of these settlers were cut off, by the treaty which gave the Canadas to the English, from all intercourse with their parent country, the people both of Prairie du Chien and Green Bay have been left, until within a few years, quite isolated, almost without any government but their own; and, although the present population of these settlements are natives of the countries which they inhabit, and, consequently, are by birth citizens of the northwest, yet, until a few years, they have had as little political connection with its government as their ancestors had with the British. Ignorant of their civil rights, careless of their land titles, docility, habitual hospitality, cheerful

submission to the requisitions of any government which may be set over them, are their universal characteristics."

In reference to grants by the French and English governments, the commissioners say, they "have not had access to any public archives by which to ascertain with positive certainty, whether either the French or English ever effected a formal extinguishment of the Indian title at the mouth of the Wisconsin, which also may be said of the land now covered by the city of Detroit, that the French government was not accustomed to hold formal treaties for such purposes with the Indians, and when the lands have been actually procured from them, either by virtue of the assumed right of conquest, or by purchase, evidence of such acquisition is rather to be sought in the traditional history of the country, or in the casual or scanty relations of travelers, than among collections of state papers. Tradition *does* recognize the fact of the extinguishment of the Indian title at Prairie du Chien by the old French government, before its surrender to the English; and by the same species of testimony, more positive because more recent, it is established also, that, in the year 1781, Patrick Sinclair, lieutenant governor of the province of Upper Canada, while the English government had jurisdiction over this country, made a formal purchase from the Indians of the lands comprehending the settlement of Prairie du Chien."

The territories and states formed from the section known as the Northwest territory, were :

1. The Northwest territory proper (1787-1800) having jurisdiction over all the lands referred to in the ordinance of 1787. In 1802, Ohio was organized as a state with its present boundaries.

2. Indiana territory was formed July 4, 1800, with the seat of government at Vincennes. That territory was made to include all of the northwest, except what afterward became the state of Ohio.

3. Michigan territory was formed June 30, 1805. It was bounded on the south by a line drawn east from the south bend of Lake Michigan, on the west by the center of Lake Michigan. It did not include what is now Wisconsin. The upper peninsula was annexed in 1836. The state of Michigan was formed January 26, 1837, with its present boundaries.

4. Illinois territory was formed March 2, 1810. It included all of the Indiana territory west of the Wabash river and Vincennes, and a line running due north to the territorial line. All of Wisconsin was included therein, except what lay east of the line drawn north from Vincennes.

5. Indiana was admitted as a state April 19, 1816, including all the territory of Indiana territory, except a narrow strip east of the line of Vincennes, and west of Michigan territory, her western boundary.

6. Illinois was admitted as a state April 11, 1818. It included all of Illinois territory south of latitude 42° 30'. All of Wisconsin was added to Michigan territory. In the month of October of that year, the counties of Michilimackinac, Brown and Crawford were formed, comprising besides other territory, the whole of the present state of Wisconsin.

7. Iowa district was attached to Michigan for judicial purposes, June 30, 1834, out of which Des Moines and Dubuque counties were formed.

8. Wisconsin territory was formed April 20, 1836. The state was formed May 29, 1848.

The territory of Wisconsin being a part of the Northwest territory claimed, and congress by direct action confirmed to her, all the rights and privileges secured by the ordinance of 1787, one of which was that congress should have authority to form one or two states in that part of the territory lying north of an east and west line, drawn through the southerly bend or extreme of Lake Michigan. Notwithstanding this plain provision of the ordinance, which is declared to

be articles of compact between the original states and the people and states in the said territory, and forever to remain unalterable unless by consent; yet congress, in establishing the boundaries of the state of Illinois, extended that state about sixty miles north of the line established by the ordinance. This action was claimed to be unjust and contrary to the spirit and letter of the compact with the original states. The legislative assembly of Wisconsin passed resolutions which were approved January 13, 1840, that it was inexpedient for the people of the territory to form a constitution and state government until the southern boundary to which they are so justly entitled by the ordinance of 1787 shall be fully recognized by the parties of the original compact. Owing to various complications over which the territory had no control, her people never succeeded in obtaining from congress what they considered their just rights.

It was also contended by many, that the portion of country set off to Michigan on Lake Superior given as a compensation in part for the strip of land awarded to Ohio from her southern border, should also have constituted a portion of Wisconsin, especially as Michigan never made the least claim to it by her delegate in congress, who was decidedly opposed to the extension of Michigan beyond the limits of the lower peninsula.

The first survey of the public lands northwest of the Ohio river, was made pursuant to an act of congress approved May 20, 1785. The geographer of the confederation was directed to commence the survey of the government lands on the north side of the river Ohio—the first line running north and south, to begin on said river at a point that should be found to be due north from the western termination of a line which had been run as the southern boundary of the state of Pennsylvania; the first line running east and west, to begin at the same point, and to extend through the whole territory. The survey comprised seven ranges, composing ten counties of the present state of Ohio. Other surveys followed when the Indian title was extinguished. Thomas Hutchins, who held the office of geographer, is believed to be the inventor of the mode of laying out land which was then introduced by him, and is still in general use by the government.

Soon after the government had acquired title to the Indian lands south of the Wisconsin river, the public authorities commenced a systematic survey of the lands, for the purpose of bringing the same into market at the earliest possible period.

The public lands in Wisconsin are, as elsewhere in the west, surveyed in uniform rectangular tracts, each six miles square, by lines running north and south, intersecting others running east and west. These townships are numbered from two lines called the principal meridian and the base line. The principal meridian by which the Wisconsin surveys are governed is that known as the fourth, and extends from the Illinois boundary line to Lake Superior, at the mouth of Montreal river, about two hundred and eighty-two miles. It divides Grant from LaFayette county, and passes through the eastern parts of Vernon, Monroe, Jackson, Clark, Chippewa, and Ashland counties. The base line separates Wisconsin from Illinois in north latitude forty-two degrees, thirty minutes. There are nearly seventeen hundred townships in the state. Each township is subdivided into thirty-six sections by lines running parallel to the sides of the township, one mile apart. A section is, therefore, one mile square, and contains six hundred and forty acres. In fractional townships, each section is numbered the same as the corresponding section in whole townships. Each section is subdivided into half-mile squares, called quarter-sections, each containing one hundred and sixty acres, and the subdivision is carried still further into half-quarter or quarter-quarter sections. It is found necessary to establish at stated intervals standard parallels, commonly called correction lines, to obviate the effect of the curvature of the earth's surface. The convergence in a single township is small, though quite perceptible, the actual excess in length of its south over its north line being in the state

about three rods. The townships north of the base line, therefore, become narrower toward the north, and if continued for too great a distance, this narrowing would cause serious inconvenience. In the state of Wisconsin there are four of these correction lines. The first is sixty miles north of the base line, and accordingly runs between townships ten and eleven. The second is between townships twenty and twenty-one, and so on. They are usually sixty miles apart. On these parallels, which form new base lines, fresh measurements are made from the principal meridian, and the corners of new townships are fixed six miles apart as on the original base line. This method of procedure not only takes up the error due to convergency of meridians, but arrests that caused by want of precision in the surveys already made.

The northern or western sections of townships, which contain more or less than six hundred and forty acres, are called fractional sections, for the reason that the surplusage or deficiency arising from errors in surveying, and from other causes, is by law added to or deducted from the western or northern ranges of sections according as the error may be in running the lines from east to west, or from north to south.

As soon as the surveys were completed in southern Wisconsin and the Green Bay section, and a knowledge of the superior qualities of the land for agricultural purposes were known to the people, the emigration became large. In fact much land was taken possession of by settlers in advance of being surveyed and brought into market. As soon as the land offices at Green Bay, Mineral Point, and Milwaukee were located, public announcement was made by the government, of the time of the sale, when the lands were put up to the highest bidder, and such as were unsold were afterward subject to private entry. The first sales were held at Green Bay and Mineral Point in the year 1835. The sale at Milwaukee was in 1839. From the reports of the general land office, it appears that from 1835 to 1845 inclusive, there were sold at the three land offices from public sale, 2,958,592 $\frac{4}{10}$ acres, amounting to \$3,768,106.51.

Fort Howard military reservation was set apart by order of the president March 2, 1829, and comprised all the lands lying upon Fox river and Green bay, in township 24 north, range 20 east, 4th principal meridian, being about four thousand acres. The lands were abandoned for military purposes, by the war department, December 4, 1850. By an act of congress approved March 3, 1863, the commissioner of the general land office was authorized and directed to cause the reservation, including the site of the fort, containing three and four-hundredths acres, situated in the county of Brown, between Fox river and Beaver Dam run, and which is not included in the confirmations to T. C. Dousman and Daniel Whitney, nor in the grant to the state of Wisconsin, under resolutions of congress approved April 25, 1862, granting lands to Wisconsin to aid in the construction of railroads, to be surveyed and subdivided into lots not less than one-fourth of an acre, and not more than forty acres, deducting such portions of the same as the public interest and convenience may require; and when so surveyed and platted, to be sold separately at auction. On the 10th of November, 1864, under directions of the commissioner, the lands were offered for sale at auction at the fort. About one-half of the lands were sold, and purchased by actual settlers, and but few for speculation. The fort and the lands contiguous were sold for six thousand four hundred dollars. The other lands sold brought about the sum of nineteen thousand dollars.

That portion of the reservation unsold was to be subject to private entry at the appraised value, and that portion lying between Duck creek and Beaver Dam creek, was subject to entry as other public lands were offered.

On the 20th of May, 1868, a joint resolution of congress was approved, by which the commissioner of the general land office was authorized and directed to cause a patent to be issued to the Chicago & Northwestern railroad company, in pursuance of a resolution passed by con-

gress, granting the same to the state of Wisconsin, approved April 25, 1862, and by act of the legislature approved June 16, 1862, granting the same to that company for eighty acres of land, as was surveyed and approved by said commissioner June 11, 1864. The lands thus donated are now used by the railroad company for their depot grounds

The Fort Crawford military reservation was purchased from J. H. Lockwood and James D. Doty by the government in the year 1829, and covered the front and main portions of farm lots numbered thirty-three and thirty-four, of the private land claims at Prairie du Chien, and comprised about one hundred and sixty acres. Fort Crawford was built on this tract in 1829, 1830 and 1831. There was also a reservation of section eighteen, township seven, north of range four west, known as the Cattle Yard. This land was at the mouth of the Kickapoo river, and is now known as the village of Wauzeka. In addition to these lands which were located in Wisconsin, there was a reservation of lands lying on the west side of the Mississippi river, in Iowa. The lands in Wisconsin were relinquished by the secretary of war, January 10, 1851, and were originally set apart by the president of the United States, February 17, 1843.

In the month of April, 1857, the secretary of war authorized Hon. H. M. Rice, of Minnesota, to sell that part of the reservation not improved, in tracts not exceeding forty acres each; and, in the month of June of that year, he sold at auction five hundred and seven acres of the reserve opposite Fort Crawford, none of which was claimed by actual settlers; and in the month of December, 1857, he sold the remainder to claimants of lands, also on the west side, and the section in Wisconsin known as the Cattle Yard, amounting to $177\frac{69}{100}$ acres. A portion of this reservation was subdivided into town lots, 80 by 140 feet, with streets 66 feet and alleys 20 feet wide. November 17, 1864, the acting commissioner of the general land office, by order of the war department, offered for sale at public auction at La Crosse the reservation at Fort Crawford, which had been surveyed and subdivided into town lots, eighty by one hundred and forty feet, with streets sixty-five feet and alleys twenty feet wide, conforming to the plat of the village of Prairie du Chien. The lands unsold were subsequently opened to private entry and disposed of.

The lands of the Fort Winnebago reservation were set apart by order of the president, February 9, 1835, and consisted of the following territory: sections two, three, and that part of four lying east of Fox river, and fractional section nine, all in township twelve, north of range nine east, also fractional section thirty-three, in township thirteen, north of range nine east, lying west of Fox river, and the fraction of section four, township twelve north, of range nine east, lying west of claim numbered twenty-one of A. Grignon, and adjacent to Fort Winnebago, reserved by order of the president, July 29, 1851, the whole amounting to about four thousand acres. September the first, 1853, these lands were by order of the president offered for sale at public auction at the fort, by F. H. Masten, assistant quartermaster United States army, having previously been surveyed into forty acre lots, and were purchased by J. B. Martin, G. C. Tallman, W. H. Wells, Wm. Wier, N. H. Wood, M. R. Keegan, and others.

The first land offices in Wisconsin were established under an act of congress approved June 26, 1834, creating additional land districts in the states of Illinois and Missouri, and in the territory north of the state of Illinois. The first section provides "that all that tract lying north of the state of Illinois, west of Lake Michigan, south and southeast of the Wisconsin and Fox rivers, included in the present territory of Michigan, shall be divided by a north and south line, drawn from the northern boundary of Illinois along the range of township line west of Fort Winnebago to the Wisconsin river, and to be called—the one on the west side, the Wisconsin land district, and that on the east side the Green Bay land district of the territory of Michigan, which two districts shall embrace the country north of said rivers when the Indian title shall be

extinguished, and the Green Bay district may be divided so as to form two districts, when the president shall deem it proper;" and by section three of said act, the president was authorized to appoint a register and receiver for such office, as soon as a sufficient number of townships are surveyed.

An act of congress, approved June 15, 1836, divided the Green Bay land district, as established in 1834, "by a line commencing on the western boundary of said district, and running thence east between townships ten and eleven north, to the line between ranges seventeen and eighteen east, thence north between said ranges of townships to the line between townships twelve and thirteen north, thence east between said townships twelve and thirteen to Lake Michigan; and all the country bounded north by the division line here described, south by the base line, east by Lake Michigan, and west by the division line between ranges eight and nine east," to be constituted a separate district and known as the "Milwaukee land district." It included the present counties of Racine, Kenosha, Rock, Jefferson, Waukesha, Walworth and Milwaukee, and parts of Green, Dane, Washington, Ozaukee, Dodge and Columbia.

An act was approved March 3, 1847, creating an additional land district in the territory. All that portion of the public lands lying north and west of the following boundaries, formed a district to be known as the Chippewa land district: commencing at the Mississippi river on the line between townships twenty-two and twenty-three north, running thence east along said line to the fourth principal meridian, thence north along said meridian line to the line dividing townships twenty-nine and thirty, thence east along such township line to the Wisconsin river, thence up the main channel of said river to the boundary line between the state of Michigan and the territory of Wisconsin. The counties now included in this district are Pepin, Clark, Eau Claire, Dunn, Pierce, St. Croix, Polk, Barron, Burnett, Douglas, Bayfield, Ashland, Taylor, Chippewa, and parts of Buffalo, Trempeleau and Jackson; also, the new county of Price.

An act of congress, approved March 2, 1849, changed the location of the land office in the Chippewa district from the falls of St. Croix to Stillwater, in the county of St. Croix, in the proposed territory of Minnesota; and, by section two of the act, an additional land office and district was created, comprising all the lands in Wisconsin not included in the districts of land subject to sale at Green Bay, Milwaukee, or Mineral Point, which was to be known as the Western land district, and the president was authorized to designate the site where the office should be located. Willow River, now Hudson, was selected. The district was usually known as the St. Croix and Chippewa district, and included St. Croix, La Pointe, and parts of Chippewa and Marathon counties. By an act of congress, approved July 30, 1852, so much of the public lands in Wisconsin as lay within a boundary line commencing at the southwest corner of township fifteen, north of range two east of the fourth principal meridian, thence running due east to the southeast corner of township fifteen, north of range eleven, east of the fourth principal meridian, thence north along such range line to the north line of the state of Wisconsin, thence westwardly along said north line to the line between ranges one and two east of fourth principal meridian, thence south to the place of beginning, were formed into a new district, and known as the Stevens Point land district, and a land office located at that place.

The boundaries enclosed the present counties of Juneau, Adams, Marquette, Green Lake, Waushara, Waupaca, Portage, Wood, Marathon, Lincoln, Shawano, New and Marinette. The La Crosse land district was formed of the following territory: "Commencing at a point where the line between townships ten and eleven north touches the Mississippi river, thence due east to the fourth principal meridian, thence north to the line between townships fourteen and fifteen north, thence east to the southeast corner of township fifteen north, of range one east of the

fourth principal meridian, thence north on the range line to the south line of township number thirty-one north, thence west on the line between townships number thirty and thirty-one to the Chippewa river, thence down said river to its junction with the Mississippi river, thence down said river to the place of beginning." The present counties of Vernon, La Crosse, Monroe, Buffalo, Trempealeau, Eau Claire, Clark, and parts of Juneau and Chippewa were included in its limits.

By act of congress, approved February 24, 1855, an additional district was formed of all that portion of the Willow river land district lying north of the line dividing townships forty and forty-one, to be called the Fond du Lac district — the office to be located by the president as he might from time to time direct. The present counties of Douglas, Bayfield, Ashland, and part of Burnett were included within its boundaries.

By an act of congress, approved March 3, 1857, so much of the districts of land subject to sale at La Crosse and Hudson, in the state of Wisconsin, contained in the following boundaries, were constituted a new district, to be known as the Chippewa land district: North of the line dividing townships twenty-four and twenty-five north; south of the line dividing townships forty and forty-one north; west of the line dividing ranges one and two east; and east of the line dividing ranges eleven and twelve west. The location of the office was to be designated by the president as the public interest might require. The present counties of Chippewa, Taylor, Eau Claire and Clark were in this district.

There are at the present time six land offices in the state. They are located at Menasha, Falls of St. Croix, Wausau, La Crosse, Bayfield and Eau Claire. By the provisions of law, when the number of acres of land in any one district is reduced to one hundred thousand acres, subject to private entry, the secretary of the interior is required to discontinue the office, and the lands remaining unsold are transferred to the nearest land office, to be there subject to sale. The power of locating these offices rests with the president (unless otherwise directed by law), who is also authorized to change and re-establish the boundaries of land districts whenever, in his opinion, the public service will be subserved thereby.

The pre-emption law of 1830 was intended for the benefit of actual settlers against competition in open market with non-resident purchasers. It gave every person who cultivated any part of a quarter section the previous year, and occupied the tract at the date mentioned, the privilege of securing it by payment of the minimum price at any time before the day fixed for the commencement of the public sale. To avail himself of this provision he was to file proof of cultivation and occupancy. As men frequently located claims in advance of the survey, it occasionally happened that two or more would find themselves upon the same quarter section, in which case the pre-emption law permitted two joint occupants to divide the quarter section equally between them, whereupon each party received a certificate from the land office, authorizing him to locate an additional eighty acres, elsewhere in the same land district, not interfering with other settlers having the right of preference. This was called a *floating right*. This provision of the law was ingeniously perverted from its plain purpose in various ways.

As fast as these evasions came to the notice of the department, all certificates given to occupants of the same quarter section in excess of the two first, or to more than one member of the same family, to employees, to any person who had not paid for eighty acres originally occupied, as well as those which were not located at the time of such payment, and the additional tract paid for before the public sale, were held to be worthless or fraudulent; but a large number of these certificates had been issued, and passed into the hands of speculators and designing men, and were a source of almost endless vexation and annoyance to settlers. The law of 1830

expired by limitation in one year from its passage, but was revived by the law of 1834 for two years. In the interim no settler could obtain his land by pre-emption. The law of 1834 extended only to those who had made cultivation in 1833, consequently the settlers of later date were excluded from its benefits. Meanwhile the fraudulent floats were freely used to dispossess actual settlers as late as 1835.

The pre-emption law of congress, approved September 4, 1841, provided that every person who should make a settlement in person on public land, and erect a dwelling, should be authorized to enter a quarter section (one hundred and sixty acres), at the minimum price (one dollar and twenty-five cents per acre), and thus secure the same against competition; and if any person should settle upon and improve land subject to private entry, he might within thirty days give notice to the register of the land office of his intention to claim the land settled upon, and might within one year upon making proof of his right, enter the land at the minimum price.

At the public land sales at Mineral Point, held in 1835, all those tracts on which lead was found, or on which it was supposed to exist, were reserved to the United States, and were leased under certain regulations by the government for a rent of ten per centum of all the lead raised. The quantity of land thus reserved was estimated at one million acres. Considerable difficulty was found in collecting these rents, and subsequently it was abandoned, as the amount expended in collecting exceeded the value of the lead collected. In the period of four years the government suffered a loss of over nineteen thousand dollars.

The act of congress, approved July 11, 1846, authorized the sale of the reserved mineral lands in Illinois, Wisconsin and Iowa, and provided that, after six months' public notice, the lands should not be subject to the rights of pre-emption until after the same had been offered at public sale, when they should be subject to private entry. The law also provided, that, upon satisfactory proof being made to the register and receiver of the proper land office, any tract or tracts of land containing a mine or mines of lead ore actually discovered and being worked, would be sold in such legal subdivisions as would include lead mines, and no bid should be received therefor at less than the sum of two dollars and fifty cents per acre, and if such tract or tracts should not be sold at such public sale, at such price, nor should be entered at private sale within twelve months thereafter, the same should be subject to sale as other lands. This act was changed by an act approved March 3, 1847, providing that any one being in possession by actual occupancy of a mine discovered prior to the passage of this act, who should pay the same rents as those who held leases from the secretary of war, should be entitled to purchase the lands prior to the day of sale at five dollars per acre. Mineral lands were to be offered for sale in forty acre pieces, and no bids were to be received less than five dollars per acre, and if not sold they were then to be subject to private entry at the same price. In 1847 or 1848 the reserved mineral lands were sold at public sale at Mineral Point at two dollars and fifty cents per acre, and they were all disposed of at that price.

Soon after the formation of Wisconsin territory, an act was passed by its legislature, approved January 5, 1838, incorporating the Milwaukee and Rock river canal company, and by an act of congress approved June 18 of the same year, a grant of land was made to aid in the construction of the canal. The grant consisted of the odd-numbered sections on a belt of ten miles in width from Lake Michigan to Rock river, amounting to 139,190 acres. Of those lands 43,447 acres were sold at public sale in July, 1839, at the minimum price of two dollars and fifty cents per acre. Work was commenced on the canal at Milwaukee, and the Milwaukee river for a short distance from its outlet was improved by the construction of a dam across the river, which was made available for manufacturing and other purposes. A canal was also built about a mile in length and forty feet wide, leading from it down on the west bank of the river. Much

dissatisfaction subsequently arose; the purchasers at this sale, and others occupying these canal and reserved lands felt the injustice of being compelled to pay double price for their lands, and efforts were made to repeal all laws authorizing further sales, and to ask congress to repeal the act making the grant. The legislation on the subject of this grant is voluminous. In 1862 the legislature of the state passed an act to ascertain and settle the liabilities, if any, of Wisconsin and the company, and a board of commissioners was appointed for that purpose. At the session of the legislature in 1863, the committee made a report with a lengthy opinion of the attorney-general of the state. The views of that officer were, that the company had no valid claims for damages against the state. In this opinion the commissioners concurred. On the 23d of March, 1875, an act was approved by the governor, giving authority to the attorney-general to discharge and release of record any mortgage before executed to the late territory of Wisconsin, given to secure the purchase money or any part thereof of any lands granted by congress to aid in the construction of this canal. The quantity of lands unsold was subsequently made a part of the 500,000 acre tract granted by congress for school purposes. It is believed the whole matter is now closed against further legislative enactments.

The next grant of lands made by congress for internal improvements in Wisconsin, was one approved August 8, 1846, entitled "an act to grant a certain quantity of land to aid in the improvement of the Fox and Wisconsin rivers, and to connect the same by canal." By this act there was granted to Wisconsin on her becoming a state, for improving the navigation of the above-named streams, and constructing the canal to unite the same, a quantity of land equal to one-half of three sections in width on each side of Fox river, and the lakes through which it passes from its mouth to the point where the portage canal should enter the same, and each side of the canal from one stream to the other, reserving the alternate sections to the United States, with certain provisions in relation thereto. On the 3d of August, 1854, an act of congress was approved, authorizing the governor of Wisconsin to select the balance of lands to which the state was entitled to under the provisions of the act of 1846, out of any unsold government lands subject to private entry in the state, the quantity to be ascertained upon the principles which governed the final adjustment of the grant to the state of Indiana, for the Wabash and Erie canal, approved May 9, 1848. In the years 1854 and 1855, acts of congress were passed, defining and enlarging the grant. Under the grants of 1846, 1854 and 1855, the number of acres donated for this purpose and certified to the state, was 674,100.

After the admission of Wisconsin into the Union, by an act of its legislature, approved August 8, 1848, a board of public works was created, through which the work of improving the said rivers, by the application thereto of the proceeds of the sale of the lands granted by congress, was undertaken by the state.

It soon became apparent that the moneys realized from the sale of lands were insufficient to meet the obligations of the state issued by its board of public works as they became due; and in 1853 the work was turned over to the Fox and Wisconsin Improvement company, a corporation created under an act of the legislature of Wisconsin approved July 6, 1853. In 1856, by an act of the legislature of Wisconsin, approved October 3, 1856, the lands granted by congress then unsold were granted by the state, through the said company, to trustees, with power to sell, and to hold the proceeds in trust for the payment of state indebtedness, the completion of the work, thereafter for the payment of bonds issued by the said company, and the balance, if any, for the company itself.

In February, 1866, the trustees, in execution of the powers contained in the deed of trust made to them, and pursuant to a judgment of the circuit court of Fond du Lac county, sold at public sale at Appleton, Wisconsin, the works of improvement and the balance of lands granted

by congress then unsold, and applied the proceeds to the purposes expressed in the deed of trust. The proceeds were sufficient to pay in full the expenses of the trust, the then outstanding state indebtedness, and to provide a fund sufficient to complete the work according to the plan specified in the act approved October 3, 1856.

Under an act of the legislature of Wisconsin approved April 13, 1861, and the acts amendatory thereof, the purchasers at said sale, on the 15th day of August, 1866, filed their certificate in the office of the secretary of state, and thereby became incorporated as the Green Bay and Mississippi canal company, holding, as such company, the said works of improvement.

At a subsequent date, under instructions from the engineer department of the United States, the surveys of the Fox and Wisconsin rivers were placed in the charge of General G. K. Warren, and by act of congress approved July 7, 1870, the secretary of war was authorized to appoint a board of arbitrators to ascertain how much the government should pay to the successors of the Improvement company, the Green Bay and Mississippi canal company, for the transfer of all its property and rights; and by a subsequent act, approved June 10, 1872, an appropriation was made therefor.

The legislation on matters connected with the Fox and Wisconsin river improvement would make a chapter of itself. The work is now in charge of the government, and will be prosecuted to completion in a satisfactory manner.

On the 29th of May, 1848, an act was approved by the president "to enable the people of Wisconsin territory to form a constitution and state government, and for the admission of such state into the Union," by which certain propositions were to be submitted to the convention which were to be acted upon, and subsequently submitted to the people for their approval. The first constitutional convention was held in October, 1846, and, having framed a constitution, it was submitted to a vote of the people at the election in 1847, and it was rejected. The second convention met December 15, 1847, and, having formed a constitution, it was adopted by the people at the election in 1848. The following are the propositions proposed by congress :

1. That section sixteen numbered in every township of the public lands of said state, and where such section has been sold or otherwise disposed of, other lands equivalent thereto, and as contiguous as may be, shall be granted to the said state for the use of schools.

2. That seventy-two sections, or two entire townships, of land set apart and reserved for the use and support of a university by act of congress approved June 12, 1838, are hereby granted and conveyed to the state, to be appropriated solely to the use and support of such university in such manner as the legislature may prescribe.

3. That ten entire sections of land to be selected and located under the direction of the legislature, in legal subdivisions of not less than one quarter of a section from any of the unappropriated lands belonging to the United States within the state are granted to the state for completing the public buildings, or for the erection of others at the seat of government, under the direction of the legislature.

4. That all salt-springs within the state, not exceeding twelve in number, shall be granted to the state, to be selected by the legislature, and when selected, to be used or disposed of on such terms, conditions, and regulations as the legislature shall direct.

The title to all lands and other property which accrued to the territory of Wisconsin by grant, gift, purchase, forfeiture, escheat, or otherwise, were, by the provisions of the constitution of the state, vested in the state; and the people of the state, in their right of sovereignty, were declared to possess the ultimate property in and to all lands within its jurisdiction; and all lands, the title of which shall fail from a defect of heirs, shall revert or escheat to the people.

The act of congress for the admission of the state into the Union gave formal assent to the

grant relative to the Fox and Wisconsin river improvement, and the lands reserved to the United States by said grant, and also the grant to the territory of Wisconsin, for the purpose of aiding in opening a canal to connect the waters of Lake Michigan with those of Rock river, were to be offered for sale at the same minimum price, and subject to the same rights of pre-emption as other public lands of the United States.

By the provisions of the state constitution, the secretary of state, the state treasurer and attorney-general, were constituted a board of commissioners for the sale of the school and university lands, and for the investment of the funds arising therefrom. In the year 1850 the commissioners put into market, for the first time, the school lands which had been donated to the state. The total quantity of lands offered was 148,021, 44-100 acres, which sold for the sum of \$444,265.19.

By an act of congress, approved September 4, 1841, there were granted to the state 500,000 acres of land, which were, by act of the territorial legislature of 1849, appropriated to the school fund, and the unsold lands of the Milwaukee and Rock river canal company, amounting to about 140,000 acres, were to be included as a part of the above grant. These lands, and the sixteenth section of each township, make up the whole of the school lands of the state. The whole number of acres sold up to the year 1877 is 1,243,984 acres, and there remain unsold, subject to entry, 216,016 acres.

The state university land grant was made in 1838, and seventy-two sections set apart and reserved. The lands were selected in 1845 and 1846. On the 15th of December, 1854, an act of congress was approved, relinquishing to the state the lands reserved for the salt-springs, and seventy-two sections were granted in lieu thereof, in aid of the university of the state. The number of acres amounts to 92,160, all of which have been sold except 4,407 acres, which are subject to entry. Under the re-organization and enlargement of the university, under provisions of chapter 114, of general laws of 1866, section thirteen provides, among other things, that the income of a fund to be derived from the sales of the two hundred and forty thousand acres, granted by congress by act approved July 2, 1862, entitled: "An act donating lands to the several states and territories which may provide colleges for the benefit of agriculture and mechanic arts," be devoted to the state university, and the funds arising therefrom to be known as the "agricultural college fund." All of the grant of lands have been sold except 51,635 acres. The quantity of lands donated by act of congress August 6, 1846, for the purpose of completing or erecting public buildings at the seat of government, known as "Capitol Lands," amounted to ten entire sections, or six thousand four hundred acres. A grant of lands was made to the state by act of congress, approved September 28, 1850, of all the swamp and overflowed lands within its limits. The total number of acres of this grant, as certified to the state from the government, to the year 1877, is 1,869,677.

A grant of land was made by congress, approved March 3, 1863, for the construction of a military road from Fort Wilkins, Michigan, to Fort Howard, Wisconsin, of every alternate section of public lands, designated by even numbers for three sections in width on each side of said road, and subject to the disposal of the legislature. In 1865 sales of land were made to the number of 85,961.89 acres, which realized the sum of \$114,856.54.

An act of congress was approved June 25, 1864, granting lands to the state to build a military road from Wausau, Wisconsin, to Ontonagon, on Lake Superior, of every alternate section of land designated as odd sections, for three sections in width on each side of the road. The grant was accepted by the state by law, approved April 10, 1865.

An act was also passed by congress, approved April 10, 1866, granting to the state of Wisconsin a donation of public lands to aid in the construction of a breakwater and harbor and ship

canal at the head of Sturgeon bay, Wis., to connect the waters of Green bay with Lake Michigan. The grant was for 200,000 acres of land. The grant was accepted by the legislature of 1868. In 1874, the same body by resolution transferred to the Sturgeon bay and Lake Michigan ship canal and harbor company 32,342 acres, and the remaining portion was authorized to be sold for agricultural purposes by said company.

The first railroad grant in Wisconsin was by act of congress, approved June 3, 1856, by the first section of which there was granted to the state, for the purpose of aiding in the construction of a railroad from Madison or Columbus, by the way of Portage City, to the St. Croix river or lake, between townships twenty-five and thirty-one, and from thence to the west end of Lake Superior and to Bayfield; and from Fond du Lac, on Lake Winnebago, northerly to the state line, every alternate section of land designated by odd numbers, for six sections in width on each side of said roads, respectively; the land to be applied exclusively in the construction of said roads, and to no other purpose whatever, and subject to the disposal of the legislature, and the same shall remain public highways for the use of the government, free from toll and other charges upon the transportation of property or troops of the United States, with other conditions as to the disposal of said lands.

The grant was accepted by the legislature by an act approved October 8, 1856, and on the 11th of the same month an act was approved granting a portion of the lands to the La Crosse & Mississippi railroad company, who were to carry out all the requirements of the original grant. A supplementary act was approved the same session, October 13, incorporating the Wisconsin & Superior railroad, which company was required to commence the construction of their road on or before January 1, 1857, and to complete the same to Oshkosh before August 1, 1858. Of this land grant John W. Cary says: "That portion of the grant given to aid in the construction of a railroad northerly to the state line was conferred on the Wisconsin & Superior railroad company. This company was organized in the interest of the Chicago, St. Paul & Fond du Lac railroad company, and that part of the grant was transferred to it. The road was, in 1859, extended to Oshkosh, and thence to Menasha, and finally to Green Bay. In the panic of 1857, the company failed to meet its obligations, but was afterward enabled to go on, and continued in possession until June 2, 1859, when its road was sold on the foreclosures of the mortgages given thereon; and on the sixth of the same month the present Chicago & Northwestern railroad company was organized under the statute, by purchasers at said sale, and took possession."

A large portion of the original grant was given for the construction of a road from Madison or Columbus to the St. Croix river, as before stated. The La Crosse company, during the years 1857 and 1858, completed its main line to La Crosse; the Watertown line, from Watertown to Columbus, and partially graded the line from Madison to Portage City. Neither it nor its successors ever received any part of the lands of the land grant.

In 1856 and 1857, the La Crosse & Milwaukee railroad graded most of the line from Madison to Portage. After the failure of the company, this line was abandoned, and so remained until 1870, when a new company was organized, under the name of the Madison & Portage City railroad company. In 1873, an act was passed chartering the Tomah & Lake St. Croix railroad company, and repealing and annulling that portion of the land grant which bestowed the lands from Tomah to Lake St. Croix upon the La Crosse company, and bestowing the same upon the company chartered by this act. This road is known as the West Wisconsin railroad.

An act of congress was approved May 5, 1864, granting lands to aid in the construction of certain roads in the state. This was a re-enactment of the law of 1856, and divided the grant in three sections, one of which was for a road from a point on the St. Croix river or lake, between

townships twenty-five and thirty-one, to the west end of Lake Superior, and from some point on the line of said road, to be selected by the state, to Bayfield — every alternate section designated by odd numbers, for ten sections in width on each side of said road, with an indemnity extending twenty miles on each side, was granted, under certain regulations; another, for aiding in building a road from Tomah to the St. Croix river, between townships twenty-five and thirty-one — every alternate section by odd numbers, for ten sections in width on each side of the road; another for aiding and constructing a railroad from Portage City, Berlin, Doty's Island, or Fond du Lac, as the legislature may determine, in a northwestern direction, to Bayfield, on Lake Superior, and a grant of every alternate section designated by odd numbers, for ten sections in width on each side of said road, was donated.

The legislature of 1865 failed to agree upon a disposition of the grant. The succeeding legislature conferred the grant partly upon the "Winnebago & Lake Superior Railroad Company," and partly upon the "Portage & Superior Railroad Company," the former April 6, 1866, and the latter April 9, 1866. The two companies were consolidated, under the name of the "Portage, Winnebago & Superior Railroad," by act of the legislature, March 6, 1869, and by act of legislature approved February 4, 1871, the name was changed to the "Wisconsin Central Railroad."

HEALTH OF WISCONSIN.

By JOSEPH HOBBS, M.D.

An article on state health, necessarily embracing the etiology, or causes of disease, involves the discussion of the geographical position of the state; its area, physical features; its elevations, depressions; water supply; drainage; its mean level above the sea; its geology; climatology; the nationality of its people; their occupations, habits, food, education; and, indeed, of all the physical, moral and mental influences which affect the public health.

GEOGRAPHICAL POSITION.

The geographical position of Wisconsin, considered in relation to health, conveys an immediate and favorable impression, which is at once confirmed by a reference to the statistical atlas of the United States. On its north it is bounded by Lake Superior, Minnesota, and the northern peninsula of Michigan; on the south by Illinois; on the east by Lake Michigan, and on the west by the Mississippi. It lies between $42^{\circ} 30'$ and $46^{\circ} 55'$ N. latitude, and between 87° and $92^{\circ} 50'$ W. long.; is 285 miles long from north to south, and 255 in breadth from east to west, giving it an area of some 53,924 square miles, or 34,511,360 acres. Its natural surface divisions, or proportions, are 16 per cent. of prairie, 50 of timber, 19 of openings, 15 of marsh, mineral undefined. North of 45° the surface is nearly covered with vast forests of pine. The proportion of the state cultivated is nearly one-sixth.

PHYSICAL FEATURES.

Among these, its lacustrine character is most conspicuous, so much so that it may not inaptly be called the state of a thousand lakes, its smaller ones being almost universal and innumerable.

It has an almost artificially perfect arrangement of its larger rivers, both for supply and drainage, is rolling in its surface, having several dividing ridges or water sheds, and varies from 600 to 1,600 feet above the level of the sea, Blue Mounds being 1,729 feet above sea level. Its pine and thickly wooded lands are being rapidly denuded, and to some extent converted to agricultural purposes; its marshes in the north are being reclaimed for cranberry cultivation, and in the more thickly settled parts of the state for hay purposes. The surface of the state is beautifully diversified with stream, waterfall and rapids; richly wooded bluffs several hundred feet in height, assuming the most romantic and pleasing forms, and composed of sandstone, magnesian limestone, granite, trap, etc. The health and summer resorts of Wisconsin are illustrative of its beauty, and its numerous mineral springs have long since formed an important feature of its character for salubrity.

GEOLOGY.

The geology of Wisconsin does not require from us but a very general notice, as it is only from its relation to disease that we have to consider it. This relation is in a measure apparent in the fact that everywhere the topographical features are governed by the strata below them. The relationship will be seen still further in the chemical or sanitary influence of the geological structures. Through the greater part of the south half of the state limestone is found, the cliff prevailing in the mineral region, and the blue in the other parts; while in the north part of the state the primitive rocks, granite, slate, and sandstone prevail. South of the Wisconsin river sandstone in layers of limestone, forming the most picturesque bluffs, abounds. While west of Lake Michigan extends up to these rocks the limestone formation, being rich in timber or prairie land. Sandstone is found underneath the blue limestone. The general dip of the stratified rocks of the state is toward the south, about 8 feet to the mile.

Medical geology treats of geology so far only as it affects health. Thus, some diluvial soils and sands are known to be productive of malarial fevers; others, of a clayey character, retaining water, are productive of cold damp, and give rise to pulmonary and inflammatory diseases; while others still, being very porous, are promotive of a dry and equable atmosphere. In the Potsdam rocks arise our purest waters and best supply, while our magnesian limestone rocks (a good quality of this kind of rock being composed of nearly equal parts of carbonate of lime and carbonate of magnesia) affect the water to the extent of producing simple diarrhoea in those unaccustomed to drinking it, as is observed in southern visitors, and was especially noticeable in the rebel prisoners at Camp Randall, though singularly enough do not seem to produce stone and gravel, as is alleged of the same kind of water in the north of England. Why this is so—if so—is a question of some interest. Goitre and cretinism are both attributed to the use of the same magnesian limestone water. Goitre is by no means an uncommon affection here, but not common enough, perhaps, to warrant us in thinking its special cause is in the water. Boiling the water is a preventive of all injurious effects. There is still another objection—particularly applicable to cities—to this kind of water, the carbonates of lime and magnesia which it contains, not simply making it hard, but giving it the power to promote the decomposition of organic matters, and thus where the soil is sandy or porous, endangering the purity of our well-water. Geology in general affects all our soils and their products; all our drainage; even our architecture, the material with which we build. Our building stone for half of the state is a magnesian limestone, a rather soft or poor quality of which will absorb one-third of its bulk of water, or two and a half gallons to the cubic foot, while most kinds of sandstone are nearly as porous as loose sand, and in some of them the penetrability for air and water is the same. (A single brick of poor quality will absorb a pint of water). Such materials used in the construction

of our dwellings, without precautionary measures, give rise to rheumatism, other grave diseases, and loss of strength. Besides, this character of stone absorbs readily all kinds of liquid and gaseous impurities, and though hardening in dry air, decays soon when exposed to underground moisture. The material of which our roads are made, as well as the kind of fuel we use in our homes, have the same unquestionable relationship to geology and disease.

DRAINAGE.

The natural drainage of the state, bearing in mind that the mean elevation of its hydrographical axis is about 1,000 feet above the sea level, is as excellent as it is obvious. (A line running from Lake Michigan across the state to the Mississippi, shows an elevation of about 500 feet). North its drainage is by a few rapid but insignificant streams into Lake Superior, while east it increases greatly and enters Lake Michigan by way of Green bay. The principal part of the supply and drainage, however, is from the extreme north to the southwest through the center of the state, by five large rivers, which empty themselves into the Mississippi at almost equal distances from each other.

CLIMATOLOGY.

The climatology of Wisconsin will be exhibited in the observations taken at different times, for longer or shorter periods, and at different points of the state. But it must be borne in mind that climate depends quite as much and very frequently more upon the physical surroundings, upon the presence of large bodies of water, like our lakes, upon large forests, like our pineries, like our heavy hard-woods, and of land elevations and depressions, upon isothermal lines, etc., as it does upon latitude. Our historic period is of a character too brief for us to assume to speak of our climate, or of all the changing causes which influence it—in a positive manner, our horticultural writers, to make the difficulty still greater, affirming that it has *several climates within itself*; still, sufficient data have been gathered from sufficiently reliable sources to enable us to form a tolerably accurate idea of the subject.

The great modifiers of our climate are our lakes. These, bounding as they do, the one, Lake Superior (600 feet above the level of the sea, 420 miles long and 160 broad), on the north side of the state, and the other, Lake Michigan (578 feet above the sea level, 320 miles long and 84 broad), on the east side of the state, serve to govern the range of the thermometer and the mean temperature of the seasons, as much as they are governed in New England by the ocean. Our climate is consequently very much like that of the New England sea-board. They both exhibit the same extremes and great extremes, have the same broadly marked continental features at some seasons, and decided tropical features at others. It is of special interest in this connection to know that the climate between the eastern coast and the lakes increases in rigor as one advances west until the lakes are reached, and again becomes still more rigorous as one advances into the interior west of the lakes, thus affording proof, if proof were wanting, of the modifying and agreeable influences of large bodies of water.

During the winter the mean temperature of the east on the New England coast is 8.38 higher than the west (beyond the lakes); during the spring 3.53 lower; during the summer 6.99 lower; and during the autumn 1.54 higher. In the mean temperature for the year there is but a fractional difference. That the winters are less rigorous and the summers more temperate on the Great Lakes is demonstrated to be owing not to elevation, but, as on the ocean, to the equalizing agency of an expanse of water.

On the lakes the annual ratio of fair days is 117, and on the New England coast 215; the

cloudy days are as 127 to 73; the rainy as 63 to 46, and the snowy as 45 to 29. In the former the prevailing weather is cloudy, and in the latter it is fair. The immense forests on the upper lake shores of course exercise a considerable influence in the modification of our temperature, as well as in the adding to our rain-fall and cloudy days. A climate of this character, with its attendant rains, gives us that with which we are so abundantly supplied, great variety of food, both for man and beast, the choicest kinds of fruits and vegetables in the greatest profusion, and of the best quality, streams alive with fish, woods and prairies with game, the noblest trees, the most exquisite flowers, and the best breeds of domestic animals the world can boast of.

The semi-tropical character of our summer, and its resemblance to that of New England, is shown by the mean temperature — 70° — for three months at Salem, Massachusetts, at Albany, New York, at southern Wisconsin, Fort Snelling and Fort Benton on the Upper Missouri, being the same; while at Baltimore, Cincinnati and St. Louis, it is 75° , and around the gulf of Mexico it is 80° . Another feature of our climate is worthy the notice of invalids and of those who make the thermometer their guide for comfort. It is a well-ascertained fact that during the colder seasons the lake country is not only relatively, but positively, warmer than places far south of it. The thermometer, during the severe cold of January, 1856, did not fall so low at the coldest, by 10° to 15° at Lake Superior as at Chicago at the same time. This remark holds true of the changes of all periods of duration, even if continued over a month. The mean temperature at Fort Howard, Green Bay, Wisconsin, 600 feet above the level of the Atlantic, latitude $44^{\circ} 40'$, longitude 87° , observations for nine years, is 44.93; and at Fort Crawford, Prairie du Chien, Wisconsin, 580 feet above the level of the Atlantic, latitude $43^{\circ} 3'$, longitude $90^{\circ} 53'$, observations for four years, is 45.65, giving a just idea of our mean temperature for the state. Under the head of distribution of heat in winter, it is found that the maximum winter range at Fort Winnebago, Wisconsin, for sixteen years, is 9.4.

HYETAL OR RAIN CHARACTER.

Wisconsin is situated within what is termed the *area of constant precipitation*, neither affected by a rainy season, nor by a partial dry season. The annual quantity of rain on an average for three years at Fort Crawford, was 29.54 inches, and at Fort Howard the mean annual on an average of four years, was 38.83 inches. The annual quantity of rain, on an average of three years was 31.88 inches at Fort Winnebago, situate (opposite the portage between the Fox and Wisconsin rivers) 80 miles west of Lake Michigan and 112 miles southwest of Green Bay. The rain-fall is less in the lake district than in the valley of the Mississippi in the same latitudes. One of the peculiarities of our winters is the almost periodical rain-fall of a few days in the middle of the winter (usually in the middle of January), which extends to the Atlantic coast, while north and northwest of us the dry cold continues without a break, winter being uniform and severe, characterized by aridity and steady low temperature. Another peculiarity of our climate is, the number of snowy and rainy days is increased disproportionately to the actual quantity — the large bodies of water on the boundaries of the state, contrary to the popular opinion, reducing the annual quantity of rain in their immediate vicinity instead of adding to it, the heavier precipitation being carried further away. One of the most pleasing features of our climate is its frequent succession of showers in summer, tempering as it does our semi-tropical heat, increasing the fertility of the soil, and carpeting our prairies with a green as grateful to the eye as that of England.

The hygrometric condition of Wisconsin may be judged of with proximate accuracy by that given of Poultney, Iowa:

Day.	Temperature of Air.	Temperature of Evaporat'n	Humidity, per cent.	Day.	Temperature of Air.	Temperature of Evaporat'n	Humidity, per cent.
10th.....	92°	78°	51	19th.....	94°	81°	55
11.....	87	75	55	20.....	97	81	48
12.....	92	77	48	21.....	96	80	47
13.....	96	81	50	29.....	81	72	63
14.....	93	78	44	30.....	84	71	50

The average depth of snow for three years, at Beloit, Wisconsin, was twenty-five inches, while at Oxford county, Maine, the average for twelve years was ninety inches. The isohyetal lines of the mean precipitation of rain and melted snow, for the year 1872, show that of Wisconsin to be thirty-two.

ISOTHERMS.

The mean temperature of spring is represented by the isotherm of 45° F. which enters Wisconsin from the west about forty miles south of Hudson, passing in a nearly southeast direction, and crosses the south line of the state near the west line of Walworth county. It then passes nearly around the head of Lake Michigan, then northeast until it reaches the latitude of Milwaukee, whence it passes in a somewhat irregular course east through Ontario, New York, and Massachusetts, entering the ocean in the vicinity of Boston. The summer mean isotherm of 70° F. enters Wisconsin from the west but little farther north than the spring isotherm, and passes through the state nearly parallel with the course of that line, crossing the southern boundary near the east line of Walworth county; passing through Chicago it goes in a direction a little south of east, and enters the Atlantic at New Haven. The mean isotherm of 47° F. for autumn, enters the state about twenty miles north of Prairie du Chien, passing in a direction a little north of east through Portage, and enters Lake Michigan near Manitowoc. The isotherm of 20° F. representing the mean temperature of winter, enters the state near Prairie du Chien, passes east and north and enters Lake Michigan at Sturgeon bay. The annual mean temperature is represented by the isotherm of 45° F. which enters the state near Prairie du Chien, passes across the state in a direction a little south of east, and enters Lake Michigan a little south of Milwaukee.

What influence these isotherms have upon our belts of disease there are no data to show. But from their influence upon vegetable life, one can not but infer a similar good influence on the animal economy. This is a question for the future.

BAROMETRICAL.

Yearly mean of barometer at 32° F. as observed at the University of Wisconsin, altitude 1,088 feet above the sea:

1869.....	28.932 inches.	1873.....	28.892 inches.
1870.....	28.867 "	1874.....	28.867 "
1871.....	28.986 "	1875.....	28.750 "
1872.....	28.898 "	1876.....	28.920 "

Atmospheric pressure, as indicated by the barometer, is an important element in the causation of disease, far more so than is generally thought. The barometer indicates not only the coming of the storm, but that state of the atmosphere which gives rise to health at one time, and to disease at another. When the barometer is high, both the body and mind have a feeling of elasticity, of vigor and activity, and when the barometer ranges low, the feelings of both are just the reverse; and both of these states, commonly attributed to temperature, are mostly the result of change in the barometric pressure. Many inflammations, as of the lungs, etc., commonly

attributed to change in the temperature, have their origin in barometrical vicissitudes.

WINDS.

Generally speaking, the atmospheric movement is from the west. It is of little purpose what the surface wind may be, as this does not affect the fact of the *constancy* of the *westerly winds* in the middle latitudes. The showers and cumulus clouds of the summer always have this movement. The belt of westerly winds is the belt of constant and equally distributed rains, the feature of our winds upon which so much of our health and comfort depends.

CLIMATOLOGICAL CHANGES FROM SETTLING THE STATE.

There are many theories afloat concerning the effects of reclaiming the soil and the destruction of its forests. To us, a new people and a new state, the question is one of great moment, the more so that it is still in our power not only to watch the effects of such changes, but still more so to control them in a measure for our good. As to the effects upon animal and vegetable life, it would appear that so far as relates to the clearing away of forests, the whole change of conditions is limited to the surface, and dependent for the most part on the retention and slow evaporation in the forest, in contrast with the rapid drainage and evaporation in the open space. The springs, diminishing in number and volume in our more settled parts of the state, do not indicate a lessening rain-fall. It is a well ascertained fact that in other places so denuded, which have been allowed to cover themselves again with forests, the springs reappear, and the streams are as full as before such denudation. With us, happily, while the destruction of forests is going on in various parts of the state, their *second growth* is also going on, both in the pineries, where new varieties of hard-wood take the place of the pine, and in the more cultivated parts of the state, cultivation forbidding, as it does, the practice so much in vogue some years ago, of running fires through the undergrowth. Thus, though the renewal of forests may not be keeping pace with their destruction, it would seem clear that as time advances, the springs and streams in the more cultivated sections of the state will fill and flow again, increasing in proportion as the second growth increases and expands.

The change, however, from denudation, though strictly limited to the surface, affects the surface in other ways than simply in the retention and evaporation of rain. When the winter winds are blowing, the want of the sheltering protection of belts of trees is bitterly felt, both by man and beast. And so, too, in the almost tropical heats of the summer; both languish and suffer from the want of shade. Nor is the effect of denudation less sensibly felt by vegetable life. The growing of our more delicate fruits, like the peach, the plum, the pear, the better varieties of the cherry and gooseberry, with the beautiful half-hardy flowering shrubs, all of which flourished so well in a number of our older counties some twenty years ago, are as a rule no longer to be found in those localities, having died out, as is believed, from exposure to the cold winds, to the south west winds in particular, and for want of the protecting influence of the woods. In fruits, however, we have this compensation, that, while the more tender varieties have been disappearing, the hardier and equally good varieties, especially of apples, have been increasing, while the grape (than which nothing speaks better for climatology), of which we grow some 150 varieties, the strawberry, the raspberry, blackberry and currant, etc., hold their ground. Nor are the cattle suffering as much as formerly, or as much as is perhaps popularly believed, from this want of forests or tree shelter. With the better breeds which our farmers have been able of late years to purchase, with better blood and better food, and better care, our stock instead of dwindling in condition, or in number, from the effect of cold, has progressed in quality and quantity, and competes with the best in the Chicago and the New York markets.

There can, however, be no doubt that the planting of groves and belts of trees in exposed localities, would be serviceable in many ways; in tempering the air and imparting to it an agreeable moisture in the summer; in modifying the severity of the cold in winter; in moderating the extreme changes to which our climate is subject; and thus in a measure preventing those discomforts and diseases which occur from sudden changes of temperature. Besides, these plantings, when made between our homes or villages and malarial marshes *southwest* of us, serve (by the aid of our prevailing southwest winds) to break up, to send over and above and beyond us the malarial substratum of air to which we are otherwise injuriously exposed.

The effects of reclaiming the soil, or "breaking" as it is called in the west, have, years ago, when the state first began to be settled, been disastrous to health and to life. The moist soil being turned over in hot weather, and left to undergo through the summer a putrifying fermentative process, gave rise to the worst kind of malarial, typhoid (bilious) and dysenteric disease. Not, however, that the virulence or mortality altogether depended upon the soil emanations. These were undoubtedly aggravated by the absolute poverty of the early settlers, who were wanting in everything, in proper homes, proper food and proper medical attendance, medicines and nursing. These fevers have swept the state years ago, particularly in the autumns of 1844 and 1845, but are now only observed from time to time in limited localities, following in the autumn the summer's "breaking." But it is pleasing to be able to add that through the advancing prosperity of the state, the greater abundance of the necessaries and comforts of life, and the facilities for obtaining medical care, the diseases incident to "settling" are much less common and much less fatal than formerly.

RELATIONS OF CLIMATOLOGY TO SANITARY STATUS.

One of the principal reasons for gathering climatological observations, is to obtain sanitary information, which serves to show us where man may live with the greatest safety to his health. Every country, we might perhaps correctly say every state, has, if not its peculiar diseases, at least its peculiar type of diseases. And by nothing is either this type or variety of disease so much influenced as by climate. Hence the great importance of the study of climatology to health and disease, nay, even to the kind of medicine and to the regulating of the dose to be given. It is, however, best to caution the reader that these meteorological observations are not always made at points where they would most accurately show the salubrity of a geographical district, by reason of the fact that the positions were chosen not for this special purpose, but for purely military purposes. We allude to the forts of Wisconsin, from which our statistics for the most part come. Another caution it is also well to bear in mind in looking over the class of diseases reported at these stations in connection with their observations. The diseases are those of the military of the period, a class from which no very favorable health reports could be expected, considering their habits, exposure, and the influences incidental to frontier life.

The geography of disease and climate is of special interest to the public, and a knowledge especially necessary to the state authorities, as it is only by such a knowledge that state legislation can possibly restrain or root out the endemic diseases of the state. In connection with the gathering of vital statistics must go the collection of meteorological and topographical statistics, as without these two latter the former is comparatively useless for sanitary purposes. More particularly does this apply to the malarial diseases of the state.

Acclimation is very rarely discussed or even alluded to by our people in relation to Wisconsin, for the reason that, come from whatever part of Europe men may, or from the eastern states, acclimation is acquired for the most part unconsciously, rarely attended by any malarial affection, unless by exposure in such low, moist localities, where even the natives of the state could not

live with impunity. It seems to be well enough established that where malaria exists, whether in London, New York, or Wisconsin; where the causes of malarial disease are permanent, the effects are permanent, and that there is no positive acclimation to malaria. Hence it should follow that since life and malaria are irreconcilable, we should root out the enemy, as we readily can by drainage and cultivation, or, where drainage is impossible, by the planting of those shrubs or trees which are found to thrive best, and thereby prove the best evaporators in such localities. Our climate, approximating as it does the 45th degree (being equi-distant from the equator and pole), would *a priori* be a common ground of compromise and safety, and from this geographical position is not liable to objections existing either north or south of us.

INFLUENCE OF NATIONALITIES.

Our population is of such a confessedly heterogeneous character that naturally enough it suggests the question: Has this intermingling of different nationalities sensibly affected our health conditions? Certainly not, so far as intermarriages between the nations of the Caucasian race are concerned. This opinion is given first upon the fact that our classes of diseases have neither changed nor increased in their intensity by reason of such admixture, so far as can be learned by the statistics or the history of disease in the northwest. Imported cases of disease are of course excepted. Second, because all that we can gather from statistics and history concerning such intermingling of blood goes to prove that it is beneficial in every respect, physically, mentally and morally.

England, of all nations, is said to be the best illustration of the good attending an intermingling of the blood of different nations, for the reason that the English character is supposed to be, comparatively speaking, good, and that of all countries she has been perhaps more frequently invaded, and to a greater or less part settled by foreign peoples than any other.

From a residence of nearly a quarter of a century in the center of Wisconsin, and from an adequate knowledge of its people, whose nationalities are so various and whose intermarriages are so common, it is at least presumable that we should have heard of or noted any peculiar or injurious results, had any such occurred. None such, however, have been observed. Some fears have been expressed concerning the influence of Celtic blood upon the American temperament, already too nervous, as is alleged. It is scarcely necessary to say that these fears are unsupported by figures or facts. Reasoning from analogy, it would seem safe to affirm that the general intermingling by intermarriage now going on in our population, confined to the Caucasian nationalities, will tend to preserve the good old Anglo-Saxon character, rather than to create any new character for our people. If this view needed support or confirmation, it is to be found in some very interesting truths in relation to it. Mr. Edwin Seguin, in his work on Idiocy, lays special stress on the influences of races in regard to idiocy and other infirmities, like deafness. He says that the crossing of races, which contributed to the elimination of some vices of the blood (as may be the case in the United States, where there are proportionally less deaf and dumb than in Europe), produces a favorable effect on the health of the population, and cites as an example, Belgium, which has fewer deaf and dumb than any country in Europe, owing to the influence of the crossing of races in past ages from the crowds of northern tribes passing, mingling and partly settling there on the way to England.

We are aware that it has been predicted that our future will give us a *new type*, distinct from all other peoples, and that with this type must come not only new diseases but modifications or aggravations of the present diseases, in particular, consumption and insanity. But so long as we are in a formative state as a nation, and that this state seems likely to continue so long as the country has lands to be occupied and there are people in Europe to occupy them, such speculations can be but of little value.

OCCUPATIONS, FOOD, EDUCATION, ETC., AS AFFECTING PUBLIC HEALTH.

The two chief factors of the social and sanitary well-being of a people are a proper education of the man and a proper cultivation of the soil. Our two principal occupations in Wisconsin are education and agriculture, the learners in the schools being in excess of the laborers on the soil. A happier combination could scarcely be desired, to form an intelligent and a healthy people. How this will affect our habits in the future it is easy to conceive, but for the present it may be said (of so many different nationalities are we composed), that we have no habits which serve to distinguish us from the people of other northwestern states. A well-fed and a well-taught people, no matter how mixed its origin, must sooner or later become homogeneous and a maker of customs. In the mean time we can only speak of our habits as those of a people in general having an abundance of food, though it is to be wished the workers ate more beef and mutton, and less salt-pork, and that whisky was less plentiful in the land. The clothing is sufficient, fuel is cheap, and the dwellings comfortable. Upon the whole, the habits of the people are conducive to health. It is thought unnecessary to refer to the influence upon health in general of other occupations, for the reason that manufacturers, traders and transporters are for the most part localized, and perhaps not sufficiently numerous to exercise any marked influence on the state health.

HISTORY OF DISEASE.

In searching for historical data of disease in Wisconsin, we are able to go back to the year 1766, commencing with the aborigines. The Indians, says Carver, in his chapter on their diseases, in general are healthy and subject to few diseases. Consumption from fatigue and exposure he notices, but adds that the disorder to which they are most subject is pleurisy. They are likewise afflicted with dropsy and paralytic complaints. It is to be presumed that while Carver is speaking generally, he means his remarks to apply, perhaps, more particularly to those Indians with whom he lived so long, the Sioux of this state. That they were subject to fevers is gathered from the use of their remedies for fever, the "fever bush" being an ancient Indian remedy, and equally valued by the inhabitants of the interior parts of the colonies. Besides this, they had their remedies for complaints of the bowels, and for all inflammatory complaints. These notices sufficiently indicate the class of diseases which have certainly followed in the wake of the Indians, and are still occurring to his white brother, making it plain enough that lung diseases, bowel complaints, and fevers are in fact native to the state. The fact must not be ignored that the Indian is subject to the same diseases as the human race in general.

After Carver, we may quote Major Long's expedition in 1824. The principal disease of the Sacs appears to be a mortification of the intestinal canal, more common among men than women, the disease proving fatal in four days if not relieved. It is unaccompanied with pain, and is neither hernia, dysentery, nor hemorrhoids. Intermittents were prevalent, and the small-pox visited them at different periods. As the Chippewas have a common Algonquin origin with the Sacs, and as their home and customs were the same, it may be expected that their diseases were similar. The principal disease to which the Chippewas are liable is consumption of the lungs, generally affecting them between the ages of 30 and 40; they linger along for a year or two, but always fall victims to it. Many of them die of a bowel complaint which prevails every year. This disease does not partake, however, of the nature of dysentery. They are frequently affected with sore eyes. Blindness is not common. Many of them become deaf at an early age.

Referring to the report of the commissioner of Indian affairs for 1854, we find that the decrease in the number of the Menomonees is accounted for by the ravages of small-pox, in 1838,

of the cholera, in 1847 (which latter was superinduced by misery and starvation), and by the fever, which from time to time, commonly in the winter, has been raging among them, being clearly the consequence of want of provisions and other necessaries. The report for 1850 says, there has been considerable sickness among the Winnebagoes for several months past; dysentery has been the prevalent disease, confined mostly to children. For 1857: the Winnebagoes have suffered considerably from chronic diseases, scrofula and consumption. For 1859: the chief malady among the Winnebagoes is phthisis pulmonalis and its analogous diseases, having its source in hereditary origin. Some of the malignant diseases are occasionally met with among them, and intermittent and remittent fevers. In 1863: of the Menomonees, there is a large mortality list of the tribes under my charge. Measles and some of the more common eruptive diseases are the causes. But the most common and most fatal disease which affects the Indians at this agency is pneumonia, generally of an acute character. There is but little tubercular disease to be found in any of these tribes, Menomonees, Stockbridges, Oneidas, etc. In the report for 1865, one can not but notice with some regret the absence of all allusion, except to small-pox, to the diseases of the Indians. Regret, because reliable information of such diseases serves a variety of valuable purposes, for comparison, confirmation, etc., of those of the white population. For these reasons, if for none other, it is to be hoped that the attention of the proper authorities will be called to this feature of such reports.

The first reliable report on the diseases of the people (as distinguished from the Indians) of Wisconsin to which we have had access, is Lawson's Army Report of Registered Diseases, for 10 years, commencing 1829, and ending 1838 (ten years before the admission of Wisconsin into the Union as a state).

FORT HOWARD, GREEN BAY.

Intermittent fever.....	30	This abstract exhibits the second quarters only, the mean strength being 1,702.
Remittent do	11	
Synochal do	4	
Typhus do	—	
Diseases of respiratory organs.....	101	All other diseases 114, excepting venereal diseases, abscesses, wounds, ulcers, injuries, and ebriety cases.
Diseases of digestive organs.....	184	
Diseases of brain and nervous system...	9	
Dropsies	1	
Rheumatic affections.....	61	

Under the class of diseases of the respiratory organs, are comprised 384 catarrh, 6 pneumonia, 60 pleuritis, and 28 phthisis pulmonalis; under the class of digestive organs, 376 diarrhœa and dysentery, 184 colic and cholera, and 10 hepatitis; under the class of diseases of the brain and nervous system, 15 epilepsy, etc. The deaths from all causes, according to the post returns, are 25, being $1\frac{1}{2}$ per cent. per annum. The annual rate of intermittent cases is 6, and that of remittent is 3, per 100 of mean strength.

TABLE OF RATIO OF SICKNESS AT FORT HOWARD.

SEASONS.	MEAN STRENGTH.	NUMBR TREATED.	RATE PER 1,000 OF MEAN STRENGTH TREATED QUARTERLY.
10 first quarters.....	1,764	715	405
10 second "	1,702	726	425
9 third "	1,526	1,073	703
10 fourth "	1,594	636	399
Annual rate.....	1,647	3,150	1,913

Every man has consequently, on an average, been reported sick about once in every six months, showing this region to be extraordinarily salubrious. The annual ratio of mortality, according to the medical reports, is $\frac{8}{100}$ per cent.; and of the adjutant-general's returns, $\frac{13}{100}$ per cent.

FORT WINNEBAGO.

Intermittent fever.....	21
Remittent fever.....	10
Synochal fever.....	1
Typhus fever.....	—
Diseases of the respiratory organs.....	141
Diseases of digestive organs.....	90
Diseases of brain and nervous system..	2
Rheumatic affections.....	26

This abstract exhibits the fourth quarters only, the mean strength being 1,571.

All other diseases, 80, with the exceptions as above.

Under the class of diseases of the respiratory organs are comprised 448 catarrh, 11 pneumonia, 29 pleuritis and 10 phthisis pulmonalis; under the head of digestive organs, 193 diarrhoea and dysentery, 149 colic and cholera, and 17 hepatitis; under the class of brain and nervous system, 1 epilepsy. The total number of deaths, according to the post returns, is 20. Of these, 3 are from phthisis pulmonalis, 1 pleuritis, 2 chronic hepatitis, 1 gastric enteritis, 1 splenitis, etc.

TABLE OF RATIO OF SICKNESS AT FORT WINNEBAGO.

SEASONS.	MEAN STRENGTH.	NUMBER TREATED.	RATE PER 1,000 OF MEAN STRENGTH TREATED QUARTERLY.
10 first quarters.....	1,535	552	360
10 second ".....	1,505	517	343
10 third ".....	1,527	581	380
10 fourth ".....	1,571	495	315
Annual ratio.....	1,534	2,145	1,398

Every man on an average is consequently reported sick once in eight months and a half.

FORT CRAWFORD.

Intermittent fever.....	262
Remittent fever.....	61
Synochal fever.....	—
Typhus fever.....	—
Diseases of respiratory organs.....	177
Diseases of digestive organs.....	722
Diseases of brain and nervous system..	16
Rheumatic affections.....	58

This abstract exhibits the third quarters only, the mean strength being 1,885.

All other diseases, 309, with the same list of exceptions as above.

Under the class of diseases of the respiratory organs are included 1,048 of catarrh, 28 pneumonia, 75 pleuritis and 13 phthisis pulmonalis; under the head of digestive organs, 933 diarrhoea and dysentery, and 195 colic and cholera; under the head of brain and nervous diseases, 7 epilepsy, etc. The total of deaths, according to the post returns, is 94, the annual ratio being $\frac{27}{100}$ per cent. The causes of death are: 6 phthisis pulmonalis, 6 epidemic cholera, 1 common cholera, 4 remittent fever, 3 dysentery, etc. In the third quarter of 1830 there were 154 cases of fever, while the same quarter of 1836, with a greater strength, affords but one case, the difference seeming to depend upon the temperature.

The relative agency of the seasons in the production of disease in general is shown in the annexed table :

TABLE EXHIBITING THE RATIO OF SICKNESS.

10 fourth ".....	1,878	1,270	676
Annual ratio.....	1,793	5,472	3,052

Consequently every man on an average has been reported sick once in nearly every four months. But high as this ratio of sickness is, at this fort, and, indeed, at the others, it is low considering the topographical surroundings of the posts. But besides these injurious topographical and other influences already alluded to, there were still other elements of mischief among the men at these stations, such as "bad bread and bad whisky," and salt meat, a dietary table giving rise, if not to "land-scurvy," as was the case at the posts lower down in the Mississippi valley (more fatal than either small-pox or cholera), at least to its concomitant diseases.

The reason for using these early data of the United States Army medical reports in preference to later ones is, that even though the later ones may be somewhat more correct in certain particulars, the former serve to establish, as it were, a connecting link (though a long one) between the historical sketch of the diseases of the Indian and those of the white settler; and again—these posts being no longer occupied—no further data are obtainable.

To continue this historical account of the diseases of Wisconsin, we must now have recourse to the state institutions.

THE INSTITUTION FOR THE EDUCATION OF THE BLIND.

The first charitable institution established by the state was formally opened in 1850, at Janesville. The census of 1875 showed that there were 493 blind persons in the state, those of school age—that is—under 20 years of age, probably amounting to 125. The number of pupils in the institution that year, 82; the average for the past ten years being 68. If the health report of the institution is any indication of the salubrity of its location, then, indeed, is Janesville in this respect an enviable city. Its report for 1876 gives one death from consumption, and a number of cases of whooping-cough, all recovered. In 1875, ten cases of mild scarlet fever, recovered. One severe and two mild cases of typhoid fever, recovered. For 1873, no sick list. For 1872, the mumps went through the school. For 1871, health of the school reasonably good; few cases of severe illness have occurred.

THE INSTITUTE FOR THE DEAF AND DUMB.

This was organized in June, 1852, at Delavan. The whole number of deaf and dumb persons in the state, as shown by the census of 1875, was 720. The report for 1866 gives the number of pupils as 156.

Little sickness, a few cases of sore throat, and slight bowel affections comprise nearly all the ailments; and the physician's report adds: "The sanitary reports of the institution from its earliest history to the present date has been a guarantee of the healthiness of the location. Having gone carefully over the most reliable tabulated statements of deaf-mutism, its parent-

age, its home, its causes, and its origin, we would most earnestly call the attention of the public to the fact that the chief cause comes under the head of congenital, 75 of the 150 pupils in this institution having this origin. Such a fearful proportion as this must of necessity have its origin in a cause or causes proportionately fearful. Nor, fortunately, is the causation a mystery, since most careful examination leaves not a shadow of doubt that consanguineous marriages are the sources of this great evil. Without occupying further space by illustrative tables and arguments, we would simply direct the attention of our legislators and thoughtful men to *the law of this disease* — which is, that *the number of deaf and dumb, imbeciles, and idiots is in direct keeping with the degree of consanguinity*. With such a law and exhibit before us, would not a legislative inquiry into the subject, with the view of adopting *preventive* means, be a wise step? The evil is fearful; the cause is plain; so, too, is the remedy.”

INDUSTRIAL SCHOOL FOR BOYS.

This institution is situated on the banks of the Fox river, at Waukesha, and was organized in 1860. The whole number of the inmates since it was opened in July, 1860, to October 10, 1876, was 1,291. The whole number of inmates for 1876 was 415. Of these, since the period of opening up to date, October, 1876, 25 have died: 8, of typhoid fever; 1, of typhoid erysipelas; 1, of gastric fever; 3, of brain fever; 1, nervous fever; 2, congestion of the lungs; 2, congestive chills; 5, of consumption; 1 of dropsy; and 1 of inflammatory rheumatism.

THE STATE PRISON.

This was located at Waupun in July, 1857. On September 30, 1876, there were 266 inmates. But one death from natural causes occurred during the year. The health of the prisoners has been unusually good, the prevalent affections attendant upon the seasons, of a mild and manageable character.

STATE HOSPITAL FOR THE INSANE.

This institution, located near Madison, was opened for patients in July, 1860. The total number of admissions down to the year 1877, was 1,227 males, 1,122 females, total 2,349. Over one half of these have been *improved*; nearly one third *recovered*; while less than one quarter have been discharged *unimproved*. Total number of deaths, 288. At the commencement of the year, October 1, 1875, there were in the hospital 376 patients. In the report for the year ending September 30, 1876, we find the past year has been one of unusual health in the hospital. No serious epidemic has prevailed, although 20 deaths have been reported, 7 fatally ill before admission, 4 worn-out cases, etc. Insanity, coming as it does, under this head of an article on State Health, is of the highest interest from a state point of view, not only because so much may be done to remedy it, but that still more can and ought to be done by the state to prevent it. Our insane amount to 1 in 700 of the whole population, the total number in hospitals, poor-houses and prisons being in round numbers 1,400. It is a striking fact, calling for our earnest consideration, that the Germans, Irish and Scandinavians *import* and *transmit* more insanity — three to one — than the American-born population produce. The causes assigned for this disparity, are, as affecting importation, that those in whom there is an hereditary tendency to disease constitute the migratory class, for the reason that those who are sound and in the full possession of their powers are most apt to contend successfully in the struggle to live and maintain their position at home; while those who are most unsound and unequal to life's contests are unable to migrate. In other words, the strongest will not leave, the weakest can not leave. By this, the character of the migratory is defined. As affects transmission, poverty is a most fruitful parent of insanity, so too is poor land. Says Dr. Boughton, superintendent of the Wisconsin State Hospital for the Insane:

Wisconsin is characterized by a large poor class, especially in the northern part of the state, where people without means have settled on new and poorly paying farms, where their life is made up of hard work, exposure to a severe climate, bad and insufficient diet, cheerless homes, etc., etc. These causes are prolific in the production of insanity. It is easy, therefore, to trace the causes that give us so large a per cent. of insane in many of the counties of the state. Nor is it of less interest to know, as Dr. B. adds: We draw our patients from those families where phthisis pulmonalis, rheumatism and insanity prevail. Insanity and rheumatism are interchangeable in hereditary cases, so too are insanity and phthisis. What may be accomplished by intelligent efforts to stem the increase of insanity in our state? Much. Early treatment is one means, this is of course curative in its character. And its necessity and advantage are well illustrated in table No. 10 of the annual report of Dr. Boughton, for 1876, where it is seen that 45.33 of males, and 44.59 of the females who had been sent to the State Hospital having been insane but three months before admission, were cured, the proportion of cures becoming less in proportion to the longer duration of insanity before admission. As a preventive means, the dissemination of the kind of knowledge that shows indisputably that insanity is largely hereditary, and consequently that intermarriage with families so tainted should on the one hand be avoided by the citizen, and on the other hand, perhaps, *prevented by the state*, (congress at the same time restraining or preventing as far as possible persons so tainted from settling in this country.) By the state, inasmuch as the great burthen of caring for the insane falls upon the state. Still other preventive means are found in the *improved cultivation of our lands* and in our improved education; in fact, in whatever lessens the trials of the poor and lifts them out of ignorance and pauperism. It is only by culture, says Hufeland, that man acquires perfection, morally, mentally and physically. His whole organization is so ordered that he may either become nothing or anything, *hyperculture* and the *want* of cultivation being alike destructive.

THE NORTHERN HOSPITAL FOR THE INSANE.

This hospital was opened at Oshkosh, May, 1873. The total number under treatment September 30, 1876 was — males 246, females 257, total 503. No ailment of an epidemic character has affected the health of the household, which has been generally good. The report of Dr. Kempster is full of suggestive matter for the legislator and sociologist.

CITY OF MILWAUKEE.

Still adhering to the plan, in writing the sanitary history of the state, of gathering up all the health statistics which properly belong to us, we now take up those of Milwaukee, the only city in Wisconsin, so far as we know, that has kept up a system of statistics of its diseases. The city is built on each side of the mouth of Milwaukee river, on the west shore of Lake Michigan in lat. 43° 3' 45" N., long. 87° 57' W., and is considered remarkable for its healthy climate. The board of health has furnished us with its report for 1870 and downward. The character of its mortality from June 19, 1869, to March 31, 1870, is thus summarized: In children under five years of age, 758 out of 1,249 deaths, consumption, 93; convulsions, 128; cholera infantum, 59; diarrhœa, 128; scarlet fever, 132; typhoid fever, 52; inflammation of the lungs, 41; still-born, 79. This disproportionate number of still-born children is attributed in part to a laxity of morals. The deaths from consumption in Milwaukee are 7½ out of every 100, one third less out of a like number of deaths than in San Francisco, in which city, in 4,000 deaths, 441 died of consumption, being 11 out of every 100 deaths for the year ending July, 1869. The deaths for 1870 numbered 1,655, the population being at the last census report, 71,636.

TABLE OF PRINCIPAL CAUSES.

Consumption.....	143
Inflammation of lungs.....	56
Convulsions.....	259
Diarrhoea.....	131
Diphtheria.....	74
Scarlet fever.....	52
Typhoid fever.....	49
Old age.....	28
Still-born.....	123

The Milwaukee population being about 72,000, the death rate per annum for every 1,000 inhabitants would be 21, after proper deductions of deaths from other causes than from disease, showing very favorably as compared with other cities.

Glasgow has 39 to every 1,000; Liverpool, 36; London, 25; New Orleans, 54; New York, 32; San Francisco, 24; Milwaukee, 21. Among seventeen of the principal cities of the Union, Milwaukee ranks the ninth in rate of mortality. An impression has prevailed that Milwaukee is subject to a large and disproportionate amount of lung and allied diseases. Statistics disprove this, its deaths from consumption being only 6 per cent., while those of Chicago are 7.75; of St. Louis, 9.68; of Cincinnati, 11.95; and of Boston, 19.31. But few cases of malarial disease occur in Milwaukee, and fewer cases of intestinal fever than in the interior of the state. The mortality among children is explained by its occurring chiefly among the poor foreign-born population, where all that can incite and aggravate disease is always to be found.

This, (the historical part of the health article), will doubtless call forth from the profession much additional and desirable matter, but excepting what will further appear under the head of Madison it is proper to say that we have exhausted the sources of information on the subject within our reach.

HEALTH RESORTS.

Next in order would seem to come some notice of the summer and health resorts of Wisconsin, which, significant of the salubrity of the state, are not only becoming more numerous, but also more frequented from year to year.

Madison, the capital of the state, with a population of 11,000, is built on an isthmus between two considerable lakes, from 70 to 125 feet above their level; 80 miles west of Milwaukee, in latitude 43° 5' north, and longitude 89° 20' west, in the northern temperate region. The lake basins, and also the neck of land between them, have a linear arrangement, trending northeast and southwest. The same linear topography characterises the whole adjacent country and the boundary lines of its various geological formations, this striking feature being due to the former movement of glacier ice over the face of the country. At two points, one mile apart, the Capitol and University hills, respectively 348 and 370 feet above the level of Lake Michigan, rise prominently above the rest of the isthmus. Both of these hills are heaps of drift material from 100 to 126 feet thickness, according to the record of the artesian well. The neck of land on which Madison stands is of the same material. The same boring discloses to us the underlying rock structure, penetrating 614 feet of friable quartzose sandstone belonging to the Potsdam series, 10½ feet of red shale belonging to the same series, and 209½ feet of crystalline rocks belonging to the Archæan. In the country immediately around Madison, the altitude is generally considerably greater, and the higher grounds are occupied by various strata, nearly horizontal, of sandstone and limestone. The Potsdam sandstone rises about 30 feet above the level of Lake Mendota, on its northern shore, where at McBride's Point it may be seen overlaid by the next and hitherto unrecognized layer, one of more or less impure, dark-colored, magnesian limestone, to which the name of Mendota is assigned, and which furnishes a good building stone. The descent of these strata is about

9 feet to the mile in a due southerly direction. Overlying the Mendota beds are again sandstone layers, the uppermost portions of which are occasionally charged with 10 to 20 per cent. of calcareous and dolomitic matter, and then furnish a cream-colored building stone of considerable value. Most of this stratum which has been designated as the *Madison* sandstone, is, however, quite non-calcareous, being either a ferruginous brown stone, or a quite pure, white, nearly loose sand. In the latter phase it is of value for the manufacture of glass. In a number of quarries, cuttings and exposed places around the city, the Madison beds are seen to be overlaid by a grayish, magnesian limestone, the lower magnesian, varying very considerably in its character, but largely composed of a flinty-textured, heavy-bedded, quite pure dolomite, which is burnt into a good quality of lime. Its thickness exceeds 80 feet. Madison, with the conveniences and comforts of a capital city, from its easy access by railroads, from not only in itself being beautiful, but from its beautiful surroundings, from its good society, charming climate, and artesian mineral water, is naturally a great summer resort.

Though there are no vital statistics of the city to refer to, a residence of nearly a quarter of a century has made us sufficiently acquainted with its sanitary history, which is more or less the sanitary history of this part of the state, and in a measure of the state itself. In 1844 and 1845, it was visited by an epidemic malarial fever of a bilious type, and not unfrequently fatal, which passed very generally through the state, and was attributed to the turning up of the soil. It was most virulent in the autumns. Again in 1854 it was visited by a light choleraic epidemic, which also swept the state, assuming very generally a particularly mild type. Again in 1857 it suffered lightly from the epidemic dysentery, which passed through the state. In 1865, it suffered from a visitation of diphtheria, the disease prevailing generally over the state at that time. It has also had two visitations of the epidemic grip (*grippe*), or influenza. The last invasion, some five years since, commencing in a manner perhaps worthy of noting, by first affecting the horses very generally, and again, by beginning on the east side of the city, while the other epidemics for the past twenty-five years (unless the choleraic visitation was an exception) came in on the southwest side of the city, as has been the case, so far as we have been able to observe with the light epidemics to which children are subject. But little typhoid fever is found here, and the aguish fevers when they occur are light and easy of control. There is but little diarrhœa or dysentery. Pneumonia and its allied affections are more common, so is rheumatism, and so neuralgia. Inflammatory croup, however, is very rare, sporadic diphtheria seeming to be taking its place. All the ordinary eruptive fevers of children are and always have been of a peculiarly mild type.

Prairie du Chien, situated immediately at the junction of the Wisconsin with the Mississippi, is built about 70 feet above low water, and 642 feet above the level of the sea. The cliffs on both sides of the river present on their summits the lower strata of the blue Silurian limestone of Cincinnati, beneath which are found sandstone and magnesian limestone down to the water's edge. We give this notice of Prairie du Chien for the purpose of bringing to the knowledge of the public that it possesses one of the most superb artesian wells in the state, which is attracting many persons by its remedial mineral properties.

Green Bay sanitarily may be considered as sufficiently indicated under the head of Fort Howard. It is, however, proper to add that from its geographical position and beautiful situation at the head of the bay, its easy access both by railroad and steamboat, its pleasant days and cool summer nights, it has naturally become quite a popular summer resort, particularly for southern people.

Racine, some 25 miles south by east by rail from Milwaukee and 62 by rail from Chicago, is built upon the banks and some 40 feet above the level of the lake. Its soil is a sandy loam and

gravel, consequently it has a dry, healthy surface, and is much frequented in the summer for its coolness and salubrity.

Waukesha, 18 miles west of Milwaukee by railroad, is a healthy, pleasant place of resort at all times on account of its mineral water, so well known and so highly appreciated throughout the country.

Oconomowoc, 32 miles by railroad west by north of Milwaukee, is a healthy and delightfully located resort for the summer. Its many lakes and drives form its chief attractions, and though its accommodations were considered ample, during the past summer they were found totally inadequate to meet the demands of its numerous visitors.

The Dalles, at Kilbourn City, by rail 16 miles from Portage, is unsurpassed in the northwest for the novelty, romantic character, and striking beauty of its rock and river scenery. It is high and dry; has pure water and fine air, and every-day boat and drive views enough to fill up a month pleasantly.

Lake Geneva, 70 miles by rail from Chicago, is built on the north side of the lake, is justly celebrated for its beauty, and its reputation as a summer resort is growing.

Green Lake, six miles west of Ripon, and 89 northwest from Milwaukee, is some 15 miles long and three broad, surrounded by beautiful groves and prairies; and is claimed to be one of the healthiest little places on the continent.

Devil's Lake is 36 miles by rail north of Madison. Of all the romantic little spots in Wisconsin, and they are innumerable, there is none more romantic or worthy of a summer visitor's admiration than this. It is, though shut in from the rude world by bluffs 500 feet high, a very favorite resort, and should be especially so for those who seek quiet, and rest, and health.

Sparta, 246 miles by rail from Chicago, is pleasantly and healthily situated, and its artesian mineral water strongly impregnated with carbonate of iron, having, it is said, over 14 grains in solution to the imperial gallon, an unusually large proportion, attracts its annual summer crowd.

Sheboygan, 62 miles by rail north of Milwaukee, from its handsome position on a bluff overlooking the lake, and from the beauty of its surroundings as well as from the character of its mineral waters, is an attractive summer resort.

Elkhart Lake, 57 miles by rail north of Milwaukee, is rapidly acquiring a good name from those seeking health or pleasure.

CHANGE IN DISEASES.

In order to ascertain whether the classes of diseases in the state at the date of Carver's travels are the same which prevail to-day, we have compared his description of them with those tabulated in the army medical reports of Forts Howard, Crawford and Winnebago, and again with those given in the U. S. Census for 1870, and with the medical statistics of the city of Milwaukee. The three distinct and prominent classes prevailing from Carver's to the present time, are, in the order of prevalence, diseases of the respiratory organs, consumption, pneumonia, bronchitis, etc.; diseases of the digestive organs, enteritis, dysentery, diarrhœa, etc.; and the malarial fevers. At Fort Howard alone do the diseases of the digestive organs seem to have outnumbered those of the respiratory organs. So far as it is possible to gather from the reports of the commissioners of Indian affairs, these features of the relative prevalence of the three classes of disease are not disturbed.

There are, however, some disturbing or qualifying agencies operating and affecting the amount or distribution of these classes in different areas or belts. For instance, there are two

irregular areas in the state; the one extending from the Mississippi east and north, and the other starting almost as low down as Madison, and running up as far as Green Bay, which are more subject to malarial diseases than are the other parts of the state. While it is found that those parts of the state least subject to diseases of the digestive organs are, a belt along the western shore of Lake Michigan, and a belt running from near Prairie du Chien north into the pineries. Again, it is found that the part of the state most subject to enteric, cerebro-spinal and typhus fevers, is quite a narrow belt running north from the southern border line into the center of the state, or about two-thirds of the distance toward the pineries. All along the western shore of Lake Michigan, and stretching across the country by way of Fond du Lac to the Mississippi, is a belt much less subject to these disorders. It is equally beyond question that the western shore of Lake Michigan, and the southern shore of Lake Superior, as well as the western half of the southern boundary line of the pineries, are less affected with consumption than the interior parts of the state.

The tendency of these diseases is certainly to amelioration. The sanitary history of Wisconsin does not differ from that of any other state east of us, in this striking particular; the farther you trace back the history of disease, the worse its type is found to be. It follows, then, that the improvement in public health must progress with the general improvement of the state, as has been the case with the eastern states, and that the consequent amelioration of our malarial diseases especially will tend to mitigate infectious diseases. The ameliorating influences, however, that sanitary science has brought to bear upon disease, of which England is so happy an illustration, has scarcely as yet begun to be known to us. But the time has come at last when this science is moving both the hearts and minds of thinking and humane men in the state, and its voice has been heard in our legislative halls, evoking a law by which we are, as a people, to be governed, as by any other enactment. The organization of a state board of health is a new era in our humanity. In this board is invested all legal power over the state health. To it is committed all the sanitary responsibility of the state, and the greatest good to the people at large must follow the efforts it is making.

There are many other points of sanitary interest to which it is desirable to call the attention of those interested in Wisconsin. It is a popular truth that a dry climate, all other things being equal, is a healthy climate. Our hygrometrical records show Wisconsin to have one of the driest climates in the United States. Choleraic diseases rarely prevail unless in a comparatively stagnant state of the atmosphere, where they are most fatal. Where high winds prevail such diseases are rare. The winds in Wisconsin, while proverbially high and frequent (carrying away and dissipating malarial emanations), are not destructive to life or property, as is the case, by their violence, in some of the adjoining states. A moist, warm atmosphere is always provocative of disease. Such a state of atmosphere is rare with us, and still more rarely continuous beyond a day or two. Moist air is the medium of malarial poisoning, holding as it does in solution gases and poisonous exhalations. Its character is readily illustrated by the peculiar smell of some marsh lands on autumnal evenings. Such a state of moisture is seen only in our lowest shut-in marshes (where there is but little or no air-current), and then only for a very limited period, in very hot weather.

But too much importance is attached by the public to a simply dry atmosphere for respiratory diseases. The same mistake is made with regard to the good effects in such disorders of simply high elevations. Dry air in itself or a high elevation in itself, or both combined, are not necessarily favorable to health, or curative of disease. In the light and rare atmosphere of Pike's Peak, an elevation of 6,000 feet, the pulse is accelerated, the amount of sleep is diminished, and the human machine is put under a high-pressure rate of living, conducive only to its

injury. The average rate of the pulse in healthy visitors is from 115 to 120 per minute (the normal rate, in moderate elevations, being about 75). And where there is any organic affection of the heart, or tendency to bleeding from the lungs, it is just this very dry atmosphere and high elevation that make these *remedies* (?) destructive. Hence it is that Wisconsin, for the generality of lung diseases, especially when accompanied with hemorrhage, or with heart disease, is preferable to Colorado. It may be objected, that the diseases of the respiratory organs are in excess of other diseases in Wisconsin. This feature, however, is not confined to the cold belt of our temperate latitudes—our proportion of respiratory diseases, be it noted, comparing most favorably with that of other states, as may be seen in the following table :

CLIMATOLOGICAL DISTRIBUTION OF PULMONARY DISEASES.

STATES.	Deaths by Phthisis.	Per cent. of entire Mortality.	Deaths by all diseases of Respiratory Organs.	Per cent. of entire Mortality.
Massachusetts, 1850, U. S. Census.....	3,426	17.65	4,418	22.27
Ohio, 1849-50, U. S. Census.....	2,558	8.83	3,988	13.77
Michigan, 1850, U. S. Census.....	657	14.55	1,084	24.00
Illinois, 1849-50, U. S. Census.....	866	7.36	1,799	15.00
Wisconsin, 1849-50, U. S. Census.....	290	9.99	535	18.43

Now, while the mortuary statistics of the United States census for 1850 are acknowledged to be imperfect, they are, nevertheless, undoubtedly correct as to the causes of mortality. But besides this statistical evidence of the climatological causes of disease, there are certain relative general, if not special, truths which serve to guide us in our estimate. Respiratory diseases of all kinds *increase* in proportion as the temperature *decreases*, the humidity of the air being the same. Another equally certain element in the production of this class of diseases is variability of climate. Still, this feature of our climate is only an element in causation, and affects us, as we shall see in the table below, very little as compared with other states. Indeed, it is still disputed whether there is not more consumption in tropical climates than in temperate climates. This much is admitted, however, that consumption is rare in the arctic regions. Dr. Terry says the annual ratio of pulmonary diseases is lower in the northern than in the southern regions of the United States, and Dr. Drake, an equally eminent authority, recommends those suffering from or threatened with pulmonary affections, to *retreat* to the colder districts of the country, citing among others localities near Lake Superior—a recommendation which our experience of nearly half a century endorses.

PROPORTION OF PNEUMONIA TO CONSUMPTION IN THE DIFFERENT STATES.

STATES.	CONS.	PNEUM.	STATES.	CONS.	PNEUM.
Massachusetts	3,424	549	North Carolina	562	664
Ohio	2,558	895	Kentucky	1,288	429
Illinois	866	647	Wisconsin	290	194

When we compare the general death-rate of Wisconsin with that of the other states of the Union, we find that it compares most favorably with that of Vermont, the healthiest of the New England states. The United States census of 1850, 1860 and 1870, gives Wisconsin 94 deaths to 10,000 of the population, while it gives Vermont 101 to every 10,000 of her inhabitants. The

census of 1870 shows that the death-rate from consumption in Minnesota, Iowa, California and Wisconsin are alike. These four states show the lowest death-rate among the states from consumption, the mortality being 13 to 14 per cent. of the whole death-rate.

Climatologically considered, then, there is not a more healthy state in the Union than the state of Wisconsin. But for health purposes something more is requisite than climate. Climate and soil must be equally good. Men should shun the soil, no matter how rich it be, if the climate is inimical to health, and rather choose the climate that is salubrious, even if the soil is not so rich. In Wisconsin, generally speaking, the soil and climate are equally conducive to health, and alike good for agricultural purposes.

ABSTRACT OF LAWS.

WISCONSIN.

ELECTORS AND GENERAL ELECTIONS.

SEC. 12. Every male person of the age of twenty-one years or upward, belonging to either of the following classes, who shall have resided in the State for one year next preceding any election, shall be deemed a qualified elector at such election:

1. Citizens of the United States.
2. Persons of foreign birth who shall have declared their intention to become citizens conformably to the laws of the United States on the subject of naturalization.
3. Persons of Indian blood who have once been declared by law of Congress to be citizens of the United States, any subsequent law of Congress to the contrary notwithstanding.
4. Civilized persons of Indian descent not members of any tribe. Every person convicted of bribery shall be excluded from the right of suffrage unless restored to civil rights; and no person who shall have made or become directly or indirectly interested in any bet or wager depending upon the result of any election at which he shall offer to vote, shall be permitted to vote at such election.

SEC. 13. No elector shall vote except in the town, ward, village or election district in which he actually resides.

SEC. 14. The general election prescribed in the Constitution shall be held in the several towns, wards, villages and election districts on the Tuesday next succeeding the first Monday in November in each year, at which time there shall be chosen such Representatives in Congress, Electors of President and Vice President, State officers, and county officers as are by law to be elected in such year.

SEC. 15. All elections shall be held in each town at the place where the last town-meeting was held, or at such other place as shall have been ordered at such last meeting, or as shall have been ordered by the Supervisors when they establish more than one election poll, except that the first election after the organization of a new town shall be held at the place directed in the act or proceeding by which it was organized; and all elections in villages constituting separate election districts and in the wards of cities, shall be held at the place to be ordered by the Trustees of such village, or the Common Council of such city, at least ten days before such election, unless a different provision is made in the act incorporating such village or city.

SEC. 16. Whenever it shall become impossible or inconvenient to hold an election at the place designated therefor, the Board of Inspectors, after having assembled at or as near as practicable to such place, and before receiving any votes may adjourn to the nearest convenient place for holding the election, and at such adjourned place shall forthwith proceed with the election. Upon adjourning any election as hereinbefore provided, the Board of Inspectors shall cause proclamation thereof to be made, and shall station a Constable or some other proper person at the place where the adjournment was made, to notify all electors arriving at such place of adjournment, and the place to which it was made.

SEC. 20. A registry of electors shall annually be made :

1. In each ward or election district of every city which, at the last previous census, had a population of three thousand or more.
2. In each ward or election district of every incorporated village in which, by law, separate elections are held ; which village at the last preceding census, had a population of fifteen hundred or more.
3. In every town containing a village which, at said census, had a population of fifteen hundred or more, in which village separate general elections are not by law required to be held.
4. In all towns any part of which shall have been embraced in any part of any city or village in which a registration by this chapter is required.

Such registration shall be made in the manner provided by this chapter. The persons authorized by law to act as Inspectors of Election in each of such towns, wards or election districts shall constitute the Board of Registry therefor.

SEC. 21. The said Inspectors shall have their first meeting on Tuesday, four weeks preceding each general election, at the place where said election is to be held ; and in election districts at which there were polled at the previous general election three hundred votes or less, they shall sit for one day, and in districts at which there were more than three hundred votes polled, they shall have power to sit two days if necessary, for the purpose of making such list. They shall meet at 9 o'clock in the forenoon and hold their meetings open until 8 o'clock in the evening of each day during which they shall so sit. The Clerks appointed by law to act as Clerks of Election shall act as Clerks of the Board of Registry on the day of election only. The proceedings shall be open, and all electors of the district shall be entitled to be heard in relation to corrections or additions to said registry. They shall have the same powers to preserve order which Inspectors of Election have on election days, and in towns vacancies in the Board shall be filled in the same manner that vacancies are filled at elections.

SEC. 22. The said Inspectors at their first meeting, and before doing any business, shall severally take and subscribe the oath of Inspectors at a general election, and said Inspectors shall at their first meeting make a registry of all the electors of their respective districts, placing thereon the full names, alphabetically arranged according to surnames, in one column, and in another the residence by number and name of street or other location, if known. If any elector's residence is at any hotel or public boarding-house the name of the hotel or boarding-house shall be stated in the registry. They shall put thereon the names of all persons residing in their election district appearing on the poll-list kept at the last preceding general election, and are authorized to take therefor such poll-list from the office where kept, omitting such as have died or removed from the district, and adding the names of all other persons known to them to be electors in such district. In case of the formation of a new election district since the last preceding general election, the said Board therein may make such registry from the best means at their command, and may, if necessary, procure therefor certified copies of the last poll-list. They shall complete said registry as far as practicable at their first meeting, and shall make four copies thereof, and certify the original and each copy to be a true list of the electors in their district so far as the same are known to them. One of said copies shall be immediately posted in a conspicuous place in the room in which their meeting was held, and be accessible to any elector for examination or making copies thereof, and one copy shall be retained by each Inspector for revision and correction at the second meeting. They shall within two days after said first meeting file the original registry made by them, and said poll-list in the office of the proper town, city or village clerk, and may, in their discretion, cause ten printed copies of said registry to be made and posted in ten of the most public places of said election district, or may publish the same in a newspaper at an expense not exceeding one cent for each name.

SEC. 23. The Inspectors shall hold their second meeting at the same place designated for holding elections on the Tuesday two weeks preceding the election. They shall meet at 9 o'clock in the forenoon. In election districts having less than three hundred voters, as shown by the

preliminary registry, the Board shall complete the registry on the same day; but if there are more than that number of voters, they shall sit two days. They shall remain in session until 8 o'clock in the evening. They shall revise and correct the registry first by erasing the name of any person who shall be proved to their satisfaction by the oaths of two electors of the district to be not entitled to vote therein at the next ensuing election, unless such person shall appear and if challenged, shall answer the questions and take the oath hereinafter provided; secondly, by entering thereon the names of every elector entitled to vote in the district at the next election who shall appear before the Board and require it, and state his place of residence, giving street and number, if numbered, or location, as hereinbefore provided, if challenged answer the questions, and take the oaths provided in case of challenge at an election; but if any person shall refuse to answer all such questions or to take such oath, his name shall not be registered. Any person who is not twenty-one years of age before the date when the registry is required to be corrected, but will be if he lives until the day of election, shall have his name put on the registry if he be otherwise qualified to be an elector. Any elector who did not vote at the previous general election shall be entitled to be registered either at the preliminary or the final registration of electors by appearing before the Board of Registration of his election district and establishing his right to be registered, or, instead of a personal appearance, he may make his application to be registered to the Board in writing. Such application shall state the name and period of continuous residence in the election district and place of residence therein, giving the number and street of the applicant, and, in case the person making the application is of foreign birth, he shall state when he came to the United States and to the State of Wisconsin, and the time and place of declaring his intention of becoming a citizen of the United States, and that he is entitled to vote at the election. Upon receiving such application, the Board of Registration shall register the name of such applicant, if it appears to the Board that the applicant is, by his statement, entitled to vote. Such statement shall be made under oath, and shall be preserved by the Board and be filed in the office of the village or city clerk, as the case may be. All city and village clerks shall keep blanks for making the application for registration, as provided by this section. The form shall be prescribed by the Secretary of State. Every person named in this section shall be subject to the same punishment for any false statement or other offense in respect thereto as is provided in case of such false statement or other offense by an elector offering to vote at an election. After such registry shall have been fully completed on the days above mentioned, no name shall be added thereto by any person or upon any pretext. Within three days after the second meeting the said Board shall cause four copies of the registry to be made, each of which shall be certified by them to be a correct registry of the electors of their district, one of which shall be kept by each Inspector for use on election day, and one shall forthwith be filed in the office of the proper town, city or village clerk. All registries shall at all times be open to public inspection at the office where deposited without charge.

SEC. 24. On election day the Inspectors shall designate two of their number at the opening of the polls, who shall check the names of every elector voting in such district whose name is on the registry. No vote shall be received at any general election in any ward or election district defined in Section 20, if the name of the person offering to vote be not on said registry made at the second meeting as aforesaid, except as hereinafter provided; but in case any one shall, after the last day for completing such registry, and before such election, become a qualified voter of the district, he shall have the same right to vote therein at such election as if his name had been duly registered, provided he shall, at the time he offers to vote, deliver to the Inspectors his affidavit, in which he shall state the facts, showing that he has, since the completion of such registry, become a qualified elector of such district, and the facts showing that he was not such elector on the day such registry was completed, and shall also deliver to such Inspectors the affidavits of two freeholders, electors in such election district, corroborating all the material statements in his affidavit. In case any person who was a voter at the last previous general election shall not be registered, such person shall be entitled to vote on making affidavit that he was entitled to vote at the previous election, and that he has not become disqualified by reason of removal

from the election district or otherwise, since that election, which affidavit shall also be corroborated by the affidavits of two freeholders, as is provided for other non-registered voters. No one freeholder shall be competent to make at any one election corroborating affidavits for more than three voters. All of said affidavits shall be sworn to before some officer authorized by the laws of this State to take depositions. The Inspectors shall keep a list of the names and residence of the electors voting whose names are not on said completed registry, and attach said list to the registry and return it, together with all such affidavits, to the proper town, city or village clerk. No compensation shall be paid or received for taking or certifying any such affidavits. On the day following the election, one of said poll-lists and one copy of the registry so kept and checked shall be attached together and filed in the office of the proper town, city or village clerk, and the other of said poll-lists and copy of the registry so kept and checked shall be returned to the County Clerk with the returns of the election. Such Inspectors shall give notice by advertisement in a newspaper printed in the city, village or town where such registration was made, of the registry, and shall include in such notice all additions to and omissions from the preliminary list, and shall also state where the election is to be held. In case there be no newspaper printed in such city, village or town, such notice shall be given by posting copies thereof in three or more public places in each ward or election district in such city, village or town. For publication of such notice in any such newspaper the publisher thereof shall be entitled to the same compensation per folio as is prescribed for publishing other legal notices.

COMMON SCHOOLS.

SEC. 413. The formation of any school district shall be by written order of the Town Board, describing the territory embraced in the same, to be filed with the Town Clerk within twenty days after the making thereof. The Supervisors shall deliver to a taxable inhabitant of the district their notice thereof in writing, describing its boundaries, and appointing a time and place for the first district meeting, and shall therein direct such inhabitant to notify every qualified voter of the district, either personally or by leaving a written notice at his place of residence, of the time and place of such meeting, at least five days before the time appointed herefor, and said inhabitant shall notify the voters of such district accordingly, and indorse thereon a return containing the names of all persons thus notified, and said notice and return shall be recorded as a part of the record of the first meeting in such district.

SEC. 414. In case such notice shall not be given, or the inhabitants of a district shall neglect or refuse to assemble and form a district meeting when so notified, or in case any school district having been formed or organized shall afterward be disorganized, so that no competent authority shall exist therein to call a special district meeting, in the manner hereinafter provided, notice shall be given by the Town Board, and served in the manner prescribed in the preceding section. Whenever a district meeting shall be called as prescribed in this and the preceding section, it shall be the duty of the electors of the district to assemble at the time and place so directed.

SEC. 415. Whenever it shall be necessary to form a district from two or more adjoining towns, the Town Boards of such towns shall meet together and form such districts by their written order, describing the territory embraced in such district, signed by at least two of the Supervisors of each town; and shall file one such order with the Town Clerk of each town, and deliver the notice of formation to a taxable inhabitant of such district, and cause the same to be served and returned in the time and manner hereinbefore prescribed; and any such district may be altered only by the joint action of the Town Boards of such towns in the same manner that other districts are altered.

SEC. 416. Every school district shall be deemed duly organized when any two of the officers elected at the first legal meeting thereof shall have consented to serve in the offices to which they have been respectively elected, by a written acceptance thereof filed with the clerk of the first meeting, and recorded in the minutes thereof; and every school district shall be considered

as duly organized after it shall have exercised the franchises and privileges of a district for the term of two years.

SEC. 425. The annual meeting of all school districts in which graded schools of two or more departments are taught, shall be held on the second Monday of July, and of all other school districts on the last Monday of September, in each year. The hour of such meeting shall be seven o'clock in the afternoon, unless otherwise provided by a vote of the district, duly recorded at the last previous annual meeting; but at any annual meeting a majority of the electors present may determine that the annual meeting of such district shall be held on the last Monday of August instead of the last Monday of September. Said determination to take effect when a copy of the proceedings of said annual meeting in reference to such change shall have been filed with the Town Clerk in which the schoolhouse of such district is situated, and to remain in force until rescinded by a like vote of the electors of such district.

SEC. 426. The Clerk shall give at least six days' previous notice of every annual district meeting, by posting notices thereof in four or more public places in the district, one of which shall be affixed to the outer door of the schoolhouse, if there be one in the district, and he shall give like notices for every adjourned district meeting when such meeting shall have been adjourned for more than one month; but no annual meeting shall be deemed illegal for want of due notice, unless it shall appear that the omission to give such notice was willful and fraudulent.

SEC. 427. Special district meetings may be called by the Clerk, or, in his absence, by the Directors or Treasurer, on written request of five legal voters of the district, in the manner prescribed for calling an annual meeting; and the electors, when lawfully assembled at a special meeting, shall have power to transact the same business as at the first and each annual meeting, except the election of officers. The business to be transacted at any special meeting shall be particularly specified in the notices calling the same, and said notices shall be posted six full days prior to the meeting. No tax or loan or debt shall be voted at a special meeting, unless three-fourths of the legal voters shall have been notified, either personally or by a written notice left at their places of residence, stating the time and place and objects of the meeting, and specifying the amount proposed to be voted, at least six days before the time appointed therefor.

SEC. 428. Every person shall be entitled to vote in any school district meeting who is qualified to vote at a general election for State and county officers, and who is a resident of such school district.

ASSESSMENT AND COLLECTION OF DISTRICT TAXES.

SEC. 469. All school district taxes, unless otherwise specially provided by law, shall be assessed on the same kinds of property as taxes for town and county purposes; and all personal property which, on account of its location or the residence of its owner, is taxable in the town, shall, if such locality or residence be in the school district, be likewise taxable for school district purposes.

BORROWING MONEY.

SEC. 474. Whenever, upon any unusual exigency, any school district shall, before the annual meeting, vote a special tax to be collected with the next levy, the district may, by vote, authorize the District Board to borrow for a period not exceeding one year a sum not exceeding the amount of such tax, and by such vote set apart such tax when collected to repay such loan, and thereupon the District Board may borrow such money of any person and on such terms and execute and deliver to the lender such obligation therefor, and such security for the repayment, including a mortgage or pledge of any real or personal property of the district, subject to the directions contained in the vote of the district as may be agreed upon and not prohibited by law.

SEC. 498. Every District Clerk who shall willfully neglect to make the annual report for his district as required by law shall be liable to pay the whole amount of money lost by such

district in consequence of his neglect, which shall be recovered in an action in the name of and for the use of the district.

SEC. 499. Every Town Clerk who shall neglect or refuse to make and deliver to the County Superintendent his annual report, as required in this chapter within the time limited therefor, shall be liable on his official bond to pay the town the amount which such town or any school district therein, shall lose by such neglect or refusal, with interest thereon; and every County Superintendent who shall neglect or refuse to make the report required of him by this chapter to the State Superintendent shall be liable to pay to each town the amount which such town or any school district therein shall lose by such neglect or refusal, with interest thereon, to be recovered in either case in an action prosecuted by the Town Treasurer in the name of the town.

SEC. 503. Every member of a district board in any school district in this State in which a list of text-books has been adopted according to law, who shall, within three years from the date of such adoption, or thereafter, without the consent of the State Superintendent, order a change of text-books in such district, shall forfeit the sum of fifty dollars.

SEC. 513. Every woman of twenty-one years of age and upward may be elected or appointed as director, treasurer or clerk of a school district, director or secretary of a town board under the township system; member of a board of education in cities, or county superintendent.

SEC. 560. In reckoning school months, twenty days shall constitute a month and one hundred days five months.

ASSESSMENT OF TAXES.

SEC. 1035. The terms "real property," "real estate" and "land," when used in this title, shall include not only the land itself, but all buildings, fixtures, improvements, rights and privileges appertaining thereto.

SEC. 1036. The term "personal property," as used in this title, shall be construed to mean and include toll-bridges, saw-logs, timber and lumber, either upon land or afloat, steamboats, ships and other vessels, whether at home or abroad; buildings upon leased lands, if such buildings have not been included in the assessment of the land on which they are erected; ferry-boats, including the franchise for running the same; all debts due from solvent debtors, whether on account, note, contract, bond, mortgage or other security, or whether such debts are due or to become due; and all goods, wares, merchandise, chattels, moneys and effects of any nature or description having any real or marketable value and not included in the term "real property," as above defined.

SEC. 1037. The improvements on all lands situated in this State, which shall have been entered under the provisions of the act of Congress entitled "An act to secure homesteads to actual settlers on the public domain," approved May twentieth, one thousand eight hundred and sixty-two, and which shall be actually occupied and improved by the person so entering the same, or his heirs, shall be subject to taxation, and such improvements shall be assessed as personal property. All taxes levied thereon shall be collected out of the personal property of the occupant of such lands, and in no other manner.

SEC. 1038. The property in this section described is exempt from taxation, to wit:

1. That owned exclusively by the United States or by this State, but no lands contracted to be sold by the State shall be exempt.
2. That owned exclusively by any county, city, village, town or school district; but lands purchased by counties at tax sales shall be exempt only in the cases provided in Section Eleven Hundred and Ninety-one.
3. Personal property owned by any religious, scientific, literary or benevolent association, used exclusively for the purposes of such association, and the real property, if not leased, or not otherwise used for pecuniary profit, necessary for the location and convenience of the buildings of such association, and embracing the same not exceeding

ten acres ; and the lands reserved for grounds of a chartered college or university, not exceeding forty acres ; and parsonages, whether of local churches or districts, and whether occupied by the pastor permanently or rented for his benefit. The occasional leasing of such buildings for schools, public lectures or concerts, or the leasing of such parsonages, shall not render them liable to taxation.

4. Personal property owned and used exclusively by the State or any county agricultural society, and the lands owned and used by any such society exclusively for fair grounds.
5. Fire engines and other implements used for extinguishing fires, owned or used by any organized fire company, and the buildings and necessary grounds connected therewith, owned by such company, and used exclusively for its proper purposes.
6. The property of Indians who are not citizens, except lands held by them by purchase.
7. Lands used exclusively as public burial-grounds, and tombs and monuments to the dead therein.
8. Pensions receivable from the United States.
9. Stock in any corporation in this State which is required to pay taxes upon its property in the same manner as individuals.
10. So much of the debts due or to become due to any person as shall equal the amount of bona-fide and unconditional debts by him owing.
11. Wearing apparel, family portraits and libraries, kitchen furniture and growing crops.
12. Provisions and fuel provided by the head of a family to sustain its members for six months ; but no person paying board shall be deemed a member of a family.
13. All the personal property of all insurance companies that now are or shall be organized or doing business in this State.
14. The track, right of way, depot grounds, buildings, machine-shops, rolling-stock and other property necessarily used in operating any railroad in this State belonging to any railroad company, including pontoon, pile and pontoon railroads, and shall henceforth remain exempt from taxation for any purpose, except that the same shall be subject to special assessments for local improvements in cities and villages and all lands owned or claimed by such railroad company not adjoining the track of such company, shall be subject to all taxes. The provision of this subdivision shall not apply to any railroad that now is or shall be operated by horse-power, whether now or hereafter constructed in any village or city.
15. The property, except real estate, of all companies which are or shall be engaged in the business of telegraphing in this State.
16. The real estate of the Home of the Friendless in the city of Milwaukee, not exceeding one lot in amount, is exempted, so long as the same shall continue to be used as such home.
17. All property of any corporation or association formed under the laws of this State for the encouragement of industry by agricultural and industrial fairs and exhibitions, which shall be necessary for fair grounds, while used exclusively for such fairs and exhibitions, provided the quantity of land so exempt shall not exceed forty acres.
18. Such tree-belts as are or may be planted and maintained in compliance with chapter sixty-six of one of these statutes.

SEC. 1191. Real property, upon which the county holds any certificates of tax sale, shall continue liable to taxation and to sale for unpaid taxes, and the county shall be the exclusive purchaser at the sale ; but when a tax deed shall be issued to the county, and it shall hold tax certificates of sale unredeemed on the same property for two successive years subsequent to the date of the sale on which such deed shall issue, including certificates of sale made prior to the passage of these statutes, such property shall thereafter be exempt from taxation until the same is sold by the county. The County Clerk shall annually, before the first day of June, furnish to the Assessors of each town a list of the lands in such town exempt under this section. Nothing in this section shall be so construed as to apply to lands owned by minors, married women, widowed women, idiots or insane persons.

COLLECTION OF TAXES.

SEC. 1089. The Town Treasurer of each town, on the receipt of the tax-roll for the current year, shall forthwith post notices in three or four public places in such towns, that the tax-roll for such town is in his hands for collection, and that the taxes charged therein are subject to payment at his office at any time prior to the first day of January in such year; and after the said first day of January he shall proceed to collect the taxes charged in such roll and remaining unpaid, and for that purpose shall call at least once on the person taxed, or at any place of his usual residence, if within the town, and demand payment of the taxes charged to him on such roll.

SEC. 1090. On all taxes paid or tendered at the office of such Treasurer prior to said first day of January, he shall remit all of the 5-per-cent collection fees, except so much thereof as he is authorized by law to have for his fees upon taxes so paid.

SEC. 1091. Town orders shall be receivable for taxes in the town where issued, and shall be allowed the Town Treasurer on settlement of town taxes; and county orders and jurors' certificates shall be receivable for taxes in the county where issued, and shall be allowed such Treasurer on settlement of county taxes with the County Treasurer, but no Town Treasurer shall receive town orders in payment for taxes to a larger amount than the town taxes included in his assessment-roll exclusive of all taxes for school purposes, nor county orders and jurors' certificates to a greater amount than the county tax included therein.

SEC. 1097. In case any person shall refuse or neglect to pay the tax imposed upon him, the Town Treasurer shall levy the same by distress and sale of any goods and chattels belonging to such person, wherever the same may be found within his town; and if a sufficient amount of such property cannot be found in such town, the Town Treasurer may levy the same by distress and sale of the goods and chattels belonging to such person, wherever the same may be found in the county or in any adjoining counties.

SEC. 1098. The Town Treasurer shall give public notice of the time and place of such sale, at least six days previous thereto, by advertisement, containing a description of the property to be sold, to be posted up in three public places in the town where the sale is to be made. The sale shall be at public auction, in the daytime, and the property sold shall be present; such property may be released by the payment of the taxes and charges for which the same is liable, to be sold; if the purchase-money on such sale shall not be paid at such time as the Treasurer may require, he may again, in his discretion, expose such property for sale, or sue, in his name of office, the purchaser for the purchase-money, and recover the same with costs and 10-per-centum damages.

SEC. 1099. If the property so levied upon shall be sold for more than the amount of tax and costs, the surplus shall be returned to the owner thereof; and if it cannot be sold for want of bidders, the Treasurer shall return a statement of the fact, and return the property to the person from whose possession he took the same; and the tax, if unsatisfied, shall be collected in the same manner as if no levy had been made.

HIGHWAYS AND BRIDGES.

SEC. 1223. The Supervisors of the several towns shall have the care and supervision of the highways and bridges therein, and it shall be their duty:

1. To give directions for repairing the highways and bridges within their respective towns, and cause to be removed all obstructions therefrom.
2. To cause such of the roads used as highways as have been laid out but not sufficiently described, and such as have been lawfully laid out and used as such up to the then present time, but not fully and sufficiently recorded, to be ascertained, described and entered of record in the Town Clerk's office.

3. To cause bridges which are or may be erected over streams intersecting highways to be kept in repair.
4. To divide their respective towns into so many road districts as they shall judge convenient, and specify every such division in writing under their hands, to be recorded in the office of the Town Clerk ; but no such division shall be made within ten days next preceding the annual town meeting.
5. To assign to each of the said road districts such of the inhabitants liable to pay taxes on highways as they think proper, having regard to the nearness of residence as much as practicable.
6. To require the Overseers of Highways from time to time, and as often as they shall deem necessary, to perform any of the duties required of them by law.
7. To assess the highway taxes in their respective towns in each year, as provided by law.
8. To lay out and establish upon actual surveys, as hereinafter provided, such new roads in their respective towns as they may deem necessary and proper; to discontinue such roads as shall appear to them to have become unnecessary, and to widen or alter such roads when they shall deem necessary for public convenience, and perform all other duties respecting highways and bridges directed by this chapter.

INTOXICATING LIQUORS.

SEC. 1548. The Town Boards, Village Boards and Common Councils of the respective towns, villages and cities may grant license to such persons as they may deem proper, to keep groceries, saloons or other places, within their respective towns, villages or cities, for the sale in quantities less than one gallon of strong, spirituous, malt, ardent or intoxicating liquors, to be drank on the premises; and in like manner may grant licenses for the sale in any quantity of such liquors not to be drank on the premises. The sum to be paid for such license for the sale of such liquor to be drank on the premises shall not be less than twenty-five nor more than one hundred and fifty dollars; and for the sale of such liquors not to be drank on the premises shall be not less than ten nor more than forty dollars.

SEC. 1549. Every applicant for such license shall, before delivery thereof, file with such town, village or city clerk a bond to the State in the sum of five hundred dollars, with at least two sureties, to be approved by the authorities granting the license, who shall each justify in double its amount over and above their debts and liabilities and exemptions, and be freeholders and residents of the county, conditioned that the applicant, during the continuance of his license will keep and maintain an orderly and well regulated house; that he will permit no gambling with cards, dice or any device or implement for that purpose, within his premises or any out-house, yard or shed appertaining thereto; that he will not sell or give away any intoxicating liquor to any minor, having good reason to believe him to be such, unless upon the written order of the parents or guardian of such minor, or to persons intoxicated or bordering upon intoxication, or to habitual drunkards; and that he will pay all damages that may be recovered by any person, and that he will observe and obey all orders of such Supervisors, Trustees or Aldermen, or any of them, made pursuant to law. In case of the breach of the condition of any such bond, an action may be brought thereon in the name of the State of Wisconsin, and judgment shall be entered against the principals and sureties therein named for the full penalty thereof; and execution may issue thereupon by order of the court therefor, to satisfy any judgment that may have been recovered against the principal named in said bond, by reason of any breach in the conditions thereof, or for any penalties or forfeitures incurred under this chapter. If more than one judgment shall have been recovered, the court, in its discretion, may apply the proceeds of said bond toward the satisfaction of said several judgments, in whole or in part, in such manner as it may see fit.

SEC. 1550. If any person shall vend, sell, deal or traffic in or for the purpose of evading this chapter, give away, any spirituous, malt, ardent or intoxicating liquors or drinks in any

quantity whatever without first having obtained license therefor, according to the provisions of this chapter, he shall be deemed guilty of a misdemeanor, and, on conviction thereof shall be punished by fine of not less than ten nor more than forty dollars, besides the costs of suit, or, in lieu of such fine, by imprisonment in the county jail of the proper county not to exceed sixty days nor less than twenty days; and, in case of punishment by fine as above provided, such person shall, unless the fine and costs be paid forthwith, be committed to the county jail of the proper county until such fine and costs are paid, or until discharged by due course of law; and, in case of a second or any subsequent conviction of the same person during any one year, the punishment may be by both fine and imprisonment, in the discretion of the court.

SEC. 1551. Upon complaint made to any Justice of the Peace by any person that he knows or has good reason to believe that an offense against this chapter, or any violation thereof, has been committed, he shall examine the complainant on oath, and he shall reduce such complaint to writing and cause the same to be subscribed by the person complaining. And if it shall appear to such Justice that there is reasonable cause to believe that such offense has been committed, he shall immediately issue his warrant, reciting therein the substance of such complaint and requiring the officer to whom such warrant shall be directed forthwith to arrest the accused and bring him before such Justice, to be dealt with according to law; and the same warrant may require the officer to summon such persons as shall be therein named to appear at the trial to give evidence.

SEC. 1552. The District Attorney of the proper county shall, on notice given to him by the Justice of the Peace before whom any such complaint shall be made, attend the trial before such Justice and conduct the same on behalf of the State.

SEC. 1553. Every supervisor, trustee, alderman and justice of the peace, police officer, marshal, deputy marshal and constable of any town, village or city who shall know or be credibly informed that any offense has been committed against the provisions of this chapter shall make complaint against the person so offending within their respective towns, villages or cities to a proper Justice of the Peace therein, and for every neglect or refusal so to do every such officer shall forfeit twenty-five dollars, and the Treasurer of such town, village or city shall prosecute therefor.

SEC. 1557. Any keeper of any saloon, shop or place of any name whatsoever for the sale of strong, spirituous or malt liquors to be drunk on the premises in any quantity less than one gallon, who shall sell, vend or in any way deal or traffic in or for the purpose of evading this chapter, give away any spirituous, ardent or malt liquors or drinks in any quantity whatsoever to or with a minor, having good reason to believe him to be such, or to a person intoxicated or bordering on a state of intoxication, or to any other prohibited person before mentioned, shall be deemed guilty of a misdemeanor; nor shall any person sell or in any way deal or traffic in, or, for the purpose of evading this chapter, give away, any spirituous, ardent, intoxicating or malt liquors or drinks in any quantity whatsoever within one mile of either of the hospitals for the insane; and any person who shall so sell or give away any such liquors or drinks shall be deemed guilty of a misdemeanor.

BILLS OF EXCHANGE AND PROMISSORY NOTES.

SEC. 1675. All notes in writing made and signed by any person or for any corporation, and all certificates of the deposit of money issued by any person or corporation, whereby he or it shall promise to pay to any person or order, or unto the bearer, any sum of money, as therein mentioned, shall be due and payable as therein expressed, and shall have the same effect and shall be negotiable in like manner as inland bills of exchange, according to the custom of merchants. But no order drawn upon or accepted by the Treasurer of any county, town, city, village or school district, whether drawn by any officer thereof or any other person, and no obligation nor instrument made by such corporation or any officer thereof, unless expressly authorized by law

to be made negotiable, shall be, or shall be deemed to be, negotiable according to the customs of merchants, in whatever form they may be drawn or made.

SEC. 1680. On all bills of exchange payable at sight, or at future day certain, within this State, and all negotiable promissory notes, orders and drafts payable at a future day certain, within this State, in which there is not an express stipulation to the contrary, grace should be allowed in like manner as it is allowed by the custom of merchants on foreign bills of exchange payable at the expiration of a certain period after date or sight. The provisions of this section shall not extend to any bill of exchange, note or draft payable on demand.

SEC. 1684. All notes, drafts, bills of exchange or other negotiable paper maturing on Sunday or upon any legal holiday shall be due and payable on the next preceding secular day.

HOURS OF LABOR.

SEC. 1728. In all manufactories, work-shops and other places used for mechanical or manufacturing purposes, the time of labor of children under eighteen years of age and of women employed therein, shall not exceed eight hours in one day; and any employer, stockholder, director, officer, overseer, clerk or foreman who shall compel any woman or any child to labor exceeding eight hours in any one day, or who shall permit any child under fourteen years of age to labor more than ten hours in any one day in any such place, if he shall have control over such child sufficient to prevent it, or who shall employ at manual labor any child under twelve years of age in any factory or work-shop where more than three persons are employed, or who shall employ any child of twelve and under fourteen years of age in any such factory or work-shop for more than seven months in any one year, shall forfeit not less than five nor more than fifty dollars for each such offense.

SEC. 1729. In all engagements to labor in any manufacturing or mechanical business, where there is no express contract to the contrary, a day's work shall consist of eight hours, and all engagements or contracts for labor in such cases shall be so construed; but this shall not apply to any contract for labor by the week, month or year.

FORM OF CONVEYANCES.

SEC. 2207. A deed of quitclaim and release of the form in common use or of the form hereinafter provided, shall be sufficient to pass all the estate which the grantor could lawfully convey by deed of bargain and sale.

SEC. 2208. Conveyances of land may be in substantially the following form:

WARRANTY DEED.

A B, grantor of _____ County, Wisconsin, hereby conveys and warrants to C D, grantee, of _____ County, Wisconsin, for the sum of _____ dollars, the following tract of land in _____ County.

(Here describe the premises.)

Witness the hand and seal of said grantor this _____ day of _____, 18—.

_____ [SEAL.]
 _____ [SEAL.]

Such deeds, when executed and acknowledged as required by law, shall, when of the first of the above forms, have the effect of a conveyance in fee simple to the grantee, his heirs and assigns of the premises therein named, together with all the appurtenances, rights and privileges thereto belonging, with a covenant from the grantor, his heirs and personal representatives, that he is lawfully seized of the premises; has good right to convey the same; that he guarantees the grantee, his heirs and assigns in the quiet possession thereof; that the same are free from all incumbrances, and that the grantor, his heirs and personal representatives will forever warrant and defend the title and possession thereof in the grantee, his heirs and assigns against all lawful claims whatsoever. Any exceptions to such covenants may be briefly inserted in such deed, following the description of the land; and when in the second of the above forms, shall have the effect of a conveyance in fee simple to the grantee, his heirs and assigns, of all the right, title, interest and estate of the grantor, either in possession or expectancy, in and to the premises therein described, and all rights, privileges and appurtenances thereto belonging.

MORTGAGES.

SEC. 2209. A mortgage may be substantially in the following form :

A B, mortgagor, of _____ County, Wisconsin, hereby mortgages to C D, mortgagee, of _____ County, Wisconsin, for the sum of _____ dollars, the following tract of land in _____ County.

(Here describe the premises.)

This mortgage is given to secure the following indebtedness :

(Here state amount or amounts and form of indebtedness, whether on note, bond or otherwise, time or times when due, rate of interest, by and to whom payable, etc.)

The mortgagor agrees to pay all taxes and assessments on said premises, and the sum of _____ dollars attorney's fees in case of foreclosure thereof.

Witness the hand and seal of said mortgagor this _____ day of _____, 18—.

In presence of }
 _____ }
 _____ }

_____ [SEAL.]
 _____ [SEAL.]

when executed and acknowledged according to law shall have the effect of a conveyance of the land therein described, together with all the rights, privileges and appurtenances thereunto belonging in pledge to the mortgagee, his heirs, assigns and legal representatives for the payment of the indebtedness therein set forth, with covenant from the mortgagor that all taxes and assessments levied and assessed upon the land described during the continuance of the mortgage shall be paid previous to the day appointed by law for the sale of lands for taxes, as fully as the forms of mortgage now and heretofore in common use in this State, and may be foreclosed in the same manner and with the same effect, upon any default being made in any of the conditions thereof as to payment of either principal, interest or taxes.

ASSIGNMENT OF MORTGAGE.

SEC. 2210. An assignment of a mortgage substantially in the following form :

For value received I, A B, of _____, Wisconsin, hereby assign to C D, of _____, Wisconsin, the within mortgage (or a certain mortgage executed to _____ by E F and wife, of _____ County, Wisconsin, the _____ day of _____, 18—, and recorded in the office of the Register of Deeds of _____ County, Wisconsin, in Vol. _____ of mortgages, on page _____), together with the _____ and indebtedness therein mentioned.

Witness my hand and seal this _____ day of _____, 18—.

In presence of }

A B. [SEAL.]

shall be sufficient to vest in the assignee for all purposes all the rights of the mortgagee under the mortgage, and the amount of the indebtedness due thereon at the date of assignment. Such assignment, when indorsed upon the original mortgage, shall not require an acknowledgment in order to entitle the same to be recorded.

TITLE TO REAL PROPERTY BY DESCENT.

SEC. 2270. When any person shall die, seized of any lands, tenements or hereditaments, or any right thereto, or entitled to any interest therein in fee simple, or for the life of another, not having lawfully devised the same, they shall descend subject to his debts, except as provided in the next section, in the manner following:

1. In equal shares to his children, and to the lawful issue of any deceased child, by right of representation; and if there be no child of the intestate living at his death, his estate shall descend to all his other lineal descendants; and if all the said descendants are in the same degree of kindred to the intestate, they shall share the estate equally, otherwise they shall take according to the right of representation.
2. If he shall leave no lawful issue, to his widow; if he shall leave no such issue or widow, to his parents, if living; and if either shall not be living, the survivor shall inherit his said estate. If a woman shall die, leaving no issue, her estate shall descend to her husband, if she shall have one at the time of her decease, and if she shall leave, surviving her, neither issue nor husband, to her parents, if living; and if either shall not be living, the survivor shall inherit her said estate.
3. If he shall leave no lawful issue, nor widow, nor father, nor mother, his estate shall descend in equal shares to his brothers and sisters, and to the children of any deceased brother or sister, by right of representation.
4. If the intestate shall leave no lawful issue, widow, father, mother, brother nor sister, his estate shall descend to his next of kin in equal degree, except that when there are two or more collateral kindred in equal degree, but claiming through different ancestors, those who claim through the nearest ancestor shall be preferred to those claiming through an ancestor more remote; provided, however,
5. If any person die leaving several children, or leaving one child, and the issue of one or more other children, and any such surviving child shall die under age, and not having been married, all the estate that came to the deceased child, by inheritance from such deceased parent, shall descend in equal shares to the other children of the same parent, and to the issue of any such other children who shall have died, by right of representation.
6. If, at the death of such child, who shall die under age, and not having been married, all the other children of his said parent shall also be dead, and any of them shall have left issue, the estate that came to said child by inheritance from his said parent, shall descend to all the issue of the other children of the same parent; and if all the said issue are in the same degree of kindred to said child, they shall share the said estate equally; otherwise they shall take according to the right of representation.
7. If the intestate shall have no widow nor kindred, his estate shall escheat to the State, and be added to the capital of the school fund.

SEC. 2271. When the owner of any homestead shall die, not having lawfully devised the same, such homestead shall descend free of all judgments and claims against such deceased owner or his estate, except mortgages lawfully executed thereon, and laborers' and mechanics' liens, in the manner following:

1. If he shall have no lawful issue, to his widow.
2. If he shall leave a widow and issue, to his widow during her widowhood, and, upon her marriage or death, to his heirs, according to the next preceding section.
3. If he shall leave issue and no widow, to such issue, according to the preceding section.
4. If he shall leave no issue or widow, such homestead shall descend under the next preceding section, subject to lawful liens thereon.

OF WILLS.

SEC. 2277. Every person of full age, and any married woman of the age of eighteen years and upward, being of sound mind, seized in his or her own right of any lands, or of any right thereto, or entitled to any interest therein, descendible to his or her heirs, may devise and dispose of the same by last will and testament in writing; and all such estate not disposed of by will, shall descend as the estate of an intestate, being chargeable, in both cases, with the payment of all his debts or her debts, except as provided in the next preceding chapter, and in section twenty-two hundred and eighty.

SEC. 2278. Every devise of land in any will shall be construed to convey all the estate of the devisor therein, which he could lawfully devise, unless it shall clearly appear by the will that the devisor intended to convey a less estate.

SEC. 2279. Any estate, right or interest in lands acquired by the testator, after the making of his will, shall pass thereby in like manner as if possessed at the time of making the will, if such shall manifestly appear, by the will, to have been the intention of the testator.

SEC. 2280. When any homestead shall have been disposed of by the last will and testament of the owner thereof, the devisee shall take the same, free of all judgments and claims against the testator or his estate, except mortgages lawfully executed thereon, and laborers' and mechanics' liens.

SEC. 2281. Every person of full age, and every married woman of the age of eighteen years and upward, being of sound mind, may, by last will and testament in writing, bequeath and dispose of all his or her personal estate remaining at his or her decease, and all his or her rights thereto and interest therein, subject to the payment of debts; and all such estate not disposed of by the will shall be administered as intestate estate.

SEC. 2284. All beneficial devises, legacies and gifts whatsoever, made or given in any will to a subscribing witness thereto, shall be wholly void, unless there be two other competent subscribing witnesses to the same; but a mere charge on the lands of the devisor for the payment of debts, shall not prevent his creditors from being competent witnesses to his will.

SEC. 2285. But if such witness, to whom any beneficial devise may have been made or given, would have been entitled to any share of the estate of the testator, in case the will was not established, then so much of the share that would have descended or been distributed to such witness as will not exceed the devise or bequest made to him in the will, shall be saved to him, and he may recover the same of the devisees or legatees named in the will, in proportion to and out of the parts devised or bequeathed to them.

SEC. 2286. When any child shall be born, after the making of his parent's will, and no provision shall be made therein for him, such child shall have the same share in the estate of the testator as if he had died intestate; and the share of such child shall be assigned to him, as provided by law, in case of intestate estates, unless it shall be apparent from the will that it was the intention of the testator that no provision should be made for such child.

SEC. 2290. No will, or any part thereof, shall be revoked, unless by burning, tearing, canceling or obliterating the same, with the intention of revoking it, by the testator, or by some person in his presence, and by his direction, or by some other will or codicil in writing, executed as prescribed in this chapter, or by some other writing, signed, attested and subscribed in the manner provided in this chapter, for the execution of a will; excepting, only, that nothing contained in this section shall prevent the revocation implied by law, from subsequent changes in the condition or circumstances of the testator. The power to make a will implies the power to revoke the same.

OF THE ADOPTION OF CHILDREN.

SEC. 4021. Any inhabitant of this State may petition the County Court, in the county of his residence, for leave to adopt a child not his own by birth; but no such petition made by a married person shall be granted, unless the husband or wife of the petitioner shall join therein;

nor shall any such petition be granted, unless the child, if of the age of fourteen years, or more, shall consent thereto in writing, in the presence of the court.

SEC. 4022. No such adoption shall be made, without the written consent of the living parents of such child, unless the court shall find that one of the parents has abandoned the child, or gone to parts unknown, when such consent may be given by the parent, if any, having the care of the child. In case where neither of the parents is living, or if living, have abandoned the child, such consent may be given by the guardian of such child, if any; if such child has no guardian, such consent may be given by any of the next of kin of such child, residing in this State, or, in the discretion of the court, by some suitable person to be appointed by the court.

2. In case of a child not born in lawful wedlock, such consent may be given by the mother, if she is living, and has not abandoned such child.

SEC. 4023. If upon such petition and consent, as herein provided, the County Court shall be satisfied of the identity and the relations of the persons, and that the petitioners are of sufficient ability to bring up, and furnish suitable nurture and education for the child, having reference to the degree and condition of its parents, and that it is proper that such adoption shall take effect, such court shall make an order, reciting said facts that, from and after the date thereof, such child shall be deemed, to all legal intents and purposes, the child of the petitioners; and by such order the name of such child may be changed to that of the parents by adoption.

SEC. 4024. A child so adopted, shall be deemed for the purposes of inheritance and succession by such child, custody of the person and right of obedience by such parents by adoption, and all other legal consequences and incidents of the natural relation of parents and children, the same to all intents and purposes as if such child had been born in lawful wedlock of such parents by adoption, excepting that such child shall not be capable of taking property expressly limited to the heirs of the body of such parents.

The natural parents of such child shall be deprived, by such order of adoption, of all legal rights whatsoever, respecting such child, and such child shall be freed from all legal obligations of maintenance and obedience to such natural parents.

INTEREST.

The legal rate of interest is 7 per cent. A higher rate of interest, not exceeding 10 per cent, may be contracted for, but the same must be clearly expressed in writing. If a higher rate than 10 per cent is collected or paid, the party so paying may, by himself or his legal representative, recover treble the amount so paid above the 10 per cent, if the action is brought within one year, and all bills, notes, or other contracts whatsoever, whereby a higher rate than 10 per cent is secured, shall be liable for the principal sum, but no interest shall be recovered.

JURISDICTION OF COURTS.

The Circuit Courts have general jurisdiction over all civil and criminal actions within their respective circuits, subject to a re-examination by the Supreme Court.

The County Courts shall have jurisdiction over the probate matters in their respective counties, and shall have exclusive appellate jurisdiction in the counties of Brown, Dodge, Fond du Lac, Milwaukee and Winnebago in all cases of appeals from Justices of the Peace in civil actions, and all cases commenced in Justices' Courts therein, there shall be an answer put in, showing that the title of lands will come in question.

And such Courts shall have concurrent and equal jurisdiction in all civil actions and proceedings with the Circuit Courts of said counties to the following extent respectively:

The County Court of Brown, when the value of the property in controversy, after deducting all payments and set-offs, shall not exceed five thousand dollars.

The County Court of Dodge County, when such value shall not exceed twenty-five thousand dollars.

The County Court of Fond du Lac, when such value shall not exceed twenty thousand dollars.

The County Court of Milwaukee, when such value does not exceed five million dollars.

The County of Winnebago, when such value does not exceed twenty thousand dollars.

They shall have jurisdiction of all actions for foreclosure where the value does not exceed the above amounts, and of all actions for divorce or for affirmation or annulment of marriage contract.

Justices of the Peace have jurisdiction in civil matters where two hundred dollars or less are involved.

The criminal jurisdiction of Justices extends to all cases where the fine is one hundred dollars, or the imprisonment six months.

JURORS.

All persons who are citizens of the United States, and qualified electors of the State shall be liable to be drawn as jurors, except as provided as follows:

The following persons shall be exempt from serving as jurors:

All officers of the United States, the Governor, Lieutenant Governor, Secretary of State, Attorney General, State Superintendent and Treasurer; all Judges, Clerks of Courts of Record; all county officers, Constables, attorneys and counselors at law, ministers of the Gospel of any religious society, practicing physicians, surgeons, dentists, and the President, professors and instructors of the University and their assistants, and of the several colleges and incorporated academies; all teachers of the State Normal Schools, one teacher in each common school, the officers and employes of the several State institutions, one miller in each grist-mill, one ferryman at each licensed ferry, one dispensing druggist in each prescription drug-store, all telegraph operators and superintendents, conductors, engineers, firemen, collectors and station-agents of any railroad or canal, while in actual employment as such; all officers of fire departments, and all active members of fire companies organized according to law; all persons more than sixty years of age, and all persons of unsound mind or subject to any bodily infirmity amounting to disability; all persons who have been convicted of any infamous crime, and all persons who have served at any regular term of the Circuit Court as a grand or petit juror within one year, except he shall be summoned on a special venire or as a talesman.

CAPITAL PUNISHMENT.

Capital punishment has been abolished in this State.

WOLF SCALPS.

A bounty of five dollars is paid for each wolf scalp.

WEIGHTS AND MEASURES.

Whenever either of the articles, as commodities hereafter mentioned, shall be sold by the bushel, and no special agreement as to measure or weight thereof shall be made by the parties, the measure shall be ascertained by weight, and shall be computed as follows:

Sixty pounds for a bushel of wheat, clover seed, potatoes or beans.

Fifty pounds for a bushel of green apples; fifty-six pounds for a bushel of rutabagas, flax-seed, rye or Indian corn shelled, and seventy pounds of Indian corn unshelled; fifty pounds for a bushel of rape seed, buckwheat, beets, carrots or onions; forty-eight pounds for a bushel of barley; forty-five pounds for a bushel of timothy seed; forty-four pounds for a bushel of parsnips; forty-two pounds for a bushel of common flat turnips; thirty-two pounds for a bushel of oats; and twenty-eight pounds for a bushel of dried apples or dried peaches.

No person shall sell, buy or receive in store any grain at any weight or measure per bushel other than the standard weight or measure per bushel fixed by law; and, for any violation, the offender shall forfeit not less than five nor more than fifty dollars.

DAMAGES FOR TRESPASS.

Any person who shall willfully, maliciously or wantonly destroy, remove, throw down or injure any fence, hedge or wall inclosing any orchard, pasture, meadow, garden, or any field whatever on land belonging to or lawfully occupied by another, or open and leave open, throw down, injure, remove or destroy any gate or bars in such fence, hedge or wall, or cut down, root up, sever, injure, destroy or carry away when severed, any fruit, shade, ornamental or other tree, or any shrub, root, plant, fruit, flower, grain or other vegetable production, or dig up, sever or carry away any mineral, earth or stone, or tear down, mutilate, deface or injure any building, sign-board, fence or railing, or sever and carry away any part thereof, standing or being upon the land of another or held in trust, or who shall willfully, maliciously or wantonly cut down, root up, injure, destroy or remove or carry away any fruit, ornamental or other tree, or any shrub, fruit, flower, vase or statue, arbor, or any ornamental structure, standing or being in any street or public ground in any city or village, in any private inclosure or highway, or destroy, remove, mutilate or injure any milestone or board, or any guide-post or board erected in any highway or public way, or on any turnpike, plank-road or railroad, or deface or obliterate any device or inscription thereon, or cut down, break down, remove, mutilate or injure any monument erected or tree marked for the purpose of designating the boundaries of any town or tract of land or subdivision thereof, or deface or obliterate any figures, letters, device or inscription thereon, made for such purpose, or break, remove, destroy or injure any post, guard, railing or lamp-post or lamp thereon, erected or being on any bridge, street, sidewalk, alley, court, passage, park, public ground, highway, turnpike, plank or rail road, or extinguish or break any lamp on any such lamp-post, or tear, deface, mutilate or injure any book, map, pamphlet, chart, picture or other property belonging to any public library, or take and carry away the same with intent to convert to his own use, or shall injure or destroy any personal property of another, shall be punished by imprisonment in the county jail not more than six months, or by fine not exceeding one hundred dollars.

Any person who shall willfully, maliciously or wantonly kill, maim, mutilate, disfigure or injure any horse, mule, cattle, sheep or other domestic animal of another, or administer poison to such animal, or expose any poison, with intent that the same may be taken or swallowed by such animal; and any person who shall overdrive, overwork, overload, maim, wound, torture, torment, cruelly beat or kill any such animal belonging to himself or another, or being the owner or having the care or charge thereof, shall fail to provide necessary food, water or shelter for any such animal, or who shall turn out and abandon, without proper care and protection, or cruelly work any such animal when old, diseased, disabled or unfit for work, or shall carry or confine any live animal, fowl or bird, in a cruel or inhuman manner, or who shall cause, procure or abet any cruelty above mentioned, or the fighting or baiting of bulls, dogs or cocks, shall be punished by imprisonment in the county jail not more than six months or by fine not exceeding one hundred dollars.

ESTRAYS.

No stray, except horses and mules, shall be taken up by any person not a resident of the town in which it is found; nor unless it is found upon land owned or occupied by him. Every finder for a stray must notify the owner, if he is known, within seven days, and request him to pay all reasonable charges and take the stray away. If the owner is not known, he must file a notice with the Town Clerk within ten days, who shall transmit a copy thereof to the County Clerk.

If the stray is not worth five dollars, the finder shall post a copy of such notice in two public places in such town; if it exceed five dollars in value, he shall publish such notice four

successive weeks either in some newspaper published in the county or in an adjoining county, if one be published nearer his residence than any published in his county; but if no newspaper is published within twenty miles of his residence, then he must post such notice in three public places in his county. Such notice shall describe the stray by giving its marks, natural or artificial, as near as possible, the name and residence of the finder, specifying the section and town, and the time when such stray was taken up. For neglect to post up or publish as required, the finder shall be liable to double the amount of damages sustained by the owner. For neglect to post or publish for one year, the finder shall be liable for its full value, to be recovered in the name of the town, and the amount recovered to be added to the school fund of such town.

The finder shall, within one month, cause the stray to be appraised by a Justice of the Peace and a certificate of such appraisal signed by such Justice filed in the Town Clerk's office. The finder shall pay the Justice fifty cents for such certificate, and ten cents per mile for each mile necessarily traveled to make the same.

The owner may have the same restored to him any time within one year after such notice is filed in the town Clerk's office, by proving that the stray belongs to him, and paying all lawful charges incurred in relation to the same. If the owner and finder cannot agree as to the charges, either party, on notice to the other, may apply to a Justice of such town to settle the same, who, for that purpose, may examine witnesses upon oath, and the amount found due, with the costs, shall be a lien upon such stray. If no owner applies for the return of such stray, as provided, and the same is not worth more than ten dollars, it shall become the absolute property of such finder; but if the appraisal shall exceed ten dollars, it shall be sold at public auction by the Sheriff or any Constable of the county, on the request of the finder, and he shall be entitled to one-half the proceeds, and the other half shall be paid to the Treasurer of the town within ten days. If the finder shall neglect or refuse to cause such sale, he shall pay to the town the value of such stray, to be recovered by the town.

If any person, without the consent of the owner, shall take away such stray, without first paying the lawful charges, he shall be liable to the finder for the value of such stray. If the finder shall neglect to do any act prescribed above, he shall be precluded from acquiring any right in such stray, and from receiving any charges or expenses relative thereto.

FENCES.

The Overseers of Highways in their respective towns, the Aldermen of cities in their respective wards, and the Trustees of villages in their respective villages, shall be Fence Viewers, and in towns having less than three road districts, the Supervisors shall be Fence Viewers.

All fences four and a half feet high, and in good repair, consisting of rails, timber, boards or stone walls, or any combination thereof, and all brooks, rivers, ponds, creeks, ditches and hedges or other things which shall be considered equivalent thereto, in the judgment of the Fence Viewers, within whose jurisdiction the same may be, shall be deemed legal and sufficient fences. Every partition of a fence, or line upon which a fence is to be built, made by the owners of the adjoining lands, in writing, sealed and witnessed by two witnesses, or by Fence Viewers in writing, under their hands, after being recorded in the Town Clerk's office, shall oblige such owners and their heirs, as long as they remain owners, and after parting with the ownership, until a new partition is made. A division of a partition fence, or line upon which a partition fence between adjoining lands shall be built, may be made by Fence Viewers in the following cases:

1. When any owner of uninclosed lands shall desire to inclose the same, he may have the line between his land and the adjoining land of any other person divided, and the portion upon which the respective owners shall erect their share of the partition fence assigned, whether such adjoining land be inclosed or not.
2. When any lands belonging to different persons in severalty, shall have been occupied in common, or without a partition fence between them, and one of the occupants shall be desirous

to occupy his part in severalty, and the others shall refuse or neglect, on demand, to divide with him the line where the fence ought to be built, or to build a sufficient fence on his part of the line, when divided, the occupant desiring it may have the same divided, and the share of each assigned.

3. When any controversy shall arise about the right of the respective occupants in partition fences, or their obligations to maintain the same, either party may have the line divided, and the share of each assigned.

In either case, application may be made to two or more Fence Viewers of the town where the lands lie, who shall give reasonable notice in writing to each party, and they shall in writing under their hands, divide the partition fence or line, and assign to each owner or occupant his share thereof, and in the second and third cases direct within what time each party shall build or repair his share of the fence, having regard to the season of the year; and shall file such decision in the Town Clerk's office. If either party shall neglect or refuse to build or repair within the time so assigned, his part of the fence, the other may, after having completed his own part, build or repair such part, and recover double the expense thereof.

Where the whole or a greater share than belongs to him has been built by one of the occupants, before complaint to the Fence Viewers, the other shall be obliged to pay for his share of such fence.

Where uninclosed land is afterward inclosed, the owner shall pay for one-half the partition fence upon the line between him and any other owner or occupant.

If any person shall determine not to keep inclosed any part of his land adjoining any partition fence, and shall give six months' notice of such determination to all adjoining occupants, he shall not be required to maintain any part of such fence during the time his lands shall lie open.

LANDLORD AND TENANT.

The common law right to distrain for rent is abolished.

The atonement of a tenant to a stranger shall be absolutely void, and shall not in anywise effect the possession of his landlord, unless it be made

1. With the consent of the landlord; or
2. Pursuant to, or in consequence of, a judgment or order of a court of competent jurisdiction; or

3. To a purchaser upon a judicial sale, who shall have acquired title to the lands by a conveyance thereof, after the period for redemption, if any, has expired. A tenancy, a will or sufferance may be determined by the landlord, giving one month's notice to quit, or the tenant giving one month's notice of his intention to quit, or if the terms of payment are for less than a month, notice equal to the time between payments, or for non-payment of rent, fourteen days' notice to quit. Such notice shall be served by delivering the same to such tenant, or to some person of proper age residing on the premises, or if no such person can be found, by affixing the same in a conspicuous part of the premises, where it may be conveniently read, and, at the expiration of the time required after the service of such notice, the landlord may re-enter, or maintain an action for the recovery of the possession thereof, or proceed in the manner prescribed by law to remove such tenant without further or other notice to quit. If, after giving notice of determination to quit, the tenant neglects or refuses to deliver up the premises, he shall be liable to double the rent agreed upon, to be collected the same as single rent.

MARKS AND BRANDS.

Every Town Clerk shall, on application of any person residing in his town, record a description of the marks or brands with which such person may be desirous of marking his horses, cattle, sheep or hogs; but the same description shall not be recorded or used by more than one resident of the same town. If any person shall mark any of his horses, cattle, sheep

or hogs, with the same mark or brand previously recorded by any resident of the same town, and while the same mark or brand shall be used by such resident, he shall forfeit for every such offense \$5; if any person shall willfully mark or brand any of the horses, cattle, sheep or hogs, of any other person with his mark or brand, he shall forfeit for every such offense \$10; and, if any person shall willfully destroy or alter any mark or brand upon any of the horses, cattle, sheep or hogs of another, he shall forfeit \$10, and pay to the party injured double damages.

SURVEYORS AND SURVEYS.

A County Surveyor is elected every two years.

The surveyor may appoint and remove deputies at will, on filing a certificate thereof with the County Clerk. He shall be responsible on his bond for the faithful performance by every deputy of his duties.

It shall be the duty of the County Surveyor:

- (1.) To execute, himself or by his deputy, any survey which may be required of him by order of court, or upon application of any individual or corporation.
- (2.) To make a record of the plat and field notes of each survey made by him or his deputies, in record books kept therefor, and to so arrange or index the same as to be easy of reference, and to file and preserve in his office the original field notes and calculations thereof.
- (3.) To safely keep all books, records, plats, files, papers and property belonging to his office; afford opportunity to examine the same to any person desiring, and deliver the same to his successor in office.
- (4.) To furnish a copy of any record, plat or paper in his office, to any person on demand and payment of his legal fees therefor.
- (5.) To administer to every chainman and marker assisting in any survey, before commencing their duties as such, an oath or affirmation faithfully and impartially to discharge the duties of chainman or marker, as the case may be; and the surveyor and his deputies are empowered to administer the same.
- (6.) To perform such other duties as may be required by law.

The surveyor and his deputies may demand and receive the following fees, except it be otherwise agreed upon with the parties employing them, to wit:

For each day's service, \$3.

For each mile traveled in going from his office to the place of rendering service and returning, 10 cents.

For plat and certificate, except town plats, 50 cents.

For recording a survey, 50 cents.

For each chainman and marker necessarily employed, \$1.50 per day, unless they be furnished by the person for whom the survey is made.

For making a copy, 10 cents a folio, and 25 cents for his certificate.

SUPPORT OF THE POOR.

Every town shall relieve and support all poor and indigent persons lawfully settled therein, whenever they shall stand in need thereof, excepting as follows:

The father, mother and children, being of sufficient ability, of any poor person, who is blind, old, lame, impotent or decrepit, so as to be unable to maintain himself, shall, at their own charge, relieve and maintain such poor person in such manner as shall be approved by the Supervisors of the town where such person may be, and, upon the failure of any such relative so to do, the Supervisors shall apply to the County Judge for an order to compel such relief.

Legal settlement may be acquired by one year's residence in a town of this State.

MARRIED WOMEN.

In Wisconsin, the marriage of a *femme sole*, executrix or administratrix, extinguishes her authority; and of a female ward, terminates the guardianship as to custody of person, but not as to estate. The husband holds his deceased wife's lands for life, unless she left, by a former husband, issue to whom the estate might descend. Provisions exist by which powers may be given to married women, and regulating their execution of them. If husband and wife are impleaded, and the husband neglects to defend the rights of the wife, she applying before judgment, may defend without him; and, if he lose her land, by default, she may bring an action for ejectment after his death. The real estate of females married before, and the real and personal property of those after February 21, 1850, remain their separate property. And any married woman may receive, but not from her husband, and hold any property as if unmarried. She may insure the life of her husband, son, or any other person, for her own exclusive benefit. The property of the wife remains to her separate use, not liable for her husband's debts, and not subject to his disposal. She may convey her separate property. If her husband desert her, or neglect her, she may become a sole trader; and she may insure his life for her benefit. Her husband is not liable for her debts contracted before marriage; the individual earnings of the wife are her separate property, and she may sue, and be sued alone, in regard to the same. She may make and hold deposits in savings-banks. She may, by a separate conveyance, release her dower in, any lands which her husband has conveyed.

If a woman has authority, she can transact all her husband's business for him; and while they live together, the wife can buy all family things necessary for the support of the family, and for which he is liable.

The husband is responsible for necessaries supplied to his wife, if he does not supply them himself; and he continues so liable, if he turns her out of his house, or otherwise separates himself from her without good cause. But he is not so liable, if she deserts him (unless on extreme provocation), or if he turns her away for good cause. If she leaves him, because he treats her so ill, that she has good right to go from him, this is the same thing as turning her away, and she carries with her his credit for all necessaries supplied to her; but what the misconduct must be, to give this right, is uncertain. In America the law must be, and undoubtedly is, that the wife is not obliged to stay and endure cruelty and indecency.

If a man lives with a woman as his wife, and represents her to be so, he is responsible, the same as if she were his wife, even if it is known that she is not his wife.

ACTIONS.

All distinctions have been abolished, and there is now but one form, which must be prosecuted in the name of the real party in interest, except in case of executors, administrators and trustees, and which is begun by the service of a summons on the defendant, to be answered within twenty days.

ARREST.

Defendant may be arrested: 1. In an action to recover damages not on contract, where the defendant is a non-resident, or is about to remove from the State, or where the action is for injury to the person or character, or for injury to, or wrong taking, detaining or converting property, or in an action to recover damages for property taken under false pretenses.

2. In an action for a fine or penalty or for money received or property embezzled or fraudulently misapplied by a public officer or attorney, solicitor, or counsel or officer of a corporation as such, or factor agent or broker, or for misconduct or neglect in official or professional employment.

3. In an action to recover property unjustly detained where it is so concealed that the Sheriff cannot find the same.

4. Where the defendant was guilty of fraud in contracting the debt, or in concealing or disposing of the property for the taking, detaining or disposing of which the action is brought. An affidavit must be made on the part of the plaintiff, stating the cause of action and one of the above causes.

ATTACHMENT

is allowed on an affidavit that the defendant is indebted to plaintiff, and stating the amount and that it is due on contract; and,

1. That defendant has absconded, or is about to abscond, or is concealed to the injury of his creditors.
2. That defendant has assigned, disposed or concealed his property or is about to do so with intent to defraud creditors.
3. That the defendant has removed, or is about to remove, his property from the State with intent to defraud creditors.
4. That the debt was fraudulently contracted.
5. That he is a non-resident.
6. Or a foreign corporation.
7. That he has fraudulently conveyed or disposed of his property with intent to defraud creditors.

The amount sued for must exceed \$50.

GARNISHMENT

is allowed on an affidavit on behalf of the creditor, that he believes that any third person (naming him) has property effects, or credits of defendant, or is indebted to him, also in execution, on a similar affidavit.

JUDGMENT

is a lien on real estate in the county where rendered from the date of docketing, and in other counties from the time of filing a transcript, and the lien continues for ten years. It bears interest at 7 per cent, or as high as 10 per cent if stipulated for in the contract.

STAY LAWS.

In Justices' Courts, on giving bond with surety within five days after judgment was rendered, stay of execution is allowed, as follows:

On sums not exceeding \$10, exclusive of costs, one month; between \$10 and \$30, two months; between \$30 and \$50, three months; over \$50, four months.

EXEMPTIONS.

A homestead not exceeding forty acres, used for agriculture and a residence, and not included in a town plat or a city or village; or, instead, one-quarter of an acre in a recorded town plat, city or village. Also, 1, Family Bible; 2, Family pictures and school-books; 3, Private library; 4, Seat or pew in church; 5, Right of burial; 6, Wearing-apparel, beds, bedsteads and bedding, kept and used in the family, stoves and appurtenances, put up and used, cooking utensils and household furniture to the value of \$200, one gun, rifle or fire-arm to the value of \$50; 7, Two cows, ten swine, one yoke of oxen and one horse or mule, or, in lieu thereof, a span of horses or mules, ten sheep and the wool therefrom, necessary food for exempt stock for one year, provided or growing or both, one wagon, cart or dray, one sleigh, one plow, one drag and other farm utensils, including tackle for the teams to the value of \$50; 8, Provisions and fuel for the family for one year; 9, Tools and implements or stock-in-trade of a

mechanic or miner, used and kept, not exceeding \$200 in value, library and implements of a professional man to the value of \$200; 10, Money arising from insurance of exempt property destroyed by fire; 11, Inventions for debts against the inventor; 12, Sewing-machines; 13, Sword, plate, books or articles presented by Congress or Legislature of a State; 14, Printing-material and presses to the value of \$1,500; 15, Earnings of a married person necessary for family support for sixty days previous to issuing process.

LIMITATIONS OF ACTIONS.

Real actions, *twenty years*; persons under disabilities, five years after removal of the same. Judgments of Courts of Record of the State of Wisconsin and sealed instruments when the cause accrues within the State, *twenty years*. Judgments of other Courts of Record and sealed instruments accruing without the State, *ten years*. Other contracts, statute liabilities other than penalties and forfeitures, trespass on real property, trover detinue and replevin, *six years*. Actions against Sheriffs, Coroners and Constables, for acts done in their official capacity, except for escapes, *three years*. Statutory penalties and forfeitures, libel, slander, assault, battery and false imprisonment, *two years*. Actions against Sheriffs, etc., for escapes, *one year*. Persons under disabilities, except infants, may bring action after the disability ceases, provided the period is not extended more than *five years*, and infants *one year* after coming of age. Actions by representatives of deceased persons, *one year* from death; against the same, *one year* from granting letters testamentary or of administration. New promise must be in writing.

COMMERCIAL TERMS.

\$—Means dollars, being a contraction of U. S., which was formerly placed before any denomination of money, and meant, as it means now, United States currency.

£—Means *pounds*, English money.

@—Stands for *at* or *to*; lb for pounds, and bbl. for barrels; ₧ for *per*, or *by the*. Thus: Butter sells at 20@30c ₧ lb, and Flour at \$8@12 ₧ bbl. % for per cent., and # for numbers.

May 1. Wheat sells at \$1.20@\$1.25, "seller June." *Seller June* means that the person who sells the wheat has the privilege of delivering it at any time during the month of June.

Selling *short* is contracting to deliver a certain amount of grain or stock at a fixed price, within a certain length of time, when the seller has not the stock on hand. It is for the interest of the person selling *short* to depress the market as much as possible, in order that he may buy and fill his contract at a profit. Hence the "shorts" are termed "bears."

Buying *long* is to contrive to purchase a certain amount of grain or shares of stock at a fixed price, deliverable within a stipulated time, expecting to make a profit by the rise in prices. The "longs" are termed "bulls," as it is for their interest to "operate" so as to "toss" the prices upward as much as possible.

SUGGESTIONS TO THOSE PURCHASING BOOKS BY SUBSCRIPTION.

The business of publishing books by subscription having so often been brought into dispute by agents making representations and declarations not authorized by the publisher, in order to prevent that as much as possible, and that there may be more general knowledge of the relation such agents bear to their principal, and the law governing such cases, the following statement is made:

A subscription is in the nature of a contract of mutual promises, by which the subscriber agrees to pay a certain sum for the work described; the consideration is concurrent that the publisher shall publish the book named, and deliver the same, for which the subscriber is to pay the price named. The nature and character of the work is described by the prospectus and sample shown. These should be carefully examined before subscribing, as they are the

basis and consideration of the promise to pay, and not the too often exaggerated statements of the agent, who is merely employed to solicit subscriptions, for which he is usually paid a commission for each subscriber, and has no authority to change or alter the conditions upon which the subscriptions are authorized to be made by the publisher. Should the agent assume to agree to make the subscription conditional or modify or change the agreement of the publisher, as set out by the prospectus and sample, in order to bind the principal, the subscriber should see that such condition or changes are stated over or in connection with his signature, so that the publisher may have notice of the same.

All persons making contracts in reference to matters of this kind, or any other business, should remember that the law as written is, that they cannot be altered, varied or rescinded verbally, but, if done at all, must be done in writing. It is therefore important that all persons contemplating subscribing should distinctly understand that all talk before or after the subscription is made, is not admissible as evidence, and is no part of the contract.

Persons employed to solicit subscriptions are known to the trade as canvassers. They are agents appointed to do a particular business in a prescribed mode, and have no authority to do it in any other way to the prejudice of their principal, nor can they bind their principal in any other matter. They cannot collect money, or agree that payment may be made in anything else but money. They cannot extend the time of payment beyond the time of delivery, nor bind their principal for the payment of expenses incurred in their business.

It would save a great deal of trouble, and often serious loss, if persons, before signing their names to any subscription book, or any written instrument, would examine carefully what it is; if they cannot read themselves call on some one disinterested who can.

CONSTITUTION OF THE STATE OF WISCONSIN.

CONDENSED.

PREAMBLE.

We, the People of Wisconsin, grateful to Almighty God for our freedom; in order to secure its blessings, form a more perfect government, insure domestic tranquillity, and promote the general welfare, do establish this Constitution.

ARTICLE I.

DECLARATION OF RIGHTS.

SECTION 1. All men are born free and independent, and have, among other rights, those of life, liberty and pursuit of happiness. Governments are instituted to secure these rights.

SEC. 2. There shall be neither slavery nor involuntary servitude, except for the punishment of crimes.

SEC. 3. Liberty of speech and of the press shall not be abridged.

SEC. 4. The right of the people to peaceably assemble to consult for the common good shall never be abridged.

SEC. 5. The right of trial by jury shall remain inviolate.

SEC. 6. Excessive bail shall not be required, nor excessive fines imposed, nor cruel punishments inflicted.

SEC. 7. In criminal prosecutions, the rights of the accused shall be protected.

SEC. 8. Criminal offenses shall be prosecuted on presentment of a grand jury. No one shall be twice put in jeopardy for the same offense, nor be compelled to be a witness against himself. Every one shall have the right of giving bail except in capital offenses; and the writ of habeas corpus shall not be suspended, except in case of rebellion or invasion.

SEC. 9. Every person is entitled to a certain remedy for all injuries or wrongs.

SEC. 10. Treason consists in levying war against the State, or giving aid and comfort to its enemies. Two witnesses are necessary to convict a person of the crime.

SEC. 11. The people are to be secure against unreasonable searches and seizures.

SEC. 12. Bills of attainder, ex post facto laws, or laws impairing obligation of contracts, shall never be passed.

SEC. 13. No property shall be taken for public use without compensation.

SEC. 14. All laws in the State are allodial. Feudal tenures are prohibited.

SEC. 15. The rights of property are the same in resident aliens and citizens.

SEC. 16. No person shall be imprisoned for debt.

SEC. 17. Wholesome exemption laws shall be passed.

SEC. 18. Liberty of conscience and rights of worship shall never be abridged. The public money shall never be applied to sectarian uses.

SEC. 19. No religious test shall ever be required as a qualification for any office.

SEC. 20. The military shall be in strict subordination to the civil power.

SEC. 21. Writs of error shall never be prohibited by law.

SEC. 22. A free government can only be maintained by adhering to justice, moderation, temperance, frugality and virtue.

ARTICLE II.

BOUNDARIES.

SECTION 1. The boundary of the State, beginning at the northeast corner of the State of Illinois, runs with the boundary line of Michigan, through Lake Michigan and Green Bay, to the mouth of the Menominee River; up that stream and the Brule River to Lake Brule; along the southern shore of that lake to the Lake of the Desert; thence in a direct line to the head of Montreal River; down the main channel of that stream to the middle of Lake Superior; thence through the center of said lake to the mouth of St. Louis River; up the channel of that stream to the first rapids; thence due south to the main branch of the St. Croix; down that river and the Mississippi to the northwest corner of Illinois; thence due east with the northern boundary of that State to the place of beginning.

SEC. 2. The propositions in the enabling act of Congress are accepted and confirmed.

ARTICLE III.

SUFFRAGE.

SECTION 1. The qualified electors are all male persons twenty-one years of age or upward, who are (1.) white citizens of the United States; (2.) who are white persons of foreign birth that have declared their intentions, according to law, to become citizens; (3) who are persons of Indian blood and citizens of the United States; and (4.) civilized Indians not members of any tribe.

SEC. 2. Persons under guardianship, such as are non compos mentis or insane, and those convicted of treason and felony and not pardoned, are not qualified electors.

SEC. 3. All votes shall be by ballot, except for township officers when otherwise directed by law.

SEC. 4. No person shall be deemed to have lost his residence by reason of his absence on business for the State or United States.

SEC. 5. No person in the army or navy shall become a resident of the State in consequence of being stationed therein.

SEC. 6. Persons convicted of bribery, larceny or any infamous crime, or those who bet on elections, may be excluded by law from the right of suffrage.

ARTICLE IV.

LEGISLATIVE.

SECTION 1. The Legislative power is vested in a Senate and Assembly.

SEC. 2. Members of the Assembly shall never number less than fifty-four, nor more than one hundred; of the Senate, not more than one-third, nor less than one-fourth of the members of the Assembly.

SEC. 3. Census shall be taken, every ten years, of the inhabitants of the State, beginning with 1855, when a new apportionment of members of the Senate and Assembly shall be made; also, after each United States census.

SEC. 4. Members of the Assembly shall be chosen on the Tuesday succeeding the first Monday of November of each year.

SEC. 5. Members of the Senate shall be elected for two years, at the same time and in the same manner as members of the Assembly.

SEC. 6. No person shall be eligible to the Legislature, unless a resident of the State one year, and a qualified elector.

SEC. 7. Each House shall be the judge of the qualifications of its members. A majority shall be necessary to form a quorum.

SEC. 8. Each House shall make its own rules.

SEC. 9. Each House shall choose its own officers.

SEC. 10. Each House shall keep a journal of its proceedings.

SEC. 11. The Legislature shall meet at the seat of government once a year.

SEC. 12. No member shall be eligible to any other civil office in the State, during the term for which he was elected.

SEC. 13. No member shall be eligible to any office of the United States, during the term for which he was elected.

SEC. 14. Writs of election, to fill vacancies in either House, shall be issued by the Governor.

SEC. 15. Except treason, felony and breach of the peace, members are privileged from arrest in all cases; nor subject to any civil process during a session.

SEC. 16. Members are not liable for words spoken in debate.

SEC. 17. The style of all laws shall be, "The people of the State of Wisconsin represented in Senate and Assembly, do enact as follows:"

SEC. 18. Private or local bills shall not embrace more than one subject.

SEC. 19. Bills may originate in either House, and a bill passed by one House may be amended by the other.

SEC. 20. Yeas and nays, at the request of one-sixth of the members present, shall be entered on the journal.

SEC. 21. [Each member shall receive, as an annual compensation, three hundred and fifty dollars and ten cents for each mile traveled in going to and returning from the seat of government]. As amended in 1867.

SEC. 22. Boards of Supervisors may be vested with powers of a local, legislative and administrative character, such as shall be conferred by the Legislature.

SEC. 23. One system only, of town and county government, shall be established by the Legislature.

SEC. 24. The Legislature shall never authorize any lottery, or grant any divorce.

SEC. 25. Stationery, for State use and State printing, shall be let by contract to the lowest bidder.

SEC. 26. Extra compensation to any public officer shall not be granted after service is rendered, nor shall his compensation be increased or diminished during his term of office.

SEC. 27. The Legislature shall direct, by law, in what manner and in what Courts suits against the State may be brought.

SEC. 28. Public officers shall all take an oath of office.

SEC. 29. The Legislature shall determine what persons shall constitute the militia, and may provide for organizing the same.

SEC. 30. Members of the Legislature shall vote *viva voce* in all elections made by them.

SEC. 31. [Special legislation is prohibited (1) for changing the names of persons, or constituting one person the heir-at-law of another; (2) for laying out, opening or altering highways, except in certain cases; (3) for authorizing persons to keep ferries; (4) for authorizing the sale of the property of minors; (5) for locating a county seat; (6) for assessment of taxes; (7) for granting corporate powers, except to cities; (8) for apportioning any part of the school fund; and (9) for incorporating any town or village, or to award the charter thereof]. Added by amendment, in 1871.

SEC. 32. [General laws shall be passed for the transaction of any business prohibited by Section 21 of this Article.] Added by amendment, in 1871.

ARTICLE V.

SECTION 1. The executive power shall be vested in a Governor, who shall hold his office two years. A Lieutenant Governor shall be elected at the same time and for the same term.

SEC. 2. Governor and Lieutenant Governor must be citizens of the United States, and qualified electors of the State.

SEC. 3. Governor and Lieutenant Governor are elected at the times and places of choosing members of the Legislature.

SEC. 4. The Governor shall be (1) commander-in-chief of the military and naval forces of the State; (2) he has power to convene the Legislature in extra session; (3) he shall communicate to the Legislature all necessary information; (4) he shall transact all necessary business with the officers of the State; and (5) shall expedite all legislative measures, and see that the laws are faithfully executed.

SEC. 5. [The Governor's salary shall be five thousand dollars per annum.] As amended in 1869.

SEC. 6. The Governor shall have power to grant reprieves and pardons.

SEC. 7. The executive duties shall devolve upon the Lieutenant Governor when, from any cause, the executive office is vacated by the Governor.

SEC. 8. The Lieutenant Governor shall be President of the Senate. The Secretary of State shall act as Governor when both the Governor and Lieutenant Governor are incapacitated from any causes to fill the executive office.

SEC. 9. [The Lieutenant Governor shall receive a salary of one thousand dollars per annum.] As amended in 1869.

SEC. 10. All legislative bills shall be presented to the Governor for his signature before they become laws. Bills returned by the Governor without his signature may become laws by agreement of two-thirds of the members present in each house.

ARTICLE VI.

ADMINISTRATION.

SECTION 1. A Secretary of State, Treasurer and Attorney General shall be elected at the times and places of choosing members of the Legislature, who shall severally hold their offices for two years.

SEC. 2. The Secretary of State shall keep a record of the official acts of the Legislature and Executive Department. He shall be ex officio Auditor.

SEC. 3. The powers, duties and compensation of the Treasurer and Attorney General shall be prescribed by law.

SEC. 4. Sheriffs, Coroners, Registers of Deeds and District Attorneys shall be elected every two years.

ARTICLE VII.

JUDICIARY.

SECTION 1. The Senate shall form the Court of Impeachment. Judgment shall not extend further than removal from office; but the person impeached shall be liable to indictment, trial and punishment, according to law.

SEC. 2. The judicial power of the State is vested in a Supreme Court, Circuit Courts, Courts of Probate, and in Justices of the Peace. Municipal courts, also, may be authorized.

SEC. 3. The Supreme Court shall have appellate jurisdiction only. Trial by jury is not allowed in any case. The Court shall have a general superintending control over inferior courts, and power to issue writs of habeas corpus, mandamus, injunction, quo warranto, certiorari, and other original and remedial writs.

SEC. 4. [The Supreme Court shall consist of one Chief Justice, and four Associate Justices, each for the term of ten years.] As amended in 1877.

SEC. 5. The State shall be divided into five Judicial Circuits.

SEC. 6. The Legislature may alter the limits or increase the number of the circuits.

SEC. 7. There shall be a Judge chosen for each Circuit, who shall reside therein; his term of office shall be six years.

SEC. 8. The Circuit Courts shall have original jurisdiction in all matters civil and criminal, not excepted in this Constitution, and not prohibited hereafter by law, and appellate jurisdiction from all inferior courts. They shall have power to issue writs of habeas corpus, mandamus, injunction, quo warranto, certiorari, and all other writs necessary to carry their orders and judgments into effect.

SEC. 9. Vacancies in the office of Supreme or Circuit Judge shall be filled by the Governor. Election for Judges shall not be at any general election, nor within thirty days before or after said election.

SEC. 10. Judges of the Supreme and Circuit Courts shall receive a salary of not less than one thousand five hundred dollars, and shall hold no other office, except a judicial one, during the term for which they are respectively elected. Each Judge shall be a citizen of the United States, and have attained the age of twenty-five years. He shall also be a qualified elector within the jurisdiction for which he may be chosen.

SEC. 11. The Supreme Court shall hold at least one term annually. A Circuit Court shall be held at least twice in each year, in each county of this State organized for judicial purposes.

SEC. 12. There shall be a Clerk of the Circuit Court chosen in each county, whose term of office shall be two years. The Supreme Court shall appoint its own Clerk.

SEC. 13. Any Judge of the Supreme or Circuit Court may be removed from office by vote of two-thirds of all the members elected to both Senate and Assembly.

SEC. 14. A Judge of Probate shall be elected in each county, who shall hold his office for two years.

SEC. 15. Justices of the Peace shall be elected in the several towns, villages and cities of the State, in such manner as the Legislature may direct, whose term of office shall be two years. Their civil and criminal jurisdiction shall be prescribed by law.

SEC. 16. Laws shall be passed for the regulation of tribunals of conciliation. These may be established in and for any township.

SEC. 17. The style of all writs and process shall be "The State of Wisconsin." Criminal prosecutions shall be carried on in the name and by authority of the State; and all indictments shall conclude against the peace and dignity of the same.

SEC. 18. A tax shall be imposed by the Legislature on all civil suits, which shall constitute a fund, to be applied toward the payment of the salary of Judges.

SEC. 19. Testimony in equity causes shall be taken the same as in cases at law. The office of Master in Chancery is prohibited.

SEC. 20. Any suitor may prosecute or defend his case in his own proper person, or by attorney or agent.

SEC. 21. Statute laws and such judicial decisions as are deemed expedient, shall be published. No general law shall be in force until published.

SEC. 22. The Legislature at its first session shall provide for the appointment of three Commissioners to revise the rules of practice in the several Courts of Record in the State.

SEC. 23. The Legislature may confer judicial powers on one or more persons in each organized county of the State. Powers granted to such Commissioners shall not exceed that of a Judge of a Circuit Court at chambers.

ARTICLE VIII.

FINANCE.

SECTION 1. Taxation shall be uniform, and taxes shall be levied upon such property as the Legislature may prescribe.

SEC. 2. [No money shall be paid out of the treasury except in pursuance of an appropriation by law. Claims made against the State must be filed within six years after having accrued.] As amended in 1877.

SEC. 3. The credit of the State shall never be given or loaned in aid of any individual, association or corporation.

SEC. 4. The State shall never contract any public debt, except in the cases and manner provided in this Constitution.

SEC. 5. A tax shall be levied each year sufficient to defray estimated expenses.

SEC. 6. Debts not to exceed one hundred thousand dollars may be contracted by the State, which shall be paid within five years thereafter.

SEC. 7. The Legislature may borrow money to repel invasion, suppress insurrection or defend the State in time of war.

SEC. 8. All fiscal laws in the Legislature shall be voted on by yeas and nays.

SEC. 9. State scrip shall not be issued except for such debts as are authorized by the sixth and seventh sections of this article.

SEC. 10. No debt for internal improvements shall be contracted by the State.

ARTICLE IX.

EMINENT DOMAIN AND PROPERTY OF THE STATE.

SECTION 1. The State shall have concurrent jurisdiction on all rivers and lakes bordering on Wisconsin.

SEC. 2. The title to all property which has accrued to the Territory of Wisconsin shall vest in the State of Wisconsin.

SEC. 3. The ultimate property in and to all lands of the State is possessed by the people.

ARTICLE X.

EDUCATION.

SECTION 1. The supervision of public instruction shall be vested in a State Superintendent and such other officers as the Legislature shall direct. The annual compensation of the State Superintendent shall not exceed twelve hundred dollars.

SEC. 2. The school fund to support and maintain common schools, academies and normal schools, and to purchase apparatus and libraries therefor, shall be created out of (1) the proceeds of lands from the United States; (2) out of forfeitures and escheats; (3) out of moneys paid as exemptions from military duty; (4) out of fines collected for breach of penal laws; (5) out of any grant to the State where the purposes of such grant are not specified; (6) out of the proceeds of the sale of five hundred thousand acres of land granted by Congress September 14, 1841; and (7) out of the five per centum of the net proceeds of the public lands to which the State shall become entitled on her admission into the Union (if Congress shall consent to such appropriation of the two grants last mentioned.)

SEC. 3. District schools shall be established by law which shall be free to all children between the ages of four and twenty years. No sectarian instruction shall be allowed therein.

SEC. 4. Each town and city shall raise for common schools therein by taxation a sum equal to one-half the amount received from the school fund of the State.

SEC. 5. Provisions shall be made by law for the distribution of the income of the school fund among the several towns and cities for the support of common schools therein; but no appropriation shall be made when there is a failure to raise the proper tax, or when a school shall not have been maintained at least three months of the year.

SEC. 6. Provision shall be made by law for the establishment of a State University. The proceeds of all lands granted for the support of a university by the United States shall constitute "the University fund," the interest of which shall be appropriated to the support of the State University. No sectarian instruction shall be allowed in such university.

SEC. 7. The Secretary of State, Treasurer and Attorney General shall constitute a Board of Commissioners to sell school and university lands and for the investments of the proceeds thereof.

SEC. 8. School and university lands shall be appraised and sold according to law. The Commissioners shall execute deeds to purchasers, and shall invest the proceeds of the sales of such lands in such manner as the Legislature shall provide.

ARTICLE XI.

CORPORATIONS.

SECTION 1. Corporations without banking powers may be formed under general laws, but shall not be created by special act, except for municipal purposes, and in cases where, in the judgment of the Legislature, the objects of the corporation cannot be attained under general laws.

SEC. 2. No municipal corporation shall take private property for public use, against the consent of the owner, except by jury trial.

SEC. 3. Cities and incorporated villages shall be organized, and their powers restricted by law so as to prevent abuses. [No county, city, town, village, school district, or other municipal corporation, shall become indebted to exceed five per centum on the value of the taxable property therein.] As amended in 1874.

SEC. 4. Banks shall not be created except as provided in this article.

SEC. 5. The question of "bank" or "no bank" may be submitted to the voters of the State; and if a majority of all the votes cast shall be in favor of banks, the Legislature shall have power to grant bank charters, or pass a general banking law.

ARTICLE XII.

SECTION 1. Amendments to the Constitution may be proposed in either house of the Legislature, and referred to the next Legislature and published for three months previous. If agreed to by a majority of all the members elected to each house, then the amendment or amendments shall submit them to the vote of the people; and if the people shall approve and ratify such amendment or amendments, they shall become a part of the Constitution.

SEC. 2. If a convention to revise or change the Constitution shall be deemed necessary by the Legislature, they shall recommend to the electors of the State to vote at the next general election for or against the same. If the vote shall be for the calling of such convention, then the Legislature, at its next session, shall provide for the same.

ARTICLE XIII.

MISCELLANEOUS PROVISIONS.

SECTION 1. The political year for Wisconsin shall commence on the first Monday in January in each year. General elections shall be holden on the Tuesday succeeding the first Monday in November.

SEC. 2. A duelist shall not be qualified as an elector in this State.

SEC. 3. United States officers (except Postmasters), public defaulters, or persons convicted of infamous crimes, shall not be eligible to office in this State.

SEC. 4. A great seal for the State shall be provided, and all official acts of the Governor (except his approbation of the laws), shall be authenticated thereby.

SEC. 5. Residents on Indian lands may vote, if duly qualified, at the polls nearest their residence.

SEC. 6. Elective officers of the Legislature, other than the presiding officers, shall be a Chief Clerk, and a Sergeant-at-Arms, to be elected by each House.

SEC. 7. No county with an area of nine hundred square miles or less, shall be divided, without submitting the question to the vote of the people of the county.

SEC. 8. [The Legislature is prohibited from enacting any special or private laws, for locating or changing any county seat.] See amendment adopted in 1871, as Sec. 31 (Subdivision 5) of Art. IV.

SEC. 9. Officers not provided for by this Constitution shall be elected as the Legislature shall direct.

SEC. 10. The Legislature may declare the cases in which any office shall be deemed vacant, and also the manner of filling the vacancy, where no provision is made for that purpose in this Constitution.

ARTICLE XIV.

SCHEDULE.

SECTION 1. All rights under the Territorial government are continued under the State government. Territorial processes are valid after the State is admitted into the Union.

SEC. 2. Existing laws of the Territory of Wisconsin not repugnant to this Constitution shall remain in force until they expire by limitation or are altered or repealed.

SEC. 3. All fines, penalties or forfeitures accruing to the Territory of Wisconsin shall inure to the use of the State.

SEC. 4. Territorial recognizances, bonds and public property shall pass to and be vested in the State. Criminal prosecutions, offenses committed against the laws, and all actions at law and suits in equity in the Territory of Wisconsin shall be contained in and prosecuted by the State.

SEC. 5. Officers holding under authority of the United States or of the Territory of Wisconsin shall continue in office until superseded by State authority.

SEC. 6. The first session of the State Legislature shall commence on the first Monday in June next, and shall be held at the village of Madison, which shall be and remain the seat of government until otherwise provided by law.

SEC. 7. Existing county and town officers shall hold their offices until the Legislature of the State shall provide for the holding of elections to fill such offices.

SEC. 8. A copy of this Constitution shall be transmitted to the President of the United States to be laid before Congress at its present session.

SEC. 9. This Constitution shall be submitted to the vote of the people for ratification or rejection on the second Monday in March next. If ratified, an election shall be held for Governor, Lieutenant Governor, Treasurer, Attorney General, members of the State Legislature and members of Congress, on the second Monday of May next.

SEC. 10. [Omitted. See Section 1, Chapter 3, Acts of Extra Session of 1878.]

SEC. 11. The several elections provided for in this Article shall be conducted according to the existing laws of the Territory of Wisconsin.

SEC. 12. [Omitted. See Section 1, Chapter 3, Acts of Extra Session of 1878.]

SEC. 13. The common law in force in the Territory of Wisconsin shall continue in force in the State until altered or suspended by the Legislature.

SEC. 14. The Senators first elected in the even-numbered Senate districts, the Governor, Lieutenant Governor and other State officers first elected under this Constitution, shall enter upon their duties on the first Monday of June next, and hold their offices for one year from the first Monday of January next. The Senators first elected in the odd-numbered districts and the

members of the Assembly first elected shall enter upon their duties on the first Monday of June next, and continue in office until the first Monday in January next.

SEC. 15. The oath of office may be administered by any Judge or Justice of the Peace, until the Legislature shall otherwise direct.

We, the undersigned, members of the Convention to form a Constitution for the State of Wisconsin, to be submitted to the people thereof for their ratification or rejection, do hereby certify that the foregoing is the Constitution adopted by the Convention.

In testimony whereof, we have hereunto set our hands, at Madison, the 1st day of February, A. D. 1848.

MORGAN L. MARTIN,

President of the Convention and Delegate from Brown County.

THOMAS MCHUGH,

Secretary.

CONSTITUTION OF THE UNITED STATES.

CONDENSED.

PREAMBLE.

We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I.

SECTION 1. All legislative powers herein granted shall be vested in a Congress, which shall consist of a Senate and House of Representatives.

SEC. 2. The House of Representatives shall be composed of members chosen every second year by the people of the States, and electors shall have qualifications for electors of the most numerous branch of the State Legislature.

Representatives must be twenty-five years of age, and must have been seven years citizens of the United States, and inhabitants of the State in which they shall be chosen.

Representatives and direct taxes shall be apportioned among the several States according to population, which shall be determined by adding to the whole number of free persons, including apprentices and excluding Indians not taxed, three-fifths of all other persons. The enumeration shall be made within three years after the first meeting of Congress, and every ten years thereafter in such manner as Congress shall by law direct. States shall have one Representative only for each thirty thousand, but each State shall have at least one Representative; and until such enumeration shall be made, New Hampshire shall choose three; Massachusetts, eight; Rhode Island, one; Connecticut, five; New York, six; New Jersey, four; Pennsylvania, eight; Delaware, one; Maryland, six; Virginia, ten; North Carolina, five; South Carolina, five, and Georgia, three.

Vacancies in the representation from any State shall be filled by elections, ordered by the executive authority of the State.

The House of Representatives shall choose their Speaker and other officers, and shall have the sole power of impeachment.

SEC. 3. The Senate shall be composed of two Senators from each State, chosen by the Legislature thereof for six years; and each Senator shall have one vote.

Senators shall be divided as equally as may be into three classes immediately after assembling, in consequence of the first election. The first class shall vacate their seats at the expiration of the second year; the second class, at the expiration of the fourth year, and the third class, at the expiration of the sixth year, so that one-third may be chosen every second year; and vacancies happening by resignation or otherwise during the recess of the Legislature of any State may be filled by temporary appointments of the Executive until the next meeting of the Legislature.

All Senators shall have attained the age of thirty years, and shall have been nine years citizens of the United States, and shall be inhabitants of the State for which they shall be chosen.

The Vice President of the United States shall be President of the Senate, but shall have no vote, unless they be equally divided.

The Senate shall choose their other officers, and also a President pro tempore, in the absence of the Vice President, or when he shall exercise the office of President,

The Senate shall have the sole power to try impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the President is tried, the Chief Justice shall preside, and concurrence of two-thirds of the members present shall be necessary to conviction.

Judgment in cases of impeachment shall be limited to removal from office and disqualification to hold any office under the United States; but the party convicted shall be liable to trial and punishment according to law.

SEC. 4. The Legislature of each State shall prescribe the times, places and manner of holding elections for Senators and Representatives, but Congress may make or alter such regulations, except as to the place of choosing Senators.

Congress shall assemble annually, on the first Monday in December, unless a different day be appointed.

SEC. 5. Each House shall be the judge of the elections, returns and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may compel attendance of absent members, under penalties.

Each House may determine its own rules of proceeding, punish its members, and, by a two-thirds vote, expel a member.

Each House shall keep a journal, which shall be published at their discretion, and one-fifth of those present may require the yeas and nays to be entered on the journal.

Neither House shall adjourn for more than three days without the consent of the other, nor to any other place than that in which they are sitting.

SEC. 6. The compensation of Senators and Representatives shall be fixed by law, and paid out of the Treasury of the United States. They shall be privileged from arrest during attendance at the session of their respective Houses, except for treason, felony and breach of the peace, and shall not be questioned in any other place for any speech or debate in either House.

No Senator or Representative shall, during the time for which he was elected, be appointed to any civil office under the United States which shall have been created or the emoluments whereof shall have been increased during such time; and no person holding office under the United States shall be a member of either House during his continuance in office.

SEC. 7. All bills for raising revenue shall originate in the House of Representatives, but may be amended by the Senate.

Every bill passed by the House of Representatives and the Senate shall, before it becomes a law, be presented to the President; if he approve, he shall sign it; but if not, he shall return

it, with his objections, to that House in which it originated, who shall enter the objections on their journal and proceed to reconsider it. If, after reconsideration, two-thirds shall agree to pass the bill, it shall be sent, with the objections, to the other House, and, if approved by two-thirds of that House, it shall become a law. But in all such cases, the yeas and nays shall be taken, and entered upon the journal of each House, respectively. Any bill not returned by the President within ten days (Sundays excepted) after it shall have been presented to him, shall be a law, as if he had signed it, unless Congress, by adjournment, shall prevent its return, in which case it shall not be a law.

Every order, resolution or vote requiring the concurrence of the Senate and House of Representatives (except a question of adjournment), shall be approved by the President before taking effect; or, being disapproved by him, shall be repassed by a two-thirds vote of each House, as in the case of a bill.

SEC. 8. Congress shall have power:

To lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States;

To borrow money on the public credit;

To regulate commerce with foreign nations, and among the several States and with the Indian tribes;

To establish a uniform rule of naturalization, and uniform laws on the subject of bankruptcies;

To coin money, regulate the value thereof and foreign coin, and fix the standard of weights and measures;

To provide for the punishment of counterfeiting the securities and current coin of the United States;

To establish post offices and post roads;

To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries;

To constitute tribunals inferior to the Supreme Court;

To define and punish piracies and felonies committed on the high seas, and offenses against the laws of nations;

To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water;

To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years;

To provide and maintain a navy;

To make rules for the government and regulation of the land and naval forces;

To provide for calling forth the militia to execute the laws of the Union, suppress insurrection and repel invasions;

To provide for organizing, arming and disciplining the militia, and for governing such parts of them as may be employed in the service of the United States—the several States to appoint the officers and to train the militia according to the discipline prescribed by Congress;

To exercise exclusive legislation, in all cases, over the seat of Government, and over all forts, magazines, arsenals, dock-yards and other needful buildings; and

To make all laws necessary and proper for carrying into execution all powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

SEC. 9. Foreign immigration or the importation of slaves into the States shall not be prohibited by Congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed not exceeding ten dollars for each person so imported.

The writ of habeas corpus shall not be suspended, unless required by the public safety in cases of rebellion or invasion.

No bill of attainder or ex post facto law shall be passed.

No capitation or other direct tax shall be laid, unless in proportion to the census or enumeration hereinbefore directed to be made.

No tax or duty shall be laid on articles exported from any State.

In regulating commerce or revenue, no preference shall be given to the ports of one State over those of another; nor shall vessels bound to or from one State be obliged to enter, clear or pay duties in another.

No money shall be drawn from the Treasury unless appropriated by law; and accounts of the receipts and expenditures of all public money shall be published from time to time.

No title of nobility shall be granted by the United States; and no person holding any office under them shall accept any present, emolument, office or title from any foreign State, without the consent of Congress.

SEC. 10. No State shall enter into any treaty, alliance or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts; pass bills of attainder, ex post facto laws, or law impairing the obligation of contracts, or grant any title of nobility.

No State shall, without the consent of Congress, lay any imposts or duties on imports or exports, except for the execution of its inspection laws; and all such duties shall be for the use of the United States; and all such laws shall be subject to the revision and control of Congress.

No State shall, without the consent of Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another State or with a foreign power, or engage in war unless actually invaded or in imminent and immediate danger.

ARTICLE II.

SECTION 1. The executive power shall be vested in a President. He shall hold office for four years, and, together with the Vice President chosen for the same term, shall be elected as follows:

Each State shall appoint in the manner directed by the Legislature, a number of electors equal to the whole number of its Senators and Representatives in Congress; but no Senator or Representative or person holding any office under the United States shall be appointed an elector.

[The third clause of this section has been superseded and amended by the 12th Amendment.]

Congress may determine the time of choosing the electors, and the day on which they shall give their votes, which day shall be the same throughout the United States.

A natural born citizen, or a citizen of the United States at the time of the adoption of this Constitution, only shall be eligible to the office of President; and he must have attained the age of thirty-five years, and been fourteen years a resident within the United States.

If the President be removed from office, die, resign, or become unable to discharge the duties of his office, the same shall devolve upon the Vice President, and Congress may provide by law for the case of removal, death, resignation or inability of both the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed or a President elected.*

The President shall receive a compensation for his services, which shall be neither increased nor diminished during the period for which he shall have been elected† and within that period he shall not receive any other emolument from the United States or from any of them.

Before entering upon office he shall take the following oath or affirmation: "I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect and defend the Constitution of the United States."

* By act of March 1, 1792, Congress provided for this contingency, designating the President of the Senate *pro tempore*, or if there be none the Speaker of the House of Representatives, to succeed to the chief Executive office in the event of a vacancy in the offices of both President and Vice President.

† The President's salary was fixed February 18, 1793, at \$25,000, and was increased March 3, 1873, to \$50,000.

SEC. 2. The President shall be the Commander-in-Chief of the army and navy of the United States, and of the militia of the several States, when in actual service of the United States; he may require the written opinion of the principal officers of the several executive departments upon subjects relating to the duties of their respective offices, and shall have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment.

He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur, and shall nominate to the Senate ambassadors, other public ministers and consuls, Judges of the Supreme Court, and all other officers of the United States whose appointment is not otherwise provided for; but Congress may vest the appointment of inferior officers in the President alone, in the courts of law, or in the heads of departments.

The President may fill all vacancies that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session.

He shall, from time to time, give Congress information of the state of the Union, and recommend measures to their consideration; he may, on extraordinary occasions, convene both Houses or either of them, and, in case of disagreement between them as to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

SEC. 4. The President, Vice President and all civil officers of the United States, shall be removed from office on impeachment for and conviction of treason, bribery, or other high crimes and misdemeanors.

ARTICLE III.

SECTION 1. The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as Congress may establish. The Judges, both of the Supreme and inferior Courts, shall hold their offices during good behavior, and shall receive a compensation which shall not be diminished during their continuance in office.

SEC. 2. The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States, treaties, cases affecting ambassadors, other public ministers and consuls, all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more States; between a State and citizens of another State; between citizens of different States; between citizens of the same State claiming lands under grants of different States, and between a State or the citizens thereof and foreign States, citizens or subjects.

In all cases affecting Ministers and Consuls, and those in which a State is a party, the Supreme Court shall have original jurisdiction. In all other cases mentioned, the Supreme Court shall have appellate jurisdiction, both as to law and fact, subject to exceptions and regulations made by Congress.

All crimes, except in cases of impeachment, shall be tried by jury, and in the State where the crime was committed; but Congress shall fix the place of trial for crimes not committed within any State.

SEC. 3. Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

Congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood or forfeiture, except during the life of the person attainted.

ARTICLE IV.

SECTION 1. Each State shall give full faith and credit to the public acts, records and judicial proceedings of every other State, and Congress may prescribe the manner in which such acts, records and proceedings shall be proved, and the effect thereof.

SEC. 2. The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

Fugitives from justice in any State found in another State, shall, on demand of the Executive, be delivered up and removed to the State having jurisdiction of the crime.

No person held to service or labor in one State under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

SEC. 3. New States may be admitted to the Union, but no new State shall be formed within the jurisdiction of any other State; nor by the junction of two or more States, or parts of States, without the consent of the Legislatures of the States concerned, as well as of Congress.

Congress shall have power to dispose of and to regulate and govern the territory or other property belonging to the United States; and nothing in this Constitution shall be construed to prejudice any claims of the United States, or any particular State.

Every State shall be guaranteed a republican form of government, and shall be protected against invasion; and on an application of the Legislature, or of the executive (when the Legislature cannot be convened), against domestic violence.

ARTICLE V.

Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on application of two-thirds of the Legislatures of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution when ratified by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; provided that no amendment which may be made prior to the year one thousand eight hundred and eight shall in any manner affect the first and fourth clauses in the ninth section of the first article; and that no State, without its consent, shall be deprived of its equal suffrage in the Senate.

ARTICLE VI.

All existing debts and engagements shall be valid against the United States under this Constitution.

This Constitution and the laws of the United States made in pursuance thereof, and all treaties made under the authority of the United States, shall be the supreme law of the land, and the Judges in every State shall be bound thereby; anything in the Constitution or laws of any State to the contrary notwithstanding.

Senators and Representatives, members of the several State Legislatures, and all executive and judicial officers, both of the United States and of the several States, shall be bound by oath or affirmation, to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

ARTICLE VII.

The ratification of the Convention of nine States shall be sufficient for the establishment of this Constitution between the States so ratifying the same.

DONE in convention by the unanimous consent of the States present, the seventeenth day of September, in the year of our Lord one thousand seven hundred and eighty-seven, and of the independence of the United States of America the twelfth.

IN WITNESS WHEREOF we have hereunto subscribed our names.

GEORGE WASHINGTON,
President and Deputy from Virginia.

[Other signatures omitted.]

AMENDMENTS TO THE CONSTITUTION OF THE UNITED STATES OF AMERICA.

Proposed by Congress and ratified by the Legislatures of the several States, pursuant to the Fifth Article of the original Constitution.

ARTICLE I.

Congress shall make no law respecting religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or of the right of the people peaceably to assemble and to petition the Government for a redress of grievances.

ARTICLE II.

A well-regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed.

ARTICLE III.

No soldier shall, in time of peace, be quartered in any house without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

ARTICLE IV.

The right of the people to be secure in their persons and property against unreasonable searches and seizures shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized.

ARTICLE V.

No person shall be held to answer for any infamous crime unless on an indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be twice put in jeopardy of life or limb for the same offense; nor shall he be compelled, in any criminal case, to be a witness against himself, nor be deprived of life, liberty or property without due process of law; nor shall private property be taken for public use without just compensation.

ARTICLE VI.

In all criminal prosecutions, the accused shall enjoy the right to speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

ARTICLE VII.

In suits at common law, when the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any court of the United States than according to the rules of the common law.

ARTICLE VIII.

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

ARTICLE IX.

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

ARTICLE X.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

ARTICLE XI.

The judicial power of the United States shall not be construed to extend to any suit in law or equity commenced or prosecuted against one of the United States by citizens of another State, or by citizens or subjects of any foreign State.

ARTICLE XII.

The electors shall meet in their respective States, and vote by ballot for President and Vice President, one of whom, at least, shall not be an inhabitant of the same State with themselves; distinct ballots shall be made for President and Vice President, and distinct lists made of such ballots and of the number of votes for each, which lists they shall sign and certify and transmit sealed to the seat of government, addressed to the President of the Senate; the President of the Senate shall, in presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted; the person having the greatest number of votes for President shall be President, if such number be a majority of the whole number of electors appointed; if no person have such majority, then from those having the highest numbers, not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately by ballot the President. But, in choosing the President, the vote shall be taken by States, each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the States, and a majority of all the States shall be necessary to a choice. If, whenever the right of choice shall devolve upon them, the House of Representatives shall not choose a President before the fourth day of March next following, then the Vice President shall act as President, as in the case of death or disability of the President. The person having the greatest number of votes as Vice President shall be the Vice President, if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person ineligible to the office of President shall be eligible to that of Vice President of the United States.

ARTICLE XIII.

SECTION 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

SEC. 3. Congress shall have power to enforce this article by appropriate legislation.

ARTICLE XIV.

SECTION 1. All persons born or naturalized in the United States, or subject to the jurisdiction thereof, are citizens of the United States, and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty or property without

due process of law, nor deny to any person within its jurisdiction the equal protection of the law.

SEC. 2. Representatives shall be apportioned among the States according to population, counting the whole number of persons in each State, including Indians not taxed. But when the right to vote is denied to any of the male inhabitants of a State, being twenty-one years of age and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

SEC. 3. No person shall hold any office under the United States or under any State, who having previously, as an officer of the United States or any State, taken an oath to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid and comfort to the enemies thereof. But Congress may, by a vote of two-thirds of each House, remove such disability.

SEC. 4. The validity of the public debt of the United States, including pensions and bounties, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

SEC. 5. Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

ARTICLE XV.

SECTION 1. The right of citizens to vote shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude.

SEC. 2. Congress shall have power to enforce this article by appropriate legislation.

ALPHABETICAL LIST OF COUNTIES AND CITIES

WITH GUBERNATORIAL AND PRESIDENTIAL VOTES.

Note.—The Republican or Democratic majority in each county is given as between Smith and Mallory. Green-back majority is only given when the vote for Allis exceeds the others, and is taken from the highest vote.

John C. Remtice

PLATTEVILLE

HISTORY OF THE LEAD REGION.

GEOLOGY, MINERALOGY AND SETTLEMENT OF THE LEAD REGION, WITH A GENERAL INTRODUCTION AND MENTION OF THE DRIFTLESS AREA.

AMONG THE ROCKS.

The narration, for which we are indebted to Plato, of part of the experiences of Solon the Athenian law-giver in Egypt, was for many centuries considered fabulous in its relation of the disappearance of the vast Island of Atlantis beneath the ocean. We respect the noble character of the Athenian sage too much to suspect him of misrepresentation, but the Egyptian hierarch, with whom we are less acquainted, might be supposed capable of disseminating travelers' stories, in regard to which, moreover, the priesthood were possibly themselves deceived. Modern thinkers are inclined to believe that the supposed fable carries with it some elements of truth. It is not easy to follow the almost shadowy story of a lost land with such precision as to establish its identity with this continent, but the position assigned to Atlantis by the Egyptians favors the idea, to which modern investigation is inclined, that our own America must have been known to the ancients way back in remote antiquity, and that its submersion beneath the waves had been recorded in curiously preserved traditions; but we cannot pretend to determine what era in the upbuilding of this continent may have been indicated by that semi-apocryphal story.

Geology tells us of upheavals from the depths of the sea, to which we are able to trace an island now known to science as the Island of Wisconsin, which appeared at about the same time with several other islands, comprising parts of the Appalachian Ranges, and of New York, as well as probably other parts of the land now being covered with a population of millions, governed and to be governed by the United States of America.

The cooling and contraction of the globe is credited with having diminished its diameter by about 180 miles, and a diminution so great might easily account for the fatal depression of Atlantis; but that shrinkage occurred at a time when human life was not possible. The popular reader will not so readily perceive how the inevitable continuance of the same process would account at a later date for the resurrection of the land which we now inhabit. The chief geologist of Wisconsin, Mr. T. C. Chamberlin, tells with a simple eloquence, which science advanced as his cannot always command, the story of the rocks upon which the greatness of this nation is securely builded; and, in trying to embody the main facts of the earth's revelation in this history, we shall endeavor to follow in the footsteps of the eminent Professor, though with the modesty and diffidence of a learner, venturing to deal with presentations which have tasked the powers of masters whose dictum is accepted by the world of learning.

The first cooling, whose catastrophe may have been attended by the submergence of Atlantis, if we may imagine a race of Salamanders rejoicing in extremes of temperature, was a comparatively general reduction of warmth and bulk, in which the earth's surface was sufficiently ductile or elastic to participate without fracture; but later, when the superficial coating of our molten globe had become more rigid, nature was constrained to work by other methods; the granite rocks, incapable of contraction, otherwise, in such a degree as would meet the changing conditions of the body which they enfolded, and subjected to pressures, compared with which, the vastest

applications of mechanic force by human agency, sink into insignificance, bent under the ocean until the outer shell touched the shrunken kernel; and then the semi-rigid envelope, heated in every particle by the compression, changed and wrinkled its mighty form, projecting its peaks above the surface of the ocean as a series of granitic islands, whose shores sloped more or less declivitously toward the depths of the sea. There are folds in the strata, observable to-day, which indicate the long-continued application of a power capable of creasing and bending adamant just as irresistibly as the hand of man may crumple paper.

Could we suppose an Alexander Selkirk possible on our inhospitable Island of Wisconsin, he would look abroad upon a limitless but comparatively shallow sea, in which, possibly, was yet no sign of life, vegetal or animal, and his island home would necessarily present to him a bleak and desolate rock, without shrub, grass, soil or insect, if we may assume that the uplifted crystalline mass had not commenced its process of disintegration.

The phenomena of building anew the Western Hemisphere can be studied in Wisconsin as advantageously as on any part of this continent, and the writing on the wall of rock is so clear and precise that the wayfarer, even though a fool, may not err if he will patiently unravel the legend which the globe offers for our acceptance. Strong winds, dashing waves, evaporation and precipitation, with some chemical conditions of the atmosphere that helped to disintegrate the exposed surface of rock more rapidly than would be possible now, acting upon stone similarly compacted, gave back to the ocean a vast aggregate of detritus worn from peak and precipice by those unceasing forces, to form the vast deposit of sandstone now known as the Potsdam, which ranges according to the convolutions of the sub-oceanic surface upon which it lodged, in thickness from a few feet to more than one thousand feet. The superimposed layers have each their own revelation to make clear; some of them in fossils which the human eye can readily decipher; others in forms so minute that the microscope is needed to unlock its mysterious message from a world possibly pre-Adamite.

Suppose the State cut through to the level of Lake Michigan, east from the Mississippi River in Grant County, we find the formations which prevail throughout Wisconsin, and far beyond its borders, always attesting the regularity with which Dame Nature prosecutes her designs. The Lower Magnesian limestone gives us the first record of life found in this region, hitherto, after the disintegrated gneiss or granite had in some degree solidified beneath the waters as sandstone, and the thickness of that stratum is remarkably even throughout our imagined cutting; the limestone following the form of the underlying rock, and having suffered but little from abrasion, protected as it must have been by its coverlet and base of supplies, the sea. Elsewhere this formation is much less regular in depth, as it follows the contour line preceding its deposit, and lies irregularly. Grant River has cut down into this bed of limestone at about 350 feet above the level of Lake Michigan, but the banks of the Father of Waters reveal the same formation at an elevation of about 200 feet. Our supposititious section runs east and west through the county of Grant about seven miles north of Lancaster, crossing the head-waters of Platte River.

Next above the Lower Magnesian limestone, we find St. Peters sandstone, so called from one of its best exposures, which has evidently suffered from abrasion in many parts of its surface, and is found cropping out on the Mississippi banks as well as on the sides of Grant River, though still far below the Platte. Trenton limestone, moderately rich in fossils, attests an era in which life had risen to more various formations, beautiful as though some cunning and skilled artist, with an unbounded wealth of resource, had fashioned and imbedded them to minister in after ages to the æsthetic sense in man. The head-waters of the Platte cut through and into this formation, which reaches an elevation little more than 300 feet on the Mississippi at our imagined line, but is found at an altitude of nearly 500 feet on Grant River, our base line being always the level of Lake Michigan. Galena limestone follows next in order, and the name is significant at once as to its place of first identification, and as to the valued mineral with which it was charged. The stratum has been abraded in many localities until it fails even to put in an appearance; as for instance, at our imagined line bisecting the bank of the Mississippi, but east of that point the stratum asserts itself, cut through with greater or less pertinacity by streams

that have long since found a grander channel. That deposit caps the ranges in the vicinity of Grant River, and further east along the head-waters of the Platte, rising east of that point to an elevation of about 700 feet on the eastern boundary line of the county.

The fact that this region did not suffer from glacial denudation and was not enriched by morainic drift, gives to our line of bisection special value in ascertaining readily the surface contour of the land before that era of refrigeration, allowing always for erosion by the atmosphere and rains and rivers. For that reason, we will follow another imagined bisection of the county due north and south, near the eastern boundary. North of the center of the line, the Potsdam sandstone rises above the level of Michigan Lake, and gradually ascends to an elevation of about four hundred feet, not far from the northern limit of the county, descending thence by denudation to about three hundred feet at the boundary. Although this sandstone is not rich in fossils, it would be folly to assume that life was not plentiful on this planet while this vast stratum was being deposited; the more sensible conclusion is that the stratum was not well adapted to the preservation of the forms of life which passed into its keeping. The Laurentian rocks, upper and lower, which constituted the first Island of Wisconsin, were sedimentary, and their formation must have preceded the sandstone mentioned by a term which human investigation has never yet defined; yet the Laurentian rocks hold within their embrace many evidences which are satisfactory to men of scientific attainments, that vitality of a low order preceded their deposition, and some fossils have been found in America and in Europe, which, it is claimed, set that question forever at rest. Some careful investigators doubt the organic character of the alleged fossils, and we are not prepared to decide, where doctors disagree; but, inasmuch as our supposed section of Grant County does not reveal the systems of rocks named from their great developments in the valley of the St. Lawrence, we will proceed with our brief disquisition on the strata actually found in that region, which we endeavor to describe. Wisconsin River has cut its course through the Potsdam sandstone, and numerous streams of less dimensions have left their marks in unmistakable characters, hewn out of the same body, which is entirely denuded of all such overlying strata as may elsewhere be found. The same order of succession as has been noted in the line east and west—Lower Magnesian limestone, St. Peters sandstone, Trenton limestone and Galena limestone in the same relative position—is still observable, but superimposed upon these we find preserved in the Platte Mounds, at an elevation not less than seven hundred feet above the level of Lake Michigan, the formation known as Cincinnati or Hudson River shale, capped by a remnant of Niagara limestone. Blue River has its course bottomed on St. Peters sandstone, while Trenton and Galena limestones form the superincumbent layers, and this regularity in the movements of natural forces enables the student to apply himself, with much economy of resource, to unfold the wealth of mineral possessions, which, in our own time and in the near future, will become the heritage of the human family.

From the writings and tracings of Prof. Chamberlin, we are permitted to supplement our scanty delineation of the State, as represented in the geological features of this region, by adding a general though brief description of the State as a whole, and of the upheaval and formations that have contributed the material bases of our national wealth.

We have delineated the shallow sea that ebbcd and flowed, obeying the impulses of the moon, where the State of Wisconsin now reposes in beauty and excellence, the loved home of a thrifty and prosperous people, but we will return to that point in our narrative, the better to present the picture of that upheaval to the popular mind. The sediment to which we are indebted for the Laurentian rock, is estimated to have been much more rapid in deposition than similar processes to-day, and a thickness of 30,000 feet is claimed by scientists as only a small remainder of a more vast formation, contributing its quota to the crust of the earth. Beneath the sea, this sediment accumulated in horizontal strata under circumstances that favored metamorphic action, the results of which are still visible. The time came when heat and lateral pressure, such as we have already mentioned, re-arranged the folds of the earth's mantle and began to prepare a dwelling-place for man. That nucleus of a nation may be called, for our own convenience, the Island of Wisconsin. The character as well as the position and form of that rock,

was probably changed in the act of upheaval, so mighty were the forces therein engaged. The sediment had been changed into crystalline rocks, widely dissimilar from the later sandstone, although compacted of the same elements. Thus we stand, as it were, in the presence of the Archæan or ancient rocks, otherwise known as the Azoic. The wonderful changes through which this metamorphic rock passed in attaining the eminence of an island in those seas, might well be supposed capable of obliterating all signs of vital organization, but, in other rocks which seem to be identified with this formation, it is asserted, with some authority, that fossils have certainly been found, and our investigations have hitherto been too narrow and restricted to entitle us to say with authority that there are no fossils in the Laurentian formation here. It is not possible to define accurately the extent of that island won from the domain of Neptune, but it is assumed to have filled a large area in the northern central part of our State, stretching beyond into the Upper Peninsula of Michigan. This was the primeval base upon which was to be erected an empire of the people, sacred to liberty and right. Other islands, at remote distances, were perhaps upheaved at the same instant with our own, to be banded together in one vast continent, for the noblest ends possible on earth, when the Laurentian era should have taken its place away back in the remotest antiquity with which life has been identified. We have no data whereby we can determine the altitude of these islands, upon which the rain descended and the floods came, beating with tempestuous violence; but, apart from the strata forced into positions almost approaching the perpendicular, and from which the cap or connecting fold has been abraded, we have the deep and wide-spread deposits of the Huronian period to tell us of the mountainous elevations from which that sandy detritus must have been torn away by wind-storms, rain, the beat of countless waves, and the never-ceasing disintegrating power of the chemic constituents of the atmosphere. We have, thus, our island lifting its head toward heaven, and the elements tearing down the inaccessible mountain peaks, to bridge the chasms and convert that island, with others widely scattered, into the broad expanse of prairie, mountain, valley, cataract, lake and river, which is to-day the world's wonder. Science may yet enable us to read this exquisite story of the earth as the home prepared for man, with fuller appreciation. It is not easy to imagine that, on an island thus builded, there could have been any form of vegetable life at the outset; but, in the sea around its base, if we may judge from the carbonaceous matter incorporated with the deposits, there must have been an abundant marine flora, and, in the limestone accretions we find evidence of higher organizations. Life was in the waters surrounding our island, and the Great Artificer of the Universe was, through His laws, compelling the least of His animate creatures to prepare the way for their superiors in the army of being. Perhaps this statement of the case may savor of dogmatism, but we argue the presence of life in the waters from the limestone deposits left in testimony, as well as from the fact that the Laurentian rocks, which antedated this era by unnumbered centuries, are not certainly and entirely barren of fossils. The shales, sandstones and limestones of this period of deposition, aggregated many thousand feet in depth; and, in due time, these also were upheaved and metamorphosed in that process, as the Laurentian had been, into crystalline and semi-crystalline rocks, known to us by various names and innumerable uses in the civilization by which we are surrounded. The Huronian rocks are compacted of quartzites, crystalline limestones, slates, schists, diorites, quartz-porphyrines, and other forms of metamorphic sediment. Graphite is the resultant from carbonaceous deposits, and magnetite, hematite and specular ores tell of the forms of life by which such means of wealth are brought within our ken; the last-named deposits are so great as to give the name of the iron-bearing series to this upheaval. These several strata, contorted and folded by pressure and heat, added largely to the circumference of the island, from whose shores and heights they had been gathered, and the ceaseless activities of nature paused not one instant in preparing new formations. The nearest approach to a mountain in our State, is the upturned edge of the Huronian upheaval, which stretches for sixty miles, crossing Ashland County, bearing within its rampart a belt of magnetic schist through nearly the whole length of Penokee Range. The Menominee iron-bearing series, which extends into the northern part of Oconto County, is another important topographical and mineralogical feature in the Huronian formation. Barron

County owes its deposits of pipestone to the same source, and they cover a large area. The Baraboo quartzite ranges in Sauk and Columbia, with detached outliers northeasterly through other counties, are conspicuous contributions from that formation, which has its most southerly exposure near Lake Mills, in the county of Jefferson.

Before the Huronian strata were upraised, it is assumed that the crust of the earth was fissured in the Lake Superior region, and that a vast outflow of molten rock spread itself by successive eruptions at various intervals over an area more than 300 miles long by 100 miles wide, forming a series of trappean beds. Sometimes there were intervals between these molten streams, during which the ocean ransacked from the superimposed rock, the materials for beds of sand, gravel and clay, which are now present as sandstone, conglomerate and shale; and, as though tenacious of the credit that belonged to its handiwork, the waves of the perturbed sea have left their ripple-marks in the stone to tell us that the forces of the central fire were not allowed to assert themselves unchallenged by the ocean. When eruptions ceased entirely in that region, the sedimentary process went on accumulating until the series achieved a thickness which is stated in miles. The rocks which have been named as thrown up from within the earth's crust have undergone changes so great that their igneous character is almost obliterated; the mineral ingredients have been metamorphosed by chemical action, so that we find iron chlorite and feldspar associated with quartz, prenite, calcite, laumontite, analcite, datolite, magnetite, native copper, silver, and occasionally other minerals, the rock being known as a melaphyr. Usually we find the upper portion of each bed composed of cells about the size of an almond filled with the minerals that have been indicated, so that the rock is amygdaloidal. After the beds were deposited, the native copper was placed in the receptacles, where it is found to-day, by chemical action after changes in the rock had been initiated by similar means, and the silver found in that series is due to the same agency. Ashland, Bayfield, Burnett, Douglas and Polk Counties, in the northern section of the State, are remarkable for the presence of copper and silver bearing rocks, the metals being most plentiful in the amygdaloids and some conglomerates, but being found in the melaphyrs, sandstones and shales also. The Huronian rocks carried the copper-bearing series with them in their upheaval, and they are found with the same folds and flexures. The Keweenaw Point range extends from the part of Michigan to which its name is due southwesterly through Ashland, Burnett and Polk Counties, in this State, the beds dipping toward Lake Superior northwesterly; but, in a parallel range, which is found in Bayfield and Douglas Counties, the beds dip at a less angle in the opposite direction. There was a "lost interval" after the upheaval of the Archæan rocks, the Laurentide hills of the early French explorers, the Laurentian of our time, which even now, after ages of erosion, can be traced on the north side of the St. Lawrence, from Labrador to Lake Superior, and still to the north a distance yet undetermined. The hills of this formation are seen 4,000 feet in height, and where the Saguenay makes its course toward the St. Lawrence there are cliffs that lift their heads fully 1,500 feet sheer from the water's edge. South of the range through which the Saguenay runs, the Adirondack Hills stand an isolated mass 6,000 feet in altitude, a sentinel rock of the Laurentian system, rivaled by the newer formation—the White Mountains. The Lower Laurentian has no exposure in our State, but it is found in Newfoundland, New Brunswick, Nova Scotia, and, rarely, in Massachusetts and Maryland. Beyond the Atlantic the same rocks are identified in Norway, Sweden, the Hebrides and Bohemia, bearing with slight differences the same alleged but debatable fossils, the *Eozoon Canadense*, *Bavaricum*, etc., of a type still said to be extant. The Lougroynd groups of rocks in Shropshire and in Wales, with their equivalents in the Wicklow Mountains in Ireland, are probably Huronian rather than Laurentian. The exact equivalency of our Laurentian system with that of Canada and the provinces is not determined, but strong likelihoods point in that direction with increasing force. The "lost interval" indicates no idleness in nature, but a failure on the part of the geologist to follow her operations. We have elsewhere glanced at the wondrous activities that laid down the vast beds now known as Potsdam sandstone, and then upheaved them to their present and to still greater elevations. We can trace the formation here lying on the foot of an eminence which is gradually succumbing to

“the tooth and razure of oblivion,” except as its remains are preserved as particles of quartz in the new stratum. Again we see some harder projection of the old rock detached from the main island, which yet lifted its head in solemn self-assertion, and breasted the angry billows, impatient of their endeavor to reduce its elevations to the common level; and yet again we meet some great boulders, typical of the empire foretold in Scripture, compacted of brass and of clay; there the harder components remain, dismounted from their eminences by the erosion of feet of clay in the softer material upon which they depended, and the sands of the sea shore reverently surrounded them with their legions of defenders, to retain them where they are found in our era, still distinguishable as mementoes of the age of giant rocks, which built for man a temple not made with hands.

Life was an ever-present element in this formation, but the earlier sandstones are not rich in well-defined fossils, although they give us lithographic illustrations and actual casts of the shells in which living beings built themselves in from the elements. Limestones and shales, interstratifying the sandstone, mark where some sheltered spot temporarily favored the establishment of a cemetery, upon which the sands once more advanced, burying the dead out of the sight of generations that had never dreamed of the mysteries of existence. The red sandstone of Lake Superior is due to the action of the sea upon the iron and copper-bearing series of rocks of whose qualities we have spoken; away from that region we find a broad, irregular belt reaching almost around the Archæan island, a rude crescent of light-colored sandstone, won by the waves and winds and rains from porphyries, quartzites and granite, either of which would, in our more conservative age, be able to hold its own against oxygen for centuries unless frost came in to help the demolition.

There was no great upheaval after the Potsdam sandstone had been deposited, hence it lies horizontally upon the abraded bed of the underlying crystalline stratum, neither crumpled nor metamorphosed by heat and pressure, only slightly arched toward the center of the State. The weight of superincumbent beds, and the cementing action of waters carrying lime and iron in solution, which have percolated through this formation, have largely increased its density; but the ripple marks, cross-laminations, worm burrows, and other indications of action and life on a sandy beach are clearly traceable, and its thickness varies from the fine line which defined its limit on the shore of the island down into the depths where it formed an aggregate of perhaps a thousand feet. All the later formations take their place above the Potsdam sandstone, which may be reached by boring in any part of the State, beyond the bounds of the Archæan core. This is a fact of vital importance, because a water-bearing rock can be calculated upon with absolute certainty, and the layers of limestone and shale which interstratify the mass are of great value in arresting the flow of water and turning it surfaceward. The formation of limestone, never arrested while life endures, comes now once more within our region of observation, and the deposit ranges from fifty to two hundred and fifty feet in thickness. The horizontality of the sandstone was not perfect, and the irregularities of the foundation were filled by the limestone as it settled down and solidified under oceanic pressure. There were places where the substratum showed a rise and fall of nearly one hundred feet within quite a limited area, but the limestone itself is remarkable for an appearance aptly described as follows: The limestone and the interstratified beds mentioned earlier were magnesian or dolomitic, containing carbonate of magnesia in great quantity. There were quantities of silica in the deposit which sometimes are found as nodules of chert, and in other instances as quartz crystals; this beautiful form of matter lines cavities which never saw the light until man quarried in the rock, and yet the exquisite loveliness of each crystal is perfected according to its law, as though the handiwork therein concealed had been one of the most costly adornments of a palace. Some metals appear in the mass, but they are of little value, and evidences of life herein are very scanty. Sea weeds, mollusks and a few other forms of being are scattered sparsely, save at intervals, where circumstances favored a more liberal contribution to our knowledge of the organisms that obtained in the earlier seas. Erosion has removed a large proportion of this rock, so that it is now jagged and irregular in the last degree, but, originally, it must have been a broad and regular band, contributing its quota toward increasing the island to the dimensions of a continent.

We cannot tell why the deposit of magnesian limestone ceased, but the sandstone known as St. Peters comes next in order of succession, probably after an interval. This is a fine silicious sand, much desiderated in the manufacture of glass; but it is deposited in small quantities, sometimes not enough to cover the inequalities of the limestone. The greatest thickness of St. Peters sandstone yet discovered does not exceed two hundred and twelve feet, and the average is less than one hundred. It is not a firm stone, having been imperfectly cemented, so that it disintegrates readily. Some organic remains have recently been found in this deposit, but they are few and far between, just sufficient to attest the presence of marine life and the agency of the ocean in trituration of these fine grains of quartz. This belt, probably much reduced from its original dimensions, fringes the lower magnesian bed on the south, and covers but a small area. The absence of fossils may be accounted for in two ways: First, in the cutting and crushing action of the sandy particles, and next in their porosity—a quality to which we are indebted for the supply of many of our finest artesian wells, and from which numberless other such living fountains may be procured, as the flow of water is practically inexhaustible.

Trenton limestone deposits follow, indicating some changes in oceanic conditions, local or general, and, at the same time, a great deal of clay-like matter was being placed in position to be converted into shale, shells, corals and other organic debris, or their signs manual in the rock give positive evidence as to the origin of this limestone in the myriad lives that were capable of converting the particles held in solution by the seas into the osseous environments of their own being. The limestone now deposited was very pure, not largely magnesian; but, when the clay predominated, a bed of shale, greater or less in extent, resulted. Sometimes these beds were so highly charged with carbonaceous matter that they burn readily, and no small portion of our petroleum comes from such formations. In the lead region, this deposit has sometimes been found rich in metals, but of course that condition is the outcome of chemical action and infiltration—not a characteristic found in the pure limestone stratum. The fossils in the Trenton limestone are abundant, and the stone, being susceptible of a very high polish, is valuable in an economic sense, as well as deeply interesting to the scientist on account of its archæological revelations, as all the animal sub-kingdoms, except the vertebrates, are therein represented. This rock borders the St. Peters sandstone, and its greatest thickness hitherto observed is about one hundred and twenty feet.

The next formation is the highly magnesian Galena limestone, buff or light gray in color, attaining a maximum thickness of about two hundred and fifty feet, and having a sub-crystalline structure. In the northeastern part of the State, the presence of shaly matter changes the color to a bluish or greenish gray; but, in the southerly deposits, the bed is not affected in that way. The presence of galena, or sulphide of lead, in this layer, in the southwestern part of the State more especially, has given its name and commercial value to this limestone. Zinc ore is abundant, as well as lead, in the region indicated, and in other districts the same metals can be traced, but not in paying quantities. In other sections of the country, the production of lead is a necessary part of the process of mining for the precious metals, and, for that reason, pure lead mining is comparatively at a discount for a time; but, whenever the best product of lead is demanded, the mines in our State and in Illinois will not fail to be largely called upon. Our Island of Wisconsin, growing from its Archæan core by concentric additions, is already much larger than the area of the State within which it took its rise, and still the aggregation continues.

Cincinnati or Hudson River shale followed the deposition of Galena limestone, a thickness of 200 feet having resulted; but the clayey bed has not become hardened to such an extent as to resist weathering wherever an exposure has occurred, and, in consequence, that layer is, in many localities, conspicuous by its absence. Some parts of the sediment have hardened well, becoming shale or limestone, according to the preponderance of the elements deposited. Many of the vertical cliffs of Green Bay are beautifully colored shales of this foundation, their hues being almost as varied, though less brilliant than those of the rainbow. The eastern side of the Green Bay—Rock River Valley—shows how easily and completely this formation can be

eroded, the less yielding Niagara limestone, which overlies the shale, being left as a kind of pent-house roof over the rapidly receding bed beneath. This phenomenon has procured for the principal feature in the cliff the name of the Ledge. The mounds in Southwestern Wisconsin owe their prominence to the rapid erosion of the shale, by which, at one time, they were surrounded. Corals and other fossils are numerous in this composite formation, and a little intelligent attention to the conditions of life under which they were deposited might have saved much time, labor and capital, uselessly expended in the search for coal. This formation, which marks the close of the Lower Silurian age, underlies the mounds in the lead region, forming only a narrow belt on the eastern margin of the valley above mentioned. Other conditions of life were now to write their history on the rocks.

Clinton iron ore, sometimes known as "seed ore," elsewhere known as "shot ore," is found deposited on the beds of shale at detached spots, probably at points that were once protected basins. It is a peculiar lenticular deposit, which might well give rise to all the variations of nomenclature which invite our attention. In this State, the prominence of this mineral aggregation at one point has led to its being denominated "Iron Ridge ore." The beds are quarried as easily as limestone, the soft ore being arranged in horizontal layers, which, at the point just indicated, have a thickness of twenty-five feet. Like deposits, in much smaller quantities, are found at Depere, and at Hartford and at Depere smelting works are in operation, besides which, this ore is shipped to markets more and less remote, to be sold for reduction. The greatest era of limestone formation in the history of our island followed this deposit of iron ore, and we may well devote some attention to the vast aggregate of about eight hundred feet, which was deposited in the beds of Niagara limestone. The old processes were repeated in all essentials, but the operation was long continued, and the conditions were favorable to marine life in that shallow sea, dotted with large islands, having a temperature almost, if not entirely, tropical. The Rocky Mountains and the Alleghanies protected this plateau from the intrusion of cold currents, if there were any such, which might have been fatal, prematurely, to the tiny artificers which were giving their lives and substance to build up this continent, as other and greater beings have since given their lives and substance—a more intelligent and volitional sacrifice—to build up and maintain their inestimable liberties. Reefs, not unlike the coral formations that prevail in the Pacific Ocean, appeared toward the close of this era of deposition, and there is no reason to doubt that the same agencies that are now at work in the Polynesian group, converting islands into continents, were then employed in the more than fairy transformation to which we are beholden for a home on this favored spot of earth—the haven for the afflicted peoples of all lands—which, ere this century comes to an end, will probably carry a Caucasian population of 300,000,000 souls.

Among the animal life of the time, we find unquestionable records of corals; mollusks, that have been called the oyster of those seas; stone lilies, or crinoids, having the appearance of a plant converted into stone, and still animal; trilobites, in great number and never-ending variety; and gigantic cephalopods, which seem to have been monarchs in that domain. The reef-rocks were very irregular, and near them were extensive beds of sandstone, largely calcareous, beyond which is found a pure, compact dolomite, formed from a deposition of fine calcareous mud. The Niagara limestone lies in a broad belt, adjacent to Lake Michigan. It is all more or less magnesian, contains much pure dolomite, but is varied in composition, some beds being coarse and heavy, other layers being even-bedded and close-grained, while yet others are impure, cherty and irregular. There is a thin-bedded, slaty limestone on Mud Creek, near Milwaukee, which is commonly, and perhaps rightly, attributed to this formation; but the fossils found therein are few and equivocal, as, indeed, are all the evidences that might be expected to determine its period of deposit. A similar formation, somewhat more rich in fossils, is found near Waubeka, in Ozaukee County, and the greater weight of evidence thus procured favors the era of the great limestone deposit; but the area covered is small, and the two beds are of little practical value. The Silurian age in Wisconsin was now ended. The island was large, almost continental in proportions. Sandstone, limestone and shale contributed each their

concentric belt, and the sea retired, save when, at rare intervals, it was stirred to its depths with a vain desire to reassert its old dominion.

The Devonian age marked one of those oscillations when there was an invasion of the eastern margin of the island by the sea, and the Hamilton cement rock was the chief result of that advance, its hydraulic properties being due to a happy admixture of magnesian limestone with silicious and aluminous materials. There was now a new dawn of life, the vertebrate animals appeared by their lowest type, the fish, but even that was a great ascension in the scale of being from protozoans, radiates, mollusks and articulates. The early types of life did not disappear but the process which Darwin has named "the survival of the fittest" was affording its advantages to the better forms of the lower orders. We cannot estimate the extent to which erosion operated on the deposit, but beyond doubt it was considerable. An area, not large, on the lake shore, north of Milwaukee, with a landward stretch of about six miles, marks the size of the bed which has been found, and the cement rock which is highest in repute is found on Milwaukee River, near the city. Thus endeth the record of the ocean on our island, although there may have been subsequent visits, too brief for Neptune to leave his monograph.

The imagination of the reader may conjure up the progressive changes of our island from the crystalline heart as leaf after leaf was added to the structure by the myriads of lives that built themselves into the simple yet wonderful development, until the insular state was lost, and many islands had become a mighty continent, inviting other and better forms of life than those that we have seen in the limestone and other deposits; but, while the several belts are being called to their position, we must not lose sight of that unceasing erosion which bears so large a part in the phenomena of deposit. The continent was lifted to its place, and aerial denudation began, or rather continued, the work long since initiated, of bringing the softer formations from their several altitudes to clothe the valleys with a mantle soon to become vernal under some law of progression which it is not permitted to us to comprehend. The Carboniferous age, marked elsewhere by carboniferous phenomena, the Mesozoic era and the earlier Tertiary period is beyond the point indicated a blank in Wisconsin. The time for the deposition of vegetal matter, which has given us rich coal measures elsewhere, was not so improved in Wisconsin.

The Glacial period has not left its record in all parts of Wisconsin, but the story is widely told by the drift and by many other signs just as certain. The country was invaded by masses of ice in broad sheets that acted like a mighty planing instrument upon the surface, over which it glided with a slow motion, which even to this day is a puzzle to the scientist. Men eminent as Tyndall and Forbes have bent their mighty intellects to solve the mystery in the Alps, where the glacier is perpetually advancing, by night as well as by day, in winter as surely though more slowly than in summer, and still we cannot determine certainly how the frozen, semi-elastic mass moves in its course, accommodating itself to all the sinuosities in the channel, varying its momentum in different parts of the stream, with a regularity that admits of accurate forecast, and still progressing even on great declivities with a speed hardly exceeding twenty inches in twenty-four hours.

Our ice-stream came down from the north, having but small declivities to favor its progression, sometimes even forcing its way over heights that might have been supposed effectual barriers, bringing in its lower surface, and sometimes—perhaps though rarely—on its upper face also, masses of rock and gravel to us from their normal resting-places as the inexorable force moved on, and ultimately scattered or deposited *en masse* miles away from the points of departure. The polished and grooved strata upon which the ice-plane has plowed its *striae* may be found by careful search in all parts of the globe that have been subjected to glaciation, and, consulting such marks, we find that one prodigious tongue of ice scooped its way through the bed of Lake Michigan, a smaller tongue meanwhile traversing the valley of Green Bay and Rock River, and through what is now the region of Lake Superior another mass of ice moved to the southwest upon Minnesota. These channels, affording outlets for the ice, appear to have diverted the invading force from the southwestern portion of Wisconsin, where a considerable region is found quite free from morainic drift and from the *striae* that attend the movements of glaciers.

When a time of greater warmth asserted its power, the extremities of the glaciers were melted, sometimes more rapidly than the mass moved forward, and thus the drift remained wherever the process of liquefaction dropped it, unless some later march of the ice stream, under the favoring winds of winter, once more pushed its vanguard to the point from which it had been driven, heaping up the drift that had been scattered through its channel in a great moraine at its terminus. The retreats and advances of this stream of ice have, in many parts of this continent, quite changed its normal aspect, and nowhere can we find more striking manifestations of the power that was thus exerted than in Wisconsin. The remarkable chain of hills known as the Kettle Range is entirely a drift formation, and the curious winding line thus presented to eyes in search of novel scenery suggests a battlement defending the furthest line marked by the glacier. At a secondary stage of advancement, when the temperature permanently changed and the frozen mass must needs return to its former condition of fluidity, there was a torrent in some regions, and there were lakes in others according to the configuration of the surface, and a depression of the land toward the north ascribed to this era is considered as one of the determining causes of the former extension of the great lakes where the ice-plow had found grooves best suited to its operations. The red clay that borders Lakes Michigan and Superior, and that may be found as far up as Fond du Lac, in the Green Bay Valley, marks a time when these waters covered a much wider area than they now fill, but whether the diminution still continues this deponent saith not. The wealth of lakes and tiny lakelets, for which Wisconsin is famous, is probably due to the waters of the glaciers filling the strange undulations which the morainic drift had caused, sometimes damming a narrow valley, as at Devil's Lake, at others presenting only shallow depressions.

The Kettle Range has been made the subject of a special disquisition by Prof. Chamberlin, the *brochure* being published in Paris during his attendance at the Geological Convention in that city in 1878, which the *Exposition Universelle* was the great event in the scientific as well as in the fashionable world. The conclusions reached by the chief geologist embody the main facts known as to the Kettle moraine so completely and, withal, so skillfully woven into his narrative, that we feel bound to summarize that production. The moraine known as the Potash Kettle Range, since abbreviated in name, resembles the Kames, Eskers, Asar and Raer, of Scotland, Ireland, Sweden and Norway, respectively, and is also similar in formation to more recent deposits in Switzerland. It is an extensive belt of drift hills and ridges, peculiar and distinctive, traversing the quaternary deposits, and disposed in vast loops about the great lakes, challenging the attention of mankind to the mode of their deposit. The belt is certainly not less, and is presumably much more, than two thousand miles in length, with a breadth varying from one mile to thirty miles in different parts of its extent. Seldom more than three hundred feet in height, it occasionally may be found exceeding four hundred feet above its base, but is generally much less; so that it is the continuity of the formation, rather than any other feature, as a rule, that commands attention; still, there are points where the range is conspicuous for its abruptness and irregularity.

Dr. Lapham, in his "Antiquities of Wisconsin," briefly described the belt as seen by him in the eastern part of the State, prior to 1855, calling attention to the peculiar depressions which first suggested the name of the Potash Kettle, as descriptive; and attributed the feature in question to the solvent, erosive action of under-drainage, forming "sinks." Col. Whittlesey, several years later, published through the same medium, the Smithsonian Institution, his observations on "Moraine Cavities" in Wisconsin, Ohio and Minnesota, attributing their presence to the building-in of ice-masses with the debris when the range was formed, the ice naturally leaving a depression when subsequently thawed. There were other suggestions not material to this issue in the same paper, which need not be further noticed. Dr. Andrews described the Kettle Range, in Eastern Wisconsin, with which he associated contiguous gravel deposits, claiming for the formation a length of two hundred miles, and a breadth of twenty miles, terminating in the bowlder clay of Illinois, but he ascribed its formation to a vast and violent current of water sweeping down from the north. Other and minor observations and speculations on this

interesting subject left the matter practically at the point indicated until 1873, when the geological survey, since completed, was commenced by order of the Legislature of Wisconsin. The gentlemen surveying in Ohio under circumstances similar to our own, gave attention to the range in that State, but they were much divided in opinion as to its origin, some inclining to the view that it was a moraine, while others favored ideas of grounding ice and the escaping waters of the great lake passing over the water-shed where the range is located.

Dr. Lapham, chief of the geological corps in this State in 1873, returning to the question with interest unabated, and with much better facilities for investigation, assigned the Kettle Range as a subject for study to Prof. Chamberlin, suggesting that the ridge might have marked an ancient shore line. The line of investigation pursued by Mr. Chamberlin, now Chief Geologist, soon convinced him that the shore-line theory was as untenable as the Andrews idea of violent currents of water from the north. The investigation was not entirely confined to this State, although, of course, this was the main field of observation. Forked tongues of ice had left their limits so clearly marked by drift deposits, about twenty miles north of the State line, that our friend was placed at once on the track, which he has since pursued and verified. In the year 1875, at the session of the Wisconsin Academy of Science, Arts and Letters, the main results arrived at in this inquiry were presented with maps and drawings, showing the determination of general drift movements, and that the range is a moraine formed by glaciers occupying the troughs of Lake Michigan and Green Bay, skirted on the west by a like deposit. The suggestion then thrown out has been verified by Prof. Irving, together with later conjectures as to the extension in Northern Wisconsin. The conclusions reached in this way threw light upon two questions: determining how the range had been deposited, and, also, why a certain large area in this State, and in Minnesota, Iowa and Illinois, is driftless. Profs. Winchell, Irving and Chamberlin are agreed that the area in question is driftless, because the ice streams were deflected by the easier exit offered through the valleys of the great lakes and through Green Bay. The several eminent authorities quoted, arrived at the same conclusion on the facts observed, without previous concert, prior to publication; consequently, we may well consider the solution as a demonstration.

Outwardly, the formation presents an irregular, intricate series of hills and ridges, rapidly but often gracefully undulating, having well-rounded domes, conical peaks, winding ridges, sometimes geniculated, short, sharp spurs, mounds, knolls and hummocks in a variety of combinations, and corresponding with depressions just as remarkable, or even still more striking. These depressions have given their name to the range; many are circular in outline, hence the title "potash kettles;" but the major part are not nearly so symmetrical. Some of the cavities resemble a bell inverted; others are shallow saucers; and others are rudely trough-like, oblong, oval, elliptical, or even winding; but to describe their various configurations would demand a volume. Their depths vary from mere indentations to sixty feet, or even more in the symmetrical forms, while the irregular sinks show a depth often exceeding one hundred feet. Occasionally the sides of the kettles are about as steep as the material will lie, an angle of from thirty to thirty-five degrees with the horizon, but usually the slope is much less declivitous. The kettles seldom exceed five hundred feet in diameter, but it is not easy to define their limits. Numerous small lakes dot the course of the range, having neither inlet nor outlet, and suggesting the process by which, under favoring circumstances as to drainage, the depressions may have been formed. In the base of some kettles there are yet ponds of water, arrested in their escape, and waiting the slow process of evaporation; and some of the lakes range from two to three miles in diameter, the increase proceeding by degrees hardly perceptible. Many of the hills in what is called the "Knobby Drift," resemble inverted kettles; and trough-like, winding hollows are offset by sharp serpentine ridges, giving to this range a distinctive character, notwithstanding its lack of altitude; but the features indicated are subordinate to the characteristics of the main range, being most abundant on its more abrupt face, though to be found on every side, and in all varieties of situation, sometimes even on areas level by comparison, adjacent to the main range, and again in the valleys, the ridges being free; or on the ridges, the valleys showing no trace of like action; or distributed indifferently over each.

The range is composite, being made up of rudely parallel ridges, that unite at some points, interlock at others, and appear to have advanced and retreated in the mazes of their morainic dance, until suddenly stricken with fixity in their most eccentric combinations. The ridge within the ridge is sometimes clearly traceable between component ridges, and the depressions resultant from such divergences, are often the areas filled by the larger lakes on the range. Some ridges cross the trend of the main range, and transverse spurs may be called common. The component ridges are frequently broken and irregular in height and breadth as in all else, just as we might have predicted would be the case, could we have seen the terminal moraines of certain Alpine glaciers understandingly, and then have been called upon to forecast the operation of similar forces, on a scale immensely greater, in this country, with variations for the widely differing contour. Most of the Swiss glaciers of our time terminate in narrow valleys with steep, sloping sides, hence their *debris* takes the form of lateral ridges, like a torrent-washed valley deposit. Some of them, in their recently advanced state, are found in more open valleys, with a gentle inclination, and, in such cases, terminal moraines have been formed from the ground moraines of the glacier, differing only from our Quaternary formations, in the presence of medial and lateral morainic matter, which, in the very nature of things, cannot be found in our more open country. The Rhone glacier has left three ridges, which, except that they are diminutive, might be studied as models of the topographical eccentricities which we have endeavored to describe. The two outer ridges are now covered with grass and shrubs, but the inner and later ridge is still bare, graduating into the ground moraine of the retreating glacier, which by some new advance may yet heap all their scattered material to magnify the last ridge of the trio, or to establish a quartette. The glaciers of the Grindelwald have left similar moraines in part, presenting a perfect analogy with our range; such as may also be found near the Glacier du Bois, the Argentine, and the Findelen; though less strikingly in the case last named. Terminal moraines alone must be relied on for analogies with our ranges. The formations have been pretty thoroughly interrogated as to their materials, as well as for their arrangement, to assist in determining their origin. The Kettle Range, in its typical development, consists mainly of clay, sand, gravel and bowlders, gravel being most conspicuously exposed. The belt at many points exhibits two formations, perfectly distinguishable; that which is uppermost, but not constituting the heights of the range, being sand or gravel, which covers the lower stratum like a sheet, over large and diverse areas, and, in many cases, suggests a much greater quantity in the superficial coating than is actually present. The coating of gravel tends to level and mask the irregularities of the main formation, but the aspects presented by the mass are still billowy and undulatory, a margin often being found on the flank of a ridge stretching away into a sand-flat, or gravel plain. Gravel is a large constituent in the Kettle Range, and wherever the forms are most symmetrical, the presence of gravel in increasing proportions may be assumed. Some minor knolls and hills are almost entirely composed of sand and gravel, including bowlders occasionally. The core of the range is, however, a confused commingling of clay, sand, gravel and bowlders, the latter sometimes many feet in diameter, and grading down to the very finest rock flour; sometimes without an angle abraded, and again thoroughly rounded by the rolling and planing process they have undergone. The cobble-stones are found spherically rounded, unlike beach gravel, which has been subjected to a sliding motion, and is thereby flattened.

There is no stratification in the heart of the range, but immediately thereupon stratification commences, partly simultaneous with the first deposition, and the rest by subsequent modification. The local overlying beds are stratified, but often inclined, rather than horizontal, and frequently discordant, undulatory or irregular, but the main point of the glacier theory is to establish non-stratification at the heart. The source whence the material was obtained to form the range in this State, cannot be doubted. Coarse rock is present in large quantities, so that identification is easy, and the distances that have been traversed can be estimated with measurable certainty, from the marks of abrasion. Many details establish the main proposition, but a single case must be relied on for illustration, premising merely that the instance cited is in perfect accord with the mass from which it is selected. The rock formations below the range, in

many of its windings, offers material aid in determining the limits of the superimposed mass. The Green Bay loop of the range, itself morainic, surrounds on all sides except the north, several scattered masses or knobs of granite, porphyry and quartzite, which protrude through the limestone and sandstone that prevail in that region, and the significance of these knobs will not fail to be perceived by the reader. The adjacent formations gave their several contributions to the range, but only to a limited section, invariably in the line of glacial striation. Take any segment of the range, and you find a noteworthy quota derived from adjacent rocks in the line of striation; and generally a less proportion from the successive formations backward for three hundred miles or more, along the line of glacial movement. The agency that produced the range, gathered material along its line of march for at least three hundred miles, freezing to the recruited matter of all kinds, but finding its great accumulations near the terminal moraine. The range changes its components in different parts of its course, in obedience to the law indicated, showing physical and lithological characteristics exactly corresponding with the formations less and more distant whence they were thus derived. The moraines of Switzerland exhibit parallel facts. The margins of the great moraine on the flanks of the Juras, are in a great degree boulder-clay from the limestone in that vicinity, the proportion derived from the more distant Alps being small by comparison. The more recently formed moraines derived from the Bois, Vierch, Rhone, Aar, and other such glaciers, which pass over granite, are composed mainly of sand, gravel and bowlders, with little clay; while the glaciers of the Zermatt region, which traverse schistose rocks, and those of the Grindelwald, that move over limestone in all their later course, are rich in clay. The Professor found some moraines that were almost exact reproductions of the phenomena observable in the Kettle Range, unstratified, commingled debris in the main; but stratified and assorted material was also found; as for instance, in the inner moraine of the Upper Grindelwald glacier there was much fine assorted gravel and coarse sand heaped together in curious peaks and ridges strangely placed on the sides and summit of the moraine.

To prove the relation of the range to the movements of the drift is, of course, vital to our purpose—to show that the ridge was located by glacial action. The grooving of the rock surface is one method of determining the course of the ice current; the direction from whence the materials must have been conveyed, the abrasions of rock prominences, the trend of elongated domes of polished rock, and the arrangement of the deposits topographically—are all means that may assist us in the demonstration, and they concur in placing beyond question the work of the glacier in the Kettle Range wherever opportunities have been found to test them exhaustively. The erratics from the protruding knobs of archæan rocks, which have been alluded to, were traced along their line of travel, as marked by striations, to the glacier-plowed parent rock, from which lines of erratics have been deposited along the ice march as they fell. Observations in Eastern Wisconsin have determined that, between Lake Michigan and the Kettle Range adjacent, the direction was obliquely up the slope southwestward toward the range. Between the Green Bay Valley and the range, after surmounting the cliff that borders the valley, the direction was obliquely down the slope southeastward. In the Green Bay trough, the glacier moved up the valley to its water-shed, and then descended Rock River Valley. Between Green Bay Valley and the range on the west, the course was up the slope southwesterly or westerly, as the position was more or less favorable. These movements have been carefully ascertained after collecting an immense mass of data, and they exhibit a marked divergence from the main channel toward the margin of the striated area, of which the Kettle Range is the *ultima thule*. Beyond our own State, a great deal of valuable matter tending in this direction has been accumulated, showing that the main channels of the ice streams were the troughs of Lake Superior, Lake Michigan, and of the two lakes, Erie and Ontario, besides which there were lesser glaciers, but still great ones, planing and plowing their several courses along the basins of the bays of Saginaw, Green and Keweenaw. The wasting and disappearance of each glacier on every margin and its advance, grinding under its ponderous weight the less elastic materials which it held imprisoned, will, when properly considered, fully account for the striations which mark its course,

and for their divergence from the main channel ; but for some time the plowed lines now so easily explained by the aid of science were sore stumbling-blocks to the inquiring minds which have solved the problem. The topography of the range may be best described by an imaginary journey along its course. Starting from the northern extreme of the range in Wisconsin, midway between the southern point of Green Bay and Lake Michigan, we mount an eastward-sloping rocky incline, the base of the range being only about two hundred feet above the level of Lake Michigan. Our course lies southwest, up the rocky slope to its crest. Twenty miles north of the Illinois line, there is a division, one portion stretching toward the south, while the other curves westward, crossing Rock River Valley, descending therein at least three hundred feet lower than the rocky crest which the glacier just as certainly traversed. Curving now gradually to the north after passing Rock River, the range crosses the water-shed between the rivers Rock and Wisconsin, and the great bend of the latter, sweeping directly over quartzite ranges with a vertical undulation of more than seven hundred feet, then ascending the water-shed between the Mississippi and the St. Lawrence drainage areas, estimated at from seven hundred to eight hundred feet above Lake Michigan. Crossing the head-waters of Wisconsin River within about fifty miles from the State's northern boundary, we descend obliquely the east slope of the Chippewa Valley, and, having crossed that part of our course, curve rapidly to the north and along its western margin to the water-shed of Lake Superior. Returning along this line to complete our tour of investigation, we find the range branching near the northern limit of Barron County. We travel with the western line southwestward to Lake St. Croix, on the boundary of Wisconsin, and move onward into Minnesota. Taking the State Geologist of Minnesota for our guide in that region, we find an extensive deposit of drift-hills on the water-shed between the Mississippi and Minnesota Rivers, and a line of similar accumulations, less definite and continuous, stretching southward from the neighborhood of St. Paul into Iowa ; between which we are somewhat at a loss to imagine which is the true moraine, or whether each may fairly lay claim to that distinction. Probably the line re-curves north of the center of Iowa, so we continue our journey northwesterly until we strike the Coteau de Prairie of Dakota, where, uncertain as to the possible limits of the tour, we reluctantly abandon the gigantic monograph of the glacier, still to be followed by inquirers and questioned as to the time and conditions under which the ice-king defined his bounds and set up this rampart to mark the decline of his empire. Returning now to the bifurcation in Southeast Wisconsin, we follow the range as it strikes south into Illinois after an interesting flexure near our State line ; but the range loses its more pronounced features in the Sucker State, broadening its base and lowering its crest, until, as it rounds Lake Michigan, it is well nigh lost. East of the Lake, trending northward in Michigan, the range resumes its old-time characteristics and is aggressive enough to develop two belts, one bearing northerly between the Great Lake and the Saginaw Valley, and the other northeasterly between that valley and the basin of the Erie. The first-named belt is hypothetical rather than actual, though not altogether hypothetical, and beyond the points already indicated there is abundant room for speculation, but little clearly defined knowledge. There is a line of drift-hills in Ohio with a surface analogous to our moraines, occupying the water-shed between Lake Erie and the Ohio River, stretching across that State and extending westward into Indiana, probably very near to, if not actually joining, the belt already described. Ohio and Indiana geologists claim that parts of those States have sustained a degree of erosion altogether exceptional in the Maumee-Wabash Valley, and it might hardly be expected that the moraine would come out of such an ordeal in any other than a fragmentary condition ; so we may have to content ourselves with a partly speculative range in the regions named, but some remains will certainly be found when adequate and critical search shall be made to connect the Ohio belt with the western range. A similar formation is described in New York reports as extending along the southern part of Long Island, and the same range is traced across New Jersey by Prof. Cook, who is satisfied that it is a terminal moraine.

Sufficient investigation may yet establish the oneness of our morainic belt, and prove a yet vaster extension, but history records only what is known.

We come now to consider the mineral resources of the State—metallic ores from which metals are extracted, and non-metallic minerals which are applied in numerous ways, with but slight preliminary treatment, in the mechanic and economic arts, to increase the comfort of mankind. Wisconsin possesses, in large degree, the ores of lead, zinc, iron and copper, and in degrees almost infinitesimal, even the more precious metals. The non-metallic substances principally found are building stone, brick clay, cement rock, kaolin, glass sand, peat and limestone for lime and flux. Lead and zinc are found in the same region, under like conditions and often together. Lead has long been the most important metalliferous product of the State, but the demand for our lead is not so great as formerly, and the labor employed suffers a corresponding reduction. Lead and zinc ores have been discovered in limited quantities in the archæan rocks in the northern part of this State, which we have described elsewhere as the core about which the concentric bands of other formations aggregated in transforming the Island of Wisconsin into part of this continent. The economic value of the deposits named is wisely doubted. The chief supply of those metals in this State comes from that section of the southwest west of Sugar River and south of the valley of the Wisconsin River, from the head-waters of the first-named stream westward. That is the lead region, and, with small additions of territory included in Iowa and Illinois, the lead regions of the Upper Mississippi can be accurately delineated.

France became impressed with the belief that the valley of the Mississippi was rich in metals, during the seventeenth century, and in the next century the fearful climax of speculation known as the "Mississippi Bubble" was largely due to the assumption that the valley was auriferous. Nicholas Perrot is said to have discovered lead here about the year 1692, but the supposed discoverer does not mention the fact in the only work of his pen that has been preserved. Le Sueur, famous for his voyage up the Mississippi in the first year of the eighteenth century, found lead on the banks of that river near what is now the southern limit of our State. Capt. Carver found lead in the Blue Mounds in 1766, the Indians being unaware of its value as an ore, although conversant with its appearance. The first mining for lead in this country with which we are conversant was undertaken in 1788 by Julien Dubuque, who continued his operations near the site of the city named for him until 1810, the time of his death. For twelve years from that time, lead mining was a lost art among the American people, but after 1821 that industry was resumed with great profit, and has been prosecuted ever since, attaining its maximum of production between the two years 1845 and 1847, until the silver-lead mines of Utah rose into prominence, with other such mines in the Rocky Mountains. The lead mines of the Mississippi Valley eclipsed all the other mines in the United States in the production of lead, and the production of that metal is still large in the region with which we are most concerned. Wisconsin gives but one form of lead ore in quantity, sulphide of lead or galena, which, when free from foreign admixtures, shows over 86 per cent of pure lead mixed mechanically with sulphur. Ordinarily, galena contains silver, but the ore in Wisconsin has only the slightest trace of the more precious metal.

There are two varieties of zinc ores produced in our mines—sphalerite, sometimes marmatite, and smithsonite—the first a sulphide containing about 10 per cent of iron, known to the miners as "black jack;" the pure sulphide of zinc contains about 67 per cent of the metal. Smithsonite, popularly known as "dry bone," is an iron-bearing carbonate, which is produced abundantly. Both the ores, lead and zinc, in the several varieties named, and some others, are limited practically to the beds of Galena and Trenton limestone, which have already been described in their order, underlaid by almost horizontal strata, deposited upon the archæan rocks the crystalline metamorphic sedimentary upheaval, to which we are under so many obligations. The order of their coming has been already given, and the facts of their partial erosion; but the strata attain a depth in all of nearly two thousand feet in the lead region. Galena buff and blue limestones are, in all, about three hundred and seventy-five feet thick, the upper and lower strata of the deposits being, in a metallic sense, barren. The blue and buff layers are the main depositaries of zinc, and lead is the chief product of the Galena limestone; but the layers all produce both metals in greater and less proportion. The deposits of ore are found in crevices

sometimes vertical and sometimes lateral, the simplest and commonest form being a crack in the rock, probably a few inches wide, having a flat extension beneath, worn by the water as it percolated through the stratum, leaving the chemical residue to be found by enterprising men. Some of these extensions are several hundred feet in length and breadth, vast chambers forty feet in height, lessening to nothing on every side, and brilliant with incrustations that might enrich a palace. The imagination of the reader may riot at will in conjuring up the wondrous forms of beauty assumed by these subterranean cavities, without danger that his most extravagant creation will surpass the reality in favored instances; but many of the chambers contain masses of loose rock disintegrated, but not carried away, containing large quantities of Galena; and the ore in numberless instances is found in cubes and stalactites, crystalline embodiments of the wealth that rewards patient labor. The limestone has been creviced in two directions, rudely indicating the points of the compass, the lines treading east and west being the most productive of metal. Vertical crevices are seldom found in the lower stratum or buff limestone; hence the ores of zinc are not found in the vertical openings to any extent. Sometimes many of the chambers or "flat openings," sheets, or crevices, are worked together with manifest advantage to the miners. Occasionally the flat openings contain little or no galena, but are well supplied with "black jack" and "dry bone" ores and cleavable calcite, as well as marcasite or sulphide of iron on roof and floor, the area between being clear. Vertical crevices characterize the galena proper, as a rule, and the flat openings are looked for generally in the blue and buff limestones, so that zinc is principally obtained in such chambers.

Until the year 1860, the zinc ores, being more refractory than galena, were not considered capable of being worked with profit, the clay and fuel for smelting having to be brought from great distances, so that freights were enormous; but about the time named the plan of sending ore to La Salle, Ill., was initiated, and has since been prosecuted with much advantage, as it is cheaper to send the ore for reduction to the fuel and clay than to bring the other substances to the mining district in sufficient quantity for the work. The innumerable purposes to which zinc is increasingly applied in daily life render it certain that the large deposits of the ore obtainable in this State will long continue to be a source of wealth. The geological survey of the State has been of immense advantage in determining the localities in which the deposits of galena and buff and blue limestone have been more or less extensively eroded by atmospheric influences, and the economic value of such inquiries will be found in the saving of money and labor from being invested, where, even though the ores may be discovered, they do not exist in sufficient quantities to justify large outlay for permanent works. The practical miner knows the worth of accurate scientific investigation.

Iron is not yet one of the great products of Wisconsin, but those who have read the former pages of this chapter cannot fail to know that there are great possibilities in the future in this respect. Many blast furnaces are now employed in the eastern section of the State, reducing ores brought from Michigan, but there are other furnaces dealing with ores from our own mines, and their number and profits will very largely increase. Our best iron fields are, beyond doubt, in the north, where the country is heavily wooded, and where much patient exploration and many tentative experiments should prepare the way for large investments, such as will afford remunerative employment to skilled miners and workmen for centuries in developing this branch of our great mineral resources. In describing the several ores from which iron is obtained, we shall try to avoid technical phraseology except in those instances in which the *technique* has become a popular possession. Red hematite ores contain iron in an earthy condition, as *anhydrous sesquioxide*, without luster, although when pure fully 70 per cent of metallic iron is present. The mined ore is seldom pure, and the mechanical combination of foreign substances reduces its value generally to about 50 per cent, or even less. Clinton iron ore is our most important find in this State of red hematite, at present being exploited, the name being derived from the locality in Oneida County, N. Y., where it was first obtained. Its rocks are limestones and shales in the Silurian formation, and its characteristics are marked so unvaryingly that any person once familiar with the ore cannot fail to recognize its presence in new positions. This

ore contains much phosphorus, and the iron is known as "cold short," but, when blended with other ores, silicious and free from phosphorus, the product is very valuable for foundry purposes. The deposit is found in rocks of great thickness which are already being mined at many points from the locality of first recognition to Tennessee. Clinton ore is found in Wisconsin sometimes immediately overlying the Hudson River or Cincinnati shales; but, more generally, the Clinton rocks merge into the Niagara limestone rocks in the eastern part of the State. Iron Ridge, in Dodge County, is an important deposit. A ledge of Niagara limestone running north and south, looking down upon lower land to the west, covers an ore bed from fifteen to eighteen feet thick, with horizontal layers ranging from three inches to fifteen, of concretionary structure, having lenticular grains one-twenty-fifth of an inch in diameter. The topmost layer is a dark purple, slightly metallic to the eye, but not resembling the other layers in structure. At Mayville, Mr. Sweet examined a thickness of forty feet three-fourths of a mile from the ridge, and the same authority gives the results of his analysis of the ridge ore in the following formula: Iron peroxide, 66.38; carbonate of lime, 10.42; carbonate of magnesia, 2.79; silica, 4.72; alumina, 5.54; manganese oxide, 0.44; sulphur, 0.23; phosphoric acid, 0.73; water, 8.75-100; metallic iron, 46.66. The average furnace yield of the ore at Mayville is about 45 per cent. Two small furnaces operating at Mayville and Iron Ridge, and using charcoal, smelt from these ores an iron sometimes rich in phosphorus. The ore is not usually smelted at the local furnaces, being mainly shipped to the extensive iron works in Chicago, Joliet and Springfield, Ill., St. Louis, Mo., Appleton, Green Bay, Depere and Milwaukee, Wis., and Wyandotte and Jackson, Mich., to mix with other ores. The yield of the ridge eight years ago exceeded 80,000 tons per annum. The base of the Niagara limestone is marked by similar deposits at other points further north in this State, but the commercial value of the ore in the instances noted is yet uncertain. The Potsdam sandstone, lowest of our horizontal formations, is highly charged with red hematite in many places; and, in Westfield, Sauk County, an excellent iron ore has displaced the sandstone, but the extent of the deposit is unknown.

Hydrated or brown sesquioxide, commonly known as brown hematite, contains 60 per cent of iron when pure; but the average yield comes nearer 40 per cent. Bog-iron ore is one of the varieties of brown hematite, a porous deposit from the water of bogs and marshes found in Portage, Wood and Juneau Counties. Near Necedah, in Juneau County, and near Grand Rapids, Wood County, are excellent bog ores containing nearly 50 per cent of iron, but the quantity available is uncertain. Brown hematite mixed with red ore is found in Sauk County and in Richland County adjoining, filling fractures and cavities in the Potsdam sandstone; and two furnaces are now in operation on this ore at Ironton and Cazenovia, the first named having been established many years, and having proved the value and quantity of the deposit.

Magnetic ores and specular hematites are found intimately mingled in the same group of rocks in Wisconsin, and, although not yet included among the industrial products of the State, there are many indications that they will rank high in its mineral sources of wealth. Magnetite is an oxide of iron, containing, when pure, about 72 per cent of iron, the highest percentage indeed possible to an ore. Specular hematite is of the same nature as red hematite, but the ore is crystalline and hard, with a metallic luster. These ores combined seldom give more than 50 per cent of metal, and the richest ores hardly ever yield more than 65 per cent. There are two iron districts in this State in which specular and magnetic ores abound; the Menomonee, near the head-waters of the river of that name, in Township 40, Ranges 17 and 18 east, Marinette County, and the Penokee in Bayfield, Ashland and Lincoln Counties, ten to twenty miles south of Lake Superior. Veins and nets of specular iron are found with the quartz rocks of Baraboo Valley, Sauk County, and in Necedah, Juneau County; and in the vicinity of the Black River Falls, Jackson County, in a peculiar quartz-schist, magnetic and specular iron oxides are found, but so far it does not appear that the ore would pay for reduction. The ores are found in the Menomonee and Penokee districts in slaty and quartzose rocks, extensions of the series which in the Northern Peninsula of Michigan have contributed so largely to the fame and wealth of that State as a producer of iron. Lean magnetic and specular ores are found in

this rock series, in great beds, combined with large quantities of quartz, forming bold ridges, almost defying the power of the air to erode them; but of little or no value for reduction. Other layers in the same series, very soft and seldom outcropping, for that reason are extremely rich, and the Menomonee region possesses the last-named layers in a marked proportion. One of these deposits shows a breadth of more than 150 feet of first-class specular ore. The existence of similar beds in the Penokee district, may be reasonably inferred, as the rocks form part of the same series, but the discovery has yet to be made, and should probably be sought north of the main range, under heavy deposits of drift which cover large areas of iron-bearing rock. There are lean ores in the Penokee range which are almost rich enough to pay for reduction, and which by and by will be reduced.

Copper is not raised in Wisconsin, except at Mineral Point, where *chalcopyrite*, the yellow sulphide of copper and iron, are found in the crevices of Galena limestone. Copper in small quantities in pyrites, can be found all through the lead region, but the return would not pay for exhaustive exploration. In Northern Wisconsin, also, copper is found, but under different conditions; and it remains to be seen whether the newer developments will pay for mining, as many hope and believe. The Keweenaw Point, and Isle Royale copper-bearing rocks stretch across this State in two belts, southwesterly and parallel. One belt commences the journey at Montreal River, crossing Ashland and Bayfield Counties, and then expanding, fills a large area in the counties of Douglas, Saint Croix, Barron and Chippewa. The back-bone of the Bayfield peninsula is found by the other belt which continues its bold ridge across Douglas County, to Minnesota. The rocks appear to be igneous, as we have elsewhere explained, but they are distinctly bedded and partly interstratified with sandstone, shales, and boulder conglomerates. Veins cross the rock beds, in which pure metallic copper can be found in fine flakes, and like deposits are found scattered all through the several layers. There have been attempts at mining on small scales in these belts where nature favors experiment, but the commercial value of the deposit must be determined by larger and more scientific endeavors.

Gold may be found in infinitesimal quantities in almost any part of the earth, but there are few even of the great diggings where it actually pays to mine for the precious metal. A few men become suddenly rich, but the great mass remain poor to the end, until they mingle their dust with that of the placer in which their lives have been spent to so little purpose. Traces of both the precious metals have been found in Wisconsin, but happily not in any such quantities as may ever disturb the normal and more profitable industries of mankind. Clark County and Ashland County are the two localities said to be auriferous and argentiferous in the trivial degrees mentioned. Thus ends our record of the metals found in Wisconsin.

The non-metallic minerals may now pass under brief review. Brick clays are of great value to Wisconsin, and they are found extending inland from the great lakes for many miles, telling of a time, probably long after the glacial period, when these immense bodies of water covered a still greater area. The beds of clay are stratified and of lake formation, containing large amounts of carbonate of lime. In this State that stratum of wealth gives employment to thousands who make and burn bricks to the extent of more than 50,000,000 annually. Some of the bricks are red and others cream color, and it has been claimed that the red color indicated the presence of more iron in the constituents of the clay; but a series of experiments and analyses carried out by Mr. Sweet, formerly of Madison in this State, and now of Colorado, and supplemented by analyses by Prof. Daniells, of Madison University, show that the quantities of iron in the clay at Milwaukee, the clay in Madison, from which red bricks are made, and the clay from Lake Superior, in Ashland County, only vary in fractional parts, the difference showing a slight excess of iron in the cream-colored Milwaukee clay over the clay used in the red bricks in Madison. Carbonate of lime seems to be the ingredient in respect to which the bricks of Milwaukee differ from some of the bricks made elsewhere. The clay from which light-colored bricks are made is often a bright red at the outset of its career, as raw material for the manufacturer. Tiles and pottery of excellent quality are made from this clay in many places, and the number of men employed in such industries will steadily increase. The lake clays already named are not the

only deposits of the kind in the State available for such uses. The Yahara Valley in Dane County has an excellent stratified clay which is burned into red brick at Madison, and to cream-colored brick at Oregon and Stoughton. Platteville, Lancaster and other noteworthy points in the southwestern parts of Wisconsin are favored with fine beds of clay, from which excellent red brick is made, and the enterprise of the people will develop other and still more valuable methods to convert these deposits into sources of wealth and happiness.

Kaolin is a contribution to our language from the Chinese, being used by the Celestials to denote the rock from which they make their porcelain. We use the word to indicate a very fine clay, although it differs widely from the material employed by the Chinese and Japanese in the fabrication of their exquisite wares. Our kaolin is the result of a disintegration of felspathic crystalline rocks, the base of supply not being removed from its place of deposit. Silica, alumina and water combine to form the mineral kaolinite which is the base of our porcelain clay. Foreign ingredients, which are as a rule present in the rock when the process of disintegration is advancing, are removed more or less completely by manipulative skill, and a pure white clay of exceptional fineness is the result. Wisconsin is rich in the crystalline rocks from which kaolin may be formed, but the disintegrated material is rarely found, probably in consequence of glacial action having denuded the softened parts of the rocks. From Grand Rapids, on the Wisconsin River, westward to Black River, in Jackson County, is a belt where the crystalline rocks were once overlaid by sandstone, and at the point of junction many water courses lent their aid to the work of disintegration. Over the area named, drift action has been trivial or is entirely wanting, so that all the conditions have favored the deposition of porcelain clay or kaolin. The beds of the Wisconsin, Yellow and Black Rivers have large exposures of the desiderated rock overlaid by sandstone on either side, and just where the deposits of disintegration might be expected, kaolin is comparatively abundant, stretching across the country in the lines of the layers of the tilted crystalline rocks, waiting only the manipulative skill of competent workmen and artists for conversion into forms of beauty that will charm wealth into the surrender of its hoards. On the Wisconsin, near Grand Rapids, these patches are very numerous, varying in dimensions from less than an inch to many feet in depth. The quality is also variant; some pure and refractory, and other parts fusible and impure.

Milwaukee cement rock has been already referred to in our geological summary, but in this relation that material must be again mentioned to assist the classification of our minerals. Certain layers of Lower Magnesian limestone produce a lime which has in a large degree the hydraulic property. Some parts of the blue limestone, in the Trenton group, which may be found in Southwestern Wisconsin has that quality; but the best yet discovered in this State is the Milwaukee cement rock. The location of the deposit has been already given. The cement is obtained in almost any quantity, and the product manufactured from it exceeds in value and strength every other material of the kind, except the famous Portland cement, made in Great Britain. The rock exhibits great evenness in the distribution of its ingredients throughout the mass, and will prove of great value. Ripon has a cement rock which belongs to the Lower Magnesian limestone, but it cannot compare in excellence and durability with the great deposit of cement rock near Milwaukee.

Niagara limestone furnishes an excellent quick-lime, white and pure, far in advance of the other formations; Lower Magnesian ranking next, as when burned it makes a strong mortar, but it is "off color," to use the language sometimes applied to precious stones. Madison lime is burned from the Lower Magnesian. Trenton limestone does not yield good lime, and the Galena limestone is little better in that respect, but much lime is made therefrom. Nearly half a million barrels of lime annually is now being made in this State from Niagara limestone alone. There is a limestone quarry near Milwaukee; the stone from which is used very successfully as a flux, at the rolling-mills at Bay View, in that city; but Shoomaker's quarry is one of very few, as our limestones are mostly Magnesian. Some layers of Trenton limestone in many parts of Wisconsin, especially in the southern section, are non-magnesian, and will reward investigation when the demand increases.

Our readers will remember the reference made elsewhere to St. Peter's sandstone, as a pure white, siliceous sand, suitable in glass making, and it is gratifying to note that this excellent material is being applied to the use named at many places in Eastern Wisconsin with advantage.

Peat will hardly ever be depended on as a fuel in this country, where coal is within easy reach; but as a fertilizer it is of great value, and it is therefore a matter for congratulation that it can be obtained in great quantity, and of good quality, from the marshes in the eastern and central parts of the State. We have now nearly completed our presentation of the geological resources of Wisconsin, as nothing remains but to note the varieties of building stone available, and before proceeding to their enumeration it is our duty to acknowledge our obligations to Prof. Chamberlin, Prof. Irving, Prof. Whitney, Mr. Strong, Mr. Sweet and to many other gentlemen, whose storehouses of fact have been ransacked without scruple to render these pages interesting and complete. More especially we are under deep obligations to the gentleman first named, our chief geologist, for kindnesses innumerable, the value of which will, we hope, appear in the enhanced worth of this volume.

The story of the rocks has been a sketch, necessarily hasty and incomplete, of the various layers of sedimentary stone and trap from the Archæan upheaval to the drift formation, all more or less adapted to building purposes; we shall name only a few kinds, representative of the great series. Granite and gneissic rock, the core of our State, are found in protruding masses at many points in Northern Wisconsin. Red granites, of great value and beauty, which have not yet been worked, but which will some day in the near future reward enterprise with rich returns, are exposed on the Wisconsin River and on Yellow and Black Rivers, more especially at Black Bull Falls, near which there may yet be quarries opened to supply the demands of neighboring States as well as our own for a building material seldom surpassed in loveliness and durability.

Along the shore line of Lake Superior, from Michigan to the Minnesota boundary, a valuable sandstone, handsome and enduring, is found in Wisconsin. This rock forms the base of the Apostle Islands, and is largely quarried in one of them to supply Milwaukee and Chicago with a dark-brown, uniform and very fine-grained stone, upon which fashion and good taste have set their seal of approbation. The stone can be worked with comparative ease, in blocks of almost any dimensions that can be transported, and many public and private buildings in the great cities named are constructed of this excellent material. The neighboring islands and contiguous points on the mainland, offer abundant opportunities to quarry stone of the same kind, in every respect as good, so that the much-admired brown-stone front, in which opulence finds delight, will some day, soon, offer attractions to be embraced by a much larger class in our community. There is a hardened, well-compacted sandstone, ranging from white to brown in color, and of even grain, obtained from the Potsdam series, at Stevens' Point, Grand Rapids, Packwaukee, Wautoma, Black River Falls, and at several points in the Baraboo Valley, so that this valued stone is known to be easily accessible in Portage County and in the counties of Wood, Marquette, Waushara, Jackson and Sauk. Besides the treasures thus unfolded, the uppermost layers of the same series furnish a very slightly buff colored, calcareous sandstone, which is quarried near Madison, in Dane County, and largely used in building the ornate residences for which the capital of the State is justly famous.

The limestone formations of this State furnish many varieties of building stone of less and greater value, and mostly durable as well as handsome. The stratum known as "Mendota," from its outcropping near the lake of that name, near Madison, is a part of the Potsdam series, very evenly bedded, finely-grained and yellow, well appreciated throughout the region in which it is found, and worked extensively all around Madison, as well as throughout the Lower Wisconsin Valley. A cream colored limestone, from the Lower Magnesian series, is quarried in Westport, Dane County, and very handsome fine-grained stone is supplied from a base that is practically inexhaustible. It is, however, fruitless to attempt a complete summary of our resources in building-stone, as the work might crowd a volume and still fail to do justice to the wealth of detail by which we are surrounded; hence we must content ourselves with but a brief reference

to the remaining series of limestones—the Trenton, Galena and Niagara—in this respect, and so close our necessarily imperfect *resume*. The Trenton layer is usually thin but evenly bedded, not highly valued by builders, but sometimes utilized for laying in wall. Galena and Niagara limestones permit of a much larger variety of uses, and, in Eastern Wisconsin, the last-named layer supplies a white stone, very compact and enduring, easily worked and capable of a high finish. It is not easy to estimate the millions of men who will find homes in this State within the next century, as the reward of enterprise and well-applied labor in the development of its mineral resources.

Having dealt somewhat exhaustively, though not completely, with the rock formations, we come now to consider the general contour of the country embraced by our history, the surface, streams and hills. A detailed description of the geological formation of this immediate locality might be written without reference to the surrounding counties, since Iowa, La Fayette and Grant Counties are entirely within the limits of a distinctive division, but, for the purpose of giving a more comprehensive report, it is deemed advisable to ignore political boundaries, and treat of those lines which nature created ages untold before the presence of man upon the scene.

THE MINERAL DISTRICT IN DETAIL.

The Mineral District of Wisconsin, Illinois and Iowa is recognized by geologists as an area peculiar to itself, and is written about as such. The geographical scope of this article extends, however, for obvious reasons, from the easternmost line of the mineral-bearing formation in Wisconsin to the Mississippi River on the west, and from the northernmost limit of the district, the Wisconsin River, to the dividing line between Wisconsin and Illinois, so far as local or detailed description is intended.

It is given on the authority of James G. Percival, State Geologist from August 12, 1854, to the time of his death, May 2, 1856, that the mineral district reaches no further eastward than Sugar River, which runs in a general southeasterly course, rising in Township 7 north, Range 7 east, Dane County, and traversing the eastern range of Green County. Occasionally small quantities of lead ore are found further east, but no especial mention of such deposits is required here.

In 1834, Mr. G. W. Featherstonhaugh began the first survey of the district lying between the Missouri River and Red River of the North, and the upper part of the valley of the Mississippi and the mining districts adjacent to that river. The survey was completed in 1835, under the patronage of the General Government. Another survey was made by the Government in 1839. Dr. D. D. Owen was the geologist in charge of the latter exploration, but the magnitude of the task prohibited a minute examination of this region. In 1853, Prof. E. Daniels published a pamphlet concerning the geology of the lead region, under the auspices of the State of Wisconsin. Dr. J. G. Percival was the next scientist to prepare a report, but his labors were cut short by death, May 2, 1856. Upon the death of Dr. Percival, Profs. James Hall, E. S. Carr and E. Daniels were appointed, and, in 1858, Prof. Daniels issued a report on the iron ores of the State. In 1862, Profs. Hall and Whitney published the largest report that had up to that date been presented, about three-quarters of the work being given to the lead region. Rev. John Murrish issued a smaller report in 1872. In 1873, the late Moses Strong, Assistant State Geologist, was instructed to prepare a report covering points not touched on by previous surveyors, and, during that and the succeeding year, responded to the request. From these volumes, but mainly from the report of Mr. Strong, the following facts are compiled.

DEATH OF MOSES STRONG.

Because of the grand work performed by Mr. Strong in this locality, as well as because of his residence in Mineral Point, it is deemed proper to interrupt the geological record for a time, and here insert the following account of his melancholy death :

The following notice is taken from the *Wisconsin State Journal* of February 4, 1878 :

“In his annual report of the Wisconsin Geological Survey, just issued from the press of the State Printer, Prof. T. C. Chamberlin, Chief Geologist, has taken occasion to commemorate,

in most fit and appreciative terms, the virtues and qualities of one of his associates in the survey, the late Moses Strong, who lost his life in the service of the State, and for his devotion to the cause of scientific discovery and research. The faculty to win at once the respect of those who became associated with him was one of the marked, peculiar and shining qualities of Mr. Strong's character; and the more intimate became the association, the higher the admiration for his genius, and the more enduring the impression of the sterling attributes of his mind and heart. Those who knew him best will be the most ready to second, and the most sincerely to indorse the high and deserved panegyric which his associate, in such apt and felicitous words, has pronounced upon him. In the opening of the report, a circumstantial account of the mournful accident by which Mr. Strong lost his life is given, which we republish."

The following letter was the last received by Prof. Chamberlin from Mr. Strong, on the eve of his departure for that which proved to be his last earthly exploration:

STEVENS POINT, August 15, 1877.

DEAR CHAMBERLIN: I leave here to-morrow morning, and, on account of very low water, I find it necessary to make the trip up the North Fork of the Flambeau first, and thence down the South Fork to Fifield.

You may send letters to me to Fifield Station, W. C. R. R., care of the Station Agent, via Stevens Point.
Very truly yours,
MOSES STRONG.

The subsequent events are clothed with inexpressible sadness. The following account was prepared immediately after the melancholy event, by one whose facilities for obtaining the exact facts exceed our own, and whose painful feelings caused every incident to impress itself with unwonted force and vividness upon his feelings and memory:

"Mr. Strong left Stevens Point on Thursday, the 16th, accompanied by William P. Gundry, of Mineral Point, and John Hawn, of Stevens Point, a guide whom he had hired, who was familiarly known as 'Sailor Jack,' and who was an experienced woodsman, and an expert in canoe navigation. The party went by railroad to the crossing of the Flambeau River, where they arrived about 6 o'clock P. M. The next day, Friday, was spent in procuring boats and other preparations for ascending the river. Mr. Strong obtained a light skiff, made of riven white cedar, which he thought well adapted for the purposes for which he wished to use it. He also obtained a birch-bark canoe, in which were to be transported the supplies and camp equipage for the party of three.

"They commenced the ascent of the Flambeau on Saturday morning, and continued it for nine or ten miles without any remarkable incident, until nearly 3 o'clock P. M., when they came to some rapids, supposed to be in Section 28, Township 41, Range 1 east. The rapids were about one hundred and fifty feet from the foot to the head. The bed of the river was filled with numerous rocks, over and about which the water rushed rapidly. 'Sailor Jack' took the lead, in the bark canoe and its freight, followed by Mr. Strong and young Gundry, in the cedar skiff. Jack had reached the head of the rapids, or nearly so, as the others were entering upon the ascent. Mr. Strong was standing in the bow of the skiff, using a long, light pole for propelling it, while Gundry was sitting in the stern, using the oars for the same purpose. Near the foot of the rapids was a rock, past which they pushed the skiff far enough so that the current struck its bow and turned it around the rock in such a manner that the whole force of the current, striking it broadside, turned it over. As it was going over, Mr. Strong jumped from it into the water, and stood upon a rock in the bed of the river, over which the water was three and a half feet deep, and came up to his waist. Immediately below the rock where he was standing and holding on to the skiff, the water was twelve feet deep, into which Mr. Gundry went as the skiff upset. At that instant he hollowed to Mr. Strong, 'I can't swim,' who replied, 'Hold to the boat.' Gundry held on at first, but, in attempting to get a better hold, or in some way, lost his hold of the boat and was carried into the water, into which he was sinking. Simultaneously, the skiff went down the stream, and Mr. Strong left his position of comparative safety, and was immediately in the deep water, and sunk to the bottom of it, to rise no more.

"Why he left the place where he was standing, and let the boat go, is a matter of conjecture. One theory is, that he slipped and could stand there no longer; but this is not as

probable as is the theory of the men who were engaged in searching for his body, which is, that as soon as he saw that his friend Gundry had lost his hold of the boat and was sinking, he threw himself into the water, in the vain (as it proved) effort to save his companion from drowning. He was a good swimmer, very self-confident and self-reliant, and would not have been likely to apprehend any disaster to himself in the efforts to save his friend, and if he had, the apprehension would not have deterred him.

"The reason why he did not reach Gundry is very satisfactorily explained by Gundry himself, who says that, while he was under the water, he distinctly saw Mr. Strong with his legs drawn up, as in a sitting position, with his arms bent in front of his breast, in which position he sank, and his body was in this position when found. It, therefore, would seem quite certain that, in his effort to save Gundry, Mr. Strong was seized with cramps, which deprived him of the power of swimming, and resulted in his own drowning, and the certainty is increased by the fact that his body was found on the bottom of the river, not more than thirty or forty feet from where he had been standing.

"That Mr. Gundry escaped drowning is almost miraculous. He drifted down the river until his feet struck a sand-bar, which enabled him barely to get his head above the surface of the water. Here he stood in water up to his neck, until he was rescued by Jack Hawn. As soon as Jack heard the cries, he left his canoe at the head of the rapids and ran to the foot of them, where he saw Gundry's head above the water, and the skiff floating down the stream. He immediately rushed into the water and secured the skiff, and with it rescued Gundry from his peril.

"The time of the accident was 2:55, as indicated by the watches of both the young men, which were stopped at the time of being submerged. The body of Mr. Strong was found at 6 o'clock on Sunday evening, in eight and one-half feet of water. It might probably have been found sooner, but for the erroneous supposition of those engaged in the search that it had drifted further than proved to be the fact."

At the time the crushing news was received, his father, the Hon. Moses M. Strong, was at Stevens' Point, and, through a generosity and courtesy that commands our warmest admiration, a special train was placed at his disposal by General Manager E. B. Phillips, of the Wisconsin Central Railroad, whereby he was enabled to reach at an early hour the scene of the disaster.

The remains were conveyed to Mineral Point, where they were laid to rest, amid profound sorrow, not alone of kindred and friends, nor of the community by which he was so highly esteemed, but of the entire commonwealth in whose service he had fallen.

The loss to the survey, though immeasurably less than the unspeakable affliction to the smitten family, is very great. Mr. Strong's careful notes, even up to the very hour of his death, were all recovered in a legible condition; yet, though they were taken with that painstaking care that so prominently characterized his work, they can never receive at the hands of another that fullness and completeness of elaboration which they would have received from their author.

As an appropriate, yet most sad and mournful appendix to the report, Prof. Chamberlin has added the following:

In Memoriam—Moses Strong—(June 17, 1846—August 18, 1877).—The lapse of a geologic age is little to us save in the record it has left us. The infinitude of its days are of little moment if they form a "Lost Interval." The record is little to us save in its character. An eon of ages may have heaped up an immensity of sands, but if they have buried neither life nor treasure, it is but a barren interval. The years that formed the coal, the ore and the life beds, however brief among the eras of the earth's history, are more to us than all lost or barren intervals, however vast their cycles. So the eon of life. June 17, 1846—August 18, 1877. These are the limiting signs of human age. What is the record?

The earlier period of Mr. Strong's life, the period of fundamental intellectual deposit and moral accretion, were spent where the basal strata of character are best laid, at home.

His early training and instruction were largely received at the hands of an intellectual father and a pious mother, the combination which best matures thought and develops morals. To this was added something of the cosmopolitan culture of the public schools. In his thirteenth year he entered the French and English school then located at Sauk City, where he acquired some knowledge of the rudiments of the versatile language of the French. A collegiate course had, however, been selected as an important feature of his education, and in his fourteenth year his studies were turned specifically in that direction under the tuition of the Rev. Mr. Skinner, then Rector of the Episcopal Church at Mineral Point. The last few months of these preparatory studies were passed at Delavan, in this State, whither Mr. Skinner had removed, and some of the citizens of that place will recall the quiet manner of the young student. Let it be noted that thus far, more than half the span of his life, he had been chiefly under the quiet but potent molding power of paternal and pastoral influence. Under these auspices the predominant traits of his character were formed, and the most important part of his education accomplished, the education that looks toward manhood.

But, though the home is wide enough for the boy, the world is none too broad for the man, and Mr. Strong now entered upon that wider culture which was to fit him for the still broader school of life. In September, 1863, he was admitted to Yale College, in whose classic atmosphere he passed the succeeding four years. It was in our judgment a fortunate circumstance, in view of the fact that he subsequently turned his attention so largely to engineering and scientific studies, that so considerable an element of literary study entered into his course at this period. In the junior year of his college course, he selected the profession of mining engineer as his life pursuit, and during the remainder of his course his reading, outside of his class studies, was mainly such as was germane to his chosen profession. Immediately after his graduation, he was offered an opportunity to engage in practical civil engineering in connection with the survey of a railroad line along the Mississippi, between La Crosse and Winona. This work, however, was cut short by sickness.

In the fall of the same year he returned to New Haven, and spent the year in the Sheffield Scientific School in the study of natural science, higher mathematics, drawing and kindred studies. In the pursuance of these studies he was much indebted to Prof. Brush, of the chair of mineralogy and metallurgy, who had completed his education in Germany, and by whom Mr. Strong's desire to complete his own education in that country was stimulated to its consummation.

Mr. Strong sailed for Germany in July, 1868, and returned in the same month of the year 1870. His first year was spent in the mining school at Clausthal, in the Hartz Mountains, and the second at the celebrated school at Freyberg, in Saxony. These two years afforded excellent facilities for the pursuit of his professional studies, both in the extensive mines and the ample laboratories.

Soon after his return from Germany, Mr. Strong engaged in the practice of his profession—the survey of the extensive lead mines of Crawford, Mills & Co., at Hazel Green, being his first engagement. Upon the completion of this, he was entrusted by the firm with a financial mission to New York.

It was always the intention of Mr. Strong to pursue the work which he had planned for his life in the mines of the West, but his devotion to his parents, and his attachment to the home of his infancy and youth, and its domestic associations, were so great that he was reluctant to remove to so distant a field of labor, so long as he could be profitably engaged without permanently disturbing the ties and affections which bound him with such devotion to the scenes that had given so much pleasure to his earlier years.

Deeming a practical acquaintance with civil engineering, especially so far as relates to the location and construction of railroads, a valuable accessory to his profession as mining engineer, he became associated for varying periods, and in different capacities, in the location of the Northern Pacific, the Wisconsin Central, and several preliminary lines in the lead region.

On the inauguration of the geological survey, in 1873, Gov. Washburn, upon the recommendation of the late Dr. I. A. Lapham, then chief geologist, commissioned Mr. Strong as

Assistant State Geologist. During the years 1873 and 1874, he was engaged chiefly in the examination of the lead region. In 1875, he extended his work, adjacent to the Mississippi, as far north as Trempealeau County.

The year 1876 was chiefly devoted to the copper-bearing series in the northwestern part of the State.

The history of Mr. Strong's work during the past year, and of its calamitous close, has already been given on a previous page. He fell in the midst of his work, in its active prosecution. His last notes were recorded but a few moments before they were submerged with him beneath the fatal rapids. The life passed away, but its latest record remained. These last recordings are marked by blanks. The formation has been described, but spaces were left for the location, which was not then determined. These blanks may be filled, but he has left other blanks we may not fill. He fell *pushing up the stream*—in fact and in symbol—not floating down it. *He stood at the prow*, pressing onward and upward, with duty for his motive and truth for his aim.

Of his investigations in connection with the survey, I need not speak. "Let his works praise him."

In character, he was modest and unassuming, and commanded respect rather by the merits he could not conceal than by any that were assumed. His quiet manner never revealed the real executive strength which he possessed. He accomplished more than he seemed to be attempting. His quiet self-possession gave steady and effective direction to his activities, and stood as a bar alike to the aberrations of mental confusion, the effervescence of merely emotional enthusiasm, and the turbulence of illusive energy. Judiciousness in the application, rather than the absolute amount of energy displayed, characterized his efforts.

His retiring disposition excluded aggressive personal ambition, and his self-assertion was limited to that called forth in the discharge of his duties. His personal advancement was due to inherent merit or the efforts of others, rather to self-zeal and assurance on his part.

Candor and sincerity were eminent traits in his character, and honesty of expression marked alike his life and his language. His integrity was absolutely above question. No bond but his honor was requisite for the security of whatever trust was reposed in him. In attestation of his attractive personal traits, he enjoyed the warm friendship of his associates, and, in an unusual degree, the esteem of the community in which he was so well known.

In harmony with his whole nature, Mr. Strong's religious convictions were of the practical rather than the emotional type. Conscientiousness in the fulfillment of every relationship of life was the fundamental stratum upon which was erected the temple of his faith. In outward recognition of his persuasions, he became a member and regular communicant of the Protestant Episcopal Church.

If he could have chosen the form of his departure, and could have so molded it to best portray at once the soul of his ethical and religious views, he could perhaps have chosen nothing more fitting than that which the hand of destiny selected for him, to die from the perils that encompass duty, to die for his friend.

His domestic relations were most felicitous. Love given and received made his dwelling place a genial home. A kind father, a happy wife, and two lovely children, formed the hearth circle. The household *penates* always seemed to smile. That they are now broken and veiled, is the saddest thought of this sad story.

Obituary Notice of Knights Templar.—The following is a brief extract from the report of the Committee on Obituaries, to the Grand Commandery of Knights Templar of the State of Wisconsin, at the Nineteenth Annual Conclave held at Madison, October 2 and 3, 1877.

After giving a statement of the events connected with his earlier life and education, the report concludes as follows:

"The unusual fine advantages that he had enjoyed in youth and early manhood had been faithfully used, and he had fairly entered on a career that, had his life been spared, would have secured him honorable distinction.

“His character was one upon which his friends can look from any point of view with pride, with satisfaction and with love. To a mind trained by years of study and filled with valuable learning, he added a character of great moral excellence and of unsullied honor.

“Sir Knight Strong was initiated, passed and raised to the Sublime Degree of Master Mason in Mineral Point Lodge, No. 1; became a Royal Arch Mason in Iowa Chapter, No. 6, in Mineral Point, and was received and constituted a Knight Templar in Mineral Point Commandery, No. 12; receiving all his degrees in the place of his birth, and the home of his lifetime, and at the hands of those who knew full well that the honors he received were most worthily bestowed. His brethren mourn his loss with grieving and heartfelt sorrow. Such men as he it is who honor Masonry in their lives, and dying leave upon it the luster of a pure life and unspotted character.”

THE DRIFTLESS AREA.

Again resuming the narrative of geologic fact, it is observed that the most interesting fact presented for the consideration of the general geologist, is the entire absence of “drift,” or diluvium throughout the southwestern quarter of the State, and, while extending far to the north, still including the region referred to herein. The lead district is driftless. About twelve thousand square miles are embraced in these boundaries. The investigations by Mr. Roland D. Irving and Mr. Moses Strong have resulted in much interesting information. From the official reports is quoted the following:

“In the driftless region, which occupies nearly one-fourth of the entire area of the State, the drift is not merely insignificant, but absolutely wanting. Except in the valleys of the largest streams, like the Wisconsin and Mississippi, not a single erratic boulder, nor even a rounded stone, is to be seen throughout the district; whilst the exception named is not really an exception, the small gravel deposits that occur on these streams having evidently been brought by the rivers themselves, during their former greatly expanded condition, from those portions of their courses that lie within the drift-bearing regions.”

Those readers of this work who have not easy access to the official reports, may be interested to know the boundaries of the driftless region, and it is, therefore, here stated. The outline is, for the most part, sharply defined, both by a more or less sudden cessation of the drift materials, and by a change in the topography, as the line is crossed, from one side to the other. This is more especially true of the eastern boundary, in which the reader is naturally most interested. On this line are often seen heavy morainic heaps—that is, deposits of such boulders and gravel as scientists have decided are carried under, or attached to the sides of glaciers, or to the center of glaciers which are formed by the union of two separate bodies of that nature. The effects of purely subaerial (or open air) erosion without drift, and the effects of glacial erosion with drift, are plainly distinguishable along these lines. The northern boundary of the region is mainly level country, the drift materials gradually diminishing to the south.

Mr. Strong defines the eastern line through Green County as beginning at the southwest corner, and waving irregularly northeast, until it crosses the county line on the north, about fifteen miles from the east line of Iowa County. Thence the line curves to the west, and crosses the Wisconsin about three miles east of the northeast corner of Iowa County; thence, due north to Baraboo, curving as it crosses the Sauk County north line to touch Range 5; thence, with a gradual curve, it includes nearly all of Adams County, and swings to the northwest, touching Grand Rapids as its northeastern point; thence, mainly west to the Mississippi River. This is now the accepted area, although Mr. Whitney differs somewhat from the definition as to the line through Adams and Juneau Counties. The report of 1877, by Mr. Irving, is referred to, for the benefit of those who desire a more detailed and argumentative description.

Mr. Irving says: “The nature of the topography of the driftless area, everywhere most patently the result of subaerial erosion exclusively, is even more striking proof that it has never been invaded by the glacial forces than is the absence of drift material. Except in the level country of Adams, Juneau, and the eastern part of Jackson County, it is everywhere a region of narrow, ramifying valleys and narrow, steep-sided dividing ridges, whose direction are toward

every point of the compass, and whose perfectly coinciding horizontal strata prove conclusively their erosive action. * * * * Each one of the numerous streams has its own ravine, and the ravines are all in direct proportion to the relative sizes of the streams in them." [Reference is made to the contour maps drawn by Mr. Strong, displaying, with instructive plainness, the topographic phenomena of the region.]

"The altitude of the driftless area, as compared with the drift bearing regions, becomes a matter of some importance in any attempt to explain the absence of the drift phenomena. It has been stated by some writers that the driftless area is higher than the drift-bearing, and was, consequently, not subjected to glacial invasion. It is true that in general the eastern half of the State is lower than the western, but from what follows it will be seen that farther than this the statement is inaccurate. From the south line of the State, as far north as the head of Sugar River, in Cross Plains, the country west of the drift limit rises rapidly from 200 to 400 feet. Just north of the head of Sugar River the limit crosses high ground—the western extension of the high limestone and prairie belt of northern Dane and southern Columbia Counties—and the altitudes east of the limit are as great as those to the west; whilst in passing from the head of the Catfish River westward, a glacier must have made an abrupt ascent of fully 300 feet. North of Black Earth River the limit has the higher ground, by 200 feet, on the east. Sauk Prairie is crossed on a level, and though higher ground occurs west of the prairie, its topography and the absence of drift show that the glacier never reached so far. Where the quartzite range north of Sauk Prairie is crossed by the limit, it is higher (850 feet above Lake Michigan) than any part of the driftless area except the Blue Mounds, whilst only a few miles east a great development of bowlders and gravel is found on one of the highest portions of the range (900 to 950 feet altitude). From the Baraboo north to the Sauk County line, there appears to be in relation between the position of the limit and the altitude of the country. From the north line of Sauk County, in curving to the eastward and northward around Adams County, the limit is on the very crest of the divide. From its position near the middle of the east line of Adams County, the country, for forty miles to the west, is from 100 to 200 feet lower. From the northwest part of Adams County to the Wisconsin River the limit is in a level country; whilst from the Wisconsin westward, the country north of it is everywhere much higher than that to the south, the rise northward continuing to within thirty miles of Lake Superior."

In his discussion of the glacial drift, Mr. Irving reaches certain conclusions, which are here reproduced only so far as they relate positively to the area devoid of drift. The negative arguments, or those that go to prove the absence of drift, because the region is not like the vast majority of the country, and of the Northern Hemisphere of the globe, are recited in brief:

"1. The drift of Central Wisconsin is true glacier drift. [See Report 1877, p. 630.]

"2. The Kettle Range of Central Wisconsin is a continuous terminal and lateral moraine. The mere fact of the existence of such a distinct and continuous belt of unstratified and moraine-like drift, which, in much of its course, lies along the edge of the driftless area, or, in other words, along the line on which the western foot of a glacier must long have stood, would go far toward proving the truth of the proposition [that this is true glacial drift], of which, however, a complete demonstration is at hand. In all the country just inside the Kettle Range, we find that glacial striæ—channels—lines of glacial erosion, and lines of travel of erratics—bowlders, or minerals foreign to the locality where found—preserve a position at right angles to the course of the range, although that course veers in the southern part of the district from west to north. East of the Central Wisconsin district, the Kettle Range extends eastward and northeastward to the dividing ridge between the valley of Lake Michigan and the valley in which lie Green Bay, Lake Winnebago, and the head-waters of Rock River, and along this ridge northward, into Green Bay Peninsula. All along this part of its course, Prof. Chamberlin has found the glacial striæ pointing east of south, and toward the Kettle Range, whilst along the middle of the Green Bay Valley he finds the striæ directions parallel to the main axis of the valley, or a little west of south. On the west side of this great valley, and along the eastern border of the Central Wisconsin district, the striæ trend about southwest, whilst still

further west, they gradually trend further to the west, becoming at last nearly due west, or at right angles to the western Kettle Range.

“We have then a most beautiful proof that at one time the Green Bay Valley was occupied by a glacier, which was not merely a part of a universal ice sheet, but a distinctly separate tongue from the great northern mass. The end of this glacier was long in northern Rock County, its eastern foot on the East Wisconsin divide, and its western on the summit of the divide between the Fox and Wisconsin River systems, as far south as southern Adams County, after which it crossed into the valley of the Wisconsin, and from that into the head-waters of the Catfish branch of Rock River, in the Dane County region. Whilst the main movement of the glacier coincides in direction with the valley which it followed, it spread out on both sides in fan shape, creating immense lateral moraines. Peculiar circumstances caused the restriction of the eastern moraine or narrow area, whilst that on the west, having no such restriction, spread out over a considerable width of country, the breadth of the moraine reaching in Waushara County as far as twenty-five miles. This width of moraine must have been due to the alternate advance and retreat of the glacier foot. Such an advance and retreat appears, moreover, to be recorded in the long lines of narrow sinuous ridges, each marking, perhaps, the position of the glacier foot, or a portion of it, during a certain length of time. The intersecting of these winding ridges, which have no parallelism at all with one another, appears to me to have been the main cause of the formation of the kettle depressions. Col. Whittlesey [Smithsonian Contributions to Knowledge], has supposed that these owe their origin to the melting of ice masses included within the moraine materials, and this may possibly be true with regard to more regularly circular kettles. The thickness of the great glacier we can only conjecture. It is easy to see, however, that it was at least a thousand feet, for it was able to accommodate itself to variations in altitude of many hundred feet. Morainic drift occurs on the summit of the Baraboo ranges over 900 feet above Lake Michigan, and on the immediately adjacent low ground, 700 below.

“3. The driftless region of Wisconsin owes its existence, not to superior altitude, but to the fact the glaciers were deflected from it by the influence of the valleys of Green Bay and Lake Superior. Some writers have thrown out the idea that the driftless area is one of present great altitude compared with the regions around it, and that, by virtue of this altitude during the Glacial period, it caused a splitting of the general ice sheet, itself escaping glaciation. This idea may have arisen from the fact that, in the southern part of the area, the district known as the ‘lead region,’ has a considerable elevation; but the facts hitherto given have shown that, in reality, the driftless area is for the most part *lower* than the drift-covered country immediately around; the greatest development, for instance, of the western lateral moraine of the glacier of the Green Bay Valley, having been on the very crown of the water-shed between the Lake Michigan and Mississippi River slopes, whilst the driftless region is altogether on the last-named slope. Moreover, to the north, toward Lake Superior, and in Minnesota, the whole country covered with drift materials lies at a much greater altitude. J. D. Whitney, in his report on the lead region of Wisconsin, favors the idea that the driftless district stood, during the glacial times, at a much greater relative altitude than now, and so escaped glaciation. But it is evident that, in order that this could have been the case, either (1) a break or bend in the strata must have taken place along the line of junction between driftless or drift-bearing regions, or else (2) the driftless region has since received relatively a much greater amount of denudation than the drift-bearing.

“That no break or bend ever took place along the line indicated, is abundantly proven by the present perfect continuity of the strata on both sides of the line, the whole region in Central Wisconsin being in fact one in which faults of any kind are things absolutely unknown. That no sensible denudation has taken place in Wisconsin since the glacial times, in either drift-bearing or driftless areas, is well proven by the intimate connection with one another of the systems of erosion of the two regions. The valley of Sugar River, for instance, with its branches, is throughout its course worn deeply into the underlying rocks; on its east side it contains moraine drift, proving that it was worn out before the Glacial period, whilst on the west it

extends into the driftless regions. We are thus compelled to believe that, during the Glacial period, the region destitute of drift had the same altitude relatively to the surrounding country as at present. Before the Glacial period, portions of the drift-bearing region may indeed have been somewhat higher, for in it a considerable amount of material must have been removed from one place to another by the glacial forces. The only satisfactory explanation remaining, then, for the existence of the driftless region, is the one I have proposed. We have already seen that the extent of this region to the eastward was marked out by the western foot of the glacier which followed the valley of Green Bay. That it was not invaded from the north, is evidently due to the fact that the glacier or glaciers of that region were deflected to the westward by the influence of the valley of Lake Superior. The details of the movement for this northern country have not been worked out, but it is well known that what is probably the most remarkable and best-preserved development of morainic drift in the United States, exists on the water-shed south of Lake Superior. Here the drift attains a very great thickness, and the kettle depressions and small lakes without outlet are even more numerous and characteristic than in other parts of the State. The water-shed proper lies some thirty or forty miles south of the lake, and 800 to 1,200 feet above it, but the morainic drift extends twenty-five to fifty miles further southward. On the east side of the State, the drift of Lake Superior merges with that of Central and Eastern Wisconsin, while west of the western moraine of the Green Bay glacier, it dies out somewhat gradually, until 125 to 150 miles south of the lake the drift limit is reached. Much of the country twenty-five to seventy-five miles north of the driftless region, though showing numerous erratics, is quite without any marked signs of glaciation, as, for instance, along the valley of the Wisconsin, from Grand Rapids north to Wausau. Further west, the drift extends more to the southward. The course of the Lake Superior glaciers conveyed them further and further southward as they moved westward.

“Future investigations will undoubtedly bring out a close connection between the structure of the Lake Superior Valley and the glacial movements south of it. Even the facts now at hand seem to point toward some interesting conclusions. Projecting from the south shore of Lake Superior, we find two great promontories, Keweenaw Point and the Bayfield Peninsula. Both of the projections have a course somewhat transverse to the general trend of the lake, bearing some thirty degrees south of west. Both have high central ridges or backbones, which rise 1,000 to 1,500 feet above the adjacent lake, and are made up of bedded igneous rocks, sandstones, and conglomerates of the copper series. Both of these ridges continue far westward on the mainland, having between them a valley, partly occupied by the lake, which is a true synclinal trough; the rocks of the two ridges dipping toward one another. North of the Bayfield Peninsula, and again south of Keweenaw Point, we find two other valleys running in from the lake shore in the same direction. In all probability each one of these valleys has given direction to a glacier tongue. An inspection of a good map of the northern part of Wisconsin, Minnesota and Michigan, will serve to show that the almost innumerable small lakes (which are far more numerous than are shown in the best maps) of these regions, are concentrated into three main groups, each group corresponding to a great development of morainic drift, and lying in the line of one of the three valleys just indicated. I suppose that each of the lake groups is a moraine of the glacier which occupied the valley in whose line it lies. The main ice-sheet coming from the north met, in the great trough of Lake Superior, over 2,000 feet in depth, an obstacle which it was never able to entirely overcome, and so reached southward in small tongues composed perhaps of only the upper portions of the ice. These tongues being deflected westward by the rock structure of the country, and having their force mainly spent on climbing over the watershed, left the region further south untouched. The eastern part of the Lake Superior trough is not nearly so deep as the western, and the divide between Lake Superior and the two lakes south of it, never attains any great altitude, so that here the ice mass, having at the same time perhaps a greater force on account of its nearness to the head of the ice movement on the Laurentian highlands of Canada, was able to extend southward on a large scale, producing the glaciers of the Green Bay Valley, and of Lake Michigan.

“Although quite crude in its details, I am convinced that the main points of the explanation thus offered for the existence of the driftless region in the northwest will prove to be correct. To obtain a full elucidation of the subject, much must be done in the way of investigation, not only in Wisconsin, but over all of Minnesota and the States south, in order that the details of the ice-movement for the whole northwest may be fully understood.

“4. The stratified drift of the valleys (in the drift-covered regions) owes its structure and distribution to the water of the swollen streams and lakes that marked the time of melting of the glaciers.

“5. The depth below the present surface of the rock valleys appears to indicate a greater altitude of this part of the continent during the Glacial period than at the present time.”

TOPOGRAPHY AND SURFACE GEOLOGY OF THE LEAD REGION.

Mr. Moses Strong, in his report of 1877, says: “Unlike most regions which nature has selected for the reception of metallic ores and useful minerals, the lead region bears no evidence of any sudden disturbances or violent action of physical forces. The effects produced by igneous and eruptive agencies are wanting. Faults and dislocations of strata are nowhere found. The only irregularities are slight upheavals or bending of the strata (and these never of great extent), producing changes of but a few feet from the normal dip. Between the geological condition and the general surface contour of the country, there is no direct correlation. The existence of a hill or a valley on the surface is not due to a subterranean elevation or depression of surface, as is by many supposed, and whatever irregularities exist must be chiefly attributed to the milder natural agencies now constantly at work, such as running water, frost, winds, etc., acting through an immensely long period of time.

“*Drainage.*—The most marked and persistent feature of the lead region is the long dividing ridge, or water-shed, which, commencing near Madison, continues almost directly west to the Blue Mounds, a distance of about twenty miles. Here it takes a slight bend to the southwest for fifteen miles until it reaches Dodgeville, where it resumes its westerly course until it terminates in the bluffs at the confluence of the Wisconsin and Mississippi Rivers. Its total length is about eighty-five miles. Two points are noticeable—one is its general uniform directness of outline (it being subject to but few and unimportant flexures), and the other is its parallelism with Wisconsin River so long as the latter holds an approximately westerly course, the summit of the ridge being always about fifteen miles from the river. The divide maintains an average elevation of about six hundred feet above Lake Michigan, and is seldom less than five hundred or more than seven hundred, except at the Blue Mounds, where it gradually rises east and west for several miles until it attains an elevation at the west mound of one thousand one hundred and fifty-one feet. This, however, is an extreme case, and, in fact, the only marked exception to the general level. In the town of Mount Hope, a slight decrease of elevation is about four hundred and thirty feet at a point within a mile of both the Mississippi and Wisconsin Rivers. There are also two main branches or subdivisions of the water-shed. Of these, the western is the ridge which separates the waters that flow into the Platte and Fever Rivers from those which flow into the Pecatonica. It leaves the main divide in the town of Wingville, and, passing through the townships of Belmont and Shullsburg in a southeasterly direction, passes out of the State in the town of Monticello. The ridge is not so conspicuous as the main water-shed, either for the directness of its course or the uniformity of its elevation. The most conspicuous points on it are the Platte Mounds, which appear from a distance to be very high, but their height is only relative, their actual elevation being about seven hundred feet above Lake Michigan. The ridge appears to slope somewhat in its approach to Illinois, its average elevation there being about five hundred feet.

“The easterly subdivision is that which separates the waters of the Pecatonica and Sugar Rivers. It may be said to begin at the Blue Mounds or a couple of miles east of them, and, pursuing quite a devious course through the townships of Primrose, Washington and Monroe, it crosses the State line in the town of Jefferson. This ridge is characterized by a much greater

want of uniformity in its general course and its very irregular elevation. It is much narrower than either of the others, more abrupt in its slopes, and contains quite a number of hills and low places. These are the principal elevations of the country affecting the drainage. There are, of course, many minor ones.

“*Streams.*—The present situation of the streams was probably never modified nor influenced by drift or glacial agencies. Premising this, it follows that the location of the streams must have depended upon the natural configuration of the country and the superior advantages of certain strata in certain positions predisposing them to become the beds of streams. Other things being equal, surface waters would naturally form a channel first in the more soft and easily erosible strata lying along the line of strike of some soft formation, and would cause a river to conform its first channel to its outcropping edge. Simultaneously, its tributaries would shape their channels approximately at right angles to the river, under the following conditions: When the general slope or drainage of the country is not contrary to the geological dip of the formations, which, in the lead region, does not appear to have been the case, the tributaries on one side of the river thus formed would conform themselves to the natural dip of the underlying strata, sloping toward the main river, and would be found wherever there were depressions or irregularities in the surface suitable to their formation. These would, at their inception, approximate to their final length and course, and future changes in them would be confined to the deeper erosion of their beds and widening of their valleys, the formation of lateral branches, the division of the head of the stream into several smaller sources, and, finally, the gradual recession of all the subordinate parts.

“With the tributaries on the other side of the principal river, a different order would prevail as regards their position and growth. They would at first be the merest rivulets, and increase only from erosion, and their beds would lie across the edges of the strata. There would be only a very limited extent of country tributary to the river on this side, the great volume of its water being derived from the tributaries of the other side. The dividing ridge would thus be very near the river, and a second set of long streams tributary to some other river would here take their rise and flow away.

“In the process of time the main river would slowly cut its way through the soft formation, in which it had its original bed, into and through those which underlaid it. This might, at first, be accompanied by a slight recession parallel to the line of strike. Such a movement, however, could not be of long duration, but would become less as the valley became deeper, because any such recession would necessitate the removal of all the overlying formations. Finally, the small streams flowing across the strata would cut their valley back from the river, the dividing ridge would recede, and their sources would, from the position of the strata, be in steep and precipitous ravines. Such, in brief, is the theory of the formation of the streams in the lead region.

“The Wisconsin River, from the eastern limit of Iowa County to its mouth, is a conspicuous example and illustration of the foregoing theory.

“Although the surface of the country, in its present condition, does not permit the accurate delineation of the former lines of outcrop of the paleozoic formations, yet a sufficient number of others remain to show that they must once have covered the country far north of where they are at present found. The existence of Niagara limestone in a thickness of about one hundred and forty feet at the Platte Mounds, and probably the full thickness of the formation at the Blue Mounds, warrants us in supposing that the former outcrop of the underlying Cincinnati group was at least as far north as the present bed of the Wisconsin River.

“The valley now occupied by the river, from Mazomanie to Blue River, is very nearly that of the present line of strike of the Lower Silurian formation, and, although from there the strike of the lower members (of which outliers still remain) appears to bear rather more to the northward, yet observations on the dip of the Cincinnati group, in such occasional outliers as remain, lead us to believe that its original strike was approximately in a southwesterly direction, from Blue River to the Mississippi.

“Assuming, then, that the Cincinnati group once had its northern outcrop where the river now runs, or in a line parallel to it in that vicinity, the surface waters would easily erode a channel in the soft and friable shales which, to a great extent, compose this formation.

“In fine, the whole process of formation previously described would take place. On the north side it had, as now its principal tributary streams, the Kickapoo, Knapp, Eagle, Pine and Bear, in their present localities, and approximately their present length. On the south side of the river, however, the principal water-shed already referred to was probably quite near the river, from which position it has receded to the place it now occupies. The Green and Blue Rivers and Otter, Mill and Blue Mound Creeks were small and insignificant streams, which, by the gradual process of erosion, have increased to their present size and length; but even now are small when compared to the northern tributaries.

“A further effect was to shorten the Grant, Platte and Pecatonica Rivers by the gradual southwesterly recession of the water-shed and the lowering of the latter by the denudation of the Niagara limestone and Cincinnati groups; except in such localities as were protected by a superior hardness of some part of the formation, as in the case of the Blue Mounds.

“The result of the denudation has been to divide the country into two parts, each differing widely from the other in its topographical features. The streams flowing southward from the water-shed have eroded the country into gently undulating slopes. This is probably due to the direction of the streams conforming in a measure to the dip of the strata. Abrupt cliffs and steep ravines are the exception, and not the rule, never being found in the immediate neighborhood of the water-shed, but rather confined to the small lateral branches. On the other hand, to the north of the water-shed the panorama of bluffs and precipitous ravines is almost mountainous in its aspect. In fact, nothing can be more striking than the contrast which presents itself from certain points on the divide in looking from north to south. In nearly all of the ravines leading northward the fall of the first quarter of a mile is not less than one hundred feet; and, in general, it is true of the streams running northward that three-quarters of the fall takes place in the first quarter of the distance from their sources to their mouths.

“It seems not improbable that these sudden declivities are due to the streams flowing over the edges of the strata, rather than lengthwise, along their dip. Again, the streams flowing to the southward become comparatively sluggish in their course as soon as they cease to be brooks. They have usually a soft, muddy bottom, while those tributary to the Wisconsin are clear, rapid streams, flowing over a sandy or gravelly bottom, their valleys being narrow and their sides very steep.

“The streams tributary to the Platte, Grant and Pecatonica Rivers do not exhibit any marked characteristics on one side that are not shared equally by the other. It may be remarked, however, that the short streams which flow into the Mississippi River present very much the same topographical characteristics as are seen in the southern tributaries of the Wisconsin, narrow and deep ravines and valleys being apparently the rule in Grant County.

“It is remarked that there has been a gradual diminution of water in the lead region since the early mining days. The larger streams contain much less water than heretofore, within the memory of living men. It is probable that cultivation of the land is the chief cause of this decrease, as a much greater amount of surface is thus exposed, and evaporation takes place more rapidly and in larger quantities. Removal of the timber is, without doubt, another cause of this decrease. The soil of the timbered land contains more moisture than that of the prairie; and in all countries the removal of the timber has always been followed by a marked decrease of the water supply.

“*Springs and Wells.*—The Lead Region is one of the best watered tracts of country in the State. Springs are very numerous about the sources of streams, and frequently in their banks. They are found in all the geological formations, but with the greatest frequency and of the largest size between the bottom of the Galena limestone and the top of the St. Peters sandstone. Such springs are usually found flowing along the surface of some layer of clay, and finding a vent in the outcrop of an ‘opening.’ The clay openings most favorable to

J. Allen Barber

(DECEASED)
LANCASTER.

their formation are the 'upper pipe-clay openings,' situated on the top of the blue or Trenton limestone, and separating it from the Galena limestone; the 'glass-rock opening,' separating the blue and underlying buff limestone, and the 'lower pipe-clay opening,' situated in the lower part of the buff limestone; the latter, however, does not seem to be so persistent a bed as the other two. Springs are by no means confined to these three openings, but occur in many of the beds of the Galena limestone, as well as in the lower formations; usually, however, flowing over an impervious bed of clay, or some layer of rock, too compact to admit of the passage of water through it."

The springs which flow from the Blue Mounds are clearly not of igneous origin, as they are not hot, but are logically accounted for by the excess of rainfall over the amount of water carried off by the streams or by evaporation.

Water is easily obtained where springs do not burst out, by digging or drilling not to exceed sixty feet.

"Nearly all the water in the region holds in solution a small portion of lime and magnesia, and a still smaller quantity of sodium, iron, alumina and silica. The presence of these salts usually gives the water what is called a hard taste, which is more noticeable in the limestone than in the sandstone springs, and not infrequently induces persons to believe them possessed of medical properties.

"*Prairie and Forest.*—The prairie area of the lead region is comparatively small, and seems to be chiefly a continuation of the great prairies of Illinois. The most extensive prairie is that found in the southern part of Grant and La Fayette Counties, comprising the townships of Jamestown, Hazel Green, Benton, New Diggings, Shullsburg, Seymour, Monticello and Gratiot. From this there is a branch extending in a northwestern direction (corresponding to the eastern subdivision of the water-shed previously alluded to), until it unites with the main water-shed; here it branches to the east and west. The western extension forms a prairie in the towns of Glen Haven, Patch Grove, Little Grant, and some parts of Fennimore and Wingville. The eastern prairie follows the main divide already described, the prairie being from six to ten miles in width. Between the east and west branches of the Pecatonica there is a prairie, including most of the towns of Fayette, Waldwick and Wiota. Small patches of prairie are to be found in other localities. The original timber of the woodland has been mostly cut off, and is replaced by second-growth black, white and burr oak, maple, hickory, poplar and elm, the trees being generally of small size, not exceeding one foot in diameter.

"*Mounds.*—The elevations in the lead region most worthy of note are: The Platte Mounds, in La Fayette County; the Blue Mounds, in Dane and Iowa Counties, and the Sinsinawa Mound, in Grant County. The former are three in number, about a mile apart, the middle one being very small in comparison to the other two. The east and west mounds are about the same elevation, and are capped with a very hard Niagara limestone, to which they doubtless owe their preservation, in the general denudation of the country. The ground slopes away from them so gently, and blends so gradually with the surrounding high land, that it is impossible to define exactly where the mound proper begins. The Blue Mounds are two in number, one being in Iowa County and the other in Dane. The top of the west mound (which is the higher of the two) consist of over a hundred feet of very hard flinty rock, somewhat resembling quartzite, or granular quartz; below this is the Niagara limestone. This cap of quartz rock seems to have been removed from the east mound, the top of which is a flat table-land under cultivation. These mounds are very conspicuous, and can be seen from any moderately high land in the region. The Sinsinawa Mound is also a very conspicuous object, in the southern part of Grant County, near the village of Fairplay. It is composed, for the most part, of the Cincinnati group, capped with a small amount of Niagara limestone.

"*Sinks.*—Very remarkable features in the vicinity of Blue Mounds are the numerous sink-holes found near their base, and frequently quite high up on their sides. The sinks are usually in groups of three or four, and invariably in nearly an east and west line, in both Dane and Iowa Counties. On the center line of Section 1, Township 6, Range 5 east, is a well-defined line of

them, extending for about a quarter of a mile on each side of the center of the section. There is another range of them near the center of the southwest quarter of Section 1, and a third line near the quarter-posts of Sections 1 and 12. The largest of these sinks is an isolated one near the center of the southeast quarter of Section 1, which is as much as fifty feet in diameter and twenty feet deep. In this one the wall rock of the fissure could be very plainly seen on the south side. The difference is that these sinks mark the line of large open crevices in the rock beneath them. No prospecting for ore has been done in them, although the suggestion has been reasonably made that the indications are favorable. The sinks are not confined to the Galena limestone, and an exceptional one in the St. Peters sandstone is noted on the southeast quarter of Section 14, Township 5, Range 2 west, although less notable ones occur in the Niagara limestone.

“*Soil and Subsoil.*—The quality of the soil of the lead region is chiefly dependent on the character of the subjacent formation. The subsoil appears to be derived directly from the decay and disintegration of the strata, of which it is the residuum. South of the principal water-shed, the subsoil is clay, almost without exception, having a thickness of from three to six feet, depending on the configuration of the underlying rock formation. This is the average thickness, on comparatively level land; on side hills it is usually much thinner, the greater part having been washed down in the valley below. The clay soils and subsoils appear to consist chiefly of those portions of the overlying Galena limestone, and earthy Cincinnati shales, which being insoluble in water were not removed by the gradual process of denudation.

“The amount of lime, magnesia and alkaline earths in the subsoil and soil, together with the vegetable mold in the latter, constitute a soil, which, in its virgin state, is unsurpassed for richness and fertility. The number of successive wheat crops which have been raised, without regard to rotation, on some of our prairie farms, attest its native strength; as, also, the marked decline in fertility of the soil when this has been done, shows the inevitable retribution which follows the practice. Exceptions to the clay soil, usually found in the country covered by the Galena limestone, are found in the eastern part of La Fayette and frequently in Green County, where the soil is quite sandy, owing to the disintegration of calcareous sand layers frequently found there in that formation. A few localities are cited below, where the sand was so abundant that the formation might have been considered a sandstone, were it not for the occasional outcrops of Galena limestone *in place*.

“The agencies of the glacial period do not appear to have had anything to do with transporting the component materials of the soil, and although a slight transportation has taken place, it is always merely local. For instance, in the valleys of the creeks which lie in the St. Peters sandstone, the soil is usually a rich clay loam, richer in fact than that of the adjacent ridges, because the best parts of the upland soils have been washed down and distributed over the surface of the valley.

“A similar transportation may be observed in passing up any long and moderately steep hill, which includes several formations, such hills being very common north of the principal water-shed. Let us suppose one, whose summit is composed of Galena limestone, and whose base lies in the Lower Magnesian. Scattered about the base will be seen many loose pieces of Lower Magnesian limestone, mixed with less numerous boulders of St. Peters sandstone; still less numerous and smaller pieces of the buff and blue (Trenton) limestone, while fragments of the Galena limestone will be comparatively rare. On ascending the hill and arriving at the St. Peters, fragments of Lower Magnesian will no longer be seen, while those of the upper formation will become larger and more numerous. On arriving at the buff limestone, the fragments of St. Peters sandstone will also have disappeared; fragments of blue limestone will be very numerous and easily recognized by their white color and their general rounded and worn appearance. On reaching the summit of the hill, no fragments of stone will be found, except such as are derived from the subjacent Galena limestone. One prominent feature of the soil will be the prevalence of flints, which are nearly indestructible, and often form a large component part. From the arrangement of the surface soil and fragmentary rock, it is evident that the rock of any formation is never found above the level from which it was detached.

“Brick Clay.—Clay suitable for making brick is found in many parts of the lead region, Mineral Point being one of the important localities. The clay sought is usually of a grayish yellow color which becomes red on burning. It appears to have been formed in the same manner as other portions of the soil, as already described. The origin of the clay of which the brick are made is a matter of some doubt. It has not exactly the appearance of a drift clay, and if not, its situation indicates that it must have undergone some subsequent re-arrangement.”

THE LEAD REGION DESCRIBED.

FROM MOSES STRONG'S REPORT.

Boundaries and Area.—In Wisconsin, the lead region may be said to be bounded on the north by the northern outcrop of the Galena limestone, running parallel to the main watershed from the Mississippi to the Blue Mounds, as already described; on the west by the Mississippi River; on the south by the State line; on the east by Sugar River. These limits include all of the lead region which has ever been productive, as well as much that has never as yet proved so. The area thus included, which has been, or may hereafter become, productive, is necessarily that of the Galena limestone, which is about 1,776 square miles.

Explanation of Mining Terms.—For the enlightenment of the readers who are unfamiliar with mining terms, the following short explanation of expressions, most frequently used in the lead region, is offered.

Range.—This is probably the most indefinite term in use, and, at the same time, one which is universally applied. First. A range denotes a single, or several, parallel crevices, containing useful ores or minerals; vertical, or approximately so; seldom more than a few yards apart; sometimes, but not necessarily, connected by quartering crevices. Its length may vary from a few hundred feet to a quarter of a mile or more; in short, so far as the crevice or crevices have been connectedly traced, or there is a reasonable probability of such connection. Thus, different parts of the same range often have different names given them before the connection between them is proved. This is a fruitful source of confusion. Second. The term range is also applied to horizontal bodies of ore, of which there may be one, or several, superimposed upon one another; sometimes, but not necessarily, separated by unproductive layers of rock, limited in length in the same way as a vertical range.

Crevice.—This term denotes a fissure in the rock, vertical or nearly so, but a few inches in width, of indefinite length, which may or may not be filled with ores or minerals. When a crevice becomes very small, less than an inch in width, it is called a seam.

Vein is a term little used; it denotes the filling of ore and accompanying minerals, or either found in a crevice.

Lode or Lead are words usually substituted for vein; they are, however, generally applied to ore deposits found either in crevices or openings.

Swither.—A metalliferous crevice, making an angle with the principal vein or lode; sometimes called a quartering crevice.

8 o'clock, 10 o'clock, etc.—Ranges whose course bears toward the sun at those hours of the day.

Openings.—They are of two kinds, vertical and horizontal. First. Vertical openings are known as crevice openings, which are mere enlargements of the crevice in certain parts, these being sometimes co-extensive with the vein in length, and sometimes mere local enlargements. There are in the same crevice frequently several openings, situated one above the other, separated by beds of unproductive rock. Crevices vary in width from one to several feet. When very wide and high, they are sometimes called tumbling openings. Second. Horizontal openings are large, irregular spaces between the strata which contain the lode. Such openings are usually from one to four feet high, and are frequently superimposed upon one another, separated by an unproductive rock, called a “cap.” The “cap” of one opening being frequently the “floor” of the one above it.

Pockets are small irregular cavities in the strata, in which ore is frequently obtained.

Chimneys are irregularly shaped vertical holes found in crevices; sometimes connecting openings, and at others extending from the surface of the ground to some particular stratum of rock.

Sheet.—This is a term usually employed to designate a solid body of ore, exclusive of other minerals, which may fill a crevice or opening. A sheet is said to “pitch” when it inclines considerably from the perpendicular.

Gouge.—This is the soft rock or clay frequently found between the sheet and adjacent wall-rock.

Bar.—The term denotes a band or belt, of very hard and unproductive rock, crossing the crevices and sheets. In crossing a bar, all sheets become less productive, and are sometimes entirely lost, the crevices usually dwindling to mere seams. Their width varies from a few feet to many yards.

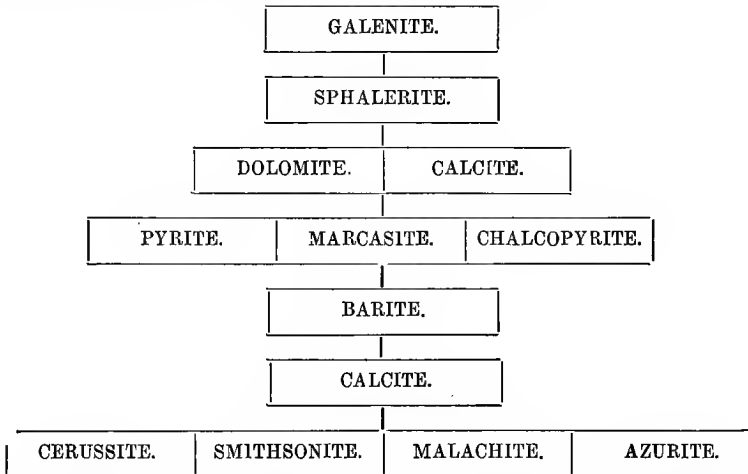

Wash dirt is the name given to the small ore, as it first comes from the mine, mixed with small pieces of rock and clay.

Pipe Clay.—A light-colored plastic clay, frequently found in the openings and crevices.

Drift.—An underground gallery or roadway.

MINERALOGY.

There does not appear to have been any absolute and unvarying order in which the minerals of the lead region were deposited in the mines. The following conclusions are derived from the inspection of the ore as it occurs in place in the numerous mines visited, and from the examination of a great number of specimens; and it is assumed that when crystals of one mineral are coated or covered with another, the overlying one is the more recent. The minerals appear to have been deposited in the following general order:

The order above given, however, is subject to very numerous and important exceptions, and is more particularly applicable to crystallized specimens than to heavy ore deposits. Large bodies of ore frequently consist of galentine, sphalerite and pyrite, so mingled together that no order of deposition can be ascertained.

In general, it appears that the sulphurets of the metals were deposited first, and that the carbonates have been generally, if not invariably derived from them. Carbonate of lead (cerussite), when found crystallized, always occurs in connection with galenite; and carbonate of zinc (Smithsonite) is so frequently found graduating into the sulphuret (sphalerite) as to leave but little doubt of its origin from that mineral.

It seems not improbable that the formation of the carbonate of zinc may even now be taking place in the ground to quite a large extent, especially in such deposits as are not below the water-level, or are only periodically submerged.

It is a well-known fact that the drybone diggings are usually comparatively free from water, and that the zinc ore below the water-level is usually blende (sphalerite) with but little admixture of the carbonate. As the level of the water in the ground becomes gradually lower, and it is a well known fact that it does, the atmosphere, together with surface water charged with carbonic acid, is permitted to act upon the blende, and a transformation from the sulphuret to the carbonate is the result.

The association of calcite with other minerals is such as to indicate that it must have been formed in crystals during at least two different periods. Stalactites of recent origin are found in the mines, which on being fractured show a distinct crystalline structure, and large planes of cleavage.

The following is a list of the minerals known to occur in the lead region, arranged according to the system adopted by Prof. Dana, in his "Mineralogy:"

Sulphur.—Native sulphur is found, but seldom in the lead region; its presence is usually due to the decomposition of iron pyrites. It is usually found in a pulverulent form. Some pieces weighing as much as an ounce were seen in a cabinet at Hazel Green, which are said to have been obtained from a small sheet in some of the Buncome mines. It is said to be not uncommon in this vicinity. Other localities where it is found are Mineral Point and the Crow Branch diggings.

Bornite.—Variegated or purple copper ore. Composition—Copper, 62.5; iron, 13.8; sulphur, 23.7. This is quite a rare mineral. A few pieces have been found in the copper diggings near Mineral Point; it has never been found here crystallized, but always massive and in small pieces.

Galenite.—Composition—Lead, 86.6; sulphur, 13.4. This is the only ore of lead found in sufficient quantities to be of economic value. It is universally known in the lead region as "mineral." It frequently occurs in distinct crystals, either as a cube or some modification of it. Octahedral crystals are quite rare, but are occasionally found, especially in the carbonaceous shale of the southern part of the region. Usually, however, galenite occurs massive, with a very distinct cleavage. Freshly broken surfaces have always a bright steel color, which speedily tarnishes on exposure to the air.

Sphalerite.—Blende or black-jack. Composition—Zinc, 67; sulphur, 33. This is one of the most abundant minerals in the lead region, besides being of great economic value as an ore of zinc. It is almost invariably found as an associate vein-mineral in the horizontal deposits of lead ore. It is usually found massive and compact, of a dark-brown or black color, due to a small portion of iron contained in it, and more or less mixed with galenite. The lead region has never afforded a perfect crystal of blende, although many specimens are found with small and imperfect crystalline faces. The fractured surfaces of such specimens usually have a resinous luster.

Pyrite.—Composition—Iron, 46.7; sulphur, 53.3. This is the most common vein-mineral found in the mines. It is universally met with in veins, lodes or other deposits of ore, and in many cases impregnates the rock when all other minerals are absent. In crevices it frequently appears to have been the first mineral deposited. It is usually found massive, although handsome crystallized specimens are frequently obtained from the mines. In crystals it usually assumes some modification of the cube, the octahedron being quite frequent. It also occurs in radiated and reniform masses. It has never yet been considered of any economic value in the lead region, and as it is so much mixed with rock it is doubtful if it could be profitably separated, except by the natural process of disintegration, to which some varieties are liable when exposed to the air. The Crow Branch diggings and the Linden mines afford large quantities and good specimens of this mineral.

Marcasite.—Composition—Iron, 46.7; sulphur 53.3, or same as pyrite. The difference between this and the preceding is but slight, and chiefly due to crystalline structure; the former belonging to the mono-metric and the latter to the trimetric system. It is somewhat lighter colored than pyrite, and decomposes more readily in the air. It is quite a common vein mineral, and occurs in globular and cockcomb shapes. It is abundant in the New Diggings district. It is difficult to preserve specimens of this mineral, longer than a few months.

Chalcopyrite.—Composition—Copper, 34.6; iron, 30.5; sulphur, 34.9. This is the principal ore of copper in the lead regions, and is most abundantly found in the vicinity of Mineral Point. It usually occurs massive, frequently mixed with pyrite; small and indistinct crystals are occasionally found.

Hematite.—Composition—Iron, 70; oxygen 30. Impure arenaceous varieties of this mineral frequently occur, nowhere, however, sufficiently rich or abundant to be of any economic value. It seems to be chiefly due to the decomposition of pyrite, and is most common as the ferruginous sandstone concretions in the upper beds of the St. Peters. It is also frequently found as ocher, with other vein-minerals, especially in the flat openings.

Oxide of Manganese.—A substance consisting of manganese with a little oxide of iron, zinc, and traces of magnesia, according to an analysis of Dr. Bode, of Milwaukee, is found in crevices in the Trenton limestone, in some diggings situated on Section 11, Town 4, Range 1 east. The mineral is as light as cork; color brownish-black, sub-metallic luster and streaks; soils readily, and is infusible. It is very soft, and does not occur crystallized. It has a structure in thin parallel layers, resembling wood.

Calamine.—Composition—Silica, 25.0; oxide of zinc, 67.5; water, 7.5. This mineral is of very rare occurrence in the lead region. It is found in small, drusy crystals; coating, Smithsonite. The crystals are very brittle, colorless, and have a vitrious luster. It is found near Mineral Point.

Barite.—Composition—Sulphuric acid, 34.33; baryta, 65.67. It occurs usually white and massive, but sometimes in lamellar and crested forms. The only place where it was found in distinct crystals, was in the railroad cut at Scales Mound, where it occurs in small cavities, as small but very perfect transparent crystals, associated with dolomite and pyrite. It is not a very abundant mineral, but is found in several of the mining districts, especially Dodgeville and Mineral Point.

The following is an analysis by Mr. E. T. Sweet, of a specimen from the southwest quarter of Section 6, Township 5, Range 3 east, in Van Matre's survey:

Silica.....	2.24
Alumina.....	.88
Sesquioxide of iron.....	.77
Water.....	Trace
Barite, sulphate.....	95.27
Lime, sulphate.....	1.80
	100.41

Anglesite.—Composition—Sulphuric acid, 26.4; oxide of lead, 73.6. Traces of this mineral are reported as occurring in some of the mining districts, but no specimens have as yet been obtained. It probably originates from the decomposition of galenite.

Calcite.—Composition—Carbonic acid, 44; lime, 56. This is a vein-mineral, common to all the deposits of ore, whether in crevices or openings. It occurs crystallized in modified rhombohedrons and scalinohedrons. The variety known as Dog-tooth-spar is a very frequent form, especially in the Shullsburg and Linden districts, which affords very handsome cabinet specimens. The Mineral Point district affords handsome rhombohedrons, and the Linden mine affords handsome twin crystals of calcite set in sphalerite (blende). It also occurs there, rarely, as a pseudomorph, after marcasite, and has then a radiate or divergent form.

Dolomite.—Bitter spar or brown spar. Composition—Carbonate of lime and carbonate of magnesia, in slightly varying, but nearly equal, proportions. It occurs occasionally in small rhombohedral crystals in cavities of the Galena limestone. The best locality for obtaining cabinet specimens is in the railroad cut at Scales Mound.

Smithsonite.—Often improperly called calimine. Composition—Carbonic acid, 35.18; oxide of zinc, 64.81. This mineral, commonly known as drybone, is one of the two ores of zinc found in the lead region. It is found most extensively in the central and northern parts, and usually in connection with blende. It crystallizes in rhombohedral forms; such specimens are, however, rare. It usually occurs massive, having a structure similar to partially decayed bone, from which it derives its common name.

Pseudomorphs, of Smithsonite, after calcite, are sometimes formed. They occur as rhombohedrons, and in the various irregular shapes in which calcite occurs in the lead region. Perfect crystals, in which the transformation from calcite to Smithsonite is complete, are very rare. It is much more common to find skeleton crystals, or those which have been formed by the deposition of a smooth, light-colored shell of Smithsonite, about a sixteenth of an inch thick, over all the exposed surface of the calcite, followed by a gradual removal of the crystal contained within the shell. The space within the shell is sometimes partially filled with Smithsonite, and frequently planes of the original crystal. Pseudomorphs are also found in which the imperfect crystallization of sphalerite is very evident. Smithsonite is also found covering crystals of galenite, which are undecomposed.

Cerussite.—Composition—Carbonic acid, 16.5; oxide of lead, 83.5. Cerussite is occasionally found in small pieces, but never in sufficient quantities to form an object of mining. It occurs in irregular rounded pieces of a yellowish color, exhibiting no crystalline structure. It has been found near Mineral Point, and in former years quite frequently at the diggings near Blue Mounds. Cerussite is found in small irregular translucent crystals of a white or light-yellow color, in the mine of Messrs. Poad, Barrack & Tredinnick, near Linden. The specimens were large, cubic crystals of galenite, coated with pyrite, the crystals of cerussite being formed in both of these minerals. The specimens indicate that the crystals of pyrite had been formed, and many of them broken before the formation of the cerussite.

Hydrozincite.—Composition—Carbonic acid, 13.6; oxide of zinc, 75.3; water, 11.1. This is a mineral of rare occurrence in the lead region. It is found at Linden and Mineral Point as a white, finely crystalline, fibrous incrustation on Smithsonite.

Malachite.—Composition—Carbonic acid, 19.9; protoxide of copper, 71.9; water, 8.2. It is occasionally found in small seams, mixed with other ores of copper in the Mineral Point copper mines. Crystals or good cabinet specimens do not occur.

Azurite.—Composition—Carbonic acid, 25.6; protoxide of copper, 69.2; water, 5.2. It occurs similar to malachite, massive and in seams, associated with chalcoppyrite. The Mineral Point mines afford very beautiful cabinet specimens of small rhombohedral crystals of dark-blue color.

Visitors in the lead region will constantly hear the terms "brown rock," "glass rock," "pipe-clay opening," etc., used by the miners to designate the different strata in which they work. This would be an advantageous system were it not that the several names are applied to widely different strata by persons in the several districts. The term "glass rock," for instance, is indiscriminately applied to all the strata in the buff, blue and Galena limestones. The following section is given as a general guide in understanding the relative position and thickness of the strata and openings, to which reference will occasionally be made in the subsequent pages. The section, however, will not be found of universal application, but merely shows the strata as their position is now understood by the most intelligent and systematic miners.

In practice, the most reliable plan for determining the geological position of an ore bed or mine, is to find the out-crop of some well-defined horizon in the vicinity, and ascertain the distance of the bed or mine above or below it, after making due allowance for the dip.

There are numerous openings occurring in all upper and middle beds of the Galena limestone, none of which appear to be found regularly in all the districts. The section is, therefore, confined to the more persistent openings of the lower beds:

GALENA LIMESTONE.	
Green rock.....	4 feet.
Green rock opening.....	3 feet.
Green rock.....	12 feet.
Brown rock.....	12 feet.
Brown rock opening.....	5 feet.
Brown rock.....	8 feet.

BUFF AND BLUE LIMESTONE.	
Upper pipe-clay opening.....	5 feet.
Glass rock (blue limestone).....	25 feet.
Glass rock opening.....	6 feet.
Buff limestone.....	12 feet.
Lower pipe-clay opening.....	3 feet.
Buff limestone.....	10 feet.
St. Peters sandstone.....	... feet.

HISTORY AND CHARACTER OF THE MINES.

The history of the mining interest of this region is essentially a history of the region itself. The following reliable and detailed report of mines was made by Mr. Strong in 1877. Such new mines as have since then been opened are named further on in this work:

BEETOWN DISTRICT.

This is the most westerly district in which any productive mines have been worked. In former years they were very productive, but have gradually become less so. There are several sub-districts, of which the principal ones are Beetown, Nip-and-Tuck, Muscalunge and Hackett's. The diggings in the immediate vicinity of Beetown are situated north and east of the village, chiefly in Sections 20 and 29, of Township 4, Range 4 west. There are here, on the ridge, about a dozen principal old ranges, all nearly parallel, and bearing a few degrees north of west. They vary from half a mile to a mile and a half in length, some of them extending easterly to the Grant Diggings. There are no large organized companies at work in them, the principal product being by individual parties in small lots.

Lead ore is usually found in this district in two principal openings, known as the "Twelve-foot Opening" and the "Sixty-five-foot Opening." The first is named from the height of the opening, which usually averages about twelve feet. The second derives its name from sixty-five feet of unproductive rock which separates it from the first. The following parties are now, or have recently been, mining near Beetown:

Brown Bros. & Birch.—These diggings are situated in the Hull Hollow, about three-quarters of a mile south of the village. They were discovered in 1860, by Walters and Roberts, and were first worked in the twelve-foot opening. There are three parallel east-and-west ranges, situated about nine feet apart. They produced lead ore, which is found in flat openings, four and one-half feet high and four and one-half feet wide, lying about seventy feet above the sixty-five-foot opening. The ore has been traced by a level three hundred feet west from the discovery shaft. The depth at the working-shaft is sixty feet; the greatest depth in the ridge will be one hundred and sixty feet. Work was commenced in the winter of 1875-76, since which time the product has been 35,000 pounds. The prospects are considered good.

Wilcox Diggings.—North half of the southeast quarter of Section 32, Township 4, Range 4 west. This ground has been recently bought by Messrs. Henry, Ross, Gundry and Toay, of Mineral Point, by whom it is now operated, under the name of the Beetown Mine. Work was commenced here by Mr. Wilcox in 1868. A level has been run in the ground 500 feet, underlying a flat sheet of blende or Smithsonite, which is, in places, 36 inches thick. The sheet

has been found to extend eighty feet north and south, and one hundred and thirty feet east and west; its extreme limits are not yet known. On its south side, some copper ore has been found. The sheet lies in the upper pipe-clay opening. About twenty-two feet above the sheet of zinc ores, is one of Smithsonite and lead ore, one hundred and fifty feet wide, whose length is unknown. It lies in flat and pitching sheets, in the green-rock opening. The ground has produced lead ore to the value of \$3,500; also, forty-five tons of Smithsonite and one hundred and seventy-five tons of blende.

Josiah Crossley & Co. produced about eight thousand pounds of lead ore in the operations of one month.

Crossly & Bass.—Situating south of the preceding. Work was carried on for six months, and stopped by the owner of the land. Twenty thousand pounds of lead ore were produced.

Wilcox & Sons.—These parties have been working about a month in a new east-and-west range. The prospect is considered good.

Pigeon Diggings.—They are situated in the north half of Section 20, Township 4, Range 3 west, and consist of several east-and-west ranges, in which the ore is found in flat openings in the "Brown Rock" division of the Galena limestone. The ground is owned by Messrs. Barber, Dewey & Cox. There are about fifty men employed here, mining chiefly in the old workings at a depth of from thirty to fifty feet below the surface. The annual product of the Pigeon Diggings is about two hundred and fifty thousand pounds of lead ore. Mining is chiefly confined to the winter season. During the last year a sheet of Smithsonite was discovered on the southeast quarter of Section 19, which has produced sixty tons.

Hackett's Diggings.—These mines are situated on Section 17, Township 4, Range 4 west. They have been idle for several years. Work has recently been resumed on them by the following parties: Hutchcroft & Pigg, and Whitehead & Co. They have now good paying mines in the sixty-five-foot opening. The annual product is about thirty thousand pounds.

Nip-and-Tuck Diggings.—Situating on the south half of Section 25, Township 4, Range 5 west. They consist of several east-and-west ranges crossed by north-and-south ranges. Very little mining is now done here. The parties are Sillick & Co. and Roberts & Co. The annual product is about twenty thousand pounds.

Muscalunge Diggings.—Situating on Section 26, Township 4, Range 5 west. There are here numerous east-and-west ranges, from a quarter to a half a mile in length, lying near Rattlesnake Creek. More activity is displayed here in mining operations than anywhere else in the district, about half of the ore smelted in the Beetown furnace being obtained here. In addition to the east-and-west ranges already mentioned, there are a great number of small parallel crevices running nearly east and west, and crossed by various quartering ores, forming a perfect network of veins and crevices. The following parties are operating in this vicinity:

Graham Mining Company.—This is a Milwaukee mining company who own and work a large tract of ground comprising the west half of Section 26. The workings are all in the sixty-five-foot opening. The following section of the Dewey & Maiden shaft is given, which shows the position of strata from the top of the ridge downward:

Soil and clay.....	15 feet.
Galena limestone.....	38 feet.
Tough light rock, hard and flinty.....	2 feet.
Openings from five to twelve feet high.....	12 feet.
Hard rock with layers of flint.....	65 feet.
Opening (workings).....	13 feet.
Galena limestone to top of Trenton.....	35 feet.
<hr/>	
Total thickness.....	180 feet.

The two openings are seen here to be separated by sixty-five feet of intervening barren rock. The ground is drained by a level about three-quarters of a mile long, run on the random of the lower opening at an expense of \$20,000. It empties into one of the adjacent branches of Rattlesnake Creek. It could easily be drained to the top of the blue limestone by a level in

the horizon of the pipe-clay opening. A convenience in hoisting was noticed here which might profitably be adopted in other portions of the lead region. A six-inch hole had been drilled from the surface to one of the drifts for purposes of ventilation. An artesian well-bucket was then put on, and all small stuff and wash dirt was removed through the hole, thus saving a long and unnecessary transportation underground to the main shaft. The company has worked continuously here for many years. The ground has been very productive; it produced in one year 1,300,000 pounds. Its average annual production for the last nine years is estimated at 300,000 pounds of lead ore.

James Thomas & Co.—This company has been working here for the last fifteen years. The ore is found on the east-and-west range in the sixty-five-foot opening. The diggings are dry, and from 150 to 160 feet deep. The average production is 150,000 pounds of lead ore per annum. The ground is owned by Mr. Dewey.

Hutchcroft & Thomas.—Situated four hundred and fifty feet south of the preceding, and connected with them underground. They are in the same opening as the preceding, and have been worked continuously for many years. During the last year, they have been idle, having been sold by the parties who operated them. When worked, their annual product was 150,000 pounds.

Hutchinson, Dewey & Co.—Situated on the southeast quarter of Section 26, east of James Thomas & Co., and in the same range and opening. This party has been working here since 1869, and has now a very good prospect. The average depth below the surface is one hundred and sixty feet. In some cases, it is one hundred and eighty feet. They are connected with the Adkinson Diggings by a quartering range. They have produced about 30,000 pounds in the last three years.

Adkinson Diggings.—Situated a short distance east of the preceding, and connected with it. Access is gained to these diggings through a level about a quarter of a mile long, emptying into the valley of Rattlesnake Creek. The level was run on a northeast crevice, which contained a large amount of ore, and was frequently intercepted with east-and-west crevices. These diggings have been worked continuously during the last twenty years. During the last fifteen years, the annual product has been 150,000 pounds of lead ore.

Showalter & Payten.—Situated a quarter of a mile southeast of the preceding, and near the south line of the Dewey land. These parties commenced two years since, and are now working an east-and-west range in the sixty-five-foot opening. During the last two years, the product has been 70,000 pounds.

Arthur & Co.—Situated two hundred feet south of the preceding, on Mr. Arthur's land. This is a new east-and-west range discovered in the spring of 1876. A shaft has been sunk ninety feet to the sixty-five-foot opening, and a small amount of ore produced. The appearances in this new range are quite encouraging.

Ritter & Bock.—Northeast quarter of Section 35, Township 4, Range 5 west; situated on land owned by Mr. Ritter. This is a new east-and-west range, discovered in the summer of 1875. It is worked in the sixty-five-foot level. It is regarded as a good prospect, and has already produced 20,000 pounds.

Loomis & Co.—Situated on the land of the Graham Mining Company, in the southern part. This is also a new east-and-west range, discovered in August, 1876. It has produced about 12,000 pounds. The mine is now in a condition to yield 1,000 pounds per day. The lead ore in the Muscalunge mines occurs in direct contact with the wall rock, usually in vertical sheets, and without any of the associate vein minerals which are usually found in the other mining districts.

POTOSI DISTRICT.

Mining operations here are chiefly confined to the winter season. The old ranges of the Potosi Diggings are included in Sections 33 and 34, Township 3, Range 3 west. Their general course is about north, 70° west, although some bear a few degrees more to the west, and some a few more to the north. They numbered about thirty in all, which were considered as separate

and distinct ranges; and, in addition, there were many smaller crevices, not sufficiently important to constitute ranges by themselves. Among the more important were the Long, Wooley, Gillet, Gilmore, Smith, Polkinghorn and Barbara, some of which were over a mile in length. The productive portion of these ranges is confined to the middle and lower portions of the Galena limestone, none of the crevices having as yet proved as low as the brown rock; the ore is usually found in sheets of varying thickness.

Considerable irregularity exists in the formation of many of the crevices in the Potosi district, by which they seem to split up in the lower beds of the limestone, forming key rocks and divergent crevices. An instance in point was seen in the diggings of Mr. Meredith, in the north-east quarter of Section 33, about three hundred feet south of the old Wooley range, on the summit of the ridge. A shaft was sunk in the main crevice, which continued without change for sixty feet from the surface. At this point a hard key rock, as it is called, was encountered, on which the crevice and ore sheets divided, one part continuing vertical and the other slanting downward at an angle of about forty-five degrees, for a distance of thirty feet. Here a very hard and smooth floor was found, on which the sheet was followed out by drifting for a distance of 130 feet, without reaching the end. No appearance of openings was observed. These diggings were struck about six years ago (1870), and have produced since then about four hundred and twenty thousand pounds.

Rockville Diggings.—There are here a number of east-and-west ranges with flat openings, which have been worked with but little interruption since 1840, and now furnish employment to about twenty miners. Mining is chiefly confined to the winter season. The following parties are now operating here:

Phillips & Walker.—Southwest quarter of southwest quarter of Section 13, Township 3, Range 3 west. These parties are working a new east-and-west range, discovered by them in the summer of 1874. The ore is found at a depth of about one hundred feet below the surface, in flat openings from fifty to sixty feet wide, whose length has not yet been ascertained. They have, however, been worked to a distance of 300 feet. The lead ore is found in what is known here as the second opening, which lies about thirty feet above the upper surface of the blue limestone. Their annual product is 30,000 pounds.

Dilger Mines.—Northwest quarter of northwest quarter of Section 24. This is a new range, discovered in January, 1876. The works are as yet confined to the first opening, which is here thirty feet above the second. It has produced, during the past year, 40,000 pounds.

Hayward Range.—Southwest quarter of Section 13. This range has been worked continuously every winter since its discovery in 1841, and has yielded in all between four and five million pounds. It is now worked by Messrs. Jackson & Calloway, in the second opening, which is here from thirty to forty feet wide. It produces about one hundred thousand pounds per annum.

Warfield Range.—Southwest quarter of Section 13. This range has been worked every winter during the last thirty years, and has produced about two million pounds. It is now worked by Messrs. White & Dunn, in the second opening, which is here from thirty to forty feet wide. Its annual product is about one hundred thousand pounds.

Curnow and Pillow Range.—Southwest quarter of Section 13. This range has not been idle during the last thirty years, and is still productive. During the last fifteen years the range has produced over 100,000 pounds per annum. Messrs. Nichols & Stevens are now mining in it, and producing 20,000 pounds per annum.

Emery & Davis Level.—Northwest quarter of northwest quarter of Section 24. The level was commenced in 1852, and is now 600 feet long, and drains the ground in its vicinity nearly as low as the second opening. Its cost was about \$20,000. The excavations here were of the nature of a quarry, several flat sheets of lead ore being found inter-stratified with the Galena limestone. While the level was in operation, the annual product was about 100,000 pounds. The level drains the Langstaff and Willey ranges, which were discovered about thirty years ago, and have been worked continuously ever since. Most of the lead ore is obtained from the first

opening. The annual product is 50,000 pounds. These ranges have been worked to the present water level, leaving sheets of ore from twelve to eighteen inches thick, going down. The level should be run a few rods further to connect with a north-and-south crevice; it would then probably drain all the ranges much deeper.

Stone & Bryhon.—Situating near the northwest corner of Section 1, Town 3, Range 3 west, on land owned by Mr. Stone, about three miles north of the village of Rockville. The works are in the first opening, which is from eight to ten feet wide. They have been worked in the winter season during the last four years, producing annually between 30,000 and 40,000 pounds. They were formerly worked by Mr. Grusham, and were more productive. The mines are dry.

Griswold Diggings.—Situating about a quarter of a mile south of the preceding. These are dry diggings, worked in the first opening, which is here about six feet high and from ten to thirty feet wide. They have been worked continuously during the last seven years, producing about 65,000 pounds per annum.

Henry Gillilan's Diggings.—These diggings are situating about three miles southeast of Rockville, on the Platte River. They are dry diggings, and have been worked during the last four years in the first opening, which is here thirty feet wide and about six feet high. The annual product is 25,000 pounds.

British Hollow Diggings.—But little mining is now done in these mines. The following parties are now mining here:

J. Alderson's Diggings.—Northwest quarter of Section 26, Town 3, Range 3 west. They are situating on the Craig range, in the village of British Holland. This range was worked by a Cincinnati company for three years; they abandoned it two years ago. This company produced about 3,000,000 pounds during the time of their operation. Mr. Alderson commenced mining here again in July, 1876, with a steam pump, and has sunk four shafts. The workings are about 120 feet deep in the second opening, and in the third, which is about twenty-five feet below the second. The mine has not produced much yet, as the time has been mostly consumed in preliminary operations.

Peak & Blair.—Northwest quarter of Section 26. These parties have also been working in the Craig range during the past summer (1876). They have a flat sheet of lead ore about five inches thick in the first opening, which here averages twenty feet in width. This range has been worked during the last forty years. The product of the present parties has been about 20,000 pounds.

Dutch Hollow Diggings.—They are situating on the north half of Section 36, Township 3, Range 3 west, about two and a half miles east of Potosi. The following parties are now operating here:

Dutch Hollow Level Company.—Mining operations have been carried on here continuously for the last six years, excavating a level on or near the upper surface of the blue limestone. The level is now about a half a mile long, and it is expected to reach the main shaft in about a month. When completed, the level will unwater all the Galena limestone above it, which is here about one hundred feet thick. It is expected to unwater the Kendall, and many other old ranges in the vicinity, as deep as the third opening. The level is not producing much now. During the year 1872, it produced 60,000 pounds.

Rup & Son.—Northeast quarter of Section 35. This party has been working during the last six months in a part of the Zug range. The ore is found in the first opening, which is here about fifteen feet wide. The production has been 150,000 pounds.

Zug Diggings.—An east-and-west range, being same range and opening as preceding. Mined, at depth of 75 feet, 150,000 pounds.

Langstaff & Gillan.—Situating three-quarters of a mile northeast of the preceding, in the creek in Section 25. The lead ore is found here in a flat sheet in the first opening, near the water level and about thirty feet below the surface. Three men have been working here twelve months, and have produced 60,000 pounds. The production of the Potosi district, including Rockville, British Hollow and Dutch Hollow, could not be definitely ascertained, as very little

record has been kept of it. It is estimated at 80,000 pounds per annum. Mining in this district is generally abandoned in summer for farming, and resumed again in the winter, in the lack of other employment. In this way a large number of men are at work in the winter, each raising a small amount by prospecting, which forms in the aggregate the total product of the district.

FAIRPLAY DISTRICT.

The only mines in this vicinity, which have recently produced anything, are those of Black & Co., on the northeast quarter of Section 24, Township 1, Range 2 west, and those of Williams & Co., near the center of Section 19, Township 1, Range 1 west.

Black & Co.—This property, which comprises in all about two hundred and forty acres, is owned by Messrs. Joseph and Thomas Sparks. It has been known to be rich ground for many years, and to contain, besides the ore, an immense amount of water, which was the chief obstacle to be overcome. Previous to the operations of Mr. Black, it had been attempted by three separate parties, at as many different times, but always with more or less loss. Mr. Black commenced work on it, in 1871, by means of pumping, and continued to add pumps, engines and pumping machinery at intervals. At the time the mine was visited (June, 1874), there were in operation two steam pumps, and two large lift pumps, together with three boilers and two engines, one of them about thirty-horse power. The company then contemplated adding a large engine and machinery. It was estimated that about a thousand gallons of water per minute were being pumped from the mine, and, when the lower opening is reached, which is thought to be about fifteen feet deeper, it will become necessary to pump about fifteen hundred gallons per minute.

The mine is in the upper beds of the Galena limestone, which is here present in its full thickness, and, indeed, the first few feet of the shafts are sunk through the lowest bed of the Cincinnati group, as may be seen from the yellow clay with the characteristic shells, in any of the shallow prospecting holes in the vicinity.

The following section of the strata penetrated in sinking the pump-shaft, will give a correct idea of the formations here represented :

CINCINNATI GROUP.		Feet.	Inches.
Soil and clay bed.....	20	...	
Pipe-clay	10	
Bed of black clay.....	...	4	
Shaly layers.....	...	10	
GALENA LIMESTONE.			
Galena limestone, in thin layers.....	4	...	
Galena limestone cap, in layers four feet thick, gradually increasing in thickness to the bottom.....	30	...	
Opening, containing ore.....	30	...	
Total depth of shaft.....	86	—	—

The course of the vein is nearly east and west, and five shafts have been sunk upon it, the deepest of which has reached a point one hundred and five feet below the surface. The opening now presents the appearance of a series of large rooms or caves, from fifteen to twenty feet wide, and about fifteen feet high, for a distance of six hundred feet. The vein was crossed in several places by bars of hard rock, one of which was sixty-five feet in thickness. The bars always caused a decrease in the size of the opening, and sometimes nearly cut off the vein. In other places, the opening contracted in width, in which case the ore usually occurred in a solid sheet, sometimes as much as seven feet thick by seven and a half feet high. In the caves or larger parts of the opening, the ore was found in large masses, weighing sometimes several thousand pounds. Two large masses were found which weighed respectively fifty thousand and twenty-seven thousand pounds. With the ore large masses of rock were found mixed with loose dirt and a fine, dark clay.

The sides of the opening were much washed and worn by water, showing a very regular stratification, with no appearance whatever of faults or dislocations. Each of the caves in the opening had a chimney going down, apparently to a second opening, which has never yet been proved or worked.

The upper part of the opening was sometimes filled with a large key-rock, having a crevice in each side of it. Sometimes, however, the key-rock was replaced by a flat cap-rock containing crevices.

The appearance of these caverns, as we passed through them, was a sight not soon to be forgotten. On the floor lay great masses of rock which had fallen from above, with clay continually moistened from the dripping walls and arching roof, and, here and there, the feeble light revealed rich masses of glittering ore.

Williams & Co.—This mining property is situated about three-quarters of a mile north-east of Black's Mine, and was operated by the proprietors, Messrs. Thomas and Jeremiah Williams and Mr. O'Connor. The water in this ground is not nearly so abundant as in other mines. It is easily removed with a common lift-pump, worked with a ten-horse-power engine; the amount seldom exceeds 250 gallons per minute. Mining has been confined to the upper half of the Galena limestone. The lower clay beds of the Cincinnati group are also found here, but there is not so great a thickness of them as at Black's Mine. The pump-shaft commences at the top of the Galena limestone, and is sunk to a depth of 106 feet, at which point the top of the second opening is found, after passing through the first opening, which is situated at a depth of forty-seven feet from the surface, and is probably identical with the first opening at Black's Mine, which it much resembles in its general appearance. The first opening here consists of a series of large caves or enlargements of the crevice, with chimneys going down to the second opening.

The ore was found in masses, mixed with clay and large pieces of stone, which had apparently fallen from the roof or cap. The lead ore, from its greater specific gravity, usually occupies the lower part or floor of the opening. The course of the range is very nearly east and west, but bears a little north on its western end.

The length of drifts in the top opening amounts to about nine hundred feet. It is about worked out at the western end, but still continues good at the east. Several masses of lead ore were found in this opening weighing from fourteen to fifteen thousand pounds. A singular formation of ore was found in the top opening. The mine was discovered and opened in February, 1872, and since then has probably been the most productive and remunerative mine in the district, on account of the comparatively small amount of water to contend with and the large amount of lead ores obtained, which has been estimated at two and a half million pounds. Work was suspended on this mine in the fall of 1875, and has not since been resumed.

Fairplay Level Co.—A company consisting of Messrs. Merry, Olinger, Rewell, Pier and Natte, having formed a stock company, with a capital of \$50,000, have been engaged during the last eight years in running a level on land owned by George Siddell & Co. This level is commenced on the east half of the southwest quarter of Section 26, Township 1, Range 2 west, about three-quarters of a mile below the village of Fairplay. It has been run eastward a distance of 2,200 feet, and thence south 70 feet, and has cost about \$30,000.

One "shift" of three men is the usual number employed, and it is not expected that the level will be completed for many years. Its greatest depth below the surface is 140 feet, and forty-eight feet below the natural water level; one mile farther east it will drain about sixty feet below the present water level.

This level will unwater the whole of Section 25, and will cut the following ranges in the third opening: The Crabtree, Thompson, Engine, Carus, Bruce, Lost range, Franklin, Seward and Cave range. The openings in these ranges are vertical; they were formerly worked and abandoned with lead ore in them going below the water. When these ranges are unwatered they will undoubtedly be very productive.

In the vicinity of Fairplay, about fifty men find employment in mining during the winter ; in summer the mines are idle. The greater part of the lead ore raised in this district comes from the mines south of the village, and, exclusive of the two large mines previously described, has not exceeded 50,000 pounds per annum for the last six years.

HAZEL GREEN DISTRICT.

The Hazel Green District exhibits considerable activity at present in mining operations, and the reports of smelters in this vicinity show that a large amount of ore is raised here. During the years 1872 and 1873, miners were attracted to other localities by the prospect of higher wages, which caused a temporary decrease in the production of lead ore ; the mines, however, remained unimpaired. The miners have now returned, and the mines have regained their normal productive condition.

The most remunerative and continuously productive portion of the district is the property of the Hazel Green Mining Company, otherwise known as Crawford, Mills & Co. It is situated on the northwest quarter of Section 30, part of the southwest quarter of Section 30, part of the northeast quarter of Section 30, part of the southeast quarter of Section 19, the southwest quarter of Section 19, the northwest quarter of Section 19, the west half of the southwest quarter of Section 18, all in Township 1, Range 1 east ; also, the northeast quarter of Section 24, and the east half of the east half of Section 25, Township 1, Range 1 west, comprising in all 1,106 acres, on which over four hundred and fifty distinct mineral veins have been discovered and worked.

During the early days of mining these grounds were worked from the surface as deep as was then possible, which was only about thirty-five feet, when they had to be abandoned. Pumping was tried on some of the larger bodies of ore, but as a general thing was found to be too expensive to be very remunerative, on account of the vast amount of water which the ground contained. In the year 1862, Crawford, Mills & Co. commenced their level from a point on the Hard-Scrabble Branch, and have been working it continuously ever since. Its total completed length is now about four thousand feet.

It is a feature of this ground that it is traversed by several bars or belts of ground which are very hard and impervious to water. As soon as the level is driven through one of them, it unwaters the ground in all directions to the next bar.

Some time in the year 1871, one of those bars was reached which was so hard that blasting with powder made but little impression on it. As an experiment, nitro-glycerine was tried and gave the greatest satisfaction, so much, indeed, that a factory has been established here, and it is gradually being introduced into the mines. It is at present used in Dubuque, Galena, New Diggings and several other places. It was at first regarded with some dislike and distrust by the miners, but this prejudice is fast being overcome, and nitro-glycerine, or some of its compounds, will probably supplant gunpowder in the mines at no distant day. The factory at Hazel Green produced, during the first three years, about 3,000 pounds of nitro-glycerine, and the demand is steadily increasing.

On account of the position of the bars, it was found necessary to make three branches to the level, one of which is now completed and is gradually draining the western part of the ground. The northern branch, when completed, will undoubtedly unwater the rest of the ground.

This level is an evidence of what can be done by scientific mining, when carried on persistently and systematically, with sufficient capital, applied with foresight and sagacity. It has cost the company twelve years of time, and about \$100,000. Its results are, that it has already repaid the outlay of capital by the ore raised from the ground unwatered by it, which would otherwise have been inaccessible. When completed, it will unwater the ground 135 feet below the natural water level on the ridge. It furnishes employment to about eighty miners during the mining season.

Quite a large and clear stream of water is discharged from the mouth of the level, and is at present used to operate a furnace and three wash-places. The ore in the Hazel Green mines is

usually found in sheets; this is its characteristic mode of occurrence. The ranges are approximately east and west, or north and south, the former being the most productive. Ore is also sometimes found in large bunches or pockets, containing sometimes several thousand pounds, and occasionally in openings. The pockets are often lined with large and very regular cubes, affording handsome cabinet specimens. The total production since the discovery of these mines, has been carefully computed from the smelter's accounts at about 126,000,000 pounds. Their present product is about 800,000 pounds per annum.

Mining in this vicinity is confined to the upper half of the Galena limestone, which is here present in its entire thickness, the clay of the lower beds of the Cincinnati group being found near the village, on the road to Galena. A section of the strata from the top of the ridge to the level would present approximately the following features:

Soil and flints.....	15 feet.
Galena limestone.....	90 feet.
Shales or thin layers of limestone.....	10 feet.
First clay opening.....	10 feet.
Second clay opening.....	20 feet.
Flint opening to floor of level.....	20 feet.
Total thickness.....	165 feet.

The following are the parties who are now engaged in mining on the company's land, or have been during the course of the present survey:

Richard Eustice & Co.—These parties were working in a new locality, and had, at the time they were visited, one of the handsomest displays of ore ever seen in the grounds. The bottom of the shaft had penetrated an opening filled with soft earth. The sides of the opening were lined with a body of ore which presented an unbroken mass of cubic crystals of various sizes, some of them being as much as six inches on a side, and of very perfect shape, affording very handsome cabinet specimens. There were not less than 10,000 pounds of lead ore in sight, in a place about ten feet long. This body of ore is known to continue several feet deeper to the drift below. These diggings were worked until the fall of 1875, and produced 120,000 pounds.

Rowe & Rowe.—This is a new range, and was discovered in March, 1874. It is an east-and-west sheet, in which the ore occurs in a crevice three or four inches wide, at a depth of about sixty feet below the surface, and about thirty-five feet above the flint opening. Work was suspended here in September, 1876. The total amount produced to that time was 50,000 pounds.

Richard Eustice's Diggings—Are situated on the Phelps range; shafts are ninety feet deep, down to the clay openings. Length of drifts about 150 feet. The ore here occurs in a sheet about an inch thick. The diggings were worked from June, 1872, to June, 1875, and produced about 40,000 pounds. Near these diggings, and about ten feet deeper, is an east-and-west sheet dipping to the north, carrying bunches of blende, which affords quite handsome crystals.

Manwaring and Madison Range.—This is an east-and-west range, and is sometimes known as the Hinch Range, from the name of a party who formerly worked it, and by whom it was abandoned in 1858. Since the level has been run, the water has fallen about fifty feet in this ground, and in December, 1873, work was resumed on it by Crawford, Mills & Co., since which time it has produced 40,000 pounds of lead ore. The shaft is down about fifty-five feet, or within six feet of the flint opening. Work was suspended on it in June, 1875.

John Edwards' Diggings.—Situated a short distance further west on the same range, a flat sheet of blende is found here in the second opening, at a depth of eighty feet below the surface. The order of deposition here is: 1st, pyrite; 2d, galenite; 3d, blende. During the winter of 1875-76, the product was blende, ten tons; lead ore, 1,400 pounds.

Bull Pump Range.—This range was worked by Jackson & Co. during the years 1873-74-75, producing 90,000 pounds. Work was suspended here in the fall of 1875.

Bininger Range.—This range has been worked at intervals since May, 1874. It is now worked by Stephens, Mankivel & Rowe; four men are employed, working with a horse pump in the second opening. During the present year the product has been 30,000 pounds.

J. C. COVER

(DECEASED)
LANCASTER.

Big Pump Range.—This range has been worked since October 1, 1876, by Richard Eustice & Co. A small amount of ore has been produced from the first opening.

McCoy Water-wheel Range.—Work was re-commenced here about August 1, 1876, by Rowe & Son, in the first opening.

Oates & Eustice.—This party has been working during the last year and a half on a range two hundred feet north of the west branch of the level. The lead ore is found in a flat sheet in the second opening. The opening is seven feet high, and averages seven feet in width. The sheet is about one foot thick. The product to the present time has been 150,000 pounds.

Clark's Diggings.—Two men have been working during the last year in the range next north of the McCoy Water-wheel Range. The ore is found as "chunk mineral" in the second opening, which is here six feet wide. The product has been 30,000 pounds.

Tregenza & Son.—Work was commenced by this party, in the fall of 1874, on the Drybone range, south of the Badger lot. The works are in the second opening, which is here from ten to twelve feet wide, and contains a flat sheet about five inches thick, of which the upper part consists of lead ore, and the lower of zinc ores. The product has been—zinc ores, twenty tons; lead ore, 20,000 pounds. Very handsome specimens of galenite, coated with cerusite, are obtained here.

W. H. Eustice & Bro.—This party commenced work in the fall of 1875 at Crawford's little pump shaft. They worked in the second opening during the winter of 1875-76, and suspended in the summer on account of water. The prospect is good, and they expect to resume work this winter (1876). Product, 10,000 pounds.

Edwards Estate.—On this land, there are several old ranges, now drained by the level of Crawford, Mills & Co., in which the following mining has been done:

Peter Skinner, in the winters of 1874-75 and 1875-76, produced 100,000 pounds.

Moffat & Co., in the same seasons, produced 80,000 pounds.

Pierce & Trewather, in the same seasons, produced 70,000. Other parties in the same time, in small amounts, 100,000.

In addition to the parties already mentioned, there are, in the winter season, usually about sixty miners at work on the lands of the Hazel Green Mining Company.

The following diggings are in the village of Hazel Green, but not on the lands of the Hazel Green Mining Company: *McBreen & Co.* This is an east-and-west sheet, connected with a quartering one averaging about an inch thick, situated on the land of Dr. McBreen, on the northwest quarter of Section 25, Township 1, Range 1 west. The range was worked in 1844, and the ore taken out to the water level. The water having become much reduced by the Hazel Green Company's level, work was recommenced in 1871, since which time about fifty-five thousand pounds of lead ore have been taken out. The diggings are in the upper beds of the Galena limestone, and not down to any opening.

Torneal's Diggings.—A short distance southwest of the preceding is a range consisting of twenty parallel crevices about twenty-five feet apart, and bearing north 15° east. Work was abandoned on them in 1850, and was recommenced by Mr. Torneal about eight years ago, since which time they have produced 42,000 pounds. Considerable time and labor have been expended in running a cross drift to prove the ground and ascertain the number and position of the crevices. The distance here to water is eighty feet, and the diggings are in the upper beds of the Galena limestone.

Rowe & Vivian.—This was formerly known as the Chizzem range, and is situated on Edward Williams' land, in the southwest quarter of Section 25, Township 1, Range 1 west, in the southern part of the village of Hazel Green. It is a north-and-south range, and was worked and abandoned in 1854. Work on it was recommenced by the present parties in November, 1873. Since then it has produced 24,000 pounds. The full thickness of Galena limestone is here present, overlaid by a few feet of clay of the Cincinnati group. The deepest shaft is 106 feet, and the total length of drifts is about 190 feet. Work was suspended here in the spring of 1875.

Williams & Brother.—On Edward Williams' land. This party commenced in the fall of 1875, and are now mining in a range a short distance west of the diggings of Eustice & Co., in the village of Hazel Green. They are working on a vertical sheet, and have produced to the present time 20,000 pounds.

Chandler's Diggings.—These diggings are situated on Mr. Weatherbee's land, and on the Sulphur Lot Range. Work was commenced two years ago, and continued to the present time. The works are in the second opening, which is from six to eight feet wide, and contain a sheet of lead ore from one to two inches thick, and also large, irregular masses which afford handsome specimens. The mine has produced 500,000 pounds, and is now very good.

PLATTEVILLE DISTRICT.

This district embraces the diggings in the immediate vicinity of the village and the Whig and Big Patch Diggings. The geological position is about the middle of the Galena limestone. The mining has been carried on principally by small parties. The annual production aggregates 395,000.

Gillis Range.—This is the longest and largest range in the Whig Diggings, being half a mile in length. A crevice opening was found from thirty to fifty feet below the surface, and is from three to five feet high. Some seven parallel crevices were discovered in 1839. About 5,000,000 pounds have been secured since that time.

The Robbins Range is a short distance north of the Gillis. It was struck in 1840, and produced 500,000 pounds. In 1866, Cronin & Stevens resumed work which had long been suspended, and raised about 300,000 pounds.

Duncan Range, a little way south of the Gillis, has given forth 1,500,000 pounds.

Messersmith Range produces only Smithsonite.

Missouri Range has produced 650,000 pounds, and has an annual product of 5,000.

Dutch Range was discovered in 1840. Some 200,000 pounds have been raised, and the products is about 5,000 annually.

Wilkinson and Cronin Ranges have given 300,000 pounds.

Smith Range produced 200,000 pounds, but is exhausted.

Big Patch Diggings put out 500,000 annually, divided among several parties, of whom Dixon & Coats represent four-fifths of the raise.

Hawkins, Thomas & Co. own the discovery on the southwest quarter of Section 31, Town 3, Range 1 west, made in 1872. The ore is blende, somewhat mixed with rock, and occurs in a flat sheet on the upper surface of the blue limestone. The sheet has in some places a thickness of five feet. It lies partially in the bed of a small stream.

BUNCOME DIGGINGS.

The Buncome Diggings form a subdistrict belonging to Hazel Green. They are situated on the Galena River, near the mouth of Bull Branch. They were formerly very productive diggings, and a few parties are still working in them. They are situated in the brown rock, which is the lowest bed of the Galena limestone, and is here from twenty to thirty feet thick, and extends down to the creek-bed at the State line, where the top of the blue limestone may be seen. At the mouth of the Bull Branch the top of the blue limestone is found to be twenty feet above the bed of the stream. Mining is generally carried on here by drifting into the side of the hill. An example of this is seen on the land of Mr. Gabriel Mills, on the northwest quarter of Section 32, Township 1, Range 1 east, where a flat sheet of ore was found on the top of the brown rock, on which a number of short levels were run. Mr. Mills is now engaged in running a level on the top of the blue limestone from Section 32, westward, to prove the ground for blende, of which ore in small quantities has been occasionally found. The Buncome ground is also remarkable as being the only locality in which native sulphur appears in sheet form.

Carpenter & Bennett.—These parties are mining on Mr. Mills' land, on the northeast quarter of Section 32, Township 1, Range 1 east, on the east side of the Galena River. The

workings are as usual in the brown rock, and produce some lead ore and large amounts of carbonate of zinc and blende. Exactly how much could not be ascertained. They have worked continuously since 1872.

Hicks, Fiddick & Co.—Situated on the land of the Edwards estate, on the southwest quarter of Section 29, Township 1, Range 1 east. The diggings are about half a mile above the mouth of the Bull Branch, and are also carried on in the brown rock. They are drained by a level a quarter of a mile long, discharging one hundred gallons per minute, which was commenced in 1868. The ore is found in flat and pitching sheets, and sometimes contains a little blende mixed with it. Twelve men are now employed here, and are producing a large amount of Smithsonite. Since the commencement of operations, about four hundred thousand pounds of lead ore have been produced.

Gabriel Mills Diggings.—This ground is on the northwest quarter of Section 29, Township 1, Range 1 east, on the ridge dividing Bull and Hardscrabble Branches, and contained the large lode mentioned in Prof. Whitney's report of 1862, on pages 285 and 286. The ore was discovered here in 1854, and has been worked uninterruptedly ever since, which is somewhat remarkable, as a single range seldom continues uniformly productive through so many years. The property is owned by Mr. Mills and R. Pierce. The deepest shaft is 130 feet down to the brown rock, in which the ore is found in flat and pitching sheets. The ore from these diggings is always coated with pyrites, and some Smithsonite is found associated with it.

The ground has produced about eight million pounds of lead ore; their present annual average production is about fifty thousand pounds, with no sign of diminution.

Simons & Sons.—Northeast quarter of northwest quarter of Section 32, Township 1, Range 1 east. A very fine prospect has recently been discovered by this party on Mr. G. Mill's land. They commenced work about the 1st of September, 1876, with a horse-pump. After sinking a shaft fourteen feet deep, a flat sheet six inches thick was discovered in the upper pipe clay opening. The sheet consists of lead ore, blende and pyrites, about half of the thickness being lead ore.

There are also several isolated ranges lying between Hazel Green and Benton, and not properly belonging to either district. They are as follows:

Johns & Harvey.—On the northeast quarter of Section 6, Township 1, Range 1 east. The range was struck in 1858, and was worked for some time with an engine and pump, and then abandoned. Work was recommenced by Messrs. Johns & Harvey, in 1869, and they are now working on the water-level at a depth of one hundred and ten feet below the surface, in the middle portion of the Galena limestone. The range bears slightly north of west, and makes ore in tumbling openings, mixed with clay and detached masses of stone. The opening is in some places twenty feet wide, but does not correspond in geological position with any of the Hazel Green openings, as it is rather above them. Work was suspended here in the fall of 1874. Their production to that time was 900,000 pounds of lead ore.

Dawson's Diggings are situated on the southeast quarter of Section 32, Township 2, Range 1 east. The general course of the range is east and west, but it is found to pitch in various directions. They are worked about thirty feet below the surface, in the upper measures of the Galena limestone. They were discovered in 1872. Since then, they have been worked continuously, and have produced 80,000 pounds.

Drybone Diggings.—Southwest quarter of Section 28, Township 2, Range 1 east. Mining for drybone has now been carried on here by George Hoppenjohn for the last ten years. The diggings are known as the "Bone Patch," and are very shallow, not exceeding twelve or fifteen feet in depth. The Smithsonite occurs in bunches as float, and does not make any regular sheet or opening. The amount produced is about fifty tons per annum.

Barney Kesson's Diggings are situated about a quarter of a mile southwest of the preceding, on the same quarter-section. Work is suspended in them during the summer seasons. They are quite productive diggings, and have yielded 50,000 pounds of lead ore per annum for several years.

Anthony & Dixon's Diggings—Southeast quarter of Section 21, Township 2, Range 1 east. These diggings are about a quarter of a mile south of the village of Jenkinsville, and are worked altogether for blende, although the ore contains a little drybone and lead ore. They are on the top of the blue limestone, in which a level is now being run, and is completed a distance of two hundred feet. The ore is very close grained, shows no regular cleavage, and somewhat resembles an ore of iron. It is remarkable by being intersected with thin parallel plates or laminae of galenite lying very close together, presenting reflecting edges and being a constituent part of the ore. The deposit was discovered in 1872, and has been worked continuously since. The production has been 180 tons of blende and 10,000 pounds of lead ore per annum.

Kesting, Hines and others.—A short distance southeast of the preceding, on the same quarter-section, are three parties at work on some drybone diggings. There are here several quartering ranges having a southwest course. The Smithsonite lies from fifteen to sixty-five feet below the surface, and in the lower measures of the Galena limestone. It "makes" in flats, sheets, and pitches without much regularity. The ground has been worked about ten years for drybone. The average annual production has been about 225 tons.

Spensley, Winn & Co.—Situated about a quarter of a mile southwest of Meeker Grove post office. The above parties have been working here about five years. The ore is found in an irregular flat sheet in the upper pipe clay opening. This ground has been worked at intervals during the last twenty years. The water is removed by a horse-pump. The production of the last two years is as follows: 1875, blende, 300 tons, lead ore, 20,000 pounds; 1876 to October 1, blende, 400 tons, lead ore, 20,000 pounds.

Greenwood & Miller.—Southeast quarter of Section 7, Town 1, Range 1 east. This is an east-and-west range, discovered by Cook twenty-five years since. The present parties became interested in it in 1871. Five shafts, from seventy to ninety feet deep, have now been sunk, and two drifts, of 300 feet each, have been run. The ore is found here in a crevice opening, sometimes twelve feet high. The width of the opening is quite variable, as it is crossed by numerous north-and-south crevices, which usually cause it to expand in width. Bunches of ore are found at the crossings, but no regular sheets. The water is removed from the ground by two horse-pumps of twelve-inch bore, six-foot stroke, which pump about ninety gallons per minute. It is estimated that the ground has produced 1,000,000 pounds of ore, and its present annual product is about 300,000 pounds.

NEW DIGGINGS DISTRICT.

Considerable lead ore is now being raised in the vicinity of new Diggings, being mostly in the ridge immediately south of the village. The following section taken from the mines south of the village will give a correct idea of the relative position of the several beds and openings:

	Feet.	Inches.
Soil and clay.....	14	...
Galena limestone.....	60	...
Flint bed.....	1	2
Shale.....	...	2
First opening (sometimes called crevice opening).....	5	...
Limestone cap.....	2	...
Second opening (sometimes called flat opening).....	5	...
Flinty rock.....	9	...
Third opening (this is the principal flat opening).....	4	...
Galena limestone.....	4	...
"Putty bed".....	...	3
Galena limestone.....	1	8
Fourth opening.....	6	...
Galena limestone.....	50	...
Flint opening.....	8	...
Brown rock to top of Blue limestone.....	13	...
Total.....	178	8

Champion Diggings.—Northeast quarter of Section 26, Town 1, Range 1 east, on the New Diggings ridge. There are several ranges here having a general east-and-west course, one of

which, known as Champion's old lode, has probably yielded more than any single range in the lead region. This and the other ranges owned by Mr. Champion are drained by a level a half a mile long. This was completed in the year 1865, at an expense of about \$70,000. It then drained the ground, and in four years, with the labor of eight men, 5,000,000 pounds of ore were taken out, which sold for about \$500,000. This ore was contained in an immense opening; in some places forty feet wide by twenty-five feet high. This principal opening is now worked out, but the range still continues productive, and has been worked uninterruptedly for the last ten years. Average product per year, 85,000 pounds. Work is now being carried on south of the old ranges. At the western end, in the Meyers lot, a shaft has been sunk seventy-three feet to the first opening, which is here about ten feet high and from twenty to thirty feet wide. There are here three parallel crevices, one of which is about eight feet wide. Seventeen men are now employed in the Champion Diggings. Mining is carried on continuously, and the annual product is about 200,000 pounds.

Craig Diggings are situated in the New Diggings ridge, on the northeast quarter of Section 26 and northwest quarter of Section 25, Township 1, Range 1 east. There are here three principal east-and-west ranges, a few feet apart. The ore which is now worked is known as the Simpson pump range. These ranges were discovered in 1834. In the spring of 1874, a shaft was sunk on one of them, and they are now worked in the second opening. They produce only lead ore, found in a flat opening which is one hundred feet wide, and has been worked to a length of one hundred and fifty feet. They are worked only in the winter, and produce 40,000 pounds per annum.

Craig, Sanders & Campbell.—Work was commenced by this party in the fall of 1874, on the east end of the Simpson pump range. The mining is carried on in the first opening. The product has been 258,000 pounds, the greater part of which was produced in the year 1876. The extreme west end of this range has been worked by Craig, Stephens & White during the past year, but has not yet produced anything.

Craig Level Company.—A company consisting of several persons residing in New Diggings and the adjacent towns, and representing an extensive capital, have been engaged for several years in running a level on the south side of the New Diggings ridge, for the purpose of unwatering the extensive east-and-west ranges on and near the summit of the ridge. It is already so far advanced that it has lowered the water in the mine several feet, sufficient to admit of the production of enough lead ore to more than defray its expenses. Mining is now carried on in pump range, the Mitchell range and several others; the company are making several "cross-cut drifts" for the purpose of prospecting their ground. The mining operations of the Craig Level Company have been very productive of lead ore. The amounts produced previous to 1874, could not be ascertained. During the year 1873, it was 70,000 pounds, and from March, 1874, to October 1, 1876, the product was 2,075,470 pounds.

Brown, Dodge & Co.—This party, consisting of four men, have been working in the west end of the Mitchell Range, on land owned by Col. S. Scales. The product has been 10,400 pounds, all raised within the last year.

Harper, Hird & Co.—Situated in the New Diggings ridge, a short distance west of the Craig Diggings, on two east-and-west ranges, known respectively as the Wiley and Engine, on which the water has been reduced about four feet by the Craig level. They were quite large ranges, and were extensively worked many years since. Work was resumed on them by the above parties in February, 1873. Since then the product has been 303,000 pounds. The crevice of the Engine Range is here about three feet wide, and the ore makes in the first opening; while on the Wiley Range the crevice is ten feet wide, and the ore makes in the crevice and not in the opening. The ground is owned by Col. Sam Scales.

The existence of lead and zinc ore in the upper pipe clay opening (upper surface of the blue limestone) is also known at New Diggings. A mining company, known as the Occidental, was in operation in 1873, by whom a level had been run on this opening, which resulted in the discovery of a flat sheet of blende or lead ore.

Catchall Diggings.—Northwest quarter of Section 30, Township 1, Range 2 east. These diggings have in former years produced large quantities of ore; exactly how much, could not be ascertained. After lying idle for some years, work was resumed on them in 1870 by S. and C. Vickers, J. and T. Peacock and John Henry. They were worked for a year with a horse pump, and after that with a steam pump, the former having been insufficient to remove the water. There are here two north-and-south ranges crossed by several east-and-west ranges, which produced blende and lead ore. The pump shaft is located in one of these crossings, and is forty-eight feet deep. A series of levels was run from here to the New Diggings Ridge, by which it was ascertained that the top of the ridge was on a level with the bottom of the shaft, which shows that the openings existing at this place are above those at New Diggings, and probably near the middle of the Galena limestone. The Catchall Diggings ceased being worked in January, 1873. The pump and engine still remain on the ground. The product during the three years of working is said to have been 2,000,000 pounds.

Howe & Alderson.—Southeast quarter of Section 15, Township 1, Range 1 east. This ground is situated a short distance north of the Democrat furnace, and belongs to the Leakley estate. The range was discovered and worked about 1847, and work was resumed on it by the present parties about fourteen years since (1862). The general course of the range is east and west; the extent of the drifts is from three hundred to four hundred feet, in the course of which five flat openings and one crevice opening have been found. The flat openings are not far above the blue limestone. There are eight shafts going down to the openings from thirty to eighty feet deep. The ore is generally small, with wash dirt; but little large or "chunk mineral" is found. The diggings are entirely free from water. During the past fourteen years they have produced about one million pounds. Work was suspended here about January 1, 1876.

John Rain & Co.—Southeast quarter of Section 31, Township 1, Range 1 east. The land is owned by Messrs. Hodge & Scales and the Field estate. The course of the range is north 5° east. It is known as the Raspberry range from the name of the man who discovered it in 1849, and sometimes as the Dinsell range. The workings are all in the first of the New Diggings opening, although the second has also been reached. There are five shafts down to the opening, and about five hundred feet of drift. The opening is quite variable in size, and is sometimes as much as thirty feet wide. The ore occurs as wash dirt, although large pieces are occasionally found. The diggings have been worked for lead ore during the last seven years, since which time Messrs. Rain & Co. have taken out as follows: 1871, 50,000 pounds; 1872, 100,000; 1873, 75,000; 1874, 75,000. The product for 1875-76 was not learned, but the mine is now productive.

DIGGINGS ON THE LEAKLEY ESTATE.

Robbins & Bros.—Four men have been employed here during the last year, working an east-and-west range with a horse pump. The amount raised is not known, but it is understood that the ground yields enough ore to pay good wages.

Hall & Rain.—Southeast quarter of Section 23, Township 1, Range 1 east. This is a new east-and-west range on the Leakley estate, discovered in 1873. The ore occurs in a crevice opening from forty to forty-five feet below the surface. Four shafts have been sunk in it, and one drift ran a distance of 400 feet. About one hundred and nineteen thousand pounds have been produced since they were discovered. Work was suspended in 1876.

E. Ashworth Diggings.—Southeast quarter of Section 24, Township 1, Range 1 east. This is an east-and-west range in the Leakley estate, discovered in the fall of 1873. The workings at this place are confined by water to the first opening, which is here crossed by numerous quartering swithers from four to six feet apart. The crossings are the most productive parts of the opening, and the ore frequently comes up to the surface clay. At the time they were visited (June, 1874), five shafts had been sunk about thirty-five feet deep. One of the drifts was about one hundred feet long, and there were several of fifty feet each. The product to that time was 4,000 pounds of lead ore and fifteen tons of drybone. They have been working continuously since, producing small amounts.

Phoenix Lead Mining and Smelting Company.—Section 13, Township 1, Range 1 east. A great deal of mining has been carried on here since a very early day, and the ground has been very productive of ore. The principal vein, which is known as the Ellis sheet, was discovered by a miner of that name about thirty-five years since. Its course is north twenty degrees east, and it has been worked for a distance of about half a mile. The workings so far have been confined to the Galena limestone, of which there is a thickness of one hundred and fifty feet at the pump-shaft at the summit ridge. This shaft has been sunk to a depth of one hundred and fifteen feet, leaving thirty-five feet of the formation unexplored, exclusive of the underlying Trenton limestones, which have here a thickness of about fifty feet. The sheet of ore is nearly perpendicular, and varies from two to eighteen inches in thickness as deep as the shafts were sunk. The same system of surface mining obtained here as at other places, by means of which the ore was extracted down to the natural water level but a short distance below the surface, leaving the main body of the ore untouched. In this manner, more than 2,500,000 pounds of lead ore were obtained. In the year 1865, a level was commenced with a view to drain the ground, and was prosecuted with slight intermission until 1872. Its present length is one thousand seven hundred feet, and when completed it will drain the ground to a depth of one hundred and thirty-five feet. Several other large east-and-west ranges traverse this ground, among which are the Bobineau and the Dowd and McGinnis, on the west half of the southeast quarter of Section 14, Township 1, Range 1 east, which have yielded heretofore not less than 3,000,000 pounds.

SHULLSBURG DISTRICT.

Stophine Diggings.—The property is situated on the northwest quarter of Section 28, northeast quarter of Section 29 and southeast quarter of Section 20, all in Township 1, Range 3 east. Although the mine is not in operation, it is in a condition to be worked on very short notice. The following information in regard to it was obtained from the owner, Mr. Edward Meloy, and personal inspection of the ground: Nearly, if not quite, the entire thickness of Galena limestone is present at this locality. The northern outcrop of the Cincinnati group is about a mile to the southwest. The pump-shaft has been sunk in a natural chimney to a depth of one hundred and twelve feet below the surface, and has now reached what is known as the green bed or cap of the Shullsburg opening. The water was removed by an engine and lifting-pump discharging five hundred gallons per minute. All the water came up in the shaft through the chimney. While the pump was in operation, two springs, situated respectively one-half mile east and northwest of the shaft, ceased to flow. There are two principal ranges here—one bearing north thirty degrees east from the pump-shaft, and worked for a distance of eight hundred feet northeast of the shaft, and the other bearing north ten degrees east, about one hundred and forty feet west of the shaft, worked about five hundred feet, connected by a quartering range running north of east.

These ranges were struck in 1863 and worked until 1869, and are thought to be a continuation of the Shullsburg elevator ranges. Two shafts sunk on the range, bearing north thirty degrees east, have turned out one thousand pounds to the foot without any drifting, and the whole tract, within an area which would be embraced within three acres of ground, has produced about 600,000 pounds. In every shaft from which ore has been raised, the indications of large bodies below are very strong.

A very peculiar formation was found in sinking on the north thirty degrees east range. Commencing at a depth of thirty-five feet from the surface, a hard, brecciated limestone sets in, filled with pyrites, and, in some cases, with galenite. This formation continues as deep as the shafts were sunk. This was not found on other ranges in this locality, and is a mode of occurrence peculiar to one range.

The breccia consists of small, angular limestone, similar to the adjacent rock of the formation. It appears to have been caused by the undermining and falling-in of a portion of the formation, by a previous subterranean drainage. The rubbing and grinding of the sides of the

fissure against each other in the course of the movement broke off pieces of various sizes, and the interstices and cavities were subsequently filled with pyrites.

McNulty Mine.—In June, 1873, work was recommenced in these old ranges, and considerable capital expended in erecting new machinery and buildings, the old ones having been burned. It is now owned and operated by Messrs. J. M. Ryan, of Galena, and M. A. Fox, of Shullsburg. The mine is situated on the northeast quarter of the northeast quarter of Section 15, Township 1, Range 2 east, a short distance south of the village of Shullsburg. There is here a thickness of about two hundred feet of Galena limestone, or four-fifths of the entire formation. The ore is obtained in the usual opening common to all the mines of the Shullsburg district, between what are known as the green and clay beds, of which the green bed is regarded as the top and the clay bed as the bottom of the opening. In this mine the following stratigraphical information was obtained: Five feet below the clay bed and one hundred and fifty feet below the surface is an opening and a bed of white rock two feet thick, then a layer of hard, gray rock, three feet thick. Below this was found a flat sheet of galenite, mixed with pyrites, and indications of openings below. It is a peculiarity of the mining ground in this ridge that all crevices south of the Shullsburg branch pitch or dip to the south, about six inches in ten feet, until the summit of the ridge is reached. Here, as in the south shaft of the McNulty, the crevices are vertical. In this shaft the crevice penetrates through the clay floor and continues on going down, being the only crevice which has done so. Proceeding further south, over the crest of the ridge, the crevices all pitch or dip to the north. Taken together, this system of crevices seems to present a fan-like shape, approaching one another as they descend.

In the spring of 1876, a new east-and-west range was discovered in this mine, south of and parallel to the one already worked. It promises to be very productive of lead ore.

The production of this mine from June 1, 1873, to March 1, 1876, is as follows: 1873, 200,000 pounds; 1874, 150,000 pounds; 1875, 75,000 pounds; 1876, 210,000 pounds.

Silverthorn Mine.—Northwest quarter Section 32, northeast quarter Section 31, Township 2, Range 2 east. The greatest thickness of Galena limestone found on the ridge was about one hundred feet. The ground is drained by a level run in the carbonaceous shale, on the top of the blue limestone, which has here a very great thickness, being nowhere less than two feet, and, in some places, seven and a half feet thick. It seems in this mine to replace the pipe-clay opening. It is very easy to work, and consequently this level has been comparatively inexpensive. This shale, when dried, burns with a bright yellow flame and much smoke until the carbon is exhausted, but owing to the amount of calcareous matter it contains, it is not much reduced in bulk. These diggings produced, in 1871, 200,000 pounds, and in 1872, about 100,000 pounds. Their product in previous years could not be ascertained. Work was suspended in them in 1875. An analysis of lead ore from the Silverthorn mine gave the following results: Lead sulphide, 97.06; metallic lead, 84.07; insoluble silicious residuum, 1.76.

Rickert, Stevens & Co.—These diggings are situated on the northwest quarter of the northwest quarter of Section 14, about five hundred feet east of the McNulty mine, and connected with it. Their geological positions, in respect to strata and openings, are almost the same. The ore is found in the usual Shullsburg opening; but, in a few instances, it runs above it for a short distance, and then drops down again, presenting a saddle-shaped appearance. At the south shaft the rock is very much disturbed and broken, apparently in an area about two hundred feet in diameter. It is in loose masses, of all sizes and shapes, containing more or less ore scattered through it, and the fine, earthy material known among the miners as sand. The strata pitch in every conceivable direction and degree from horizontal to vertical. Crevices and veins cannot be followed through it with any degree of certainty; but at the borders of this disturbed area, as well as above and below it, the strata have their normal position, which is nearly horizontal. This is merely a local disturbance, and is probably due to the unequal hardness and solubility of the formation. Considerable of the limestone seems to have been removed by currents of water running through the opening, thus permitting large and small irregular

masses to fall from above, and filling the interstices with the fine, insoluble residuum of sand.

In connection with this irregularity was noticed a remarkable "chimney," about thirty-six feet long by twenty feet broad, and extending upward further than has yet been followed. It was originally filled with loose masses of galenite, rock and sand. In the ground on this ridge the strata dip on both sides toward the north-and-south line between Sections 14 and 15, on the west side, about four feet in a quarter of a mile, and on the east side, one foot in thirty rods. The ground is drained by a horse-pump, into a level a short distance below the surface. The mine produces very handsome cabinet specimens of galenite and calcite, in the form of dog-tooth spar.

The following section will serve to convey a general idea of the arrangement of the strata on this ridge:

Soil and clay.....	6 to 10 feet.
Galena limestone.....	100 feet.
Flint bed.....	4 to 8 feet.
Green bed to clay bed, including the opening.....	14 to 18 feet.
Galena limestone to top of blue limestone.....	65 feet.
Total average thickness.....	195 feet.

Reckoning upward from the top of the blue limestone to the top of the green bed or cap of the Shullsburg opening, the distance is found to be about eighty feet, and in the New Diggings section, from the top of the blue limestone section to the top of the flinty rock, which is the cap of the third or main opening, the distance is eighty-two feet.

This establishes an identity of geological position of these two points. Measuring downward from the cap in the Shullsburg opening, its average distance is found to be sixteen feet to the bottom of the opening. In the New Diggings section the same distance includes all that lies between the top of the third and bottom of the fourth opening, and finally, each is underlain by about the same thickness of unproductive rock. The correspondence between these openings is thus very distinctly marked. The unproductive beds in the New Diggings openings seem to disappear in going eastward, and finally the openings unite on reaching Shullsburg. In regard to the production of these diggings, it is estimated that the south half of Section 10 and the northwest quarter of the northwest quarter of Section 14, being an area of one mile long on a course south seventy degrees east, and three-quarters of a mile wide, including the McNulty and Rickerts Diggings, have produced since the commencement of mining operations not less than one hundred million pounds.

The bearing of the crevice on which Rickert, Stephens & Co. are now working, is due east and west. The mineral is found about twelve feet below the green bed or cap, and is mixed with sulphur (pyrites). The rock is different from any before taken out of the mines in this section. It is a dark blue, and mixed with sulphur and flint, and is very hard. In the opening, there is copper rust or verdigris mixed with large balls of sulphur. Dog-tooth spar, or tiff, is also found in large quantities, most of which is attached to the mineral. The company commenced work in 1849, and on the present range in May, 1874. They are now operating a steam pump in what is supposed to be a continuation of the South Diggings range. The product from June 1, 1873, to March 1, 1876, is as follows: 1873, 377,120 pounds; 1874, 201,966 pounds; 1875, 318,690 pounds; 1876, 153,720 pounds.

Drybone Diggings.—Situated on the southwest quarter of the east quarter and the south-east quarter of the southwest quarter of Section 4, Township 1, Range 2 east. The ranges here run in nearly an east-and-west direction. The diggings are situated in the lower strata of the Galena limestone; the top of the blue limestone is found a short distance down the stream. Although shallow, these diggings have been very productive of zinc ore, and are still successfully worked.

Irish Diggings.—Section 2, Township 1, Range 2 east. These diggings have not been worked for many years, on account of the water, but were formerly very productive, and were

abandoned with ore going down in the crevices. The greatest thickness of Galena limestone in this ground is about one hundred and fifty feet. They could be readily unwatered by means of a level from some point on the Shullsburg branch.

Meloy & Fox.—In the early part of the year 1875, that part of the Irish Diggings known as the Findley Cave range, was leased by Messrs. E. Meloy and M. A. Fox, of Shullsburg. It is situated in the northeast quarter of Section 2, Township 1, Range 2 east, and comprises ninety-nine acres of land lying about a mile northeast of the village. The range was worked during the months of April, May and June, 1875, and in November of that year a steam engine and pump were erected, and it has been worked continuously to the present time (November, 1876). The pump shaft is now about eighty feet deep; water is discharged into an adit connecting with the shaft at twenty feet below the surface, at the rate of 150 gallons per minute. The course of the vein is north seven degrees east, having a dip to the eastward of four feet in one hundred. The distance between the walls of the vein or crevice varies from two and a half to seven feet, the space between them being filled with the vein matrix common to the neighborhood. The bottom of the pump shaft is six feet below the top of the flint beds. The vein appears to continue downward, the filling of the crevice being loose and allowing the water to pass readily through it. After sinking the pump shaft, the vein was drifted in a distance of sixty feet to the northward; in the course of running this drift, 100,000 pounds of ore were extracted.

The foregoing remarks show the condition of the mine in 1876. The production since then we have not learned. The range was worked more than thirty years since, with a two-horse pump, as deep as water would permit, and large quantities of lead ore were obtained. These diggings could be unwatered to a much greater depth by means of a level from some point on the Shullsburg branch.

Bull Pump Range.—Work is still carried on on this range, which is situated on the Hempstead estate. It is operated by Messrs. Beebe, of Galena, and Wetherbee, of Shullsburg. The amounts produced could not be ascertained.

Oakland Mining Company.—The lands of this company are situated in the southeast quarter of Section 6, the northeast quarter of Section 5, the northwest quarter of Section 4, and the southeast quarter of Section 4, all in Township 1, Range 2 east, comprising in all about 565 acres.

This ground includes the old French range, which was discovered as early as 1839, and produced not less than 1,000,000 pounds. It is connected northward by some quartering crevices and is known as the Ernest and Townsend range. The thickness of Galena limestone here is about one hundred and seventy feet. There are six shafts in the range, averaging about fifty feet each. The lead ore is abundant, but dips rapidly to the northwest beneath the water. The range has produced about four hundred thousand pounds. The ground is susceptible of drainage from the Shullsburg branch. It is not worked at present. The company also has a level nearly completed in the southwest quarter of Section 4, which is run on the stratum of carbonaceous shale, or the top of the blue limestone. At the working shaft, there is a thickness of ninety feet of Galena limestone, of which the following section is given:

Clay and soil.....	18 feet.
Yellow, flinty limestone.....	16 "
Galena limestone containing calcite.....	20 "
Blue, sandy limestone cap.....	6 "
Red ochery clay, with lead ore in flat sheets at top and bottom, also diffused through the mass, forming a wash dirt.....	12 "
Unexplored beds.....	18 "
Total thickness.....	90 feet.

Considerable mining has been done in former years in the blue sandy limestone member of the section, but the main opening appears to be in the red-ochery clay which underlies it, which, so far as explored, has been found to have a thickness of about twelve feet, and to con-

tain a flat sheet of galenite nearly continuous, and of variable thickness, sometimes furnishing pieces of five hundred pounds' weight. The bearing of the sheet, so far as has been determined, is west of north and east of south, with a slight dip to the southwest. Its area has not been determined, but, so far as has been worked, there are no indications of the opening, contracting or closing up.

BENTON DISTRICT.

In the immediate vicinity of the village of Benton, there are several parties permanently engaged in mining, besides others who mine only in the winter. The diggings are in the lower beds of the Galena limestone, yet not so low as the brown rock.

Bainbridge and Vipord—Southeast quarter of Section 8, Township 1, Range 1 east. This is an east-and-west range somewhat near a mile long, which was worked about twenty-two years since and abandoned. Prior to 1854, it produced about one and a half million pounds. About seven years since, some work was done on it, and one million pounds were produced. Work was recommenced on the eastern end by the present parties in February, 1874, and has continued to the present time (November, 1876). The annual product is about twenty thousand pounds. During the last year and a half, they have been worked with a horse-pump.

Bainbridge, Mundy and Maighn.—This is a quartering southwest-and-northeast range, about one hundred yards north of the preceding. This range was never worked previous to March, 1874. It is now worked only in the winter seasons. It has produced in all about fifty thousand pounds. The ore in these diggings and the preceding is found in openings detached from the main crevice.

Metcalf, Harker and Alexander—Northwest quarter of Section 9, Township 1, Range 1 east. This ground is situated on what is known as the Swindler ridge. It derived its name from the custom which formerly existed among the miners of cutting through and breaking into each other's ground to steal the ore, which the complicated nature of the openings enabled them to do. This range was struck in 1871, and has been worked continuously ever since. The depth to the top of the first opening is fifty feet at the shaft, and on the ridge generally, although the opening is said to dip slightly to the west. Some water is encountered on the ridge, and the present parties have found it necessary to work a two-horse pump. The production to November 1, 1876, has been 600,000 pounds.

Bainbridge Diggings—Situated on the east half of the northeast quarter of Section 4, Township 1, Range 1 east. Work was commenced here by Mr. Thomas Bainbridge, of Benton, in the winter of 1874. In May, 1875, an irregular deposit of lead and zinc ore was discovered about fifty feet below the surface, having a course a little west of south. Its production has been twenty-five tons of Smithsonite and twenty-five thousand pounds of lead ore.

Harvey's Diggings—Situated on the same ground and about 250 yards northwest of the preceding work, was begun here in the winter of 1875-76, and a large flat sheet of Smithsonite was discovered, which has been worked over 200 feet in diameter without reaching unproductive ground. It is found about fifty feet below the surface, in the random or horizon of the flat flint openings. The ore is found in flat sheets, interstratified with the formation. One hundred tons have been produced.

McElroy Bros.—Situated half a mile south of the village of Benton. This is a new discovery, made in the winter of 1875-76; an irregular flat sheet of Smithsonite was found at a depth of fifty feet below the surface, from which in two months fifteen tons of ore were produced.

M. J. Williams & Co.—Situated on the southwest quarter of the southwest quarter of Section 3, Township 1, Range 1, east. A large flat sheet of lead ore and blende, about one foot thick, was discovered in July, 1876, in the bed of Fever River, soon after a heavy flood which took place at that time. It lies in the upper surface of the blue limestone, and, on account of its situation in the river, but little has been done with it. It is an excellent prospect, and will doubtless be remunerative as soon as the water can be removed.

McCaffery, Smith & Co.—In the middle of October, 1876, these parties commenced work sinking a shaft on the west line of the forty of M. J. Williams & Co. They found the

same sheet of ore as there described; in the space of two weeks they had developed a fine prospect, and had produced about one ton of ore.

Level Company.—On the northwest quarter of Section 29, Township 1, Range 1 east, a level is now being run by Messrs. Stevens, Mason, Miller, Robbins, Broderick, Hoover, Thompson, Coltman and Farley, who own and have leased 135 acres in Sections 20, 21, 28 and 29. The level was commenced in the spring of 1870, and has now reached a length of 1,000 feet; it is being driven on a flint opening near the top of the brown rock, which is here about fourteen feet above the blue limestone. The object of driving the level is to unwater the Drummond range, which runs east and west, and is supposed to be a continuation of the Crow range of Hazel Green, and the Nagle range of New Diggings. It is believed that when the level is completed it will unwater the Drummond range to a depth of forty feet below the present water level. The level now gives access to two openings in working it, and had, when visited, an inch sheet of lead ore in the working forehead. It may be remarked that these openings are lower than any of the Benton openings, and seem to be identical with those of the Buncome district. The product has been, up to the present time, 60,000 pounds.

MIFFLIN DISTRICT.

Mining operations here are now chiefly confined to several parallel ranges, having a general northeasterly course, and situated about half a mile south of the village, including the Penitentiary, Dunbar and Owen ranges. The ore is found in flat sheets on the surface of the blue limestone, in the pipe-clay opening.

Some mining is also done in Section 10, Township 4, Range 1 east, in the vicinity of the Welsh settlement.

Penitentiary Mine.—Southwest quarter of northeast quarter of Section 34, Township 5, Range 1 east. This property is owned by Messrs. James, John and Calvert Spensley, William Bainbridge, J. J. Ross, Mrs. Mitchell and N. W. Dean. The mine was opened in 1842, and since then it has been very productive, and has been worked continuously to the present time. The mine is drained by a level containing a tramway, on which the rock and ore are carried out of the mine. Sufficient water is removed to operate a large wash place. The distance from the entrance of the mine to the forehead is about seventeen hundred feet. The average width of the range is about three hundred feet, and the thickness of the deposit from six inches to two feet. Previous to 1864, the mine was worked chiefly for lead ore, producing in some years as much as 170,000 pounds. It is estimated by Mr. Ross that it produced, from 1862 to 1875, 3,000,000 pounds of lead ore and 11,000 tons of blende. The production for 1875 was, blende, 375 tons; lead ore, 35,000 pounds. The production for 1876 was, blende, 600 tons; lead ore, 40,000 pounds.

Jenkins, Miller & Co.—These parties have been working during the last two and a half years in the Dunbar range, which is parallel to the Penitentiary, and a short distance north of it. The land is owned by Messrs. Ross & Dean. This range has been worked during the last thirty years, and is drained by the Penitentiary level; the present workings are about fifty feet below the surface. The company produced during the year 1876, to October 1, blende, 80 tons; lead ore, 8,000 pounds. Their annual average is, blende, 80 tons; lead ore, 12,000 pounds.

Rain, Young & Jenkins.—These parties are now working on the Blackjack range, which is adjacent to the Dunbar, and sometimes connects with it. The present works are fifty feet below the surface. The ore is found in flat sheets, sometimes seventy feet in width, in the pipe-clay opening, the height of the opening averaging five feet. The annual production is from one hundred and fifty to two hundred tons of blende, and from ten thousand to fifteen thousand pounds of lead ore. A short distance northeast of the Blackjack is the Owens range. It has not been worked during the last two years, but is considered good mining ground.

CENTERVILLE DISTRICT.

These diggings are like those in the village of Highland, in that they are all situated quite close together, on Section 7, Township 6, Range 1 east, on the hill about a quarter of a mile east of the village. The land is all owned by Messrs. Top, Nordorf and Kroll. The miners are nearly all Germans. The diggings were first worked in 1836, and have been worked continuously ever since, chiefly for lead ore, until within the last ten years, since which time they have been worked for zinc ores. The workings are in the brown rock opening, and lie from five to fifty feet below the surface, depending on the amount of denudation. Very little trouble is experienced from water, and during the past two years the ground has been especially dry. The principal parties working here are as follows:

Heller & Parish.—These parties are working a southeast-and-northwest range, twelve hundred feet long and six hundred feet wide. Their annual product is lead ore, 100,000 pounds; blende, 500 tons; Smithsonite, 400 tons.

John Carter and Richard Samuels.—On the same range as the preceding. They have worked here two years, and are producing two hundred tons of Smithsonite and five thousand pounds of lead ore per annum. Other parties and their annual products are as follows:

Schock & Flemmer.—Blende, 200 tons per annum.

Stepper & Mensing.—Blende, 100 tons per annum.

George Wieble.—Blende, 200 tons; lead ore, 15,000 pounds.

Blue River Paint Works, situated on the southwest quarter of Section 7, Township 6, Range 1 east. At the time this establishment was visited, work had been suspended, and consequently it did not appear in as flattering a light as its merits would probably justify. The building and machinery were still standing, in a condition to resume work without delay. According to the best information obtained, the paint was made from the ocher which is quite abundant in the Centerville Diggings, and which furnishes quite a number of shades of yellow in its raw state, and an additional number on being burned. The red paint, however, was derived from the upper bed of the St. Peter's sandstone, which was crushed and washed; the red coloring matter being readily dissolved out by the water, from which it afterward settled on being allowed to stand. The colors, after being burned and ground, were ready for the market. As many as fifteen different shades of red and yellow ocher were manufactured. Several tons of paint were placed in market, and it was claimed to be a good and durable article. It is unfortunate that the manufacture could not have continued longer, and its qualities have been more definitely ascertained and generally known.

HIGHLAND DISTRICT.

The diggings of the Highland District are all situated within a short distance of each other, and about a quarter of a mile north of the village. They are all in the brown rock, the lower openings never have been proved. Most of the diggings are in what is known as the Drybone Hollow range. The names of the parties mining, and the present condition of their diggings are as follows:

Samuel Hinderleiter & Son—On the southwest quarter of Section 28, Township 7, Range 1 east, in the Drybone Hollow range. This is an east-and-west range, from one-quarter to one-half mile long, and from two to three hundred feet wide. It was discovered in 1846, and worked entirely for lead ore. It is now divided into small lots, of which Mr. Hinderleiter's is one. The work is chiefly confined to going through the old diggings and taking out the Smithsonite left by former miners, no blende being found. The shafts are about twenty-five feet deep, which brings them to the top opening, three feet in height. The ore is found in a flat sheet, about a foot thick, with ocher and clay above and below it. But little water is found here. The annual product of this lot is about thirty tons of Smithsonite.

Mulligan & Francis.—These parties have diggings in all respects similar to those already described, in a lot about one hundred and fifty feet northwest of the preceding.

Maguire, Kennedy & Co.—Southeast quarter of Sections 28, Township 7, Range 1 east. This is also in the Drybone Hollow range. The shafts here are from sixty to seventy feet deep, according to the surface of the ground. The workings are in the brown-rock opening, which is here about eight feet high. The lead ore is found in a flat sheet in the bottom of the opening, underlaid by pipe clay. The blende was discovered in the spring of 1874, and is much mixed with rock. The ore has to be crushed, washed and separated. Water is removed from the diggings by means of a windmill and small pump, and is afterward utilized to wash ore. The annual product is as follows: Lead ore, 200 pounds; blende, 100 tons; drybone, 50 tons

Blackney, Donahue & Co.—This ground is owned by Dr. Stanley, of Highland, and is a part of the same range as the preceding, and situated but a short distance northeast of them. The range here makes two well-defined openings, separated by a cap rock. It is irregular in shape, and about sixty or seventy feet wide, with little water. The following is a section of their principal shaft:

	FEET.
Galena limestone.....	60
First opening.....	9
Cap rock.....	2
Second opening.....	4

The ore is found in flat sheets, and is Smithsonite, blende and lead, the former being rather impure. The present parties have been working here for the last seven years. The annual product has been as follows: Lead ore, 11,000 pounds; Smithsonite, 35 tons; blende, 35 tons. The ground here seems to be pretty much worked out, the product being chiefly derived from the old workings.

Spensley & Co.—This is also on the land of Dr. Stanley, and is a short distance east of the preceding. It is an east-and-west range, situated a little north of the Drybone Hollow range. The range is one hundred and thirty feet wide so far as has been worked, and may prove to be two hundred feet in width each way from the center. The ore makes in pitches, and the sheet varies in size according to the number of feeders coming in from above. The lead ore occurs much mixed with rock, which necessitates crushing and jiggling the entire product. The lot worked by these parties consists of about six acres, of which only about one-sixth has been explored. The ore is blende and lead ore. Some Smithsonite is said to be found in the southern part. The amount of water here is small, and is all removed by bailing and hoisting in a barrel containing about fifty gallons. There shafts have been sunk, one of which is down to the blue limestone, and is one hundred feet deep. The company have operated here for six years, with the following product:

Year.	Blende, tone.	Lead ore, lbs.
1871.....	70	60,000
1872.....	150	120,000
1873.....	350	150,000
1874.....	250	160,000
1875.....	300	257,000
1876.....	325	300,000

Siddel & Co.—They are situated on the same range, worked in the same opening as Spensley and Co., and are located about one hundred and fifty feet east of them. They are the most easterly of all the diggings in this vicinity. One shaft has been sunk, and the ore has been found to make in the same manner as the preceding, except that this ground already furnishes some Smithsonite from the north side. These parties have been working here for the last five years, during which time the average annual product has been as follows: Lead ore, 70,000 pounds; Smithsonite, 85 tons; blende, 70 tons.

Flynn, Lynch & Co.—On Dr. Stanley's ground, and about three hundred feet southeast of Spensley & Co. Their ground is a lot 250x350 feet. One shaft has been sunk here eighty feet to the top of the opening, which is here six feet high and one hundred feet wide. The ground produces lead ore and blende, occurring in a flat sheet, mixed with the top layer of the blue limestone and some pipe-clay. The company has been working about five years, since which

time to October, 1874, they have produced 250,000 pounds of lead ore and seven hundred tons of blende.

Robinson's Diggings.—Situated about three hundred feet southeast of the preceding, on the ground of Mr. Barnard. These diggings are not being worked at present. They were commenced in the winter of 1871-72, and produced 4,500 pounds of lead ore and about nine tons of blende in the first two years.

Williams & Edwards.—Situated on the land of Mr. Lampe, and about 500 feet west of the diggings of Blackney & Co., previously described. They are part of the Spensley and Lynch range. The works are in the brown rock, which here appears to divide into three subordinate openings. A section of their working shaft is as follows, all in the Galena limestone:

Galena limestone.....	40 feet.
First opening.....	3 feet.
Soft, unproductive ground.....	8 feet.
Second opening.....	3 feet.
Soft, unproductive ground.....	8 feet.
Third opening to top of blue limestone.....	3 feet.

These diggings consist partly of old and partly of new openings. Cross-cut drifts are run through the old works in search of new ground, lead ore being usually found in the lowest opening. These parties have been working since 1870, and their product is as follows:

Year.	Lead ore, lbs.	Smithsonite, toos.
1870.....	70,000	70
1871.....	70,000	70
1872.....	80,000	80
1873.....	90,000	90
1874.....	90,000	90

The production of the years 1875 and 1876 was not ascertained.

Harris & Stanley.—Situated on the ground of Dr. Stanley, about 300 feet north of the windmill on Kennedy & Co.'s ground, previously described. These diggings are quite dry, being drained by the windmill pump. The range appears to be a branch of the Drybone Hollow range, about 500 feet long, running in a north-and-south direction. There are two principal openings exhibited in the following section of their working shaft:

Galena limestone.....	30 feet.
First opening.....	3 feet.
Cap rock (limestone).....	7 feet.
Second opening.....	6 feet.

The ore occurs, as usual in this district, in flat sheets. These parties have been working here since September, 1871, since which time to October, 1874, the total product was as follows: Lead ore, 40,000 pounds; blende, 35 tons; Smithsonite, 75 tons.

Rowe & Co.—Situated on the northeast quarter Section 28, Township-7, Range 1 east, comprising 160 acres. This is an east-and-west range, known as the Dunstan, discovered in 1846, and worked continuously since. It is about half a mile long, and 200 feet wide. The range is worked in the brown rock opening, chiefly for Smithsonite and lead ore. There are three working shafts from 50 to 75 feet deep. The opening is from 5 to 20 feet high. The annual product is stated at, lead ore, 50,000 pounds, and Smithsonite, 50 tons.

The foregoing comprises all the diggings in the immediate vicinity of Highland, and, with the exception of the last (Rowe & Co.), they are all embraced in a tract of land not exceeding forty acres in extent. The same general geological characteristics prevail in all, and they are nearly all connected together in the workings. The ore in most of them has to be crushed and jigged, and all except Kennedy and Maguire, have to haul their wash dirt about a mile and a quarter to water.

In these diggings the openings below the top of the blue limestone have never been worked or even prospected. If the several land-owners would take some concerted action, a level might be run up the Drybone Hollow, which would drain them to any depth required. Such a work.

however, should be preceded by boring, to ascertain the presence of flat sheets in the lower openings, the existence of which is not improbable. Mr. Solomon Spensley, who is well informed on the subject, says that the annual average product of the mines is approximately as follows :

Lead ore, 1,000,000 pounds ; drybone, 1,350 tons ; blende, 1,200 tons. In addition to the preceding, there are some diggings situated south of the village of Highland.

Davis & Co.—Situated near the southeast corner of Section 5, Township 6, Range 1 east. This is a northwest-and-southeast range, discovered by a Mr. Styles in 1862. It has been proved to a distance of 450 feet, with an average width of forty feet. The opening is the brown rock, and from four to six feet high. There are two shafts, each about forty feet deep. The ore occurs in flat sheets, and is mostly Smithsonite and blende in about equal quantities, containing little lead ore. The ground was formerly worked chiefly for blende. The ground is estimated to have produced 2,400 tons of blende, and 1,100 tons of Smithsonite since 1862. Their present annual product is, blende, 200 tons, and Smithsonite, 150 tons.

Manning & Delaney.—Situated about 600 feet west of the preceding. It is an east-and-west range, which was discovered twenty years since, and has been worked by several different parties, who have proved the ground in the brown rock opening for a distance of 600 feet. The present parties have worked it for the past four years, principally for Smithsonite, no blende being found until the spring of 1874. The deepest shaft is only 40 feet ; sunk to the top of the blue limestone, which is here estimated at twenty-five feet. The St. Peter's sandstone is plainly seen in the valley a short distance below. The ground produced 600 tons of Smithsonite during the years 1873 and 1874. The diggings are quite dry.

Hornsnoggle Ridge.—Situated in the northeast quarter of Section 5, Township 6, Range 1 east. This is an east-and-west range, about half a mile in length, which was discovered about twenty-five years since, and worked for lead ore in the brown rock opening ; but is now pretty much worked out. The only ore found on the ridge is drybone. The present annual production is about 1,500 tons :

Beginning at the eastern end and going west, the following parties are working :

Joseph Call worked here since 1871, amount produced unknown.

Borey & Neumeyer worked since 1872, produced 1,500 tons.

Brinnen & Kelley worked on a lot here twenty years, and produced 1,000 tons.

LINDEN DISTRICT.

The principal diggings in this district are those of the Linden Mining Co., owned by Messrs. J. J. Ross and William Henry, of Mineral Point. The property consists of the east half of the east half of Section 6, the west half of Section 5, the northeast quarter of the southwest quarter of Section 7, the northeast quarter of the southeast quarter of Section 7, the south half of the southwest quarter of Section 8, southwest quarter of the southeast quarter of Section 8, the northwest quarter of the northeast quarter of Section 17, the south half of the northeast quarter of Section 17, all in Township 5, Range 2 east, and is situated a short distance west of the village of Linden. They were first opened in 1833, and worked by various parties up to 1853, altogether for lead ore, and in the middle beds of the Galena limestone. Prior to 1853, they are said to have produced 40,000,000 pounds of lead ore.

In 1853, they were bought by a Pittsburgh company, and operated with a water-wheel in the upper and lower pipe-clay openings, also for lead ore. The amount of lead ore produced by them was about 500,000 pounds per annum. The works finally became unprofitable, and were suspended by them in 1866. In this condition they remained until the spring of 1874, when they were bought by Messrs. Ross & Henry, by whom work was resumed in April. They are now operated for blende or blackjack, Smithsonite and such lead ore as incidentally occurs with it.

On resuming work, the principal operations of the first six months were cleaning out the old shafts and drifts, erecting a new engine of thirty-horse power, with a lift-pump, together with the necessary buildings and other machinery. The sheets worked here have a singular

ELIJAH BAYLEY

(DECEASED)

PLATTEVILLE.

complication of "flats and pitches," both in their connection with each other and in respect to their general course.

Although the blende usually occurs in a large sheet, yet it is frequently connected with two or three parallel smaller ones by veins or "pitches." The sheet often contains detached pieces of the wall or cap-rock, of various sizes, completely surrounded by ore. Large pockets occur in the bed, lined with very handsome crystals of calcite, one of which, recently removed from the mine, measures five feet by two.

Another peculiarity noticed was the finding of several pieces weighing from one to five pounds, composed of wall-rock and ore, which were rounded and worn smooth, resembling small drift bowlders. They were found in the lower pipe-clay opening, and had probably been detached from the wall at its junction with the ore. They must have undergone considerable erosion and transportation, or movement, by subterranean currents of water.

The workings in the vicinity of the engine-shaft were first examined. They extend in a westerly direction a distance of 1,300 feet, and have been worked to a width of 45 feet, leaving a sheet of blende on the northern side from one to three feet thick. It has been proved by a cross-cut to connect through to the north pitch, a distance of 180 feet. The same sheet has been worked in a southerly direction nearly to the well-shaft, a distance of 600 feet, leaving a large sheet of blende on its eastern side. These workings are on the glass-rock opening, and about twenty feet above the St. Peters sandstone. The following section of the engine-shaft will explain their situation :

	Feet.	Inches.
Dump-rock, clay and soil.....	15	...
Galena limestone.....	72	6
Blue limestone.....	6	6
Pipe-clay.....	1	...
Glass-rock.....	5	...
Glass-rock opening (workings).....	4	...
Buff limestone, to bottom of shaft.....	8	...
Buff limestone, to St. Peters sandstone.....	16	...
Total	128	00

The workings at the well-shaft were next examined. They are in the brown rock division of the Galena limestone, and about twenty-six feet above the lower workings. The ground is worked in an irregular shape, about three hundred feet long by one hundred and fifty feet wide. It is estimated that \$200,000 worth of ore has been taken, in the course of all operations, from this small, irregular piece of ground. It was full of large, flat sheets and pitches, and was worked in some places to a height of twenty feet. It now produces thirty tons of zinc ore per week, and considerable lead ore. This is exclusive of the ore raised by numerous miners working here on tribute.

It is estimated by the owners that, during the first six months of their operation, the mines produced ten tons of zinc ore per day ; and from that time to the present, it has produced twenty-two tons of zinc per day, and more than 300,000 of lead ore per annum. The value of all ores for the last two years is estimated at \$500 per day.

The owners have lately introduced the Ingersoll Pneumatic Drill, with air compressor, and use rend rock exclusively, the explosions being effected by an electric battery.

Poad, Barrett & Tredinnick Bros.—Southwest quarter of the northwest quarter of Section 8, Township 5, Range 2 east. This is a very old mine, the property of Mr. John Heathcock, known as the Roberts mine, on which work had been discontinued for several years, until 1869, when it was again resumed. The present party have been working about four years, and have sunk ten shafts, from forty to seventy feet deep. The water is removed by two horse-pumps.

To the west of the above parties, and on the same range, are Kisselbury Brothers, Hammerston & Trewatha. Also on the east end of the same range are the Poad Brothers, Tredinnick, Vial and Geach.

The Robarts range has been traced for a distance of a quarter of a mile, the ore being found in flat sheets twenty-five feet above the glass-rock. The manner in which the ore is deposited is very remarkable, the order of deposition being as follows: Pyrites, blende, galenite. This is one of the few localities in the lead region from which cerussite is obtained. The three mines in the Robarts range are estimated to produce annually 200,000 pounds of lead ore and 100 tons of blende.

Treglown & Sons and Capt. Wicks.—Southwest quarter of northwest quarter of Section 8, in the west side of the Heathcock branch, Waring and Goldsworthy, owners. This range was discovered about forty years ago, and has been worked continuously ever since. The present company have been working it during the last two years in the glass-rock opening. The ore is found about fifteen feet below the surface; the width of the range is forty-five feet, drained by a level forty rods long. In former years it was worked for Smithsonite at higher levels, and was quite productive. Its present annual production is, lead ore, 5,000 pounds; blende, 100 tons.

Adams & Son & Bowden.—These parties are situated about a quarter of a mile southwest of Treglown & Wicks. They have been working during the last seven years on the Morrison range, producing annually about fifty tons of Smithsonite and seven thousand pounds of lead ore. Water was removed from these diggings by drilling a hole down to the glass-rock opening.

David Morrison Diggings.—West half of southwest quarter of Section 8. The range is about seven hundred yards long, forty feet wide, and has a general north and south course. The range was discovered in 1846, and worked at various times for lead ore to 1874. Mr. Morrison then opened the main sheet of the blende, since which time the production has been as follows: In 1874, 90 tons; in 1875, 106 tons. During the present year the mine has not been worked, although it is still good. The range is drained by a level three hundred and fifty feet long. The ore is found in flat sheets, from seven to ten inches thick, on top of the glass-rock.

Richards & Faul Bros.—These diggings are situated in the village of Linden, near the southeast corner of Section 8, on land owned by William George. The ore is found under the glass-rock in a flat sheet, from ten to twelve inches thick, from fifteen to twenty-five feet in width, and from thirteen to thirty feet below the surface. The water is removed by a drain about one hundred and fifty feet long. This mine was discovered in May, 1875. From that time to May, 1876, they produced 80,000 pounds of lead ore, and 150 tons of blende. During July, August and September, 1876, they have produced 35,000 pounds of lead ore and 40 tons of blende.

Thomas Tamblin.—Zinc ores were discovered on the northwest quarter of the northwest quarter of Section 10, Township 5, Range 2 east, on the 20th of December, 1875, on the land of Mrs. Thomas Shore. The general course of the range is nearly east and west, and is now worked at an average depth of ten feet below the surface, and has been proved to a distance of forty feet. The ore was found as a flat sheet of drybone, cropping out at the foot of a hill. On working into the hill, the amount of Smithsonite was found to diminish, and the blende to increase, which seems to be an indication that the Smithsonite is a secondary product, derived from blende. It is estimated that two mines can produce here one hundred tons of zinc ore per annum.

R. S. & W. J. Jacobs.—Southeast quarter of southwest quarter, and southwest quarter of southeast quarter of Section 7, Township 5, Range 2 east. This mine was discovered in March, 1875. There are here four east-and-west sheets from four to six feet wide, and from four to six inches thick in the upper pipe-clay opening, separated from each other by six or eight feet of unproductive rock. They are worked about twenty feet below the surface. There is but a small amount of water, which is bailed out. Some very large isolated masses of lead ore have been found here, one of which, weighing 1,527 pounds, was sent to the Centennial Exhibition. Small quantities of zinc ores are also found. The mine produced, during the year 1875, of lead ore, 70,000 pounds, and in 1876, 40,000 pounds. The mine has not been worked much during this summer, as the owners are engaged in farming.

DODGEVILLE DISTRICT.

The mines of this district comprise those in the immediate vicinity of the village. The zinc ore diggings situated about two miles east of the village, and those in Van Meter's Survey about four miles west of the town. The most productive and profitable are those situated east of the village, worked for drybone blende and lead ore.

Evan Williams' Mines.—Southwest quarter of southwest quarter of Section 25, Township 6, Range 3 east. These mines were discovered in 1844, and were worked at intervals until 1853. Since then Mr. Williams has worked them continuously to date. The ore is found in flat sheets, about one hundred feet wide, in the lower beds of the Galena limestone, and the ground is drained by a level a quarter of a mile long.

Mr. Williams estimates that this range has averaged fifty thousand pounds of lead ore per annum during the last twenty years. Previous to 1863, they were worked exclusively for lead ore. Since then they have averaged one hundred tons per annum of blende, the production rising in some years to two hundred tons. During the present year (1876) thirty thousand pounds of lead ore have been produced here, and one hundred and twenty-five tons of blende. In November, 1875, Mr. Williams commenced working about seven hundred feet south of the preceding location. A flat sheet was found here at a depth of ninety feet, and has been proved horizontally a distance of sixty feet. This mine in the past year has produced, lead ore, 15,000 pounds; blende, 50 tons. In July, 1876, Mr. Williams sunk a shaft twenty-five feet deep, about quarter of a mile west of the center of Section 25, and discovered a flat sheet of blende about five inches thick, from which he has obtained about three tons of blende.

Owens & Powell.—On the southwest quarter of southeast quarter of Section 25 are some small drybone digging, on Mr. Williams' land. Five tons of ore are produced here each year. This is known as Rounds' range.

Jones, Farrager & Owens.—Southwest quarter of southwest quarter of Section 25, near the west line of the Section on Evan Williams' land. This is an old range, which has been worked since its discovery in 1849. The range is drained by a level three hundred yards long. The ore is found in flat sheets, from forty-five to eighty feet below the surface. Five shafts are now open. These diggings produce only lead ore. The annual product is valued at from \$3,000 to \$5,000.

Mreddth Evans.—Northeast quarter of northwest quarter of Section 25, in John Williams' land. These diggings are on Morgan Jones' old range, and have been worked during the last four years for Smithsonite. During the present year (1876), lead ore and blende have been discovered, and 65,000 pounds of lead ore have been produced, and considerable blende.

Hugh Jones.—Northeast quarter of northwest quarter of Section 25. These diggings are on the eastern portion of the Watkins range. They were discovered in 1848. The present party commenced work in 1864. The ore is found in an irregular, flat sheet, from one hundred to two hundred feet wide, in the lower part of the Galena limestone. The annual product of this mine is: Lead ore, 25,000 pounds; blende, 150 tons.

Hendy, Davey, Lovey & Co.—Northwest quarter of northwest quarter of Section 36, Township 6, Range 3 east. These diggings comprise the southern and western portions of the Watkins range. The ore is blende and lead ore, found in a flat sheet, in the same opening and position as in the Hugh Jones diggings. The works extend eastward, and will ultimately connect with them, the intervening space being about one hundred feet. The mine has been and is now quite productive—the exact amount cannot be ascertained.

Samuel Clegg.—Northeast quarter of southeast quarter of Section 26, Township 6, Range 3 east. The land is owned by Mr. A. P. Thompson, of Buffalo. The ore is found in a flat sheet, in the glass-rock opening, and is obtained from three shafts, each 100 feet deep. Lead ore only is produced. It was discovered in 1870, and produced in that year 20,000 pounds. Since that time to October 1, 1876, the total product has been 600,000 pounds.

Joseph Pearce Diggings.—This mine is situated in the village of Dodgeville, a short distance northwest of the court house. It is known as the Lowry range, and was discovered in

1836. It was not worked from 1850 to 1870, when Mr. Pearce commenced work on it, and has worked it continuously ever since. It is worked exclusively for lead ore, which is found in tumbling openings and in flat sheets, from fifty to seventy feet wide. The range is drained by a level 800 feet long to a depth of 30 feet below the surface. The deepest shaft is eighty feet. There is considerable water in the mines, but much less than there was twenty-five years since. The water is removed by a horse-pump, worked during the daytime. The length of the range, so far as it has been worked, is 1,000 feet. During the last two years, this mine has produced 200,000 pounds of lead ore; previous to this it only paid expenses.

William Carter & Owens.—West half of the southeast quarter of Section 26. Owner of land, A. P. Thompson, of Buffalo. This is known as Edward Edwards' range, and was discovered in 1853. The range has a general north-and-south course, but with some irregularities. It was worked north 500 feet, then west 600 feet, then north—the north-and-south portions being the most productive of lead ore. The mine is quite wet, but is drained by a level about two thousand feet long. The number of shafts is nine, the greatest depth below the surface being seventy feet. The length of the drift is 1,250 feet. Mr. Carter has been working this mine for six years. During that time, the product of the east-and-west portion has been 65,000 pounds of lead ore annually, and in the north-and-south portions, 150,000 pounds per annum, with the same expense. Other parties working in this vicinity are Nicholas Bailey & Co. and John Bosanco & Co.

Lambly Range.—Northeast quarter of Section 28, Township 6, Range 3 east. This range has been worked continuously for a great many years. It produces lead ore to the amount of about thirty thousand pounds per annum. Four years ago, its annual product was 200,000 pounds.

Porter's Grove Diggings.—These mines are situated in Town 6, Range 4 east. At present the following mines are in operation:

Union Mine, William Hendy & Co.—Situated on the northeast quarter of the northeast quarter of Section 28. The ore produced is lead, and in tumbling openings, at a depth of seventy feet, and in the upper surface of the rock. The mine is drained by a level one-quarter of a mile long.

Ridgeway Mine, William Hendy & Co.—Situated on the southeast quarter of the southeast quarter of Section 21. This mine is owned and operated by the same parties as the preceding, and is in the same range, which is known as the North-and-South Branch Lot. It is drained by a level a quarter of a mile long. The present owners commenced operating them in 1872. Since then the product of lead ore has been as follows:

	Union Mine. Lbs.	Ridgeway Mine. Lbs.
1872.....	300,000	44,000
1873.....	35,000	44,000
1874.....	16,000	63,000
1875.....	38,000	44,000
1876, to October 1.....	22,000	17,000

Frank Farwell & Co.—Southeast quarter of northeast quarter of Section 28. These parties commenced working on the Wakefield range in October, 1875. Previous to that time it had not been worked for twenty years. Most of the workings are at a depth of thirty-five feet below the surface, although some are as deep as sixty feet. The work is chiefly removing pillars of lead ore, which have been left from former operations. The product from October, 1875, to October, 1876, has been 14,000 lbs. Other parties mining in this vicinity are John and Thomas Paull, of Ridgeway, producing lead ore.

VAN METER'S SURVEY.

On the north half of the northeast quarter of Section 18, Township 5, Range 3 east, are three very large ranges which have not, to our knowledge, been reported. Their general course is northwest and southeast, and they are crossed by numerous north-and-south crevices. It is at these crossings that the largest bodies of ore are found. The ore is galenite, and is entirely free

from any mixture of zinc ores. It is found in the green rock opening. The northernmost of the three ranges known as the Duke Smith, contained an opening in places fifty feet wide, somewhat intersected with bars. It was worked over a quarter of a mile in length, and produced about half a million pounds of lead ore. It has not been worked since 1853. A short distance south of this is a parallel range, which produced over 20,000 pounds in a distance of about 100 feet. The opening was about thirty feet wide.

The third parallel range, 300 feet south of the Duke Smith range, has been worked since the winter of 1873-74, by Mr. John Hutchinson, of Mineral Point. The lead ore occurs in large pockets, containing crystalline pieces of from one to 500 pounds' weight. The opening is in the green rock, and is from ten to twelve feet high. This range has been the least worked of all, but formerly produced about 100,000 pounds. It now yields ore of the value of \$5 per day when worked. None of the ranges have been worked to any great depth, and all were abandoned with ore going down in the crevices. The gradual diminution of water in the country has now made it possible to resume work.

Powell & Co.—This party is working on what is known as the Nic Schillen range. Work was commenced in the spring of 1876, and continued for three months. The work was in the glass-rock opening, and about twenty feet below the surface. The amount produced was 3,000 pounds.

Richards & Burns.—This party is situated south of the preceding, and in land of the Sterling estate. They have been working there during the present year, in the green-rock opening, producing about 2,000 pounds per month.

Powell Diggings.—They are situated about a quarter of a mile north of Mr. Hutchinson's diggings. This is a new discovery, and has been in operation about a year. The product has been 35,000 pounds.

MINERAL POINT DISTRICT.

These mines comprise those in the immediate vicinity of the city and those of Lost Grove and Diamond Grove. Considerable mining is being carried on at these localities, which are among the oldest and most productive of the lead region. They are all comprised in Towns 4 and 5, Ranges 2 and 3 east. In addition to the lead ore, a great deal of zinc ore has been produced within the past ten years, and they now supply a large portion of the zinc ore of the lead region.

Terrill Range and Badger Range.—These ranges are situated on Lots 128, 129, 130, 131, 132 and 134, of Harrison's survey of the city of Mineral Point. They are old and well-known ranges, which have been worked continuously for many years, and are now productive of Smithsonite and galenite. The mines are situated in a high ridge, from which the water drains naturally into the adjacent ravines, leaving the diggings constantly dry. The ore is found in flat sheets and "pitches" (inclined sheets). The ranges are from one hundred and fifty to two hundred feet wide, more than a quarter of a mile long, and contain ore at depths varying from ten to sixty feet below the surface. There are three principal openings in the lower beds of the Galena limestone. The parties now working on the Terrill range are as follows:

Matt Shields and John Linden.—They have been working for three years, at an average depth of forty feet, producing chiefly Smithsonite from the second opening. The sheet averages about ten inches in thickness.

Pascoe & Collins.—They have been working their present mine during the last eight years, producing Smithsonite, blende and galenite from the green rock and green-rock opening. The Smithsonite is the most abundant, and the lead ore the least so. The workings are from twenty to sixty feet deep, and the ore is found in sheets from one to four inches thick. The blende is found at the greatest depth, and averages about four inches in thickness.

Jacka & Waggoner.—These parties have been working here eight years, at a depth of about fifty feet below the surface, but never having reached the lower opening. They estimate their annual production at 15,000 pounds of galenite and 25 tons of Smithsonite. The range at this point is two hundred feet wide.

Hitchins & Terrill.—They have been working at various times during the last ten years in the northwest end of the Terrill range, known as the Brush Lot, producing lead ore and zinc ore. This was formerly very rich ground. The work at present is confined to prospecting.

Huxtable & Son.—These parties are working near the center of the range, and from twenty to fifty feet deep, producing large amounts of lead and zinc ore. This is believed to be one of the best mines in the range.

Parties working on the Badger range are as follows:

Thomas Cox & Sons.—These parties are working near the center of the range, and have been mining here during the last ten years. The ore is found in three flat openings. The first is from ten to twenty feet below the surface, and contains chiefly Smithsonite, in sheets of three inches in thickness. The second opening is ten feet deeper, containing the same ore, mixed with galenite, in sheets of three inches. The third opening is ten feet below the second, and contains chiefly blende, in sheets averaging four inches. The description in these openings applies to all other mines in the range. Other parties working in this range are:

Cox & Co., James Hitchins & Holman and Harris and Partner.—The mining ground on this ridge is owned in small lots by several parties, among whom are Messrs. Ross, Priestly, Tyck and Prideaux. It was found impossible to obtain any information of the amounts of ore produced on this ridge, but it is safe to estimate ore to the amount of \$600 per annum for each man, and this is probably much beneath the actual amount.

William Prideaux Mines.—Southeast quarter of northwest quarter of Section 30, Township 5, Range 3 east. This is a part of the Ashbank range, so called from the decomposed appearance of much of the surface lead ore. It was discovered more than thirty years since, and worked extensively for lead ore. The course of the range is nearly northwest, and its average width about twenty-five feet. The principal product of the mine is Smithsonite, with some lead ore. The workings are chiefly in the green-rock opening, where the ores are found in flat and pitching sheets, from two to eighteen inches thick. The ground is dry, and the workings rather shallow, seldom being more than fifty feet below the surface. In one place, where the water was troublesome, it was removed by drilling a hole fifty-four feet deep, draining it off through a lower opening. During the present year (1876), about 51,000 pounds of lead ore and some blende were obtained in the brown-rock opening. Mr. Prideaux commenced work in April, 1873. He estimates that from January 1 to October 1, 1876, the value of ores produced is \$6,500, and about the same amount from April, 1873, to January 1, 1876. A short distance southwest of the preceding is a parallel range not worked at present, but regarded as valuable mining ground.

J. Jackson & Co.—These diggings are also on the Ashbank range, and a short distance east of William Prideaux. The ores produced are Smithsonite and galenite, in nearly equal amounts, found in flat sheets in the green rock and its openings, from fifteen to forty feet below the surface. The range is about forty rods long and 350 feet wide; ten shafts have been sunk upon it. Work was commenced here in 1868, since which time it has been continuous, the mines proving very productive. No exact amounts could be ascertained, but the owners estimate the value of ores produced since 1868 at \$18,000, the present year being the most remunerative.

Mitchell & Pollard.—Northwest quarter of the southwest quarter of Section 30, Township 5, Range 3 east. This range is situated about sixty rods southwesterly from the Prideaux mines. These parties have been working about four years, producing Smithsonite and lead ore. The workings are shallow and dry, similar to the Ashbank range, but not so productive.

Sinapee Diggings.—These mines are situated on the northeast quarter of the southeast quarter of Section 30. They were discovered in 1854; have been worked continuously since then, and now furnish employment to several parties, among whom are

Samuel Prisk and William Paynter.—These parties commenced work in the fall of 1875, and have produced during the last year about fifty tons of Smithsonite and some lead ore. The diggings are quite dry, and average about fifteen feet in depth. The ore is found in flat sheets, the principal workings being in the glass-rock openings. The mine furnishes fine cabinet speci-

mens of galenite. The range is about five hundred feet long, and from one hundred to one hundred and fifty feet wide, and has a general east-and-west course. The ore sheet is from two to four inches thick.

Prisk & Coad.—This is a parallel range, situated about three hundred feet south of the preceding, and having about the same length, width and thickness. The above parties commenced work in the fall of 1875, and are now working in the upper pipe-clay opening. This mine is from fifty to sixty feet deep, and formerly produced over a million pounds. The production during the past year was 7,000 pounds of lead ore.

Samuel and William Richards.—These parties are working a short distance east of Prisk & Paynter. They have been engaged here about a year and a half, producing chiefly blende and lead ore.

Bennett & Brady.—Situated near the center of Section 29. A large amount of work has been done here, including a level to unwater the ground. They are quite productive of the ores of zinc and lead.

Short & Co.—Situated on the northwest quarter of Section 29. Considerable mining has been done by these parties in this vicinity during the last few years. There are several very profitable mines in the northwestern part of Strong's Addition to the city of Mineral Point, all on land owned by Mr. J. J. Ross. They are as follows:

Bohan & Co.—Smithsonite and lead ore are produced here. The range is from seventy to eighty feet wide, has a general east-and-west course, and is worked to a depth of seventy feet below the surface. There are two openings, separated by about twenty feet of unproductive rock, the lower ore being the glass-rock opening.

Connaughton & Cassrly.—These parties are working on an east-and-west range, about three hundred feet north of the preceding. They have been working here during the last two years, having sunk two principal shafts to a depth of sixty feet to the glass-rock opening. This is an east-and-west range, about sixty feet wide, and has been drifted on to a distance of 100 feet. It produces chiefly blende, estimated by the owners at \$800 per year.

John Waegler & Co.—Situated about three hundred feet northwest of the preceding. These parties are working in the same openings, and producing chiefly zinc ores. Until very recently, two other parties were employed in this vicinity, this ridge having for many years been very good mining ground:

Bennett & Co.—This party is engaged in mining and prospecting about a quarter of a mile east of the preceding diggings. Near the corner of Towns 4 and 5, Ranges 2 and 3 east, are a number of ranges which have been worked for many years. Those situated on Section 1 are the property of the Mineral Point Mining Company; those on the adjacent sections are the property of Mr. John J. Ross. There are six principal crevices, running nearly parallel, on Sections 33 and 1. Their general course is south 70° east, and on entering Section 6, they run nearly east and west. The crevices lead down to the opening between the buff and blue limestones, known as the glass-rock opening. The ore here is found in a flat sheet, about a foot thick and from seventy to one hundred and forty feet wide, which has been worked for a distance of half a mile. The ores are galenite and blende, and occur associated with baryte, and have to be separated before reduction. The mode of drainage in Mr. Ross' mine is somewhat peculiar; shafts were sunk at intervals to a distance of eight feet below the opening, into the buff limestone, where a bed is reached through which the water readily passes away. This mode of drainage was accidentally discovered in prospecting for the sheet. No ore of any consequence is found in the upper pipe-clay opening; occasional bunches have been found, probably not over 20,000 pounds in all. These ranges have been worked at intervals for the last forty years by various parties. Active operations were commenced by Mr. Ross about ten years ago, since which time his ground has produced about 2,500,000 pounds of lead ore, and about 3,500 tons of zinc ores. During the whole time in which these mines have been worked, it is safe to say they have produced not less than 8,000,000 pounds of lead ore, and twice as much zinc ores. During the winter of 1874-75, ore to the value of \$1,600 was produced.

During the winter of 1875-76, \$1,000 worth of ore was produced. On the lands of the Mineral Point Mining Company, several parties are working on tribute. The amount this ground is producing could not be ascertained.

Goldsworthy & Brother.—These diggings are situated on Lots 279 and 280 of Harrison's survey, about a quarter of a mile east of the preceding, and on the northwest quarter of Section 6, Town 4, Range 3 east. This is known as the Barber range, and has been worked in the winter seasons during the last six years. The ore is Smithsonite, much mixed with pyrites; it is found in the upper pipe-clay opening, in a flat sheet from eight to thirty feet wide, and from eighteen to twenty-four inches thick, being most productive in crossing crevices. About twenty tons per year is produced here.

T. Lutey & Co.—This party is working a short distance east of the preceding, on land owned by M. M. Cothren. They have been working in a continuation of the Barber range for about two months (October and November, 1876), and have now a very good prospect. Most of the lead ore from the Barber Range is obtained from the glass-rock opening, but it never has been worked for zinc ore.

Suthers & Co.—Situated on the southeast part of Harrison's survey. This is a nearly east-and-west range, known as the "Walla Walla," and has been worked by the present party since 1865. The range is about 120 feet wide, and has been worked in the glass-rock opening to a length of about 1,000 feet, and at a depth of seventy-three below the surface. The mine produces lead ore and both kinds of zinc ore. The average annual product of lead ore is about 44,000 pounds. The products from January to April, 1876, of all kinds of ore were valued at \$900.

J. Arthur & Co.—Situated on the southwest quarter Section 6, Township 4, Range 3 east. This is an east-and-west range, discovered about two years since, and worked continuously to the present. The ores are Smithsonite and lead ore found in flat sheets, from six inches to one foot thick, in the glass-rock opening, at a depth of sixty feet from the surface. The range is about one hundred feet wide. It is situated on land owned by Mr. J. J. Ross. The ground is comparatively dry.

Hoare Bros.—Situated about fifty yards east of the preceding, and on the same range, in land owned by Mr. J. Hoare. This party has been working here about two years, producing lead ore and Smithsonite from the glass-rock opening. The diggings are now very good.

Nichols & Holmes.—Situated on northeast quarter Section 7, Township 4, Range 3 east, a short distance east of the old zinc works. There are some irregular flat sheets of zinc ore in the glass-rock opening, about twenty feet deep. They have been worked during the last two years, and have produced considerable zinc ore.

Harris & Lang.—These diggings are situated about half a mile south of the preceding. This is an east-and-west range, situated in the glass-rock opening, about twenty-five feet deep. It has been worked about a year, producing considerable zinc ore. In the vicinity of the Mineral Point Town Hall, on the northwest quarter of Section 5, Township 4, Range 3 east, are the following diggings:

Prideaux & Henry.—This is a north-and-south range, about 200 yards south of the Town Hall, which has been worked by the present party since 1866. The ores are lead and zinc, found in flat and pitching sheets, from eight to ten inches thick, in the upper pipe-clay opening, at a depth of from one to sixty feet below the surface. The range is from sixty to seventy feet wide, and has been worked to a distance of 350 feet.

Jeffrey & Bro.—Situated about one hundred yards south of the preceding, and probably on the same range. The range is here one hundred feet wide, and produces lead ore and both kinds of zinc ore in about equal quantities, and considerable iron pyrites. The work has been chiefly done in the winter season during the last two years.

Mankey & Son.—Situated about 150 yards southeast of Jeffrey & Bro. They have been working during the last twelve years in a north-and-south range. The product is lead ore, found in vertical crevices, and in flat sheets in the green-rock opening, at a depth of forty feet from the

surface. All the diggings in this hill are dry, and most of them are remunerative, but the amounts of ore produced could not be ascertained. The mining land is owned by Messrs. Henry Coad, Pricéaux & Woodman. About a quarter of a mile north of this ridge is the Mineral Point Hill, lying directly east of the city. The following parties are mining there :

Short & Foster.—Situated about 200 yards west of Jeffrey & Bro., on an old north-and-south range, sixty feet in width. They have been working during the last two years in the winter season, producing lead and zinc ores from the pipe-clay opening. The diggings are about forty feet deep.

Vivian & Sleep.—This party is working a nearly east-and-west range, the most southerly of several parallel ranges which cross the hill. The range is about fifty feet wide, and produces zinc ores, chiefly Smithsonite, from the upper pipe-clay opening, which is here about twenty-five feet below the surface. They have been working here during the last thirteen years, operating during the entire year.

Brown & Cluthers.—They have been mining about a year on a parallel range 150 feet north of the one last mentioned. The range is about fifty feet wide, and produces zinc ores, chiefly blende. The ore is found in flat and pitching sheets in the pipe-clay opening.

James Dunn & Son.—This party has been working about three years on a range 150 feet north of the preceding. Both kinds of zinc ores are produced from the upper pipe-clay opening, which lies here about forty feet deep.

Trewilla & Strong.—This party has worked about eight years in this vicinity and one and a half on their present range, producing zinc ores.

Goldsworthy & Hocks.—Situated about one-fourth of a mile east of Vivian & Sleep. They have been mining about a year, producing blende. The mining land in this hill is owned by Messrs. Hutchinson, Henry, Curry, Gundry and Washburn. The ranges all bear a little north of west and south of east, and have never been worked below the upper pipe-clay opening. The earliest mining in this vicinity was done in the Mineral Point Hill. The ranges were formerly very productive, and have been worked continuously for many years to the present time. There are a few other parties mining with in a few miles of Mineral Point. They are as follows :

Rogers & Mankey.—Situated on the northeast quarter of Section 8, Township 4, Range 3 east, on land owned by Mr. Suthers, near Rock Branch. This is a new discovery, made in October, 1876, being a flat sheet of Smithsonite in the brown-rock opening.

Jeffrey & May.—Situated a short distance north of the preceding. This is also a new discovery, made about the same time as the preceding, being a flat sheet of zinc ores in the glass-rock opening. The prospect is very good.

Badcroft Diggings.—Section 15, Township 4, Range 3 east. Work was begun here in 1872, and has been continued at intervals since. A small amount of lead ore has been produced. The ore is found in flat and pitching sheets in the pipe-clay opening, about twenty feet below the surface.

Shepard & Co.—Situated on the northeast quarter of the northeast quarter of Section 22, Township 4, Range 2 east. Work was commenced here in August, 1876, on the old Maloney range. This range has a general east-and-west course, and yields lead ore and blende from the pipe-clay opening, which is here about twenty-five feet deep. The ore occurs in flat sheets from four to five inches thick, the blende forming the top and bottom of the sheet, and lead ore the central part. The product has been, to December, 1876, lead ore, 1,500 pounds; blende, three tons. The ground is dry, and the prospect considered good.

Clebenstein Diggings.—They are situated on the same ridge, and a short distance east of the preceding. They are now operated by August Cain, who has been mining about a year. They were operated from 1865 to 1875 by Mrs. Clebenstein, and produced large amounts of lead and zinc ores. The ore was found in flat sheets, in the pipe-clay and glass-rock openings.

H. Joseph's Diggings.—Situated on the west half of the southwest quarter of Section 5, Township 4, Range 3 east. Mining was commenced here in 1871, and continued until the fall

of 1874, when it was discontinued on account of water. The ore found here was exclusively blende, which occurred in a flat sheet in the green-rock opening. The width of the sheet was about eighty feet, its greatest thickness three feet, and it was worked for a distance of 800 feet. The greatest depth below the surface is seventy feet. During the years 1873-74, this ground produced about one thousand tons of blende.

Diamond Grove Diggings.—These diggings are situated on Sections 25 and 26, Township 5, Range 2 east. They produce chiefly zinc ores, found in flat sheets in the pipe clay and glass-rock openings. The following parties are now mining here.

Cain & Read.—Situated on the northwest quarter of Section 25. This party has been working on the Rodersdorf range during the winters of 1873-74, 1874-75. The ore, which is Smithsonite, is found in the glass-rock opening, in a range from sixteen to twenty feet wide, and two hundred feet long. The production during the first season was seventeen and one-half tons; in the second season, twenty tons.

Robert Conley & Sons.—Situated on the southwest quarter of Section 25. Mining has been carried on here by the above party during the last ten years, on an east-and-west range. Both kinds of zinc ore and lead ore are found here, in the pipe-clay and glass-rock openings, but chiefly in the latter. The range is from forty to sixty feet wide, and has been worked a distance of one hundred and fifty yards. During the last year and a half, the product of lead ore has been 60,000 pounds, and 60 tons of zinc ore during the last two years.

Biddick Diggings.—A valuable deposit of lead ore has lately been discovered on the southwest quarter of Section 24, Township 5, Range 2 east. Four flat sheets, from one to four inches thick, are found here, situated above one another in the upper pipe-clay opening. It has not yet been sufficiently worked to determine its actual extent.

Martin Bros. & Cramer.—Situated on the southwest quarter of Section 25. This and the preceding one are on land owned by Mr. James Spensley. They have been mining here on an east-and-west range, which was discovered two years since. The ore is Smithsonite, and is found in the glass-rock opening, which is here from ten to thirty feet deep.

Spensley & Brown.—situated on the northeast quarter of Section 26, Township 5, Range 2 east. Men have been employed since July, 1876, driving an adit in the glass-rock opening. The adit is 200 feet long, and drains an east-and-west range. The product has been: Lead ore, 36,000 pounds; blende, 6 tons.

Opir & Lancaster.—Situated on the northwest quarter of Section 26. This party is working the same range, 450 yards west of the preceding. It is here known as the Lancaster range, and has been worked by the present party about a year. The product has been 150 tons of blende. It is worked by an adit.

McDermott & Co.—Mining has been carried on here by Mr. McDermott for about twenty-six years, in the McShane & Gray range. The ore is found in flat and pitching sheets, in crevices and crevice-openings in the Galena limestone, above the flat openings. The diggings now produce lead and zinc ore. The average annual product is about thirty thousand pounds.

Schlosser & Co.—This party has been working four or five years on the east end of the same range as the preceding. The ground is dry, and the lead ore is found about forty feet below the surface. The average annual product is about ten thousand pounds.

William & Thomas Thrasher.—This party has been working in this vicinity about fifteen years, on a parallel range, situated about a quarter of a mile southeast of Schlosser & Co. The product is chiefly lead ore.

Lost Grove Diggings.—These diggings are situated on land owned by Mr. J. J. Ross, on Section 33, Township 5, Range 2 east. Mining is confined here to the winter season. The ground is dry, and the ore is found in flat sheets in the glass-rock opening. The following parties are mining here:

Rigger & Arthur.—This party has been working two years in an east-and-west range, producing lead ore and Smithsonite. The range varies from twenty-five to fifty feet in width,

and lies from thirty to forty feet below the surface. The product is valued at \$12,000 per annum.

Clayton & Co.—Situated about a quarter of a mile northwest of the preceding. Have been working during the last twelve years on the Jim Brown range. This is an east-and-west range, from fifty to sixty feet wide, and lying about seventy feet below the surface, producing exclusively lead ore. The product has been about twenty thousand pounds per annum.

Garden & Son.—Situated about one-fourth of a mile south of the preceding. They have been working about two years, and have produced about \$400 worth of ore.

Robert Brown & Co.—Situated about half a mile east of Clayton & Co., and on the same range. The diggings here are from twenty-five to fifty feet deep. They have been working about three years, and have produced about thirty thousand pounds per annum.

Furfer & Co.—They have been working on a range near Brown & Co. during the last eight years, producing lead and zinc ore.

CALAMINE DISTRICT.

There are several tracts of land situated in Sections 18 and 19, Township 3, Range 3 east, which were formerly quite productive, but little work is now done on them. They are situated on the left side of the Pecatonica River, on the ridge which separates the Wood and Bonner Branches. The ridge slopes abruptly on all sides, but one toward the various streams which nearly inclose it. On the summit of the ridge there is a thickness of about one hundred feet of Galena limestone, underlaid by about fifty feet of the blue and buff limestones, below which is the sandstone. All these formations may be distinctly seen in passing from the summit of the ridge to the valley of the Pecatonica. During the winter of 1876-77, some mining was done here by Mr. Charles Mappes, of Belmont, on an east-and-west range, lying from thirty to forty feet below the surface. Four men were employed, working on a flat sheet of blende and galenite. The amount produced could not be ascertained. Some Smithsonite is also produced in this vicinity.

Yellowstone Diggings, Pierce & Son.—Some work has been done here during the winter seasons of the last three years, in a range a quarter of a mile north of the New Kirk range, situated on the southwest quarter of Section 14, Township 4, Range 4 east. The lead ore is found in a vertical sheet in a crevice opening about fourteen feet below the surface.

In the winter of 1874-75 the product was 18,000 pounds, and in the following winter about one thousand eight hundred pounds. No mining is done here in the summer.

WIOTA DISTRICT.

This is a small group of east-and-west ranges, crossed by north-and-south crevices, situated on the northwest quarter of Section 19, Township 2, Range 5 east. But very little mining is done here; the annual production of the whole district does not exceed 40,000 pounds. The ore is lead, occurring in the middle portion of the Galena limestone, and there does not seem to be any regular opening. There are several parties here, among whom the principal ones are as follows:

Purcell & Harden.—They are at work in the old Hamilton Diggings, removing the pillars from the old workings, which were abandoned many years since. They are unable to go any deeper, or make any new discoveries, on account of the water, which is here quite plentiful. The ground is owned by the Ridgeway Mining Company, of Madison. Messrs. Purcell & Harden have worked here two years, and during that time have produced 20,000 pounds of lead ore.

Smith & Anderson.—Situated a short distance north of the preceding, and from the northern part of the Hamilton Diggings. This does not appear to form any regular range. The ore occurs in east-and-west sheets, in very hard rock, and seldom in openings. The diggings have now been worked since January, 1873, and have produced 80,000 pounds.

COPPER IN THE LEAD REGION.

The last mining for copper in this region was done at Mineral Point from 1873 to 1876. Mr. James Toay is authority for the following sketch of the work in past years: "Sometime in 1837-38, copper was discovered on the southeast quarter of Section 32, Township 5 north, Range 3 east, one mile northeast of the Mineral Point Court House. The crevice had a course south 85° east, and was traced for over one-third of a mile. The locality has not been worked since 1842. A great amount of copper was obtained. Some of the ore was smelted by William Kendall & Co. Sometime in 1844, S. P. Preston came to the region and went into partnership with Kendall & Co. Two other furnaces have been worked; one by Charles Bracken and one by Curtiss Beach."

From 1873 to 1875, Mr. Toay produced about two hundred tons of copper ore from the mines near Mineral Point.

For a detailed statement of the statistics of the amount and kinds of ore raised prior to 1877, reference is made to the State Geological Report of 1877.

SETTLEMENT OF THE LEAD REGION.

A brief narrative of the settlement of the lead region is necessary to a complete understanding of the growth which eventuated in the formation of Iowa, La Fayette and Grant Counties.

In the general history of the State, which precedes these pages, can be found a sketch of the several explorations of the Wisconsin River, or rather the fact that they were used as avenues for the still further exploration of the Mississippi Valley during the seventeenth century. Those rapid journeys cannot be considered as bearing upon the subsequent selection of this region by white men, save in so far as they made known the existence of a habitable section, and one which contained valuable mineral deposits as well as fertile agricultural lands.

THE FIRST EXPLORER.

Nicholas Perrot is said to have discovered lead in this region during his visit here in 1692, but this assertion is not proved by his written statements concerning his trip.

Probably the first *explorer* of what is called the lead district, including Dubuque County, Iowa, and Jo Daviess County, Ill., was Le Sueur, a French trader, who, on the 25th of August, 1700, while on an expedition to the Sioux on St. Peter's River, now in Minnesota, discovered a small river entering the Mississippi on the east side, which he named "The River of the Mines." He describes it as a small river running from the north, but turning to the east, and he further says that "a few miles up this river is a lead mine." Le Sueur was unquestionably the first white man who trod the banks of Fever (Galena) River. He visited lead mines which were then known to and probably operated in a crude manner by the Indians.

Whatever may have been done in the way of mining by the natives during the unrecorded years of their occupancy, it is clear that the primitive methods of work have left no traces visible to-day.

A natural sequence of the ownership of the territory now known as the Mississippi Valley was the exploration of the river by French adventurers. Le Sueur pointed the way for other brave men, who were inspired both by a love of wild life and that universal hope of pecuniary gain. When reports of discoveries of rich mineral deposits in the hills of the section defined by the Onisconsin and Mississippi Rivers reached the lower settlements, numerous parties undoubtedly attempted to speedily profit by the knowledge thus gained.

THE MISSOURI DIGGINGS.

Some twenty years after the voyage of Le Sueur (who unquestionably did find lead at several different points on the Upper Mississippi, besides obtaining specimens in the Fever River

country), mining was actually begun in what are known as the Missouri Diggings, although it was not until 1798 that it became a regular business or was systematically carried on.

The sparse settlement of the Lower Mississippi Valley at the beginning of the century did not conduce to a rapid invasion of the Indian country, as in the present days the discovery of valuable minerals in forbidden regions would do.

THE MARGRY LETTERS.

A most valuable contribution to historic information was recently made through the mediumship of Hon. E. B. Washburne, late United States Minister to France, and formerly a resident of Galena. Mr. Washburne dates his interest in the lead region from 1840, and because of those years of prosperity there he gladly improved opportunities presented while he was in France to gain further knowledge of its early history. The subjoined extract explains itself, and is most timely in its appearance.

CHICAGO, December 13, 1880.

MR. A. D. HAGEN, *Librarian of the Chicago Historical Society.*

DEAR SIR: From the great interest you have taken in the early discoveries and explorations in Canada (or New France) and Louisiana, you are aware that Pierre Margry is one of the most thoroughly studied men of the present day in all those matters, as he is also one of the best-known men in historical circles, both in Europe and in this country. The Chicago Historical Society honored itself, some time since, by making him an honorary member. In view of his extended and accurate researches, he has been decorated by the French Government as a Chevalier of the Legion of Honor. It may be said that he has spent most of his life in the archives of the Ministry of the Marine of France. It is a mine of historic wealth of unsurpassed richness. Under the patronage of our Congress he has brought out a vast mass of material, hitherto unpublished, in relation to the discovery and explorations of the French on the North American Continent. This material is in the course of publication at Washington, and will be looked for with great interest by all students of history.

I had the pleasure, during my residence in Paris, of knowing Mr. Margry quite well, and talked with him often in regard to the early history of New France and Louisiana. In the course of our conversation, I took the opportunity to talk with him touching the early discoveries of lead mines in what is now Illinois and Missouri, and received a letter in reply, which I inclose herewith. He was kind enough to send me a transcript of certain documents which are to be published by Congress, and which I have not yet seen. By these documents I am more convinced than ever that the Galena and Dubuque lead mines were the earliest ever discovered by the French explorers, either in Illinois, Iowa or Missouri. The accounts of the discovery, about the year 1719, of the mine of M. de la Motte and the Maramek mines of Missouri, are very interesting, but I cannot here refer to them particularly. What interested me very much is an extract from a letter, written from Fort de Chartres, on the 21st day of July, 1722, by one Le Gardeur de Lisle, which I copy herewith, and which is in relation to the discovery of minerals on the Illinois River:

"I have the honor to inform you, gentlemen, that I have been sent in command of a detachment of twelve soldiers, to accompany Mons. Renaud to the Illinois River, where the Indians have found some lumps of copper, which they brought to Mons. de Boisbriant, and more particularly to a coal mine, said to be very rich.

"When we reached the place of our destination, M. Renaud commenced the search for the copper mine, but without success, no sign of that metal being visible anywhere. However, in looking for the coal mine, which we had been told was near the spot we had examined before, we discovered a silver and copper mine, of which Mons. Renaud made an assay, and which upon the surface of the ground is much richer than M. de la Motte's.

"I have kept a little diary of that journey; I take the liberty of sending it to you. It will enable you to locate the spot where this mine is situated. It is a most beautiful site; the mine is easy to work, and close to a magnificent country for settlers. I am delighted with my trip and with the success which has attended it, for the assay made by Mons. Renaud was upon ore found on the surface, and it has proved to be much better than that of M. de la Motte's mine," etc.

The alleged discovery of silver and copper mines on the Illinois River has never been verified to any extent. As to the coal mine said to be "very rich," a question which now arises is, Where was it located? All of the expeditions for the discovery of mines were fitted out at Fort Chartres, which was then evidently the commercial as well as the military headquarters of all the country.

The letters, reports, etc., made in regard to these early mines, are very interesting. In one of the reports made by one Le Guis, in 1743, he speaks of the miners of that day, and his description of them would apply, in many respects, to the miners in the Fever River, or Galena, lead mines half a century ago. He says:

"Most of these miners, numbering eighteen or twenty when I left Illinois, have been driven there by fast living, unable to satisfy their passions any longer. Then, everybody here works for himself, and only gives his attention to a few veins or branches, not being able to dig far enough to reach the heart of the mine. In their search they use an auger four or five feet long, which they sink into the ground in different places until they find one of these veins. When they do strike one, they make a deep hole and dig all the mineral they can out of it. If they meet with any obstacle, in the way of stones or water, they give up that vein and try elsewhere. As soon as one man has gathered enough mineral to live the rest of the year, he quits work and begins to smelt it."

Further along in this report, M. Le Guis gives an account of the manner in which these miners smelted their ore in 1743, and it is almost precisely the same method which was followed in the Galena up to within three or four years

before I located there in 1840. There were then the remains of many old log furnaces throughout the mines. It was about in 1836, I think, that the log furnaces were supplanted by the Drummond blast furnace. The amount of waste or scoria by the old log method of smelting was very great. This waste was in a great measure avoided by the blast furnace, of which the inventor was Robert A. Drummond, of Jo Daviess County, the uncle of the Hon. Willis Drummond, of Iowa, late Commissioner of the General Land Office at Washington.

The following is the description of the log furnace one hundred and thirty-seven years ago:

"They cut down two or three big trees and divide them in logs five feet long; then they dig a small basin in the ground and pile three or four of these logs on top of each other over this basin; then they cover it with the same wood, and put three more logs, shorter than the first, on top, and one at each end, crosswise. This makes a kind of box, in which they put the mineral; then they pile as much wood as they can on top and around it. When this is done, they set fire to it from under, the logs burn up, and partly melt the mineral. They are sometimes obliged to repeat the same operation three times in order to extract all the matter. This matter, falling into the basin, forms a lump, which they afterward melt over again into bars, weighing from sixty to eighty pounds, in order to facilitate the transportation to Kaskaskia. This is done with horses, who are quite vigorous in this country. One horse carries generally four or five of these bars. It is worthy of remark, gentlemen, that in spite of the bad system these men have to work, there have been taken out of the La Motte mine 2,500 of these bars in 1741; 2,228 in 1742; and these men work only four or five months in the year at most."

Mr. Margry also observes that he is unable to throw direct light upon the occupation of the Fever River section by the French, in the eighteenth century. A history of Louisiana, written by Lepage Dupratz in 1758, forty-five years before the ownership of the colony was transferred, contains the statement that "the region is not frequented." This is but natural, since the French Governors held quasi court in Canada and the Lower Mississippi region, leaving the western tract of the present Illinois out of the range of more frequent mention.

DUBUQUE'S SETTLEMENT.

In 1788, Julien Dubuque, a French trader with the Indians, who had heard of the region in the course of his business, located on the site of the city bearing his name. He was accompanied by a party of miners. Dubuque obtained a grant of a large tract of land from the chiefs of the Sacs and Foxes, and was, fortunately, able to secure the confirmation of his claim from Carondelet, then Governor of Louisiana. The grant was confined to the western bank of the Mississippi. Dubuque remained in occupation of these lands, engaged in mining, until the time of his death, which occurred in 1810.

Julien Dubuque's grave is on the summit of a high bluff overlooking the Mississippi River, about two miles below the city of Dubuque, and above the mouth of Catfish Creek.

When Dubuque located on the west shore, it is said that a man named D'Bois also located on the east bank, nearly opposite the Frenchman's trading and mining post, probably a short distance below the Dunleith of to-day. But so little is known of this man that his residence is traditionary. The period between 1788 and 1811 is one of vague and uncertain historic character in this region. It is said that traces of white occupants at a very early period were discovered on the Sinsinawa by the "first" settlers of Jo Daviess County, who were miners. It would be strange, indeed, with the knowledge of the immense deposits of lead and the abundance of game in this region, as well as the mining operations of Dubuque, so near at hand, if no adventurers or traders ever visited the Riviere au Feve, or ventured among the Sacs and Foxes east of the Mississippi; especially since the success of Dubuque in gaining a grant could not be kept a matter of absolute secrecy. Roving traders and agents of the American Fur Company—that corporation which has left its tracks everywhere throughout the Northwest—must surely have been cognizant of the rich stores of peltry annually obtained along the Wisconsin and its many tributaries, and engaged in competition with the miner and trader on the west side. But thus far no record of occupation or irregular traffic has been discovered. The first evidence of occupation of Jo Daviess County after D'Bois, and prior to 1819-20, is the testimony of Capt. D. S. Harris, of Galena, an old steamboat Captain who ran upon the Mississippi at a very early day, and who furnished the information hereinafter given, as late as 1878.

A MISSING ISLAND.

Capt. Harris says that, in 1811, George E. Jackson, a Missouri miner, had a rude log furnace and smelted lead on an island then existing in the Mississippi, but which has since dis-

appeared. The island was on the east side of the main channel, a short distance below Dunleith, nearly opposite the mouth of the Catfish Creek. Jackson floated his lead to St. Louis by flat-boat, and experienced much trouble with the Indians. He was joined in 1812-13 by John S. Miller, but soon after the island was abandoned. Jackson went to Missouri, and Miller went down the river and built the first cabin and blacksmith-shop on the site of Hannibal, Mo. It is said that in 1818, Miller, in company with George W. Ash and another man, ascended the Mississippi with a boat load of merchandise as far as Dubuque's mines, trading with the Indians. It is believed he penetrated to the site of Galena, and spent some time on Fever River, in this region.

The first permanent settlement by white men on the east shore, within the lead district, of which any reliable knowledge remains, dates from 1820, on what is now Galena River. In 1823, Miller and Jackson again visited this spot.

In 1803, when the United States purchased the province of Louisiana from Napoleon, of France, the existence of lead mines in this region was well known. In 1807, Congress enacted that these mines should be reserved from sale and held in fee simple, under the exclusive control of the Government. Leases of three to five years were issued to various individuals to work them as tenants of the United States, but, until about 1823, most of the work was done in Missouri, and the operations appear to have been carried on without much system. Miners throughout all the lead-mining districts paid but slight attention to Congressional enactments. Lessees were not properly supported in their rights, and, of course, became constantly involved in disputes with claimants and trespassers, which often proved ruinous to their undertakings.

DUBUQUE'S OPERATIONS ON THE EAST SIDE.

The veteran Capt. Harris says that, unquestionably, Julien Dubuque operated on both sides of the Mississippi, and mined on Appie River, near the present village of Elizabeth, worked the old Buck and Hog leads, near Fever River, the Cave Diggings, in what is now Vinegar Hill Township, and others, as early as 1805, and very probably at a still earlier date. The Indians were on very friendly terms with Dubuque, and, when they reported a discovery to him, he sent his assistants, Canadian Frenchmen and half-breeds, to prove them, and, in some cases, to work them. All over this region, when Capt. Harris came to Fever River, a lad of fifteen, in 1823, traces of old mining operations existed, which were evidently not the work of the Indians. At what was called the Allenwrath Diggings, at Ottawa, about two miles from the present city of Galena, a heavy sledge-hammer was found under the ashes of one of those primitive furnaces, in 1826. This furnace had been worked long before the date generally assigned to the first white settlement in this region. This ancient hammer, weighing from fifteen to twenty pounds, was—and probably still is—preserved by Mr. Houghton, a well-known editor of the Northwest. The Indians never used such an implement, and it was unquestionably left by some of Dubuque's miners where it was found in 1826.

All these important considerations, in connection with the fact that the Mississippi River was the great highway of the pioneers of that day; that Prairie du Chien was a thriving French village, and had been a French military post as early as 1755, long before Dubuque located above the mouth of Catfish Creek; that a military and trading post existed at Fort Armstrong (Rock Island) previous to the later "first settlements" on the east side of the Mississippi, now Jo Daviess County, lead almost irresistibly to the conclusion that "La Pointe" was well known to the earlier Indian traders, and that the lead-mining region around Riviere au Feve had been visited and occupied, temporarily at least, by white men, for many years prior to 1819-20. But by whom? History is silent, and those hardy pioneers have left no footprints on the shifting sands of time.

It must be considered as reasonably certain, as previously stated, that the lead-mining district, now lying in Jo Daviess County, Ill., and in Grant, Iowa and La Fayette Counties, Wis., was more or less occupied by Dubuque's men before any permanent settlements were made in the territory. Dubuque, by his wonderful magnetic power, had obtained great influence among

the Indians, then occupying this entire region. They believed him to be almost equal to the Great Spirit, and they feared him nearly as much. They implicitly obeyed him, and it is not a mere chimera to presume that they reported to him the existence of leads on the east as well as on the west side of the Father of Waters; and it is reasonable to suppose, when such reports were made to him, that he verified them by actual observations made by himself or his men. From the remembrances of the oldest residents of this region, now surviving, and the traces of mining done by whites long before any permanent settlements were made, it seems more than probable that Dubuque and his men were the first whites who occupied the Fever River lead-mining district, in common with the aboriginal inhabitants.

It must also be considered certain that "La Pointe" was familiar to them as a trading-post, long previous to actual white settlement. The total absence of records leaves the subject enshrouded in a darkness that is relieved only by tradition. The locality here designated as "La Pointe" is that also known as "The Portage," near the present city of Galena.

In February, 1810, Nicholas Boilvin, then agent for the Winnebagoes at Prairie du Chien, passed through this region on foot from Rock Island, with Indians for guides, and by them was shown a lead mine, which, from his memoranda, written in the French language, was near Fever River, and was probably what was afterward known to the early settlers as the Old Buck Lead.

EARLY NAVIGATION AND COMMERCE.

In 1810, Henry Shreeve is said to have worked his way up to Fever River, and there obtained a small cargo of lead, which he floated back to the towns on the Lower Mississippi.

The following extract from Moses M. Strong's forthcoming "History of Wisconsin," confirms the fact of early-time navigation and intercourse between the lead region and St. Louis:

"In the period between 1815 and 1820, Capt. John Shaw made eight trips, in a trading-boat, from St. Louis to Prairie du Chien, and visited the lead mines where the city of Galena now is, and where the Indians smelted the lead in rude furnaces of their own construction; and at one time Mr. Shaw carried away seventy tons, which they had produced from the ores obtained by themselves, in their primitive modes.

"Capt. Shaw afterward lived in Green Lake County, in this State, where he died a few years since."

In 1816, by a treaty made at St. Louis with various tribes to settle the disputes that had arisen under the treaty of 1804, by which the Sacs and Foxes had ceded to the United States all the lands lying between the Illinois and Wisconsin Rivers, east of the Mississippi, all the lands north of a line running west from the southern extremity of Lake Michigan to the Mississippi, were relinquished to the Indians, except a tract five leagues square on the Mississippi River, to be designated by the President of the United States. These reservations were intended to be sufficient to embrace the lead mines known to be worked by the squaws and presumed to be valuable, although their location was not known to the Government, and probably the undefined character of the reservation is thus accounted for.

DAVENPORT AT FEVER RIVER.

In 1816, the late Col. George Davenport, agent of the American Fur Company, trading with the Sacs and Foxes, occupied the trading-post at the Portage, on Fever River, and lived there, but how long is not now known. He soon after left that point and went to Rock Island. The post was afterward occupied by Amos Farrar, of the firm of Davenport, Farrar & Farnham, agents of the American Fur Company. This important fact in the early history of this district is given on the authority of William H. Snyder, of Galena, who had the statement direct from Col. Davenport in 1835.

Previous to 1819, the Sacs and Foxes, both noted as warlike and dangerous tribes, had killed several traders who had attempted to traffic among them. It was currently reported that a trader met his death at their hands, at Sinsinawa, in 1813.

Geo B. Hazeltine

THE BUCK LEAD.

In 1819, the historic diggings known for more than half a century as the "Buck Lead," were being worked by the Indians, the labor being mainly performed by squaws. It was the largest body of mineral then ever discovered on Fever River, and an immense amount of galena ore was taken out by the natives and sold to traders, before the lead was worked out by Johnson, as hereinafter referred to. Mr. Farrar estimated that several million pounds had been taken from this lead by the Indians; more, in fact, than was taken from it by white miners afterward. This lead took its name from "The Buck," a Sac or Fox chief, who was encamped with his band on Fever River in 1819, and worked it. Its existence had been known to the Indians for many years, and unquestionably by Dubuque, previous to its working by Buck and his band. Close by it and parallel with it, was a smaller lead, which may be called the "Doe" lead, in honor of Buck's favorite squaw. Before the arrival of Johnson, in 1820-21, the Indians took from this lead the largest nugget of mineral ever raised in the region. It took all the force they could muster to raise it, and, when they had succeeded in getting it out, the Indian miners urged that it be sent to Washington as a gift to the Great Father, but, since no record of its having been so disposed of is extant, it is reasonable to believe that the traders outweighed their inclinations by offering a slight advance on the customary price, which was a peck of corn for a peck of mineral.

JESSE SHULL'S TRADERSHIP.

In 1819, when the Buck Lead was being worked by the Indians, Jesse W. Shull was trading at Dubuque's mines, for a company at Prairie du Chien. That company desired him to go to Fever River and trade with the Indians; but he declared that it was unsafe, that the Sacs and Foxes had already murdered several traders, and declined to go unless he could have the protection of the United States troops. Col. Johnson, of the United States Army, subsequently was induced to summon a council of the Sac and Fox nations at Prairie du Chien, and when the chiefs had assembled, he informed them that the goods which Mr. Shull was about to bring among them were sent out by their Father, the President of the United States (it was not considered a sin to lie to the Indians even as long ago as then), and told them that they must not molest Shull in his business.

Having received from the Government officers and from the Indians assurances of protection, Shull came to Fever River late in the summer of 1819, and erected a trading-house on the bottoms at the river, probably near the foot of the present Perry street. Mr. Seymour, in his "History of Galena," published in 1848, fixes the location as the "site of the American House;" but, as that landmark has long since disappeared, the location is indefinite. During 1848, Mr. Seymour had a personal interview with Mr. Shull, then residing in Green County, and gathered from his lips the information given herein. Mr. Shull stated that he and Dr. Samuel C. Muir were the first white settlers on Fever River at that point. Dr. Muir began trading, with goods furnished by Col. Davenport, at that place, the same year. Mr. Shull also said that Francois Bouthillier, a French trader known about Prairie du Chien as early as 1812, "occupied" a rude hut at the bend, on the east side of Fever River, in 1819; but whether he built the same, or merely occupied a shanty already constructed by some earlier trader, is undetermined. This leaves the subject in a vague state; but the inference is that Bouthillier not only lived in but also built the hut.

Mr. Shull does not appear to have been a permanent fixture at Fever River, for he soon moved to other places, and changed his base as the Indians shifted their hunting and trapping grounds. He subsequently removed to what is now La Fayette County, as is shown in the history of that county proper.

DR. SAMUEL C. MUIR.

Dr. Samuel C. Muir, mentioned by Mr. Shull as trading in the district in 1819, may have been the companion of that pioneer, but no evidence goes to prove the fact. Just when he first came and how long he remained is unknown. Dr. Muir was an educated physician, a graduate of

Edinburg, and a man of strict integrity. He was Surgeon in the United States Army previous to his settlement at La Pointe. He married an Indian woman of the Fox Nation. In 1819-20, Dr. Muir was stationed at Fort Edwards, now Warsaw. He resigned in the latter year, and built the first house on the site of Keokuk, but leased his claim to parties in St. Louis, and again came to La Pointe in 1820, to practice his profession. He was the first regular physician in the district. He remained ten years. Subsequently, he returned to Keokuk, where he suddenly died, leaving an estate badly involved. His widow and her two surviving children (two had previously died) disappeared, some say to resume her old relations with her tribe, on the Upper Missouri.

A. P. VAN MATRE.

In the summer of 1819, A. P. Van Matre located on the east side of the river, at La Pointe, where he engaged in smelting. From an article on the early settlement of this district published in the Galena *Sentinel* in 1843, the following is taken relative to this man:

"In the fall of the year 1819, our old friend, Capt. D. G. Bates, started from St. Louis, with a French crew, for Fever River, Upper Mississippi, lead mines. His vessel was a 'keel,' the only means of conveyance then of heavy burthens on the Upper Mississippi; and the boatmen in those days were, some of them, 'half-horse and half-alligator.' But the merry French, after arriving off Pilot Knob, commenced hunting for Fever River. After a search of three days they found the mouth, and, on the 13th of November, after pushing through the high grass and rice lakes, they arrived safely at where Galena now stands, where they were greeted by some of the natives, from the tall grass, as well as by our old acquaintances, J. W. Shull and A. P. Van Matre, who had taken to themselves wives from the daughters of the land, and were traders for their brethren. [A portion of the scrap is here gone. Others are evidently mentioned; Dr. Muir, for one.] Capt. Bates, after disposing of or leaving his cargo in exchange for lead, etc., returned to St. Louis for another cargo."

Future generations will be glad to learn what the primitive "keel-boat" was. The novel craft was built to fill the peculiar demand of the locality. It was something like a modern "scow-berge," only its hull was lower. These boats were from fifty to eighty feet long and from ten to fifteen feet beam, with two to three feet depth of hold. On the deck was built the "cargo-box," which generally extended to within about ten feet of the ends of the boat, with about two feet space between gunwales and box. This space was called a "walking-board." Sometimes there was no room for this runway, and it was projected over the hull. The rudder was a gigantic sweep. The boat was propelled by oars, sails, poles, or any other contrivance which ingenuity or necessity suggested. When the water was high and the boat near shore, the crew would seize the bushes and "bushwhack" along. The character of many men who engaged in this life was such as to render "bushwhacking" a term of severest reproach even to this day. Frequently, a long rope was attached to the boat, and the crew organized into a towing-club. This style of navigation was called "cordelling." Sometimes a rope was made fast to a tree or an anchor and hauled upon, the crew walking from stem to stern until the craft was alongside of the anchorage, when another "hitch" was made. This laborious work was the only method of securing navigation in the Upper Mississippi at the time mentioned.

Francois Bouthillier, the other and later occupant of the Fever River trading-post in 1819, was a roving trader, who followed the nomadic habits of his dusky customers. Whether he remained in his shanty, calling it home, from that time on, is unknown. The second mention of him is made in the statement of J. G. Soulard, who, while on his way to Fort Snelling, in 1821, found Bouthillier at Fever River, still acting as trader. Mr. Shull, in the interview with Mr. Seymour, already mentioned, said: "Mr. Bouthillier, after he occupied a shanty at the 'Bend,' in 1819, purchased a cabin then known as the cabin of Bagwell & Co., supposed to be near the lower ferry. In 1824, and *previous* to Bouthillier's purchase, the house and lot had been sold for \$80." Here Mr. Bouthillier engaged in trade and established a ferry, which is the first permanent settlement made by him of which authentic account is given. Capt. Harris is authority for saying that such a ferry and trading-house were built near that point.

In this connection, it is well to add that Mr. George Ferguson and Mr. Allan Tomlin, early settlers and reliable men, both express the opinion that there was a trading-post at the Portage, three and a-half miles below La Pointe, before either of those whose names have been mentioned were at the place. However this may be, in the absence of further evidence, it must be admitted that there were a large number of Indians encamped or living in the region referred to at that time, whose women and old men were engaged in raising lead from the Buck lead, and the fame of their rude though, for them, extensive mining operations, must have naturally attracted the attention of traders, who probably came to traffic with them. The inference, if not the proof, sustains the statements of Messrs. Ferguson and Tomlin. The Portage was a narrow neck of land between Fever River and the Mississippi, so named because the Indians and traders were accustomed to transport their canoes and goods across to save the journey down to the mouth, some two and a half miles, the neck being only a few rods in width. A furrow was plowed across the neck in 1834, by Lieut. Hobart, and now there is a deep channel, called the "cut-off." This was certainly a good location for a trading-post.

In November, 1821, when the charge of the lead mines was transferred from the General Land Office to the War Department, no mines were known to be worked in any of the mining districts under leases or legal authority, although many were known to be worked without authority, especially in Missouri. This statement is made in the sense of United States authority, for it was only by obtaining the authority and friendship of the Indians, either by marriage with squaws or by presents, that operations could be carried on with impunity by white men.

THE FIRST WHITE WOMAN.

In 1821, Thomas H. January located on "La Pointe." He brought his wife and one child—a son. This must be accepted as the first known presence of a white woman in the lead region. Mrs. January died in a short time after her arrival, and her remains were taken back to Kentucky, her former home, in 1826. Mr. January was a former resident of Maysville, Ky., where he lost his fortune. He moved to the new country for the purpose of retrieving his financial condition. He died November 29, 1828, and was buried with Masonic honors, according to the *Miner's Journal*, a paper he doubtless helped to establish.

THE FIRST AMERICAN HISTORY.

In 1822, this extreme western frontier settlement had become sufficiently well known to have a place in the literature of the day. A book called *The Gazetteer of Illinois and Missouri* was published that year. The Galena River, called frequently "Fever River," was also known as "Bean River," because the French traders had styled it "Riviere au Feve," meaning bean. The *Gazetteer* contained the following:

"Bean River (Riviere au Feve, Fr.), a navigable stream of Pike County, emptying into the Mississippi three miles below Catfish Creek, twenty miles below Dubuque's mines, and about seventy above Rock River. Nine miles up this stream a small creek empties into it from the west. The banks of this creek and the hills, which abound in alluvium, are filled with lead ore of the best quality. Three miles below this, on the banks of Bean River, is the trader's village, consisting of ten or twelve houses or cabins. At this place the ore is obtained from the Indians, is smelted, and then sent in boats either to Canada [by way of the Wisconsin to the Portage, then down the Fox River to Green Bay] or New Orleans. The mines are at present extensively worked by Colonel Johnson, of Kentucky, who, during the last session of Congress (winter of 1821-22), obtained the exclusive right of working them for three years. The lands on this river are poor, and are only valuable on account of the immense quantities of mineral which they contain."

In the same work, Chicago is simply mentioned as a "village of Pike County, containing twelve or fifteen houses, and about sixty or seventy inhabitants." It is very evident that there was a "traders' village" on or near the present site of Galena in 1822, and that it was a point of more importance, commercially, than Chicago at that time. The statement is confirmed by

a letter from Capt. M. Marston, then commander at Fort Edwards, to Amos Farrar, Fever River, dated April 12, 1822, in which appears the following: "The Johnsons, of Kentucky, have leased the Fever River lead mines, and are about sending up a large number of men. It is also said that some soldiers will be stationed there. If this is all true, the Foxes, and *all the trading establishments now there*, must remove."

An explanation of the foregoing, and a confirmation of historic assertion, is found in official documents. If the lead mines attracted traders, they naturally attracted miners also. Especially so since the Missouri mines were known to be fields wherein depredations could be, and were, carried on. It followed in logical sequence that the Fever River district should not be left in exemption to the rule. Possibilities soon become probabilities and actualities.

Leaving the Indian's and unlawful white man's attempts out of further mention, it is found that the first regular operations of which records speak were those carried on by James Johnson, of Kentucky, who is named in the foregoing extracts from the *Gazetteer* and letter. Mr. Johnson is spoken of as a brother of the historic Col. R. M. Johnson, famous as the accredited slayer of Tecumseh—a disputed point in more recent history, however, but one foreign to this chapter. The date of Johnson's arrival at La Pointe must remain forever in obscurity, unless some records not now discovered are hereafter brought to light. Capt. Marston's letter, quoted above, is supplemented by a letter written by Dr. H. Newhall, dated "Fever River, March 1, 1828," in which the Doctor speaks of the Buck lead as having been "worked out by Col. Johnson while he was at these mines in 1820-21." J. G. Souldard, who passed up the Mississippi in 1821, as already mentioned, also speaks of Johnson. He says the latter's boats were seen floating down the river loaded with lead. He did not see Johnson, however. It is believed that Johnson first came to the district in 1819-20 as a trader. In 1820-21, it appears probable that he mined without Government authority, but under purchased permission from the Indians. At that time the Land Office, and not the War Department, had control of the matter, and a very vigorous exercise of authority was neither possible nor attempted. It is barely supposable that Johnson was there engaged merely in smelting, and did not mine at all until legally empowered to do so.

In August or September, 1821, Amos Farrar was managing a trading-post on Fever River, as agent for the American Fur Company, and was living there with his Fox wife. This fact is established by the existence of a letter addressed to him at the "Lead Mines, Fever River," from Major S. Burbank, commander at Fort Armstrong, dated October 14, 1821. The letter was sent "by favor of Mr. Music," and tendered Mr. Farrar "my old black horse, if it will be of any service to you." A letter dated at Fort Armstrong, November 21, 1821, signed "J. R. Stubbs," a blacksmith, was addressed to "Amos Farrar, Fever River, and introduced the bearer of the letter, Mr. Symmes, who is accompanied by Mr. Connor and Mr. Bates." These were, probably, B. Symmes and James Connor; but whether it was David G. or Nehemiah Bates, is uncertain. The documents preserved show that Mr. Farrar was, for at least two years before and up to July 22, 1821, in the service of Louis Devotion, as a trader on the Mississippi, located at Fort Armstrong, and receiving his goods, *via* Green Bay, from Canada. About the date referred to, he left Devotion's service and located at Portage, on Fever River. In 1823, he had a trading-house on the bank of the river near the center of what is now Water street, Galena. On the first of June, 1825, Mr. Farrar received a permit, signed Charles Smith, acting Sub-agent of the United States Lead Mines, permitting him to occupy five acres of United States land for cultivation, and to build a cabin thereon, situated near the Portage. He was compelled to comply with all the timber regulations. Mr. Farrar had three children by his Fox wife, but who are now dead. About two years before his death, he married Miss Sophia Gear, sister of Capt. H. H. Gear. He died of consumption July 24, 1832, at his house within the stockade then existing.

THE CHANGE IN MANAGEMENT.

In November, 1821, the jurisdiction of the lead mines was transferred from the General Land Office to the War Department, and January 4, 1822, leases were granted to T. D. Carniel and

Benjamin Johnson, and to Messrs. Suggett & Payne, all of Kentucky, for one hundred and sixty acres of land to each of the two parties to be selected by them, in the northern part of Illinois or the southern part of the then Michigan Territory, now Wisconsin. Lieut. C. Burdine, of the United States Army, was ordered to meet them in the spring at the Great Crossings of the Kentucky, proceed with them in exploring the country, assist them in the selection of their lands, protect them with an armed force, and make surveys of the ground for the information of the Government. Subsequently, leases were granted to other parties. The absence of records in the West—though probably such reports as were made can be found in the archives of the War Department, if one is desirous of gaining positive knowledge—leaves the precise movements of Lieut. Burdine in obscurity. It is presumable that he obeyed the orders of his superiors, however, and made a more or less careful survey. April 12, 1822, Capt. Marston, at Fort Edwards (Warsaw), wrote to Amos Farrar, at Fever River, that "the Johnsons, of Kentucky, have leased the Fever Lead Mines, and are about sending up a large number of men." It is probable that under their lease they selected land to include the Buck lead; and a little later, in the same year, James Johnson and a Mr. Ward (probably D. L. Ward) came from Kentucky, bringing with them a number of negro slaves. It was thus that human slavery was introduced into the lead district. The statement is authoritatively made that the leaders were accompanied by several young white men, whose names are not now remembered. Johnson had his furnace on the site of McClosky's store, on the levee. He worked the Buck lead, and raised a large amount of ore. David G. Bates and A. P. Van Matre worked a vein of mineral on Apple River, near Elizabeth (Georgetown), but smelted their ore at Fever River. The number of miners at work at this period (1822) is not known.

During 1822, Dr. Moses Meeker visited the lead region on a tour of observation. Unquestionably others visited Fever River the same year for the same purpose, as the extraordinary deposit of mineral had become known in the old settlements south and east.

Maj. John Anderson, of the United States Topographical Engineers, was stationed as Government Agent at Fever River in 1822, probably, although the exact date is not shown. He occupied a shanty on what was known as "Anderson's Slough" (now Harris' Slough), about two and a half miles from Galena.

William Adney and wife were also in the place, Adney had been a soldier, and arrived here that spring. Mrs. Adney was the only white woman at Fever River when the Ohio colony arrived, which caused the statement to be made that she was the first white woman to settle in the district. The facts already mentioned concerning Mrs. Thomas H. January's arrival in 1821, and her death a short time later, show that Mrs. Adney must have been the second white female settler. Mrs. Adney's remains were disinterred and taken to her former home in Kentucky in 1826.

Mr. Shull removed to what is now La Fayette County, as is fully shown in the history of that county proper.

These few cabins and smelting-furnaces constituted the abodes of the white population in the entire region, but the bottoms, ravines and hill-sides were thickly dotted with the wigwams of the Sacs and Foxes. They were peaceable and treated the whites kindly. The greater portion of the meats consumed by the settlers was furnished by the Indians. The squaws and old men, who were too weak to hunt, were made to raise the mineral from the mines. The Winnebagoes and Menomonees, although living in what is now Wisconsin, used to trade with the whites on Fever River.

In 1823, large and important accessions were made to the population of the then remote pioneer settlements on Fever River, and the history of the mining region begins to emerge from the obscurity and uncertainty theretofore surrounding it. The testimony of reliable, living witnesses was obtained in 1878, by the Western Historical Company. Capt. D. S. Harris and Hiram B. Hunt, then surviving, and, indeed, the only survivors of the emigration of that year, and a few persons who came in 1824, contributed to the interest and value of the history of the region published in 1878.

MOSES MEEKER'S COLONY.

In 1823, there transpired an important event. Dr. Moses Meeker, who had prospected on Fever River during the previous year, organized a colony and embarked on the 20th day of April on the keel-boat "Col. Bomford," at Cincinnati, Ohio, for "the mines." There were thirty men, besides the women and children, in the party, and seventy-five tons of freight, consisting of a complete mining outfit merchandise and provisions, sufficient to subsist the party a year after their arrival. Among the passengers, and all whose names can now be recorded, were: Dr. Moses Meeker, James Harris, his son, Daniel Smith Harris, then fifteen years old; Benson Hunt and his wife, Elizabeth Harris Hunt; his two daughters, Dorlesca and Dorcina, and his son, Hiram Benson—aged respectively, six, four and two years; John Doyle, wife and child; Maria Bunce and her brothers, John and Hiram; Maria Rutherford; Thomas Boyce; Israel Garretson; John Whittington, the steersman; William Howlett, and a man named House.

At St. Louis, James Harris left the boat and purchased a herd of cattle, which he drove overland, arriving two or three weeks later than the main party.

The "Col. Bomford" reached Fever River June 20, after a safe passage of sixty days, which was considered remarkably quick. The Mississippi was very high, and bushwhacking had to be resorted to frequently. Just below St. Louis, the steamer "Virginia," bound for Fort Snelling with supplies for the troops, passed the pioneers. This was the first steamer to make the trip of the Upper Mississippi, above the mouth of the Illinois River. The "Virginia" touched at Fever River, being the "first arrival" at that "port," landing in June, 1823. Her speed was but little superior to a well-manned keel-boat. The "Col. Bomford" reached haven on Sunday, June 20, and ran up the small creek known as Meeker's Branch, where a landing was effected on the south bank, not far from the main stream.

The arrival of Dr. Meeker marked a new era in the history of the mining district, and gave an impetus to the growth of the little outpost, which was then scarcely more than an Indian village, almost unknown except to traders. It required enthusiasm, energy, bravery, perseverance and patient endurance of toil and privations, not experienced in later years, to venture into the Indian country and there make permanent settlement. Dr. Meeker possessed all those characteristics in a remarkable degree, as did also James Harris, his foreman, confidential counselor and friend. The two men became the head and soul, so to speak, of the new settlement, and to them, perhaps more than to any others, it owes its rapid development, until, six years after their arrival, a town was laid off by the United States authorities. Mrs. Meeker died December, 1829, aged thirty-nine years. Dr. Meeker removed to Iowa County in 1833, and his history will be found in the chapters devoted specifically to that locality. Mr. Harris lived but a few years to witness the results of his labors, as he, too, died in 1829, suddenly. He sleeps beside his former companion, in the cemetery at Galena. His children and descendants are among the respected residents of Galena and the mineral district at the present time.

Returning to the year 1823, it is seen that Dr. Meeker built a cabin on what was called Meeker's Branch, now on the east side of Main street, Galena. Hunt built a cabin a little north. Directly across the road from Meeker's cabin a well was sunk. This well still remains, although unused, to prove the identity of these pioneer cabins. Fifteen or twenty feet north of the well, Benson Hunt built a blacksmith-shop, and there did the first regular work of the kind done in the district. Harris and his son also put up cabins not far from Meeker's.

During the early years of settlement, Fever River was really an arm of the Mississippi, and the first settlers attempted to make a harbor there, with considerable success, as is shown by the early legislative proceedings.

When Dr. Meeker arrived, in June, 1823, he found less than one hundred white men in the entire region. Prominent among them were Dr. Samuel C. Muir, who was practicing medicine and was highly esteemed by all; Thomas H. January, Amos Farrar, Jesse W. Shull, François Bouthillier, A. P. Vanmatre, D. G. Bates, John Conley, John Ray, James Johnson, Nehemiah

Bates, James Connor, B. Symmes, E. Rutter, John Burrell, Joseph Hardy, Robert Burton (not the smelter), Montgomery Wilson, Stephen P. Howard, Martin Smith, Israel Mitchell (a surveyor), John Armstrong, Cuyler Armstrong, William Thorn and others.

The War Department's Report for 1823 shows that the only persons engaged legitimately in mining and smelting in this district under Government lease were James Johnson, James Connor, B. Symmes and E. Rutter. This was in September. Dr. Meeker put up a furnace that year, but his name was not returned in the reports until 1824. During the latter year he cultivated land, and planted the first orchard in the district.

THE FIRST MARRIAGE.

In the fall of 1823, Israel Garretson and Maria Bunce were married in the Meeker cabin, by an army officer whose name is not preserved. Probably it was Maj. John Anderson, then stationed at Fever River as Government Agent. There was neither minister nor magistrate in the district at that date. Miss Rutherford and William Hines were married at the same time. These, so far as is known, were the first marriages of white people solemnized in the district.

THE FIRST DEATH.

About this time, a General Schirmerman, whose name does not appear in other records obtainable now at this point, was taken sick and died at the village, which was the first death after the arrival of the Ohio colony.

John S. Miller and family came to the mines in 1823, and opened the first public house, in a double log-cabin, on the present northwest corner of Branch and Dodge streets. Galena.

In 1824, James Harris began the cultivation of land at Anderson's Slough, which was the second farm—Meeker's being the first—in the district. It was believed until as late as 1830, that crops could not be successfully grown so far north.

Dr. Meeker's keel-boat returned in 1824, with another load of immigrants.

August 18, 1824, Lieut. Martin Thomas was appointed superintendent of the lead mines of the Upper Mississippi, and authorized to grant leases and permits to smelters and miners, and to farmers, provided they did not interfere with the mining interests.

THE FIRST BIRTHS.

In October, 1824, a son was born to Benson Hunt and wife. The old family Bible contains the following entry, which is almost illegible: "James Smith Hunt, born at fifteen minutes past 1 o'clock P. M. on the 9th day of October, 1824." Soon after this event, Mary S. Miller, daughter of John S. Miller, was born. These were the first white children born in the district. Both were born within the present city limits of Galena.

SOCIAL DEVELOPMENT.

Following the history of settlement, and reserving the narrative of the mining operations until later, it is recorded that 1825 witnessed a large arrival of white settlers. John Foley, who became the first Sheriff of Jo Daviess County, came that year. Among the more prominent men were Capt. William Henry; Capt. James Craig, whose wife was a grand-daughter of Daniel Boone; Col. Henry Gratiot and his brother, John P. B. Gratiot, and others. The Gratiots came in a light wagon, accompanied by three hired men, with a complete outfit. They struck mineral and made their first settlement in the valley between Hinckley's and Waddell's Mounds. Subsequently, the Indians made large discoveries fifteen miles from Fever River, in what is now La Fayette County, and the Gratiots located there, as is fully shown in the history of La Fayette County.

In 1826, Charles Gear came to the district, with his family and many other persons. He was an enthusiastic Freemason, and his influence can be seen in the organization of Strangers' Union Lodge, No. 14, the first Masonic society instituted in the mining district. It was chartered by the Grand Lodge of the State of Missouri.

Sophia Gear, sister of Charles, taught the first school presided over by a woman in the district, in 1827. She afterward married Amos Farrar.

Capt. Allenwrath, the discoverer of the Allenwrath lead, came to the mines in 1826, and soon after made his fortunate discovery.

Lemon Parker, William P. Tilton, D. B. Morehouse and Robert P. Guyard organized the Galena Mining Company at an early date, and are remembered as having made Ottawa, now Barton's, a place of considerable importance, where boats landed. The company smelted on an extensive scale. They had several "log-furnaces," and dealt largely in miner's supplies.

THE FIRST POST OFFICE.

June 4, 1826, the first post office was established in the mining region. It was called "Fever River," and designated as in Crawford County, Ill. As the tract south of the Michigan Territorial line (Wisconsin State line), was in Peoria County, the Post Office Department evidently labored under the impression that Crawford County, Michigan Territory, was in Illinois. Ezekiel Lockwood was appointed Postmaster. The service prior to 1828 was semi-monthly, and irregular at that.

The name Galena first appeared December 27, 1826, in official papers.

In 1826, a large number of Swiss arrived and settled at Fever River. These people emigrated to the Red River of the North in 1821, under the patronage of Lord Selkirk. They became dissatisfied with their location, and went back to St. Louis in 1823. Three years later, Louis Chetlain and several of his friends came to the mining district, and, during the summer, nearly all the original colony made their homes here.

Better than any history compiled from the fragmentary statements of after years—better even than unaided memory, striving often in vain to recall the events of fifty years ago, are the letters and memoranda written at that time by intelligent men, who lived here, and knew whereof they wrote. Dr. E. G. Newhall has permitted the following copy of a letter, written by his honored father, Dr. Horatio Newhall, to his brother Isaac Newhall, Esq., of Salem, Mass., to be taken expressly for this work. It will be valuable to the people of this section, both on account of the information it conveys, and because the writer, now passed away, is tenderly enshrined in their memories.

GALENA, FEVER RIVER LEAD MINES,
UPPER MISSISSIPPI, SUPPOSED IN ILLINOIS, }
November 20, 1827.

Dear Brother:

I received, by the last mail brought here by steamboat "Josephine," a newspaper from you, on the margin of which were endorsed the following words: "Write a full account." I was rejoiced to see once more a Massachusetts paper, and presume you meant by the endorsement, a full account of "Fever River." This would puzzle me or any other person on the river. It is a nondescript. It is such a place as no one could conceive of without seeing it. Strangers hate it, and residents like it. The appearance of the country would convince any one it must be healthy; yet, last season, it was more sickly than Havana or New Orleans. There is no civil law here, nor has the Gospel been yet introduced; or, to make use of a common phrase here, "Neither law nor Gospel can pass the rapids of the Mississippi." The country is one immense prairie, from the Rock River on the south to the Ouiconsin on the north, and from the Mississippi on the west, to Lake Michigan on the east. It is a hilly country, and abounding with lead ores of that species called by mineralogists "galena," whence is derived the name of our town. The lead mines of the Upper Mississippi, as well as those of Missouri, are under the control of the Secretary of War. Lieut. Thomas is Superintendent. He resides at Saint Louis; a sub-agent resides at this place. Any person wishing to dig, gets a permit of the agent to do so, by signing certain regulations, the principal of which is that he will sell his mineral to no one but a regularly licensed smelter. He has all the mineral he can raise, and sells it at \$17.50 per thousand (pounds), delivered at the furnaces. Any person who gets a permit, stakes off two hundred yards square. This is his lot so long as he works it, and no one can interfere with his discoveries. Any person who will give bond to Government for \$5,000, can have half a mile square, on condition that he employs twenty laborers, and pays Government 10 per cent of lead made from mineral raised on his survey, or sells his mineral to a public smelter. The public smelters, of which I am one, give bond for \$20,000, to pay Government one-tenth of all lead manufactured. They buy mineral of any person who has a permit to dig, manufacture it into lead, pay Government one-tenth, monthly, and are the *great men of the country*. The mineral, lead, and cash all go into their hands. H. Newhall & Co. got their furnace in operation 1st of September, 1827. I made, by the 15th, twenty tons of lead. My men became sick, and I made but 14,000 pounds until 1st of November, since which time I have manufactured about 17,000 pounds every week. I have a store of goods, in Galena, for the supply of those with whom I have dealings, and never sell anything for less than 50 per cent advance. My furnace is on the Sinsinawa River, three miles from Galena, a stream navigable for boats to

my furnace. * * * The privilege of working these mines, you know, was first given by the Government to Col. Johnson, of Kentucky, five years ago (in 1822). He did but little and sunk money. Not much lead was made here till last year. There were then four log buildings in Galena. Now there are 115 houses and stores in the place. It is the place of deposit for lead and provisions, etc., for all the mining country. There is no spot in America, of the same size, where there is one-fourth of the capital, or where so much business is done. There was manufactured here, in the year ending September last, 5,000,740 pounds of lead. The population consists mainly of Americans, Irish and French (that is, in the diggings). There are but comparatively few females. Hence, every female, unmarried, who lands on these shores, is immediately married. Little girls, fourteen and thirteen years old, are often married here. Three young ladies, who came, fellow passengers with me, in June, and the only ones on board, are all married months since. Du'Buque's Mines, on the opposite side of the Mississippi, are worked by the Fox Indians. They, however, merely skim the surface. The windlass and bucket are not known among them. Du'Buque's Mines is a delightful spot, particularly the Fox Village, on the bank of the Mississippi. But, of all the places in the United States, which I have seen, Rock Island, at the lower rapids of the Mississippi, called the Rapids of the Des Moines, is by far the most beautiful. Fort Armstrong is on this island. At the mouth of Fever River is a trading-house of the American Fur Company. Their trading-houses are scattered up and down the Mississippi, on the river Des Moines, St. Peters, etc. Their capital is so large, and they gave such extensive credit to the Indiana, that no private establishment can compete with them. An Indian debt is outlawed, by their own custom, in one year. The fur company credits each Indian hunter a certain amount, from \$100 to \$500, according to his industry and skill in hunting and trapping. If, when they return in the spring, they have not furs and peltry enough to pay the debt, the trader loses it. But, on the goods sold to the Indians, there is a profit of 200 or 300 per cent made, and a profit on the furs received in payment.

December 7, 1827.

Fever River was closed with ice on the 21st of November, and, of course, navigation is ended, and I have not sent my letter. I now have an opportunity to forward it by private conveyance to Vandalia. We are now shut out from all intercourse with the world until the river opens again in the spring. We have no mail as yet, but shall have a mail once in two weeks, to commence the 1st of January next. I have not received a letter from one of my friends since I have been in Fever River. I hope you will write me before 1st of January, or as soon as you receive this letter.

Sincerely yours,

H. NEWHALL.

This letter was mailed at Vandalia December 25, and by it is established the fact, that, although Fever River Post Office was established in 1826, it was not regularly supplied, even once a fortnight, until the spring of 1828. Mails were brought by steamboat in the summer, and in the winter the people had none.

In the fall of 1827, Strader & Thompson brought a keel-boat load of general merchandise, including a quantity of flour and pork, from St. Louis. Mr. Bouthillier, whose trading-house was on the east side of the river, near the present site of the railroad station, purchased the entire cargo to secure the flour, as that was scarce, even then. Winter set in without a sufficient supply of provisions to supply the wants of the miners. Nearly all the flour obtainable was held by Bouthillier. It was sour and hard. He chopped it out of the barrels with hatchets, pounded it, sifted it loosely into other barrels, filling two with the original contents of one, and then sold it for \$30 per barrel. Even then, the settlers saw with alarm, that there was not enough to last until spring. The winter of 1827-28 was mild and open until January 6; the streets had been muddy, and "not freezing in the least, even at night"—but the river froze over then. Word had reached St. Louis that the people in the mines were destitute of provisions. The steamboat "Josephine," Capt. Clark, was loaded with flour and started off to take her chances of getting as near as possible to the mines. Slowly she made her way up the Mississippi, and when she reached the mouth of Fever River, the warm weather had weakened the ice, and she made her way, unheralded, to Galena. The date of her arrival is fixed by the following entry in a memorandum book, kept by Dr. H. Newhall: "February 25, 1828, arrived steamboat 'Josephine;' broke the ice to get up Fever River." Farther corroborated by a letter from Dr. Newhall to his brother, dated March 1, 1828, in which he says: "To our astonishment, on Monday last, a steamboat arrived from St. Louis." The people rushed to the bank, rejoiced and amazed to see a steamboat loaded with flour, except Bouthillier. The day before, Mr. Gratiot had offered him \$25 a barrel for all the flour he had, and the offer was refused. Mr. Gratiot now asked him what he would take for his flour, and Bouthillier, with a shrug, replied: "Dam! hell! suppose, by gar! what man tinks one steamboat come up Fever River in mid de wint?" February 27, the river froze over, and March 5 the boat was still detained by ice, but arrived at St. Louis about March 14.

The following extracts from a letter from Dr. H. Newhall to his brother, dated March 1, 1828, will give some idea of social life in the mines fifty years ago :

We have had but two mails this winter. It has been pleasantly warm here during winter, and the heavy rains caused the ice in the river to break. * * It has been extremely cold for four days; the river is close l with ice, and the boat (the "Josephine," which arrived on the 25th) consequently detained. We have been almost completely isolated from the rest of the world this winter. We have received the President's Message and proceedings of Congress up to the 26th of December, since that time we have had nothing. We, in Galena, enjoyed ourselves well during the winter. There have been ten or twelve balls, the last on the 22d of February. At noon a salute was fired from the cannon received during the Winnebago war. In the evening a ball was given at the Cottage Hotel (the name applied by Dr. N. to the log tavern on the west side of Main street, corner of Green), in a hall (building) sixty feet in length, ornamented with evergreens. * * There were sixty ladies and ninety gentlemen present. The ladies were elegantly dressed, and many of them were handsome. The ball was managed with a degree of propriety and decorum scarcely to be expected in this wild country. Had I been suddenly transported into the ball-room, I should have imagined myself in some Eastern city, rather than in the wilds of the Upper Mississippi. Little should I have dreamed that within five miles was the home of the savage, and that only twelve miles off is a large Fox village, where I have witnessed the Indian dance around a fresh-taken scalp. March 5.—The steamboat ("Josephine") is still detained by ice. * * The *Miners' Journal*, a newspaper, will be commenced at Galena by 1st of May next. The proprietor, in his prospectus, calls it the *Northern Herald*. He altered the name at my suggestion. * * "Old Buck," the Fox chief, who discovered (?) the famous "Buck Lead," has been encamped all winter within a mile of my furnace (on the Sinsinawa, three miles from town). Himself and sons often visit me in town.

In 1829, David G. Bates built a small steamboat at Cincinnati, and called her the "Galena," to run between St. Louis and Galena. Robert S. Harris ran her up the river that summer, but the little boat was short lived.

October 10, 1829, the cholera carried off James Harris, the second victim of that terrible scourge in the mines. Mr. Harris was one of the leaders in the little colony, and his death produced a profound impression.

In the winter of 1832-33, Captain D. S. Harris and his brother R. S. Harris built the first steamboat constructed in this region. It was named "Jo Daviess," and was built at Portage. Subsequently these men became known on the Mississippi as masters of their trade in practical steamboating.

Negro slavery existed in the mines for several years. It was not abolished altogether until 1840. In 1823, Capt. Harris says there were nearly one hundred and fifty negro slaves in the mines. Under the ordinance of 1787 slavery was prohibited in this Territory, but Illinois sought to evade this organic law by the enactment of statutes by which these slaves could be held as "indentured," or "registered servants," and these statutes are known as the "Black Laws." As late as March 10, 1829, the Commissioners of Jo Daviess County ordered a tax of one-half of one per cent to be levied and collected on "town lots, slaves, indentured or registered servants," etc.

GOVERNMENT CONTROL OF THE MINES.

It is necessary to take a retrospective view of the history of the mines, at this point, to take up the threads of the narrative of settlement.

Prior to the appointment of Lieut. Martin Thomas as Superintendent of United States Lead Mines, in August, 1824, there does not appear to have been an agent of the Government here authorized to grant leases and permits to operate on United States lands. Leases of large tracts were obtained from the Government, and on these lands small miners were permitted to enter and dig under the lessees. But their numbers were few.

In 1823, the principal leads worked were all old Indian and French mines struck anew. There were diggings on January's Point, about six hundred yards above January's warehouse. On the school section just above were two leads. Next, north, was the "Hog" lead, beyond which were the "Doe" and "Buck" leads, the latter of which had been worked by French miners under Dubuque. Then, there were the "Old Cave Diggings," on Cave Branch, in what is now Vinegar Hill Township, that had also been worked by Dubuque, and the old "Indian Lead," west of the Buck lead. On the east side of the river was the "Backbone Lead," about half a mile east of January's Point, and "Van Matre's lead, on the east side of Apple River, near the present village of Elizabeth. On the west, near Anderson's (now Harris') Slough, were two

old French leads, one of which was worked by — McLanahan, and the old "Indian Diggings," two miles west of Galena.

In 1824, John and Cuyler Armstrong struck a lead on the Middle Fork of Miller's Branch (now Meecker's), above the old Indian leads. North of this, another lead was struck, near where the Comstock lead was afterward discovered. Mr. Vanderslice had made a discovery about two miles northwest of the settlement, and two new leads east of Vinegar Hill were worked by J. Bruner, Michael Byrne and John Furlong. On Cave Branch, one and one quarter miles south-east of "Cave Diggings," John Armstrong had found a good lead, and "the only one," says Capt Harris, "where I ever saw native lead sticking to mineral." These were all the principal diggings known in what is now Jo Daviess County when Lieut. Thomas arrived, and they had all, or nearly all, been previously worked by the Indians and French.

Up to that time it is probable that the local agent, Maj. Anderson, had not been authorized to grant leases and permits. Johnson and others had obtained their leases at Washington, but the Fever River lead deposits were found to be richer than those of Missouri, and the greater facility with which the mines or "leads" were worked, attracted a large number of miners from Missouri. The Government of the United States had, by advertisements in the leading papers of the Union, called the attention of the people to these lead mines, and invited miners and settlers to the region. They were flocking hither, and it became indispensable to station a resident superintendent here, clothed with authority to grant permits and leases, issue regulations, settle disputes, etc. There was no other law at that time, and, as a rule, the inhabitants were quite as orderly and quite as mindful of each other's rights as they have been in later days. Property was safe and doors needed no locks.

Lieut. Thomas arrived at Fever River in October (probably), 1824, and established his headquarters in a double log cabin which then stood on the bank of the river, in the middle of what is now Main street, about sixty feet south of Gear street. On the north side of Gear street, close by the agency, was a little pond fed by a large spring, and a little creek connected the pond with the river. Immediately after his arrival, Lieut. Thomas issued an order to all miners to suspend operations the next day (the absence of records renders it impossible now to fix the precise date). William Adncy, D. G. Bates, John Burrell and John Furlong were working the "Old Cave Diggings," and had just uncovered a sheet of mineral when the order came to stop next day. They worked all night, and the next morning had raised 100,000 pounds. All mining operations stopped, but only for a short time. Within a week they were at work again under direction to sell the mineral only to licensed smelters, so that the Government could collect the rent-lead. In explanation of this, it may be observed that miners could sell mineral only to licensed smelters, for which the Government collected one-tenth for rent, and paid them for smelting it. Miners were paid for only nine-tenths of the mineral they delivered. It is said that in later years the smelters have received from the Government the value of the lead thus paid, but it belonged to the miners, not to the smelters, and the money should have been expended in public improvements in the Territory, in the absence of the rightful claimants.

No records can be found of Maj. Anderson's transactions, and two old volumes marked "A" and "B," containing some of the transactions of Lieut. Thomas' agency during 1825-27, which are preserved in the archives of the county, are all of these records available for this work. Mr. Charles Smith was the sub-agent residing here, and came with Lieut. Thomas, who lived at St. Louis and visited Fever River occasionally.

The first established regulations of which record remains, and probably the first code promulgated by Superintendent Thomas, bears date "1825," but were undoubtedly issued very early in the spring, and are as follows:

REGULATIONS FOR MINERS AT THE UNITED STATES MINES ON THE UPPER MISSISSIPPI.

First.—All miners shall forthwith report themselves to the agent, who will enter their names on a register and give them a written permit to mine on ground which is not leased.

Second.—Without such written permit, no miner shall dig or mine; he shall forfeit his discovery and all mineral he digs, and be prosecuted as a trespasser.

Third.—Any miner who gives false testimony in any dispute or arbitration, or before any magistrate, or who is convicted of stealing ore or any other thing, setting fire to the prairie or woods, cutting timber where it is prohibited, shall forfeit his permit to mine or dig, and no smelter shall purchase his ore or give him any employment.

Fourth.—When going to dig, two or more miners must work in company. They are permitted to stake off three hundred yards square, lines to be north and south and east and west.

Fifth.—A permanent post or stake shall be placed near every digging, with marks designating ownership.

Sixth.—A discontinuance of work for eight days in succession shall cause a forfeiture of ground.

Seventh.—When a dispute shall arise respecting the right to ground, the matter shall be arbitrated among miners or smelters. On their failing to settle it, a reference shall be made to the agent, whose decision shall be final.

Eighth.—No person is permitted to build a cabin, cultivate land, cut timber or settle in any manner without written permission of the agent.

Ninth.—Whenever surveys of discovery are required, they will be surveyed twenty rods by forty, running to cardinal points, the length to correspond with the course of the lead, and the discoverer will be entitled to a certificate of survey.

Tenth.—No miner shall hold two discoveries at the same time, nor shall any miner be permitted to go on other ground until his lead is dug out or sold, nor until he abandons it and renders up his certificate of survey.

Eleventh.—All miners must report to the agent the name of the smelter to whom they deliver their mineral, and the amount they deliver in each quarter.

Twelfth.—No certificate of survey shall be sold or transferred to any other than a miner who has a written permit, or to a smelter who has a license; and no survey or other diggings shall remain unwrought for more than eight days in succession, on penalty of forfeiture.

Thirteenth.—All mineral raised when searching for discoveries or leads must be delivered to a licensed smelter, and to no other person.

Fourteenth.—Any miner who shall disobey or go contrary to any of these regulations shall forfeit his permit to dig or mine; and should he attempt to cut timber, mine, farm, cultivate land or build cabins without written permission from the agent, he will be prosecuted as a trespasser on United States land.

(Signed),

M. THOMAS,

Lieutenant U. S. A. and Superintendent of Lead Mines.

FORM OF PERMIT TO MINERS.

_____ is hereby permitted to dig or mine on United States land which is not leased or otherwise rightfully occupied. He is not to set fire to the prairie grass or woods, and must deliver his mineral to a licensed smelter, and comply with all regulations.

Fever River, _____, 1825.

GENERAL REGULATIONS.

Smelters and lessees will have their ground on Fever River off two hundred yards in front on this river, and four hundred in depth, running in right lines perpendicular to the river.

No timber to be cut within one hundred yards of Fever River bank, from one mile above its mouth to and one mile above the point where January's cabins are situated.

M. THOMAS,

Lieutenant U. S. Army and Superintendent of Lead Mines.

Persons desirous of taking a lease are notified that bonds in the penalty \$5,000, with two sureties, are required, when a lease for three hundred and twenty acres, as usual, will be granted, provided the ground is not occupied. Blank bonds may be had of the agent, who will make the survey when the bonds are given.

REGULATIONS FOR SMELTERS.

This agreement, made and entered into this _____ day of _____, 1825, between Lieut. M. Thomas, Superintendent of the United States Lead Mines, and _____, lead smelter,

Witnesseth: That the said _____ is hereby permitted to purchase lead ore at the United States lead mines on the Upper Mississippi for one year from the date hereof, on the following conditions:

First.—No purchases of ore to be made from the location of any person without his consent in writing.

Third.—(The record was so made). To smelt with a log furnace or furnaces at all times, when one hundred thousand pounds of ore (or more) are on hand at any one furnace.

First.—No ore, ashes or zane to be purchased or otherwise acquired from any other person than an authorized miner or lessee.

Fourth.—To haul mineral to furnaces when fifty thousand pounds (or more) are dug at any one place of three hundred and twenty acres.

Fifth.—To run an ash furnace when four hundred (or more) thousand pounds of ore have been smelted at any one set of furnaces.

Sixth.—To comply with all general regulations for cutting timber.

Seventh.—To keep books which shall contain an accurate and true account of all lead ore, ashes or zane purchased or dug, of all smelted, and of the amount of lead manufactured or purchased, from whom purchases were made, and from whence the ore was dug; said books to be open for inspection by the United States Agent of Mines, and a monthly transcript of the contents to be furnished to him, to be verified on oath if required.

Eighth.—To clean, or cause to be cleaned, all lead ore previous to smelting it, and to weigh a charge of the log furnace when required, and the lead made from such charges.

Ninth.—To pay to the United States a tax of one-tenth of all lead manufactured from ore, ashes or zane, to be paid monthly, in clean, pure lead, to be delivered at the United States warehouse (near the mines), free of expense.

Tenth.—To build a strong log warehouse, twenty by sixteen feet, one story high, the logs to be squared so as not to admit of a bar of lead being passed between them; to have a strong door, with a good and sufficient lock; to have a log ceiling in the usual manner; said warehouse to be located at such place as the agent for mines shall direct, to be built free of expense to the United States.

Eleventh.—Not to employ in any manner whatever any *miner, lessee or smelter* who has forfeited his *permit to dig*, his *lease or license*, on written notice to that effect being given by the agent.

Twelfth.—A non-compliance or neglect of performance of any one of the foregoing articles to constitute a forfeiture of this license, and of the bond given for the faithful performance thereof; and on proof being offered to the agent of the United States that such forfeiture has been incurred, his written notice to the smelter shall be sufficient to suspend the stipulations aforesaid.

Thirteenth.—No sale, transfer or shipment of lead is to be made by said smelter, until all arrears or tax which are due are paid, nor any removal of lead from the place of manufacture, without the consent of the agent of the United States. The said ——— to be allowed wood and stone for smelting and furnaces, and to cultivate enough land to furnish his teams, etc., with provender and his people with vegetables.

It is distinctly understood that the bond given for the performance of the stipulation in this license, is to be in full force and virtue until all arrearages of rent or tax are paid to the agent of the United States, and a written settlement is made with him, on which a certificate that no such arrearages exist shall be given, when the bond shall be null and void.

The earliest permit recorded is as follows:

"John S. Miller, a blacksmith, has permission to occupy and cultivate United States land. He will comply with all regulations for the cutting of timber, etc. Twenty acres. Dated May 16, 1825.

"(Signed) M. THOMAS," etc., etc.

The first recorded survey of mineral land was of five acres of mineral land (a discovery lot), two acres in length by one-quarter of an acre in breadth, lying and being on what is known as "Jannary Patch Diggings," founded by "beginning at a stake on the north side of a rocky bluff," running to stakes in mounds to the place of beginning. This was a survey for Patrick Dugan and Barney Handley, dated Fever River, May 28, 1825, and signed Charles Smith, Acting Sub-Agent U. S. Lead Mines.

There is also recorded, June 21, 1825, a survey of 320 acres of mineral land on Apple River, for David G. Bates, the original field notes being taken July 2, 1823, signed John Anderson, Major U. S. Topographical Engineers, on Ordnance duty.

A copy of a bill of lading of May, 1825, shows that lead was transported from the Fever River to St. Louis for forty cents per hundred pounds.

According to the regulations, all disputes between the miners were settled by the U. S. Agent. The earliest account of these of which record now exists, is a "Record of Proceedings in the case of Dugan & Welsh and David Mitchell." Joseph Miller and Ebenezer Orne were witnesses for Dugan & Welsh; and Joseph Hardy, Stephen Thrasher and William H. Smith for Mr. Mitchell. There were no lawyers to complicate matters. The witnesses stated what they knew in few words, and the case was summed up and adjudicated by Lieut. Thomas, who gave one-half the mineral dug on the disputed claim to Mitchell, "and it is considered that the other half is an *ample* compensation to Dugan & Welsh for the labor they bestowed on digging it. Their conduct was violent and quarrelsome, which will be utterly discountenanced at these mines. Mr. Charles Smith, Acting Sub-agent, will see this settlement carried into effect." Signed, M. Thomas, Lieutenant U. S. Army, Superintendent of Lead Mines, and dated May 21, 1825.

In the record of the proceedings in the case of Joseph Hardy vs. Ray, Orne & Smith, on the same day, Israel Mitchell testified that Col. Anderson stated that "Mr. Hardy was the oldest applicant for survey on the river."

The following extract from reports made by Charles Smith to his superior officers, are valuable as showing the exact state of affairs at that time:

June 11, 1825.—Hardy and Jackson are running an ash furnace; Meeker is smelting in his log furnace; Van Matre's ash furnace will be in operation to-day. Perfect harmony exists among the diggers. The regulations appear to give universal satisfaction. Every man appreciates the protection which they afford, and the security they give to their operations presents a stimulus to enterprise, and prevents encroachments upon the rights of others. The difficulty of borrowing or hiring a horse when wanted, has rendered necessary the purchase of one. I have

accordingly bought one, old, to be sure, but serviceable—the price, \$20. He will be worth as much, probably, a year hence.

June 11, 1825.—I have just visited a discovery made by C. Armstrong and I. Thorn, about three-quarters of a mile south of the Cave Diggings. They dug twenty or thirty feet before they struck mineral. Two thousand pounds were taken out in three hours—six thousand pounds, at least, are in view on the west side of the diggings, and I struck mineral over one-half of the bottom. The hole is about five feet in diameter.

Lead was low, and Smith already begins to find that the miners appreciate the situation. The following extracts are significant, and indicate that the miners were not quite satisfied with the reign of Thomas, and were expecting a change. They were not delivering mineral to the licensed smelters with much alacrity :

July 4, 1825.—The diggers generally are keeping back their mineral, some with the expectation of raising the price, and others in the belief that licenses will be obtained by smelters from below. I understand that Meeker offers \$18, an increase of 50 cents on the former price.

July 22, 1825.—Smith reported that in his opinion some regulation is necessary to enable the smelters to keep their furnaces in operation. The diggers are deluded with an expectation that mineral will rise, and, as they are generally able to hold on, they refuse to make deliveries.

July 22, 1825.—Lieut. Low is here with twenty-five men, arrived on the 11th instant; he is encamped near the agency's establishment for a few days, and occupies the finished cabin, with my permission, until he can select a suitable site for building barracks.

Lieut. Low came here with his men to build barracks and remain to enforce the regulations and the collection of the lead rent, as well as to compel the miners to deliver their mineral to the licensed smelters, whether they desired to do so or not. Lieut. Low selected as a suitable site for barracks a point on the west side of Fever River, at about one and one-half miles below the agency establishment, cleared the ground, erected a flagstaff, but before the barracks were commenced the order was countermanded, and Low left with his command. The point is still known as "Low's Point." Tholozan & Detandabaratz afterward had their smelting establishment on the east side of the river, about half a mile below Low's Point, or half way down the "Long Reach."

It is to be inferred that the orders of Lieut. Thomas were not always obeyed with the promptness desired by military officers. The following is selected from a large number of similar orders on record at that time, because Mr. Meeker was one of the prominent men at the mines, as well as to show that then, as in later days, such men sometimes took their own time:

To MR. MOSES MEEKER, *Smelter* :

FEVER RIVER, July 19, 1825.

Sir—By an order of Lieut. Thomas, of the 18th of May, 1825, you were required to erect the warehouse stipulated in your license as a smelter (at the place on Fever River where it will be designated to you), without delay, as it was required immediately. You have since, by consent, commenced the erection of a cabin in lieu of the storehouse, and made considerable progress in that building. You are now required to erect a storehouse (agreeably to the stipulation in your license), from the foundation, on such ground as will be designated to you, or to complete the cabin, at your election. Should the order not be complied with within a reasonable time, the fact will be reported to the Principal Agent, and such measures adopted in the meantime as will be justified by the Twelfth Article of your license.

By order,

CHARLES SMITH, *U. S. A.*

The following orders indicate difficulty in securing obedience to established regulations:

Notice is hereby given to all the diggers of lead ore upon the public land in the vicinity of Fever River, Small-Pox and Apple Creeks, that they must forthwith deliver to the licensed smelters all the mineral they have dug; and in future, the smelters, when guaranteeing the tax to the United States, will take measures to have the ore delivered at such times as may be convenient—at least once every month. A refusal on the part of any digger to comply with this order (which is in accordance with the true intent and meaning of the regulations) will cause his permit to dig to be forfeited, and the ore already obtained will be taken possession of by the agent, for the use of the United States. (Signed)

M. THOMAS, *Lieutenant U. S. Army, Superintendent of Lead Mines.*

SEPTEMBER 5, 1825.

MR. MEEKER, *Esq.*:

FEVER RIVER, October 13, 1825.

Sir—Unless immediate provision be made for the hauling and smelting of mineral at the diggings, as well as for a satisfactory settlement thereof, notice will be given to diggers to deliver their mineral to licensed smelters, without regard to existing guarantees. It is necessary that the order of the 5th of September should be immediately complied with.

I am, sir,

CHARLES SMITH, *U. S. Lead Mines, Fever River.*

The first recorded return of lead mineral received and on hand at the furnaces of M. Meeker and Bates & Van Matre, the only licensed smelters at that date, from April 3 to May 31, 1825, shows that Meeker received from sundry persons 30,342 pounds, and Bates & Van Matre, 25,601 pounds. Total number of diggers who have permits, 69. June 30, the number of diggers had increased to 89; July 31, 96. In August, the number of diggers permitted was 105. Five smelters reported in August, viz.; Meeker, Bates & Van Matre, Hardy, Jackson and N. Bates. At the end of September, there were 127 diggers, and the five smelters had manufactured during the month 154,323 pounds of lead.

The name of Gratiot first appears in these monthly reports in December, 1825, but he made no return until June following.

The number of diggers at the end of December is reported at 151, but the aggregate amount of lead manufactured was only 2,792 pounds. January 31, 1826, the name of Gibson appears in the list of smelters; diggers number 163; 29,185 pounds of lead manufactured, but the amount of mineral at the diggings was estimated at 425,000 pounds.

In April, 1826, the number of diggers was 287; amount of mineral at the diggings, 900,000 pounds; lead manufactured, 78,528 pounds. May shows a rapid increase of the number of diggers—350. Mineral at the diggings accumulates, but only 6,927 pounds of lead are reported as manufactured by licensed smelters. In June, the first return of Gratiot appears—406 diggers; 173,479 pounds of lead. In July, 1826, Comstock's name appears among the licensed smelters—441 diggers; 140,781 pounds of lead, and 1,400,000 pounds of mineral at the diggings. October, 1826—Diggers, 548; smelters, 7; 269,405 pounds of lead; 1,500,000 pounds of mineral at the diggings. This is the last report to be found.

Although this region was then heavily timbered, it seems that lessees and smelters were favored by the Government, and farmers and villagers had to go to the islands for their wood, as is shown by the following:

NOTICE.

Those persons who have received permission to occupy land in the vicinity of Fever River are hereby informed that all timber for fuel, fencing or building, must be obtained from the islands in the Mississippi, and from no other place in this vicinity, as the timber elsewhere is reserved for the purposes of smelters and lessees.

(Signed)

M. THOMAS, *Superintendent of Lead Mines.*

FEVER RIVER, June 5, 1826.

The following document will be interesting now, when people can own their land. Then, and for a long time afterward, the only title to land was by permit. All the people were tenants-at-will of the United States, liable to be ejected from their homes at any time, at the caprice of one man. It is proper to add that, in 1826, the people of the mines petitioned Congress for more permanent titles, but no attention was paid to their request:

It having been requested from the United States Agent for Lead Mines to grant us permission to build and inclose in a small quantity of ground for our convenience, it has been granted upon the following conditions, viz.:

That we will not claim any right, title or interest in the said lands (other than as tenants, at the will of said agent, or such other agent as may be appointed for the superintendence of the mines); and we hereby bind and obligate ourselves to quit said premises upon one month's notice to that effect being given by said agent—it being understood that those persons who have licenses or leases are not included in this arrangement, but are to occupy agreeably to their contracts. No transfer of said ground or improvement will be made without the consent of the agent, and will be subject to the aforesaid regulations.

FEVER RIVER, June 6, 1826.

A large number of names are attached to this register, among whom are many of the leading settlers. The first name is R. W. Chandler. James Harris and Jonathan Browder, first Commissioners of Jo Daviess County, are among the first signatures. James Foley, Samuel Lawrence, George W. Britton, T. H. January, Thomas Ray, William H. Johnson, N. Bates, Thomas Hymer, J. P. B. Gratiot, Samuel C. Muir, A. P. Vanmeter, Amos Farrar, J. W. Shull, F. Dent, B. Gibson, James Jones, Elijah Ferguson, Isaac Swan, David M. Robinson, E. F. Townsend, H. H. Gear and R. H. Champion are among the signers of this unique document.

A report from Charles Smith, dated July 25, 1826, says: "I have surveyed the upper street in the town, and staked off the lots fifty feet, forty-one in number. There is a great itch-

ing for privileges, and a superabundant *measure of independence*. Complaints about right ground, and *this, that* and the *other* right, are accumulating every day, both from diggers and settlers, and God knows *what* and *when* will be the end of all things. The *dead* and the living both conspire to cause me a great deal of trouble. I am no prophet, but I will be mad enough to predict that not *many months* will elapse without the necessity of the intervention of military force (the only force that can be recognized in this county) to protect the interest of the mines, and to encourage their development. Every day adds proof of their immense importance, and justifies the employment of every possible means for their protection and support. The competition among smelters may, I dare say *will*, have a tendency eventually to injure the mines by producing a reaction upon themselves, and exciting a rebellious spirit among the miners."

Mr. Smith's allusion to the *dead* and living is explained by the fact that in earlier days the people buried their dead in various places along the bench where Bench street, Galena, is now. These remains had to be removed, of course, when the town was laid out, and caused the good-natured Smith a deal of trouble. His gloomy predictions, happily, were not fulfilled.

Thomas McKnight succeeded Charles Smith as resident sub-agent, and remained until Lieut. Thomas was succeeded by Capt. Legate in 1829. Charles Smith died at Galena March 3, 1829.

Mr. McKnight arrived at Fever River as sub-agent November 15, 1826. His first report is dated November 28, 1826, in which he says: "I arrived here on the 15th inst., but did not receive the Government papers until the 20th, in consequence of having a little house to repair for an office. Mr. Dent, the bearer, leaves here to-morrow morning. I am told that there is a great quantity of mineral lying, and will lie all winter, unsmelted. There is a great scarcity of corn for feeding teams. A great many of the teamsters are sending their teams down to the settlements to winter."

The "little house" referred to by Mr. McKnight is still standing on the west side of Main street, Galena, about one hundred and fifty feet north of the corner of Spring street, on Lot 3. The stone "Government house," built for a warehouse in which to store lead in 1829, by Harvey Mann and others, is still standing a little farther north, on Lot 6.

Here occurs a list of persons in whose favor the Superintendent has notified his acceptance of bonds for leases. The list was evidently made and entered of record in November or December, 1826, and entries of dates of surveys made subsequently: John P. B. Gratiot, survey made; John Cottle, survey made; Ira Cottle, survey made; George Collier, survey made; Jesse W. Shull, survey made; M. C. Comstock, survey made January 22, 1827; John Barrel, survey made January 22, 1827; William Henry, survey made January 22, 1827; P. Hogan, survey not made; — Bouthillier, survey not made; — Tholozan, survey not made; Charles St. Vrain, survey made April 5, 1827; David G. Bates (Cave), survey not made; John P. B. Gratiot (section timber land), survey made.

The first mention of the "town of Galena" occurs December 27, 1826, in a permit to Patrick Gray and Thomas Drum to occupy Lot No. 25, in the town of Galena, fifty feet fronting on Hill or Second street, running back to the bluff; but this permit is dated "Fever River."

January 23, 1827, a permit was granted to Gray and Drum to enclose fifty feet on First (or Front) street, north of Davis, for the purpose of building a bake-shop thereon. There may have been, probably were, other permits to persons desiring to occupy "town lots" prior to the above, but these are the first that appear of record. The future city of Galena was laid off and evidently named in 1826, as these records show, but permits of the Superintendent were the only titles the people could have to their lots, improvements and homes, and these they must vacate and abandon on thirty days' notice. The United States still retained ownership.

May 12 to 15, 1827, various permits were signed by "Wash Wheelwright, Light Artillery," probably acting in Mr. McKnight's absence. Historians have given, although with questionable authority, as one of the causes of the "Winnebago war," which occurred in 1827, the fact that the Indians were dissatisfied because the miners were encroaching on their territory and digging mineral on the north side of the "ridge," which they considered the boundary of

Luther Brown

PATCH GROVE

the "Five Leagues Square." In this connection, the following letter and orders will be of interest, whatever may have been the primary cause of the Indians' ill-will:

UNITED STATES LEAD MINING OFFICE, Fever River, June 30, 1827.

TO MR. ELIJAH FERGUSON, NOW MINING ON THE PECALOTEA :

Sir—It is doubtful whether you are within the limits of the country which the United States, by treaty with the Pottawatomies, etc., have a right to explore for mining purposes. Under this circumstance, you will not remove further toward Rock River. Should you prefer to remain where you now are, you are at present at liberty to do so, with the express understanding, however, that should that part of the country be eventually decided to belong to the Winnebagoes, you remove when duly notified of the fact from this office.

I am, sir, your obedient servant,

(Signed)

M. THOMAS, *Lieut. U. S. A., Superintendent U. S. Lead Mines.*

CIRCULAR TO SMELTERS.

U. S. LEAD MINING OFFICE, Galena, October 1, 1827.

SIRS—You are hereby directed to desist from working over the Ridge, and to employ no force whatever, either in hauling or smelting any material that may have been, or in the future may be, raised there. Also to make no purchases of said mineral from any digger.

By order of Lieut. Thomas, Superintendent of Lead Mines.

CHARLES SMITH.

On the same date miners were notified that they had no right to go beyond said ridge for the purpose of mining, and were ordered to suspend all further operations until further orders from the Superintendent.

On the 8th of October, 1827, an order was issued directing all discoveries of lead to be reported to the Lead Mining Office, Galena. On the 15th of November, 1827, the following persons, having struck leads prior to the 3d of July, 1827, beyond the ridge, were licensed to dig or work them out without interruption, but no others were to be allowed to mine beyond the ridge *under any circumstances whatever*: Cabanal, for Ewing & Co.; Stevens, for Kirker & Ray; Riche, for Winkle; Elijah Ferguson, Hawthorn & Deviese; Carroll, for Dickson; Stevenson, transferred to Blanchard; Gillespie & Hymer; Stevens & Co.; George Ames' survey, Moore & Watson, sold to Blanchard; Foster & Hogan.

July 2, 1827, Lieut. Thomas granted a permit to M. C. White to "burn one *lime of kiln* [kiln of lime] above the mouth of Small-Pox [creek]." On the same day, Mr. Comstock had permission to cut fifty large trees for building logs, near the large mound south of Mr. Gratiot's survey. Arbitrations were ordered between McKnight and Ewen Boyer & Co., on Mackey's survey, and between Jacob Himer and Will Baker, to take place on the 7th.

NOTICE.

There will not, for the present, be any town laid off at the Old Turkey Village, commonly called Grant River Town. All persons are hereby forewarned from building cabins or houses there, except such licensed smelters who may locate in that vicinity, and such smelters will first obtain a special permission.

M. THOMAS, *Lieut. U. S. Army, Supt. U. S. Lead Mines.*

FEVER RIVER, July 13, 1827.

August 14, 1827, a permit was granted to Messrs. D. G. Bates, V. Jefferson and Hempsted to make a wharf, or landing, in front of their houses and lots, provided such landing is at all times free to public use; no building to be placed upon it.

On the 8th of August, 1827, Michael Dee was convicted by arbitration of having stolen certain articles, the property of Thomas Williams, and all smelters and miners on Fever River forbidden to harbor said Dee or give him any employment.

This is the first conviction for theft of which record remains.

McKnight left no records, except a few recorded permits; and, except the two volumes from which the above extracts have been made, there are no records of the transactions of the Lead Mines Agency accessible, unless they are preserved in the War Department at Washington, and a letter to that department, asking for information, has failed to elicit a reply.

The only entries to be found of date later than 1827, are a code of regulations for miners, dated April, 1833, and signed Thomas C. Legate, Captain Second Infantry, Superintendent U. S. Mines, and another and shorter code, dated October, 1840, signed by H. King, Special Agent U. S. Lead Mines, in which miners were required to pay not to exceed 6 per cent of the ore, or its equivalent in metal, to the United States.

Under Lieut. Thomas' administration, Charles Smith and Thomas McKnight were Resident Sub-Agents at Galena. About 1828, the agency was removed to a log building there recently erected under permit, by Barney Dignan, on the southwest corner of Main and Washington streets.

In 1829, the office was in the first building above Mr. Barnes' boarding-house, on the upper (Bench) street, and in later time, and until discontinued, the office of the Superintendent was in Newhall's building, southwest corner of Hill and Main streets.

In 1829, Lieut. Thomas was succeeded by Capt. Thomas C. Legate, Second Infantry, under whom Capt. John H. Weber was Assistant Superintendent. Maj. William Campbell, Col. A. G. S. Wight and R. H. Bell were also connected with the office. In November, 1836, Capt. Weber's signature as Superintendent appears of record, and it is probable that he was appointed about that time.

As previously shown, under the old system, which generally prevailed until 1836, diggers were permitted to sell their mineral only to licensed smelters, and the Government collected the rents (10 per cent until 1830, and 6 per cent subsequently, delivered at the United States warehouse, in Galena) of the smelters. The prices paid to miners were made with that fact in view. In 1827, as clearly indicated by the letter from Lieut. Thomas to E. Ferguson, and subsequent orders, the diggers and some of the smelters were operating on lands not owned or controlled by the United States, in some instances, having the permission of the Indians and paying them for the privilege, and in more cases, probably, trespassing on their domain. It had begun to dawn upon the people that five leagues square comprised only a very small portion of the lands rich in mineral wealth, and it was not possible for the Government agents to prevent digging for mineral outside the limits of the reservation, over which, only, could the United States exercise control. The Superintendent of the United States Mines had no authority to grant permits on Indian territory. He could forbid such trespass, but it would require a military force to prevent mining beyond the limits of the reservation, provided the diggers obtained the consent of the native owners. It was plain that the Government could rightfully collect rent only of those who obtained their mineral within the recognized limits of the "five league square." The agent could not fully demand any of the lead obtained beyond the limits of the reservation, and this led to difficulty. It was unjust to pay rent to the Indians and to pay it again to the United States, nor could the agent collect rent even if it had been surreptitiously obtained. Some of the smelters, and especially those operating on Indian lands, either with or without the permission of the natives, or buying mineral from diggers operating beyond the jurisdiction of the agent, began to refuse to pay rent, alleging that, as they obtained lead from Indian lands and were not protected by the Government, they were under no obligation to pay. The agent was placed in an embarrassing position. They were obtaining mineral on the public lands, but they were also obtaining it on lands over which the United States exercise no control, he had no means of determining the amount actually due the Government, and therefore could not enforce payment of any. This refusal became more general until the unauthorized sale of the mineral lands in Wisconsin, in 1834, and subsequently by the Register of the Land Office at Mineral Point (called "Shake-rag" in early mining days), who, in violation of his express instructions, permitted a large number of the diggings actually worked to be entered. Many miners were thus outrageously defrauded, and their rights were disregarded. From that time they declined taking leases, and the lead office gradually fell into practical disuse. Capt. Weber remained as agent until about 1840, but his agency was purely nominal. The regulations were not enforced, smelters paid no rent, and there was a season of freedom from Governmental supervision. In 1840, however, an attempt was made to revive the office. H. King, special agent, was sent to the mines, probably to investigate Weber's loose manner of doing business, or rather his neglect of business. "With Mr. King," says Mr Houghton, "or very nearly the same time, came John Flanagan."

A letter from Capt. W. B. Green, who was familiar with the events of that period, contains the following information: "The Lead Mine Agency was suspended for several years prior to 1841. After the inauguration of President Harrison, in 1841, the agency was revived and Flanagan

appointed Superintendent—revived, probably, to give Flanagan the appointment. Previous to the suspension of the agency, the royalty to the Government was paid by the miners through the smelters. After the revival of the agency under Flanagan, the attempt was made to collect the royalty directly from the miners. The attempt was only a partial success, as the miners generally refused or evaded the payment. During the suspension of the agency, through affidavits gotten up (as affidavits can be to prove anything when taken *ex-parte*), a bill was lobbied through Congress, giving one of the early smelters a large sum of money for royalty paid by him on mineral reported to have been taken from Indian lands outside the original purchase. This established a precedent, of which most of the other smelters availed themselves, and in a similar manner had large sums voted them—in the aggregate, it may be, amounting to more than all the royalty received by the Government from the mines. The truth is, there was but a very inconsiderable amount taken from the Indian lands prior to the purchase of the lands south of the Wisconsin River, in the winter of 1827–28. What little there was, should, of right, have been paid to the Indians, or, ignoring their right, it should have been paid to the miners who *actually paid it*, as the smelters took the royalty into account when they purchased the mineral and *deducted it* from the value thereof.”

Mr. King remained but a short time, Weber was removed or superseded, and Flanagan left in charge with instructions to enforce the regulations established by Mr. King.

About the same time Walter Cunningham, who, says Mr. Houghton, had been appointed to investigate the Superior copper mines, returned from a tour through that region and established himself here with Flanagan. From this time, the regulations required the miners to pay the rent “not to exceed 6 per cent of the ore or its equivalent in metal,” but in practice, it is said, the rent that was collected was generally paid through the smelters, as formerly.

Flanagan, his associate, Cunningham, and a clerk named Couroddy, by their associations and habits rendered themselves exceedingly odious to the people. Flanagan commenced a large number of suits against individuals for arrears of rent, and compromised them for what he could get in cash, but, it is said, made no returns to the Government of his collections—defrauding the people and the Government at the same time. He was accustomed to say to the people that the “Government must be paid first,” and his arrogant declaration to smelters and others that “I am the Government,” sufficiently indicates his character and the disposition he made of his collections. If he was “the Government,” there was no necessity of making returns to anybody, and none were known to be made by him. Complaints of his high-handed proceedings reached Washington, and in 1843, Mr. Wann states, Capt. — Bell, stationed at St. Louis, was ordered by the Secretary of War to Galena, to investigate Flanagan’s administration. He came, but remained but a few days, dismissed Flanagan and placed Maj. Thomas Melville, of Galena, in charge of the office, temporarily, until reports could be made to the War Department, and a Superintendent should be appointed. The next year, 1844, according to the best information to be obtained, John G. Floyd, of Virginia, was appointed to the office. Mr. Floyd made an effort to enforce the collection of rent, and in some measure succeeded, but was removed in 1845, at the instance of Hon. Joseph P. Hoge, then member of Congress for this (then Sixth) District, and James A. Mitchel was appointed as his successor, who remained until the office was finally discontinued, about 1847, when the lands were thrown into the market. Practically, however, the office was little more than nominal after the resignation of Capt. Legate, in 1836. Under the pre-emption law, a large amount of mineral lands had been entered. Settlers were required to make oath that no mineral *was being dug* on the lands they desired to enter, and this requirement was easily evaded.

The people generally considered the agency as an imposition, and it was impossible to secure the implicit obedience to the rule of the superintendent that obtained in the days of Thomas and Legate. The experiment of reviving the office was not a success. The Government found upon trial that, instead of being a source of revenue, the management of the lead mines produced constant drafts upon the Treasury, and at last, after the settlers had petitioned in vain for years, early in the session of 1846–47, Congress authorized the sale of the lands. A

receiver was appointed, and by the 5th day of April, 1847, says Seymour, "land to the amount of \$127,700 had been sold at minimum prices, \$1.25 per acre for farming, and \$2.50 per acre for mineral lands, and the days of governmental supervision or ownership of the lead mines ended.

The amount of lead shipped from various ports on the Mississippi, principally from Galena, for nine years prior to the discovery of gold in 1849, and the estimated value thereof, is as follows:

1841—31,696,980 pounds, valued at \$3 per hundred.....	\$950,909 40
Small bars and shot valued at.....	31,433 50
Total.....	\$982,342 90
1842—31,407,530 pounds at \$2.75@ \$3 per hundred.....	\$ 746,296 46
1843—39,461,171 pounds at \$2.37½ per hundred.....	937,202 00
1844—43,722,070 pounds at \$2.82½ per hundred.....	1,235,148 47
1845—54,492,200 pounds at \$3.00 per hundred.....	1,634,766 00
1846—51,268,200 pounds at \$2.90 per hundred.....	1,486,778 09
1847—54,085,920 pounds at \$3.00 per hundred.....	1,622,577 60
1848—47,737,830 pounds at \$3.50 per hundred.....	1,670,324 95
1849—44,025,380 pounds at \$3.62½ per hundred.....	1,595,920 02

In 1849, the gold discoveries in California disturbed "the even balance of ordinary business operations" in the lead-mining district. The tide of immigration that had been directed to this region, was diverted to the Pacific Coast, and a large number of miners and business men, dazzled by the glitter of California gold, left to seek their fortunes on the slopes of the Sierra Nevada. Large amounts of real estate, covered by valuable improvements, were forced into market and sold at nominal prices, to obtain the means wherewith to remove to California. Enormous rates were paid for money, and a large amount of capital was withdrawn from the usual channels of trade; improvements commenced or contemplated, were suspended or delayed, and the heavy emigration from the lead to the gold mining region was seriously felt. A large number of men usually engaged in prospecting, and by whom new and important discoveries had been constantly made, were no longer here, and operations were principally confined for a time to old "leads." But in compensation for this, the price of mineral advanced to \$28 per thousand (it had at some periods been as low as \$8 or \$9, and was seldom higher than \$22), and this advance caused operations to be renewed in diggings that had been abandoned as too unproductive to be remunerative. Writing in 1850, in discussing the effect of the "gold fever," Mr. Seymour says: "Although lead is one of the baser metals, and does not strike the imagination like pure gold dug from the bowels of the earth, yet it immediately becomes gold in the pockets of the miner, for nothing but gold is given in exchange for it by the smelter, and it is always in great demand at the market price. If enterprising men were willing to undergo here half the privations and sufferings which they endure by a journey to California and hard labor in the gold mining, their happiness and prosperity would probably be as well promoted by their pecuniary success, saying nothing of the extreme perils thereby avoided, and the painful disruption of domestic ties, so common to this class of emigrants."

CHARLES BRACKEN'S SKETCH.

In 1859, Hon. Charles Bracken prepared an historic statement of the early times in the lead region for the purpose of influencing a Congressional grant of lands for railroad purposes. So far as these annals are concerned, the value of the document lies in the expression of facts, and also in the report thereto appended, giving a list of those who mined prior to 1830, and paid rent to the Government as well as tribute to the Indians. Mr. Bracken wrote:

"At a treaty held by Gen. William H. Harrison with the Sac and Fox Indians, at St. Louis, on the 3d day of November, 1804, those Indians sold to the United States all the land east of the Mississippi River, extending from the mouth of the Illinois River to the mouth of the Wisconsin River, including the lead mines east of the Mississippi. Another treaty was held on

the 24th of August, 1816, at Fort Crawford (St. Louis), between the United States representatives, Gov. Edwards, Gen. Clark and Mr. Choteau, and the Ottawa, Chippewa and Pottawatomie Indians. The Indians then proved, to the satisfaction of the Commissioners, that the country sold to Gen. William H. Harrison did not belong to the Sacs and Foxes alone, but was jointly the country of the Ottawas, Chippewas, Pottawatomies, Winnebagoes and Pottawatomies of the Illinois. The Winnebagoes were not parties to this treaty, and, as a result, the Government ceded to them all the country lying north of a line running west from the southerly bend of Lake Michigan to the Mississippi, reserving, however, a quantity of land north of that line equal to five leagues square, to be laid in such tract or tracts as the President of the United States might deem proper. Some six years after the ratification of that treaty, the President, acting under authority vested in him by the act of March 3, 1807, which authorized him to lease the salt springs and lead mines belonging to the Government, directed the Secretary of War to lease the lead mines. Acting under this order, Col. Bomford, of the Ordnance Bureau, on the 15th day of June, 1822, advertised in the principal newspapers throughout the United States that proposals would be received for leasing any land of the Government containing lead mines. Col. James Johnson, of Kentucky, responded to the notice, and became a lessee of the Government for the lead mines of the Upper Mississippi, and was the first person to come into the country for the purpose of mining under Government auspices. He proceeded with keel-boats to Fever River, where, although accompanied by Maj. Forsythe, the Indian agent at Rock Island, his landing was resisted by the Winnebago Indians (who had assembled in arms to resist the landing of any white men, saying that the Sacs, Foxes, Ottawas, Chippewas and Pottawatomies had received presents and payments for lands which belonged to them, and that they never sold to the United States). After Mr. Johnson had counseled with the Indians for several days, and made them presents of merchandise and provisions, they consented to his landing and mining and smelting in their country. Others received similar leases and followed him, and the result was that, at the time of the treaty of Prairie du Chien, in 1829, when the Indian title to the country was extinguished, the miners had dispossessed the Indians of every foot of land where there were indications of lead ore. In thus taking possession of the rich mineral lands belonging to the Winnebago Indians, they carried out the object of the Government, as evinced by the clause of the treaty at Fort Edwards, in 1816, which authorized the President to reserve a quantity of land equal to two hundred and twenty-five sections in their country. As the quantity of land covered by a smelting lease was limited to three hundred and twenty acres, or one-half section, the entire quantity reserved would authorize four hundred and fifty leases, and the Government well knew that, when that number of her citizens were dotted over those lands, the country was virtually lost to the Indians forever, and the result proved the correctness of this conclusion.

“It cannot be shown by any record, that a tract of land five leagues square, or any less in quantity, was ever officially located or reserved, as provided for in the treaty at Fort Howard, in 1816; but, under the orders of the Superintendent of the Lead-Mine District of the Upper Mississippi, surveys were made for licensed smelters, covering a half-section of timbered land each. It appears that no record was kept of such surveys; yet, in every instance where a lease was granted a survey was made, and, as timber was necessary for smelting purposes, these surveys were always made in groves where plenty of wood could be obtained. It may be assumed, that, although there was no record kept, as the surveys were made under the direction of the President, and had metes and bounds regularly established, they must necessarily be considered as a part of the reserve under the treaty; yet, that position would not affect the miners' claims seriously, for in no instance was the mineral smelted taken from the timbered surveys; it was taken from the adjoining prairie lands, which were undoubtedly the property of the Indians. So well was this understood by the miners and smelters that, at a very early day, they refused to pay rent for the lead dug and smelted from the Indian lands. The consequence was, in the spring of 1825, troops were ordered from Fort Armstrong (Rock Island) to force the payment of the rent. Against this military exaction the smelters strongly protested.

“Up to the year 1825, the country east of the Mississippi, lying between the Rock and Wisconsin Rivers, and extending north to Lake Winnebago, was claimed conjointly by the Ottawas, Chippewas, Winnebagoes and Pottawatomies of the Illinois. The Winnebagoes, it will be remembered, were not parties to the treaty of 1816, at Fort Howard, and they were the actual occupants of the land around Fever River, and who resisted the landing of Col. Johnson. Previous to his arrival, Van Matre, Shull and others, who were licensed as Indian traders, also mined and smelted in the country. They were tolerated in this because they were married to Indian women, not because they had any recognized right to do so, conferred by the Government. But, after the arrival of Johnson, all who were smelting in the country were compelled to take out licenses and pay rent to the Government.

“At the treaty concluded at Prairie du Chien, on the 19th day of August, 1825, known as the ‘Treaty of Limits,’ the seventh and ninth articles divided the mining country on the east of the Mississippi between the Chippewas, Winnebagoes, Ottawas, and the Chippewas and Pottawatomies of the Illinois, and, by the tenth article of the treaty, the United States solemnly establishes and recognizes the boundaries.

“In the summer of 1827, the Winnebago chief, Red Bird, attacked some keel-boats on the Mississippi, above Prairie du Chien, and killed some of the hands.*

“Previous to that time no attempt had been made by the miners to cross the boundary line established in 1825,* but then a military expedition was sent against the Winnebagoes to capture Red Bird. The miners who accompanied the expedition discovered numerous indications of mineral, and in the fall of 1827 a number of them prospected in the country, and a valuable discovery of mineral deposit was found near Dodgeville (in Iowa County). During the following year other mines were discovered.

“The miners purchased the right to mine here from the Indians, and, therefore, when called upon by the Superintendent of the lead mines, refused to pay rent to the Government. The consequence was, troops were ordered out from Fort Crawford (Prairie du Chien), to remove the miners from the Winnebago country. To avoid this issue, the miners finally consented to take out leases and pay rent to the Government, and did, therefore, actually pay two duties for the privilege of mining—one to the Indians to keep them quiet, and one to the Government to prevent expulsion.

“The Winnebagoes never consented to the reservation with the other tribes who made the treaties of 1804 and 1816, although they were, as shown, part owners of the country; neither can any evidence be adduced showing that the reservation provided for in the treaty of 1816, was ever located, except in the matter of timber surveys before mentioned. * * *

“When the first leases were granted, in 1822, the Fever River mines were fully 300 miles beyond the border settlements, and the Mississippi was the only thoroughfare into the country, and keel boats the only means of transportation. The consequence was that the necessary implements for mining purposes, as well as the necessaries of life, were taken to the mines at an enormous expense. For years the prosperity of the mines was retarded because the Government discountenanced any attempts, at agriculture; the agents assuming that the fencing of farms would consume timber needed for smelting purposes. At first the ore was smelted in log furnaces, and thereby a heavy loss was sustained. For two seasons the mining and smelting operations were suspended, and great sacrifices were made by the miners in defending the country against the Indians. The miners, at a great loss in the expenditure of time and labor and money, and though suffering the worst dangers and deprivations that are to be met with on the frontier, opened this portion of the country to a permanent settlement. The expenditures of Col. Johnson alone amounted to \$10,000.”

*See “Winnebago War,” in County History.—Ed.

*This is clearly a misstatement, since evidences of white occupation north of the present Illinois boundary are abundant.—Ed.

THOSE WHO SMELTED PRIOR TO 1830.

The list referred to, as showing the names of smelters, and the amount of rent lead collected by them prior to January 1, 1830, is here given. The rent was one-tenth :

POLITICAL HISTORY OF THE DISTRICT.

The legislative actions by which the mining district has been geographically changed, may be briefly and appropriately stated here, at the risk of repeating certain statements given in the general history which opens this volume.

The ordinance of 1787 provided that not less than three, nor more than five, States were to be erected out of the territory northwest of the Ohio River. Three States were to include the whole territory, and these States were to be bounded on the north by the British Possessions; but Congress reserved the right, if it should be found expedient, to form two more States of that part of the territory which lies north of an east-and-west line drawn through the southern extremity of Lake Michigan.

It is not necessary to trace the various changes of territorial jurisdiction to which Illinois, and especially its northwestern portion, was subjected, until the admission of the State into the Union in 1818. During all that time this section of the country was inhabited only by Indians, and this whole region was claimed by them. In 1804, the Sacs and Foxes, then a powerful tribe, by a treaty made at St. Louis with Gen. Harrison, then Governor of the Territory of Indiana, ceded to the United States all their lands lying east of the Mississippi; but Black Hawk and other chiefs who were not present at St. Louis, refused to be bound by it. All the territory north of the line drawn west from the southern extremity of Lake Michigan to the

Mississippi was in the undisputed possession of the native tribes, when the State of Illinois was erected, in 1818, except a tract about five leagues square on the Mississippi, of which Fever River was about the center, which, by treaty with various tribes in 1816, the United States Government had reserved, ostensibly for a military post, but really to control the lead mines. The Government had had knowledge for many years of the existence of lead mines here, but their location was not known, and it was thought that all would be included within the limits of the reservation. The Government designed to own and hold exclusive control of these mines.

In January, 1818, the Territorial Legislature of Illinois, assembled at Kaskaskia, petitioned Congress for the admission of the Territory as a sovereign State, with a population of 40,000.

The petition was sent to Nathaniel Pope, the Territorial Delegate, by whom it was promptly presented, and it was referred to the proper committee, which instructed Mr. Pope to prepare and report a bill in accordance with its prayer. The bill, as drawn in accordance with these instructions, did not embrace the present area of Illinois, and, when it was reported to Congress, certain amendments proposed by Mr. Pope were reported with it. It was generally supposed that the line established by the ordinance of 1787, namely, the line drawn through the southern part of Lake Michigan, west to the Mississippi, was to be the northern boundary of the new State. But this, if adopted, would have left the port of Chicago in the Territory of Michigan, as well as all the territory now embraced within the limits of fourteen rich and populous counties in Northern Illinois. A critical examination of the ordinance, however, convinced Mr. Pope that Congress had the power, and could rightfully extend the northern boundary of the State as far beyond the line provided in 1787 as it pleased. The principal amendments proposed by Mr. Pope, therefore, were, first, that the northern boundary of the new State should be extended to the parallel of 42 deg. 30 min. north latitude—this would give a good harbor on Lake Michigan; and secondly, more important than the boundary line, to apply the 3 per cent fund arising from the sale of public lands to educational purposes, instead of making roads, as had been the case in Ohio and Indiana. These amendments were adopted without serious opposition, and Illinois was declared an independent State.

These important changes in the original bill, says Mr. Ford in his History of Illinois, "were proposed and carried through both houses of Congress by Mr. Pope on his own responsibility. The Territorial Legislature had not petitioned for them—no one had suggested them, but they met the general approval of the people." The change of the boundary line, however, suggested to Mr. Pope—from the fact that the boundary as defined by the ordinance of 1787, would have left Illinois without a harbor on Lake Michigan—did not meet the unqualified approval of the people in the northwestern part of the new State. For many years the northern boundary of the State was not definitely known, and the settlers in the northern tier of counties did not know whether they were in Illinois or Michigan Territory. Under the provisions of the ordinance of 1787, Wisconsin at one time laid claim to a portion of Northern Illinois, "including," says Mr. Ford, writing in 1847, "fourteen counties embracing the richest and most populous part of the State." October 27, 1827, nine years after the admission of the State, Dr. Horatio Newhall, who had then recently arrived at the Fever River Settlement, wrote to his brother as follows: "It is uncertain whether I am in the boundary of Illinois or Michigan, but direct your letters to Fever River, Ill., and they will come safely." In October, 1828, a petition was sent to Congress from the people of that part of Illinois lying north of the line established by the ordinance of 1787, and that part of the Territory of Michigan west of Lake Michigan, and comprehending the mining district known as the Fever River Lead Mines, praying for the formation of a new Territory. A bill had been introduced at the previous session of Congress for the establishment of a new Territory north of the State of Illinois, to be called "Huron Territory," upon which report had been made, *in part*, favorable to the wishes of the petitioners, but they asked for the re-establishment of the line as ordained by Congress in 1787. They declared "that the people inhabiting the territory northwest of the Ohio had a right to expect that the country lying north of an east-and-west line passing through the southernmost

end of Lake Michigan, to the Mississippi River, and between said lake, the Mississippi and the Canada line, would REMAIN TOGETHER" as a Territory and State. They claimed that this was a part of the compact, unchangeably granted by the people of the original States to the people who should inhabit the "territory northwest of the Ohio." They declared that the change of the chartered limits, when Illinois was made a State, was open invasion of their rights in a body when they were unrepresented in either territory; that "an unrepresented people, without their knowledge or consent, have been transferred from one sovereignty to another." They urged that the present "division of the miners by an ideal line, separating into different governments individuals intimately connected in similar pursuits, is embarrassing." They asked for "even-handed justice," and the restoration of their "chartered limits." The *Miners' Journal*, of October 25, 1828, which contains the full text of the petition, says: "We do not fully agree with the memorialists in petitioning Congress again to dispose of that tract of country which has once been granted to Illinois; but we think that it would be for the interest of the miners to be erected, together with the adjoining county above, into a separate Territory. And we firmly believe, too, that Congress departed from the clear and express terms of their own ordinance passed in the year 1787, when they granted to the State of Illinois nearly a degree and a half of latitude of the CHARTERED LIMITS of this country. Whether Congress will annex this tract to the new Territory, we much doubt, but we believe the ultimate decision of the United States Court will be, that the northern boundary line of the State of Illinois shall commence at the southernmost end of Lake Michigan." The petition was unavailing, and the northern line of Illinois remains unchanged, but the agitation of the subject by the people of this region continued. In 1840, the people of the counties north of the ordinance line sent delegates to a convention held at Rockford to take action in relation to the annexation of the tract north of that line to Wisconsin Territory, and it is said the scheme then discussed embraced an effort to make Galena the capital of the Territory. Resolutions were adopted requesting the Senators and Representatives in Congress for Illinois to exert their influence in favor of the project. The labors of the convention produced no results; but, until the admission of Wisconsin as a State, there was a strong feeling among the people of Northwestern Illinois that they rightfully belonged to Wisconsin, and there was a strong desire to be restored to their chartered limits. Perhaps the heavy debt with which Illinois was burdened at that time may have had some influence in causing the feeling.

St. Clair County, organized April 28, 1809, included the whole territory of Illinois and Wisconsin, to the line of Upper Canada, north of Randolph County, these two being the only counties in the territory.

Madison County was erected from the St. Clair, September 14, 1812, and comprised all the territory north of the second township line south, to the line of Upper Canada. County seat, Edwardsville.

Bond County was organized out of part of Madison, January 4, 1817, and extended in a strip about thirty miles wide on each side of the Third Principal Meridian to the northern boundary of the territory.

Pike County was erected January 31, 1821, from Madison, Bond and other counties, and embraced all the territory north of the Illinois River and its South Fork, now Kankakee River. This was the first county erected by the State of Illinois, which embraced the present territory of the lead region. A Gazetteer of Illinois and Wisconsin, published about 1822, says that the county "included a part of the lands appropriated by Congress for the payment of military bounties. The lands constituting that tract, are included within the peninsula of the Illinois and Mississippi, and extend on the meridian line passing through the mouth of the Illinois, 162 miles north. Pike County will no doubt be divided into several counties; some of which will become very wealthy and important. It is probable that the section about Fort Clark (now Peoria), will be most thickly settled. On the Mississippi River, above Rock River, lead ore is found in abundance. Pike County contains between 700 and 800 inhabitants. It is attached to the first judicial circuit, sends one member to the House of

Representatives, and, with Greene, one to the Senate. The county seat is Colesgrove, a post town. It was laid out in 1821, and is situated in Township 11 south, in Range 2 west of the Fourth Principal Meridian. Very little improvement has yet been made in this place or the vicinity. The situation is high and healthy, and it bids fair to become a place of some importance." This is all that is known of the town of Colesgrove, the county seat of all this region in 1821.

Fulton County was formed from Pike, January 28, 1823, and included all the territory north of the base line, and west of the Fourth Principal Meridian, which had been in Pike.

Peoria County was created from Fulton, January 13, 1825, and, with some exceptions, included the same territory that comprised Fulton. The county seat was Fort Clark, now Peoria, and the first election of which record exists, within the mining district, was in Fever River precinct of Peoria County, August 7, 1826. The election was held at the house of James Smith. This was the trading-post then recently located by Amos Farrar and occupied by Smith as a tavern; a double log-cabin that stood on the west bank of the river about half way between the foot of Perry and the foot of Franklin streets, Galena. Water street now passes over its site.

The following is a copy of a document found among the archives of Peoria County, at Peoria.

I hereby certify that Nehemiah Bates, T. W. Shull and Andrew Clamo, judges, and B. Gibson and Joseph Hardy, clerks of the election, were severally sworn before me as the law directs, previous to entering upon the duties of their respective offices.

Dated at Fever River, this 7th of August, 1826.

JOHN L. BOGARDUS,
Justice of the Peace of Peoria County.

There is a tax-list of 1826 on file at Peoria, containing two hundred and four names of men in the Fever River settlement, but the Deputy Collector who undertook to collect the taxes reported that the settlers openly defied him, and refused to pay a cent. This recalcitrant condition grew out of the uncertainty of to whom allegiance was due, as described in the foregoing pages. The people of the region from the first days to the present have been noted for their law-abiding character, with this exceptional exhibition of feeling.

The narrative of the political creation of the counties of Grant, Iowa and La Fayette, is pursued in the works devoted to those several counties by the Western Historical Company, and need not be detailed at this point.

R. H. MAGOON'S MEMOIRS.

His first visit to the lead mines was in August, 1828. He settled in Monticello, in the vicinity of the Galena lead mines in the following month. Capt. Benj. Funk, Thos. Wiley and R. H. Magoon band a band-mill at what is now Wiley's Grove, then called Funk's Grove, in Monticello. After seeing the mill in successful operation, Mr. Magoon went to the Blue Mounds, and, after a brief sojourn, entered into co-partnership with Esau Johnson and Henry Starr for the purpose of smelting. The enterprise proved a success. About December, 1829, he disposed of his interest in the business and returned to the Grove, now part of La Fayette County, but then erroneously accredited to Jo Daviess County, Ill. He re-engaged in the smelting business, having erected a furnace, which was completed about May 1, 1830. He subsequently made the discovery that he was nearly one mile within the boundaries of Michigan Territory. The United States Surveyors denominated his place of residence "Magoon's Grove," in deference to the proprietor. This likewise proving a successful year of smelting, he broke up twenty-five acres of prairie land, which he seeded down with forage supplies. In the early part of 1831, all the mineral in view was smelted, as Mr. Magoon, in anticipation of increased prices, was paying a higher rate per ton than others believed they could afford. This anticipation proved faithful, for, on the arrival of steamboats, lead advanced in figure. With the profit thus realized by his shrewdness, he invested in a stock of general merchandise, such as always finds ready sale in a miner's camp. In 1831, he fenced in a hundred acres of arable land, and extended his operations in ore to the absorption of his whole capital and \$8,000 borrowed from Robert Graham, of Galena.

The winter of 1831-32 was marked by Indian inroads, which, coupled with authenticated reports, presaged a bloody influx of the Sac and Fox tribes in the ensuing spring. These rumors were still further corroborated in May, 1832, by information that the British bands of Sac and Fox Indians had crossed the Upper Mississippi River, ascending Rock River, with the intention of effecting a union with the Pottawatomies, and inaugurating warfare against the whole race of whites. Fully aroused by the threatening aspect of affairs, every settlement of miners and farmers began to erect forts for their mutual protection. Every other business was abandoned, as of secondary consideration, until these improvements were fully achieved. When Funk's Fort was completed, R. H. Magoon was elected Captain, a position which he resigned in a few days, for the express purpose of joining a mounted corps, a branch of the service which he considered more effective in waging war with a fleet-footed foe. Benjamin Funk was elected to fill the vacancy. Moving in such hazardous times, and at no moment confident of

his own safety, he called upon Mr. Robert Graham and decided to that gentleman his entire estate as collateral for the loan of \$8,000. The transfer was reluctantly accepted by the capitalist, who vainly essayed to dissuade R. H. Magoon from his purpose.

This business satisfactorily accomplished, he removed his wife and three-months-old son to a place of safety in Galena. Then, arming himself, he joined an expedition under command of Col. Dodge that was setting out to reclaim and enter the bodies of St. Vrain and others, who had fallen in an encounter at Plum River. Parts of four companies composed the force, with a few independent volunteers who were starting forth to war on their own account. The first halt was made at Fetter's, a point nine miles from Gratiot. Before alighting, Col. Dodge strongly impressed on the rugged yeomen the necessity that existed for unanimity of action, and urged them to study discipline. The troop was then formed into a hollow square, and, on receiving orders to "Dismount," each man removed his saddle and laid it on the ground where he, dismounted, and turned his horse out to graze. The orders were, that if an alarm was sounded during the night, each man should spring up in his place, and thus be formed in hollow square, to repel an attack.

The line of march was resumed in the morning, and, later in the day, the bodies of St. Vrain and three companions were found and properly buried. One of St. Vrain's number, a Mr. Hawley, was not found. The march was continued on to Dixon's Ferry, on Rock River, where Mr. Magoon was assigned as Second Lieutenant of Capt. Clark's company of mounted volunteers, and in that capacity assisted, with an escort of twenty-five men, to conduct Gen. Brady to Ottawa. Col. Dodge was in command. The journey and return trip was accomplished in immunity.

The camping-place selected was the very spot where St. Vrain and his men encamped the night before they met their fate. At Kellogg's Grove they encountered Capt. A. W. Snyder and his company, from St. Clair, Ill. Capt. Snyder reported that they had a brush with the Indians several hours previous, and, despite the assistance afforded by Gen. Samuel Whiteside, a portion of his command was sadly demoralized at a sight of the Indians. At the close of the conflict, it was found that several of the Illinois men were killed, whereas their foes escaped almost unscathed.

Before arriving at Gratiot's Grove, a halt was made to graze the horses. No provisions were visible for the bodily support of the soldiers. They were placed in a quandary for a time, not knowing how to remedy the omission. In the vicinity was Fetter's deserted house, and, while wandering around the premises, one of the men descried a huge, rusty iron kettle. Summoning assistance, the kettle was cleaned out and filled with mustard greens, from which they expected to sup sumptuously. Alas for the hopes of men! When the mess was boiled, it proved unpalatable and nauseating. Arriving at Gratiot's Grove, Col. Dodge informed the volunteers that they had covered two hundred miles in five days, thus averaging forty miles a day. May, 1832, was occupied in general skirmishing and guerrilla warfare, which permitted the utilization of Col. Dodge's 200 mounted men. The united strength of the Sacs, Foxes, Winnebagoes and Pottawatomies, was 600 warriors, a force that could have annihilated the gallant miners had they met in a pitched battle. When the mounted men were dispatched to Ottawa, Black Hawk, who had been reconnoitering the white men's position, realized the serious error committed, and instructed Little Priest to make a descent on Fort Hamilton.

Little Priest and his war party invaded Spafford's farm and killed four out of six men entrenched in an open corn-field. One of the men, named Spencer, effected his escape by concealing himself during the fight. The other fortunate was a Mr. Million, whose fleetness enabled him to outstrip his pursuers, and bring the awful tidings to Fort Hamilton. The information was thence disseminated by couriers among the different forts. On the 15th of June, Apple, a resident of the fort, was found dead within half a mile of the fort, bearing unmistakable signs of a murderous attack by the Indians. The exigency of the occasion demanded immediate and energetic action. A pursuing party was organized. Little Priest attempted evasive tactics, but, being hotly pressed, was compelled to ambush himself where the ground inequalities gave

him the vantage. The whites charged valiantly in a sweeping fire, that inspired each man to greater action. The position was captured, and every Indian ruthlessly slain, with the same degree of mercy that they had meted out to their white victims. Not a soul escaped to narrate in the wigwam the desperate struggle. About June 20, word was received by Capt. Clark that the fort at Blue Mounds was besieged. To "boot and saddle" was quickly sounded, and all available mounted men were marched to the threatened locality. A halt was made at Porter's Grove, six miles west of Blue Mounds, and on consultation the march was continued through the night. Nearing the objective point, the mutilated body of Lieut. George Force was found, the remains were carefully collected, and, with a blanket for a shroud, laid in a grave on the open prairie. A parade was held on the ridge, and, in the unanimous opinion of the people of the fort, the Sacs were far the more numerous. The march south was continued to Willow Springs, where they camped were driven for the night. During the night the startling intelligence was received that a large party had appeared from the direction of Pecatonica, and were marching toward Apple River Fort, on the site of the present town of Elizabeth. Capt. Clark instantly ordered the company to saddle, a feat that involved nearly an hour's time, owing to the dense darkness prevailing. They set out upon a forced march, and had proceeded seven miles beyond White Oak Springs, when overtaken by an express messenger, who related the capture of Apple River Fort. He alleged that when approaching the fort that morning, and when within plain sight, he had seen two hundred red demons charging on the fort. The fire was active and incessant for a time, and then ceased altogether. Despairing of the fate of the garrison, he had hastened to convey the information to Capt. Clark, whom he had expected to meet at White Oak Springs. Capt. Clark and Lieut. Magoon, after a hasty consultation, concluded to re-enforce White Oak Springs, and to notify the commanders of Fort Gratiot and Fort Funk to maintain a vigilant guard, and forward any fresh intelligence of the aborigines' movements. The mounted company clamored loudly to be brought face to face with Black Hawk and his braves, so as to wreak on them a terrible and sanguinary vengeance. Capt. Clark departed to alarm the habitues of Fort Gratiot of their danger, leaving Lieut. Magoon in charge. That officer caused every man to test his rifle, wipe it out and reload for fresh service. These movements were only completed when two men, attached to Funk's Fort, arrived, saying that the Indians were marching on that place, and when last observed were within three miles and still approaching. Supported by eleven volunteers, Lieut. Magoon made all haste toward the Fort, which he reached without adventure. No Indians were in sight, and, on prosecuting inquiry, it was rendered obvious that a foe only existed in the excited imaginations of the Orderly Sergeant, who, mistaking a scouting party from a neighboring post for Indians, sounded a premature alarm. In the morning, great relief was experienced on learning that Apple River Fort was intact, Capt. Stone having effectually scattered the enemy, who beat a precipitate retreat toward the east. An order was received from Col. Dodge, in the afternoon, directing that a messenger should be dispatched to Kellogg's Grove to inform them there that the trail of a large war party was visible two miles north of his station, and warning them to maintain a strict guard in the absence of volunteers. Capt. Funk and Jacob Duval bore the dispatch to its destination. Maj. Dement, of Kellogg's Grove, sent out scouts in the morning. They quickly returned with a cry of "Indians." General excitement prevailed; every one in the camp was astir. All semblance of order was lost, and Maj. Dement vainly strove to organize his battalion out of this disturbed rabble. They all sallied forth regardless of order, some on horseback, and others, too eager for the fray to catch their horses, on foot. Unopposed they advanced until Black Hawk and his sterling warriors emerged from cover, uttered their war whoop, and charged on the disorderly mob. The whites retreated in overwhelming disorder, in many instances the infantry being trod under foot by their own cavalry. Maj. Dement exerted himself to the utmost of his ability to restore a semblance of order, but his praiseworthy efforts were unavailing. The troops fell back on the houses, wherein they sought shelter from the well-directed missiles of Black Hawk's sharpshooters. Maj. Dement, irritated at defeat, remained outside the protecting walls, and angrily strode up and down the path. Not until a well-

directed bullet from the enemy passed through his hat was Maj. Dement induced to seek shelter at the importunities of his friends. The Indians continued firing on the house until finally, tired of this amusement, they crossed the prairie to the east, and disappeared in the Yellow Creek timber. The damage inflicted by this visitation was the loss of fifty horses, shot dead or crippled.

The following evening, Capt. Clark was handed a dispatch from Col. Dodge, ordering him to proceed to Fort Hamilton, and, after drawing ten days' rations, join the regiment then preparing to march on Black Hawk. No rations were visible at Fort Hamilton, and, weary and hungry, the mining regiment had to make the best of its way to headquarters, where no remedy existed for their complaints. A brace of tough plow oxen were killed for their benefit, but this "bull beef" could not be masticated by the strongest man. Capt. James A. Stephenson was elected Lieutenant Colonel, and, the plans of the campaign having been matured, the route of march was taken up. Progress was extremely slow, owing to the numerous marshes which intersected their path having to be bridged to enable the passage of artillery. So tardy was the march that Black Hawk defiantly boasted that "he could go before the white heard (Gen. Atkinson) and raise corn." Half famished, and driven to the verge of desperation by hunger, the miners petitioned Lieut. Col. Stephenson to permit them to advance to Fort Winnebago to obtain supplies. The request was complied with, under the express stipulation that the mounted company should return by the same route. Alexander and Henry's brigade and Col. Dodge's regiment were included in this order. Arriving at the fort, Clark's company enjoyed their first meal for ten days. On proposing to return to the main body, much rebellious discussion was aroused, as the men, one and all, were opposed to the snail-like progress of the regular army, preferring to march to the head-waters of Rock River, in hopes of overtaking and chastising the Indian chief. Col. Dodge, although expressing doubts of their ability to master Black Hawk, freely promised to accompany them. After reflection, Gen. Henry promised to cast his lot with the mining regiment in pursuit of Black Hawk.

An incident of the campaign will serve to illustrate some of the difficulties the miners had to submit to. Prior to marching up the Rock River country, two barrels of flour were served out to each company. By design or oversight the two barrels served to Clark's corps were musty and sour. Col. Dodge refused to replace them with flour of palatable quality. On being acquainted with the refusal, Lieut. Magoon selected a file of his best men, and, marching to the staff quarters, deliberately bore off the precious goods. This peremptory course, becoming known to the officers of the staff, caused some comment, but, beyond a feeble demur, no action was taken. Having thus secured rations, the line of march was taken up. On the second day, about 4 o'clock in the afternoon, it began to rain, and maintained a constant downpour until midnight. Tents were unknown luxuries to these hardy pioneers, who camped down in the grass with saddles for pillows and the weeping heavens for covering. As might have been expected, in the morning the men arose, dripping wet, and resumed their ordinary duties. In course of time, the miners arrived at the rapids near Whitewater, below Horicon Lake, and, after crossing to the east side, a halt was called. During that halt, Lieut. Magoon became acquainted with Abraham Lincoln. The place where the troops halted was in an open grove of sugar-trees, with a thick undergrowth of red raspberry bushes. In riding along the border of this patch, the Lieutenant came to an opening, where he could see a dwarfish Indian slowly walking around a very tall, lean white man. As the Lieutenant halted to observe the ludicrous appearance of the pair, the white man noticed the actions of the Indian, and remarked to his visitor, "I wonder what the little Indian wants?" Lieut. Magoon replied, "I suppose he is taking your altitude; see how he cocks up his eye as he goes round." Further conversation led to an exchange of names, the future President of the United States giving his cognomen as "Abraham Lincoln, of Springfield, Ill." Referring to this informal introduction, Lieut. Magoon says: "They met frequently after the war, and often spoke of our first acquaintance, and of the little Indian cocking up one eye at him."

From this grove they marched up Rock River a few miles, then recrossed and bivouacked for the night. Shortly after, an express arrived in camp from Gen. Atkinson, reporting that

Black Hawk's trail had been discovered below where we first crossed Rock River. The track was retraced, and the pursuit became exciting. On all sides in the vicinity of the trail, the Indians had dug spikenard, which vouched for their being famine stricken. Subsequent developments rendered safe the conjecture that no white army could have been kept banded together under a similar train of adverse circumstances. After several days of close pursuit, the scouts reported, at about 6 o'clock in the evening, that the enemy's rear was in view, a short distance in front. The soldiers were in a timber thicket on the north side of Second Lake, northeast of Madison, on the margin of a creek, the banks of which were thick set with brush. It was resolved to camp for the night and devote the whole of the ensuing day to routing and demoralizing Black Hawk's forces. The camp was early astir, breakfast was gulped hurriedly, and accouterments donned so as to be prepared at a moment's notice. The morning wore away without any command being issued, and the impatience of the men manifested itself in murmuring at the protracted delay. At 9 o'clock, orders were issued to mount. The order of march was Ewing's battalion in the lead, the mounted miners, and then Gen. Henry's regiment. They crossed the creek, and were marching over the present site of Madison, when a gunshot was heard on the banks of the lake, to the left. In a few minutes the shot was explained by the appearance of the regimental surgeon bearing in his hand a trophy in the shape of a fresh Indian scalp, reeking with blood. He had surprised the Indian trying to draw a bead on some ducks, and had popped him on the spot. Seeing the Indian fall, he rushed from cover, and, gaining possession of his tomahawk and scalping-knife, began to rend the scalp from the head. The pain partially revived the victim, who muttered some words in his native guttural, which elicited from the surgeon the following: "If you don't like being scalped with a dull knife, why didn't you keep a better one?" He then dispatched the Indian and returned to camp.

The army continued the march on the trail which followed around the south side of the upper lake. They had camped on the southwest side of the lake, and their cold camp-fires showed they had several hours' move of the soldiers. Hitherto the march had been conducted at a walking pace, and now it was altered to a quick trot. After passing over a distance of four miles, a solitary Indian was discovered ahead on the trail. Col. Dodge ordered ten men from Capt. Clark's detachment to advance and kill him. With cocked rifles, the detail advanced. Learning of their presence and his prospective fate, the Indian stoically retreated to a tree, where he steadied his rifle, and, after taking deliberate aim, fired. Clark's men replied with a volley, which they followed up with a bayonet charge. The Indian seized the nearest bayonet in his naked hands and attempted to wrest it from the soldier, who, by a powerful effort threw the Indian, face down, on the ground. With great agility he recovered his position, and again seizing the bayonet. He was forced to release his grasp, and the weapon descended with such force as to penetrate through the body and pin it to the ground. The hapless Indian struggled to release himself, but the brutal volunteer sprang on the body, and, with merciless ferocity, extracted the bayonet and inflicted seven additional thrusts through the body. A parcel enveloped in the folds of an antiquated blanket composed a portion of the Indian's equipment, but no man had the temerity to investigate the contents, fearing contagion or vermin. In the next fall, a hunter named Rowan visited the scene, and, prompted by curiosity, opened the package, which displayed to his astonished gaze the gold watch owned by Lieut. Force at the time of his death at Blue Mounds. The Indian's rifle had been charged with six rifle-balls, the entire number lodging in the thigh of a soldier named Isam Hardin. Two hours subsequently a view was had of thirty mounted Indians, about eighty rods to the left. One of Henry's regiments was detached to follow them, while the main body continued on the trail. This troop of mounted Indians were making in a southerly direction, while the others were continuing due west. Fearing a decoy, Henry's regiment was re-called, and the whole army descended into a valley opening toward the Wisconsin River. The march was continued cautiously, the scouts maintaining a lead of thirty rods. As the army defiled down the valley, the width increased and the bank on the right dwindled in proportions until equalized with the surrounding surface. At this natural outlet, the alarm was communicated from the scouts, who shouted, "Here they come, thick as bees."

Col. Dodge, in a cool tone, ordered his forces to "dismount and form line." The order was executed in a trice. The next command was, "Advance to the top of that eminence." From the elevated range a good view could be obtained. Here the scouts were retreating down the valley, vigorously applying whip and spurs, to escape a score of Indians in pursuit. Capt. Clark opened column to admit the passage of the scouts, and then, forming line, presented a solid front to the foe, which had approached within six rods. A volley was fired, and one Indian bit the dust. The Galena company, with a well-directed fire, demoralized the enemy, who fled in dismay to a safe position behind a ridge forty rods distant. Col. Dodge ordered his men not to expose themselves or to expend a single shot without a sure target. The only wounded was Capt. Parkinson, Second Lieutenant, who received a bullet in the thigh. An inspection of arms followed, when the rifles were cleaned and priming renewed. Col. Dodge then ordered the charge, and the force advanced with eager rapidity, without encountering any obstacles. On arriving at the brow of the bluff, they were saluted by a volley, which passed over their heads. On the return fire six Indians fell, and the remainder retreated at the top of their speed. In the meantime, another party of Indians had outflanked Capt. Clark, who, by a well-directed charge, coupled with the skillful maneuvering of his company, averted a disaster and routed his opponents. They fled for a swamp of tall grass cane, which afforded them suitable shelter and covered their retreat to the opposite bank, where they emerged and disappeared in the woods. Owing to the late hour, it was deemed advisable to postpone the chase and recuperate for the night in camp. When another day was heralded in, the enemy had disappeared, having, during the night, beat a hasty retreat across the Wisconsin River, without removing their lodges. A short journey brought into sight Black Hawk's camp on the west side of the Wisconsin River, about half a mile off. His camp was much larger than the camp of the military, and in the struggle of the preceding day the whites must have been greatly outnumbered. It was then decided to return to Blue Mounds. To facilitate the transportation of the three wounded soldiers—Isam Hardin, Robert McGee and Enoch Nevill—litters were prepared from the materials of a tent presented by Maj. W. L. D. Ewing to Capt. Clark's company. The loss was one killed and eight wounded. The return journey to Blue Mounds was tedious, owing to general ignorance of the topography of the country. To gain a rest rendered necessary by a month of incessant toil, day and night, the miners removed to White Oak Springs. Here the first information of the battle of Bad Axe, which occurred August 22, was received. This pleasant news was rapidly succeeded by an invitation for an Indian treaty at Rock Island, where a general peace was concluded. The war being terminated, the different military divisions were discharged, with the exception of Capt. Clark's and Capt. Gentry's companies, which were held in reserve. When the treaty of Rock Island was concluded, the miners were notified of their discharge from the Federal service, the Government having no further need for their services. By an infamous arrangement of the commanding officer of the forces, Col. Dodge, the two mining companies known respectively as Capt. Clark's and Capt. Gentry's men, were forced to assume the expenses of their own corps during the campaign. The sum of over \$4,000 was accordingly deducted from the pay of the men by the Paymaster, acting under orders from Col. Dodge. Having been involved in war for five months, ending in the Fall of 1832, Lieut. Magoon returned to commercial life, as, during his absence, his financial affairs had suffered. To add to his misfortunes, Robert Graham, his heaviest creditor, succumbed to the cholera, and the estate reverted to an administrator, who was inflexible in his demands. The years 1833, 1834 and 1835 were highly profitable, and successful to such a degree that he speedily regained his independent rank in finance.

In 1836, Lieut. Magoon opened a large store of dry goods and groceries in the village of White Oak Springs. One mile east of the village, he long operated an ash furnace for smelting slag as well as mineral. His store in Monticello and his furnaces there he also operated at a remunerative profit. He sold out his store in White Oak Springs in 1837, closed his ash furnace, near by, in 1840, and closed his store and furnaces in Monticello in 1842. Continued to reside on his large farm in Monticello, which he adorned with extensive improvements till

BOSCOBEL.

1853, when he removed to Scales' Mound Township, Jo Daviess County, Ill., where he resided till his death, July 28, 1875, aged seventy-six.

Lieut. Richard H. Magoon, we here state, was a man of greatest energy and integrity in business; repeatedly, from 1829 to 1836, rode on horseback from his furnaces in Wisconsin, four hundred miles, to St. Louis, through storm and cold, swimming rivers, the saddle at night his pillow, and often the sky his only covering. His grave is in the cemetery at Darlington. He had his faults, but, looking back upon his forty-seven years all crowded with business in the mines, he could have made the honest boast, that, although cast amid the license of a new country, he never visited a gaming-table, never deserted a needy friend, never liked a negro, intensely despised the lazy, invincibly kept his word of honor bright, and his contracts to others always at par with gold.

STILLMAN'S DEFEAT—KINGSTON'S NARRATIVE.

Soon after the appearance of Gov. Reynolds' order calling for troops, a force of nearly two thousand men had been assembled near the mouth of Rock River. Included in this force was a regiment of about four hundred men under Col. Stillman. Between Stillman's force and the band of Black Hawk was fought the first battle of the Sauk war, which affair resulted most disastrously to the whites. Three or four days after the battle, Stillman and his men came into Ottawa, Ill., and a more sorry looking set could not have been found. From the various, and, in some instances, conflicting accounts, gathered from the men, it appears the following are about the facts with regard to the battle of the "Sycamores."

About the middle of the afternoon, on the day of the battle, the regiment had halted for the purpose of encamping for the night. Nearly all the horses had been picketed out, turned loose or otherwise disposed of. The men were lazily engaged about camp, some gathering wood, pitching tents, etc., and others drinking whisky, of which they had an abundance in camp, and to save time they knocked in the heads of the barrels containing it. But, suddenly, a great commotion arose! Three Indians had made their appearance on the open prairie a short distance in advance. The cry was now raised, "Every man draw his rations of Sauks." Then the rush commenced; the first man to mount his horse and give chase was the best fellow; pell-mell was the order of march. This order, or rather disorder, continued for some distance, probably two or three miles. Two of the Indians were overtaken on the prairie and killed. At length, the rear of the army reached the Sycamore, a small stream on the outskirts of a grove of timber. Here they met the van in the same disgraceful order, in full retreat, and the whole body of Indians in hot pursuit. The whole direction of things had suddenly changed; these men, who a few moments before were so anxious to pursue an enemy, were now more anxious to escape. Amid this confusion, Capt. Adams, with a company from Peoria, succeeded in crossing the creek, and took a position between the fugitives and the Indians. This position they held for some time against the whole force of the enemy, and no doubt saved the lives of many. This, however, was not accomplished without severe loss. Capt. Adams and about one-fourth of his men were left dead on the field.

There was no longer any uncertainty. The Indians separated their force into small bands, and numerous reports of sudden attacks and massacres, some true and others false, came in from various surrounding points.

The evening of the day previous to the arrival of Stillman and his men at Ottawa, the Indian massacre occurred on Indian Creek, about fourteen miles distant from that place. It has been stated that all the whites present at the time of the massacre, except the two Misses Hall, taken prisoners, were killed. This statement is not correct. The first intelligence received at Ottawa of that event was brought in by a young man, a brother of the Misses Hall, who was present at the commencement of the attack, and who arrived at Ottawa about midnight; but his mind was so much confused by the fright that he was unable to give any connected statement of the facts until the next day. From his statement, it appears that the wagons containing the furniture and effects of the families were not yet unladen when the Indians made the attack. In

the morning of the same day on which the occurrence transpired, the three families of Hall, Pettigrew and Davis, had, upon warning received from Shabbona, a Pottawotamie chief, that "The Sauks were coming," fled to Ottawa, the nearest settlement. Davis was not at home at the time; but when he reached there a short time after the families had left, he followed them to Ottawa, where he arrived about the same time they reached that place. He at once declared his determination to take his family back home; and most unfortunately, and against the unanimous admonition of all the inhabitants, prevailed upon Hall and Pettigrew to accompany him with their families; and they had only just arrived at Davis' house late in the afternoon, when the Indians came upon them. At the moment of the attack, Davis and young Hall were in the blacksmith-shop. Davis was fixing his gun, and, at the same time, had the barrel of the gun separate from the stock. When the alarm was given, he rushed out of the shop with the gun-barrel in his hands, and was immediately surrounded by the Indians. Young Hall ran to the creek, a few yards distant, jumped down the bank, and, taking the downward course of the stream, reached Ottawa the same night. The Misses Hall afterward said that Davis killed six Indians before he was finally overcome.

In the afternoon of the day following this massacre, a company of men from Ottawa, accompanied by some of Stillman's command, went to the scene of the murder, and the accounts they gave, on their return, of the appearance in and around the house was horrible in the extreme. Even little infants were literally cut to pieces; and this, too, was done in the immediate presence, and, doubtless, with the sanction of Black Hawk himself.

HISTORY OF GRANT COUNTY.

CHAPTER I.

LOCATION AND BOUNDARIES—THE NATURAL DRAINAGE—THE MOUND-BUILDERS—MOSES STRONG'S OBSERVATIONS ON THE PRE-HISTORIC MOUNDS OF GRANT COUNTY.

LOCATION AND BOUNDARIES.

This county is situated in the extreme southwest corner of the State, its boundaries being thus described: "Beginning at the southwest corner of this State (Wisconsin), running thence east on the boundary line of the State to the Fourth Principal Meridian; thence north on said Meridian to the middle of the main channel of said Wisconsin River, to the mouth thereof; thence southerly on the boundary line of the State, in the middle of the main channel of the Mississippi River, to the place of beginning." The county is, therefore, bounded on the south by the State of Illinois, on the east by the counties of La Fayette and Iowa, on the north by the county of Crawford and a portion of Richland County, and on the west by the State of Iowa.

Grant County is, next to Dane, the largest of the older-settled counties of the State, and, in population, stands seventh on the list of counties. Its length in the longest part is somewhat over forty-eight miles, while its width in the widest part is about thirty-six miles. This extreme length and width, however, is reached only in certain portions, as, upon its southern boundary line, the county is between eleven and twelve miles in width, while the western portion is but a trifle over seventeen miles in length, diminishing upon the extreme northwest portion, in the town of Wyalusing, to between six and seven miles. In fact, the configuration of Grant County conforms somewhat to the figure of an isosceles triangle, of which its eastern boundary line would form the base.

THE NATURAL DRAINAGE.

Grant County is divided, by an elongated elevation known as Military Ridge, into two drainage systems, those streams to the north flowing into the Wisconsin, while the southern streams empty into the Mississippi. This ridge, which divides the county, so to speak, into two unequal portions, starts from the Blue Mounds in Iowa County, and extends westward in an almost direct east and west line nearly to Prairie du Chien, a distance of about sixty miles. Along this water-shed was built the military road running from Fond du Lac to Prairie du Chien, and from which it takes the warlike appellation which it retains to this day. The distance from the water-shed to the Wisconsin on the north is but from twelve to fifteen miles, and, as a consequence, the streams on this side are small and have a rapid descent. Another peculiarity of these streams is noticeable, namely, that the bluffs which skirt their shores are higher and more precipitous than those streams of a similar size on the southern side of the water-shed, owing, it would seem, to their rapid fall. Thus, the Blue River, near Wingville, on its very head-waters, has its valleys hemmed in by lofty walls of almost perpendicular rock, more than 100 feet in height. With the exception of this last-named river, all the streams in this section have their sources in the county. In none of these is the volume of water so great as formerly.

This diminution has, in rare instances, been so great as to necessitate the abandonment of mill sites, where, in early times, plenty of water was to be had. This is undoubtedly chargeable in part, if not wholly, to the gradual settlement of the country, by which means the ground has been transformed, in course of time, to a hard and compact mass, where formerly it was loose and spongy, forming numerous subterranean reservoirs for the constant replenishing of the brawling streamlets.

The Wisconsin.—This stream, into which empties all those streams that drain the northern portion of the county, and which itself is the most important of those that drain the elevated lands of the State, has a length, from its source to its mouth, of about 450 miles. It forms, with its valley, the main topographical feature of Central Wisconsin. Rising in Lac Vieux Desert, on the summit of the Archæan water-shed, at an elevation of 951 feet above Lake Michigan, it pursues a general course for 300 miles, over the crystalline rocks, and then, passing on to the sandstones which form its bed for the remainder of its course, continues to the southward some eighty miles more. Turning then westward, it reaches the Mississippi within forty miles of the south line of the State, at an elevation of only thirty feet above Lake Michigan, so that its fall from Lac Vieux Desert is 921 feet, an average of a fraction over two feet to the mile. Like all other streams which run to the south, southeast and southwest, from the crystalline rocks, it has its quite distinct upper or crystalline rock portion, and its lower or sandstone portion. This river, however, may be regarded as having three distinct sections, the first including all that part from the source to the last appearance of crystalline rocks in the bed of the stream, in the southern part of Wood County; the second, that part from this point to the Dells, on the south line of Adams and Juneau Counties, and the third, that portion from the Dells to the mouth of the stream. The first of these divisions is broken constantly by rapids and falls, caused by the descent south of the Archæan area, and by the obstructions produced by the combined ledges of rock which cross the stream. The second and third sections are alike in being almost entirely without rapids or falls, and in the nature of the red rock, but are separated by the contracted gorge known as the Dells, which, acting in some sort as a dam, prevents any considerable rise in the river below, the water above not unfrequently rising as much as fifty feet in flood seasons, whilst below the extreme fluctuation does not exceed ten feet. The total length of the Archæan upper sandstone and lower sandstone sections of the river are respectively 250, 62 and 130 miles, the distance through the Dells being about seven and one-half miles.

The width of the river, where it enters Marathon County, is from 300 to 500 feet. In its course through Portage County, the Wisconsin flows through a densely-timbered country, and has, except where it makes rapids or passes through rock gorges on either side, a narrow bottom-land, which varies in width, is usually raised but a few feet above the water level, and is wider on one side than on the other. Above this bottom, terraces can be often made out, with surfaces, in some cases, one or two miles in width. Above, again, the country surface rises steadily to the dividing ridges on either side, never showing the bluff edges, so characteristic of the lower reaches of the river. Heavy rapids and falls are made at Wausau (Big Bull Falls), at Mosinee (Little Bull Falls), at Stevens' Point and at Conant's Rapids; all but the last named of these are increased in height by artificial dams. Two miles below the foot of Conant's Rapids, just after receiving the Plover River on the east, the Wisconsin turns a right angle to the west, and enters upon the sparsely-timbered sand plains, through which it flows for 100 miles. At the bend, the river is quiet, with high banks of sand and a few low outcrops of gneiss at the water's edge. From the bend, the course is westward about nine miles; then, after curving southward again, the long series of rapids soon begins, which, with intervening stretches of still water, extend about fifteen miles along the river to the last rapid at Point Bass, in southern Wood County.

East of the river line, between Grand Rapids and Point Bass, the country rises gradually, reaching altitudes of 100 feet above the river, at points ten or fifteen miles distant. On the west, the surface is an almost level plain, descending gradually as the river is receded from. At

Point Bass, gneissic rocks disappear beneath the sandstones, which, for some miles, have formed the upper portion of the river banks, and now become, in turn, the bed rock, and the first division of the river's course ends. The main tributaries which it has received, down to this point, are on the left bank—the Big Eau Claire, the Little Eau Claire and the Big Plover. On the right bank, the Placota or Big Rib, the She-she-ga-ma-isk or Big Eau Pleine, and the Little Eau Pleine. All of these streams are of considerable size, and drain large areas. They all make much southing in their courses, so that their lengths are greater than the actual distances from the sources to the Wisconsin at the nearest point, and all of them have a very considerable descent, making many rapids and falls over the tilted edges of schistose and gneissic rocks, even down to within short distances of their junction with the main river. The streams on the west side head on the high country along the line of the Fourth Principal Meridian, about forty miles west of the Wisconsin, and at elevations of from 200 to 300 feet above their mouths. Those on the east head on the divide, between the Wisconsin and Wolf, about twenty miles east, at elevations not very much less. Reaching back, as these streams do, into a country largely timbered with pine, and having so large a descent, they are of great value for logging and milling purposes.

The second section of the Wisconsin River begins at Point Bass, with a width of from seven hundred to nine hundred feet. The next sixty miles of its course, to the head of the Dells, is a southerly stretch with a wide bow to the westward, through sand plains here and there timbered with dwarf oaks, and interspersed with marshes. These plains stretch away to the east and west for twenty miles, from the river bottom gradually rising in both directions. Scattered over them at intervals of one to ten miles, are erosion peaks of sandstone, from fifty to three hundred feet in height, rising precipitously from the level ground. Some of these are near and on the bank of the river, which is also in some places bordered by low, mural exposures of the same sandstone. The river itself is constantly obstructed by shifting sand bars, resulting from the ancient disintegration of the sandstone, which, in the vicinity, everywhere forms the basement rock; but its course is not interrupted by rock-rapids. As it nears the northern line of Columbia County, the high ground that limits the sand plain on the west, curving southeastward, finally reaches the edge of the stream, which, by its southeastwardly course for the last twenty miles, has itself approached the high ground on the east. The two ridges thus closing in upon the river, have caused it to cut for itself the deep, narrow gorge known as the Dells.

In the second section of its course, the Wisconsin receives several important tributaries. Of those on the east, the principal ones are Duck Creek and Ten Mile Creek, in the southern part of Wood County; and the little and big Roche-a-Cris Creeks, both in Adams County. The two former head in a large marsh twenty-five miles east of, and over one hundred feet above, the main stream. The two latter head on the high dividing ridge, on the west line of Waushara County, at elevations between one hundred and fifty and two hundred feet above their mouths. These streams do not pass through a timbered country, but have very valuable water-powers. Of those tributaries on the west, two are large and important, the Yellow and Lemonweir Rivers. Yellow River heads in the adjoining corners of Wood, Jackson and Clark Counties, and runs a general southerly course, nearly parallel to the Wisconsin for over seventy miles, the two gradually approaching and joining each other about the center of Juneau and Adams Counties. The upper portions of this river extend into the pine regions, and much logging is done in times of high-water. The water-powers are of great value. The Lemonweir is also a large stream. Heading in a timbered region, in the southeast corner of Jackson County, it flows southward for some distance through Monroe, and entering Juneau on the middle of its west side, crosses it in a southeastwardly direction, reaching the Wisconsin in the lower portion of the county.

The Wisconsin enters the gorge already spoken of as the Dells not far above the southern boundary line of Juneau and Adams Counties. This famous passage of about seven and one-half miles, has been often described. At its foot, between the counties of Sauk and Columbia,

the Wisconsin enters upon the last section of its course, and also upon the most remarkable bend in its whole length. Through the Dells its general course is southward, but it now turns almost due east, in which direction it continues, with one or two subordinate turns southward, for about seventeen miles, through low sand banks as far as Portage. Here it bends abruptly south again, and, reaching its most eastern point not far below, soon swerves around into the final southwestward stretch to the Mississippi. The cause of this long detour to the east is sufficiently evident. As the river leaves the Dells, it finds lying directly athwart its course two bold quartzite ranges, extending east and west through Sauk County for upward of twenty miles, and, crossing into Columbia, finally unite about eight miles east of the county line in a sharp and bold eastwardly projecting point, rising four hundred feet above the river bottom. Above Portage, where the Wisconsin forms the southern boundary line of the town of Lewiston, the ground immediately north is lower than the water in the river; the heads of Neenah Creek, a tributary of the Fox, rising a short distance from its banks. In times of high water the Wisconsin overflows into these streams, and thus contributes to a totally different river. At Portage, the Fox, after flowing south of west for twenty miles, approaches the Wisconsin, coming from the opposite direction. Where the two streams are nearest they are less than two miles apart, and are separated by a low, sandy plain, the water in the Fox being five feet below that in the Wisconsin at ordinary stages. The greater part of this low ground is overflowed by the latter stream in times of high water, and to this is chiefly due the spring rise in Fox River.

After doubling the eastern end of the quartzite ranges, as already said, the Wisconsin turns again to the West, being forced to this by infringing on the north side of a high belt of limestone country, which, after trending southward across the eastern part of Columbia County, veers gradually to a westwardly direction, lying to the south of the river along the rest of its course. Soon after striking this limestone region, the river valley assumes an altogether new character, which it retains to its mouth, having now a nearly level, for the most part treeless bottom, from three to six miles in width, ten to thirty feet in height, usually more on one side than the other, and bounded on both sides by bold and often precipitous bluffs one hundred to three hundred and fifty feet in height, of sandstone capped with limestone. Immediately along the water's edge is usually a narrow timbered strip, rising two to four feet above the river, which is overflowed at high water. The line of bluffs along the north side of the valley is the northern edge of this high limestone belt just mentioned, which reaches its greatest elevation ten to fifteen miles south of this edge. In front of the main bluff face, especially in its eastern extension, are frequently to be seen bold and high isolated outlines of the limestone country. On the north bank the bluffs are at first the edges of similar large, outlying masses, but farther down they become more continuous, the river crossing over the northwestward trending-out cross-line of the Lower Magnesian Limestone.

In this last section of its course, the Wisconsin is much obstructed by bars of shifting sand, derived originally from the erosion of the great sandstone formation which underlies the whole region, and to whose existence the unusual amount of obstruction of this kind in the river is due. The altitude of the water surface of the Wisconsin at Lac Vieux Desert above Lake Michigan is 911 feet; at Warsaw, above dam, 623 feet; at Knowlton (high), 538 feet, (low) 523 feet; at Stevens' Point, 485 feet; at Conant's Rapids, 468 feet; at Grand Rapids, railroad bridge, 420 feet; at Kilbourn City, railroad bridge, 233 feet; at Portage, 211 feet; at Merrimack, 182 feet; at Sank City, 165 feet; at Spring Green bridge, 134 feet; at Muscoda, 115 feet; at the mouth of the stream, 34 feet. The average velocity of the river below Portage is remarkably uniform, and is just about two miles an hour. The daily discharges of the river at Portage, in times of extremely low water is about two hundred and fifty-nine million cubic feet. The average fall of the water surface of the river below Portage is one and one-half feet per mile. This rapid fall, were it not for the great amount of sand in the river bed, would make the stream a series of pools and rock rapids.

Platte River.—The Platte finds its source in the northern part of Clifton Township, and flows thence in a general southerly course until it empties into the Mississippi in the extreme

southeast corner of Potosi Township. This river is often inclosed during its course by hills gently sloping on one side, and quite precipitous on the other. This feature is more especially noticeable near its mouth. Its volume is much increased during the latter portion of its course by the waters of the Little Platte, which stream, rising in the southern part of Clifton Township but a few miles from the source of its elder brother, passes down in a southwestwardly course through Lima, Platteville, Harrison and Paris Townships, effecting a junction with the Platte in Section 17 of the latter township.

The Blue River.—This stream is the principal tributary of the Wisconsin in the county, and finds its source in the western central portion of Iowa County, and flows in a general northwesterly course, until it empties into the Wisconsin in the northeastern portion of Waterstown Township. It is increased in volume in Section 29 of Muscoda Township, by the addition at this point of Fennimore, its principal branch. This river heads in the center of Fennimore Township, and flows a northeasterly course, until its junction as given above.

Green River.—This river heads about a mile from the source of the Fennimore in Fennimore Township, and flows a northwestwardly course until its junction with the Wisconsin in Section 22 of Woodman Township.

Grant River.—The Grant heads in the lower part of Fennimore Township, and flows in a southwesterly course down through Lancaster Township, and thence in a general southerly course through Beetown, passing from which it makes a curve to the west, and, passing through Waterloo Township, empties into the Mississippi in the southern part of Potosi.

TOPOGRAPHICAL FEATURES.

The greater portion of Grant County consists of high, rolling prairie, interspersed in the neighborhood of the streams with timber. This feature is the prevailing characteristic of the central and eastern part of the county. Along the Wisconsin, near its confluence with the Mississippi, and extending with a few breaks, almost the entire length of that portion of the latter river which forms the western boundary of the county, are high precipitous bluffs, adding much to the picturesqueness of the scenery. As we progress southward, this feature extends further inward, forming successions of deep ravines and precipitous ridges, that join to make a country at once varied and wildly beautiful. No better description of this section can be given than is found in an early article on the mines. Speaking of the bluffs, which for ages have stood as silent and motionless sentinels guarding the broad river which flows so majestically at their feet, the writer says:

“These bluffs rise from two to two hundred and fifty feet in height, sometimes standing out in all the boldness of a broken sea-cliff; and again, retiring to a considerable distance from the margin of the river, the ascent is more easy, grass covered, and studded with trees and shrubbery. Sometimes the whole bluff is made up of a regular succession of steps and benches; at others, one broad leaf of table-land spreads out at various distances from the base, forming the only interruption in an otherwise perpendicular elevation. The strongest point of relief, and the one which often forms a piece of highly imposing scenery, are the deep ruptures, or shattered openings, by which the line of bluff is frequently parted or rent asunder.

“As we leave the river in a right line, either east or west, our course is rapidly intercepted by deep channels plowed through the rock. We leave our direct line to follow one of these gaps to its origin or commencement. Perhaps a brook of diminutive size is rippling its way among huge blocks of detached rock, that have been dislodged, by the action of frost and rains, from the jutting sides and sharp points above. As we progress, one after another of the sparkling springs are passed, of which the brook we are tracing is formed; the hills upon either side have been lessened in height and increased in slope, and vegetation has supplied the place of rocky barrenness. The ravine up which we are passing (for it is now nothing more), is made the receptacle of a fast succession of smaller ones, both constantly decreasing in size and indentation, until they are completely lost in the level of the ridge beyond.

“Resuming our right line, the ravines gradually become less and less in depth, the ridges spread out wider and wider, and we begin to fancy that the general level of the country is gained, when suddenly the ground again becomes broken, the hills, torn and distorted, appear heaped upon each other, the gush and gurgle of a rivulet is heard below, rocks are threateningly poised upon the peaks, others having been displaced and hurled into the narrow valley more than a hundred feet below. We are past this barrier, and after crossing some harsh points, hewn to a variety of patterns, as many ravines (perhaps in as many different directions), carelessly and awkwardly excavated, roughness rapidly gives place to a uniformity, the depressions become broad and shallow, and the whole surface wears the appearance of high agricultural susceptibility. We have now reached the predominant characteristic of the mining district—a rolling country. With just sufficient descent to carry off the surface waters handsomely, every square foot arable, yes, highly productive, we are at the same time surprised, as we pass along, at the unending variety and picturesque softness it comprises. Indeed some parts appear more like well-executed etching in a picture than any result of the ordinary workings of nature. We have traveled for miles, perhaps, over this description of surface, when we find ourselves upon the main ‘divide,’ or summit, between two considerable water-courses. We will once more leave our right line for the purpose of obtaining a more accurate knowledge of these ‘divides,’ which are easily definable from the almost exact level they preserve. We will not turn to the southwest, for it would only be to take a survey of increasing irregularity, growing more wild and confused as we advanced, until soon we would find ourselves upon one of those topping, cragged points of the Mississippi bluffs which overlooks for miles the peaceful meanderings of the river below.

“But we will turn toward the northeast; and as we go along, a larger and still larger stretch of country, rich in soil and scenery, opens before us. Upon either side, and at short distances only, we cast our eye down some long line of gentle depression, with other and smaller ones all the while opening into it, the rises between which appear actually to interlock. The encroachments these main depressions make upon our road, renders it quite serpentine, often forming heavy, and sometimes even right angles to the general direction of the ridge. As we advance still farther, the scope of undulating country becomes more and more extended, until the ‘divide,’ which we have followed, is imperceptibly lost in another and generally more important one, running perhaps in a counter direction to it.”

THE MOUND-BUILDERS.

Fitly might this ancient race, relics of whom are seen on every hand, be characterized as the wonder-puzzle of scientists. That they were once here, occupying the land which now teems with wealthy, bustling cities and their ever-restless myriads of toilers, is certain. Here is beheld their imprint; yet to-day investigators are as far as ever from deciding the question as to when and how these pre-historic, traditional people came or how they went. Like the will-o'-the-wisp, ever before and ever eluding, the subject still continues one over which the cloud of mystery hangs, unpenetrated by any of those rays of the sun of intelligence by which so much that has been “seen darkly” is now as clear as the noonday.

That these monuments are the work of a race anterior to the one inhabiting this country at the time of its discovery, and reaching back probably in its existence to the earlier periods of the world's history, is the single established fact to which the antiquarian can make good his claims. Beyond this all is a blank.

Of the mounds themselves, silent monuments of this wonderful race which “being dead yet speaketh” through their works, we are, fortunately, not without such specimens scattered with a prodigal hand over the United States as precludes all chances of a crop of doubting Thomases.

The mounds themselves are of three classes, and include the earthwork or fortification, the circular and oblong tumuli, and the “animal” mound. This latter class is by far the most interesting and includes in the category representations of the human form, birds, bears, foxes,

elephants, deer, lizards—in fact, almost everything pertaining to the animal or feathered kingdom. This class of mounds abounds throughout Wisconsin, although numerous instances of the circular tumuli are to be found in the southwestern portion of the State, and especially in Grant County. The *National History Review* (London) thus refers to this peculiar evidence of the pre-historic races: “Not the least remarkable of the American antiquities are the *animal mounds*, which are principally, though not exclusively, found in Wisconsin. In this district, thousands of examples occur of gigantic basso-relievos of men, beasts, birds and reptiles wrought with a persevering labor on the surface of the soil, while inclosures and works of defense are almost entirely wanting, the ancient city of Aztalan being, as supposed, the only example of the latter class.” But very few of the animal mounds have been found elsewhere than in Wisconsin.

It is but at a comparatively recent date that thorough and exhaustive explorations of these reminders of a lost race has been instituted. The mounds in this State vary considerably in height, being from three to fifteen feet above the general level, and the latter height is confined entirely to the conical mounds, those representing animals being much lower, and in all instances recumbent. The figures are, in a majority of cases, placed with their backs to the rising ground, and their feet pointing down-hill. In 1842, *Silliman's Journal* contained an interesting account of the explorations made by Mr. Stephen Taylor among these mounds, and mentioned among others the figure of a quadruped thought to be a wildcat, being one of a group of three closely resembling each other at that time, lying in the western part of the village of Muscoda, in this county, which measured in length from the front part of the head to the end of the tail 264 feet. One of the other figures, supposed to represent the turtle, measured from the tip of its nose to its posterior extremity 76 feet. At this point it is 18 feet in width, and over the projections representing claws it is 37 feet. The greatest elevation, near the junction of the neck, was 30 inches, and at the narrow end 15 inches, while the head, neck and claws were only 9 inches. The whole figure had retained its original shape in great perfection, owing to the coat of sward which covered it. The bearings of this figure were east and west, the head being pointed toward the eastward.

No better description of the present mounds in Grant County has been given than the following by Mr. Moses Strong, Assistant State Geologist, describing his visit to the different mounds which form almost a continuous procession along the Wisconsin and down the eastern shores of the Mississippi in Grant County. Mr. Strong says:

“During the course of my geological examination of the lead region of Wisconsin, in the summer and fall of 1874, my attention was directed to the numerous and remarkable tumuli which are found in the valleys of the Mississippi and Wisconsin Rivers, and on the adjacent bluffs.

“The entire number of mounds of which this article treats may be classified in three kinds, according to their form.

“1. *The Round Mounds*.—They are perfectly round or circular at the base, and are dome-shaped or conical, according to their height, which varies from three to fifteen feet. By far the larger number, probably as many as four-fifths, are less than five feet high, and are spherical segments, with an average diameter at the base of about twenty-five feet. The conical mounds usually exceed this diameter and height, and are always rounded off at the apex; whether this was by design, or is a modification due to the lapse of time, it is difficult now to decide. Some of the largest attained a diameter of fifty feet and a height of fifteen feet. Again, many of the round mounds were so low as almost to escape observation, and sloped so gradually into the ground on which they were thrown up, that the true diameter could not be exactly ascertained. No traces were seen of ridges or trenches surrounding any of the round mounds, such as are described in other localities, as at Hutsonville, Ill.; nor were there any terraces on their sides, or any appearance of a platform on their summits. All the circular mounds were perfectly plain and simple in their structure.

“2. *Oblong Mounds*.—These tumuli are invariably straight, and of various lengths, from fifty to 300 feet. They are seldom more than four feet in height, and will average about

two and one-half feet high and fifteen in width. They always slope gradually at the ends to the ground. Sometimes these mounds are found in a long, straight line, and, at others, in parallel rows, but a systematic arrangement is always apparent. Excepting in their length, there is less variation from a uniform standard seen in the oblong mounds than in any other kind.

"3. *Effigy Mounds, or those having Animal Forms.*—These are the most singular and interesting of all, perhaps, for the reason that it is most difficult to find any theory which rationally accounts for their existence. They are found of all dimensions, as regards length, being from fifty to 200 feet long, and are usually a little higher and wider than the long mounds. Their average height is about four feet, and their width twenty-five.

"They usually represent animals lying upon one side, with the head up and legs apart, as if in motion. Representations of the human form were not observed, although such exist north of the Wisconsin River. Three instances of the representation of birds were observed, and one of an animal like a lizard.

"That these mounds were intended to represent animals can be seen at a glance, but what particular genus of animal is seldom so evident. In general, all that is plainly seen are the head, neck, body and legs of an animal. Sometimes there are added to them ears, horns or a tail, the two latter being quite infrequent.

"*Localities of the Mounds.*—The following descriptions of the several localities where mounds were seen, with a few explanatory remarks, will convey an idea of the former works of the Mound-Builders, and the sites selected by them for their tumuli:

"1. Southeast quarter of northeast quarter of Section 36, Town 4, Range 2 east—five straight mounds, each about fifty feet long, situated in a direct line coinciding with the axis of a low ridge, on which they are built. This ridge is the terminus of a long divide between two branches of the Pecatonica River. The mounds are about 200 feet from the eastern branch, and about thirty feet above it. As a dwelling-site it would have been very convenient.

"2. Southwest quarter of Section 25, and northeast quarter of Section 24, Town 4, Range 2 east. Proceeding in a northwesterly direction from the preceding locality, and following the crest of the same dividing ridge, numerous long mounds are seen lying parallel to the axis of the ridge. This land is now under cultivation, and the mounds are nearly obliterated.

"3. Northwest quarter of Section 22, Town 7, Range 4 west. On the summit of a bluff at the junction of the Green and Wisconsin Rivers, a straight mound was observed. It is 200 feet long, two feet high and six feet wide. From this point a beautiful view of the valley is obtained. No other mounds of any kind were found near it.

"4. Northwest quarter of Section 25, Town 7, Range 5 west. At the mouth of Dry Hollow, and near the bank of a bayou of the Wisconsin River, are a number of mounds, both long and round, scattered about without any apparent order of arrangement.

"5. Southwest quarter of Section 26, Town 7, Range 5 west, proceeding down the valley of the Wisconsin to a deserted farm known as the 'Schlundt place,' several long mounds were seen on the road, lying parallel to the foot of the bluff, and a few yards from it. At the Schlundt house, one long and three round mounds were seen, one of which is quite conspicuous for its size.

"It has the form of the frustum of a cone; the diameter of the base is forty feet, the diameter of the upper surface twenty-eight feet, and the height four feet. In the center of this mound, a cottonwood tree, seventeen inches in diameter is growing. The appearance of the mound indicates that it has been cut or worn down several feet, to make its upper surface level; and that the tree was subsequently planted, perhaps for shade. The mound is constructed of sandy clay, which, however, contains much less sand than the adjacent ground. The material of which the mound is constructed may have been brought from the bluff, which is not far distant. About one hundred feet south of this large mound, is a small circular mound, fifteen feet in diameter, and three feet high. Thirty feet east of the small mound is a straight one, seventy-seven feet long. Following the road for about a quarter of a mile west of the 'Schlundt place,' a mound was discovered. It is situated immediately on the bank of the Wisconsin River, and

about fifty feet from the foot of the bluff. This mound is the only one of its kind seen. It is, perhaps, intended to represent a bird with its wings and tail spread, as shown by the circular expansion at the rear end. If this is its design, it is not nearly so well proportioned as the other bird mounds which were seen, none of which, had their tails spread.

"6. Northeast quarter of Section 2, Town 6, Range 5 west, making a short detour from the valley of the Wisconsin, up the valley of a small stream on which the village of Millville is situated, we find a singular mound. It is situated in a meadow owned by Mr. Kidd, the miller, and about three hundred feet south of his house. The mound lies on the level ground, with its limbs fronting to the creek, which is distant but a few yards. The meadow has been under cultivation for a number of years, so that the mound is much reduced in height, although it can still be distinctly traced. The remains of several others were observed, but they are so obliterated by cultivation that their forms can no longer be identified. As it lies upon the ground, the effigy is not particularly suggestive of any known living animal. The fore limbs are the longest, and each longer than the body, while the neck has been omitted in the construction of the animal. Altogether it is one of the most singular effigies seen, and the only one of its kind.

"7. Center of Section 15, Town 7, Range 5 west. This locality was formerly known as Warner's Steam Mill, and is situated on the bank of the Wisconsin River. Here is a strip of bottom land, half a mile wide, lying between the bluffs and the river, on which a large number of small circular and conical mounds were found scattered about without any apparent law of distribution. No straight or effigy mounds were seen.

"8. Quarter posts, Sections 5 and 8, Town 6, Range 5 west. On the new road from Millville to Bridgeport three straight mounds were found, from one hundred to one hundred and fifty feet long. The mounds lie at the foot of the bluff and parallel to it, about fifteen feet above high-water mark, with a bayou of the Wisconsin in front of them and but a few yards distant. Nothing particular was noticed in their mode of distribution.

"9. Southeast quarter Section 14, Town 6, Range 6 west. Quite an extensive group, consisting of an animal form, three oblong mounds and a number of small, round mounds, is to be seen at this locality. They are situated about half a mile above the Wisconsin River bridge at Banfill, on a raised level piece of land near the foot of the bluff. The land was formerly under cultivation, but not for a sufficiently long time to injure the appearance of the mounds. The effigy-mound is quite large and appears to be the central figure around which the others were grouped, and was probably the first earthwork constructed. It is quite large and well-proportioned, with the head thrown up and forward, and the legs bent forward and backward. It seems designed to represent some animal in a springing or jumping posture. At the intersection of the body, neck and forelimbs, a hole was sunk, six feet long by three wide, by Messrs. Rice, Mitchell, Thompson, Haven and myself. Nothing was found, except that the mound was constructed of a very hard and compact clay, quite homogeneous throughout, and apparently the same as the underlying soil, into which we penetrated about eighteen inches.

"Abandoning operations on the effigy-mound, we next excavated one of the circular mounds by means of a trench, about two feet wide, carried in from the circumference to the center on the same level as the adjacent ground. On reaching the center, a human skeleton was found, the bones of which were so brittle and crumbling that no perfect ones could be obtained. During the exhumation the following facts were observed: The process of burial had been as follows: The body was seated on the level ground, with the face to the west, and the legs stretched out in the same direction, but not separated, the knees not being at all drawn up. The body and head were erect, and the arms placed by the sides. The mound was built up around the corpse in this position. Since then, the process of decay, by removing the soft internal parts of the body, had permitted all the bones of the skull and body to fall down into and on the pelvis, where most of them were found confused and mingled together, compacted in a hard, dark clay, from which the bones were separated with much difficulty. Parts of the tibia, femur, pelvis, ribs and skull were recovered, together with parts of the jaw-bones and numerous teeth. The jaw-bones and teeth were in the best state of preservation of

any obtained, the teeth being especially so. Several loose teeth were found belonging to the upper jaw, and the lower jaw still retained most of its teeth. They indicated an adult individual, and were, without exception, flattened and worn smooth on their grinding surfaces.

"The clay of which the circular mound was constructed was somewhat different from that excavated in the effigy mound. The upper part of the circular mound, for about eighteen inches, consisted of a sandy clay, which was easily removed with a shovel alone. All below this consisted of a very compact clay, containing but little sand, so hard that a pick was necessary, and the point would not penetrate more than an inch or two at a stroke. So great was the difference in the compactness of the clay in the two mounds excavated, that it occurred to me that the circular mound might have been stamped or rammed, or otherwise compacted at the time when it was built, perhaps for the purpose of protecting the corpse against the attacks of prowling animals.

"I do not think that the most skeptical person could regard this as an intrusive burial of a date more recent than the formation of the mound. It bears no internal evidence of ever having been disturbed; and externally the mound precisely resembles all the others in this vicinity, and hundreds of others in different localities which we are accustomed to attribute to the Mound-Builders.

"10. Southeast quarter of Section 19, west half of Section 20, southwest quarter of Section 17, southeast quarter of Section 18, all in Town 6, Range 6 west. All these several localities appear component parts of one grand chain, series or procession of mounds. This procession may be said to begin near the residence of Hon. Robert Glen, not far from the line between Sections 19 and 30, of Township 6, Range 6 west. The first seen are the four round ones in the orchard near the house. They seem to be in a manner set apart from the rest, as quite a distance intervenes between them and the first long one, and they are the only ones of the circular kind.

"Proceeding along the crest of the ridge, nothing is seen for about half a mile, until the first of the mounds is found, following which is a row of twenty round mounds, each about twenty-five feet in diameter, five or six feet high and about twenty-five feet apart. They are arranged in straight lines, conforming to the crest of the ridge. The long north-and-south row of eleven mounds, when viewed from the south end, presents a peculiarly striking and impressive appearance. At the northern end of this row of mounds the ridge turns abruptly to the west, and a change in the mounds also takes place. No more round mounds are to be found, but more animal structures, of which may be observed the following peculiar arrangement. As all the effigies at the south end of the circular mounds are headed away from them, so also those at the northern end appear to be departing from them in a westerly direction.

"Proceeding westward along the ridge, a mound is seen. The animal represented by it appears to have a short tail and horns, and is probably designed to represent some species of deer. It is one of the few effigy mounds in which we can trace a resemblance to some particular animal. It will be seen that its feet are turned to the south, in an opposite direction to all the others. Two hundred feet west of this is the only long mound in the procession. A long interval now occurs, in which no mounds of any kind are found, until at the extreme end of the ridge are two. From this point a beautiful view of the Mississippi and Wisconsin Rivers is obtained.

"11. Northeast quarter of Section 17, Town 5, Range 6 west. This group or groups of mounds is situated on the Mississippi River bottom. They are the first specimens of the circular mounds anywhere observed. Their diameters vary from twenty to fifty feet, and they are from five to fifteen feet high. The mounds are situated on a low, sandy ridge, a few feet higher than the adjoining grounds, which are not far above high-water mark. They are built in straight lines, consisting of three or four mounds each, the lines making angles with each other, to conform to the higher portions of the ground. The mounds appear to be constructed of a sandy loam, although, as no excavations were made, it is impossible to say of what material the inside is composed.

"In two or three of the mounds near the southern end of the group, excavations had been made which were evidently of a recent date, probably within a few months. The excavations

were shallow holes, about eighteen inches deep, sunk in the tops of the mounds; a large quantity of human bones and teeth had been exhumed from them in each instance. They were still lying scattered out on the summits of the mounds, and a number of them were collected. The bones were well preserved and firm in their texture, and the teeth, some of which were as sound and solid as any in a living person, had the grinding surfaces worn flat and smooth, similarly to those before mentioned.

"The fine state of preservation of the bones, so different from those found in the mound previously described, together with the circumstance of their being found so near the surface leads me to think that they are not the bones of the original Mound-Builders, but rather that they are intrusive burials; that these mounds have been resorted to in comparatively recent times by a different race for burial purposes. Unfortunately no crania (except some small fragments) were found, which might have been of assistance in determining this question; and my limited time did not permit me to make any excavations.

"12. Southeast quarter of Section 17, Town 5, Range 6 west. Following the course of the Mississippi about a quarter of a mile southeast of the preceding locality, numerous long mounds were seen arranged in several rows parallel to each other and to the river. They are situated in the cultivated fields and are near obliterated. At the time these localities were visited, the valley was covered by a crop of standing corn, which rendered it difficult to find them, and it is probable that many exist which were not noticed. No circular or effigy mound were found in connection with them.

"13. Southeast quarter of Section 21, Town 5, Range 6 west. Continuing down the valley, we come to a group in which the three kinds of mounds are well represented. They lie upon the alluvial bottom, quite near a bayou of the Mississippi, and none of them are more than eight feet above high water-mark, while those in the southern part of the group are not more than three feet. In this group, where all kinds are represented, there seems to be a separation of the long and round mounds from each other. There is nothing of peculiar interest in the occurrence of the long and circular mounds, but we have here two quite singular effigies. The central one of the group is evidently intended to represent a bird with the wings spread, in the act of flying, the head is directed to the south. The wings measure ninety-four feet each way from the center of the body to their extremities, and the length of the tail is sixty-five feet. It is quite a large and well-formed effigy, and is different from the other bird mounds in having an angle in the wings.

"Situated at the northern end of the group is the most interesting effigy-mound anywhere observed, a description of it by Mr. Warner, of Patch Grove, was published in the Smithsonian Report of 1872, page 416. It is known as the 'Elephant Mound,' and as it lies upon the ground it resembles an elephant or mastodon much more closely than any other animal, and the resemblance is much more perfect in this instance than in any other effigies.

"Of this mound Mr. Warner says: 'The mound has been known here for twenty-five years as the "Elephant Mound."' There are, on each side of the mound, some fifteen to twenty rods distant, sandy, grassy ridges, some fifteen feet higher than the land about the mound. The mound is, therefore, in a shallow valley, sloping gently to the Mississippi River, and only about eight feet above high water. Its total length is 135 feet; from fore-feet to back, sixty-six feet; width across fore-legs, twenty-one feet; across hind-legs, twenty-four feet; from end of proboscis or snout to neck or throat, thirty-one feet; space between fore and hind legs, fifty-one feet; from end of proboscis to fore-legs, thirty-nine feet; across the body, thirty-six feet; general height of body above the surrounding ground, five feet. The head is large, and the proportions so symmetrical that the mound well deserves the name of the Big Elephant Mound. There are many mounds in the form of animals in this section of country, which I have seen within the past thirty-five years, namely, in the shape of birds, bears, deer, foxes and men, the latter with legs only to their knees.'

"This mound, in common with all the rest in the group, has been under cultivation, and on account of its size, special efforts have been made, with plows and scrapers, to bring it to the level of the adjacent field. Its size alone has protected it. These efforts have resulted in

diminishing its height, increasing its width and general circumference, and rendering its outline somewhat indistinct, so that it was difficult to make exact measurements.

"14. Northeast quarter of Section 17, Town 3, Range 5 west. A short distance below Cassville, near the bank of the Mississippi, are three animal mounds. Several long mounds were seen in the vicinity, but no circular ones. One of them is probably intended to represent some kind of a lizard or saurian; another is a bird, with extended wings, and the third is uncertain, but, in common with the first, is remarkable for having a round head, a peculiarity not observed in any other effigies. The first mentioned is a large and symmetrical mound, and is the only one of the kind observed. The mounds are very well defined, and are some of the best preserved effigies seen.

"15. South half of Section 30, northeast quarter of Section 31, northwest quarter of Section 32, Town 3, Range 4 west. This is a long, high ridge, having its general direction a little south of east. Upon it is the most extensive representation and fullest development of the mound system anywhere observed. Circular, straight and effigy mounds extend along the crest of this ridge for a distance of nearly two miles in uninterrupted succession. The mounds are so extensive and numerous that my time did not admit of making even the most general survey of any but the effigies. One of them is a perfectly symmetrical cross, the opposite parts corresponding exactly in length. It is difficult to conceive what its object could have been, or of what it is symbolical. Another, from its long tail, slender body and small head, may have been designed to represent some one of the feline species. A third and fourth exhibit quite a remarkable formation in the extremities of the limbs.

"Civilization has not as yet encroached on this locality, except to a slight extent at the eastern end, which is beginning to be cultivated.

"Most of the earthworks are doubtless in the condition in which they were left at the time of their desertion by their builders. It is probable that, in a few years, all the land will be under cultivation, and the mounds obliterated. Perhaps a few dollars would be judiciously appropriated in making these grounds burial grounds, perhaps, the property of some scientific society, and thus preserve them from further destruction.

"From observations of the mounds at all the foregoing localities, we arrive at the following conclusions in regard to their distribution:

"1. The circular mounds are frequently found in one locality, and the long mounds in another; or, if both kinds are found in the same group, they are usually separated.

"2. When the number of mounds does not exceed five or six, they are usually of the same kind.

"3. The effigy mounds are never found unaccompanied by either long or circular mounds, and are usually attended by both.

"4. All the mounds appear to have been made by scraping up the surface soil, either from the ground immediately adjacent, or from a neighboring hill. In no place was any appearance of excavation seen.

"5. During the Champlain period, the valley of the Mississippi underwent a depression of at least fifty feet, during which period it was filled with a stratified drift, of which occasional patches still remain along the sides of the bluffs. To this there succeeded a period of elevation in which most of the valley drift was removed. The situation of some of the mounds so near the present high-water marks shows that they were not built until after the completion of the last elevatory movement, which probably took place within the recent period.

"The mounds themselves reveal that order and government must have prevailed to some extent among the race which built them, but afford no clew to the time in which they lived."

In January, 1870, as some workmen were engaged in digging the foundation for a saw-mill at Potosi, near the bank of the river, they had descended about seven feet, having dug into one of the circular mounds which abound in that vicinity, when they came upon two human skeletons, the bones of which were almost entire and in a good state of preservation. They were taken out and an accurate measurement made, when one of the skeletons was found

seven and one half feet, and the other eight feet in length. Under the bodies were found arrow-heads in great abundance, and a collection of strange toys. Unfortunately, these relics of an unknown race were suffered to become scattered and destroyed.

In 1877, Mr. E. B. Crane, of Hazel Green, made an investigation of a mound situated on a bluff overlooking the Sinsinawa River, about four miles southwest of Hazel Green, and thus describes the result of his explorations :

" We had every appurtenance required with which to make the exploration carefully. The mound was fifty feet long, five feet high and fifteen in width. Its length represented an east and west line, and after looking it over carefully, we decided to break earth at the west end. Two feet below the surface we found many pieces of burned sandstone, which is a characteristic of all the mounds that I have explored in this part of the country, in which were found human remains. At a depth of three feet we discovered a few small pieces of broken pottery. Next we found many flat stones, neatly arranged, with edges close together, and evidently intended to aid the heavy coating of clay, which was also placed over the remains to protect the dead from being disturbed by burrowing animals. However, having removed some of the stones, we discovered that time and decay had allowed one of the larger rocks to settle, and that a woodchuck or some other animal had succeeded in making the tomb of these pre-historic people his home, and while making or digging his burrows had destroyed some of the bones and broken the pottery in a fearful manner. We found the remains—or rather, part of the remains—of four persons, one in a kneeling and the others in a reclining position, with their heads to the east. The skeleton in the best state of preservation was that of a female, whose bones as well as whose teeth indicate great age. The crowns of the teeth were worn down to the gums without any indication of decay or cavities in them. The head was badly broken, and some parts of it entirely gone. However, I succeeded in restoring it to its original form by use of plaster of Paris, and careful manipulating. The head is almost precisely like that of a negro, except that the nose and mouth is more projected, like that of an orang. The lower maxillary is wanting. It must have been thrown out while the animal referred to above was making its burrows. By the side of this female was placed an earthen pot or vase, made of clay and pulverized granite. This was also badly broken, but I have succeeded in restoring it to its original form, supplying the missing parts artificially. This vase will hold nearly three quarts, and is the shape of an egg, with small end down and the top slightly narrowed to form a sort of neck, the upper edges flaring out a little. One of the other remains unearthed was that of a male, the bones of which were in a bad state of preservation, moisture having reached them through the burrows of the little animals to which previous reference has been made. This man, I should judge, was six feet in height. The female was not more than five. We also found the femoral and tibia bones of a child not more than a year old. These were in a fair state of preservation. Aside from the remains already mentioned, nothing of interest was found, if we except the temporal bone of a pre-natal skull. This some scientists seem to doubt, maintaining that bones so fragile (if indeed they are more than cartilages) could not be preserved in the earth for a great length of time. However, the fact is established beyond question, and I have several pre-natal bones in my possession, which I found embedded in a fine quality of clay, which is equivalent to hermetically sealing such bones in a metallic case. We investigated three other mounds in this vicinity, but they were made of black soil, and the remains which had once been there had long since returned to mother dust. No pottery, implements of any kind, or other relics were found in these last examined mounds, so that we concluded our search unrewarded, which is the case eight times out of ten."

Many mounds in different parts of the county have been opened by parties living near by, but being prompted in most cases simply by a mere curiosity, the results of their investigations tended in no way to throw any additional light upon the question of the antiquity of their builders. In the years to come it is to be hoped that the efforts of the many earnest antiquarians who give this subject their special thought, will result in the unearthing of new evidence which shall at once dispose of this mystery.

CHAPTER II.

INDIAN OCCUPANCY—THE FIRST WHITE MAN IN GRANT COUNTY—OTHER EARLY VISITORS—
WATER WAYS—THE WINNEBAGO WAR—THE BLACK HAWK WAR.

INDIAN OCCUPANCY.

Back as far as Champlain's time, in 1615, rumors of the existence of a tribe of Indians known as the Five Nations, and living many leagues beyond Lake Huron, were prevalent among the tribes on the St. Lawrence. This tribe was better known at a later date as the Mascoutins. It is believed that their home at that time was upon the Fox River, and here they were visited by civilized man less than a score of years afterward. The supposed site of their villages is included in the present limits of Green Lake County, somewhere on Fox River between Berlin and Lake Puckaway. When visited by Joliet and his party in 1673, the Kickapoos and Miamis were included in their village. The nearest tribe to the Mascoutins, down the Fox River, was that of the Winnebagoes, whose homes were at the mouth of the stream. To the south, extending, perhaps, well up the Rock River, was the territory of the Illinois. This tribe, who lived in a country "where there was a quantity of buffaloes," were afterward driven across the Mississippi, but subsequently returned to the river which still bears their name. The country west of the Mascoutins, and in fact all of the present State of Wisconsin, except, perhaps, the extreme southeastern portion, was originally claimed by the Sioux, and, that their claim was a substantial one, is evidenced by the fact that, as late as 1681, Hennepin was taken prisoner by them on the Mississippi, below the mouth of the Wisconsin, as an intruder upon their country. But now commenced a migration of the Mascoutins and their kindred the Kickapoos and Miamis, to the southward, at least so far as the south end of Lake Michigan, they being pressed back and their place taken by the warlike Foxes and their relatives the Sacs. These tribes also emigrated in time, pushed back in their turn by the advent of the white man, and laid claim to the country to the west and southwest, including the present limits of Grant County. The Winnebagoes also began moving, by slow degrees, from the head of Green Bay up the Fox River, having outlying villages on the shores of Winnebago Lake and Rock River. This brings us up to the time the United States began making treaties with these tribes. During the Revolutionary war, the Sacs and Foxes had fought on the side of the English, having transferred their allegiance from their former allies, the French.

By a treaty negotiated at Fort Harmar, in Ohio, on the 9th of January, 1789, the Pottawatomie and Sac tribes of Indians, among others, were united in a "league of peace and amity" with the United States. November 3, 1804, a treaty was made and executed at St. Louis, between William Henry Harrison on the part of the United States, and the following chiefs and head men of the Sacs and Foxes: La-you-vois, Pashe-paho, Quashquame, Outchequa and Hash-equarhequa. This treaty was afterward repudiated by Black Hawk, and was the foundation cause of much of the future trouble between the whites and these tribes, until their defeat in the famed "Black Hawk war" put an end, once and for all, to their claims. This treaty Black Hawk claimed, was signed by the chiefs without authority from the united tribe, they having been sent to St. Louis to endeavor to effect the release of one of the tribe who was then confined at that place for killing an American.

By this treaty the united Sac and Fox tribes were received into the friendship and protection of the United States, while the tribes on their part were to consider themselves under the protection of the United States, and of no other power whatsoever. They also ceded the lands included within the following boundaries to the United States: "Beginning at a point on the Missouri River opposite the mouth of the Gasconade River, thence in a direct course so as

J. H. Boscobel

(DECEASED)
BOSCOBEL.

to strike the River Jefreon at a distance of thirty miles from its mouth, and down the said Jefreon to the Mississippi; thence up the Mississippi to the mouth of the Wisconsin River, and up the same to a point which shall be thirty-six miles in a direct line from the mouth of said river; thence by a direct line to a point where the Fox River (a branch of the Illinois) leaves the small lake called Sakaegan; thence down the Fox River to the Illinois River, and down the same to the Mississippi."

The consideration for this cession of lands by the Indians was an immediate delivery of goods to the value of \$2,234.50, and a yearly annuity of \$1,000, \$600 of which was intended for the Sacs and \$400 for the Foxes, to be paid in goods valued at the first cost.

This treaty, although discredited by Black Hawk, was signed by Pashepaho, who was generally considered the head chief of the Sac Nation, and its provisions must have been considered binding by the tribes generally as the annuities therein mentioned were regularly paid and received. Afterward, in the year 1815, separate confirmatory treaties were made with the Sacs and Foxes, as is shown by the following: "By the treaty of Portage des Souix, made by William Clark, Ninian Edwards and Aguste Choteau, Commissioners, etc., and the kings, chiefs and warriors of the Fox tribe or nation, dated September 14, 1813, the said Fox tribe—

"Do hereby assent to, recognize, re-establish and confirm the treaty of St. Louis, which was concluded on the 3d day of November, 1804, to the full extent of their interest in the same, as well as all other contracts and agreements between the parties; and the United States promise to fulfill all the stipulations contained in the said treaty in favor of the said Fox tribe or nation.

"By the treaty of Portage des Souix made by the above-named commissioners, and the chiefs and warriors of that portion of the Sac Nation of Indians, now residing on the Missouri River, dated September 13, 1815, the chiefs and warriors—

"For themselves and that portion of the Sacs which they represent, do hereby assent to the treaty between the United States of America and the united tribes of Sacs and Foxes, which was concluded at St. Louis on the 3d day of November, 1804; and they, moreover, promise to do all in their power to re-establish and enforce the same."

The signers of this treaty also promised to give no aid whatever to the "Sacs of Rock River" until peace should be established between that band and the United States.

But by a later treaty, executed at St. Louis May 13, 1816, the "Sacs of Rock River and adjacent country," agreed to, "hereby unconditionally assent to, recognize, re-establish and confirm the treaty between the United States of America and the united tribes of Sacs and Foxes, which was concluded at St. Louis on the 3d of November, 1804, as well as all other contracts and agreements heretofore made between the Sac tribe or nation and the United States." This treaty was signed by twenty-two chiefs and head men, among others, Black Hawk. This treaty he afterward claimed he never understood, and so did not know what he was signing. The Indians, comprising the following of this chief, continued to claim proprietary rights in the lands on the east of the Mississippi until the disastrous result of the war, in 1832, effectually put this question beyond dispute. The Government had previously made treaties with other tribes who laid claim to the same territory, and the "Indian troubles" were thenceforth a story of the past.

FIRST WHITE MAN IN GRANT COUNTY.

Among those representatives of the paternal government founded and fostered by Louis XIV, in his possessions in the New World, none were more assiduous in their endeavors to develop the resources of the New France than Jean Baptiste Talon, Intendant of Canada from 1665 to 1672. In 1670, under his orders, an expedition was fitted out to search for copper mines on Lake Superior, and to formally take possession of the whole of this interior country for the King of France. This expedition was under the command of Daumont de St. Lussen, and among those who accompanied him was Louis Joliet, a name imperishable so long as the great western land, of which he was afterward the discoverer, shall continue to bear its teeming millions. St. Lussen set out on his voyage of exploration accompanied by a small party besides

Joliet, with Nicholas Perrot, a voyageur, who spoke Algonquin fluently, as interpreter. By arrangement, St. Luson remained at Manitoulin Islands through the winter, while Perrot made a tour of the different tribes to invite them to a general conference at the Sault Ste. Marie in the following spring. Perrot, having first sent messages to the northern tribes, went to Green Bay for the purpose of obtaining the presence of the nations residing upon its borders to the proposed meeting.

St. Lussen, accompanied by his men (fifteen in number), appeared at the Sault over a month in advance of the time appointed. When all the tribes had assembled, the Frenchman prepared to execute the mission with which he was charged. A large cross of wood was prepared, and, in the presence of the assembled savages, it was planted in the ground. A post of cedar was then planted beside it attached to which was a metal-plate engraved with the royal arms. Then St. Lussen made proclamation: "In the name of the most high, mighty, and redoubtable monarch, Louis XIV, of that name, most Christian King of France and Navarre, I take possession of this place Sainte Marie du Sault, as also of Lakes Huron and Superior, the Island of Manitoulin and all countries, rivers, lakes and streams, contiguous and adjacent thereto; both those which have been discovered, and those which may be discovered hereafter, in all their length and breadth, bounded on the one side by the seas of the North and of the West, and on the other by the South Sea, declaring to the nations thereof, that from this time forth they are vassals of His Majesty, bound to obey his laws and follow his customs; promising them on his part all succor and protection against the incursions and invasions of their enemies; declaring to all other potentates, princes, sovereigns, states and republics—to them and their subjects—that they cannot and are not to seize or settle upon any parts of the aforesaid countries, save only under the good pleasure of His Most Christian Majesty, and of him who will govern in his behalf; and this on pain of incurring his resentment and the efforts of his arms." So far as words alone could effect it, thus passed the whole Northwest, including the territory of the present State of Wisconsin, under the dominion of France. She had discovered and, to a certain extent, explored it, established a rude commerce with its barbarous inhabitants, and, through her missionaries, proclaimed the Christian doctrine to their heathen ears. But none of her agents, traders or missionaries, had so far reached that great river of which so many marvels were being constantly related.

Upon the return of the expedition to Quebec, it was determined to explore this mysterious stream. The choice fell upon Joliet. Said the Governor on the 2d of November, 1672: "It has been judged expedient to send Sieur Joliet to the Maskoutiens (Mascoutins), to discover the south sea and the great river they call the Mississippi, which is supposed to discharge itself into the Sea of California." Continuing, the official adds: "He is a man of great experience in these sorts of discoveries, and has already been almost at the great river, the mouth of which he promises to see."

Joliet passed up the lakes, and, on the 17th of May, 1673, accompanied by Father James Marquette and five others, started from the Mission of St. Ignatius, north of Machinaw Island, in the present county of Mackinaw, Mich. with two bark canoes, on a trip which was destined to open the beauties of the Father of Waters to the gaze of civilized man. All information possible was obtained from the Indian tribes regarding this great unknown stream before starting, and then with light hearts the explorers paddled away to the west and up Green Bay to the mouth of the Fox River. The first Indian nation met by Joliet was the Menomonees. He was warned by them not to venture so far into the interior on account of the bands of savage warriors inhabiting that country and who spared no strangers, accompanied by marvelous tales of the numerous monsters and demons who made the "great river" their haunt, and adding as a final argument that the heat was so excessive in those countries as to infallibly cause death to all who ventured into that section. Nothing daunted by the hideous prospect presented, Joliet determined to persevere, and proceeded on up the Fox River to the portage.

This river was found quite pleasant at its mouth, having a gentle current. The wild oats along the bank had gathered along the shores numerous flocks of bustards, ducks, teal and other

birds. As the party advanced up the river, it was found to be more difficult of ascent, owing not only to the currents but to the sharp rocks which projected above the troubled waters on every side and cut their canoes. By using great care and precaution, the rapids were passed in safety, and soon afterward the party reached the nation of the Mascoutins. In their village were also gathered two other tribes, the Miamis and Kickapoos. The Miamis were very civil in their deportment. Two long ear-locks, which was a distinctive feature of their costume, added somewhat to their appearance. They had the name of being a warlike tribe, and seldom went out on war parties in vain. They were found to be very docile and ready to listen quietly to what was said to them. The Mascoutins and Kickapoos were more rude in their manner. Bark for cabins was found to be rare in this village, the Indians using rushes, which served them as walls and roof, but, as might be expected, were no protection against rain when it fell, as it frequently did, in torrents. Their advantage was that cabins built of these rushes could easily be taken to pieces, rolled up and transported wherever the owner wished.

The view from the village was extremely picturesque, it being perched upon an eminence and surrounded on every side by broad prairies, stretching away as far as the eye could reach, interspersed by thickets or groves of lofty trees. The soil was found to be very good, producing corn in abundance. Plums and grapes also were gathered in abundance by the Indians.

Joliet and his party arrived at this village on the 7th of June, and remained until the 10th.

"We knew," wrote Father Marquette, "that there was, three [thirty] leagues from the Mascoutens [Mascoutins] a river entering into the Mississippi; we knew, too, that the point of compass we were to hold to reach it was west-southwest, but the way is so cut up by marshes and little lakes that it is easy to go astray, especially as the river leading to it is so covered with wild oats that you can hardly discover the channel, hence we had great need of our two (Miami) guides, who led us safely to a portage of 2,700 paces [the site now occupied by the city of Portage], and helped us to transport our canoes to enter this river [Wisconsin], after which they returned, leaving us alone in an unknown country, in the hand of Providence.

"We now leave the waters which flow to Quebec, a distance of four or five hundred leagues, to follow those which will henceforth lead us into strange lands. Before embarking, we all began together a new devotion to the Blessed Virgin Immaculate, which we practiced every day, addressing her particular prayers to put under her protection both our persons and the success of our voyage. Then after having encouraged one another, we got into our canoes. The river on which we embarked is called the Mesconsing [Wisconsin]; it is very broad, with a sandy bottom, forming many shallows which render navigation very difficult. It is full of vine-clad islets. On the banks appear fertile lands diversified with wood, prairie and hill. Here you find oaks, walnut, whitewood, and another kind of tree with branches armed with thorns. We saw no small game or fish, but deer and moose in considerable numbers."

Thus they floated down this great tributary of a greater river, while on their left hand lay exposed for the first time to the gaze of civilized man in all its virginal beauty what is now included in the county of Grant. Without doubt, the explorers stopped at several points in pursuit of game or to camp, thus being actually the first white men who set foot in Grant County.

On the 17th of June, to their inexpressible joy, the party entered the Mississippi. After descending the river many miles, Joliet retraced his steps to Green Bay, and thence to Quebec, there to make his report of the wonderful discovery he had made. Marquette remained at the Bay to recruit his health, which had been seriously tried by the anxieties of the previous months.

OTHER EARLY VISITORS.

Not a great while was suffered to elapse before Joliet and his companions were followed by others. Louis Hennepin, a Recollet friar, and his party, as a detail from La Salle's expedition to the Illinois, reached the portage in 1680, on his way from the Upper Mississippi to the great lakes, passing up the Wisconsin and down the Fox River to Green Bay. Le Seuer and his

party passed down the Wisconsin in 1688, on his way to the Mississippi. The name is spelled by these early explorers Ouisconsin (Wisconsin).

Jonathan Carver came over the same route in 1766, and thus speaks of his voyage: "On the 8th of November (1766), we got our canoes into the Ouisconsin River, which, at this place (the portage), is more than 100 yards wide, and the next day arrived at the great town of the Saukies (Sauks or Sacs). This is the largest and best built Indian town I ever saw. It contains about ninety houses, each large enough to accommodate several families. These are built of hewn plank, neatly jointed, and covered with bark so compactly as to keep out the most penetrating rains. Before the doors are placed comfortable sheds, in which the inhabitants sit when the weather will permit, and smoke their pipes. The streets are regular and spacious, so that it appears more like a civilized town than the abode of savages. The land near the town is very good. In their plantations, which lie adjacent to their houses, and which are neatly laid out, they raise great quantities of Indian corn, beans, melons, etc., so that this place is esteemed the best market for traders to furnish themselves with provisions of any within 300 miles of it.

"The Saukies can raise about 300 warriors, who are generally employed every summer in making incursions into the territory of the Illinois and Pawnee nations, from whence they return with a great number of slaves. But those people frequently retaliate, and in their turn destroy many of the Saukies, which I judged to be the reason they increased no faster.

"On the 10th of October, we proceeded down the river, and the next day reached the first town of the Ottigamies (Foxes). This town contained about fifty houses, but we found most of them deserted, on account of an epidemical disorder that had lately raged among them, and carried off more than one-half of the inhabitants. The greater part of those who had survived had retired into the woods to escape the contagion.

"On the 15th, we entered that extensive river, the Mississippi. The Ouisconsin, from the carrying place to the part where it falls into the Mississippi, flows with a smooth but a strong current; the water of it is exceedingly clear, and through it you may perceive a fine and sandy bottom, tolerably free from rocks. In it are a few islands, the soil of which appeared to be good, though somewhat woody. The land near the river also seemed to be, in general, excellent, but that at a distance is very full of mountains, where it is said there are many lead mines."

In this last sentence, Carver undoubtedly refers to the section now included in the borders of Grant County, showing, also, that the great mineral wealth had been known to the Indians and French previous to his visit.

WATER-WAYS.

From the time when first the bow of Joliet's canoe clove the virgin waters of the Wisconsin, until the present, that river has been used as a prominent thoroughfare, first for convenience, and, as the country became inhabited by the pushing, daring white man, and succumbed to the advance of modern civilization, commerce claimed it for its own, and the hoarse shout of the "river man," as he pilots his unwieldy lumber raft, now resounds along those banks which formerly gave back the echoes of the wild Canadian boat song, or the thoughtless laugh of the light-hearted traveler. During the last half of the seventeenth century, from Joliet's time forward, and during nearly all of the eighteenth, this river was a broad highway, furnishing the only connection between the Mississippi and the great lakes for the fur-trader, the missionary and the explorer. Small squads of French soldiers occasionally passed down the river, on their way to garrison the Western posts, and, returning, took the same route. Frequently the way would be rendered treacherous and full of danger by the Fox Indians, who dwelt first upon the river of that name, and then upon the Wisconsin. In 1761, the French lost, by the conquest of Canada, their supremacy over those rivers, and, for a time, England took nominal possession of them, and travel was not seriously interrupted until 1827. During the interval the water-courses had passed under the jurisdiction of the United States. In 1814, Col. McKay, of the British Army, came down the Wisconsin with a large force of British and Indians, and captured

the post at Prairie du Chien from the United States. In 1819, the Fifth Regiment of United States Infantry used the same broad stream as a means of reaching Prairie du Chien, which had again passed into the possession of the United States. Ebenezer Childs, a well-known Wisconsin pioneer, made the same trip in a bark canoe in 1821. He also conducted the first Durham boat that ever made that journey. In 1826, a fleet of thirty-five boats passed down the river, bearing the Third United States Infantry from Green Bay to St. Louis, and, a year later, Gen. Cass passed over the same route, to ascertain the feeling of the Winnebagoes toward the United States, as hostilities were threatened, which afterward broke out and were promptly squelched. Thus, year after year, the human tide swept back and forth along the northern boundary of this beautiful county, until the advent of post and railroads drew travelers in other directions. To-day it is given over to the raftsmen and the pleasure seeker.

THE WINNEBAGO WAR.

During the early part of 1827, there arose a difficulty with the Winnebago tribe which for the time-being roused the early settlers of Grant County to a high pitch of excitement. The commencement of these troubles arose from the surprise of a party of Chippewas, who were on their way to Fort Snelling by a war-party of Winnebagoes. The attack was made at the mouth of St. Peter's River, and eight of the Chippewas were killed. The commandant of the United States forces at the fort, took four of the offending Winnebagoes prisoners, and turned them over to the exasperated Chippewas, who immediately put them to death. This act of the commandant, showing a lack of judgment, that, under the circumstances of the case, seemed little less than criminal, was greatly resented by "Red Bird," a prominent chief of the Winnebagoes, who owed his name to two birds of that color which he wore on his shoulders, much the same as epulets are worn by military officers.

Another inciting cause to this enmity was the daily encroachments of the miners in the lead region, extending between the Galena and Wisconsin Rivers east of the Mississippi. These infringements upon what the Indians considered their rights were each day becoming worse, and necessarily served to add new fuel to the flame that was already burning in the chieftain's breast. In revenge for the killing of the four Winnebagoes, "Red Bird" led a war party against the Chippewas, but being defeated in his attempt for scalps, he turned his resentment against the whites, whom he viewed not only as usurpers in a country which he claimed as belonging to his tribe, but also as allies of his ancient enemies, the Chippewas.

Previous to this, a murder had been committed by the Winnebagoes, near Prairie du Chien, by which several persons of the family of a Mr. Methode had been slain. This and other ominous signs showed that a spirit of enmity had been stirred up between the Indians and the whites, and for the first time since the war of 1812, a speck, presaging a war cloud of the most formidable proportions, was visible to the affrighted gaze of the whites.

On the 28th day of June, 1827, Red Bird, We-Kaw and three of their companions entered the house of Register Gagnier, about three miles from Prairie du Chien, where they remained several hours. At last, when Mr. Gagnier stood unsuspecting any danger, Red Bird took deliberate aim and shot him dead on his own hearthstone. A person in the building by the name of Sip Cap, who was in the employ of Mr. Gagnier, was killed at the same time by We-Kaw. Madame Gagnier, seeing the assault turned to flee, with her babe of eighteen months in her arms. As she was about to leap through the window, the babe was torn from her arms by the fiendish We-Kaw, stabbed, scalped and thrown violently on the floor as dead.

The murderer then attacked the woman, but gave way when she snatched up a gun and presented it at his breast. She then effected her escape. Her eldest son, a lad of ten years, also succeeded in eluding the red fiends, and they both arrived in Prairie du Chien about the same time. The alarm was given, and a body of settlers promptly assembled and marched out to the scene of the murder, but the perpetrators had fled, leaving the mangled form of the infant behind. Strange as it may seem, the little one was still alive, and more than that, afterward recovered.

Red Bird and his companions at once proceeded from the scene of their crime to the rendezvous of their band. During their absence, thirty-seven of the warriors who acknowledged the authority of Red Bird, had assembled with their wives and children at the mouth of Bad Ax River. They received the murderers with joy, and evinced a hearty appreciation of their exploit.

A keg of liquor which they happened to have was brought out, and as the alcohol arose to their brains, they boasted long and loud over what they had done, and what they intended to do. This revel continued for two days. On the third day, the whisky having given out, the dissipation came to an end. They were, about 4 o'clock in the afternoon, working off the last fumes in the scalp-dance, when they discovered keel-boats coming down the river. The boats had passed up a few days before loaded with provisions for Fort Snelling, and were now in charge of Mr. Lindsay. Supposing from their examination of the crafts while on their way up that no arms were aboard, the savages determined at once to capture the boats and massacre the crews.

The boats came on, unsuspecting attack, until nearly, opposite the encampment of the Dakotas some distance up the stream. These Indians hailed them with insults and reproaches, but offered no violence, and the whites supposed all danger over. Just here a heavy wind began to sweep up the river with such violence that it took all the strength of the crews to force their crafts down the river against it.

By the time the first boat was near the village of Red Bird's party, the crew were quite ready to stop and rest. One or two Frenchmen who were aboard, seeing signs of hostility from the Indians on the bank, advised their companions not to make a landing. The majority of the crew were Americans, and, like the generality of their countrymen, held the Indian in considerable contempt, and their contempt was only equaled by their ignorance of Indian character. They therefore urged the boat toward the camp with all the force of the long sweeps. There were sixteen men on deck, the boat itself being like all keel-boats, built somewhat on the model of the Erie and Middlesex canal-boats.

The men were rallying their French companions on their fears, and the boat was within thirty yards of shore and nearing it as fast as the strong arms on board could effect the junction, when suddenly the trees and rocks rang with the blood-chilling, ear-piercing war-whoop, and a volley of rifle balls rained upon the deck. Happily the nerves of the Winnebagoes were yet unstrung from the effects of their late debauch, and, as a consequence, their aim was not so steady as it would have otherwise been. One man only fell from their fire. He was a negro named Peter. His leg was dreadfully shattered, and he afterward died of the wound. A second volley soon came from the shore, but, as the men were lying in the bottom of the boat, they escaped injury, save one who was more exposed, and was shot through the heart. Encouraged by the non-resistance of the boatmen, the Winnebagoes rushed for their canoes, intending to board. The whites, having recovered from their first panic, seized their arms, and the boarders were met with a well-aimed discharge, that laid two of the Indians dead and wounded another. The attack was continued until night, when one of the boatmen named Mandeville, who had assumed command, jumped into the water followed by four of his companions, and, by their united exertions, the craft was set afloat and drifted down stream.

Thirty-seven Indians were engaged in this attack, seven of whom were killed and fourteen wounded. They managed, however, to put 693 bullets into different parts of the boat, some even passing through it. Two of the crew were killed outright, two mortally and two slightly wounded. The daring and presence of mind of Mandeville no doubt saved the rest as well as the boat.

Mr. Lindsay's boat—the rear one—did not reach the Indian encampment until midnight. The Indians opened fire on it and the fire was returned, but, owing to the darkness, no injury was done and the boat escaped in safety.

The arrival of the boats at Prairie du Chien caused a panic. The people thereabouts crowded into the dilapidated fort, leaving farms and houses to the mercies of the dreaded Indians.

An express was immediately sent to Galena and another to Fort Snelling for assistance. A company of nearly a hundred volunteers soon arrived from Galena, and the fears of the settlers were much assuaged. A few days later relief also arrived from Fort Snelling. The consternation and alarm felt throughout the lead mines and outlying settlements was fully as great as that felt at Prairie du Chien. Everybody crowded to the block-houses that were hastily constructed, and, for a time, work of all kinds was at a standstill. Many, in fact, were so terrified at the wild stories afloat that they left the country.

Troops were at once ordered to the seat of war from Fort Howard and St. Louis. The former were under the command of Maj. Whistler, who, on the 1st of September, arrived at "the portage." While here, an express arrived from Gen. Atkinson, commanding the detachment coming up from St. Louis, directing Maj. Whistler to halt and fortify himself at the portage, and await his arrival. The object of these joint expeditions was to capture the "hostiles" and intimidate the remainder of the tribe in such a manner that no further depredations would be committed. The Winnebagoes had previously been advised that their safety lay in the surrender of the Gagnier murderers. While Maj. Whistler was awaiting the arrival of the other troops at the portage, he received a mysterious call. An Indian came unceremoniously to his tent and informed the officer that about 3 o'clock on the afternoon of the next day "they will come in." In reply to the question "Who will come in?" he answered, "Red Bird and We-Kaw." After making this answer, he retired by the way he came. At 3 o'clock on the same day, a second Indian made his appearance in the same silent manner, made a similar announcement, and answered the question as to who would come in in the same manner as the first. At sundown a third came, and confirmed what the other two had stated, adding that he had given nearly all his property to the families of the murderers to secure this object.

The pathetic and the heroic were both combined in this voluntary submission, and the preliminary arrangements. That the prisoners were aware that they were probably going to their death, is shown in their endeavor to first secure something for their families previous to giving themselves up. It was the relinquishment of two lives to satisfy the demands of the law upon the whole tribe. The act rises to the level of the heroic, in the fact that the murders committed at Prairie du Chien were, according to the Indian law, if not justifiable, at least permissible, on the ground of the complicity of the whites in the murder of the four Winnebago prisoners. Certainly, the victims of this savage vengeance were in no ways associated in that act, but, belonging to the same tribe of "pale-faces," under the savage law, the act was in accordance with justice.

The grand finale of this impressive scene is thus described by an eye witness: "About noon of the day following the announcement, there was seen descending a mound on the portage a body of Indians. Some were mounted and some were on foot. By the aid of a glass they were made out to be coming toward Maj. Whistler's camp. They bore no arms, and Whistler was at a loss to understand that the promise made by the three Indians was about to be fulfilled. In the course of half an hour they had approached within a short distance of the crossing of Fox River, when, on a sudden, was heard singing. Those who were familiar with the air said it is the death song. When still nearer, those who knew him said it is Red Bird singing his death song. The moment a halt was made preparatory to passing over, two scalp yells were given.

"The Menomonees and other Indians who had accompanied us were lying carelessly about the ground regardless of what was going on; but when the scalp yells were heard they sprang as one man to their feet, seized their rifles and were ready for battle. They were at no loss to know what these yells were, but they had not heard them with sufficient accuracy to determine whether they indicated scalps to be taken or given, but, doubtless, inferred the first.

"Barges were sent across to receive the Indians, and an escort of military to accompany them within Whistler's lines. The white flag which had been seen in the distance was borne by Red Bird.

"And now the advance of the Indians had reached half way up the ascent of the bluff on which was Whistler's encampment. In the lead was Kar-ray-mau-nee, a distinguished chief.

Arriving on the level on which was the encampment of the Americans, and order being called, Kar-ray-man-nee spoke, saying, 'They are here. Like braves they have come in; treat them as braves; do not put them in irons.' This address was made to Col. McKenney. The latter told the chief he was not the big captain. His talk must be to Maj. Whistler, who would do what was right. Mr. Marsh, the sub-agent, being there, an advance was made to him, and the hope expressed that the Indians might be turned over into his hands.

"The military had been previously drawn out into line. The Menomonee and Wabanackie (Oneida) Indians were in groups upon their haunches upon the left flank. On the right was the band of music a little in advance of the line. In front of the center, about ten paces distant, were the murderers. On the right and left were those who had accompanied them, forming a semi-circle, the magnificent Red Bird and the miserable-looking We-kaw a little in advance of the center. All eyes were fixed on Red Bird. In height, he is about six feet, straight, but with an easy air, devoid of restraint. His proportions are those of most exact symmetry; and these embraced the entire man from his head to his feet.

"He and We-kaw were told to sit down. At this moment the band struck up Pleyel's hymn. Everything was still. Red Bird turned his eyes toward the band. The music having ceased, he took up his pouch, and taking from it kinnikinnic and tobacco, cut the latter in the palm of his hand Indian fashion; then, rubbing the two together, filled the bowl of his calumet, struck fire on a bit of punk with his flint and steel, lighted and smoked it. All sat except the speaker. The substance of what they said was as follows:

"They were required to bring in the murderers. They had no power over any except two; the third had gone away; these had voluntarily agreed to come in and give themselves up. As their friends, they had come with them. They hoped their white brothers would accept the horses, of which there were perhaps twenty, the meaning of which was to take them in commutation of the lives of their two friends. They asked kind treatment for them, and earnestly besought that they might not be put in irons, and concluded by asking for a little tobacco and something to eat.

"They were answered, and told in substance that they had done well thus to come in. By having done so, they had turned away our guns and saved their people. They were admonished against placing themselves in a like situation in the future, and were advised, when they were aggrieved, not to resort to violence, but to go to their agent, who would inform the Great Father of their complaints, and he would redress their grievances; that their friends would be treated kindly, and tried by the same laws by which their Great Father's white children were tried; that for the present Red Bird and We-kaw should not be put in irons; that they should all have something to eat and tobacco to smoke.

"Having heard this, Red Bird stood up; the commanding officer, Maj. Whistler, a few paces in front of the center of the line, facing him. After a moment's pause, and a quick survey of the troops, he said, '*I am ready!*' then advancing a step or two he paused, saying, 'I do not wish to be put in irons; let me be free; I have given away my life—it is gone (stooping and taking some dust between his thumb and finger and blowing it away) like that'—eyeing the dust as it fell and vanished from his sight—adding, '*I would not take it back; it is gone!*' Having thus spoken he threw his hands behind him and marched up to Maj. Whistler, breast to breast. A platoon was wheeled backward from the center of the line, when, the Major stepping aside, Red Bird and We-Kaw marched through the line, in charge of a file of men, to a tent provided for them in the rear, where a guard was set over them. The comrades of the two captives then left the ground by the way they had come, taking with them Maj. Whistler's advice, and a supply of meat, flour and tobacco.

"We-Kaw, the miserable looking brave, the accomplice of Red Bird, was in all respects the opposite of that unfortunate chief. Never were two persons so totally unlike. The one seemed a prince, and as if born to command and worthy to be obeyed; the other as if he had been born to be hanged—meager, cold, dirty in his person and dress, crooked in his form, like the starved wolf, gaunt, hungry and bloodthirsty, his entire presence indicating a spirit wary, cruel and

treacherous. The prisoners were committed for safe keeping at Prairie du Chien, to await their trial at the regular courts of justice for murder.

"The next spring, Red Bird, We-Kaw and another Winnebago prisoner were tried at Prairie du Chien, before Judge J. D. Doty, who went from Green Bay for that purpose, convicted and sentenced to death. Red Bird died in prison. A deputation of the tribe went to Washington to solicit the pardon of the others. President Adams granted it upon the implied condition that they would cede their lands then in the possession of the miners. The Winnebagoes agreed to this. Mm. Gagnier was compensated for the loss of her husband and the mutilation of her infant. At the treaty made at Prairie du Chien, in 1829, provision was made for two sections of land for herself and her two children, and the Government agreed to pay her the sum of \$50 per annum for fifteen years, to be deducted from the annuity of the Winnebago Indians.

Before closing this account of the troubles of 1827, mention must be made of an incident that calls to mind the "noble savage" of Cooper, the traditional rather than the real. Immediately after the affair with the boats, the volunteer soldiery at Prairie du Chien seized the old chief of the tribe De-Kaury and four other Indians. He was informed that if Red Bird was not given up in ten days he and his companions were to suffer in their stead. This he devoutly believed. A young Indian was sent as messenger to inform the tribe of the conditions. Several days had elapsed and not anything had been heard from the murderers. The fateful day was drawing near and De-Kaury, being in a bad state of health, asked permission of the officer in command to go to the river where he could indulge in a much-prized custom of bathing in order to improve his health. Col. Snelling told him that if he would promise upon his honor as a chieftain not to try and escape, but to come back immediately upon finishing the bath, he might go; and if he would further promise not to leave town he might have his liberty until the day set for his execution.

De-Kaury, upon this, first thanked the officer for his kind offer, then, raising both hands aloft, promised he would not leave the bounds prescribed, adding that if he had a hundred lives to lose he would rather lose them all than forfeit his word. He was then set at liberty. Friends advised him at once to flee to the woods and make good his escape, but the savage, with the dignity of an ancient Roman, drew himself proudly up and asked his advisers if they thought he prized life above honor. No entreaties could move him. He complacently remained enjoying his freedom until nine days of the ten had nearly passed, and still nothing had been heard from the murderers; no alteration could be seen in the face of this savage stoic. The same day Gen. Atkinson arrived with his troops from St. Louis, and the order for the execution was countermanded, and the Indians sent to their homes.

The excitement over, everything settled back to the usual ruts, until the country was again awakened by another and more startling outbreak a few years later.

THE BLACK HAWK WAR.

Mention has been made in an earlier portion of this work, of the different treaties made by the Sacs and Foxes, by which these tribes ceded their lands east of the Mississippi to the United States. "Black Hawk, in His Life," edited in 1833, by J. B. Patterson, claims that these treaties were made without the assent of himself or his band, although he admits "touching the gogsequill" at the treaty made at St. Louis, May 13, 1816, but excuses himself for this implied acquiescence by saying he was not fully aware of the import of the document he was signing. Notwithstanding this cession, Black Hawk continued to occupy the tribal village which was situated on the north side of Rock River, on a point of land between that river and the Mississippi. But the constant pressure of the incoming white emigration led to innumerable difficulties, Black Hawk himself being at one time severely beaten by three white settlers, upon a charge of having killed some of their hogs—the castigation being so severe that he remained lame for some time afterward. Covert depredations were undoubtedly committed on both sides; the white standing upon the treaties and endeavoring to shoulder the red man out of the country;

the latter protesting against these treaties, and stubbornly resisting the encroachments of the new-comers. The Sacs and Foxes were also divided into two bands—one headed by Keokuk, recognizing the validity of the treaties, and the other headed by Black Hawk, who was determined not to give up the graves of his fathers and retire across the Mississippi. Thus matters stood, when, in the fall of 1830, Black Hawk and his band crossed to the western side of the Father of Waters upon their fall hunt, their hunting-grounds being on that side of the river. During their absence, the whites took possession of their village, and, when the band returned in the winter, they found themselves houseless and shelterless, and their homes in the hands of those whom they could consider as no less than usurpers.

The Indians had nothing to do but to return to the western shore. Early in the succeeding spring, however, Black Hawk re-crossed the Mississippi with a band of Sacs, and took possession of their bark cabins and cornfields in a menacing manner, but, according to Black Hawk's statement, they did not intend to shed white blood, except in their own defense and the defense of what they considered their homes.

The settlers became alarmed, fearful of that vengeance which their own acts had partly provoked, and appealed to Gov. Reynolds, who issued a proclamation, declaring the State invaded by hostile Indians, and called for help from Gen. Gaines, commander of the Western Department, besides ordering out 700 militia. The campaign ended abruptly by the withdrawal of the Indians to the western shore of the Mississippi, accompanied with a threat from Gen. Gaines to cross the river and pursue the band. Black Hawk was brought to sign another treaty, by which he and his band agreed never to re-cross the great river without permission of the President or Governor of the State. In the face of this treaty, early in the spring of 1832, Black Hawk, accompanied by his band, together with their women and children, again crossed the river. To a close student of the Indian character this is not at all surprising, and, in fact, the red chieftain, had he only known it, had, in the history of eighteen centuries, numerous and noble authorities for treaty-breaking, and upon slighter pretexts than the recovery of home and lands. His mistake, as mistake it undoubtedly was, lay in his insufficiency of force to back his claims.

Black Hawk himself claims that he was led into this movement by deceptive assurances of assistance from the Winnebagoes, Pottawatomies and his British Father. This assistance did not come, and, having made the cast of the die, the savage chieftain was forced to abide the consequences.

This new inroad created the wildest consternation among the inhabitants of the newly-settled portion of the country in dispute. All the district between the Rock, Wisconsin and Mississippi Rivers began vigorous preparations for defense against the savage foe. Block-houses were erected, companies formed, and everything put into the best shape for defense. Within the present limits of Grant County, there were two regularly-constructed block-houses, one at Platteville and one at Cassville. At the former place, a mounted company was formed, of which John H. Roundtree was elected Captain. This company, together with one formed by Capt. Gentry, in the adjoining county, were attached to Col. Dodge's command, and formed his mounted battalion and served all through the war. The second company formed in the county was at Hazel Green, but their service consisted principally in drawing their rations with regularity and presenting themselves for muster occasionally, and, as a consequence, the fact that there was a company organized at that point is remembered by only a few. A third company was formed under command of Capt. Price, at Cassville, and did good service in clearing the country between the Grant and Wisconsin Rivers of the "hostiles." This company was composed of thirty-six men, but having only eighteen horses, half remained to guard the block-house while the other portion scoured the country around.

A call was issued by Gov. Reynolds to the militia, and a force of 1,800 men, under the command of Brig. Gen. Whiteside, was soon in the field. In the meantime, Gen. Atkinson had set out for the seat of war, and had sent several expresses to Black Hawk, ordering him to leave the country. To these the Sac chieftain made reply that he was going to the Prophet's town and the whites might attack if they dared, and continued his retreat up Rock River.

To add to the complexity of the situation, it was feared that the Winnebagoes would join Black Hawk in his outbreak, which they undoubtedly would have done had the odds not been quite so great. But, although much given to the small pécadillos which mark the bravo—which was the position they occupied among the other tribes—they had too keen and distinct a remembrance of the swift chastisement following their outbreak five years before, to attempt another rising without heavy odds on their own side. At this time, however, their future action was clouded with uncertainty, which added much to the precariousness of the situation of settlers in the lead region.

At this moment, Col. Dodge stepped to the front, and, by his position as commander of the militia in this portion of Michigan Territory, and known energy of character, succeeded in organizing the settlers and miners into proper shape for vigorous defense. Several mounted companies, as has been before mentioned, were organized and placed under the command of the gallant Colonel, who, having first written a letter to Gov. Reynolds telling him of the dangers which might result to the northern country should Black Hawk be driven back on them, started for Rock River to get a better insight into the situation.

Black Hawk had, during this time, continued his retreat up that river followed by Maj. Stillman, at the head of a force of about three hundred men. On the 12th of May, he encamped near Sycamore Creek, and, shortly afterward, three Indians were discovered approaching the camp. These men, according to Black Hawk's account, were sent by him "to conduct the whites to his camp, or, if they had encamped, he would come to them," when he hoped to make arrangements by which he would be allowed to descend Rock River again.

From all accounts given of this disgraceful affair, it seems that the whites did not wait to learn of the message brought by these ambassadors, although one account seeks to excuse the action of the half-drunken mob, by stating that the Indians bore a red flag, this is put much in doubt by other testimony; and, in view of what occurred afterward, both here and elsewhere, it is important to remember that so far no white man's blood had been shed by Black Hawk or his band. No sooner had the soldiers in Stillman's command caught sight of the three Sacs, than with a howl they at once set out in pursuit. The Indians, witnessing the hostile movements of their opponents, turned and endeavored to effect their escape. This two succeeded in doing, but their companion was killed. Black Hawk was informed of the turn of events, and, hastily placing his men in ambush, waited the time when the whites should come within range. This was not long, and the disorderly mob of pursuers, unable to form any organized resistance, at once gave way before the onset, and, what had a few moments before been a victorious pursuit, was changed to an unseemly and disorderly rout. The whites lost eleven killed, and a number wounded, beside having their camp and material fall into the hands of the Indians. Black Hawk, in his account of the affray, sarcastically says: "After pursuing the enemy some distance, I found it useless to follow them, as they rode so fast." Only three Indians were killed. Had it not been for the bravery of Capt. Adams, and a few men under his command, who threw themselves between the terrified whites and the pursuing savages, the loss of the former would have been much larger.

Upon receiving the news of Stillman's disastrous rout, Gov. Reynolds sent an express to Col. Dodge informing him of the fact, and the danger to be apprehended throughout the mineral country, and that officer at once notified the settlers and miners directing them to at once repair to the block houses, and place themselves in a position to resist attacks.

After the affair at Stillman's Run—as it was afterward known—Black Hawk had continued his retreat unmolested up Rock River, sending out, in the meantime, small predatory bands in every direction. These bands, in the interval succeeding the disbanding of the volunteers shortly after Stillman's defeat, and the enlistment of new men, had created a panic throughout the mineral region and along the Rock River, they having scoured the country between that river and the Mississippi most effectually. On the 22d of May, a party of about seventy Indians, led by a Pottawatomie who had been badly whipped by a settler named Hall, attacked the latter at his home on the Indian Creek, where he had just returned with his neighbors, Davis and

Pettigrew, and massacred fifteen persons, only three escaping, two being the daughters of Mr. Hall, who were taken into captivity, and a young lad who escaped to Ottawa and gave the alarm. The two girls were taken to Black Hawk's camp at Koshkonong, where they were turned over by that chief to the Winnebagoes, who returned them to their friends, receiving therefor a reward of \$2,000, which had been offered by Gen. Atkinson.

Numerous other murders were committed by these roving bands, Durley, a mail contractor, being killed near Buffalo Grove on the 21st of May, and, two days later, another party of whites were attacked near the same place, and four, Felix St. Vrain, agent for the Sacs and Foxes at Rock Island; Aaron Hawley, Fowler and Hale were killed. On the 6th of June, James Aubrey was killed at Blue Mounds, while going to a spring for water, he being at the time not more than a mile and a half away from the fort.

Gov. Reynolds, of Illinois, had again placed a force of 2,000 volunteers in the field. Capt. Adam Gentry, with a company from a regiment which had been formed of those volunteers who had been recently disbanded, while on a scout over the country between Rock River and Galena, was attacked in camp near Burr Oak Grove by a small party of four Indians, whom he pursued and killed. While returning to Camp, he was again attacked by a large force of Indians. Gen. Whiteside, formerly in command of all the volunteer forces, was now a private in Capt. Gentry's Company. As the men broke and fled under the sudden onslaught, Whiteside sprang from his horse, and, "drawing a bead" on the chief as he came charging down, pulled the trigger, and with a loud yell the savage dropped from his saddle. This loss disconcerted the Indians, and gave the command time to rally. The savages showed no signs of continuing the attack; but, securing the body of their leader, slowly retreated. Whiteside, upon being asked afterward why he risked his life in so open a manner, sturdily replied, that "He had never run from an Indian yet, and never would."

The murder of St. Vrain and his companions was soon afterward bloodily revenged by Col. Dodge at the battle of the Pecatonica, where, with twenty-one men, he, in a hand-to-hand fight, killed every Indian in a band of seventeen which had committed this and other murders.

On the 20th of June, a small party of Indians showed themselves a short distance from Mound Fort, and Lieut. Force and a man named Green, who went out to reconnoiter, were surrounded and killed in sight of the fort. Their bodies were afterward buried by Col. Dodge and a company of volunteers, who took the trail of the Indians soon after, but lost the savages, they having scattered.

The only parties killed within the present confines of Grant County, of which there is any record, were two men named John Thompson and James Boxley, who were attacked in a field at Sinsinawa Mound. A companion escaped. The bodies of the two murdered men were shockingly mutilated, Thompson's heart having been taken out, and both scalped. Notice of the attack being given at Galena, Maj. Stephenson, in command at that place, marched in pursuit of the savages. Leaving a few men to bury the dead, the Major with his command followed the trail to the Mississippi, where he found the party had stolen a canoe and escaped across the river.

Through a Pottawatomie Indian, Gen. Atkinson received information that Black Hawk was encamped near the junction of the Whitewater with the Rock River, and immediately marched with a portion of his army to that point; but, on arriving there, Black Hawk was found to have broken camp, and the direction he had taken was so effectually concealed that for some time it remained unknown.

After the junction of all the forces at Koshkonong, provisions running short, Gen. Atkinson dispatched Gens. Henry, Alexander, Posey and Col. Dodge, with about two hundred and fifty men, to Fort Winnebago for supplies. The provisions obtained, Gens. Posey and Alexander started back, while Gen. Henry and Col. Dodge, with their commands, struck across the country toward Rock River, in hopes of hearing something of Black Hawk.

On arriving at the rapids of that river, they learned that the trail of the retreating Indians had been discovered, and at once started in pursuit. From the appearance of the trail it was plainly evident that the retreating force was large. A party of fourteen was thrown out ahead of the main body to act as scouts. This party was under the command of Capt. Gentry. On the morning of the 21st of July, as they were working their way across the country, they observed an Indian ahead of them, who turned and fired on them, and was himself slain as he attempted to escape. The main body was but a short distance in advance, and so anxious were the scouts to come up with it that they did not stop to examine the body, but, some weeks afterward, when the prairie had been burned over, the body was searched, and the watch which had been taken from the body of Lieut. Force was discovered. The watch was recognized the more readily that it had been used to regulate the change of sentinels at the Mound Fort.

The incidents of the closing acts in this stirring border drama are thus related by one who participated in the events which followed. "We reached the Four Lakes about sundown [July 20]. Gen. Henry here called a halt, and consulted with our pilot Poquet [Parquette] as to the country we were approaching. Poquet told him we could not get through it after dark; that we had to march close to the margin of the lake for some distance, as the undergrowth stood so thick one man could not see another ten steps. Gen. Henry concluded to encamp here until the break of day. Gen. Dodge sent Capt. Dickson (serving as Captain in place of Capt. Roundtree, who had been injured) ahead with a few men to see if they could make any discovery of the enemy, who returned in a very short time and stated they had seen the enemy's rear guard about one mile and a half distant.

"Gen. Henry gave strict orders for every man to tie up his horse, so as to be ready to start as soon as it was daylight. The order was strictly obeyed, and, after we had taken our frugal supper, all retired to rest except those who had to mount guard, for we had marched a great way that day, and many were still wet by the rain that fell the preceding night. Being very much fatigued, we were soon all asleep except those on guard.

"July 21, at the break of day the bugle sounded, and all were soon up, and in a few minutes had breakfast ready, and after taking a little food we mounted our horses and again commenced the pursuit.

"We soon found that the pilot had told us no lie; for we found the country that the enemy was leading us into to be worse, if possible, than what he told us. We could turn neither to the right nor left, but were compelled to follow the trail the Indians had made, and that, too, for a great distance at the edge of the water of the lake.

"We now doubled our speed, all were anxious to press forward, and as our horses were nearly worn out, we carried nothing only just what was actually necessary for us to eat; camp kettles and many such articles were thrown away. The trail was now literally, in many places, strewn with Indian trinkets, such as mats, kettles, etc., which plainly told us that they knew we were in pursuit. We saw too, from the face of the country that we were drawing close to the Wisconsin River, and our object was to overtake them before they reached it, so now we went as fast as our horses were able to carry us. But this was too severe for our poor horses; they began to give out. But even this did not stop a man. Whenever a horse gave out, the rider would dismount, remove the saddle and bridle and pursue on foot, on a run, without a murmur. I think the number of horses left that day was about forty. The rear guard of the enemy began about this time (3 o'clock P. M.) to make feints of standing, and as the timber stood thick, we did not know but that the whole army was forming for action. In consequence of this, we got down and formed as often as twice before we found out that their object was to keep us back until they could gain some strong position to fight from. Our front scouts now were determined not to be deceived any more, but the next stand they came to, they stopped, not for their feigned maneuver, but pursued them to the main body of the enemy. They returned to us in great haste, and informed Gen. Henry that the Indians were forming for action.

"We all dismounted in an instant. The line of battle was then formed in the same order that it had been laid off the preceding day. Gen. Dodge's corps and Maj. Ewing's spy battal-

ion still in front. The horses were left, and every fourth man detailed to hold them, which gave seven horses to each man to hold.

"We had scarcely time to form on foot before the Indians raised the war-whoop, screaming and yelling hideously, and rushed forward, meeting us with a heavy charge. Gen. Dodge and Maj. Ewing met them with a charge also which produced a halt on the part of the enemy. Our men then opened a tremendous volley of musketry upon them, and accompanied it with the most terrific yells that ever came from the head of mortals, except from the savages themselves. They now tried their well known practice of flanking, but here they were headed again by the brave Col. Jones and his regiment, who were on our left, where he met them in the most fearless manner, and opened a heavy fire upon them. Col. Fry was placed upon the extreme right. They tried his line but were soon repulsed. Their strong position was on the left or near the center, where Cols. Jones, Dodge and Ewing kept up a constant fire for something like half an hour.

"The enemy here had a strong position. They had taken shelter in some very high grass where they could lie down and load and be entirely out of sight. After fighting them in this manner for at least thirty minutes, during which time Col. Jones had his horse shot from under him, and one of his men killed and several wounded, Cols. Dodge, Jones and Ewing all requested Gen. Henry to let them charge upon them at the point of the bayonet, which Gen. Henry very readily assented to and gave the order to charge! which was obeyed by both men and officers in a most fearless manner. All were intent upon the charge. We had to charge up a rising piece of ground. When we got on the top, we then fired perfectly abreast. They could not stand this. They had to quit their hiding-place and make good their retreat. When they commenced retreating, we killed a great number.

"Their commander, who, it was said, was Napope, was on a white pony on the top of a mountain in the rear of his Indians; he certainly had one of the best voices for command I ever heard. He kept up a constant yell until his men began to retreat, when he was heard no more. Col. Collins was kept, during this engagement in the rear, as a reserve, and to keep the enemy from flanking and coming in upon us in the rear, which was a very good arrangement of Gen. Henry.

"It was now near sundown and still raining, as it had been all the evening, but so slow that we made shift to keep our guns dry. The enemy retreated toward the river with considerable speed. The ground they were retreating to appeared to be low and swampy, and on the bank of the river there appeared to be a heavy body of timber, which the enemy could reach before we could bring him to another stand. So Gen. Henry concluded not to pursue them any further that night, but remain on the battle-ground until next morning, and then he would not be in danger of losing so many of his men, knowing that, in the dark, he would have to lose a number, for the Indians would have the timber to fight from, while we would have to stand in the open prairie.

"Next morning, July 22, the troops were paraded and put in battle order on foot, except Col. Fry's regiment, and took up the line of march to the river, leaving Col. Collins' regiment to guard the horses and baggage and take care of the wounded. We marched down to the river, which was about one mile and a half off, but, before we reached the bank, we had a very bad swamp to go through, fifty or sixty yards on this side of the timber, which stood very high on the bank of the river. We now saw that Gen. Henry had acted very prudently. If he had attempted to follow them the night before, he would have lost a great many of his men.

"When we got to the bank, we found they had made their retreat across the river during the night, leaving a great many articles of their trumpery behind. We also saw a good deal of blood, where their wounded had bled. We now returned to camp, seeing there was no chance to follow them this day across the river.

"We, in this battle, were very fortunate, indeed. We had only one man killed and eight wounded, and we have learned, since the battle, that we killed sixty-eight of the enemy, and wounded a considerable number, twenty-five of whom they report died soon after the battle.*

* Black Hawk afterward stated his loss to have been only six men, which is doubtless true.—En.

"We were now nearly out of provisions, and to take up our line of march against them in the condition our horses were in, told us plainly we would suffer for something to eat before we could get it. We buried the brave young man who was killed, with the honors of war. It was stated that he had just shot down an Indian when he received the mortal wound himself. His name was John Short, and he belonged to Capt. Bragg's Company, from Randolph County. He had a brother and a brother-in-law in the same company, who witnessed his consignment to mother earth. The wounded were all well examined, and none pronounced mortal. We continued this day on the battle-ground, and prepared litters for the wounded to be carried on. We spent this day in a more cheerful manner than we had done any other day since we had been on the campaign. We felt a little satisfaction for our toils, and thought that we had, no doubt, destroyed a number of the very same monsters that had so lately been imbruing their hands with the blood of our fair sex—the helpless mother and unoffending infant.

"We dried our clothes, which had then been wet for several days. The day was spent in social chat between men and officers. There were no complaints made, all had fought bravely; each man praised his officers, and all praised our General. Late in the evening, some of our men, who had been out to see if there were any signs of the enemy still remaining near us, returned and stated that they saw smoke across the river.

"Gen. Henry had been of opinion throughout the day that if the Indians ever did intend fighting any more they would attack us that night, and this report went to confirm him in his belief more fully. That night he had a larger guard than usual. He made use of another excellent precaution. Orders were given for every man to sleep upon his arms, so that he could be ready for action upon the shortest notice, should an alarm be given. He had fires made in advance of our lines, at least forty yards, and had them kept burning all night. We had scarcely got to sleep, before we were alarmed by the running of our horses; we had to parade as usual to keep them from killing us. Men and officers now fully expected it was the enemy who had frightened them. Orders were now given for no man to sleep that night, but for every man to stand to his arms and be ready to receive the enemy. We now all expected to have hard fighting, and prepared for the worst. There was not a man who shrunk from his duty. All punctually obeyed the orders of their officers, and made every preparation to receive the enemy, should he come.

"At about one hour and a half before day, on the same mountain from which the Indian chief had been giving his orders on the evening of the battle, we heard an Indian voice, in loud, shrill tones, as though he was talking to his men and giving them orders. Gen. Henry had his men all paraded in order of battle in front of the tents, and the fires roused up.

"In this order we stood until daylight. Just before day, the Indian quit talking. When it was just light enough to discover a man a short distance, the brave and fearless Ewing took his battalion of spies and mounted on horseback. We were soon at the top of the mountain, to see who it was that had serenaded us so long at that hour of the night. We found only the sign of a few horse tracks, that appeared as though they had been made that night. We marched in quick time around the mountain, and found no one. We took a circuitous route back to camp, but found no one on the way. [This mysterious visitant proved afterward to have been a Sac talking in the Winnebago dialect, as it was known that there had been some of that tribe with the troops, and it was hoped that they would act as mediators for the Sacs, who wished to surrender—*vide* narrative of Lieut. Bracken.—Ed.]

"We were now out of provisions, and were obliged to abandon further pursuit, and go to the Blue Mounds to procure a supply. Accordingly, on the 23d, we got in motion again, not in pursuit of the enemy, but for bread and meat to satisfy our appetites, as we were now out of everything to eat. Our wounded this day suffered very much, on account of having rough ground to pass over, and some very muddy creeks. When they got to the Blue Mounds, they were very hospitably treated.

"We here drew three days' rations, and, on the 25th, took up the line of march for Helena, on the Wisconsin River, where we intended to cross, again to take up the pursuit of the enemy."

Gen. Atkinson had, on hearing the news of Black Hawk's whereabouts, broken camp, and marched by way of Blue Mounds to Helena. Here a participator in the closing scenes informs us: "The volunteers, under Col. Dodge, were again assembled, and the whole army crossed the river and followed the trail of the retreating Sacs and Foxes, which was discovered under the bluff north of the river, until they arrived at the Mississippi, near the mouth of the Bad Ax. On the route, a number of dead bodies of Indians were found, many in a state of putrefaction; these had doubtless died of wounds received at the battle of Wisconsin Heights, and from debility produced by sickness and starvation, which, from all accounts, prevailed among the Indians who accompanied Black Hawk. The march was, therefore, rendered distressingly offensive, both to the senses of seeing and smelling.

"On the evening of the 1st of August, signs of the enemy were discovered, and some stragglers killed. At 2 o'clock on the morning of the 2d, the line of march was taken up, Col. Dodge's command forming the advance, supported by the regular troops, under Col. Zachary Taylor. About sunrise, Capt. Dickson (of Platteville), who commanded the spy company, reported, by one of his men, that he was up with the enemy, and asked for orders. Col. Dodge sent orders to attack them instantly, and at the same time moved up rapidly with his command. He was immediately supported by Col. Taylor, with the regulars, and the line was then formed, and advanced about a mile to the banks of the Mississippi, near the mouth of the Bad Ax River. In the meantime, Capt. Dickson, who was in front with his spies, seemed, from the firing, to be actively engaged with the enemy. Our troops rushed with ardor to the scene of action; the battle was soon over, and the fate of Black Hawk and his band determined."

A correspondent of the *Galena Gazette*, in his account of the battle written at the time, says: "The battle lasted upward of three hours. About fifty of the enemy's women and children were taken prisoners, and many, by accident in the battle, were killed. When the Indians were driven to the bank of the Mississippi, some hundreds of men, women and children, plunged into the river, and hoped, by diving, etc., to escape the bullets of our guns; very few, however, escaped the bullets of our sharpshooters. The loss on the side of the enemy can never be exactly ascertained, but according to the best computation, they must have lost in killed, upward of one hundred and fifty; our loss in killed and wounded was twenty-seven."

The same writer says: "On the 4th of August, a party of fifteen men, from Cassville, under command of Capt. Price, were reconnoitering the country between that place and the Wisconsin, and fell upon a fresh Sac trail, making toward the Mississippi; they rushed forward with full speed of horses, and soon came upon them, killed and took prisoners to the number of twelve." This was the closing encounter of the war.

Black Hawk ever claimed that he was forced into the conflicts described in the foregoing pages, and, as will be seen by his account of the incidents preceding the Stillman defeat, this claim seems to be well grounded in fact, but, in order that the reader may himself judge of Black Hawk's sincerity, his own account, as given in his life, of the closing scenes of the war, is appended:

"During our encampment at the Four Lakes," says the chieftain in his narrative, "we were hard put to obtain enough to eat to support nature. Situated in a swampy, marshy country (which had been selected in consequence of the great difficulty required to gain access thereto), there was but little game of any sort to be found, and fish were equally scarce. The great distance to any settlement, and the impossibility of bringing supplies therefrom, if any could have been obtained, deterred our young men from making further attempts. We were forced to dig roots and bark trees to obtain something to satisfy hunger and keep us alive. Several of our old people became so reduced as actually to die with hunger. Finding that the army had commenced moving, and fearing that they might come upon and surround our encampment, I concluded to remove my women and children across the Mississippi that we might return to the Sac nation again. Accordingly, on the next day we commenced moving, with five Winnebagoes acting as our guides, intending to descend the Quisconsin [Wisconsin].

Seth C McDonald

MUSCODA.

"Napope, with a party of twenty, remained in our rear, to watch for the enemy, while we were proceeding to the Ouisconsin with our women and children. We arrived and had commenced crossing them to an island, when we discovered a large body of the enemy coming toward us. [Gen. Henry's command.—Ed.] We were now compelled to fight or sacrifice our wives and children to the fury of the whites. I met them with fifty warriors (having left the balance to assist our women and children in crossing) about a mile from the river, when an attack immediately commenced. I was mounted on a fine horse, and was pleased to see my warriors so brave. I addressed them in a loud voice, telling them to stand their ground, and never yield it to the enemy. At this time, I was on the rise of a hill, where I wished to form my warriors, that we might have some advantage over the whites. But the enemy succeeded in gaining this point, which compelled us to fall back into a deep ravine, from which we continued firing at them, and they at us, until it began to grow dark. My horse had been wounded twice during this engagement, and fearing, from his loss of blood that he would soon give out—and finding that the enemy would not come near enough to receive our fire in the dusk of the evening—and knowing that our women and children had had sufficient time to reach the island in the Ouisconsin, I ordered my warriors to return, in different routes, and meet me at the Ouisconsin, and was astonished to find that the enemy were not disposed to pursue us.

"In this skirmish, with fifty braves I defended and accomplished my passage over the Ouisconsin, with a loss of only six men, though opposed by a host of mounted militia. I would not have fought there but to gain time for my women and children to cross to an island. A warrior will duly appreciate the embarrassments I labored under; and, whatever may be the sentiments of the white people in relation to this battle, my nation, though fallen, will award to me the reputation of a great brave in conducting it.

"The loss of the enemy could not be ascertained by our party, but I am of the opinion that it was much greater in proportion than mine. [It was much less, as has been shown in previous pages.—Ed.] We returned to the Ouisconsin and crossed over to our people. Here some of my people left me and descended the Ouisconsin, hoping to escape to the west side of the Mississippi that they might return home. I had no objection to their leaving me, as my people were all in a desperate condition, being worn out with traveling and starving from hunger. Our only hope to save ourselves was to get across the Mississippi. But few of this party escaped. Unfortunately for them, a party of soldiers from Prairie du Chien were stationed on the Ouisconsin a short distance from its mouth, who fired upon our distressed people; some were killed, others drowned, several taken prisoners, and the balance escaped to the woods and perished with hunger. Among the party were a great many women and children.

"Myself and band having no means to descend the Ouisconsin, I started over a rugged country to go to the Mississippi, intending to cross it and go to my nation. Many of our people were compelled to go on foot for want of horses, which, in consequence of their having had nothing to eat for a long time, caused our march to be very slow. At length we arrived at the Mississippi, having lost some of our old men and little children, who perished on the way with hunger.

"We had been here but a little while before we saw a steamboat (the Warrior) coming. I told my braves not to shoot, as I intended going on board so that we might save our women and children. I knew the captain (Throckmorton), and was determined to give myself up to him. I then sent for my white flag. While the messenger was gone, I took a small piece of white cotton and put it on a pole, and called to the captain of the boat and told him to send his little canoe on shore and let me come on board. The people on the boat asked whether we were Sacs or Winnebagoes. I told a Winnebago to tell them we were Sacs, and wanted to give ourselves up. A Winnebago on the boat called to us "to run and hide, that the whites were going to shoot." About this time, one of my braves had jumped into the river, bearing a white flag to the boat, when another sprang in after him and brought him to shore. The firing then commenced from the boat, which was returned by my braves, and continued for

some time. Very few of my people were hurt, after the first fire, having succeeded in getting behind old logs and trees, which shielded them from the enemy's fire.

"The Winnebagoes on the steamboat must have either misunderstood what was told or did not tell it to the captain correctly, because I am confident he would not have fired upon us if he had known my wishes. I have always considered him a good man and too great a brave to fire upon an enemy when suing for quarter.

"After the boat had left us, I told my people to cross if they could and wished; that I intended going into the Chippewa country. Some commenced crossing, and such as had determined to follow them remained, only three lodges going with me. Next morning (August 2) at daybreak, a young man overtook me, and said that all my party had determined to cross the Mississippi; that a number had already got over safe, and that he had heard the white army last night within a few miles of them. I now began to fear that the whites would come up with my people and kill them before they could get across. I had determined to go and join the Chippewas, but reflecting that by this I could only save myself, I concluded to return and die with my people if the Great Spirit would not give us another victory. During our stay in the thicket, a party of whites came close by us, but passed on without discovering us.

"Early in the morning, a party of the whites, being in advance of the army, came upon our people who were attempting to cross the Mississippi. They tried to give themselves up. The whites paid no attention to their entreaties, but commenced slaughtering them. In a little while the whole army arrived. Our braves, but few in number, finding that the enemy paid no respect to age or sex, and seeing that they were murdering helpless women and little children, determined to fight until they were killed. As many women as could commenced swimming the Mississippi with children on their backs. A number of them were drowned and some shot before reaching the opposite shore.

"One of my braves, who gave me this information, piled some saddles up before him when the fight commenced to shield him from the enemy's fire, and killed three white men; but, seeing that the whites were coming too close to him, he crawled to the bank of the river and hid himself until the enemy retired. He then came to me and told me what had been done. After hearing this sorrowful news, I started with my little party for the Winnebago village at Prairie La Crosse."

The finale of this romantic melo-drama is given in an earlier part of this work.

Of the justness of the quarrel the reader can judge for himself; but, whatever the decision, the so-called battle of Bad Ax can only be characterized, according to testimony on both sides, as an indiscriminate massacre. Whatever may have been the provocation, and Black Hawk and his band were by no means blameless, this indiscriminate slaughter of women and children, and refusal of quarter to the starving savages, is one scene in the chapter of early history to which none will look back with any great degree of pride.

HEIGHTS IN GRANT COUNTY.

The following list will show the elevation of different points in the county. All heights are computed from the level of Lake Michigan, and are just that number of feet above the lake's surface: Wyalusing, 33 feet; Glen Haven, 28 feet; Cassville, 30 feet; North Andover, 260 feet; Bloomington, 327 feet; Patch Grove, 498 feet; Mount Hope, 498 feet; Little Grant, 250 feet; Beetown, 184 feet; Potosi, 204 feet; British Hollow, 287 feet; Rockville, 348 feet; Hurricane Grove, 363 feet; Lancaster Court House, 502 feet; Mount Ida, 590 feet; Homer P. O., 400 feet; Fennimore, 590 feet; Liberty Ridge, 566 feet; Annaton, 271 feet; Ellenboro, 111 feet; Dickeyville, 356 feet; Jamestown P. O., 334 feet; Fair Play P. O., 220 feet; Sinsinawa Academy, 348 feet; Hazel Green, 360 feet; St. Rose, 416 feet; Big Patch, 239 feet; Platteville, 257 feet; Washburn, 263 feet; New California, 411 feet; Montfort, 515 feet; Castle Rock, 269 feet; West Platte Mound, 694 feet; Muscoda, 109 feet; Boscobel, 89 feet. The Mississippi Bottom, at the southern extremity of Grant County, is 600 feet above the sea. The highest point within Grant County being the top of Sinsinawa Mound.

WEATHER REPORT.

Among other incidents connected with the history of the county, which live with vivid distinctness in the memory of old settlers, are several winters noted for their unexceptional severity. Among the first spoken of was that of 1836, when the frost king's reign lasted long into April, teams heavily loaded crossing the Mississippi River as late as the 20th of that month. This was followed by another in 1843, which, if not quite as severe as its predecessor, was about as long continued. But all these paled before the terrible rigor that marked the ending of 1855 and the commencement of 1856. This season was unexceptional in its severity. A heavy fall of snow marked the commencement of king winter's reign, over which formed, in time, a hard crust. This was followed by another storm that in turn melted enough under the limpid rays of the sun to form a second crust. Everything outside was buried and frozen up. In many instances, corn and fodder that had been left out in the fields, owing to the sudden downward swoop of the icy temperature, was obliged to be left standing in the "stook" until the warm rays of late spring sun released it from its icy fetters. Especially hard did this winter bear upon the game in the forests, deer were reduced to such extremities that they would enter the outskirts of the villages in droves in order to obtain a morsel of hay from out the farmers' sleighs and were killed by the score, many being massacred with clubs, so intent were they upon obtaining food. Corn that had been left in the fields was found in the spring half-eaten where these famine-stricken creatures had sought to secure enough to keep them alive. This point marks the decline of this species of game in the county. They never recovered from the great losses suffered by starvation and slaughter made by their four-footed enemies. Of feathered game, quail were nearly entirely killed out, and it was many years before they were found again in much abundance. The past winter of 1880 and 1881 will long be remembered as one ranking among the most severe and long-continued of its noted predecessors. Travel was almost entirely impeded, mails blocked, and not until late in the spring was the country released from the embargo of ice and snow.

CHAPTER III.

THE FIRST OCCUPANT—THE SECOND TRADER—SHAW'S TRIP TO THE MINES—INDIAN MINING—THE ADVANCE OF WHITE MEN—THE FIRST WHITE WOMAN—EARLY MINING EXPERIENCES—FIRST MILLS—GRAHAM'S WOLF FIGHT—PRIMITIVE AGRICULTURE—THE FIRST THRESHING MACHINE—THE CALIFORNIA GOLD FEVER—MINING TROUBLES.

THE FIRST OCCUPANT.

There remains but little doubt that the pressure of a white man's foot upon Grant County soil was coeval with the presence of the earliest explorers, who, taking their lives in their hands, boldly plunged forward into the unknown wilderness and rescued from the realms of obscurity that mighty river which was afterward to become the diamond among diamonds in the crown of the conqueror and possessor.

But of the presence of these early explorers, we have only a traditionary and untangible knowledge, and up to the beginning of the eighteenth century, and, in fact, a few years later, there is no evidence which would show that this section had been used as a tarrying place by the white man. But later on, evidence tangible and authentic proves beyond question that one Capt. Morand, a French trader, not only visited the present county of Grant, but had established a place for the deposit of his stock upon the east bank of the Mississippi, at a point some eight or nine miles below the mouth of the Wisconsin, in what is now Bloomington Township. Of the early history of this trader but little can be gleaned, or how long he had occupied this site, which was known as Fort Morand. Besides this depot, he had still another some seven miles west of Mackinaw, known by the same name. And it is only by events which happened later in the century that we can, with any degree of reliability, fix the probable date of this occupation.

During the early part of the century, the Ottigaumies, or Foxes, were located at the Little Butte des Morts, on the western bank of Fox River, some thirty-seven miles from Green Bay. Here, following their predatory instincts and the practices of civilized man of early times, they were accustomed to levy blackmail from every passing craft, the usual course of procedure being, upon the appearance of a trader's boat, to plant a torch on the shore as a reminder that he was expected to land and deliver certain tribute, and woe to the unlucky wight who failed to comply with the hint so expressed. The imperious nature of these demands so vexed Morand that he finally resolved to put a stop to them once and for all. He accordingly raised a small force of volunteers at Mackinaw, in all probability increased somewhat at Green Bay by friendly Indians and French troops, and with this force felt assured of giving his ancient enemies a castigation that would effectually prevent their levying any more tribute-money for some time to come.

The exact date of this expedition is involved in some doubt. Carver gives it that as far back as 1706 "the French missionaries and traders having received many insults from this people, a party of French and Indians under the command of Capt. Morand marched to avenge their wrongs." The Rev. Alfred Brunson, in a paper on the 'Early History of Wisconsin,' published in 1858, thinks it must have been somewhat later than this, probably in 1714; while Grignon, in his *Recollections*, agrees with the Hon. Morgan L. Martin in placing this expedition as late as 1745; yet this latter date seems too far on in the century, as Black Hawk, in 1832, claimed that the lands ceded by a portion of his tribe to the United States had been in the possession of the tribe over a hundred years, and it was not until after the third of Morand's expeditions when the Foxes were disastrously defeated and reduced almost to annihilation that they united with the Sacs, and afterward with them were driven out of their former country. However this may be, that this first expedition was previous to 1746 is absolutely certain, leav-

ing the date of Morand's first occupancy of the Mississippi River depot somewhere during the early part of the century. Of this expedition and those which followed so quickly after, ending in breaking the power of this tribe, the following interesting account is given in the Grignon *Recollections*.

"Morand's force was deemed sufficient, and his fleet of canoes started from Green Bay up the river, each canoe having a full complement of men well armed, and an oil-cloth covering large enough to envelope the whole canoe, as was used by the traders to shield their goods from the weather. Near the Grand Chute, some three miles below the Little Butte des Morts, and not yet within view of the latter, Morand divided his party, one part disembarking and going by land to surround the village and attack the place when Morand and his water division should open their fire in front. The soldiers in the canoes, with their guns all ready for use, were concealed by the oil-cloth coverings, and only two men were in view to row each canoe, thus presenting the appearance of a trader's fleet. In due time the Foxes discovered his approach and placed out their torch, and squatted themselves thickly along the bank as usual, patiently awaiting the landing of the canoes and the customary tribute offering. When sufficiently near to be effective the oil-cloth coverings were suddenly thrown off, and a deadly volley from a swivel gun loaded with grape and canister shot, and the musketry of the soldiers scattered death and dismay among the unsuspecting Foxes; and this severe fire was almost instantly seconded by the land party in the rear, and quickly repeated by both divisions, so that a large number of devoted Foxes were slain, and the survivors escaped by rapid flight up the river.

"The Foxes next took post about three miles above the Grand Butte des Morts, on the southern or opposite bank of the river, on a high, sandy point of land, with a marsh on its eastern border. Here Morand, the same season, followed them, but, of course, could not resort to his old ruse, and must have approached the town in the night, or just before daybreak. At all events, according to the general statement given me by my grandfather (Charles de Langlade) and aged Indians, another severe battle ensued, and many Foxes were killed, though not so many as at the Little Butte des Morts, and again they were forced to fly. The Indians always spoke of this place as the locality where Morand's second battle with the Foxes took place. My half-brother, Perrish Grignon, informed me that he had seen, many years ago, a crevice or cavity on the rocky shore of Lake Winnebago, some six or eight miles south of Oshkosh, near the old Indian village of Black Wolf, a large number of skulls and other human remains, and I have thought that when the Foxes fled from Little Butte des Morts, they may have passed around the head of Lake Winnebago, and thinking themselves safe from pursuit, tarried at this point and gave attention to their wounded, and that the remains of those who died were placed in that cavity.

"The surviving Foxes located themselves on the northern bank of the Wisconsin, twenty-one miles above its mouth, and some little distance below the creek next below the mouth of Kickapoo River. When I first passed there in 1795, I saw some crude remains of this village. As soon as the enterprising Morand heard of the new locality of his determined enemies, who still seemed bent on obstructing his great trading thoroughfare, he concluded it would be unsafe for him to suffer them to remain there, and consequently lost no time, even though winter had commenced, to collect his tried and trusty band of French and Indians and make a distant winter expedition against the Foxes. Perhaps he thought as he had once defeated them by stratagem, and then by the usual mode of Indian warfare, that it would now be policy to push his fortunes by a winter campaign, and fall upon his inveterate foes, and strike a fatal blow when they would least expect it. Capt. Morand pursued on foot with his troops, up Fox River and down the Wisconsin, taking with them snowshoes to meet the exigencies of the season, and pursue their tedious march over the snow for a distance of fully two hundred miles. The Foxes were taken completely by surprise, for Morand's men found them engaged in the amusement of *jeu de paille*, or game of straw, and surrounding the place and falling suddenly upon them, killed some and captured the others. So well planned was the attack, and so complete was the surprise, that not one of the Foxes escaped.

“It must have been on the return of this winter expedition of Capt. Morand’s that the following incident occurred, as narrated by Capt. Carver, on the authority of an Indian. ‘On the return of the French,’ says Carver, ‘to Green Bay, one of the Indian chiefs in alliance with them, who had a considerable band of the prisoners under his care, stopped to drink at a brook. In the meantime, his companions went on, which, being observed by one of the women whom they had made captive, she suddenly seized him with both her hands, while he stooped to drink, by an exquisitely susceptible part, and held him fast until he expired on the spot. As the chief, from the extreme torture he suffered, was unable to call out to his friends, or give any alarm, they passed on without knowing what had happened; and the woman, having cut the bands of those of her fellow-prisoners, who were in the rear, with them made her escape. This heroine was ever after treated by her nation as their deliverer, and made a chieftainess in her own right, with liberty to entail the same honor on her descendants—an unusual distinction, and permitted only on extraordinary occasions.’ ”

These defeats broke the spirit of the tribe, and not only rendered them powerless for some time to come, but their severe chastisement had a restraining effect upon other tribes located near or upon these water highways between the great lakes and the Mississippi.

Of Morand himself, but little more can be said. A person of the same name was mentioned in Gorrell’s *Journal* as being, in 1763, at the head of an extensive body of traders, and was, in all probability, the same individual who years before humbled the power of the Foxes in so signal a manner. The mother of the wife of the Sac Chief, Keokuk, claimed in after years to be the daughter, by a Sac mother, of Capt. Morand. But the latter’s disappearance was as sudden and complete as his former plans had been successful, leaving no trace behind by which the future history of the first known white man whose foot pressed Grant County soil could be traced.

THE SECOND TRADER.

The next resident in this section, and the one whose name the county now bears, was another Indian trader named Grant. He was here as early as 1810, and for many years was supposed to have been the first known white man in Grant County. The *Grant County Herald*, in an early issue, speaking of this pioneer adventurer says:

“Grant was an Indian trader, one of those dauntless frontiersmen known to the earlier days of the Northwest, and who differed from the savage by possessing a thirst for gain and the enterprise to gratify it. As early as 1810, Grant was engaged in trade with the Indians occupying this region, making his headquarters at Prairie du Chien. He was noted for his hardihood and endurance, and for his disregard of every comfort and convenience of civilized life. His rifle supplied him with food; his cooking utensil consisted of a brass kettle, which was fitted to his head, and which he wore under his cap. One incident of his history has been preserved, and is worth relating. The Sacs and Foxes were at war with the Winnebagoes. Grant was trading with the former, and was consequently regarded by the latter as their enemy. One day he happened to encounter a war party of the Winnebagoes, who immediately gave him chase. The foremost coming up struck him upon the head with his tomahawk, which produced no other effect than a sharp ring from the kettle before mentioned. The Indian recoiled with consternation and horror, exclaiming, Manitou (spirit)! and precipitately retreated, accompanied by the whole party. This revelation of his divine character subdued the animosity of the Winnebagoes, and he was ever afterward regarded with the utmost awe by the Indians.”

Of the future career of Grant, even less is known than of Morand. Whether he returned to the Northeast, from which he had originally drifted, or whether he pressed on in the van of the advancing tide of civilization, must ever remain enwrapped in the fog-bank of unexplained mysteries. It is enough that he left the imprint of his name upon the rivers and lands of his old trading-ground.

SHAW’S TRIP TO THE MINES.

John Shaw, who was engaged in boating on the river from 1816 to 1820, stopped during his trip in the first-named year at a point where Cassville is now situated, to obtain a return

cargo of lead ore. This could not be obtained here, and Mr. Shaw was requested to drop down with his boat to the mouth of Fever River until the lead was brought down to him by the trader. This he refused to do, and, being conversant with the French tongue, he was enabled to pass himself off as a Frenchman, and ascend the river to where the Indians had their furnaces, despite the refusal of the savages to allow "a white man," as they called the Americans, to see the mines. According to Mr. Shaw's narrative, the lead of each trader was stacked up separate on the bank. The lead was in a bowl-shaped form, called *plats*, each weighing about seven pounds.

That the Indians had discovered and worked the mines for a long period of years, extending well back into the middle of the eighteenth century, there is but little if any doubt. At Hardscrabble, and in other parts of this county, the remains of their rude smelting furnaces were to be seen, and in some parts remained visible to a recent date.

Jonathan Carver, whose visit to Wisconsin in 1766 has been noticed heretofore, says in his account of a visit to the great town of the Saukies (Sacs) in that year. "While I stayed here I took a view of some mountains that lie about fifteen miles to the southward and abound in lead ore. So plentiful is lead here, that I saw large quantities of it lying about the streets in the towns of the Saukies, and it seemed to be as good as the produce of other countries."

This mining must necessarily have been of the most superficial character, both from lack of the proper tools with which to carry on the work to any great depth, and also from the inherent disinclination on the part of the lordly savage to do more manual labor than was absolutely necessary.

INDIAN MINING.

The means by which these untutored sons of the forest were enabled to locate "leads with a definiteness not attained by later explorers, except in rare instances, and when the secret had been communicated by the original owners of the soil, was a small bluish bush, somewhat resembling the sage, and known as "mineral weed." This bush grew to a height of some eighteen inches, and was topped by a large red, tasseled head. When the mineral was no more than a few feet below the surface, this weed was found growing luxuriantly over it, and furnished a means for tracing the direction of the mineral not less certain than if the ore lay bare before the explorer. A fine, rank growth of wire grass also furnished information of the hidden wealth beneath when the mineral approached close to the surface.

The Indian method of mining was one on which the miners of to-day would look with astonishment and disgust. Their "bucket" being a tough deer-skin, and their windlass stoutheongs by which one or more muscular "bucks" would drag the loaded skin up the inclined plane, which formed the entrance to their burrows; for to dignify them with the names of miners would be a mistake. When in their progress their way was found obstructed by a boulder too large to remove, a fire was kindled under it until it was heated to a high temperature, and the cold water was poured on, the immediate result being a splitting of the rock into the proper size to handle with ease. Ore, when found in large lumps, was encircled with thongs of stout green hide, and dragged by main strength to the surface. Here, by means of rude smelting furnaces, the ore was reduced to pigs or *plats* of mineral, in which state it was sold to the trader who visited the region. These furnaces were a curiosity in themselves, and are thus described: "A hole or cavity was dug in the face of a piece of sloping ground, about two feet in depth, and as much in width at the top. This hole was made in the shape of a mill-hopper, and was lined or faced with flat stones. At the bottom, or point of the hopper, which was about eight or nine inches square, other narrow stones were laid across grate-wise. A channel or eye was dug from the sloping side of the ground inward to the bottom of the hopper; this channel was about a foot in width and in height, and was filled with dry wood and brush. The hopper, being filled with the mineral, and the wood ignited, in a few minutes the molten lead fell through the stones to the bottom of the hopper, and thence was discharged through the eye over the earth. It was certainly a simple but rough and improvident way of gathering the melted lead. But, in the great abundance of mineral, and ease of its procurement, it sufficed for the wants of the Indian

At many of these primitive smelting places, the white settlers afterward extracted a profitable harvest of rich lead from the slag and refuse of the Indian laborer's smelting." The Vinegar Hill mines are stated by old miners to have been thus worked long before the advent of the white miners.

THE ADVANCE OF WHITE MEN.

Of this mining region, its development, richness and peculiarities, extended mention is made in an earlier portion of this work, hence we will but pause to note that through the industries and enterprise of DuBuque and others, this vast region of mineral-producing country had early in the century become known to the outside world. In 1822, a party of adventurous miners came up the river and progressed so far northward as the diggings afterward known as "Hardscrabble," while a second party landed on Grant River, at an Indian town called Pascans, near where the town of Osceola was afterward located. This is the first authentic knowledge of the advent of white men in what is now Grant County other than the few traders already mentioned. A traditional legend exists that a party of English founded a town close by the site of the present city of Muscoda, but no mention is made by any of the early voyagers or travelers through that region of the existence of such a town. The legend further avers that the town was destroyed by the Indians. However, the whole matter can but be dismissed for lack of corroborative proofs into the misty region of mythland.

Those miners who entered the southern coasts of the county as mentioned above, in 1822, remained but a short time, and in absence of all account to the contrary, it is safe to infer that they failed to unearth those stores of mineral wealth which a few years later brought a heavy tide of immigration into the new El Dorado. But the way had been opened, and, in 1824, Thomas McKnight, John Ewin and several others made the first mining settlement at Hardscrabble." This name arose from a difficulty experienced in deciding the ownership to a newly discovered lead. The exact date of this ancient game of grab is not given, but apparently was soon after the first discoveries, as in 1826 the name had already become the distinctive appellation of this section. In the latter year came a large addition to the new mining camp, and the news of the richness of the diggings began to attract miners and adventurers from all directions, chiefly, however, from Missouri, with a moderate infusion of Kentucky and Illinois blood. It is from 1827 that Grant County must date its first permanent settlement. Although it is true that those coming to the new country in this year did so with no settled intention of remaining, still the richness of the diggings and the numerous evidences of untold wealth, that needed only the pick and shovel to unearth it, so worked upon the intentions of these early pioneers as to change their character from that of mere adventurers to that of permanent settlers. Among those who thus became the pioneer fathers of the future county of Grant were Maj. J. H. Roundtree, Hugh R. Colter, Ebenezer M. Orne, Edgerton Hough, Henry Bushnell, Col. Joseph Dixon, Orris McCartney, Henry Hodges, Thomas Shanley and A. D. Ramsey. There were many others who came the same year, some of whom, after going back and forth spring and fall for several years, finally settled in the county; and others, by far the larger majority, who sucked the orange until it began to show signs of dryness, and then turned to new fields. Of the former class were Joseph, Harvey and Frank Bonham, and James Grushong and brother, these two latter, however, making their first entry into the county in 1826.

Of these pioneers, Maj. Roundtree, Hugh R. Colter, Ebenezer Orne and Col. Joseph Dixon settled at Platteville; Edgerton Hough at Gibraltar; Orris McCartney first stopped at Platteville, and in 1828 settled at Beetown, but in the same year removed to his farm near Cassville. Henry Hodges and Thomas Shanley came to Hardscrabble in 1826, and, a few years later, settled a few miles southwest of the present city of Lancaster. Mr. Ramsey also settled near Cassville. The Winnebago troubles stopped for a moment the tide of immigration which had thus early began to flow in the direction of the new land, which, if not flowing with milk and honey, was at least supposed to exist on the surface of an aggregated mineral mountain, where all that was necessary was the removal of a few shovels of dirt, when, "presto!" the laborer was ready to take his seat among the Croesuses of the land. The following year this tide returned to its former

channel, and flowed, if not extravagantly, at least steadily, until the Black Hawk war of 1832. Across the wide open prairies they came, fording streams, following dimly shadowed trails, or striking out into the wild wilderness about them; or loading the puffing, snorting steamer to the guards, the new seekers for the land of promise came hurrying in. Little villages began to arise here and there in the wilderness. First a mere collection of miners' cabins, then a store, again a rude smithy, the inevitable tavern, and then the family home, where, gathered around the broad hearthstone of the great open fire-place, they enjoyed the privileges and pleasures, and endured the privations of a pioneer life. But broad as was the hearthstone, and large as was the fire-place of which it formed the base, neither was so broad or opened so wide as the generous, hospitable hearts of these early pioneers—men of brain and muscle, clear of head and stout of heart, who thus put behind them the comforts and luxuries of civilization to wrestle with the primeval wilderness, and tear from its grasp another star which they should add to the constantly increasing constellation that formed the insignia of the young Republic.

THE FIRST WHITE WOMAN.

Early in 1827, mineral in large quantities had been discovered at Beetown. The tradition of its discovery being that the discoverers, while hunting for wild bees, found at the foot of an uprooted maple tree, a large deposit of mineral. This discovery was made by James Meredith, Thomas Crocker, Curtis Caldwell and Cyrus Alexander. Among the miners attracted by the new discoveries to this section, was Mr. Thomas, who was accompanied by his wife, thus making Mrs. Thomas the first white woman in the present confines of Grant County. The "Winnebago scare" came on soon after their arrival, and all pulled up stakes and started for Galena. Mr. Thomas afterward moved into La Fayette County and settled about two miles south of White Oak Springs, where he resided for many years. In the fall of this same year, Mr. Henry C. Bushnell located at Muscalonge, bringing with him his bride of a few months. They resided here until the following year, when, after the birth of their daughter, Dorethy J. Bushnell, they moved to a point just northwest of Lancaster, now known as "Bushnell Hollow." Thus Mrs. Bushnell was the second white woman in the county, and the first to actually settle within its limits, while her daughter, Dorethy, has the honor of being the first white child born in the county. When the Black Hawk war broke out, the Bushnells took refuge first in Fort Crawford, at Prairie du Chien, and afterward in the block-house at Cassville. Soon after the close of the outbreak, they returned. They returned to Lancaster where they remained some years, finally removing to Muscalonge, where they remained until called upon to prepare for the long journey upon which all, sooner or later, must start. Miss Bushnell was married to Mr. Charles Whipple, and, at last accounts, resided in California.

After the defeat of Black Hawk and his band in 1832 had settled forever the question of supremacy in this section, immigration again set in fierce and strong, as the spring torrent obstructed, for the time being, by an unexpected barrier, by its chafings and surgings tears aside the obstacle and rushes onward with a victorious roar. New diggings were being opened up, which, with the ranges already discovered, placed the county for the time being at the flood-tide of prosperity. Mining was then the principal, and indeed, almost the only employment. The man with a "prospect" was, for the time being, the coming man, too often, alas! to degenerate by future developments into the disappointed adventurer.

EARLY MINING EXPERIENCES.

The following description of early mining, taken from a historic tale entitled "Struck a Lead," and published by James M. Goodhue, in the *Grant County Herald* at an early date, will give the younger generation, not "to the manor born," something of an idea of the country as it then appeared and the modes of procedure employed by the embryo millionaires to "make a strike."

"The 'lead district' is embraced in the original Northwest Territory, ceded to Congress by the State of Virginia. Upon the extinguishment of the Indian title, the fee simple of course

vested in Congress. The upper lead district as it was generally called, extended about seventy miles north and south on both sides of the Mississippi River, and about sixty miles east and west, embracing portions of Iowa, Wisconsin and Illinois. Perhaps the most prominent feature in the face of the country is the 'Mounds.' They are quite numerous; among the most prominent of which are the Blue Mounds, the Sinsinawa and Platte Mounds. Some of these mounds are one or two hundred feet high, and appear to be nothing more or less than hills dissolved by time, and by the gradual disintegration of the rocks of which they were composed—rugged mountains razed into smooth green mounds. Standing upon one of these the traveler sees the mining region spread out before him like a map. The greater part of the land is prairie; though there is abundance of forest and barrens. The prairie is mostly undulating; but the forests and barrens are strongly marked with ridges and ravines. No country in the world is more abundantly watered. Every ravine has its rivulet. The most successful mining operations have been in the barrens, where the land is broken into irregular lobes or swells, ranging in altitude from ten feet to one hundred. In 'prospecting,' the miner generally commences by digging a hole as large as a well, on the north and south side of these hills, in some small ravine leading up the side. If, in sinking the shaft he finds scattering mineral—'float' as it is termed—he infers that it descended from an east-and-west crevice above. It is then termed a prospect, and the miner is encouraged to sink another hole a few feet further up the ravine. If in the next shaft he finds the mineral still 'stronger,' that is, larger, more abundant, and of a character indicating the near approach to the crevice from which it 'floated,' he throws into a pile all the pieces of mineral he has found and calls it a 'show'—a good show or a bad show as the fact may be. The speculator, upon examination of a show, often buys the discoverer's show or prospect of a 'lead.' The mere prospect of finding a large body of mineral is frequently sold for hundreds of dollars. The miner now proceeds to prove his 'prospect;' that is, to extend a range of prospect holes up the hill to the crevice. If he should pass over the crevice, in prospecting, he will find no mineral in the holes he may sink; because mineral never floats up hill. He then commences 'drifting,' that is, digging horizontally from the bottom of the last hole in which he 'struck' mineral, toward the bottom of the next hole above, and in his progress he strikes the crevice, which may, after all the labor in finding it, be a barren crevice, containing but little mineral; on the other hand, the lead may be worth many thousands of dollars; since the labor of raising the mineral when discovered is comparatively little, and the ore is worth when raised, from \$10 to \$25 per thousand pounds. [In some years of late it has gone much beyond this figure.—ED.] 'Crevices,' of course, vary in depth and width. Some of these are openings thirty or forty feet wide, between perpendicular wall rocks. The ore is generally found mixed with ochre and flint—but is sometimes found in solid masses.

"When all the mineral is raised that can be found in sinking a shaft, the miner commences drifting east and west in the crevice for more mineral. For this purpose, it is sometimes necessary to brace the aperture with timbers to prevent caving. Sometimes a lead is worked out by means of a level; that is, a tunnel being dug in the bottom of the crevice through the hill, and in this tunnel is constructed a cheap railroad for carrying out the contents of the crevice. The principal crevices run east and west; those running north and south contain smaller quantities, generally in thin horizontal sheets, and are cut out by east-and-west leads (or, as geologists term them 'lodes'). Sometimes after drifting a few rods, the crevice 'closes up,' but frequently by sinking another hole still further east or west on the same crevice, another 'opening' is found, and the mineral comes in good again. Leads vary greatly in extent. Some are wide and deep, while others are narrow and shallow. Some 'run' well, while others 'give out' in a few rods. Occasionally a crevice is found widening into a 'chamber' containing an immense body of mineral. It is not, however, every crevice that contains mineral—the sanguine miner sometimes comes to the bottom of a barren crevice, confident all the time that he is about to strike mineral; and when, after all his labor, he finds the crevice closed up at the bottom with solid rock, he leans perhaps on the handle of his pick, the very image of despair, and then ascends into the light of day by means of a windlass. In some places the diggers have run the

mineral into the water. Of course these water leads cannot be worked unless by draining and pumping. Mining here is yet in its infancy, requiring but little capital. The diggings are generally superficial. Some miners and geologists believe, however, that much larger bodies of lead and also of copper ore, lie buried deep in these mines than have yet been discovered. For mining deep, much capital and large and expensive machinery is requisite. The population of the mines is rather fluctuating, drifting from one part of the mines to another and settling permanently nowhere. This state of things is of course unfavorable to the steady growth and permanent prosperity of the towns and villages in the mines. All the lands in the 'lead district' which were known by Government to be mineral lands, and some which were not supposed to be mineral lands, but which were covered with forests to supply the wants of miners and smelters, have been reserved from sale 'for mining and smelting purposes.' Many tracts of land not reserved have been entered, that is, purchased at the land office. Before entering a tract of land, a purchaser was sometimes required to make oath that he knew of no mineral having been discovered upon it. If the miner discovers a valuable lead upon Congress land, and the discovery is known to no other person, the inducement to perjury by taking the oath required at the land office, and purchasing the soil in fee simple at \$1.25 per acre is great. Perhaps some frauds upon the Government have been thus committed. No patents for these lands have yet been issued; if such frauds have been committed, they may become the subject of legal investigation. Mineral lands thus purchased, are of course, leased by the proprietors upon such terms as they please to establish. A great part of the lands reserved from sale have, by a kind of prescription, become also the property of claimants in the following manner: They were at first farmed out to miners in small lots by an agent of Government. The miner was allowed to stake out his lot which he was then authorized by a 'permit' from the agent to occupy, upon the condition of his mining upon the lot five days in every week, etc. Few, if any, of the miners complied with the condition of their permits; but the miners were indulgent toward one another, and each respected the claims of the rest; so that, although the lots were forfeited, no complaint was made to the agent. Permits soon began to be transferred by sale, like leases; and every purchaser of a mineral lot held it by a title deemed even better than that by which the first claimant held; because a valuable consideration had been paid. The revenue for the mines was collected from the smelter, who purchased his ore of the miner. Each smelter received a license from the Government, and was required to pay over to the agent one-tenth part of all the lead manufactured. Thus the revenue was paid indirectly by the miner.

"Many valuable leads were discovered upon lands which had been entered at the land office. The proprietors of such lots were of course under no obligations to pay rents to the Government. They required the smelter to pay them the full value for their mineral. But the smelter was bound to pay over one-tenth part of the lead manufactured by him as revenue to the Government, whether manufactured from ore raised upon 'reserved' lands or 'entered' lands. The smelter could not ascertain whether the mineral brought to him was raised on Government land or not. If he had been allowed to attempt a discrimination, it would have been unavailing; since nothing could be easier than for a miner upon Government land to sell his ore to a neighbor who owned a mineral lot in fee simple, and who would sell the ore as his own, without any deductions for rent. The revenues for rent naturally soon became nearly nominal. The smelters were environed with difficulties. In the year 1836, the whole system went down, every smelter refusing to pay rent. The agency ceased, and Government was fairly 'elbowed out' of the mining district. The possession of such reserved mineral grounds as had been claimed by miners under the old regulations by virtue of permits, was left undisturbed. The proprietors, as they consider themselves, lease these lands to miners upon such terms as they deem most profitable; some taking one-fourth, others one-fifth of the mineral raised. A great number of mineral lots are in many instances the property of the same landlord, some successful speculator in lead, perhaps, who has bought up, at a bargain, the claims of many poorer men. Whether these tenures were exactly honest in their origin or republican in their tendency, will not here be made a subject of inquiry. No doubt the most profitable disposition Congress could make

of their mineral lands would be to sell them in small lots to the highest bidders. [This was afterward done, as will be seen in another portion of this work.—ED.] By such sale a large sum of money would accrue to the treasury, as great, perhaps, in the aggregate, as the lands are intrinsically worth; and more profit would thus be derived from them than could be derived from the best system of renting and leasing that could be devised.

“The business of smelting is quite distinct from that of mining. The smelter must have some capital to do business. He constructs a furnace, usually in a ravine near the diggings, and over some small stream of water, which is used as well for washing the mineral as for turning the water-wheel that works the furnace bellows. The process of smelting is simple enough. The mineral is broken fine and thrown into a large slanting hearth filled with charcoal and wood. When, by action of the bellows, the heat becomes sufficiently intense, the lead begins to trickle down the hearth in bright streams, which unite and flow through one mouth into a reservoir, which is also heated. From this reservoir the melted lead is removed with a ladle and poured into molds made of cast-iron. When thus molded into ‘pigs,’ weighing about seventy pounds each, the lead is ready for the market. The per centum yield by good mineral is about 70 or 80. The ore contains a small quantity of silver; though perhaps too little to warrant the cost of extracting it; the residuum is called ‘slag.’”

Up to the close of the Black Hawk war, but little attention had been paid to the surface soil of the country, all endeavours being directed to obtaining wealth from below. The general feeling previous to that time is fittingly expressed in a few remarks made by Mr. A. D. Ramsay at a meeting of the Old Settlers Club, held at Lancaster, in 1876. Speaking of this feeling, he said: “I came here in 1827; then not a furrow had been broken in Grant County soil. Like others, I came to find a fortune in the mines, and, like many others, I found mining unprofitable. We then hardly knew what to do with ourselves; we thought we were too far north and that the country was too cold for farming, but we tried it and were successful.”

It was thus found by experiment that the surface teemed with wealth as well as the bowels of the earth, and a new class of settlers began to pour in, under whose hands the country, if it did not indeed “blossom as a rose,” began to redeem its injured character as an agricultural district. Of the privations of these early pioneers, those of the present generation can know but little. Miners’ cabins had at first been erected of logs, stone, and even sods; the latter substance answering as well as other material for the length of time that the restless occupant would care to make it his home. But the new settler, he who was to wring his living from the cold, unyielding soil, and whip it in a fair fight before it would resign itself to that unquestioning, unresisting obedience so necessary to productive farm lands, must have something more stable; hence, the first thing erected was a substantial log-house, made from logs of such size as two or three men could roll up with ease. The ends were rudely dove-tailed together, and the gaping cracks were made wind and weather tight by a liberal application of mud. Openings for doors and windows were then cut out; the latter, when the owner was especially fortunate, consisting of a four-lighted sash of the smallest known panes of glass, and, when this was not obtainable, oiled paper was made to serve instead. On one side, and occupying a goodly portion of its entire length, was the generous fire-place, with its wide, cavernous chimney, built of sticks laid “cob-house” fashion and plastered with a liberal coating of mud, which was soon reduced to the flintiness of fire-brick, as up through the capacious throat poured the roaring flames, while the great fore-stick and back-log threw out their generous, all-pervading heat below. Here around the hearth the family would gather in the winter evenings, the good man indulging in a quiet smoke, provided he was fortunate enough to have laid in an ample supply of the weed, while the good wife busied herself in plying the busy needles from whose glittering points rolled in warm folds foot covering for all; while the little ones romped and played around the brightly dancing blaze. The early settler of Grant County was probably better placed as regards the mere necessaries of life than the vast majority of the present race of pioneers. Game was abundant in the forest, deer being, in the expressive language of one of these early comers, as “thick as hogs,” while the “stinging fly,” as the poet Longfellow calls the industrious honey-

maker, deposited his stores in generous abundance in the hollow trees throughout the woods, so that among the preparations for the winter's stock was always to be found a barrel of honey, or perhaps two; while the remembrance of the luscious venison steaks with which ye first settler was wont to forget the finer luxuries of an effete civilization, will still cause a longing to arise in the heart of the remaining members of the fraternity that cannot be filled with any of the present delicacies, however toothsome.

The necessity of having timber at hand with which to erect his future home, and also to provide the "fore-sticks" and "back-logs" for use on the long winter evenings, led the new settler to choose the timber rather than the prairie, where, in addition, the springs that dotted the country were also found to hide their bubbling fountain heads among the ferns and brakes of the shaded woodland, the inducement was increased tenfold. This finally progressed, so far as to become the rule, until the prairie, so generous and bountiful in its crops, was long left unoccupied, even so late as 1853 there being a great deal of prairie land unoccupied throughout the county. This state of things gradually changed until now the prairie land is valued according to its worth.

FIRST MILLS.

In 1829, Mr. Hough had erected a saw-mill on the Platte to which he soon after added the paraphernalia of a "grist" mill, where the early settlers could get their grain reduced to flour, if not indeed of the very whitest, at least a good, palatable article. A second mill was erected, by Abram Miller, on Pigeon Creek, a few miles from Lancaster, in 1835. For millstones the builders went to the Iowa side of the river and obtained what is generally known as "lost rock." These they dressed down for buhrs, and managed to grind wheat and corn "after a fashion." It is needless almost to say that the fashion would hardly prove an acceptable one in this present age of patent flour and meal thrice whitened. The result of passing grain through these frontier mills was a dark, coarse meal, made darker in all probability by a generous quantity of dirt, which might have adhered to the grain during the rude methods of threshing then obtaining. By 1836, Mr. Daniel Burt had a grist-mill in operation in the present township of Waterloo, which produced a very fair article of flour. The mill was commenced in 1835. The mining camps, however, still in a great measure depended for their supplies upon flour which was brought up from below via the Mississippi; but as the country became settled up, mills improved, and grain abundant, this dependence upon foreign supplies was reduced to the minimum. Yet it was many years before this wished-for time arrived. For the present, the county is still hovering between frontier barbarism and civilization, with the question an open one as to which side of the balance it would ultimately incline. This wild, primeval wilderness, had, however, a wonderful fascination for the mere passer-by, as well as for the dweller therein.

"It was forty years ago," says Judge J. T. Mills, in an address delivered a few years ago, "that I stood at the foot of the lower rapids. They came to me, or I to them. No difference, we got together. I occupied the same site then that the city of Quincy does now. You might have carried the embryo burg in a wheelbarrow, if you could find one. There was a block-house on the bank, and here, some mining adventurers and myself waited for steam navigation. The voyage forty years ago required a large reserve of patience. Often we put our ears down to the water as if the steamer was expected underneath the surface, for 'suckers' were more numerous than any other passengers in those days. I well remember one day, while repeating this acoustic experiment, I heard a thumping like a heart-beat in the water, and soon, to my inexpressible satisfaction, I saw a smoke 'way down de ribber.' Puff, puff, the discharge of a blunderbuss, the ringing of a bell—no steam-whistle then—and the stout, strong-built steamer 'Warrior,' Capt. Throckmorton, landed on the shore. The mining adventurers rushed aboard and threatened to take possession of the vessel. 'On to Dubuque;' 'Forward to Snake;' 'Hurrah for Hard-scrabble;' were watchwords yelled as vociferously as 'On to Richmond!' years later, by the *New York Tribune*. But what was the appearance of the Great West in 1834, as seen from the Father and yet child of many waters? Illinois above Rock River, with slight exceptions, was

wholly vacant. The State of Iowa had not even been christened. The owl hooted from the forests that covered its bottoms or crowned its headlands.

‘The wolf’s long howl from Onalaska’s shore
Was heard above the troubled water’s roar.’

“If Thomas Campbell could make poetry out of this long howl, his muse would have been rampant had he tried this voyage. These devil-eyed, white-teethed denizens of the forest, amused us with their nightly serenade whether we hissed or applauded.

“And still the wide prairies on either hand seemed opening to receive the immense and teeming population destined to supplant nature’s husbandry by that of civilized man. The very soil, the streams and the woods which skirted them, seemed conscious, setting up of nights and watching by day for the ‘coming events that cast their shadows before.’ The bear, the elk and the deer, heard all too frequently the crack of the backwoodsman’s rifle. He was trespassing on the domain of the Winnebago, Sac and Sioux. The Great Spirit had packed up his airy wigwam, converted it into a balloon and sailed westward, beckoning his children to follow; hard-fisted miners, men of ‘mighty bone and bold enterprise,’ had built their tenements of sod, palisades and mud at different places. Galena, Neptune-like, had reared her awful head above the mud in which she floundered, and was visible to a considerable distance. Patches of corn and potatoes showed that a race of men were pressing into this region, who could work the surface of mother earth as well as, gopher-like, burrow in her bowels. These were the scattering drops, the earnest of that human flood that has swollen into millions, rolling westward on foot, on horses, on wheels, till the locomotive and thundering train behind commands the highway to California: has changed the frontage of the continent, has completed the American section of the thoroughfare that encircles the globe, and changed the direction of commerce. All this since 1834.”

“The long howl” was heard only too often by the early inhabitant, as the loss of many a fine porker or fat ewe bore testimony. Dogs were secured, kept and fed, to protect their master’s property from these depredations, but in the majority of cases the owner awoke when too late, to find that he “had been hugging a fond delusion to his breast,” as his much-vaunted guardian of the flock was found “gayly gamboling” with the foe he was expected to destroy. A good wolf-dog forty years ago was almost literally worth his weight in gold. Wolves when caught were often partially disabled, and then turned over to the dogs by the settlers, in order to accustom the latter to the sight of their foe, and many were the disappointed looks that crossed weather-beaten countenances as it was found that “Tige” or “Watch” would, instead of boldly attacking, drop their caudal appendage and incontinently quit the field. One of these wolf-fights which has become historical, is given below by an active participant in the scene:

GRAHAM’S WOLF-FIGHT.

“I don’t remember the year. [It was 1838.—ED.] We didn’t take any account of time when we ranged at will over these fenceless prairies. We didn’t cut the year into weeks and Sundays, but took it as it came. It was about the first court; Harvey Pepper was Sheriff; Judge Dunn was on the bench; I was Foreman of the jury; old yellow-black Paul was plaintiff; and Col. Jones, who went to Congress, and perched himself on top of Sinsinawa Mound—he was the defendant. Jones owned Paul down in Kentucky, and when Paul got on the mound he quarreled with his master and became obstreperous, and Jones drove him off. He then went through the country fiddling at what they called ‘stag dances.’ Females then were scarce and very dear and hard to get, so the boys would dance alone on the sod floor, and Paul would ‘fiddle’ for his whisky, and when he ran too far out of knees and elbows he would go back to Jones and saw wood, and Jones would supply him with old clothes. After some years, Paul concluded, as courts and lawyers had made their appearance, he would sue his old master for wages, and have a final settlement in this free country. We heard the evidence. The yellow darkey hadn’t a bit of proof in support of his claim, but eleven of the jurors went in steep for the plaintiff, contending if Paul recovered wages it would make him a free man. I asserted

he was free any way—wages or no wages—that we were sworn to go according to law. Some of the jurors said, ‘D—n the law; when it comes in one door, justice runs out the other.’ Pepper, the Sheriff, locked us up, and, to make the purgatory complete, said he was sworn to allow us no meat or drink except water.

“Imprisoned in this ten-by-nine cell, we quarreled long and loud. I stood out for the defendant against the eleven who were determined that Paul should be paid for our ‘shin-dig’ music, and that Jones was the man to do it. He got appropriations from Congress. I told my eleven brethren I was used to starving, and would die at my post rather than violate the law. They talked of fighting but I was ready there.

“We should have hung there until this time, probably, but for a couple of huge, gray, timber wolves, that old ‘Wolf-catcher Graham,’ had brought into the town plat, securely caged in his wagon. Everybody then attended court, and everybody brought his dogs. The old wolf-catcher set up a loud cry, saying he would let out a wolf against all the dogs in creation, if the people who desired the sport would pay him \$20 each for his wolves, and allow him the scalps. The money was raised quicker than you could count it. We would have almost paid the national debt to see a wolf-fight. The first wolf—and he was an old settler, I tell you—was let loose in the yard, right under our window. We ran to it, and climbed on each other’s shoulders. Such snapping, barking, growling and bristling you never heard or saw. Dogs and wolf were piled up almost to the upper story, in a living, biting, snapping, rolling, tumbling and boiling mass. Some of the dogs were thrown *hors du combat*, but others took their place. The revolving mass turned round the corner where we couldn’t see them, and then my eleven associates cried: ‘For heaven’s sake, Free, do agree, so we can get out of this cursed hole and see the fun.’

“‘Boys,’ said I, ‘I have been raised with wolves. I won’t budge an inch for any arguments—dogs and wolves can furnish.’

“‘Well, Free, just say that Jones shall pay \$1, and we will come down to that.’

“‘Never a cent.’

“We heard the uproarious laughter and shouts of the outside world. It was too much for the hoys. The friends of poor yellow Paul yielded, and cried out: “We agree; write out the verdict, Free.’

“I wrote out the verdict for the defendant; but lo! we were in a worse condition than ever. The Judge, Sheriff and all hands had gone to the entertainment. No time was to be lost. A chair was picked up—a window smashed—and, as Judge Dunn heard the glass come jingling to the ground, he screamed ‘Pepper! Pepper! let those men out, they will tear down the court house!’

“These words sounded like the trump of jubilee. We handed our verdict to the Sheriff, and rushed down stairs like a flock of frightened sheep when the dogs are after them.

“But the scene of the fight had changed. In the dog and wolf revolution, the latter actually entered the sacred halls of Pepper’s tavern, where all our fair female population were gathered and gossiping. Such a scattering, screaming, fright, running-up stairs and jumping on beds was never seen or heard of. But the poor wolf, as if he understood the tenderness of the female heart, galloped up stairs too; on the bed he jumped with tongue protruding, and, with beseeching looks, prayed for mercy. But up rushed the dogs dripping with blood; now mad with fury and blessed with victory, they scaled the parapet. A universal and deafening hubbub ensued. Men rushed in with clubs, seizing a dog or two by the tail, and tossing them out of the window, and, sometimes punching the wolf, that by this time had learned that the generous dimensions of female apparel offered him the safest retreat. But, notwithstanding the poor wolf’s surrender and meek behavior after he entered the forbidden halls, he was slain without mercy. There is not a living man, or woman, or animal, that witnessed that scene but if they are still alive remember it to this day. I am satisfied that jury never would have agreed in that case had it not been for Graham’s wolf.”

The hound was found to be the only breed of canine that could with certainty be depended on to pursue this terror of the forest to the death. He flew the black flag, neither giving nor

asking quarter, and was proportionately prized. Aside from the gray and black timber wolves, and the prairie wolf, which was more stealthy and less dangerous than his larger brother, wild-cats and foxes were also extremely troublesome at times. Bears were met occasionally, and were seen in the northern portion of the county late in the fifties. At a very early period, both buffalo and elk roamed at will through the country, but this was anterior by many years to the date of the white man, although the horns of the elk were occasionally found by the early settlers. Deer, however, continued to be abundant until the severe winter of 1856, which did much to deplete their ranks. Wolves and wild-cats continue to be found, as many of our readers are aware, in the northern portion of the county, up to the present time.

PRIMITIVE AGRICULTURE.

Notwithstanding the fact that the thoughts of many were being turned at this date to agriculture, the mining furor showed but little if any signs of abating. According to Mr. Ralph Carver, who died some years ago at Muscoda, the year 1833 witnessed a slight improvement in the mining implements in the shape of cast-steel drills, which introduction is thus noticed by him in a letter read before the Old Settlers' Club: "Previous to the Black Hawk war, we miners used iron drills and gads with steel points, but in that year some Cornish miners came to Gratiot's Grove and introduced the inestimable poll-pick and cast-steel gad, but used iron drills with steel points. In the succeeding winter, James Gilmore, myself and others, were mining at Snake Hollow (Potosi). Our blacksmith, whose anvil was on a stump of a tree with no covering but the sky and clouds, was absent on a spree. Mr. Gilmore and myself wanted new steel on our drills. He said he could sharpen and temper tools, but could not weld cast-steel. He proposed we should get a bar of cast-steel and cut it in two, for each of us a drill, and he could sharpen and temper the ends. We got a square bar, as octagon bars were then unknown, beat down the corners, and had each of us an excellent drill, which I have every reason to believe were the first cast-steel drills ever used. They soon came into general use in the lead mines, and, a few years afterward, were in use wherever drills were needed. Whether this universal use of them was the result of Mr. Gilmore's invention I cannot say, but I know that up to that time the Cornish miners were unacquainted with cast-steel drills."

Numerous villages had now dotted the face of Grant County. Platteville, Hazel Green, Paris—soon to wither and die under the blight of a brooding presence—Fair Play, Potosi, Beetown, Lancaster—just honored by being selected as the county seat—Cassville, Wingville and Muscoda, each had obtained a foothold on Mother Earth, and were boldly struggling for existence. The towns Hazel Green, Potosi, Beetown and Fair Play, had included in their limits some of the most productive mines in the lead region. The lead mines were also so prolific in the production of zinc that Prof. Owen, in his report to the War Department, made in 1842, stated it as his opinion that the supply in the mines was sufficient to furnish all that was needed of this mineral in the United States, and to furnish a surplus for export. The flood-tide of the mining interests was the decade from 1839 to 1849; the estimated annual production during that time being 40,000,000 pounds, employing 3,000 men.

In the years 1844-45, a second wave of immigration swept in upon the county. Both residents and outsiders had begun to awake to the fact that Grant County afforded unequalled facilities for the agriculturist as well as the miner. The *Herald*, speaking in 1843 on this subject, said: "Few are aware of the extent of arable land within the mining district, particularly that portion lying within the confines of Wisconsin. Abroad, this region is looked upon as adapted to mining only; and the fact that it is positively unsurpassed in agricultural susceptibility by any State or any portion of any State in the Union, would be news to at least three-fourths of our own Territory." In 1845, the country between Lancaster and Fennimore received an addition of fifty families, who settled there during the spring of that year, and thirty-three emigrants arrived at Lancaster direct from Scotland. These were mostly mill operatives, and located at what was afterward known as the "Welsh Settlement." The settlement took its name from the leading spirit of the enterprise. Nor were other portions of the county allowed

Chas G. Rodolf

MILSCODA.

to suffer; immigrants came streaming in from every quarter, though even this large emigration was soon swallowed up by the vastness of the county, and, like Oliver Twist of romantic memory, the cry of those most alive to the interests of the county was still for "more." It was in 1842 that the town of Sinipee, which had been started on the Mississippi, a few miles above Dunlieth, was abandoned, owing to the unhealthfulness of its location, and the houses moved during the winter, upon sleds, here, there and everywhere, while the spot that once knew it now was to remain forever desolate. But the demolition of this weaker brother only added the more to the strength of its near neighbors, again illustrating the ancient doctrine that "To him that hath shall be given." The estimation of the different pursuits of the inhabitants of Grant County in the year 1844, showed: Farmers, 600; miners, 600; mechanics, 150; smelters, 100; merchants, 60; millers, 32; tavern-keepers, 16; grocers, 15; lawyers, 17; physicians, 16. There were at that time in the county, 21 common schools, 9 churches, 30 stores, 16 public houses, 20 furnaces, 12 saw-mills, 4 grist-mills, 12 groceries, and 1 academy.

THE FIRST THRESHING MACHINE.

In this year, Mr. Vedder built for Mr. Thomas Shanley, upon his place near Lancaster, a stationary threshing machine—so far as can be learned, the first machine of this kind in use in the county. The old-fashioned mode of laying the grain in a large circle on the barn floor, and then tramping it out with horses or cattle, had, previous to this time, been the only method, together with that ancient instrument, the flail, for releasing the kernel from its protecting husk. The first reaper in the county was used on the farm of Mr. William Wright, in 1845. It was a strange and unknown instrument, even to those who were operating it; the man charged with the duty of "raking off," working like a Trojan to keep the machine entirely clear from grain, for fear "the d—d thing would get clogged." This fear, it may be inferred, was entirely done away with by a closer acquaintance.

In February, 1846, the last "Indian war" known to Grant County broke out at Muscoda. It was but a flickering flame and was extinguished almost as soon as ignited. Many of the Winnebagoes had continued to roam about the country instead of going upon their reservation. Some of the band at the above date were lingering in the neighbourhood of Muscoda. A quarrel was commenced between the whites in that vicinity and the savages, when one of the Indians fired, wounding one of the whites. This was a signal for donning the war-paint on both sides, ending in a tally of three dead Indians for the whites. The knowledge of the affray spread like wild-fire, and volunteers assembled from over the northern portion of the county to drive the savages beyond its precincts. The latter were amply satisfied to be allowed to withdraw in peace, and the war-cloud disappeared in thin vapor.

For a few years everything appeared favorable to a rapid and extended increase in the wealth and population of the county. Judge Colter, years later, referred to this early period as a time when "there was more honesty than now. People were not required to lock their doors; when they met at each other's cabins for social recreation, or to attend to business, they never met to quarrel; but the whisky was better than now."

THE CALIFORNIA GOLD FEVER.

In 1849, the discovery of gold in California made the first break in the chain of fortuitous circumstances which was fast advancing the county to the front rank; and for the succeeding three years this section had to wrestle with the alluring attractions of the distant gold-fields, as well as the demon cholera which made its appearance in 1850. This dread scourge broke out suddenly in Beetown, in September, 1850, and in forty-eight hours ten or twelve deaths had occurred. In less than a week's time twenty corpses attested the measure of the affliction. The inhabitants fled in every direction. Forty-one deaths occurred in two weeks. The towns of Fennimore and Wingville also suffered heavily, the latter town being evacuated by the inhabitants. A few cases had been noticed in the southern portion of the county, but it seemed not to rage with such virulence as in the other portions.

Speaking of the settlements in the county, the *Herald*, of cotemporaneous date, notices that "in the region west of Patch Grove, known as 'the timber,' no improvements worth the name were made previous to 1850; and in that year only thirty bushels of wheat were raised." This section, however took on a new life in after years. The problem that now arose before the minds of the people was the depopulation of the country by the California gold fever. The god, mammon, seemed to have laid his beguiling fingers on the bravest and best, and the good results which were just making their appearance as the consequence of the fostering care of years were blighted almost at a breath by this terrible excitement.

It was estimated that at least two-thirds of the miners had left for the gold-fields, while of other classes the proportion was frightful to contemplate. The *Herald* of April 17, 1851, expressed the opinion that the craze had run its course, but in the issue of the same paper of February 5, 1852, it says editorially: "By May next, Grant County will have disgorged more than a fourth of her adult population, and California, like the whale that swallowed Jonah, will have swallowed this entire animal export; we have lost none to migration to other parts; all have gone to golden California. They were the bone and sinew of the country, and we parted with them as reluctantly as did King Pharaoh with the Children of Israel. In 1848 and 1849, the California fever commenced, and the end is in the misty future; we dare not venture an opinion as to when the disease will abate. Grant County has invested \$1,000,000 in the gold mines." Again: "It is difficult to fix the amount of depreciation in the value of real property as the result of this migration. To say that land has fallen one hundred per cent may be true or false; that depends upon circumstances. We set down the average depreciation at one hundred per cent. In many cases two hundred per cent would be a closer estimate. Village property has slid lower than farm property." And a careful scrutiny of the events then transpiring and their effects show this to be no fancy sketch, but almost literally true. The rush in the spring of 1852 was so great that Chapman's ferry at Potosi was unable to accommodate the crowds that came, and the impatient emigrants had to wait four and five days before they could cross; yet other ferries were equally blocked. In the exodus of this year were fifty persons with trains from Lancaster, a moderate number from Fennimore and Patch Grove, a few from Harrison, and a large throng from Jamestown; while Beetown, sorely afflicted with every plague, suffered more than any other place. This enormous rush is certainly in a great measure accounted for by the fact that the population of the county was at the time largely composed of miners, who were at first attracted by a prospect of "striking it rich;" but even this does not account for this extraordinary depletion in population which the county experienced in these ever-to-be-remembered years. The greed for gold seemed to have seized every one old enough to endure the privations and weariness of the six months' journey, and not until the disappointed victims began to return with their tale of wretched hopes and terrible sufferings did the fever abate its devastating work. The following are the rules and regulations adopted for the guidance of one of the many trains and will serve as an illustration of the times:

BY-LAWS AND RESOLUTIONS OF THE CASSVILLE AND BEETOWN EMIGRATING COMPANY TO CALIFORNIA.

Adopted at Council Bluffs May 10, 1852.

SECTION 1. This Company shall be called the Cassville and Beetown Emigrating Company.

SEC. 2. The general organization shall be composed of divisions of not less than ten nor more than fifteen teams; each division choosing its own officers, which shall consist of a Captain, a Committee of Two, and a Secretary, which said Committee shall only act in concert with the Captain when so required by a majority of the Company; and the said officers to be elected every Saturday night, at the call of the then existing Secretary, a majority of votes electing. It shall be the duty of each Captain to take a general supervision of his own company, and to act in concert with each other in inspecting the outfits before starting, and in selecting the most practicable routes, crossings of streams and camp grounds, and to give the orders for starting and stopping.

SEC. 3. It shall be the duty of each Secretary to keep a record of all the names of the individuals in his company, also a list of every able-bodied male member liable to stand on guard, and to call the guard to duty each night according to their turn on the roll.

SEC. 4. Every male member of the company, over sixteen years of age, shall be liable to perform duty on guard, at night, when not disqualified by sickness.

Resolved, 1st. That we will not receive into our organization any company or person without a suitable outfit for the journey.

Resolved, 2d. That we will observe the Christian Sabbath, and attend religious service whenever practicable.

Resolved, 3d. That we will avoid open immorality of all kind, such as profane swearing, gambling and the use of intoxicating drinks as a beverage.

Resolved, 4th. That we will render mutual assistance to each member of the organization, in case of sickness or other misfortune; and that we will respect the feelings and property of all, and on all occasions avoid giving offense by word or deed, and in any way acting contrary to the spirit and meaning of the foregoing by-laws and resolutions, for the faithful performance of all which we pledge our lives, our fortunes, and our sacred honor.

Signed by Thirty-six Names.

Three years later, in 1855, the population of the county, according to the State census, was 23,170, against 16,169 for 1850, showing not only that the tide of outflowing gold-seekers had been stopped and even returned upon itself, but had been counteracted by a much larger wave of immigration flowing into the county which now advanced with steady strides for the next five years. Then came the war of the great rebellion which again depleted old Grant of its brawny sons, who responded so nobly to the call for living breastworks to oppose the slimy wave of secession. Of this great and patriotic outpouring, extended mention is made in its proper place. With the return of peace, Grant County once more resumed its onward march. Manufactories began to spring up in different parts of the county, while agriculture, which at first, as we have seen, was hardly noticed or thought of, had now become the principal occupation of the inhabitants. The census reports of 1870 showed that about one-half of the land of the county was under cultivation. Of the remaining half, the greater portion was woodland; leaving but about one-fifth of the land of the county unimproved; which, when the bad and broken lands among the bluffs are taken into consideration, is an extremely creditable showing. The number of farms in the county at that time was 4,301, of which the great majority, three-fourths in fact, were from twenty to one hundred acres in extent. The value of these farms was \$11,662,855, their products amounting to \$2,629,805. The capital invested in manufacturing at the same date was \$627,130, with an annual production of \$1,122,000. The principal industries, stating them as they came on the relative scale of value were: Flouring-mills, with an annual production of \$261,345; lumber, \$117,150; woolen goods, \$65,568, and carriages and wagons, \$64,670. The productions of the lead mines within the county was at the same time \$196,957.

Thus Grant County took rank not only as an agricultural and mining county, but as one whose manufacturing interests would make a respectable and goodly showing alongside those of any other county of the State. This rank it has since maintained. It will be found that the census returns when published for 1880, will show about the same amount of production in the manufacturing industries, although in some branches there may be a slight falling off, especially in the matter of carriages and wagons, which industry has in a great measure been driven from the county by the competition from the eastern part of Wisconsin and other States. The flouring interests have also suffered somewhat, but that which is lost in one branch will be offset in a measure in the increased production in another. Possessed of a fine country, water-power in abundance, with its mines still unexhausted, Grant County may well view with a hopeful countenance the great future which stretches away before it. All it needs to develop the latent wealth, is better transportation facilities, and these are already promised with a goodly prospect of the promises being fulfilled with proper transportation by means of which goods manufactured in the county can be brought into direct competition with the productions of other sections, the advancement in manufactured productions will be steady and unbroken. The vista is constantly brightening. Although lovingly referred to by its children as "old Grant," the county is yet young in possibilities, and the development of its latent riches with its three sources of wealth, agriculture, manufacturing and its mines from which to draw, the county has yet to enter upon its most felicitous period of existence.

MINING TROUBLES.

Immediately upon the earliest discovery of mineral in that section afterward known as the "lead region," the Government withheld these lands from sale, and established a system of rental, stationing a Government agent in the different mining districts to collect the same, one-

tenth of the product of the mines being the general rule of tribute. This tax was not very well received by the miners, even at the establishment of the new regulations, and as the region became more thickly occupied by delvers after the hidden treasure, many miners refused to pay "tribute to Cæsar." This course became gradually more and more popular, owing, first, to self-interest, and second, to a growing suspicion that the Government agents were given to lining their own pockets, rather than transferring to Uncle Sam the rents received. Among the later agents was one of the Floyds, a name afterward rendered odious by secession proclivities, and one Flanagan. The general rule was for these gentlemen to remain as long as it was deemed healthy to do so and then decamp, leaving the Government to appoint a new agent who was sure to follow in the footsteps of his predecessors. At the period mentioned, agents wielded an additional authority in having the power to grant new trials where contests in regard to claims had been tried before the usual board of arbitrators. These arbitrators were six in number, and their verdict was decisive unless the Government agent saw fit to grant a new trial in the premises.

Having discovered at last that it was playing a losing game, the Government determined, in 1846, to throw the lands upon the market for sale to the highest bidder. This decision created a whirlwind of opposition from every miner's camp in "the diggings." The danger of having their claims bought up by some speculator, who could at his will, run the price up to a figure where the unfortunate occupant could not touch it, was more appalling than the former Governmental policy. Indignation meetings were held in all the camps, and resolutions adopted protesting against this action on the part of the Government, and calling for the appointment of committees who should proceed to adjust all disputed claims, and then provide for the appointment of a bidder whose duty it should be to attend the land sales and bid off the different lands, after which he was to re-convey them to the original owners. A claim was about two hundred yards square, but as the mineral was sometimes found running east and west, sometimes angling from that line, the different claims assumed an oddly jumbled appearance when viewed upon the surface and upon maps. As an example of the text and tone of the resolutions passed at these miners' meetings, below is given the preamble and resolutions adopted at a meeting held at British Hollow, December 19, 1846:

WHEREAS, The President of the United States has ordered the sale of the reserved mineral lands in this land district, which sale takes place on the 24th of May next, to the highest bidder without respect to claims or to settlers, leaving it for speculators to bid off our claims and property which have cost us the labor of years. Therefore,

Resolved, 1st. That we are willing to pay the price fixed by the Government, \$2.50 per acre, for our homes and claims, and will repel by force any attempt to make us pay more.

Resolved, 2d. That we will all be at Mineral Point on the first day of the land sales, and there remain until all the reserved lands on the west side of the Big Platte have been offered for sale.

Resolved, 3d. That there will be a committee of five appointed by this meeting, three of whom shall form a quorum, whose duty it shall be in all cases where there are conflicting claims, to hear the evidence in the case and decide according to justice and equity, and their decision shall be final.

Resolved, 4th. That the jurisdiction of this committee shall extend over Town 3 north, of Range 3 west, and the whole of Section 12 in Town 2 north, and Range 3 west. Said committee shall give a certificate of decision to the rightful owner, with the appropriate value affixed thereto.

Resolved, 5th. That the owners of claims on each section shall appoint one or more of their number, who shall receive the certificate of each forty-acre lot as it is bid off at the land sale, and who shall give bond in double the appraised value of said claims to redeed it to the rightful owners.

Resolved, 6th. That the claimants shall employ the County Surveyor to survey their claims and give a certificate to the owners thereof, specifying the number of acres in the claim surveyed, and also a plat of the whole survey, for the settlers on the reserved lands.

Resolved, 7th. That no committeeman shall sit to investigate the right of any claim in which he is interested.

Resolved, 8th. That a committee of five be appointed by this meeting, who are claimants of reserved lands, whose duty it shall be to correspond with all meetings held in this and Iowa Counties, for the purpose of carrying into effect the objects of this meeting, offering them our and soliciting their co-operation.

This feeling of injustice was shared by all classes. The Wisconsin (now *Grant County*) *Herald*, commenting on the action of the Government, and the meetings of the miners for protection, says:

"The only fault we have to find with the bill providing for the sale of these lands is, that the claimants are not allowed to enter them at \$1.25 per acre. The law makes the minimum

price \$2.50. By reference to our first page it will be seen that the claimants in the west part of the county, have formed an association for mutual protection against the rapacity of speculators. This is the only plan by which their best rights can be secured. In union there is strength. Fill up the ranks, present yourselves in solid, serried phalanx at the land office on the day of sale. Submit all disputes unconditionally to the arbitrament of your committee, heal all dissensions, sacrifice even what you deem your individual rights if need be, and substantial justice will be done to all. * * * * Congress walks into us to the extent of ten bits per acre; that is we have to pay just twice as much for land as others who buy of the public domain. There let the robbery of Government forever cease.

Early in the succeeding year, the following memorial was presented to Congress by the Territorial Legislature.

TO THE SENATE AND HOUSE OF REPRESENTATIVES OF THE UNITED STATES IN CONGRESS ASSEMBLED :

The memorial of the Council and House of Representatives of the Legislative Assembly of Wisconsin respectfully represents,

That by the late proclamation issued by the President of the United States for the sale of lands in the Mineral Point Land District, in the Territory of Wisconsin, to be held at Mineral Point, on the 24th day of May next, a large number of tracts of land are proclaimed for sale, which were entered at the Mineral Point Land Office several years ago, some of them as early as 1832, in accordance with the laws of the United States regulating the sale of the public lands. Some of the said lands were entered by pre-emption, and some were purchased at public sale, at prices ranging from \$1.25 to \$1.60 per acre. The principal value of these lands at present has been given to them, in many cases, by the labor and improvements of the pioneer settlers of the country, who came to the country at an early day and were exposed to all the hardships and privations peculiar to the settlement of a new and wild country. Those privations and hardships can be appreciated by those, and those only, who are acquainted with the nature and character of savage and uncivilized Indian tribes, with which Wisconsin, in the days of the early settlement of this portion of the country, was filled. These settlers have by their own hands subdued the forest, cultivated the prairies, opened the mines, constructed the roads, etc., and have thus done much and everything toward developing the rich resources of the country, and paving the way for the unparalleled growth and settlement of the richest portion of the hitherto public domain of the United States.

In other instances these same lands have been sold and transferred by the original settlers to other persons who have purchased in good faith, and paid large considerations for improvements thereon, and from time to time have made further and other valuable improvements, equal, in many instances, to five times at least the original value of the land. These lands so entered and transferred from individual to individual, in some cases many times, and by deeds of warranty, are now offered for sale a second time under proclamation. As the most injurious and disastrous consequences would result to a large and respectable portion of the citizens of Wisconsin, if the lands entered and paid for should again be disposed of at public sale, the Legislative Assembly of the Territory of Wisconsin deem it an act of duty to the people residing in said district to address your honorable body in their behalf.

After referring to the welfare of one portion of the Territory upon the prosperity of the whole, the importance of the tenure of leases and the suggestion that the proper place to submit fraudulent entries was the organized tribunals of justice, while to expose the lands for sale would be to strip many settlers of homes, the memorialists closed by stating, "In view of these facts, and urged by the most important considerations of public policy and public and private justice, and as the only effectual means of protecting and securing the rights of innocent parties, the Legislative Assembly of the Territory of Wisconsin respectfully and most earnestly petition your honorable body to provide by law for withholding from sale all lands in the Mineral Point District heretofore sold, and for the issuing of patents for all lands purchased at said land office, saving such entries as have been, or may hereafter be declared fraudulent entries by the proper tribunals."

Despite memorials, resolutions and entreaties, the Government continued with its preparations for the sale of the mineral lands. The miners, in their turn, as the time drew near for the sales, assembled in large numbers at Mineral Point. Previous to the day set for commencing the sale, a public meeting was held, Maj. J. H. Roundtree, of Platteville, officiating as Chairman, at which it was determined that the bidders from each place should bid off the land in their vicinity, and that none others should be allowed to bid. An "inspection committee" was appointed, whose duty it was to see that no officious meddlers interrupted the harmony of the sale. It is needless, perhaps, to add that none of that class made themselves manifest, and the lands were bid off as proposed; the bidder taking the land in the name of the owner, when only one party laid claim to the portion up for sale, and where several claims were located on a

piece it was taken in the name of the bidder, and then by him conveyed to the occupants forthwith. Thus the long-disputed land question was settled once and for all.

FIRST THINGS.

The first farming in the county was done by Col. Joseph Dixon, who, in the early fall of 1827, began to prepare a farm a short distance from Platteville. The succeeding spring he plowed twenty acres and planted it to corn, of which he raised a generous crop that year.

The first marriage in the present county was performed in September, 1828, at Esquire Holmans, the contracting parties being James R. Vineyard and Miss Mary Jones.

The first white child born in the county was Dorothy J. Bushnell, born at Muscalunge in 1828.

The first saw-mill was erected in 1829, by Mr. Edgerton Hough, at Gibraltar.

The first schoolhouse was built in Platteville in 1834, and school opened the same year, Mr. Hundington, master.

First church in the county was erected at Platteville in 1837 by the Methodist denomination

First post office established at Platteville in 1829.

The first court was held at Cassville, Judge Dunn presiding in June, 1837.

First town election was held in spring of 1833 at Platteville.

First election of county officers was held in the spring of 1837.

The first railroad was Prairie du Chien Division of Chicago, Milwaukee & St. Paul, opened in Grant County in 1856.

CHAPTER IV.

YOUNG.

EARLY GOVERNMENT.

The first civilized claimants to the territory now included within the boundaries of Wisconsin were the French. The whole of the Northwest was claimed by France from 1671 to 1763, when it was surrendered to the English. By the "Quebec Act" of 1774, all of this region was placed under the local administration of Canada. It was, however, practically put under a despotic military rule, and so continued until possession passed to the United States. Before the last-mentioned event, and during and after the Revolution, the conflicting claims of Virginia, New York, Massachusetts and Connecticut to portions of the country were relinquished to the General Government. All these claims were based upon supposed chartered rights, Virginia adding to hers the right of conquest, as she contended, of the "Illinois country" during the Revolution. As early as October, 1778, Virginia declared, by an act of her General Assembly, that all the citizens of that commonwealth who were then settled, or should thereafter settle, on the western side of the Ohio, should be included in a distinct county, which should be called Illinois. No Virginians were then settled as far north as the southern boundary line of what is now Wisconsin, and, as none thereafter located so far north before Virginia relinquished to the United States all her rights to territory on the western and northern side of the Ohio, it follows that no part of the territory which afterward became Wisconsin was ever included in Illinois County as a part of Virginia, nor did the last-mentioned State ever exercise any jurisdiction over the territory of this State, or make any claim to any part of it by right of conquest. Wisconsin was never a part of Virginia.

Notwithstanding the passage of the Ordinance of 1787, establishing a government over the territory northwest of the Ohio River, which territory was acquired by the treaty of 1783, from Great Britain, possession only was obtained, by the United States, of the southern portion, the northern part being held by the British Government until 1796. Arthur St. Clair, in February, 1790, exercising the functions of Governor, and having previously organized a government for the country under the ordinance above mentioned, established, in what is now the State of Illinois a county, which was named St. Clair. But, as this county only extended north "to the mouth of the Little Mackinaw Creek, on the Illinois," it did not include, of course, any part of the present State of Wisconsin, although being the nearest approach thereto of any organized county up to that date.

In 1796, Wayne County was organized, which was made to include, besides much other territory, all of what is now Wisconsin watered by streams flowing into Lake Michigan, the territory of the present Grant County, as it will be seen, being not included in the new county. From 1800 to 1809, the present limits of Grant County were included in the Territory of Indiana, and, in the last-mentioned year, passed into the Territory of Illinois. It is probable that Indiana Territory exercised jurisdiction over what is now Wisconsin, at least to the extent of appointing two Justices of the Peace—one for Green Bay and one for Prairie du Chien. In the year 1809, the Illinois Territorial Government commissioned three Justices of the Peace and two militia officers at Prairie du Chien, the county of St. Clair having previously been ex-

tended so as to include that point, and, consequently, the present county of Grant. In course of time, other counties had jurisdiction, until, in 1818, what is now Wisconsin became a portion of Michigan Territory.

By a proclamation of Lewis Cass, Governor of Michigan Territory, of October 26, 1818, Brown and Crawford Counties were organized. The county of Brown originally comprised all of the present State of Wisconsin, east of a line passing north and south through the middle of the portage between the Fox and Wisconsin Rivers, except a small portion of the Door County Peninsula, which was included in the county of Michilimackinac. The limits of Brown County extended north into the territory of the present State of Michigan so far that its north line ran due west from Noquet Bay. An east and west line, passing near the northern limits of the present county of Barron, separated the county of Crawford from the county of Michilimackinac on the north; on the east, it was bounded by the county of Brown; on the south, by the State of Illinois; and on the west, by the Mississippi River.

Thus, as it will be seen, the present territory of Grant County was included in the limits of Crawford County. By an act of the Legislative Council of the Territory of Michigan, approved October 29, 1829, to take effect the 1st of January following, the county of Iowa was established, embracing all territory south of the Wisconsin, west of Brown County, east of the Mississippi, and north of Illinois, or what is now included in the counties of Grant, Iowa, LaFayette, the greater part of Green, nearly half of Dane, and a portion of Columbia.

By an act of Congress passed in 1836, and approved April 20 of that year, the Territory of Wisconsin was organized, including in its limits, beside the present State, the territory now included in the States of Iowa and Minnesota, and about half the present Territory of Dakota. June 12, 1838, all that portion of Wisconsin Territory lying west of the Mississippi River was organized into a Territory called Iowa.

GRANT COUNTY FORMED.

Previous to this, and at the first meeting of the Territorial Legislature at Belmont, in the present county of La Fayette, in 1836, in an act entitled "An act to divide Iowa County" it was enacted, "That all that part of the county of Iowa lying west of the fourth principal meridian be and the same is hereby constituted a separate county, to be called Grant."

Section 4 of the same act provided: That, "from and after the 4th day of March next, the said county of Grant shall, to all intents and purposes, be and remain an organized county, and be invested with full power and authority to transact all county business which any regularly organized county may of right do."

Section 5 stipulated that "Henry W. Hodges, James Gilmore, E. E. Brock, Orris McCartney and Frank C. Kirkpatrick are hereby appointed commissioners to fix the seat of justice of said county of Grant, and they are hereby required to perform the said duty on or before the 1st day of February next ensuing, at such place within said county of Grant as to them may seem best calculated to promote the public interest, being first sworn to the faithful discharge of their trust; and so soon as they shall have come to a determination, the same shall be reduced to writing and signed by the Commissioners, and filed with the Clerk of the present county of Iowa, whose duty it shall be to record the same and deliver over the same to the Clerk of Grant County, whenever he shall be appointed, whose duty it shall be to record the same and forever keep it on file in his office; and the place thus designated shall be considered the seat of justice of said county; provided, that in the event of said Commissioners being prevented, from any cause whatsoever, from performing the duty required of them, or if a majority of said Commissioners should not be able to agree upon any place for the establishment of the said seat of justice, then the seat of justice is temporarily established at Cassville, in said county of Grant."

"Section 6, That there shall be two terms of the District Court held annually at the seat of justice for said county of Grant by one of the Judges of the Supreme Court, to wit: One upon the first Monday in June, and the other upon the fourth Monday of October; and the said District Court for said county of Grant shall have and enjoy all the powers, rights and

ties which courts in the other counties of this Territory have and enjoy, and shall be subject all the restrictions imposed upon said courts by the act entitled 'An Act for establishing judicial districts and for other purposes,' passed at the present session of this Legislative Assembly, and that the courts hereby authorized to be held in the county of Grant shall be held at the town of Cassville, in the county of Grant, until the necessary public buildings are erected at the seat of justice of said county."

THE COUNTY SEAT.

In accordance with the provisions of the above section, the Commissioners proceeded with their work of choosing a county seat for the new county. Lancaster at this time boasted of but one occupant, Aaron Boice, who resided near the "big spring," and had entered eighty acres of land, a portion covering the present court house square. This, together with a second eighty, entered by Maj. Price, formed the site of the present county seat. Cassville, then an ambitious village, was an aspirant for both territorial and county distinctions; but its location on the extreme western side of the county operated against its claims in the race for the lesser honors. Lancaster was nearly the geographical center of the county, a point a few miles northeast was supposed to be the exact center, speaking in the manner of geographical exactness, and for a time the scales wavered; but Maj. Glendower M. Price, who had purchased the land formerly owned by Aaron Boice, offered as extra inducements toward the location of the seat of justice in Lancaster to pay to the county the sum of \$1,000, and donate beside certain lots of land within the village, providing Lancaster's claims were allowed. This offer was accepted by the commissioners, and the embryo village became the county seat. To the antiquarian the following deed setting forth a portion of the terms of the contract will be of interest, as an historical souvenir:

M. PRICE AND WIFE }
TO
SUPERVISORS OF GRANT. }

This deed, made this the fifteenth day of May, eighteen hundred and thirty-seven, witnesseth: That Glendower Morgan Price and Harriet, his wife, of the county of Grant and Territory of Wisconsin, in consideration of the sum of one hundred dollars, to them in hand paid by the Supervisors of the county of Grant and Territory of Wisconsin, the receipt of which is hereby acknowledged, do by these presents grant, bargain and sell, convey and confirm to the said Supervisors and their successors in office, the following described property in the town of Lancaster, to wit: All of Block No. 10; Lots No. 1, 2, 3, 4, 5, 6, 7 and 8, Block No. 22; Lots No. 1, 2, 3, 4, 5, 6, 7 and 8, in Block No. 25; Lots No. 3, 4, 5, 6, 7 and 8, in Block No. 26; Lots No. 1 and 2, in Block No. 27; Lot No. 2, in Block No. 21; Lots No. 1, 2, 3, 4 and 10, in Block No. 24; Lots No. 3, 6, 8, in Block 23; Lots 3, 4, 5, 9 and 10, in Block No. 9; Lots No. 1, 2, 3, 4 and 5, in Block No. 8; Lots No. 1, 2, 3, and 5, in Block No. 7; Lots No. 1, 2, 3, 4 and 5, in Block No. 6; Lots No. 6, 7, 8, 9 and 10, in Block No. 5; Lot No. 3, in Block No. 4; Lot No. 3, in Block No. 13; Lot 5, in Block No. 20; Lot No. 3, in Block No. 28. To have and hold the same with the privileges and appurtenances thereunto belonging, to the said Supervisors and their successors in office forever; the said Glendower M. Price and Harriet his wife, the aforesaid premises unto the said Supervisors and their successors in office hereby covenanting that they and their heirs, executors and administrators will warrant and defend the title to the said premises to the said Supervisors and their successors in office forever, against all persons whatsoever. In witness whereof, the said G. M. Price and Harriet, his wife, have hereunto set their hands and seals the day and year first above written.

Signed, sealed and delivered in the presence of
JOHN G. FLETCHER.
BENJ. F. FORBES.

G. M. PRICE.
HARRIET PRICE.

In the spring of 1837, the first election of officers for the new county was held, resulting in the choice of the following elective officers: Treasurer, Orris McCartney, Cassville; Register, Deeds, Nelson Dewey, Cassville; Board of Supervisors, Henry Wood, J. J. Basye, Daniel Richards. The County Clerk (the title of this officer, until 1849, was Clerk of County Commissioners, and from that date until 1872 Clerk of the Board of Supervisors), appointed by the county Commissioners, was J. Allen Barber, of Lancaster. First Clerk of the Circuit Court, appointed by Judge Dunn, John S. Fletcher. The first District Attorney was T. S. Wilson, appointed by Judge Dunn to act in that capacity at the first term of court held in Grant County. The Sheriff, County Judge and Justices of the Peace were appointed by the Executive of the Territory until 1844.

At this election, about three hundred votes were cast, the population being in the neighborhood of 1,600.

The first meeting of the newly elected Board of Supervisors, or, as they were then called, County Commissioners, was held at Cassville, April 29, 1837. The next meeting was held at Lancaster, May 2. At this meeting, the contract for building the new Court House was awarded to G. M. Price and Daniel Banfield. At a meeting held a year later, or April 2, 1838, it was determined to erect a jail for the safe keeping of criminals, and the contract was awarded to Harvey Pepper, for \$400.

The newly-formed county government was not without its troubles, as the following acts passed by the Territorial Legislature, at its second session in the latter part of 1837, will show. The first, entitled "An act to legalize the acts of the Supervisors of Grant County," provides:

WHEREAS, the Supervisors of Grant County did, in the spring of the year one thousand eight hundred and thirty-seven, proceed to sell certain town lots donated for the use and benefit of said county, and likewise to contract for the building of a court house; and whereas, doubts exist as to the legality of the sales and contract for building, therefore,

SECTION 1. *Be it enacted*, That all bonds for the titles that have been given to guarantee the sales and titles shall be and are hereby declared to be valid in law.

SEC. 2. All contracts that have been entered into by the Supervisors for building of the court house shall be of binding and legal effect upon the county of Grant, in their corporate capacity, any law to the contrary notwithstanding.

Under a general law passed by the Legislature in 1839, a County Agent was appointed to take charge of the lands belonging to the county, to sell and convey the same, and transact all business connected therewith. Nelson Dewey was appointed as the agent of Grant County, and continued to act in that capacity until the formation of the State Government.

The second act is entitled "An act to legalize the proceedings of the Justices of Peace in Grant County and release them from penal liability in certain cases," and reads as follows:

WHEREAS, Certain Justices of the Peace in the county of Grant, not having access to the revised code of laws of Michigan, of one thousand eight hundred and thirty-three, enforced in this Territory by the Act of Congress organizing the Territorial Government, and adopted by the Legislative Assembly at their last session; and having the laws of eighteen hundred and twenty-seven in their possession, they supposed it to be their duty to give bonds to the United States, with a penalty of \$200, when, in fact, the law required them to give bonds to the County Clerk, with a penalty of \$250, whereby said Justices have incurred certain penalties; for remedy thereof,

SECTION 1. *Be it enacted*, That the several Justices of the Peace in Grant County be and they are hereby released from all fines, forfeitures and penalties, incurred by them for the failure to give bonds according to the provisions of the act entitled "An act to regulate and define the powers of Justices of the Peace and Constables in civil cases."

SEC. 2. That all acts done and performed by them are hereby declared to be as legal, to all intents and purposes, as though they had given bonds in accordance with the provisions of the above recited act, any other law to the contrary notwithstanding.

The passage of these acts placed the county affairs upon a proper legal basis, and the local government proceeded without further hitch.

ATTEMPTS TO DIVIDE THE COUNTY.

Several times since its organization, Grant has been agitated by an effort to divide the county. The earlier agitations looked to a division into two parts, and a later one into three parts. In 1860, the movement progressed so far as the signing of petitions and counter-petitions, but the matter went no further than the ballot-box, where those opposed to a division received a heavy majority. The war coming on a few months later drove the subject out of the minds of the people, and the advent of railroads connecting the county seat with other portions of the county, and facilitating communications between different points, removed one great argument in favor of a re-organization of county lines. A slight ripple on the placid surface of events, a few years ago, showed that the ancient topic had not been forgotten, but the "indications" were not of a nature to give rise to any anxiety on the part of those who preferred "old Grant" as it was, and the movement will hereafter be remembered simply as one of the exciting questions of "auld lang syne."

COUNTY OFFICERS.

Below is given a complete roster of the occupants of the various county offices from the organization of the county until the present time:

Sheriff.—1836–37, James H. D. Street; 1837–38, Robert H. Reed, Potosi (resigned in 1838, and Harvey Pepper appointed to fill unexpired term); 1839–41, Harvey Pepper, Lancaster; 1842, Robert B. Reed, Lancaster; 1843–44, Enos S. Baker, Platteville; 1844–46, N. V. Kendall, Platteville; 1847–50, Matthew Wood, Potosi; 1851–52, George R. Stuntz, Lancaster; 1853–54, William McGonigal, Wingville; 1855–56, Lorenzo Preston, Hazel Green; 1857–58, Dexter Ward, Lancaster; 1859–60, William H. Foster, Lancaster; 1861–62, J. B. Moore, Muscoda; 1863–64, N. Goodenough, Glen Haven; 1865–66, W. H. Clise, Potosi; 1867–68, J. P. Cox, Lancaster; 1869–70, W. H. Clise, Potosi; 1871–72, W. E. Sloat, Lancaster; 1873–74, Terrence Carrier, Boscobel; 1875–76, J. B. McCoy, Platteville; 1877–78, J. H. Birchard, Fennimore; 1879–80, ——— Streeter; 1881, John Lane.

Treasurer.—1837–38, Orris McCartney, Cassville; 1839–41, Elisha T. Haywood, Potosi; 1842–43, Edmund Havelson, Lancaster; 1844–46, Robert Templeton, Potosi; 1846, Samuel Tompkins, Lancaster; 1847, Cutler Salmon, Lancaster; 1848, James M. Otis, Lancaster; 1849, J. H. Rountree, Platteville; 1850–51, A. W. Worth, Lancaster; 1852–54, William T. Connor, Potosi; 1855–56, J. L. Marsh, Platteville; 1857–58, Simon E. Lewis, Potosi; 1859–62, James Jones, Hazel Green; 1863–66, Samuel Moore, Platteville; 1867–70, V. F. Kinney, Potosi; 1871–74, A. R. McCartney, Cassville; 1875–78, Alex Ivey, Potosi; 1879–81, Lou P. Lester, Boscobel.

Register of Deeds.—1837–38, Nelson Dewey, Cassville; 1839–41, John S. Fletcher, Lancaster; 1842, A. R. T. Locey, Platteville; 1843–47, Hugh R. Colter, Lancaster; 1848–52, L. W. Martin, Platteville; 1853–54, George H. Cox, Lancaster; 1855–56, William McGonigal, Wingville; 1857–60, J. H. Evans, Platteville; 1861–64, E. T. Mears, Platteville; 1865–68, Joseph Bock, Cassville; 1869–76, James Woodhouse, Bloomington; 1877–81, Perry Durley, Paris.

*County Clerk.**—1837–39, J. Allen Barber, Lancaster; 1839–41, Nelson Dewey, Lancaster; 1842, J. Allen Barber, Lancaster; 1843–46, L. O. Shrader, Lancaster; 1847, Enos P. Wood, Paris; 1848, Arunah A. Parker, Lancaster; 1849–51, J. C. Squires, Platteville; 1852–60, Wood R. Beach, Beetown; 1861–62, J. W. Angell, Potosi; 1863–68, S. F. Clise, Ellenboro; 1868, P. H. Parsons,† Lancaster; 1869–72, Atlizer Smelser; 1873–80, Fletcher S. Kidd, Millville; 1881, C. W. Hill, Platteville.

County Judge.—1837–38, J. H. Rountree, Platteville; 1839, Henry Wood, Lancaster; 1840–43, J. A. Barber, Lancaster; 1844–49, Hugh R. Colter, Lancaster; 1850–53, Cyrus C. Lord, Potosi; 1854–56, S. O. Paine, Platteville; 1858–81, William McGonigal, Lancaster.

Clerk Circuit Court.—1837–48, John S. Fletcher, Lancaster; 1849–50, L. O. Shrader, Lancaster; 1851–52, Joel C. Squires, Lancaster; 1853–54, N. W. Kendall, Lancaster; 1855–60, J. G. Clark, Lancaster; 1861–68, J. W. Blanding, Muscoda; 1869–76, David Schreiner, Lancaster; 1877–81, Herman Buchner, Lancaster.

District Attorney.—1837, T. S. Wilson, afterward of Dubuque; 1838, Nelson Dewey, Cassville; 1839, F. J. Munger, Cassville; 1840–43, J. Allen Barber, Lancaster; 1844–45, James M. Goodhue, Platteville; 1846–48, J. Allen Barber, Lancaster; 1849–50, William R. Riddlecome, Potosi; 1851–52, William Hull, Potosi; 1853–54, J. Allen Barber, Lancaster; 1855–56, Willis H. Chapman, Platteville; 1857–58, Ed D. Lowry, Lancaster; 1859–60, J. C. Mills, Lancaster; 1861–62, A. R. Bushnell, Platteville; 1863–64, J. T. Mills, Lancaster; 1865–68, G. C. Hazelton, Boscobel; 1869–72, George Clementson, Hazel Green; 1873–76, George B. Carter, Platteville; 1877–80, W. H. Beebe, Platteville; 1881, R. C. Orr, Bloomington.

Surveyor.—1839—Orson Lyon, Potosi; 1840–41, Thomas Hugill, Platteville; 1842–43, James E. Freeman, Lancaster; 1844–46, Henry A. Wiltse, Jamestown; 1847–48, George R. Stuntz, Lancaster; 1849–50, James E. Freeman, Lancaster; 1851–52, John T. Everett, Jamestown; 1853–54, Joseph H. Hayden, Beetown; 1855–56, C. L. Overton, Platteville; 1857–58,

* Title of office, "Clerk of County Commissioners" till 1849, and "Clerk of the Board of Supervisors" till 1872.

† Appointed to fill vacancy occasioned by death of S. F. Clise.

C. W. Hayden, Beetown; 1859-60, J. W. Blanding, Muscoda; 1861-64, H. A. W. McNair, Fennimore; 1865-66, Joseph Allen, Clifton; 1867-68, Joel Barber, Lancaster; 1869-70, Joseph Allen, Clifton; 1871-74, George McFall, Harrison; 1875-80, Joel Barber, Lancaster; 1881, J. C. Scott, Patch Grove.

Superintendent of Schools.—1862-63, David Parsons, Bloomington; 1864-67, D. G. Purman, Hazel Green; 1868-69, J. P. Hubbard, Potosi; 1870-73, William H. Holford, Bloomington; 1874-76, G. M. Guernsey, Platteville; 1877-80, Charles L. Harper, Hazel Green; 1881, C. L. Harper.

Coroner.—1840, Darius Bainbridge, Lancaster; 1841, A. R. T. Locey, Platteville; 1842-43, James F. Chapman, Potosi; 1844-47, David Gillespie, Potosi; 1848, Andrew J. Green, Potosi; 1849-50, William McDaniel, Beetown; 1851-52, Llewellyn Brock, Potosi; 1853-54, Leonard Coates, Platteville; 1855-56, Benjamin M. Coates, Muscoda; 1857-60, Stephen Mahood, Lancaster; 1861-62, M. M. Wood, Lancaster; 1863-64, A. M. Neaville, Potosi; 1865-66, Thomas Chesebro, Lancaster; 1867-72, Charles Dickey, Paris; 1873-74, J. T. Taylor, Montfort; 1875-76, H. F. Young, Cassville; 1877-78, Mandley Dean, Ellenboro; 1879-81, Franklin Lyster, Jamestown.

Board of County Supervisors.—1837—Daniel Richards.* Henry Wood, J. J. Basye. 1838—Daniel Richards, Henry Wood, F. F. Brock. 1839—Henry Wood, E. M. Orne, J. F. Brown. 1840—Allen Hill, E. M. Orne, J. F. Brown. 1841—F. F. Brock, E. M. Orne, Allen Hill. 1842—James P. Cox, Warren Hannum, N. McLeod. 1843—Orris McCartney, W. Davidson, N. H. Virgin. 1844—Orris McCartney, W. Davidson, J. F. Chapman. 1845—N. H. Virgin, Henry L. Massey, O. McCartney. 1846—H. L. Massey, J. F. Kirkpatrick, James P. Cox. 1847—H. L. Massey, George W. Patch, George Byerly. 1848—James P. Cox, Horace Catlin, H. Webster. 1849—Lewis Rood, Thomas Cruson, C. L. Lagrave.

1849—C. B. Eastman, E. D. Bevans, J. N. Jones, Jared Warner, D. R. Burt, D. Wiker, J. B. Turley, A. Smith, William Brandon, C. J. Cummings, Orris McCartney, J. Switzer, N. McLeod, A. Dyer, William Kinney, J. F. Chapman—16.†

1850—J. A. Barber, J. H. Roundtree, J. B. Turley, William McGonigal, E. D. Bevans, J. Warner, W. R. Biddlecome, C. Dickey, L. Basford, William Brandon, W. W. Barstow, H. Van Vleck, J. Walker, J. Waldorf, J. H. Champlin, D. R. Burt—16.

1851—J. Allen Barber, H. E. Rice, Isaac Williams, Charles Dickey, C. W. Wright, J. B. Turley, S. Barstow, Henry Patch, C. L. Lagrave, Jesse Waldorf, Benjamin F. Woods, David McKee, Edward Sprague, Benjamin Bull, David Thompson, H. P. Patterson, Joseph Walker—17.

1852—William N. Reed, Jared Warner, Thomas Laird, Stephen Brock, A. H. Gilmore, Titus Hays, Philo Demy, J. B. Turley, L. S. Reynolds, Joseph Palliser, James Moore, Jesse Waldorf, Benjamin Bull, H. D. York, A. Woods, J. H. Barnett, Charles Dickey, D. R. Burt—18.

1858—J. Allen Barber, Lewis Rood, Thomas F. Lane, Hugh B. Patterson, Thomas Palliser, W. W. Barstow, Charles Dickey, H. Hurlburt, J. Waldorf, Benjamin Bull, W. S. Chapman, James Moore, William Jeffrey, J. Wannemaker, H. A. W. McNair, W. G. Wilcox, J. B. Turley, Daniel Andrews, J. D. Harp—19.

1854—Nelson Dewey, Joseph Walker, J. F. Murphy, Jared Warner, John Welsh, J. D. Harp, William G. Wilcox, Samuel Wilson, Lewis Rood, Thomas Burns, Isaac Williams, S. F. Clise, John Wilkinson, Jonas Wannemaker, Nathan White, A. D. Mills, Noah Hutchins, W. W. Barstow, James Moore, William Clifton—20.

1855—J. Allen Barber, Benjamin Straw, George E. Cabanis, T. T. Lane, Nathan White, William T. Ennor, O. C. Jones, J. H. Roundtree, Jesse Waldorf, George W. Mace, A. D. Mills, James Moore, W. W. Field, Joseph Walker, S. F. Clise, Augustus Blaufus, W. G. Wilcox, Tim E. Barr, John D. Harp, J. F. Murphy, Henry R. Miles, Jared Warner—20.

*The name of the Chairman is first mentioned.

†These officers were elected in the spring of 1849 under the new township system rendered obligatory by the new State Constitution. The previous board had been elected under the Territorial law in the autumn of 1848, and held over until the new board qualified in the spring.

1856—J. Allen Barber, J. D. Harp, W. P. Dixon, O. Rice, Jesse Waldorf, Thomas Weir, Fish, James Moore, J. F. Murphy, C. Kaltenbach, James Bonham, Mahlon Fawcett, S. F. Rouse, G. W. Paugh, T. T. Lane, J. Prideaux, William Kidd, Charles Dickey, J. H. Rouse, William Brandon, Joachim Gulick, A. D. Mills—22.

1857—Jared Warner, J. B. Turley, D. R. Sylvester, G. W. Mase, W. P. Dewey, S. F. Rouse, J. Graham, J. W. Kaump, J. M. Chandler, Joseph Walker, Henry Van Vleck, Jesse Waldorf, James Prideaux, Thomas Wier, J. G. Clark, C. R. Dean, J. W. Blanding, T. Longtham, J. T. Murphy, F. H. Virgin, David McKee, Hugh Laird, A. A. Petty, James Bonham, Robert Glenn, A. D. Mills—26.

1858—John G. Clark, John B. Turley, D. R. Sylvester, F. C. Kirkpatrick, W. P. Dewey, Springer, H. A. W. McNair, W. W. Barstow, J. M. Chandler, Mason Fish, Jason Lathrop, Thomas Weir, Jesse Waldorf, Alfred Bark, J. R. Muffley, George Ballantine, James Moore, William Davidson, J. C. Orr, Samuel Moore, H. B. Patterson, A. Foster, James Bonham, David Brodt, A. A. Petty—26.

1859—J. E. Dodge, J. B. Turley, D. R. Sylvester, J. D. Harp, N. Millard, S. F. Clise, W. P. Dixon, W. L. Wilson, J. M. Chandler, Mason Fish, Jason Lathrop, James Prideaux, Charles Fulks, Jesse Waldorf, J. C. Holloway, James Moore, Moors Rice, Levi Brown, F. D. Francis, H. Patch, Samuel Vance, J. Augustine, George E. Cabanis, Robert Glenn, J. D. Jenks, Henry Morgan—26.

1860—S. F. Clise, J. M. Chandler, W. W. Field, W. P. Dewey, George E. Cabanis, W. L. Wilson, Jason Lathrop, Silas Brooks, Mason Fish, Joseph Horsfall, Thomas Tormey, Jesse Waldorf, J. B. Turley, Samuel Vance, James Bonham, James Prideaux, J. C. Holloway, A. R. Ashnell, B. F. Hilton, Jesse S. Jones, W. W. Demock, A. A. Bennett, J. A. Houghtaling, J. Shafer, A. F. Schnee, Henry Patch, Moors Rice, J. Cranston—28.

1861—W. W. Field, John Pepper, Henry Webster, George Cutts, W. P. Dewey, S. F. Clise, A. A. Bennett, W. L. Wilson, G. R. Frank, Jason Lathrop, Jesse Waldorf, J. C. Holloway, D. F. Brown, Joseph Horsfall, Moors Rice, Silas Brooks, E. M. Hoyt, T. L. Hammonds, Henry Patch, James Bonham, J. M. Sifford, G. Hess, John Clark, S. Lightcap, Edward Childen, William Brandon, W. W. Dimock, J. T. Murphy, J. S. Jones—29.

1862-63—J. H. Rountree, Henry Patch, Jesse Waldorf, D. G. Seaton, James W. Seaton—5.*

1864-65—Addison Burr, Alfred Palmer, A. A. Bennett, M. A. Harper, J. W. Kaump—5.

1866—A. Burr, J. W. Seaton, A. C. Stiles, H. A. W. McNair, Henry Mitchell.

1867—J. W. Seaton, Addison Burr, H. B. Wood, Cyrus Sargent, H. A. W. McNair.

1868—Addison Burr, J. B. Moore, A. W. Emery, Cyrus Sargent, H. B. Wood.

1869—J. B. Moore, J. H. Evans, Jared Warner, Joseph Allen, A. W. Emery.

1870†—William P. Dewey, W. J. McCoy, Michael Nolan, T. Carrier, George H. Chambers, Elisha Carrington, John Geiger, E. D. Bevans, D. T. Parker, A. A. Bennett, A. F. Knapp, Thomas G. Stevens, James Murphy, John Heir, J. Waldorf, Thomas Weir, John H. Griffis, J. B. McIntyre, James B. Ricks, Joseph Horsfall, Israel Miles, Peter Casper, N. W. Bass, James W. Seaton, James Ballantine, George E. Cabanis, Archie Brown, Jacob Scott, Robert Lenn, Thomas Laird, T. N. Hubbell, W. W. Field, G. W. Ryland, C. Clementson, J. H. Evans—35.

1871—A. A. Bennett, W. P. Dewey, William J. McCoy, Henry Gore, Alfred Palmer, Henry Lord, E. Carrington, Herman Grimm, J. S. Maiben, John Montieth, Thomas G. Stevens, Moses Vanatta, James Murphy, John Hier, George W. Ryland, G. D. Pettyjohn, Thomas Weir, John H. Griffis, T. J. Graham, J. B. Ricks, E. I. Kidd, E. Abrams, Peter Casper, N. W. Bass, J. W. Seaton, Jared Warner, George E. Cabanis, Archie Brown, J. E. Jones, Thomas Laird, George Brown, Robert Glenn, W. W. Field, George Broderick, J. H. Evans—35.

*That section of the revised statutes creating the County Board of Supervisors was amended by the Legislature of 1861, and a return made a Board of County Commissioners to consist of three electors, except in those counties which contained three or more assembly districts. In such counties one Supervisor, was elected in each assembly district, and one additional for the county at large, in those counties where there are an even number of assembly districts. This gave Grant County five Supervisors.

†The amendment passed by the Legislature of 1861 was repealed by the Legislature of 1870.

1872—George W. Ryland, O. C. Hathaway, Henry Gore, L. J. Woolley, Benjamin M. Coates, Henry Lord, J. McLeod, H. Grimm, James H. Rowe, John Montieth, William Curtis, Moses Vanatta, T. G. Stevens, George Broderick, James Murphy, John Hier, William H. Clise, John A. Boerner, Perry Squires, J. H. Griffis, George Tuffley, E. I. Kidd, Jacob Bremmer, Ezra Abrams, Peter Casper, Jared Warner, N. W. Bass, J. H. Rountree, J. W. Seaton, William Brandon, Archie Brown, Jacob Scott, Robert Glenn, George Brown, Thomas Laird—35.

1873—G. W. Ryland, E. Bayley, George Broderick, John Schreiner, O. C. Hathaway, Henry Gore, William T. Scott, D. F. Brown, John McLeod, Herman Grimm, John G. Hudson, H. A. Dankleff, D. P. Grinter, James Murphy, J. M. Chandler, Moses Vanatta, Rufus Hanum, Perry Squires, Peter Clayton, J. H. Griffis, C. G. Rodolf, George Tuffley, Joseph Horsfall, Reuben Cooley, Peter Casper, N. W. Bass, J. W. Seaton, Haynes Fitch, David Wilkinson, Adam Mink, Jacob Scott, Thomas Laird, Robert Glenn, George Brown, James Barnett—35.

1874—George W. Ryland, George W. Parker, E. Bayley, George Broderick, George Clementson, W. J. McCoy, Henry Gore, W. T. Scott, D. F. Brown, F. C. Kirkpatrick, Herman Grimm, J. H. C. McKinsey, H. A. Dankleff, D. P. Grinter, G. S. Hammond, J. H. Chandler, Moses Vanatta, John Hier, E. P. Dickenson, John Boerner, Delos Abrams, C. G. Rodolf, George Munns, Joseph Horsfall, R. G. Humphrey, Peter Casper, N. W. Bass, A. W. Emery, George Ballantine, George E. Cabanis, Archie Brown, William Northey, Thomas Laird, Robert Glenn, George Brown—35.

1875—George W. Ryland, W. J. McCoy, Henry Gore, B. M. Coates, George W. Fennel, F. C. Kirkpatrick, Herman Grimm, J. H. C. McKinsey, H. A. Dankleff, D. P. Grinter, Henry Maxam, Matthew Thompson, Moses Vanatta, John Hier, E. P. Dickenson, John Boerner, Delos Abrams, C. G. Rodolf, George Munns, E. J. Kidd, David D. Snider, Peter Casper, N. W. Bass, R. H. Kendrick, J. C. Scott, John A. May, W. B. Slocum, William Northey, Thomas Laird, Riley Jacobs, George Brown, James Barnett, George E. Clementson, E. Bayley, Joseph Clementson—35.

1876—George W. Ryland, C. Hutchinson, C. G. Van Buren, T. N. Hubbell, W. B. Clark, Thomas Watson, Herman Grimm, Samuel Barstow, Jacob Baumgartner, John Ryan, Adam Kruel, Matthew Thompson, George W. McFall, John Hier, E. P. Dickinson, John Boerner, Delos Abrams, C. G. Rodolf, D. R. Walker, E. I. Kidd, David D. Snider, Peter Casper, N. W. Bass, Robert H. Kendrick, George Ballantine, George E. Cabanis, W. B. Slocum, C. H. Williams, Thomas Laird, P. C. Palmer, George Brown, Gustave Meyer, George Clementson, Hanmer Robbins, Joseph Clementson—35.

1877—George Clementson, Jesse Wagner, L. J. Woolley, W. B. Clark, C. J. Van Buren, Herman Grimm, Thomas Weston, J. H. C. McKinsey, T. Tormey, John Ryan, W. D. Jones, Adam Kruel, Henry M. Bowen, John Hier, E. P. Dickenson, J. A. Bremmer, John G. Clark, John Henkel, Ezra Abrams, George Munns, E. J. Kidd, C. G. Rodolf, George Ballantine, T. Stephens, N. W. Bass, Peter Casper, R. A. Wilson, Archie Brown, C. H. Williams, W. H. Middleton, Robert Glenn, George Brown, Benjamin M. Coates, Matthew Thompson, H. Robbins—35.

1878—George Clementson, C. Hutchinson, W. B. Clark, Ed Meyer, Herman Grimm, Henry Gore, Thomas Watson, J. H. C. McKinsey, Thomas Tormey, J. S. Kidd, Charles Wunderlin, T. G. Stevens, Adam Kruel, John Hier, John G. Clark, John A. Boerner, A. V. Knapp, Alfred Bark, O. A. Rice, E. I. Kidd, Peter Cameron, Ezra Abrams, Jacob Bremmer, Peter Casper, George Ballantine, N. W. Bass, A. W. Emery, R. A. Wilson, Archie Brown, Jacob Scott, W. H. Middleton, George Brown, Robert Glenn, John H. Sarles, Matthew Thompson, George B. Carter—36.

1879—George Clementson, C. Hutchinson, W. B. Clark, Ed Meyer, Herman Grimm, Michael Nolan, Thomas Watson, J. H. C. McKinsey, Thomas Tormey, Joseph S. Kidd, O. S. Jones, T. G. Stephens, Adam Kruel, John Hier, George W. Ryland, A. V. Knapp, Alfred Bark, Paul Welner, E. I. Kidd, O. J. Arnold, Ira W. Bronson, Jacob Bremmer, Peter Casper,

James A. Davis, N. W. Bass, Thomas Davies, Joshua Laurence, Archie Brown, Jacob Scott, E. Carrington, George Brown, Robert Glenn, Sr., T. N. Hubbell, H. Robbins, George Broderick—36.

1880—George W. Ryland, C. Hutchinson, W. B. Clark, Ed Meyer, Herman Grimm, Henry Gore, Thomas Watson, James McCormick, C. Shuttleworth, Joseph S. Kidd, Thomas McMahon, Joseph Harris, Adam Kruel, John Hier, John A. Boerner, A. V. Knapp, Alfred Bark, George Munns, E. J. Kidd, O. J. Arnold, William H. Gilliard, Jacob Bremmer, Peter Casper, Reed Patch, John McArthur, George W. Hampton, R. A. Wilson, Archie Brown, Jacob Scott, C. G. Van Buren, James A. Faris, John A. Harford, John G. Clark, T. N. Hubbell, H. Robbins, George Broderick, Moritz Homer, G. Forshay—38.

TERRITORIAL AND STATE REPRESENTATION.

The present territory included within the limits of Grant County as the Western portion of Iowa County was represented in the first Territorial Assembly, by James R. Vineyard, of Platteville, in the Council, and Thomas Shanley, of Cassville, and James P. Cox, of Lancaster, in the House of Representatives, as the lower branch of the Assembly was denominated. This Assembly had two sessions, the first at Belmont, Iowa County, commencing October 25, 1836, the second at Burlington, Iowa, that State then forming a portion of the Territory of Wisconsin, as has been shown heretofore. Upon the formation of the county in 1837, it was allowed two members of the Council, and four members in the House of Representatives. Upon the adoption of the State Constitution in 1848, and the formation of the State government, Grant County was divided into four Assembly Districts; the county by itself forming the Sixth Senatorial District. By the apportionment of 1852 upon the basis of the census of 1850, the Assembly Districts of Grant were increased by one, or a total of five, and the county, in the re-districting of the State, became the Sixteenth Senatorial District, which it has since remained. This representation in the Assembly was retained until under the re-apportionment of 1871, upon the basis of the State census of 1870, when Grant County lost one district; upon the re-apportionment made by the Legislature of 1876, one more district was deducted from the county. Its present representation in the Legislature is one Senator and three Assemblymen. The First District comprises the towns of Clifton, Ellenboro, Harrison, Hazel Green, Jamestown, Lima, Paris, Platteville and Smelser. Second District—Beetown, Bloomington, Cassville, Glen Haven, Lancaster, Liberty, Little Grant, Potosi and Waterloo. Third District—Blue River, Boscobel, Fennimore, Hickory Grove, Marion, Millville, Mount Hope, Muscoda, Patch Grove, Waterstown, Wingville, Woodman and Wyalusing. The following is a complete list of County Representatives, both in Territorial and State Legislatures, from the organization of the county up to the present time:

TERRITORIAL LEGISLATURE.

Councilmen—In the first and second sessions of the Territorial Legislature, 1836–37, James R. Vineyard represented the present county of Grant as a part of Iowa County. 1838–42, James R. Vineyard, Platteville; J. H. Rountree, Platteville; 1842–44, J. H. Rountree. Platteville; Nelson Dewey, Lancaster; 1844–46, J. H. Rountree, Platteville; Nelson Dewey (President), Lancaster; 1847–48, Orris McCartney, Cassville.

Representatives—1838, Thomas Cruson, Platteville; Nelson Dewey, Lancaster; Ralph Carver, Potosi; Joseph H. D. Street, Cassville.

1840—Thomas Cruson, Platteville; Nelson Dewey, Lancaster (Speaker); Jonathan Craig, Potosi; Joseph H. D. Street, Cassville.†

1841—Neely Grey, Platteville; Nelson Dewey, Lancaster; D. R. Burt, Waterloo.

1842—Neely Grey, Platteville; Nelson Dewey, Lancaster; D. R. Burt, Waterloo.

1843—Alonzo Platt, Platteville; Franklin Z. Hicks, Jamestown; G. M. Price, Cassville.

†Members of the Council were first elected for four years, and members of the House for two years; this was afterward changed, and members of the Council chosen for two years, and members of the House annually.

1844—Alonzo Platt, Platteville; Franklin Z. Hicks, Jamestown; G. M. Price, Cassville.
 1845—Thomas Cruson, Platteville; F. Z. Hicks, Jamestown; T. P. Burnett, Mount Hope.
 1846—Thomas Cruson, Platteville, A. C. Brown, Potosi; T. P. Burnett, Mount Hope.
 1847—A. C. Brown, Potosi; William Richardson, Paris.
 1848—Noah H. Virgin, Platteville; D. R. Burt, Waterloo.

STATE ORGANIZATION.

Senate—1848-49, George W. Lakin, Platteville; 1850-51, J. H. Rountree, Platteville; 1852-53, J. C. Squires, Lancaster; 1854-55, Nelson Dewey, Lancaster; 1856-57, J. Allen Barber, Lancaster; 1858-59, Noah H. Virgin, Platteville; 1860-61, Noah H. Virgin, Platteville; 1862-63, M. K. Young, Glen Haven; 1864-65, M. K. Young, Glen Haven; 1866-67, J. H. Rountree, Platteville; 1868-69, George C. Hazelton, Boscobel; 1870-71, George C. Hazelton, Boscobel; 1872-73, J. C. Holloway, Lancaster; 1874-75, J. C. Holloway, Lancaster; 1876-77, O. C. Hathaway, Beetown; 1878-79, O. C. Hathaway, Beetown; 1880-81 George W. Ryland.

Assembly—1848—N. H. Virgin, Platteville; Arthur W. Worth, Lancaster; A. C. Brown, Potosi. 1849—J. R. Vineyard, Platteville; Robert M. Briggs, Beetown; D. Gilfillan, Potosi; Robert Young, Hazel Green. 1850—H. D. York, Hazel Green; John B. Turley, Beetown; J. E. Dodge, Waterloo; William McGonigal, Wingville. 1851—John N. Jones, Platteville; Robert M. Briggs, Beetown; W. R. Biddlecome, Potosi; James B. Johnson, Fair Play. 1852—Noah Clemmons, Platteville; J. Allen Barber, Lancaster; David McKee, Potosi; William Richardson, Jamestown. 1853—Titus Hayes, Platteville; H. E. Block, Potosi; J. Allen Barber, Lancaster; H. D. York, Hazel Green; J. E. Dodge, Waterloo. 1854—E. Estabrook, Platteville; William Hull, Potosi; William Jeffrey, Ellenboro; Lewis Rood, Hazel Green; M. K. Young, Cassville. 1855—N. H. Virgin, Platteville; William Hull, Potosi; W. W. Field, Fennimore; Allen Taylor, Hazel Green; William Cole, Beetown. 1856—Allen Taylor, Hazel Green; William Hull, Potosi; J. T. Mills, Lancaster; J. F. Brown, Clifton; Horace Catlin, Cassville. 1857—Hanmer Robbins, Platteville; A. W. Emery, Potosi; J. T. Mills, Lancaster; Allen Taylor, Hazel Green; Joachim Gulick, Wyalusing. 1858—Hanmer Robbins, Platteville; A. W. Emery, Potosi; Henry Patch, Patch Grove; H. D. York, Hazel Dean; C. K. Dean, Boscobel. 1859—J. Waldorf, Lima; J. W. Seaton, Potosi; H. A. W. McNair, Fennimore; George Broderick, Hazel Green; Luther Basford, Glen Haven. 1860—J. R. Spottswood, Hazel Green; J. W. Seaton, Potosi; S. F. Clise, Ellenboro; J. B. Moore, Muscoda; George Ballantine, Patch Grove. 1861—H. Robbins, Platteville; H. L. Massey, Potosi; J. G. Clark, Lancaster; Joseph Harris, Hazel Green; Jared Warner, Patch Grove. 1862—William Brandon, Smelser; Allen Taylor, Paris; J. T. Mills, Lancaster; W. W. Field, Fennimore; Samuel Newick, Beetown. 1863—J. H. Roundtree, Platteville; J. F. Chapman, Potosi; J. Allen Barber, Lancaster (Speaker); W. W. Field, Fennimore; Robert Glenn, Wyalusing. 1864—H. Robbins, Platteville; Allen Taylor, Paris; J. Allen Barber, Lancaster; W. W. Field, Fennimore (Speaker); W. R. Beach, Beetown. 1865—William Brandon, Smelser; Allen Taylor, Paris; Henry Utt, Lima; W. W. Field, Boscobel (Speaker); Robert Glenn, Wyalusing. 1866—H. Robbins, Platteville; W. S. Scribner, Fair Play; A. P. Hammon, Montfort; George Washburn, Millville; A. A. Bennett, Glen Haven. 1867—H. Robbins, Platteville; John Carthew, Rockville; Joseph Allen, Clifton; H. A. W. McNair, Fennimore; A. A. Bennett, Glen Haven. 1868—H. Robbins, Platteville; J. H. Neaville, Potosi; J. E. Dodge, Lancaster; Mat Burchard, Fennimore; N. W. Kendall, Wyalusing. 1869—Joseph Harris, Hazel Green; G. H. Block, Potosi; W. P. Dewey, Lancaster; B. M. Coates, Boscobel; A. R. McCartney, Cassville. 1870—J. C. Squires, Platteville; John Carthew, Rockville; W. P. Dewey, Lancaster; H. A. W. McNair, Fennimore; Luther Basford, Glen Haven. 1871—Joseph Harris, Hazel Green; H. B. Coons, Potosi; J. C. Holloway, Lancaster; W. W. Field, Boscobel; George H. Chambers, Bloomington. 1872—A. R. Bushnell, Lancaster; George Cabanis, Smelser; S. A. Ferrin, Montfort; J. B. Corey, Patch Grove. 1873—W. H. Clise, Lancaster;

Geo. W. Eastman,

PLATTEVILLE.

Thomas G. Stevens, Hazel Green; John Monteith, Fennimore; C. Hutchinson, Beetown. 1874—Thomas Jenkins, Platteville; John B. Callis, Lancaster; Gottlieb Wehrley, Fennimore; Robert Glenn, Wyalusing. 1875—James Jeffrey, Smelser; La Fayette Caskey, Potosi; Benjamin F. Coates, Boscobel; Delos Abrams, Little Grant. 1876—William D. Jones, Hazel Green; Joseph Bock, Lancaster; George Brown, Woodman; William J. McCoy, Beetown. 1877—William E. Carter, Platteville; Joseph Bock, Lancaster; Daniel R. Sylvester, Castle Rock. 1878—William E. Carter, Platteville; T. J. Graham, Muscoda; William J. McCoy, Beetown. 1879—William E. Carter, Platteville; J. T. Mills, Lancaster; John Brindley, Boscobel; 1880—Charles Watson, Clifton; John A. Klindt, Cassville; John Brindley, Boscobel. 1881—James H. Cabanis, Smelser; H. S. Keene, Lancaster; E. I. Kidd, Millville.

REPRESENTATIVES IN CONSTITUTIONAL CONVENTION.

Hardly had the Territory of Wisconsin been formed by act of Congress, before agitation was commenced for the formation of a State government. After numerous rejections of the proposition, finally, in 1846, the first convention met in Madison, and proceeded to form a constitution for the acceptance of the people. In the deliberations of this convention, Grant County, through her representatives, occupied a prominent position. This body has been fittingly characterized as one of "great, if not extraordinary, intellectual ability. Its members," says the same authority, "were all in the prime of life, the representatives of the systems of many States, generally highly educated, and possessed of mental culture far above the average of men." The list of representatives from Grant County in this convention, headed by the name of the Hon. J. Allen Barber, then and now a resident of Lancaster, comprised, besides that gentleman, the Hon. Lorenzo Bevans, Hon. Thomas P. Burnett, Hon. Thomas Cruson, Hon. James Gilmore and James R. Vineyard. The constitution, as has been stated in an earlier portion of this work, was rejected, after an exciting contest, the principal differences of opinion being the articles in relation to the rights of married women, exemptions, the bank articles, the number of Representatives in the Legislature, and the Elective Judiciary.

A second convention was authorized, and met at the capital late in the succeeding year (1847). This body, while fully as high as its predecessor in point of the ability of its members, had that membership considerably changed. The Grant County representation to this assemblage was headed by the Hon. Orsamus Cole, now Chief Justice of the Supreme Court of the State, and comprised the following names: Hon. George W. Lakin, Hon. John Rountree, Hon. Alex D. Ramsey and the Hon. William Richardson. The deliberations of this body resulted in the formation of the present constitution, and, the following year, Wisconsin took her place among that ever-increasing galaxy of commonwealths, which, as time rolls on, will dot this broad land from the Atlantic to the Pacific, and from the 49th parallel of latitude to the Mexican border.

TOWN ORGANIZATION.

In its early settlement, Wisconsin presented two subdivisinal systems of government. The southwestern and earlier-settled portion, being almost entirely filled with emigrants from Southern and Southwestern States, adopted the county system, while the later-settled portion, on the eastern shore of the State, being filled by natives of the New England and Middle States, where the township system was in vogue, naturally followed, in their new settlements, that local polity with which they had been most acquainted, and with whose workings they were familiar. These distinctional features continued in existence until the formation of the State Government, in 1848, when, the two waves meeting, the eastern overtopped its rival, and Section 23 of Article IV of the Constitution provided that "The Legislature shall establish but one system of town and county government, which shall be as nearly uniform as possible." Previous to this, or immediately after the close of the Black Hawk war, in 1832, and after the acquisition by the United States of the Indian title to all the land west of Lake Michigan not reserved to particular tribes, or secured to specified individuals by terms of previous treaties, a survey was commenced by the General Government. The northern boundary line of the State

of Illinois, fixed April 11, 1818, on the parallel of 42° 30' north latitude, became, properly enough, the base line of these surveys. A principal north-and-south line, known as the Fourth Meridian, was run, extending from the base line to Lake Superior, at right angles with that line. The Fourth Meridian forms the east boundary line of Grant County, dividing it from La Fayette and Iowa Counties on that side.

Parallel lines to the Fourth Principal Meridian were run every six miles on the east and west sides of it. The intervening six miles between these lines were designated as ranges. Range 1 west is the first range west of the Fourth Meridian; Range 2 west is the second range, continuing in this manner to the western boundary of the State. Grant County lies in Ranges 1, 2, 3, 4, 5, 6, and a portion of Range 7 west.

North of the base line were also run parallel lines six miles apart, and at right angles to the range lines. Thus the State was cut up into blocks, each six miles square, called townships. These were numbered by tiers going north from the base line, Township 1 being the first tier of townships north, Township 2 being the second, and so on. As the southern boundary of Grant County is the dividing line between Wisconsin and Illinois, that serves as the base line. This county lies in Townships 1, 2, 3, 4, 5, 6, 7, 8, and a portion of Township 9, the latter being in the extreme northeast portion of the county, and included in the township of Muscoda.

During the years 1832, 1833 and 1834, the different townships in Grant County were subdivided into sections and quarter-sections, these lines being run by Lucius Lyon, Robert Clarke, Jr., and Hervey Perke.

After the admission of Wisconsin into the galaxy of States, it became necessary to divide the county politically, in accordance with the provision of the constitution noticed above; and, in pursuance of this object, the Board of County Commissioners met, January 9, 1849, and enacted as follows:

All that district of country in Grant County embraced in township numbered one north of range numbered one west of the fourth principal meridian shall constitute a separate town to be called "Hazel Green." The first town meeting in said town shall be held at the Empire House.

All that district of country in Grant County embraced in township numbered one north of range numbered two west of the fourth principal meridian shall constitute a separate town to be called "Jamestown." The first town meeting in said town shall be held at the house of Alfred Woods.

All that district of country in Grant County embraced in township numbered two north of range numbered one west of the fourth principal meridian shall be called "Smelser." The first town meeting in said town shall be held at the house of Jonas Smelser.

All that district of country in Grant County embraced in township two north of range numbered two west of the fourth principal meridian shall constitute a separate town to be called "Paris." The first town meeting in said town shall be held at the house of William Richardson.

All that district of country in Grant County embraced in township numbered three north of range numbered one west of the fourth principal meridian shall constitute a separate town to be called "Platteville." The first town meeting in said town shall be held at the house of B. Atwood.

All that district in Grant County embraced in township numbered four north of range numbered one west of the fourth principal meridian shall constitute a separate township to be called "Lima." The first town meeting of said town shall be held at the schoolhouse near the house of F. Johnson.

All that district of country in Grant County embraced in townships five, six, seven, eight and fractional townships nine north, in range numbered one, west of the fourth principal meridian, shall constitute a separate town to be called "Wingville." The first town meeting in said town shall be held at W. Bruner's hotel in said place.

All that district of country in Grant County embraced in townships numbered six, seven and fractional eight north of range numbered two west, and townships numbered six, seven and fractional eight north of range numbered three west of the fourth principal meridian shall constitute a separate town to be called "Fennimore." The first town meeting in said town shall be held at the schoolhouse near P. Dempey's.

All that district of country embraced in township numbered three north of range numbered two west of the fourth principal meridian shall constitute a separate town to be called "Harrison." The first town meeting in said town shall be held at the house of C. Travis.

All that district of country in Grant County, embraced in township numbered four and five north of range numbered two west of the fourth principal meridian shall constitute a separate town to be called "Highland." The first town meeting in said town shall be held at the house of Col. James McKensie.

All that district of country in Grant County, embraced in township numbered three north of range numbered three west of the fourth principal meridian, and fractional townships numbered two of range numbered three west, shall constitute a separate town to be called "Potosi." The first town meeting in said town shall be held at the Wisconsin House.

All that district of country in Grant County, embraced in township numbered three and fractional township numbered two north of range numbered four west of the fourth principal meridian, shall constitute a separate town to be called "Waterloo." The first town meeting in said town shall be held at the schoolhouse near the house of D. R. Burt.

All that district of country in Grant County, embraced in townships numbered four and five north of range numbered three west of the fourth principal meridian, shall constitute a separate town to be called "Lancaster." The first town meeting in said town shall be held at the court house

All that district of country in Grant County, embraced in townships numbered four and five north of range numbered four west of the fourth principal meridian, shall constitute a separate town to be called "Beetown." The first town meeting in said town shall be held at the Beetown House.

All that district of country in Grant County, embraced in townships numbered three and four north of range numbered five west of the fourth principal meridian shall constitute a separate town to be called "Cassville." The first town meeting in said town shall be held at the house of Mr. Pollock.

All the district of country in Grant County, embraced in townships numbered six and seven north of range numbered four west, also townships numbered five, six and seven north of range numbered five west, also townships numbered five and six of range numbered six west, and fractional township numbered six north of range numbered seven west, of the fourth principal meridian, shall constitute a separate town to be called "Patch Grove." The first town meeting of said town shall be held at the schoolhouse near J. M. Dickenson's.

It will thus be seen that the original towns of the county were Hazel Green, Jamestown, Smelser, Paris, Platteville, Harrison, Potosi, Waterloo, Cassville, Lima, Highland—embracing what was Liberty, afterward the townships of Liberty and Ellenboro, Lancaster, Beetown, Wingville, Fennimore and Patch Grove.

The present towns of the county are Hazel Green, Jamestown, Smelser, Paris, Potosi, Platteville, Harrison, Waterloo, Cassville, Lima, Ellenboro, Lancaster, Beetown, Glen Haven, Clifton, Liberty, Little Grant, Bloomington, Wingville, Fennimore, Mount Hope, Patch Grove, Wyalusing, Hickory Grove, Woodman, Millville, Castle Rock, Marion, Muscoda, Waterstown and Boscobel.

Hazel Green comprises Township 1, Range 1; Smelser, Township 2, Range 1; Platteville, Township 3, Range 1; Lima, Township 4, Range 1; Clifton, Township 5, Range 1; Wingville, Township 6, Range 1; Castle Rock, Township 7, Range 1; Muscoda, Township 8 and fractional Township 9, Range 1; Jamestown, Township 1, Range 2; this township is curtailed to somewhat less than a full township by the indenture of the Mississippi. Paris, Township 2, Range 2; Harrison, Township 3, Range 2; Ellenboro, Township 4, Range 2, Liberty, Township 5, Range 2; Fennimore, Township 6, Range 2, and Township 6, Range 3, being a double township; Hickory Grove, Township 7, Range 2; Waterstown, fractional Township 8, Range 2; Potosi, Township 2, Range 3, and fractional Township 2, Range 3; Lancaster, Townships 4 and 5, Range 3,—a double township; Marion, Township 7, Range 3, with the exception of a portion of Sections 5 and 6 cut off by the Wisconsin River; Boscobel, fractional Township 8, Range 3, being that portion south of the Wisconsin; Waterloo, Township 3, Range 4, and fractional Township 2, Range 4; Beetown, Township 4, Range 4, and Sections 1, 2, 11, 12, 13, 14, 23, 24, 25, 26, 35, 36, of Township 4, Range 4; Little Grant, Township 5, Range 4; Mount Hope, Township 6, Range 4, except Sections 1 to 6 inclusive; Woodman, fractional Township 7, Range 4, and Sections 1 to 6 inclusive of Township 6, Range 4; Cassville, fractional Townships 3 and 4 of Range 5, and fractional Township 4, Range 6; Glen Haven, Sections 7, 8, 9, 10, 15, 16, 17, 18, 19, 20, 21, 22, 27, 28, 29, 30, 31, 32, 33, 34, of Township 4, Range 5, and Sections 10, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 27, 34, 35, 36, of Township 6, Range 4; Bloomington, Sections 3, 4, 5, 6, of Township 4, Range 5; half Sections 13, 14, 15, 16, 17, 18, and whole Sections 21 to 36 inclusive of Township 5, Range 5, and Sections 24, 25, 36, 35, 26, 23, 22, 27, 34, 21, 20; fractional Sections 19, 28, of Township 5, Range 6, and Sections 1, 2, 3, of Township 4, Range 6; Patch Grove, Sections 1 to 12 inclusive, and half Sections 13, to 18 inclusive, of Township 5, Range 5; also 19 to 36 inclusive, of Township 6, Range 5; Milville, Sections 1, 2, 3, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, and fractional Sections 4, 5, 7, Township 6, Range 5, together with Sections 25, 26, 35, 36, and fractional Sections 14, 24, 23, of fractional Township 7, Range 5; Wyalusing, Sections 1 to 18 inclusive, of Township 5, Range 6, and Townships 13, 19 to 36 inclusive, of Township 6, Range 6; together with fractional

Sections 14, 15, 16, 17, 18, of same township and range, and fractional Sections 13, 24 and 25, of Township 6, Range 7.

The number of acres in each of the townships in Grant County is as follows:

Township 1 north, Range 1 west.....	23,099.37
Township 2 north, Range 1 west.....	23,073.12
Township 3 north, Range 1 west.....	22,931.44
Township 4 north, Range 1 west.....	23,015.71
Township 5 north, Range 1 west.....	23,040.31
Township 6 north, Range 1 west.....	22,945.05
Township 7 north, Range 1 west.....	22,928.77
Townships 8 and 9 north (the latter fractional), Range 1 west.....	22,062.33
Township 1 north, Range 2 west.....	19,009.29
Township 2 north, Range 2 west.....	23,173.04
Township 3 north, Range 2 west.....	23,194.69
Township 4 north, Range 2 west.....	23,080.40
Township 5 north, Range 2 west.....	23,061.77
Township 6 north, Range 2 west.....	23,037.33
Township 7 north, Range 2 west.....	18,037.85
Township 2 north, Range 3 west (fractional township).....	7,647.33
Township 3 north, Range 3 west.....	23,168.07
Township 4 north, Range 3 west.....	23,211.56
Township 5 north, Range 3 west.....	23,008.76
Township 6 north, Range 3 west.....	22,477.43
Township 7 north, Range 3 west.....	22,876.67
Township 8 north, Range 3 west (part south of Wisconsin River).....	6,120.14
Township 2 north, Range 4 west (fractional township).....	1,047.86
Township 3 north, Range 4 west.....	22,940.04
Township 4 north, Range 4 west.....	22,907.04
Township 5 north, Range 4 west.....	22,866.22
Township 6 north, Range 4 west.....	22,934.08
Township 7 north, Range 4 west (part south of Wisconsin River).....	13,438.49
Township 3 north, Range 5 west (fractional township).....	17,833.82
Township 4 north, Range 5 west.....	23,184.55
Township 5 north, Range 5 west.....	22,948.01
Township 6 north, Range 5 west.....	21,645.77
Township 7 north, Range 5 west (part south of Wisconsin River).....	3,008.33
Township 3 north, Range 6 west (fractional township).....	3,380.33
Township 4 north, Range 6 west (fractional township).....	10,918.05
Township 5 north, Range 6 west (fractional township).....	18,986.18
Township 6 north, Ranges 6 and 7 west (fractional townships).....	14,480.03
Total.....	706,460.23

LEGAL JURISDICTION.

Federal Courts.—By Section 4, of the act of Congress entitled “An act to enable the people of Wisconsin Territory to form a Constitution and State Government, and for the admission of such State into the Union,” approved, August 6, 1846, it was, *inter alia*, provided: * * * “Said State shall constitute one district and be called the District of Wisconsin, and a District Court shall be held therein, to consist of one Judge, who shall reside in said district and be called a District Judge. He shall hold, at the seat of government of said State, two sessions of said court annually, on the first Mondays in January and July; and he shall in all things have and exercise the same jurisdiction and powers which were by law given to the Judge of the Kentucky District under an act entitled, ‘An act to establish the judicial courts of the United States.’ He shall appoint a clerk for said district, who shall reside and keep the records of said court at the place of holding the same, and shall receive for the service performed by him the same fees to which the clerk of the Kentucky District is by law entitled for similar services. There shall be allowed to the Judge of said District Court the annual compensation of \$1,500.”

Section 5 of said act provides for the appointment of a “person learned in the law to act as attorney of the United States” in said district, and provides that, besides the stated fees, he is to receive a salary of \$200. It also provides for the appointment of a Marshal for said district,

who is to perform the duties and services, and be entitled to the fees and emoluments given to the Marshals of other districts.

By Section 4, of the act of Congress, approved May 29, 1848, entitled, "An act for the admission of the State of Wisconsin into the Union," the provisions of the foregoing section of the act of August 6, 1846, were modified so as to provide for the holding of "one term of said court in each year at the seat of government, to commence on the first Monday in July, and another term of said court in each year at Milwaukee, to commence on the first Monday in January." It also empowered the Judge of the district to hold special terms of court when he should deem it necessary. The records and papers to be kept at either place as the Judge might direct.

The Hon. Andrew G. Miller was appointed the first District Judge under this act, June 12, 1848. Congress by subsequent acts increased the salary of the Judge of this district to \$2,500 and \$3,500.

By an act of Congress, approved July 15, 1862, the districts of Michigan, Wisconsin and Illinois were constituted the Eighth Judicial Circuit; but, by an act, approved February 9, 1863, Wisconsin was made a part of the Ninth Judicial Circuit, and subsequently transferred to the Seventh Judicial Circuit, the Hon. Thomas Drummond, of Chicago, Circuit Judge.

The business of the United States becoming too large for a single District Judge, by an act of Congress, approved June 30, 1870, entitled "An act to establish the Western Judicial District of Wisconsin," the State was divided into two districts—the Eastern and Western. That portion of the State comprising the counties of Rock, Jefferson, Dane, Green, Grant, Columbia, Iowa, La Fayette, Sank, Richland, Crawford, Vernon, La Crosse, Monroe, Adams, Juneau, Buffalo, Chippewa, Dunn, Clark, Jackson, Eau Claire, Pepin, Marathon, Wood, Pierce, Polk, Portage, St. Croix, Trempeleau, Douglas, Barron, Burnett, Ashland and Bayfield was constituted the Western, and the remainder of the State the Eastern District. The terms were appointed to be held for the Western District, at Madison, on the first Monday in June, and at La Crosse the first Monday in December; a District Judge for this Western District was provided for, together with a Marshal, District Attorney, a Clerk at Madison, and another at La Crosse. Under these provisions, James C. Hopkins, of Madison, Wis., was appointed Judge of said Western District, on the 9th day of July, 1870. F. W. Oakley, of Beloit, Wis., was appointed Marshal, and Charles M. Webb, of Grand Rapids, appointed District Attorney, at the same date. F. M. Stewart, of Baraboo, was appointed Clerk of both Circuit and District Courts at Madison, August 2, 1870, and H. J. Peck, of La Crosse, Clerk at that place, August 18, 1870. On October 19, 1879, Sidney Foote, of Madison, was appointed a Register in Bankruptcy; and on the 10th of January, 1871, Carson Graham, of Viroqua, was appointed Register at La Crosse.

In 1872, the terms of court were changed by act of Congress, and directed to be held at La Crosse, on the third Tuesday of September, and abolishing the December term there, but reserving to the Judges the right to appoint special terms if they deemed it necessary. In March, 1877, Mr. Foote, Register in Bankruptcy, died and was succeeded by Mr. S. W. Botkin, of Madison. On the 4th of September, the same year, Judge Hopkins died, after a service of seven years. His successor, the present Judge, Romanzo Bunn, of Sparta, was appointed October 13, 1877. On the 5th of February, 1878, Henry M. Lewis, of Madison, was appointed District Attorney, vice Charles M. Webb, resigned. These officers now constitute the officers of the Federal Court of the Western District of Wisconsin.

Territorial Courts.—The act of Congress, which provided for the organization of the Wisconsin Territory, declared that the judicial power therein should be vested in a Supreme Court, District Courts, Probate Courts and Justices of the Peace. The Supreme Court was to consist of a Chief Justice and two Associate Justices, any two of whom should be a quorum; and they were required to hold a term of court annually at the seat of government. The Territory was to be divided into three Judicial Districts; and it was provided that a District Court or Courts should be held in each of said districts, by one of the Judges of the Supreme Court, at such times

and places as might be prescribed by law; the jurisdiction of these several courts was to be "as limited by law;" but the act declared, that both the Supreme and District Courts should "possess chancery as well as common law jurisdiction." That "writs of error, bills of exception, and appeals in chancery causes," should "be allowed in all cases from the final decisions of the District Courts to the Supreme Court," under regulations to be prescribed by law, and that in no case, removed to the Supreme Court, should there be a trial by jury. It further provided that "writs of error and appeals from the final decisions of the said Supreme Court" should be "allowed, and taken to the Supreme Court of the United States, where the value of the property or the amount in controversy be ascertained by the oath or affirmation of either party," should exceed \$1,000. The Supreme Court was also empowered by the act to appoint its own Clerk, as were each of the District Courts.

The Judges of the Supreme Court, as well as a United States Attorney and Marshal for the Territory, were to be appointed by the President, by and with the advice and consent of the Senate. In spite of vigorous efforts of leading politicians of that early day to induce the President to appoint to all the leading offices of the new government persons then resident in the Territory, President Jackson appointed as Chief Justice, Charles Dunn, then of Illinois, and, for Associate Judges, he selected William Frazier, of Pennsylvania, and David Irvin, formerly of Virginia, but who had been, during the preceding four years, Judge of the additional or Fourth District of the Michigan Territory, which comprised the whole of that territory west of Lake Michigan. William W. Chapman, of Burlington, Iowa, was appointed United States Attorney, and served until July 4, 1838, when he was succeeded by Moses M. Strong, of Mineral Point. Francis Gehon, of Dubuque, was appointed Marshal, serving until June 19, 1838, when Edward James was appointed to that office.

At the first session of the Territorial Legislature, held at Belmont, commencing October 25, 1836, the Territory was divided into three Judicial Districts, the First District consisting of Crawford and Iowa Counties; the Second, of Dubuque and Des Moines, and the Third, of the counties of Brown and Milwaukee; and it was further provided, "That Charles Dunn, Chief Justice of the Supreme Court of the Territory of Wisconsin, shall perform district duties in the First Judicial District; that David Irwin, Associate Judge of said court, shall perform district duties in the Second Judicial District; and that William C. Frazer, Associate Judge of said court, shall perform district duties in the Third Judicial District. It was further provided, that "there shall be two terms of the District Courts held annually in each of the counties now organized in the Territory, at the court house thereof, or place provided for holding court, which terms shall be commenced and held at the respective times, following, to wit: In the county of Crawford, on the first Mondays in May and September; and in the county of Iowa, on the third Monday in May, and the first Monday in October." Grant County, as a part of Iowa County at the time the districts were created, was included in the First Judicial District. At the same session of the Legislature, but subsequent to the districting of the State, several new counties were formed, among them, Grant; and it became the duty of Chief Justice Dunn to hold terms in the new county which continued a part of his district.

Of Chief Justice Dunn, a late writer speaks as follows: "The Chief Justice of the new Supreme Court was then in his thirty-seventh year, of Irish descent, of Virginia ancestry on his mother's side, a native of Kentucky. Having enjoyed the advantages of nine years' preliminary education at Louisville, before he attained the age of eighteen, and having read law for about three years with distinguished lawyers of Kentucky and Illinois, he was admitted to the bar in the latter State before reaching his majority, and had practiced there during most of the next sixteen years, except so far as his practice was interrupted by the duties of various civil and military offices. He had taken part in the Black Hawk war as Captain of an Illinois company, and had entered Wisconsin with the Illinois forces engaged in the pursuit of a retreating enemy. During the campaign, he had been wounded by a blundering sentinel, and had been disabled for further service. An able and well-read lawyer, endowed with a fine physique, with a countenance open, ruddy and frank, whose lines were nevertheless strong and indicative of good sense

and a strong will, with a firm, manly and dignified bearing, familiar with the habits of border life, yet with the manners of an urbane and cultivated gentleman, Judge Dunn, though still a young man, had little difficulty in commanding the respect or winning the general good will of the people among whom his lot was now cast."

The first session of the District Court in Grant County, was held at Cassville, commencing June 5, 1837. The first docket of the court shows the following cases: James H. Johnston vs. A. R. T. Locey, action, trespass. Francis Gehon vs. J. B. Estes, action, trespass. A. Levi & Co. vs. Coyle & Palmer, action, trespass. Stewart McKee & Co. vs. John R. Farnsworth, action, trespass. Holder vs. Keller, action, debt. A. Cornell (assignee) vs. R. Ray, action, same as above. C. A. & C. L. Lagrave vs. J. B. Estes assumpsit, discontinued with leave to withdraw *de con.*

The first grand jury was as follows: Jeremiah Dodge, John R. Farnsworth, Alexander D. Ramsey, Andrew McWilliams, Isaac Lander, Moses Hicklin, Daniel Richards, Clovers A. Lagrave, Abram Miller, James Benham, Thomas Shanley, William P. Fleharty, Elisha T. Haywood, James R. Vineyard, Henry Hodges and James Grushong. James R. Vineyard was selected to act as foreman.

Upon the opening of the court, it was "ordered by the court that Orris McCartney, Henry Wood, James Boice and Aaron Boice appear here on the first day of the next term of this court, and show cause, if any they can, why they shall not be fined for contempt of court in not attending at this court as grand jurors."

The first case brought before the attention of the court was that of Stewart McKee and Lind vs. John R. Farnsworth for trespass. Moved by defendants' attorney to quash the complaint. The case was continued to the following morning, and court adjourned until that time. Upon re-assembling, the complaint was quashed and defendants empowered to collect costs from plaintiff. The first bill returned by the grand jury was a "true bill" against John R. Farnsworth for retailing ardent liquors; case continued until next term of court and then dismissed. The first execution issued was in favor of James Gehon against James B. Estes, indorsed "satisfied by order of plaintiff."

At this session of the court, Thomas S. Wilson was appointed District Attorney, *pro tem.*, by the presiding Judge. Among other matters, Justice Parson was granted leave to keep a ferry across the Mississippi opposite his house. James H. D. Street as Sheriff of Grant County, and Robert R. Read and George Moore, his Deputies, were granted pay for three days' attendance upon court, this appearing to have been the limit of the first session. One term of court was held at Cassville, the court house at Lancaster not, as yet, having been completed. At the October term ensuing, J. Allen Barber was admitted to the bar of Grant County as attorney and counselor at law, being the first one so admitted; Edward Southwick was also admitted at the same term.

The first session of the court at Lancaster took place at the October term, 1837. The court house not being quite finished, the court was held in a little frame structure standing about where the bank is now situated. There being no crier, the court appointed Lewis Reynolds to act in that capacity, and also appointed Harvey Pepper as Constable. From this time forward until the organization of the State government, in 1848, regular terms of court were held by Judge Dunn at Lancaster, the county seat.

The last term of the District Court was held in June, 1848. On the 29th of May, of that year, Wisconsin became a State, and a new period began in her judicial and political history. None of the Judges of the Territorial Supreme Court were afterward connected with the State Judiciary. While still on the bench, Judge Dunn had been elected as a delegate from La Fayette County to the second Constitutional Convention. In this convention, he served as Chairman of the Judiciary Committee, and possessed a "commanding influence" in the convention. He was afterward a member of the State Senate from 1853 to 1856, and was a member of the Judiciary Committee of that body during the entire four years, and its Chairman until 1856, when the majority of the Senate being of the opposite political party, he was succeeded in the chairmanship

by David Taylor. Judge Dunn died April 7, 1872, at the residence of his sister at Mineral Point, in the eightieth year of his age.

By the constitution of the new State, Wisconsin was divided into five Judicial Districts. Grant County was included in the Fifth Judicial District, which comprised besides, Iowa, La Fayette, Crawford and St. Croix Counties, and three new counties attached to some of these for judicial purposes. The Legislature was authorized to alter the limits or increase the number of these circuits, with certain restrictions. These Circuit Judges were then to form the Supreme Court of the State, which court was by law compelled to hold at least one session annually at the seat of government.

The first election for Circuit Judges was held on the first Monday of August, 1848, and the following persons chosen: First, Edward V. Whiton; Second, Levi Hubbell; Third, Charles H. Larrabee; Fourth, Alexander W. Stow; Fifth, Mortimer M. Jackson.

The first term of the Circuit Court in Grant County, opened Monday, October 2, 1848, Judge Jackson, presiding. Upon the opening of the court the following persons, "who were formerly" attorneys and counselors at law in the District Court, came forward and took the oath, and were admitted as attorneys: Nelson Dewey, J. Allen Barber, Orsamus Cole, Stephen O. Paine, Joseph T. Mills, Cyrus K. Lord, Royal C. Bierce, William Hull, James W. Seaton, Ben C. Eastman. Willis H. Chapman, attorney at law in the courts of Illinois, was also admitted at the same time.

The first grand jury for this court was composed of the following persons: Thomas Cruson, Simpson Oldham, Warren Hannam, Sr., William Richardson, Jeremiah E. Dodge, Samuel Wilson, A. W. Emery, Jonas M. Smelzer, John S. Kirkpatrick, James Prideaux, Thomas J. Taylor, Robert Langley, Neely Gray, Jacob Benninger, James Barr, Abner Coates, Sr., Robert R. Young, James Bonham, James R. Short, Lewis Rood. Thos. Cruson was elected as Foreman.

The first case brought before the court was the State of Wisconsin vs. William Morris, Reuben Ray, Thomas Cobb, Thomas G. Kirkpatrick, Benjamin Baldwin, Solomon Roberts, Samuel Dorsey, William Clise and Pendleton P. Stone, for riot. Case stricken from the docket on motion of the District Attorney J. Allen Barber, subject to re-instatement at the option of the District Attorney. The case was one growing out of a charivari given in accordance with the customs of "ye olden time." Judge Jackson continued as Judge of the Fifth District until 1852, when he was succeeded by Montgomery M. Cothren, who served two terms, retiring in 1864. Joseph T. Mills, of Lancaster, was the next Judge of this circuit, and held two terms, and was followed by Judge Cothren, the present incumbent.

County and Probate Courts.—County Courts were established in this State by Chapter 86, of the revised statutes of 1849, and the jurisdiction and powers previously exercised by Probate Courts were by said Chapter 86, transferred to the County Courts.

Prior to 1849, the Judges were styled Probate Judges, and prior to 1844, they were appointed by the Governor of the Territory.

Civil jurisdiction, to a limited extent, was vested in County Courts by the act establishing them. In 1853, a decision of the Supreme Court, in the case of James Norval vs. James P. Rice and Lutia A. Rice, action of assumpsit, commenced in County Court of Rock County and appealed to the Supreme Court, struck a heavy blow at the common law jurisdiction of the County Courts. The court held that the statute creating the County Court, in so far as it provides for the trial of issues of fact by a jury of six men instead of twelve, is repugnant to the constitution of this State, and void.

"The right of trial by jury, secured by the constitution, contemplates a jury of twelve good and lawful men as the same was understood by the common law."

At the session of the Legislature of 1854, Chapter 86 of the Revised Statutes of 1849, so far as it related to civil jurisdiction of County Courts, was repealed, except in Milwaukee County, where this court has always retained civil jurisdiction to a limited extent. The other counties of the State in which County Courts have this jurisdiction at present are Dodge, Brown, Fond du Lac and Winnebago. A list of the County Judges of Grant County is given in another place.

COUNTY BUILDINGS.

Court House.—Immediately upon the meeting of Board of Supervisors for the newly created Grant County, in 1837, proposals were entertained for building a new court house, and at a subsequent meeting the contract was let to Messrs. G. M. Price and Daniel Banfill, the former taking the wood-work and the latter the mason-work of the building. Building operations were at once commenced, and the court house finished the following year. This building was occupied until in 1851. Its dilapidated condition called either for extensive repairs or the erection of a new structure. The latter measure was decided upon, and the contract awarded to Messrs. Alcorn, Wood and Prentiss, who commenced work upon the new building in 1852, turning it over to the county the succeeding year. This building forms the wing of the present court house. A relic of the first court house of Grant County still remains in the shape of the stairs, over which the feet of so many weary applicants for the interposition of the strong arm of the law have passed. At present these steps do duty as an outside means of reaching the second story of the residence of Judge Mills. By 1865, the needs of the county for a larger building were so glaringly portrayed, that, at an annual meeting of the County Board in November of that year, \$5,000 was appropriated for the enlargement of this repository of justice and county business. The contract for the erection of the present east front was then given to John Thornton. At the same time the roof of the old court house was raised several feet, giving the court-room a much airier and handsomer appearance. The new front was finished the following year. The original contract price was \$5,000, but at a subsequent session of the board the sum of \$1,087.76 was added to this in order to reimburse the contractor for his work which, while it had been performed in an eminently satisfactory manner, had by this sum exceeded the contract price, and feeling that they now had a building which they could regard with pride, the county generously came to his relief and awarded him the above sum. A lengthened description of this building is unnecessary. It is an edifice that does credit to the county, and provides in a commodious and safe manner for all the varied county interests that have their headquarters there.

County Jail.—In April, 1838, seeing the necessity for providing a place for the safe-keeping of criminals, the County Board decided to erect a building for that purpose, and a contract for a log jail was made with Harvey Pepper, the price for the same completed to be \$400. This pioneer bastille was made of logs, squarely hewn, and snugly laid together, while on the inside it was lined with oak plank two inches in thickness. To add to the further security of the jail, the interior was nailed every two inches with heavy spikes, the result of which was to make a box that, crude though it might be, was stronger than many of the more modern specimens of this genus. The word box is used advisedly, as the entrance to the interior was by means of a flight of steps running up to the second floor of the structure from the outside, where, from the interior, entrance was effected into the cell below by means of a ladder. This floor was made of stout hewn oak logs, and through the cracks between such air as could, struggled through to the prisoners below. For light two or three holes about the size of a small pane of glass were cut far above the reach of the prisoners, and admitted an occasional ray of sunshine to the occupants of this "dungeon cell." The jail finally went up in smoke, being fired by an incendiary, and, in 1844, the "old stone jail" was erected at a cost of \$1,685, including a frame jailer's house. This structure, although regarded at the time as the acme of institutions of its kind, was soon found to contain serious failings, both in size and internal necessities for the comfort of prisoners. As early as four years later, namely, in 1848, the Clerk of the County Board was ordered to advertise for bids for "enlarging the jail," but this order was afterward countermanded, and at the January session of the board in 1849, it was decided that air holes cut in the walls so as to ventilate the lower cells would be sufficient for all needs, and N. W. Kendall was employed to provide this rather crude means of ventilation, but for reasons unexplained in the proceedings of the board, the job was turned over to J. C. Squires, who was ordered to let the job to such person as he saw fit. In 1852-53, the present Sheriff's house was built, the one formerly occupied by that officer being altogether too rough and crude an affair for habitable purposes.

The ease and facility with which prisoners effected their escape from these prison walls finally awoke the county to the necessity of providing a jail that would be capable of holding securely the desperadoes and ruffians who visited this section. Notice was accordingly given early in 1872, that bids for the proposed new structure would be received, and, in July of that year, the contract was awarded to Haugh & Co., of Indianapolis, for the sum of \$20,500. All but the iron-work was sub-let by this firm to Norris & Hinkley, of Monroe, Wis. The following description of the new prison is published in the *Herald* of cotemporaneous date:

"The edifice will be made of brick and be two stories high above the basement room, the latter having an altitude of seven feet and five inches, and extending three feet below the surface of the ground. The basement will be divided into two compartments, one of which (the front) is to be used as a fuel room, and contain the furnaces for heating the various rooms, cells, etc., above. Eight basement windows will light this portion of the building, each grated by two horizontal and seven vertical bars of iron. The walls are to be one foot six inches thick, laid with good building stone in the best sand and lime mortar. The dimensions of the building to be $36\frac{1}{2} \times 45\frac{1}{2}$ feet, all measured outside of brick-work. All outside walls above the water-table will be twelve inches in thickness, to be built of the best quality of Lancaster brick. The floors will be of bush-hammered limestone, seven inches thick, laid level and properly bedded in mortar. All window-frames and sash to be of good, solid oak.

"The building will contain twelve cells, six on the first floor and as many on the second. Each cell will be five feet by seven and eight feet high, made of jail plate a quarter of an inch thick, and set on iron pillow-blocks six inches from the floor. The doors to these cells will be two by six feet, made of articulated iron-work secured with heavy bolts and provided with strong locks. A corridor composed of articulated iron-work will surround the outer tier of cells on both the first and second floors. This grating will extend from floor to ceiling. Separating the corridor from the gallery will be another grating of iron-work, the horizontal bars of which are to be of strong band-iron, and the upright of one-inch round-iron, spaced three to a foot. The lower ends of these bars will pass through the stone floor and be securely riveted. The gallery is to be two feet wide, and will extend all around the main prison. Besides the cells, gallery and corridor already referred to, the first floor will contain a kitchen and guardroom; the second a jailer's bedroom and a female ward furnished with six beds and provided with an iron door. The walls on three sides of the main prison to be eight feet in height, the wall on the north side the entire height, the whole ceiling of the apartment containing the cells as well as the floor, walls and ceiling of the female ward are to be lined with jail plate-iron a quarter of an inch in thickness. There will be eight windows in the prison, and two in the female ward, each made secure with cast-steel gratings, consisting of three horizontal and seven vertical bars, the latter let into the caps and sills two inches, and the spaces around them at the bottom will be filled with melted lead. There will be two swinging beds in each cell, and six in the ward for women. These will be hung with chain suspenders and hinged with strong hinges, four inches from the wall. To be made wholly of iron."

Some slight changes were made in the original plan, two feet being added to the height of the basement, and six inches to the thickness of the basement walls, besides several minor additions.

The site selected for the new building was a vacant lot on the corner of Jefferson and Maple streets, and just north of the old jail. Work was commenced soon after the awarding of the contract and carried rapidly forward, and in September of the following year, the completed structure was turned over to the county and accepted. The total cost of jail and lot was \$21,740, \$800 having been paid for the lot and a small sum allowed the contractors for extra work according to changes made in the original plans.

It had been intended at first to include a Sheriff's residence with the new building, and plans for a building $44 \times 27\frac{1}{2}$ feet, two stories high, with a mansard roof, had been accordingly drawn. The cost of this additional building would have been about \$7,500, but from motives of economy the residence was omitted, something that was afterward much regretted. This

contemplated addition will doubtless be completed according to the original plans ere many years roll round, as only this is needed to round-out and finish to completeness what is undoubtedly one of the finest jails in the State.

County Poor Farm.—This property which lies some two miles southeast of town on the Platteville road was purchased by the county in the fall of 1845, the purchase being brought about in a great measure by the efforts of Judge Barber and Dewey, who previously had purchased the property and offered the county the land at the cost price, namely, \$3 per acre, providing they would establish there a poor farm, the need of which was already felt. The proposition was accepted, and November 17, 1845, deeds were made out direct from James Wilter, of Monroe, Green Co., to the county of Grant, by which the latter became the owner of 240 acres of the half-section sold by Wilter. Work was begun upon the proper buildings thereon, and the farm was ready for occupancy the following year. Isaac Martin was the first Superintendent. October 24, 1866, the main building was destroyed by fire, the incendiary being an insane pauper named Susan, who started the blaze in her cell. There were no men on the place at the time, and although the women present fought strenuously against the fire fiend, they were unable to subdue it, and before help could arrive from Lancaster the flames had such possession of the structure that all efforts to save it proved unavailing. The furniture and some few other articles were saved. The building was uninsured, and the loss to the county was estimated at \$7,000. At the meeting of the Board of Supervisors in the November following, the sum of \$5,000 was appropriated for rebuilding the structure, the new building not to cost over \$8,000. During the interval, a stone building about a mile south of the poor farm, the property of the Hon. J. P. Cox, then lately deceased, was leased for the use of the Superintendent and inmates until the new building could be erected. The present poor house is a commodious and neat-looking structure, combining comfort with all the requirements necessary for such an institution. Its cost, however, somewhat exceeded the price set by the Board of Supervisors when rebuilding was first determined upon.

EARLY JUSTICE.

As is usual in new countries, the earliest efforts to establish the blind goddess with her impartial scales securely upon her throne in Grant County, were accompanied by many discrepancies in form and procedure that cannot fail to produce a quiet smile upon the countenances of present-day barristers.

Not but the dignity of the higher courts, under the same and dignified rule of Chief Justice Dunn, backed by a bar comprising such names as those of Orsamus Cole, Stephen O. Paine, J. Allen Barber, Judge J. T. Mills, and other legal luminaries of a like standing and character, was well preserved and their proceedings marked by that staid decorum that is supposed to be the especial characteristic of these fountain-heads of Justice. On the contrary, while in exceptional instances, and these extremely far between, might have been exhibited instances of *gaucherie* and disregard of legal amenities, the bench and bar of Grant County would take high precedence with any similar body in the State. While this is the case in the upper courts, it is equally true that the lower channels at times, under the influence of amateur occupiers of the wool sack, pursued a most tortuous and perplexing course, ending in climaxes altogether the reverse of the meaning intended by the court; a few of the most authentic have been culled from the many and are given below. The first are included in the recollections of the Hon. Henry S. Baird, published some years since, who relates them as happening in the western part of the State at a very early day. While it is possible that they may not have occurred exactly within the territory afterward defined as Grant County, they are altogether too good illustrations of the early legal *modus operandi* to permit of their being missed here. Says Mr. Baird:

“In the subordinate or Justices’ Courts, many singular incidents transpired and decisions were made, which, to the actors at the time, seemed to be all right, and in strict conformity with their notions of justice; but, to modern practitioners, they would appear, however, to conflict with the strict rules of evidence and encroach upon the rights of the citizen. I will illustrate

by relating the proceedings that took place in two cases tried before Justices' Courts in the western part of the State about the year 1830. A plaintiff was, at that time, permitted to sue his debtor by warrant, and on judgment being obtained, to issue execution against and imprison the body for want of goods or chattels, out of which to make the money. In the case I allude to, the gentleman who related to me the story, applied to a country Justice for a warrant, he acting as the agent of a firm in St. Louis that had sold a bill of goods to the defendant. The warrant was issued and placed in the hands of a Constable. The plaintiff's agent returned to his place of abode, distant several miles from the office of the Justice. The Constable, prompt in the discharge of his duty, went in search of the defendant, and, in the course of a day or two, arrested him and brought him before the Justice. The question now arose, how should the attendance of the agent be accomplished? This was soon settled by the Justice, who immediately issued a warrant against his body and directed the Constable to bring him forthwith before the court. 'But,' said the Constable, 'What shall I do with the defendant in the meantime? I cannot carry him with me.' 'Oh, I will fix that,' said the Justice, who at the moment observed a man on horseback passing by. The Justice hailed him, and commanded the stranger to alight and *take charge of the defendant*. The traveler at first refused, alleging that he was a stranger, residing in Illinois and going on business to a distant point, but the Justice would receive no such excuse. He informed the stranger that he was a Justice of the Peace, and, in the name of the United States, and by authority of the laws of the Territory, ordered him again to take charge of the prisoner. He reluctantly obeyed the mandate, and mounted guard over the defendant. The Constable then went in search of the plaintiff's agent, found him at his residence, arrested him on the warrant, brought him before the court, and reported that he had the 'body' there present. The trial proceeded and judgment was duly rendered against the defendant. It was now nearly dark, and, as in those days, houses were few and distant from each other, the traveler said to the Justice, that as he had detained him nearly all day, it was then too late to proceed on his journey, and he supposed he could give him supper and lodging. The Justice was quite willing to do so—for he was not only a Judge, but a landlord as well. The traveler and plaintiff's agent accordingly had their horses cared for, had supper, lodging and breakfast, immediately after which the stranger ordered his horse; but when about to mount and ride off, he was civilly informed by the late Justice—now landlord—that his bill was twelve shillings. In this case, the Justice probably pocketed more than either party or the Constable. At the other trial, I witnessed the whole scene myself. The court was held in a small log school-house. The suit was brought to cover the amount of a note in hand. The defendant pleaded either payment or want of consideration; each party had employed counsel, and a jury of six was empaneled to try the issue. A witness was called and sworn. In the course of the examination, one of the counsel objected to some leading question put by the opposite side, or to some part of the witness' answer as improper testimony. The Judge overruled the objection and the witness proceeded; but, ere long, another objection, similar to the first, was made from the same side. On this second objection being made, the foreman of the jury, a large and portly individual, who bore the title of Colonel, and, probably, owing to his exalted military rank, was permitted to wear his hat during the trial, manifested a good deal of impatience, shown by fidgeting in his seat, and whispering to his fellow-jurors; but the Justice again overruled the objection, and told the witness to proceed. This he did for a short time, when he made a statement which was clearly irrelevant and contrary to every rule of evidence and common sense. The attorney who had so often and so unsuccessfully attempted to exclude this sort of evidence, could no longer silently submit; he again rose from his seat and most respectfully appealed to the court, protesting against such statements going to the jury as testimony. Thereupon the worthy foreman rose from *his* seat and swore he would no longer sit there and hear the objections of that fellow; that he had taken an oath as a juror to decide the case according to the evidence, and if he could not hear the whole story from the witness he should leave. Accordingly, he made several strides toward the door, when the Justice rose from the bench, and approaching the juror, placed his hand on the Colonel's shoulder, and begged that he would

return to his seat, promising that the troublesome attorney should not again interfere. After some persuasion, he consented to do so; at the same time—while pressing his hat more firmly upon his head—he exclaimed, ‘Well, I’ll try it once more, but d—d if I’ll stand any more of that fellow’s nonsense.’ The attorney gave up in despair, and the opposite counsel had it all his own way.”

A third illustration of the manner in which the dignity in which the law was upheld, sometimes under serious difficulties, comes from the southwestern part of the county. Two parties became embroiled in one of those bouts at fisticuffs so common in the mining region at that date, but before any considerable damage had been done, a third party stepped between the combatants, and restored order. But the peace of the village had been disturbed; the dance was over, but now some one must pay the piper. Accordingly, a warrant was issued and one of the pugilists arrested. His trial came off in due form, and resulted in his acquittal. Thereupon the other party to the fracas was brought before the dread bar of justice, with a similar result. Matters were now becoming serious; insulted justice demanded a victim, and a warrant was issued against the body of the peace-maker. Thoroughly astounded, that individual was brought before the court, and convicted of disturbing the peace of the commonwealth. In the meantime, astonishment had given way in the mind of the victim to a feeling of righteous indignation, which was shared to the full by his friends. Suddenly the tables were turned, not only figuratively but literally. The Court was obliged to take refuge in flight, and the last seen of his honor he was making hasty strides over an eminence in the vicinity, with his erstwhile prisoner trailing close in the rear, while the latter’s friends obligingly remained behind, to reduce to chaos the scene of their favorite’s disgrace. The pound of flesh, tradition assures us, was never obtained in that case.

It was genial Daniel Gellipsie who, after listening impatiently to long-winded arguments upon law and evidence when he was seated on the bench, gave vent to his feelings by exclaiming with emphatic earnestness: “Gentlemen, you may go away with your Blackstones and your whetstones. It is my private opinion that the plaintiff has got the right of the case, but the Court reserves its decision until Monday.”

The northern part of the county comes to the front with a well-known instance where the Court, not waiting for the slow and ponderous movings of the law, took upon itself the double role of Judge and executioner. A case was on trial, and the small carpenter-shop, covered with its cleanly litter, was filled with legal talent, witnesses and spectators. The trial had not progressed very far before one of the witnesses cast a doubt upon the veracity of the Court, or in other words, suggested that his Honor was “a d—n liar.” This was more than Scotch blood could stand. Rising from his seat, the incumbent of the bench remarked to himself: “Your Honor, I dismiss this court for fifteen minutes,” and then, pulling off his coat, proceeded to inflict swift and terrible punishment upon the vile slanderer. Having finished his self-imposed task, his Honor resumed his seat, opened court, and no more insults were offered to that fountain of justice. A volume might be filled with incidents, pathetic and humorous, of the early administration of the affairs of the blind goddess, but the few given will show to those reaping the benefits of the pioneer labors of the fathers of the county, one of the many crucibles through which came the present forms of law and order.

CAPITAL CRIMES.

Grant County in its earlier and middle-age history was the abode of many representatives of the rougher elements of society, drawn hither by the mines and its proximity to the Mississippi, that famous water-way which served for many years previous to the war as a promulgator of vice as well as a pathway of commerce. This roughness gradually wore away under the natural and social laws of the advancing civilization, until the cuttings, shootings and brawls, of which the county was so prolific in an early day, are now remembered only as vague traditions of the past. It does not come within the province of the present chapter to take note of every disturbance which resulted in loss of life, but only of such as at the time created a strong ripple

of excitement, so as to for the time being shake the foundations of society in the neighborhood where the crime was committed.

JIM CROW MURDER.

Among the earliest assassinations which took place in the present confines of Grant County, and one that, at this date, seems most brutally cold-blooded, was the shooting of "Jim Crow," at Potosi, by a gang of claim-jumpers. The following account of this murder is compiled from different sources, chiefly from a history of the crime that appeared in the *Grant County Herald* some years ago:

"The 'Long Range' was one of the most prolific ranges of mineral ever worked in the Potosi mines. It was originally discovered by a man by the name of Fipps, who, failing to discover the fortune it contained, and, after working awhile on side crevices, sold out for a trifle to more fortunate parties. A mining claim, at this time, was a lot two hundred yards square, as allowed by the Government. Moor & Watson held one of these lots, and, in proving their claim, struck the main body of mineral, or, in more modern parlance, the 'bonanza.' There was living in 'Snake Hollow,' at this time, a gang of roughs, whose business was to make an easy living by any means that might subserve their own nefarious purpose. Sometimes they would decoy their victims into the saloons and fleece them out of their 'piles' at the gambling table. Failing at this, they did not hesitate to adopt means that would compass their design and place them in possession of the coveted treasure of the fortunate and hard-working miner; and woe be to the man who fell under the ban of their displeasure. Their plan once devised and adopted, they did not fail to execute it, however hazardous and villainous the means used in its accomplishment. No retreat, however secure, was safe from their invasion. With the stealth and persistence of the India thug, they pursued their victim, and, once within their meshes, there was no escape. The 'Long Range,' with its deep, capacious crevices of glittering ore, was a prize, and the band resolved to have it—by fair means if possible, by foul if necessary. Moor & Watson learned their design, and resolved to beat them in their own way. They gave 'Jim Crow' a *fighting interest*. He was a man formed in a perfect mold, and well skilled in the 'manly art of self-defense,' his right name being James D. Morga, but, through the mines, he went by his sobriquet of 'Jim Crow.' It was a pastime for him to ward off the blows of his antagonist and send him sprawling to the ground with a force that beats the Keely motor. He was never known to seek a quarrel nor to back out from one in behalf of an insulted or injured friend. A few well-directed blows was sufficient for the occasion, and the recipient never asked to have them repeated. Bill Goodfellow, also a powerful man, thought to dispatch him once, at a saloon in Dubuque, striking him in the back with an ax, severing his ribs from the bone; but Jim, quick and fierce as a she tiger, turned on him, wresting the ax from his hands, and, before feeling the effects of his severe injury, dealt him such a thrashing that Bill ever after kept the peace. Such was the new partner in Moor & Watson's diggings, whom the miners had learned to respect for his unobtrusive devotion to the right, and the roughs to fear for his swift and terrible punishments of the wrong. A fellow by the name of John Calder was the first to assert his claim to the diggings, and, for this purpose, armed himself with a gun. Jim saw him coming and advanced to meet him half way. His first move was to wrest the gun from his hand, and then administering a few well-placed kicks, ordered him to return by the path he had come, or he would blow the top off his head; Calder obeyed, and relinquished all further claim. A few days after, the whole gang, consisting of Sam Rountree, Bill Clark, Cyrus Harper, Jake Derrich, Bill Cooley and Lindsey Evans, all armed, were seen approaching the diggings. Jim Crow was prepared for them. He stood, as they approached, leaning on the windlass at the mouth of the 'hole,' armed with his knife, pistols and rifle. When they came within thirty yards, Jim ordered a halt along the whole line. They knew too well the determined character of their foe, and to advance farther was certain death to one or more, and they wisely concluded to obey the order and remain where they were. Harper tried to commence conversation and said: 'Crow, we have come up to settle this difficulty, and would like to talk with you a little.'

Crow replied, 'You can't talk to me; you have come with a d—d pack of thieves. Now, take the path you came, and go home and attend to your own business.'

"They did leave and were only too glad to get beyond the reach of the well aimed rifle. Though held at bay and baffled in their nefarious purpose for the time, for there is little doubt they purposed to kill Crow then and there, if they could do so without endangering their lives, they were not to be thus easily thwarted, and slowly returned deliberating a more successful revenge. It was not long delayed. All was kept quiet. No intimation was given of the work they had in view, and it was supposed the strife was at an end, and Moor & Watson were to be left in the peaceable possession of their rich diggings. A few weeks after, Jim Crow was sitting in Owen McLaughlin's grocery, quietly smoking his short pipe, when Bill Cooley, Jake Derrich and Lindsey Evans entered. It was observed that Evans wore a cloak. All walked up to the bar and called for something to drink, inviting Jim Crow to do the same. There was nothing in the words or movements of the men to betray suspicion when the two turned to leave the house. Cooley and Derrich had passed out, when Lindsey Evans turned suddenly round sent a ball whizzing through Crow's heart, and left him weltering in his blood. He expired in a few moments thereafter, while the assassins mounted horses that were held in waiting by their cowardly associates without and escaped down the Hollow. Crow was buried in Whittaker's field, on the hill, to the left of the road leading from Potosi to Galena. The events succeeding the cowardly assassination stop not here, and were fraught with more than mere local interest. The number and influence of the gang, some of them being men of means and holding respectable connections, defied the law. The local authorities were mere minions of their authority, and, if not willing tools, were but too anxious to avoid giving offense. The three principal murderers, after skulking a few days in the neighborhood, were arrested, and, after a farcical examination, were set at liberty. It was then the people became aroused. Nelson Dewey was serving his first term of Justice of the Peace in the town of Lancaster: From him a new warrant was procured, and the villains re-arrested and brought into court. The prisoners were held to bail and committed to the guard-house at Prairie du Chien, there being no jail yet in the county. The examination lasted all night and some time into the next day. Many of the persons who attended were known to be armed, and their previous intimacy with prisoner and known desperate character fastened the rumor that an attempt at a rescue would be made. A guard was organized to protect the officers, and thus under a strong guard the prisoners were started for Prairie du Chien. They were afterward brought before Chief Justice Dunn on a writ of *habeas corpus* and admitted to bail. This action on the part of Judge Dunn aroused the slumbering passions of the better class of citizens. These lawless desperadoes again at liberty, defiantly returned to their old haunts in Potosi. Forbearance had ceased to be a virtue in this case, and meetings were held to take into consideration the best mode of getting rid of them. It was finally determined to drive them out of the country, and a limit fixed to the number of days they might remain to adjust their business. At the end of the time an armed body of men numbering two hundred and over, marched into the town; but the desperadoes had made good their retreat, and put the waters of the Mississippi between them and all danger. The principals never returned. As an episode showing the animus of the times and of the kind of characters that went to make up a mining town, the following incident will show: Dr. Hill was a friend of some of the parties implicated in the murder, whom the mob compelled to leave. One of them went to him for advice. The Doctor said: 'I will not advise you one way or another, but there is not men enough in Wisconsin to drive me out.' This remark identified him with the gang, and a meeting was called to dispose of his case. Dr. Hill hearing of it armed himself to the teeth and walked into the meeting. Taking off his hat, and standing straight as a lamp-post and bringing his rifle to a ground arms, he addressed the meeting as follows: 'Mr. President, I understand this meeting has been organized for the purpose of driving me out of Potosi. Sir, is that the object of this meeting? G—d d—m your souls! you can't drive me out! and you shall not discuss a matter of that kind.' And every one present knew that speech portended death to the first man who should open his mouth. The meeting was cowed into silence and one by one they dropped out,

glad to get beyond the range of the belicose doctor's rifle. He was not driven out. Harper, a merchant was, however, afterward arrested and brought before the Vigilante Court and proven guilty of loading the pistol with which 'Jim Crow' was killed, his own clerk testifying against him. He was then given two days in which to settle up his affairs and leave town. Before the expiration of the limit set, he was out of town glad to escape so easily."

Nearly forty years have elapsed since these events occurred, and but few remain who were cognizant of the facts. Lindsey Evans was never tried, and few if any learned the sequel of his life. Some returned Wisconsin soldiers, while in a Southern prison, relate that one of their keepers, learning whence they came, confessed himself to be Lindsey Evans, and by kindly acts to the prisoners seemed to desire to atone for his great wrong. But his name and memory will ever be attached to the most infamous assassination that ever occurred in the lead mines.

RUSSELL MURDER.

On the 1st day of March, 1838, Edward Oliver and John Russell, living near Cassville, became involved in a discussion arising from the loan of a skiff which Russell had borrowed from Oliver to go across Turkey River, and had not returned as he agreed. The wordy warfare aroused Oliver's passions to such an extent that he drew a pistol and attempted to shoot his antagonist. Parties near by interfered, but reaching around the would-be peacemaker, Oliver pulled the trigger and the ball from the pistol struck Russell in the left breast killing him instantly. Oliver was arrested and tried at September term of court and sentenced to be hanged. This sentence was carried into effect a short time later, the gallows for the execution being erected a short distance from where the old jail now stands. Harvey Pepper was Sheriff at the time, but a deputy named Reynolds released the fatal drop that sent the murderer into eternity. Previous to his execution, Oliver expressed a wish to make a confession as well as give a history of his past life, and Judge Barber, then a young lawyer, went to his cell to commit this recital to paper. The entrance to the cell was effected by first going into the upper story of the old log jail and then descending into the cell. As Mr. Barber sat writing, he happened to notice Oliver slip his hand from the shackles which he had unloosened in some manner and stealthily reach for an iron bar that lay near him, his evident intention being to brain his visitor and then perhaps escape.

Mr. Barber stopped writing and looking the murderer squarely in the eye, commanded him in a stern voice to replace his hand in the shackle. For a moment they sat eyeing each other, but the piercing, unflinching gaze was too much for the murderous ruffian, and he sullenly obeyed the command, and when he was securely fastened, his visitor took his leave informing him that some other time he would take the remainder of the matter. But no further attempts were made to gratify the fellow's desire for posthumous notoriety.

Oliver's son, a young lad, threatened, previous to his father's execution, to kill the officers should the sentence be carried out, and a short time after the verdict of the court had been fulfilled to its awful end, young Oliver was found in a thicket on the edge of the town with cocked gun waiting for his victim. He was, however, seen and captured before he had time to do any damage. His weapons were taken from him, and he made, so far as heard from, no further attempts for vengeance.

LATIMER MURDER.

The death of Charles Latimer in February, 1844, at the hands of one Gloster, at Potisi, created at the time much local excitement and was characterized as "the most tragical occurrence that has disgraced this portion of the Territory for years." Latimer was an Englishman by birth, and had fled from Canada in consequence of his participation in the patriot war. He was a lawyer by profession, a man of brilliant parts and a ripe scholar, but unfortunately addicted to intemperance and the abuse of the American eagle. The former habit was viewed according to the custom of the time, with a great deal of tolerance, the latter with quite the reverse.
