SERIES DESCRIPTION

TYPE: Topographic, polyconic projection based on Greenwich Meridian. British Grid at 10,000 meter intervals shown by full lines with the Universal Transverse Mercator Grid shown by ticks at 10,000 meter intervals.

FORMAT: Sheet sizes:

From latitude 0° to 60°	1°N-S x 2°E-W
60° to 72°	1°N-S x 4°E-W
72° to 76°	1°N-S x 6°E-W
76° plus	1°N-S x 8°E-W

PREPARATION PROCEDURE: Compiled from JILG 1:200,000 maps which were copied from the Russian (1935); Japanese and U. S. Hydrographic Charts; augmented with reconnaissance maps and aerial photography.

CHARACTERISTICS: Relief shown by contours augmented with hill shading. Contour interval in hilly terrain, 100 meters; in relatively flat terrain, 20 meters. In USSR, boundaries include international, RSFSR or SSR, oblast, kray, etc. In other countries, boundaries include international and province or equivalent. In areas outside the USSR but which are claimed by the Soviet, both boundaries are shown, the original in the normal fashion, and those established by the Soviet in red. The latter are included for reference only and are not to be regarded as being officially accepted by the U. S. Populated places symbolized according to a population breakdown based on latest census figures. The nature and amount of map detail is compatible to a strategic road map of this scale. Woodland coverage is shown where information is available. Horizontal datum is based on Tokyo. Vertical datum is based on mean sea level. When necessary, the margin includes cautionary notes qualifying the accuracy of particular features.

COMMUNICATIONS: Roads, railroads, telephone, telegraph lines, etc. are shown based on the latest available information. A limiting note on aeronautical data appears.

RELIABILITY: Generally good. Reliability for individual sheets can be further ascertained from the coverage diagram.
