Torpedo planes proceeded from the ship to an approach point east of the island and from here were directed by CASCU to orbit at Point X-Ray. Their target was designated as the road and railroad between Kobakusa and Taina with instructions to disrupt communications in that areas as much as possible.

Glides were started about 2500 feet and several of the runs were made as low as 150 to 200 feet. Low level attacks were permitted by delay fusing and this contributed to accuracy of the attack.

Runs were made individually and from all directions with one bomb dropped per run. Planes also strafed extensively.
