The World's Largest Peach

RIO OSO GEM

United States Plant Patent, No. 84

a New
LATE PEACH
the perfect Running Mate for
Elberta

Gigantic Size—Biggest Peach On Earth

The Rio-Oso-Gem is a perfect freestone, form is globular, slightly elongated, of extremely large size, averaging in diameter from 2¾ to 3¾ inches, deep yellow flesh, very fine grain, firm texture, with very excellent flavor, being rich, juicy, sweet and slightly spicy. The coloring is unique, being a beautiful dark crimson-red, running out to lighter crimson and into a rich mottle of crimson over the orange-yellow ground color. It is a good trans-continental shipper.

Bears Heavier Than Elberta

Rio-Oso-Gem is an extremely heavy bearer and on account of its prolific set of fruit, it is necessary to practice extremely heavy thinning. It has hardy, vigorous fruit buds, which insure it being a heavy annual bearer. Tree bears young.

Ripens Two Weeks Later Than Elberta

The Rio-Oso-Gem would be a peach of commercial importance when ripening at any time during the peach season, but it is very fortunate that it ripens two weeks later

than Elberta, which puts it at a time when there is no other variety of commercial importance as a competitor, and fills a long looked-for gap in commercial production, ripening when the markets are clamoring for peaches—this variety has sold at very much higher prices than Elberta and J. H. Hale. To prolong your peach shipping season, we highly recommend to you planting the Rio-Oso-Gem. Harrisons' have planted several thousand Rio-Oso-Gem in their own famous orchards. We have the utmost faith in the Rio-Oso-Gem, and we will also make future plantings of this remarkable peach.

11,000 Rio-Oso Gem Peach Trees have been planted in Harrisons' own orchards at Berlin, Maryland. You are welcome at any time to come and inspect this commercial planting.

30 Rio-Oso Gem
for only **\$18.00**

Special Introductory Offer

Each peach grower owes it to himself to plant a trial orchard of this sensational peach. It is the best new variety introduced since the famous Elberta in 1870. This peach is "going places" and will soon be America's most extensively planted, late ripening variety. **Place your money on Rio-Oso-Gem—it's a sure cash profit winner.**

ENJOY LARGE PROFITS

As leading nurserymen, and large commercial peach growers we have the utmost faith in the new Rio-Oso-Gem peach. We offer you a trial orchard planting, as below:

SPECIAL OFFER
30 Rio-Oso-Gem Peach Trees \$18.00

As a special 1940 inducement we will supply you with 30 Rio-Oso-Gem peach trees, U. S. Plant Patent No. 84, one-year, 4 to 5 ft., for \$18.00. You save on the original cost. We further guarantee complete satisfaction. If for any reason you are not satisfied with this special offer of Rio-Oso-Gem peach trees, we will gladly return your money.

THE RESPONSIBLE HARRISONS' NURSERIES

have been in continuous business since 1884, at Berlin, Maryland. The Harrisons' own and operate more than five thousand acres of land in Worcester County, Maryland.

CUSTOMER AND BANK REFERENCE

For customer references—we refer you to any fruit grower in America who has planted Harrison-Grown fruit trees any time during the past 56 years.

For bank references—Union Trust Company of Maryland, Baltimore, Maryland; Calvin B. Taylor Banking Co., Berlin, Maryland; Exchange and Savings Bank, Berlin, Maryland.

Actual Size

RIO-OSO GEM

U. S. PLANT PATENT NO. 84

The World's Largest Peach

Ripens two weeks later than J. H. Hale. Colors ten days before ripening. The best commercial Peach introduced since the famous Elberta.

Sample of RIO-OSO GEM Grown in Harrisons' Orchards at Berlin, Maryland

Sold only by Harrisons' in numerous states. See pages 4 and 5.

I'LL TELL THE WORLD

IT'S AMERICA'S BEST PEACH

Rio-Oso Gem "Clicked" from the Start BEARS YOUNG — PRODUCES TREMENDOUS CROPS Brings Highest Prices Everywhere

An amazing feature of the Rio-Oso-Gem is, it will take on a good bright red color and yellow background two weeks before ripening, and even ten days before actual ripening time the percentage of bright red color is decidedly more than most other varieties. When Rio-Oso-Gem is ready to pick and ship it has practically a solid red color. There is no other peach known that carries such a high percentage of red color on the fruit as this marvelous Rio-Oso-Gem.

LARGER THAN J. H. HALE

Rio-Oso-Gem is a larger peach than J. H. Hale and yields bumper crops, larger than Elberta. In our own and other orchards Rio-Oso-Gem bears at a younger age than any of the other yellow varieties.

TRAVELS 3500 MILES

One striking feature of Rio-Oso-Gem is the unusually firm texture of the fruit. It will stand up and ship in excellent condition in standard refrigerator cars for long transcontinental hauls of 3500 miles in A-1 shape for the markets.

OUTSELLS OTHER GOOD VARIETIES

Because of their superiority, Rio-Oso-Gem outsells other good varieties on the nation's markets at a premium price of 75c to \$1.50 per bushel.

EXPERT FRUIT GROWERS SAY O.K.

Rio-Oso-Gem has now fruited in practically every peach district of the Union. Veteran peach growers of the nation are loud in their praise of this startling variety. Rio-Oso-Gem has passed the experimental stage and proven an outstanding commercial variety superseding the famous Elberta of the Victorian era.

PRICES OF RIO-OSO-GEM

Quantity prices on Rio-Oso-Gem peach trees, U. S. Plant Patent 84, apply on the total quantity of fruit trees ordered and can be assorted varieties of peaches, apples, pears, plums, cherries, apricots, nectarines, and quince trees.

PROTECTED BY U. S. PLANT PATENT NO. 84

The Rio-Oso-Gem has been protected by the Government against infringements by U. S. Plant Patent laws for a period of 17 years from the date patent was granted, being November 28, 1933. It is unlawful for anyone to propagate and sell the Rio-Oso-Gem, U. S. Plant Patent No. 84, peach trees without obtaining written permission from the owner.

Exclusive Propagation and Sales Rights of the Rio-Oso-Gem in the Following States Granted to Harrison:

Alabama, Arkansas, Connecticut, Delaware, District of Columbia, Florida, Georgia, Kansas, Kentucky, Louisiana, Maryland, Maine, Massachusetts, Mississippi, New Hampshire, New Jersey, New York, North Carolina, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Vermont, Virginia and West Virginia. Also sales rights in Ohio, Indiana, Illinois, Missouri, Michigan, Iowa, Minnesota, and Wisconsin.

BRING HIGHEST MARKET PRICES

Fruit men were amazed at the high prices Rio-Oso-Gem brought on the markets this season. They outsold Elbertas and J. H. Hale from \$1.00 to \$1.50 per bushel and sold for as high as \$5.00 per bushel.

There is a brilliant future in store for the progressive orchardist who plants Rio-Oso-Gem peach trees.

BURBAGE
HARRISON

ORLANDO
HARRISON, JR.

JOHN L.
HARRISON

Have you a copy of Harrison's first catalog issued fifty-six years ago? It contained the best varieties of its time.

Yet, today it would be obsolete. This is primarily due to the advancement of the practical method of bud selection from trees of superior strains and extra heavy bearing habits originated by Harrisons, combined with other propagation improvements fostered by leading horticulturists, as well as Federal-State Experimental Stations.

Apples, Peaches, Roses, etc.—yes! the entire list shows marvelous progress. An infinite number of new varieties, many of them superior in strain, form, color and size await the planter.

However, this abundance of new varieties has tended to confuse the problem of selection. The Harrison organization have assumed the responsibility of choosing the best, after careful scientific and practical tests, thus avoiding those varieties that lack merit, that would produce uncertain results, consequently protecting our customers. With this objective, the Harrisons' have discarded hundreds of varieties, both old and new, and have limited ourselves to cataloging only the best in every group, from the standpoint of performance and superiority.

HARRISONS' Fruit Trees and Small Fruits are TRUE TO NAME, earlier to bear, and yield larger crops because they are scientifically propagated from SUPER SELECTED STRAINS. Likewise, the parent plants used for propagating our Ornamentals are of the finest types for their respective varieties.

We send you this catalog in the hopes that you will take advantage of our high quality nursery stock which we are offering at unusually low prices for 1940.

Appreciatively yours,

HARRISON BROTHERS

HARRISONS' "BUD" SELECTED TREES FROM BEARING ORCHARDS — YOUR BEST BET!

Young fruit trees, budded from orchards in full fruit, are definitely superior to any other method of propagation. Careful examination and selection of healthy, heavily branched, heavy-yielding trees are without question the best parent trees to supply the buds for young tree inheritance.

RESULTS — COME SEVERAL YEARS HENCE

No one can measure in advance the future results of a newly planted orchard. Several years must come and go before the trees bear fruit. A good inheritance immediately qualifies as a money-maker, fruit is large and true-to-name. Poor trees at any price never give satisfaction.

Fifty-six years of dependability and square business dealings—finds Harrisons' today the best place in America to buy truly dependable trees.

Millions of Harrisons' "bud" selected fruit trees planted throughout the years are today the very backbone of a profitable and dependable fruit business in all sections of the country.

The Harrison Bros. extend to everyone interested in horticulture a personal invitation to visit our nursery and orchard plantings. Operating over five thousand acres of land.

OUR GUARANTEE

Every customer is assured of Harrisons' Hi-Quality Trees and Plants at all times. Expert growing on proper soils, careful digging and packing is Harrisons' policy on every order. Every tree and plant we ship is guaranteed to be strictly first class, free from injurious diseases and insects and to reach you in good condition.

Any time trees or plants are received that do not meet these standards they will be replaced free of charge or your money refunded.

Continued growth depends on soil, weather conditions, planting and after care. After ten days it is mutually understood that the nursery stock is satisfactory; however, we will replace nursery stock that dies from unavoidable causes at half price, if notified within six months after its arrival.

- Propagated from bearing trees of selected strains
- Come into bearing earlier
- Yield bigger crops of better fruits
- Have larger roots
- Take hold quickly in new locations
- The best trees for less money

TODAY FRUIT GROWING is making inroads on the big farms—little orchards lead the way to a profitable and worth-while fruit market.

Dependable Nurserymen Propagate from Bearing Orchards

If fruit trees are continuously propagated from the nursery rows, as practiced now by a large percentage of nurserymen, because it is cheaper, fruit trees begin to degenerate, and when the original was a poor type, the nurseryman, without knowing it, continues to reproduce poor, undesirable, small type fruit. Incidentally, in case there was a mixture in the nursery rows, how could a nurseryman propagate true-to-name trees successfully. We are orchardists and nurserymen, and nothing can compare with our own scientific method of "bud selections"—it always gives complete satisfaction and spells profit for the fruit farm.

Harrisons' "Bud Strains"

Some fifty years ago, and almost every year since, Harrisons' have planted orchards, not alone for fruit but principally to secure the type of parent fruit tree that was characteristic of a "variety" dominant in bearing qualities coupled with health, vigor and ability to withstand changeable climatic conditions. This type of tree became the parent supplying the budding sticks for future orchards in America and true-to-name varieties were assured.

**It's Slower
Of Course**

But this personalized way of selecting buds from trees in fruit, is to know definitely the percentage of your future orchard.

Cutting Buds

MONEY IN FRUIT GROWING

Leading Orchardists Prefer Harrison Grown Fruit Trees

Alive Healthy Fruit-Bearing Trees Depend on the Heredity

Many, many years ago the Harrisons introduced a new method of propagation that was later to revolutionize the industry. Seeking out a better method of propagation in the interest of securing dependability in true-to-name varieties, we selected new budding stock from our own orchards, taking only those trees that were stamped "super-quality."

These new bud selections of known origin were later to become new orchards, and so through a desire to make more profits, we were able to help our fellow orchardists in cashing in on our experience.

You Pay No More for Harrisons' "Bud-Selected" Trees

The "bud-selection" method to propagate fruit trees is very expensive—but whatever the expense they are the trees that give satisfaction.

With 1750 acres of bearing orchards and a trained organization operating twelve months a year, we are organized on a large production basis, which reflects lower prices both for the commercial grower and the home owner.

Northern Growers take no risk in buying Harrisons' Superior Fruit Trees, Berry Plants and Ornamentals.

We absolutely guarantee Harrisons' Berlin-grown fruit trees, berry plants and ornamentals, variety for variety, are as hardy as any stock grown in any locality north of us.

Harrisons Offer the Greatest Selection of Dependable Fruit Varieties in America

Peaches

*A bright and PROFITABLE CASH FUTURE
Plant a PEACH ORCHARD
this Spring*

The Peach grower has a bright and profitable cash future—we advise you to plant a Peach orchard this spring, as the number of Peach trees in bearing is the smallest of any time during the past fifty years. Harrisons' are the largest commercial Peach orchardists in the East, and we will plant additional Peach orchards this spring.

Finest Strains

Harrisons' "bud selection" of propagating direct from bearing trees of known sturdy ancestry, superior strains, bearing the highest coloring of fruit, with extra heavy bearing habits, has made the greatest contribution in directing and fixing the characteristics of the yield; of perfecting color; increasing the size of the fruit and the volume, as well as regularity of the crop.

FRUIT GROWERS—look at fruit trees in other nurseries, then come to Berlin and see the superior quality of Harrisons' true-to-name varieties at attractive prices. See the fruit trees growing in the nurseries—know what you buy. For best results, plant dependable Harrison-grown trees.

Younger Bearing

Do you want your trees to come into bearing at an early age? It is a recognized fact that trees propagated direct from bearing trees will commence to fruit at an earlier age than trees that are propagated from non-bearing scions. Harrison-Grown Fruit Trees, due to the fact they are propagated from bearing trees, will produce profit-paying crops in the shortest possible time.

Grown on the "Brink" of the Atlantic

Our favorable climatic conditions, being located only eight miles from the Atlantic Ocean, with our rich soils of various types, coupled with the latest scientific and practical methods, as well as an unusually large number of experienced nurserymen, with ample facilities, enables Harrisons' to grow America's foremost, finest and best quality, true-to-name fruit trees, with superior merits and extra heavy annual bearing habits, which we guarantee, with proper care, will produce bumper crops in any fruit-growing section of the United States.

True-to-Name In addition to carefully selecting the propagating wood from bearing trees of superior strains we have also employed the services of Dr. W. H. Upshall, of Vineland, Ontario, Canada Experimental Station, to inspect our Peach trees in the nursery rows and he has pronounced our trees true-to-name. This is just another precaution in order to check up on any possible errors so that we can be absolutely sure that our varieties will reproduce true when planted in your orchards.

The Reasons Back of Harrisons' Superior Stock

- A—Our organization has over 56 years experience.
- B—Every step in growing under the personal supervision of the Harrison brothers.
- C—One hundred thousand trees in our own orchards from which our propagating plants are selected.
- D—Use of modern methods for planting, cultivating and digging.
- E—Over 5000 acres of various types of soil.
- F—Ideal soil and climatic conditions.
- G—Co-operation with leading horticulturists and experimental stations all over the world.

Little Peach Orchards make more profit than Big Farms

PLANT PEACHES FOR BIG CASH PROFITS

Your fruit fortune is in your hands. Don't gamble—buy Harrisons' true-to-name super selected "budded" trees, backed by three generations of practical experience.

SALES \$1150

from 1000 Red Bird Cling Peach trees which bore a crop when trees had been planted in orchard only two years—averaging 1/2 bushel per tree. Large, one-year peach trees were planted.

Red Bird Peach

—a real productive Variety

Also known as "Early Wheeler." The first Peach of large size to ripen. White, cling, with a crimson cheek and yellowish white undertone; very hardy, will thrive in any peach growing district.

Plant Red Birds — The First of the Early Profits

Other Very Early Varieties

ADMIRAL DEWEY. Yellow fleshed, freestone; productive.
BUTTERCUP. Yellow, freestone. New.

Early Rose Very early. Another Favorite Commercial Peach. White, cling, medium large size for an early Peach, high bright red skin, sweet, delicious flavor. Good shipper, making it a new favorite among commercial varieties.

Greensboro White, freestone, extra large for such an early peach. One of the handsomest, being a large, yellowish white with crimson cheek; flesh is white and of average quality. Exceedingly hardy, being an extra heavy, prolific bearer and adapted for wide variations in peach regions.

June Elberta (Mikado) A big, handsome red and gold peach, highly colored, excellent quality and a dandy shipper. Being one of the earliest of the good yellow-fleshed peaches, this semi-freestone variety quickly returns cash dividends before later varieties reach the market.

MAYFLOWER. White, cling, small size with red all over.

Marigold Yellow, semi-cling. New.

Oriole Yellow, freestone, very good quality, new.

ROSEBUD. Very early. Freestone, extra good flavor.

SUNBEAM. Yellow, semi-freestone, attractive. New.

UNEEDA. Cling; skin creamy white with red blush.

A LEADER and What a PEACH!

GOLDEN JUBILEE

Recommended by Harrisons'

GOLDEN
JUBILEE

Harrisons' were the first nurserymen to give wide publicity to Golden Jubilee. They recommend it to every grower north and west of Georgia. Our own orchards have several thousand trees that are bearing fruit for the commercial market, they have proved beyond doubt an ever popular variety with a brilliant future ahead.

Our strain of Golden Jubilee is the original strain introduced by the New Jersey Experimental Station.

Commercial Peach Orchardists for a half century have been looking for an early Peach of high quality, yellow, free stone with attractive coloring and good shipper. The Golden Jubilee is far better than any variety of commercial importance since the introduction of Brackett. A pretty looking Peach with plenty of appetite appeal.

It ripens fully four or five days ahead of Carman.

Fruit is of Good Size

In most localities the fruit of the Golden Jubilee will attain extra good size for an early Peach. One of its most remarkable features is that it is very hardy in fruit bud and withstood the bitter cold weather of last winter as well as any other variety known. It is a cross between the famous Elberta, and the hardy Greensboro, which is a very early variety. Golden Jubilee, fortunately, through the cross inherited the finest qualities of both the Elberta and Greensboro.

Attention—Southern Planters

EARLY HILEY. A NEW STRAIN of Hiley from the South; ripens a few days earlier and is slightly larger. Our strain is from a prominent Georgia orchardist. Hiley growers—try a few trees of this new strain; it may be what you have been looking for.

OTHER EARLY VARIETIES

CARMAN. Semi-freestone, medium size, attractive and luscious, oval-shaped, yellowish white with bright red cheek; flesh creamy white, spicy and good flavor. Hardy, strong grower; heaviest producer of the earliest varieties. A sure cropper.

MAMIE ROSS. White, freestone, large, covered with a beautiful delicate carmine—red blush; firm, juicy, good flavor, excellent shipper. Mamie Ross is about one-third larger and ripens two days later than Carman.

DELICIOUS. White, freestone. A seedling of Belle of Georgia. New.

NEW JERSEY 66. Early. White.

RADIANCE. White, freestone. New.

SAVE MONEY — MAKE MONEY

Now every planter can buy dependable true to name Harrison grown fruit trees at prices no higher than the ordinary tree.

CUMBERLAND

An Outstanding Favorite Early White Peach

A comparatively new, white, nearly freestone variety that was developed by the New Jersey Experimental Station. The fruit resembles Belle of Georgia both in appearance and quality, although it ripens about the same time or a little before

Carman. It has proven a heavy cropper, vigorous grower and hardy as Carman. The flesh is white, firm and much better quality than Carman and Mamie Ross. We unhesitatingly recommend Cumberland for a white, semi-freestone variety that ripens during the Carman season.

GIANT PEACH TREE COLLECTION No. 105

For Real Profit Plant Harrison's' Selected Strain Trees
 Scientifically Propagated by America's Best Fruit Tree Growers

HILEY *A White Freestone*

Best Southern Peach

White, freestone, medium size, highly colored, very firm, a handsome creamy-white Peach with a delightful red cheek; flesh is white, fine texture, aromatic, very juicy, and excellent flavor. Tree is strong grower, very healthy and heavy bearer.

An excellent shipper, with the stamina to withstand very long hauls under refrigeration. Many of our varieties are propagated direct from the original strain, and Hiley is no exception. Our late Mr. George A. Harrison cut the buds from the orchard of Mr. Eugene Hiley of Marshallville, Georgia, the originator, then known as Early Belle, and later as Hiley Early Belle. The Harrison Bros. have frequently visited Georgia and cut buds from trees being propagated direct from the original strain of Hiley from the famous Hiley orchards of Rumph Brothers of Marshallville, Georgia. Add Harrison's' Strain of Hiley to your commercial plantings for real profit.

OTHER EARLY MIDSEASON PEACHES

ALTON. White fleshed, semi-free.

CRAWFORD'S EARLY. Yellow, freestone, large size, juicy, sweet flavored, highly prized for canning. Tree strong grower and prolific bearer. One of the old-time commercial varieties, which has been extensively planted in years past, but now mainly a home market fruit.

CHAMPION

A Good Home Peach

White, freestone, very large, creamy white with red cheek, sweet, juicy; very high flavor. Champion has lost its past commercial importance because it will not carry satisfactorily under refrigeration, but as a home garden or a roadside Peach, it is one of the best. Tree is hardy, large grower and productive.

 - 1 **Fair Beauty.** Yellow, early midseason.
- 5 big, 5-6 ft. trees
For Only \$2.00**

Valiant

A very promising freestone variety of Elberta family of recent Canadian introduction. Valiant is rapidly proving to be the best and most heavily planted of the five "V" Peaches. The fruits are large, roundish, yellow blushed with red, with firm, juicy flesh that makes it equally good either for canning or in the fresh state. The trees are productive. It ripens two weeks ahead of Elberta. A noteworthy Peach because of earliness and rich, delectable flavor.

Harrisons' Fruit Trees are Hardy in Any Climate

Early Elberta

A Masterly Peach
Harrison's Genuine Strain

Once planted, Harrison trees readily take root and develop very rapidly—they are quality bred, ready for early fruiting. A young Early Elberta peach tree.

Ripens 7 to 10 Days Ahead of Elberta

A Golden Yellow Blending Into Rich Red On the Sunny Side

Early Elberta is Fine for Canning

Early Midseason

Yellow, freestone, large, lemon-yellow with a dark cast, blush with vivid red. Beautiful appearance, high quality, being somewhat similar to Elberta, although a trifle better flavor; rich golden, tender flesh, yet firm and has a delightful flavor; excellent for canning. Hardier in fruit bud than Elberta, tree is a good grower, bears very young and is a heavy producer. Ripens about a week or ten days earlier than Elberta and is being planted quite extensively in commercial orchards; excellent home orchard Peach. Due to its earliness, and being Elberta type of Peach, it brings high prices on the leading markets.

POLLY. White, freestone, large.

Rochester Popular Midseason Variety. Excels in Western New York and Michigan. Yellow, freestone, large, covered with mottled red blush; flesh yellow, stained with red at pit; very good quality, prolific bearer. One of the best early midseason yellow freestone Peaches for nearby markets, and highly desirable for canning. Our buds came direct from the original tree from Mr. A. H. Heberle, of Rochester, New York, the originator. Popular in Western New York and Michigan.

SLAPPEY. Yellow, freestone, medium to large size, beautifully red colored, rich and extra good flavor. Good commercial variety for nearby markets and one of the best early yellow freestone Peaches.

Eclipse A new self-pollinated Peach coming from Belle of Georgia. A bright red freestone with yellow flesh, firm texture, and good flavor. Medium size fruit ripening about 16 days earlier than Elberta. Tree is a vigorous grower, a prolific bearer, being noted as an excellent shipper. Tree is exceedingly hardy and a dependable cropper. This new variety was introduced by the New Jersey Experimental Station.

VEDETTE. The earliest of the Canadian "V" Peaches, ripening a few days before Valiant. Like Valiant, it was obtained from an Elberta cross. The tree is productive and the fruit is large, roundish oval, yellow fleshed and freestone.

VIGEROY. Yellow, freestone, high quality. New Canadian Peach.

YELLOW ST. JOHN. Yellow, freestone. A favorite in western New York.

SOUTH HAVEN

*Deep Yellow
Red Cheek*

Large, handsome, yellow, freestone Peaches of uniform size, delicate in flavor. Ripens about 15 to 18 days ahead of Elberta. Trees are very hardy and productive. Adapted to cold climates and produce bumper crops in mild climates. A proven variety.

Plant Harrison-grown, large size, carefully selected, super strain Peach trees for biggest crops of best fruit. They come into bearing quicker, often within a year or so, insuring the earliest possible cash profits.

- Attractive
- Big Crops
- Easy to Grow

BELLE OF GEORGIA PEACH

The Queen of Flavor

The Best White Mid-season Variety

Ripens midseason. Color creamy white with red cheek. Flesh white, red near pit. Size large, freestone. Belle of Georgia, for some time, has been recognized as the best all-around white Peach on the market. It is easily the best shipping white Peach of its season, ranking almost with Elberta in this respect. Because of its many desirable qualities, it has become standard in the large commercial orchards, and you can find few orchardists of any importance who do not have a block of Belle in their orchards. These men know from experience just what varieties pay best and endorse it highly.

Harrisons' Super Selected Strain is Better

Harrisons' commercial Peach orchards over a long period of years, have grown and shipped many carloads and truckloads of Belle of Georgia Peaches, perhaps more than any other orchardist in the nation. Through the process of "bud selection" Harrisons', over a period of years, have been able to aid Nature and improve the original strain which we received from Mr. L. A. Rumph, originator. This insures our famous Harrisons' Super-Strain Belle of Georgia Peach trees to be true, hardest and the most productive strain available. Praised by all who know it because of the beauty of its fruit. It is one of the glories of the Peach World.

Redelberta

U. S. Plant Patent No. 232

New variety which ripens ten days sooner than Elberta of which it is a "bud sport." It has the famous characteristics of Elberta with more red color. Plant now a few for trial.

	1 to 9 trees	10 to 49 trees	50 or more trees
4 to 5 ft.	\$1.00	\$0.80	\$0.50
3 to 4 ft.90	.75	.45

Other Mid-Season Varieties

BILLMEYER. Yellow, medium size, productive, quality good.

Gage Elberta Recommended for Illinois and Indiana

Originated by Mr. John Gage, of Illinois. It is a disease-resistant bud sport of the famous Elberta variety. The tree is just as vigorous as the ordinary Elberta, but instead of growing upright, its branches are more of spreading nature. Due to high resistance to bacteriosis, the tree retains its foliage and the fruit ripens three or four days later than the regular Elberta. In sections where bacteriosis is a serious matter for most Peaches, we recommend the Gage Elberta.

INDIAN. Yellow, freestone, very rich, juicy flavor.

NEW PROLIFIC. Yellow, very vigorous, healthy, medium size fruit.

NIAGARA. Yellow, freestone.

Benefits

**It's a Yellow
Freestone—
Midseason**

Fruit is large to extra large; golden yellow with brilliant shades of red; firm juicy, rich, sweet and good flavor. Elberta has the greatest international reputation of any peach. It has been the standard for all other peaches almost since the date of its introduction. The coloring of Elberta is practically perfect. The rich, yellow skin is almost entirely covered with dark red blush upon the sunny side. This attractive appearance and the uniform large size serve to sell it almost on sight.

**ELBERTA
Harrisons'
"Original Strain"**

**Stamina — Uniformity — Best Canning — Premium Prices
Public Demand**

The large fruit, being uniform in size and shape, along with its high, attractive red color and firmness, withstands shipments of three thousand or more miles under refrigeration in cars taking two or three weeks before being consumed, arriving with stamina enough to still look its best. Elberta has the reputation of being a peach without a peer and the variety which is always in favor and strong demand with the buying public, demanding the highest possible market prices. Elberta is by far the best canning peach.

Save Disappointment — Plant Only Original Strain Elberta

Today, there are more than seven distinct types and strains of Elberta, bearing fruit in the orchards of this country. To compare the various sizes, shapes, texture and red coloring of these Elberta with those grown "on original strain trees" gives sufficient reason why they sold in 1939 at a premium of 50¢ to 75¢ per bushel on the New York and other leading fruit markets.

They Cost No More

Why plant degenerated strains of Elberta when you can plant Harrisons' heavy yielding original strain trees. They can be purchased at the lowest price that high quality trees can be produced for. It is true trees, size by size, can be produced cheaper by budding them from non-fruiting trees in the nursery row, but this method causes degeneration. Trees grown in this manner will be lighter croppers and require a longer time in coming into bearing.

**Thousands Acclaim the Superiority of
Harrison-Grown Trees**

Harrisons' pride themselves in propagating from the original Elberta strain, buds of which were personally cut by the late Senator Orlando Harrison from the original Elberta mother tree in the Rumph orchard in 1889.

We have two commercial orchards, now 36 years old, of these wonderful original strain Elberta. Besides yielding bumper crops annually, they are the source of our present supply of original strain buds for the new young trees.

For years our Elberta peaches have been the background of handsome peach profits. You can do the same if you plant Harrisons' original strain Elberta—it's your best bet.

America's No. 1 Peach—Elberta. There are more Elberta peach trees in bearing than any other variety on earth.

*The Best
Commercial
Variety - Elberta*

Tree is vigorous, very hardy, sturdy, thrives in widely different localities. Elberta is hardier in bud than most varieties, and is a uniform prolific bearer. You can always depend on Elberta as a sure cropper.

Shippers Late Red—Real Peach Appeal

Shippers' Late Red

Ripens a Few Days After Elberta

Yellow, freestone, large, round, bulkier than Elberta, with an attractive red coloring which is catchy to the eye. Flesh is yellow, juicy, sweet and of pleasing flavor. Trees are very hardy, good growers, bear young, sure croppers, and prolific bearers. Promising new late commercial variety and excellent home sort.

Other Late Varieties

BANNER. Medium size, yellow.

BERK'S FAVORITE. White, freestone.

CRAWFORD LATE. Yellow, freestone, superb in size and shape; splendid yellow, with broad, dark red cheek; flesh deep yellow, juicy and melting, rich, winy flavor. One of the best late sorts. Tree vigorous, hardy and

sure bearing. Coming at a time when the midseason peaches are over, this variety is eagerly bought up for canning and preserving, and brings highest prices. Being such a remarkably good shipper, it reaches the market in first class condition. An old commercial favorite.

side red, melting, sweet, high

FOX SEEDLING. (Fox). White, freestone, large; white with whole quality and high flavor. Good for roadside market and canning.

IRON MOUNTAIN. White, freestone, large, generally planted in New Jersey.

OLD MIXON FREE. White, freestone, large with bright red cheek, tender, rich, excellent flavor.

ROBERTA (Augbert). A comparatively new variety of good merit. Resembles the Elberta in many respects, but ripens about a week to ten days later.

WILMA. Yellow, freestone, large, good red color, somewhat similar to its parent, Elberta.

SALBERTA A Late Commercial Peach. Yellow, freestone, large, being a satisfactory cross between Elberta and Salwey. Salberta inherited the size, quality and productiveness of Elberta, and inherited the lateness in season of Salwey. This new variety is being planted commercially in many peach-growing sections. Ripens about 10 days after Elberta.

\$2.40

NATIONAL
Reputation
J. H. HALE
Originated by the Late PEACH KING

MIDSEASON—Ripens 2 to 3 days before Elberta.

Original Strain J. H. HALE

Our "Hales" are propagated direct from the original strain, the variety originated by the late J. H. Hale of South Glastonbury, Connecticut and Fort Valley, Georgia, known as the Peach King of

America. There are many types and strains of J. H. Hale grown, but the only one worthy of commercial importance is the original strain, which is the extra large, round, highly colored Peach. The original strain necessitates cross-pollination and it is necessary, for proper results, to plant a few Belle of Georgia or Hiley along with Hale for cross-pollination.

Extra Large Size Yellow, freestone, extra large, beautiful red coloring, firm and of the highest quality and enticing flavor. J. H. Hale ripens about 2 or 3 days prior to Elberta.

MAKE YOUR ORCHARD MORE PROFITABLE BY PLANTING HARRISON GROWN PEACH TREES

Brackett

Mid-Season
Late

A THREE POINT

WINNER

- 1. QUALITY
- 2. SIZE
- 3. COLOR

Peach

A Profitable Commercial Variety Slightly Later Than Elberta

Brackett is a comparatively new commercial peach in some sections but wherever tried it has given uniformly good results. During the past twenty years we have planted many thousands of this variety in our own orchards and they have given good results.

The fruit is rich yellow, with dark carmine cheek. The size runs fully as large or larger than Elberta and fruits weighing five to six ounces are common. Flesh is deep yellow, extremely juicy and is absolutely freestone. Fruit is much better flavored than Elberta.

Popular on the Markets

Brackett commands unusually high prices on the market and often outsells Elberta twenty-five to fifty cents per bushel. We know that the grower who needs a peach that ripens slightly later than Elberta will make no mistake in planting Brackett.

Plant Harrison's' Original Strain

HARRISONS were the first to popularize this great variety and distribute it throughout the peach-growing sections. We offer trees that are propagated direct from the original strain and they are sure to produce results.

Very Late Varieties

- BEER'S SMOCK.** Yellow, freestone, large, oval, skin orange-yellow mottled with red; high flavor.
- KRUMMEL'S (Krummel's Late October).** Yellow, freestone; extra large, round, deep yellow with a blush of carmine on the sunny side—fine flavor. Good shipper, and ripens late in the season.

SALWEY A variety which you can always depend on to greatly lengthen your peach season. For both roadside markets and commercial shipping there is none better than the Salwey, which ripens very late in season. Yellow, freestone, large, beautifully mottled with a red and brownish cheek; flesh is yellow, firm, rich, juicy and sugary. Good quality for fresh eating and particularly fine for canning and preserving. It has a decided commercial advantage, being a good shipper. Salwey is adapted to diverse soils and climates, making it a variety that can be profitably grown in any peach district in the Union.

WHITE HEATH CLING

Be Sure To Include This Variety In Your Home Orchard

White; sometimes called Mammoth Heath Cling, extra large, round, with red blush; flesh is firm, white, exceedingly juicy, and ripens fully to the pit. Favorite for canning and pickling. An old time favorite.

Harrisons' APPLE TREES

for the **FRUIT INDUSTRY**

Apple Growing—pays Profits

—BUT in order to get these profits, it is necessary to start with the best trees and the most desirable varieties. Harrisons' Nurseries have been, and are still growing, at Berlin, Maryland, the finest and best apple trees of superior merits it is possible to produce. Harrison-grown apple trees are propagated on whole root stock, insuring an unusually large root system which is the basis of plant growth. Our apple trees are scientifically budded and grafted from selected heavy bearing strain trees of the variety desired, using the bud selection system. Today we believe that we have more of the improved and best strains of apples in our nursery than any nursery concern in America. Do not allow a few cents per tree to keep you from buying Harrison-grown apple trees, being the finest and by far the best quality produced on the North American Continent.

Large Transparent (LODI)

A New Summer Variety First of Apples

Ripens Very Early — Destined to Replace the Ever Popular Yellow Transparent

We believe there is a big future for this new summer Apple. Our commercial friends should lose no time in anticipating the future demand for an Apple of this type.

Somewhat of a dwarf grower, bearing very young, it makes an excellent filler. The skin is a clear yellow, white flesh, of medium size.

Make More Money With Large Transparent

Yes, actual profit, that's what we mean. It can be done—here's why. Yellow Transparent Apples are always the first on the market and generally they bring good profits when they attain the proper size. Size on Yellow Transparent is hard to get, but easily on its Big Brother, "Large Transparent," which ripens at the same time.

Large Transparent Apples Average up to 1/2 Inch Larger Than Yellow Transparent. This Means 35c to 50c per Bushel Extra

Expert horticulturists claim in Large Transparent there is no noticeable difference in the appearance, color, shape or taste from its parent Yellow Transparent.

Our Large Transparent were propagated from bearing trees.

Yellow Transparent

The Familiar Summer Apple

Its popularity as an excellent cooking Apple is unrestricted from North to South. In Georgia it is extremely successful and does equally as well in the cold climes of Canada. Ripens early in July, flesh white, flavor slightly acid, of medium size. Develops where a fine soil is not necessary.

LARGE TRANSPARENT (Lodi)
 You can depend on bumper crops. Plant Harrisons' "Bud Selected" Strain

TREES

LIKE THE 1ST. ROBIN
WILLIAMS  *Early*
RE D
Gets A Cordial Welcome

**as a Big Red Apple
in Eastern Markets**

Just at the time when people are hungry for a fresh, new red Apple, this superb sort comes into market. In New York, Boston, Philadelphia and other eastern cities the fruit sells about as quick as it hits the market-house or dealer's store. It holds its own anywhere and has proven to be—

*The most profitable
Summer Apple*

The rich bright red fruit catches the buyer's eye and is ordered at a price that yields the grower a good profit. The Apple is large, with tender, crisp, white flesh, juicy and slightly tart. The trees come to bearing when quite young, producing freely and steadily. Fine for a filler or permanent tree, and being hardy, can be successfully grown in New England states and Canada. All commercial orchards should include Williams Early Red.

Early McIntosh

Resembles its McIntosh parent in appearance, but is less aromatic. An attractive uniform red color, good size, flesh white, tender, and juicy. The trees are vigorous, hardy, healthy, productive, and bear annually if thinned early and severely. The shape and frame work of the tree, especially the heavy-butted branches, are like those of McIntosh. The crop ripens ten days later than that of Yellow Transparent. The fine flavor is similar to that of famous McIntosh Red.

EARLY RED DUCHESS. A red sport of Duchess. The fruits resemble those of Duchess except that the red is solid and uniformly distributed.

MILTON. A very handsome new apple of the McIntosh type. Fruit a beautiful pinkish red with tender, crisp, white flesh of excellent flavor. Trees hardy and vigorous. Ripens a month ahead of McIntosh Red.

RED SUMMER RAMBO. Harrison's new early coloring bud sport. This new strain is much superior to the ordinary Summer Rambo.

WILLIAMS EARLY RED—Ready for Market when folks just get hungry for apples

Other Summer Varieties

ANOKA. Striped red, bears when extra young; new. (1-year trees only).

CARLTON. Resembles red Astrachan; new.

DUCESS (Duchess of Oldenburg). Striped red, medium size, juicy. Our early Red Duchess has more color.

EARLY HARVEST. Very early, not a good keeper; fruit medium size, pale yellow, tender, juicy, sub-acid. Fine for home orchard because of its merit as a cooking and dessert fruit. Tree is a vigorous grower and bears early and regularly.

MELBA. An offspring of McIntosh. Good size, early.

RED JUNE (Carolina Red June). Medium size, conical, dark red, juicy, fairly good flavor, very productive.

SPITZENBURG (Esopus). A very showy, large red apple, conical in shape, good quality.

STARR. Large, yellowish smooth skin; sometimes marked with a faint blush and numerous russet dots; flesh yellow, very tender, crisp, juicy, aromatic and fine quality, brings high prices. Recommended for nearby markets; a poor long distance shipper. Popular in Southern New Jersey.

SWEET BOUGH. Large, pale yellow; tender, sweet. (1-year trees only.)

SUMMER RAMBO. Large, yellowish green, splashed with red, crisp and tender. Very good.

WILSON RED JUNE. Fairly large, red; good quality. Popular in New Jersey.

Aristocrats
of the
Dining Table
Brilliant
Crimson-Red
Large Size
Extra Fancy**

leading fruit growers throughout the country. It is a "bud sport" of unusually superior merits, being **triple-red** colored and the earliest red coloring strain known.

Colors Much Earlier Than Ordinary Delicious

Harrisons' Triple Red Delicious colors up weeks earlier than the ordinary strain. By coloring earlier the fruit can be picked while it is firm and it keeps better in storage.

Size and Taste

Size is all anyone could desire, as it runs from large to extra large. The large size, solid red color and characteristic five-knob end make it attract buyers in every market.

Taste will be found on a par with its other points of advantage. The flavor is rich, slightly sub-acid, with an individuality which makes the palate call for more. You'll have no trouble with repeat sales for this variety.

Ships and Keeps Well

Harrisons' Triple Red Delicious ships without bruising. In fact, it ships better than the ordinary Delicious because its earlier coloring permits it to be picked when the fruit is more firm. Its large size makes it easy to pack attractively and the uniformity of size guarantees a good appearance.

Large Profit Maker

The ordinary Delicious is a proven profit maker and our Harrisons' Triple Red Delicious is destined to outclass its predecessor due to the fact that it will produce more highly colored fruit and as most every fruit grower knows, color plays an important part in the price the fruit sells for.

LEADING FRUIT GROWERS PROCLAIM HARRISON'S TRIPLE-RED DELICIOUS IS SUPERIOR TO ALL OTHER STRAINS

Leading orchardists and fruit men of the country who have seen the Harrisons' Triple-Red Delicious in fruiting claim it is superior to any of the other several new double red earlier coloring strains of Red Delicious such as Starking, Richared Delicious, Shotwell Red Delicious, and others.

This past season our Harrisons' Triple-Red Delicious colored weeks earlier than the ordinary Red Delicious. Growers expressed amazement at the difference in color of these two distinct strains. Trees looked like they were loaded with balls of fire, each apple solid bright red in color.

Harrisons' Triple Red Delicious Apples Fruiting in Our Orchards at Berlin, Maryland

Growers Who Want More Color — Plant Super-Red-McIntosh

Make Money With Harrison's Super Red McIntosh

Earlier Coloring—Solid Red Strain

SUPER-RED
McINTOSH
Apple

A new strain of McIntosh Red that starts coloring earlier and produces a larger percentage of extra fancy fruits. Super-Red McIntosh, when allowed to mature on the trees, is slightly darker in color than our regular improved McIntosh Red. Has all the best qualities of ordinary McIntosh and will mean larger profits for growers who have been unable to get sufficient color. McIntosh has been the favorite in the North; this new strain extends the planting area farther South. The most highly colored solid red strain available, regardless of price. We have some exceptionally good one-year trees and a few two-year trees to offer this season. Plant McIntosh strain of Apples for big profits, equally as good in home orchards as it is commercially.

McIntosh Red

Improved Type—Heavy Yielding Strain Preferred by Many Growers in the North

Until the discovery of our New Super Red McIntosh our improved McIntosh Red was the best strain of McIntosh available. It colors solid red when climatic and soil conditions allow it to remain on the trees until it is mature. This heavy yielding strain is much superior to many strains of McIntosh especially the dull striped kinds. If you do not have trouble getting sufficient color then we recommend you planting this time proven, heavy yielding strain. McIntosh Red is very hardy and produces bumper crops each year. Generally considered as the best flavored apple grown. Recommended for home or commercial orchard plantings.

54% Less Apple Trees In Orchards, says New York State College of Agriculture at Cornell University.

Fifty-four per cent less Apple trees of bearing and non-bearing age in the United States during 1935 as compared with the fruit tree census taken in 1910, according to an article printed in the Produce News, November 27, 1936.

Now is the Opportune Time to Plant.

Leading Orchardists Prefer Harrison-Grown Fruit Trees.

NEW DISCOVERY Made

Buy "Bud-Selected" Super-Strain Fruit Trees

Not Magic
Our famous **YELLOW DELICIOUS**
as nature made it—a **GOLDEN YELLOW**

TWO-YEAR APPLE TREES
 Superior Strains, Straight
 Stems, Well Branched
 Heads, Fibrous Roots

A golden yellow Apple with decided "Delicious" characteristics. Yellow Delicious has a remarkably good flavor, and is most popular for eating during the fall and winter months. Late September and January finds the flavor and condition at its best. Many people think it superior to the famous Delicious.

Yellow Delicious is a national favorite. No other Apple has such an appeal to the appetite. Folks cannot resist buying them when displayed for sale.

A Prolific Cropper at an Early Age

The Yellow Delicious tree is very thrifty, hardy, and a vigorous grower. It is renowned for its heavy bearing of fruit at a very early age. You can depend on a good yield of ripened fruit each year.

Other Autumn Varieties

FAMEUSE (Snow). Popular in northern states. Deep red; flesh snowy white, juicy and tender, size medium round.

GRAVENSTEIN. Extra large, perfect in form. Coloring orange-yellow overlaid with broken stripes of light and dark red; flesh yellowish, firm, crisp, tender, juicy, fine flavor. Good for cooking, extra vigorous tree, comes into bearing rather early and bears profuse crops regularly. Grown extensively in California and commands good price.

JEFFERIES. Tender, excellent quality.

KINNARD. Large, dark red, very juicy.

KENDALL. A McIntosh offspring. Handsomely colored over entire surface. Dark red, with the same fine characteristics of the McIntosh.

KING DAVID. A beautiful deep dark red Apple, resembling Jonathan as to size and shape, but not quite as good flavor. Splendid shipper and keeper. Tree hardy, and comes into bearing young. (1-year trees only.)

KEETOSH. An offspring of McIntosh. Canadian origin.

LOBO. Prominent in a number of fruit districts due to the high coloring and many McIntosh characteristics. The season of Lobo begins a little earlier than McIntosh, but it keeps about as long. The earlier coloring enables growers to pick Lobo in advance of McIntosh. It hangs on the tree better than McIntosh.

GRIMES GOLDEN
Big crops—*one of the best Golden Apples*

Grimes Golden

Harrisons' Selected "Big Yield" Strain

BEST HOME ORCHARD APPLE

Autumn, medium sized, golden yellow, tender, rich, aromatic, sub-acid, delicious, possibly the best flavored apple known, and a good keeper. No better variety exists for eating raw or for cooking. Tree is very hardy and one of the heaviest bearers known, producing extra large crops annually. Excellent variety for a filler, as it comes into bearing very early. Grimes Golden is the best pollinizer known, especially for Stayman Winesap, Turley, Baldwin, Cortland, Rome, Winesap, McIntosh and others. Be sure to include Grimes Golden in your orchard. IT IS EASY TO GROW.

Little Orchards Make More Profit Than Big Farms

Delicious SOMETIMES CALLED STARK DELICIOUS

This is the Original Strain of Delicious

Of peculiar and distinctive shape; brilliant dark red, flesh fine grained, juicy, crisp and melting, flavor sweet, with a slight acid taste, with a delightful aroma, very highest quality. Excellent for eating, and the most popular fruit stand Apple. Packs well in boxes and bushels, always bringing high prices on the leading markets, and in strong demand by the best trade. Tree is hardy, a vigorous grower and a good, dependable cropper when properly pollinized. Suggest planting Yellow Delicious or Jonathan as pollinizers with Delicious.

Other Autumn Apples

NORTHWESTERN GREENING. Large, round, greenish yellow; juicy, firm, good quality; splendid keeper, ships well. Attractive apple when packed in bushels, demands good prices, excellent baking apple. Should not be planted extensively, because crops are not so certain, due to blossoming early. Trees are extremely hardy, vigorous, and bear very young.

RED GRAVENSTEIN. This red sport is more attractive than Gravenstein. It differs from Gravenstein only in the solid dark red fruit.

SMOKEHOUSE. Large apples of superfine flavor, excellent for eating, yellowish green mottled with dull red and with many russet dots; flesh firm, crisp, juicy and aromatic. Tree large, vigorous and reliably productive.

MAMMOTH GRIMES. A big golden apple.

MAGNUM BONUM. Red, popular in South.

ORLEANS. Delicious type, bears early and is an annual bearer.

WEALTHY. Medium to large size; round; almost solid red; flesh white or a little stained; tender, crisp, juicy, fine grained, aromatic and very good flavor. Relatively good keeper. Old variety most extensively planted in North. Tree is very hardy, withstanding unusually cold climates, vigorous, fruits at early age, bears regular and abundant crops. Tree somewhat dwarf, making a fine filler.

BRIGHT RED Jonathan

SOLID RED COLOR
ALL OVER

A Great Improvement Over the Ordinary Jonathan

We searched the country over to find a strain of Jonathan that had more color than our selected Big Yield Strain Jonathan. After thousands of miles of travel inspecting all of the new strains of this famous variety we found the one we had been looking for. It colors solid red several days earlier, otherwise it is identical with ordinary Jonathan. Growers who want more, deeper colored apples will find our Bright Red Jonathan the best colored strain obtainable.

BRIGHT RED JONATHAN

JONATHAN

Selected "Big Yield" Strain

Jonathan is a money-making apple that is widely adapted to different soils and conditions. Its attractive fruits command good prices in the market and this, combined with its unusually heavy bearing characteristics, make it one of America's leading apples. It ripens its cherry-red fruits during early fall at a time when good apples are scarce. Our Big Yield Strain is renowned for its early bearing, as well as its ability to produce consistent crops from year to year of highly colored apples.

Winter Varieties

DOUBLE RED BALDWIN. A new dress for this old reliable variety. Solid deep red color, much earlier than ordinary Baldwin. The color makes it sell better. This new strain will bring new profits to the grower of Baldwins. (1-year trees only.)

ALBEMARLE PIPPIN or YELLOW NEWTOWN. Famous in section around Crozet, Va., and sections of Oregon and Washington. Large, round, ribbed and somewhat irregular. Tree a slow grower and light bearer in poor soils, but right soil and care bring a world-beater when it will thrive.

ARKANSAS BLACK. Dark red; good keeper.

BALDWIN. Large, round, bright red, crisp, juicy and rich; good late keeper, esteemed as an eating apple and for cooking. Quick and large grower; yields big crops. A wonderful shipper, standing long distances very successfully.

BEN DAVIS. Large, good looking, poor flavor.

CORTLAND. A new variety resulting from cross pollenization of McIntosh Red and Ben Davis, and inheriting the good qualities of each parent. Beautiful red apple, approximately the same size and fine flavor of the McIntosh, but ripens 3 weeks or a month later. Good keeper.

GANO (Black Ben). A handsome, large Apple of perfect shape, smooth, glossy, deep red skin; flesh white, slightly tinged with yellow, firm, rather coarse, crisp, mild, sub-acid flavor. Gano is one of the most popular export apples for the South American trade. Excellent keeper, standing long shipments, usually packed in barrels. A sure money-maker for the export trade.

GILBERT (Arkansas). Dark red, heavy bearer.

LOWRY. Beautiful mahogany-red, good, medium size, round oval shape, nearly sweet, mild sub-acid; excellent flavor, good shipper, long keeper, and sells at fancy prices in export as well as domestic markets. New popular commercial variety in Virginia.

MAMMOTH BLACK TWIG (Paragon). Extra large in size and round; skin smooth, yellowish covered with deep red, the general effect being dark red; flesh tender, tinged with yellow, crisp sub-acid, aromatic, fine flavor, of excellent quality, long keeper of great value. An important commercial variety in the East. Tree is vigorous and healthy, yields big crops. Plant Delicious or Jonathan as a pollinizer.

MACOUN. Similar quality and texture to McIntosh Red, although it ripens 2 to 3 weeks later than Cortland.

MEDINA. Delicious type, slightly larger, recommended for trial where Delicious grows too small.

MOTHER. Medium sized red late fall, early winter export variety. One of the latest apples to bloom. Seldom killed by late spring frosts. (1-year trees only.)

NERO. An Apple which has received far too little attention from planters of Eastern orchards. Deep red, with handsome shading; medium large size, of good quality and excellent flavor; one of the longest keepers, one of the best cold storage Apples. Apples are graded and packed easily, do not show bruises and hold up well in storage. Nero is an extra heavy bearer, dependable, being a big cropper every year.

Be Smart

PLANT AN APPLE ORCHARD NOW of well-selected varieties. This orchard will come into bearing when there will be a decided shortage of apples. The unwritten law of supply and demand has always worked and when your orchard comes into bearing the demand for high quality apples will far exceed the available supply. There is a bright future for making money in growing apples. Plant the best strains of leading commercial varieties preferred on the American and foreign markets.

Says G. Hale Harrison, the Nationally known Fruit Marketing Specialist for Harrison's Nurseries, Inc.

Harrison's Take All the "Risk" Out of Buying Fruit Trees

When we say **RED** we mean **HARRISONS - SCARLET RED STAYMAN**

SCARLET RED STAYMAN

SCARLET RED STAYMAN

'BRILLIANT COLOR

This season we offer to the public for the first time the greatest strain of Stayman Winesap ever discovered. It is a true bud sport found in a Stayman Winesap orchard. Scarlet Red Stayman takes on bright red color weeks earlier than ordinary Stayman. Its ripening date is the same but can be picked earlier if desired.

A READY MARKET AT TOP PRICES

Scarlet Red Stayman is the best general purpose apple for planting in the East. Its solid scarlet-red color and its bright attractive finish causes it to command highest market prices. The fruit is large and it produces bumper crops each year.

KEEP CRISP AND JUICY UNTIL LATE SPRING

Because this new strain takes on solid red color weeks earlier, allows it to be picked when it is hard ripe thereby making it keep much better during the winter and spring.

NO INCREASE IN PRICE OVER OTHER VARIETIES

We grow Scarlet Red Stayman Apple trees by the tens of thousands and improved methods of production and low selling costs enable us to sell you the very best strain of Stayman at no increase in price over ordinary varieties. Most nurseries ask more for their so called improved varieties, but you can plant the improved Scarlet Red Stayman with our assurance that it is the best strain of Stayman available regardless of price. (1-year trees only.)

Will Be a Great Money-Maker for Growers

STAYMAN WINESAP

Big Yield, Improved Color Strain

Without a doubt the heaviest yielding strain of Stayman Winesap obtainable. This strain yields bumper crops year after year. It colors to a good bright red and gets nearly solid red colored when allowed to stay on trees until fully ripe. This is an improved strain and is preferred by many growers in the East. Tested and time proven by thousands of growers. If you liked the color and quality of fruit on the trees you have heretofore purchased from us, you will find this strain the type to plant, as it is an improvement on the well-known strain which we have offered in the past. If in doubt which strain to plant, you will not make any mistake in planting this one.

OTHER TYPES OF STAYMAN

CHERRY RED STAYMAN

Many growers, especially in certain districts, have some trouble getting enough color on their Stayman Winesap. We offer Cherry Red Stayman to those growers who want more and darker color. This strain is lighter in color than Dark Red Stayman, but darker in color than Scarlet Red Stayman, otherwise its characteristics are the same as ordinary Stayman in fruiting, etc.

DARK RED STAYMAN

The darkest of all our Stayman Winesap strains. It is especially recommended for growers who want the dark or almost black colored Apples.

It is a heavy yielder, but we prefer any of the other strains that we offer to this one.

TURLEY—A Type of Stayman

This variety is an offspring of Winesap, which it resembles. Fruit rounded, conical in shape, as large as Stayman Winesap, smoother skinned, deeper and richer in color; juicy and rich flavor. Tree very hardy and comes into bearing early. Planted extensively in Indiana and Ohio along with Stayman Winesap to prolong shipping season.

TEN REASONS WHY RED SPY IS A NORTHERN LEADER

1. Extremely hardy, extra strong, vigorous growing tree.
2. Extra large size fruits, slightly larger than Northern Spy.
3. A typical Northern Spy except in color. Red Spy color is solid bright red without either stripes or splashes.
4. Every Apple being a solid red color is a tremendous advantage.
5. Colors early. Red Spy harvests somewhat earlier than Northern Spy; it enjoys advantage in price.
6. Quicker sales. A basket of Red Spy sells at premium prices over the well-known Northern Spy, on account of every Apple being a blazing solid red color.
7. More U. S. No. 1 grade Apples. There are no culls in Red Spy on account of color lacking—the U. S. No. 1 grade pack will be of much higher percentage in quantity than Northern Spy, consequently a great profit.
8. Red Spy is apparently more prolific than Northern Spy, which for more than a century has been recognized a leader in producing big bumper crops.
9. Red Spy comes into bearing at an earlier age than its well-known parent, Northern Spy.
10. Recommended for commercial and home planting by the leading horticultural experts as well as practical fruit growers in the Northern States and Canada.

NEW RED SPY

Other Good Winter Apples

- NEWFANE.** Delicious type, large size, attractive red color.
- NORTHERN SPY.** Large, bright scarlet-red, with yellow markings. Flesh juicy, rich, crisp, tender, aromatic and highly flavored. Tree a strong, erect grower, very healthy, extremely hardy and a free producer. We offer an exceptionally heavy bearing strain that comes into bearing at an early age.
- OPALESCENT.** Very handsome dark crimson apple.
- PARAGON.** For description, see Mammoth Black Twig.
- RHODE ISLAND GREENING.** Large, greenish yellow; flesh crisp, juicy, quite acid, firm, fine grained, tender, and of very fine flavor and quality. An excellent keeper, a popular barrel apple; brings good prices. Generally planted in New England, New York, Michigan and Canada, but not advisable to plant south of the Mason-Dixon line.
- ROXBURY RUSSET.** Large, firm, moderately tender, juicy, sub-acid, good flavor. Skin almost smooth, but covered with greenish to yellowish brown russet, long keeper. Most popular russet apple; tree hardy, strong grower, and prolific bearer.
- STARK.** Long keeper and a reliable commercial sort. Fruit large, round, greenish yellow with red stripes; flesh yellow, crisp and mildly acid. Excellent baking apple, preferred by the larger baking concerns and hotels. A good variety for the commercial orchard because the tree is hardy, thrifty, healthy and very productive. Good trees to top work other sorts on.
- SWEET DELICIOUS.** Seedling of Delicious. Very sweet in flavor.
- TERRY.** Medium size, red.
- TWENTY OUNCE.** Very large, yellow striped with red; fine quality, good keeper.
- WOLF RIVER.** Very large, handsome, bright yellow, skin mottled and blushed with deep red and broad stripes of bright carmine, fair quality, long keeper and excellent for cooking. (1-year trees only.)
- WINTER RAMBO.** Medium size, greenish yellow color; thick skin. (2-year trees only.)
- WINESAP. An Apple Favorite in Virginia.** Sometimes called Old Winesap and Virginia Winesap. Medium size, oblong, smooth, and a fine dark red—one of the best red-colored apples grown; flesh yellow, crisp, tender, very juicy, aromatic, firm and excellent flavor. Very long keeper and considered the best cold storage variety, keeping until July. Strong grower; comes into bearing early. Our strain produces bumper crops of the larger sized apples with plenty of color.

Solid Red Winesap

Old Winesap generally has plenty of color when planted in most sections, but for those growers who want a more solid red-colored

Winesap, we recommend our new strain. (1-year trees only.)

See page 18 for **NEW LOW PRICES** on all varieties of apple trees.

HARRISON'S'

Red Rome Beauty

A FAVORITE WITH THE GROWERS

This Is a Flaming Triple Solid
Scarlet-Red "Bud Sport"

RED ROME BEAUTY—Colors Red a Month Earlier than Rome
A 100 per cent Red—
Flesh exceptionally white and fine grained

GALLIA BEAUTY. A Rome Beauty type of apple identical in every respect, except its earlier coloring qualities; recommended for commercial planting. For general plantings we consider our Red Rome Beauty better. However, if you desire Gallia Beauty we have the true strain.

ROME BEAUTY. Large, round; mottled and striped in different shades of red; flavor and quality way above the average; appearance and size are its valuable points; always in strong demand and brings highest prices. Keeps in good condition until May and June. With an established reputation due to real merit, Rome Beauty is a variety eastern orchardists should plant. Good, hardy, strong grower; blooms late; bears heavily every year; is adapted to a wide range of soils, elevations and conditions. Reliability, due to being frost-proof, strong growing, sure bearing, unusual demand, with high prices on the leading markets, especially from the chain stores, make it a favorite with the growers. Fine quality and long keeping for use and for handling make it popular with consumers and dealers. Most attractive when packed in boxes and bushels. This is the improved Cox strain of Ohio.

YATES. Yellow splashed with red. Popular in the South.

WAGENER. A large apple of beautiful bright red; fine texture, high flavor and excellent quality. Tree bears early; a reliable cropper.

WINTER BANANA. Extra large, golden yellow, and beautifully shaded with bright crimson-red; firm, fine grained, rich, sub-acid. The name suggests the high flavor. Tree thrives nearly everywhere. Should be packed in bushels or boxes and sold soon after picking.

YELLOW BELLFLOWER IMPROVED. An improved type of Yellow Bellflower.

**Renowned
for Bearing
at an Early
Age**

An improved Rome Beauty, identical in vigor and production. Color of fruit much brighter and solid red. Produces much higher percentage of fancy Apples and also superior in quality to the ordinary strain of Rome Beauty. Red Rome Beauty is renowned for bearing at a very early age, producing bumper crops of large size Apples. The tree is a vigorous, strong grower, exceedingly hardy.

**Superior to All Other Tested
Strains of Rome**

Harrisons' strain of Red Rome Beauty is the best of all Rome Beauty types and because of its improved and early high red color characteristics, will eventually replace the Rome Beauty. Already the Red Rome Beauty is a star among leading commercial varieties of winter apples. It pays to grow them.

Red Rome Beauty is easy to pack U. S. Fancy grade while most strains of Rome Beauty have just enough color to pass the requirements of U. S. No. 1 grade.

THIS NEW GLORIFIED YORK IMPERIAL

RED YORKING

TRADE MARK REG.

U. S. PLANT PATENT No. 125
Prices of Red Yorking same price
as standard varieties. See page 18
for sizes and prices.

Early Coloring Means 100% Perfect Extra Fancy Grade

The Red Yorking is similar in size and shape to York Imperial, but is characterized by the abundant red coloring that completely covers the fruit. A vigorous grower and an abundant producer.

RED YORKING—

An Exalted York Imperial

The Red Yorking is a "bud sport", being a mutation of the famous York Imperial. This "bud sport" originated on a tree, grown with other York Imperial trees, in Harrison's Nurseries and later sold to Mr. W. H. Allison, near Shippensburg, Penna., for use in planting a large orchard about twenty-nine years ago.

**A Winner—
because it
comes into
the market
3 to 5 weeks
ahead of its
parent.**

The Appalachian Winner

RED YORKING

WITH TEN TESTED REASONS:

1. York Imperial has long been the commercial leader and money-maker in Virginia, West Virginia, Maryland and Southern Pennsylvania, but with the discovery of a "bud sport" strain from a Harrison-grown York Imperial planted near Shippensburg, Pennsylvania, the new "Red Yorking", U. S. Plant Patent, No. 125, will eventually replace its famous parent.
2. Leading fruit growers were astounded and now proclaim that Red Yorking is the ideal commercial apple for the Appalachian region.
3. Red Yorking, by actual comparisons, has proven to be far superior to any other so-called red strain of York Imperial.
4. Color: Every Red Yorking apple being SOLID RED is a tremendous advantage.
5. Colors very early—being able to pick and ship Red Yorking from three to five weeks earlier than York, due to its 100% solid red color before the apple is fully ripe.
6. Will bear bumper crops each year under modern up-to-date orchard management, and Red Yorking is a more prolific bearer than its parent.
7. Red Yorking can be easily packed U. S. Fancy grade from three to four weeks sooner in the fall than you can possibly pack York Imperial to meet the requirements of U. S. No. 1 grade.
8. All apples of Red Yorking will run U. S. Fancy grade and U. S. No. 1 grade as to color requirements, whereas you always have a varied percentage of York Imperial that will fail to meet even U. S. No. 1 color specifications.
9. For the export trade, Red Yorking can be sold and shipped at premium high prices long before Yorks are ready to pick.
10. For cold storage purposes, Red Yorking does not "scald," even when held until June; whereas, York Imperial must be sold during the winter to avoid "scald" and other cold storage troubles.

"RED YORKING"

United States Plant Patent No. 125
(FOR PRICES OF ALL APPLES, SEE PAGE 18)

WARNING! It is unlawful for anyone to propagate and sell Red Yorking, U. S. Plant Patent No. 125, Apple trees without obtaining written permission from the owners. The Government has protected the owners of the Red Yorking against infringements by the U. S. Plant Patent Laws for a period of 17 years.

York Imperial

*a favorite for Southern Pa.,
Maryland, W. Va. & Va.*

Medium to large size, round, irregular, greenish yellow overlaid with bright red; flesh tender, firm, crisp, and of high flavor; wonderful keeper. Can be kept in cold storage until June. Tree is a vigorous grower, strong and healthy; an unusually heavy bearer.

Other varieties may fail to set fruit and suffer from off years, but York Imperial with proper cultural methods, will bear consistently from year to year. York Imperial is a popular winter variety for cooking; also good for eating. A wonderful apple for packing in bushels for the domestic trade. The best known and most popular export apple in barrels.

BARTLETT PEAR

KIEFFER — Easy to Grow

Of all the pears, Kieffer is the most easily grown. Trees are vigorous, exceptionally hardy and thrive on varied soils in any climate. Kieffer is the only pear that can be successfully grown in such southern states as Alabama, Mississippi, Louisiana, etc., and yet it is the leading commercial pear in Canada. Kieffer is blight-resistant, and can be successfully planted in large orchards.

This fruit is large to very large size; skin yellow, with light vermilion cheek; flesh yellowish white, very juicy. Noted for being a long time keeper. Most popular canning pear.

A leading commercial variety. New method of storing enables Kieffer pears to have as good flavor as other varieties.

For home, for canning, for market, the best. A golden colored pear, with red cheek. Bartlett mellows and is excellent for eating very early in the fall, yet when picked a week before it is ripe and properly stored, will keep till late. Flavor delicious and musky; flesh buttery, rich, juicy. One of the finest pears that grows to eat raw.

Fancy Bartlett Brings Highest Prices. Bartlett Pears always sell on the market even when other sorts are not in great demand. The fruit is so handsome and appealing, that it pays to pack it in fancy containers. Bushels or bushel boxes are best adapted. The fruit ought to be carefully sorted and graded, wrapped in tissue paper, and arranged in the container practically the same way that you pack apples.

OTHER PEAR VARIETIES

- ANJOU.** Large, green in color, somewhat yellow when ripe, buttery, melting, rich vinous, good flavor. Tree vigorous, hardy, prolific bearer. **BARTLETT.** See description at top of page.
- BUERRE BOSC (Bosc).** Large size, fine quality, brings highest market prices.
- CAYUGA.** Flesh is firm and fine texture quite to the center and possesses a delectable flavor. New.
- CLAPP'S FAVORITE (Clapp).** Very large, long, lemon-yellow with brown dots; richly flushed with russet-red on sunny side; fine texture, melting, buttery, juicy, with a rich, sweet, delicate, vinous flavor. Thrives where other varieties fail. Tree hardy and very productive.
- DOUGLAS.** Very resistant to blight. A winter pear of wonderful quality, golden yellow with a faint blush on the cheek. Bears early.
- DUCHESS (Duchesse d'Angouleme).** Very large, dull greenish yellow, spotted russet, flesh white, rich, buttery, juicy; excellent flavor. Tree somewhat dwarf, but a most dependable bearer. Profitable commercial pear.
- EWART.** Large size and good quality. Greenish yellow netted with russet, and has a fine, melting, tender, juicy flesh. New.
- GARBER.** Large, clear yellow, heavy bearer. Fine market variety; unsurpassed for preserves.
- GORHAM.** Flavor is sweet and vinous with a very marked and pleasing aroma.
- KIEFFER.** See description at left.
- KOONCE.** One of the earliest pears, free from blight, does not rot at the core like many early pears. Fruit is yellow, medium to large, delightful flavor. Very productive.
- PHELPS.** Flesh is tender and juicy with a pleasant vinous flavor. New.
- PULTENEY.** New variety originated by the New York Experimental Station. Fruit is of the Bartlett type, a little more regular in outline, skin smoother.
- SECKEL.** A beautiful and delicious little pear known everywhere and an old-time favorite; skin yellowish brown with deep brownish red cheek; flesh very fine grained, sweet; one of the richest and highest flavored pears grown. Tree rather dwarf, slow, stout and erect; bears prolific crops.
- SHELDON.** Medium size, flesh slightly coarse, melting, juicy.
- WINTER NELIS.** A sweet rich pear for winter use. The trees are not very vigorous but are adapted to most soils and are productive. For home and market.
- WORDEN-SECKEL.** Offspring of Seckel, equal in quality and productiveness; decidedly superior in size, color, and form.

HARRISONS' AMERICA'S BEST VARIETIES famous PLUMS NEW LOW PRICES

This is an expert selection made from hundreds and hundreds of known varieties of plums, which we have fruited, thus selecting only the super-strain varieties, which are suitable for all purposes. You can depend on Harrison-Grown Plum trees, being hardy and producing bumper crops each year.

Six of the Leading Kinds

ABUNDANCE. Early, large, color pinkish red changing to darker red, with thin bloom. Yellow flesh. Very juicy, sweet and tender, pleasantly aromatic. Hardy, very productive. Adaptable to a wide diversity of soils and climates.

BRADSHAW. Midseason, large, light purplish red changing to dark reddish purple at maturity, covered with thick bloom. Flesh dull yellow with a trace of red, juicy, somewhat tender, sweet, pleasant, good. Hardy, a popular variety.

BURBANK. Early, about one week after Abundance. Large, cherry-red with thin lilac bloom. Flesh amber-yellow with rich sugary flavor; high quality and very productive. A product of Burbank, the master plant breeder. Should be in every orchard.

ITALIAN PRUNE (Fellenberg). Late. The best of all the older prune type Plums. Medium size, purplish black, flesh greenish yellow, changing to yellow; juicy, firm, sub-acid, slightly aromatic; stone free. Tree rather vigorous, hardy, productive. Good for drying, and when allowed to become fully ripened, excellent for eating. Ships well. Italian Prune is the leading commercial variety. We have the genuine strain.

RED JUNE. Early, medium size, garnet-red color, thin bloom, flesh light yellow, somewhat meaty, sweet, aromatic. Trees are healthy, hardy and productive. An early market Plum.

SHROPSHIRE DAMSON. Late, medium size, purplish black, overspread with thick bloom. Thin skin, tender flesh, golden yellow, juicy, agreeably tart at full maturity, sprightly, pleasant, enormously productive. Very easy to grow. One of the best of its kind for culinary purposes, and when fully ripe and after light frost makes a highly desirable dessert Plum. The popular old-fashioned Damson variety.

Other Desirable Plums

BLUE DAMSON. Late, very similar to Shropshire Damson. A favorite variety in many sections. We consider Shropshire Damson better.

German Prune. Late, purplish black, thick bloom. Flesh yellowish green, sweet. Good for canning and drying.

IMPERIAL GAGE. Midseason, greenish yellow, faintly tinged with red on the sunny side. Flesh golden yellow, juicy, sweet, mild, very productive.

BURBANK PLUM

Santa Rosa. Large, round, dark purple, flesh reddish near the skin. Good quality. Keeps and ships well. Originated by Luther Burbank.

Superior. Large size, red, firm flesh, delicious quality. Extra hardy.

Underwood. Very large, beautiful red color, delicious quality. The best of many Plums originated at Minnesota Fruit Farm. Bears annually.

WICKSON. Early, midseason, extra large size, color dark red, thin bloom, flesh amber-yellow, firm, sweet.

Wild Goose. Very early, medium size, color bright red, flesh yellowish, sprightly, fair to good in quality.

Buy "Bud-Selected" Super-Strain Fruit Trees - It Pays

Sour **HARRISON'S** Profitable Cherries

They Never Miss a Crop Montmorency

The most popular sour cherry grown in America. It ripens midseason, is large, red, slightly acid, flesh very tender, good quality. The best shipper of all sour cherries; always commands the highest market prices in city markets or commercial canneries. When preserved at home or commercially, it is always attractive in appearance and of extra good quality.

Montmorency trees are strong, disease-resistant, very hardy, generally starting to bear fruit in two years.

The superior strain which Harrison's grow is a bud-selected strain from Montmorency (Ordinaire). There are several different types and strains of Montmorency, which is often confusing to the public. We have experimented over a long period of years and have selected the best type and strain. You can depend on our superior strain of Montmorency, which is a real money-maker for the commercial orchardist.

9/16 to 11/16 inch Caliper

3 to 4 feet
1/2 to 9/16 inch Caliper

Other Sour Cherry Trees

Dyehouse. Very early summer, ripening ten days prior to Early Richmond; medium size, sour, good quality, heavy bearer.

EARLY RICHMOND. Early summer. Very sour, medium size, bright red, valuable and popular cherries, unsurpassed for cooking purposes. A good old variety which yields such marvelously heavy crops. Tree is the most hardy of all cherries, being uninjured by the coldest winters; slender in growth and very productive.

ENGLISH MORELLO. Midseason. Fruit sour, large, elongated, almost blackish red when fully ripe; very rich, acid, juicy and good.

May Duke. Very early, sour, large, red, juicy, rich, its acidity pleasantly tempered to the advantage of sensitive teeth, superior quality, very productive.

Olivet. Large, deep red, glossy cherry with rich vinous sub-acid flavor. Morella type. Midseason.

Richmorency. A Montmorency type that ripens a week or more earlier than Montmorency. Produces heavy crops and the size of the fruit is large.

Royal Duke. Sour, dark red, fair quality. Early.

Leading Sweets

HARRISON'S SUPER-STRAIN CHERRY TREES

What fruit is more pleasing than the sweet cherry? The ideal fruit to plant in the back yard. We have a good supply of first-class trees in the following varieties:

BLACK TARTARIAN. Very large, sweet, purplish black color, juicy, rich flavor, heavy bearer and most profitable sweet variety grown.

GIANT. A late variety; tree is large, vigorous, and productive.

GOLDEN WAX. Large, yellow, fine flavor. Bears bumper crops. Easily grown. Midseason.

GOVERNOR WOOD. Large, light yellow, marked with red, sweet.

Lyons. Large, black, extra early, ripens a week ahead of Black Tartarian.

BLACK TARTARIAN
—It's Sweet

SPECIAL SWEET CHERRY Offer No. 323

- 1 Black Tartarian
 - 1 Napoleon
 - 1 Yellow Spanish
 - 1 Windsor
 - 4 Big 4 to 5 ft. trees
- For Only **\$2.00**

NAPOLÉON (Royal Ann). Large, pale yellow with bright red cheek, sweet, excellent flavor, prolific bearer. Famous canning variety of the Pacific Coast.

Schmidt (Schmidt's Bigarreau). Large, sweet, deep black, tender, fine flavor.

WINDSOR. Large, sweet, almost black, fine quality. Valuable late variety.

Yellow Spanish or Ox-Heart

A popular variety within reach of every rural housewife—in orchard or garden, along roadside or lane. A stately tree with abundant annual yield of big 1-inch cherries. Coloring a rich yellow and orange-red. Renowned for being a heavy bearer.

YELLOW SPANISH—A Favorite Among Sweets

Harrison-Grown Cherry Trees

Budded from bearing commercial orchards of superior strains. All cherries are budded on hardy grown, whole root seedlings, which, in our most favorable soil, form a large, fibrous, well proportioned root system, which is exceedingly important for the proper growth of cherries. Highest quality at most attractive prices.

Apricots — Nectarines

Extra Good Fruits for the Home Orchard

ALEXANDER APRICOTS—A Real Treat

APRICOTS

The apricot is one of the most delightfully luscious fruits grown, when eaten fully ripe and fresh from the tree. It is remarkable that such a rich and beautiful, golden, sweet fruit is not planted more, especially since it ripens just after the early cherries and before the best early peaches.

ALEXANDER. Early, prolific, freestone, orange, with red blush; very juicy and sweet flavor. A large prolific sort that will withstand adverse weather conditions. This variety deserves greater popularity. The best.

EARLY GOLDEN. Small, pale orange, juicy and sweet. It is a hardy, prolific bearer; ripens first of July.

SUPERB. Medium size, light salmon-colored fruit; hardy.

GROW YOUR OWN FRUIT It's Easy with Harrison's Hi-Quality

NECTARINES *Delicious for Eating*

There is a mistaken idea that the nectarine is a cross between the peach and something else, while it is really nothing more or less than a smooth-skinned peach. The melting, juicy texture of the nectarine and its delicious flavor furnishes one of the most delightful fruits for eating during the summer. Plant a few trees in your home orchard this year.

BOSTON. Bright yellow, red cheek, flesh yellow.

GOLD MINE. White flesh, large, attractive, freestone.

GOWER. Large, white flesh, freestone, good flavor.

HUNTER. Large, round, yellow, freestone.

JOHN RIVERS. Early, medium size, red, semi-cling.

QUETTA. One of the newer nectarines that is being tested for commercial possibilities in the East. Fruit large, greenish-white, splashed with red, white flesh, cling.

STANWICK. Very large, attractive, white, freestone, good flavor.

SURE CROP. Very vigorous and productive. The fruits are large, roundish, white and overlaid with very attractive red. Very pleasing flavor.

It's Twice the Fun when You Grow Your Own Fruits

IT'S EASY TO CUT YOUR FAMILY'S FOOD COST — PLANT ASPARAGUS.

ASPARAGUS

**BIG
YIELD
STRAIN**

Is a Profitable Crop

Harrisons' Pedigreed Mary Washington Crowns Yield Bigger Crops and Greater Profits

Highly Profitable and Easily Grown

Being the first vegetable to come in the spring it always brings a high price on the markets. Stocks being delicious and very healthful, every garden should have a generous supply and when properly set and cared for will last a lifetime.

MARY WASHINGTON

100 Mary Washington Roots.
Selected, 2-yr. plants,
for only **\$1.50**

Asparagus fresh from your garden is better.

The Famous Mary Washington—True To Name—Plant This Pedigreed Strain

There is no variety of Asparagus as good as Mary Washington and whether you are growing for home use only or for market you cannot afford to grow any other. This wonderful new Asparagus was developed and introduced by the U. S. Department of Agriculture

and although it is just a recent introduction it has become famous the country over.

Rust Resistant—Profitable

Growers everywhere are discarding all other varieties in favor of the famous Mary Washington, because it is earlier, the stalks are larger, more tender and more productive than any other variety and more highly immune to rust, which means that one planting will produce profitable crops for many years.

Large—Early—Tender—Juicy

Asparagus buyers now demand Mary Washington and are willing to pay fancy prices to get it. The demand for Mary Washington is tremendous because when it is once eaten, no other variety will give satisfaction. The stalks are purplish green color, large, tender and juicy. A very rapid grower, which means many cuttings.

We Recommend Two-Year Roots for Home Gardens

Experience has taught us that 2-year roots give better results for garden planting than 1-year roots. The 2-year roots are much larger and have more food stored up, which causes them to make more growth and yield larger crops of asparagus sooner than the 1-year roots.

Plant Harrisons' Pedigreed Roots

We have made a specialty of growing Asparagus roots for over forty years and have supplied plants for some of the finest Asparagus beds in the country. The growing, handling, and shipping of millions of Asparagus roots has taught us many things and today we are in position to supply you with quality roots at low cost. All our crowns were grown direct from the original strain of seed.

NEW LOW PRICES OF GENUINE PEDIGREED MARY WASHINGTON ASPARAGUS ROOTS

Missionary

Some folks say this is the best southern berry. It reigns supreme in Florida and is extensively grown in Georgia, North Carolina, South Carolina, Louisiana, and Texas. The berries are well colored, firm, large, holding their size throughout the season. We offer a selected big yield strain.

KING OF THE EARLY BERRIES IN THE NORTH

If you plant Harrisons' Premier, you can depend on having the first berries in market, and the first cash returns on the new strawberry crop.

Premier is a splendid early variety with many excellent features. It is immensely productive, and unlike other early ripening strawberries, the fruit Premier produces is of the finest quality, color, texture and flavor. The berry is well proportioned, of uniform size and shape, making it supreme for eating, canning and preserving.

Nation-Wide Popularity

Although Premier is extremely popular in large berry-growing areas of Michigan and Pennsylvania, thousands of large shipments are made by other berry-growing associations and individual growers throughout the United States.

**Plant our selected Big Yield
Strain for greater profits.**

Because of the Wonderful Premier Characteristics

1. Color—a showy red.
2. Extra firm, long distance shipper.
3. Healthy foliage. Grows successfully anywhere.
4. Resists drought and frost.
5. Attractive size.
6. Holds records for bumper crops.
7. Ripens early.

SENATOR DUNLAP

(Midseason)

SOMETIMES CALLED DR. BURRILL

Senator Dunlap is an old standard variety that is dependable. It has made more crates and more dollars for berry growers than any other one variety. It's the toughest variety known. Plants are healthy, fast growers and make new plants freely. Berries very dark red, wonderful for canning, excellent for preserves. Require little attention, and by all means include it in your list of preferred varieties. We offer an especially selected "Big Yield" Strain of this popular variety.

Yellows-Free Strain **BLAKEMORE**

A favorite Early Variety in the Southern States

The Blakemore berries are slightly blunted, with broad shoulders and slim neck. The color a bright glossy red, with a tough skin, firm flesh, and a mild flavor, which make a wonderful market and shipping berry. Plants make runners freely and you are sure of getting a good fruiting row. They should be set about 24 inches apart. Otherwise, if close, they will get too thick.

It has been thoroughly tested in nearly all the Strawberry producing centers, and is rated as 'a winner.' Blakemore is a cross between Premier and Missionary, it makes a greater growth than Missionary. We believe it is the coming early berry to plant in those sections which are distant from the markets.

NORTH STAR

VERY LARGE, FIRM, ATTRACTIVE BERRIES

Medium Early. A Howard 17 and Redheart cross introduced by Dr. George M. Darrow of the U. S. D. A. It is adaptable from Virginia to Oklahoma, and as far north as Massachusetts. The berries average very large, as large as Dorsett and Fairfax, very firm, and exceptionally attractive. North Star is very resistant to late frosts, and is adapted to moist, fertile soils. Its productiveness is fully equal to our present varieties.

BELLMAR

A cross between Missionary and Premier. Plant makes a vigorous growth and under good conditions is very productive. The berries are about the same size as Premier, but are somewhat darker in color. They are slightly firmer and of better quality.

DORSETT—
The new cham-
pion of Straw-
berry - producing
sections.

DORSETT

The Premium Priced EARLY STRAWBERRY.

Despite drought, excessive rain, cold or heat, DORSETT comes through year after year with large crops of fancy berries.

A product of the master plant breeders of the U. S. Dept. of Agriculture. The commercial growers are receiving it with great satisfaction, because of its unusual, strong selling appeal.

Get the Harrisons' Super Selected Big-Yield Strain of this most famous variety; make more money than you have ever made before. DORSETT is making profits as high as \$1100 per acre, and made those profits even in years when prices were low.

The berries are very large, all finely shaped, and cover a long extra early to late fruiting time.

Best for Heavy Yields HARRISONS' Selected

Another New Strawberry Introduction that is a Companion of DORSETT

As a double guarantee for bumper crops, many growers plant both sorts extensively. They are both topnotchers on the market, and little difficulty is experienced in selling the "load."

Fairfax is the famous team-mate of Dorsett, and is as good a variety in every respect but slightly later. Unlike many other berries, Fairfax does equally well in all parts of the country, and for this reason it is a general utility variety. Early, frost-proof, uniform in size and shape, deep red clear to the center,

firm, and a bi-sexual that does not require mating. Plant our big-yield strain for greater profits.

Fairfax

Fairfax—the best flavored

Catskill
The
MAMMOTH
NEW
MID-SEASON
VARIETY

CATSKILL

A midseason berry, that will produce the largest crop of bigger berries than any midseason variety we know. Catskill is entirely satisfactory as to firmness, quality, color and attractiveness, season of ripening and climatic adaption. The highest record of marketable berries was made with this variety. In shipping respects it ranks with Chesapeake and Lupton. It is rated equally as attractive as Fairfax or Dorsett. The berries are borne on rather long fruiting stems which makes it easier to get at in picking. Catskill berries bring top prices. Our big yield strain is better.

CULVER. A long midseason variety. Attractive dark red berries, firm, fine for preserving. Plants are healthy and vigorous and produce quite heavily. We have some fine

plants of this variety this season.

BIG JOE The Old Reliable Midseason Variety

It is a worthy companion for Dorsett, Fairfax and Premier, the best early berries, and Chesapeake, the best late. When grown for local or nearby markets, Big Joe is one of the best money-makers. Commands top market prices.

Large Yield—Fancy Fruit

Big Joe is a heavy producer of large, brilliant red berries of extra fine flavor and is firm enough to withstand long shipments. The plants are good growers and heavy yielders. This variety succeeds on all types of soil but does extra well when given good care and fertility. Be sure to include some Big Joe in your planting this spring. Our big yield strain insures big crops.

PATHFINDER Originated at the New Jersey Experimental Station and formerly known as New Jersey No. 35. It makes vigorous, healthy growth and sets tremendous crops of berries, ripening a few days after Premier. The berries are medium in size, uniformly smooth and regular in shape, but rather dark in color. One of the newer varieties that we recommend for trial plantings.

Chesapeake The Favorite Late Berry

All growers seem to make money on this variety, especially when grown under conditions suitable for it. Chesapeake grows to perfection on most any highly manured soil.

Very Large Berries of Supreme Quality

It is a good producer of very large berries that hold their shape well until the end of the season. It does not yield as many berries per acre as some of the early varieties, but the size and quality of its fruit enables it to sell for a much better price which offsets this disadvantage. The berries are firm enough to ship to distant markets and to arrive in first-class condition. An exceedingly valuable commercial berry but equally adapted for home planting. We offer a selected "Big Yield" strain.

LATE BEARING STRAWBERRIES

Dependable and Popular—True-to-Name

AROMA. Clean, healthy, hardy growing plants; does well on moist soils. Fruit large, deep red, excellent quality for home use or market.

GANDY. The favorite late berry in many localities. Large size and handsome appearance make it command highest prices on the market. Not quite as productive as some of the other berries, but its appearance and quality offset this. Good for either home use or commercial planting.

WM. BELT. An extra good quality late berry for home use or market. Its flavor is extraordinarily good, the berries are medium to large size, ideal for home use.

BIG LATE. One of the most attractive berries of very high quality. Plant makes a vigorous growth and sets a large number of berries. Blooms are imperfect and it should be planted with Big Joe, Catskill or other varieties of same season for pollination.

LUPTON'S—A Table Delight. The heaviest sales are made in Pennsylvania, New York, Michigan, West Virginia, and Ohio. A favorite for years, because of its large size and attractive "double red" color. They demand top prices because of their appetizing appeal.

NEW YORK—A Real Home Garden Berry. It is one of the few strawberries we know of that gets sweet before it gets red. The plant is a vigorous grower, producing a moderate number of large, healthy plants. Every gardener should plant this worth-while berry.

3 REAL CROPS — 3 BIG PROFITS

Bears in 90 days, and, too, it's the best Family Garden Strawberry

Loads of Big Berries in 90 Days

Unlike the other varieties, Mastodon begins to bear luscious berries three months after planting and bears three big crops in eighteen months. Customers have reported yields as high as three quarts per plant the first fall.

Why Wait a Whole Year?

Plant Harrisons' "Big Yield" Mastodon this spring and grow your own berries this summer and fall, instead of buying them. If you have more than you can use, they are easily disposed of in the nearby community, where they will always bring top prices.

Lucky Strike Everbearer

MAKES A GOOD FRUITING BED ON ORDINARY SOIL

Lucky Strike is famous for its big, rich, red-colored fruit and its high productiveness. This berry has excellent flavor and stands up well in shipping.

PICK WORLD'S FINEST BERRIES FROM YOUR OWN PLANTS

A Big Profit from Your Own Back Yard

Everybody prefers the flavor of vine-ripened strawberries. They are more delicious and usually sell for 5c to 10c more per quart. Customers pay premium prices for garden fresh strawberries and small growers make real money, up to \$500.00 per acre.

Whether you have a small garden or several acres, you can make a big extra cash income by planting Harrisons' "Big Yield" strawberries. Others are doing it, why not you. It costs only a few dollars to get started.

— Easy to Grow

Harrisons' Are Large Growers of Grape Vines

Harrisons' Hardy GRAPE VINES

We absolutely guarantee Harrisons' Berlin-grown grape vines, variety for variety, are as hardy as any stock grown in any locality north of us.

Concord Grape Vines — 2-yr., No. 1 grade, extra strong

This season brings to Harrisons' customers one of the finest crops of fruit trees and grape vines we have ever had. Climatic conditions this year were exceptional, resulting in root growths for which every planter will gladly pay premium prices.

The soil on which our vines are grown is especially adapted to root growth. Our propagating stock is selected from healthy, vigorous, heavy bearing vines. This results in a vine that will give you 100 per cent satisfaction in your vineyards.

Our sandy loam soil is especially adapted for growing big rooted Grape Vines. We have about 500,000 thrifty one- and two-year roots to offer this season. If interested in 1000 or more send us your list for quotations.

MAKE MONEY GROWING GRAPES

The increasing demand for grape juice and other extracts make this a big money crop for the formers. Get your vineyard started now and be ready for the increased demand for grapes. For commercial vineyard, Concord is by far the best.

GRAPES ~ A Lifetime Investment

What a Strain! THAT SUPER CONCORD GRAPE

Harrisons' Magnificent Super-Strain CONCORD

Black, midseason. The most popular and extensively planted grape in America. It adapts itself to varying conditions and is grown in most every state in the union. Large, compact bunches of dark purplish black colored berries. The berries are covered with a rich bloom, skin is tender, but is sufficiently firm to carry to distant markets; flesh is juicy, sweet and tender.

Exceptionally Heavy Yields

Concord is a very vigorous grower, hardy and very productive. It ripens during midseason, and is rated as the best money-making commercial variety.

CONCORD

BLACK GRAPES

True-to-Name

CLINTON. Black. Late. A rank grower, hardy; bunch and berry small to medium size, slightly juicy and spicy. Ripens two to three weeks after Concord.

FREDONIA. Black. Very early. Originated by New York Experimental Station. The bunch and berry are large with excellent, juicy, delicious flavor. Vigorous and productive. Ripens fully ten days before Moore's Early.

IVES. Black. Midseason. Quality good when fully ripe. Produces a successful market grape.

MOORE'S EARLY. Black. Early. Bunch and berry very large. Equal to Concord in quality, health and hardiness, but ripens about ten days earlier. It is a fair grower, valuable for garden and vineyard.

WORDEN. Black. This excellent grape is as hardy, healthy, vigorous and productive as Concord, of which it is a seedling, but better in quality. It is sweeter, larger in bunch and berry. Several days earlier. Valuable for garden and vineyard.

RED GRAPES

True-to-Name

AGAWAM. Red. Midseason. Large, thick skin, aromatic flavor. Vines strong, rank grower. Hardy and productive. Ripens with Concord.

BRIGHTON. Dark red. Early, bunch large, berry medium size. Skin thin. Flesh tender. Sweet and best quality. Vine vigorous and fairly productive.

CACO. Red. Midseason. Fruit is very large and handsome. A rich wine-red color. Not a very rank grower and a shy bearer.

CATAWBA. Red. Very late. Large. Flesh pulpy with rich vinous flavor. Quality good. A very desirable variety.

DELAWARE. Red. Early midseason. Bunch and berry good size, compact, flesh juicy, very sweet and refreshing. Vine very hardy and productive. A slow grower. Requires rich soil, good culture and close pruning.

LUCILE. Red. Early. Very large bunches, large fruit. Vine is vigorous grower, hardy, and enormous bearer. Quality very good.

SALEM. Dark red. Midseason. Bunch and berry large. Flesh sweet, tender, with rich vinous flavor. Good keeper, vigorous and productive.

NEW the Sensational Boysenberry

The New Mammoth Berry that Will Revolutionize the Berry-Growing Industry
BOYSENBERRY, 2 inches in length

The new Boysenberry is truly a glorified Youngberry. We offer it again this year because of the tremendous large size of the berries; because of its very prolific fruiting; and lastly, because we think that it has the highest qualities of all bramble fruits.

They are just as easy to grow as blackberries. They produce a larger crop, not because there are more berries, but because each berry is so much larger. Has a rich, tangy flavor all its own. The few seeds are scarcely noticeable. Plant 6 feet apart in rows 6 feet across. You will be surprised at the berries you can get from a dozen plants.

SPECIAL LOW PRICE OF THE NEW BOYSENBERRY

15c each; 10 for \$1.20; 25 for \$2.50; 50 for \$4.00; 100 for \$7.00; 250 for \$15.00; 500 for \$27.50; 1000 for \$50.00.

Eldorado Blackberry

The Heavy Yielding Variety. The heavy producing quality of Eldorado has placed it first among blackberries. Every good quality possessed by other blackberries is emphasized in Eldorado. Its berries are of enormous size, shiny jet black, sweet pleasing flavor.

For Home or Commercial Planting. It is valuable for all purposes, both home and commercial, being so firm that it will remain in good condition for three and four days, and can be sent to distant markets, where it always commands the highest price. This variety is making big money for other growers and it will do the same for you.

ALFRED. A comparatively new blackberry that has given good results wherever planted. Immense sized berries, practically coreless, heavy producers and very hardy. Worthy new commercial variety, ripens over a long period of time.

EARLY HARVEST. Black, very early, excellent quality, good size, ripens 10 days to two weeks before any other. Favorite commercial berry in middle Atlantic states.

MERSEREAU. Brilliant black, late, very large berries, extra good quality. Heavy producer, extra strong grower.

BOYSENBERRIES

The Mammoth Dewberry LUCRETIA

Long, mammoth blackberries, recognized as the leading variety. Incomparably better in every way than any blackberry you have ever seen or tasted. Lucretia is a very early bearer, ripening from a week to ten days before even the earliest blackberries. Big, uniform size makes them top-notchers in price on any market. For real profits and for home and commercial growing, Lucretia is the only variety of importance.

The New Giant CULTIVATED BLUEBERRIES

Blueberries are not only the largest money-maker of all time, commercially, but also the plants may be used as ornamental shrubs of rare beauty. Easy to grow, and the berries bring 55c to 75c per quart —\$400.00 per acre the third year. They must have an acid soil, good drainage, and a moderate supply of moisture. Nearly every home has low acid soil, which is considered worthless that will grow this profitable crop.

As an ornamental they may be used in lawn plantings. In autumn, the leaves drop, leaving bright red twigs to remain all winter. Plant no less than two to insure pollination.

BLUEBERRY VARIETIES—Listed in order of ripening:

CABOT. Earliest, large berries, low grower.

RANCOCAS. Very productive, large berries.

CONCORD. Delicious in flavor, extra large berries.

RUBEL. Heaviest bearer, most dependable, delicious, large berries.

JERSEY. The latest. Very large berries.

PRICES OF ALL VARIETIES BLUEBERRIES:

12- to 15-in., 2-yr., \$1.25 each; 2 for \$2.30; 10 for \$10.00.
Write for prices on large quantities.

BLUEBERRIES—Ornamental as Well as Fruitful

The Giant Red Raspberry

LATHAM

WORLD'S LEADING RASPBERRY

The sensational yields of this variety have attracted the attention of growers everywhere, and all those who have given it a trial are praising the many unusual features they have found in Latham. After thoroughly testing Latham we find it a remarkable variety in every respect; you will be both delighted and surprised after giving it a trial.

Tremendously Productive; Large Berries. Latham is a tall, vigorous grower, the canes are extra heavy, well able to support the load of fruit. The foliage is healthy, dark green, tough and leathery, highly resistant to insects. Latham ripens with Cuthbert. Covers a longer fruiting season. The berries are beauties and will cause a sensation wherever they are shown. Many are over an inch in diameter and they hold this size to the end of the season. Color dark rich red.

A Blue Ribbon Winner for the Home and Commercial Grower. It simply cannot be equalled.

12 Selected Latham Raspberry plants for only 75c

CUMBERLAND RASPBERRIES

CUMBERLAND

Midseason to late. This is the most popular Blackcap at the present time, because of its great size, firmness, and productiveness. The fruit is the largest of the Raspberry family, and is of such handsome appearance that it is sure to bring the top prices on the market.

A BIG CROP EVERY YEAR

Cumberland has never been known to fail to produce a big crop every year. This variety is perfectly hardy and tremendously productive, the bushes are vigorous, upright and healthy. Berries are glossy black in color, not equalled by any other variety in quality, flavor and appearance. It's good to eat and good to sell.

The most popular Black Raspberry

Other Black Raspberries

NEW LOGAN. A new Black Raspberry variety; probably its two most noteworthy characteristics are that it ripens about a week earlier and is more resistant to the virus diseases. A very productive variety and fruit of good size and quality. If an early berry is desired, it is one of the best. It does not crumble.

PLUM FARMER. Very popular with many growers on account of its earliness of ripening. Plum Farmer has the ability to mature its customary big yield in a very short time, generally 15 to 20 days. The plants are healthy, canes strong growing. Ripens a week earlier than Cumberland.

Other Red Raspberries

CHIEF. A new Red Raspberry that is destined to challenge the supremacy of Latham, originated by the Minnesota State Breeding Farm and has been given rigid tests over a wide area. It has proven hardy, resistant to disease, a heavy cropper of large, excellent quality berries that will withstand shipments to market.

ST. REGIS. There is a demand for this fine fruit in the late summer and fall. Growers make exceptionally large profits when grown for markets. However, if you do not grow them for market, by all means plant a few bushes for home use. St. Regis produces a big crop of fruit during the regular season and then continues bearing all summer and fall on the new canes.

NEWBURGH. The new Red Raspberry which is gaining popularity rapidly. Bright red, excellent shipper, high quality. Earlier than Cuthbert. A new commercial leader.

Nursery Stock a Good Investment. Is there any other thing about your home that grows in value, interest and beauty each succeeding year like trees and plants? Most other things are wearing out with use and age and constantly depreciating in value. That is why we say our nursery stock is a permanent and cumulative investment. What is that shade tree that cost you two or three dollars a few years ago now worth to your place? If you are contemplating a planting, not for years have you had such an unusual opportunity to secure plants of Harrison's quality at such low prices.

Quality Stock at Lowest Prices. With one of the finest growing seasons and prices lower than in years, landscape architects and garden lovers are taking advantage of the "America Beautiful" spirit by purchasing their planting material now.

As in all buying, it pays to know what you are getting in buying nursery stock—you can't afford to take chances. When you buy from Harrison's Nurseries you know that a strong established organization with over fifty successful years of experience is behind every transaction. Harrison's stand back of the quality of every plant they send out.

 Strong, 2-year specimens

EVERYWHERE people are making their homes more livable, more attractive. A little planning, a little planting. And what joy and satisfaction in having a home framed with beautiful trees and a well kept lawn planted to shrubs and flowers.

ALTHEA, ROSE OF SHARON (*Hibiscus syriacus*). The double and single flowers are formed in varying colors. We can supply double red, single red, white with crimson eye, single white.

BUDDLEIA MAGNIFICA. New and undoubtedly the finest of all the summer-flowering Butterfly Bushes. Large, bright lavender panicles. Flowers do not sunburn as do other varieties. Foliage heavy, rich dark green. Hardy.

DEUTZIA, PRIDE OF ROCHESTER. Double white flowers, slightly tinged rose, in mid-June.

DOGWOOD, RED-BRANCHED (*Cornus alba sibirica*). Bright red bark, white flowers, blue fruit; rapid grower; beautiful winter effect.

GOLDEN BELL (*Forsythia*). Vigorous, upright grower; profusion of yellow flowers in April. One of our best early blooming shrubs.

HONEYSUCKLE, JAPANESE BUSH (*Lonicera Morrowi*). Early white flowers in June, followed by red berries.

QUINCE, JAPANESE FLOWERING (*Cydonia japonica*). Scarlet flowers in April and May. No doubt one of the most attractive spring blooming shrubs.

SPIRAEA ANTHONY WATERER. Crimson flowers in large, flat clusters. Blooms early and continues till fall.

SPIRAEA REEVESIANA. Slightly drooping shrub covered in May with clusters of single, white flowers.

SYRINGA; SWEET MOCK ORANGE or GARLAND (*Philadelphus coronarius*). Of upright habit, and produces in June a wealth of white, fragrant flowers.

TAMARIX, AFRICAN (*Tamarix africana*). Feathery gray-green foliage, very showy.

TARTARIAN HONEYSUCKLE (*Lonicera tatarica*). Very attractive in blossom, producing an abundance of flowers followed by red fruit. We offer pink and white varieties.

This colorful shrub planting adds that "bit" of beauty so necessary to the home. Each variety should be carefully selected and planted to get the proper place and correct balance. These shrubs blossom intermittently from April until frost.

WEIGELA, PINK (*Weigela rosea*). The most popular Weigela sold today. Its delicate pink, bell-shaped flowers are borne in great profusion along arching branches.

TAMARIX GALLICA. Light pink blossoms in May and June. Bluish green foliage.

TAMARIX AMURENSE. Slender branch covered with pink flowers. Gray-green foliage.

VARIEGATED WEIGELA. Sprays of rosy pink flowers. Beautifully variegated green and white foliage.

WINTER or FRAGRANT HONEYSUCKLE. Highly esteemed for its exceedingly sweet scented, pinkish white flowers during winter.

SPIRAEA BILLIARDI. A hardy type of Spiraea that grows exceedingly well in dry places. Long, fluffy flower spikes. We offer two colors: white and pink.

WEeping GOLDEN BELL (*Forsythia suspensa*). A graceful variety with long, slender, drooping branches. Fruit yellow, produced in great profusion during early spring.

Lifetime Shrubs To Beautify Your Home

The Glorious Spiraea Van Houttei

This grand shrub has done more to beautify the homes of America than any other variety. It is valuable as a specimen in groups in border planting and for hedges. The branches are slender, drooping, covered with white flowers in April or early May. It grows in any place either in full sunlight or partial shade. Disease resistant, hardy, thrives under adverse conditions. Ultimate height 6 to 8 feet but can be kept lower by trimming. The most popular shrub. We have an extra fine supply of first class plants this year and are pricing them especially low.

- 1 to 1½ ft. 15c each; 3 for 39c; 10 for \$1.00; 50 for \$ 4.00
- 1½ to 2 ft. 20c each; 3 for 51c; 10 for \$1.40; 50 for \$ 5.50
- 2 to 3 ft. 25c each; 3 for 60c; 10 for \$1.80; 50 for \$ 7.50
- 3 to 4 ft. 30c each; 3 for 75c; 10 for \$2.20; 50 for \$10.00

GOLDEN TWIG DOGWOOD (*Cornus stolonifera flaviramea*). Dwarf grower, branches are golden in color; most attractive in winter.

- 1 to 1½ ft. 30c each; 2 for 50c

HYDRANGEA PEE GEE (*Hydrangea paniculata grandiflora*). Large flowers; first snowy white, then pink, changing to reddish bronze in the fall. Blooms midsummer to fall.

- 1 to 1½ ft. 30c each; 2 for 50c
- 1½ to 2 ft. 40c each; 2 for 70c
- 2 to 3 ft. 50c each; 2 for 90c

HYDRANGEA, PINK or BLUE (*Hydrangea otaksa*). Old favorite southern hydrangea. When winters are severe we suggest heeling in. Large balls of pink or blue flowers; very attractive large leaves. Color depends on acidity of soil.

- Field-grown 60c each; 2 for \$1.00

COMMON SNOWBALL (*Viburnum opulus sterile*). The old-fashioned Snowball. Large, globular clusters of snow-white flowers in May and June.

- 12 to 18 in. 35c each; 2 for 70c
- 18 to 24 in. 50c each; 2 for 90c

FIRETHORN. A beautiful shrub covered with a profusion of white flowers in early spring, followed by bright orange berries which hang on all winter.

- 12 to 15 in. 50c each; 2 for \$0.90
- 15 to 18 in. 75c each; 2 for \$1.30

SWEET SCENTED SHRUB (*Calyanthus floridus*). Hardy, native, with many double chocolate colored flowers in May. Flowers, leaves, even wood, have a spicy fragrance.

- 18 to 24 in. ... 30c each; 3 for 75c

SPIRAEA VAN HOUTTEI

SPIRAEA THUNBERGI. In early spring its arching branches bear fine bright green foliage and a profusion of white flowers.

- 12 to 18 in. 30c each; 3 for 75c

SCOTCH BROOM (*Cytisus scoparius*). A lovely plant with great masses of yellow, pea-shaped flowers in June.

- 2 to 3 ft. \$1.50 each; 2 for \$2.75
- 3 to 4 ft. \$1.75 each; 2 for \$3.00

CREPE MYRTLE (*Lagerstroemia indica*). Small, green, glossy leaves; very beautiful showy flowers during midsummer to fall; noticeable object in any landscape. Not hardy north of Mason-Dixon line, but most popular southern shrub. Pink and red varieties. State color.

- 1 to 1½ ft. ... \$0.75 each; 2 for \$1.30
- 1½ to 2 ft. ... \$1.15 each; 2 for \$2.00
- 2 to 3 ft. ... \$1.35 each; 2 for \$2.20
- 3 to 4 ft. ... \$1.50 each; 2 for \$3.70

NANDINA DOMESTICA. A beautiful upright growing shrub with numerous reedlike stems springing from the same root. Leaves deep, glossy green, when young tinged with red. In winter beautiful coppery tones are assumed. White flowers produced in long panicles are followed by masses of small bright red berries which are retained all winter.

- 15 to 18 in. ... \$0.75 each; 2 for \$1.30
- 18 to 24 in. ... \$1.10 each; 2 for \$2.00

DECORATIVE EVERGREENS

Our Splendid Trees Embellish the Grounds of Beautiful Homes the Country Over

AMERICAN ARBORVITAE

(*Thuja Occidentalis*)

THE FINEST LOW PRICED EVERGREEN

Probably no evergreen is more admired than the American Arbor-Vitae with its beautifully carved foliage of deep green, its graceful, refined habits and its artistic shape. These features make it indispensable in the home foundation groups and in lawn and garden plantings. This evergreen is easy to transplant and grows under adverse weather conditions.

Makes Beautiful Hedges

Rapid growing, thrives under unsatisfactory conditions, and ideal for evergreen hedges. You'll be delighted with a hedge planted with this remarkable evergreen. Can be kept trimmed if desired. Space plants 2 to 3 feet apart.

	Each	2 for	10 for	50 for
12 to 15 in.	\$0.60	\$1.10	\$5.00	\$22.50
15 to 18 in.75	1.40	6.00	27.50

5 to 6 ft.	3.50	6.50	30.00	112.50

Write for prices on larger sizes.

CHINESE ARBOR-VITAE (*Thuja orientalis*). An attractive, upright evergreen, rapid grower with bright green foliage. When young it is compact and rather pyramidal in form. As it becomes older it assumes the habit of a rather loose-growing Red Cedar. Very useful for screening purposes because of its rapid growth.

	Each	2 for	10 for
3 to 4 feet	\$1.75	\$3.20	\$14.50
4 to 5 feet	2.50	4.50	20.00
5 to 6 feet	3.50	6.50	30.00

PYRAMIDAL ARBOR-VITAE (*Thuja occidentalis pyramidalis*). A really beautiful evergreen that should be included in every planting. It grows tall and narrow, requires no trimming and retains its bright green color throughout the whole year. A pair of them placed at the entrance or at the corner of a home makes a superb showing. Our Pyramidal Arbor-Vitae are grown with extreme care and each one is a specimen.

SAVIN JUNIPER

turning to a rich purple-bronze color in fall and winter. Unusually good for planting along slopes and places where grass will not grow.

PFITZER'S JUNIPER (*Juniperus chinensis pfitzeriana*). The most popular of all spreading evergreens. Its peculiarly graceful, distinctive manner, plus an unusually hardy nature, makes it particularly fascinating and desirable for foundation planting.

Prices of Pfitzer's and Andorra Junipers:

	Each	2 for	10 for
18 to 24 inches	\$1.75	\$3.20	\$14.50
2 to 2½ feet	2.50	4.50	20.00
2½ to 3 feet	3.50	6.50	30.00

SPINY GREEK JUNIPER (*Juniperus excelsa stricta*). A tall grower of upright columnar habit and bluish green foliage. The growth is so slow that the tree is well adapted for foundation plantings and other situations requiring dwarf trees.

VARIEGATED SPINY GREEK JUNIPER. Similar to Spiny Greek Juniper, but has yellow spots throughout the foliage.

Prices of Spiny Greek and Variegated Spiny Greek Junipers:

	Each	2 for	10 for
2 to 3 feet	\$2.00	\$3.70	\$17.00
3 to 4 feet	3.00	5.50	25.00
4 to 5 feet	4.00	7.50	35.00

SWEDISH JUNIPER (*Juniperus communis suecica*). Tall columnar habit, dense, fairly broad foliage, drooping tips. Resembles the Irish Juniper but is somewhat slower growing and lighter in color.

SWEDISH JUNIPER

	Each	2 for	10 for
18 to 24 in.	\$0.90	\$1.60	\$7.00
2 to 3 feet	1.25	2.20	9.50
3 to 4 feet	1.75	3.20	14.50
4 to 5 feet	2.50	4.50	20.00
5 to 6 feet	3.50	6.50	30.00

VIRGINIA BLUE JUNIPER. Broadly conical form and beautiful glaucous blue foliage make it one of the choicest evergreens.

	Each	2 for
3 to 4 feet	\$3.00	\$5.00
4 to 5 feet	4.00	7.50

INDIAN CEDAR (*Cedrus deodara*). Feathery blue-green foliage, and graceful drooping branches, tall growing. Ideal to use as a specimen in the corners of lawns.

	Each	2 for
4 to 5 ft.	\$4.00	\$7.50
5 to 6 ft.	5.00	9.00
6 to 7 ft.	6.00	11.00

JAPANESE CEDAR (*Cryptomeria japonica lobbii*). A fine novelty, of slender habit, leaves deep green. Fine for a specimen plant, grows tall, and is ideally adopted for formal plantings.

	Each	2 for
2 to 3 ft.	\$2.00	\$3.70
3 to 4 ft.	3.00	5.50
4 to 5 ft.	4.00	7.50
5 to 6 ft.	5.00	9.50

SAVIN JUNIPER

(*Juniperus Sabina*)

Handsome, dark green foliage, spreading branches forming irregular vase-shaped bush. One of the most attractive spreading Evergreens grown. The ideal plant to use for low foundation plantings. Can be kept trimmed to any desired height.

	Each	2 for	10 for
12 to 15 inches	\$0.90	\$1.60	\$ 7.50
15 to 18 inches	1.25	2.20	10.00

JAPANESE PLUME-LIKE RETINOSPORA (*Retinospora plumosa*).

A handsome evergreen from Japan, with feathery, light green foliage, more beautiful than a fern. Excellent for foundation plantings; can be kept pruned to any desired height.

JAPANESE HINOKI RETINOSPORA (*Retinospora obtusa*).

Compact, pyramidal form; slightly drooping tips, beautiful dark green, flat foliage.

JAPANESE THREAD-LIKE RETINOSPORA (*Retinospora filifera*).

Has long, stringy, droopy branches, bright green foliage; slow grower, very attractive.

JAPANESE GOLDEN SAWARA RETINOSPORA (*Retinospora pisifera aurea*).

Habit of growth like the Sawara Retinospora, but its color is bright golden.

NEW LOW PRICES OF ABOVE RETINOSPORAS:

That are Not Expensive

Norway Spruce

ONE OF THE MOST POPULAR EVERGREENS

Planted in groups by itself or with other varieties of evergreens it is assuredly a delight to the artistic eye. In the springtime after the buds have burst open and the new growth shoots forth, its rich deep green blends so harmoniously with other varieties of evergreens. The compact habit of the tree, its inter-lacing branches and thick foliage and its rapid growth makes it especially desirable for groups on the lawn where an ornamental screen is needed, at terminal points of shrubby groups for emphasis or at curves in the driveway where they serve to break up bleak stretches.

POPULAR FOR HEDGES

The Norway Spruce is also a popular evergreen for hedges, both high and low. It is easily sheared and the foliage never discolors or burns during an unfavorable winter or spring.

Arbor-Vitae

ELLWANGER'S or TOM THUMB ARBOR-VITAE (*Thuja occidentalis ellwangeriana*). A low, broad pyramidal form of evergreen with slender branches and feathery foliage.

SIBERIAN ARBOR-VITAE (*Thuja occidentalis sibirica*). Dark green color, broadly pyramidal, very hardy and holds green color during the winter.

LEE GOLDEN ARBOR-VITAE (*Thuja occidentalis elegantissima*). Compact, pyramidal plant, golden green foliage; dependable, hardy and vigorous in growth.

FERNLIKE ARBOR-VITAE (*Thuja occidentalis filicoides*). Pyramidal in shape, dark green whorled foliage.

GEORGE PEABODY ARBOR-VITAE (*Thuja occidentalis lutea*). A beautiful variety, the gold marking diffusing more deeply into the foliage than in any other tall growing evergreen.

See how we grow bushy, symmetrical Arbor-Vitae specimens

NORWAY SPRUCE

All Evergreens
Are Balled in
Rich Earth

VERVAENE ARBOR-VITAE (*Thuja occidentalis vervaenana*). More compact than American Arbor-Vitae, good green foliage, slightly variegated.

Prices of all Arbor-Vitae:

	Each	2 for	10 for
18 to 24 in.	\$1.10	\$2.00	\$ 9.00
2 to 3 feet	1.50	2.70	12.00

Yews or Taxus

Beautiful Rich Green - All Year
Hardy, Disease-Resistant, Long-Lived

IRISH·YEW *taxus baccata hibernica*

Fine Soft Lustrous Foliage

An ARISTOCRAT from OLD IRELAND

IRISH YEW (*Taxus baccata hibernica*). This Evergreen is the aristocratic member of the Yew family. It grows tall and narrow with stout, crowded branches and spirally arranged leaves which are dark green in color. This Yew is very scarce, but everyone who sees it is enthusiastic about it. Formerly it was imported from Europe, but after all importations were discontinued by the Federal Government, American nurserymen were unable to supply their customers. Fortunately, we had some specimen plants in our nurseries from which we were able to propagate.

	Each	2 for	10 for
12 to 15 inches	\$1.25	\$2.20	\$ 9.50
15 to 18 inches	1.50	2.70	12.00

2 to 2½ feet	3.50	6.50	30.00
2½ to 3 feet	5.00	9.00	40.00
3 to 4 feet	6.00	11.00	50.00

HICKS' YEW (*Taxus media hicksii*). A narrow columnar growing form. Dark green leaves, resembles the Irish Yew, but is much hardier and a faster grower. Good for specimen or hedges. Same price as Irish Yew above.

JAPANESE SPREADING YEW (*Taxus cuspidata*). The beautiful Yew of moderate bushy growth, the spreading branches densely clothed with short leaves of dull green. Hardest of all Yews. Grows in semi-shady locations.

12 to 15 inches, \$1.00 each;
2 for \$1.80; 10 for \$8.00.

15 to 18 inches, \$1.50 each;
2 for \$2.70; 10 for \$12.00.

18 to 21 inches, \$2.00 each;
2 for \$3.70; 10 for \$17.00.

21 to 24 inches, \$2.50 each;
2 for \$4.50; 10 for \$20.00.

2 to 2½ feet, \$3.50 each;
2 for \$6.50; 10 for \$30.00.

Harrisons' Ornamental SHADE TREES

RAPID GROWING
VIGOROUS
STRAIGHT
TRUNKS

ORIENTAL PLANE

(*Platanus orientalis*)

A rapid, upright, clean growing shade tree, long lived, beautiful dense foliage. A superb tree of gigantic proportions, which is very hardy. The Oriental Plane, being originally an imported tree during the past generation, has rapidly won high popularity in recent years due to its many merits, which have made it the most useful and the most sought for shade tree for lawns, parks, streets and highway plantings. Harrisons' Nurseries are specializing in growing Oriental Planes and we are the largest growers in America.

Shade Trees Cannot be Shipped by Parcel Post
Can supply larger caliper sizes—write for prices

SILVER MAPLE (*Acer dasycarpum*). The name comes from the color of leaves. Underneath, these are the same shade as new, bright silver; on top they are light green. Many of them are carried on their edges, and when wind blows the trees are alive with silver and green flashes. In the fall the leaves fade to pale yellow. Growth is faster than that of any other Maple, and probably faster than that of any other shade tree. Branches are slim and dainty rather than heavy, and the form of growth is spreading. Gets very large eventually—as high as 120 feet sometimes—and does well over nearly all the United States. Makes splendid quick screens or quick shade. On streets and in parks is extensively planted, and is very fine.

AMERICAN ELM

AMERICAN ELM (*Ulmus americana*). A noble native tree of great size, wide spreading, gracefully curving branches, growing up in a form like the outline of long-stemmed flowers in a tall vase. The handsomest American tree for lawns, avenues and parks.

American Plane (*Platanus occidentalis*). A very rapid growing tree for yard and street planting. The bark is grayish green and peels off during the winter. Not as desirable as the Oriental Plane, but is a much more rapid grower.

Catalpa speciosa Rapid grower. Large heart-shaped leaves and panicles of white flowers tinged with violet.

**HARRISON'S NURSERIES, Inc.,
AT BERLIN, MARYLAND, IS
AMERICA'S LARGEST GROWER
OF SHADE TREES.**

Picture these lovely shade trees in your own garden. They are modern and really so inexpensive.

Trees

Harrisons' STATELY PIN OAKS

(*Quercus palustris*)

America's Favorite Oak Tree

The tree of trees—no other tree is more beautiful—once planted the Pin Oak continues to grow for a lifetime. Some of the finest, most attractive plantings depend almost entirely on the stately Pin Oak for their real landscape appeal.

BEAUTIFUL BRONZE COLOR DURING AUTUMN

Deeply cut, bright, fresh green foliage during the summer, turning to a bright bronze color during autumn. The most graceful tree for the lawn, equally as desirable for street or roadside planting.

YOU'LL NEVER REGRET PLANTING PIN OAKS.

PIN OAK

ALL HARRISONS' SHADE TREES HAVE BIG ROOTS, SHAPELY TOPS, AND GIVE IMMEDIATE EFFECT AFTER PLANTING

NORWAY MAPLE

NORWAY MAPLE (*Acer platanoides*). Typical Maple leaves, large and bright green, fading to gold in the fall. Trunk and branches are sturdy and strong, lending an effect of ruggedness. Growth is fast. Branches and foliage are thick and compact, and the head, which is round-topped, begins to branch not far above the ground. The tree is large—towering 50 feet high when fully grown. Splendid trees, most beautiful and desirable. For lining the sides of lanes and roads, for a lawn, to protect the house from sun and weather, for shade, for beauty and satisfaction, and for real permanent worth in all landscape planting there are no other trees in its class. Norway Maples are at home in the mountains, but will thrive at any elevation, and in nearly any soil to be found in this country.

SWEET GUM (*Liquidambar styraciflua*). A shapely tree with slender, corky-ridged branches. Leaves are bright green and lustrous; in autumn they change to a pleasing tone of crimson color.

MOLINE ELM Grows into a dense conical specimen.

EUROPEAN LINDEN (*Tilia platyphyllos*). Pyramidal in form, its abundant foliage forms a dense shade.; flowers fragrant.

RED or SCARLET MAPLE (*Acer rubrum*). Brilliant autumn coloring, eventually grows into big tree size. Do not confuse with Japanese Blood Leaf Maple.

Plant Chinese Elms for Quick Shade

NORTHERN STRAIN

CHINESE ELM

Grows 20 feet in Four Years

Because of its beauty and extremely rapid growth, Chinese Elm has become a leading shade tree of America. It is planted in every state, and like its native country of Korea, withstands intense cold and extreme heat. It makes excellent shade in five short years, averaging about 5 feet growth annually. It is by far the fastest growing hard-wooded shade tree. It resembles the American Elm except the leaves are smaller, with the gracefulness of a cut-leaf Birch.

6 to 8 ft., 1 to 1 1/4 in. cal., \$1.50 each; 2 for \$2.70; 10 for \$12.00; 100 for \$110.00.

8 to 10 ft., 1 1/4 to 1 1/2 in. cal., \$2.00 each; 2 for \$3.70; 10 for \$17.00; 100 for \$150.00.

Picture these lovely shade trees in your own garden. They are modern and really so inexpensive.

10 to 12 ft., 1 1/2 to 1 3/4 in. cal., \$2.50 each; 2 for \$4.50; 10 for \$20.00; 100 for \$175.00.

CHINESE ELM. Quickest Growing Tree in the World

Lovely Red Maple . . . Umbrella Tree Poplar . . . or Weeping Willow

JAPANESE BLOOD-LEAF MAPLE (*Acer palmatum atropurpureum novum*). Picturesque Maple for use in landscape schemes, as an individual specimen or to add color to your planting. Very conspicuous, medium size bush with blood-red foliage. Best color in sunny locations. We offer an improved strain.

Each	2 for
8 to 15 inches	\$1.25 \$2.30

CATALPA BUNGEI or **Umbrella Tree**. Umbrella-shaped heads without pruning. Hardy, have large, glossy green leaves; usually planted in pairs on opposite sides of an entrance or walk.

Each	2 for
3-year heads, 5- to 7-foot stem	\$1.50 \$2.70

HONEY LOCUST (*Gleditsia tricanthos*). Loose, open, flat top; leaves small, compound, assume yellow color in fall. Thrives in barren exposures.

Each	2 for	10 for
5 to 6 feet	\$.80	\$1.50 \$7.00

LOMBARDY POPLAR (*Populus nigra italica*). A tall, spirelike tree used for screens and formal plantings. It is fast growing, distinctly ornamental and beautiful.

	Each	2 for	10 for	100 for
6 to 8 feet	\$.80	\$1.50	\$7.00	\$65.00

Always makes an attractive hedge
For prices, see page 51.

JAPANESE BARBERY — Green in the summer, turning to a brilliant coppery red in late fall, a protection against small animals, because of the sharp thorns. This type of hedge is practical and inexpensive.

HARRISONS' GENUINE HEALTHY BOXWOOD AT AMAZINGLY LOW PRICES

The Famous Colonial Boxwood of the South

Dwarf English Boxwood

(*Buxus Sempervirens Suffruticosa*). A widely known and popular form of dwarf Boxwood. It has small deep green dense leaves which hold their bright color throughout the winter months. Suitable for very low hedges and edgings; can be trimmed in various forms.

Easy to Grow. Dwarf English Boxwood is easy to grow and will thrive in most every type of soil. After this plant once becomes established, it does not require any particular attention. It is practically immune from all diseases and insects. Can be planted in the full sunlight and semi-shady locations.

Large Specimen Plants Sell at High Prices. Dwarf English Boxwood has been called the "Century" plant, due to its ability to live over a hundred years. A few years ago, large plants sold for fabulous prices, many selling for hundreds of dollars.

Ideal for Dwarf Hedges. Make your home grounds the show place of your community. Dwarf English Boxwood is the ideal low growing plant to add the finishing touches to your home grounds. It stays green all winter and provides your planting with year around beauty. Can be trimmed if desired, but not necessary, unless you want the strictly formal effect.

LOVELY

BROADLEAF EVERGREENS

the foliage stays green all winter

BUSH ARBUTUS (*Abelia grandiflora*). One of our most beautiful, popular and satisfactory Broad-Leaved Evergreens. The graceful, drooping stems and branches are covered with dark, glossy leaves, which in winter assume a metallic sheen. From the middle of June until frost, this plant produces an immense quantity of tubular-shaped white flowers tinged with pink, about an inch long, which are borne in clusters. Good for shady locations.

9 to 12 in. 40c each; 2 for \$0.70; 10 for \$3.00
1 to 1½ feet 50c each; 2 for \$0.90; 10 for \$4.00
1½ to 2 feet 75c each; 2 for \$1.40; 10 for \$6.50

BERBERIS JULIANAE. A beautiful and rare evergreen variety. It stays perfectly green during the winter and blends well with other evergreens and broad-leaved evergreens.
9 to 12 in., 40c each; 2 for 70c.

LEATHERLEAF VIBURNUM (*Viburnum rhytidophyllum*). Large, oblong, crinkled, deep green leaves. Flowers yellowish white, berries deep red. 12 to 15 in., 70c each; 2 for \$1.20. 15 to 18 in., \$1.00 each; 2 for \$1.80.

GREEN EUONYMUS (*Euonymus japonica*). Green, glossy, evergreen foliage, upright grower. Thrives under adverse soil conditions. Ideal for planting at seashores. 9 to 12 in., 30c each; 2 for 50c. 12 to 18 in., 50c each; 2 for 90c. 18 to 24 in., 75c each; 2 for \$1.30. 2 to 3 ft., \$1.25 each; 2 for \$2.20.

MOUNTAIN LAUREL (*Kalmia latifolia*). Most effective in June when the clusters of pink flowers open. Good foliage, likes shady locations. 2 to 3 ft., \$1.50 each; 2 for \$2.70.

COTONEASTER HORIZONTALIS. A low shrub with almost horizontal branches. Leaves dark green, pinkish white flowers followed by red berries. 9 to 12 in., 50c each; 2 for 90c. 12 to 15 in., 70c each; 2 for \$1.20.

REAL HOLLY TREES THAT BREATHE OF CHRISTMAS

AMERICAN HOLLY (*Ilex opaca*). The Christmas Holly. Its bright green, spiny leaves and brilliant red berries make it one of our handsomest plants. 12 to 18 in., \$1.25 each; 2 for \$2.20. 18 to 24 in., \$1.75 each; 2 for \$3.20.

JAPANESE HOLLY (*Ilex crenata*). A much-branched evergreen shrub with oval crenate leaves. Clusters of black berries form during the fall. Makes a splendid plant. 9 to 12 in., 40c each; 2 for 70c. 12 to 15 in., 70c each; 2 for \$1.20. 15 to 18 in., \$1.00 each; 2 for \$1.80. 18 to 24 in., \$1.50 each; 2 for \$2.70. 2 to 3 ft., \$2.25 each; 2 for \$4.00.

HOLLY-LEAVED MAHONIA (*Mahonia aquifolium*). Bright glossy green, holly-like leaves, turning rich red and bronze in autumn. Clustered racemes of attractive yellow flowers in spring.

LIGUSTRUM LUCIDUM. Large, thick, shiny dark green leaves; white flowers, black berries in winter. Will thrive in shady locations.

HARDY CHERRY LAUREL. An improved form of Cherry Laurel, much hardier, slightly dwarfier grower.

PRICES OF ABOVE VARIETIES:

15 to 18 inches	\$0.75 each; 2 for \$1.30
18 to 24 inches	\$1.25 each; 2 for \$2.20
2 to 3 feet	\$1.75 each; 2 for \$3.00

Azaleas Can Be Satisfactorily Grown in Shady Locations

Supreme Rose Offer No. 635 6 Super-Select Grade Roses for \$3⁰⁰

OF THE FOLLOWING VARIETIES:

- | | |
|-------------------------------------|-----------------------------------|
| 1 Caledonia. White. | 1 Pres. H. Hoover. Multi-colored. |
| 1 Pink Radiancance. Pink. | 1 Mrs. Chas. Bell. Light pink. |
| 1 Souv. de Claudius Pernet. Yellow. | 1 Red Radiancance. Red. |

Harrisons' Roses Are Graded to the Highest Standards

Our Roses are graded in three groups. The best quality is our extra select grade, it is the cream of our crop and is comparable in size, quality and blooming habits with Roses offered by some growers at three times our price.

Our select grade are equally as good and in many instances better than Roses offered by some concerns as their first grade.

Every medium grade Rose is a strong, sturdy, two-year, field-grown plant and is the size usually sold at double our price.

Harrisons' Guaranteed Super-Select Grade Field Grown Rose Plant

ROSE GUARANTEE

All of our Super-Select Grade of Roses are guaranteed to grow and bloom at their first natural blooming period; if they fail, we will replace them without cost to you. All other grades of Roses are subject to our regular guarantee.

Roses Growing in the Nursery. We Grow the Roses We Sell

HARRISONS' ROSES ARE GROWN BY A SENSATIONAL NEW METHOD

Bud selection method of propagation is a definite improvement in Rose growing. It results in bigger, brighter, better quality blooms in larger quantities with stronger, healthier growing plants. Each and every plant we grow for sale is the offspring of the plant that was especially selected for its free flowering characteristics, pureness of color and type, vigorous and exceptionally free from diseases.

Other Popular ROSES

AMI QUINARD. Very dark crimson-maroon.

AUTUMN. Orange stained red and pink.

COLUMBIA. A lovely pink. A favorite for many years.

DAME EDITH HELEN. A lovely pink rose that is much desired in certain sections.

Pres. H. Hoover

DUCHESS OF WELLINGTON. Beautiful buds of saffron-yellow, deeply tinted with orange.

DUQUESA DE PENARANDA. Long pointed buds of apricot-orange, which open to blooms of coppery apricot.

E. G. HILL. It constantly produces beautiful buds on long stems, opening into large, double, fragrant flowers of shining red.

EDITH NELLIE PERKINS. Exquisite two-toned pink. Always in bloom.

ETOILE DE FRANCE. An old favorite, sparkling red. Very desirable.

FRANCIS SCOTT KEY. Large, double, perfectly formed flowers of crimson-red.

GRENOBLE. Scarlet-crimson. Long stems.

GRUSS AN TEPLITZ. The great bedding rose. Brilliant scarlet, very hardy, always in bloom.

INDEPENDENCE DAY. A brilliant orange-copper rose that is always in bloom. Admired by all.

JOANNA HILL. A fine yellow rose; fragrant.

LUXEMBOURG. A fine yellow rose.

Harrisons' Berlin, Maryland, Nursery Field Grown Rose Bushes are Definitely Superior

Betty Uprichard Semi-double, large with harmonizing shades of carmine and salmon, rising from an orange base. Fragrant aroma. Hardy, vigorous, and disease-resistant.

Caledonia Long buds opening ivory, changing to large, pure white, double blooms of soft velvety texture. Very vigorous, upright and free branching.

Condesa de Sastago Marvelously colored rose with large cupped flowers of coppery red inside and rich yellow outside. A profuse bloomer at all times, keeps well when cut, and is spicily fragrant. Compares with the Radiance rose in vigor and hardiness.

These Roses are pictured in true colors on inside back cover page.

Editor McFarland Firm textured, perfectly formed flowers of clear brilliant pink. Beautiful fragrant blooms on long stems throughout the season. The plant is strong, bushy, very vigorous, and free-flowering.

Etoile de Hollande At present considered most popular of crimson Hybrid Teas. Velvety scarlet-crimson with delicious fragrance, and enormous petals. It charms continuously with its delightful color, vigorous growth, and well-formed flowers on long stems. Truly a faultless rose.

Golden Dawn Generally considered the finest yellow rose. Blooms of soft lemon-yellow tinted with old rose markings, long-lasting fragrance of real Tea scent. Hardy, bushy, medium height, and very vigorous.

Kaiserin Auguste Viktoria Perfect creamy white bloom, slightly tinged with lemon, large and full. Long shapely buds open to full-petaled, deliciously scented bloom. An old favorite that even today has not been surpassed.

Harrisons' Field Grown Hardy ROSES

Mrs. Chas. Bell A delicate, refined shell-pink shade, intensely fragrant. Very vigorous, tall and bushy. A sport of the ever-popular Pink Radiance, and sometimes called "Shell Pink Radiance." An exquisite rose that should be in every garden.

Mrs. E. P. Thom Deep yellow buds, with carmine markings, opening to semi-double, clear lemon-yellow, never fading blooms. Similar to Souv. de Claudius Pernet, being among the best yellows grown successfully throughout the United States.

Mrs. Pierre S. du Pont Medium sized red-dish gold buds open to a semi-double golden yellow that is a glorious sight from early summer until freezing weather. Moderately fragrant. Vigorous, compact, glossy foliage. The "ace" of the golden yellow roses.

Red Radiance A sport of the famous Radiance and identical in all characteristics except color. A brilliant cerise-red color, and intensely fragrant. Tall and bushy, healthy foliage and excellent blooming qualities. The favorite red rose of America's millions.

Radiance A brilliant carmine-pink with yellow shading at base of petals, having a light silvery tone on the inside, and deeper on the outside. The vigorous, free bloomer, parent of Red Radiance. Among the oldest roses, planted everywhere because it has made good everywhere.

Souv. de Claudius Pernet Unfading yellow flowers of tantalizing aroma. Strong plants of fine form. Probably the richest yellow of all roses. An old favorite.

Talisman A multi-colored glorious combination of orange, yellow and rose-red. They simply eclipse other roses in autumn. Fine for both decoration and cutting. The triple-tone flowers are produced all season.

Golden Dawn

These Roses are pictured in true colors on inside back cover page.

Mrs. Chas. Bell

Other Popular ROSES

MME. EDOUARD HERRIOT. Brilliant orange-red and salmon-flame, always in bloom.

MARGARET MCGREDDY. The most popular red rose, always in bloom; a thrifty, healthy, vigorous grower. One of the finest of all roses.

MEV. G. A. VAN ROSSEM. An exceedingly fragrant rose of orange and bronze, beautifully veined. Fine for cutting.

MCGREDDY'S SCARLET. Free bloomer, beautiful flowers of deep vivid rose-red.

MME. JULES BOUCHE. White buds which show slight blush in center. Fragrant.

MME. BUTTERFLY. Light pink, faintly tinted with gold near base of petals. Richly perfumed.

MRS. LOVELL SWISHER. Coppery salmon flowers which fade pleasantly to lighter hues.

MRS. SAM MCGREDDY. Coppery scarlet-orange flowers. Richly fragrant.

RAPTURE. Glowing pink, fine for cutting.

ROSLYN. A new rose, deep yellow shaded orange.

ROWENA THOM. Extra large blooms of satiny pink shaded orange-flame.

SOUV. DE GEORGES PERNET. Magnificent blooms, brick-red.

VATERLAND. Dark red rose and very double, strong grower.

VILLE DE PARIS. A fine yellow rose.

Gorgeous Roses That Make Any Planting More Colorful

Harrisons' Hardy Climbing and Pillar Roses

DOROTHY PERKINS
A Typical Climber

DR. W. VAN FLEET

FRAU KARL DRUSCHKI

POLYANTHAS Bloom in Beautiful Masses. Loads of Flowers All Summer

Climbers of all kinds are now being planted in the best Rose gardens, not only as Climbers, but can be trained over archways, doorways, arbors, trellises, pergolas, fences, and as cover for sloping banks and rough places. More of these varieties should be grown around every home, as there are very few flowering "vines" that are as beautiful as Climbing Roses.

AMERICAN PILLAR. Large clusters of single rosy pink flowers with yellow shadings. Rank climber.

ALIDA LOVETT. Lively bright shell-pink with shadings of rich sulphur at base of the petals.

BESS LOVETT. Lavishly produced flowers of bright red. Fragrant.

CLIMBING AMERICAN BEAUTY. Large, rosy crimson bloom.

DOROTHY PERKINS. Full double, shell-pink flowers in large clusters. A very attractive climber.

DR. HUEY. Deep crimson-maroon.

DR. W. VAN FLEET. Light shell-pink to silver-flesh color blooms; double climber.

GARDENIA. Small yellow buds, opening to creamy white; very fragrant climber.

HARRISON'S YELLOW. Bright golden yellow; very hardy.

JACOTTE. Orange-apricot. Fragrant.

MME. GREGOIRE STAECHELIN. A fine pink climbing Rose. One of the best.

MARY LOVETT. Pure snow-white flowers. Sweet scented.

MARY WALLACE. Semi-double, rose-pink blooms; salmon at base of petals.

PRIMROSE. A hardy, unfading primrose-yellow climbing Rose, double flowers. Vigorous.

PAUL'S SCARLET CLIMBER. Large, intense scarlet blooms; freely produced. It is strong and perfectly hardy. The most popular climbing Rose.

SCORCHER. A new Rose from Australia with enormous ruffled blooms of vermilion-red. Very free bloomer. Grows rapidly to a height of ten feet or more. No other climber like it.

PAUL'S SCARLET

FRAU KARL DRUSCHKI. Enormous pure white.

GENERAL JACQUEMINOT. Fragrant, perfect formed blossoms of scarlet-crimson.

MAGNA CHARTA. A rosy pink, full rounded, globular Rose of marked fragrance.

MRS. JOHN LAING. Soft pink, beautiful formed large, double blossoms.

PAUL NEYRON. The well known H. P., immense pink flowers.

ULRICH BRUNNER. Brilliant scarlet-crimson.

Polyantha Roses

Requiring less attention than Hybrid Teas, they bloom continuously from early summer to frost. The Polyantha or Dwarf Roses are indispensable for bedding, mass effect, and edging, with a color range almost as varied as Hybrid Teas.

CAMEO. New variety with distinct color, shell-pink tinged gold and salmon.

ELSE PULSEN. Rose-pink flowers. Hardy as an oak; always in bloom.

GOLDEN SALMON. A baby rambler, having large clusters of orange flowers.

GLORIA MUNDI. Bright orange-scarlet.

GRUSS AN AACHEN. White to carmine. Large fully double flowers of flesh-pink, salmon and yellow.

IDEAL. Dark red; free bloomer.

Money Back

In the event that any nursery stock sold by us should prove untrue to name under which it is sold, we hereby agree, on proper proof of such untruthfulness to name, to replace the original order or to refund the purchase price. Except for such liability, and in respect to all nursery stock sold by us, we give no warranty, expressed or implied, as to description, quality, productiveness or any other matter.
