The Political Economist.

THE SOCIAL AND THE POLITICAL RESULTS OF THE ROYAL MARRIAGE.

THE alliance about to be formed between England and Prussia is a subject for hearty congratulation, not only to the young Prince himself, but to both the great nations whose sympathies and interests will be drawn closer by the There are few of the great continental nations union. whose natural temper and character are really so much in harmony with our own as the people of Northern Germany. No doubt we admire and envy the French more for the possession of a class of talents and capacities totally different from our own; we envy the poignancy of their wit, we delight in the piquancy of their tastes; but when we come to the essentials of life which lie beneath the surface of society, we find ourselves entirely out of unison with French modes of thought and feeling. The ground of our daily thoughts, the substance of our daily ambition, the world of our poets and novelists, the ideal life of our middle class, the passion for liberty among all classes, are of a totally different type in England and in France. But with the people of Northern Germany we have far more in common. If we find less to admire, it is because we find far more to understand and love. There we find a simplicity of manner and feeling surpassing even the simplicity of England,—less enterprise and more light hearted content,-less reserve and more humility,-less success in practical life, but even more diligence and caution,-less audacity and self-confidence in external things, more boldness and self-confidence in theoretic pursuits,-less freedom of action, more freedom of thought,-less faith, more spontaneous and child-like feeling. All these characteristics are so closely allied to our own, and yet so different, that when fairly known, they form the natural ground of a very per-manent bond between the two types of national charac-ter; and it is easy to see that German literature and thought has taken a far deeper, though at present a narrower, hold of the English mind than the French literature and thought could ever take. The defects of the English mind are not the defects of the German, and yet both nations respect the same qualities of character-two conditions without either of which no cordial and lasting sympathy can exist. It is the accident of language and imperfect intercourse which has alone isolated us so completely from Germany ;-and we

may be sure that closer intercourse will tend-not perhaps, as in the case of France, to make German habits and tastes admired and fashionable amongst us-but, what is of far higher importance. to foster hearty mutual esteem between the great middle classes of the two nations.

But it is not simply as promoting the social alliance of the two nations that we may congratulate ourselves on the mar-riage of the Princess Royal. That indeed is the deepest, but it is not the most obvious and tangible result which this alliance will have on English affairs. We may, without vanity, believe that it will extend the influence of England on the Continent, and tend to wean from exclusive bias to Russian interest one of Russia's most powerful neighbours. Those who, when this alliance was first suggested, seemed to fear that it might tend to weaken the independence of England, and indirectly draw her diplomatists into the jealousies and intricacies of German politics, far under-rated, we think, the substantial dependence of English statesmen on the national will. To suppose that any Court influence, however strong, could have altered the course of English statesmanship during the Russian war,— simply because the leaning of Prussia was in a different direction,-is to suppose that that war was the result of ministerial and not popular resolve. The truth is obvious, that in any alliance of this kind, whichever of the two States is by its position and resources the most independent, may naturally hope to give rather than to receive That the cordiality between Prussia and support. England will be quickened by the close alliance between the heads of the Executive Government, we cannot doubt; and whether that increased cordiality will tend rather to increase Russian influence in England, or to decrease Russian influence in Prussia, is not, perhaps, a question that is very difficult to answer. It is, for example, in all probability, quite impossible to over-estimate the influence which English institutions and habits of friendship with English public men, have had in helping the King of Belgium to establish on a secure foundation the political institutions of that youthful kingdom. We have lately had reason to admire the firmness, the tact, the energy with which he held the reins of Government during a conflict of no slight magnitude, which threatened either to overthrow the constitutional rights of the laity or to plunge the State into civil war. No one can doubt that it was Leopold's familiarity with English political traditions and English history which at once enabled him so to rule Belgium, as to render constitutional and moderate measures at that crisis decisive with the people, and which taught him what those measures ought to be. And can we doubt that the same spectacle of English politics, and the same close connection with English statesmen, will produce a similar effect on the mind of the young Prince of Prussia, and confirm in him the habits of a constitutional monarch far more effectually than all the historical and legal lore of his German University training? All the political philosophy of Bonn and Berlin would never endear to him the constitutional freedom of Prussia, as will his personal experience of English politics and politicians,-his knowledge how real is the national life of England, and how much more real than it could ever have been had not kings and ministers known how to yield to the people as well as how to guide them.

And, last of all, we cannot doubt for a moment that the alliance just about to be formed will be a real security for

THE ECONOMIST.

Jan. 23, 1858.

the peace of Europe. The misunderstandings which arise because there is no cordial spirit between the Executive Powers in different countries are numerous; the misunderstandings which, having arisen, are not removed, but fostered into actual conflict, because there is no such cordial spirit at work in the mutual explanations that take place, are perhaps more numerous still. More than once lately we have beheld how a cordial understanding between France and England has either averted disagreement or subdued disagreement in its earliest stage. So, too, it will doubtless be between England and Prussia. Frank good-will is the first essential of political concord; and frank good-will must ever exist where the heads of the Executive would look upon war as a personal grief. They would know, indeed, that if the political purposes of the two nations were ever directly to cross each other, no power in the Executive could prevent a conflict: but they would be resolved that no merely apparent variance should be the occasion of so painful a struggle; and thus, by taking care to remove all the false conceptions of diplomacy they would remove the grounds of every merely formal strife. We may feel completely satisfied, therefore, that, on public as well as on personal grounds, the marriage of our Princess is a subject of mutual congratulation to Germany and England ; and indulge ourselves with the hope that for once, a source of private happiness is to be also a source of permanent political gain.

THE COURT'S DEFENCE OF THE DOUBLE EXECUTIVE OF INDIA.

THE Court of Directors have prepared a very able petition to the House of Commons against the abolition of the Double Government. So far as the petition is grounded on the assumption that the Minister for India will need the advice and support of an independent Council, including men of tried experience in the government of India,-and will need them not only as counsellors, but as lending him the authority of their names in resisting the hasty innovations of parliamentary excitement,-we entirely concur in the prayer of the petition. But when the Court of Directors go on to assume that such a body cannot be obtained except through the present cumbrous and wasteful machinery ;---that the Court of Directors is not an executive body, but a sort of Indian Parliament, discussing principles rather than initiating action ;- that there is no alternative between a perfeetly irresponsible constituency for the Imperial Council of India, such as we see in the Court of East India Proprietors, and complete subserviency to the party-exigencies of the moment,-we totally dissent from their memorial, and find in it the prejudice natural to their position.

The point raised by the memorial as to the non-executive character of the Court of Directors, and, in fact, of the Home Government altogether, is one of the first importance. " An executive authority, your petitioners submit, may often " with advantage be single, because promptitude is its first " requisite. But the function of passing a deliberate opinion " on past measures, and laying down principles of future " policy, is a business which, in the estimation of your peti-"tioners, admits of and requires the concurrence of more "judgments than one. It is no defect in such a body to be " double, and no excellence to be single, especially when it " can only be made so by cutting off that branch of it which " by previous training is always the best prepared,-and "often the only one which is prepared at all for its pecu-"liar duty." This is the same line of argument, somewhat more skilfully turned to account, which was used at the time of the last renewal of the Company's Charter in 1853. Sir Charles Wood then said :----" Orders " for executive administration are seldom issued from hence. " The greater part of the business consists in revising the " acts of the Indian authorities, but that is not business " which requires much despatch. Perhaps I should not be " far wrong in stating that nine-tenths of the Indian business " is to revise, and see whether the administration of India is " carried on consistently with the principles laid down." Sir Charles Wood here put the matter more clearly and far more instructively for the purposes of the present discussion, than the dexterous petition which we are now considering. For what is the substance of the proposition on which so much stress is laid,-except that nine-tenths of the business of the Indian departments in the Home Government is, strictly

speaking, neither deliberative nor executive, but the ordinary business of a bureau-the business of checking the conduct of a routine administration, by comparison with a standard of general principles previously laid down for its guidance? So far, therefore, as this argument goes, it is equally applicable to every department of the English Government. A large proportion of the business of the War Office certainly consists in "revising the acts" of the military authorities,checking the accounts of paymasters, and sanctioning or reversing the acts of subordinate authorities. Again, a large proportion of the business of the Board of certainly consists not in exercising direct Customs power, but in scrutinising the past exercise of power by subordinates, and giving approval or censure. Now it is exactly this simply *critical* function—this work of "revising the acts of the Indian authorities"—which least of any needs an independent deliberative body; it is characteristically the work of a bureau, as distinguished both from a deliberative council, or a responsible executive. And if this element predominates in our Indian departments, whether under the Court of Directors or the Board of Control, more than in any other department of State-as may well be the case, considering the distance from the seat of Government and the practical independence of the Local Indian Government-this is rather a new reason against than for the double constitution of the Home Government. There is no function more completely routine in its character than this measuring of past transactions by a standard of principle clearly laid down ;-and, in point of fact, ninetenths of the Indian business is done by the invaluable staff of professional officials, and merely receives a formal sanction from the higher authorities of the Company and the Government. To argue, therefore, that the Court of Directors is not properly an executive body, because a very large proportion of its duties are rather critical than active and initiative, is, in the first place, an argument which would almost dispose of the executive character of every department of State ;-and in the second place, one which, so far as it tells at all, brings out into prominence official functions quite as little in need of secondary checks as even executive functions themselves. The Court of Directors draw a true distinction between executive and deliberative offices, and leave it to be erroneously inferred that all which are not executive are deliberative ;- the truth being that by far the greater portion of the duties which are non-executive, are of the sort which least of all need a Double Government, because they consist mainly of the application of well-defined principles to new cases,-and are, therefore, work entirely appropriate to a bureau.

If, then, we subtract this very large element from the work of the Indian departments, which is of a kind exactly similar to the routine work of all other departments of State, how far does it remain true that the Home Government of India is not properly a branch of the Executive,and that, therefore, it is not an executive but a deliberative power which is thus divided into two parts? We take it hat to speak thus is a most delusive error. Could the House of Commons appoint to offices of trust, as do the Court of Directors and Board of Control? Could it pro-pose new items of expenditure like the Court? Could it without any Ministerial sanction take up the proposal of an Irish Lord-Lieutenant to lay down a telegraph, as the Board of Control assented to the proposal of Lord Dalhousie ? Could it authorise a reduction of a five per cent. loan to four per cent. without any suggestion from the Chancellor of the Exchequer? Could it order the introduction of a system of railways into any portion of the British Empire? Could it appoint, or dispense with, colonial councils, as the Court of Directors dispensed with the Council of Bengal and of the North-West Provinces? Could it send out troops, and determine how to send them? Could it reconstitute a grand army? Could it recall a Governor-General? Yet all these are powers which the Double Government at home have actually exercised; and we have omitted from the list those, like the declaration of war and peace, which are virtually lodged only in one branch of the Double Government. All the rest are executive functions, which are actually exercised by these authorities jointly,which may at least be initiated by either of them,which neither of them, therefore, feels absolutely called on to

set in motion. It is simply absurd to call the Home Government of India a non-executive power. No doubt the Indian Executive initiates many, perhaps most, of the practical measures suggested by the immediate experience of Indian difficulties. But the Indian Executive is a derived Executive; the rulers are representatives of English authority; the force by which they rule is furnished—and will now be furnished by a yet larger proportion—from the English shores. The numberless responsibilities and acts of authority, therefore, by which England recognises and asserts her supremacy in India, are *executive* acts by which she steers the Local Government, just as the Local Government steers the subordinate native Governments.

No doubt it is quite true to say that, in addition to all these practical executive functions, a deliberative body of Indian experience is needed to discuss the general principles of government, and record its regret at the departure from any of these principles. And here the value of an independent Indian Council becomes conspicuous enough. But there is the broadest distinction between the need for the existence of such a body, and for the existence of two distinct initiating Executives,-each of them trusting to the other to do what it omits,-each of them jealous of any policy which the other is the first to start. An undivided responsibility is absolutely requisite for the energy of an Executive Government,-and especially an undivided responsibility in taking the practical initiative. This the Double Government does not and cannot afford us. If the Court of Directors do not like the alterations made by the Board of Control in any of their despatches, they may and sometimes do let the matter drop altogether, and then it requires some courage and resolution in either the Court or the Board to start it again and push it to its conclusion. So far as the Board of Directors is a merely deliberative body, a Council of India, with proper securities for its independent position, would discharge its office even more effectively. So far as it intro-duces the uncertainty and jealousy of a rival executive, it were good that it should be swept away.

COUNT DE MORNY'S ATTACK ON ENGLAND. ALL Englishmen must rejoice heartily in the failure of the detestable plot to assassinate the Emperor of France. There is, perhaps, no man living whose life is of so much value to France and Europe, as that of the Emperor of the French. Not that we sympathise with his system, or greatly admire his régime; but because his is at least a firm and sensible government,-a fixed centre of order amid the fluctuating waves of French political opinion,-a strong and sagacious administration, amidst much weakness and folly-a government, in short, that actually governs and knows its own mind. But Count de Morny is not content with expressing his conviction on these subjects,on which he would command the sympathy, not only of France, but of England,—he adds a foolish and impertinent sarcasm on the policy of England, because she has "not the "power to destroy these nests of assassins," because she does not violate the "laws of hospitality" in the case of men who turn out to be less men than "wild beasts." We do not believe that this imprudent and impudent reflection on the traditional policy of England, can have found any approval in the mind of the Emperor, who retains, we doubt not, a generous and cordial recollection of the time when the same policy extended its shelter to himself. And, indeed, the remark fell with little fitness from the President of a French Legislative Assembly, who ought to have still vividly before his mind the multitudes of all political opinions whom State persecution has driven within the last seventy years to take refuge on the shores of England,-some of them Royalists, and some of them Republicans,-some of them partisans of a constitutional assembly, some of them advocates of a Socialist anarchy. Certainly France is not the nation to complain of the refuge which England affords to political exiles. Count de Morny must well know that England cannot act in one way at one time, and in another way at another time. If she is to apprehend on suspicion,-to overhear every word of conspiracy, to track every thought of resistance to established authority which is cherished on her soil,-she must alter her policy towards Royalist and Republican, Legitimist and Anarchist alike. She cannot shelter the Napoleonist and imprison the

Bourbon; she cannot set spies on the leaders of the Red Republicans unless she also set spies on the leaders of the Orleanists,-nay, should the Imperial dynasty of France ever cease to be the one in power, unless she also set spies on all its adherents who may be suspected of organising a return to power upon our shores. Unless England is to cease to be what she has been to all the parties which have so long divided France,-Royalists, and Girondists, and Buonapartists, and Orleanists, and Socialists -she cannot undertake or attempt to destroy these "nests " of assassins." Without shackling the liberty of the exile, there is no mode of either discovering or preventing secret conspiracy; and Count de Morny must well know that it is impossible in England to apply one policy to one set of exiles and another policy to another. Yet if ever there were a country that as a whole owes gratitude to the generous traditions of English hospitality, that country is France Hither came the Huguenots during the time of Louis the Fourteenth, and hither came the priests in the time of the Revolution. The old nobles, whose chateaux were forfeited by the Convention, came to England to bide their time; the quiet middle classes followed during the Reign of Terror ; those who made themselves obnoxious to the first emperor found refuge here; those who adhered to his policy and dreaded his successors were equally welcome; twice has a French king recently found hospitality in England; and French statesmen of every class have turned to England in their need. Does Count de Morny suppose that, if England adopted a different policy, such infamous plots as these could be suppressed? Would infamous plots as these could be suppressed? not the United States, or any spot on the globe, however distant, serve equally well for such machinations ?- though they would surely not serve equally well for the poor political refugee, flying from the sudden storm of a French revolution. It is certain that the Count de Morny has not yet learned the very elementary truth, that freedom of any kind implies the power to abuse freedom; and that for England to protect France against "wild beasts," is only possible on condition of refusing shelter also to the more harmless creatures whom "wild beasts" so often pursue to their destruc-

DEPOSITS AND DISCOUNTS, AND THEIR EFFECT LATTERLY UPON THE PREVIOUS STATE OF BANKS.

STATED in the fewest words, it is possible that the rationale of the recent pressure amounts to this, namely-that in this country, and in most of the great trading communities with which it is connected, there had grown up gradually during the last five or six years a wide circle of firms who carried on an enormous trade in exports and imports, not by means of capital of their own, but by means of capital raised by the systematic fabrication and discount of accommodation bills of exchange : that, after several narrow escapes from collapse since the summer of 1855, the crash came at last in its most sweeping form by the simultaneous breaking up of several of the great centres upon which the coherence of the system depended; and that, in point of fact, when all mysteries of drawing and redrawing, discounting and rediscounting, are cleared away, it becomes perfectly plain that the masses of actual capital which were really wielded by these adventurers were obtained by them in the form of discounts and advances, and at high rates of interest, out of the reservoirs of deposits held by such concerns as the Western Bank of Scotland, and out of the reservoirs of capital at the command of the manufacturers, brokers, and dealers from whom the adventurers obtained credit, and to whom, of course, there remains only as much satisfaction as is conveyed by an infinitesimal dividend.

It will be a great misfortune if any part of the public are led into the belief that it is possible to devise or conduct any system of mere paper credit, which for several years shall be equal to the task of fostering and conducting an enormous trade, and especially an enormous foreign trade. And yet it is, perhaps, to be feared that the strength and prevalence of the modes of speech in which the recent disasters are all constantly ascribed to devices of credit may, in the minds of some persons not acquainted with trade, lead to such a conclusion. Credit can do a great many wonderful things; but it certainly cannot make something out of nothing. For a

[Jan. 23, 1858.

large trade there must be a supply of ready money from somewhere. Wages must be paid in gold and silver, or its equivalents; machinery must be kept going; custom and port duties must be settled; and fifty other classes of disbursements must all be kept in subordination to the end of the enterprise by a command of hard, actual cash. And this is the the narrowest view to take. When the operations become larger, extend over long periods, or stretch into distant countries, there must be a vast capital at the bottom. It may be the capital of men who, as trading with their own money, and guided by their own knowledge and judgment of each special case, fulfil all the conditions which attach to a substantial and prudent merchant; or it may be capital scraped together by the devices of adventurers whose proper vocation is not commerce but gambling ;-still, whether it be capital owned by principals or by creditors of those principals, it is capital which has been obtained from somebody and has been saved somewhere. The fabric of credit which may grow out of the dealings with this capital may be large or small; but let us assure ourselves, once for all, that no depth of infatuation in favour of accommodation bills, no density of mental darkness or moral perception as regards prodigality of fictitious promises, can of itself create the means even of sharpening the point of one of the pens employed to propagate the mischief. In return for commodities or labour, other commodities or labour the property of some one-that is capital-must sooner or later be given, and we may profitably endeavour to find out from what quarter the capital actually wielded by the fictitious houses has been drawn, and how it happened that it was obtained so easily and left so long.

In 1845, the total amount of the deposits and balances in the five Joint Stock Banks then existing in London was about 10 millions sterling. In 1853, the amount had become 22 millions, and early in 1857 it is probable that it was very nearly 42 millions. There is no means of arriving at the same class of results as concerns Joint Stock Banks in the country; but there is no great rashness in assuming that during the last seven or eight years the amount of funds lodged with these Banks and with private Banks, upon deposit and at various rates of interest, has been very much greater than at any former period-and that it has gone on increasing year by year. In some cases the Banks do not allow interest on the balance of current accounts-in others, interest is allowed on those balances, subject to certain conditions of amount and time-and the rate allowed is nearly always materially less than the market rate of the day. But all the Joint Stock Banks in London allow interest on sums of money lodged with them on deposit, and it has been a sort of rule to fix the deposit rate of interest at some given per centage below the varying rate of discount of the time being. The higher, therefore, the rate of discount, the greater the inducement on the part of the public to become depositors. In point of security, the unlimited liability of all the shareholders of the Banks, to say nothing of the trading resources of the concerns themselves, has been regarded as placing the depositors beyond peril. In point of convenience, no investment could be more attractive-for in the most emphatic sense, it was speedy, inexpensive, and simple. The whole process could be gone through in five minutes. It required neither lawyer, broker, notary, nor witnessand the handsome piece of engraved paper called the deposit receipt, was as easy to understand and as agreeable to look at as an opera ticket. Moreover, there was another consideration which was not overlooked, namely-that not only was the interest on the deposit paid with admirable punctuality, but also that the payment was made in full, and without any abatement of income tax on the part of the Banks. The effect therefore has been, that deposits in Joint Stock Banks have, to a great extent, assumed a new character and new dimensions. Formerly it was a general impression on the part of the public that it was desirable only to leave in the custody of bankers such floating and casual sums of ready money as were indispensable for current wants of business or household expenditure. The account of the bankers was a larger sort of strong box, very safe and very convenient as the receptacle of all odd sums which could not be spared for some ultimate purpose of investment; and so long as bankers did not allow interest on current accounts, and did not allow more than a moderate rate of interest on sums left

strong reasons of profit and loss against the employment for any but temporary occasions of the facilities afforded by Banks. The Banks were confined to their original function of taking charge of floating balances for short periods,—and all persons possessing accumulations of money seeking investment, made their own inquiries in their own way as to the kind of investment—land, consols, ships, houses, bonds, or produce—which would best suit them. The judgment, observation, knowledge, and technical skill, therefore, of every person having money to lend or apply was continually exercised in finding out the best and safest mode of application. Every investor did his own business, and did not depend upon the banker.

But in their new character, as the centres of these large deposits, the Joint Stock Banks have in a great measure relieved the holders of ready money from all necessity of exercising this vigilance and discretion. During the last few years a man who happened to receive two or three thousand pounds, or any larger or smaller sum, say as the repayment of a mortgage, has found it much more to his advantage to place the money as a deposit than to incur the annoyance, risk, and expense of seeking another permanent security,-and hence it is that the resources of the Banks as obtained from deposits have taken so rapid an increase. In other words, the character of the Banks They have still retained has been gradually changed. the functions of Banks, and by virtue of that function their leading peculiarity still is to undertake enormous liabilities claimable on demand or short notice, and to cover their liabilities by assets capable of being realised under similar prompt conditions. But the growth of their deposits has gradually superadded to these ordinary functions of banking, the function of finding employment in a variety of forms for no small part of the ready money capital of the country.

The most obvious and profitable kind of employment which has presented itself to the Banks has been the discount of bills of exchange and advances under various forms and names on mercantile credits.

The process has, then, resolved itself into a circle of action and reaction. The influx of deposits has given facilities for the discount and establishment of bills and credits ;-the necessities or the expectations of the borrowers under these bills and credits have led them to pay readily a high rate of interest ;- that high rate of interest has increased the profits of the Banks and led them to offer better terms to their depositors ;-still larger and still more inordinate proportions of the ready-money capital of the country have thus been drawn into the money market ;- the former and ordinary system of individual investments by individual holders of money capital has been interfered with and suspended ;and the end has been what we have just seen, namely-that the unnatural scope given to fictitious and adventurous houses, has led to a more appalling example than ever occurred before, of the extent to which credit misapplied may enable the most worthless part of a commercial community to waste in gigantic follies and disgraceful frauds, millions of capital gradually amassed by years of industry and selfdenial on the part of others.

BILLS WITH DOCUMENTS AND WITHOUT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As the consistent supporter of those principles which would leave trade untrammelled by needless restrictions, and believing that the present tendency, especially under the influence of the late panic, is in an opposite direction, I venture to address you on a very important subject.

A letter appeared in your own columns a short time since, and subsequently one or two letters have been addressed to the *Times*, in respect to bills of exchange, advocating the desirability of a "rule being made absolute," that merchants should in all cases be required to attach shipping documents as collateral security to their drafts. Your article on open credits, directed against a vicious system of accommodation, without any basis of capital, has been supposed by many to endorse such views—an opinion which I believe to originate in a misapprehension.

not allow more than a moderate rate of interest on sums left Following up this idea of security, the leading joint stock with them on deposit, there were constantly in operation bank connected with India and China is believed to have in-

THE ECONOMIST.

structed its agents to confine themselves to the purchase of document bills only; and, further, they have intimated their intention after a certain date in the present year to purchase bills drawn at 4 months' sight only.

My experience of many years as a merchant in India and as a bank director, has led me to regard document bills with so much disfavour, that in all the bill remittances, of vast magnitude, in which I have been interested, I have specially excluded such class of paper; and the character assigned to it in the Eastern markets is generally evidenced by its value being 2 to 3 per cent. under that of first-class credit bills. From what I know of the India and China trade, I believe I am substantially correct in saying that the losses on bills of exchange will fall exclusively on those accompanied by documents (and on which they are stated to be extremely heavy), no "credit" house of any standing in this trade having succumbed.

Here, then, are two distinct opinions diametrically opposed to each other ;—the one is, that in bills secured by documents there is safety, while credit bills must be no longer countenanced ;—the opinion, on the other hand, by which the great bulk of purchasers have hitherto been guided, having been that document bills should stand lowest in the scale, while many have sedulously abstained from purchasing them at all.

To arrive at any sound conclusion as to which of these views should be adopted, it will be well to analyse the nature of the two classes of bills; in the first instance having special reference to purchases of produce abroad.

It is familiar to most of your readers, that certain houses in England, possessed of large capital, grant "credits" to their correspondents abroad, under which they are authorised to draw to a certain defined extent, against consignments of produce, and the issuers of these credit bills affix to them a special letter of guarantee to accept, addressed to the holders. Houses granting these credits, being composed of men of large capital (assuming that to be the case) and earning a very moderate commission upon the transactions, of course exercise a vigilant discretion as to the standing and respectability of the parties to whom they afford such facilities. Houses carrying on this class of business generally are not, and oughtnot to be, interested in any purchases of produce on their own account. They sell produce belonging to others on commission, and employ their large resources in providing the needful margins for securities, discounting sales, &c., for their constituents. Assuming such a house to be provided with a capital of 300,000/ unfettered cash, and its engagements to represent liabilities spread over six coming months, of 400,0007, all covered by produce and bills of exchange, then it is clear that there are convertible assets under their control of 700,000/, and this, with the modification of figures, the proportion being preserved, is the position of many leading houses.

Now it is equally evident that purchasers of bills abroad, if exercising due vigilance and caution, ought to be well acquainted with the character of the drawers of these credit bills, and the standing and the means of the issuers of the credits can be accurately ascertained. Bills, therefore, drawn by parties of prudence and respectability upon drawees such as I have described, having the legitimate trade in produce as their basis, appear to me to constitute mercantile securities of the highest character, by the aid of which alone the vast trade of this country can be successfully carried on.

The abuse of this system would, of course, be houses of inadequate means granting undue facilities. Men of straw abroad, trading by the aid of such facilities to a speculative and dangerous extent; but the wilful blindness or carelessness of bill purchasers would, in such cases lend encouragement.

In the case of document bills, in the large majority of instances, I believe I might say in all, the drawers and drawees enjoy so little credit, that they are unable to get their drafts taken in the market without the accompanying security of shipping documents, and the purchaser relies upon the value of the shipment covering his interest. Now, in cases where the produce is bought at moderate prices, and the advance represented by the bill is a moderate one,—that is to say, leaves a fair margin,—while the parties to the bill are respectable, the risk run would be confined to the probable inability of the drawer to pay in "hard times" with a great depreciation in the value of produce. But it is quite notorious that throughout the East, and notably in Bengal and China, vast speculations have been carried on by the aid of document bills, generally purchased by the banks, drawn up to the full amount of cost by men entirely without means. By the natives of India gross deceptions have been practised. Produce of inferior quality has been invoiced at the highest price of the best without the possibility of check, for the produce is shipped before the bills are drawn. Speculators without means are invariably bold (reckless); by them prices are forced up to an exaggerated height, and a margin of even 20 per cent., nominally preserved between the amount of a document bill and the cost of the produce it represents, is frequently dangerously above the limit of an average market value. In China it is stated to be a fact that immense transactions have been entered upon by the clerks of the different houses, who get their bills secured by documents taken for amounts representing the full cost of their shipments even at the prices lately ruling for silk.

Thus merchants find themselves frequently engaged in a ruinous competition with those who are alike destitute of capital and prudence. Wild speculation is fostered, while a "fine exchange business" is apparently carried on by the banks.

It may be argued that, admitting credit bills to be first class, they would be rendered still more secure to the holders by the accompaniment of documents. But no merchant with an extensive business would conduct it on such terms. He must have his produce unfettered, and shipping documents in his own hands form an indispensable item of his available assets in times of need and pressure. The real security to the "credit" bill-holders consists in the large surplus capital and the *character* of the parties on whom the bills are drawn.

In the proposal to reduce the usance of East India and China bills from 6 to 4 months, there appears to me to be little wisdom, and a fancied security originating in fright.

Bills from the East are generally drawn against produce, and from the origin of the purchase to the realisation of the proceeds of the goods the time occupied will generally b six months. Now, as the produce should generally meet the bills, as it is the substantial substratum against which they are drawn, fortified by reserves in the hands of the drawees, as undue haste certainly does not tend to security, it appears to me that the substitution of a four months' for a six months' echéance would be simply to create a pressure upon consignees which is not desirable, and is uncalled for.

But putting produce bills out of the question, what is to be said of those bills drawn by bankers abroad upon their correspondents here against their own cash balances? Are operations of this nature to be suspended for want of documental security? The business of the (exchange) banks would be annihilated if they were unable to sell drafts; but does recent experience of some joint stock banks lead to the conclusion that they need no security attached, and are entitled to a preference over the credit bills of our firstclass mercantile houses? The rule which some such institutions would apply to others, how would they propose to apply to themselves?

Safety, I apprehend, is not to be found in restrictive measures engendered by the alarm of a passing crisis. The great commerce of England needs a wider expansion of credit-that much-abused but most necessary servant of trade. A credit based upon real capital, prudence, and high principle, is the desideratum. Let not great money-dealers, in their haste to grow rich, foster fictitious credit, bolster up speculation, support needy adventurers in easy times ; and then, when the pressure comes-brought about mainly by such recklessness-seek to slur the character of the anxious upright mercantile classes of England. The title deeds to security to every man are painstaking and prudence in his own affairs, and a vigilance which embraces the affairs of others, with whom he may have dealings .--Apologising for the length of these remarks. I am, yours A MERCHANT. respectfully London, Jan. 20, 1858.

Agriculture.

CROPS AND PROSPECTS.

SEVERAL sharp frosty nights during the past week have given a acasonable check to vegetation. The meadow, perhaps, required this leven more than the wheat, for there is nothing more fatal to the grass crop than a loxuriant winter growth, checked and stunted as it is certain to be later in the year by spring frosts and cold easterly winds. Notwithstanding the general and unusual mild-ness of the winter, the wheat plant everywhere looks well, and is by no means over-luxuriant. This is, perhaps, to be accounted for by the dryness of the soil, the quantity of rain which has fallen during Nov., Dec., and so far in January, having been far below the average rain-fall of those months. The breadth of wheat sown is very great, and that, with the good appearance of the growing crops, has probably much to do with the continued fall in the prices of wheat and flour, for English farmers are not sending their wheat to market free y. Oats alone seem to maintain their price, the truth being that the growth of oats in this country is far below the demand, and we depend mainly on foreign imports. The high rates at which barley has sold for the last few years have occasioned oats to be much displaced. Indeed, though most valuable on a farm, oats do not form a very money-producing crop to the English farmer. They seem to require a moister climate than we have in the eastern and midland districts, and to be yearly less and less cultivated.

The Mark Lane Express report from the Isle of Ely, Cambridgeshire, says the growing wheats in the fens are looking well, and have retained their plant during the frost. Labourers are well employed in this district, the fen land farmers being much engaged in claving their land. This is the great improvement of the district; clay giving solidity to the peaty soil, prevents the throwing out of plant after frost, which is the constant source of loss on fen land where so much of our seed wheat is grown. Like turnips on the turnip soils, rape on the fens is a thin crop, and is producing fewer fat sheep than usual in that district.

In East Suffolk, wheats are luxuriant, and "a full average of acres sown." In Warwickshire, "wheat is forward, and looking most beantiful-strong, and plenty of plant." In Cambridgeshire, "wheat has come up admirably, and shows almost invariably a very excellent plant." The wheat of last harvest in this county yields well. Throughout the agricultural districts of England, stock still sells for fair prices, with the exception of pigs, which have now fallen immensely. The agricultural reports from the Scotch counties for the last

The agricultural reports from the Scotch counties for the last quarter of 1857, of the North British Agriculturist, give evidence of great activity and progress amongst the farmers north of Tweed. The same mild weather has prevailed in the North as in the South, and the Scotch farmers have been most active in land-draining work, for which open weather, without much rain, is very favourable. The Aberdeenshire report says that on the 14th of December

The Aberdeenshire report says that on the 14th of December last "there was one continued influx of cattle to Aberdeen, drove succeeding drove; 1,000 beasts left Aberdeen for London by rail and steamers." The quality of these cattle was generally very good, most of them being fitted for the West-end butcher. "The quality and ripeness of the beasts were much improved compared with former years, which we attribute to our best feeders finding that 3 or 4 lbs of oilcake per day for the last two months is profitable. In Aberdeenshire, cake, a few years ago, was hardly known except by name." A similar and other indications of enterprise appear incidentally in the report of nearly every county.

HINTS TO SHORTHORN BREEDERS. HE who can learn from the experience of others is proverbially a wise man; and though the breeder of live stock cannot hope to become successful without large experience and extensive observation of his own, he will be greatly assisted by the recorded observations of men who have been eminent as breeders. Now we have had few breeders of Shorthorns more entirely successful than the late Sir Charles Knightly; and none who more resolutely rehed on his own judgment. That the United States has supplied our Shorthorn breeders with some of their most spirited customers is well known, and the observations on Shorthorns we are about to quote were written by Sir Charles Knightly to William H. Southam, an American breeder. The letter was published in an American paper and reprinted in the North British Agriculartist. Sir Charles said :--

My chief objection to the breeding from large bulls is, that one hardly

ever sees a large animal of any description possessing symmetry, and I have always endeavoured to get as near perfection in shape as I could. It is a common, though I think an erroneous opinion, that by putting

It is a common, though I think an erroneous opinion, that by putting two animals together, both faulty in shape, but one having good shape where the other has bad, that one will correct the other. You cannot get a perfect herd of cows—but by chance, care, and expense you may get a first-rate bull.

Instruct built. My first desire is to get a good shoulder. I think it by far the first my first desire is to get a good shoulder. I think it by far the first point to be attended to; and I believe in general it is little attended to. I may be wrong, but I have always set my face against using an upright shouldered built. Not only do you lose the best part of the beef, but I believe you lose constitution. No animal with an upright shoulder can have a protuberant bosom, and consequently cannot have the same play for the lungs, and the most common and frequent disease of cattle proceeds from the lungs. I would, in short, were I to use a faulty bull, prefer that he should have every imaginable fault, rather than a bad shoulder. The two great faults belonging to the original breed of Shorthorns were upright shoulders and large high hips, the latter of which are very much the fashion in the North of England, but which I think a deformity. It gives the animal the appearance of a bad loin when it does not deserve it, and causes the appearance of a hollownest between the hip and the tail, which otherwise would not be the case. It has been one of my hobby-horses, that provided the hips are not too narrow, to have the hip joint project as little as possible. I bought the Duke of Gloucester contrary to my own judgment. He had good flesh and hair, but as his calves were young when I sold them, I cannot form an opinion as to how they would turn out.

Your countrymen have not spared money, which I have always thought the most efficient way of getting a herd; but unless a man understands the thing himself, he will soon spoil them, however good they may be. Though Sir Charles may have had his peculiarities of opinion,

Though Sir Charles may have had his peculiarities of opinion, some of which are apparent in the foregoing letter, there is so much that is just and useful to the breeder that it well deserves attention.

CULTIVATION IN THE EAST.

A FRENCH gentleman, who delights to frequent the spots on which celebrated poets have dwelt or from whence they derived their inspiration, has published in the *Moniteur* an account of his visit to the "Gardens of Solomon." First, he visited the "sealed fountains"—large subterranean reservoirs, wherein the waters springing from the mountains are collected, and from thence the water is conducted to Jerusalem by pipes.

At a short distance from the reservoirs are the celebrated gardens. They extend along a valley which runs from El-Bourrach to Bethlehem. It is the most charming spot in all Palestine. Solomon was a good judge in more senses than one. There are murmuring streams winding through verdant lawns; there are the choicest fruits and flowers; the hyacinth and the anemone; the fig-tree and the vine. Towering high above the garden, and contrasting grandly with its soft aspect, are the dark precipitous rocks of the neighbouring mountain, around whose summits vultures and eagles incessantly scream and describe spiral circles in the air. The rare plants and flowers which the great enchanter of the East collected within these gardens were protected from the north wind by the mountain. Every gust of the south wind was loaded with perfumes. With the first breeze of spring the fig-tree put forth its fruit, and the vines began to blossom. It was, in the words of Scripture, "a garden of delights." The vegetations of the north and the south were intermingled. One part of the garden was called t e Walnut Tree walk (or as the English Scripture translation has it, the Garden of Nuts). Another is the Beds of Spices.

The writer's guide was a well-educated Italian, who informed him that the gardens of Solomon are now let to an Englishman.

"The present tenant," he said, "is Mr Goldsmith, of the house of Goldsmith and Son. He is underdraining the gardens of Solomon on the Yorkshire system. You will be astonished to see how successful he has been. Here is the house." I perceived a bright brass knob shining in the centre of a small square of porcelain let into a white wall. Over this knob was the following superscription in the English linguage— "Ring the bell." This bell seemed to my imagination rather an anomaly in the gardens of Solomon—but that is a triffe. We did ring the bell, and we went in. The first thing that struck my eyes were red draining pipes ly ng about, and bearing the mark of the manufacturers, Samuel and Co., No. 128 Strand. Mr Goldsmith was draining that biblical valley, the dew of which was so often brushed away by the naked feet of the Shulamite. It was in the month of September. An American mowing machine was cutting a second crop of artificial grass on the very spot where the daughters of Jerusalem gathered those lifes of the field which were more beautiful than Solomon in all his glory. A patent resping machine was rapidly garnering the crop of that glebe in which the sisters of Ruth and the daughters of Naomi were wont to glean.

I asked to see Solomon's pavilion, but alas, the cypress timbers and the cedar wainscotting had been taken down, and in their place there is a brick-built cottage with a roof of red and green tiles. The entrance hall is whitewashed; there is a little parlour with a Birmingham carpet, and a drawing-room papered with a red-bordered yellow paper, purchased in Paris, Rue des Moineaux. The chimney is Prussian, and the curtains are of Swiss muslin. Instead of the servants of the spouse, I found two nurserymaids, one from Paris, and the other from Florence. The slave who prepares the tents of cedar is now scalled "John." He has red whiskers, blacks his master's shoes, scrubs the floor every day, and varnishes it on Sundays; and if some romantic person should inquire—as I had the mairete to do—shout the dark Shulamite, he will be shown five sweet little English children, redolent of cold cream and Windsor soap. as fair as floss silk, with their hair in cork-screw curls, and wearing prunella boots, bue capes, and green parasols. The cinnamon trees have been cut down for firewood, and the aromatic canes grabbed up; but the five little thisses do crochet work under the shade of a box chretien pear tree. Since the Eastern war, Mr Goldsmith has obtained the custom of the Pacha of

Jernsalem for vegetables. Last year he had seven crops of potatoes, thanks

Jerusalem low log terminates. to his wonderful drainage. What might not British capital and British enterprise accomplish in the cultivation of land when aided by the climate of Palestine or Syria? In Syria especially we hear of fertility which is most astonishing, and well-informed natives say that Europeans would find in these districts safe and most profitable fields for their industry. This is probably true, though we confess to some apprehension for the security of rural capital embarked by a foreign farmer in a land governed by the Turk.

Literature.

EITISH INDIA, ITS BACES AND ITS HISTORY, CONSIDERED WITH REFERENCE TO THE MUTINIES OF 1857 : A Series of Lectures addressed to the Students of the Working Men's College. By JOHN MALCOLM LUDLOW, Barrister-at-Law. 2 Vols. Cambridge: Macmillan and Co. 1858.

THE peculiar office which was undertaken by the "Working Men's College" was, if we understood it rightly, to supersede the old desultory and superficial courses of lectures of the Mechanics' Institutes by a systematic and sound instruction, suited to those who were adults in age but children in knowledge. Generally speaking, this idea appears, under the unflagging supervision of Mr Maurice, to have been carried on with very great fidelity and some saccess. It has become understood that the "College" is not a mere arena for rhetorical displays on the part of hired lecturers to the gratification of little more than the love of novelty and excitement in the auditors—but a sober intellectual workshop, from which we are not to expect prodigies of learning and genius, but men well grounded in the common-places of knowledge. The platform" system we had hoped, therefore, had been effectually excluded from its walls, and the ex-cathedra assertions of partisans and politicians estimated at their due value. It appears, however, that we are in some cases mistaken, and that-if the example of the present volumes is to be followed-the Working Men's Col-lege will soon possess more claim to an affiliation with the London and Freemasons' Taverns, than it had for its admission into the University of London. Under guise of a set of lectures on India -intended, we presume, for those who had no independent means of information on the subject-Mr Ludlow has availed himself of his authoritative position in Ormond street to promulgate his peculiar views of the merits of Anglo-Indian statesmen, and the injuries of their Hindoo subjects ;-and he now, through this medium, appeals to that wider and better-informed audience which been the more appropriate tribunal in the first inwould have would have been the more appropriate tribunal in the first in-stance. It is significant that "one of the least assiduous of the *teachers*" at the Working Men's College—as he styles himself in his dedication—should have been the foremost among them in assuming the position of its political lecturer. What the book might have been—had a truer appreciation of his position and duties actuated our professor—may be seen from the first few lectures, which treat carefully of the races of India, and only slightly deviate from the function of imparting established forts. With deviate from the function of imparting established facts. With the "History" begins the pamphleteering, which increases in violence as we proceed, and ends by laying at the door of the unfortunate victims to Asiatic frenzy or treachery in 1857 the outbreak which shook to its foundations the British ascendancy in India. "I fear--I greatly fear," says this *candid* patriot, " that it is our own conduct as Englishmen, which has been the main cause of the hatred towards us which the character of this revolt seems to me to indicate." We are not going to enter into a particular discus-We are not going to enter into a particular discussion of this charge, supported as it is by a few cases of individual insolence, and some random and vague assertions of casual ob-servers. No one doubts that in India, as elsewhere, violence and oppression may be justly laid to the charge of a dominant race. The question, however, whether this misconduct was sufficiently the rule to produce any general or rooted ill-feeling,—or whether, on the contrary, it is not so entirely the exception that the particular cases become the more marked from contrast,-is, we suppose, beyond the limits of a lecture, and, therefore, judiciously avoided. The indifference or aversion of the mass of the population to the revolt, and the well-known and excessive indulgence shown to the actual mutineers by their confiding officers, might otherwise have been discussed and accounted for; and the fact that the best officers were among the first victims, explained by something more plausible than the gratuitous hypothesis broached in a foot-note, that one or two bad Sepoys killed the good officers in order to involve their virtuous comrades in a common responsibility.

From the manner in which Mr Ludlow deals with the recent mutiny, some idea may be gained of the method pursued by him in dealing with the earlier and more disputable part of our Indian policy. He carefully places in the foreground the offences, real or imputed, of English statesmen and Englishmen; and as carefully shades away into peculiarities of race the flagrant enormities and treachery of native Governments and natives. Here and there a statesman is more fortunate at the hands of Mr John Malcolm Ludlow, if (like the Marquis of Wellesley, for instance) he happens to have reared and cherished in his school such a man as Sir John Malcolm. Sir Charles Napier's dictum as

it

lla cut tle

of

to the virtue of the Sepoys is allowed to serve as the basis of an argument for the criminality of English officers; but, except in this and similar "useable" cases, the tone of the volumes is as unblushingly and disgracefully anti-English as the most violent of our enemies on the Continent could desire. They might well issue forth with the joint imprimatur of the Rajah of Bithoor and the Peace Society, but will, we hope, out of the Working Men's College, be received by Mr Ludlow's countrymen with that indignation which the manifest feelings of the author so pre-eminently call for. Messrs Macmillan have taken care that the book should have all the attractions which admirable type and good papercan supply. We are sorry that these have been lavished on so unworthy an undertaking. For Mr Ludlow's own sake, and that of the College with which he is connected, we hope that his present volumes will be speedily forgotten.

THE EDINEURGH REVIEW. No. CCXVII. January, 1858. THE NATIONAL REVIEW. No. XI. January, 1858.

THE new numbers of the Edinburgh and National Reviews offer three points of direct comparison, and two of them on subjects of the most important kind. The Edinburgh is, as is its wont, fuller of information than of thought, more remarkable for knowledge than intellectual grasp. This is not the defect of its younger contemporary. The National indicates a clear and comprehensive intellectual grasp of political subjects, and is more careful even to stamp its articles with broad and well-defined convictions than to fill them with the details of knowledge on which those convictions should be based. The Edinburgh, in the spirit of all institutions approved by time, is cautious and conservative, reluctant to take a new line, eager to show all the difficulties of change, unwilling to suggest anything fresh. Even its literature is somewhat weighty, — literature with a business side to it. The National is strongest wherever a pure intellectual estimate of either men or questions is needed, and its literary criticism is remarkable for the skilful delineations of personal and intellectual character, without regard to local or temporary prejudice,—delineations which its pages have given us from the first.

Both the Edinburgh and the National have articles on the Monetary Crisis, and on India. On the former subject they take oppo-site views,—on the latter quite different lines of thought. The article in the National Review adopts and defends the same currency principles which the ECONOMIST has ever maintained; and brings to the subject so complete a knowledge and so prac-tised a power of illustration, that it will teach many to understand the subject who never understood it before, and may possibly, we think,—though this can rarely happen,—shake the faith of men who have long accustomed their thoughts to run in the ruts of a particular currency system, and shut their ears to arguments that point in the opposite direction. The writer in the National points out very clearly that this crisis has not been affected by paper-currency at all;—that so far as it has been affected by bad banking, it has been so by imprudent discounting ;- and that in consequence of the completeness of our banking system of book-credits and cheques, the store in the vaults of the Bank of England is the only great hoard of bullion on which any drain of gold from England can primarily take effect. So complete is the credit system of the English banks, assisted by the clearing-house, that no bank finds Luguish banks, assisted by the clearing-house, that no bank finds it necessary to keep a considerable public reserve except the Bank of England, which, in fact, keeps a reserve not only for itself, but for all the others too. When, then, from causes quite independent of "circulation" a drain on this bul-hon reserve commences, the credit system of all the banks in the country begins to be affected. The cheque and book-credit system is only adequate in good times. When banks fail, neither bankers nor customers like to truct activate banks fail, neither bankers nor customers like to trust entirely to bookcredits; transactions require much more ready money,—or at least Bank of England notes,—than usual. An entry in a book may satisfy in ordinary times, but not in times of panic. And Si Robert Peel's Bill, which just at this very moment steps in and limits the issue of notes, so as to alarm depositors without giving any real safety to the note-holders, of course very much aggra-vates the excitement of the crisis. At the time when the Bank had more than six millions and a half in bullion, -equally applicable in law both to note holders and depositors, -Sir Robert Peel's Act frightened the depositors into panic, by limiting their immediate resources to the 957,000l of note reserve. We cannot further indicate the line of argument taken by this masterly writer,-but we must say that whoever will compare the admirer of Lord Overstone's theory who writes in the Edinburgh, with the National reviewer, will be glad to pass from the hesitating and sometimes self-confuting admissions of the one to the lucid and sometimes self-confuting admissions of the one to the lucid exposition of the other. The Edinburgh writer has to admit that this crisis has not been a "currency crisis," – that it has arisen from the misapplication of capital, – that "circulation" had even decreased while book-credits were increasing. And yet he de-fends a measure whose only effect is to shake the credit system of the courter at a moment when the solver even even of the most solid the country at a moment when the solvency even of the most solid firms depends entirely on that credit system.

Better is the Edinburgh's article on India, which is full of valuable information and suggestion, but wherein, again, the information appears to be but half-assimilated by the mind of the writer. It contains a very well-timed analysis of the resources of

[Jan. 23, 1858.

Indian finance, but when it comes, according to promise, to explain how these resources may be increased, it suddenly breaks off with meagre suggestions. The article in the National deals only with the general principles of Indian Government, as gathered from recent events and from the anomalous relation of that great dependence to the English Imperial Government. But these sub-jects it illustrates with clear and comprehensive criticism, and in a style so lucid and trenchant that the attention is fascinated throughout. Both Reviews concur in the necessity of consolidat-ing the present awkward system of Double-Government. But hath concurs in continuing us amount turning the present awkward both concur in cautioning us against turning the new Council

of India into a mere Secretariat. In literature, both Reviews have articles on Mr Coventry Patmore's poems, and both give him high praise ; the review in the National being, however, a much more complete and original piece of criticism than that in the Edinburgh, which is somewhat indolent "extractive."

By far the most interesting and able of the literary papers in the new Edinburgh is that on Tom Brown's School Days, which is written with much humour, and contains also a very just estimate of Dr Arnold's influence, drawing a true line be-tween indiscriminate praise and carping criticism. There is also a fair but rather dry narrative article on the Addington and Pitt Administrations.

The articles of highest literary interest in the National are those on George Sand and Ben Jonson,-which are full of fine perception and original criticism. The paper on Colonel Mure gives a very scholastic estimate of Thucydides and Xenophon; and the late Czar is delineated in an article of much ability and vigour. The Edinburgh is sadly deficient in literature proper. Almost all its articles have more or less connection with either history or politics. The pure delineation and analysis of character and genius seem scarcely within its scope.

UNGAVA: A Tale of Esquimaux-Land. By ROBERT MICHAEL BALLANTYNE

THE CORAL ISLAND: A Tale of the Pacific Ocean. By ROBERT MICHAEL BALLANTYNE. J. Nelson and Sons, Paternoster row.

THE author of the "Young Fur-Traders" has here contributed two gaily bound, illustrated, and pleasant volumes of travels and adventures to the Christmas stock of amusement for young people. They will, we fancy, be popular, since Mr Ballaptyne possesses many of the requisites for a successful writer of books of this nature: he has a lively fancy, high animal spirits, a sense of humour often running into broad fun, and a talent for painting the different aspects of nature so as to bring them before the very eyes of the reader. His characters are individual and full of life, but they are not always natural nor interesting :-- the adventures, not actors themselves, engross the chief attention of the reader. the This, however, will scarcely act as a drawback to their popularity, since exciting incident has more charms for the young than the most skilful delineation of character or analysis of human nature; and this is as it should be. We do not even complain that some of the adventures here related are strained to the very verge of probability. Children love the marvellous, while mouth a contract to rushing this natural feeling, and to the seems chiefly directed to crushing this natural feeling. Children love the marvellous, while modern educabringing all the wonders of this universe down to the level of their comprehension, until they are far too wise to be amused at stories that were the delight of their fathers' and mothers' infancy. We are much more inclined to object to a want of straightforward simplicity in Mr Ballantyne,-a turn towards sentiment and instructiveness, which degenerates now and then into fine writing, or what his boyish readers will be apt to call "humbug." These defects are not strongly marked, but they are sufficiently so to prevent a thorough enjoyment of these tales by, at least, many boys, "Ungava" is, in our opinion, the best. It is founded on fact. A settlement was actually formed by the Hudson's Bay Company in the desert regions where its scenes are laid, and the hardships of the voyage and first establishment undergone by the settlers are only modified so far as was necessary for the construction of the story. There is a stronger feeling of reality in the events of this tale, and more actual knowledge of the strange lands described, than in the "Coral Island," vivid and powerful as the impression is that is there given us of nature in the tropics. The story of "Ungava' is very simple : it is merely the journey of the family of the leader of a band of fur-traders and his men to a wild and remote part of Hudson's Bay, followed up by the disasters and senote part of first year of residence. One of the incidents is the loss of their little Edith in a snowstorm, and her rescue by some Esquimaux. This affords an opportunity for an amusing picture of Esquimaux life and customs, and some animated hunts in their company. thread of Indian life is mixed up with this by means of a young Esquimaux girl, who has been carried off by the Indians, and recovered after some time by the intervention of the traders. The scenes among these enterprising men themselves are often exceed-ingly graphic and humorous, and the accounts of their nocturnal pic-nics after a successful day's sport are perfectly enticing to youthful appetites.

palm-covered islands, and fierce and naked inhabitants. Mr Ballantyne's vivid and picturesque descriptions carry us with him into any land he pleases, and we seem here as intimately ac-quainted with the coral wonders of the South Seas as we were, when reading "Ungava," with the wild lands of the arctic zone. In the earlier part of this tale he has used this power of description so as give unmixed pleasure, - a pleasure which, in the later chapters, he turns into borror and aversion by descriptions of eracity and ferocity most unsuitable for youthful readers. A slight sketch of the plot will be necessary to explain our meaning, Ralph Rover is supposed to be relating his first experiences on the high seas. He has been brought up to the coasting trade, but at fifteen he enters as an apprentice on board the Arrow, a merchant vessel, bound for the islands of the Pacific. Here he becomes fast friends with Jack Martin and Peterkin Gay, two lads of eighteen and thirteen. After a prosperous voyage the ship is wrecked on m coral reef: the three lads, however, escape by means of an oar, and, on gaining the island, are so fortunate as to means of an oar, and, on gaining the Island, are so fortunate as to find it fertile and uninhabited. Here they make themselves at home, living upon fruits, birds, fish, and pigs, the only four-footed beasts they encounter, except one old cat; and, what with hunt-ing, fishing, boat-building, a visit from some savages, escapes from sharks and hurricanes, they led a life by no means dull, and on the whole extremely jolly; indeed, the "quips and cranks" of little Peterkin, the manly sense and good humour of Jack, and the garge simuliaity of Ralph form a tria with whom such a the grave simplicity of Halph, form a trio with whom such a desert island would be no unpleasant place to live in. But this enjoyment is suddenly ended by the appearance of a pirate ship, which carries off Ralph, the other two saving themselves in a wonderful cave; and here the darker part of the story begins. The scenes that Ralph witnesses between the pirates and the savage natives, and among those natives themselves, are quite unfit for children to read. That they are true, is only calculated to increase the horror and loathing they awaken. Mr Ballantyne seems aware that they need excuse, for he says : " Oh, reader this is no fiction. I would not for the sake of thrilling you with horror invent so terrible a scene. It was witnessed. It is true, true as that accursed sin which has rendered the human heart capable of such diabolical enormities." This excuse might be allowed if such descriptions were given in history or travels, or in any other book addressed to mature minds, though even then we think Dr Livingstone shows a true wisdom when he says, speaking of the natives of Central Africa:--" I shall not often advert to their depravity. My practice has always been to a the remedy with all possible earnestness, but never allow My practice has always been to apply own mind to dwell on the dark shades of men's characters. I have never been able to draw pictures of guilt, as if that could awaken Christian sympathy. The evil is there. But all around in this fair creation are scenes of beauty, and to turn from these to ponder on deeds of sin cannot promote a healthy state of the faculties." These words are the more forcible as coming from one who is deeply interested in those very missionary Libours for the promotion of which Mr Ballantyne has drawn these fearful pictures of heathen and savage life, and contrasted them with the state of those islands which have been converted to the Christian faith. We do not in the least doubt the greatness of the contrast, but we think the effect would have been equally great, and far more pleasant, if he had dwelt more on the bright, and far less on the dark, picture of human nature.

THE THREE CLERKS. A Novel. By ANTHONY TROLLOPE. In Three Volumes. Richard Bentley.

"THE WARDEN" and "Barchester Towers" raised Mr Trollope to a very promising position among modern novelists. He had attained that degree of eminence at which a new publication be-comes a matter of curiosity and interest to the whole novel-reading public. His reputation, however, stood at a critical point. step in advance would have fixed it as a recognised and esta-blished thing, and the slightest falling-off would have materially damaged its half-fledged glory. "The Three Clerks" has not settled the question as might have been expected. It is inferior in many respects to "Barchester Towers," but at the same time it contains indications of higher powers than any that were dis-played in that amusing tale. Mr Trollope owed his previous success not only to his smart, but to his really good writing. There was a buoyancy and life about his style, as well as an aptness and precision in all his expressions, that was irresistible. In "The Three Clerks" there is, perhaps, nearly as much "go," but the subtler and more delicate charms of style have sadly decreased. It bears evidences of having been written in haste, and reads as if the author had not given himself time to find the most exact and appropriate expressions for his meaning. This is unpardonable in one who has the power of writing so pointedly and so well. Mr Trollope cannot afford to be careless; such a fault in his case would be suicidal. A good style is in a certain sense synonymous with good matter. To quote from "Ernest Maltravers," "there is often but a hair's-breadth between a truism and a discovery. and on an author's style often depends his ability to express this hair's breadth difference. As our literary wealth increases, preci-sion of expression becomes more and more important. The broad From the regions of perpetual ice, with their mild, fur-elad, and uncouth inhabitants, we are transported in the "Coral Island" to the glowing loveliness of the tropic seas, their manifold expression, we all know by heart. If an author would

tell us anything new, he must penetrate into that labyrinth of subtler and less obvious thoughts which elude the touch of the subtler and less obvious thoughts which elude the touch of the unskilful or hasty pen,—which require to be clothed in well-inskilful or hasty pen,—which require to be clothed in well-fitting words in order that we may recognise the pith of their meaning. Now Mr Trollope possesses this power of exact expression to a high degree, and any haste or carelessness which leads him to forego its advantages, detracts materially both from his style and his matter. No one who has read "Barchester Towers" and "The Three Clerks" will fail to observe an unsatisfactory looseness, and consequent superficiality, of thought in the latter, as compared with the former. The same haste has produced a very detrimental effect upon "The Three Clerks" as a whole. In point of construction, the story is some-what clumsy, and it contains what the novel-reader is very justly slow to pardon,—long dissertations on abstract questions, which. slow to pardon,-long dissertations on abstract questions, which, in helping to swell out the matter to three volumes, make very heavy demands on his patience. In the second volume, one whole chapter is devoted to the wrongs of civil servants, and the injuschapter is devoted to the wrongs of civil servants, and the injus-tice which denies them the prizes of their profession. As a pamphlet, this chapter would have been worthy of attention; it is a pity Mr Trollope did not publish it in that form. No one can now be expected to read it. Standing, as it does, immediately before the consignment of our favourite, Charley, to the sponging before the consignment of our involution, charley, to the sponging house, it will, of course, be systematically skipped. The mere story of "The Three Clerks," independent of all this irrelevant and tedious matter, and of some of the details of Alaric's backslidings, could have been easily compressed into two volumes and would have stood higher as a work of art for the condensation.

To counterbalance these defects, however, Mr Trollope has given us some charming characters,—people whom we get to know as well as if we had lived with them for years. None are in any way exceptional characters. They all have the comfortable smooth appearance of people toned down to the pleasing proprieties and routine impressions of every-day life. Yet each is perfectly distinct, and exercises, in his contracted sphere, enough of originality to determine our feelings very decidedly towards The Three Clerks themselves are admirably drawn. Harry him. Norman and Alaric Tudor, belonging to the respectable office of the "Weights and Measures," who remain till five o'clock every day at their work, and maintain all the dignity, and something of the priggishness, of a model office, are well contrasted in their external life with poor Charley Tudor, who follows the reckless path which alone seems open to him among the riotous crew of the "Internal Navigation." Harry's character and career are the most touching. Too proud and sensitive to be very courageous or enterprising, or even very amiable, and too high-minded and conscientious not to be generous and self-denying, he remains one of the superior but unsuccessful members of society, who acquire the respect, but not the good things, of this world. He loses first his promotion, and then his lady-love; and his friend Alaric, with hardier nerves and less sensitive conscience, and a more determined will, steps into his place on both occasions. Alaric, how-ever, sells his soul to worldly success, and the various influences through which he is induced, first to speculate, then to employ his official knowledge dishonourably, and, lastly, to misuse the fortune of a ward, are well drawn, but form too disagreeable a theme to occupy to advantage the larger portion of three volumes. He ends by six months' imprisonment and emigration to Aus-tralia. Harry inherits his father's estate, which all will feel to be the most satisfactory finale for a good man who cannot help himself. the most satisfactory finale for a good man who cannot help himself. Paternal estates ought to be reserved for such meritorious but un-successful characters. The Three Clerks are only surpassed by Mrs Woodward and her three daughters, whose cha-racters are drawn with as much delicacy and truth as if they had been sketched by a skilful female hand. Mrs Wood-ward herself is a delightful creation, and diffuses a sunny cheerfulness over the whole work. The three girls are the most interesting characters that Mr Trollope has yet given us. We will not forestall the pleasure of our readers by relating their three courtships, but we cannot refrain from expressing our admiration at the pleasant way in which Mr Trollope has managed a very unat the pleasant way in which Mr Trollope has managed a very unat the pleasant way in which Mr Trollope has managed a very un-pleasant complication, viz.—a change of partners in the middle of the tale. The Miss Woodwards testify to great insight into cha-racter, and alone raise "The Three Clerks" above Mr Trollope's previous works. It contains fewer humorous passages and fewer amusing characters than "Barchester Towers," but Sir Gregory Hardines, the civil service regenerator, and his colleague, Mr Jobbles, who is ready to undertake the examination and classifica-tion of the whole English pation are very cleverly done. There is tion of the whole English nation, are very cleverly done. There is a good deal of broad fun, too, in Charley's first attempt at author-ship. With all its faults "The Three Clerks" is vastly superior to the state of the state to the general run of novels. A little more pains might have made it a first-rate book. We trust in future that Mr Trollope will give us characters equal to the heroes and heroines of this tale, but that her will be a state of the state of but that he will linger over them with more of the pride and the care that he bestowed upon his first creations.

A Letter on Banking with Limited Liability. By Edmund Potter. London: John Chapman. 1858.

ļ

A Letter on Banking with Limited Liaburg. Ly London: John Chapman. 1858. As may be said of all Mr Potter's political tracts, this pamphlet is written with ability, and evinces so living an interest in the political morality of England, and so practical a know-

ledge of commercial affairs, as to command our attention throughout. We do not agree in his conclusions. He has always been a consistent opponent of permitting limited lia-bility for joint stock companies, and of course opposes the ex-tension of the principle to banking companies. We believe that he greatly underrates the value of certainty and of defined obligation in all commercial dealings. No doubt the public have greater trust in companies that trade with unpublic have greater *trust* in companies that trade with un-limited liability; that is admitted on both sides. But have they greater security? They at least *know* far less clearly what security they really have. They have a vague and un-defined sense of security, which is in fact the greatest pro-moter of speculation. If depositors knew exactly the extent of the security on which they were relying—say double the amount of the paid-up capital—they would take care to ex-mine much more any invest the previously the security of the amine much more anxiously the periodical accounts of the bank with which they did business than they now do. The banks could not then be allowed to disguise their operations, as they would lose public confidence much more easily.

Thom's Almanach and Official Directory for 1858. Alexander Thom, Dublin. Longman, London.

THIS very useful Almanack and Directory, originally intended only for Ireland, has now been so much enlarged as to make a very valuable and complete almanack for the United Kingdom,-Irish information being, of course, still given in the greatest detail. It comprehends very valuable statistical in-formation, compiled from parliamentary returns, on foreign states, population, revenue, as well as on English commerce, navigation, exports and imports, banks, railways, mines, emigration, criminal returns, &c.

Villette. By Currer Bell. A New Edition. Smith, Elder, and Co., 1858.

- THIS cheap and beautifully-printed edition of one of Miss Bronte's scheap and beautifully-printed edition of one of Miss Bronte's most powerful tales needs nothing more than mention by the English press to ensure the widest success. It will be strange, indeed, if this series of Messrs Smith and Elder does not contrive to displace a good deal of the trash with which railway stalls are so often filled.
- Tell me of Happy Days. Ballad. Written by Charles d'Arcy, Esq. Composed by Joseph Philip Knight. Tranquille sur la Mer. Mélodie Religieuse. Poésie de Madame
 - Parnell. Musique par Joseph Philip Knight. Charles H. Purday, Maddox street.
- THE music of these two ballads deserves attention as being above the average in merit. The melodies of both are simple and pleasing, - qualities somewhat rare in these days of ambitious compositions, when a complicated harmony is considered to cover a multitude of faults. At the same time there is no poverty in the accompaniments. "Tell me of Happy Days" is rather the better composition of the two, but both will repay the study of the amateur.

Foreign Correspondence.

(FROM OUR CORRESPONDENT.)

Paris, Thursday.

If the abominable attempt to assassinate the Emperor had been made some weeks back, when the discount of the Bank of France was at 10 per cent., it would have caused a panic which would have been scarcely less disastrous in its effects than the Revolution of 1848. As it happens, it took place at a moment at which a rather serious commercial crisis having been got through, which a rather serious commercial crisis having been got through, the public securities were rising, commerce was presenting many symptoms of improvement, and everybody was looking more or less hopefully to the future. But still it has given a sharp and sudden check to speculation and trade, it has shaken confidence, it has opened the eyes of every one to the fatal truth which a rather long calm had caused to be forgotten, that the tranquillity ad mercine for a start of the start o and prosperity of France depend on the life of one man, and that there exists a gang of miscreants who are determined to take that life by means the most desperate and foul. It is much to be I feared that for many months to come the attentat of last Thursday

Jan. 23, 1858.

night will exercise a baneful influence on French enterprise :-at all events, it will certainly have the effect of making foreigners, and especially the English, cautious in their dealings with this country. What it has already **d**one on the Bourse will be seen country. What i from these figures

The exportation of silver and the importation of gold to replace it, which have been going on for some years, and which last year attained extraordinary magnitude, have at length forced themselves on the attention of the Government; and a sort of commission has been formed by the Minister of Finance to devise some measures with respect thereto. I am told that the majority of this commission seems likely to recommend either that the exportation of silver shall be totally prohibited, or that a heavy duty shall be imposed on it. The Minister of Finance himself is said to be in favour of one or other of these measures. Both, however, are opposed to the teachings of economic science, and however, are opposed to the teachings of economic science, and will certainly produce the most serious inconveniences; besides which, they will, so to speak, be a violation of the good faith that should be observed towards foreign creditors. The opinion of men of the highest authority in these matters is, that the Go-vernment, instead of having recourse to empirical and mischievous means the decomposed of the openate to empirical and mischievous measures like those proposed, ought to grapple manfully and at once with what is the real cause of the export of silver and the influx of gold,-namely, that from the abundance of gold, that metal no longer possesses the relative value to silver that it did sixty years ago, when the present standards of gold and silver coin were fixed by law.

From information which has reached me, there is reason to fear that the repeal of the usury laws which the Government lately proposed to the Council of State will not take place. In previous letters you were informed of the strong opposition this measure encountered in the Council, and it is now said that the Emperor is less favourable to it than he was, owing to some senators, bishops, and other influential personages having represented to him that it would have the effect of rendering the peasantry and the working classes the victims of usurers. Thus the commercial community is to continue to suffer inconvenience, because a considerable num-ber of councillors of State, of bishops, and of such people happen to know nothing whatever of political economy, and do think it worth the while to take the trouble to learn. Thus the law will continue to allow the Bank of France to charge ten per cent. discount whenever it pleases, and yet will inflict fine and imprisonment on private persons who may lend money at six per cent.

The budget of 1859 has been presented to the Legislative Body. It estimates the receipts at 70,956,7641 sterling, the expenses a 70,668,291*l*, and, consequently, leaves a surplus of 288,473*l*. It had been hoped that it would have provided for an increase of salaries to various classes of public functionaries, especially to the judges of the law courts, who are most scandalously underpaid. The necessity of making an increase was earnestly pressed on the attention of the Minister of Finance by some influential persons, and even, I hear, by the Council of State: he was told that it is absolutely impossible for the far greater part of functionaries to live on their salaries, - and that, consequently, not a few of them are compelled to have recourse to dishonesty. But he would not con-sent to grant any increase, beyond the paltry sum of 5,000,000f (200,000*l*), which is literally like a drop to the ccean; and which is destined for the clergy and schoolmasters. Yet there were some 40,000,000f, which, without much inconvenience to the public, he might have so employed: only he preferred to set it apart to the sinking fund. The Minister's conduct is considered very ungracious, as not only does he receive upwards of 5,000/ for his own ervices, but he has a palace to live in, lighting, firing, servants, farniture, plate, table linen, and some other things found for him at the public expense. Yet though thus comfortably provided for, the worthy gentleman does not spend more than 1,200/ a year, or thereabouts :- he economises the rest. I have also heard that this Minister has done a thing which is very absurd and mischievous : he has used his influence to prevent the carrying out of an extenhe has used his influence to prevent the carrying out of an exten-sive reduction in the import duty on coffee and sugar, which was recommended to the Emperor by a great personage here, and which His Majesty seemed disposed to adopt. The Minister ought to know that the reduction in question would not only afford an immense relief to the public, but would augment the revenue.

The Government has published a return relative to the indirect and direct taxes. The amount of indirect taxes got in last year was (including a sum of 6,218,000f not yet paid up), 1,052,713,000f,

which was 26,506,000f more than in 1856, and 101,834,000f more than in 1855. The total of 1,052,713,000f is thus made up :--Registration and mortgage dues, 283,735,000f; stamp dutes, 54,590,000f; customs duties on wheat, 1,233,000l; ditto on different descriptions of goods, 115,217,000f; ditto on colo-nial sugar, 36,953,000f; ditto on foreign sugar, 29,810,000f; various customs duties not included in preceding items, 2,442,000f; export duties, 1.802,000f; navigation duties, 4,147,000f; salt duty, 57,122,000f: duty on wines and spirits, 152,899,000f; on manufacture of beetroot sugar, 41,577,000f; various duties and receipts, 51,849,000f; sale of tobacco, 173,268,000f; sale of guupowder, 11,254,000f; Post-office, 52,004,000f; tax on money orders, 1,664,000f; places in mails, 15,000f; transit dues on formism while, 10,000f; correspind receipts 24,000f; foreign mails, 1,108,000f; occasional receipts, 24,000f. Compared with 1856, wines and spirits present an increase of 11,593,000f; and tobacco the enormous one of 9,835,000f. Foreign sugar in-creased by 10,405,000f; the other items of increase are insignifi-In colonial sugar there is a decrease of 3,998,000f; in the manufacture of native sugar of 3,933,000f; and in registration and mortgage dues of 2,034,000f. On the whole, the return is very satisfactory.

The return of the direct taxes shows that the amount got in, in the course of last year, was 440,044,000f,-which, the taxes havthe course of last year, was 440,043,0007,—which, the taxes hav-ing only to be paid in monthly instalments, and a month's grace being allowed, was more by 22,490,000f than could have been legally exacted. The amount of direct taxes remaining due at the end of the year was only 15,470,000f. In 1857, the expenses of proceedings to enforce payment of taxes was at the rate of 15 600 more 1000f, in 1856 it was at the fact of These 60c per 1,000f; in 1856, it was 1f 62c the 1,000f. These figures also are satisfactory.

The Emperor opened the other day the Legislative Body, in a speech in which he touched on economic as well as political He said that 831 miles of railway were opened last matters. year, and 1,625 miles conceded ; that the ports of Havre, Marseilles, Bayonne, and others, have been improved, and that by a ship canal that of Caen has been placed in communication with the sea; that in the north and east of the country the working of new coal-mines has been undertaken; that the plantation of uncultivated tracts of land has been commenced; and that the exportation and distillation of grain has been authorised. His Majesty took credit to his Government for its conduct in the recent commercial crisis, and said that the manner in which French commerce had supported that crisis was highly creditable. But he did not, unfortunately, announce any of those Customs or other economic reforms which are so much needed.

The railway newspapers make calculations of the gross receipts of the different lines for the last year. These calculations are, of course, not exact, and are incomplete, but they are a sort of guide to shareholders. The receipts of the Northern line are put down at 51,615,000f, of the Orleans at 57,500,000f, of the Lyons and Mediterranean at 79,214,960f, the Western at 41,790,419f, and Eastern at 48,026,578f. Deducting from these receipts the sup-posed expenses, it is assumed that the dividend of the Northern line will be about 61f, of the Orleans 90f, of the Mediterranean 60f, of the Western 37f, and of the Eastern 34f. But these are after all little more than mere guesses.

BIRTHS.

On the 17th inst., at 39 Lowndes square, the Lady De L'Isle and Dudley, of a son On

the 19th inst., at 17 Eccleston square, the Viscountess Ingestre, of a daughter.

On the 5th inst., at Chateau de Salenstein, Switzerland, the residence the Dowager Lady Temple, the lady of Sir Grenville Leofric Temple, Bart., of a son.

MARRIAGES.

On the 19th inst., No 5 Albyn place, Edinburgh, by the Rev. Dr. Bruce, Dr John Stewart, R.N., Perth, to Georgina Taylor, only daughter of David Martin, Esq., Kinmouth, Bridge of Earn.

On the 19th just, at the church of the Sub-deanery, Chichester, the Rev. Robert Sutton, to Lucy Turner Gilbert, seventh daughter of the Bishop of Chichester and Mrs Gilbert. DEATHS.

On the 18th inst., his Grace the Duke of Devonshire.

On the 16th inst., at No. 22 Hyde park gardens, the Right Hon. Sir William Henry Maule, in his 70th year. On the 16th inst., at St Leonard's-on-Sea, Lady Boothby, relict of Sir William Boothby, Bart., of Ashbourn hall, Derbyshire. On the 19th inst., at Plymouth, Vice-Admiral Sir John Coode, K.C.B., azed 79. aged 79.

COMMERCIAL AND MISCELLANEOUS NEWS.

From Bombay we have received the following commercial intelligence by the last overland mail :-- We have no material change to report in our money market during the past six days. The banks are acting cau-tiously, and the rates of interest charged by them remain unchanged. Government and other securities are without change. Tonnage is abun-dant in the harbour, and the arrivals being numerous, the rates are likely to give way. We quote 1/ 10s to 1/ 12s 6d for London, and 1/ 7s 6d to 1/ 10s for Liverpool. Exchange has not been in much request for this

steamer. First-class bills have sold for 2s 2d, and document paper at 2s 21d. On Calcutta, sight, 1002; on China, 60 days' sight, 215.

The latest advices from New York state that money was in better request, but, with an abundant supply, there was not much change in rates, though, perhaps, the facilities for obtaining it on second-class paper were not so great as they were the previous week. High grades paper were still scarce. No. 1 signatures 8, 10, and 12 per cent., and of paper were still scarce. No. 1 signatures 8, 10, and 12 per cent., and mames less known and second-class notes 12 to 30 per cent. On call there was an abundant supply of money at 6 to 7 per cent. The Bank statement showed an increase in all the items, that in the specie line amounting to nearly a million and a half. The actual increase in th deposits was nearly two millions. The discount line had been enlarged to the amount of about six hundred and fifty thousand dollars. The line was 3,566,856 dols higher than the minimum on the 28th of November last, and 23,527,269 dols below the maximum on the 8th of August last. We annex a comparison of the leading items:--

	Jan. 3, 1857.		Dec. 26, 1857 dels	*	Jan. 2, 1858. dois

The Belgian Moniteur has published a royal decree sanctioning various modifications made by the Chambers in the Customs tariff. The system of free trade has been alopted in a number of articles, while others are fixed at a very low rate of import duty. Among those admitted free are sanimals of different kinds, lime, charcoal, and turf, copper in blocks, rags, tanning bark, raw wool, milk, metals and minerals, unless specially tariffed; eggs, gold and silver in ingots or bars, hones, perfumery; stones, rough, cut, or in statues; forage of all kinds, resin and bitumen; sathetre, nitrates of soda and potash, silk (except for sewing and embroidery), dyestuffs (except those prepared with oil), vegetables and vegetable substances, and rough zinc. Coal is now admitted upon payment of If 40c per 100 kilogrammes; unworked steel, 80c the 100 kilos; wood of different kinds, 5f; fermented potable liquors, except wine in casks, 5f per hecto.; mercery, ironmongery, 10 per cent.; raw skins, 10 per cent.; chemical productions, 2f to 5f the 100 kilos, according to kind. In order to cover the deficit resulting from the modifications and suppressions, the additional centimes on the entrance duties are increased from 16 to 20 per cent., but this addition of 4 per cent. will not be charged on commercial contracts previously entered into. By royal decree olive oil cannot be admitted as oil for the use of manufacturers unless mixed before passing through the Custom-house with a certain quantity of turpentine, so as to render it unfit for table use. Olive oil which has become rancid may, however, be passed without the the above mixture. The Belgian official-journal also publishes the Customs returns for the first eleven months of 1857, present a diminution of 13 per cent. compared with these ame period of 1856, and 3 per cent. compared with 1856, and of 22 per cent. compared with 1855. In importations, the eleven months of 1857, compared and the 1855. In importations, the eleven months of 1857, compared and the 1855. In importations,

The last advices from Buenos Ayres state that commercial affairs were dull and flat. The news taken by the last packet from Southampton produced a perfect revulsion in the produce markets, with falling prices and several mercantile failures. In manufactured goods the wholesale transactions' during November were very inconsiderable. Stocks were large of articles for daily consumption. From Rio advices are to the 25th of December. By them we learn that the disastrous commercial intelligence taken out by the Medway had caused an almost total torpor in trade, especially in coffee. Such a restriction of business in this article as has prevailed since the beginning of October has not been remembered for many years past, for during this period of a season when generally an amount of transactions is calculated upon the sales only reached 166,000 bags, against 550,000 in the same time last year. About 16,000 bags were disposed of from the 13th to the 30th of November at a decline of 100 rs, but a further reduction of 500 rs was established between the 4th and 9th of December, 13,000 having been sold. Of 29,000 bags in all sold since the 13th of November, 12,000 were for the United States, 8,000 for the Channel and North of Europe, 2,500 for the Mediterranean, and 6,500 for the Cape of Good Hope. Nothing was doing in hides, of of which there were 3,887 in stock, all of small weight. A great depression in exchange had taken place since the 12th of November, chiefly caused by the almost entire absence of transactions in coffee. The business done for this mail was important, chiefly at $26\frac{1}{4}d$, 90 days; a moderate amount was also negotiated at $25\frac{1}{2}d$, $26\frac{1}{6}d$, $26\frac{1}{6}d$, and 26d. The Bank had drawn a large sum at $26\frac{1}{4}d$. The National Bank of Brazil had raised the rate of discount to 10 per cent. Exchange on Paris, 362 to 368; Hamburg, 695. Freight quotations nominal.

The Jamaica Legislature was prorogued on the 31st of December, after passing new laws substituting export duties for the hereditaments tax. The export duty has been fixed on the following scale:--Sugar, per hhd of 18 cwts, 3s; rum, per pun of 96 gallons, 2s 6d; coffee, per tierce of 750 lbs, 4s; pimento, per bag, 1s 6d; woods (except mahogany), per ton, 1s; ginger, per cwt, 1s; bees wax, per cwt, 2s; arrowroot, per cwt, 1s; cocoa-nuts, per 1,000, 1s; mahogany, per 1,000 feet, 5s; honey, per cwt, 1s. In addition to these duties on export, it has been agreed to levy the following duties, which are additional to the tariff, to commence on the 19th December:--Soap, per box of 56 lbs each, 1s; tobacco, manufactured, per 1b, 2d; ditto, unmanufactured, per 100 lbs, 7s; cigars, per 100, 1s. Duties to be levied on the under-mentioned articles already in bond, and imported on and after the 18th December: --Gin, per gallon, 1s; brandy, per ditto, 1s; ale and beer, per tun of 252 gallons, 20s; wine, per tun of 252 gallons, 60s; lucifer matches, per gross, 5s 6d; tea, per 1b, 2d; sperm and composition candles, per box, 2s. In Jamaics, the business of the fortnight had been somewhat more active in consequence of the demand f.r Christmas supplies; large quantities of goods in the provision and grocery lines have changed hands. The money market was not more easy. Coffee was in better supply, but transactions were confined to small purchaves for the English market. Trinidad was healthy, and the crops were coming forward well. Indeed, the Jamaica Standard asserts that in all the West India islands the crops this year will be unusually heavy.

The following statement shows the worth of 100l of tithe rent-charge for each year since the passing of the Tithe Commutation Act, viz. :--For the year \pounds a d is for the year \pounds a d

A return of the sherry wines exported during the past year shows the quantity to have been 50,707 butts, against 54,611 butts in 1856, and 43,637 in 1855. The proportion from Xeres was 27,707 butts, and from Port St Mary, 23,000. At the former port the largest shippers were F. W. Cosens, 3,119 butts; Gonzalez and Dubosc, 2,892; P. Demecq, 2,628; Simon de la Sierra, 2,443; P. Garvey, 2,317; Pemartin and Co., 2,160; M. Miss, 1,411; P. Beigbeder, 1,091; and P. L. Villegae, 1,038. From the latter port the largest were J. W. Burdon, 3,544; Duff, Gordon, and Co., 2,214; Widow Harmony and Co., 2,163; Mousley and Co., 2,066; Diaz, Merello, and Co., 1,879; M. and F. Tosar, 1,675; Widow Portilla, 1,452; M. M. de Mora, 1,378; B. Vergara, 1,246; and nephews of P. Harmony, 1,060. All other shippers were under 1,000 butts each.

A meeting of proprietors of the St Katharine Dock was held on Tuesday. The report was adopted, and a dividend declared for the past half-year of 2¹/₄ per cent., free of income tax.

A meeting of the shareholders of the Commercial Bank too's place on Tuesday, when a dividend was declared at the rate of 6 per cent. per annum, free of income tax.

A meeting also of proprietors of the City Bank was held on Tuesday, when a dividend was declared for the past half-year at the rate of 5 per cent. per annum, free of income tax.

The meetings of proprietors of the London and Westminster Bank, and Union Bank of London, were held on Wednesday. In the former case, the balance of profits available for division was stated at 76,446*l*, out of which the directors declared a dividend of three per cent. for the half-year, and a bonus of four per cent. upon the paid-up capital. At the meeting of the Union Bank proprietary the net profits for the halfyear were stated at 50,474*l*. The directors declared a dividend and bonus equal to that paid at this period lat year, viz., a dividend for the last six months at the rate of 10 per cent. per annum, and a bonus of $2\frac{1}{2}$ per cent. on the paid-up capital.

The London Joint Stock Banking Company have declared a dividen at the rate of 12} per cent. per annum, with a bonus of 10s per share: and the Bank of London one of 5 per cent.

Creatation, the bank post bins 20,317,410 [Securities _______ in a 31,305,613] Public Deposits _______ 2,413,738 [Bullion _______ 14,435,815 Private Deposits _______ 15,386,694 The balance of assets showe liabilities being 3,688,6147, as stated in the above account under the head REST.

FRIDAY NIGHT. The preceding accounts, compared with those of last week, exhibit--

An increase of Circulation of	£355,802
A decrease of Public Derosits of	
A decrease of other Ireposit. of	
A decrease of pourities of	
An increase of Bullion of	
An increase of Rest of	
An increase of Reserve of	**·· ·· ·· ··· · ··· ··· ··· 728, +13

The Bank's means have been greatly increased by the running off of advances and loans to the amount of more than a million and a half; but, on the other hand, the deposits have diminished by not far short of a million. On balance, the banking reserve presents an augmentation of 728 413/. A decrease in the "other" deposits was expected, after the unprecedentedly large addition made under that head in the previous week. The increase in the coin and bullion is more than a million; and the total held has reached nearly fourteen and a half mildions. The delay of the directors in further reducing the rate of discount is probably chiefly dictated by the magnitude of the stock of "other" securities. So long as this item remains above twenty millions, the traces of the recent convulsion cannot be said to have vanished from the Bank balance-sheet.

The Bank of England have not made any further reduction in their rates of discount this week, but the tendency of the money market continues as strongly pronounced as ever. There is an absolute plethora of money in the open market. The supply of bills is far below the requirements of discounters, who compete with each oth r most keenly. The consequence is that, although the current rates for good bills may still be quoted at $3\frac{1}{4}$ to $3\frac{3}{4}$ per cent., transactions take place in paper with unexceptionable names as low as 3 per cent. As a matter of course, the Bank of Eugland are at present virtually out of the market. The "Dis-count Office" at that establishment, lately so thronged, is almost deserted, for houses whose bills are eagerly sought after by disdescribed, for houses whose bins are eagerly sought after by dis-counters at 4 per cent. and less, are hardly likely to pay 5 per cent. at the Bank. We have scarcely ever wiressed so much eagerness for business on the part of the joint stock banks and discount establishments. The fact is, all these establishments hold unusually large amounts of unemployed deposits, for which there are no and in some ever they are paying 3, and, in some cases, 31 per cent. interest, and which they must find some employment for, in order to avoid loss. We know of numerous instances in which fresh deposits have been altogether refused ; for, although these establishments have a fixed rate of allowance for deposits, they are not disposed to take in fresh sums, if they see no means of temporarily investing It is an interesting feature of the day that, in the dearth of good mercentile bills, the tanks and other large holders of money are becoming much more willing lenders on stocks and shares. Considerable amounts of various descriptions of securities, including English Government stock, Turkish Guaranteed Four per Cents, and Indian and British railway shares, have of late "gone into pledge." This movement is calculated to give a great stimulus to speculation in the Stock Exchange, where money is thus ren-dered unusually plentiful. Owing partly to the important invest-ments of bankers, and partly to loans of money upon stock, the current rate in that establishment has been only 2 to 2½ per cent., on deposit of Government securities; and, recently, brokers who instructions to employ large sums in this channel, have have found themselves quite unable to execute their orders, in the absence of any corresponding demand. In the railway share department of the Stock Exchange, a somewhat more extended

field may perhaps be presented for the employment of money in loans, and the result will ultimately be the accumulation of a very large amount of railway stock in the hands of bankers and moneylenders in London, in the provinces, and in Scotland. And there the stock will probably lie until the legitimate commercial demand for money shall revive. As yet, the dulness of trade is universal, nor can any speedy rally be reasonably expected. The commercial collapse and monetary stringency reported by the last packet from the Brazils, furnishes an illustration of the wide-spread disturbance to which trade has been subjected by the recent convulsion. The reply to the European pressure must be received from all the other distant markets before trade here will be replaced upon a basis of confidence.

The considerations thus briefly sketched render a fresh reduction in the Bank rate of discount certain. It is generally believed that the *minimum* charge at that establishment will be lowered to four per cent. next week. The rate in the open market will then probably be still nearer to three per cent.

The fall in the value of money on the Continent continues. The Bank of Belgium yesterday reduced the rate of discount to 4 per cent. At Hamburg the quotation is 2 per cent. On Tuesday the Bank of Holland reduced their charge from 6 to 5 per cent.; and on Saturday the Bank of Prussia lowered the rate from $5\frac{1}{2}$ to 5 per cent.

The amount of gold known to have been purchased by the Bank of England since Wednesday evening, to which the above return is made up, is 260,000/.

The imports of he precious metals since Friday evening have been large, comprising 440,000l from the United States; 156,000l, chiefly gold, from the West Indies; 140,000l from the Brazils; 14,000l from the Levant; 13,000l from Alexandria; and considerably upwards of 100,000l from Russia. The principal shipment has consisted of 370,101l (nearly all silver) by the Indus, for the East.

On Tuesday the foreign exchanges were again lower, the decline extending to bills on Holland, Belgium, Frankfort, and long paper on Paris. To-day the tendency was steadier. As regards Hamburg, the quotation remains the same as on last Friday. The rates have not yet declined to the point at which a portion of the gold imported will flow out again; but, as the money market becomes easy, this point will probably be gradually reached.

Owing to some revival of the demand for silver for the Continent, the price of the metal is firm, at $61\frac{3}{2}d$ to $\frac{3}{4}d$ per ounce standard. The price of Mexican dollars is merely nominal, there being few in the market.

The only failure announced this week in London is that of Messrs Charles Walton and Sons, ship and insurance brokers, whose liabilities are estimated at about 80,000*l*. At Newcastle and in the manufacturing districts fresh cases of embarrassment are reported.

There have been meetings of the creditors of several houses which lately failed. Messrs Albert Pelly and Co. show liabilities 36,316*l*, and a surplus of 50,000*l*—a result which excites a feeling of surprise that the house should have been allowed to succumb. In this instance the creditors left the winding-up in the hands of the partners themselves. Messrs T. H. Elmenhorst and Co. show liabilities 11,167*l*, and assets 14,281*l*; Messrs Powles Brothers and Co., liabilities 160,369*l*, and assets 88,250*l*; Messrs Wm. Dray and Co., liabilities 17,267*l*, and assets 15,279*l*; and Messrs Herman Cox and Co., liabilities 154,911*l*, and assets 85,129*l*.

Most of the London Joint Stock Banks have this week held their meetings, which were looked forward to with considerable interest. The London and Westminster Bank show a dividend of three per cent. for the half-year, and a bonus of four per cent. on the paid-up capital, adding 3,868l to the reserved fund, and carrying forward 2,578l; the Union Bank of London declare a halfyearly dividend at the rate of ten per cent. per annum, and a bonus of 2½ per cent., and carry forward 5,474l; the London Joint Stock Bank declare a dividend at the rate of 12½ per cent. per annum, and a bonus of 10s per share, and add 16,066l to the guarantee fund, which is thus raised to 187,014l; the Commercial Bank declare a dividend at the rate of six per cent. per annum, add 536l to the reserved fund, raising it to 75,000l, and carry forward 2,304l; the City Bank declare a dividend at the rate of five per cent. per annum, and carry forward 4,228l; and the Bank of London declare a dividend at the same rate, carrying forward 802l. The dividends declared seem to give satisfaction to the shareholders, but, with the single exception of the London Joint Stock Bank, not one of these institutions has made any important addition to its reserved fund.

New joint stock projects may now be looked for by the dozen. This week the Bahia and San Francisco Railway Company has issued its prospectus, with a capital of 1,800,000*l*, bearing a guarantee of 5 per cent. from the Brazilian Government, and an additional 2 per cent. from the Provincial Government of Bahia. The capital mentioned is intended for the completion of 77 mles from Bahia into the interior. The credit of Brazil is good, and the undertaking is introduced by Messrs Rothschild and Sonscircumstances which combine to give it great popularity. The shares were quoted this afternoon at $\frac{2}{5}$ prem ; and so great has

been the rush to obtain them, that Messrs Rothschild have been compelled this evening to request that no more applications may be sent in. The original prospectus mentioned that the list would remain open until Tuesday next, and the necessity im-posed upon the promoters of virtually violating this understanding, will menably give rise to the complaint usual amongst discowill probably give rise to the complaint usual amongst disappointed persons.

This afternoon the "Cape (Eastern Province) Railway Com-pany, Limited," was launched on the market. The proposed capital is 600,000l, in 20l shares, with a deposit of only 2s. capital is 600,0004, in 204 shares, with a deposit of only 2s. This company is virtually the Cape Town Railway and Dock Company under another name. It proposes to undertake the construction of such railways in the Eastern Province as the colonial authorities may sanction, under a colonial guarantee of 6 per cent. interest. No call is to be made unless the concession and guarantee are obtained.

and guarantee are obtained. Monday next (the Royal Wedding Day) will be very generally observed as a holiday in commercial circles. The Stock Exchange will be closed.

At Paris to-day (Friday) the closing quotations of the Bourse were as follows, viz.:--Three per Cent. Rentes, for money, 69.15; ditto, for account, 69.35; ditto, Four-and-a-Half per Cents., for anto, for account, 05.55, dites, rotation and a number of the closing quotations of France Shares, 3,200. A comparison with the closing quotations of last Friday exhibits, as regards the Three per Cents, a decline of about $\frac{1}{8}$ per cent. in the price for money, and of $\frac{1}{4}$ per cent. in the price for the account. In the interval the quotation has been as low as 68.40 for cash, and 68.80 for the end of January, owing to the uneasiness excited by the atrocious attempt upon the Emperor's life, and by the rumours of difficulties

with neighbouring Governments in connection with the foreign refugee question. The rally took place this day. The English funds this week have attained a fresh rise of $\frac{2}{2}$ per cent. The chief buoyancy was exhibited yesterday and today. The market is strongly supported by the investments of bankers overloaded with money, and unable to employ it in com-mercial channels. Yesterday alone about 300,000l stock is stated mercial channels. Yesterday alone about 300,000*l* stock is stated to have been absorbed on banking account. The restraint exer-cised upon the market by the fear of an Indian loan seems to be passing off. The latest quotation of Consols this evening was 95½ "sellers," for the 4th of February. Subjoined is our usual list of the highest and lowest prices of Consols every day, and the closing prices of the principal English andforeign stocks last Friday and this day :--

New ditto 4 per cent $10\frac{14}{2}\frac{4}{2}$ $10\frac{14}{4}\frac{5}{2}\frac{1}{4}$ The railway share market has experienced numerous varia-tions, but in some cases realisations have predominated, and prices are lower. Compared with last Friday's quotations, Great Western stock exhibits a decline of $1\frac{3}{4}$ per cent.; York and North Midland, of $1\frac{1}{2}$ per cent.; Berwick, of 1 per cent.; Lanca-shire and Yorkshire and South-Eastern, of $\frac{3}{4}$ per cent., and Lon-don and South-Western, of $\frac{1}{2}$ per cent. On the other hand, Cale-donian has risen $1\frac{1}{2}$ per cent.; Great Northern, 1 per cent.; and London and North-Western and Eastern Counties, $\frac{1}{2}$ per cent. Great Northern is the strongest stock in the market, and cent. Great Northern is the strongest stock in the market, and Great Western the most sensitive. It is said that the coming dividend of this last-mentioned company will be at the rate of 2 per cent. per annum. The traffic of the lines running north-wards is still unsatisfactory. Subjoined is our usual list of the closing prices of the principal shares last Friday and this day :-

COMPARATIVE EXCHANGES.

The quotation of gold at Paris is about $1\frac{1}{2}$ per mille discount, and the short exchange on London is 25:15 per 12 sterling. On comparing these rates with the English mint price of 32 17s 10 $\frac{1}{2}$ per ounce for standard gold, it appears that gold is nearly 1-10th per cent. dearer in London than in Paris.

By advices from Hamburg the price of gold is 415 per mark, and the short exchange on London is 13.34 per 11 sterling. Standard gold at the English Mint price is therefore about 12 per cent. dearer in London

the English Mint price is therefore about 12 per cent, dearer in London than in Hamburg. The course of exchange at New York on London for bills at 60 days' sight is 109 to $109\frac{1}{2}$ per cent. At the present rate of discount here there is no profit on the transmission of gold from this country to the United States, and the profit is very small on receiving it from the other side side.

The Commercial Times.

MAILS FOR AND THROUGH SARDINIA.—In accordance with the provision of the postal convention concluded with Sardinia, and which will come into operation on the 1st February next, the following rates of postage on letters forwarded to Sardinia in the mails via France will be substituted for those now beind now levied. -

port in Sardinia by a Sardinian or by private ship J a Letters for V: netian Lombardy are sent via France and Sardinia, unless otherwise addr.saed, but letters for any other part of the Austrian dominious intended to be for-warded via France and Sardinia must be so addressed. And so on, adding one rate for each additional quarter of an ounce. The postage upon letters intended to be forwarded to parts beyond sea from a port of Sardinia, must in all cases be paid in advance, or the letters cannot be forwarded. Letters addressed to Sardinia, if not prepaid, will be subject on delivery to an extra charge of sixpence each, in addition to the postage specified in the foregoing table. Letters addressed to Sardinia, must be poind in advance; and, in addition, a registration fee of sixpence if the letters be addressed to Sardinia, and of elevenpence if the letters be addressed to Tuscary, Par-ma, Modena, or the Austrian dominions.

Imports of the week

Jan. 23, 1858.]

THE ECONOMIST.

COMMERCIAL EPITOME. FRIDAY NIGHT.

The navigation on the Continent being still open, liberal sup-plies of good and useful wheat continue to reach us from abroad, plies of good and useful wheat continue to reach us from abroad, the imports this week being 9,010 quarters. As the supplies are disposed of almost immediately on arrival, our millers are still operating with great caution; hence the trade is heavy, and prices at Mark Lane have a downward tendency. All spring corn—the receipts of which have been tolerably good—has moved off slowly on former terms. Inferior flour has gone rather cheaper. on former terms. Inferior flour has gone rather cheaper. At Liverpool and Wakefield, to-day, wheat and most other

produce met a dull inquiry, and the quotations were in favour of

produce her a tail inquiry, and the quotations were in favour of buyers. No particular change has taken place in the value of either wheat or flour in the French markets, which, for the most part, have shown no signs of animation. Very few orders have been received out from this country for the purchase of those articles. In the North of Europe the business doing in grain for spring shipment is trifling in the extreme. Our American advices— which extend to the 9th inst—bring no change in the value of which extend to the 9th inst.—bring no change in the value of either wheat or flour. The want of shipping orders was much against value, as the stocks at New York were large for the time

of year. An active inquiry has prevailed throughout the present week in the Liverpool cotton market, and the total sales reached 67,000 the Liverpool cotton market, and the total sates reached 67,000 bales at an advance of $\frac{1}{4}$ d per lb upon last Friday's quotations. Spinners have operated to a fair extent; their purchases amount to 48,000 bales; speculators have taken 15,000 bales, and ex-porters 4,000 bales. To-day the market closes with an animated porters 4,000 bales. tone. Sales 10,000 bales at the fullest rates of the week, with appearance of a further advance. In the London market a good business has been transacted at an improvement of $\frac{1}{5}d$ per lb on last week's prices. Sales are 4,000 bales.

Dull accounts, in reference to the cotton trade, have come to hand from Alexandria. During the fortnight prior to the 4th inst., 5,000 cwts had been disposed of at the following quotations :---

Free	on	board,	including	commission	and	costs.	
		f.	с.		f.	C.	

	Ť.	C.		Ť.	c.	
Ordinary	138	40 per	100 kilos., or	30	5	per 100 lbs.

- ,	1855. bales		1856. bales		1857. bales
To England			107,915		69,381
- France			36,411		
- Austria		********	35,353	********	18,267
Total	142,791	-	179.679	-	106.198

The latest advices from New York bring inactive markets for cotton, with very few sales on English account. Our correspondents thus write :-

Prices have at last fallen to what must be considered a low rangevery low, in view of the probabilities as to the extent of crop and con-sumption. The latter will be stimulated by the safety of present prices, sumption. The latter will be stimulated by the safety of present prices, by the cheapness of food, and probably in a few months by the abun-dance and cheapness of money. These causes are likely to set all the available machinery everywhere in motion, and it will sgain be found that a crop of three and a half millions of bales would not be too much for actual consumption, not to speak of filling the gap in stocks, which the world will be araisets to do at low prices. How, then, will a crop of the world will be anxious to do at low prices. How, then, will a crop of 3,000,000 bales serve? It is apparent that when the wheels of trade are again set in motion, an advance will commence, which will eventually carry prices to a high point.

The tea market has been less active than last week. In prices, however, very little change has taken place. Common sound congou has sold at $1s 1\frac{1}{2}d$ to $1s 1\frac{2}{3}d$ per lb, with only a moderate show of samples.

Good and fine raw sugars have moved off steadily, and prices may be considered 6d to 1s per cwt higher. In low and damp parcels, only a moderate business has been passing, on former terms. Refined sugars have advanced fully 1s per cwt. The market generally exhibits a healthy tone.

Coffee has been in good, though not to say active, request, at the late improvement in value. Cocoa, however, continues heavy, and some kinds have sold at 10s per cwt beneath the recent nominal quotations.

Commercial letters from Rio, dated the 15th ult., furnish some interesting details in reference to the coffee crop. We are in-formed that an average yield of 2,300,000 to 2,500,000 bags will be obtained, but in all probability it will come late to market, the bulk of the crop being the result of the third blossom. Com-parative statements from his from his July to Novemparative statement of exports from Rio from 1st July to Novem-

Cleaned rice has h other descriptions hav	oon in a	ood 1 of	rognost	at .	Fort full	pric late	es, but rates.

The unusually large stock in warehouse, and the heaviness in the

corn trade, continue to operate against value. Good old currants have sold steadily, and good Valencia raisins have realised 57s to 58s per cwt. Other fruit is a slow inquiry. Messrs Houghton and Levy, of Liverpool, thus report the state of the currant market :-

The trade is healthy, which has not been the character of it hitherto this season, and valuations can be determined with more certainty. At the early part of the season the high rates asked by importers checked business, ard when sales were made prices were accepted, with but little ocnsideration as to quality, good fruit being sold at 40s to 44s. The effect of this has been to give an impetus to consumption, and an advance of 5s to 6s is now established on this description.

Most kinds of saltpetre have met a heavy demand, and the quo-

tations have had a drooping tendency. The tobacco market is firm, and prices are well supported. The annexed table shows the stocks of tobacco in the principal markets of the United States on the 1st of January, 1856, 1857, and 1858 :-

	1856.	1857.		1858.

Tratal	10.000	01 880		11.100	
Total	10.302	21.758		14.480	

21,758 14,480 Silk has been held with more firmness, and the late improve-ment in prices is supported. The business doing, however, is very moderate. The total deliveries of silk in New York last year, were 3,627 cases and bales, against 3,413 ditto in 1856; 3,428, in 1855; 3,963, in 1854; and 4.979, in 1853. Indigo has been held for more money; but, as yet, very few buyers are coming forward; consequently, the supply in ware-house is increasing.

house is increasing.

We have to report a much better feeling in the wool trade. The fall in the value of all kinds of wool has been arrested; but the business doing is wholly confined to small parcels. Flax is still dull, yet importers generally are firm. The value

of Manilla hemp has improved 20s per ton, at which numerous buyers have come forward.

Scotch pig iron has ruled about stationary. Nearly all other metals, especially tin and spelter, have met an active demand on higher terms.

The dealings in the spirit market have been comparatively trifling. Compared with last week, we have very little change to

report in prices. The oil market has continued steady, and the quotations have rather advanced.

Tallow has realised steady currencies. To-day P. Y. C. on the spot, is quoted at 54s 3d to 54s 6d per cwt. At St Petersburg the market is firm at 164 roubles for August delivery.

From a circular issued by Messrs Saml. Schultz and Co., we learn that the exports of wood from Memel in 1857 were :-Oak Wainscot Oak Timber Red Round White Round Oak

Staves.

Schocks. 10,973.

In the manufacturing districts trade generally is becoming more active. However, very little improvement has taken place in the value of the staple articles of daily use. The dry goods trade at New York has lately shown signs of a revival. "There is," says the Shipping List, "a hopeful feeling with regard to the future, and a good spring trade is confidently expected. In many quarters, factories which suspended operations two months ago, in the general uncertainty and gloom, have once more started their works, and, though the depression is still great, there has yet been a marked improvement, and the small amount of goods now manufactured are likely to meet a fair market at the opening of the spring trade. The importations are light, and should they continue so, we may look for an improvement in prices commensurate with the expectations of the major portion of the trade."

SPIRIT OF THE TRADE CIRCULARS.

(FROM MESSRS M'NAIR, GREENHOW, AND IRVING'S CIRCULAR.)

Manchester, Jan. 19, 1858. Since the lowering of the rate of discount by the Bank of England, matters here have been gradually acquiring greater strength, accom-panied with considerable operations in both goods and yars, adapted for India chieffy. To-day, however, owing to the generally advancing ten-dency in prices, and an actual demand for higher rates in the majority of instances, the action of the market has been confined to comparatively few transactions. The market, nevertheless, was decidedly strong and against the buyer.

(FROM MESSES GULTEOW AND CO.'S CIECULAR.) Bahia, Dec. 21, 1857. Sugar-Supplies of the new crop have been very scarce from the interior, and we get every day more convinced that the present crop will be a very late and small one; from the Cotinquiba River we have not yet had any supplies of new sugars, and we cannot expect them before the end of next month. Previously to the arrival of this steamer from Europe, a cargo of good old brown sugars in cases and bags has been

THE ECONOMIST.

Jan. 23, 1858.

bought at 2,550 to 2,600 rs per arrobe ; since then some parcels of regular good new brown sugars in bags found purchasers at 2,400 to 2,450 rs, and at 2,100 rs for low browns; afterwards exporters were only offering 2,000 rs per arrobe for regular browns, but as holders asked higher prices, no transactions took place at this rate. In white sugars nothing has been done, and neither in browns since the arrival of the Petropolis steamer ; we therefore quote prices entirely nominal :- 2,000 to 2,400 m ateamer; we therefore quote pitces charley nominal 22,000 2, 3,370 tons, against 3,400 tons on the 15th December, 1856. Cocoa-Regular supplies have come to town, and prices declined to 6,000 rs to 6,400 rs per arrobe. Stock on '18th inst., 385 bags. Exchange fluctu-ated for this conveyance from $26\frac{1}{2}d$ to $24\frac{1}{2}d$, 90 days' sight, and even about 4,000l, 90 days' sight, have been passed at 24d. The bulk of transactions has been done at $25\frac{1}{2}d$ to 25d, about 5,000l at $24\frac{3}{4}d$, and perhaps 10,000l at $24\frac{1}{2}d$. 10.000/ at 241d.

(FROM MESSES C. J. ASTLEY AND CO.'S CIRCULAR, FORWARDED BY ME ENGELHARDT.) Pernambuco, Dec. 21, 1857.

Since the date of our last, this market has undergone a series of most violent fluctuations both in produce and exchange, but especially the latter, consequent upon the successive bad accounts brought by the mail steemers. attenter, consequent upon the sate still going on, ou a good scale, both to the steamers. Shipments are still going on, ou a good scale, both to the Plate. Valparaiso, and Portugal, or we should have seen a further reduction in prices. The entry continues on a fair scale, and would have been larger, but planters are for the most part claying their sugars, which keeps them back, and also of course diminishes very materially the supply of browns.

The cotton market has been animated this week, and somewhat excited towards the close. The trade are gradually resuming full time, and the supply of the more useful qualities of American is below their requirements. Holders have, consequently, obtained an advance in these grades, amounting generally to 1d per lb. The lower qualities are requirements. less in demand, and do not equally purticipate in the improvement. Longstapled kinds are in better request, and command full prices. East India an $\frac{1}{2}$ d per lb dearer. The sales to-day are 8,000 bales. The sup-ply is restricted, and prices ore firm. The reported export amounts to 4,160 bales, consisting of 2,710 American, 450 Brazil, 20 Egyptian, and 980 East India.

Last week closed with rather heavy buying for most of the Eastern markets, and that class of demand has acquired an extending character So bare now are stocks of all the usual qualities throughout this week. of yarn and cloth for India, China, the Indian Islands, and Straits, with only some such exception as that of the finer jacconets for Bengal, that the buying which is now taking place has reference to delivery for more than a month to come, and is fast absorbing the production for that length of time. That production is increasing to meet this demand is shown by the sales of cotton in Liverpool, and as these markets alone take off more than a third of what is produced, the indirect influence of present operations on prices generally, though not now experienced, is believed not to be distant. Mule yarns of all numbers, and cop yarns up to 50's, are about $\frac{1}{4}$ d per lb higher; water twist still shows considerable irregularity, the China qualities being the strongest. For the German and Levant markets there is but little movement. The home trade houses seem to have laid in what little they required about the end of the year, and printing cloths remain quite as dull as ever. Shirtings and that class of goods are about 3d per piece higher, and difficult to buy.

BRADFORD, Jan. 21.-Wool-The demand has not been active, and the purchases are confined to bright-haired sorts. Prices have assumed a fixed basis, and there is not that difference observable there was a few weeks ago. Noils and brokes are better sale, and command more was a rew Yarns—There are a few inquiries making by the export houses both for Russia and the Continent, and several lots have changed hands, but at prices far below the cost to make. The home houses continue quiet. Pieces-The warehouses here are very quiet, it being rather too early for spring. Some of the London buyers have been down, but their purchases are only small.

LEEDS, Jan. 19 .- There has been a tolerably good attendance in the cloth halls this morning, the tone of the market has been firm, and generally the improvement noticed in late reports has been fully maintained. A few orders for spring goods have been given out, and a slight increase in business is experienced by both the home and the foreign houses; but a great deal of caution is used on all sides, and undoubtedly houses; but a great deal of caution is used on all sides, and undoubtedly will be until the settling of accounts for the past year's transactions be nearly completed.

HUDDERSFIELD, Jan. 19 .- There has been a good demand for woollen fabrics to-day, there having been a numerous attendance of buyers, several from a distance, and they purchased much more freely than of late. Prices, too, were rather better, and this may be said both of cloth and wool. The manufacturers in the neighbourhood are giving out more work and employing their hands and machinery better. In the neigh-bouring town of Holifax there is an improvement in the carpet trade, and Messrs Crossley and Son, the well-known carpet manufacturers, have just recommenced their hands at full time, except those in the printing department, who are for the present continued at eight hours' work per day. day.

Jan. 23, 1858]

THE ECONOMIST.

ROCHDALE, Jan. 18.—Wool—There is little doing to-day, as staplers are asking higher prices for skins; and in other sorts prices are firm at last week's rates. In Yorkshire goods we have very little doing, indeed, and prices are unaltered.

CORN.

AMERICAN GRAIN AND FLOUR MARKETS.

NEW YORK, Jan. 6 -FLOUR AND MEAL .- The flour market assumed a more buoyant tone on Saturday, and, subsequently, under the influence of more favourable news from Great Britain, prices of State and Western of more advanced 10 cents. The demand, however, has not been active, the purchases for home consumption having fallen off lately in about the ratio that the business for shipment to Europe has increased. The stock is larger than at the corresponding period for several years active, past, and the remarkably mild weather is favourable to liberal receipts, though it must be confessed that the very low prices current cannot be considered an incentive for forwarders, in the interior, to hurry their supplies to the seaboard. The sales for the three days are 31,000 brls, supplies to the seaboard. the market closing buoyant at our revised quotations. The demand for Canada flour has been to a fair extent, and the low grades have slightly advanced—the sales are 1,800 brls, within the range of 4.35 dois to 6 dols, as in quality. We quote:—State, common brands, per brl, 4.30 dols to 4.35 dols; State, straight brands, 4.35 dols to 4.40 dols; State, extra to 4.55 dols; State, straight brands, 4.55 dols to 4.40 dols; State, extra brands, 4.55 dols to 4.75 dols; Michigan, fancy brands, 4.30 dols to 4.40 dols; Ohio, common brands, 4.35 dols to 4.45 dols; Ohio, fancy brands, 4.45 dols to 4.55 dols; Ohio, fair extra, 4.65 dols to 5 dols; Ohio, good and choice extra brands, 5.25 dols to 6.50 dols; Michigan and Indiana, extra brands, 4.55 dols to 6 dols; Genesee, fancy brands, 4.45 dols to 4.50 dols; Genesee, extra brands, 5 dols to 6.50 dols; Mis-souri, 5 dols to 8 dols; Canada, 4.35 dols to 6 dols. Southern flour remains without quotable change in value, but the demand is still very Export from 1st to 5th of January : wheat flour, 4,159 bris, light. against 43,378 brls in 1857.

GRAIN .- The demand for wheat continues extremely light, but with not a great deal pressing on the market, there is little or no variation. The only sales we have to report are 3,800 bushels white Southern at 1.21 dol to 1.30 dol, and 5,800 red and mixed do., 1.10 dol to 1.15 Southern is about the only kind that is freely offered, receivers dol. preferring to sell affoat than to store. The rye market is quiet, and without important change : sales 5,000 bushels at 73 to 75 cents. There There is a better demand for corn for export, and prices are 2 to 3 cents better, though irregular, there being no other kind in market than new, much of which is not in fit condition to ship; white is more inquired for than yellow. The sales reach 113,000 bushels, the market closing firm at 58 to 62 cents for Jersey and Southern yellow, and 58 to 64 for ditto white. Export from 1st to 31st December: wheat, 419,532 bushels, against 1,497,375 bushels in 1856; corn, 49,820 bushels, against 237,484 bushels in 1856 bushels in 1856.

NEW YORK, Jan. 9 .- We have no change to notice in the value of any kind of flour, and the demand rules inactive. The wheat market continues quiet, and there is no export demand.

LONDON MARKETS.

STATE OF THE CORN TRADE FOR THE WEEK. MARK LANE, FRIDAY EVENING.

Nearly the whole of the leading markets held this week have been very moderately supplied with English wheat; nevertheless, the demand for all kinds has ruled heavy at a further decline in the quotations of from 1s to 2s per quarter. Foreign wheats have moved off slowly on former terms. There has been a heavy inquiry for barley at 1s to 2s per quarter less money. All other spring corn has met a dull inquiry at about previous rates. The flour trade has continued heavy, and the quotations have ruled in favour of buyers.

The imports of grain and flour from France have continued very moderate, and, owing to the low prices of produce in this country, very few orders have been lately forwarded either from the London or Liverpool importing houses. As some misapprehensions exist in reference to the amount of duty levied upon exports from France, we annex the follow-ing particulars of the sliding scale drawn out from the official tariff :-For the regulation of the export duty, the frontier departments are The duty upon all grain and flour is regulated by the price of wheat. The duty upon all grain and flour is regulated by the price of wheat. The average price of wheat is taken in the markets indicated for each section, according to the tariff of the class in which it is included. The official averages are published about the 21st of each month, being that of the four preceding weeks, and mark the duty from the 1st to the end of the following month, thus giving ten days' notice of any altera-100 kilos on flour, &c. Any advance upon 21f up to 22f raises the duty to 2f 40c on wheat, 4f 80c on flour, &c.; in a similar manner, every subsequent advance of a franc incr ases the duty by 2f 40c per hectolitre on wheat, and 4f 80c per 100 kilos on flour. Thus, if the average price, at the markets markets named, should be from 22f 1c to 23f per hectoitre, the duty would be 4f 80c per hectolitre on wheat, and 9f 60c the 100 kilos on four, &c. The working is similar for the other classes, the only difference being in the price at which the nominal duty changes.

Every 2s 4d advance in the price of wheat, raises the duty in the same proportion. The smount of business doing in the North of Europe for spring ship-ment to England is trifling, and prices continue to give way. Owing to the mildness of the season, shipments of good wheat continue to be made from Hamburg, and which, on arrival in London, are immediately disposed of. The markets in the United States have lately exhibited more firmness.

In Scotland, the grain trade generally has been devoid of interest. Wheat and some other articles have moved off slowly, on lower terms. The Irish markets have ruled heavy for produce, on lower terms. The

shipments to England have continued on a limited scale.

Very little English wheat was on sale in to-day's market, neverthe-less the demand for all kinds ruled heavy, at barely Monday's prices. All foreign wheats were very dull, but not cheaper. In spring corn and

The following particulars in reference to the floating trade, are fur-nished by Mr Edward Rainford:—There has been only 16 arrivals at ports of call since the 13th inst., viz.:—Of wheat, 2 cargoes from Taganreg, 4 Odessa, 1 Alexandria, 1 Ibraila, and 1 Berdianski; cf maize, 1 cargo from Reni, 1 Malta, and 1 Venice; of barley, 1 cargo from Scala Nova, 2 Odessa, and 1 Baltzik-altogether 9 wheat, 3 marze, 4 harley. Transactions in cargoes of grain have been limited this week, and I have only to report the following :--Wheat, 2 cargoes of Taganrog Ghirka at 42s 6d, and one at 43s; 1 cargo of Berdianski at 47s; 1 Polish Odessa at about 43s, I ditto at 44s per 480 lbs, I ditto at about 46s per 492 lbs (Odessa Ghirka quality), and I Egypfian Behara at 31s; maize, I cargo of Reni, with some warmth, at 31s 6d, 1 Galatz at 32s 9d, 1 ditto at 32s, and 1 Ibraila, warm, at 29s; barley, 1 cargo of Egyptian at 18s 6d, and 1 Odessa at 21s 6d, all arrived. The Berdianski and Taganrog Ghirka wheats and the maize were sold per 492 lbs, excepting the 1braila maize.

COLONIAL AND FOREIGN PRODUCE MARKETS. TRANSACTIONS OF THE WEEK.

(For Report of This Day's Markets, see "Postseript.") MINCING LANB, FRIDAY MORNING.

SUGAR.-The market opened with an active demand from the grocers at from 6d to 1s advauce for good and fine descriptions, and continued steady until yesterday, when some of the foreign went rather easier. Low sugars generally do not share the above improvement; indeed, date Madras, brown Penang, &c., must be quoted for to cheaper than on the 15th inst. Numerous public sales announced for to-day have latterly ratheralso tended to unsettle the market. At auction 410 hhds 279 har-rels Barbadoes chiefly met with buyers: soft brown to middling yellow, 38s to 42s; good middling to fine, 42s 6d to 47s 6d. 171 casks crys-tallised Demersra and Berbice, 45s to 49s per cwt. The deliveries proceed favourably, and are nearly 2,000 tons larger for consumption than to same date last year. There is an increase in the stock at this port amounting to 16,110 tons contrasted with that of 1857.

Mauritius.-Only 623 bags were submitted on Tuesday, which chiefly ld as follows: low to low middling yellow, 38s to 41s; blacks, 29s to 29s 6d. 29 casks liquid and very low blacks, 27s 6d to 33s, one lot 18s. A cargo sold yesterday for the United Kingdom at 28s, in bond, equal to No. 10 to 11.

Bengal.-4,241 bags nearly all sold : Gurpattah date, good to very fine, 44s 6d to 49s 6d; low fancy brown to good strong grey, 32s 6d to 41s; soft date brown and yellow, 28s 6d to 35s; yellowish Benares kind, 44s 6d to 49s 6d; fine white Cossipore, 55s 6d per cwt.

Madras .- 5,200 bags native were principally disposed of, and soft date kinds went rather cheaper, viz.: brown, 29s to 31s; grey to good yellow, 31s 6d to 38s; cane sugar, 33s 6d to 36s for brown and yellow. 4,184 bags grainy yellow realised 44s 6d to 50s 6d ; white, 54s 6d to 55s 6d per cwt for Aska.

Siam.-2.803 bags sold as follows: soft yellow to fine white, 47s 6d to 50s 6d; low to soft middling brown, 27s 6d to 31s 6d per cwt.

-144 bags soft low brown went at 30s. Yestesday, 4,300 bags China.soft brown and grey were bought in at 32s to 33s per cwt.

soft brown and grey were bought in at 32s to 33s per cwt. Foreign. -1.707 hhds foreign muscovado, chiefly of indirect import, were partly sold: low soft to fine yellow, 38s 6d to 45s; very low brown to low soft grey, 32s to 38s. 409 hhds Porto Rico, 40s 6d to 47s for brown to fine yellow. 3,417 boxes Havana were partly disposed of: white, 50s to 55s; yellow, 41s to 48s; brown, 36s 6d to 40s 6d for soft to fine strong. Five floating cargoes of Havana have sold for the United Kingdom: Nos, 9 to 13, 26s to 28s 6d; No 14, 30s. A cargo of white Maroim for London realised 29s 6d. On the spot, 4,500 bags Pernam-

97

Jan. 23, 1858

buco are reported sold at 37s for brown and yellow. 2,000 boxes Havana, Nos. 9 to 12, 41s to 44s 6d ; Florettes, 49s 6d to 52s.

Refined.—An improvement of 1s to 1s 6d has been paid, with an active demand from the trade. Brown to good titlers are this morning worth 59s 6d to 61s; wer lumps, 54s to 55s. Dutch crushed attracts increased attention, and business to some extent has been done. Current qualities now quoted, 35s to 35s 6d on board at Amsterdam. English loaves in bond are scarce.

MOLASSES .- Nothing of interest had transpired to yesterday (Thursday). 130 hhds melado by auction were taken in at 27s 6d to 30s per cwt. Privately, business has been done in melado at 27s to 28s per cwt. RUM.—The market presents a firmer appearance, and there are buyers

at previous rates, with few sellers. Demerara proof quoted 2s 34 to 2s 4d ; good Leewards, 2s 1d per gallon. The deliveries are large, and the stock reduced to 19.600 puns 4,240 hhds, against 20,850 puns 3,885 bhds in 1857 at same period.

CocoA is almost neglected. 100 bags Trinidad and 74 bags Grenada were chiefly bought in or withdrawn. 154 bags St Lucia partly sold at 45s to 49s 6d per cwt, being much lower rates.

TEA .- The remaining 6,600 pkgs offered by auction passed on Monday, 1,100 finding buyers without further change in value. Since then, the market has ruled firm, and prices of all descriptions, excepting common congou, fully maintained. The latter has, however, sold to some extent at 1s 1kd per 15.

COFFEE.--Coloury kinds are rather higher again this week, and the market presents a firm appearance, advices from the Continent being of a more favourable character. 213 casks 276 brls and bags plantation Ceylon found buyers at 64s to 71s for fine fine ordinary to good middling, and 72s 6d to 80s for good. A few transactions are also reported by private contract. 915 bags native were bought in: good ordinary, 53s; and 185 bal-s, &c., palish long berry Mocha, 100s to 105s; al-o 92 bales Alexandria at 65s. 25 casks 59 brls and bags Jamaica realised 50s to 25 casks 59 brls and bags Jamaica realised 50s to 2,021 bags Costa Rica sold readily: fine ordinary to middling, 58s to 69s. The sales by private contract are unimportant. 500 bags or-dinary to good ordinary Rio have sold at 40s to 44s per cwt.

RICE.—Our market is quiet, and former prices have been barely main-tained in some cases. 6,626 bags 1,580 pockets Bengal were chiefly bought in, a small portion finding buyers at and after the sale : cargo, 7 = to 7 = 6d ; low middling and broken white, 8s to 8s 6d. 9,325 bags Madras partly sold : good pinky, 8s 6d to 9s; and a large proportion, sea-damaged, at corresponding rates. 6,953 bags Rangoon were taken in at 7s 6d to S+. Privately, transaction have been to a very limited extent. 141 tres Carolina were bought in at 23s per cwt.

NITRATE OF SODA remains neglected. 3,200 bags in public sale yesterday were held at 18s per cwt for refraction 11.

HINEAL .- The demand has not improved, and 212 bags Honduras sold about 1d cheaper: low small to good silver, 3s 5d to 3s 11d; party, 2s 9d to 3s 3d; very low small to middling blacks, 3s 8d to 4s 8d per lb. LAC DYE is dull and lower. 119 chests partly sold: WBLD, 28 ld er lb. Common marks remain almost unsaleable.

per DYESTUFFS.—Gambier has sold to a moderate extent at 17s, and one parcel in public sale was withdrawn at 18s. A parcel sea-damaged Cutch by anction, sold from 33s 6d to 38s 6d, but since realised a profit on those rates. 43 ba es Bengal sefflower went at 10l to 13l, being about former

quotations. Turmeric is again cheaper: Madras selling from 13s to 15s 6d per cwt according to quality. DRUGS, &c .- Few transactions have occurred by private contract. Low

and middling qualities of caster oil are still unsettled. Camphor nominally 65s per cwt. Opium firm at 16s to 16s 6d per lb. Some parcels China rhubarb sold at rather lower prices, from 2s 2d to 3s 3d per lb. Fine qualities of sheliac remain firm. Good olibanum at 62s 6d to 6d sold rather dearer, but middling qualities went cheap. Gum arabic attracts more attention. RED SAUNDERS WOOD was taken in at 5/ per ton.

INDIA RUBBER continues to sell slowly at 71d to 71d per lb. METALS.—The improvement in quotations has been general this week,

and there appears to be a gradual revival of the demand for consumption. Lead and copper are firmer. British tin has been advanced 5s by the smelters. Foreign shows a proportionate rise, and there are now few sellers: Straits, 113s to 114s; Bancs, 116s to 117s. A large business has been done in spelter to arrive, latterly at 26/ to 26/ 10s, spring shipment; 27/ is now the nearest value, and 26/ 10s per ton on the spot. Quicksilver Is 114d per 1b. Iron is at present quiet; or pig was quoted 55s per ton for mixed Nos. on 'Change yesterday Scotch

HEMP.—Manilla commands a more ready sale, and at rather higher rates. 1,204 bales, by auction, realised 27/ 15s to 32/ 5s for common to good roping; fine white held at 48/. 390 bales East India Sunn were aken in at 16*l*. Of 2,000 bales jute a portion only sold, chiefly, including damaged, at rather higher rates; remainder bought in above the value.

OILS .- Nearly all descriptions have realised higher prices, with a better demand by the trade. Pale seal, 39/ to 39/ los; cod, 31/; sperm, 80/ to 82/ per tun. Olive sells more "readily at the quotations: Gallipoli, 50/ to 50/ 10s per tun. Linseed has declined fully 6d, closing yesterto 501 10s per tun. Linseed has declined fully 6d. closing yester-day at 29s sellers, the Hull market ruling weaker. Rape easier: best foreign refined, 44s 6d to 45s; brown, 40s 6d to 41s. A good demand prevails for cocce-nut, partly for export: Ceylon, 42s to 43s; Cochin, 44s to 44s 6d. Fine palm is quiet at 41s per cwt. LINSEED.—There has been less inquiry, yet prices continue steady: East Iudia, 52s to 56s; Black Sea, &c., 54s to 54s 6d; to arrive, 53s to 54s. Imports this week 4,550, quarters. Linseed cakes are firm: Eng-liab 10². fine American in barrels. 10/ 10s to 10/ 15s per ton

lish, 10%; fine American, in barrels, 10/ 10s to 10/ 15s per ton.

TALLOW .- The trade have been buyers to a fair extent, yet the market was quiet until Tuesday, when a firmer tone prevailed. This morning Petersburg Y.C. is again dull at 53s 9d to 54s on the spot and up to March, This morning

and 54s 6d for the latter month only. The deliveries are steady. TURPENTINE.—There is little rough offering for sale. Spirits have met with a good demand: American, in barrels, quoted 35s to 35s 6d; English, 34s to 34s 6d per cwt.

POSTSCRIPT. FRIDAY EVENING.

SUGAR was less inquired for. 3,209 hhds West India sold for the week, including a small proportion offered (Barbadoes and St Lucia) by auction. Jamaica went at 38s 6d to 43s 6d. 540 bags Mauritius were auction. Jamaica went at 388 6d to 438 6d. 540 bags Mauritius were withdrawn. 5,836 bags Bengal were partly sold at easier rates. Yellow and white Benares, from 46s to 52s, went above the valuations. Madras-4,413 bags native partly sold : brown and yellow, 32s 6d to 35s 6d per cwt.

MOLASSES .- A large business has been done in foreign, chiefly at 14s per cwt for Cuba.

COFFEE.-980 bags native partly sold at 56s to 58,6d for good. 192

bags Brazil: Bahia, 37s 6d; washed Rio, 46s 6d per cwt. Rice.-988 bags pinky Madras were taken in at 8s 6d. 56l bags Ben-gal sold : midding white, 8s 6d to 9s per cwt.

-598 bags black pepper and 12 cases nutmegs and mace SPICES realised Tuesday's quotations. SALTPETRE .- 254 bags Bengal, refraction 24, were held at 42s

per cwt. OILS .--- 83 tuns sperm by auction sold at 80% to 81% 5s. i0 tuns

Southern, 38/ to 39/ 5s per tun. 67 tuns seal were taken in. 412 casks palm part sold, 38s 9d to 41s. 202 casks cocoa-nut: Cochin, 40s 6d to 44s; Sydney, 35s 3d to 41s; East India, 38s to 41s per cwt.

TALLOW was lower. Petersburg Y. C., 538 to 418 per cwt. TALLOW was lower. Petersburg Y. C., 538 6d; March only 548. 587 casks Australian by auction part sold, 488 6d to 54. 9d. 44 pipes 70 boxes South American, 518 9d to 558 9d. 300 casks Odessa chiefly taken in. 16 casks 113 cases E. I. realised 498 3d to 558 per cwt. Town unaltered.

ADDITIONAL NOTICES.

REFINED SUGAR .- The home market for refined sugar opened very animated at 1s advance, but has since been quieter, at a decline of 6d. For export, nothing to report. DRY FRUIT.—Fine Valencias scarce, and command the quotation; the

lower sorts are not offered at present. On the whole the fruit market is healthy.

ENGLISH WOOL .- The English wool trade rather better this week, and prices much firmer, and in some cases an advance has been obtained.

COLONIAL AND FOREIGN WOOL .- The wool market continues firm,

COLONIAL AND FOREIGN WOOL. — The wool market continues inin, more business is doing, and the tendency is upward. Corron. — Sales of cotton wool from Friday, 16th January, to Thurs-day 21st inclusive :--3,500 Surat at 43d to 54d for middling fair to good fair, and 53d for good fair! sawginned; 500 Madras at 43d to 44d for middling fair to fully fair Western. An improved demand has been upperioded and however terror to the market having out experienced, and a good business transacted, the market having quite recovered the dulness which prevailed at the end of last week, and prices are again decidedly in favour of sellers, and in some cases id per lb higher. Yesterday, 100 Northern Madras, and 750 Surat were offered at public sale, cash in 10'; days the former was bought in above the market value, also 400 bales of the Surat, the remainder being sold at full prices are 43d to 51d to 51d

full prices, say $4\frac{3}{4}d$ to $5\frac{1}{4}d$ per lb. SILK.— There has been a fair business doing in silk during the week,

and prices still have an upward tendency. TOBACCO.—Demand has been more active for good and fine qualities. and the trade have purchased more freely than for some time past. Prices remain steady.

LEATHER AND HIDES .- The recent reduction in prices of foreign hides of all descriptions has not produced any increase in the transactions, and not any further change has taken place in quotations. In leather rather more business has been done during the week, but there is still a downward tendency in prices.

METALS .- There is a general tendency to improvement in all metals, and several considerable advances in prices have been established. Cop-per assumes a firmer tone. Tin continues its upward tendency. Spelter has advanced considerably. Lead is firmer, and the demand for tin plates is unabated.

METROPOLITAN CATTLE MARKET. MONDAY, Jan. 18.—The total imports of foreign stock into London last week amounted to 541 head. In the corresponding week in 1857 we re-ceived 1.237; in 1856, 1,105; in 1855, 2,371; in 1854, 1,996; in 1853, 3,954; and in 1852, 1,508 head. About average supplies of beasts were received up to our market this morning from our own grazing districts, as well as from Scotland, for the time of year; but compared with Monday last, their condition was inferior. Notwithstanding that the weather has become colder, the demand for all kinds of beasts was in a sluggish state, at last week's decline in value. The top figure for Scots was 4s 6d per 8 lbs. We were again very mode-rately supplied with sheep, the general quality of which was by no means first-rate. Nearly all kinds met a slow inquiry; but we have no change to notice in prices. The best old Downs sold at 5s 4d per 8 lbs. From Ireland, 600 sheep came fresh to hand. Calves—the supply of which was limited—sold steadily at Friday's improvement in value of 4d per 8 lbs. The best quality of veal realised 5s 4d per 8 lbs. *urrume* Jav. 21, 1856. Jan. 19, 1857. Jan. 18, 1858.

HOP MARKET.

HOP MARKET. BOROUGH, Monday, Jan. 18.—We have no alteration to report in our market. The demand continues active for fine samples, which are scarce and realise full prices. Our currency is as follows:—Mid and East Kents, 70s to 90s, choice 120s: Weald of Kents, 50s to 63s, choice 70s; Sussex, 50s to 50s, choice 62s; yearlings and olds, 21s to 35s, choice 50s. FRIDAY, Jan. 22.—The demand for good and fine hops is steady, at full prices.

prices.

POTATO MARKET. SOUTHWARK WATERSIDE, Monday, Jan. 18. —During the past week the arrivals both coastwise and from abroad have been limited: the trade is a shade better for best samples: the following are this day's quotations: — Yorkhire Regents, 120s to 180s; Lincolnshire ditto, 120s to 150s; Dunbar ditto, 120s to 160s; ditto reds, 80e to 85s; Perth, Fife, and Forfar Regents, 100s to 115s; ditto reds, 65s to 75s; French whites, 75s to 85s; Belgian ditto, 65s to 70s; ditto reds, 70s to 90s; Dutch whites, 70s to 90s per ton.

WATERSIDE POTATO MARKET, THURSDAY, Jan. 21 .- Only very moderate WATERSIDE POTATO MARKET, THURSDAY, Jan. 21.—Only very moderate supplies of home produce have come to hand at this market, by land and water conveyance; but the imports of foreign potatoes have been somewhat large. Trade generally continues to rule heavy, at the annexed rates:— York Regents, from 120s to 180s; Kent and Essex, ditto, 100s to 140s; Scotch, ditto, 80s to 120s; ditto Cups, 75s to 85s; Middlings, 50s to 60s; Lincolns, 120s to 150s; Blues, 65s to 85s per ton.

HAY MARKETS.—THURSDAT. SMITHFIELD.—Fine upland meadow and rye grass hay, 78s to 80s; in-ferior ditto, 50s to 55s; superior clover, 95s to 100s; inferior ditto, 70s to 75s; straw, 26s to 30s per load of 36 trusses. WHITECHAPEL.—There was a fair average supply of hay and straw at this market to-day, and trade dull, as follows:—Hay, good, from 70s to 80s; ditto inferior, 50s to 60s; clover, good, 92s to 105s; ditto inferior, 60s to 80s; straw, 24s to 28s per load.

LIVERPOOL MARKETS.

WOOL. (From our o

FRIDAY, Jan. 22.-More business is doing, and altogether a firmer tone is gaining ground.

CORN. From our own Correspondent.

FRIDAY, Jan. 22 .- Our market continues heavy, at about Tuesday's quotations.

METALS.

METALS. (From our own Correspondent.) FRIDAY, Jan. 22.—There has been a very quiet market for manufactured iron during the past week, and no change to note in prices. In Scotch pig iron there has also been little doing, with little variation in value. For copper there has been more inquiry, and the market is firmer. Tin has been advanced 5/ per ton, and still has an upward tendency.

 T. and W. Frogatt, cotton spinners, Copster hill, Oldham.

- T. and W. Frogat, cotton spinners, Copster hill, Oldham. T. Lamb, grocer, Manchester.

LYCEUM THEATRE.—A new and original play, entitled "Love's Amaze ments, or How will it End?" was produced at this theatre on Wednesday The principal characters were represented by Mr and Mrs Charles Dillon, and that universal favourite, Miss Woolgar. Mr Leigh Hunt, true to his traditions, trusts to the strength of his dialogue more than to stage effect or plot. The play, however, was very successful.

THE ECONOMIST.

EPITOME OF RAILWAY NEWS.

RAILWAY RECEIPTS. - The traffic returns of railways in the United

RAILWAY RECEIPTS. —The traffic returns of railways in the United Kingdom. published for the week ending January 9, amounted to 381,546*t* and for the corresponding week of 1857 to 393,778*t*, showing a decrease of 12,232*t*. The gross receipts of the eight railways having their termini in the metropolis amounted for the week ending as above to 160,955*t*, and for the corresponding week of last year to 161,405*t*, showing a decrease of 450*t*. EXETER AND EXMOUTH.—The directors of this company, in their finan-cial declaration to Parliament, in respect of their abandonment of part of the main line and for the construction of a new line to Topsham, for ex-tension of time, &c., report that the expense is to be defrayed out of a sum of 70,000*t*, which they are authorised by their Act of 1855 to raise by shares, and of which there remains unexpended 63,900*t*; and that after deducting 20,000*t*, the amount by which the share capital of the company is sought to be reduced, there will remain 15,000*t* applicable to the new railway and works proposed by the bill. MIDLAND GREAT WESTERN OF IRELAND.—This company's declaration as to funds sets forth that the cost of the proposed deviation line from Streamstown to Clara will be defrayed out of 80,000*t* authorised by their Act of 1857, and that the expense of the proposed deviation will amount to

ct of 1857, and that the expense of the proposed deviation will amo untto 15

15,0007. KENDAL AND WINDERMERE.—The half-yearly meeting of this company was held on Tuesday. The revenue account showed an increase of receipts under the head of passengers amounting to 673, as compared with the cor-responding half-year of 1856, and 9157 as compared with the same half of 1855. The expenditure for locomotive power and general charges showed a decrease of 4137 as compared with the year 1856, and of 4177 as compared with 1855. A dividend of 2s 6d per ordinary share, being at the rate of 1 per cent, per annum, was declared, free of income tax, payable on the 9th of February. February.

RAILWAY AND MINING SHARE MARKET.

RAILWAY AND MINING SHARE MARKET. LONDON. MONDAY, Jan. 18.—The railway market has been flat, in sympathy with the funds and from realisations by recent operators for the rise. Lanca-shire and Yorkshire receded 1 per cent. ; most of the other leading descrip-tions also declined from $\frac{1}{2}$ to $\frac{3}{2}$ per cent. Indian shares were heavy from the probability of the creation of new securities to mcet the requirements of the Indian Government. Canadian railways were also lower, and a reduction of 2 per cent. took place in Grand Trunk. French generally advanced, but in the other foreign lines there was increased weakness. Mines were active and in some cases better. TUESDAY, Jan. 19.—The railway market was beavy during the greater part of the day, but ralled in the afternoon, and closed at a general advance of $\frac{1}{2}$ to $\frac{1}{2}$ per cent. Indian shares show little alteration ; other colonial descriptions, on the other hand, were better. French generally declined, but only to a slight extent ; the small foreign lines improved. In Ameri-can securities New York and Erie and Michigan Central advanced. Mines were in fair demand, and in some cases higher. The transactions in joint stock banks were rather numerous.

can securities New York and Ene and Michigan Central advanced. Mines were in fair demand, and in some cases higher. The transactions in joint stock banks were rather numerous. WEDNESDAT, Jan. 20.—The railway market has been dull, but prices on the whole were fairly supported. In some cases, however, a decline has taken place, especially in Great Western, Midland, and North-Eastern stocks. London and North-Western have been in active demand. Great Northern were also firm. It is stated that arrangements are in progress for the purpose of terminating the present competition between these com-panies. Indian shares were flat. Other colonial descriptions were steady. Mines were rather actively dealt in, in most cases at an advance; Cobre Copper and United Mexican, however, declined. THURSDAY, Jan. 21.—The railway market has been inactive, the public at this period of the year suspending their purchases until the result of the half-yearly meetings is made known. In some cases, however, there was increased weakness, especially in London and North-Western and South-Western. Caledonian, on the other hand, were firm, ard a fractional ad-vance occurred in Great Northern, Sheffield, and Great Western. Indian shares continue rather heavy. French and foreign lines were generally higher. The transactions in mines were of an average character, mostly at former prices.

shares continue rather neavy. French and foreign finds were granted, higher. The transactions in mines were of an average character, mostly at former prices. FRIDAY, Jan. 22.—In the railway share market the transactions have been extremely limited. A few of the leading lines have been dealt in, and a decline of about 1 to 1 per cent.may be reported. East Indian are steady at 108 1084. Grand Trunk of Canada have improved to 49 and 50, and Great Western of Canada are 204. Mining shares are dull. Wheal Tralaway have declined to 205. 49 and 5 Wheal 9 | Trelawny have declined to 26%.

EPITOME OF RAILWAY NEWS.

Total

RAILWAY RECEIPTS. —The traffic returns of railways in the United Singdom, published for the week ending January 9, amounted to 381,5467 and for the corresponding week of 1857 to 393,7787, showing a decrease of 2,2327. The gross receipts of the eight railways having their termini in he metropolis amounted for the week ending as above to 160,9557, and for he corresponding week of last year to 161,4057, showing a decrease of 4507. EXETER AND EXMOUTH.—The directors of this company, in their finan-ial declaration to Parliament, in respect of their abandonment of part of he main line and for the construction of a new line to Topsham, for ex-ension of time, &c., report that the expense is to be defrayed out of a sum f 70,0007, which they are authorised by their Act of 1855 to raise by shares, and of which there remains unexpended 63,9007; and that after deducting 00,0007, the amount by which the share capital of the company is sought o be reduced, there will remain 15,0007 applicable to the new railway and vorks proposed by the bill. MIDLAND GREAT WESTERN OF IRELAND.—This company's declaration is to funds sets forth that the cost of the proposed deviation line from Streamstown to Clara will be defrayed out of 80,0007 authorised by their Act of 1857, and that the expense of the proposed deviation will amount to 5,0007. RAILWAY RECEIPTS. - The traffic returns of railways in the United

000

5,000%. KENDAL AND WINDERMERE.—The half-yearly meeting of this company ras held on Tuesday. The revenue account showed an increase of receipts nder the head of passengers amounting to 673, as compared with the cor-esponding half-year of 1856, and 9157 as compared with the same half of 855. The expenditure for locomotive power and general charges showed a cerease of 4137 as compared with the year 1856, and of 4177 as compared with 855. A dividend of 28 6d per ordinary share, being at the rate of 1 per ent. per annum, was declared, free of income tax, payable on the 9th of ebrnary. ebruary.

Number of a product of the second p

former prices. FRDAY, Jan. 22.—In the railway share market the transactions have been extremely limited. A few of the leading lines have been dealt in, and a decline of about $\frac{1}{2}$ to $\frac{3}{4}$ per cent.may be reported. East Indian are teady at 108 108 $\frac{1}{4}$. Grand Trunk of Canada have improved to 49 and 50, and Great Western of Canada are 20 $\frac{3}{4}$. Mining shares are dull. Wheal Grelawny have declined to $20\frac{5}{6}$.

THE ECONOMIST.

DEAFNESS, NOISES IN THE HEAD. Turkish Treatment by a Retired Surgeon from the Lurgian Treatment by a Retired Surgeon from the Crimea (who was himself perfectly curred). Just put-lished, a book, SELF-CURE, free by post for six stamps. Surgeon Colston, M.R.C.S., 6 Leicester place, Leicester square, London. At home from 11 to 4, to receive visits from patients.

from patients. KEATING'S COUGH LOZENGES. A SLIGHT COLD,"—IF ITS FIRST Symptoms are not arrested, - too often lays the foundation of a variety of Pulmonary Completions, in-cluding Winer Coughs. A-thma, and other constitu-tional derangements. The evil consequences of these disorders may be easily averted tor subdued by keeping at hand a supply of the above celebrated Lozegaes, which have now stond the test of public experience for newards of half a century. The Testimonials to their efficacy have been voluntarily given by the most eminent of the Faculty, as well as by all classes of private in-dividuals. Containing neither oplates nor any injurious anodine, they may be safely taken by the youngest child or the most delicate female. Prepared sur sold in hores is 14d, and tins, 2s 94, 4c.0d, and 10s 5d each, by Thomas Keating, Chemisr, der, 75 St Paul's churchyard, London. Retail by all druggists and patent medicine venders. **VEATING'S PALE NEWFOUND**-

KEATING'S PALE NEWFOUND-LAND CODLIVER OIL, perfectly pure, nearly tasteless, and free from adulteration of any kind, having been analysed, reported on, and recommended by Professors Taylor and Thomson, of Guy's and St Thomsa's Hospitels, who, in the words of the Let Dr Pereira, say, that "The finest of is that most devoid of Conors, Opous, and FLAYOUS," characters this will be found to possess in a high derree. Half-pints Is 6d, Pinter 2s 6d, Quarts 4s 6d, and Five-pint bottles 10°s 6d, Imperial Measure. nperial Measure. 79 st Paul's churchyard, Londo

79 st Paul's churchyard, London. BLAIR'S GOUT AND RHEUMATIC PILLS.-Price is light and 28.94 per box. This preparation is one of the benefits which the science of modern chemistry has conferred upon man-kind; for, during the first twenty years of the present century, to speak of a cure for the grut wis considered a romance; but now the efficacy and sviety of these modifies is so fully demonstrated, by un-olicited testi-monials from persons in every rank of life, that ptblic optimon proclaims this as one of the most impectant discoveries of the present are. Sold by all medicine venders. See the name of "Thomas Pront, 229 Strand, London," on the Got ern-ment stamp.

A NEW AND IMPORTANT DISCOVERY IN THE SCIENCE OF MEDICINE. Patent Office Scal of Great Britain, Diolome de Ecole de Pharmacie Pharmacien de Paris. Imperial College of Medicine, Vienna. TRIESENCE OF MAR, and can be carried in the waistcoat pocket, as admin-istered by Vaipean, Laileman, Roux, Ricord, adapted for both sexes.

stered by Valpeau, Lalleman, Roux, Ricoro, auspica for both series. TREESEMAR, No. 1, is a remedy for Relaxation, Sper-matorrhea, and all the distressing consequences arising from early abure, indiscriptionate excesses, or too long residence in hot climates. It has restored bodily and sexual strength and vigour to thousands of debilitated individuals, who are now enjoying health and the functions of manhood; disqualifections for marriage are effectually subdued by this wonderful discovery. TRIESEMAR, No. 2, effectually, in the short space of Three Days, eradicates all traces of Gonorrheas, both in its mild an aggravated forms, Gleets, Strictures, irrita-tion of the Bladder, non-retention of the Urine, pains of the Loins and Ktieneys, and those Disorders which Copairi and Cabels have so long been thought an antidote for.

the Loins and Klengys, and torse been thought an antidote for. TRIESE MAR, No.2, is the great Continental Remedy for Syphilis and secondary symptoms. It searches out and purifies the Viseased humours from the blood, and cleanes the systex. Ifom all deteriorating causes; it constitutes a certain cure for Scory, Scrofula, and all Cutaneous Erupions, and is a never-failing remedy for that class of disorders which, unfortunately, the English Physician treats with Mercory to the inevitable destruc-tion of the patient's constitution, and which all the Saraaparilla in the world cannot restore. Price 11s, free by post 1s 3d extra, forw arded to any part of the United Kingdom, or four cases in one for 33s, by post 32 d extra, which suves it is; and in £5 cases, a saving of £1 12s; from Loniel Church, 73 Grace-church street, City and to be had wholemate and retail in London of Bartlett Hoocer, 43 King William street; nd Watts, 17 Strand; Prout, 249 Strand; Hannay, 63 Datore street: and Sayaer, 350 Oxford, street. Inga street, Huil. DR. DE JONGH'S LIGHT - BROWN COD LIVER OIL, Entirely free from nau-coos flavour and after-taste, is prescribed with the greatest success by the Faculty as the safest, speedlest and most efficient from of the CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM, SCIATICA, DIABETES, DISEASES OF THE SKIN, NEURALGIA, RICKETS, INFAN-TILE WASTING, GENERAL DEBILITT, and all SCROFULOUS AFFECTIONS.

SCROFULOUS AFFECTIONS. Numerous spontaneous testimonials from Physicians of European reputation a test that, in innumerable cases, where ether kinds of Cod Liver Oil had been long and coplously administered, with little or no bene-fit, Dr dd Jongh's Oil has produced immediate relief, arrested discase, and restored health.

arrested discase, and restored health.
Opinion of A. B. GRANVILLE, Esq., M.D., F.R.S.,
Author of "The Spas of Germauy." "The Spas of England," "On Sudden Death," &c. &c.
"Dr Granville has used Dr de Josph's Light-Brown Cod Liver Oil extensively in his practice, and has fourd it not only efficacious, but uniform in its qualities. He believes it to be preferable in many respects to Oils sold without the guarantee of such an authority as De Jongh. Dr Granville has found that this particular kind produces the desired effect in a shorter time than others, and that it does not cause the Nausea and Indigestion too often consequent on the administration of the Paie Newfound-tand Oils. The Oil, being, moreover, much more pala-table, Dr Granville's patients have thems/ves expressed a preference for Lr De Jongh's Light-Brown Cod Liver Oil."

Sold only in IMPERSAL Hait-pints, 2s 6d; Fints, 4s 9d; Quarts, 9s; carsuted and labelled with Dr de Jongh's Stamp and Signature, without which none can possibly BK GENUINE, by most respectable Chemists throughout the Provinces. Dirac roas. Mathew Marshall, Jun., Esq., Manager. And ninety-six Proprietors,

The following report was read by the Secretary :

Matthew Marshall, Jun., Eq., Manager. And nucley-six Proprietors. The following report was read by the Secretary:--"The Directors have pleasure in reporting that busi-ness has astisfactorily progressed since they less must the proprietors. A balance statement, showing the position of the bank on the 31st December, 1857, and a profit and loss account at the same date are appended; by which it will be seen that after payment of 23,755/7s to cus-tomers, for interest on current and deposit accounts, there remained at that date a balance of gross profit of 26,727/14 a 10d. "Out of this sum have been defrayed current expenses at the Threadneedle street establishment and the Charing cross branch, Directors' remuneration, and bad and doubtful debts. After passing through a com-mercial criss of unparalleled severity, it will be needless to state that the amount of such debts has somewhat exceeded the general average; but your Directors have been able, out of the profits of the half-year, to write of all losses, and to make ample provision for doubtful con-tingencies. They have carried forward to profit and loss maw account 3,2971 fis 4d for rebate of discount on bills not matured; and they have also written of 7241/7a 6d, the expenses incurred in procuring the conviction of Lawson and Cockburn for conspiracy and likel. After making these provisions, the Directors have the sati-faction of declaring a dividend upon the paid-up capital for the half-year at the rate of 5/ per cent. per annum, free of income tax, leaving a balance of 8021/15e 20, to be also carried to the redit of profit and loss maw account. "Your Directors have registered the bank under the Bank Act of the lax session (20 and 21 Vice, cap. 49), in compliance with the requirements of that Act. No material alteration in the government or constitution of the bank results from this registration. "A vacancy in the direction having been caused by whe retirement of Mr Ionides, several duly qualified shareholders have intimated their intention of becoming ca

FORTY-FIRST REPORT OF

THE LONDON JOINT STOCK BANK-At a General Meeting of the Shareholders, held at the

THE LONDON JOINT STOCK BANK-- At a General Meeting of the Shareholders, held at the Banking house of the Commany, in Princes street, Man-sion house, on Thursday, the 21st of Jannary, 1858. William Bird, Esq., Chairman. DIBECTORS. William Bird, Esq., Chairman. DIBECTORS. William Bird, Esq. Ald, Sir George Carroll, William Miller Christy, Esq. Goorge H, Foster, Esq. Grancis B, Goldney, Esq. Francis B, Goldney, Esq. William O, Gore, Esq. William O, Gore, Esq. The Manager-George Pollard, Esq. Solicitors-Messrs C.arke and Morice.

The following Report was presented :--The annexed accounts exhibit the position of the bank on the 33-t ultimo, and it will be seen that after providing for all loss and charges, there remains a net profit of 83,5567 98, which the Directors have appro-printed as follows, viz.:-

 \pounds s d 37,500 0 0 to a dividend at the rate of 12½ per cent per annum. 30,000 0 θ to a boaus of 10s per share. 16,166 9 0 to the credit of the guarantee fund.

By the above addition and the accruing interest, the guarantee fund is raised to 187,0141 2s 1d, and the Directors feel very confident that this augmentation of their reserve will be satisfactory to the shareholders, when viewed in connection with the enlarged scale of the bank's operations. The dividend and bonus, free from income tax, will the symbol on and after Friday, the 29th instant.

The following gentlemen, who retrie in the order of ro-tation--viz., Sin James Duke, Bart., M.P., Ambrose Moore, Esq., William Bird, E.q., and John Timothy Oxley, Esq.-offer themselves for re-election; and the lamented death of Archibald Hastie, Esq., M.P., having caused another vacancy at the Board, Donald Larnsch, Esq., a duly cualified shareholder, who has given the necessary notice, presents himself as a candidate for the vacant seat.

The Directors cannot allow this opportunity to pass without some expression of their kiph sense of the honourable character of their deceased friend and col-league, whose zealous exercions were never wanting when required to promote the interest of the bank ; and they feel assured that the proprietors will participate in their regrit for his los. The shareholders have already been apprised by ad-vertisement of the recent returement from the direction of Thomas Tilson, Eq., who, having undertaken im-portant public duties, has considered it necessary, much to the regret of his brother Directors, to resign his mut at the Board.

An extraordinary meeting of proprietors will be called for the ist April next, to elect his successor. The preceding report having been read to the meeting by the Scretary, a dividend for the balf-year ending the list Pecember last, after the rate of 124 per cenium per annum, and a further division of 10s per share out of the net profits of the year ending as above, were de-clared by the Chairman.

of the net profits of the year ending as above, were de-clared by the Chairman. Resolved unanimously,—That the report now read be received, and that it be printed for the use of the share-holders. The following Directors having retired by rotation, were subanimously n-elected, viz.:— Sir Janes Duke, Bart., M.P.; Ambrose Moore, Esq.; Witham Bird, Esq.; John Timothy Oxley, Esq.; and Dernid Larnach, Esq.. It was then resolved an Director, in the place of Archabs of Hartie, Esq., M.P., decembed. It was then resolved unanimously.—That the best tharks of this meeting be tendered to the Directors for their cacellant general namegenent, and for having made an acdition to the guarantee fund. Resolved unasimously,—That its thanks be also offered of Mr Poliard for this valuable services in connection with this task. (Signed) WM. BIRD, Chairman. Extracted from the minutes. JNO. WARDROPE, Secretary.
