(o) RESULTS: (For all hits claimed on ship targets and for land targets of special interest, draw diagram, top or side view or both, as appropriate, showing type and location of hits. For all targets give location and effect of hits, and identify by numbers above. Use additional sheets if necessary.)

Target area was so completely obscured by clouds that any firing was no more than a means of jettisoning over enemy held territory, rather than in the sea. Both divisions dove through a hole in the clouds and released bombs and rockets through this aperture. No damage assessment can be made.

(p) Were Photographs Taken? No Photographs of Damage, When Taken, Should Be Attached By Staple.

Cloud coverage was too low and too complete to expect any positive results from this flight. The ceiling at ANAMI O'SHIMA was below the hill tops, making it impossible to approach the seaplane station located just west of the town of KONIYA. At KIKAI SHIMA the clouds hung at 200 feet. An attempt was made to attack the island through a small opening extending to 1000 feet. Two runs were made, both dependent upon the position of this clear spot.

As it developed both attacks were made upon areas along a road, or possible taxiway, extending NE from WAN Airfield to the northern tip of the island. The positions hit might have been camouflaged dispersal areas or small villages half way from the southern to northern points of KIKAI on the west coast.

The remainder of the period was spent in patrolling the sea between KIKAI and ANAMI, thence returning to base.
