PARISH CHURCH AT SAN MIGUEL DE ALLENDE — MEXICAN NATIONAL RAILROAD.

d

From the Border to the Capital.

A PROMINENT guide-book writer says, "the shape of Mexico is that of a cornucopia turned the wrong way"—the cornucopia is there, but it is by no means turned the wrong way: the big end is towards the United States, and there is naught for us to do but to pour out its treasures of climate, scenic beauty, antiquity, legends and commercial wealth for our delectation and to the prosperity of its people and ours.

It is a favorite "ism" to compare rather odiously the mountains, rivers and lakes of this continent with those of Europe, and applying the names of those on the other side to those on this side of the ocean is where the comparison becomes odious, as we have an American Rhine, a Switzerland and an Italy of America, down to Mexico, where an Egyptian title obtains which might be more complimentary to its age if it went the other way and Egypt was called the Mexico of the Old World—even the title of "Old" is now disputed with the lands across the seas, as the history of Egypt's civilization is new, while Mexico's graven pillars, crumbling teocallis and ruined temples tell of a civilization whose generations run back through unremembered centuries and whose history must forever go unwritten.

The discovery of Mexico by Francisco Hernandez de Cordova was made on the 4th of March, 1517, at a point on the coast of Yucatan, and a year later was followed by Juan de Grijalva, who landed on the Island of San Juan de Uloa in the harbor of the existing city of Vera Cruz, from which port two years later Cortez commenced the march of the conquest, whose history is one of fascinating romance and adventure. The story of his battles, victories and defeats, the pomp and pageantry of Montezuma's court, to the fearful scenes of the *noche triste*, is familiar to every school boy, and the remembrance of it a lingering desire to see a country it was worth so many lives to obtain possession of—hence dates and statistical figures are unnecessary here, the all-important question of the traveler of to-day may be written in seven words: Which is the shortest and the quickest? Being answered satisfactorily, he proceeds at once, taking up his historical data en route.

Cortez could not have been impressed with the country from a first view, any more than the modern traveler is when he comes to the border at Laredo

and looks across the murky waters of the Rio Grande to the plains on the other side and, beyond them, to the barren, treeless, verdureless hills that would seem to shut out anything but the charmingly delightful country that opens up from their southern slopes, and, but for the tale of wealth, of salubrious clime, of people queer and quaint, of obelisks and temple ruins, of mysterious idol gods and pyramids, of cities falling on their own crumbling walls, not only Cortez, but every modern traveler would turn back discouraged on the first impression at the boundary hills. But the story of a country so unique in varied attractions is to be relied upon and the journey continued.

HILL AND CHURCH OF GUADALUPE.

A journey whose scenic effect does not rapidly improve can have but one redeeming feature — that of quick transit — in which the rapid revolutions of the wheels apologize for the featureless characteristics of the country, and do much to promote the placidity of a tourist on an otherwise tedious journey. When to this is added the knowledge that the desolate, cactus-covered plain ends at the foot of these blue hills that encircle it, and there are only a few hours of this, then every mile is full of interest. Crossing the Rio Salado and coming to the little town of Lampazos, the object of the journey for pleasure begins to be realized. South of the town on the right of the track is a mountain high and so level of crest that it is called *La Mesa*, the table. Its summit is nearly 2,000 feet above the plain, and along the rugged side of the cliff is a narrow path scarcely wider than is necessary for man and horse, or Indian and burro to pass from the plain four miles to the summit. On the tip top of *La Mesa* is a level plain of nearly a hundred thousand acres of woodland and grass, well

watered, where once was the home of a band of Cartujanos, an Indian tribe obtaining their name from an ancient Benedictine Mission established there some hundreds of years ago, but the more prosaic history is told in the ownership of La Mesa by an Irish-Mexican, a landlord with the wit of his native and the courtesy of his adopted country.

Proceeding southwesterly, the Mexican National Railroad follows the old highway, that was first an Indian trail, then the highway of the Spanish king, and, later, the line of march of the American armies as they proceeded to the fields of what their greatest general has pronounced the most unholy and unjust war that was ever waged by a stronger against a weaker nation. This is an up-grade pull to higher altitudes, passing the minor stations of Bustamente, Villadama, Palo Blanco and Salinas in tortuous windings through the hills that seem to crowd around and shut off further progress at every turn; and thus on to the first of those delightful surprises so plentiful in Mexico—a beautiful valley, a level plain of fertile fields and green trees with circling hills, bluer as they are nearer and in the distance fading to a lighter azure, so faint the line that it scarce can be discerned where the mountain ends and sky begins.

In such a plain and valley is the beautiful city of Monterey, with its flowering gardens and running springs and streams of limpid water, its quaintly arched bridges in the narrow streets, its plazas and parks, its massive houses and cathedral towers. The plain spreads out to the foot hills of the Sierra Madres and to the peak called *La Silla*, where 'tis no strain on the imagination to define the saddle-shaped top that gives its name, or of that other Cerro de las Mitras where the bishop's mitre hangs high in the heavens as if in benediction over a peaceful people. South of the city a smaller hill has an odd-looking structure, that was once the residence of the bishop, and later was a fortress in defense of the city, the capture of which made the entry of the city an easy matter or the alternative of a destructive bombardment. Another point of interest and fine view is the Caido Hill, south of the city, reached by carriage road to within a hundred yards of the summit.

On the border of the plain to the north and west are the famous Hot Springs of Topo Chico, famous long years ago, while those of Arkansas (that are not superior to these) remained undiscovered, and for centuries under the patronage of the élite of Mexico, even to the august personage of Montezuma's daughter, who fatigued in the giddy whirl of court life, came to Topo Chico for rest and recreation, returning to the capital as good as new, and was ever afterward. Topo Chico is three miles distant from Monterey, reached by horse-cars from the plaza, the track running through the green fields that

lie between the city and the Springs. There are superb baths and a good hotel, all under American management. The waters of the Topo Chico are

IN THE VALLEY OF LAJA — MEXICAN NATIONAL RAILROAD.

to become famous in this generation as in so many of the past, and now, in these days of fast travel, many will journey thither as soon as 'tis known of

the location on a main thoroughfare within six hours of the border, where the climate in December is as it is in June—an advantage not even claimed by any rival. Monterey and Topo Chico must become a summer resort for the people of the great State of Texas, and a winter resort for all the other States. From the Mexican National Railroad station horse-cars lead to the hotels, which are especially good, to all parts of the city and to Topo Chico. This system is under a careful and competent management that is watchful for their comfort and pleasure, as also for the traveler's patronage. Special cars may be hired and run "special" at the pleasure of the party. This is the best way to see the sights of Monterey, as the tracks reach all points of interest. At Monterey connection is made with the Monterey and Mexican Gulf Railway for Tampico.

Southward from Monterey the scenery begins in earnest, following in the narrow valley of the San Juan, a great deep cut as if hewn from the towering rocks by the hand of Nature for a Titan roadway, now reduced to the uses of the modern railway, whose pigmy trains are little to insignificance as compared with the gigantic surrounding rocks, and the cut seems a misfit for even the ponderous locomotives that awaken the echoes as they, toiling, climb the resisting grades. The noisy little *Rio San Juan* foams and frets, first on this side, then on the other, as the track crosses from one side of the cañon to the other to find easier ways to get over the hills. The little hamlet of Garcia, sometimes called Pesqueria, is just below Santa Catarina, both places being objects of excursions by rail and carriage from Monterey. There are two caves at Garcia, and from the left windows of the cars a careful look will find a curious hole through the crest of the mountain, as if made by a monster cannon shot. From now on, it is hard to say which side of the car to select. To see it all an observation point on the rear platform is best, or make a round trip and sit on one side one way, and on the other going back; perhaps this is better, then you can sit still and take it easy. The wildness of scenery grows as the train rolls on through the ever-narrowing cañon, and each turn brings some new picture grander and more beautiful than that other just back around the curve, and so it is on the up grade all the time till the train rolls onto the elevated plateau and through the gardens and orchards to the station at SALTILLO, the capital of the State of Coahuila, a city celebrated for its good wine and the many and brightly colored *zerapes*, the pride of the Mexican's wardrobe, prized more highly than the overcoat of the American, or the top-coat of the Englishman. To own a *zerape* of Saltillo is to possess the best and most artistically woven in intricate colors that can be produced with all the factories of Mexico striving to imitate those hand-woven in Saltillo

towards Cedral and Matehuala. At Cedral, thirteen miles distant, are located extensive silver reduction works. Matehuala, fifteen miles beyond, is situated in a productive agricultural country, and is an extremely attractive place. There is a smelter here where is extracted the silver from the ores brought from the La Paz mines, which have produced great quantities of valuable mineral during the last decade. From Vanegas south, we skirt the foot-hills of the mountain range, leaving it on the left, and come to the important station of CATORCE. The importance does not seem to cluster about the station and force itself on one's observation, and at first glance there is an idea of inquiry as to the use of the elegant stone station at Catorce—a seditious talker about Mexico said he had discovered that when he asked about some of the charming points in Mexico the answer was to the effect that they were somewhere else. While this is not true, one is apt to wonder why Catorce and other places of that ilk are set down as important. See the burros browsing or lazily lying on the shady side of the station or the jacals—their empty pack-saddles were just now under a burden of silver—look across the plain, on the east side at the foot of the hills is a little patch of green where there is a village, the resting place of the pack trains of burros, the only means of transportation up the narrow path—that long brown line is the path that leads over hills where no wheels have ever rolled, to a city that has never heard their rumble, to the great mining city of Catorce, situated in the range eight miles from the station of the same name, merits more than a passing notice. Silver was discovered here about 1780, and the district at once took rank among the most important in Mexico. Ore of fabulous richness was found, and the records show that for more than thirty years, commencing with 1790, the value of the output amounted to over three million dollars annually. Here are hundreds of mines and miles of shafting and tunneling. The drainage tunnel of one mine alone, the San Augustin, extends into the mountain for more than a mile and a half, and was excavated at a cost of a million and a half of dollars. For its entire length a tramway has been constructed which is operated by mule power. Catorce should be one of the very interesting places in Mexico to the tourist. Here are found the customs of Mexico in their purity, unaffected by the influence of the stranger. Difficult of access, the town can only be reached by horseback or on foot. Catorce has seldom been visited by any except those making business trips. The ride up the mountains into the town is something, once accomplished, always to be remembered, partly from its element of personal peril, but more because of the beauty of the landscape encountered at every turn. Glancing down as you near your journey's end, you catch the gleam of

the white walls of the town of Los Catorce outlined against the green of the mountain side. Thousands of feet below shimmer the waters of a mountain stream. The shifting coloring of the mountains, as light and shade chase each other over their rugged expanse, the browns and greens of the valley far below, and the hills in the hazy distance, are "beautiful exceedingly." The Real de Catorce is built on the side of a ravine near the top of the range,

CROSSING OF TROPIC OF CANCER.

and has a varying population of from 8,000 to 20,000, as the mines are paying poorly or well. Here are found all varieties of silver ore, from carbonate to refractory ore, assaying \$15,000 to the ton. Catorce has a fine cathedral, richly decorated, and a pretty plaza, the only level spot in the place. To use a railroad phrase, it is a combination of a cut and a fill, so that to tumble into it on one side or out on the other would be extremely disastrous. The streets are neatly paved, and run up and down hill, many of them at an angle of forty-five degrees.

The story of the wheels, or rather, the no wheels, is a true one, literally,

with the single exception in the (was about to say) "carting", but conveying is better, a carriage on burros to the city by a rich mine owner, but was abandoned; the wheels would roll one way easy enough, but it was difficult to get back to the starting point—and the innovation of wheels at Catorce was not accomplished. The word catorce in Spanish means fourteen—the mines were discovered by a bandit band of fourteen members, hence its name.

Catorce is the last stop in the Temperate Zone. Before the train reaches the next station, La Maroma, it crosses the Tropic of Cancer and enters the Torrid Zone, but it is not to be inferred that the weather is to be warmer now, either in summer or winter. The memories of early geography lessons teach of latitude only, not even referring to the altitude of the section. Although within the tropics, it

possesses a more delightful climate than anywhere in the United States. A pyramid erected by the Mexican National Railroad Company marks the spot where the track crosses the tropical line. It may be seen from the windows on the west side of the train. This is an interesting feature in the geography of the line, and is brought more forcibly to the mind of the traveler in that it marks the exact line between two zones that he has been taught differ so radically in climate.

Leaving the Tropic of Cancer, the route is still across the plain as the arrow flies, passing Las Charcos, the station for another mining town, that of Charcos, where there are some valuable properties, then Venado, where half the journey is accomplished, and Montezuma, which is quite a village. As the train is nearing BOCAS, be ready for a look from the windows on the east side of the cars and very near the track, see a most magnificent hacienda, the first really fine and typical hacienda, with its castle-like residence, towered church and group of bells, arched bridge of stone, walled gardens with growing fruits and flowers, and court-yards with frowning parapets built in the old

TABLET OF THE PYRAMID OF THE TROPIC OF CANCER.

bandit days for protection to the peons and the herds at night. On the other side in a grove of green trees is a place 'tis said once belonged to the Emperor Maximilian, while another legend says a rich land owner commenced to build, but ere the house was completed he died and it was turned into a chapel; it is the white tower of the chapel that is seen above the trees. Be-

THE WATER WORKS OF SAN LUIS POTOSI.

tween the stream and the track is a distillery of *mescal*, a native rum made from a species of the maguay—a novel feature of which is the primitive water-wheel worked by the more primitive and patient ass. At Bocas, no matter which way you are going, lay in your supply of fruits (and mescal if you like it), they are good (the fruits are) and fresh from the trees.

Now the plains are left behind and the climbing of the hills at the southern boundary commenced ; there are many twists and turns before the table land is reached where the city is, which, outside of the capital, is second to none in the Republic, the city of SAN LUIS POTOSI, almost the only one where the railway station is near the city's centre, as it is here, on one of the main plazas, and within easy walk of the business portion from one of the finest railway stations in this or any other country. On all schedules there is time for a look around, but San Luis is one of the places to stop, as there are good hotels and much to see. The city is laid out at right angles; the streets are marvelously clean, and the houses, required by law to be kept newly painted, are examples of cleanliness that might be emulated by nations said to have a better reputation than has been unjustly given to Mexico.

The markets are especially interesting, and the fountains with their picturesque crowds of water-carriers and their quaint, primitive wheelbarrows carrying from one to three earthen jugs that are strapped on these San Luis velocipedes which work with a shove motion in a manner more picturesque than easy. In the plaza is a fine statue of Hidalgo, placed in position on Independence day of '89. An interesting drive is through Paseo del Santuario de Guadalupe to the church of that name, the one with the two tall towers seen from the cars in approaching the city from the south. The cathedral has a fine clock which sounds the hours, and was the gift of a King of Spain in return for the largest single piece of silver ore ever taken from a mine—the mines of San Pedro, near San Luis. The people are a hospitable, pleasure-loving set, and very kind and courteous to strangers within their gates.

There are several fine public buildings, notably the Governor's Palace, Palace of Justice, the Cathedral, the churches of Carmen, San Augustin and Merced. The streets are narrow, and, as usual, picturesque; the plaza is a revelation; the hotels are much superior to those of most Mexican cities, and altogether San Luis Potosi is worthy of its enviable reputation. Its business men are active and progressive. Mining interests have added very materially to its wealth, and now that it is on the direct line of rail communication with the outside world will, without doubt, attain increased prominence. The railway station is located on the west side of the alameda, or park, so that, contrary to usual custom in this country, the traveler is enabled to take the train almost in the heart of the city. At San Luis Potosi is the crossing of the Mexican Central's Tampico line, reaching to Tampico on the east and Aguas Calientes on the west.

After leaving the tableland we again enter the hills and valleys and cañons where the scenery is wildly picturesque, and as valley after valley is passed, it is apparent that the soil is here extremely productive. The population becomes more dense, and the vegetation increases in luxuriance. Villa Reyes is passed, with the immense hacienda of Jaral, which, during the revolution of 1810 furnished a full regiment of cavalry to assist the royalists as against the armies of the patriots. This hacienda once controlled 20,000 peons. Before arriving at San Felipe we cross a deep *barranca* spanned by a viaduct noticeable for its height and the engineering skill displayed in its construction. San Felipe is a town of some 6,000 inhabitants, and is situated in the center of a rich farming country.

Dolores Hidalgo was given its name in honor of the patriot Hidalgo, the Washington of Mexico, who sounded the watchword of liberty which fired the Mexican heart and aroused the whole country to arms to resist the power of Spain. This is a quaint old town of several thousand inhabitants. It has a fine plaza and interesting churches, and the traveler is shown many relics of the Cura Hidalgo, which are here preserved in the old house which he occupied.

Turning more to the westward, skirting some high mountains, the road comes to the city of SAN MIGUEL DE ALLENDE, named for, and was the birthplace of the patriot Allende. The city is on the east side, about a mile and a half from the station, spread out on the sloping sides of a great hill. One of the most picturesque towns in all Mexico, famous for its baths, where the water gushes from the rocks on the hillside, is conveyed fresh to the baths at a most comfortable temperature, these ever-running springs furnishing an abundance of water, run down in sparkling streams and miniature cascades through the most beautiful gardens of fruits and flowers. The plaza is a beautiful one, densely shaded by luxuriant trees under which the natives, in brightly-colored costumes, group themselves on market days, when the band plays in the evenings, making pretty pictures fit for a canvas. The hotels face the plaza, and they are good ones, the windows overlooking the novel scene. On one side is the Casa de Loreto; the modern spires of the chapel being designed by an untutored native, contrast strangely with the square and Moorish style of the older buildings beside it.

After leaving San Miguel the road enters the valley and cañon of the Laja—a seat on the right is the best, where you can see the little river far down the valley, and on the other side the high hills and just at a turn of the cañon, on a jutting point of the mountain across the valley, is a cross that would seem to be painted on the sky. All along through the valley are little farms with clusters of adobe houses; every hamlet has its quaint little church, tower, bell and all. These are on the slope below the track, affording glimpses of Mexican farm-yard life. The houses are almost hidden by trees and vines, among which are many oranges, lemons and bananas, bright green spots in little fields laid out in squares hedged with what we call the century plant, the maguey, from whence the Mexican gets his *pulque*.

Leaving the cañon the country assumes a more tropical aspect, more of what the tourist expects to see—and if there were time and a hotel at the place, would say to stop off at San Juan de las Vegas—a typical Mexican town, primitive in style, where no foreigner has his home, where there are groves of oranges and lemons and bananas, where fruit may be had for the picking, and where the native “lazies” the time away in indolent do-nothingness behind the rows of cactus that hedge the streets. This interesting place and the woolen mills of Soria passed, the route is through a fine agricultural country, to CELAYA, a city of great beauty in the midst of a fertile country. Here the tourist meets the vender of opals, strawberries (at all seasons) and *dulces*, a native confection, or rather the vender meets the traveler on all trains, night or day. A word of advice—select your opal, box of strawberries or dulces, but conclude no bargains till the engine bell rings and the conductor cries “vamos;” then—have the exact change ready, and *probably* you will come out all right. At Celaya are many fine old churches, especially Our Lady of Carmen, which contains some frescoes of note and several paintings well worth seeing. Celaya is built on a level plain in the valley of the Laja. It is celebrated for its dulces (sweetmeats), and there are several manufactories of woolen and cotton fabrics. The baths of Celaya are among its attractions. A tramway extends from the railroad to the plaza in the centre of the town. Here the Mexican National is crossed by the line of the Mexican Central. The principal hotel is the Golis. Continuing down

the valley of the Laja we arrive at SALVATIERRA, noticeable in the distance from the glittering of its many church domes which, being covered by a glazed tiling, present a pleasing contrast to the dark green of the many

WAITING FOR THE TRAIN.

shade trees with which the streets are lined. Salvatierra has a population of 10,000, and is something of a trading centre. There is a large woolen mill which gives it some manufacturing importance. There are several small hotels, the best of which is the Diligencias. The line continues from here south through an interesting and very fertile country, abounding in corn and sugar cane, pass-

ing many peculiar-looking Indian villages with their quaint, peaked huts.

From the valley, the "Valley of the Laja," it is a quick ride through a rich country to the valley of the Lerma, reached at ACAMBARO, and that longest river in Mexico is crossed just before coming to the station.

Acambaro is the most self-satisfying town in Mexico. It is delightfully primitive, and the fact that it is an important railway junction point has not lost to it any of its antique quaintness. The town lies off to the westward of the station, and although scarcely half a mile away, is so completely hidden by the trees that only the church towers can be seen peering above them, and showing the white outline against the blue background of the high hills beyond the town. The lover of the quaint and antique will find much to charm in this old town, only its very quietness seems oppressive, and after a stop of a few hours the tourist is ready to join the entire population and go and see the train come in. Acambaro is the junction of the Western Division of the Mexican National Railroad, leading to Morelia and Patzcuaro, and the beautiful lake region of Mexico, which is described in another part of this book.

The main line of the National now takes a turn to the southeast, following the valley of the Lerma, sometimes running near its waters and then high above them on the high cliffs of a cañon. The best view to be had from the windows on the east side, though in crossing the hills there are so many turns that the same views may be seen from either side—one in particular, a fertile valley far down the hillside with its green fields laid off in squares so regularly that it seems a huge checker-board. In the midst of it is a little village hidden by the trees, all but the very white tower of the church, which may be seen first from one side of the train and then from the other for more than an hour, then passing into a great cañon and through it on the right bank, in ten minutes comes to the very pretty town of MARAVATIO, with the usual complement of queer-looking old churches and attractive plazas. Its red-tiled houses give it a picturesque appearance. From here on the country is fertile and remarkably attractive to the eye, the broad lying valleys covered with bright patches of brilliantly colored flowers, and the graceful lines of the mountains, all are in marked contrast to the wild and rugged landscape of the north. At Maravatio connection is made with the Michoacan Pacific Railroad under construction to the west coast of Mexico. Skirting the valley of Solis we pass into the mountains under a beetling cliff, called by the natives "El Salto de Juan Medina," the tradition being that a famous bandit, one Juan Medina, being hotly pursued by the authorities, leaped his horse from the precipice and was dashed in pieces on the rocks below. A steep grade is here surmounted, and the train enters Zopilote

STATION AT DOLORES HIDALGO.

Cañon, along the precipitous side of which a space just wide enough for the track has been blasted. Above hang great masses of granite, the mountain here rising sheer upward for hundreds of feet; below dashes a rushing stream, which just in advance foams and tumbles over the rocks forming a waterfall of great beauty. Passing out of the cañon we enter the fertile country once more, and reach one of the richest agricultural regions in all Mexico, the great haciendas, that are almost towns in themselves, are seen on both sides, and in the fields whole regiments of peons are plowing, the plows drawn by steers move more slowly, but with military precision as soldiers in skirmish line, as they are, too, on the skirmish for their daily bread.

Now a look forward from either side of the cars will soon show the snow-capped crater of the volcano of Toluca, and after passing Flor de Maria and several other less important stations, comes the city of TOLUCA, on the west side of the track, a very beautiful city on the foothills of the volcano. Toluca is the capital of the State of Mexico; it is one of the cleanest, most

WHOA!

charming and most hospitable cities in the world. Horse-cars run from the station to the plaza, passing the principal hotels, of which there are several excellent ones in Toluca; in fact, no tourist has ever left the city but in a happy mood, thanks to the good living, splendid rooms and refreshing baths. The clean, well-paved streets, the quaint portales, the really fine markets, the pretty plaza, and the splendid public buildings are all features of attraction that leave the most pleasant memories. Toluca is a good place to buy souvenirs in linen-drawn work, pottery, straw sombreros, palmetto baskets and scores of other mementoes of this delightful town and country.

After leaving the station at Toluca the track runs almost due east, and

how the high mountains just over there are to be surmounted no traveler can surmise, and when he comes to them he still wonders how it was ever done. A seat on the right is to be chosen, or on the rear platform. The King's Highway, a broad road that once was paved, parallels the track for some miles. It is crowded with droves of cattle, hundreds of men and women, and pack-trains of burros, the men, women and burros all laden with the products of the country going to or returning from the markets of Toluca or even the City of Mexico, forty miles away. Just before reaching the hills the river Lerma is crossed near its head waters, and at a point where was once the great city of Lerma, now only a straggling village. A mile or two further on a stop is made and the helper-engine is hooked on, two engines being required for the lightest train and three for the heavier ones—now all hands to the right for the grandest piece of scenery on the road or anywhere in Mexico. The little village near the road whose streets are about on a level with the rails is Ocoyocac—in a few moments after the train has crawled around a closely bended horseshoe curve, it will be a thousand feet above the village, and on a cliff so precipitous that we may look down on the roofs of thatches and tiles and the church towers that seem as toys from a child's play-box—not all the attraction is at the base of the hill the grand view includes the whole plain of Toluca, the city with its red tiled roofs and beyond it the volcano, a magnificent panorama without a superior in its wonderful scope—not in Mexico, not on the continent, nor, I believe, in the world.

The two locomotives toil along slowly, so there is time to enjoy the scene always to be remembered, and yet almost impossible to describe. On the first shelf of the Sierra Madres the "Mother Mountains" of Mexico after leaving Toluca valley are the mill and fields of Jajalpa, then continuing the ascent, passing under the old and the new aqueducts of the mills, with here and there a parting glimpse of the valley again, the road comes to Salazar and then to La Cima, which is the summit and where the "helper" is unhooked, as 'tis easy going now; here the altitude is more than 10,000 feet above the sea, though you may have discovered this if altitudes affect you, if not in measured feet, in the short measure of your breathing, and the cool crisp atmosphere. You noticed the mountain stream that flows down the west slope and past Jajalpa, the source of the Lerma, whose waters flow on to the Pacific Ocean—these at the track side now, rushing in a hundred cascades down the cañon go on forever to the Gulf of Mexico.

As the seat on the right has been selected for the ascent it is a good one to keep on the down grade, and there is something to see in every inch of the way, so the wink of darkness made by a short tunnel is begrudged. The

towering mountains on one side, the yawning chasm on the other, look wicked enough and command attention near by; but look—look beyond that cañon, and beyond the hills on the other side of it—there still twenty miles

away is a shining sheet of silvery waters, a broad spreading plain, hundreds of towers, and beyond them the everlasting hills, and beyond them lifting their hoary heads even to the clouds, and above them two peaks of snow, whiter than the

snowiest clouds, and whiter still 'gainst the clear blue sky—is this picture or the other, grander? These are the Lakes Texcoco and Zochomilco, the plain and City of México and the volcanoes of Popocatapetl and Ixtaccihuatl.

Rolling the descent down the train runs almost as slowly as it came up the other side—the two powerful brakes keeping it in perfect control. The village over on the hill was once a rendezvous of a bandit band, the church

UP HILL AND DOWN IN THE MADRES.

was of their building from the proceeds of their business. Rio Hondo is a wood and water station; near it on the left of the track is a great meteoric stone as big as a car, called by the natives the "moon stone," as they believe it fell from that planet. There are some strange hieroglyphics on the stone, and it is believed to have a more ancient origin in its graving than the famous Calender stone. Next is Dos Rios and then the factories of Naucalpan, and then rolling down to the level plain, past Tacuba and under the old aqueduct into the Colonia station, and the journey to the City of Mexico is ended.

WESTERN DIVISION.

Westward from Acambaro runs the division of the Mexican National Railroad, which is to make it a Transcontinental line, and when completed will reach the Pacific Ocean at Manzanillo—in the meantime that completed portion which extends from the main north and south line at Acambaro to Morelia and Patzcuaro affords a most charming ride through a rich country of the more primitive Mexico and through the beautiful lake region.

The winding road passes over the hills and valleys and some stretches of agricultural lands with its fertile farms and great haciendas, and comes suddenly after a sharp curve to the shores of Lake Cuitseo, and turning to the left skirts the southern shore of the lake, where in the marshes are some old salt works; following along the western shore the train comes to the little station of Queréndaro. The more adventurous tourist may leave the train here, not that there is any danger whatever, but there is no hotel, not even a *fonda*, and provender must be brought along or hunted and fished for. A canoe may be hired from the Indians for a voyage across to the Island of the Burros, one of the many islands of the lake and the only one inhabited.

The people are a hardy, sturdy race, the men are hunters and fishers, the women have nothing to do but to eat, sleep and grow fat, which they have made a complete success of; there are some fine specimens of almost Amazonian proportions, the finest Indians in Mexico. The lake abounds in myriads of water-fowl of every description. The fish as taken by the Indians in large hoop nets attached to a long pole, are a small white fish like a minnow, no bigger than your finger—these when dried in the sun are ready for the table, I should say, if there was one on the island. Lake Cuitseo is about forty-five miles long by ten to twelve broad: the shores on the north and east rise to high peaks as do most of the islands; the southern shore is low and marshy; altogether a beautiful sheet of water.

Near the landing place of Queréndaro there are some hot springs, where the water is hot enough in the streams that flow from them to boil an egg—in scores of places columns of steam are rising from the fissures in the ground and to walk over or near them is to feel the ground sink under you.

In a thicket near the track is a most primitive bath—a pit dug in the ground near one of the spring streams, is filled with water by damming the little brook, and when full is turned back to its own channel again. It must be a spring of wonderful, curing waters; on the trees and bushes, in the ground, everywhere near, there are hundreds and hundreds of crosses, the thank-offerings of those who have bathed and been cured.

Leaving the lake, the route is still to the westward, and abounding in those beauties of landscape that characterize the road throughout its length.

The high double-peaked mountain to be seen ahead, first on one side and then the other, is the Cerro de Quinceo, just on the outskirts of MORELIA—a look from the windows on the left

shows the towers of the cathedral over the top of a barren hill; on the other is the river, the train running close to its banks, where hundreds of natives are indulging in open air laundering and bathing.

Morelia is one of the prettiest cities in all Mexico, and its women enjoy the same flattering reputation. Horse-cars run from the station to the plaza and to the principal hotels, than which there are no better anywhere in the Republic, and they are entirely satisfactory as to rooms, baths and board. The beautiful plaza, the magnificent cathedral, the Paseo de San

AQUEDUCT OF JAJALPA.

Pedro, the Causeway of Guadalupe, the Aqueduct, are objects of attraction, but the hospitality of the people, the beauty of the women, the music and the flowers, all combine to lengthen the stay to the extreme limit of a stop-over ticket.

After leaving Morelia the road passes near the Cuincho Falls and hot springs on the south side of the track, and after a short run skirts a high bluff and comes to the highest navigable waters on the globe—comes to beautiful Lake Patzcuaro. PATZCUARO is well entitled to its name, which, being interpreted, means to Indian ears a “place of delights,” and it means this to anybody who goes there.

The station is on the lake shore, a diligence runs to the town, two miles up the hill, and the drive is a most charming one, as the beautiful view grows wider and wider as the hill is ascended, and when at the top, the lake with its islands, the valley with its fields of green and its four dozen towns and villages are included in the scope of vision. The quaint plaza shaded by great trees, surrounded on four sides with heavy columned portales, the market place, the narrow, crooked streets with shrines and crosses in every nook and corner, and the grand view from Los Balcones, at the crest of the Cerro de Calvario, are all most prolific subjects for the tourist's note-book, and in every one will be written that Patzcuaro is indeed a “place of delights.”

There is a little steamer on the lake, the “Mariano Jiminez,” which runs from the dock to the northern shores of the lake, making several landings, at way-back towns, where there are no railways, and, perhaps, never will be. The object of the voyage on the lake, and in fact of the trip to Patzcuaro, is the famous painting in the old church at the village of Tzintzuntzan, on the east shore of the lake—The Entombment, by Titian, presented to the Bishop of Michiocan by Philip II of Spain. Many noted writers and artists have made the pilgrimage and returned with the feeling that the trip was amply paid for in the seeing of so celebrated a picture, for which the natives have been offered the most fabulous sums by different persons, but they have uniformly refused. Tzintzuntzan was once the capital of a powerful tribe of Indians, but now only a little hamlet with a grand old church and a great picture.

Patzcuaro and the beautiful lake have all the attributes of a fine health and pleasure resort. In the very near future the American will begin to find out why the Indians call it a place of delights.

THE CITY OF MEXICO.

The City of Mexico is not all of Mexico, neither is the all of Mexico completed until the City has been seen, and since Cortez came over the eastern hills that are beyond Texcoco's waters, every tourist or traveler on business bent makes a bee line for the city, nor stops till within its walls. All other places may be visited later, but the Capital must have the first call.

The fame of this fair City, for it *is* a fair city, has gone abroad through all the world, and nearly half a thousand years ago the story of its splendor, the glory of its temples, the civilization of its people and their wealth, the pomp and circumstance of its rulers, the beauty of situation and salubrity of climate went across the seas and reached the royal ears of Europe's kings, and since those old, old days, centuries ago, the famous story went out continually to bring hither in every passing decade, year, month, week and day, pilgrims from every land, for conquest, hope of gain or scientific research, down to these days of pleasure touring and business travel.

Nor is the story scarcely less famous now; true, it is not expected that tawny princes bedecked with dazzling jewels, on palanquins borne, with attending hosts of vassals and plumed and feathered warriors, will meet the arriving guest in these modern days, but the same grand old City's there, with its temples not less imposing, its people not less curious, its glorious climate of perpetual spring-time, just the same now as then, and beauty of spreading plain and lake, circled by high hills deeply, darkly blued by a wondrous atmosphere marvellously clear, high hills with camel backs outlined against the sky, a silent, never-ending caravan led on by two hoary leaders with heads uplifted high above the others and whited by eternal snows. These are there forever, and withal, there, treasured in the City's halls, the evidences in hieroglyphics, graven image, altar and sacrificial stone, and wrinkled parchment, faithfully tells of nations passed away and a history that must forever go unwritten.

As this story brought Cortez across the seas and other thousands since his time, so the telling of it, and the relics of it, are bringing armies of sight-seers, health and pleasure seekers to the same grand old city of to-day—and those who get there the quickest, with most comfort and scenic attraction, are the passengers of the Mexican National Railroad. (This paragraph is a sudden drop from the soaring flights of fancy, but the cold facts so assert themselves that the pencil takes the tangent businessward irresistibly.)

Since, then, we are down to the present age, where practical information is the thing, let us have it. It has been told how this short line gets to the

capital of the Mexican Republic ; the story has a fitting ending—at Colonia station, near the Paseo de la Reforma, in a most attractive portion of the city, where all trains arrive and depart—a convenient location with connecting horse-car lines to all parts of the city, and paved streets leading to hotels and points of interest.

The City of Mexico, with a geographical location within the tropics, and although on a level plain with outlying lakes, is by its altitude of over 7,000 feet above the sea, possessed of a climate so delightfully salubrious, so even in temperature, that summer or winter a residence here is always pleasant, and visits to the city may be made at any time from January to January.

If it is written that the climate is the chief attraction, when you have seen them, you may say that the beauties of the plain and the surrounding hills and the volcanic views are a fair rival ; to this may be added the manners and customs of a courteous people, the parks and streets, the old churches and their decorations, pictures, bells and towers, which are more satisfactorily seen than described. They can only be enumerated here as 'tis done on the other pages of this book.

HISTORICAL.

Cortez landed at Vera Cruz April 21, 1519; commenced his march toward the Capital August 16, and entered Mexico November 8, 1519; was driven out July 1, 1520, La Noche Triste (Dismal Night).

Cortez returned and laid siege to Mexico December 31, 1520; captured and entered the city again August 13, 1521, and Mexico or the province of New Spain remained under Spanish rule three hundred years ; during this time there were five governors, two audiencias and sixty-two viceroys.

First insurrection against Spanish rule was started September 16, 1810, by Hidalgo, who was defeated, captured and executed July 31, 1811.

After another period of disturbance, Yturbide entered the City of Mexico with his army, and the power of Spain was ended in Mexico September 27, 1821.

Yturbide elected emperor May 19, 1822 ; forced to resign March 4, 1823, and a decree of banishment was passed against him ; after an absence of a year in Europe, he returned to Mexico July 14, 1824 ; was captured and executed July 19, 1824.

From the time of banishment of Yturbide to the arrival of Maximilian Mexico had a republican form of government.

The troops of Napoleon III occupied the City of Mexico June 9, 1863 ;

Maximilian arrived at City of Mexico June 12, 1864 and was executed June 19, 1867.

Benito Juarez returned to the City of Mexico July 15, 1867, and the republican form of government was again established. And under the liberal and progressive policy of President Diaz, Mexico is being rapidly developed, and taking a front rank among the nations of the world.

EXCURSION TICKETS.

The Mexican National Railroad, at their ticket and telegraph office, Coliseo street, under San Carlos Hotel, City of Mexico, will sell excursion tickets to holders of American tourist tickets at following rates of fare in Mexican silver :

Toluca and return.....	\$ 3 00
Morelia and return	12 00
Patzcuaro and return	14 00
Lake Patzcuaro (including steamer) and return.....	15 00
San Miguel de Allende and return.....	12 00

Tickets good for fifteen days.

Stop-over checks for any of the above-named points issued by conductors.

Passengers holding through tickets issued in the United States may stop off at Acambaro and make the tour of the Western division running through the lake region of Mexico to two of the most interesting cities in the Republic—Morelia and Patzcuaro.

Round-trip tickets from Acambaro to Patzcuaro, via Morelia, \$5.00.

NOTE.—Round-trip tourist tickets to Mexican points cannot be changed to other returning routes after arrival in Mexico ; routes must be decided when tickets are purchased at starting point.

ALTITUDES OF MOUNTAIN PEAKS.

Popocatepetl, 17,782 feet ; Orizaba, 17,356 feet ; Ixtaccihuatl, 16,060 feet ; Nevado de Toluca, 15,000 feet.

These are all extinct volcanoes with others of their kind throughout the country, not having been in action for centuries, though the sulphur deposits give ample evidence of the hot times in the long ago, when their internal affairs must have interfered with the eternal snows on the external surfaces, also, indicating a closer proximity to the infernal than was altogether pleasant.

OTHER TOWNS AND TOURS.

I believe it was left to the progressive American to "do Rome in a day," but in this country of magnificent distances such celerity is not possible, nor can the number of days required to do the City of Mexico be quoted here, but when this greatest of Mexican cities has been gone over, from Chapultepec to Guadalupe, and from Texcoco to Los Remedios, the sight-seer tireth not, but looketh about for new fields and other sights to see.

THE DAY EXCURSIONS from the Capital may be made by rail or horse-cars, and not one of these mentioned here but is sufficient in attraction to repay the trip.

TACUBAYA is the place of summer residence of many prominent people of the City, a lovely suburban village, with many beautiful gardens surrounding some of the finest residences in all Mexico. Tacubaya has been called the Mexican Monte Carlo, as in a small way it is. Horse-cars run from the Plaza Mayor in front of the cathedral, and there is a steam road starting from near the Paseo.

GUADALUPE is a famous name in Mexico, and the shrine of that name, about six miles north of the City, is called the holiest in Mexico. The beautiful legends have been written and read in almost every language, and need no repetition here. The churches and the chapels, the famous spring, the ship's foremast and sails incased in stone, the mysterious preservation of the tilma of Juan Diego, with the unfading picture of the Virgin of Guadalupe, are of interest. Horse-cars from the Plaza Mayor every half hour.

CHAPULTEPEC, the Mexican White House, Presidential summer residence and seat of the National Military Academy, is best reached by carriage through the Paseo de la Reforma, though the Tacubaya and San Angel horse-cars, from the Plaza Mayor, pass the gates at the foot of the hill, from whence it is a rather difficult climb to reach the castle.

TEXCOCO is beyond the lake of that name, and is the station for the beautiful gardens of the Molino de Flores, the country seat of the ancient family Cervantes. Trains of the Inter-Oceanic Railroad stop at Texcoco, and schedules usually permit the trip to be made, going in the morning and return in the evening. Carriages are required between Texcoco and Molino de Flores, as the distance is two leagues.

AMECAMECA is a pretty little city, immediately at the foot of the volcanoes of Popocatepetl and Ixtaccihuatl, and is the point of starting for the ascent. The Sacro Monte is an attraction of Amecameca. The railway station is just at the foot of the hill. The legends of the sacred mountain are

incentive enough to make its ascent. Trains of the Inter-Oceanic Railroad run conveniently to make the excursion in daylight.

PACHUCA is more of a windy city than Chicago, though not so large. It is a great mining town, located in the mountains nearly a thousand feet higher than the City of Mexico. The city lies in a barranca between two high peaks, so that the breezes blowing down the cañon pass over the city continuously. The mines and the picturesque location are the attractions. Trains of the Hidalgo Railroad leave the City in the morning and return in the evening.

LA VIGA GATE.

TOLUCA, and ride over the mountains, thereto the magnificence of the scenery of the plain and City of Mexico and the Toluca Valley, are described elsewhere in this book. Trains of the Mexican National are scheduled so the trip may be made in a day, though it is advised to take an afternoon train and return by a morning train. This gives a proper sunlight on the scenery on both slopes of the Sierras that is not surpassed anywhere in the world.

LA VIGA CANAL and the floating gardens. Take horse-cars one square southeast of the Plaza Mayor to the canal, thence by boat, a very novel one, with seats and awnings, propelled by pole power, for Las Chimapas and Santa

Anita, stopping without fail at the hacienda of the late lamented Don Juan Carona, once a bullfighter of great renown, and a philanthropist who established a school for the poor. The hacienda is a perfect museum and is most unique.

TULA is one of the oldest Toltec foundations in the country, where there are some grand old ruins of that ancient race. The *casas grandes*, as the ruins are called, are intensely interesting to the tourist as well as the student.

RUINS OF A TOLTEC TEMPLE.

In the plaza at Tula some curious relics of a prehistoric age may be seen. Take a morning train on the Mexican Central Railroad and return in the evening.

TAJO DE NOCHISTONGO, the great canal that was intended to drain the Mexico Valley, and which cost so many men and so much money, and yet failed of its purpose, may be seen on the trip to Tula. The Mexican Central track runs along the top of the east bank of the canal.

THE INTER-OCEANIC RAILWAY is the recently completed line between

the City of Mexico and Vera Cruz, running around Lake Texcoco on its southern shore and skirting the foot hills of the great volcanoes, keeps their white caps in view during nearly the entire journey. The road runs through a richly cultivated country, though there is plenty of mountain scenery and cañons wild and picturesque; and the cities and towns are quaint and novel as they are in Mexico. Puebla, one of the prettiest, most interesting and healthy cities, and Jalapa, famed for its quaint location and general beauty, are both on the main line to Vera Cruz. Hitherto, the travelers to these cities must lose a day's travel going and another returning, as they could only be reached by branch roads; now on the main line, they are easier of access, and may be reached in a few hours from the Capital. The Morelos division of the Inter-Oceanic runs south from the City of Mexico to Amecameca, Otumba, Cuautla and Yautepec, and under construction to Acapulco. The tour of this line is very interesting, passing as it does from the high table lands to the *tierra caliente* down where the sugar cane and coffee grows. The scenery of the descent is very grand, the volcanoes are in view all day long, and the view from Nepantla, stretching leagues and leagues away, is beyond description, and is constantly changing as the train rolls from there down to Cuautla.

THE MEXICAN RAILROAD is the oldest railroad in Mexico. The line is from the City of Mexico to Vera Cruz, passing from one table land to another, through the famous pulque regions of the plain of Apam to Esperanza, where there is a sheer descent of more than two thousand feet in thirteen miles. The ride down the mountain from Boca del Monte to Maltrata, through the Barranca del Infernillo (the Ravine of the Little Hell), is the chief attraction of the trip, though the scenery thence down to Córdoba is very beautiful. Orizaba and Córdoba are very pretty cities, and well worthy of a stop-over. There are branch lines to Puebla and Jalapa, the former from Apizaco and the latter from Tejeria. On this road and others in this region it is very dusty at all times, and dusters should be provided before making the journey.

THE MEXICAN SOUTHERN RAILWAY is in operation from Puebla to Tehuacan and under construction to Oaxaca and Tehuantepec. Track-laying is being rapidly extended, and the country opening up to tourist travel seems to surpass all anticipations in the way of scenic attraction. The passenger equipment of the road is of English manufacture, and surpasses anything ever sent out from that country. It is simply superb in appointment and decoration. A ride over the Southern from Puebla to the track end is one of the tourist things to do.

THE MEXICAN CENTRAL RAILROAD runs a day train north from the City of Mexico as far as Leon, passing in daylight some of the most interest-

ing cities and splendid scenery on that line. Leaving the fine station of Buena Vista, the route is across the plain to the northward; the gradual climb enlarges the view till at Huchuetoca, the grand panorama of the plain of Mexico, with its cities and lakes and the surrounding mountains, spreads out in one magnificent picture. This is hardly shut out by an intervening hill, higher than the rest, till there is something else of equal interest—the great Tajo de Nochistongo, the drainage canal mentioned on another page; then the city of Tula, with its ruined city of the Toltecs.

There is a down grade now to the Cazadero plain, and thence to Querétaro, a very interesting city, noted in Mexico's modern history as the place of execution of Maximilian and his generals, Miramon and Mejia; noted among tourists as a place of opals. If there be anything in the reputation of that jewel, surely there can be no good fortune in store for Querétaro. But the prosperity of the place tells a different story, which a look from the window, as the train approaches the city, will prove. The great stone aqueduct that brings water from the mountains to the city, and the great Hercules cotton mills, is one of the great works of the country. The train passes under one of the highest arches and through the village of the mills, where there are trees and gardens of tropical fruit and verdure. Just west of the city, in a stony field on the hillside, to be seen from the cars, is the spot where the last Mexican emperor was executed.

It is through a fine agricultural country that the line runs now, down into the Valley of the Laja and crosses the Mexican National Railroad at Celaya; the beautiful towers of the Franciscan group of churches and of Our Lady of Carmen can be seen from the west windows for some miles up and down the line. Celaya is noted for its *dulces*, a kind of native confection that is very palatable. There is ample opportunity to prove this, as the vendors meet all trains.

Irapuato is celebrated for its all-the-year-round strawberries; these are also at the train, whether it is on time or not, as the opals are at Querétaro and the *dulces* at Celaya. I have heard some one carp at the civilization of the peon of Mexico, but he knows which strawberries to put on the top of the basket. Irapuato is the point of junction of the Guadalajara division with the main line. The road is a fine one through a rich country, picturesque to a degree, passing many fine haciendas and the cities of Penjamo, La Piedad and La Barca, running along the river Lerma and near to beautiful Lake Chapala, comes to Guadalajara, a truly beautiful city, with its fourteen portales, twenty plazas, fourteen bridges, five theatres, twenty-five baths, twenty-three

restaurants and twenty-eight hotels—a city that was a city two hundred years before it had a railroad.

There are numberless attractions that there is not space here to mention, with interesting excursions to Lake Chapala, the Falls of Joanacatlan, Mexico's Niagara, and a cañon 2,000 feet deep, all to make the visit to Guadalajara a lengthy and a pleasant one.

Northward from Irapuato, on the main line, Silao is the next station of importance, a pretty little town and the junction of the branch line to the great mining city of Guanajuato, ten miles east. A city set among the mountains, a fortified place on the heights, the foundations of whose buildings cost more to dig out than the houses that rest on them. The train stops at Marfil, thence the ride to Guanajuato is four miles up the barranca by horse-cars through the quaintest, crookedest road that ever was, and stops at the prettiest little plaza, that seems only a shelf in the side of the mountain, and on either side the hanging gardens droop their flowers to the waters of a rushing stream below. There is but one Guanajuato in Mexico, and no other city like it.

The route of the Central's day train ends at Leon, a great manufacturing city, whose nearly every house is a factory, principally of leathern goods. The city is a pretty one, the streets laid out at right angles, with parks and plazas here and there, a pretty alameda and a causeway leading to a place of suburban resort, which is also the Paseo of Leon.

EXCHANGE OF MONEY.

Passengers having American money can have same exchanged for Mexican currency at the Mexican National R. R. Ticket Office in New Laredo, where the highest market price will be paid for "greenbacks" or gold, American silver not commanding a premium. July 1, 1890, a law went into effect establishing the dollars and cents system, but it is well to understand the old way of counting money.

On arrival at Laredo, or just before the train reaches that city, an agent of the Mexican National R. R. comes on board the train. He wears a uniform and has a cap which bears the legend "Passengers' Assistant." This gentleman will assist passengers in every way as to tickets, baggage and custom-house regulations. He is a regular agent of the Company and is at the service of its patrons.

The paper money of Mexico, issued by the Banco Nacional and the Bank of London, Mexico and South America, passes at par, as do the notes of the

State banks in the States where issued, but when far away from home are discounted somewhat. The gold coins are seldom seen; the *onza* is worth about \$16, *media onza* \$8, the *pistola* \$4, *escudo* \$2, *escudito* \$1.

SILVER AND COPPER.

The silver currency consists of dollars (pesos), 50c., 25c., 12½c. (reals), 6¼c. (medios), 10c. and 5c. pieces, cuartillos 3⅛c., and 1c. coins.

PRICES FOR CARRIAGES.

Yellow Flag, ½ hour or less, 25c.; 1 hour, 50c.; Red Flag, ½ hour or less, 37c.; 1 hour, 75c.; Blue Flag, ½ hour or less, 50c.; 1 hour, \$1, Green, special rates. Sundays and feast days extra rates are charged. Tin flags indicating class are displayed on front corner of roof of coach when not engaged.

Street-car fares vary according to the distance traveled, from 5 to 25 cents. First-class cars are painted yellow, second-class are green.

BAGGAGE ACCOMMODATION.

After baggage is examined at New Laredo, passengers can on application have baggage wire-sealed and avoid other custom houses en route to the City of Mexico.

EXPRESSING BAGGAGE IN CITY OF MEXICO.

Transfer agent will board the train before arrival at City of Mexico, and will check and deliver baggage to hotels and residences as in the cities of the United States.

Baggage may be also checked from hotels or residences in City of Mexico to points on the line of Mexican National R. R., or to Laredo, Texas, upon application to C. P. BARRETT, City Ticket Agent, Mexican National R. R., Coliseo street, under San Carlos Hotel; or to J. H. CHRISTEN, proprietor International Transfer Co., No. 402 Calle Gante, near San Francisco street.

Tourists having curiosities and other small packages can send same safely to their homes through the National Railroad Express office, Ortega street, No. 28.

PLACES OF INTEREST.

NATIONAL PALACE—Present building commenced in 1692; additions have been made since. It occupies the entire eastern side of the Plaza Mayor, with a frontage of 675 feet, contains departments of the Federal Gov-

ernment, Hall of the Ambassadors, with portraits of Hidalgo, Yturvide, Morelos and other persons of note.

CATHEDRAL—Built upon the site of the great Aztec Temple, which the Spaniards destroyed when the city was conquered in 1521. The first stone of the existing building was laid in 1573. Final dedication, 1667. Completion of the towers, 1791. Entire cost about \$2,000,000. The building measures 387 feet from north to south, and 177 feet from east to west. Interior height, 179 feet. It is built of stone. Towers are 203 feet 6 inches high.

FLOWER MARKET—Glass and iron pavilion in garden west of Cathedral; best display in early morning.

MINT—Calle del Apartado; open from 8 A.M. to 5 P.M.

NATIONAL MUSEUM—Open daily, Saturdays excepted, from 10 A.M. to 12 noon. Aztec Calendar stone, Sacrificial stone, Maximilian's chariot, Montezuma's shield, etc.

ACADEMY OF FINE ARTS OR SAN CARLOS ACADEMY—Open daily, from 12 M. to 3 P.M. Paintings by native and foreign artists.

PASEO DE LA REFORMA—Two and one-fifth miles long; laid out by Maximilian; runs from bronze statue of Charles IV to gates of Chapultepec. The Paseo is the daily early morning and late afternoon ride and drive of fashionable Mexico.

CHAPULTEPEC—The Presidential residence and National Military Academy.

GUADALUPE—Holiest shrine in Mexico, old Church, stone sails, cemetery, Santa Ana's tomb, Grotto cave, and beautiful view of the City and Valley of Mexico.

LA VIGA CANAL—Take La Viga cars to La Viga gate; thence by canoe to the Chinampas or floating gardens.

HACIENDA OF DON JUAN CORONA—In this house, on the bank of the Viga Canal, can be seen a valuable and rare collection of ancient and modern Mexican curiosities. Don Juan was a retired bull-fighter become philanthropist and antiquarian. The hacienda is one of the most interesting places to visit.

Take street-car one square east from main plaza on street leading from northeast corner, ride to La Viga gate, thence by boat, or all the way on the cars.

NOCHE TRISTE TREE—Beneath which Cortez is said to have wept on the night of his disastrous retreat from Mexico, July 1, 1520.

NATIONAL LIBRARY—Open from 10 A.M. to 5 P.M. daily.

CHURCHES—Profesa, Santa Teresa, San Fernando and St. Domingo. Protestant—Christ Church (Episcopal); service at 11 A.M. on Sundays; Trinity Church (Methodist) stands next door; service at 10:15 A.M. The "Union Evangelical" has service at 10:30 A.M.

MONTE DE PIEDAD—National pawnbroking establishment. Fine gems, jewelry, etc.

ALAMEDA—Band plays on Sundays and evenings.

BULLFIGHTS—Every Sunday afternoon and on Feast days.

THEATRES, ETC.

CIRCO-TEATRO ORRIN—Plazuela Villamil. Capacity, 4,000.

NATIONAL THEATRE—Vergara street; seating capacity, 3,500.

PRINCIPAL THEATRE—Coliseo street; seating capacity, 2,800.

ARBEU THEATRE—San Felipe Neri street; seating capacity, 700 to 1,000.

HIDALGO—Cochoero street; seating capacity, 700 to 1,000.

AMERICAN HOSPITAL—The American Hospital has three large and well-arranged buildings. It is pleasantly situated a short distance outside the city gates on the Tacuba road.

The nucleus of the fund from which the hospital was built, was contributed by a party of American tourists, one of their number being taken sick en route.

Since then, American residents of the city have raised from various sources moneys for the building of the hospital.

The hospital was opened in 1887, and since that time the American colony has supported it, aided at times with subscriptions of visitors. The expenses of sustaining the hospital are almost entirely dependent on voluntary contributions.

Simon Lara, Esq., a retired Spanish-American merchant, has given at different times a total of nearly \$25,000.

HOSPITAL DE JESUS, in Jesus street, was founded by Cortez before the year 1594, and endowed by him; contains the only authentic portrait of Cortez and his letters patent of nobility and land grants from the King of Spain.

MEXICAN CURIOSITIES TO BE PURCHASED AS SOUVENIRS FOR
FRIENDS AT HOME.

INDIAN FEATHER WORK—Guest and menu cards, portrait frames, panels, dining-room pictures, landscapes, native figures, Mexican coat of arms, Virgin of Guadalupe, etc. Only the most skillful workers are employed, and their work is highly artistic and durable. Prices from 10 cents upward.
