# About Wikidata

- Free knowledge base
- Content is created and maintained collaboratively
- 92 million data items
- 11.8 billion triples
- 8,300 properties

# PIDs in Wikidata

- 5696 external ID properties
- 163,569,913 identifiers

Property class	Properties	Identifiers
Items about scholarly articles	56	73,296,617
Authority control for works	239	43,397,229
Related to medicine	95	34,766,452
To identify books	48	27,932,065
Authority control for people	1389	23,021,842
Taxa	202	12,735,476
Organisations	245	10,718,303

# Property Proposals

**ANSI/NISO standard ID** (en) – *(Please translate this into British English.)* [ edit ]

<span>Under discussion</span>	
<b>Description</b>	identifier for the number of the ANSI/NISO standard which normalizes the object (en) – <i>(Please translate this into British English.)</i>
<b>Represents</b>	<a href="#">ANSI/NISO standard</a> (Q104634626)
<b>Data type</b>	External identifier
<b>Domain</b>	technical standard (Q317623)
<b>Example 1</b>	<a href="#">Criteria for Indexes</a> (Q104635113) → <a href="#">Z39.4</a> <span><span></span></span>
<b>Example 2</b>	<a href="#">Z39.50</a> (Q135847) → <a href="#">Z39.50</a> <span><span></span></span>
<b>Example 3</b>	<a href="#">Serial Item and Contribution Identifier</a> (Q3479782) → <a href="#">Z39.56</a> <span><span></span></span>
<b>Example 4</b>	<a href="#">Chinese Character Code for Information Interchange</a> (Q1073697) → <a href="#">Z39.64</a> <span><span></span></span>
<b>Example 5</b>	<a href="#">Digital object identifier</a> (Q25670) → <a href="#">Z39.84</a> <span><span></span></span>
<b>Example 6</b>	<a href="#">Dublin Core</a> (Q624610) → <a href="#">Z39.85</a> <span><span></span></span>
<b>Example 7</b>	<a href="#">Z39.87</a> (Q1961037) → <a href="#">Z39.87</a> <span><span></span></span>
<b>Example 8</b>	<a href="#">OpenURL</a> (Q311386) → <a href="#">Z39.88</a> <span><span></span></span>
<b>Example 9</b>	<a href="#">Journal Article Tag Suite</a> (Q17060731) → <a href="#">Z39.96</a> <span><span></span></span>
<b>Planned use</b>	enriching items around standards
<b>Number of IDs in source</b>	a bit over 100 when excluding temporal and version modifiers like <a href="#">Z39.96-2019</a> <span><span></span></span> or <a href="#">Z39.88-2004 [R2010]</a> <span><span></span></span> , otherwise several hundreds
<b>Expected completeness</b>	always incomplete
<b>See also</b>	<a href="#">ISO standard</a> (P503)

**Motivation** [ edit ]

[National Information Standards Organization](#) (Q1508447) are maintaining a number of information standards that are relevant in the United States as well as internationally. Wikidata has very patchy coverage in this area, so I thought proposing a dedicated property is a good way to get things started into a more systematic direction. However, I am not clear yet how best to handle

- the modifiers like [Z39.96-2019](#)  or [Z39.88-2004 \[R2010\]](#) , which refer to documents *about* the standards that essentially *define* a particular version (or even draft) of the standard
- consequently, the range of allowed values or the necessity for qualifiers
- the lack of landing pages for these standards on the NISO website, which seems document-centric rather than built around the standards, which means that formatter URLs like <https://www.niso.org/explore/search?keys=Z39.96-2019>  would mostly work in practice but not in a consistent fashion across the website
- whether/ how this could be bundled somehow with other standards within the realm of [American National Standards Institute](#) (Q180003), e.g. ANSI X3.159-1989 for [ANSI C](#) (Q1931402) or ANSI/ASME Y14.1 for [ANSI/ASME Y14.1](#) (Q4653029)

-- Daniel Mietchen (talk) 22:22, 2 January 2021 (UTC)

**Discussion** [ edit ]

- **Question.** Not sure quite how to phrase this, but does ANSI/NISO embellish or innovate conceptually at all, such that there might not be a one-to-one correspondence between the ANSI/NISO identifier and the item to which it corresponds? For example, the [result you linked](#)  for [Digital object identifier](#) (Q25670) suggests that ANSI/NISO simply creates a unique identifier that corresponds directly to the DOI standard. But ISO standards (as far as I know) are sui generis, so that the ISO standard for "Unique digital document identification" would *include* DOIs but doesn't correspond one-to-one with it. Where do ANSI/NISO identifiers fit in here? [AleatoryPonderings](#) (talk) 18:17, 4 January 2021 (UTC)
- **Support** These are important standards, and deserve their own identifier. On [AleatoryPonderings](#) question, I believe Z39.84 is a formalization of the DOI standard as implemented by the organizations involved, so the identifier points to a document that specifies what a DOI is. [ArthurPSmith](#) (talk) 19:43, 4 January 2021 (UTC)
- **Support.** [YULdigitalpreservation](#) (talk) 13:52, 7 January 2021 (UTC)

### WikiProject Source Metadata

The aim of the **WikiProject Source Metadata** is:

- to act as a hub for work in Wikidata involving citation data and bibliographic data as part of the broader [WikiCite](#) initiative.
- to define a set of properties that can be used by citations, [infoboxes](#), and [Wikisource](#).
- to map and import all relevant metadata that currently is spread across Commons, Wikipedia, and Wikisource.
- establish methods to interact with this metadata from different projects.
- to create a large open bibliographic database within Wikidata.
- to reveal, build, and maintain community stakeholderhip for the inclusion and management of source metadata in Wikidata.

There have been various proposals over the years for similar projects (see [meta:WikiCite](#) for details). Now that Wikidata is here, we can make it happen.
