REVISION

OF THE

NATURAL ORDER HEDERACEÆ,

BEING

A REPRINT, WITH NUMEROUS ADDITIONS AND CORRECTIONS, OF A SERIES OF
PAPERS PUBLISHED IN
THE 'JOURNAL OF BOTANY,' BRITISH AND FOREIGN.

BY

BERTHOLD SEEMANN, PH.D., F.L.S.,

PRES. ADJ. OF THE IMPERIAL GERMAN L. C. ACADEMY NATURÆ CURIOSORUM.

With Illustrations.

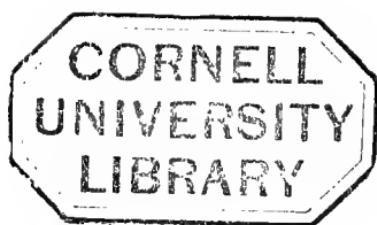

LONDON:

L. REEVE AND CO., 5, HENRIETTA STREET,
COVENT GARDEN.

1868.

PRINTED BY J. E. TAYLOR AND CO.,
LITTLE QUEEN STREET, LINCOLN'S INN FIELDS.

REVISION OF THE NATURAL ORDER HEDERACEÆ.

From my 'Journal of Botany' I here reprint, with numerous corrections and additions, a series of papers on all Umbelliferous plants having valvate petals and a fruit composed of two or more carpels, of which *Hedera Helix* is the type, and for which I have adopted the name *Hederaceæ*; all genera with imbricate petals and 1-celled ovaries being excluded, as elements foreign to this group.

Linnæus has bequeathed to us only one genus of *Hederaceæ* (*Hedera*); his genera *Panax* and *Aralia*, reduced to their true limits, are not members of the group.

In 1756, P. Browne published the genus *Sciadophyllum*; ten years later (1766), Forster, *Schefflera* and *Polyscias*. In 1780, Thunberg established the genus *Cussonia*, and in 1789, Commerson that of *Gastonia*. In 1791, Gærtner added *Heptapleurum*; in 1802, Ruiz and Pavon, *Gilibertia* and *Actinophyllum*, the latter identical with *Sciadophyllum*; and in 1806, Petit-Thouars, *Maralia*.

In 1830, De Candolle enumerated thirteen genera, viz. *Adoxa*, *Panax*, *Cussonia*, *Maralia*, *Gilibertia*, *Gastonia*, *Polyscias*, *Toricellia*, *Aralia*, *Sciadophyllum*, *Hedera*, *Paratropia*, and *Arthrophyllum*. Five of these (*Adoxa*, *Panax*, *Aralia*, *Toricellia*, and *Arthrophyllum*) being excluded by the definition above given, the genera known to De Candolle are reduced to eight, whilst the two published as new on this occasion were previously known.

In 1840 Endlicher, in his 'Genera Plantarum' (including the first supplement), enumerated sixteen genera, adding to those known to De Candolle *Botryodendron*, *Miquelia*, and *Brassaia*. But *Miquelia* belongs to *Olacineæ*, and *Botryodendron*, previously described by Forster under the name of *Meryta*, as I have shown in 'Bonplandia' for 1862, p. 294, to *Haloragineæ*, an Order to which *Helwingia*, Willd., should also be referred.

In 1854 Asa Gray (Botany of Wilkes's Expedition) added *Reynold-sia*, *Tetraplasandra*, and *Plerandra*,—all three excellent genera.

In the same year (1854) Decaisne and Planchon commenced, in the

'*Revue Horticole*,' a revision of the Order "Araliaceæ," which unfortunately has never been completed, only nineteen genera being treated upon. It is a sketch, written merely for a gardening paper, but nevertheless most important. The learned authors there availed themselves of several characters pointed out in 1848 by Röper, viz. the articulation of the pedicels, the calyxulus, and the aestivation, in circumscribing the genera. The new genera indicated were found, in most instances, to be so natural, and to coincide so well with the geographical distribution of the species, that most of them have been generally adopted, though they have, as yet, not been described by them. They were eight in number (viz. *Stilbocarpa*, *Echinopanax*, *Fatsia*, *Brassaiopsis*, *Dendropanax*, *Oreopanax*, *Didymopanax*, and *Cuphocarpus*), two of which, *Cuphocarpus*, with its unicellular ovary, and *Stilbocarpa*, on account of its quincuncial petals, must be excluded from the Order, whilst *Echinopanax* has proved identical with *Horsfieldia*.

In 1856, Miquel published in my 'Bonplandia' a paper on the Araliaceæ of the Indian Archipelago, in which he establishes five new genera (viz. *Agalma*, *Eupteron*, *Aralidium*, *Macropanax*, and *Nothopanax*); and in a subsequent, though antedated publication, his 'Flora of Dutch India,' and its supplement, he adds to them *Actinomorphe* and *Parapanax*. Of these *Aralidium*, with its 1-celled ovary, will have to be transferred to *Cornaceæ*; whilst *Eupteron* is identical with the older genus *Polyscias*. In 1863, the same author published the genera *Botryopanax*, *Osmoxylon*, *Textoria*, and *Kalopanax*, one of which only (*Osmoxylon*) proved new. In 1856, Hooker fil. and Thomson established the genus *Tupidanthus*; in 1858, Grisebach ('Bonplandia') the genus *Sciadodendron*; and in 1859, Maximowicz, the genus *Eleutherococcus*.

In 1859, Carl Koch gave, in his 'Wochenschrift für Gärtnerei und Pflanzenkunde,' an enumeration of the garden Araliaceæ known to him, and a review of the labours of those gone before him in this field of inquiry. Though overlooking a few genera, he enumerates thirty-four, of which seven (*Aralidium*, *Arthrophyllum*, *Cuphocarpus*, *Panax*, *Aralia*, *Pukateria*, and *Bursinopetalum*) are not recognized by me as Hederaceæ. He proposes two new genera (*Pseudopanax* and *Tetrapanax*), which I have adopted.

In 1863 I pointed out, in the 'Journal of Botany,' that *Horsfieldia*, *Astrotricha*, *Hydrocotyle* (in part), etc., hitherto placed in Umbelliferæ

must be referred to *Hederaceæ*, on account of their truly valvate petals; and in 1864 I added *Crithmum* to the list.

I. ON THE POLYANDROUS GENERA.

In the 'Botanical Magazine' for April, 1856, there is published, on plate 4908, a new genus of *Hederaceæ*, *Tupidanthus calypratus*, Hook. fil. et Thoms., of which it is remarked, that "the coalescence of the calyx lobes and corolla into an arched coriaceous calyptra, together with the numerous stamens, the total absence of styles, and very numerous cells of the ovary, are perhaps unique in the Order" to which it belongs. The characters are certainly very singular, but it had evidently been overlooked that two years previously (in 1854) Asa Gray described two allied genera from the South Sea Islands (*Plerandra* and *Tetraplasandra*), both of which share with *Tupidanthus* a calyprate corolla, polyandrous stamens, and a many-celled ovary. The calyprate corolla had previously been noticed in some of the older genera of the Order, but the polyandrous stamens were certainly quite a new feature,—no more 13 than had been known to exist amongst this group of plants. During my exploration of the Viti Islands, I was fortunate enough to discover several additions to the polyandrous *Hederaceæ*, among them two entirely new genera (*Nesopanax* and *Bakeria*), and in the following pages I propose to give a description of them, together with an enumeration of all the polyandrous *Hederaceæ* known to me. In this list a polyandrous genus will be missed, which being referred by Bentham and Hooker fil. (Gen. Plant. p. 17) to *Hederaceæ*,—"est Araliacea anomala ovario subsupero" are their exact words,—would naturally be looked for in this place. I mean *Trochodendron*, a Japan genus founded by Siebold and Zuccarini, and placed by them amongst *Wintereæ*, by Endlicher as an anomalous genus at the end of *Magnoliaceæ*, and by Miers in the neighbourhood of *Ternstrœmiaceæ*. However it cannot be admitted amongst *Hederaceæ*, differing as it does from all the known members of the Order by its 4-celled anthers and many-ovuled ovaries, to say nothing of its entire want of calyx and corolla. Its affinities are, in my opinion, much more with *Wintereæ*, the very group in which Siebold and Zuccarini placed it; and its nearest ally I hold to be *Euptelia*, Sieb. and Zucc., the nature of which has become better understood by the recent publication of Drs. Hooker and Thomson's new Indian species ('Linnean Journal,' sect. Botany, vii. 241. t. 2),

in which it is convincingly shown that the best place to be found for that genus is with or near *Wintereæ*. This is exactly the position in which *Trochodendron* has been put by its founders. The two genera agree in almost all essential points, viz. their arboreous habit, alternate, serrate simple and exstipulate leaves, peculiar process of budding, apetalous flowers, numerous stamens, 4-celled anthers, many-ovuled carpels (at least in two out of the three known species), anatropous ovules, albuminous seed, and minute embryo; but they differ in the carpels being separate in *Euptelia*, and almost consolidated in *Trochodendron*. How far this would affect their being grouped together is a matter of individual opinion. In *Ranunculaceæ* we have genera with free, and more or less consolidated carpels, and in *Papaveraceæ* a species, the common garden Poppy, one variety of which* has distinct and consolidated carpels in the same flower. I incline to think that we have here the first known members of a new Order of plants which will have to be ranged near *Ranunculaceæ* and *Magnoliaceæ*, and which might be called *Trochodendraceæ*.

The two genera I have to propose (*Bakeria* and *Nesopanax*) present a new feature, combining as they do free petals with an indefinite number of stamens, the other polyandrous genera previously known having calyprate petals.

CONSPECTUS GENERUM HEDERACEARUM POLYANDRARUM.

* *Petala calypratim cohærentia, caduca.*

1. *Tupidanthus*. Pedicelli inarticulati. Flores ecalyculati. Petala 5. Stamina infinita, biserialia. Ovarium multiloculare. Stigma depresso, 3-4-crure.—*Arbor Indiæ orientalis*, exstipulata, foliis digitatim 8-9-foliolatis, umbellis compositis.

2. *Tetraplasandra*. Pedicelli inarticulati. Flores ecalyculati. Petala 7-8. Stamina 28-32, uniserialia. Ovarium 7-10-loculare. Stigma obsoletum 7-10-radiatum, stylopodio brevi impositum.—*Arbor Hawaiensis*, exstipulata, foliis pinnatim 5-7-foliolatis, umbellis paniculatis.

3. *Plerandra*. Pedicelli inarticulati. Flores ecalyculati. Petala 5. Stamina infinita, pluriserialia. Ovarium 14-15-loculare. Stigma truncatum, obsoletum multiradiatum, stylopodio conico impositum.—*Arbores Vitienses*, exstipulatae, foliis digitatim 9-foliolatis, umbellis compositis.

* See figure in *Gard. Chronicle* for 1859, and 'Bonplandia,' 1859, p. 336.

4. *Brassaia*. Pedicelli subnulli. Flores calyculati. Petala 7-17, vulgo 12. Stamina 7-17, plerumque 12, uniserialia. Ovarium 7-17, vulgo 12-loculare. Stigma obsolete 7-17-radiatum, stylopodio conico impositum.—Arbores Novæ Hollandiæ, Novæ Guineæ, et Sumatræ, stipulatæ, foliis digitatim 9-16-foliolatis, capitulis racemosis, pedicellis basi bracteolatis.

5. *Reynoldsia*. Pedicelli inarticulati. Flores ecalyculati. Petala 8-10. Stamina 8-18, uniserialia. Ovarium 8-18-loculare. Stigma 8-18-radiatum, stylopodio conico impositum.—Arbores insularum Oceani Pacifici, exstipulatæ, foliis pinnatim 3-9-foliolatis, umbellis paniculatis compositis, pedicellis nudis.

** *Petala basi cohærentia, persistentia.*

6. *Gastonia*. Pedicelli inarticulati. Flores ecalyculati. Petala 10-11. Stamina petalorum numero, uniserialia. Ovarium 8-10-loculare. Styli 8-10, distincti.—Arbor Mauritanica, foliis exstipulatis imparipinnatis, umbellis paniculatis.

7. *Grotefendia*. Pedicelli articulati. Flores calyculati. Petala 11-13. Stamina petalorum numero, uniserialia. Ovarium 5-10-loculare. Styli 5-10, distincti.—Arbores Mauritianæ, foliis exstipulatis imparipinnatis, floribus racemosis v. umbellatis.

*** *Petala libera, persistentia.*

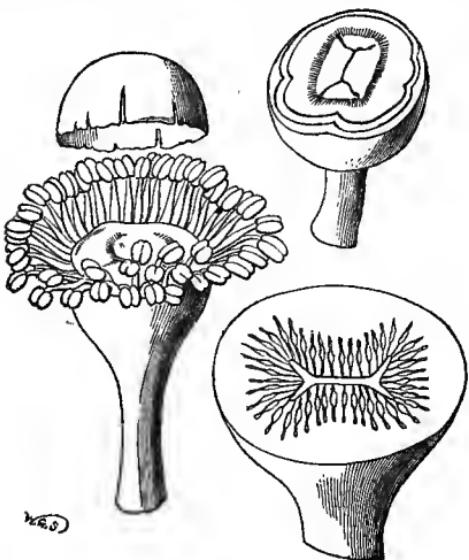

8. *Bakeria*. Pedicelli inarticulati. Flores ecalyculati. Petala 5. Stamina 15, uniserialia. Ovarium 5-loculare. Stigma obscure 5-fidum, stylopodio subconico impositum.—Arbor Vitiensis, foliis digitatim 5-foliolatis, petiolis basi stipulatim dilatatis, umbellis compositis.

9. *Nesopanax*. Pedicelli inarticulati. Flores ecalyculati. Petala 5. Stamina indefinita, pluriserialia. Ovarium 5-7-loculare. Styli 5-7, distincti, breves.—Arbor Vitiensis, foliis digitatim 7-9-foliolatis, petiolis basi stipulatim dilatatis, umbellis compositis.

I. *TUPIDANTHUS*, Hook. fil. et Thoms. Pedicelli inarticulati. Flores ecalyculati, hermaphroditæ. Calyx tubo late clavato v. hemisphærico, limbo truncato. Petala 5, calypratim cohærentia ("corolla monopetala," C. Koch). Stamina indefinita, biserialia; antheræ oblongæ, 2-loculares. Ovarium multiloculare, centro depresso et rima stigmatifera 4- v. 3-cruri insculptum, loculis uniovulatis. Bacca coriacea, multilocularis, loculis 1-spermis.—Arbor Indiæ orientalis, foliis exstipulatis digitatim 8-9-foliolatis, petiolis petiolulatis oblongis acu-

minatis, integerrimis, glaberrimis, umbellis compositis, lateralibus, corol-

lis viridibus, staminibus pallide stramineis. — *Tupidanthus*, Hook. fil. et Thoms. in Bot. Mag. t. 4908 (1856); C. Koch, Wochenschrift, 1859, p. 348.

Tupidanthus calypratus (partly after Hooker).

1. *T. calypratus*, Hook. fil. et Thoms. in Bot. Mag. t. 4908. *T. Pückleri*, C. Koch, in Wochenschrift, 1859, p. 348, cum icon. *Sciadophyllum pulchellum*, Hort.—At the base of the Khasia Mountains, Eastern Bengal (Hooker fil. and Thomson !—Griffith ! n. 2701).

This tree seems to grow as underwood and support its weak stem by leaning against other trees, as many other *Hederaceæ* do, a habit which the founders of the genus expressed by “*Arbor alte scandens*.” Dr. Carl Koch, mistaking “*scandens*” for “*cirrhosus*” (“rankend” is his exact translation), has endeavoured to make a second species (*T. Pückleri*), which he says differs from *T. calypratus* by not being cirrhose. Of course *T. Pückleri* must fall to the ground. The Kew plant, from which the figure in Bot. Mag. t. 4908 was made, is now 24 feet high, and erect, in growth very much the same as all the other garden plants of this species are.

II. **TETRAPLASANDRA**, A. Gray. Pedicelli inarticulati. Flores ecalyculati, polygami (?). Calyx tubo hemisphærico, limbo brevissimo truncato vix denticulato. Petala linearia, 7–8, calypratim cohærentia. Stamina petalorum numero 4-plo (28 v. 32), uniserialia; antheræ oblongæ, subsagittatae. Ovarium 7–10-loculare. Stigma obsolete 7–10-radiatum, stylopodio brevi conico impositum, loculis 1-ovulatis. Drupa baccata, 8–10-pyrena, pyrenis coriaceis.—*Arbor Hawaïensis*, procera, inermis, foliis exstipulatis pinnatum 5–7-foliolatis, foliolis oblongis v. ellipticis utrinque obtusis v. apice acutis integerrimis, subtus incanis,

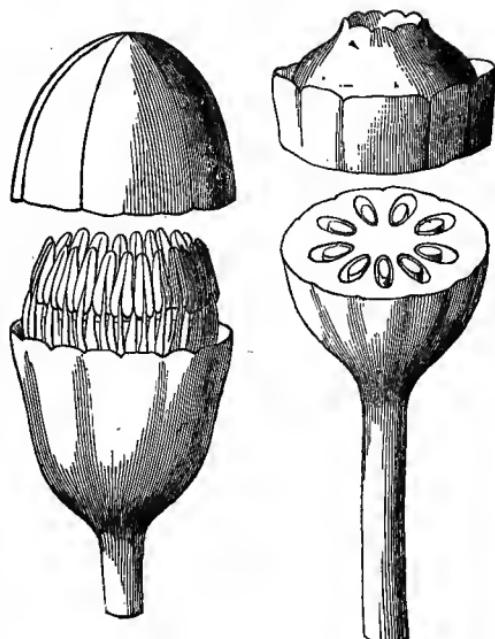

umbellis paniculatis. —

Tetraplasandra, A. Gray
Bot. Wilkes, p. 727, t. 94
(1854). Walp. Ann. v.
p. 82.

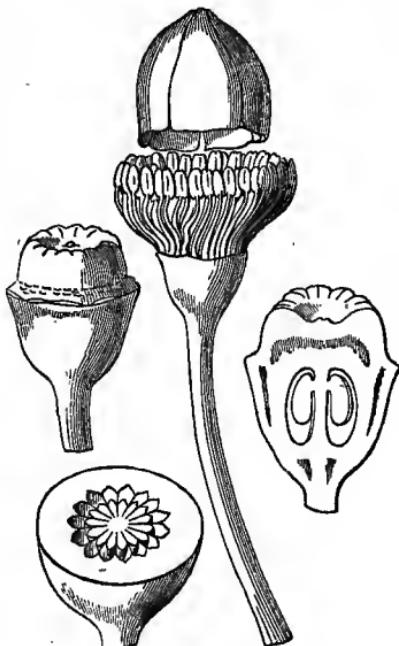

1. *T. Hawaiensis*, A. Gray, Bot. Wilkes, p. 728, t. 94; Walp. Ann. v. p. 82.—Hawaii, Sandwich Islands, in the district of Puna (United States Expl. Exped.).

III. *PLERANDRA*, A. Gray. Pedicelli inarticulati. Flores ecalyculati, polygami. Calyx tubo turbinato, limbo brevissimo post anthesin repando-undulato. Petala ovato-triangularia, 5, calyptratim cohaerentia. Stamina indefinita, pluriserialia; antheræ oblongæ. Ovarium 12-15-loculare, loculis 1-ovulatis. Stigma truncatum v. depresso, obsolete multiradiatum, stylopodio conico impositum. Drupa obovata, 12-15-loculare, loculis 1-spermis. — Arbores Vitienses, inermes, foliis exstipulatis digitatim 9-foliolatis, foliolis obovato-oblongis integerimis, umbellis compositis. — *Plerandra*, A. Gray, Bot. Wilkes, p. 729, t. 95 (1854); Walp. Ann. v. 81.

Asa Gray not having had sufficient materials, I have emended the generic character of *Plerandra*. The petals are 5,

Tetraplasandra Hawaiensis (after Asa Gray).

Plerandra Grayi.

and calyprate. Hitherto there was only one species known; the second, which I was enabled to add, I have named in honour of the illustrious founder of the genus, *P. Grayi*.

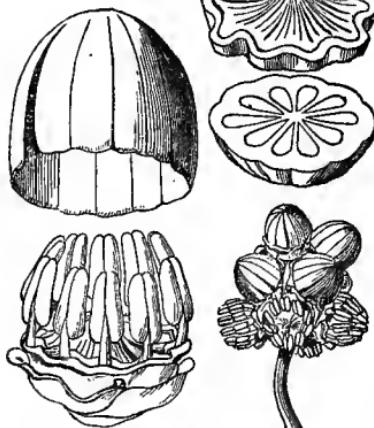

1. *P. Pickeringii*, A. Gray, Bot. Wilkes, p. 729, t. 95 (1854) Walp. Ann. v. 81.—Viti Levu (Seemann! n. 206); Vanua Levu, above Nandy (Milne!); Ovalau, Viti Islands (United States Expl. Exped.). “A tree, called ‘Volā’ by the natives of Vanua Levu” (Milne).

2. *P. Grayi*, Seem. Viti, Appendix, n. sp.; inermis, glabra, foliis digitatis, foliolis 9 obovato-oblongis obtusis basi in petiolum attenuatis integerrimis, umbellis multiradiatis, umbellulis 26-floris, calyce post antbesin repando-undulato, petalis 5 valvatis oblongis acutis calypratim cohærentibus, mox deciduis, staminibus indefinitis, stigmate obscure multiradiato, ovario 12–15-loculari, drupa obovata obscure 12–15-costata.—Viti Levu, Viti Islands (Seemann!, n. 208).

A small tree. Petioles 12 inches, petiolules $1\frac{1}{2}$ inch long. The upper leaflets the largest, and their blade 6–7 inches long and $2\frac{1}{2}$ inches broad. Flowers greenish. Drupe about $\frac{3}{4}$ of an inch long, $\frac{1}{2}$ inch in diameter. Stigma depressed in the male flowers, on conical stylopodia in the hermaphrodite.

IV. BRASSAIA, Endl. Pedicelli subnuli. Flores calculati, calyculo 4-phyllo, polygami. Calyx tubo obconico, limbo truncato. Petala

linearia, 7–17, plerumque 12, calypratim cohærentia. Ovarium 7–17-loculare, vertice exerto multicostatum, loculis 1-ovulatis. Stigma sessile, 7–17-radiatum, stylopodio conico impositum. Drupa angulato-sulcata, 7–17-vulgo 12-locularis.—Arbores inermes, Novam Hollandiam, Novam Guineam, Amboynam et Sumatram incolentes, stipulatæ, foliis digitatim 7–16-foliolatis, foliolis subintegerrimis, capitulisracemosis, pedicellis subnullis.—*Brassaia*, Endl. Nov. Stirp. Mus. Vindob. Dec. n. 100; Gen. Plant. Suppl. i. p. 1415. *Parapanax*, Miq. Fl. Nederl. Ind. Suppl. i. p. 339, ex parte.

Brassaia actinophylla.

Sciadophylli, *Paratropiae* sp. auct.

The genus *Brassaia*, though well defined by Endlicher, has not been recognized by other botanists. Several years after its publication (1843) Bentham described a new *Hederacea* from New Guinea, which he referred to *Sciadophyllum*, and which, in 1856, was transferred to *Paratropia* by Miquel, though he had not seen the plant; and, in order to admit it into that genus, had to amplify the generic character. More recently the same author, still unaware of the existence of *Brassaia*, established the genus *Parapanax* upon two Sumatran species, without, however, suspecting that his *Paratropia macrostachya* was congeneric with one of them. It is to be hoped that, in future, this truly natural genus will be more generally recognized. We now know representatives of it from tropical New Holland, New Guinea, Amboyna, and Sumatra, and the intermediate regions will doubtless supply additional species.

1. *B. actinophylla*, Endl. Nov. Stirp. Mus. Vindob. Decad. i. p. 89; Walp. Rep. i. p. 430, v. p. 925; F. Mueller, Fragmenta, ii. p. 108.—Tropical parts of Eastern Australia (Sir Joseph Banks! A. Cunningham! n. 484, of Second 'Mermaid's' Voyage in Mus. Brit., Robert Brown! in Herb. Hook.)

This fine tree was first discovered by Sir Joseph Banks, next found by Robert Brown, and afterwards met with "at Pine Head and similar situations" of the east coast of New Holland, north of Endeavour River by A. Cunningham, who, in his journals sent to Sir J. Banks, enumerates it under n. 484, as an *Urticacea*, appending to it the following note:—"Amentum [capitulum] 8–10-florum, subglobosum, pedicellatum, pedicello crasso. Flores 12-andri, hermaphroditi. Calyx semi-superus, subcyathiformis, dentibus [*i. e.* petalis] apice conniventibus deciduis, 3-bracteatus. Stam. 12, antherifera, calyci inserta. Anth. 2-locul. Ovarium 10-loculare. Stigm. sessile, radiatum.—Arbuscula 16–20 ped. ramis crassis brevibus, foliis 7–12-nis, foliolis ellipticis petiol. glabris mucronatis obtusis." From Dr. F. Mueller (Fragm. l. c.) we learn that Mr. Charles Moore found this tree near Boyn River, Mr. Eug. Fitzalan near Port Molle, and Leichhardt in those parts of E. Australia which he crossed. By the last-named author the tree is stated to be forty feet high, and the leaflets varying in number to sixteen. According to Ch. Moore the flowers are said to be *scarlet*, but this statement is not confirmed from what is known from other sources, nor borne out by an inspection of the specimens before me. In the copy of

'Endlicher's Iconographia' which I have consulted, there is no plate of this *Brassaia*, though Endlicher quotes it himself; and C. Koch says ('Wochenschrift,' 1859) that it has never been published.

2. *B. macrostachya*, Seem. mss.—*Sciadophyllum macrostachyum*, Benth. in Lond. Journ. of Bot. ii. (1843), p. 222; Walp. Rep. ii. p. 939. *Paratropia macrostachya*, Miq. in Bonplandia, 1856, p. 139. —New Guinea (Hinds! in Herb. Benth.).

3. *B. littorea*, Seem.—*Papaya littorea* seu *Papaja Pante*, Rumph. Amb. i. p. 150. t. 52.—Halong, Amboina, rare (Rumphius).

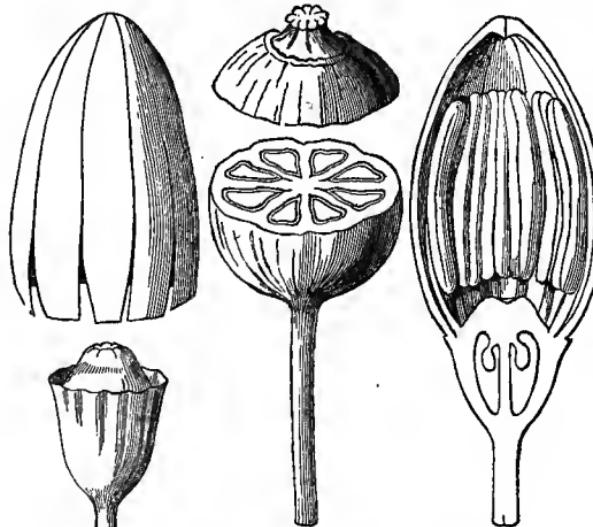

Leaves over 3 feet long, leaflets 13–16 elliptico-lanceolate, 12–15 inches long, 3 inches broad, acute on both ends. Racemes paniculate, over a foot long. Called by some Amboinese "Lau Takka," from the resemblance of its leaves to those of *Tacca*. Does not seem to have been collected since the time of Rumphius.

4. *B. sessilis*, Seem. mss.—*Parapanax sessile*, Miquel, Fl. Nederl. Ind. Suppl. i. p. 339.—Western Sumatra, near Lolo (Teijsmann).

Species exclusa:—

B. palmata, Dcne. et Planch.=*Trevesia Sundaica*, Miq. fide C. Koch.

V. *REYNOLDSIA*, A. Gray. Pedicelli inarticulati. Flores ecalyculati, polygami. Calyx tubo obconico, limbo integerrimo v. subrepando. Petala linearia, 8–10, calyptratim cohaerentia. Stamina 8–10, uniserialia; antheræ lineares. Ovarium 8–18-lokulare. Stigma 8–18-radiatum, stylopodio conico impositum. Drupa baccata, globosa, 8–18-pyrena, pyrenis cartilagineis. Embryo minu-

Reynoldsia Sandwicensis (after A. Gray).

tus, radicula supera cylindrica.—Arbores insularum Oceani Pacifici, inermes, glabræ, exstipulatæ, foliis pinnatum 3–9-foliolatis, foliolis ovatis v. subcordatis dentatis, umbellis paniculatim compositis.—*Reynoldsia*, A. Gray, Bot. Wilkes, p. 723, t. 92 et 93; Walp. Ann. v. p. 82.

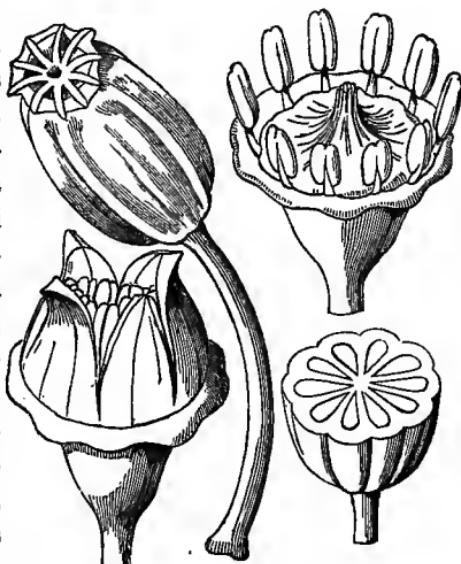

1. *R. Sandwicensis*, A. Gray, Bot. Wilkes, p. 724, t. 92; Walp. Ann. v. p. 82.—In a ravine near Waianæ, Oahu, Hawaiian (Sandwich) Islands.

2. *R. pleiosperma*, A. Gray, Bot. Wilkes, p. 725; Walp. Ann. v. p. 82.—Forests of Savaii, Samoan (Navigator) Islands.

3. *Reynoldsia verrucosa*, Seem. n. sp.; foliis pinnatis, foliolis 3–4-jugis cum impari ovatis acuminatis dentatis, dentibus glandulos-verrucosis, umbellis 5–7-floris, pedicellis ancipitibus, calyce undulato-multidenticulato, corolla clausa subobovata, petalis staminibusque 7, ovario multiloculari, stigmate multiradiato, fructu . . .—Tahiti (Nelson! collected in Captain Cook's third voyage).

Differs from the allied *R. pleiosperma* of the Samoan Islands in the quite warty teeth of the leaves, and compressed pedicels. The whole plant glabrous. Leaflets petiolulate, $2\frac{1}{2}$ –3 inches long, $1\frac{1}{2}$ inch broad. The umbels axillary, shorter than the leaves. All the flowers in Nelson's specimens hermaphrodite.

VI. *GASTONIA*, Comin.
Pedicelli inarticulati. Flores ecalyculati, hermaphroditici. Calycis tubo obconico, angulato, limbo subintegro. Petala 11, linearia, 1-nervia, basi plus minus cohærentia, aestivatione valvata. Stamina petalorum numero æqualia; antheræ oblongæ. Styli 8–10, basi ima connati, erecti, demum recurvi. Drupa oblonga, 8–10-costata, 8–10-locularis.—*Arbor Mauritiana*, foliis imparipinnatis, foliolis 5 integerrimis, umbellis paniculatis, paniculis termina-

Gastonia cutisponga.

libus.—*Gastonia*, Comm. in Juss. Gen. 217; Lam. Dict. ii. p. 610; De Cand. Prodr. iv. p. 256.

The genus *Gastonia* has been incorrectly described. De Candolle ('*Prodromus*'), to go no further back, assigns to it from 5–16* petals, and double the number of stamens, two stamens being said to be placed before each petal. Decaisne and Planchon describe the petals as 3-nerved. All three are wrong. The stamens in this, as in all other genera of the Order with definite stamens, alternate with the petals, and are equal in number with them; and they are always 1-nerved. What has given rise to the belief of their being 3-nerved is that they are very narrow, and are more or less coherent, in some instances not separating at all from each other, so that the corolla appears to have fewer petals than it really has. The normal number of petals and carpels seems to be 10. But there are sometimes fewer by abortion, or more by excess.

Gastonia is closely allied to *Grotfendia*, a genus also inhabiting the islands of Eastern Africa. Both have imparipinnate leaves and very narrow petals, but they are easily distinguished from each other, viz. :—

Gastonia. Pedicelli inarticulati. Flores ecalyculati.

Grotfendia. Pedicelli articulati. Flores calyculati.

1. *G. cutisponga*, Lam. Dict. ii. p. 610; De Cand. Prodr. iv. p. 256; *G. spongiosa*, Pers. Ench. ii. p. 20; *Bois d'éponge*, incolarum.—Mauritius (Sieher! Fl. Maurit. Exs. ii. p. 197, Carmichael! Bouton! in Herb. Kew.), growing in woods, abundantly in Mount "Pouce."

2. *Species dubia*, indescripta:—*G. saururoides*, Roxb. Cat. Hort. Calc. p. 70; *Gilibertia saururoides*, De Cand. Prodr. iv. p. 256, in the Moluccas.

Species exclusæ :—

G. aculeata, Hortor. = *Cuphocarpus aculeatus*, Dene. et Planch.

G. Candollei, Hortor. = *Brassaiopsis speciosa*, Dene. et Planch.

G. dentata, Hortor. = *Brassaiopsis speciosa*, Dene. et Planch.

G. longifolia, Hortor. = *Brassaiopsis speciosa*, Dene. et Planch.

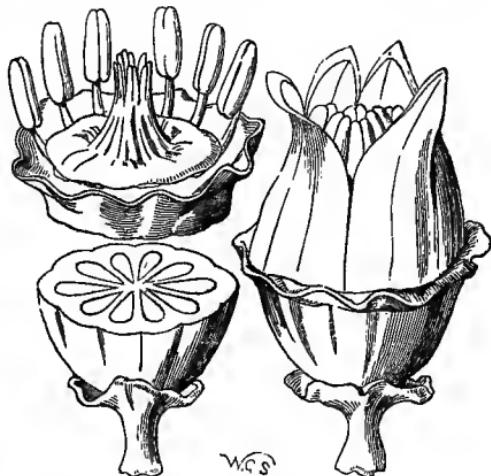

G. Nalugu, Lam. (*Gilibertia Nalugu*, De Cand.) = *Leea staphylea*, Roxb. teste Wight et Arn. Prodr.; = *L. sambucina*, Willd. teste Miq.

G. (?) Oahuensis, A. Gray, Bot. Wilkes, p. 726, is the type of a new genus.

G. palmata, Roxb. = *Trevesia palmata*, Visian.

* "16" may possibly be a misprint for "6," else the number would be 32.

VII. GROTEFENDIA, Seem. n. gen. Pedicelli articulati. Flores calyculati, hermaphroditi. Calyx tubo obconico angulato, limbo obscure 5-6-lobato v. subintegerrimo. Petala cuneato-linearia, 1-nervia, 11-13, basi cohærentia, aestivatione valvata. Stamina 11-13; antheræ lineares. Pollen ellipticum. Styli 5-10, compressi, erecti v. demum recurvi. Ovarium 5-10-loculare, loculis 1-ovulatis. Drupa oblonga, costata v. sublævis.—Arbores Mauritanæ, foliis exstipulatis, imparipinnatis, foliolis integerrimis v. obsolete dentatis, floribus umbellatis v. racemosis, umbellis v. racemis paniculatis.

Grotefendia cuneata.

This genus I have named in honour of Dr. Grotfend (one of the earliest decipherers of cuneate writings, and Director of the college in which I was educated), and of his son, to whom I am indebted for my first lessons in botany.

1. *G. cuneata*, Seem. mss. Glabra; foliis imparipinnatis, foliolis 11 longe petiolulatis ovatis v. subrotundato-ovatis obtusis basi acutis v. obtusis, penninerviis, subrepando-dentatis v. integerrimis, floribus racemosis, pedicellis subnullis, calyculo 5-dentato, calycis tubo obconico, limbo subintegro, petalis cuneato-linearibus 13 1-nerviis plus minusve coalitis, staminibus 13, antheris linearibus, pollinis granulis ellipticis, stylis 10 basi læviter cohærentibus, ovario 10-loculari, loculis 1-ovulatis.—*Gastonia spongiosa*, Herb. Hook. non Pers.—Manritius (Carmichael ! in Herb. Hook.; Hardwicke ! in Mus. Brit.).

Leaflets 3-3½ inches long, 2½-3 inches broad; petiole $\frac{1}{2}$ -¾ inch long.

2. *G. paniculata*, Seem. mss. Glabra; foliis imparipinnatis, foliolis 7 oblongis elliptico-oblongis acutis v. obtusis basi acutis integerrimis penninerviis, floribus racemosis, pedicellis articulatis brevissimis, calyculo 5-dentato, calycis tubo obconico, 5-6-angu-

lato, limbo 5–6-dentato, petalis cuneato-linearibus 11 1-nerviis, plus minusve cohærentibus, staminibus 11, stylis 5–7 compressis erectis demum recurvis, fructu oblongo 5–7-angulato 5–7-loculari.—*Gastonia heptagyna*, Herb. Hook.; *Gilibertia paniculata*, De Cand. Prodr. iv. p. 256.—Mauritius, in mountainous forests (Carmichael! Bouton! in Herb. Kew.).

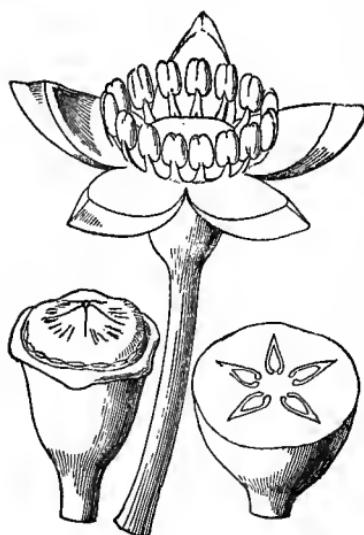

Leaflets 6–7 inches long (or smaller), 3–3½ inches broad.

That *Gilibertia paniculata*, De Cand., described from a scrap, is a synonym of this species, I was able to determine from a few flowers kindly sent to me by M. Alph. de Candolle for that purpose.

3. *G. repanda*, Seem.—*Gilibertia repanda*, De Cand. Prodr. iv. p. 256.—Mauritius (Bory! in Herb. De Candolli).

Easily distinguished from the foregoing species by its umbellate flowers and long pedicels. I am indebted to M. Alph. de Candolle for a sight of a few flowers of this species, sufficient for determining the genus.

VIII. BAKERIA, Seem. mss. n. gen. Pedicelli inarticulati. Flores ecalculati. Calyx tubo turbinato cum ovario connato, limbo brevissimo repando-undulato. Petala 5, ovato-triangularia, aestivatione valvata, apice incurvula, libera, intus 1-nervia. Stamina 15, uniserialia; filamenta compressa; antheræ oblongæ. Ovarium 5-loculare, loculis 1-ovulatis. Stigma obscure 5-fidum, stylopodio subconico brevi 5-angulato sulcato impositum; fructu . . .—Arbor Vitiensis mediocris, glaberrima, inermis, foliis digitato-5-foliolatis, foliolis longe petiolulatis obovato-obtusis v. acutis in petiolum angustatis integrerrimis, petiolo basi stipulatodilatato (ut in *Agalma*), umbellulis umbellatis exinvolucratis, floribus viridiuseulis.

Bakeria Vitensis.

This new genus, named in honour of Mr. J. G. Baker, of Thirsk, Yorkshire, a distinguished British botanist, differs from *Plerandra* in having free petals, a definite number of stamens (15) arranged in a

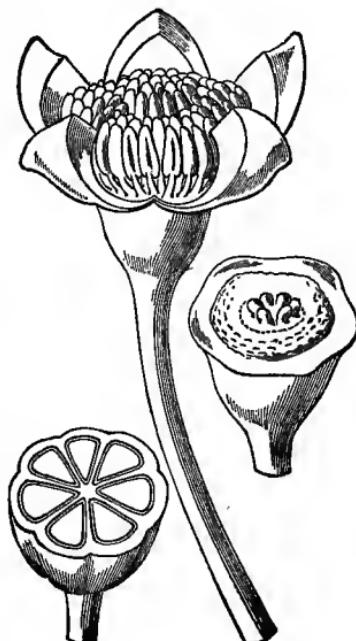

single series, and a 5-celled ovary; from *Tetraplasandra*, in having only 5 petals and a 5-celled ovary, and a different habit; from *Reynoldsia*, in having three times as many stamens as petals, and a 5-celled ovary; and from all the other genera of the Order in having 5 free petals, 15 stamens, and a 5-celled ovary. There is only one species, viz. :—

1. *B. Vitiensis*, Seem. n. sp.; a slender tree; petioles 4–5 inches long, petiolules 1 inch long; blade of leaflets 3–4 inches long, $1\frac{1}{2}$ –2 inches broad; pedicels 4-angular, not articulated.—Namosi, interior of Viti Levu (Seemann !, 209); also collected in the same island (foliage only), twenty miles inland, and there plentiful, by Milne.

IX. *NESOPANAX*, Seem. n. gen. Pedicelli inarticulati. Flores ecalyculati. Calyx tubo obconico, cum ovario connato; limbo supero, obsolete 5-dentato. Corollæ petala 5, ovato-triangularia, disci epigyni margini inserta, libera, aestivatione valvata. Stamina indefinita, cum petalis inserta, pluriserialia; filamenta brevia; antheræ oblongæ. Ovarium inferum, 5–7-loculare. Ovula in loculis solitaria, pendula. Styli 5–7, breves, distincti; stigmata simplicia. Drupa oblonga, 5–7-locularis, calycis limbo stylisque coronata.—Arbor Vitiensis mediocris, glabra, inermis, foliis digitatis, foliolis 7–9 obovato-oblongis utrinque attenuatis integerrimis, petiolis basi stipulato dilatatis, umbellis multiradiatis, umbellulis 26–30-floris, floribus viridibus.

This genus differs from *Plerandra*, A. Gray, in having free petals, 5–7 distinct styles, and a 5–7-celled drupe. It agrees with it in habit, and the indefinite number of stamens. I have only one species:—

1. *N. Vitiensis*, Seem. n. sp.—Viti Islands (Seemann ! n. 207, Milne !).

Nesopanax Vitiensis.

Petiole $1\frac{1}{2}$ feet long. Leaflets pinnately veined, coriaceous; blade 6–7 inches long, $2\frac{1}{2}$ –3 inches broad; petiolules $1\frac{1}{2}$ –2 inches long. Peduncles 6–8 inches long. Pedicels of fruiting specimens $1\frac{1}{2}$ –2 inches long. There is no ripe fruit.

II. ON THE GENERA WITH A SINGLE STYLE.

There are only a few genera having a single style, genera in which the ovary is elongated into a short conical stylopod being more common; these are *Brassaiopsis*, *Macropanax*, *Pentapanax*, *Agalma*, *Dendropanax*, and *Hedera*. I follow Lowe in his ‘Flora of Madeira’ in calling the style *single* rather than *simple*, because in *Hederaceæ* that organ is always composed of two or more styles, in the genera here provisionally grouped together so closely united as to form a single column, and separating either not at all or just a little at the top; but they never become disunited to the very base, and bend back as in *Gastonia*, *Polyscias*, *Gilibertia*, etc.

CONSPECTUS GENERUM HEDERACEARUM STYLO UNICO.

* Ovarium 2-loculare.

10. *Brassaiopsis*. Pedicelli inarticulati. Flores ecalyculati. Albumen æquabile.—Arbores aculeatæ Asiæ tropicæ et subtropicæ, foliis simplicibus, palmatis v. digitatim sectis.

11. *Macropanax*. Pedicelli articulati. Flores calyculati. Albumen ru-
minatum.—Frutices inermes Indiæ orientalis, foliis digitatim compo-
sitæ.

** Ovarium 5-(per excessum 6-)loculare.

12. *Pentapanax*. Pedicelli articulati. Flores calyculati. Drupa exsucca. Albumen æquabile.—Arbusculæ inermes Indiæ orientalis, foliis pinnatis.

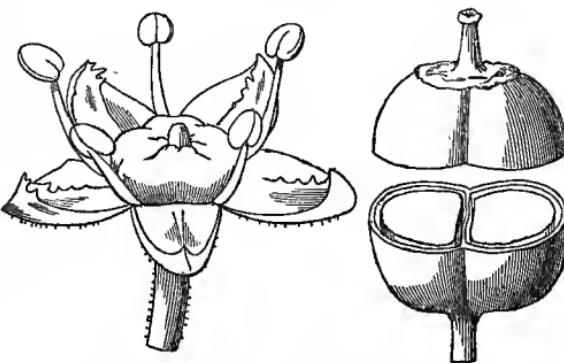

13. *Agalma*. Pedicelli inarticulati. Flores ecalyculati. Drupa exsucca. Albumen æquabile.—Arbores inermes Asiæ tropicæ, foliis digitatim compositæ.

14. *Dendropanax*. Pedicelli inarticulati. Flores ecalyculati. Drupa baccata. Albumen æquabile.—Arbores inermes Americæ et Asiæ tropicæ et subtropicæ, foliis simplicibus.

15. *Hedera*. Pedicelli inarticulati. Flores ecalyculati. Drupa

baccata. Albumen ruminatum.—Frutices sarmentosi, inermes, in Europa Asia et Africa indigenæ, foliis simplicibus.

X. BRASSAIOPSIS, Dcne. et Planch.
Pedicelli inarticulati. Flores ecalyculati, hermaphroditi. Calyx tubo obconico, limbo 5-dentato. Petala 5, ovato-triangularia, 1-nervia, apice incurvula, libera, aestivatione valvata.

Brassaiopsis speciosa (*partly after Hooker*).

Stamina 5, petalis alterna; filamenta filiformia; antheræ subrotundatæ. Ovarium 2-loculare, loculis 1-ovulatis. Ovula pendula. Stylus unicus, compressus; stigma obscure 2-lobatum. Drupa subglobosa, 2-locularis. Semina solitaria. Albumen æquabile.—Arbores aculeatæ in Asia tropica et subtropica vegetantes, stipulis nullis, foliis alternis longe petiolatis palmato-5-lobis, lobis argute dentatis v. digitatim 5-8-sectis; segmentis dentatis, umbellis globosis longe pedunculatis in racemes v. paniculas dispositis involucratis, pedunculis pedicellisque compressis, floribus albidis.—*Brassaiopsis*, Dcne. et Planch. Rev. Hort. 1854, p. 106; Planch. Hort. Donat. p. 8; *Hederæ*, *Panacis*, *Kalopanaxis* et *Araliæ* sp. auct.

C. Koch ('Wochenschrift,' 1859, p. 364) has endeavoured to show that *Brassaiopsis* and *Macropanax* are identical, but he had evidently overlooked that *Brassaiopsis* (of which *Hedera glomerulata*, Bot. Mag. t. 4804, is the type) has inarticulate pedicels, no calyx, and a very distinct habit. It is true that Miquel referred *Hedera glomerulata* to his genus *Macropanax*; nevertheless it does not agree with the generic character he furnishes, and is very different from *M. oreophilum*. Decaisne and Planchon, in their valuable paper on *Hederaceæ*, ascribe to their new genus *Brassaiopsis* two short styles, but there is only one, as in the absence of specimens may be seen from Hooker's very correct figure; and by a slip of the pen the island of Bourbon, instead of Java, is named as the native country of *B. speciosa*.

1. *B. Hainla*, Seem. mss.—*Hedera Hainla*, Hamilton, mss. in Don, Prod. Fl. Nep. p. 187 (1825); De Cand. Prodr. iv. p. 253. *H. polyantha*, Wall. Cat. n. 4907; Wall. Plant. Asiat. t. 190; Don, Gen. Syst. iii. 392; Walp. Rep. ii. p. 431 and 432. *H. scandens*, De Cand. Prodr. iv. p. 264? *Panax palmatum*, Roxb. Fl. Ind. ii. p. 74 (1832). *P. curcifolia*, Griff. Itinerary Notes, p. 145. *Aralia palmata*, Lour. Fl. Cochinch. p. 233? non Lam. *A. scandens*, Poir. Suppl. i. p. 419?

Nepal (Hamilton! in Mus. Brit.; Wallich! n. 4907); moist valleys of Chittagong (Roxburgh); Bootan (Griffith! n. 2667), towards Oon-gar Bridge, in forests, 5–6000 feet (Griffith! n. 697), Sikkim (Hook. fl. et Thoms.!).

2. *B. ricinifolia*, Seem. mss.—*Panax ricinifolium*, Sieb. et Zucc. in Abhandl. Bair. Akad. iv. 2, p. 198.—*Kalopanax ricinifolium*, Miq. Ann. Mus. Bot. Lugd.-Bat. vol. i. p. 16. Japan (Siebold! in Herb. Benth.), N. China (Fortune! in Herb. Mus. Brit.).

3. *B. hispida*, Seem. sp. n.; ramis petiolis pedunculisque hispido-aculeatis, aculeis rectis, foliis palmato-10-lobis, lobis ovatis v. oblongis acuminatis setoso-serratis, supra glabris, subtus ad nervos ferrugineo-hirtellis hinc inde aculeatis, umbellis multifloris (50–60) in paniculas terminales dispositis, pedicellis rufo-hirtellis, calycibus tomentosis, petalis glabris.—Bootan (Griffith! n. 2066 in Mus. Brit.).

Judging from the dried specimen, the peduncles are stiff and patent, not drooping as in *B. speciosa*. Leaves nearly a foot across; peduncles 5 inches long; bracts surrounding the base of the pedicels lanceolate-linear acute; the whole inflorescence forming terminal panicles 1–1½ feet high.

4. *B. confluens*, Seem.; ramis petiolisque aculeatis, foliis glabris palmatim 8–9-lobis, lobis pinnatifidis v. bipinnatifidis, umbellis globosis longe pedunculatis solitariis v. racemosim dispositis, junioribus stellato-pubescentibus, calyce 5-dentato, stylo 1, fructu subgloboso, latiore leviter compresso, 2-spermo.—*Hedera confluens*, Wall. Cat. n. 4910, ex parte; Nepal (Wallich! n. 4910, ex parte).

The sheet of Wallich's Herbarium at the Linnean Society containing this plant, has two other *Hederaceæ* pasted on it, all three of which are labelled n. 4910. One of them is probably another species of *Brassaiopsis*, with unarmed petioles and palmate 3–5-lobed leaves; the other is a *Trevesia*.

The leaves of *B. confluens* are $1\frac{1}{2}$ foot across. The petiole is at the top expanded into the blade, from which spring 8–9 mostly bipinnatifid lobes. It is a magnificent species.

5. *B. speciosa*, Dcne. et Planch. l. c.—*Macropanax glomerulatum*, Miquel in Bonplandia, 1856, p. 139. *Aralia glomerulata*, Blum. Bijdr. p. 873. *Hedera glomerulata*, De Cand. Prodr. iv. p. 265; Hook. Bot. Mag. (1854) t. 4804; Regel, Gartenflora (1863), tab. 411. *Brassaiopsis floribunda*, Dcne. et Planch. Hort. Donat. p. 8, excel. syn. Wall. *Gastonia longifolia*, hortorum.—Java (not Bourbon, as stated by Dcne. and Planch.). Decaisne and Planchon have introduced considerable confusion into the synonymy of this species by abandoning (Hort. Donat.) the name *speciosa*, which a few months previously they gave to the plant, and quoting Wallich's *H. floribunda* as a synonym. I have retained the oldest name.

6. *B. floribunda*, Seem. mss. in Herb. Mus. Brit.—*Hedera floribunda*, Wall. Cat. n. 4912 A; G. Don, Gen. Syst. iii. p. 394. *Hedera Wallichiana*, Steudl. Nom. Bot.—Nepal (Wallich ! n. 4912A); Khasia Mountains, 2000–4000 feet high (Hooker fil. et Thomson!).

Segments of leaves ovate at base, minutely dentate, or almost quite entire at the edge. Peduncles unarmed.

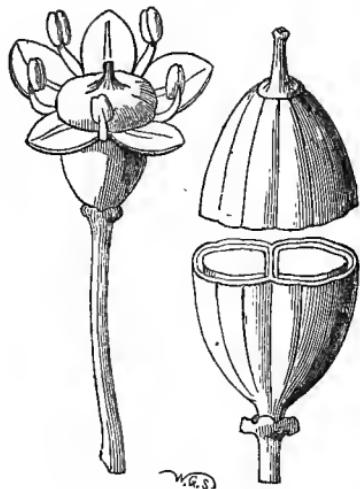

7. *B. aculeata*, Seem. mss. in Herb. Mus. Brit.—*Hedera aculeata*, Ham. in D. Don, Fl. Nepal. p. 185; De Cand. Prodr. iv. p. 264.—Nepal (Hamilton ! in Mus. Brit.).

Segments of the leaves acute at base, and coarsely serrated at the edge; umbels on stiff peduncles 2–3 inches long.

Obs.—The leaves of the last three species seem, at first sight, compound, but on closer inspection it will be found that there is no articulation at the base of the apparent leaflets, but that the top of the petiole is expanded, then suddenly contracted, and again expanded into leaflet-like segments. In *B. confluens* the same structure is repeated on a much larger scale. I took some pains to investigate this structure, as *Brassaiopsis* seemed to be the only genus of the Order in which simple and compound leaves occurred together.

8. *B. cyrtostyla*, Seem.—*Macropanax cyrtostylum*, Miq. Ann. Mus. Lugd. Bat. i. p. 13.—Sumatra (Korthals).

XI. MACROPANAX, Miquel. Pedicelli articulati. Flores calyculati, polygami. Calyx tubo obconico, limbo 5-(vel per excessum 6-) dentato. Petala 5 v. 6, ovata, libera, aestivatione valvata. Stamina 5 v. 6, petalis

Macropanax undulatum.

Wall.; in De Cand. Prodr. iv. p. 253. *Aralia disperma*, Blum. Bijdr. p. 872. *Hedera disperma*, De Cand. Prodr. iv. 265. *Aralia (?) catyculata*, Zoll. et Moritz. Syst. Verz. p. 265. *Brassaiopsis disperma*, C. Koch, Wochenschrift, 1859, p. 364.—Java (Horsfield! in Mus. Brit.; De Vriese! Junghuhn! in Herb. Hook.) 3000–4000 feet above the sea; Sumatra and Laronan (fide Miquel), Bootan (Griffith! n. 206); Nepal (Wallich! Cat. n. 4915); Khasia Hills (Hooker fil. et Thomson!).

Var. β , *foliolis multo tenuioribus*. *M. floribundum*, Miq. l. c.—*Brassaiopsis floribunda*, C. Koch, Wochenschrift, 1859, p. 364.—Java (Junghuhn! in Herb. Hook.).

2. *M. undulatum*, Seem. mss. in Herb. Mus. Brit.—*Hedera undulata*, Wall. Cat. n. 9416 A; Don, General System, iii. p. 394; Walp. Rep. ii. p. 432 (v. s. sp.)—Silhet (Wallich! n. 9416 A); Khasia (Hooker fil. et Thomson); Sikkim (Hooker fil. et Thomson!).

3. *M. concinnum*, Miq. Ann. Mus. Lugd. Bat. i. p. 220.—Java (De Vriese).

Species exclusæ:

M. cyrtostylum, Miq. = *Brassaiopsis cyrtostyla*, Seem.

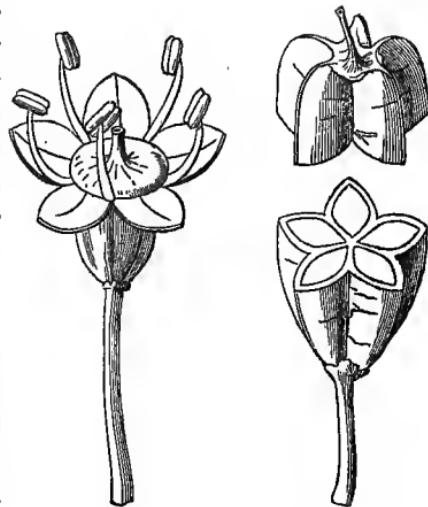

M. glomerulatum, Miq. = *Brassaiopsis speciosa*, Dcne. et Planch.

XII. PENTAPANAX, Seem. gen. nov. Pedicelli articulati. Flores calyculati, hermaphroditi. Calyx tubo obconico angulato, limbo 5-

alternæ; filamenta filiformia; antheræ ovatæ. Ovarium 2-loculare, loculis 1-ovulatis. Ovula pendula. Stylus unicus, cylindricus, stigmatibus 2 orbiculari-convexis subunitis. Drupa ellipsoidea, subsicca, lævis, 2-locularis. Semina solitaria. Albumen ruminatum.—Frutices inermes Indiæ orientalis, foliis exstipulatis digitatim 5–7-foliolatis, foliolis serratis, umbellis in racemos v. paniculas dispositis.—*Macropanax*, Miq. in Bonplandia, 1856, p. 139.

1. *M. oreophilum*, Miquel in Bonpl. l. c. p. 139; Flor. Nederl. Ind. vol. i. pars 1, p. 763. — *Panax serratum*,

dentato. Petala 5, ovata, 1-nervia, libera, aestivatione valvata. Stamina 5. Stylus 1, 5-angulatus; stigma 5-lobatum. Fructus oblongus, acute 5-angulatus, 5-locularis.—Frutices v. arbusculæ Indiæ orientalis, inermes, foliis alternis, pinnatim 3-5-foliolatis, foliolis coriaceis v. submembranaceis, ovatis v. oblongis, basi obtusis v. subcordatis, integerrimis, serratis v. setoso-serratis, racemis v. umbellis compositis, pedicellis saepe elongatis subfiliiformibus, apice incrassatis.
— *Pentapanax*, Seem. mss. in Herb. Mus. Brit. *Panacis* et *Hederæ* sp. auctor.

Pentapanax Leschenaultii.

Flores racemosi.

Pedicelli hirtelli *P. racemosum.*

Pedicelli glabri *P. subcordatum.*

Flores umbellati.

Pedicelli hirtelli *P. umbellatum.*

Pedicelli glabri.

Foliola coriacea, integerrima *P. parasiticum.*

Foliola membranacea, setoso-serrata . . . *P. Leschenaultii.*

1. *P. racemosum*, Seem. mss. in Herb. Mus. Brit.; glabrum, foliis longe petiolatis pinnatim 3-5-foliolatis, foliolis petiolulatis obovatis v. ovato-oblongis, basi obtusis v. subcordatis, acuminatis, subintegerrimis, floribus distincte racemosis, racemis longis gracilibus paniculatis, pedunculis pedicellisque hirtellis, pedicellis basi bractea suffultis, calyculo fimbriato (v. s. sp.).

Sikkim (Hooker fil. et Thomson! in Herb. Mus. Brit.), 4000–6000 feet above the sea.

This plant was distributed by Drs. Hooker and Thomson under *Hedera subcordata*, Wall., but it is not identical with the species described by Don under that name from Wallich's authentic specimen. The panicles are 1½ foot long, and at the base (as are the young leaf branches) furnished with persistent scales (perulæ).

2. *P. subcordatum*, Seem. mss. in Herb. Mus. Brit.; glabrum, foliis pinnatum 5-foliolatis, foliolis longiusculæ (1–1½ poll. long.) petiolulatis ovato-oblongis acuminatis, basi rotundatis vel subcordatis, serratis, serraturis obtusiusculis, floribus distincte racemosis, pedunculis pedicellisque glabris, calyculo integro.—*Hedera subcordata*, Wall. Cat. n. 4917; G. Don, Gen. Syst. iii. p. 394 (v. s. sp.).—Silhet (Wallich ! n. 4917, in Herb. Soc. Linn. Lond.); Khasia Hills (Hooker fil. et Thomson !).

Blade of leaflets from 4–5½ inches long, 3–4 inches broad.

Both this and the preceding species differ in their truly racemose flowers from the other species of *Pentapanax*, but they agree so well in every other respect, that I cannot separate them generically.

3. *P. umbellatum*, Seem. mss. in Herb. Mus. Brit., foliis pinnatum 5-foliolatis, foliolis petiolulatis ovatis acuminatis, basi obtusis, serratis coriaceis, floribus umbellatis, umbellis compositis, pedunculis pedicellisque hirtellis, calyculo subintegro (v. s. sp.).—Khasia (Hook. fil. et Thomson !).

Differs from *P. Leschenaultii* (for which it was mistaken by Hooker and Thomson) in its coriaceous, not setoso-serrate leaves, and hirtellous peduncles and pedicels, from *P. racemosum* in its umbellate flowers.

4. *P. parasiticum*, Seem. mss. in Herb. Mus. Brit.—*Hedera parasitica*, Don, Prodr. Fl. Nepal. p. 188; De Cand. Prodr. iv. p. 265. *Hedera glauca*, Wall. Cat. n. 4921; Don, Gen. Syst. iii. p. 394; Walp. Rep. ii. p. 432 (v. s. sp.).—Nepal (Hamilton ! in Herb. Mus. Brit.; Wallich ! n. 4921).

I have identified *Hedera parasitica*, Don, with *H. glauca*, Wall., by means of the authentic specimens, one existing in the British Museum, the other in Burlington House. *Hedera acuminata*, which Thwaites unites with *Hedera parasitica*, is at once distinguished generically by its five free styles. Leaflets quite entire, with the exception of the ultimate one, almost sessile; umbels globose terminal, simple or compound, springing from scaly buds.

5. *P. Leschenaultii*, Seem. mss. in Herb. Mus. Brit.—*Panax Leschenaultii*, De Cand. Prodr. iv. p. 254. *Hedera Leschenaultii*, Wight et Arn. Prodr. i. p. 377. *Panax bijugum*, Wall. Cat. n. 4937; Don, Gen. Syst. iii. p. 386. *Hedera trifoliata*, Wight et Arn. Prodr. i. p. 377; Wight, Icon. Plant. t. 307. *Hedera fragrans*, Don, Fl. Nepal, p. 187, non Roxb. (v. s. sp.).—Nepal (Wallich ! n. 4937); Sikkim

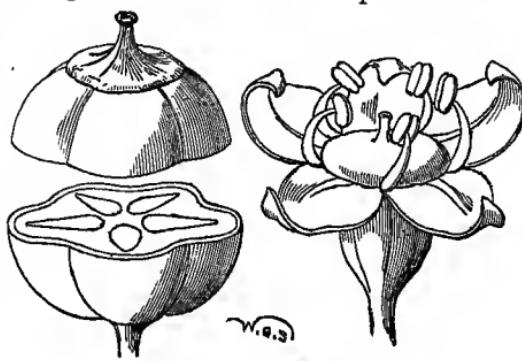

(Hooker fil. et Thomson !); Nilgherrie Hills (Leschenault); Kumaon (Strachey et Winterbottom!); Bootan (Griffith ! n. 2065).

Wight and Arnott separate the trifoliate from the 5-foliate form, stating that they had never seen a plant where both kinds of leaves occur. There are no other differences between those two supposed species; and, as I have seen specimens with both 3- and 5-foliate leaves, I have no hesitation in uniting them under the oldest specific name.

XIII. AGALMA, Miq.

Pedicelli inarticulati.

Flores ecalculati, hermaphroditi. Calyx tubo obconico, limbo 5-6-dentato. Petala 5-6, ovato-triangularia, libera, 1-nervia, apice incurvula, aestivatione valvata. Stamina 5-6; antheræ oblongæ.

Agalma rugosum (after Miquel).

Stylus 1; stigma 5-6-lobatum. Ovarium 5-6-loculare, loculis 1-ovulatis. Drupa oblonga, exsucca, 5-6-angulata, 5-6-pyrena. Albumen æquabile.—Arbores inermes Asiæ tropicæ, foliis digitatim foliolatis, foliolis integerrimis v. dentatis, floribus racemosis v. umbellatis in paniculas dispositis, petalis viridiusculis.—*Agalma*, Miq. in Bonplandia, 1856, p. 138; Fl. Ned. Ind. i. pars i. p. 752, t. 11 et 12.—*Hederae*, *Paratropia*, sp. auct.

Miquel wished to confine the genus *Agalma* to those species which have truly racemose flowers, represented typically by *A. rugosum* (*Aralia rugosa*, Blum.), and it is only in this particular that his *Agalma* differs from his *Paratropia*. Singular as is the inflorescence in *A. rugosum*, *simillimum*, and *racemosum*, few botanists would follow him in thinking that character sufficient to found a genus upon. I have therefore sought for better limits, and, adopting Miquel's two *Agalmas* as the type, added all that agreed generically with them. Most of their congeners had been referred to *Paratropia*, even by Miquel himself, where, on account of their long style, they were quite misplaced. De Candolle established *Paratropia* for plants with sessile stigmas, and three out of the four species he referred to it have sessile stigmas, the fourth being a species of *Polyscias*, and having long styles. Now

Paratropia, restricted to the species with sessile stigmas, is identical with *Heptapleurum* of Gærtner; and as the latter was established as early as 1791, that name, quite as appropriate as *Paratropia*, claims the right of priority by thirty-nine years. *Agalma* and *Heptapleurum* have certain features in common, but they differ in several essential points, viz. :—

Agalma. Stylus 1, elongatus.—Arbores plerumque terrestres, floribus viridiusculis.

Heptapleurum. Stigmata ovario immersa, punctiformia.—Arhus enlæ epiphytæ, floribus viridiusculis v. sæpe purpureis v. sanguineis.

* *Flores racemosi*. (*Agalma*, Miq.)

Foliola 6–7-poll. longa, 1–1½ poll. lata; petioluli ½–1½ poll. longi; venæ 10–12.

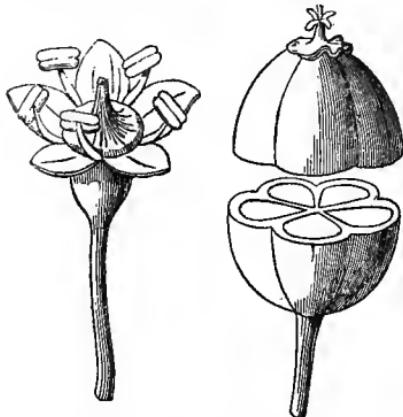

13. *A. Griffithii*, Seem. sp. nov.; foliis digitatim 7-foliolatis glabris, foliolis ovato-oblongis v. oblongis cuspidatis, integerrimis v. obscure denticulatis, basi subcordatis v. obtusis, supra viridibus lucidis, subtus subglaucis, floribus umbellatis, ramulis pedunculis pedicellis calycibus ferrugineo-furfuraceo-tomentosis.—Bootan (Griffith ! n. 2064).

Petioluli 1 poll. longi; foliola 4 poll. longa, 2–2½ poll. lata; venæ 7–9.

14. *A. redivivum*, Seem. n. sp.; scandens, epiphytum, foliis digitatim 4–5-foliolatis, foliolis longissime (3–3½ poll. long.) petiolulatis, ellipticis v. oblongo-ellipticis longe aeuminatis, remote dentatis, basi

attenuatis, umbellis brevissime pedunculatis, racemosis, pedunculis pedicellis calycibusque tomentosis, floribus 7-8-meris.—Bangermassing, Borneo (Motley!, n. 1130, in Herb. Hook.).

When gathering his specimens, Motley stripped off and left on the

Dendropanax cuneatum.

ground some leaves, and on revisiting the spot their petioles were found to have made roots, some of which are in Hooker's Herbarium. Leaf-stalks $1\frac{1}{2}$ foot long; leaflets, including the petiolules, 1 foot long and from 4-5 inches broad; racemes 1 foot long.

XIV. *DENDROPANAX*, Dcne. et Planch. Pedicelli inarticulati. Flores ecalyculati, polygamо-mоnоici. Calyx tubo obconico, limbo 5-6-dentato. Petala 5-6, ovato-triangularia, 1-nervia, aestivatione valvata. Stamina 5-6, antheræ oblongæ. Stylus 1; stigma 5-lobatum. Ovarium 5-loculare, loculis 1-ovulatis. Drupa baccata, subglobosa, obtuse 5-angularis, 5-pyrena. Albumen æquabile.—Arbores inermes Asiae et Americae tropicæ et subtropicæ, foliis simplicibus integris coriaceis, umbellis terminalibus, simplicibus v. compositis, floribus pedicellatis, viridiusculis v. albidis.—*Dendropanax*, Dcne. et Planch. Rev. Hortic. 1854, p. 107; Planch. Hort. Donat. p. 8. *Hederæ*, sp. auct.

* *Umbellis simplicibus.*

1. *D. pendulum*, Dcne. et Planch. Rev. Hort. 1854, p. 107.—*Hedera pendula*, Swartz, Fl. Ind. Occ. p. 512; Sw. Icon. t. 9; De Cand. Prodr. iv. p. 262; Griseb. Fl. West Ind. i. p. 306.—Mountains of Jamaica, Swartz!, in Mus. Brit.; Wilson! in Herb. Hook.).

2. *D. trilobum*, Seem.—*Hedera triloba*, Gardn. in Hook. London Journ. iv. p. 105; Walp. Rep. v. p. 926.—Forests of Organ Mountains, Brazil, 4000 feet elevation (Gardner!, n. 433, in Mus. Brit. et Herb. Hook.).

3. *D. nutans*, Dcne. et Planch. Rev. Hort. 1853, p. 107.—*Hedera nutans*, Swartz, Fl. Ind. Occ. p. 514; De Cand. Prodr. iv. p. 262;

Griseb. Fl. West Ind. i. p. 306.—Mountains of Jamaica (Swartz !, in Mus. Brit.; Alexander !, in Herb. Hook.).

Dr. Alexander Prior's specimen is a very fine one; blade of the leaf $2\frac{1}{2}$ - $3\frac{1}{2}$ inches long, 2 - $2\frac{1}{2}$ inches broad, leaf-stalk 3-4 inches long. Flowers large for the genus. "A tree 40-50 feet high," Alexander.

4. *D. Darienense*, Seem. n. sp.; ramis cinereis, foliis longe petiolatis ovato-oblongis v. obovato-oblongis, acuminatis, basi acutis, venis costatis 4-5, 2 infimis angulo acuto ortis, umbellis solitariis longe pedunculatis, circ. 30-floris, pedunculis inarticulatis, pedicellis filiformibus elongatis.—*Hedera pendula*, Seem. Bot. Herald, p. 132, non Swartz.—By rivulets, Cape Corrientes, Darien (Seemann !, n. 1103, in Mus. Brit. et Herb. Hook.).

Petioles 1-2 inches long. Leaves coriaceous; blade 4-5 inches long, 2 - $2\frac{1}{2}$ inches broad; peduncles $2\frac{1}{2}$ inches long, erect; pedicels very slender, $1\frac{1}{2}$ -2 inches long; calyx-tubes obconical; styles ultimately divided on the top and recurved. A comparison of my Darien plant with Swartz's authentic specimen of *Hedera pendula* at once proved their specific differences. The extreme length of the pedicels distinguishes *D. Darienense* at first sight from all its allies.

5. *D. proteum*, Benth. Fl. Hongk. p. 136.—*Hedera protea*, Champ. in Kew Journ. iv. p. 122; Hongkong (Champion ! Wright !).

6. *D. parviflorum*, Benth. Fl. Hongk. p. 137.—*Hedera parviflora*, Champ. in Kew Journ. iv. p. 122.—Hongkong (Champion !).

7. *D. Japonicum*, Seem.—*Hedera Japonica*, Jungh. Nov. Gen. et Sp. Plant. p. 25, n. 22; Walp. Rep. ii. p. 431.—Japan, not Java as stated by Walpers (Blume ! in Herb. Benth.).

8. *D. ovatum*, Seem.—*Hedera ovata*, Wall. Cat. n. 4911; G. Don, Gen. Syst. iii. p. 392; Walp. Rep. ii. 431.—Madras (Wallich ! n. 4911).

Though the bulk of species belonging to *Dendropanax* is American, the admission of *Hedera protea*, *parviflora*, *ovata*, and *Japonica*,—four Asiatic species,—is justified by their agreeing in every respect with the definition now adopted for the genus.

** *Umbellis compositis.*

9. *D. Juergenseni*, Seem. n. sp.; glabrum, foliis ovato-oblongis v. oblongis acuminatis integerrimis, basi attenuatis, venis pinnatis horizontaliiter divergentibus, umbellis terminalibus compositis, ramis (pedicellis

primariis) medio articulatis bracteatis, pedicellis (secundariis) basi bracteolis minutis ferrugineis instructis.—Sierra San Pedro Nolasco, Mexico (Jürgensen ! n. 729 in Herb. Hook.).

Allied to *D. arboreum*, but all the veins diverge horizontally from the midrib, even the lowermost. Leafstalk 2–3 inches long; largest leaf-blade 7 inches long, 4 inches broad, and having 11–12 veins on each side of the costa.—In *D. arboreum* the two lowermost veins form an acute angle with the midrib, the same is the case in *D. cuneatum*.

10. *D. Fendleri*, Seem. mss. n. sp.; glabrum, robustum, foliis longe petiolatis ovatis acuminatis integerrimis crasse coriaceis, basi 3–5-nerviis, supra viridibus lucidis, subtus pallidioribus opacis, umbellis terminalibus compositis, pedicellis inarticulatis, floribus . . . , drupa baccata (nigra) 5-angulata 5-pyrena, stylis 5 basi arcte connatis apice divaricatis coronata.—Tovar, Venezuela (Fendler ! n. 529).

Petiole 3 inches long; blade 4–5 inches long, 3– $3\frac{1}{2}$ inches broad; drupe $\frac{3}{4}$ of an inch across.

11. *D. arboreum*, Dcne. et Planch. Rev. Hortic. 1854, p. 107.—*Hedera arborea*, Swartz, Fl. Ind. Occ. p. 518; De Cand. Prodr. iv. p. 262. *Aralia arborea*, Linn. An. Ac. v. p. 369; Jacq. Hort. Schœnb. t. 51. *Hedera alaris*, Schlecht. Linnæa, ix. p. 605; Walp. Rep. ii. p. 431. *Dendropanax alare*, Dene. et Planch. l. c. *Sciadophyllum Jacquini*, Griseb. Fl. West Ind. i. p. 306.—Jamaica (Swartz ! Masson ! Wright ! Macfadyen ! Pnrdie ! March ! Wilson ! Alexander ! Hartweg ! n. 1544); Island of St. Vincent (Anderson !); Isthmus of Panamá (Seemann !, n. 1171; Fendler ! n. 131; Hayes !); Central America (Shakespear !); Cuba (Wright ! n. 212); Bogotá (Triana !); Mexico (Jürgensen ! n. 63, Botteri ! F. Mueller ! Lay and Collie !)

XV. HEDERA, Linn.

Pedicelli inarticulati. Flores ecalyculati, hermaphroditici. Calyx tubo obconico, limbo 5-dentato. Petala 5, ovato-triangularia, 1-nervia, libera, aestivatione valvata. Stamina 5; antheræ oblongæ. Ovarium 5-loculare, loculis 1-ovulatis. Stylus 1, elongatus; stigma obscure 5-lobatum. Drupa baccata,

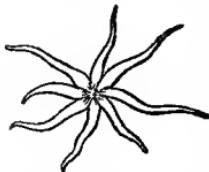

subglobosa, laevis, 5-pyrena. Albumen ruminatum. Embryo magnus.—Frutices sarmentosi inermes Europæ, Asiæ et Africæ indigenæ, foliis exstipulatis simplicibus palmatim lobatis v. integris, umbellis racemosim v. paniculatim dispositis, floribus viridiusculis, drupis nigris flavis v. albidis.—*Hedera*, Linn. Gen. n. 395 (ed. Schreb.); De Caud. Prodr. iv. p. 261, excl. sp.; Koch, Synops. Germ. Fl. p. 321.

Whether there is only one species or several mixed up with the plants which now go in gardens and herbaria under the name of *Hedera Helix*, and make up the genus *Hedera*, as now circumscribed, and whether one or two species are indigenous to the British Islands are still open questions. No botanist has, as yet, been successful in finding good characters for what have been considered as species; and though all other *Hederaceæ* have a limited geographical range, *Hedera Helix* is supposed to be an exception to this rule, and to be spread over three continents, Europe, Asia, and Africa, from the Canary Islands to Japan, and that this circumstance alone sufficiently accounts for the numerous existing varieties. After carefully investigating the subject, and examining every specimen I could lay my hands on, aided by contributions from botanical friends, I have arrived at a different conclusion. I can clearly distinguish three distinct species, which, though having each many varieties, do not run into each other, and have each a distinct geographical range. If these different species had to be named anew, I would propose to call them respectively the European, the African, and the Asiatic.

The European Ivy is *Hedera Helix*, Linn. It is not found out of Europe, and may at once be known by its uppermost leaves being ovate or elliptical, its umbels arranged in simple racemes, and its pedicels and calyx being covered with white stellate hair, the hair

having from 6–8, but never more, rays. From time immemorial a variety with white and yellow variegated leaves has been cultivated in gardens; even Pliny mentions it; indeed it is one of the oldest, if not the oldest, variegated garden plant of which we have any record. The fruit of *Hedera*

Hair of *H. Helix*. *Helix* in northern Europe is generally black; in Germany it occurs occasionally with white; and in European Turkey, Greece, and Italy with yellow berries. The black-fruited kind has always been considered as the true *H. Helix*, and the white as a variety of it, which indeed it is; but the yellow has been made, I think, unjustly into a distinct species, and named *H. poetarum* by Bertoloni, and some time previously *H. chrysocarpa* by Walsh. It is the latter plant which played so important a part in ancient Greece and Rome, its leaves supplying the materials for the wreaths with which poets were crowned, and at the festivals in honour of Dionysos all casks,

vessels, amphoras, etc. were decorated; it was customary even to lie and sit upon ivy branches on those occasions.* It is believed traditionally that the yellow-fruited Ivy came from India with the worship of Bacchus; and the fact that the Nepal Ivy described by Wallich has yellow fruit is regarded as a proof of the correctness of this tradition. But a close examination of the European yellow-fruited plant shows that it is specifically identical with *H. Helix*, and specifically different from the Nepal and all other Asiatic specimens. If the worship of Dionysos gradually crept from India to Greece and Rome, and a yellow-fruited Ivy was deemed essential to its proper performance, there was no need of carrying the Asiatic plant into Europe, as an indigenous variety (*chrysocarpa=poetarum*) occurred at the very threshold; whilst the Asiatic Ivy, as we shall presently see, is spread from the central highlands to the most western confines of Asia,—to ancient Colchis.

The African Ivy is *Hedera Canariensis*, Willd. It is found in the Canary Islands, Madeira, and the north of Africa, and may at once be known by its uppermost leaves being cordate, its umbels arranged in panicles, rarely and only in young plants in simple racemes, and its pedicels and calyx being covered with white stellate hair, the hair having from 13–15 rays. To this must be referred what is called in gardens sharp-leaved Irish Ivy. It is a much quicker-growing plant than *H. Helix*, and on that account frequently planted in gardens. Dr. Moore, of Glasnevin, informs me that it was discovered many years ago by a nurseryman named Hair of *H. Canariensis*.

 Hodgins, in the county of Wicklow, Ireland, and the fact that it has lately been found in Portugal, and therefore belongs to the so-called Iberian type of the British flora, would seem a confirmation of its being truly indigenous in Ireland. This *sharp-leaved* Irish Ivy is a form rather than variety of *Hedera Canariensis*, with more or less deeply-lobed leaves, and must not be confounded with what is called Irish or Scotch Ivy (*Hedera Hibernica v. Scotica*) in our gardens. The latter is a large-leaved and quick-growing form of *H. Helix*, more susceptible to cold than the common North European form of that species.

The Asiatic Ivy is *Hedera Colchica*, C. Koch. It is not found out

For further particulars, see C. Bötticher, 'Baumkultus der Hellenen' (Tree-worship of the Hellenes), Berlin, 1856, 8vo, p. 333.

of Asia, and may be known by its uppermost leaves being elliptical or lanceolate, its umbels arranged in simple racemes, and its pedicels and calyx being covered with yellowish 2-lobed scales, the lobes being opposite each other, and divided into 7–10 segments.

Our first knowledge of this plant is derived from Kæmpfer, who, two centuries ago, found it in Japan, where it is called "Fotogi Tsta (*i. e.* simulacri seu idoli *Hedera*)."¹ It was afterwards gathered by Wallich and other collectors in the Himalaya Mountains, by Fortune in Northern China, by Wright ^{Scales of} *H. Colchica*, in the Loochoo Islands, and by C. Koch in the trans-Caucasian countries. Wallich was the first to describe the plant, though he did not venture to separate it from *H. Helix*; in fact, the important character furnished by the scales escaped him. It was not until 1859 that C. Koch, who had seen it wild, named it *Hedera Colchica*, and gave a correct diagnosis of it. It is owing to an authentic specimen kindly transmitted by him that I am able to identify this new species with the Asiatic Ivy. *Hedera Colchica* is now an inmate of our gardens, it having been found on the Caucasian coast of the Black Sea, by Mr. Rœgner, formerly Curator of the Botanic Gardens of Odessa. Thus it found its way into our gardens, occurring here and there under the (*I believe unpublished*) name of *Hedera Rœgneriana*. The only two popular accounts of this plant are given by Wallich and C. Koch. In Nepal it is called Sagooke or Gooke (*i. e.* the climber), "and is," says Wallich (Roxb. Fl. Ind. ii. p. 515), one of the most common, as well as the most noble productions of Nepal, where it grows to a majestic size, and extends over trees and rocks." In Transcaucasia, on the contrary, it is more stunted than the European Ivy, having reached its western geographical limit; "and," says C. Koch ('Wochenschrift,' 1859, p. 76), "I have never seen it ascend the tops of the numerous Beeches of that country, whilst the common Ivy climbed to the highest branches."

Though there are several important peculiarities to distinguish the three species, the most ready way to make sure of them is to look at the character furnished by the hairs and scales. They are largest in *H. Helix*, where they may be seen distinctly with a common pocket lens; but in the two other species it requires a greater magnifying power to make their nature quite intelligible.

III. ON SPHÆRODENDRON, A NEW AFRICAN GENUS.

Hederaceæ are represented in Africa by the genera *Oligosrias*, Seem., *Hedera*, Linn., *Maralia*, Thouars, *Sciadophyllum*, P. Browne, *Grotfendia*, Seem. (*Botryodendron*, Miq.), *Gastonia*, Comm., *Sciadopanax*, Seem., *Cussonia*, Thunb., and *Hydrocotyle*, Linn., and from the tropical parts of the west coast we know only four woody species (*Sciadophyllum Manni*, Seem., *S. Barteri*, Seem., *S. Baikei*, Seem., and *S. elatum*, Seem.), which have a natural ally in *S. Abyssinicum* (*Aralia Abyssinica*, Hochst.). To these the indefatigable Dr. Welwitsch has made a valuable addition by the discovery of a new genus, which I propose to name *Sphærodendron*, in allusion to the perfectly round crown of the tree (see Fig. 1 of our Plate). This feature is so striking that on account of it, *Sphærodendron* is planted as a boundary tree of fields, a purpose for which its ready and quick growth otherwise well qualifies it.* According to Dr. Welwitsch this species often grows gregariously, and even forms entire woods, the singular aspect of which one of his sketches enables me to realize. The wood is hard, tough, and durable, and serves for many useful purposes.

Sphærodendron differs from *Cussonia* by its non-ruminate albumen, from *Nothopanax* by its inarticulate pedicels, from *Tetrapanax* by its dry fruit, and from *Sciadopanax* by its evittate fruit and inarticulate pedicels. The following generic characters have been drawn up from a fine set of specimens and copious notes, kindly placed at my disposal by the discoverer.

SPHÆRODENDRON (gen. nov.), Seem. Pedicelli inarticulati. Flores ecalyculati, hermaphroditici. Calyx tubo ovato, limbo minute 5-dentato. Petala 5, ovato-triangularia, 1-nervia, apice incurvula, libera,

* In the Isthmus of Panama and about Carthagena, *Sciadodendron excelsum*, Griseb. Bonplandia, 1858, p. 7, a remarkable *Araliaceæ*, is used for making living fences; large poles, struck into the ground, take root as readily as our Willows do.

æstivatione valvata. Stamina 5, petalis alterna; filamenta filiformia, antheræ ovatæ. Ovarium inferum, 2-loculare, loculis 1-ovulatis. Ovula pendula. Styli 2, basi connati, erecti, demum recurvi, apice stigmatosi. Drupa ovata, obscure angulata, evittata, exsucca, 2-pyrena. Semina solitaria, dorso convexa, facie plana. Albumen æquabile.—Arbor Angolensis, 15–30-pedalis, trunco 1–2-ped. diam., strictissime recto, adulto longe nudo, apice comam exacte sphæricam ramorum foliorumque ferente, aspectu admodum singulari, cortice spongioso, ligno albo tenace durabili, ramulis junioribus petiolis costisque foliolorum floccoso-ferrugineo-tomentosis mox glabratis, foliis alternis digitatim 6–8-foliolatis, foliolis longe petiolulatis ovatis acuminate, irregulariter subduplicato-serratis, stipulis binis linearibus denticulatis cum petiolo basi connatis, racemos elongatis in apice ramorum clavato spongiōse tumido, congestis, floribus solitariis pedicellatis viridescentibus, basi bracteatis.

1. *S. Angolense*, Seem. Tab. I.—Habitat in sylvis humilioribus distr. Ambaca et juxta ripas Rivi de Luxillo et fluminis Cuanza, locis minus humidis, 2400–3800 ped. alt. (Welwitsch! Iter Angol. n. 479, 480.)

Petiole about 1–1½ ft. long, at the insertion of the petiolules with a tuft of brown hair. Leaflets coriaceous, green, shining, 3–5 inches long, 2½–3 inches broad; petiolule 1½–3 inches long. Stipules 1–1½ inches long. Racemes about 1½ feet long, scaly at base, the scales broadly ovate, acute or acuminate, and gradually merging into bracts; rhachis and bracts crowned with a short brown tomentum, afterwards glabrescent. Pedicels pubescent. Calyx and corolla glabrous.

EXPLANATION OF PLATE I., representing *Sphærodendron Angolense*.—Fig. 1. Portrait of the tree, from a sketch by Dr. Welwitsch. 2. One of the larger leaflets. 3. An entire flower. 4. Portion of the raceme in fruit. 5. A fruit (not quite ripe). 6. The same, cut across. Figs. 3, 4, 5, and 6, magnified.

IV. ON SCIADOPANAX, A NEW AFRICAN GENUS.

By the courtesy of Sir W. J. Hooker, I am able to give an illustration of a new East African genus of *Hederaceæ*, discovered by M. Boivin, at Nossibé, Madagascar, which I propose to name *Sciadopanax*. It shares with the American genus *Didymopanax* the peculiarity of having *vittæ*, but it differs from all the other genera I have examined by its very singular four-lobed seeds. When I first saw it at the Kew

Herbarium, I fancied it might possibly be the obscurely known *Maralia Madagascariensis*, and to make quite sure I forwarded a proof of my plate to my friend Señor Triana, to compare it with the authentic specimens of *Maralia* existing at the Paris Herbarium. Señor Triana communicated on the subject with M. Decaisne, to whom we are indebted for one of the ablest papers on *Hederaceæ*, and the latter very kindly took the trouble to compare my plate with the plant in question. The subjoined extract from his letter informs me of the result :—

"I have examined plate xxvii. of the 'Journal of Botany' and compared it with *Maralia Madagascariensis* of Petit Thouars' herbarium (*Panax Maralia*, Dcne. et Planch.). The plant figured is not our *Panax Maralia*, but a distinct species, collected at Nossibé by Boivin, and named *Panax Boivini*, Dcne. mss. in Herb. Par. According to Boivin, it was met with on the seashore at Ampambilava, August, 1851, and forms a tree 30–40 feet high, with few and slightly divided branches, and the leaves crowded at their extremities. I enclose a leaflet and a few fruits of *Panax Boivini*, so that the identity may be well established. The true *Maralia Madagascariensis* = *Panax Maralia* has coriaceous leaflets, very similar to those of certain *Jasmineæ*; the umbellules are composed of 3–5 flowers, and the fruit has from 3–5 styles, I regret that I cannot send more than a single leaflet for comparison."

Sciadopanax seems to occupy the same position towards *Maralia* as does *Nothopanax* towards *Polyscias* (*Eupteron*) ; it belongs to the dicarpous series, *Maralia* to the pentacarpous, whilst both have pinnated leaves, a similar inflorescence, and the same native country. It would be desirable to have a good figure and description of *Maralia*, which anybody living at Paris might easily furnish. Good flowering-specimens of *Sciadopanax* are also a great desideratum.

XVII. *SCIADOPANAX*, Seem. (nouv. gen.) Pedicelli articulati. Flores ecalyculati. Calyx tubo ovato, limbo obscure 5-dentato. Petala . . . Stamina . . . Ovarium inferum, 2-loculare, loculis 1-ovulatis. Ovula pendula. Stigmata 2, stylopodio conico imposita. Drupa ovato-cylindrica, exsucca, 10-costata, 8-vittata, 2-pyrena. Semina cruciatim 4-loba. Albumen æquabile.—*Arbor Madagascariensis*, 30–40-pedalis, glaber, sparsim ramosus, ramis teretibus, foliis alternis exstipulatis imparipinnatis, foliolis sessilibus v. breviter petiolulatis, ovatis acuminatis v. ellipticis integerrimis, umbellulis racemoso-paniculatis. Species unica :—

1. *S. Boivini*, Seem. mss. (Tab. nostr. II.).—*Panax Boivini*, Decne. mss. in Herb. Par.—Nossibé, Madagascar (Boivin !, in Herb. Kew. et Par.).

EXPLANATION OF PLATE II., representing *Sciadopanax Boivini*, from a specimen preserved in Sir W. J. Hooker's herbarium.—Fig. 1. Part of the inflorescence. 2. Fruit. 3. Longitudinal section of the same. 4. Cross section of the same. Figs. 2, 3, and 4, magnified.

V. ON THE GENERA WITH SESSILE STIGMAS.

The *Hederaceæ* having stigmas not placed on stylopodia, but immediately on the top of the ovary, belong to two Asiatic genera, one recently founded by Miquel (*Osmoxylon*), the other many years ago by Gærtner (*Heptapleurum*). *Osmoxylon* is but imperfectly known.

CONSPECTUS GENERUM HEDERACEARUM STIGMATIBUS SESSILIBUS.

18. *Osmoxylon*. Flores capitulati. Stigma semiglobosum, omnino indivisum, papilloso-puber.—Arbor Indiæ orientalis, foliis simplicibus.

19. *Heptapleurum*. Flores umbellati. Stigmata distincta, ovario immersa, punctiformia.—Arbusculæ epiphytæ Asiæ et Australiæ tropicæ, foliis duplicato- v. simpliciter digitatis, v. rarissime 1-foliolatis.

XVIII. *Osmoxylon*, Miq. Flores capitulati. Calyx tubo subcylindrico, limbo dilatato integerrimo. Petala . . . Stamina . . . Discus epigynus, centro elevatus, stigmate semigloboso omnino indiviso papilloso pubere. Ovarium 8–10-loculare. Drupa calycis margine detruncato disco stigmatifero tecta, pericarpio carnuloso, ovoidea, 8–10-pyrena. Albumen . . .—Arbor inermis Amboinensis, resinafera, foliis longe petiolatis lanceolatis acuminatis rariter serratis, floribus capitulatis, capitulis umbellatis.—*Osmoxylon*, Miq. Ann. Lugd. Bat. i. p. 5. *Hederæ*, *Aralia* et *Gastonia*, sp. auct.

1. *O. Amboynense*, Miq. Ann. Lugd. Bat. i. p. 5.—*Aralia umbellifera*, Lam. Dict. i. p. 225. *Hedera umbellifera*, De Cand. Prodr. iv. p. 262. *Gastonia simplicifolia*, Zippel, mss. *G. saururoides*, Roxb. Fl. Ind. i. p. 408? *Pseudo-Sandalum Amboinense*, Rumph. Amb. ii. p. 54, t. 12.

The gum resin exuded by this tree is called "Saruru" by the Amboynese. Is Roxburgh's name *Gastonia saururoides* derived from this??

XIX. *HEPTAPLEURUM*, Gærtn. Pedicelli inarticulati. Flores ecalyculati, hermaphroditi. Calyx tubo obconico, limbo brevissimo trun-

cato v. rarius obscure repando. Petala 5–7, ovato-triangularia libera v. calypratim cohærentia. Stamina petalorum numero, filamentis subulatis v. filiformibus, antheris oblongis. Stigmata parva, loculorum numero, papillæformia, in disci vertice circulariter disposita. Drupa disco glanduloso coronata, sulcato-angulata, matura subsicca, 4–7-pyrena. Albumen æquabile.—Arbusculæ epiphytæ Asiæ et Australiæ tropicæ, glabrae v. pilosæ, foliis duplicato- v. simpliciter digitatis, rarissime 1-foliolatis, foliolis integerimis v. dentatis, umbellulis racemoso-paniculatis, petalis viridibus v. sæpe purpureis v. sanguineis.—*Heptapleurum*, Gærtn. Fruct. ii. p. 472, t. 178, fig. 3. *Paratropia*, De Caud. Prodr. iv. p. 265, excl. sp. *Actinomorphe*, Miq. Comm. Phytogr. p. 102.

Hasskarl (Flora Beibl. 1842, p. 30) was the first who pointed out the propriety of restoring the genus *Heptapleurum*, quite overlooked by De Candolle when he established *Paratropia*, a genus in every respect identical with *Heptapleurum*, if we adopt the definition which he himself gives in the ‘Prodromus,’ and which excludes one of the species (*P. nodosa*) incorporated with it at that place, but belonging to the older genus *Polyscias*, Forst. The genus *Actinomorphe*, according to Miquel’s own showing (Ann. Lugd. Bat.), is identical with *Heptapleurum*. But I cannot admit *Parapanax*, Miq. which I have shown to belong, at least in part, to *Brassaia*, Endl. *Paratropia*, being absorbed by *Agalma*, *Heptapleurum*, *Polyscias*, *Brassaia*, and other genera, has no longer any existence, and in finally dissolving it, I shall show how the different species have been disposed of, viz. :—

35. *H. Cumingii*, Seem. n. sp.; foliolis 5 ellipticis v. ovato-ellipticis longe acuminatis integerimis 3-plinerviis; paniculis terminalibus pubescenti albido vestitis; drupis obovatis 5-locularibus.—Philippine Islands (Cuming! n. 800 et 1293).

36. *H. capitatum*, Seem.—*Paratropia capitata*, Wight et Arn. Prodr. p. 378; Walp. Rep. ii. p. 433.—Eastern parts of Bengal (Wight); Malacca (Griffith! n. 2708).

At first sight looks like a *Brassaia*, but flowers pedicellate and without a calyx. Inflorescence covered with stellate hairs. Leaflets in Griffith's specimen 3–4 inches long, having 15–22 veins on each side of the midrib.

To this genus must probably be referred *Paratropia subobtusa*, DCne. et Planch. Hort. Donat. p. 10 (*Sciadophyllum rotundifolium*, *Paratropia panduræfolia*, et *P. macrophylla*, Hort.), of which both the flowers and the native country are unknown.

VI. ON THE POLYPETALOUS GENERA WITH SEVERAL DISTINCT STYLES.

Under this heading are provisionally grouped together all those genera which, when the fruit is ripe, have several distinct, generally recurved styles. *Gastonia*, *Grotefendia*, and *Nesopanax* would have been inserted here, if I had not already treated of them under a previous heading.

CONSPECTUS GENERUM HEDERACEARUM POLYPETALARUM
STYLIS PLURIMIS (3-∞) .DISTINCTIS.

XX. *Gilibertia*. Pedicelli inarticulati. Flores ecalyculati, hermaphroditi. Petala 5-9, libera. Stamina 5-9. Drupa baccata, 5-7-pyrena. Albumen . . .—Arbores inermes Americæ australis tropicæ, foliis exstipulatis simplicibus, umbellis compositis.

XXI. *Fatsia*. Pedicelli inarticulati. Flores ecalyculati, hermaphroditi. Petala 5, libera. Stamina 5. Drupa baccata, 5-pyrena. Albumen . . .—Frutex inermis Japoniæ, foliis stipulatis simplicibus palmatim lobatis, umbellis paniculatis.

XXII. *Schefflera*. Pedicelli inarticulati. Flores ecalyculati, polygami. Petala 5, libera. Stamina 5. Drupa baccata, 5-10-pyrena. Albumen æquabile.—Arbores v. frutices inermes Polynesiæ tropicæ v. subtropicæ, foliis stipulatis digitatim compositis, umbellis racemoso-paniculatis.

XXIII. *Sciadophyllum*. Pedicelli inarticulati. Flores ecalyculati, hermaphroditi. Petala 5; libera v. calypratim cohærentia. Drupa exsuccea, 4-10-pyrena. Albumen æquabile.—Arbores v. frutices inermes Africæ et Americæ tropicæ, foliis stipulatis digitatim compositis, umbellis v. capitulis racemosis.

XXIV. *Pseudopanax*. Pedicelli articulati. Flores ecalyculati hermaphroditi. Petala 5, libera. Stamina 5. Drupa baccata, 3-5-pyrena. Albumen æquabile.—Arbores inermes Novæ Zelandiæ, foliis exstipulatis digitatim compositis, umbellis paniculatis.

XXV. *Oligoscias*. Pedicelli articulati. Flores calyculati, hermaphroditi. Petala 5, libera. Stamina 5. Drupa baccata, 5-pyrena. Albumen ruminatum.—Frutex inermis Madagascariensis, foliis exstipulatis imparipinnatis, umbellis simplicibus v. compositis.

XXVI. *Polyscias*. Pedicelli articulati. Flores calyculati, hermaphroditi. Petala 5-8. Stamina 5-8. Drupa baccata, 5-pyrena. Albumen . . .—Frutices v. arbusculæ inermes Asiæ et Polynesiæ tropicæ, foliis exstipulatis imparipinnatis, umbellis v. capitulis paniculatis.

XX. *GILIBERTIA*, Ruiz et Pavon. Pedicelli inarticulati. Flores ecalyculati, hermaphroditi. Calyx tubo obconico, limbo truncato v. obscure 5-9-denticulato. Petala triangularia 5-9, 1-nervia, libera,

æstivatione valvata. Stamina 5–9. Styli 5–7, connivent, demum recurvi (subpatentes, De Cand.). Ovarium 5–7-loculare, loculis 1-ovulatis. Drupa baccata, 5–7-angulata, 5–7-pyrena. Albumen . . .—Arbores Peruvianæ et Brasilienses, foliis exstipulatis simplicibus, integerrimis v. denticulatis, umbellis terminalibus compositis.—*Gilibertia*, Ruiz et Pav. Fl. Peruv. Prodr. p. 50, t. 8; Fl. Peruv. iii. p. 75, t. 312; De Cand. Prodr. iv. p. 256, exclud. sp. 2, 3, 4, 5, et 6.

1. *G. umbellata*, Ruiz et Pav. Fl. Peruv. iii. p. 75, t. 312; De Cand. Prodr. iv. p. 256.—*Wangenheimia umbellata*, Dietr. . . . *Ginnania umbellata*, Dietr. . . . *Aralia umbellata*, Pav. Herb. *Dendropanax umbellatum*, Dcne. et Planch. in Rev. Hortic. 1854, p. 107.—Forests of Muña, Peru (Pavon! in Mus. Brit.).

2. *G. Brasiliensis*, Seem. (sp. nov.); glabra; foliis longe petiolatis ovatis v. ovato-oblongis breviter acuminatis v. acutis integerrimis coriaceis, venis pinnatis parallelis, inferioribus haud crassioribus, umbellis terminalibus brevipedunculatis compositis paucifloris, calycis limbo truncato obscure 5–6-denticulato, petalis triangularibus 5–6, 1-nerviis, staminibus 5–6, stylis 5–6 conniventibus, demum recurvis, drupa baccata 5–6-angulata, 5–6-pyrena.—Ilhéos, Brazil (Moricand! n. 2095).

This may possibly be the second species of *Gilibertia*, indicated, but not described nor even named by Decaisne and Planchon as having been collected by Blanchet in Brazil, whose specimens I have not seen. *G. Brasiliensis* is in every respect a smaller species than *G. umbellata*. Petioles 2–2½ inches long, blade 3–3½ inches long, 1–1½ inches broad. Pedicels $\frac{1}{2}$ inch long.

Species exclusæ:

G. Naluga, De Cand. = *Leea staphylea*, Roxb.

G. palmata, De Cand. = *Trevesia palmata*, Visian.

G. paniculata, De Cand. = *Grotfendia paniculata*, Seem.

G. repanda, De Cand. = *Grotfendia repanda*, Seem.

G. saururoides, De Cand. = (?) *Osmoxylon Amboynense*, Miq.

XXI. SCHEFFLERA, Forst. *Pedicelli inarticulati. Flores ecalyculati, polygami. Calyx tubo obconico limbo minute 5-dentato. Petala 5, ovato-triangularia, 1-nervia, æstivatione valvata. Stamina 5; antheræ oblongæ. Ovarium 5–10-loculare, loculis 1-ovulatis. Styli 5–10, basi coadunati distincti. Drupa baccata, globosa, 5–10-pyrena. Albumen æquabile.*—Arbores vel frutices Novæ-Zelandiæ et insularum Vitiensium, inermes, glabræ, foliis alternis stipulatis digitatim 7–9-

foliolatis, foliolis longe petiolulatis oblongis v. ellipticis serrulatis, umbellis racemoso-paniculatis.—*Schefflera*, Forst. Gen. p. et t. 23 (1776). *Aralia* sp. auct.

Schefflera (not *Schæfflera*, as authors incorrectly write) contains two species, viz.

Styli 8-10	<i>S. digitata</i> .
Styli 5	<i>S. Vitiensis</i> .

1. *S. digitata*, Forst. Char. Gen. t. 20, Prodr. n. 146; Icon. (ined.) t. 94; Lam. Ill. Gen. t. 221.—*Aralia Schefflera*, Spr. Pug. Plant. pl. i. p. 28; De Cand. Prodr. iv. p. 258; Hook. fil. Fl. New Zel., i. p. 95, t. 22; A. Gray, Bot. Wilkes, p. 715; A. Rich. Fl. N. Zel. p. 283. *Aralia polygama*, Banks et Sol. mss.; Parkinson's Icones Plant. Nov. Zel. t. 105 et 106 (ined.).—New Zealand, throughout the islands, abundant (Banks and Solander! Forster! in Herb. Mus. Brit.).

2. *S. Vitiensis*, Seem.—*Aralia (Schefflera) Vitiensis*, A. Gray, Bot. Wilkes, p. 715, t. 89.—Viti Islands (Seemann! n. 203, Harvey! United States Expl. Exped.).

XXII. *FATSIA*, Dcne. et Planch. *Pedicelli* inarticulati. *Flores* ecalyculati, hermaproditi (vel polygami?). *Calyx* tubo obovato, 10-nervio, limbo subtruncato. *Petala* 5, ovata, acuta, 3-nervia, reflexa, libera, *æstivatione* valvata. *Stamina* 5; *filamenta* elongata; *antheræ* oblongæ-ellipticæ. *Ovarium* 5-loculare, loculis 1-ovulatis. *Styli* 5, omnino liberi, divergentes. *Stigmata* punctiformia. *Drupa* obovato-globosa, 10-nervia, 5-pyrena. *Albumen* . . .—Frutex inermis Japonicus, foliis stipulatis petiolatis palmato-5-7-lobis versus apicem serratis, 7-9-nerviis, coriaceis lanatis demum glabris; umbellis in paniculas terminales dispositis.—*Fatsia*, Dcne. et Planch. in 'Revue Horticole,' 1854, p. 105; Miquel in Ann. Lugd. Bat. i. p. 11. *Aralia* sp. auct.

1. *F. Japonica*, Dcne. et Planch. l. c. sine descript.—*Aralia Japonica*, Thunb. Fl. Japon. p. 128; De Cand. Prod. iv. p. 258; Banks, Icon. Select. Kämpf. t. 10; Regel, Gartenflora, 1863, t. 420.—Japan, in woods (Kämpfer! Thunberg! in Herb. Mus. Brit., Alcock! Wright! Oldham!).

Species exclusa:

Fatsia Mitsde, de Vris. (*Aralia Mitsde*, Siebold in Hort. Lugdun. Bat. Plant. Rar. 1854; Walp. Ann. p. 83; Linnæa, xxvi. p. 89. *Textoria Japonica*, Miq. in Ann. Lugd. Bat. i. p. 12. *Oreopanax*

Brownii, Witte in Fl. de Jard. de Pays Bat. 1861; Koch, Wochensch. iv. p. 223; Regel, Gartenfl. 1863, p. 146, t. 399.) = *Dendropanax Japonicum*, Seem.

XXIII. *SCIADOPHYLLUM*, P. Browne, Jam. 190. Pedicelli inarticulati. Flores ecalyculati, hermaphroditi. Calyx limbo 5-dentato v. subtruncato. Petala 5-10, ovato-triangularia, 1-nervia, aestivatione valvata, libera v. calyptratim cohaerentia, nunc plane concreta. Stamina 5-10; antherae oblongae v. subglobosae. Pollen globosum. Ovarium 4-10-loculare, loculis 1-ovulatis. Styli 4-10, erecti, liberi, demum recurvi. Drupa subexsucca, 4-10-costata, 4-10-pyrena, pyrenis 1-spermis. Albumen æquabile.—Arbores v. frutices Africæ et Americæ tropicæ, stantes v. scandentes et radicantes; foliis alternis, digitatim compositis, foliolis obsolete denticulatis v. integerrimis; stipulis in unam intra-axillarem concretis; umbellis v. capitulis in racemos dispositis; floribus albidis flavis roseis v. purpurascensibus.—Planch. et Linden, Araliaceæ, p. 19 (ined.). *Actinophyllum*, Ruiz et Pav. Fl. Per. Prodri. 51, t. 8; Fl. Peru, iii. p. 74. *Astropanax*, Seem. in Journ. of Bot, 1865, p. 176. *Araliæ et Paratropiæ* sp. auct.

Sciadophyllum differs from *Heptapleurum* and *Agalma* by its several free styles, from *Fatsia* by its strongly-ribbed fruit, and was founded by P. Browne on a Jamaica tree with digitate leaves, umbels arranged in racemes, a 5-toothed calyx, a corolla composed of 5 petals closely united into a calyptra, 5 stamens, 5 styles, and a 5-celled ovary. Ruiz and Pavon afterwards named the genus *Actinophyllum*, and added several Peruvian species, several of which, however, differ from the original type of the genus in having double the number of stamens and petals, and the petals so closely united that it is impossible to trace their individual limits, and the corolla might be appropriately described as monopetalous. At one time I thought it possible to restrict the genus *Sciadophyllum* to those species, the corolla of which consists, apart from all theoretical considerations, of one piece only; and, on that ground, I proposed for the African species the name *Astropanax*; but a close examination of all the materials at hand, enclosing the authentic specimens of Ruiz and Pavon, has convinced me that there is a gradual transition, from the *Sciadophylla* with free petals, petals closely united, but distinguishable with the naked eye, and petals with difficulty distinguished by the help of high microscopic powers, and reflected light, to petals so intimately joined as to

seem to form one solid piece. At a future time, when materials have more accumulated in our herbarium, and both flower and fruit of all the species shall have become known, it may, perhaps, be possible to use the corolla for generic purposes; as its nature is never obscure or doubtful, one is always able to say of how many parts the corolla of a species is composed.

* *Flores umbellati.*

1. *S. Brownei*, Spreng. Syst. i. p. 953.—*Aralia Sciadophyllum*, Swartz, Prodr. 55. *Hedera Sciadophyllum*, Swartz, Fl. Ind. Occ. i. p. 519. *Vitis heptaphylla*, Linn. Mant. p. 212.—Woods of Jamaica (Massou! in Herb. Mus. Brit.; Purdie! Alexander Prior! Marsh!).
2. *S. sphærocoma*, Benth. Bot. Sulph. p. 102.—Isle of Gorgona, west coast of trop. America (Barclay! in Herb. Benth.).
3. *S. pedicellatum*, Poir. Dict. vi. p. 176.—*Actinophyllum pedicellatum*, Ruiz et Pavon, Fl. Per. iii. p. 73, t. 308.—Mountains about Muña, Peru (Pavon! in Herb. Mus. Brit.).
4. *S. micranthum*, Planch. et Linden, Araliac. p. 20.—Ocaña, New Granada (Schlim, n. 1149). This is in Herb. Hook. under Schlim, n. 699, if I have correctly determined the species.
5. *S. villosum*, Planch. et Linden, Araliac. p. 20.—New Granada (Schlim, n. 44). Corolla unknown.
6. *S. Goudotii*, Planch. et Linden, Araliac. p. 21.—Bogotá and province of Pamplona, New Granada (Goudot! Schlim! n. 3 et 5).
7. *S. oxyanthum*, Planch. et Linden, Araliac. p. 21.—New Granada (Triana, n. 372).
8. *S. Quinduense*, De Cand. Prodr. iv. p. 261.—*Aralia Quinduensis*, H. B. et K. Nov. Gen. v. p. 8, t. 417, f. 1; Planch. et Linden, Araliac. p. 22.—Nomen vernac. "Pata de gallina." New Granada, Andes of Quindiu (Humboldt et Bonpland: Triana!), Antioquia (Purdie! Jervise!).
9. *S. decaphyllum*, Seem. (sp. nov.); glabrum; foliolis 9–10, obovato-oblongis retusis basi acutis, supra lucidis; floribus umbellatis; drupis 5-angulatis; stylis 5 recurvis persistentibus coronatis.—*Panax decaphyllum*, Sagot, Herb.—French Guiana (Sagot! n. 916).—Leaflets 3–4 inches long, $1\frac{1}{2}$ –2 inches broad, and their surface so remarkably shining that this species is at once distinguished by it. The specimens are in fruit only.

10. *S. Abyssinicum*; Steud. Nomencl. Bot. p. 537; Miq. Ann. Lugd. Bat. i. p. 26.—*Astropanax Abyssinicum*, Seem. in Journ. of Bot. 1865, p. 177. *Aralia Abyssinica*, Hochst. mss. in Schimp. Pl. Abyss. ed. i. n. 283; Rich. Tent. Fl. Abyss. i. 336; Walp. Ann. ii. p. 724.—Adoa, Abyssinia (Hochstetter!).

11. *S. elatum*, Seem.—*Astropanax elatum*, Seem. l. c. *Paratropia elata*, Hook. fil. in Journ. Linn. Soc. vii. p. 196.—Cameroon Mountains, 7500 feet above the sea (Mann!).—This species is very close to *S. Abyssinicum*, but appears to be sufficiently distinct.

12. *S. Barteri*, Seem.—*Astropanax Barteri*, Seem. Journ. of Bot. 1865, p. 177.—Glabrum; foliolis 5 longe petiolatis ovato- v. obovato-oblongis acuminatis basi rotundatis integerrimis coriaceis supra nitidis; umbellis racemosis 7-12-floris, bracteis ovatis acuminatis; drupis subglobosis 8-pyrenis.—Sugar Loaf Mountains, Niger (Barter! n. 2027) "A small tree," Barter.

13. *S. Baikici*, Seem.—*Astropanax Baikiei*, Seem. in Journ. of Bot. 1865, p. 177.—Glabrum; foliolis 5 (?) longe petiolatis elliptico-oblongis acuminatis in petiolum attenuatis integerrimis submembranaceis; umbellis racemosis 4-5-floris, bracteis lanceolatis; drupis ovatis 4-6-pyrenis (albis) acute angulatis.—Niger (Barter!).—"Twenty feet high, fruit white when ripe," Barter. I have named this species in commemoration of the late Dr. Baikie, the indefatigable explorer of the Niger, to whose expedition the late Mr. Barter was attached as botanist. The leaflets are larger than these of the preceding species, less coriaceous, and different in shape.

** *Flores capitati.*

14. *S. Manni*, Seem.—*Astropanax Manni*, Seem. in Journ. of Bot. 1865, p. 178. *Paratropia Manni*, Hook. fil. Journ. Linn. Soc. vi. p. 10.—Fernando Po. 5000 feet above the sea (Mann!).

15. *S. conicum*, Poir. Dict. vi. p. 746.—*Actinophyllum conicum*, Ruiz et Pav. Fl. Per. iii. p. 74, t. 309.—Peru (Pavon! in Herb. Mus. Brit., Mathews!).

16. *S. acuminatum*, Poir. Dict. vi. p. 746.—*Actinophyllum acuminatum*, Ruiz et Pav. Fl. Peru. iii. p. 74, t. 310.—Peru (Pavon! in Herb. Mus. Brit., Lechler! n. 2592).

17. *S. angulatum*, Poir. Dict. vi. p. 745, exclud. syn. Browne.—*Actinophyllum angulatum*, Ruiz et Pavon; Fl. Pernv. iii. p. 73, t. 307, non H. B. et K.—Peru (Pavon! in Herb. Mus. Brit.).

18. *S. Humboldtianum*, Dcne. et Planch. in Planch. et Linden, Araliac. p. 23.—*Actinophyllum angulatum*, H. B. et K. Nov. Gen. v. p. 92, non Ruiz et Pavon?—New Granada, between Pansitara and Almaguer (Humboldt and Bonpland).

19. *S. pentandrum*, Poir. Dict. vi. p. 747.—*Actinophyllum pentandrum*, Ruiz et Pavon, Fl. Peruv. iii. p. 75, t. 311.—Muña, Peru (Pavon! in Herb. Mus. Brit.).

20. *S. Trianæ*, Planch. et Linden, Araliac. p. 23.—New Granada (Triana! Jervise!).

I have seen the corolla of this plant, unknown to Planchon and Linden. It is hemispherical.

21. *S. heterotrichum*, Planch. et Linden, Araliac. p. 23.—New Granada, between Bogotá and Fusagasuga (Goudot! n. 1 B.).

22. *S. Mathewsi*, Seem. (sp. nov.) ; ramis foliisque glabris ; foliolis 8–10 oblongis v. obovato-oblongis, obtusis v. abrupte acuminatis, basi obtusis v. acutiusculis integerrimis coriaceis, supra nitidis subaveniis, subtus venis prominulis ; capitulis (Pisi maj. magnitudine) racemosopaniculatis, rachis ramisque villosa-puberulis, pedunculis angulatis ; corolla hemisphaerica puberula, apice depresso ; staminibus 5, antheris oblongis ; stylis 4–5 ; drupis obconico-4–5-angulatis, glabris.—Chachapoyas, Peru (Mathews! in Herb. Hook. et Bth.).

Leaflets $3\frac{1}{2}$ –4 inches long, $1\frac{1}{2}$ inches broad.

23. *S. ferrugineum*, Dcne. et Planch. in Rev. Hort. 1854, p. 107.—*Aralia ferruginea*, H. B. et K. Nov. Gen. v. p. 7. *Hedera ferruginea*, De Cand. Prod. iv. p. 264.—Between Saraguro and Oña (Humboldt and Bonpland).

24. *S. Sprucei*, sp. nov. Seem. ; foliolis 9 longe petiolulatis ovalioblongis acuminatis in petiolum attenuatis glabris, supra atroviridibus, subtus pallidioribus venis primariis subpurpurascensibus ; rachi pedunculisque tomento stellato deciduo vestitis ; floribus sessilibus ; capitulis (fœm. fructif.) parvis ; corolla ign. ; stylis 4 recurvis.—Tarapoto, Peru (Spruce! n. 4550).

I have named this species in honour of its discoverer, that enterprising South American explorer, Dr. Spruce.

Species indescriptæ.

25. *S. caudatum*, Dcne. et Planch. in Rev. Hort. l. c. (Herb. Dombey).

26. *S. Gayanum*, Dcne. et Planch. l. c.
 27. *S. ochroleucum*, Dcne. et Planch. l. c.

XXIV. PSEUDOPANAX, C. Koch, 'Wochenschrift,' 1859, p. 336.
Pedicelli articulati, apice incrassati. *Flores* ecalculati, polygami. *Calyx* tubo obconico, limbo obsolete denticulato. *Petala* 5, ovato-triangularia, 1-nervia, aestivatione valvata. *Stamina* 5; antheræ ovato-oblongæ. *Ovarium* 5-loculare, loculis 1-ovulatis. *Styli* 5, basi co-adunati, apice liberi. *Drupa* baccata, globosa, 5-pyrena. *Albumen* æquabile. *Frutices* v. arbusculæ Novæ-Zelandiæ, foliis alternis ex-stipulatis, simplicibus vel digitato-3-5-foliolatis, foliolis crassis coriaceis oblongis vel linearibus, sinuato-dentatis, umbellis racemosis v. paniculatis, terminalibus.—*Xylophylla*, Banks et Sol. mss. *Araliæ*, *Cussoniæ* et *Panacis* sp. Auct.

This genus is closely allied to *Cheirodendron*, Nutt., the relationship having been suggested by De Candolle; but in *Pseudopanax* the calyx

is not calculate, though the pedicel is swollen at the articulation, and the stigmas are not seated on a stylopodium but on five long styles, more or less free above the base.

C. Koch thought that *Panax simplex*, *anomalum*, *Gaudichaudii*, *platyphyllum*, *arborum*, *lineare*, *Edgerleyi*, and *Colensoi* might possibly belong to *Pseudopanax*. But if *P. crassifolium* be regarded as the type of the genus, those species, not being pentacarpous or having distinct styles, are inadmissible.

1. *P. crassifolium*, C. Koch, Wochenschrift, 1859, p. 366.—*Aralia crassifolia*, Banks et Sol. mss.; Parkinson's Drawings of New Zealand Plants, tab. 101, 102 (ined.); Hook. Icon. Plant. t. 583, 584; Hook. fil. Fl. New Zeal. i. p. 96. *Panax coriaceum*, Regel, Gartenflora, 1859, p. 45. *P. longissimum*, Hook. f. Handbook Fl. New Zealand, i. p. 102.—New Zealand (Banks and Solander; Forster! in Herb. Mus. Brit.).

This is a very variable plant. Parkinson, who accompanied Captain Cook in one of his voyages, has left drawings of two varieties which he gathered in New Zealand, the one having crimson, the other purple petioles. In recent years, Continental nurserymen have raised as many as twenty varieties, chiefly differing in the division, shape, and colour of the leaves. One of the oldest inmates of our gardens has been described as a separate species by Regel (1859) under the name of *Panax coriaceum*, and by Hooker f. (1863) under that of *P. longissimum*. It has a simple stem and a dark-green bark striped with brown; all the leaves are quite simple. Regel enumerates two varieties of *P. coriaceum*, viz. α . *latifolium* (leaves $\frac{1}{2}$ — $\frac{3}{4}$ of an inch broad, the older ones with rather larger teeth, *Aralia latifolia*, Hort.,) and β . *angustifolium* (*Aralia integrifolia*, Hort., leaves $\frac{1}{3}$ of an inch broad, with very small teeth). *Panax pentadactylon*, Dene. et Planch. Hort. Donat. p. 10 (*Aralia pentaphylla* et *A. quinquevulnera*, Hort.), and *P. tridactylon*, Dene. et Planch. l. c. (*Aralia triphylla* and *A. trifoliata*, Hort.), and *Aralia heteromorpha* are also garden varieties of this variable species.

2. *P. Lessoni*, C. Koch, Wochenschrift, 1859, p. 366.—*Panax (?) Lessoni*, De Cand. Prod. iv. p. 253. *Cussonia Lessoni*, A. Rich. Fl. N. Zel. p. 285, t. 32. *Aralia trifolia*, Banks et Sol. mss.; Parkinson's Drawings N. Zeal. Plants, t. 103, 104 (ined.). *Aralia Lessoni*, Hook. fil. Fl. N. Zel. i. p. 96.—New Zealand, in woods. (Banks and Solander! in Mus. Brit.)

XXV. *OLIGOSCIAS*, Seem. (gen. nov.)—*Pedicelli articulati. Flores calyculati, hermaphroditi. Calyx tubo turbinato, limbo 5-dentato. Petala 5, ovato-triangularia, 1-nervia, libera. Stamina 5, filamentis brevibus, antheris oblongis. Ovarium inferum, 4-5-loculare, loculis 1-ovulatis. Styli 4-5, erecti, omnino liberi, stigmatibus 2-fidis. Drupa baccata, subglobosa, 4-5-pyrena. Albumen ruminatum.*—*Frutex Madagascariensis, inermis, foliis exstipulatis pinnatis 2-3-jugis cum impari, petiolis supra canaliculatis, foliolis lateralibus sessilibus, terminali petiolulato, infimis subrotundatis substipulæformibus, supremis ovatis basi acutis v. acuminatis, 3-5-setaceo-dentatis; umbellis 5-8-floris, simplicibus v. compositis; pedicellis filiformibus (6-8 lin. long.); floribus drupisque albis.* Species unica :—

1. *O. Madagascariensis*, Seem. (sp. nov.)—Madagascar, Betroun, Tamatave and Antananarivo, on clay hills, 2000-3000 feet above the sea. (Meller! Lyall! n. 232, and others.)

A transverse section of the albumen presents almost the same cross-shaped figure as that of *Sciadopanax*, though not quite so regular as in that genus.

XXVI. *POLYSCIAS*, Forst. *Pedicelli articulati. Flores calyculati, hermaphroditi. Calyx tubo turbinato v. hemisphærico, limbo minute 5-8-dentato. Petala 5-8, vulgo 5, ovato-triangularia, 1-nervia, libera, æstivatione valvata. Stamina 5-8, vulgo 5, antheris oblongis. Ovarium 5-8, vulgo 5-loculare, loculis 1-ovulatis. Styli 5-8, erecti, angulati, demum recurvi. Drupa baccata, subglobosa, 5-angulata, 5-8-pyrena. Albumen . . . Frutices v. arbuseculæ Asiæ et Polynesiae tropicæ, inermes, glabræ, caule simplici v. parum ramoso, foliis exstipulatis imparipinnatis, foliolis ovato-oblongis v. subrotundatis subintegerrimis v. crenatis, floribus umbellatis v. subcapitatis, in paniculas amplas dispositis.—*Polyscias*, Forst. Gen. p. 63. t. 33 (1766); De Caud. Prod. vi. p. 257. *Eupteron*, Miq. in Bonplandia, 1856, p. 139. *Hederæ*, *Panacis*, et *Nothopanax* sp. Auct.*

In the specimen of *P. pinnata* figured and described by Forster, there was an excess of petals and stamens, and this, together with the imperfect way in which the whole genus has been characterized, probably accounts for Miquel's failing to recognize it, establishing the genus *Eupteron* (absolutely identical with Forster's *Polyscias*), and, mistaking Forster's species for a *Nothopanax*, describing it as *Nothopanax tricochleatum* in his 'Supplement of the Dutch East Indian

Flora.' Miquel, on that occasion, proposed to enlarge the generic character of *Nothopanax*, so that it includes 5-merous species, and those who follow him would have to call all *Nothopanaxia* species of *Polyscias*, *Polyscias* being the older name. But by combining dimerous and pentamerous ovaries in the same genus, we should once more return to the chaos from which the *Hederaceæ* are just emerging. De Candolle regarded *Polyscias nodosa* as a species of *Paratropia*, but it differs from the other species he associated it with by its pinnate leaves and long recurved styles. The above generic character has been worked out from Forster's original specimens and drawings preserved at the British Museum.

* *Flores pedicellati.*

1. *P. pinnata*, Forst. Gen. p. 64. t. 32; Prod. n. 518; Icon. (ined.) t. 298; De Cand. Prod. iv. p. 257.—*Polyscias umbellata*, Spreng. ex Steud. Nom. Bot. p. 546. *Panax (?) Hayneanum*, Wall. Cat. n. 4927, et. G. Don, Gen. Syst. iii. p. 383; Walp. Rep. ii. p. 429. *Panax Forsteri*, Dcne. et Planch. Rev. Hort. 1854, p. 105. *Nothopanax tricochleatum*, Miq. Fl. Ned. Ind. Suppl. i. p. 340. *Aralia Polyscias*, Spreng. in Erschein.—Tana (Forster! Anderson! in Mus. Brit.), Sumatra (Wallich! n. 4927, et in Herb. Soc. Linn. Lond., Teijsmann! Diepenhorst! in Herb. Hook.).

The leaflets being very apt to drop off in drying, have been described by G. Don as simple leaves.

2. *P. Papuana*, Seem.—*Gastonia Papuana*, Miq. Ann. Lugd. Bat. i. 5. New Guinea (Zippelius). Has generally 8 styles, but sometimes 12 by excess.

3. *P. acuminata*, Seem. mss.—*Hedera acuminata*, Wight, Icon. t. 1062. *Eupteron acuminatum*, Miq. in Bonplandia, 1856, p. 139; Fl. Ned. Ind. i. pars i. p. 762.—Nilgherries (Wight), Ceylon (Thwaites! Ceylon Plants, n. 4.).

Wight thinks *Hedera Jackiana*, Don, may possibly be identical with *Polyscias acuminata*, but that species belongs to *Arthrophyllum*; and Thwaites refers *Hedera parasitica*, Don, to *P. acuminata* as a synonym, but from Don's authentic specimen it proves to be a species of *Pentapanax* (*P. parasiticum*, Seem.).

** *Flores sessiles.*

4. *P. nodosa*, Seem. mss.—*Aralia nodosa*, Blum. Bijdr. p. 873.

Paratropia nodosa, De Cand. Prod. iv. p. 265. *Hedera nodosa*, Hassk. Tijdr. Nat. Gesch. x. p. 181. *Aralia umbraculifera*, Roxb. Fl. Ind. ii. 108. *Papaja sylvestris*, Rumph. Amb. i. p. 149. t. 53, fig. 1. *Eupteron nodosum*, Miq. in Bonplandia, 1856, p. 139.—Java and Moluccas (Blume), Philippine Islands (Cuming! n. 504 et 1053 in Mus. Brit.).

According to Roxburgh about twelve feet, according to Blume thirty feet high. Rumphius's figure is referred by De Candolle to *Bergera Koenigii*, a plant which has a very different inflorescence, whilst Roxburgh and Miquel referred it to this species. By some misprint, however, the latter author quoted plate 13, which represents a Palm.

VII. ON THE GENUS OREOPANAX.

I should not have been able to give a complete enumeration of all the species composing this large genus and *Sciadophyllum* if Dr. Planchon and M. J. Linden had not obligingly sent me the proof-sheets of a work on the plants of New Granada and Venezuela, written by them, which contain descriptions of the *Araliaceæ* of that region, and of which they allowed me to make a free use. I have not reprinted the descriptions, but merely referred to them under the title "Planch. et Lind. *Araliaceæ*." MM. Decaisne and Planchon have also kindly furnished me with information relative to several of the undescribed species enumerated by them in the 'Revue Horticole.' Botanists who meet with any species of *Oreopanax* in a wild state or cultivated in tropical gardens should endeavour to observe whether the flowers are really dicecious. Many *Araliaceæ* are polygamous, but some genera seem to be always hermaphrodite. Observations on these points are very much needed.

XXVII. OREOPANAX, Dene. et Planch. Revue Horticol. 1854, p. 108; Planch. et Lind. *Araliac.* p. 5 (*ined.*).—Flores diclines, dioici (?). Calyx limbo brevi subintegro v. obscure sinuato. Petala 5, rarissime 4, libera, aestivatione valvata. MASC.: Stamina petalorum numero; filamenta subulata, petalis longiora. Styli imperfecti 1–5, liberi v. inferne concreti. FEM.: Stamina sterilia 4–5, fertilibus masculis breviora. Styli 3–6, liberi v. plus minus concreti. Drupa baccata, saepius 4–5–6-pyrena, nunc abortu 1–2–3-pyrena. Albumen ruminatum.—Arbores v. frutices Americæ tropicæ, plerique Andicoli; foli' simplicibus integris v. varie divisis, stipulis in unam intra-axillarem petiolo plus minus adnatum parvam conuatis; floribus sessilibus, singulis bractea v. bracteolisque duabus stipitatis; capitulis paniculatis; ovario semper glabro.—*Aralia* et *Hederæ* sp. auct.

1. *O. capitatum*, Dcne. et Planch. in Rev. Hort. 1854. p. 108.—*Aralia capitata*, Jacq. Amer. p. 89. t. 61. *Hedera capitata*, Smith, Icon. Pict. p. et tab. 4. *H. multiflora*, De Cand. Prod. iv. p. 262. *Sciadophyllum capitatum*, Griseb. Fl. West Ind. p. 306.—The most widely diffused species of *Oreopanax*. Veraguas, on the volcano of Chiriquí (Seemann! n. 1648); Organ Mountaius, Brazil (Gardner! n. 5726); Peru (Dombey! Mathews!); Cariacica Islands (Jacquin! De Ponthieu!); Jamaica (Alex. Prior! W. Wright! Wilson! F. Massén! Marsh!); Central America (R. Shakespeare!); Belize (Marsh!); Venezuela (Fendler! n. 1320, 526; Funk and Schlim! n. 91; Ernst! n. 571); Mexico (F. Müller!); Martinique (Sieber! n. 94); N. Granada (Goudot! n. 5); Ecuador (Spruce! n. 5525). Called in Belize "Three-foot Jack," because the branches are seldom more than three feet long. (Marsh.) In Venezuela it is termed, according to Ernst, "Candelero."

2. *O. septemnervium*, Dene. et Planch. l. c.—*Aralia septemnervia*, H. B. et K. Nov. Gen. v. p. 3. *Hedera septemnervia*, De Cand. Prod. iv. p. 263.—New Granada (H. B. et K.).

3. *O. (?) catalpæfolium*, Dcne. et Planch. l. c. (ined.).—*Aralia catalpæfolia*, Willd. Herb. ex Rœm. et Schult. Syst. vi. p. 697. *Hedera catalpæfolia*, De Cand. Prod. iii. p. 263.—New Granada (Triana, n. 537; Humboldt and Bonpland).

4. *O. Mutisianum*, Dene. et Planch. l. c.—*Aralia Mutisiana*, H. B. et K. Nov. Gen. v. p. 1. *A. heterophylla*, Mutis, non Willd. *Hedera Mutisiana*, De Cand. Prod. iv. p. 262.—New Granada (Mutis, Humboldt and Bonpland, Linden! n. 1259; Goudot! n. 1; Hartweg! n. 935; Triana! 189; Purdie!).

5. *O. sessiliflorum*, Dene. et Planch. in Rev. Hort. l. c.—*Hedera sessiliflora*, Benth. Pl. Hartweg. p. 146.—Ecuador, near Loja (Hartweg! 816).

6. *O. avicenniæfolium*, Dcne. et Planch. in Rev. Hort. l. c.—*Aralia avicenniæfolia*, H. B. et K. Nov. Gen. v. p. 2. t. 2. *Hedera avicenniæfolia*, De Cand. Prod. iv. p. 263. *Aralia trachonanthifolia*, Willd. in Rœm. et Schult. Syst. vi. p. 698.—Ecuador (Humboldt and Bonpland; Spruce! n. 5999).

7. *O. Echinops*, Dcne. et Planch. in Rev. Hort. l. c.—*Hedera Echinops*, G. Don, Gen. Syst. iii. p. 394. *Aralia Echinops*, Schlecht., Linnaea, v. p. 174.—Mexico.

8. *O. macrocephalum*, Dcne. et Planch. in Rev. Hort. l. c. sine de-

script.; ramis petiolis rachibus pedunculisque ferrugineo-tomentosis demum glabratiss; foliis ovato- v. subrotundato-oblongis acuminatis dentatis v. grosse repando-dentatis, 3-nerviis coriaceis, supra glabris, subtus dense flavidoto-tomentosis; capitulis masculis globosis in racemos elongatos dispositis; bracteis ovatis acuminatis; petalis extus villosiusculis; capitulis fructiferis oblongis in racemos abbreviatus dispositis; baccis globosis stylis 5 liberis coronatis.—Province of Larecaya, Bolivia, in forests (Mandon! n. 571; Kelly! in Herb. Bth.) Petioles 3-4 inches long; blade of leaf 5-6 inches long, 3-4 inches broad; female flower-heads as large as a good-sized walnut. The plant here described must be *O. macrocephalum*, which M. Decaisne informs me is founded upon a specimen gathered by Weddell in the same locality as that collected by Mandon.

9. *O. Lechleri*, Seem. (sp. nov.); robustum; ramis petiolis rachibus pedunculisque ferrugineo-tomentosis demum glabratiss; foliis ovato-oblongis acuminatis, basi subcuneatis; integerimis v. hinc inde dentatis, 5-7-nerviis, supra glabris, subtus dense ferruginco-tomentosis capitulis fructiferis longe pedunculatis paucis; stylis 5-7; cæt. ign.—Gachapata, Peru (Lechler! n. 2286).—Leaves about a foot long, 4-5 inches broad. Fruiting flower-heads as large as a cherry.

10. *O. cordatum*, Planch. et Linden, Araliaceæ, p. 7. ined.—New Granada (Goudot! n. 6; Linden, n. 962; Purdie!).—Leaves sometimes 3-lobed in Purdie's specimens.

11. *O. Pavoni*, Seem. (sp. nov.); ramis petiolis rachibus pedunculisque dense fusco-tomentosis; foliis longe petiolatis ovatis v. subcordato-ovatis acuminatis 5-nerviis crasse coriaceis, supra stellato-puberulis demum glabratiss, subtus dense fusco-tomentosis; paniculis masculis amplis; capitulis globosis (*Pisi maj. magnitudine*); petalis 4 ovatis extus stellato-pubescentibus; fl. fœm. ign.—Peru (Pavon! in Mus. Brit.).—Petioles 4-5 inches long; blade of leaf 4-5 inches long, 3- $3\frac{1}{2}$ inches broad.

12. *O. Ecuadoriense*, Seem. (sp. nov.); foliis longe petiolatis ovatis 3-fidis, lobis divaricatis ovato-oblongis acuminatis irregulariter et grosse dentatis, basi obtusis, 3-nerviis crasse coriaceis, supra glabris, subtus cinereo-tomentosis; rachibus pedunculisque tomentosis; capitulis masc. ovatis v. oblongis; petalis 4 ovatis acuminatis, extus tomentosis; fœm. ign.—Western side of the Andes, above Guayaquil, Ecuador (Pavon! in Mus. Brit.).—Petiole 7 inches long, blade of leaf 7 inches long.

13. *O. Macleani*, Seem. ; ramis petiolis rachibus pedunculisque dense villosso-tomentosis ; foliis longe petiolatis ovatis apice 5-lobis, lobis ovato-triangularibus acuminatis integerimis v. hinc inde dentatis, 8-nerviis, supra glabris, subtus dense villosso-tomentosis ; capitulis masc. globosis Pisi maj. magnitudine; petiolis extus villosis ; fœm. ign.—Peru (Maclean! in Herb. Hook.).

14. *O. Sprucei*, Seem. (sp. nov.) ; ramis petiolis rachibusque albido-villoso-tomentosis ; foliis palmatim 3–5-fidis, lobis oblongis acuminatis dentatis, supra glabris, subtus albido-tomentosis ; capitulis masculis in paniculas amplas dispositis, Pisi magnitudine ; petalis 5 ovatis acuminatis, extus albido-tomentosis, demum glabratis ; fl. fœm. ign.—Nomen vernac. Ecuadorensse : Púma-máqui (*i. e.* pes tigris) teste cl. Spruce.—In stony places at the foot of Mount Tunguragira, Ecuador (Spruce! n. 5113).—“A tree 20–30 feet high, slightly branched; flowers white,” Spruce. Allied to *O. argentatum*.

15. *O. Mathewsi*, Seem. (sp. nov.) ; ramis petiolis rachibusque ferrugineo-tomentosis ; foliis palmatim 3–5-fidis, supra glabris, subtus sparse stellato-pubescentibus, demum glabratis ; fl. masc. in paniculas amplas dispositis; petalis extus glabratis ; fl. fœm. ign.—Chachapoyas, Peru (Mathews! in Herb. Bth.).

16. *O. Boliviense*, Seem. (sp. nov.) ; ramis petiolis rachibus pedunculisque ferrugineo-floccoso-villosis mox glabratis ; foliis palmatim 3–5-fidis, lobis spinuloso-dentatis 5–9-nerviis, demum utrinque glabris ; fl. ign. ; baccis glabris (*nigris*) stylis 5 coronatis.—Andes of Bolivia, prov. of Larecaja, in forests (Mandon! n. 569).

17. *O. discolor*, Dene. et Planch. l. c.—*Aralia discolor*, H. B. et K. Nov. Gen. v. p. 4. *Hedera discolor*, De Cand. Prod. iv. p. 263.—New Granada (Humboldt et Bonpland; Triana, n. 538). Peru (Lechler! n. 1974).

18. *O. argentatum*, Dene. et Planch. l. c.—*Aralia argentata*, H. B. et K. Nov. Gen. v. p. 4. t. 114. *A. heterophylla*, Willd. ; Rœm. et Schult. Syst. vi. p. 698, fide Kunth. *Hedera argentata*, De Cand. Prod. iv. p. 263.—New Granada (Humboldt et Bonpland).

19. *O. crassinervium*, Dene. et Planch. l. c.—*Aralia crassinervia*, H. B. et K. Nov. Gen. v. p. 5. *Hedera crassinervia*, De Cand. Prod. iv. p. 263.—New Granada (Humb. et Bonpl.).

20. *O. lancifolium*, Planch. et Linden, Araliaceæ, p. 8.—Venezuela (Linden! n. 1432, in Herb. Mus. Brit. et Hook.).

21. *O. fraternum*, Dcne. et Planch. Rev. Hort. l. c.; Planch. et Lind. Araliaceæ, p. 9.—Venezuela (Funk et Schlim, n. 1530).

22. *O. Horquetero*, Dcne. et Planch. Rev. Hort. p. 108; Planch. et Lind. Araliac. p. 9.—Nomen vernac. Horquetero.—Venezuela (Funk et Schlim! n. 1529).

23. *O. hypargyreum*, Dcne. et Planch. in Rev. Hort. l. c.; Planch. et Linden, Araliac. p. 10.—New Granada (Funk et Schlim, n. 1333).

What Decaisne and Planchon have named *O. hypoleucum* is, as Dr. Planchon tells me, this species,

24. *O. Trianæ*, Dcne. et Planch. in Rev. Hort. l. c.; Planch. et Linden, Araliac. p. 10.—Nomen vernac. Higueron.—New Granada (Triana! n. 375, Jervise! in Herb. Hook.).

25. *O. chryssoleucum*, Planch. et Linden, Araliac. p. 11.—Venezuela (Funk et Schlim).

26. *O. Cecropia*, Dcne. et Planch. in Rev. Hort. l. c.; Planch. et Linden, Araliac. p. 11.—New Granada (Schlim, n. 113).

27. *O. myriocarpum*, Dcne. et Planch. in Rev. Hort. l. c.; Planch. et Lindl. Araliac. p. 12.—Ibagué, New Granada (Goudot! n. 2, Holton!).

28. *O. floribundum*, Dcne. et Planch. in Rev. Hort. l. c.—*Aralia floribunda*, H. B. et K. Nov. Gen. v. p. 6, t. 416. *A. Humboldtiana* et *incisa*, Willd. in Rœm. et Schult. vi. p. 699, fide Kunth. *Hedera floribunda*, De Cand. Prodr. iv. p. 264.—New Granada (Humboldt et Bonpland, Triana! n. 2761, 2703).

29. *O. Humboldtianum*, Dcne. et Planch. in Rev. Hort. 1854, l. c.—*O. Bonplandianum*, Planch. et Linden, Araliac. p. 12. *Aralia ferruginea*, Linden, Cat. Hort. non H. B. et K.—Nomen vernac., fide Ernst, Yagrumo macho.—Silla de Caracas and Valle de Cobre, Venezuela (Fendler! n. 531, 532, 533, Birschel! Funk et Schlim! n. 1524 et 92, Ernst! n. 1118.)

According to information kindly supplied by M. Decaisne, the undescribed *O. Humboldtianum* is identical with *O. Bonplandianum* of Planchon and Linden. It is Bonpland's n. 646.

30. *O. coriaceum*, Dcne. et Planch. in Rev. Hort. l. c.; Planch. et Linden, Araliac. p. 13.—New Granada (Triana! n. 190).

Planchon and Linden quote Triana's n. 130, which is probably a misprint.

31. *O. Ocannense*, Dcne. et Planch. in Rev. Hort. l. c.; Planch. et

Linden, Araliac. p. 13.—Ocaña, New Granada (Schlim! n. 491, in Herb. Hook.).

32. *O. flabellatum*, Dcne. et Planch. in Rev. Hort. l. c.; Planch. et Linden, Araliac. p. 14.—New Granada (Schlim! n. 836, in Mus. Brit. et Herb. Hook.).

33. *O. brachystachyum*, Dene. et Planch. in Rev. Hort. l. c.—*O. brachybotryum*, Planch. et Linden, Araliac. p. 15.—New Granada (Triana, n. 737).

34. *O. brunneum*, Dene. et Planch. in Rev. Hort. l. c.; Planch. et Linden, Araliac. p. 5.—Antioquia, New Granada (Triana, n. 376, Jervise!).

35. *O. sclerophyllum*, Dene. et Planch. in Rev. Hort. l. c.; Planch. et Linden, Araliac. p. 15.—New Granada (Schlim! n. 114, in Herb. Hook.).

36. *O. jatrophæfolum*, Dene. et Planch. in Rev. Hort. l. c.—*Aralia jatrophæfolia*, H. B. et K. Nov. Gen. v. p. 6, non Lind. Cat. Hort. *Hedera jatrophæfolia*, De Cand. Prodr. iv. p. 264.—New Granada (Humboldt et Bonpland).

37. *O. Lindenii*, Dene. et Planch. in Rev. Hort. l. c. p. 108; Planch. et Linden, Araliac. p. 16.—*Aralia palmata*, Lind. Cat. Hort. non Willd.—New Granada (Schlim, n. 1725).

38. *O. Xalapense*, Dene. et Planch. in Rev. Hort. l. c.—*Hedera Xalapensis*, De Cand. Prodr. iv. p. 264. *Aralia Xalapensis*, H. B. et K. Nov. Gen. v. p. 8. *A. digitata*, Willd. in Rœm. et Schult. Syst. vi. p. 701, ex Kunth.—Mexico (Humboldt et Bonpland, Botteri! Jürgensen!) Veraguas (Seemann! n. 1170), Chiapas (Linden! 1651).

39. *O. bulbosum*, Dcne. et Planch. in Rev. Hort. l. c.; Planch. et Linden, Araliac. p. 17.—New Granada (Goudot, Triana).

IX. ON HEDERA CANARIENSIS AS AN IRISH PLANT.

(Plate III.)

The existence of *Hedera Canariensis* in Ireland has been so often asserted and denied that most botanists seem to look upon the plant as one of those phantom species which occasionally flit across the botanical forum. Before publishing my revision of the genus *Hedera**

* The genus *Hedera*, as now circumscribed, is very natural, and easily distinguished from all other *Hederaceæ* by its climbing and rooting branches, simple leaves, five petals and stamens, semi-inferior ovary, single style, and ruminant albumen. Dr. F. Müller recently referred to it an Australian species, which I cannot admit, as it has a completely inferior ovary and compound leaves. I hold it to be the type of a new genus, which may be briefly described as:—*Kissodendron*. Pedicelli articulati. Calycis limbus 5-dentatus. Petala 5, aestivatione valvata, in calyptram cohaerentia et tali modo v. tarde ex apice secedentia. Stamina 5. Stylus 1, elongatus. Drupa infera, baccata, 3-5-pyrena. Albumen ruminatum. Arbor glabra Novæ Hollandiæ; inermis, foliis pinnatis plurijugis, foliolis integrerrimis ovatis v. lanceolato-ovatis brevi-acuminatis, basi obtusa inaequilateris, pedunculis primariis elongatis, secundariis inferioribus oppositis, superioribus aliquot verticillatis, summis umbellatis, umbellulis 8-12-floris. Species unica, *K. Australianum*, Seem.—*Hedera Australiana*, F. Muell. Fragm. iv. p. 120. *Polyscias Australianana*, F. Muell. Coll. *Irvingia Australianana*, F. Muell. Fragm. v. p. 18.—Rockingham Bay, E. C. of Aus-

(Journ. of Bot. Vol. II. p. 303) I had made many inquiries about the subject, and looked at every book I could think of; nevertheless I was compelled to state that I had "not been able to examine any specimens of wild Irish Ivy," and "that our British Floras did not afford any information respecting it." With the help of Dr. D. Moore, of Glasnevin, whose kind aid no man of science ever invoked in vain, I am able to clear up much of what formerly appeared doubtful.

There is in gardens a very fast-growing, large-leaved plant, commonly called "Irish or Scotch Ivy" (*Hedera Hibernica v. Scotica hortulanorum*). This plant, as I understand the species, is one of the many varieties of *H. Helix*. There is, besides, a plant which gardeners call "Sharp-leaved Irish Ivy," and this I hold to be one of the varieties of *H. Canariensis*. It is figured in our Plate, occurs wild in Ireland, and is evidently the plant alluded to by Mackay in his 'Flora Hibernica.' Dr. Moore says of it:—

"The plant known in gardens as the Sharp-leaved Irish Ivy, I do not remember ever seeing myself in a wild state. I, however, saw it lately, growing at West Aston, Co. Wicklow, and Mrs. Acton, mother to the present proprietor, who has resided there during the last sixty years at least, told me, she remembers getting it from the late Mr. Hodgens, of Dunganstown, Co. Wicklow, about forty years ago, as a rarity he found somewhere in the neighbourhood of that place. I consider it to be the plant alluded to by the late Dr. Mackay in 'Flora Hibernica,' p. 135, who compares the leaves to those of *Passiflora caerulea*! and states it was found by Mr. Hodgens, and also on walls near Merrion. The latter place is about four miles from Dublin. I have no doubt plenty of additional information will be obtained concerning the plant, after the figure in the 'Journal of Botany' is published, but the foregoing are the only facts I am able to state at present about it."

A certain confirmation of *H. Canariensis* being an indigenous Irish plant is afforded by its general geographical distribution. Assuming it to belong to the Iberian types of our flora, and acting upon that assumption, I procured, through Dr. Welwitsch's kind offices, specimens of the *Hedera* growing in Portugal; and I was delighted to find it to be *H. Canariensis*, thus furnishing another proof of the correctness of the accepted theory of plant distribution. Specimens from the Rev.

tralia (Dallachy! comm. cl. F. Muell.). This new genus is allied to *Pentapanax*, Seem. (Journ. of Bot. Vol. II. p. 294), both having pinnated leaves and an arboreous habit, but they differ in the following points:—*Pentapanax*. Drupa exsucca. Albumen aquabile. India orient.—*Kissodendron*. Drupa baccata. Albumen ruminatum. Nov. Holl.

Mr. Lowe had already enabled me to pronounce the Madeira Ivy *H. Canariensis*; so that the geographical range is now pretty well ascertained, the species being found in the Canary Islands, Northern Africa, Madeira, Iberian peninsula, and Ireland.

I have not yet concluded my inquiries into the varieties of *H. Helix* and *Canariensis*; and should like to test certain characters more fully before using them for diagnostic purposes. For the present, it is sufficient to say that the characters derived from the stellate hair of the pedicels and calyx (the hair having 8 rays in *H. Helix* and from 13 to 15 in *H. Canariensis*) absolutely distinguish the two species. In *H. Helix* the rays are clearly in a single whorl; but under very high microscopic power it would seem as if in *H. Canariensis* there were two whorls, one placed above the other. But I have not been able to satisfy myself on this point, and if there be two whorls, perhaps some skilful manipulator may succeed in separating them.

Hedera Canariensis; foliis inferioribus cordatis v. 3-5-lobatis, floralibus cordatis v. ovatis acuminatis, integerrimis v. hinc inde grosse dentatis; umbellis in racemos v. paniculas dispositis, pilis pedicelli et calycis stellato-13-15-radiatis; drupis nigris.—*H. Canariensis*, Willd. in Berl. Mag. ii. p. 170. t. 5. fig. 1; Schult. Syst. v. p. 508. *H. Helix*, var. (?) *Canariensis*, De Cand. Prodr. iv. p. 261. *H. Helix*, Lowe, Fl. Mad. p. 376, non Linn. Sharp-leaved Irish Ivy, hortul.

H. corymbosa, Chois., conjectured to be a synonym, is, according to an authentic specimen obligingly communicated by M. Alph. de Candolle, a *Bixinea*, *Hydnocarpus corymbosus*, Seem.

EXPLANATION OF PLATE III., representing *Hedera Canariensis*, from garden specimens kindly communicated by Dr. D. Moore.—Fig. 1, a flower-bud; 2, a flower open; 3, a cross section of ovary; 4, the stellate hair found on pedicels and calyx:—all magnified. At the back one of the lower leaves.

X. ON THE GENERA TORICELLIA, DECOSTEA, AND ADOXA.

(TAB. IV.)

The monotypic genus *Toricellia* was established by De Candolle (Prodr. iv. p. 257) upon a plant of the Nepal mountains, which Wallich distributed under the name of *Sambucus* (?) *tiliaefolia*. At first sight the plant has some points which certainly do remind us of *Sambucus*; the pith of the stem and branches is thick and spongy, as in Elder-

trees, and the flowers have somewhat the look of those of *Sambucus*. But the corolla is not monopetalous, nor imbricate in aestivation; it consists, on the contrary, of 5 petals, induplicate in aestivation,—characters removing it entirely from *Caprifoliaceæ*. De Candolle placed *Toricellia* in *Hederaceæ*, but in that Order it cannot be retained, on account of its induplicate petals, which are so closely united to the calyx that, unlike those of genuine *Hederaceæ*, they never fall off, nor can they be separated from the organ they adhere to, without tearing them. Nor does the nature of inflorescence or the leaves in any way accord with that of *Hederaceæ* proper. In finally rejecting *Toricellia* from the Order, the question is where should it be referred to. In *Umbelliferae* proper we have induplicate petals, but the inflorescence and 3-4-merous fruit are against an admission into that Order, and even if the widest interpretation is put upon the adhesion of the calyx and corolla of *Toricellia*, we could not but own that the *Cucurbitaceæ* have a differently-constructed corolla, which renders impossible any incorporation of the genus with that Order, though *Sicyos*, with its pendulous ovules, may invite an examination into possible degrees of relationship. *Halorageæ*, as now circumscribed, rather than *Corneæ*, to which Bentham and J. Hooker refer it, seem to offer the only suitable place, and I would range the genus next to *Loudonia*, with which it agrees in the aestivation of the corolla, and somewhat in inflorescence. The special claims of *Toricellia* for admission into *Halorageæ* rest upon its didymous flowers, induplicate petals, and tetramerous fruit.* Most specimens of *Toricellia* contained in herbaria were distributed by Wallich, and had, in almost all instances, male flowers only. The female flowers are still unknown, but Griffith gathered branches with fruit nearly ripe, and from them, by the courtesy of the late Sir W. Hooker, our Plate (n. 4) has been made. In the printing of the plate a line of fig. 1 has not come out satisfactorily, making it appear as if calyx and corolla were merged in the manner of *Cucurbitaceæ*, whilst in the specimens the calyx-limb can be traced distinctly all round; the teeth of the calyx ought also to have been drawn less blunt.

TORICELLIA, De Cand. Prodr. iv. p. 257; Endl. Gen. n. 4557;

* At my suggestion Professor Gulliver was induced to investigate *Toricellia*, and he finds it destitute of raphides, as is *Hippuris* and the other *Haloragineæ* he has examined. "This character is the more remarkable," he says, "because the very next Order under which *Hippuris* used to be placed, abounds in raphides."

Benth. et Hook. Gen. i. p. 952. Flores dioici. Masc.: Calycis margo 5-dentatus. Petala 5, obovato-oblonga, cucullata, cum lacinula inflexa, membranacea, persistentia, aestivatione induplicata. Stamina 5, filamentis brevissimis; antheræ oblongæ, 2-loculares, longitudinaliter dehiscentes; pollinis granula globosa. Discus planiusculus. Ovarium rudimentarium. Fœm. Calyx tubo cum ovario connato, limbo supero 3-5-lobo. Corolla nulla. Stamina nulla. Discus inconspicuus. Ovarium 4-, v. abortu 3-loculare, loculis 1-ovulatis, ovulis pendulis. Styli 4 v. 3, liberi, apice 2-fidi, stigmatosi. Drupa ovata, 3-4-angulata, calycis limbo coronata, 3-4-locularis. Semina linearia, solitaria, pendula.—Arbor parva, ramosa, ramis teretibus crassiusculis late medullosois, foliis exstipulatis alternis deciduis simplicibus cordato-subrotundis v. subquinque-lobatis, palmatim 5-7-nerviis, grosse et acute dentatis; paniculis terminalibus ∞ -floris, floribus albidis, masculis pedicellatis, foemineis sessilibus, drupis parvis (purpurcis).—Species unica:—

1. *T. tiliæfolia*, De Cand. Prodr. iv. p. 257. (Tab. Nostr. n. 4.)
Sambucus (?) tiliæfolia, Wall. Cat. n. 483. Nepal (Wallich!), Bootan (Griffith!), Sikkim (J. D. Hooker!).

EXPLANATION OF PLATE IV., representing *Toricellia tiliæfolia*, from specimens of Wallich and Griffith. Fig. 1. A male flower in bud. 2. A male flower open. 3. A 3-merous ovary. 4. A tetramerous fruit not quite ripe. 5 and 6. Cross and transverse sections of the same, all magnified.

Décostea, a Peruvian genus of Ruiz and Pavon, has been referred by Bartling to *Juglandaceæ* with a mark of doubt, but it has lately been identified with *Griselina*, Forst. (*Pukateria*, Raoul). By Endlicher (Gen. n. 4576) it is regarded as allied to *Corneæ*. The petals of the male flowers are imbricate. It seems to me to be a genus which might also be referred with propriety to *Haloragineæ*. The female flowers are, in some species, without petals and stamens, as those of *Toricellia* are.

Adoxa still lingers in most of our European Floras in *Hederaceæ*, though it was shown more than thirty years ago, by J. Rœper (see Meisner, Gen. Comm. p. 111) to be intimately related to *Sambucus*, Linnæus and Jussieu referred it to *Saxifrageæ*, near *Chrysosplenium*; Adanson to *Portulaceæ*, placed by him between *Cactæ* and *Saxifrageæ*; and De Candolle, Bartling, Lindley, Endlicher, Fries, Brongniart, Decaisne, and others, to *Araliaceæ*. Payer made *Adoxa* the type of a distinct Natural Order, which he thought more allied to *Sambucineæ*.

than *Hederaceæ*; and Agardh (*Theoria*, p. 77), who also regards it as a separate Order, looks upon the *Adoxæ* as “*Ranunculaceæ* verticilsi omnibus floralibus clausis, partibus ideo (!) numero definitis arctiusque conjunctis;” which reminds us of the views of Caspar Bauhin, who named *Adoxa* “*Ranunculus nemorosus, Muscatellina dictus.*” In 1860, Professor Rœper published a critique of parts of Agardh’s ‘*Theoria*,’ in his well-known ‘*Preconceived Botanical Opinions Defended,** in which he shows convincingly that on this point Agardh’s views are erroneous, and that *Adoxa* does not constitute a separate Natural Order allied to *Ranunculaceæ*, but must retain its place near *Sambucus*, where he put it years ago.

XI. ON THE GENERA WITH ARTICULATED PEDICELS AND DIMEROUS OVARY.

There are only three genera which come under this heading, *Sciadopanax*, *Macropanax*, and *Nothopanax*, the two former of which have already been treated upon; and they differ by the following characters:—

XVII. SCIADOPANAX. Stigmata 2, stylopodio conico imposita. Albumen ruminatum.—Arbor Madagascariensis; foliis impàripinnatis.

XI. MACROPANAX. Stylus 1, elongatus. Albumen æquabile.—Frutices Indiæ orientalis; foliis digitatis.

XXVIII. NOTHOPANAX. Styli 2–3, elongati, distincti. Albumen æquabile.—Arbores v. frutices Asiæ, Africæ, et Australiæ; foliis simplicibus v. pinnatim digitatim compositis.

XXVIII. NOTHOPANAX, Miq. in Bonplandia, 1859, p. 139, et Fl. Ned. Ind. vol. i. pars i. p. 765. Pedicelli articulati. Flores calyculati, polygami. Calycis tubus obconicus; limbus minute 5-dentatus. Petala 5, aestivatione valvata. Stamina 5. Styli 2 (per excessum 3), dein divergentes, fere ad basin usque facie interiore stigmatosi. Ovarium 2-, rarissime 3-loculare. Drupa didymo-compressa v. rarissime 3-gona. Albumen æquabile.—Frutices sæpius anisati; foliis decompositis, pinnatis digitatis v. simplicibus; petiolis basi stipulatim dilatatis.

* “*Vorgefasste Botanische Meinungen, vertheidigt von Dr. Johannes Rœper, Professor in Rostock.*” Rostock; 1860. 8vo. A book displaying a profound knowledge of the vegetable kingdom.

tatis; umbellis decompositis v. racemoso-paniculatis, floribus parvis albidis v. viridiusculis.—*Panacis*, *Araliæ*, et *Paratropiæ* sp. auct.

Nothopanax was established in 1856 by Miquel in the ‘Bonplandia’ for a set of shrubby *Hederaceæ* having articulate pedicels, polygamous 5-androus flowers, and a two-celled ovary. The generic character there given was admitted by him, unaltered, in his ‘Flora of Dutch India;’ but in the Supplement of that work he amplified it so far as to admit a *Hederacea* with 5–7 styles, which he named *N. tricocheatum*. In another more recent publication (Ann. Mus. Lugd. Bat. vol. i.), he rejects the genus altogether, and refers all the species once more to the old Linnaean genus *Panax*. I think *Nothopanax* ought to be upheld, and be restricted to the dicarpous (by excess tricarpous) species. The 5-carpous plant Miquel referred to it I consider to *Polyscias pinnata*, Forster. With *Panax*, as I understand the genus, *Nothopanax* has but distant relationship. The genus now comprises twenty-one species, but it is quite possible that some of them will have to be rejected when better specimens can be examined. I more than half suspect that *N. (?) obtusum*, of which I have not seen a specimen, may belong to my new genus *Heteropanax*, which is founded upon the East Indian *Panax fragrans*, Roxb. What I have seen in herbaria under the name of *Panax pinnatum*, Lam., is certainly a species of *Arthrophyllum*, a genus easily known by its 1-celled ovary; and Miquel’s description of “*Panax pinnatum*,” given in the Annales above quoted, must refer to a different plant, perhaps a genuine *Nothopanax*. I have also my suspicion about *N. cochleatum* (known to me only from books). It has simple leaves, whilst all the other species of the genus have compound ones. Most of the species have a very strong smell of aniseed and celery,—hence the name of “Celery-tree” is given to *N. elegans*, Seem., by the Queensland colonists.

* *Folia decomposita tripinnata.*

1. *N. fruticosum*, Miq. in Bonpl. 1856, p. 139; Fl. Ned. Ind. l. c. p. 765.—*Panax fruticosum*, Linn. Spec. p. 1515; Wight, Icon. t. 573. *Scutellaria tertia*, Rumph. **** *Folia simplicia*.

21. *N. cochleatum*, Miq. in Bonplandia, 1856, p. 139, et Fl. Ned. Ind. I. c. p. 766.—*Aralia cochleata*, Lam. Dict. vol. i. p. 224. *Panax cochleatum*, De Cand. Prod. iv. p. 255. *Panax scutellaroides*, Rein. in Blume, Bijdr. p. 888. *Panax conchifolium*, Roxb. Fl. Ind. vol. ii. p. 77. *Scutellaria prima*, Rumph. Amb. vol. iv. p. 75, t. 31.—Indian Archipelago.

Species exclusæ.

N. (?) pinnatum, Miq.=*Arthrophyllum*, sp.

N. tricochleatum, Miq.=*Polyscias pinnata*, Forst.

XII. ON THE GENERA WITH INARTICULATE PEDICELS, DIMEROUS OVARY, AND RUMINATE ALBUMEN.

Under this heading belong *Heteropanax* and *Cussonia*, differing in the following absolute characters:—

XXIX. *Heteropanax*. Styli 2, liberi, demum divaricati. Drupa exsuccea, compressa.—Arbor Indica, foliis impari- v. supradecomposite pinnatis, umbellis paniculatum dispositis.

XXX. *Cussonia*. Styli 2–3, basi connati. Drupa baccata, subglobosa.—Arbores Africæ tropicæ, foliis palmatis v. digitatis; floribūs umbellatis, racemosis v. spicatis.

XXIX. HETEROPANAX, Seem. Fl. Vit. p. 114, in adnot. Pedicelli inarticulati. Flores ecalyculati, hermaphroditici. Calyx tubo obconico, limbo minute 5-dentato. Petala 5, ovata, 1-nervia, aestivatione valvata. Stamina 5. Ovarium 2-loculare, loculis 1-ovulatis. Styli 2, liberi, demum divaricati. Drupa exsuccea, didyma, compressa, 2-pyrena. Albumen ruminatum.—Arbuseula inermis Indiæ orientalis, foliis alternis simpliciter impari- v. supradecomposite pinnatis, foliolis petiolulatis ovatis acuminatis integerrimis, umbellis paucifloris paniculatis, pedunculis pedicellis calycibusque stellato-tomentosis, floribus odoratis.—*Panacis* sp. auct. Species unica :

1. *H. fragrans*, Seem. l. c.—*Panax fragrans*, Roxb. Cat. Cale. 21; De Cand. Prodr. vol. iv. p. 254, excl. syn. Don.—Bootan (Griffith, n. 2073), Kumaon (Strachey et Winterbottom !), Sikkim, 2–4000 feet (Hooker fil. et Thomson !), Khassia (Hooker fil. et Thomson !), Calcutta Bot. Garden (Wallich ! n. 4929 b), Assam plants (Jenkins !)—Very variable in foliage, some leaves being scarcely a foot long, others exceeding 4–5 feet in length, with petioles 2 feet and more. Don's *Hedera fragrans*, referred with a mark of doubt to this species by De Candolle, is *Pentapanax Leschenaultii*, Seem., a common Nepal plant.

XXX. CUSSONIA, Thunb. Nov. Act. Ups. iii. p. 212; Nov. Gen. i. p. 11.—Pedicelli inarticulati. Flores ecalyculati, hermaphroditi. Calyx tubo obovato, limbo 5–7-dentato v. truncato. Petala 5–7, libera, aestivatione valvata. Stamina 5–7. Ovarium 2- v. per excessum 3-

loculare, loculis 1-ovulatis. Styli 2 v. per excessum 3, basi connati. Drupa baccata, globosa, leviter compressa, 2- v. per excessum 3-locularis. Albumen ruminatum.—Arbores v. frutices Africæ tropicæ v. subtropicæ, inermes; foliis alternis palmatis v. digitatim 5–9-foliolatis, foliolis simplicibus v. compositis (lomentaceis); floribus umbellatis, racemosis v. spicatis.

This genus is allied to *Sphærodendron*, from which it differs chiefly by its ruminant albumen; and it is possible that some *Cussonias* will have to be transferred to it when their fruit shall have become known. To restrict *Cussonia* to the species with spicate flowers, as Miquel wishes to do, appears to me impracticable.

* *Folia palmata.*

1. *C. Natalensis*, Sond. in Sond. et Harv. Fl. Cap. ii. 561.—Natal (Gueinzius; Gerrard! in Mus. Brit.).

2. *C. Gerrardii* (sp. nov.), Seem. mss. in Mus. Brit.; glabra; foliis palmato-5-lobis, lobis ovatis longe acuminatis glanduloso-inciso-serratis, 5-nerviis, subitus reticulatis v. supremis ovato-acuminatis; umbellis paniculatim dispositis, paniculis axillaribus.—Natal (Gerrard! in Mus. Brit.).

3. *C. arborea*, Hochst. mss. ex A. Rich. Tent. Fl. Abyss. i. 356, p. 58; Walp. Ann. ii. p. 723.—Abyssinia (Schimper! in Herb. Hook.).

** *Folia digitata.*

4. *C. umbellifera*, Sond. Linnæa, xxiii. p. 49; Walp. Ann. ii. p. 123; Harvey et Sond. Fl. Cap. ii. p. 570; Dietr. Fl. Univ. fasc. 9 (1856), t. 90.—*C. paniculata*, E. Mey. non Eckl. et Zeyh.—Natal (Drége! Sanderson! Sutherland! Gerrard!).

5. *C. (?) Bojeri* (sp. nov.), Seem. mss. in Mus. Brit.; glabra; foliis 3-foliolatis, foliolis linear-lanceolatis acutis, basi connatis; umbellis paucifloris in paniculas axillares dispositis, ovario 2-loculari; fruct. ignot.—Madagascar (Bojer! Blackbourn!). Ripe fruit being unknown, the genus is somewhat doubtful.

6. *C. thyrsiflora*, Thunb. Nov. Act. iii. t. 12; De Cand. Prodr. iv. p. 255.—*C. thyrsoida*, Pers. Euch. i. p. 98.—Cape of Good Hope (Fr. Masson! Roxburgh! in Mus. Brit.; Sir F. Gray! Zeyher! Burchell! in Herb. Hook.).

7. *C. calophylla*, Miq. in Ann. Sci. Nat. ser. 3, vol. i. p. 36 (1844); Walp. Rep. v. p. 925.—*C. Kraussi*, Hochst. in Flora (Ratisb.), 1834, p. 431; Walp. Rep. v. p. 925. *Sciadophyllum Comorense*, Boj. mss.—Natal.

(Gueinzius !), Orange Free State (Cooper !), Comoro Islands (Bojer !), Mohely (Boivin !).—Miquel's name seems to have the priority by a few months over Hochstetter's. In leaf often resembling *C. thyrsiflora* and *C. paniculata*.

8. *C. Kirkii* (sp. nov.), Seem. ; arborea ; foliis digitatim 9-foliolatis, foliolis ovalibus longe acuminatis basi attenuatis, supra venulis depresso, subtus venulis reticulatis elevatis ; floribus spicatis.—Moramballa, South Africa (Kirk !). “Tree, about 20 feet high ; leaves at the extremities of the branches. Stem, when cut, yields a gum. Flower-spikes numerous from amongst the leaves” (Kirk, ms.). Named in honour of its discoverer, Dr. Kirk, and allied to *C. arborea*, from which it differs by its truly digitate leaves, *C. arborea* having deeply divided palmate ones.

9. *C. Barteri* (sp. nov.), Seem. mss. in Herb. Kew. ; foliis digitatim 5-foliolatis, foliolis subcuneato-ovatis acuminatis integerrimis glabris ; floribus spicatis, spicis tomensis ; drupis baccatis (albis).—Dry rocky hills, Niger River (Barter ! in Herb. Hook.).

10. *C. spicata*, Thunb. Nov. Act. Upsal. iii. p. 212, t. 13 ; De Cand. Prodr. iv. p. 255.—*C. triptera*, Colla, Hort. Rip. 43, t. 26.—Caffraria and Cape of Good Hope (Niven ! F. P. Oldenburg ! in Mus. Brit. ; Drége ! in Herb. Hook.), Tschirandzura (Kirk !).

11. *C. paniculata*, Eckl. et Zeyh. n. 226 ; Sond. et Harvey, Fl. Cap. ii. p. 569.—Cape of Good Hope (Drége ; Zeyher ! n. 746 ; Burke !), Natal (Gerrard ! 1265), Basuta Land (T. Cooper !).

Species exclusa.

C. Lessoni, A. Rich.=*Pseudopanax Lessoni*, C. Koch.

XIII. ON THE GENUS RAUKANA.

XXXI. RAUKANA, gen. nov.—Pedicelli inarticulati. Flores ecalyculati, hermafroditi. Calyx tubo obconico, limbo 5-dentato. Petala 5, ovata, aestivatione valvata. Stamina 5. Ovarium 2- per excessum 3-loculare, loculis 1-ovulatis. Styli 2-3, basi connati, apice recurvi, intus stigmatosi. Drupa ovata, subcompressa v. 5-angulata, 2-3-locularis, loculis 1-spermis. Albumen—Arbor Novæ-Zelandiæ, 20-40-pedalis ; foliis exstipulatis, oppositis v. alternis, 1- v. 3-folio-latis, foliolis oblongis v. linearis-lanceolatis integerrimus v. pinnatifidis,

membranaceis lucidis; umbellis terminalibus v. axillaribus, involucratis.

1. *R. Edgerleyi*, Seem.—*Panax Edgerleyi*, Hook. fil. Fl. N. Zeal. i. 94, et Handbook, p. 101. Nomen vernaculum N. Zelandicum, teste Hooker, “Raukana.”—Mountainous regions of the Northern and Middle Islands of New Zealand (Edgerley! Colenso! Bidwill! Hector! in Herb. Hook.).

According to Edgerley, the natives rub their bodies with the fragrant leaves of this tree, whence the name.

XIV. ON THE GENUS TREVESIA.

XXXII. *TREVESIA*, Visiani, Mem. della Reale Acad. della Sc. di Torino, ser. ii. tom. iv. p. 262; C. Koch, Wochenschrift, 1859, p. 67; Walp. Rep. v. p. 226; Miq. Ann. Lugd.-Bat. i. p. 10. (*Actinanthe*, sect. *Sciadophylli*, Miq. Comm. Phyt. p. 102.)—Pedicelli inarticulati. Flores ecalyculati, polygamо-monoici. Calyx tubo brevi-turbinato v. ellipsoideo-urceolato, limbo brevissimo integerrimo v. obsoletissime 8-10-denticulato, in fructu irregulariter crenulato. Petala 10, abortu pauciora, ovato-linearia v. ovato-triangularia, basi plus minus connata, aestivatione valvata. Stamina petalorum numero; filamentis breviusculis; antheræ ovatis, aestivatione biserialiter imbricata. Stylus 1; stigma 10-radiata. Ovarium 10- v. abortu 8-4-loculare, loculis 1-ovulatis. Drupa exsucca, stylo coronata, 10-4-pyrena, pyrenis chartaceis ligneis. Semina valde compressa; albumen æquabile; cotyledones lanceolatæ.—Frutices v. arbores Asiae tropicæ, aculeatæ, pube stellata; foliis amplis palmatilobis, lobis serratis v. pinnatifidis; umbellis in paniculos terminales dispositis, floribus viridiusculis.

Allied to *Reynoldsia*, from which it differs in habit, shape of the petals, ovate anthers, stigmas seated on an elongated style, and ovary not having more than 10 cells.

1. *T. Sundaica*, Miq. in Bonplandia, 1856, p. 137; Fl. N. Ind. vol. i. pars i. p. 747; Ann. Lugd.-Bat. i. p. 11; Regel, Gartenflora, 1864, t. 438.—*Sciadophyllum palmatum*, Bl. Bijdr. p. 875; De Cand. Prodr. iv. p. 259. *Brassaia palmata*, Dcne. et Planch. in Rev. Hort. 1854, p. 106. *Aralia Reinwardtiana*, Steudl. Nom. Bot. i. p. 119 (errore typog. “Reinwoldiana”). *A. palmata*, Reinw. (non Linn. nec Willd.).—Java.

2. *T. palmata*, Visiani, l. c.; C. Koch, l. c. pp. 67 et 371.—*Gastonia palmata*, Roxb. Cat. Calc. 33; Lindl. Bot. Reg. t. 894. *Gilibertia palmata*, De Cand. Prodr. iv. p. 256. *Aralia palmata*, Hort. *A. dubia*, Spreng. fide Steudel. *Hedera ferruginea*, Wall. Cat. n. 4909.—India (Wallich !, n. 4910), Sikkim (Hooker et Thomson !), Calcutta Bot. Garden (Roxburgh !, n. 273, in Mus. Brit.).

3. *T. Molluccana*, Miq. in Bonplandia, 1856, p. 137; Fl. N. Ind. l. c. p. 478, et Ann. Lugd.-Bat. p. 220.—*Aralia (?) palmata*, Lam. Dict. i. p. 224; De Cand. Prodr. iv. p. 258; Rumph. Amb. iv. t. 43.—Moluccas.

May be identical with *T. palmata*, Vis.

4. *T. Zippeliana*, Miq. in Ann. Lugd.-Bat. p. 11.—*Eschweileria palmata*, Zippel, Herb. et mss.—Amboina (Zippelius).

“ *T. Molluccanæ*, Miq., simillima, sed ovario drupisque 4-locularibus cæt. sui juris, ab Zippelio tanquam proprii generis typus in mss. adumbrata ” (Miquel).

5. *T. insignis*, Miq. Ann. Lugd.-Bat. i. p. 220; petiolo aculeato, aculeis mollibus sparsis subfasciculatisque; foliis amplis digitato-7-partitis, lobis infimis minoribus, 3 mediis subæqualibus, omnibus præter basin attenuatam apicemque pinnatifidis spinuloso-serratis, pergamaceo-chartaceis glabris, nervis lobos primarios intrantibus validis utrinque exsertis; umbellis 5-floris; drupis 5-angulatis.—Bantjan, Moluccas (Teijsmann), New Guinea (Hinds ! in Herb. Benth.).

There is only one indifferent specimen in Bentham's Herbarium, to which he alluded in Lond. Journ. of Bot. ii. p. 222.

XV. ON THE GENUS CHEIRODENDRON.

XXXIII. **CHEIRODENDRON**, Nutt. mss. in Herb. Mus. Brit. (gen. nov.). Pedicelli articulati, calyculati, calyculo dentato v. subfimbriato. Flores polygami. Calycis tubus obpyramidalis, 3- v. 4-5-angulatus; limbus truncatus, minute 5-dentatus. Petala 5, ovato-triangularia, libera, æstivatione valvata. Stamina 5; antheræ 2-loculares. Ovarium 5- v. 4-3-loculare, loculis 1-ovulatis. Stigmata 5 v. abortu 4 v. 3, styllopodio imposita. Drupa carnosa, 3-5-angularis, 3-5-pyrena. Albumen corneum, æquabile.—Arbores Hawaienses et Chilensis, inermes, foliis exstipulatis oppositis v. alternis, digitato-3-5-foliatis, foliolis ovatis v. ovalibus serratis v. subintegerrimis; umbellis laxe paniculatis.—*Hederaæ Panacis* et *Aralia* sp. auct.

Closely allied to the genus *Pseudopanax*, C. Koch, from which it differs by its denticulate calyxulus and stigmas seated on a stylopodium. *Sciadophyllum Gayanum*, Dcne. et Planch. Rev. Hort. 1854 (nomen solum), is probably a synonym of one of the Chilian species of *Cheirodendron*.

1. *C. Gaudichaudii*, Seem.—*Aralia trigyna*, Gaud. Bot. Freyc. Bot. p. 474. t. 98. *Panax (?) Gaudichaudii*, De Cand. Prodr. iv. p. 253; Hook. et Arn. Bot. Beech. p. 84. *Hedera Gaudichaudii*, A. Gray, Bot. Wilkes, p. 719. t. 90.—Hawaiian Islands (D. Nelson! Menzies! Nuttall! Macrae!).

Var. β ; foliolis sæpius 3 subovatis vix denticulatis seu integerrimis.—*Panax (?) ovatum*, Hook. et Arn. Bot. Beech. p. 84.—Hawaiian Islands (Nuttall!).

2. *C. platyphyllum*, Seem.—*Panax (?) platyphylla*, Hook. et Arn. Bot. Beech. p. 84. *Hedera platyphylla*, A. Gray, Bot. Wilkes, p. 720. t. 91.—Hawaiian Islands (Lay and Collie!).

3. *C. lætevirens*, Seem.; foliolis elongatis cuspidatis inciso-serratis.—*Aralia lætevirens*, Gay, Fl. Chil. iii. p. 151.—Woods of Valdivia, Chili, as far north as the river Maule (Gay!, Dombey!). Term'd “Sauce” (*i. e.* Willow) by the Chilians, and used by them as a sudorific.

4. *C. Valdiviense*, Seem.; foliolis ovatis acuminatis subintegerrimis v. obscure serratis.—*Aralia Valdiviensis*, Gay, Fl. Chil. iii. p. 152. *Sciadophyllum racemiferum*, Miq. in Herb. Hook. *Aralia paniculata*, Philippi. Nomen vernaculum Chilense, “Saluco falso,” teste Philippi. “Arbor 20 ped.” Philippi Plant. Chil. n. 236.—Island of Chiloë (Capt. King!); Straits of Magellan (Whinnie, Capt. King!); Valdivia, outskirts of woods. (Bridges! n. 78, ex parte; Lechler! n. 1417 et 1302; Harvey! Gay!).

5. *C. Samoense*, Seem.—*Paratropia Samoensis*, A. Gray, Bot. Wilkes, p. 722.—Samoan Islands (U. St. Expl. Exped.!)

XVI. ON THE GENUS TRIPLASANDRA.

XXXIV. *TRIPLASANDRA*, Seem. (gen. nov.).—Pedicelli inarticulati. Flores ecalyculati, polygami. Calycis tubus obovatus; limbus truncato-repandus. Petala 5–6, triangulari-lanceolata, aestivatione valvata. Stamina duplo triplo petalorum numero, uniserialia; filamenta subulata; antheræ oblongæ. Ovarium 5–6-loculare, loculis 1-ovulatis.

Stigmata 5–6, punctiformia, stylopodio brevi conico imposita. Drupa baccata, ovato-oblonga, 5–6-angulata. Albumen æquabile.—Arbor Hawaiensis ; foliis exstipulatis, pinnato-5–9-foliolatis, foliolis carnosis oblongis v. ovalibus obtusis integerrimis ; umbellis compositis cymosis. Species unica :

1. *T. Oahuensis*, Seem.—*Gastonia (?) Oahuensis*, A. Gray, Bot. Wilkes, i. p. 726; Horace Mann, Enum. Hawaiian Plants, p. 169. Nomen vernac. Hawaiense, fide Mann, “Ohe mauka.”—Hawaiian or Sandwich Islands (U. S. Expl. Exped. !; H. Mann !; Hillebrand !).

Asa Gray, not having fertile flowers when he first described this plant, provisionally referred it with a mark of doubt to *Gastonia*. When revising *Gastonia* I excluded it from that genus, being convinced that it was the type of a new one; and the specimens just received from Mr. H. Mann, of Cambridge, Mass., collected in December, 1867, by Dr. Hillebrand, enable me to publish the above character. It is closely related to *Tetraplasandra*.

XVII. ON THE GENUS MARALIA.

(PLATE V.)

Bentham and Hooker fil. (‘ Genera Plantarum’) referred my genus *Oligoscias* to *Panax*, from which, as limited by me, it differs by its pentacarpous fruit and valvate petals. It proves, however, to be identical with the little-known genus *Maralia*, Petit Thouars.

XXXV. MARALIA, Petit Thouars, Nov. Gen. Madag. p. 13, n. 43; De Cand. Prodr. iv. p. 255.—Pedicelli articulati. Flores ecalyculati, hermaphroditici. Calycis tubus turbinatus, limbo 5-dentato. Petala 5, ovato-triangularia, libera, aestivatione valvata. Stamina 5, filamentis brevibus, antheris oblongis. Ovarium inferum, 3–5-loculare, loculis 1-ovulatis. Styli 3–5, filiformes, omnino liberi, stigmatibus punctiformibus. Drupa baccata, ovato-oblonga, 3–5-pyrena. Albumen ruminatum.—Frutex Madagascariensis, inermis, foliis exstipulatis pinnatis 2–3-jugis cum impari, petiolis supra canaliculatis, foliolis lateralibus sessilibus, terminali petiolulato, infimis subrotundatis substipulaeformibus, supremis ovatis v. ellipticis, basi acutis, acuminatis, 3–5-setaceo-dentatis ; umbellis 5–8-floris, longe pedunculatis ; pedicellis filiformibus (6–8 lin. long.) ; floribus drupisque albis.—*Oligoscias*, Seem. Journ. of Bot. iii. p. 179. Species unica :—

1. *M. Madagascariensis*, De Cand. l. c.—*Oligoscias Madagascariensis*, Seem. Journ. of Bot. iii. p. 179. *Aralia Maralia*, Schult. Syst. vi. p. 704. *Panax Maralia*, Dcne. et Planch. in Rev. Hortic. 1854, p. 105.—Madagascar, Betroun, Tamatave and Antananarivo, on clay hills, 2000–3000 feet above the sea. (Meller! Lyall! n. 232, and others.)

EXPLANATION OF PLATE V., representing *Maralia Madagascariensis*, from specimens obligingly lent by Dr. Hooker.—Fig. 1. Flower-bud. 2. Open flower. 3. Stamens. 4. Ovary, far advanced. 5. The same, cut across. 6. Seeds:—all, with figure on right-hand side of 6, magnified.

XVIII. ON THE GENUS ELEUTHEROCOCCUS.

XXXVI. *ELEUTHEROCOCCUS*, Maxim. Prim. Fl. Amur. p. 132; Bth. et Hook. f. Gen. i. p. 941.—Pedicelli articulati. Flores ecalyculati, polygami. Calycis margo vix prominulus, integer v. minute dentatus. Petala 5, rarius 6–7, submembranacea, aestivatione valvata. Stamina tot quot petala; antheræ ovato-oblongæ. Discus convexus, in conum v. columnnam stylorum abiens. Ovarium 5-rarius 6–7-loculare. Stylus 1, stigmate terminali. Drupa baccata, globosa, siccitate saepè angulata; pyrenæ crustaceæ, a latere compressæ. Semen planum. Albumen æquabile.—*Frutex Amurensis*, aculeatus, foliis digitatim 5-folio-latis, foliolis membranaceis serrulatis, stipulis vix prominulis v. nullis; umbellis solitariis v. paucis, saepius geminis, bracteis minutis caducis v. nullis.

In habit closely resembling some digitate-leaved Indian *Aralias*, but differing from them in its valvate corolla and single style.

1. *E. senticosus*, Maxim. l. c.; Regel, Gartenflora, 1863, tab. 393.—*Hedera (?) senticosa*, Rupr. et Maxim. olim.—Forests of Manchuria, where it forms part of the underwood (Maximowicz!).

XIX. ON THE GENUS KISSODENDRON.

(PLATE VI.)

The genus *Hedera*, as circumscribed by me, is very natural, and easily distinguished from all other *Hederaceæ* by its climbing and rooting branches, simple leaves, inarticulate pedicels, five petals and stamens, semi-inferior ovary, single style, and ruminant albumen. Dr. F. Mueller referred to it an Australian species, which has, however, articulate pedicels, a completely inferior ovary and compound leaves, and is held by me to be the type of the genus *Kissodendron*. This genus

resembles *Pentapanax*, Seem. (Journ. of Bot. vol. ii. p. 294), both having pinnated leaves and an arboreous habit, but they differ in the following points :—

Pentapanax. Petala æstivatione imbricata. Drupa exsucca. Albumen æquabile. India orient.

Kissodendron. Petala æstivatione valvata. Drupa baccata. Albumen ruminatum. Nov. Holl.

XXXVII. *KISSODENDRON*, Seem. Journ. of Bot. vol. iii. p. 201 in adnot. (*Irvingia*, F. Muell. Fragm. vol. v. p. 17.)—Char. emend. : Pedicelli articulati, ecalyculati v. calyculo obscuro. Calycis limbus 5-dentatus. Petala 5, æstivatione valvata, in calyptram cohærentia et tali modo v. tarde apice resilientia. Stamina 5. Ovarium inferum, 3-5-loculare, loculis 1-ovulatis. Stylus 1, elongatus. Drupa baccata, 3-5-pyrena. Albumen ruminatum.—Arbor glabra Novæ Hollandiæ, inermis, foliis pinnatis plurijugis, foliolis integerrimis ovatis v. lanceolato-ovatis brevi-acuminatis, basi obtusa inæquilateris, pedunculis primariis elongatis, secundariis inferioribus oppositis, superioribus aliquot verticillatis, summis umbellatis, umbellulis 8-12-floris. Species unica :

1. *K. Australianum*, Seem. l. c.—*Hedera Australianana*, F. Muell. Fragm. vol. iv. p. 120. *Polyscias Australianana*, F. Muell. Coll. *Irvingia Australianana*, F. Muell. Fragm. vol. v. p. 17.—Rockingham Bay, E. Coast of Australia (Dallachy ! comm. cl. F. Muell.).

EXPLANATION OF PLATE VI., representing *Kissodendron Australianum*, from specimens kindly furnished by the Kew and Melbourne Herbaria.—Fig. 1. Flower bud. 2. Expanded flower and stamen. 3. Ovary. 4. Ovary cut across. 5 and 6. Ripe fruit and seed. 7. Fruit cut across. 8 and 9. Different views of seed :—all, with exception of 5, magnified.

XX. ON THE GENUS DIPANAX.

XXXVIII. *DIPANAX* (gen. n.), Seem. Pedicelli inarticulati. Flores ecalyculati. Calyx . . . Petala 5. Stamina 5 ; antheræ ovatæ. Ovarium semisuperum, 2-loculare, loculis 1-ovulatis. Stigmata 2, sessilia. Drupa exsucca, 2-locularis, 2-sperma. Albumen . . .—Arbuscula Hawaiensis, foliis imparipinnatis, junioribus inflorescentiisque furfuraceo-puberulis demum glabratis ; foliolis brevissime petiolatis 13-15 coriaceis oblongis v. ovatis integerrimis basi cordatis, umbellis racemoso-paniculatis. Species unica :

1. *D. Manni*, Seem.—*Heptapleurum dipyrenum*, Mann in Proceedings of the American Academy, vol. vii. p. 168.—Lanai, Hawaiian Islands (Mann !).

The sessile stigmas and inarticulate pedicels distinguish this genus from all other known dicarpous *Hederaceæ*. The flowers are unknown, but on the young ovaries, kindly communicated to me by Mr. Mann, the impression made on them by the stamens before anthesis is clearly discernible; and from this it appears that there were 5 stamens and ovate acute anthers.

XXI. ON THE GENUS DIDYMOPanax.

XXXIX. *DIDYMOPANAX*, Dene. et Planch. in Revue Horticole, 1854, p. 109. Linden et Planch. Araliac. p. I.—Pedicelli inarticulati. Flores polygami (masc. et hermaph.), mono- et dioici. Calycis limbus repando-5-dentatus. Petala 5, crassiuscula, libera, æstivatione valvata. Stamina 5, petalis breviora; antheræ ovatæ, mucronulatæ. Discus explanatus, margine libero undulato. Ovarium 2-loculare, in fl. masc. effæcum. Styli 2, sæpius basi ima, nunc longiuseule concreti (divisuris intus 1-sulcis stigmatosis) apud fl. masc. imperfecti, in fructu maturo persistentes, indurati, recurvi. Bacca drupacea, 2-pyrena, transverse elliptica, didyma, v. orbiculato-ovata; pyrenis a latere valde compressis, margine externo (v. dorso) leviter bicarinatis, latere utroque costis tenuibus nerviformibus arcuatis notatis, putamine crustaceo, lævinsculo v. rugoso. Semina in loculis 1, lævia v. rugosa, integumento tenni. Albumen æquabile.—Arbores v. frutices Americæ tropicæ, sericeo- v. velutino-tomentosæ, nunc glabré; foliis simplicibus v. sæpissime digitatim compositis, foliolis petiolulatis coriaceis integer-rimis circa tuberculum v. apiculum centralem quasi verticillatis; stipulis parvis, petiolo adnatis; umbellis in paniculas amplas terminales dispositis; floribus viridiuseculis.—Benth. et Hooker, Gen. Plant. p. 939.

* *Folia simplicia.*

1. *D. lucumoides*, Dene. et Planch. Rev. Hort. 1854, p. 109 (sine descript.). *Dendropanax tomentosum*, Seem. Journ. of Bot. 1864, p. 302; Revision Heder. p. 28!—Minas Geraes, Brazil (Claussen! 1843, n. 88; 1841, n. 4; et Coll. 1840. Dupré! Gardner! n. 4703).

** *Folia digitatim composita.*

2. *D. speciosum*, Dene. et Planch. l. c.—*Panax speciosum*, Willd. Sp. iv. p. 1126. *P. undulatum*, H. B. K. Nov. Gen. et Sp. iv. p. 11. t. 417. f. 2, icon. fr. *P. spinosum*, Poir. Suppl. ii. p. 778.—Venezuela (Bonpland! in Herb. Paris).

3. *D. Morototoni*, Dcne. et Planch. l. c.—*Panax Morototoni*, Aubl. Guian. ii. p. 949. t. 360. *P. undulatum*, Pers. Ench. p. 298, non Kunth?—Guiana (Aublet! in Mus. Brit., Perrottet!), Brazil (Guillemin! Burchell! n. 1842 et n. 4896; Moricand, n. 2345), Rio Negro and Casiquiare (Spruce! n. 1683 et n. 3456), Cuba (Wright! n. 211), Panama (Seemann! n. 1615, Sutton Hayes!), Dutch Guiana (Anderson! in Mus. Brit.), Trinidad (Crüger!), Tovar, Venezuela (Fendler! n. 2337), Popayan, N. Granada (Triana! Schlim et Funk!).

This is probably not distinct from *D. speciosum*. The leaflets are either attenuate at the base or rounded, and the tomentons covering underneath the blade varies in colour, being either of a brown or more or less silvery hue. The leaves of young plants are quite membranaceous, ciliate-dentate, and pilose.

4. *D. chrysophyllum*, Dcne. et Planch. l. c.—*Panax chrysophyllum*, Vahl, Eclog. i. p. 33. *P. undulatum*, Pers. Ench. p. 298, non Kunth?—Porto Rico (Herb. Paris!).

5. *D. marginatum*, Dcne. et Planch. l. c.—Minas Geraes, Brazil (Claussen! 1838, n. 39).

6. *D. parviflorum*, Dcne. et Planch. l. c.—*Panax parviflorum*, Mart. et Zucc. in Abh. d. Math. Phys. Cl. d. Baier. Akad. i. 319; Walp. Rep. ii. p. 429.—Minas Geraes, Brazil (Gardner! n. 4705, in Herb. Mus. Br. et Paris).

7. *D. calvum*, Dcne. et Planch. l. c.—*Panax calvum*, Cham. in Linnæa, viii. p. 232; Walp. Rep. ii. p. 422.—Brazil (Burchell! n. 2690; Spruce! n. 2811).

8. *D. sericeum*, Dcne. et Planch. l. c.—*Panax sericeum*, Pohl in De Cand. Prodr. iv. 254. *P. vinosum*, Cham. et Schlecht. in Linnæa, i. p. 403.—Brazil (Pohl! Langsdorff! Gardner! n. 4709, n. 8880; Burchell!).

9. *D. Pœppigii*, Dcne. et Planch. l. c.—*Panax chrysophyllum*, Pœpp., non Vahl.—Mayna Alto, Peru (Pœppig! n. 1959).

10. *D. argyrophyllum*, Dcne. et Planch. l. c.

11. *D. splendens*, Dcne. et Planch. ex Planch. et Linden, Araliac. p. 3.—*Panax splendens*, H. B. K. Nov. Gen. v. p. 11; De Cand. Prodr. iv. p. 253. n. 15. *Aralia (?) micans*, Willd. mss. ex Schult. Syst. vi. p. 101; De Cand. Prodr. iv. p. 258. n. 11.—Popayan (Bonpland! in Herb. Paris).

12. *D. Spruceanum*, Seem.—*Hedera Spruceana*, Benth. mss.—Near Panure (Spruce!, n. 2307, in Herb. Paris et Mus. Brit.).

13. *D. Claussenianum*, Dene. et Planch. in Herb. Paris.—Minas Geraes, Brazil (Claussen! Coll. ann. 1841, n. 1495, and Coll. ann. 1838, n. 40).

14. *D. calcophyllum*, Dene. et Planch. in Herb. Paris.—Bahia, Brazil (Blanchet! n. 2345).—Looks like *D. Morototoni*. Is it different?

15. *D. glabratum*, Dene. et Planch. ex Linden et Planch. Araliac. p. 3.—*Panax glabratum*, H. B. K. Nov. Gen. v. p. 10; De Cand. Prodr. iv. p. 253. *P. attenuatum*, Swartz, Prodr. 54; Fl. Ind. Occ. ii. p. 562; Griseb. W. Ind. Fl. p. 306. *P. Caribaeum*, Sieb. Fl. Martin. n. 290.—Martinique (Pléc! n. 771), Caracas, Tovar, and Galipan (Funk et Schlim! n. 91, n. 528, et n. 530), Guadalupe (De Pontheiu!), St. Christopher (Fr. Mason!), St. Vincent (Guilding!) Trinidad (Herb. Kew.).

Ought to be called *D. attenuatum*, if these two are identical, as I hold them to be. Styles connate nearly to top. Petals calyptriform, coherent.

16. *D. Gardneri*, Seem. (sp. nov.) ; foliis digitato-5-natis; foliolis subrotundatis v. ovato-rotundatis acuminatis, basi obtusis, margine integerrimis revolutis, supra glabris, lucidis, subtus sericeo-tomentosis; umbellis in paniculas terminales sericeo-tomentosas dispositis.—Diamond District, Brazil (Garduer! n. 4708).—"A shrub, about four feet high," Gardner, mss.

17. *D. macrocarpum*, Seem.—*Panax macrocarpum*, Cham. et Schlecht. in Linnæa, i. p. 404.—Minas Geraes, Brazil (Sellow! Claussen! Coll. ann. 1840; Gardner! n. 4759, n. 4706, n. 4707; Burchell! n. 5144).

18. *D. Burchelli*, Seem. mss. in Herb. Hook.; foliis digitatim 7-natis, foliolis obovato-oblongis apice subbilobis, basi attenuatis, utrinque glaberrimis.—Porto Real, Brazil (Burchell! n. 8425).

Sciadophyllum rubiginosum, Pl. et Lind. Aral. p. 24, Venezuela (Funk et Schlim, n. 1528), is probably a species of *Didymopanax*.

XXII. ON THE GENUS HORSFIELDIA.

XL. HORSFIELDIA. Pedicelli inarticulati, ecalyculati. Flores polygami. Calycis tubus ovatus; limbus obsolete denticulatus. Petala 5, ovata, acuta, libera, aestivatione valvata. Stamina 5; filamenta elongata, filiformia; antheræ subrotundæ. Ovarium 2-loculare, loculis 1-

ovulatis. Ovula pendula. Styli 2, omnino liberi, divaricati. Drupa didymo-compressa, 2-pyrena, pyrenis 3-costatis. Semina oblonga. Albumen æquabile. Embryo minutissimus.—Frutices magni, aculeati, Americæ boreal.-occid., Japoniæ et insulæ Javæ; foliis exstipulatis alternis peltatis vel palmatis, petiolis inermibus v. spinosis; umbellis subsessilibus vel pedunculatis, basi bracteolatis, in racemos v. spicas simplices vel compositas dispositis.—*Horsfieldia*, Bl. Bijdr. p. 885; Brown et Bennett, Pl. Jav. Rar. p. 123. t. 26. *Schubertia*, Bl. l. c. *Echinopanax*, Dcne. et Planch. in Rev. Horticol. 1854, p. 105. *Oplopanax*, Miq. in Ann. Mus. Lugd. Bat. i. p. 16. *Panacis* sp. auct.

I cannot find any structural difference of generic importance between *Horsfieldia aculeata*, Bl., and *Echinopanax horridum* (*Panax horridum*, Smith), and therefore do not hesitate to unite them. The two form a very natural genus, with a distinct habit. In 1863 I transferred this genus from *Umbelliferæ* to *Hederaceæ*, a view now generally adopted.

1. *H. aculeata*; foliis peltatis utrinque inermibus subtus dense stellato-tomentosis; umbellis subsessilibus basi pluri-bracteatis; calyce hispido; fructu paleaceo-setoso.—*H. aculeata*, Bl. Bijdr. p. 885; Brown et Bennett, l. c. p. 123. t. 25. *H. peltata*, Benth. et Hook. Gen. i. p. 937—Java (Horsfield! in Mus. Brit.).

2. *H. horrida*; foliis palmatis utrinque aculeatis, subtus ad costas nervisque pilis crispis sparsis instructis; umbellis pedunculatis, ebracteatis; calyce fructuque inermi glabro.—*Horsfieldia horrida*, Seem. mss. *Panax horridum*, Smith in Rees' Cycl. n. 10; De Cand. Prodr. iv. p. 252; Hook. Fl. Bor. Am. i. p. 273. t. 98; Torr. et Gray, Fl. N. Amer. i. p. 648. *Aralia erinacea*, Hook. in Brewst. Edinb. Journ. 1827, p. 64; De Cand. Prodr. iv. p. 259. *Echinopanax horridum*, Dcne. et Planch. Rev. Hort. 1854, p. 105.—North-west America (Menzies! Capt. Portlock! in Mus. Brit.), Wahlanat (Nuttall! in Mus. Brit.); Japan (C. Wright! in Herb. Kew.).

There is a good illustration of the mode of growth and habit of this plant (so great an impediment to travellers in the woods of north-west America) in my translation of Kitlitz's 'Twenty-four Views of the Islands and Vegetation of the Pacific,' plate ii. fig. $7\frac{1}{2}$ and $2\frac{3}{4}$.

XXIII. ON THE GENUS ACANTHOPanax.

XLI. ACANTHOPanax, Seem. Pedicelli inarticulati. Flores ecalyculati, polygami. Calyx minute 5-dentatus. Petala 5, 1-nervia,

libera, valvata. Stamina petalorum numero iisque alterna; antheræ ovatæ v. oblongæ. Styli 2, basi connati, apice divaricati. Discus convexus v. medio conicus. Ovarium 2-loculare, loculis 1-ovulatis. Fructus didymo-compressus, 2-locularis. Albumen æquabile.—Arbusculæ v. frutices aculeati, Indiae or., Chinæ, et Japoniæ, foliis simplicibus v. digitatim 3-5-foliolatis, foliolis serratis, umbellis globosis solitariis v. paniculatis.—*Panax* subg. *Acanthopanax*, DCNE. et Planch. Rev. Hort. 1854, p. 105. *Kalopanax*, MIQ. in Ann. Mus. Lugd. Bat. i. p. 16. *Plectronia*, Lour. Fl. Cochinch.

1. *A. ricinifolium*, Seem.—*Panax ricinifolium*, Sieb. et Zucc. in Abhandl. Baier. Akad. iv. 2. p. 199. *Kalopanax ricinifolium*, MIQ. in Ann. Mus. Bot. Lugd. Bat. i. p. 16. *Brassaiopsis ricinifolia*, Seem. Journ. of Bot. vol. ii. p. 291.—Japan (Siebold! in Herb. Benth.; Oldham! Maximowicz!), N. China (Fortune! in Herb. Mus. Brit.).

2. *A. aculeatum*, Seem. *Panax aculeatum*, AIT. Kew. iii. p. 448; De Cand. Prod. iv. p. 252; Jacq. Coll. iv. p. 175; Icon. Rar. t. 634.—*Zanthoxylon trifoliatum*, Linn. Spec. 1455; Lam. Dict. ii. p. 40. *Plectronia Chinensis*, Lour. Fl. Cochinch. i. p. 201. *Panax Loureirianum*, De Cand. l. c. p. 252. *Aralia trifoliata*, Meyen, Reise, ii. p. 332, nomen, teste C. Koch, Wochenschrift, 1859, p. 366.—Southern China, about Canton and Macao (Seemann! n. 2457; Millett! in Herb. Hook.; Sir G. Staunton! Robertson! Bradley; Lord McCartney! in Mus. Brit.), Assam plains (Jenkins! in Herb. Hook.), Khassia (Griffith! in Herb. Hook.); East Indies (Wallich!, n. 4926), Assam (Griffith!, n. 787 in Mus. Brit.), Amoy (Herb. Bth.).

3. *A. spinosum*, MIQ. Ann. Lngd.-Bat. i. p. 10.—*Panax spinosum*, Linn. fil. Suppl. 441; Lam. Dict. ii. p. 715. *Aralia pentaphylla*, Thunb. Fl. Jap. 128; De Cand. Prod. iv. p. 259.—Japan (Thunberg! in Mus. Brit.; Wright! in Herb. Hook.). Thunberg's specimen at the British Museum has only 2, not 5, styles.

4. *A. sepium*, Seem.; arbuscula; ramis patentibus aculeatis, aculeis recurvis; foliis 3-5-foliolatis, foliolis ellipticis acuminatis in petiolum attenuatis dentatis glabris, petiolis aculeatis; umbellis globosis terminalibus, solitariis v. paniculatis; pedicellis elongatis; calyce ecalycenato 5-dentato; petalis 5, 1-nerviis, liberis; stylis 2, apice divaricatis, basi connatis; fructu didymo-compresso, 2-loculari.—“Small, dull green tree or bush, with dense patent branches, growing in hedges.” Hook. fil. in Sched. Herb. Kew.—Khasia Hills, E. Indies (J. D. Hooker!).

5. *A. divaricatum*, Seem.—*Panax divaricatum*, Sieb. et Zucc. Abhand. Baier. Akad. iv. 2. p. 198; Walp. Ann. i. p. 981. *Kalopanax divaricatum*, Miq. Ann. Lugd.-Bat. i. p. 17.—Japan (Siebold! in Herb. Benth.; Maximowicz!).

6. *A. sessiliflorum*, Seem.—*Panax sessiliflorum*, Rupr. et Maxim. Fl. Amur. p. 131; Regel, Gartenflora, 1862, t. 369.—Amur (Maximowicz), Manchuria (Wilford!), Northern China (Fortune? Fischer). Stem and petioles armed.

7. *A. Sumatranum*, Seem.—*Kalopanax Sumatranum*, Miq. l. c.—Sumatra.

8. *A. resectum*, Seem.—*Kalopanax resectum*, Miq. l. c.—Patria?

9. *A. innovans*, Seem.—*Panax innovans*, Sieb. et Zucc. l. c.—Japan (Maximowicz!).

XXIV. ON THE GENUS TETRAPANAX.

XLII. TETRAPANAX, C. Koch, Wochenschr. f. Gärtn. und Pflanzenk. 1859, p. 371; Ed. Otto et Sonder in Hamburg. Gartenz. 1862, p. 61. Pedicelli inarticulati. Flores ecalyculati, hermaphroditici. Calycis margo obsoletus. Petala 4 v. 5, ovata, acuta, aestivatione valvata. Stamina 4 v. 5; filamenta elongata; antheræ elliptico-ovatæ. Styli 2, erecti, demum recurvi. Ovarium 2-loculare, loculis 1-ovulatis. Drupa baccata.—Frutex Chinensis, inermis, stoloniferus, caule erecto 5–9-ped. striato annulato intus copiose albissimo-medulloso; foliis terminalibus longe petiolatis amplis palmatim lobatis, lobis omnibus acutis serratis, subtus (præcipue junioribus) totisstellato-subferrugineo-tomentosis, stipulis 2 magnis subulatis; umbellis in paniculas terminales amplas dispositis; floribus albido-flavis.—*Didymopanax*, subg. *Tetrapanax*, C. Koch, Wochenschrift, n. 10. p. 71. *Aralia* sp., Hook.

Prof. C. Koch was the first to perceive that the plant described by Hooker as *Aralia papyrifera* had nothing to do with *Aralia*, and therefore referred it as a subgenus to *Didymopanax*,—subsequently separating it as a distinct genus (*Tetrapanax*), to which he thought *P. innovans* and *P. ricinifolium* might possibly belong. But the two latter both out turn to be species of *Acanthopanax*, a genus differing in its spinose habit and dry fruit from *Tetrapanax*, but which is by far more intimately related to it than *Fatsia*, to which Hook. fil. and Benth. (Gen. Plant. p. 939) have referred both *Aralia papyrifera* and *A. erinacea* (= *Horsfieldia*). Ed. Otto has already pointed out (Hamburg. Gartenz. l. c.) that in *Aralia papyrifera* pentamerous flowers pre-

dominate over the tetramerous ones, and that the name *Tetrapanax* is on that account open to objection; but if we were to change every inappropriate name, our botanical nomenclature would have to undergo considerable alterations, and I therefore shall retain that of C. Koch. The only species of *Tetrapanax* at present known is the following :—

1. *T. papyriferum*, C. Koch, l. c.—*Aralia (?) papyrifera*, Hook. in Kew Journ. iv. p. 53. t. 1 et 2. *A. papyrifera*, Hook. Bot. Mag. t. 4897; Fl. des Ser. viii. t. 806, 807: xii. t. 1201; G. Bennett, Gatherings of a Naturalist, t. 6; ejusd. Wanderings, vol. ii. p. 77, cum icone (1834); ejusd. in Seem. Journ. of Bot. 1864, p. 309. "Rice-paper Plant" of English Gardens.—Island of Formosa (Oldham! in Herb. Hook.), China (Bowring!).

Interesting particulars about the habit of this plant are given by Dr. Bennett, who, it appears, was the first to publish a figure of the Rice-paper Plant. It throws up numerous suckers, the suckers flowering the second year after they have been removed from the mother plant, and every time after flowering form two new branches.

XXV. ON THE GENUS ASTROTRICHA.

XLIII. ASTROTRICHA, De Cand. Prodr. iv. 74, et Mem. Omb. 29. t. 5, 6; Benth. et J. Hook. Gen. Plant. i. p. 937; Benth. Fl. Austr. iii. p. 379.—Pedicelli articulati. Flores ecalyculati, hermaphroditæ. Calyxis tubus ovatus; limbus minimus, vix 5-dentatus. Petala 5, ovalia, subacuta, æstivatione valvata. Stamina 5; antheræ oblongæ. Discus subplanus, margine libero undulato. Ovarium 2-loculare. Styli 2, distincti, a basi filiformes; stigmata terminalia. Fructus ovatus, a latere compressus exalatusque v. transverse subteres ad commisuram longitudinaliter alatus, exocarpio membranaceo v. subcarnoso; pyrenæ a latere compressæ, præsertim ad commisuram induratæ ibidemque utrinque sulcateæ v. in loculos spurios vacuos productæ. Semen oblongum. Albumen æquabile.—Frutices Australienses, plus minus stellato-tomentosi v. lanati, foliis alternis petiolatis indivisis subtus tomentosis; stipulis nullis; umbellis paniculatis; bracteis parvis setaceis v. nullis.

A genus so closely allied to *Nothopanax*, that it can only be separated by artificial characters; so that the latter, bearing the more recent name, may have to be merged into it. In 1863 I transferred it (Journ. of Bot. i. p. 280) from *Umbelliferae*, where up to that time it had been placed, to *Hederaceæ*,—a view since adopted by various authors.

1. *A. pterocarpa*, Benth. Fl. Austr. iii. p. 379.—Queensland, at Fitzroy Island (Walter Hill !).

2. *A. floccosa*, De Cand. Mem. Ombell. 30. t. 5 ; Prodr. iv. p. 75 ; Benth. Fl. Austr. iii. p. 379.—*Bolax floccipes*, Sieb. Pl. Exs. n. 258.—Queensland and New South Wales, Australia (R. Brown ! Sieber ! n. 258, A. Cunningham !).

Var. α . *subpeltata*, Benth. l. c.

Var. β . *angustifolia*, Benth. l. c.

Var. γ . *incana*, Benth. l. c.—*A. latifolia*, Benth. in Hügel, Enum. 55.

3. *A. longifolia*, Benth. in Hügel, Enum. 55 ; Fl. Austr. iii. p. 380.—Queensland and New South Wales (A. Cunningham ! F. Mueller ! R. Brown ! M'Arthur !).

4. *A. ledifolia*, De Cand. Memb. Omb. 30. t. 6 ; Prodr. iv. p. 74 ; Benth. Fl. Austr. iii. p. 380.—*A. hoveoides*, A. Cunn. ; Benth. in Hügel, Enum. 55. *A. linearis*, A. Cunn. ; Benth. l. c. γ . *asperifolia*, F. Muell. ; Klatt in Linnæa, xxix. p. 709. *Bolax ledifolius*, Sieb. Plant. Exs. n. 25.—New South Wales and Victoria (Sieber ! n. 257, A. Cunningham ! F. Mueller !).

ARALIACEÆ.

The following genera belong to the *Araliaceæ* proper, distinguished by an imbricate (often quincuncial) aestivation of the corolla. To them should be added my genus *Pentapanax*, which does not have a valvate corolla, as stated in Journ. of Bot. ii. p. 294 ; whilst, on the other hand, *Mackinlaya*, F. Muell., should be referred to *Umbelliferæ* proper. The genera belonging to this suborder form two natural groups :—

I. ARALIEÆ.—Ovarium 5-, abortu 3-, nunquam 2-loculare.

1. *Aralia*, Linn.

2. *Stilbocarpa*, Dcne. et Planch.

3. *Pentapanax*, Seem.

4. *Sciadodendron*, Grisb.

II. PANACEÆ.—Ovarium 2-, per excessum 3-, nunquam 4- ∞ -loculare.

5. *Panax*, Linn.

6. *Myodocarpus*, A. Brongn. et Gris.

7. *Delarbrea*, Vieill.

XXVI. ON THE GENUS ARAlia.

XLIV. ARAlia, Linn. Gen. n. 386, excl. sp.; Benth. et Hook. Gen. i. p. 936.—Pedicelli articulati. Flores sœpe polygamo-monoici. Calycis margo prominulus, truncatus, repandus v. brevissime 5-dentatus. Petala 5, ovata, obtusa v. brevissime inflexo-acuminata, marginibus plus minus imbricatis. Stamina 5; antheræ oblongæ v. rarius ovatæ, rectæ. Discus subplanus v. rarius conicus, margine libero. Ovarium 3–5-loculare; styli nunc basi erecti v. breviter connati, superne demum recurvi, nunc a basi recurvi v. summo apice inflexi; stigmata terminalia. Fructus 3–5-angulatus, exocarpio carnosø; pyrenæ 3–5 orbiculatæ, ovatæ v. oblongæ, compressæ, crustaceæ v. duræ. Semen compressum, albumine æquabili.—Herbæ perennes v. frutices, glabri pubescentes setosi v. aculeati. Folia alterna, digitata pinnata v. ternato-pinnatim pinnatim decomposita, foliolis serrulatis. Stipulæ a basi petioli parum prominentes. Umbellulæ solitariae racemosæ paniculatæ v. terminales, rarius in umbellam compositam dispositæ. Bractæ parvæ.—*Dimorphanthus*, Miq. Com. Phytogr. 95. t. 12.

This genus is here restricted to the pentecarpous, by abortion tricarpous, species; the truly dicarpous ones, having a distinct habit, are referred by me to *Panax*.

Species Chinenses :—

1. *A. Chinensis*, Linn. Sp. 393; De Cand. Prod. vol. iv. p. 259, excl. syn. Blume; Hance in Seem. Journ. of Bot. 1866, p. 172.—*Lcea spinosa*, Spreng.—China (Lord Macartney! in Herb. Mus.).
2. *A. Planchoniana*, Hance in Seem. Journ. of Bot. 1866, p. 172.—Ilha Verde, near Macao, S. China (Hance).
3. *A. Decaisneana*, Hance in Seem. Journ. of Bot. 1866, p. 172.—Island of Formosa.
4. *A. Mandschurica*, Seem.—*Dimorphanthus Manchuricus*, Rupr. et Maximow. Fl. Amer. p. 133.—On the Lower Amur (Maximowicz! in Herb. Hook.).

Species Japonicæ :—

5. *A. elata*, Seem.—*Dimorphanthus elatus*, Miq. Com. Phytogr. 95. t. 12; Walp. Rep. vol. ii. p. 430.—*Aralia grandis*, Miq. Herb. Japan.
6. *A. canescens*, Sieb. et Zucc. Abhand. Math. Phys. Kl. Baier. Akad. vol. ii. p. 222; Walp. Ann. vol. i. p. 982.—Japan (Bürger! Oldham!).

7. *A. edulis*, Sieb. et Zucc. Fl. Jap. i. 57. t. 25.—*Dimorphanthus edulis*, Miq. Com. Phytogr. p. 96; Walp. Rep. ii. p. 431. *Aralia cordata*, Thunb. Fl. Jap. p. 127? *A. racemosa*, var. *Sachalinensis*, Regel, Gartenflora, 1864, t. 432?—Japan.

Species Indicae :

8. *A. Cachemirica*, Dcne. in Jacquem. Voy. iv. p. 72. t. 82; Walp. Rep. ii. p. 430.—*A. macrophylla*, Lindl. Bot. Reg. (New Series) xvii., Plant. Misc. p. 73. n. 72. *Panax tripinnatum*, Wall. Cat. n. 4934. *P. decompositum*, Wall. Cat. n. 4935; De Cand. Prod. iv. p. 255.—Nepal (Wallich!). Cat. n. 4934 et 4935).

9. *A. foliolosa*, Seem.—*Panax (?) foliolosum*, Wall. Cat. n. 4928.—Sikkim (Hooker f. et Thomson!); Bootan (Griffith! n. 2074 in Mus. Brit.); Silhet (Wallich! n. 2928).

10. *A. Thomsonii*, Seem. (n. sp.)—Khasia mountains (Hook. f. et Thomson!). *Araliaceæ*, n. 42); Assam Plains (Jenkins!).

11. *A. armata*, Seem.—*Panax armatum*, Wall. Cat. n. 49, 33; G. Don, Gen. Syst. iii. p. 386; Walp. Rep. ii. p. 429.—Tavoy (Wallich! n. 49, 37); Khasia and Sikkim (Hook. f. et Thomson!).

12. *A. Finlaysoniana*, Seem.—*Panax Finlaysonianum*, Wall. Cat. n. 49, 36; G. Don, Gen. Syst. iii. p. 429; Walp. Rep. ii. p. 492.—India (Wallich! n. 4937.).

13. *A. cissifolia*, Griffith, mss. in Herb. Hook.—*Panax scandens*, Edgw. mss. in Herb. Hook.—Bootan (Griffith!), Kumaon (Strachey and Winterbottom!).

Has the habit of *Eleutherococcus*. Leaves 5-nately digitate.

Species Boreali-Americæ :

14. *A. nudicaulis*, Linn. Sp. p. 393, non Blume; Raf. Med. Bot. i. t. 8; Torr. et Gray, Fl. North Amer. i. p. 646. Nomen vernac. “Wild Sarsaparilla.”—Canada to the mountainous portions of the Southern United States (Nuttall! Douglas! Anderson! Kertland! in Herb. Mus. Brit.).

15. *A. racemosa*, Linn. Sp. p. 393; Schk. Hand. t. 86; Torr. et Gray, Fl. North Amer. i. p. 646. Nomen vernac. “Spikenard.”—Canada to mountains of Georgia and Rocky Mountains (Nuttall! Kertland!).

16. *A. hispida*, Michx. Fl. Am. Sept. i. p. 185; Vent. Hort. Cels. t. 41; Sims, Bot. Mag. t. 1041; Lodd. Bot. Cat. t. 1306; Torr. et Gray, Fl. North Amer. i. p. 647.—*A. Muhlenbergiana*, Schult. Syst.

vi. p. 704. *Nomina vernac.* "Wild Elder" et "Bristly Sarsaparilla."—Lakes Winnipeg and Superior (Richardson!); Sachakawan (Richardson!); Nova Scotia (Alex. Anderson!); Massachusetts (Nuttall!).

18. *A. pubescens*, De Cand. Hort. Monsp. 1813, p. 80; Prod. iv. p. 258.—Mexico.

19. *A. spinosa*, Linn. Sp. p. 392.—*A. spinosa*, var. γ , Torr. et Gray, Fl. North Amer. i. p. 647. *Nomina vernac.* "Prickly Ash," "Angelica Tree," "Hercules Club."—United States (Nuttall! Pursh! Gonan! Drummond! Short!).

20. *A. Leroana*, C. Koch, Wochenschrift, 1864, p. 369.—*A. spinosa*, var. β , Torr. et Gray, Fl. North Amer. i. p. 647. *A. Japonica*, Hort. Germ. non Auct.—North America.

Professor K. Koch, l. c., thus distinguishes *A. spinosa* and *A. Leroana*.

A. spinosa; spinosissima; petioli glabri; foliola oblongo-lanceolata, cuspidata, glabra, subitus glaucescentia; panicula pedunculata, elongata; rami alterni, denuo ramosi, ramulis plerumque ad apicem solum umbelliferis; flores majores.

A. Leroana; spinosa; petioli puberuli; foliola supra aspera aut deuine glabriuscula, acuta aut acuminata, subitus pubescentia glaucescentia; panicula sessilis, contracta, ramis elongatis denuo ramosis, ramulis ubique umbelliferis; flores minores.

Species Javanicæ et Philippinenses:

XXVII. ON THE GENUS STILBOCARPA.

XLV. STILBOCARPA, Dcne. et Planch. Rev. Hort. 1854, p. 105.—
 Pedicelli articulati. Flores ecalyculati, polygami. Calycis tubus ob-ovatus; limbus truncatus. Petala 5, obovato-oblonga, obtusa, aestivatione imbricata. Stamina 5; antheræ oblongæ. Styli 3—4, divergentes, recurvi, omnino liberi. Stigmata punctiformia. Ovarium 3—4-loculare. Drupa depresso-sphærica, suberosa, 3—4-pyrena. Albumen æquabile.—Herba perennis, regionibus subantarcticis et Nova Zelandia inhabitan-
 tans, inermis, tota setis mollibus laxis obsita, fœtida; foliis (maximis) stipulatis longe petiolatis orbiculari-reniformibus basi profunde cor-
 datis marginibus multilobatis; umbellulis compositis; involucris folia-
 ceis; floribus densis; drupis atris nitidis, grana piperis magnitudine.—Hook. f. Fl. N. Zeal. i. p. 95. *Araliæ* sp., Homb. et Jacq. Species unica:

1. *S. polaris*, Dcne. et Planch. l. c.; Hook. f. Fl. N. Zeal. i. p. 95; A. Gray, Bot. Wilkes, p. 716.—*Aralia polaris*, Homb. et Jacq. Voyage au Pôle Sud, t. 2, sine descript.; Hook. f. Fl. Ant. p. 19; Handbook Fl. N. Zeal. i. p. 100. Hook. Icon. Plant. t. 744.—GEOGR. DISTR. Southern Island of New Zealand (Lyall!); Lord Auckland's Islands (J. D. Hooker! Dr. Holmes!); Campbell's Islands (J. D. Hooker!), covering large tracts.

This genus, on account of the quincuncial aestivation of its corolla, belongs to *Araliaceæ*.

XXVIII. ON THE GENUS SCIADODENDRON.

(PLATE VII.)

I first met with this tree in 1846, at Panama, where it is known by the name of Jobo de lagarto, and commonly used for making fences,—poles stuck in the ground taking root readily, and growing very fast. On the 22nd of March, 1847, I sent a collection of Panama woods to the Kew Museum, and n. 33 of that collection were specimens of this tree. But though I looked carefully and frequently for flowers, I could never find any. Mr. Sutton Hayes also records amongst his notes that he had known the tree for years, without being so fortunate as to find any flowers on it. My friend Dr. Duchassaing was the first who gathered some imperfect flowering specimens, which passed into the hands of Professor Grisebach, who referred them, in my 'Bonplandia,' to a new genus of *Araliaceæ* (*Sciadodendron*). The late Mr. Sutton Hayes obtained better specimens of the flowers, which he sent to England, and which I found without a name both at the British Museum and at Kew. There being no leaves of the plant in these herbaria, I did not fail, when, in May, 1866, at Panama, to collect specimens of them, so that I am now able to publish a plate of this common, but so little known tree, that Bentham and Hooker, in their 'Genera Plantarum,' were obliged to refer it amongst the doubtful genera.

Sciadodendron belongs to the little group of *Araliaceæ* proper (distinguished from the *Hederaceæ* by the imbricate aestivation of the petals), and it differs from *Aralia*, *Stilbocarpa*, and allied genera by its 10–12-merous flowers.

XLVI. *SCIADODENDRON*, Griseb. in Seem. Bonplandia, 1857, p. 7. Char. gen. emend.: Calyx limbo undulato v. subintegro. Petala 10–12, ovato-linearia, aestivatione imbricata. Stamina 10–12, antheris incum-

bentibus. Ovarium inferum, subglobosum, 10- v. per excessum 12- loculare, stylis totidem inferne cohærentibus, superne divergentibus et radiatim expansis abbreviatis. Ovula in loculo solitaria, pendula. Drupa . . .—Arbor excelsa, inermis, glabra, foliis longe petiolatis supradecompositis, foliolis breviter petiolulatis ovatis acuminatis mucronato-serrulatis; umbellis 15-40-floris compositis, pedicellis pedunculisque bractea scariosa subrotunda basi suffultis. Species unica:—

1. *S. excelsum*, Griseb. l. c. p. 7. (Tab. Nostr. n. 7.) Nomen vernaculum Panamense "Jobo de lagarto," Nicaraguense "Palo de lagarto."—Geogr. distribution, Isthmus of Panama (Sutton Hayes! Duchassaing! Seemann!), Nicaragua, between Leon and Ocotal (Seemann!), and Peru (Gay! n. 486).

Sciadodendron excelsum, the type of the genus, does not seem to be truly indigenous to the Isthmus of Panama; at all events in that country I have never seen it anywhere but near human habitations. The same remark applies to Cartagena. But I have found it truly wild in the forests of New Segovia, Nicaragua, where it is one of the most common trees, and attains a height of sixty feet. In the Paris herbarium I have seen specimens of it from Peru, where they had been collected by Gay (n. 486).

This tree is 60 feet high, with a corky, greyish bark. The branches are few, straight, and terminated by the foliage. The leaves are without stipules, from 3-5 feet long, compoundly pinnate, and impart to the tree a Palm-like habit, not unlike that of *Caryota*. The petiole is jointed at the base of the ramifications of the leaf, and the joints swollen. On the whole, the leaves resemble those of *Heteropanax fragrans*, Seem. The tree flowers without leaves and very seldom, I having seen it but once in flower. The flowers grow from the old wood, and are greenish.

In the Isthmus of Panama the tree is known by the name of Joho de lagarto (Alligator Joho), from a certain resemblance of the bark of the tree to the skin of an alligator. In Nicaragua it is vernacularly termed "Palo de lagarto" (Alligator's tree), the name of "Joho" being unknown there. In the isthmus the natives apply the leaves (macerated) with beneficial effect to ulcers. The ashes of the wood are used in Nicaragua in the manufacture of soap.

EXPLANATION OF PLATE VII., representing *Sciadodendron excelsum*, Griseb. The flowers from specimens collected by Sutton Hayes, at Panama, and

kindly lent by Dr. Hooker; the leaves from specimens collected by me in the same place.—Fig. 1. Flower. 2. Petals. 3. Flower with petals removed. 4. The same, with stamens removed. 5 and 6. Stamens. 7. Pistil. 8. Cross-section of ovary :—*all magnified*.

XXIX. ON THE GENUS PANAX.

Panax has been made one of the great lumber-rooms of our science, and none of the modern botanists have assigned to it intelligible limits. Linnæus referred *three* species to it, including two generic types, and his generic name ought to go with the majority of species represented by *P. quinquefolium* and *P. trifolium*. Both these species have a dimerous ovary and five petals, quincuncial in aestivation, the latter character assigning them a place amongst the *Araliaceæ* proper; whilst Linnæus's third species (*P. fruticosum*) has petals valvate in aestivation, and therefore stands as the type of the genus *Nothopanax* in my Revision of *Hederaceæ*. If the species referred to *Panax* by authors are examined, it will be found that but few agree generically with *P. quinquefolium* and *P. trifolium*; but that all those that do agree have the same habit and partake of similar medicinal properties, being perennial herbs, with tuberous roots, and with verticillate, digitate leaves, terminal solitary simple umbels, and coloured berries; moreover, they are distributed geographically over North America and Eastern and Central Asia. I therefore restrict the genus *Panax* to these species only. It will be seen that these views are at variance with those advanced by Decaisne and Planchon (*Revue Hortic.* 1854, p. 105), who shift *P. quinquefolium* and *P. trifolium* to *Aralia*, retain the name *Panax* for *P. fruticosum*, and unite with it *Polyscias*, Forst.; *Cheirodendron*, Nutt.; *Pseudopanax*, C. Koch; and *Maralia*, Pet. Thouars. Beetham and Hooker f. (*Genera Plant.* p. 938) entertain similar views with regard to shifting *P. quinquefolium* and *P. trifolium* to *Aralia*, the retention of the name *Panax* for *P. fruticosum* and its congeners, and the union of *Cheirodendron* and *Maralia* with their *Panax*; but they exclude, as I had previously done, *Polyscias* and *Pseudopanax*. Yet, even with these two latter genera removed, Beetham and Hooker's *Panax* remains ill-defined. Having excluded *Pseudopanax*, the learned authors ought to have removed *Cheirodendron* along with it, as that genus is so closely allied to it as almost to justify those desirous of forming large genera to unite the two. *Oligoscias* (*Maralia*), which the two authors also incorporated with

Panax, has nothing to do with that genus as defined by them, having ruminant albumen, which would entitle it a place among their tribe *Hedereæ*.

XLVII. *PANAX*, Linn. Gen. n. 1166, ex parte.—Char. gen. emend.: Pedicelli articulati. Flores calyculati, polygamo-monoici. Calycis margo obscure 5-dentatus. Petala 5, ovata, acuta, aestivatione quincunciali. Stamina 5, filamenta brevissima; antheræ ovatæ v. oblongæ. Ovarium 2- v. per excessum 3-loculare, loculis 1-ovulatis. Drupa baccata, didymo-compressa (colorata), 2- v. per excessum 3-loculare, loculis 1-spermis. Semina pendula. Albumen æquabile.—Herbæ perennes, Amer. bor., Japon., Chin. et Ind. or. indigenæ, radice crassa, tuberosa; caule solitario, foliorum verticillum unicum proferente; foliis palmatim 3-5-foliolatis; umbellis terminalibus simplicibus.—*Aureliana*, Lafit. Mém. du Ginseng. *Araliæ* sp. auct. *Eupanax* (subgenus), Torrey et Gray, Fl. N. Am. i. p. 647.

ADDITIONS AND CORRECTIONS TO THE REVISION
OF HEDERACEÆ.

GASTONIA, Comm., add :—

Species exclusæ :—

G. (?) Oahuensis, A. Gray = *Triplasandra Oahuensis*, Seem. (gen. n.).

GROTEFENDIA, Seem. = *Botryopanax*, Miq. in Ann. Mus. Lugd. Bat. i. p. 5.

G. paniculata, Seem., add : *Gastoniasausuroides*, (?) Rœper in Bot. Zeit. 1848, p. 257. t. 1. *Botryopanax Borbonicum*, Miq. l. c.

BAKERIA, Seem. Stamens 15–23, in several rows, according to Bentham and Hooker.

BRASSAIOPSIS, Dcne. et Planch., add: Albumen ruminata, not even.

B. Hainla, Seem., add : *Panax (?) Hainla*, De Cand. Prod. iv. p. 253.

Species exclusæ :—

B. ricinifolia, Seem. = *Acanthopanax ricinifolium*, Seem.

PENTAPANAX, Seem. Petals imbricate, hence the genus must be removed to *Araliaceæ*.

AGALMA, Miq., add :—

15. *A. Kavaienense*, Seem. (*Heptapleurum Kavaienense*, Mann in Proceed. Am. Acad. vii. p. 168.)—Kauai, Hawaiian Islands (Mann!).

DENDROPANAX, Dcne. et Planch., add :—

15. *D. monogynum*, Seem. (*Aralia monogyna*, Arrab. Fl. Flum. ii. p. 17. t. 75). Umbels solitary, on long, erect peduncles. Allied to *D. nutans* and *Darienense*.—Brazil.

16. *D. cuneifolium*, Seem. (*Hedera cuneifolia*, Wright, Plant. Cub.).—Cuba (Wright! n. 2631).

17. *D. samydifolium*, Seem. (*Sciadophyllum samydifolium*, Wright, Plant. Cub.).—Cuba (Wright! n. 2632).

Species exclusæ :—

D. tomentosum, Seem. = *Didymopanax lucumafolium*, Dene. et Planch..

HEDERA, Linn., add :—

Species exclusæ :—

H. cuneifolia, Wright = *Dendropanax cuneifolium*, Seem.

H. quinquefolia, Arrab. = *Vitis Arrabidea*, Seem. (*Cissus quinquefolia*, Soland.).

H. unifolia, Arrab. = *Vitis unifolia*, Seem.

OSMOXYLON, Miq., add :—

2. *O. Cumingii*, Seem. (sp. n.).—Philippine Islands (Cuming! n. 754).

3. *O. Borneense*, Seem. (sp. n.).—Foliis digitato-11-foliolatis, foliolis lanceolato-linearibus serratis, stipulis fimbriato-laceris.—N. E. of Borneo (Thom. Lobb ! in Herb. Kew.).

ARALIA CAPITULATA, Jungh. et de Vris., may be a fourth species of this genus.

HEPTAPLEURUM, Gærtn., add :—

H. venulosum, Seem.—Omit *Panax serratum*, Wall., as synonym.

Species exclusæ :—

H. diphyllum, H. Mann = *Dipanax Manni*, Seem. (gen. n.).

H. Kavaiense, H. Mann = *Agalma Kavaiense*, Seem.

GILIBERTIA, Ruiz et Pav., add :—

G. Brasiliensis, Seem. = (?) *Aralia arborea*, Arrab. Fl. Flum. iii. t. 100.

SCIADOPHYLLUM, P. Browne, add :—

Species exclusæ :—

S. racemiferum, Miq. = *Cheirodendron*.

S. samydifolium, Wright = *Dendropanax samydifolium*, Seem.

PSEUDOPANAX, C. Koch, add :—

To generic character: Foliis exstipulatis v. stipulatis.

P. crassifolium, C. Koch, add: *Panax crassifolium*, Dcne. et Planch. in Rev. Hort. 1854, p. 105.

3. *P. lineare*, Seem. (*Panax lineare*, Hook. f. Fl. N. Zeal. i. p. 93; ejusd. Handbook N. Z. Fl. p. 101).—Middle Island of New Zealand (Lyall!).

OLIGOSCIAS, Seem.=*Maralia*, Petit Thouars.

O. Madagascariensis, Seem. = *Maralia Madagascariensis*, De Cand.

POLYSCIAS, Forst., add to generic character: Styli 5-12.

OREOPANAX, Dcne. et Planch., add :—

O. Humboldtianum, Dcne. et Planch., add: *O. (?) reticulatum*, Dene. et Planch.—Nomen vernac. “Papayon.”—Silla de Caracas (Bonpland ! in Herb. Mus. Par.).

O. Turbacense, Dene. et Planch.—There are only three leaves of this in the Paris Herbarium, two of which are 3-lobed, the lobes ovate acuminate. *O. discolor* has similar foliage, but that of *O. Turbacense* is quite glabrous, and looks almost a form of *O. capitatum*.

NOTHOPANAX, Miq., add :—

N. sambucifolium, C. Koch, add: *Panax dendroides*, F. Muell. in Hook. Journ. 1856, p. 72.

N. simplex, Seem.= (?) *Panax simplicifolium*, Dietr. Gart. Lexicon.

N. arborum, Seem., add: *Panax Australasia*, Pers. Ench. i. p. 298.

CUSSONIA, Thunb., add :—

C. (?) Bojeri, Seem.—Ovarium 1-loculare; hence probably the type of a new genus.

Raukuna, Seem., read always *Raukaua*.

Total number of genera and species at present known :—

Hederaceæ, 43 genera, 300 species.

Araliaceæ, 7 genera, 44 species.

SYSTEMATIC ARRANGEMENT OF THE HEDERACEÆ.

Tribus I. CUSSONIEÆ.—Stamina petalorum numero æqualia. Ovarium 2-(per excessum 3-)merum. Albumen ruminatum.

* *Pedicelli articulati.*

Sciadopanax, Seem.

Macropanax, Miq.

** *Pedicelli inarticulati.*

Brassaiopsis, Dcne. et Planch.

Cussonia, Thunb.

Sphærodendron, Seem.

Heteropanax, Seem.

Tribus II. HORSFIELDIEÆ.—Stamina petalorum numero æqualia. Ovarium 2-(per excessum 3-)merum. Albumen æquabile.

* *Pedicelli articulati.*

LIST OF WORKS PUBLISHED BY L. REEVE & CO.

L. REEVE AND CO.'S NEW SERIES OF NATURAL HISTORY FOR BEGINNERS.

* * * A good introductory series of books on Natural History for the use of students and amateurs is still a *desideratum*. Those at present in use have been too much compiled from antiquated sources; while the figures, copied in many instances from sources equally antiquated, are far from accurate, the colouring of them having become degenerated through the adoption, for the sake of cheapness, of mechanical processes.

The present series will be entirely the result of original research carried to its most advanced point; and the figures, which will be chiefly engraved on steel, by the artist most highly renowned in each department for his technical knowledge of the subjects, will in all cases be drawn from actual specimens, and coloured separately by hand.

Each work will treat of a department of Natural History sufficiently limited in extent to admit of a satisfactory degree of completeness.

The following are now ready:—

BRITISH BUTTERFLIES AND MOTHS; an Introduction to the study of our Native LEPIDOPTERA. By H. T. STANTON. Crown 8vo, 16 Coloured Steel Plates, containing Figures of 100 Species, engraved from Natural Specimens expressly for the work by E. W. ROBINSON, and Wood-Engravings, 10s. 6d.

BRITISH BEETLES; an Introduction to the Study of our Indigenous COLEOPTERA. By E. C. RYE. Crown 8vo, 16 Coloured Steel Plates, comprising Figures of nearly 100 Species, engraved from Natural Specimens, expressly for the work, by E. W. ROBINSON, and 11 Wood-Engravings of Dissections by the Author, 10s. 6d.

BRITISH BEES; an Introduction to the Study of the Natural History and Economy of the Bees indigenous to the British Isles. By W. E. SHUCKARD. Crown 8vo, 16 Coloured Steel Plates, containing nearly 100 Figures, engraved from Natural Specimens, expressly for the work, by E. W. ROBINSON, and Woodcuts of Dissections, 10s. 6d.

BRITISH SPIDERS; an Introduction to the Study of the ARANEIDÆ found in Great Britain and Ireland. By E. F. STAVELEY. Crown 8vo, 16 Plates, containing Coloured Figures of nearly 100 Species, and 40 Diagrams, showing the number and position of the eyes in various Genera, drawn expressly for the work by TUFFEN WEST, and 44 Wood-Engravings, 10s. 6d.

BRITISH GRASSES; an Introduction to the Study of the Grasses found in the British Isles. By M. PLUES. Crown 8vo, 16 Coloured Plates, drawn expressly for the work by W. FITCH, and 100 Wood-Engravings, 10s. 6d.

BRITISH FERNS; an Introduction to the Study of the Ferns, LYCOPODS, and EQUISETA indigenous to the British Isles. With Chapters on the Structure, Propagation, Cultivation, Diseases, Uses, Preservation, and Distribution of Ferns. By MARGARET PLUES. Crown 8vo, 16 Coloured Plates, drawn expressly for the work by W. FITCH, and 55 Wood-Engravings, 10s. 6d.

BRITISH SEAWEEDS; an Introduction to the Study of the Marine ALGÆ of Great Britain, Ireland, and the Channel Islands. By S. O. GRAY. Crown 8vo, 16 Coloured Plates, drawn expressly for the work by W. FITCH, 10s. 6d.

Other Works in preparation.

BOTANY.

BRITISH WILD FLOWERS, Familiarly Described in the Four Seasons. A New Edition of 'The Field Botanist's Companion.' By THOMAS MOORE, F.L.S. One volume, Demy 8vo, 424 pp. With 24 Coloured Plates, by W. FITCH, 16s.

An elegantly-illustrated volume, intended for Beginners, describing the plants most readily gathered in our fields and hedgerows, with the progress of the seasons. Dissections of the parts of the flowers are introduced among the Figures, so that an insight may be readily obtained not only of the Species and name of each plant, but of its structure and characters of classification.

HANDBOOK OF THE BRITISH FLORA; a Description of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. For the Use of Beginners and Amateurs. By GEORGE BENTHAM, F.R.S., President of the Linnean Society. New Edition, Crown 8vo, 680 pp., 12s.

Distinguished for its terse and clear style of description; for the introduction of a system of Analytical Keys, which enable the student to determine the family and genus of a plant at once by the observation of its more striking characters; and for the valuable information here given for the first time of the geographical range of each species in foreign countries.

HANDBOOK OF THE BRITISH FLORA, ILLUSTRATED EDITION; a Description (with a Wood-Engraving, including dissections, of each species) of the Flowering Plants and Ferns indigenous to, or naturalized in, the British Isles. By GEORGE BENTHAM, F.R.S., President of the Linnean Society. Demy 8vo, 2 vols., 1154 pp., 1295 Wood-Engravings, from Original Drawings by W. FITCH, £3. 10s.

An illustrated edition of the foregoing Work, in which every species is accompanied by an elaborate Wood-Engraving of the Plant, with dissections of its leading structural peculiarities.

OUTLINES OF ELEMENTARY BOTANY, as Introductory to Local Floras. By GEORGE BENTHAM, F.R.S., President of the Linnean Society. Demy 8vo, pp. 45, 2s. 6d.

LAWs OF BOTANICAL NOMENCLATURE adopted by the International Botanical Congress, with an Historical Introduction and a Commentary. By ALPHONSE DE CANDOLLE. 2s. 6d.

BRITISH GRASSES; an Introduction to the Study of the
Gramineæ of Great Britain and Ireland. By M. PLUES. Crown 8vo, 16
Coloured Plates by W. FITCH, and 100 Wood-Engravings, 10s. 6d.

One of the 'New Series of Natural History,' accurately describing all the
Grasses found in the British Isles, with introductory chapters on the Structure,
Cultivation, Uses, etc. A Wood-Engraving, including dissections, illustrates
each Species; the Plates contain Coloured figures of 48 Species.

CURTIS'S BOTANICAL MAGAZINE, comprising New and
Rare Plants from the Royal Gardens of Kew, and other Botanical Establish-
ments. By Dr. J. D. HOOKER, F.R.S., Director of the Royal Gardens.
Royal 8vo. Published Monthly, with 6 Plates, 3s. 6d. coloured. Vol. XXIII.
of the Third Series (being Vol. XCIII. of the entire work) now ready, 42s.
A Complete Set from the commencement may be had.

Descriptions and Drawings, beautifully coloured by hand, of newly-discovered
plants suitable for cultivation in the Garden, Hothouse, or Conservatory.

THE FLORAL MAGAZINE, containing Figures and De-
scriptions of New Popular Garden Flowers. By the Rev. H. HONYWOOD
DOMBRAIN, A.B. Imperial 8vo. Published Monthly, with 4 Plates, 2s. 6d.
coloured. Vols. I. to V., each with 64 coloured plates, £2. 2s. Vol. VI.,
48 coloured plates, 31s. 6d.

Descriptions and Drawings, beautifully coloured by hand, of new varieties of
Flowers raised by the nurserymen for cultivation in the Garden, Hothouse, or
Conservatory.

**THE JOURNAL OF BOTANY, BRITISH AND
FOREIGN.** By Dr. B. SEEMANN. Monthly, 2s. 6d.

THE TOURIST'S FLORA; a Descriptive Catalogue of the
Flowering Plants and Ferns of the British Islands, France, Germany,
Switzerland, Italy, and the Italian Islands. By JOSEPH WOODS, F.L.S.
Demy 8vo, 504 pp., 18s.

Designed to enable the lover of botany to determine the names of any wild
plants he may meet with while journeying in our own country and the countries
of the Continent most frequented by tourists. The author's aim has been to
make the descriptions clear and distinct, and to comprise them within a volume
of not inconvenient bulk.

**A FLORA OF ULSTER, AND BOTANIST'S GUIDE
TO THE NORTH OF IRELAND.** By G. DICKIE, M.D., F.L.S.,
Professor of Botany in the University of Aberdeen. A pocket volume,
pp. 176, 3s.

A SECOND CENTURY OF ORCHIDACEOUS PLANTS,
 selected from the subjects published in Curtis's 'Botanical Magazine' since
 the issue of the 'First Century.' Edited by JAMES BATEMAN, Esq., F.R.S.
 Complete in 1 Vol., royal 4to, 100 Coloured Plates, £5. 5s.

During the fifteen years that have elapsed since the publication of the 'Century of Orchidaceous Plants,' now out of print, the 'Botanical Magazine' has been the means of introducing to the public nearly two hundred of this favourite tribe of plants not hitherto described and figured, or very imperfectly so. This volume contains a selection of 100 of the most beautiful and best adapted for cultivation. The descriptions are revised and in many cases re-written, agreeably with the present more advanced state of our knowledge and experience in the cultivation of Orchidaceous plants, by Mr. Bateman, the acknowledged successor of Dr. Lindley as the leading authority in this department of botany and horticulture.

**MONOGRAPH OF ODONTOGLOSSUM, a Genus of the
 Vandaceous Section of Orchidaceous Plants.** By JAMES BATEMAN, Esq.,
 F.R.S. Imperial folio. Parts I. to IV., each with 5 Coloured Plates, and
 occasional Wood Engravings, 21s.

Designed for the illustration, on an unusually magnificent scale, of the new and beautiful plants of this favoured genus of *Orchidaceae*, which are being now imported from the mountain-chains of Mexico, Central America, New Granada, and Peru.

SELECT ORCHIDACEOUS PLANTS. By ROBERT WARRER, F.R.H.S. With Notes on Culture by B. S. WILLIAMS. In Ten Parts, folio, each, with 4 Coloured Plates, 12s. 6d.; or, complete in one vol., cloth gilt, £6. 6s.
 Second Series, Parts I. to IV., each, with 8 Coloured Plates, 10s. 6d.

PESCATOREA. Figures of Orchidaceous Plants, chiefly from the Collection of M. PESCATORE. Edited by M. LINDEN, with the assistance of MM. G. LUDDEMAN, J. E. PLANCHON, and M. G. REICHENBACH. Folio, 48 Coloured Plates, cloth, with morocco back, £5. 5s.

THE RHODODENDRONS OF SIKKIM-HIMALAYA;
 being an Account, Botanical and Geographical, of the Rhododendrons recently discovered in the Mountains of Eastern Himalaya, from Drawings and Descriptions made on the spot, by Dr. J. D. HOOKER, F.R.S. By Sir W. J. HOOKER, F.R.S. Folio, 30 Coloured Plates, £3. 13s.

Illustrations on a superb scale of the new Sikkim Rhododendrons, now being cultivated in England, accompanied by copious observations on their distribution and habits.

ILLUSTRATIONS OF THE GENUS CAREX. By FRANCIS BOOTT, M.D. Part IV. Folio, 189 Plates, £10.

GENERA PLANTARUM, ad Exemplaria imprimis in Herbariis Kewensibus servata definita. By GEORGE BENTHAM, F.R.S., President of the Linnean Society, and Dr. J. D. HOOKER, F.R.S., Director of the Royal Gardens, Kew. Vol. I. Part I. pp. 454. Royal 8vo, 2ls. Part II., 14s.; Part III., 15s.; or Vol. I. complete, 50s.

This important work comprehends an entire revision and reconstruction of the Genera of Plants. Unlike the famous Genera Plantarum of Endlicher, which is now out of print, it is founded on a personal study of every genus by one or both authors. The First Vol. contains 82 Natural Orders and 2544 Genera.

FLORA OF THE ANTARCTIC ISLANDS. By Dr. J. D. HOOKER, F.R.S. Royal 4to. 2 vols., 574 pp., 200 Plates, £10. 15s. coloured. Published under the authority of the Lords Commissioners of the Admiralty.

The 'Flora Antarctica' illustrates the Botany of the sothern districts of South America and the various Antarctic Islands, as the Falklands, Kerguelen's Land, Lord Auckland and Campbell's Island, and 1370 species are enumerated and described. The plates, which are executed by Mr. Fitch, and beautifully coloured, illustrate 370 species, including a vast number of exquisite forms of Mosses and Seaweeds.

FLORA OF TASMANIA. By Dr. J. D. HOOKER, F.R.S. Royal 4to, 2 vols., 972 pp., 200 Plates, £17. 10s., coloured. Published under the authority of the Lords Commissioners of the Admiralty.

The 'Flora of Tasmania' describes all the Plants, flowering and flowerless, of that Island, consisting of 2203 Species, collected by the Author and others. The Plates, of which there are 200, illustrate 412 Species.

ON THE FLORA OF AUSTRALIA, its Origin, Affinities, and Distribution; being an Introductory Essay to the 'Flora of Tasmania.' By Dr. J. D. HOOKER, F.R.S. 128 pp., quarto, 10s.

FLORA HONGKONGENSIS; a Description of the Flowering Plants and Ferns of the Island of Hongkong. By GEORGE BENTHAM, P.L.S. With a Map of the Island. Demy 8vo, 550 pp., 16s. Published under the authority of Her Majesty's Secretary of State for the Colonies.

The Island of Hongkong, though occupying an area of scarcely thirty square miles, is characterized by an extraordinarily varied Flora, partaking, however, of that of South Continental China, of which comparatively little is known. The number of Species enumerated in the present volume is 1056, derived chiefly from materials collected by Mr. Hinds, Col. Champion, Dr. Haace, Dr. Harland, Mr. Wright, and Mr. Wilford.

FLORA OF TROPICAL AFRICA. By DANIEL OLIVER,
F.R.S., F.L.S. Vol. I., 20s. Published under the authority of the First
Commissioner of Her Majesty's Works.

This important and much-needed work embodies the researches of a long list of explorers, the results of whose labours have been accumulating at the Royal Gardens, Kew, and other museums, for many years past. The present volume contains the Orders *Ranunculaceæ* to *Connaraceæ*.

HANDBOOK OF THE NEW ZEALAND FLORA; a Systematic Description of the Native Plants of New Zealand, and the Chatham, Kermadec'a, Lord Auckland's, Campbell's, and Macquarie's Islands. By Dr. J. D. HOOKER, F.R.S. Demy 8vo. Part I., 16s.; Part II., 14s.; or complete in one vol., 30s. Published under the auspices of the Government of that colony.

A compendious account of the plants of New Zealand and outlying islands, published under the authority of the Government of that colony. The first Part contains the Flowering Plants, Ferns, and Lycopods; the Second the remaining Orders of *Cryptogamia*, or Flowerless Plants, with Index and Catalogues of Native Names and of Naturalized Plants.

FLORA AUSTRALIENSIS; a Description of the Plants of the Australian Territory. By GEORGE BENTHAM, F.R.S., President of the Linnean Society, assisted by FERDINAND MUELLER, F.R.S., Government Botanist, Melbourne, Victoria. Demy 8vo. Vols. I., II., and III., 20s. each. Published under the auspices of the several Governments of Australia.

[Vol. IV. in the Press.]

Of this great undertaking, the present volumes, of nearly two thousand closely-printed pages, comprise about one-half. The materials are derived not only from the vast collections of Australian plants brought to this country by various botanical travellers, and preserved in the herbaria of Kew and of the British Museum, including those hitherto unpublished of Banks and Solander, of Captain Cook's first Voyage, and of Brown in Flinders', but from the very extensive and more recently collected specimens preserved in the Government Herbarium of Melbourne, under the superintendence of Dr. Ferdinand Mueller. The descriptions are written in plain English, and are masterpieces of accuracy and clearness.

FLORA OF THE BRITISH WEST INDIAN ISLANDS. By Dr. GRISEBACH, F.L.S. Demy 8vo, 806 pp., 37s. 6d. Published under the auspices of the Secretary of State for the Colonies.

Containing complete systematic descriptions of the Flowering Plants and Ferns of the British West Indian Islands, accompanied by an elaborate index of reference, and a list of Colonial names.

FLORA VITIENSIS; a Description of the Plants of the Viti or Fiji Islands, with an Account of their History, Uses, and Properties. By Dr. BERTHOLD SEEMANN, F.L.S. Royal 4to, Parts I. to VIII. each, 10 Coloured Plates, 15s. To be completed in 10 Parts.

This work owes its origin to the Government Mission to Viti, to which the author was attached as naturalist. In addition to the specimens collected, the author has investigated all the Polynesian collections of Plants brought to this country by various botanical explorers since the voyage of Captain Cook.

CONTRIBUTIONS TO THE FLORA OF MENTONE.

By J. TRAHERNE MOGRIDGE. Royal 8vo. Parts I. and II., each, 25 Coloured Plates, 15s. [Part III. in the Press.]

In this work a full page is devoted to the illustration of each Species, the drawings being made by the author from specimens collected by him on the spot, and they exhibit in vivid colours the beautiful aspect which many of our wild flowers assume south of the Alps.

ILLUSTRATIONS OF THE NUEVA QUINOLOGIA

OF PAVON, with Observations on the Barks described. By J. E. HOWARD, F.L.S. With 27 Coloured Plates by W. FITCH. Imperial folio, half-morocco, gilt edges, £6. 6s.

A superbly-coloured volume, illustrative of the most recent researches of Pavon and his associates among the Cinchona Barks of Peru.

ILLUSTRATIONS OF SIKKIM-HIMALAYAN PLANTS,

chiefly selected from Drawings made in Sikkim, under the superintendence of the late J. F. CATHCART, Esq., Bengal Civil Service. The Botanical Descriptions and Analyses by Dr. J. D. HOOKER, F.R.S. Imperial folio, 24 Coloured Plates and an Illuminated Title-page by W. Fitch, £5. 5s.

THE LONDON JOURNAL OF BOTANY. Original

Papers by eminent Botanists, Letters from Botanical Travellers, etc. Vol. VII., completing the Series. Demy 8vo, 23 Plates, 30s.

JOURNAL OF BOTANY AND KEW MISCELLANY.

Original Papers by eminent Botanists, Letters from Botanical Travellers, etc. Edited by Sir W. J. HOOKER, F.R.S. Vols. IV. to IX., Demy 8vo. 12 Plates, each £1. 4s.

ICONES PLANTARUM. Figures, with brief Descriptive

Characters and Remarks, of New and Rare Plants, selected from the Author's Herbarium. By Sir W. J. HOOKER, F.R.S. New Series, Vol. V. Royal 8vo, 100 plates, 31s. 6d.

FERNS.

BRITISH FERNS; an Introduction to the study of the FERNS, LYCOPDS, and EQUISETA indigenous to the British Isles. With Chapters on the Structure, Propagation, Cultivation, Diseases, Uses, Preservation, and Distribution of Ferns. By M. PLUES. Crown 8vo, 16 Coloured Plates, drawn expressly for the work by W. FITCH, and 55 Wood-Engravings, 10s. 6d.

One of the 'New Series of Natural History for Beginners,' accurately describing all the Ferns and their allies found in Britain, with a Wood-Engraving of each Species, and Coloured Figures of 32 of the most interesting, including magnified dissections showing the Venation and Fructification.

THE BRITISH FERNS; or, Coloured Figures and Descriptions, with the needful Analyses of the Fructification and Venation, of the Ferns of Great Britain and Ireland, systematically arranged. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 66 Plates, £2. 2s.

The British Ferns and their allies are illustrated in this work, from the pencil of Mr. FITCH. Each Species has a Plate to itself, so that there is ample room for the details, on a magnified scale, of Fructification and Venation. The whole are delicately coloured by hand. In the letterpress an interesting account is given with each species of its geographical distribution in other countries.

GARDEN FERNS; or, Coloured Figures and Descriptions, with the needful Analyses of the Fructification and Venation, of a Selection of Exotic Ferns, adapted for Cultivation in the Garden, Hothouse, and Conservatory. By Sir W. J. HOOKER, F.R.S. Royal 8vo, 64 Plates, £2. 2s.

A companion volume to the preceding, for the use of those who take an interest in the cultivation of some of the more beautiful and remarkable varieties of Exotic Ferns. Here also each Species has a Plate to itself, and the details of Fructification and Venation are given on a magnified scale, the Drawings being from the pencil of Mr. FITCH.

FILICES EXOTICÆ; or, Coloured Figures and Description of Exotic Ferns, chiefly of such as are cultivated in the Royal Gardens of Kew. By Sir W. J. HOOKER, F.R.S. Royal 4to, 100 Plates, £6. 11s.

One of the most superbly illustrated books of Foreign Ferns that has been hitherto produced. The Species are selected both on account of their beauty of form, singular structure, and their suitabilities for cultivation.

FERNY COMBES; a Ramble after Ferns in the Glens and Valleys of Devonshire. By CHARLOTTE CHANTER. *Third Edition.* Fcp. 8vo, 8 coloured plates by FITCH, and a Map of the County, 5s.

MOSSES.

HANDBOOK OF BRITISH MOSSES, containing all that are known to be Natives of the British Isles. By the Rev. M. J. BERKELEY, M.A., F.L.S. Demy 8vo, pp. 360, 24 Coloured Plates, 21s.

A very complete Manual, comprising characters of all the species, with the circumstances of habitation of each; with special chapters on development and structure, propagation, fructification, geographical distribution, uses, and modes of collecting and preserving, followed by an extensive series of coloured illustrations, in which the essential portions of the plant are repeated, in every case on a magnified scale.

SEAWEEDS.

BRITISH SEAWEEDS; an Introduction to the Study of the Marine ALGÆ of Great Britain, Ireland, and the Channel Islands. By S. O. GRAY. Crown 8vo, 16 Colored Plates, drawn expressly for the work by W. FITCH, 10s. 6d.

One of L. Reeve and Co.'s 'New Series,' briefly but accurately describing, according to the classification of the best and most recent authorities, all the Algae found on our coasts.

PHYCOLOGIA BRITANNICA; or, History of British Seaweeds, containing Coloured Figures, Generic and Specific Characters, Synonyms and Descriptions of all the Species of Algae inhabiting the Shores of the British Islands. By Dr. W. H. HARVEY, F.R.S. Royal 8vo, 4 vols., 765 pp., 360 Coloured Plates, £6. 6s.

This work, originally published in 1851, is still the standard work on the subject of which it treats. Each Species, excepting the minute ones, has a Plate to itself, with magnified portions of structure and fructification, the whole being printed in their natural colours, finished by hand.

PHYCOLOGIA AUSTRALICA; a History of Australian Seaweeds, comprising Coloured Figures and Descriptions of the more characteristic Marine Algae of New South Wales, Victoria, Tasmania, South Australia and Western Australia, and a Synopsis of all known Australian Algae. By Dr. HARVEY, F.R.S. Royal 8vo, 5 vols., 300 Coloured Plates, £7. 13s.

This beautiful work, the result of an arduous personal exploration of the shores of the Australian continent, is got up in the style of the 'Phycologia Britannica' by the same author. Each Species has a Plate to itself, with ample magnified delineations of fructification and structure, embodying a variety of most curious and remarkable forms.

NEREIS AUSTRALIS; or, *Algæ of the Southern Ocean*,
being Figures and Descriptions of Marine Plants collected on the Shores
of the Cape of Good Hope, the extratropical Australian Colonies, Tasmania,
New Zealand, and the Antarctic Regions. By Dr. HARVEY, F.R.S.
Imperial 8vo, 50 Coloured Plates, £2. 2s.

A selection of Fifty Species of remarkable forms of Seaweed, not included in
the 'Phycologia Australica,' collected over a wider area.

FUNGI.

OUTLINES OF BRITISH FUNGOLOGY, containing

Characters of above a Thousand Species of Fungi, and a Complete List of
all that have been described as Natives of the British Islea. By the Rev.
M. J. BERKELEY, M.A., F.L.S. Demy 8vo, 484 pp., 24 Coloured Plates,
30s.

Although entitled simply 'Outlines,' this is a good-sized volume, of nearly 500
pages, illustrated with more than 200 Figures of British Fungi, all carefully
coloured by hand. Of above a thousand Species the characters are given, and
a complete list of the names of all the rest.

THE ESCULENT FUNGUSES OF ENGLAND. Containing

an Account of their Classical History, Usea, Characters, Develop-
ment, Structure, Nutritious Properties, Modes of Cooking and Preserving,
etc. By C. D. BADHAM, M.D. Second Edition. Edited by F. CURREY,
F.R.S. Demy 8vo, 152 pp., 12 Coloured Plates, 12s.

A lively classical treatise, written with considerable epigrammatic humour,
with the view of showing that we have upwards of 30 Species of Fungi abounding
in our woods capable of affording nutritions and savoury food, but which, from
ignorance or prejudice, are left to perish ungathered. "I have indeed grieved,"
says the Author, "when reflecting on the straitened condition of the lower
orders, to see pounds of extempore beefsteaks growing on our oaks, in the shape
of *Fistulina hepatica*; Puff-balls, which some have not inaptly compared to
sweetbread; *Hydnæ*, as good as oysters; and *Agaricus deliciosus*, reminding us of
tender lamb-kidney." Superior coloured Figures of the Speciea are given from
the pencil of Mr. FITCH.

ILLUSTRATIONS OF BRITISH MYCOLOGY, comprising Figures and Descriptions of the Funguses of interest and novelty indigenous to Britain. By Mrs. T. J. HUSSEY. Royal 4to; First Series,
90 Coloured Platea, £7. 12s. 6d.; Second Series, 50 Coloured Plates,
£4. 10s.

This beautifully-illustrated work is the production of a lady who, being an
accomplished artist, occupied the leisure of many years in accumulatiog a port-
folio of exquisite drawings of the more attractive forms and varieties of British
Fungi. The publication was brought to an end with the 140th Plate by her
udden decease. The Figures are mostly of the natural size, carefully coloured
by hand.

SHELLS AND MOLLUSKS.

ELEMENTS OF CONCHOLOGY; an Introduction to the Natural History of Shells, and of the Animals which form them. By LOVELL REEVE, F.L.S. Royal 8vo, 2 vols., 478 pp., 62 Coloured Plates, £2. 16s.

Intended as a guide to the collector of shells in arranging and naming his specimens, while at the same time inducing him to study them with reference to their once living existence, geographical distribution, and habits. Forty-six of the plates are devoted to the illustration of the genera of shells, and sixteen to shells with the living animal, all beautifully coloured by hand.

THE LAND AND FRESHWATER MOLLUSKS indigenous to, or naturalized in, the British Isles. By LOVELL REEVE, F.L.S. Crown 8vo, 295 pp., Map, and 160 Wood-Engravings, 10s. 6d.

A complete history of the British Land and Freshwater Shells, and of the Animals which form them, illustrated by Wood-Engravings of all the Species. Other features of the work are an Analytical Key, showing at a glance the natural groups of families and genera, copious Tables and a Map illustrative of geographical distribution and habits, and a chapter on the Distribution and Origin of Species.

CONCHOLOGIA ICONICA; or, Figures and Descriptions of the Shells of Mollusks, with remarks on their Affinities, Synonymy, and Geographical Distribution. By LOVELL REEVE, F.L.S. Demy 4to, published monthly in Parts, 8 Plates, carefully coloured by hand, 10s.

Of this work, comprising illustrations of Shells of the natural size, nearly 2000 Plates are published, but the plan of publication admits of the collector purchasing it at his option in portions, each of which is complete in itself. Each genus, as the work progresses, is issued separately, with Title and Index; and an Alphabetical List of the published genera, with the prices annexed, may be procured of the publishers on application. The system of nomenclature adopted is that of Lamarck, modified to meet the exigencies of later discoveries. With the name of each species is given a summary of its leading specific characters in Latin and English; then the authority for the name is quoted, accompanied by a reference to its original description; and next in order are its Synonyms. The habitat of the species is next given, accompanied, where possible, by particulars of soil, depth, or vegetation. Finally, a few general remarks are offered, calling attention to the most obvious distinguishing peculiarities of the species, with criticisms, where necessary, on the views of other writers. At the commencement of the genera some notice is taken of the animal, and the habitats of the species are worked up into a general summary of the geographical distribution of the genus.

CONCHOLOGIA SYSTEMATICA ; or, Complete System of
Conchology. By LOVELL REEVE, F.L.S. Demy 4to, 2 vols. pp. 537,
300 Plates, £10. 10s. coloured.

Of this work only a few copies remain. It is a useful companion to the collector of shells, on account of the very large number of specimens figured, as many as six plates being devoted in some instances to the illustration of a single genus.

THE EDIBLE MOLLUSKS OF GREAT BRITAIN AND
IRELAND, with the modes of cooking them. By M. S. LOVELL. Crown
8vo, 12 Coloured Plates, 8s. 6d.

INSECTS.

CURTIS'S BRITISH ENTOMOLOGY. Illustrations and
Descriptions of the Genera of Insects found in Great Britain and Ireland,
containing Coloured Figures, from nature, of the most rare and beautiful
species, and, in many instances, upon the plants on which they are found.
Royal 8vo, 8 vols., 770 Plates, coloured, £21.

Or in separate Monographs.

'Curtis's Entomology,' which Cuvier pronounced to have "reached the ultimatum of perfection," is still the standard work on the Genera of British Insects. The Figures executed by the author himself, with wonderful minuteness and accuracy, have never been surpassed, even if equalled. The price at which the work was originally published was £43. 16s.

BRITISH BEETLES; an Introduction to the Study of our Indigenous COLEOPTERA. By E. C. RYE. Crown 8vo, 16 Coloured Steel Plates, comprising Figures of nearly 100 Species, engraved from Natural Specimens, expressly for the work, by E. W. ROBINSON, and 11 Wood-Engravings of Dissections by the Author, 10s. 6d.

This little work forms the first of a New Series designed to assist young persons to a more profitable, and, consequently, more pleasurable observation of Nature, by furnishing them in a familiar manner with so much of the science as they may acquire without encumbering them with more of the technicalities, so confusing and repulsive to beginners, than are necessary for their purpose. In the words of the Preface, it is "somewhat on the scheme of a *Delectus*; combining extracts from the biographies of individual objects with principles of classification and hints for obtaining further knowledge."

BRITISH BEES; an Introduction to the Study of the Natural History and Economy of the Bees indigenous to the British Isles. By W. E. SHUCKARD. Crown 8vo, 16 Coloured Steel Plates, containing nearly 100 Figures, engraved from Natural Specimens, expressly for the work, by E. W. ROBINSON, and Woodcuts of Dissections, 10s. 6d.

A companion volume to that on British Beetles, treating of the structure, geographical distribution and classification of Bees and their parasites, with lists of the species found in Britain, and an account of their habits and economy.

BRITISH SPIDERS; an Introduction to the Study of the ARANEIDÆ found in Great Britain and Ireland. By E. F. STAVELEY. Crown 8vo, 16 Plates, containing Coloured Figures of nearly 100 Species, and 40 Diagrams, showing the number and position of the eyes in various Genera, drawn expressly for the work by TUFFEN WEST, and 44 Wood-Engravings, 10s. 6d.

One of the 'New Series of Natural History for Beginners,' and companion volume to the 'British Beetles' and 'British Bees.' It treats of the structure and classification of Spiders, and describes those found in Britain, with notes on their habits and hints for collecting and preserving.

BRITISH BUTTERFLIES AND MOTHS; an Introduction to the Study of our Native LEPIDOPTERA. By H. T. STAINTON. Crown 8vo, 16 Coloured Steel Plates, containing Figures of 100 Species, engraved from Natural Specimens expressly for the work by E. W. ROBINSON, and Wood-Engravings, 10s. 6d.

Another of the 'New Series of Natural History for Beginners and Amateurs,' treating of the structure and classification of the Lepidoptera.

INSECTA BRITANNICA; Vols. II. and III., Diptera. By FRANCIS WALKER, F.L.S. 8vo, each, with 10 plates, 25s.

ANTIQUARIAN.

SACRED ARCHAEOLOGY; a Popular Dictionary of Ecclesiastical Art and Institutions, from Primitive to Modern Times. Comprising Architecture, Music, Vestments, Furniture Arrangement, Offices, Customs, Ritual Symbolism, Ceremonial Traditions, Religious Orders, etc., of the Church Catholic in all Ages. By MACKENZIE E. C. WALCOTT, B.D. Oxon., F.S.A., Praeceptor and Prebendary of Chichester Cathedral. Demy 8vo, 18s.

Mr. Walcott's 'Dictionary of Sacred Archaeology' is designed to satisfy a great and growing want in the literature of the day. The increased interest taken by large classes of the community in the Ecclesiastical History, the Archaeology, the Ritual, Artistic, and Conventional Usages of the early and middle ages of Christendom has not been met by the publication of manuals at all fitted by their comprehensiveness, their accuracy, and the convenience of their arrangement to supply this highly important demand. To combine in one the varied and general information required by the cultivated reader at large with the higher and more special sources of knowledge of which the student of ecclesiastical lore has need, is the object which has been kept in view in the compilation now offered to the public. In no work of the kind has the English public, it is confidently believed, had presented to it so large and varied a mass of matter in a form so conveniently arranged for reference. One valuable feature to which attention may be invited is the copious list of authorities prefixed to Mr. Walcott's Dictionary. The student will here find himself put readily upon the track for following up any particular line of inquiry, of which the Dictionary has given him the first outlines.

MAN'S AGE IN THE WORLD ACCORDING TO HOLY SCRIPTURE AND SCIENCE. By an ESSEX RECTOR. Demy 8vo, 264 pp., 8s. 6d.

The Author, recognizing the established facts and inevitable deductions of Science, and believing all attempts to reconcile them with the commonly received, but erroneous, literal interpretation of Scripture, not only futile, but detrimental to the cause of Truth, seeks an interpretation of the Sacred Writings on general principles, consistent alike with their authenticity, when rightly understood, and with the exigencies of Science. He treats in successive Chapters of The Flint Weapons of the Drift,—The Creation,—The Paradisiacal State,—The Genealogies,—The Deluge,—Babel and the Dispersion; and adds an Appendix of valuable information from various sources.

A MANUAL OF BRITISH ARCHAEOLOGY. By CHARLES BOUTELL, M.A. Royal 16mo, 398 pp., 20 Coloured Plates, 10s. 6d.

A treatise on general subjects of antiquity, written especially for the student of archaeology, as a preparation for more elaborate works. Architecture, Sepulchral Monuments, Heraldry, Seals, Coins, Illuminated Manuscripts and Inscriptions, Arms and Armour, Costume and Personal Ornaments, Pottery, Porcelain and Glass, Clocks, Locks, Carvings, Mossics, Embroidery, etc., are treated of in succession, the whole being illustrated by 20 attractive Plates of Coloured Figures of the various objects.

THE BEWICK COLLECTOR. A Descriptive Catalogue of the Works of THOMAS and JOHN BEWICK, including Cuts, in various states, for Books and Pamphlets, Private Gentlemen, Public Companies, Exhibitions, Races, Newspapers, Shop Cards, Invoice Heads, Bar Bills, Coal Certificates, Broadsides, and other miscellaneous purposes, and Wood Blocks. With an Appendix of Portraits, Autographs, Works of Pupils, etc. The whole described from the Originals contained in the Largest and most Perfect Collection ever formed, and illustrated with a Hundred and Twelve Cuts from Bewick's own Blocks. By the Rev. THOMAS HUGO, M.A., F.S.A., the Possessor of the Collection. Demy 8vo, pp. 562, price 21s.; imperial 8vo (limited to 100 copies), with a fine Steel Engraving of Thomas Bewick, £2. 2s. The Portrait may be had separately, on imperial folio, price 7s. 6d.

THE BEWICK COLLECTOR SUPPLEMENT. With 180 Cuts from Bewick's own Blocks. By the Rev. T. HUGO, M.A., F.S.A. Demy 8vo, 21s.; imperial 8vo (limited to 100 copies), 42s.

WHITNEY'S "CHOICE OF EMBLEMES;" a Facsimile Reprint by Photo-lithography. With an Introductory Dissertation, Essays Literary and Bibliographical, and Explanatory Notes. By HENRY GREEN, M.A. Poet 4to, pp. lxxxviii., 468. 72 Facsimile Platea, 42s.

A beautiful and interesting reproduction by Photo-lithography of one of the best specimens of this curious class of literature of the sixteenth century. An Introductory Dissertation of eighty-eight pages traces the history of Emblematic Literature from the earliest times, and gives an Account of the Life and Writings of Geoffrey Whitney, followed by an Index to the Mottoes, with Translations and some Proverbial Expressions. The facsimile reproduction of the 'Emblems, with their quaint pictorial Illustrations, occupies 230 pages. Then follow Essays on the Subjects and Sources of the Mottoes and Devices, on Obsolete Words in Whitney, with parallels, chiefly from Chaucer, Spenser, and Shakespeare; Biographical Notices of some other emblem-writers to whom Whitney was indebted; Shakespeare's references to emblem-books, and to Whitney's emblems in particular; Literary and Biographical Notes explanatory of some of Whitney's emblems, and of the persons to whom they are dedicated. Seventy-two exceedingly curious plates, reproduced in facsimile, illustrate this portion of the work, and a copious General Index concludes the volume.

SHAKESPEARE'S SONNETS, Facsimile, by Photo-Zinco-graphy, of the First Printed edition of 1609. From the Copy in the Library of Bridgewater House, by permission of the Right Hon. the Earl of Ellesmere. 10s. 6d.

THE ANTIQUITY OF MAN An Examination of Sir Charles Lyell's recent Work. By S. R. PATTISON, F.G.S. Second Edition. 8vo, 1s.

MISCELLANEOUS.

CALIPHS AND SULTANS; being Tales omitted in the ordinary English Version of 'The Arabian Nights Entertainments,' freely rewritten and rearranged. By S. HANLEY, F.L.S. 6s.

CAUSE AND EFFECT; or, The Globe We Inhabit. By R. MACKLEY BROWNE, F.G.S. Crown 8vo. 6s.

LIVE COALS; or, Faces from the Fire. By L. M. BUDGEN, "Acheta," Author of 'Episodes of Insect Life,' etc. Dedicated, by Special Permission, to H.R.H. Field-Marshal the Duke of Cambridge. Royal 4to, 35 Original Sketches printed in colours, 42s.

The 'Episodes of Insect Life,' published in three series some years since, won from the late Prince Consort a graceful acknowledgment in the presentation to the Author of a copy of a book, 'The Natural History of Deeside,' privately printed by command of Her Majesty the Queen. The above Work comprises a series of Thirty-five highly imaginative and humorous Sketches, suggested by burning Coals and Wood, accompanied by Essays, descriptive and discursive, on:—The Imagery of Accident—The Fire in a New Light—The Fire an Exhibitor—The Fire a Sculptor.

SUNSHINE AND SHOWERS: their Influences throughout Creation. A Compendium of Popular Meteorology. By ANDREW STEINMETZ, Esq. Crown 8vo, Wood Engravings, 7s. 6d.

This Work not only treats fully all the leading topics of Meteorology, but especially of the use of the Hygrometer, for which systematic Rules are now for the first time drawn up. Among other interesting and useful subjects, are chapters on Rainfall in England and Europe in general—Wet and Dry Years—Temperature and Moisture with respect to the health of Plants and Animals—The Wonders of Evaporation—Soil Temperature—The Influence of Trees on Climate and Water Supply—The Prognostication of the Seasons and Harvest—The Characteristics and Meteorology of the Seasons—Rules of the Barometer—Rules of the Thermometer as a Weather Glass—Popular Weather-casts—Anemometry—and finally, What becomes of the Sunshine—and what becomes of the Showers.

EVERYBODY'S WEATHER-GUIDE. The Use of Meteorological Instruments clearly Explained, with Directions for Securing at any time a probable Prognostic of the Weather. By A. STEINMETZ, Esq., Author of 'Sunshine and Showers,' etc. 1s.

THE REASONING POWER IN ANIMALS. By the Rev.
J. S. WATSON, M.A. 480 pp. Crown 8vo, 9s.

The object of the above treatise is to trace the evidences of the existence in the lower animals of a portion of that reason which is possessed by man. A large number of carefully-selected and well-authenticated anecdotes are adduced of various animals having displayed a degree of intelligence distinct from instinct, and called into activity by circumstances in which the latter could have been no guide.

METEORS, AEROLITES, AND FALLING STARS. By
Dr. T. L. PHIPSON, F.C.S. Crown 8vo. 25 Woodcuts and Lithographic Frontispiece, 6s.

A very complete summary of Meteoric Phenomena, from the earliest to the present time, including the shower of November, 1866, as observed by the Author.

MANUAL OF CHEMICAL ANALYSIS, Qualitative and Quantitative; for the Use of Students. By Dr. HENRY M. NOAD, F.R.S. Crown 8vo, pp. 663, 109 Wood Engravings, 16s. Or, separately, Part I., 'QUALITATIVE,' 6s.; Part II., 'QUANTITATIVE,' 10s. 6d.

A Copiously-illustrated, Useful, Practical Manual of Chemical Analysis, prepared for the Use of Students by the Lecturer on Chemistry at St. George's Hospital. The illustrations consist of a series of highly-finished Wood-Engravings, chiefly of the most approved forms and varieties of apparatus.

PHOSPHORESCENCE; or, the Emission of Light by Minerals, Plants, and Animals. By Dr. T. L. PHIPSON, F.C.S. Small 8vo, 225 pp., 30 Wood Engravings and Coloured Frontispiece, 5s.

An interesting account of the various substances in nature—mineral, vegetable, and animal—which possess the remarkable property of emitting spontaneous light.

THE ZOOLOGY OF THE VOYAGE OF H.M.S. SAMARANG, under the command of Captain Sir Edward Belcher, C.B., during the Years 1843–46. By Professor OWEN, Dr. J. E. GRAY, Sir J. RICHARDSON, A. ADAMS, L. REEVE, and A. WHITE. Edited by ARTHUR ADAMS, F.L.S. Royal 4to, 257 pp., 55 Plates, mostly coloured, £3. 10s.

In this work, illustrative of the new species of animals collected during the surveying expedition of H.M.S. Samarang in the Eastern Seas in the years 1843–1846, there are 7 Plates of Quadrupeds, 1 of Reptiles, 10 of Fishes, 24 of Mollusca and Shells, and 13 of Crustacea. The Mollusca, which are particularly interesting, include the anatomy of *Spirula* by Professor Owen, and a number of beautiful Figures of the living animals by Mr. Arthur Adams.

TRAVELS ON THE AMAZON AND RIO NEGRO;

with an Account of the Native Tribes, and Observations on the Climate, Geology, and Natural History of the Amazon Valley. By ALFRED R. WALLACE. Demy 8vo, 541 pp., with Map and Tinted Frontispiece, 18s.

A lively narrative of travels in one of the most interesting districts of the Southern Hemisphere, accompanied by Remarks on the Vocabularies of the Languages, by Dr. R. G. LATHAM.

A SURVEY OF THE EARLY GEOGRAPHY OF WESTERN EUROPE, as connected with the First Inhabitants of Britain, their Origin, Language, Religious Rites, and Edifices. By HENRY LAWES LONG, Esq. 8vo, 6s.

LITERARY PAPERS ON SCIENTIFIC SUBJECTS.

By the late Professor EDWARD FORBES, F.R.S., selected from his Writings in the 'Literary Gazette.' With a Portrait and Memoir. Small 8vo, 6s.

THE GEOLOGIST. A Magazine of Geology, Palæontology, and Mineralogy. Illustrated with highly finished Wood-Engravings. Edited by S. J. MACKIE, F.G.S., F.S.A. Vols. V. and VI., each, with numerous Wood-Engravings, 18s. Vol. VII., 9s.

GUIDE TO COOL-ORCHID GROWING. By JAMES BATEMAN, Esq., F.R.S., Author of 'The Orchidaceæ of Mexico and Guatemala.' Woodcuts, 1s.

THE STEREOSCOPIC MAGAZINE. A Gallery for the Stereoscope of Landscape Scenery, Architecture, Antiquities, Natural History, Rustic Character, etc. With Descriptions. 5 vols., each complete in itself and containing 50 Stereographs, £2. 2s.

THE ARTIFICIAL PRODUCTION OF FISH. By PISCARIUS. Third Edition. 1s.
