How labour legislation is enforced is of the greatest importance to all who are interested in the improvement of industrial and labour conditions, for legislation is of little importance until it is enforced.

The question is of special importance to the International Labour Organization. It was definitely laid down in Part XIII of the Treaty of Peace that "Each state should make provision for a system of inspection, in

which women should take part, in order to insure the enforcement of the laws and regulations for the protection of the employed."

The problem of the enforcement of labour legislation in various countries was examined by the International Labour Conference last October in connection with the Recommendation it adopted laying down the general principles for the organization of factory inspection. The International Labour Office has now published a comprehensive report explaining the historical development and present organization of factory inspection in twenty-five countries, and including some of the more important states of the United States. Copies of this report may be obtained from the International Labour Office, Geneva, Switzerland.

#### **Eight-hour day in United States steel industry**

Information obtained by the International Labour Office in Geneva indicates the gradual elimination of the twelve-hour day in the American steel industry in favour of three shifts of eight hours each. The President of the Bethlehem Steel Company is credited with the statement that at the beginning of 1924 not more than 2 per cent of the staff in the company's factories worked more than ten hours a day. Transformation of plant is being effected as rapidly as possible in order to allow the immediate application of the new system.

The United States Steel Corporation has succeeded in suppressing the twelve-hour shifts in its factories in the neighbourhood of Chicago.

In the region of Pittsburgh, in Ohio and in Kentucky, the twelve-hour shift is gradually disappearing, and 80 per cent of the undertakings in these districts have already substituted the eight-hour shift. This is also the case in the undertakings at Cleveland and Buffalo.

#### **Child labour in China**

Since the establishment of the International Labour Organization the movement to better conditions of life and labour for the wage-earner has been accelerated particularly in the field of children and young persons employed in industry. Child labour legislation has been established in practically every civilized country, and a movement is now on foot in China to protect the young in industry.

It will be remembered that it was through the medium of the International Labour Organization that the conditions of the child workers in the carpet manufacturing industry

in the Kerman district of Persia were ameliorated. Where formerly the children started working at the looms in their fifth year, they can not now be employed before their fourteenth birthday.

Conditions in China are somewhat similar to those in Persia as regards child labour. Modern machinery has reduced the skill needed for operation so that women and children, who are cheaper than men, may be employed. It is estimated that in the cotton mills in China 40 per cent of the employees are women, 40 per cent children and only 20 per cent men. In the silk industry in Central and South China nearly all the workers are women and girls. The estimates for all branches of industry in China show 20 per cent boys and girls under 14 years of age.

Although labour legislation has heretofore been non-existent in China, many organizations, including the newly organized labour unions, have attempted to establish standards of working conditions comparable with those adopted at the various International Labour Conferences.

The first attempt at State regulation was recently made when the Board of Agriculture and Commerce published 28 articles governing the conditions of employment. Among the main features may be mentioned the prohibition of child labour under 10 years for boys and 12 years for girls; and the institution of less strenuous working conditions of junior workers, boys 10 to 17 and girls 12 to 18. Furthermore, employers are forbidden to employ junior workers at night, i.e., from 8 o'clock p.m. to 4 o'clock a.m.

#### **Overseas Settlement Committee**

The British Overseas Settlement Committee, in their report for the year 1923 (Cmd 2107), mention that the policy of state-aided Empire settlement, as embodied in the Empire Settlement Act, 1922, had received the approval of the Imperial Economic Conference. This policy is to ensure that the fresh population required by the Dominions should, as far as possible, be British in sympathy, spirit, and origin; and also to remedy fluctuations of trade by developing the country's markets and increasing the number of its customers, thus permanently minimizing the risk of unemployment both in the United Kingdom and overseas. It is not claimed as a means of securing the immediate relief of unemployment. The Committee propose to extend the system under which individuals resident in certain of the Dominions may nominate their friends or relatives in the United Kingdom for passage at reduced rates by means of col-

lective nomination, under which churches, philanthropic societies and other organizations overseas may make nominations in favour of persons to be selected by kindred churches, societies and organizations in the United Kingdom. The committee consider that this system "should be of most value in facilitating the settlement of those classes which the ordinary government machinery has been least successful in obtaining, e.g., single women and families." At present more men than women are going overseas. The report states that nominated families going to Canada, Australia, or New Zealand will be able, if they so desire, and subject to the concurrence of the nominator, to include one additional woman, either relative or friend, among their number. Reference is made to the policy of "group settlement" which it is hoped to extend, and which is already in operation in Western Australia, with hopeful results. The object of the extended system would be to select in the United Kingdom groups of families connected by some bond of sympathy, such as residence in the same town or district, or membership of the same organization, and to settle these groups under skilled supervision upon a suitable tract of land overseas.

Mention is made in the report of the means of caring for farm immigrants in Canada and particulars regarding the present Canadian system may here be added:—

Prior to the war the Canadian Immigration Department carried on certain employment activities in connection with the suitable placement of immigrant farm workers, but this work was suspended shortly before the outbreak of hostilities. Within recent months the Department has again undertaken similar work, although the desire is not to function as an employment service but rather as a land settlement division. It assists in establishing satisfactory relations for immigrants who are desirous of settling on farms or, for a time at least, working for some Canadian farmer. The field staff of the Soldiers' Settlement Board, under the name of the Land Settlement Branch, now operates as a branch of the Department of Immigration with a view to carrying out this work. The employment feature of the duties of the Land Settlement Branch is really only incidental, as the main endeavour is to insure that those coming to Canada to undertake farm work shall have the necessary aid and encouragement to fit them into the agricultural life of this country.

The report states that the Commonwealth of Australia at the Imperial Economic Conference agreed to take up with the governments of the several Australian States the question of establishing farm reception depots, by way of supplementing the existing arrangements for the reception of settlers. Attention is drawn in the report to the Canadian government policy of encouraging the settlement of children by making a grant toward the transportation of children accompanying parents or other approved guardians

and intending to take up agricultural work. The South Australian parliament has passed an act to improve the conditions of the farm apprenticeship system, and to introduce a system of domestic apprenticeship for girls. New South Wales has adopted similar systems. It is also stated that the various Dominion authorities have undertaken to explore the possibilities of migration of public school boys and that New Zealand has already made arrangements for a limited number of boys from public schools to receive training in farm work in that Dominion.

The number of persons of British nationality leaving the United Kingdom for Canada and Newfoundland for the purpose of permanent residence during the years 1913, 1922 and 1923 were 164,566 in 1913; 29,621 in 1922, and 75,866 in 1923. During the same periods the emigrants from the United Kingdom to the United States numbered 78,072 in 1913, 37,291 in 1922 and 86,034 in 1923.

#### Unemployment insurance in Great Britain

On April 3 and 4, the British Minister of Labour introduced in the House of Commons two bills relating to unemployment insurance.

The Unemployment Insurance Bill (No. 2), "to amend the Unemployment Insurance Acts, 1920 to 1924" provides that on and after October 6, 1924, boys and girls between the ages of fourteen and sixteen years are to be insured against unemployment on becoming employed in an insured trade. Under the existing law no persons under 16 years of age are insurable. Various other minor amendments were made. Insured contributors formerly disqualified if thrown out of work owing to a trade dispute are entitled to benefit when they can prove that they are not participating in the dispute and are not members of a class of workers that are participating in the dispute.

The Unemployment Insurance Bill (No. 3) which became law on April 15, extends the period for the receipt of unemployment benefit from 26 to 41 weeks, during the first benefit year, between October 18, 1923, and October 15, 1924. The additional benefit allowed will be governed by conditions applying to uncovenanted benefit. Weekly rates for men and women are also increased from 15 to 18 and from 12 to 15 shillings respectively.

In reply to questions as to the experience of other countries in regard to unemployment insurance, the Honourable Mr. Murdock, Minister of Labour, recently presented to the House of Commons a statement in the form of an address given by Mr. T. W. Phillips,

C.B., C.B.E., principal assistant secretary of the British Ministry of Labour at a conference of the League of Nations Union held on March 26. The address, which is printed in full in the House of Commons debates of May 20, contains an account of the working and principles of the National Unemployment Insurance scheme in operation in Great Britain.

Since November, 1920, the scheme has covered practically all trades except agriculture and private domestic service. It includes between eleven and twelve million workpeople. Benefit is paid after the first six days of unemployment, the weekly rates for adults being 15 shillings for men and 12 shillings for women, with an additional allowance of 5 shillings for a wife (or invalid husband) and one shilling for each young child. During the period of rather less than 3½ years since November, 1920, about £155,000,000 has been paid in benefit. The administrative expenses during the financial year 1923-24 were between 8 and 9 per cent of the revenue. Only one-fourth of the amount of the unemployment benefit is paid by the Exchequer out of the taxes. The remaining three-fourths is contributed by insured workpeople and employers in about equal shares. The address describes the measures taken to meet the excessive amount of unemployment which has prevailed since 1920, and the machinery which has been set up for carrying out the Unemployment Insurance Acts.

#### Miners' old age and infirmity insurance in France

During December, 1923, the French Legislature passed two acts amending the laws governing the compulsory insurance of mine workers, both manual and non-manual, against old age and infirmity. An outline of these acts is given in the *British Ministry of Labour Gazette* for May, 1924, as follows:—

The earlier of the two new acts, which is dated December 24, 1923, introduces amendments in regard to the contributions to the special fund, and in regard to the amount of the pensions granted to mine workers or to their widows and orphans. The workers' and employers' contributions to the special fund are each to be increased to an amount not exceeding two-and-a-half per cent of the wages paid; the contribution of the State is to be not less than one per cent of the amount of wages paid.

The principal objects of the special fund are: (1) To increase up to at least 2,000 francs a year the pensions of workers who have been employed at or in the mines for 30 years and have attained the age of 55 years; (2) to grant to the widows of pensioners referred to under (1) who are not less than 55 years of age, or when they attain that age, such an increase as will bring the amount of their pension up to half that which the husband enjoyed; (3) to grant to widows 55 years of age of workers who die before attaining the

age of 55, but who have worked for 30 years at or in French mines, a supplementary allowance which will bring their pension up to 1,000 francs.

Provision is also made for the payment of allowances or increased pensions to workers who have been employed at least 15 years at or in French mines, or to their widows; as also to the widows and orphans of workers who die during the time they are acquiring pension rights.

Provision is made for allowances to workers who, after ten years' service in French mines and after six months' treatment through a benefit society, have lost at least two-thirds of their capacity for work. So long as this incapacity continues such persons are entitled to the following allowances: (1) For the period of 5 years from the end of the sixth month of incapacity, a monthly allowance of 125 francs, of which 30 francs are payable by the benefit society of which the worker is a member, and 95 francs by the Miners' Pension Fund; (2) at the end of a period of 5 years a pension of 1,500 francs per annum.

The second of the two acts above mentioned, which is dated December 28, 1923, extends the provisions of the legislation regarding miners' pensions to the staff employed in industrial undertakings administered by mine owners which are ancillary to the mines and are carried on in the same district as the mining concession or in its near vicinity.

#### Labour unrest in Northern Europe

Labour in the three Scandinavian countries has been very unsettled during the last few months, the main cause of the unrest being a growing dissatisfaction among the workers with the wage rates established by existing agreements. The general trend towards revision of agreements and increased wages has led to a number of labour disputes, and relations between employers and workers have in general become very strained.

The following notes on the situation in the three countries are based on information recently published in the Northern European press.

*Denmark.*—The unrest in the Danish labour world was particularly marked in February, when first and second strike notices were issued by the Boilermakers' Union, the textile workers, and, later, by the Unskilled Workers' Union. The situation was aggravated by the decision of the Danish employers to send lock-out notices affecting a large number of trades to the Confederation of Trades Unions. Wiser counsels prevailed later; the notices were cancelled, and negotiations, directed by the State conciliators, were opened between the two parties. So far these negotiations have resulted in the settlement of a number of the disputes, and the situation has accordingly become less tense.

*Sweden.*—Negotiations for new wage agreements have been going on in Sweden in several important industries for some little time and although the situation was complicated by

the rejection by the Iron Workers' Union of proposals made by the Conciliation Commission, no actual rupture has as yet taken place.

*Norway.*—Labour unrest in Norway is much more acute than in either of its two sister countries, and has been continuous since the spring of 1923, when the arbitration awards given in 1922 expired. During 1923 there were several prolonged strikes, the most serious being that which occurred in October in the Christiania metal industry and which extended into 1924 despite the fact that it was declared illegal by the Industrial Council. According to a statement made in the Storting (Norwegian Parliament), during a discussion on the labour situation, 3,600,000 working days were lost in Norway during 1923 on account of strikes.

The Department of Labour has received a copy of the Revised Statutes of Nova Scotia, 1923, published under the authority of an act of 1921 for the consolidation and revision of the public statutes of the province.

The Windsor Trades and Labour Council has challenged a recent city by-law incorporating a recreation commission on the ground that the supervised play which was to be organized under the bylaw would not benefit the children of workingmen. They suggest that the bylaw be submitted to a popular vote at a regular civic election before it takes effect.

The Ontario division of the Navy League of Canada, at their annual convention held at Ottawa during May, discussed the question of pensions for widows and children of merchant seamen. It was stated that the pensions paid by the Navy League average from \$20 to \$35 per month, and are paid only to dependants who are not receiving aid from any government.

The Labour Women's Social Economic conference of Winnipeg recently appointed committees to study the working of certain provincial acts, including the Mothers' Allowance, Child Welfare, Garnishee, Workmen's Compensation, Minimum Wage and Factory acts.

At a recent meeting of the New Brunswick executive of the National Council of Women, it was proposed to urge the provincial government to appoint a woman factory inspector in accordance with the provisions of the Factories Act of 1919. That act provides at sec-

tion 15, subsection (2) that "the Board may appoint one or more inspectors, and 'safety-first' inspectors, one of whom may be a female, who shall be paid such salary or compensation as from time to time may be appropriated by the legislature".

The Minimum Wage Board of Alberta, using the additional powers given it by recent amendments to the act, is considering new regulations regarding hours and rates of pay for overtime work, and as to the proportion of inexperienced workers or apprentices to be permitted in any place of employment. The amendments referred to were outlined in the last issue of the LABOUR GAZETTE, page 377.

A mine examiners' educational club has been organized recently in the Watford district, Nova Scotia. Lectures on educational subjects pertaining to mining and other matters will be given occasionally by visiting speakers.

The Belgian Confederation of Christian Unions has established an equalization fund for the payment of family allowances to permanent members of the unions. Under the scheme, which was to come into operation on April 1, 1924, the unions may place under the fund all members who have reached the age of 21 years. Family allowances will be paid in respect of all children under 16 years of age, beginning with the third child. For 1924, the rate of allowance has been fixed at 500 francs per child per annum. Payments will be made monthly by postal cheque direct to members entitled to them. In addition to these regular allowances, a birth bonus of 200 francs will be paid in respect of each child, irrespective of the number of children in the family. The unions will pay to the equalization fund a sum of 275 francs per member per annum, this figure having been fixed on the basis of the membership statistics. Christian Workers' Organizations other than trade unions (e.g., co-operative societies, mutual aid societies, etc.) are entitled to become affiliated to the fund.

The International Labour Office, Geneva, has recently published an illustrated volume of about 300 pages under the title of "Artificial Limbs, Appliances for the Disabled." The book contains descriptions of the various appliances in use in the different countries, classified according to the type of amputation and the method of manufacture, with a critical appreciation in each case. The volume is issued as "Studies and Reports, Series E, No. 5," and is sold for \$1.20.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation, Strikes, Prices

#### The Labour Situation

**S**UBSTANTIAL recovery at the beginning of May was indicated in employment reports, the increases being largely seasonal in character. The situation continued to be better than during the same period of last year and also than at the beginning of May, 1922 and 1921.

At the beginning of May the percentage of unemployment among members of trade unions stood at 5.1 as compared with 6.7 per cent at the beginning of April, and 4.6 at the beginning of May, 1923.

The offices of the Employment Service of Canada showed an increase in the volume of daily business during April, 1924, in comparison with the reports of March. The increase, however, was not equal to the volume of business transacted during the corresponding period of 1923.

The following paragraphs give a summary of employment conditions at the end of May, 1924, as reported by the Superintendents of the Employment Service.

Municipal work in the Maritime Provinces had been completed, but many workers formerly engaged in this work were absorbed into other outdoor trades. Building and construction programs were fairly well advanced, and with the continuance of fair weather a start will be made on the city and provincial road work. Demands for mill labourers and river men were filled at the offices in small numbers. The mining industry was quiet and little change was shown in the reports from the farm sections.

The farming group in Quebec showed only a slight expansion, but a decided improvement was noted throughout the province in employment in the building trades. The lumber industry was quiet, the calls for river driving and saw-mill men being of a nominal character. The supply of workers in the domestic section was sufficient to meet the demand.

The employment situation in Ontario showed little change owing to the adverse weather conditions. A falling off in the demand in the farming industry has been noted and was not unexpected owing to the large number of placements effected previously in this group. There is no immediate prospect of resumption of employment in the building group, although a number of contractors were

now started on the season's work. Numbers of men were satisfactorily placed on railway and track construction work. Bush work advanced rapidly for a week or two, but showed a further decline as the month closed, the river drives being completed in most sections. Sawmills, however, were operating steadily. The manufacturing industries continued quiet, while the demand for experienced women domestics remained as formerly reported with the same large number of placements.

Seeding operations were well advanced in Manitoba and orders for farm workers were coming in more slowly. The effect of the continued poor weather was shown in the retarding of outdoor industries, and aside from the track repairs and extra gang work the offices made few placements. The building industry was confined mainly to residential construction.

The number of calls for farm workers in Saskatchewan was considerably lessened, with applicants about equal to the requirements. The slackness in the building and construction group continued, with more than sufficient workers available to meet the demands of the few contractors who had started operations. Requests from the railways for extra gang and section men were filled without difficulty. A quiet though steady demand for domestic servants was reported, with a shortage of trained women.

Seeding in the province of Alberta was practically completed with the result that further vacancies for farm workers will not be available. Little work was offering in the construction groups, but if the fine weather continues an early expansion may be anticipated. The mining group was quiet, a number of workers being sent to British Columbia. A decline was noted in the demand in the women's division, with a surplus of applicants available.

In British Columbia building tradesmen were busy, though a large demand for workers was not felt at the offices. The railroads have required numbers of men for extra gang and section work, the supply of this type of labour being greatly in excess of the demand. The logging and mining groups were well supplied with men, consequently the demand has slackened considerably. Longshore work on the coast was quiet with many workers unemployed. There was no change in condi-

tions as regards domestic workers, a number of vacancies being still unfilled at the close of the month on account of the shortage of experienced workers.

Considerable improvement in employment was indicated in reports from employers of labour to the Dominion Bureau of Statistics at the beginning of May, when some 20,500 workers were added to the staffs of the reporting firms. This number was smaller than the increase recorded on May 1, 1923, at which date the recovery was from larger losses than were indicated on April 1, 1924. Practically all industries shared in the upward movement at the beginning of May, 1924, but the gains in construction, manufacturing, mining and transportation were most noteworthy. The only declines of any size occurred in textiles, leather, iron and steel and logging. All provinces shared in the expansion registered at the beginning of May, showing percentage gains of between 2 and 4 per cent in every case. The largest increases in the Maritime Provinces took place in coal mining, fish preserving plants, lumber mills and logging. Shipping and stevedoring, however, afforded much less employment than at the beginning of April, owing to the closing of the winter ports. In Quebec, construction, transportation and logging showed the greatest improvement, but manufacturing also was more active. Saw-mills and other manufactures in Ontario registered large additions to staffs, as did also building and railway construction, transportation and trade. Railroad construction and maintenance recorded the most pronounced gains in the Prairie Provinces, but transportation, building and highway construction, trade, iron and steel also showed improvement. Coal mining, on the other hand, suffered some curtailment. In British Columbia, saw-mills, fish canneries, metallic ore mines, highway and railway construction reported large additions to payrolls. The trend of employment was upward in all of the six cities for which separate tabulations are made. Recovery in tobacco, together with increased activity in electric current and electrical appliance works, in transportation and construction caused most of the improvement in Montreal. In Toronto, construction and trade recorded expansion, and mineral product factories also showed improvement. Seasonal activity in saw-mills accounted for most of the gain in Ottawa; pulp mills, on the other hand, were not so busy. In Hamilton increased activity was recorded in iron and steel, construction and

transportation. Moderate, but general increases in activity in Winnipeg resulted in a net gain of about 1 per cent. Saw-mills, shipping and stevedoring registered the largest expansion in Vancouver. An analysis of the returns by industries shows that manufacturing reported further and more marked expansion on May 1, in contrast with the declines reported on the same date of last year. Seasonal activity was indicated in food, rubber, tobacco, brick, electric current, electrical appliance and mineral product factories, but the leather, textile, iron and steel industries afforded less employment than in the preceding month. In logging fluctuations in different parts of the country produced a net decline; river-driving operations in Quebec and the Maritime Provinces caused a revival, which was rather more than offset by continued curtailment elsewhere. Coal and other non-metallic mineral and metallic ore mines employed a larger number of persons than at the beginning of April, the increase occurring largely in the Nova Scotian coal fields. Considerable expansion was indicated in construction and maintenance. Railway construction recorded especially pronounced increases, but gains were also reported in the building and highway divisions. Moderate improvement was shown in the employment afforded by steam and electric railways and also in shipping and stevedoring. Trade and communication also registered increased activity.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of May, 1924.

#### TRADE UNION REPORTS

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness or as a direct result of strikes or lock-outs, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Improvement continued to be registered during April by the 1,452 unions from which reports were tabulated, with a membership of 154,160 persons, 5.1 per cent of the members being idle, as compared with 6.7 per cent at the end of March, and with 4.6 per cent at the close of April, 1923. All provinces participated in this increase except New Brunswick, where slight declines occurred. In

comparison with the same month of last year more work was afforded members in Manitoba, Alberta and British Columbia. The same percentage of unemployment was reported in Nova Scotia, but in New Brunswick, Quebec, Ontario and Saskatchewan the situation was slightly less favourable than in April, 1923. In the manufacturing industries, as reported by 404 unions with an aggregate membership of 47,215 persons, there was practically no change, 4.5 per cent of the members being out of work as compared with 4.4 per cent in March. Fluctuations, however, occurred within the group. Brewery, cigar, wood, garment, fur and glass workers and printing tradesmen were more active, but declines were registered by papermakers, textile, jewelry and iron and steel workers and metal polishers. Slightly more unemployment was reported in the manufacturing industries than in April of last year. Coal miners in Nova Scotia, Alberta and British Columbia showed some improvement, though in Alberta and British Columbia a number of members were still reported on strike. Asbestos miners in Quebec registered no unemployment. Unions in the building and construction trades, although registering considerable unemployment, reported an improvement over March when 26.4 per cent of the members were idle, in comparison with 19.1 per cent at the close of the month. Steam shovel and dredgemen, bridge and structural iron workers, bricklayers, masons and plasterers, carpenters and joiners, granite and stonecutters and tile layers, lathers and roofers all reported greater activity, but employment for electrical workers, painters, decorators and paper-hangers, plumbers and steamfitters and hod carriers and building labourers declined slightly. In comparison with April of last year more unemployment was reported by all tradesmen in this group with the exception of bridge and structural iron workers and electrical workers. Transportation workers were somewhat more fully engaged than in March, the percentage of idleness being 3.6 at the end of April, as compared with 5.5 per cent at the close of March. Substantial increases were indicated by shipping and stevedoring employees, especially in Quebec, and gains on a smaller scale were reported by steam and street and electric railway employees. A better situation was shown in the transportation group than at the close of April of last year. Retail clerks were more active than in March. Less unemployment was reported by hotel and restaurant, and theatre and stage employees and by barbers. A nominal change only was indicated by stationary engi-

neers and firemen. Fishermen and lumber workers and loggers reported no unemployment.

During the month of April, 1924, the offices of the Employment Service of Canada made 30,907 references to positions and effected a total of 29,234 placements. The placements in casual employment during this period were 8,146, while those in regular work were 18,141 of men and 2,947 of women—a total of 21,088. Employers notified the Service of 35,670 vacancies, of which 16,258 were for men and 9,379 for women. The number of applications for work was 39,401, those from men were 29,992 and from women 9,442. A comparison of the reports for this period with the preceding month shows a considerable increase in the volume of business, the weather being more favourable for expansion in industry. A comparison with April of last year, however, indicates that the volume of business during this year is as yet considerably lower than at the same time a year ago.

The Dominion Bureau of Statistics reports a production of 83,875 tons of pig iron and 2,920 tons of ferro-silicon in Canada during April, 1924. The pig iron output exceeded the March tonnage of 77,290 tons by 8 per cent, and the ferro-silicon output amounted to one per cent more than the 2,888 tons produced in March. The cumulative production of pig iron for the four months ending April was 285,155 tons, and was the highest recorded for the period since 1919. In the first four months last year the production was 234,000 tons, as compared with 141,000 tons in 1922 and 198,000 tons in 1921. Seven furnaces were in blast at the end of the month, located as follows: three at Sydney, Nova Scotia, three at Sault Ste. Marie, Ontario, and one at Hamilton, Ontario.

The total production of steel ingots and castings in Canada during April amounted to 104,162 long tons, or 9.7 per cent over the 94,962 tons produced in March. The rise was due to the increased output of ingots, which amounted to 100,324 tons, or 10 per cent greater than the 91,011 tons produced for the preceding month. The output of 3,838 tons of steel castings marked a slight decline from the 3,951 tons produced in March.

The Inverness Coal Company, Inverness, Nova Scotia, during the four weeks ending April 26 produced 7,524.30 tons of coal, there being 504 workmen employed. The Nova

Scotia Steel and Coal Company at Sydney Mines, during the same period, produced 70,202 tons with an average working force of 2,388 men, and the Dominion Coal Company of Glace Bay, N.S., and vicinity produced 346,587 tons of coal, the average number of men employed being 9,362.

A report from the Department's correspondent at Cobalt states that twenty-eight cars of silver ore were shipped during May, 1924, from the Cobalt camp, containing approximately 2,075,985 pounds of ore, as compared with fifteen cars containing 1,159,881 pounds in April. The Nipissing mines shipped 220 bars containing 252,939.60 ounces of silver, and The Mining Corporation of Canada shipped 89 bars containing 89,208.41 ounces of silver as compared with 417 bars containing 462,603.93 ounces in the previous month.

A report from the British Columbia Forestry Branch shows that 229,421,278 feet, board measure, of timber was scaled in the province during April. The total includes Douglas fir, 95,630,510 feet; red cedar, 52,926,355 feet; spruce, 17,583,584 feet; hemlock, 31,828,685 feet; balsam, 6,360,856 feet; yellow pine, 3,816,693 feet; white pine, 1,602,743 feet; jack pine, 11,941,882 feet; larch, 4,441,957 feet; cotton wood, 749,839 feet; and species not specified, 2,538,174 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$19,051,093 in April, 1924, as compared with \$20,669,619 in the previous month, and with \$20,753,212 in April, 1923.

The gross earnings of the Canadian Pacific Railway in April, 1924, were given in a preliminary statement as \$13,806,122 in comparison with \$14,812,928 in the previous month and \$13,651,494 in April, 1923.

#### BUILDING PERMITS AND CONTRACTS AWARDED

According to the Dominion Bureau of Statistics, the value of building permits issued in 56 cities during April showed an increase of \$4,289,597 or 46.8 per cent over the previous month. The total for April, 1924, was \$13,452,359 as compared with \$9,162,762 in March, 1924, and with \$19,207,171 in April, 1923.

According to the MacLean Building Review, issued by MacLean Building Reports, Limited, the value of the contracts awarded in Canada during May, 1924, amounted to \$32,966,900 compared with \$30,198,800 in April, 1924, and with about \$40,697,000 in May, 1923. Residential building accounted for 37.7 per cent

of the May total, amounting to \$12,410,700. Business building amounted to \$10,351,200 or 31.4 per cent; industrial building, \$1,623,100 or 4.9 per cent; and public works and utilities, \$8,581,900 or 26 per cent. The activity was distributed among the provinces as follows: Ontario, 44.2 per cent; Quebec, 37.9 per cent; British Columbia, 7.7 per cent; prairie provinces, 7.6 per cent; and the maritime provinces, 2.6 per cent.

#### FOREIGN TRADE

A summary of Canadian trade prepared by the Department of Customs and Excise shows that in April, 1924, the merchandise entered for consumption amounted to \$60,203,141 as compared with \$68,181,320 in April, 1923. There was a decrease of \$4,761,337 in the value of domestic merchandise exported which amounted to \$48,880,914 in April, 1924, compared with \$53,642,251 in the corresponding month of the previous year. The chief imports in April, 1924, were iron and its products, \$12,505,328; fibres, textiles and textile products, \$12,373,764 and non-ferrous metals and their products, \$9,482,286; and agricultural and vegetable products, mainly foods, \$7,510,513. The chief exports during the same month were in the group of wood, wood products and paper, \$16,116,918; agricultural and vegetable products, mainly foods, \$13,510,268; animal and animal products, \$5,648,212; non-ferrous metals and their products, \$4,195,629.

#### Strikes

Time loss due to industrial disputes was greater than during either April, 1924, or May, 1923. There were in existence at some time or other during the month eleven disputes, involving 8,531 employees and a time loss of 218,428 working days, as compared with 14 strikes in April, involving 9,286 workpeople and a time loss of 215,234 working days. In May, 1923, there were recorded 39 disputes involving 4,767 workpeople and a time loss of 53,891 working days. Three new strikes commenced during May with a time loss of 1,094 working days. These terminated during the month. At the end of May, therefore, there were eight strikes involving 8,359 workpeople.

#### Prices

The movement in retail food prices continued downward. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$9.89 at the beginning of May as compared with \$10.16

at the beginning of April, \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. Butter showed a net fall of 16 cents for the three pounds included in the budget. Substantial declines occurred also in eggs, bacon, lard and cheese, while sugar, milk, salt pork and veal showed less important decreases. Sirloin steak, shoulder roast of beef, mutton, evaporated apples and potatoes advanced slightly. Including the cost of fuel and rent with that of foods, the total budget averaged \$20.20 at the beginning of May as compared with \$20.58 for April; \$20.90 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.92 for July, 1920 (the peak); \$26.44 for May, 1920; \$20.09 for May, 1918; and \$14.21

for May, 1914. Fuel and rent averaged slightly lower.

The movement of wholesale prices as indicated by the index number of the Dominion Bureau of Statistics continued downward, the figure for May being 150.6 as compared with 151.1 for April; 155.2 for May, 1923; 153.9 for May, 1922; 171.4 for May, 1921; 256.9 for May, 1920 (the peak); and 201.2 for May, 1919. In the grouping according to the chief component material four of the eight main groups declined, one advanced, while three were practically unchanged. The Animals group and the Iron group each were substantially lower while the Non-Ferrous Metals group and the Chemicals group showed less important declines. The Vegetable Products group advanced.

## COST OF LIVING ADJUSTMENT OF WAGES OF VANCOUVER ISLAND COAL MINERS

THE Cost of Living Commission appointed on January 21, 1919, to determine every three months the changes in the cost of living for coal miners on Vancouver Island, and to report the amount by which wage rates should correspondingly be increased or decreased, has forwarded its report to the Department of Labour for the quarter ending March 31, 1924.\* The Commission consisted of Mr. Matthew Gunness, representing the miners; Mr. Tulley Boyce, representing the operators, and Mr. F. E. Harrison, Fair Wages Officer of the Department of Labour, chairman.

As in previous investigations, forms containing a list of groceries, provisions, meats, etc., were sent out to the merchants and dealers with whom the majority of the miners were accustomed to trade in the various localities. The method of computing the changes for the period under review was the same as used for previous adjustments, namely, to determine the percentage of increase or decrease, as the case may be, of prices at the end of the quarter, over the prices at the end of the preceding quarter, for groceries, provisions, meats, etc., and to add a further two-fifths of this in-

crease (or decrease) as an equivalent to cover similar increase (or decrease) in clothing, etc.

For the quarter ending March 31, 1924, a decrease of 1.61 per cent was ascertained which amounted to a decrease in wages of 5 cents per day in the district where the base rate was \$3.15, such decrease to become effective on May 1, 1924, and to apply to all underground, surface, clerical and office employees.

Slight increases were noted in some beans, sago, corn, master mechanic soap, flour, corn-meal, soda biscuits, tea, cream of tartar, mutton chops, shoulder of pork, veal chops, shoulder of veal. A sharp increase was noted in vinegar. Slight decreases were noted in granulated sugar, syrup, split peas, canned peas, canned corn beef and roast beef, jams, barley, canned beans and lunch tongue, brooms, naphtha soap, whole wheat flour, rolled oats, oatmeal, lard, cheese, ham, bacon, butter, coffee, currants, evaporated figs, peaches, prunes and apricots, steak, roast beef, stewing mutton, shoulder of mutton, leg of mutton and leg of veal. A sharp decrease was noted in canned salmon. No changes were noted in molasses, small white beans, brown beans, rice, tapioca, canned tomatoes, pickles, cookies, evaporated milk, flavouring extracts, raisins, matches, stewing beef, pork chops, leg of pork.

\*For previous adjustments see LABOUR GAZETTE, March, 1924, and previous issues.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF MAY, 1924

**D**URING the month of May, the Department received four applications for the establishment of Boards of Conciliation and Investigation as follows:—

(1) From certain employees of the corporation of the City of Ottawa, being civic firemen, members of the International Association of Fire Fighters, Local No. 162.

(2) From certain employees of Kennedy Taxis, Limited, and the Bramsons' Auto Service, Limited, being taxicab drivers and chauffeurs, members of the Montreal Chauffeurs' Protective Association.

(3) From certain employees of the Roberval-Saguenay Railway Company, being station agents, telegraph operators, railway conductors, enginemen, trainmen, maintenance of way men, etc., members of the National Catholic Syndicate of the employees of the Roberval-Saguenay Railway Company.

(4) From certain employees of the Montreal Street Railway Company being members of Division 790, Amalgamated Association of Street and Electric Railway Employees of America.

## STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1924

**T**HE number of strikes and lockouts in Canada in existence at some time or other during the month of May, was eleven, three less than in April. The time loss for May was greater than in May, 1923, being 218,428 working days as compared with 53,891 working days in the same month in the previous year.

Date	Number of disputes	Number of employees affected	Time loss in working days
May, 1924.....	11	8,531	218,428
April, 1924.....	14	9,286	215,234
May, 1923.....	39	4,767	53,891

Eight disputes involving 8,359 workpeople were carried over from April. Three new strikes which commenced during May terminated during the month. At the end of May, therefore, there were on record eight disputes: coal miners, Alberta and British Columbia; three strikes of printing compositors at Montreal; printing compositors, Ottawa; printing compositors, Toronto; printing compositors, Winnipeg; and printing compositors and pressmen at Halifax.

Two of the new strikes which commenced during May were for increased wages, while the third one was for increased wages and shorter hours. Two of the strikes terminated in favour of the employers, and the third ended in a compromise being effected.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

**COAL MINERS, ALBERTA AND BRITISH COLUMBIA.**—The strike of 8,000 coal miners which began April 1, against a proposed reduction in wages on the termination of the agreement, March 31, remained unterminated at the end of May. During the month a member of the Alberta government stated that the appointment of a commission to investigate the coal industry of the province would probably be dealt with on the return of the Ministers who were at Ottawa discussing with the Dominion government the transfer of the natural resources to the province. The President of the Alberta Federation of Labour proposed that mining be resumed pending the investigation by this commission. Pickets at one of the mines were charged with assault in police court but the case was adjourned. At the middle of the month relief was given to destitute families of miners on strike pending an inquiry by a committee from the International headquarters of the United Mine Workers of America, the attitude of the International Executive being reported to be that most of the mines would have been closed in any case during the summer months owing to the lack of demand for coal.

**PRINTING TRADES IN VARIOUS CITIES.**—The strikes of printing compositors and pressmen in job offices in various cities, for the 44-hour week, were still in progress at the end of the month, involving 359 employees and resulting in a time loss of 9,334 working days.

**STONECUTTERS, TORONTO, ONT.**—On May 6, some 60 stonecutters in the employ of ten

firms, went on strike demanding an increase in wages from \$1 per hour to \$1.25 per hour. After being on strike ten days the men decided to accept their employers' terms and resumed work on May 19, at \$1 per hour.

BRICKLAYERS, HAMILTON, ONT.—One hundred bricklayers in the employ of eight firms went on strike May 1, demanding an increase in wages from \$1 per hour to \$1.25 per hour. Negotiations were carried on between the parties concerned which resulted in a com-

promise being effected, the strikers returning to work May 6, at \$1.12½ per hour.

PLASTERERS, WINDSOR, ONT.—On May 1, 12 plasterers in the employ of six firms went on strike for increased wages and shorter hours. Previously the rate had been \$1.50 per hour for a 44-hour week and they demanded \$1.75 per hour for a 40-hour week. After being on strike 12 days the men returned to work on May 15, under the same conditions as existed prior to the strike.

STRIKES AND LOCKOUTS DURING MAY, 1924

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
-----------------------------------	------------------------------	---------------------------	---------

(a) Strikes and lockouts commencing prior to May, 1924.

MINING, NON-FERROUS SMELTING AND QUARRYING.— Coal miners, Alberta and British Columbia.	8,000	208,000	Commenced April 1, against a reduction in wages. Underminated.
MANUFACTURING.— Printing and Publishing.— Printing compositors, Montreal, Que.	4	104	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Underminated.
Printing compositors, Montreal, Que.	81	2,106	Commenced July 1, 1921. For increased wages and 44-hour week. Underminated.
Printing compositors, Montreal, Que.	12	312	Commenced September 15, 1922. Employer refused to negotiate a new agreement with union. Underminated.
Printing compositors, Ottawa, Ont.	16	416	Commenced June 1, 1921. For increased wages and 44-hour week. Underminated.
Printing compositors, Toronto, Ont.	196	5,096	Commenced June 1, 1921. For increased wages and 44-hour week. Underminated.
Printing compositors, Winnipeg, Man.	33	858	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Underminated.
Printing compositors and pressmen, Halifax, N.S.	17	442	Commenced May 2, 1921, for shorter hours with same weekly pay. Underminated.

(b) Strikes and lockouts commencing during May, 1924.

CONSTRUCTION.— Stonecutters, Toronto, Ont.....	60	600	Commenced May 6, for increased wages. Work resumed May 19, on employers' terms.
Bricklayers, Hamilton, Ont.	100	350	Commenced May 1, for increased wages. Settled by negotiations and work resumed May 6; compromise.
Plasterers, Windsor, Ont.	12	144	Commenced May 1, for increased wages and shorter hours. Work resumed May 15, on employers' terms.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND

THE British *Ministry of Labour Gazette* for May contains the following information respecting strikes and lockouts in Great Britain and Northern Ireland during April, 1924, based upon returns from employers and employees:—

**NUMBER, MAGNITUDE AND DURATION.**—The number of trade disputes involving a stoppage of work, reported to the Department as beginning in April in Great Britain and Northern Ireland, was 46, as compared with 59 in the previous month, and 52 in April, 1923. In these new disputes about 37,000 workpeople were involved, either directly or indirectly (i.e. thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition, about 14,000 workpeople were involved, either directly or indirectly, in 21 disputes which began before April, and were still in progress at the beginning of that month. The number of new and old disputes was thus 67, involving about 51,000 workpeople, and resulting in a loss during April of about 471,000 working days. The principal stoppages in progress during April were the shipyard strike at Southampton and the lockout at other ports.

**CAUSES.**—The lock-out of shipyard workers on April 12 was imposed in consequence of the continuation of the strike at Southampton. Of the remaining 45 disputes beginning in April, 17, directly involving 9,000 workpeople, arose out of demands for advances in wages; 11, directly involving 1,000 workpeople, on other wages questions; 9, directly involving 3,000 workpeople, on questions respecting the employment of particular classes or persons; and 8, directly involving 3,000 workpeople, on other questions.

**RESULTS.**—Settlements were effected in the case of 27 new disputes, directly involving 25,000 workpeople, and 9 old disputes, directly involving 1,000 workpeople. Of these new and old disputes, 10, directly involving 1,000 workpeople, were settled in favour of the workpeople, 15, directly involving 23,000 workpeople, in favour of the employers; and 11, directly involving 2,000 workpeople, were compromised. In the case of two disputes, directly involving 7,000 workpeople, work was resumed pending negotiations.

The following table analyses the disputes in progress in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during the month in all disputes in progress:

Groups of industries	Number of disputes in progress in April			Number of workpeople involved in all disputes in progress in April	Aggregate duration in working days of all disputes in progress in April
	Started before April	Started in April	Total		
Mining and quarrying.....	2	12	14	8,000	104,000
Metal, engineering and shipbuilding.	8	11	19	30,000	270,000
Building, decorating, contracting, etc.....	3	6	9	5,000	18,000
Public administration services.....	3	2	5	3,000	36,000
Other.....	5	15	20	5,000	43,000
Total, April, 1924..	21	46	67	51,000	471,000
Total, March, 1924	21	59	80	76,000	730,000
Total, April, 1923.	38	52	90	110,000	1,077,000

### Allowances for Families of the Blind

The Ontario Mothers' Allowance Commission, in response to appeals made to them on behalf of families in which the fathers have become blind, recently announced that they had decided to consider cases of this nature under the amendment of 1921 giving power to the Board to consider special circumstances in particular cases where the mother is not

otherwise strictly eligible for an allowance under the usual conditions. If the circumstances appear to warrant assistance the Board will assist cases of need caused by the total blindness of the father, on condition that the father takes the course of training leading to self support which is provided by the Canadian National Institute for the Blind.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Canadian Delegation to International Labour Conference

THE sixth session of the International Labour Conference opens in Geneva on June 16th. The Agenda of this conference was published in the April issue of the *LABOUR GAZETTE* (see page 300). The Canadian delegation to the conference is made up as follows:—

Delegates representing the Government of Canada—

Mr. F. A. Acland, of Ottawa, King's Printer for Canada.

Mrs. Charles H. Thorburn, of Ottawa, vice-president of the National Council of Women.

Technical Advisers to the Government delegates—

The Honourable R. W. Craig, K.C., of Winnipeg, Attorney General for Manitoba.

Mr. W. C. Noxon, Agent General for the Province of Ontario in London, England.

Mr. Pierre Beaulé, of Quebec, president of the Confederation of Catholic Workers of Canada.

Delegate representing the employers of Canada—

Mr. Melville P. White, of the Canadian General Electric Company, Limited, Toronto, Ontario.

Technical adviser to the employers' delegate—

Mr. H. W. Macdonnell, of the Canadian Manufacturers' Association, Toronto, Ontario.

Delegate representing the workpeople of Canada—

Mr. Tom Moore, of Ottawa, president of the Trades and Labour Congress of Canada.

Technical adviser to the workpeople's delegate—

Mr. W. L. Best, of Ottawa, legislative representative of the Brotherhood of Locomotive Firemen and Enginemen.

### Labour Conventions Endorsed by Nova Scotia Legislature

A resolution in the terms following was adopted by the Legislative Assembly of the Province of Nova Scotia on April 30 endorsing

the principles of certain Draft Conventions and Recommendations of the International Labour Conference. The resolution was proposed by the Premier, Honourable E. H. Armstrong.

"Resolved, that this Legislature do endorse the principles of the following Draft Conventions and Recommendations and portions of Recommendations adopted by the General Conference of the International Labour Organization of the League of Nations, and do authorize the Dominion Government to inform the Secretary-General of the League of Nations of such endorsements, namely:—

A. Draft Conventions and Recommendations adopted by the said General Conference convened at Washington, U.S.A., by the Government of the United States of America, on the 29th day of October, 1919:

1. Articles numbered 1 and 4 of the Recommendation concerning unemployment;
2. Draft Convention fixing the minimum age of admission of children to industrial employment;
3. Draft Convention concerning the employment of women during the night;

B. Draft Conventions and Recommendations adopted by the said General Conference convened at Geneva by the Governing Body of the International Labour Office, on the 25th day of October, 1921:

1. Article 1: Sections 1, 2, 4 and 5 of the Recommendation concerning the prevention of unemployment in agriculture;
2. Draft Convention concerning the age of admission of children to agricultural employment;
3. Draft Convention concerning the rights of association and combination of agricultural workers;
4. Recommendation covering the development of technical agricultural education.

Further resolved, that an humble address be presented to His Honour the Lieutenant Governor, praying that a copy of the Resolution passed this day by this Legislature respecting the endorsement of the principle of certain Conventions and Recommendations adopted by the General Conference of the International Labour Organization of the League of Nations be forwarded to the Secretary of State of Canada for transmission to His Excellency the Governor General in Council."

### Labour Legislation in the Netherlands

The ratification by the Netherlands of the Draft Convention adopted by the first session of the International Labour Conference (Washington, 1919) concerning the night work of young persons employed in industry was registered March 17th. The Netherlands is the tenth country to ratify this Convention, that is, to approve the standard which prohibits the employment during the night of young persons under eighteen, excepting young persons over sixteen in the case of a few specified industries involving continuous processes. The other countries which have ratified it are: Bulgaria, Denmark, Esthonia, Great Britain, Greece, India, Italy, Roumania and Switzerland.

### Labour Ratifications Proposed in Hungary

As Hungary, under the prospect of League guidance and an American financial administrator, is working up to more normal and stable conditions, the government has found it advantageous to put into force the improved labour standards set up by the International Labour Organization. By ratification, i.e., incorporation into law of the standards in

question, Hungary would accept nine draft conventions and ten recommendations of the International Labour Conferences. Among the most important are the conventions on the night work of women and young persons in industry, unemployment, concerning employment of children in agriculture, workmen's compensation in agriculture, and three regulating employment of children at sea.

### Labour Legislation in Ireland

Ratification of two Draft Conventions of the International Labour Conference of 1921 is proposed by the Irish Free State. The conventions in question deal with the rights of association of agricultural workers and workmen's compensation in agriculture.

Interest is attached to the proposal as ratification of these conventions, if authorized by Parliament, will be the first results of the Irish Free State having become a member of the International Labour Organization, and are of particular importance inasmuch as the Irish Free State was not represented at the Conference which drafted the Conventions.

The two Conventions in question, it may be noted, were ratified by Great Britain on August 6, 1923.

## PROPOSED RATIFICATION BY CANADA OF INTERNATIONAL LABOUR CONFERENCE CONVENTIONS

NOTICE was given in the House of Commons during the past month by the Honourable James Murdock, Minister of Labour, of four resolutions proposing the acceptance in Canada of two Draft Conventions which were adopted by the International Labour Conference (League of Nations) in 1920, namely: (1) Draft Convention Fixing the Minimum Age for Admission of Children to Employment at Sea; (2) Draft Convention concerning Unemployment Indemnity in Case of Loss or Foundering of the Ship; also of two Draft Conventions which were adopted by the International Labour Conference in 1921, namely: (1) Draft Convention fixing the Minimum Age for the Admission of Young Persons to Employment as Trimmers or Stokers; (2) Draft Convention concerning the Compulsory Medical Examination of Children and Young Persons Employed at Sea. The text of these first two Conventions appeared in the October, 1920, issue of the LABOUR GAZETTE; the text of the two other Draft Conventions appeared in the January, 1922, issue. The resolutions, of which notice was given by the Minister of Labour, are in the terms following:—

Resolved, that it is expedient to bring in a measure to confirm a certain Convention relating to the employment of children at sea, adopted at Genoa on the 9th day of July, 1920, by a general Conference of the International Labour Organization of the League of Nations; and to provide that no child under the age of fourteen years shall be employed on any ship except as permitted under such convention; that a list of persons under sixteen years of age so employed, or a register thereof, shall be kept; that penalties be imposed for violation of the proposed legislation; and that the Act shall not apply where all the crew are members of the same family, or the child was lawfully employed at the commencement of the Act.

Resolved, that it is expedient to bring in a measure to confirm a certain Draft Convention fixing the Minimum Age for the Admission of Young Persons to Employment as Trimmers or Stokers, adopted at Geneva on the 11th day of November, 1921, by a General Conference of the International Labour Organization of the League of Nations; to provide that any persons under the age of 18 years shall not be employed or work as trimmers or stokers on vessels engaged in maritime

navigation excluding ships of war, vessels mainly propelled by other means than steam, and school ships or training ships.

Resolved, that it is expedient to bring in a measure to confirm a certain Draft Convention concerning the Compulsory Medical Examination of Children and Young Persons Employed at Sea, adopted at Geneva on the 11th day of November, 1921, by a General Conference of the International Labour Organization of the League of Nations; to provide that the employment of any child or young person under 18 years of age on any vessel engaged in maritime navigation, other than vessels on which only members of the same family are employed, shall be conditional on the production of a medical certificate attesting fitness for such work and that the

continued employment at sea of children and young persons shall be conditional on the repetition of medical examination at intervals of not more than one year.

Resolved, that it is expedient to bring in a measure to confirm a certain Draft Convention concerning Unemployment Indemnity in Case of Loss or Foundering of the Ship, adopted at Genoa on the 9th Day of July, 1920, by a General Conference of the International Labour Organization of the League of Nations; and to provide that in the case of loss or foundering of any vessel the service of a seaman shall terminate before the date contemplated in the agreement, he shall be paid unemployment indemnity for the days during which he remains in fact unemployed for a period not exceeding two months.

## PROPOSED CONFERENCE IN OTTAWA ON UNEMPLOYMENT

### To Consider Means for Regularizing Employment Particularly in Building and Out-of-Door Work during Winter.

THE Dominion Government adopted an Order in Council on June 3 proposing that a conference be held at Ottawa in the early part of September with representatives of the provincial governments, the principal municipalities, the two transcontinental railways, industrial employers and organized labour, for the purpose of devising means for the regularization of industrial employment, having regard particularly to building and other out-of-door work during the winter season. This action was taken on the recommendation of the Honourable James Murdock, Minister of Labour, and the Honourable J. H. King, Minister of Public Works, in response to representations received from various quarters, more particularly from a municipal deputation from the city of Toronto on April 11, which included among its members Aldermen B. J. Miller and C. Wemp. Announcement will be made in due course of the decision which is reached in connection with this matter when the replies have been received from the public and other bodies to whom the proposal contained in the Order in Council was addressed.

The text of the Order in Council is as follows:—

P.C. 914.

CERTIFIED COPY of a Minute of a Meeting of the Committee of the Privy Council, approved by His Excellency the Governor General on the 3rd June, 1924.

The Committee of the Privy Council have had before them a joint report, dated 27th May, 1924, from the

Minister of Labour and the Minister of Public Works, submitting as follows:—

The evil of unemployment has at no time afflicted Canada with the suffering and distress which, particularly during the post-war years, it has brought on the older communities of Europe.

Climatic conditions in Canada impose industrial changes between season and season with resulting unemployment in many of the larger centres, particularly during the winter months when out-of-doors industrial activities are largely suspended over considerable portions of the Dominion.

The Ministers have, after careful inquiry and consideration, reached the conclusion that whilst these features of Canadian industrial life may be accepted as on the whole permanent, none the less, by consultation and co-operation between the various public authorities and others deeply concerned in and affected by the conditions in question, much may be done to mitigate these conditions in their severest aspects and greatly to increase the prospect of employment winter and summer alike for all who are willing and able to work.

A certain degree of co-operation as between the federal, provincial and municipal authorities was attempted and effected during the period of acute industrial depression occurring, largely as an aftermath of the Great War, in the winters of 1920-21 and 1921-22. The efforts of those years lessened the sufferings of the time but the means employed can hardly be regarded as adequate to meet the more permanent, if less severe, conditions arising from seasonal fluctuations in industry.

The Ministers suggest that the time has come when all public authorities as well as those persons most intimately involved, whether as employers or workmen, in the problem of unemployment, should come together in conference for the purpose of endeavouring to devise a certain regularization of industrial employment, having regard particularly to building and other out-of-doors work during the winter season.

Such a conference should, it is submitted, include representatives not only of the federal and provincial

governments and of the leading municipalities but also of the two transcontinental railways, the associations of employers in the building and constructions industries, the Canadian Manufacturers' Association and the trade union organizations of the workers directly affected.

The Ministers submit that larger benefits are likely to ensue from such a conference if the members of the same are permitted to develop their own programme and system of procedure, the mitigation of the unemployment evil being recognized as the object aimed at; save that the Ministers submit that it should be accepted as a principle that the giving of direct relief rather than work to unemployed persons is not only economically wasteful but tends to affect detrimentally the character of the recipients.

Questions will naturally arise as to the possibility of winter work by railways in the diversion or separation of grade crossings, etc., by municipalities in the construction of trunk and other large sewers and by the provincial and federal governments in carrying on various kinds of public work. The feasibility of the continuance during winter of outside work in building and other construction activities has received already some consideration from representatives of employers and workers and it is understood that work in these lines may be under certain conditions prosecuted during the greater part of the winter.

The Ministers accordingly recommend the assembling in conference at an early date of representatives of the bodies above indicated and as enumerated in the list appearing hereunder, the conference to be held at Ottawa and the costs incidental to attendance at the same to be borne by the federal government:—

The Province of British Columbia,  
 The Province of Alberta,  
 The Province of Saskatchewan,  
 The Province of Manitoba,  
 The Province of Ontario,  
 The Province of Quebec,  
 The Province of New Brunswick,  
 The Province of Nova Scotia,  
 The City of Montreal,  
 The City of Toronto,  
 The City of Winnipeg,  
 The City of Vancouver,  
 The City of Calgary,  
 The City of Halifax,  
 The City of Hamilton,  
 The City of Ottawa,  
 The City of St. John,

The Canadian Pacific Railway,  
 The Canadian National Railways,  
 The Canadian Manufacturers' Association,  
 The Association of Canadian Building and Construction Industries,  
 The Trades and Labour Congress of Canada, and through it an invitation to the Chief Executive Canadian Officer of the most important building trades organizations.

The Ministers are of the view that the federal government in taking the initiative in this matter and in undertaking to convene the conference as proposed is taking action which there is good ground for hoping may lead to the development of a systematic co-operation of all public authorities and other parties as indicated in creating and maintaining a reasonable volume of employment during the winter months.

It is submitted that the course proposed will be consistent with the principle laid down in The Employment Office Co-ordination Act, sec. 3, par. (c) whereby the Minister (of Labour) is "authorized and empowered" (c) "to compile and distribute information received from employment offices and from other sources regarding prevailing conditions of employment"; this principle being set forth more fully with respect to the particular matter of unemployment in P.C. 3097, Dec. 16, 1918, which provides that one of the duties of the Director of the Employment Service shall be as follows: "5—To study and report on unemployment and ways and means of lessening unemployment", etc.

The Ministers estimate that the cost incurred in conducting the proposed conference, including the repayment to delegates in attendance at the same of the moneys expended in travelling to and from Ottawa and in residing at Ottawa during the conference, will be approximately between five and six thousand dollars, and it is recommended that the same become a charge against Vote 272 of the Estimates for the present fiscal year and being "For the administration of the Employment Offices Co-ordination Act".

The Ministers further recommend that the precise date of the proposed conference be not now determined but be left to their decision after they have had communication with the representatives of the bodies above mentioned, but that the period of early September be suggested as that most likely to meet the convenience of all the parties concerned.

The Committee concur in the foregoing recommendations and submit the same for approval.

(Sgd.) E. J. LEMAIRE,

*Clerk of the Privy Council.*

## EIGHT-HOUR DAY CONVENTION OF INTERNATIONAL LABOUR CONFERENCE UNDER CONSIDERATION BY HOUSE OF COMMONS COMMITTEE

A resolution was adopted on May 23 by the House of Commons, of which notice has previously been given by the Minister of Labour, referring the Draft Convention which was adopted at the first session of the International Labour Conference (League of Nations), in 1919, limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week, to the Select Standing Committee on Industrial and International Relations for examination and report, having regard to the labour provisions of the Treaties of Peace and to the Order in

Council which had been adopted on November 6, 1920, dealing with the jurisdiction of the Dominion Parliament and the provincial legislatures. The membership of the Committee on International Relations is as follows: Messieurs Black (Halifax), Cahill, Caldwell, Cannon, Carroll (chairman), Denis (Joliette), Deslauriers, Drummond, Finn, Gervais, Graham, Grimmer, Guthrie, Healy, Hoey, Johnston, Kennedy (Edmonton), Ladner, Lapointe, Macdonald, Malcolm, Marcell (Bonaventure), Marler, McDonald, McKillop, McTaggart, Morin, Murdock, Prevost, Rinfret, Stewart (Hamilton), Tolmie, White and Woodsworth.

The first meeting of the Committee was held on May 28. Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, explained the provisions of the eight-hour Convention in question and also referred to the provisions of the Treaties of Peace which bear on this same subject. Reference was made to the Order in Council of November 6, 1920, in which it was declared that the proposals of this Convention involved "legislation which is competent to Parliament in so far as Dominion works and undertakings are affected but which the Provincial legislatures have otherwise the power to enact and apply generally and comprehensively." Copies were also distributed to the Committee of a bulletin of the Department of Labour entitled "Hours of Labour in Canada and other Countries."

The Assistant Deputy Minister stated that in accordance with a resolution which was adopted at the Federal-Provincial Conference which was held in Ottawa last fall relative to the obligations of Canada arising out of the Labour Sections of the Peace Treaties, an inquiry had been made by the Department of Labour to ascertain the present position of the eight-hour day movement in industrial undertakings in Canada. The complete report of this inquiry, which has not yet been completed, will be communicated to the respective provincial governments. A preliminary statement of the results of the general inquiry was given to the Committee by the Assistant Deputy Minister of Labour. The inquiry was made with the assistance of the Dominion Bureau of Statistics and was based on returns

received from employers having fifteen or more employees in the various industries excepting agriculture and fishing. Information was received from 5,263 employers in all, having 690,317 employees. The compilation of the returns went to show that 374,274 employees worked an eight-hour day or forty-eight hour week or less, which was 54.22 per cent of all those from whom returns were received.

A similar inquiry in June, 1918, covering 612,398 employees indicated 43.4 per cent were on an 8-hour day or less, with 5.4 per cent on an 8½-hour day. As many of these would have a half day off the weekly hours would be 48 or less, so that approximately 50 per cent of the workers included in the inquiry at that time were on an 8-hour day or 48-hour week or less.

The following statement shows the number and percentage of employees in certain Canadian industries working forty-eight hours per week or less:—

	48 and under	per cent	Over 48	per cent	Total
Logging.....	4,482	19.23	18,829	81.77	23,311
Mining.....	22,686	62.61	13,546	37.39	36,232
Manufacturing (a)....	110,211	33.81	215,766	66.19	325,977
Construction.....	8,435	21.04	31,667	79.96	40,102
Transportation.....	173,487	91.50	16,152	8.50	189,639
Communication.....	16,500	84.63	2,949	15.37	19,449
Trade.....	26,577	62.45	8,080	37.55	34,657
Services (b).....	11,896	56.48	9,054	43.22	20,950
All.....	374,274	54.22	310,723	45.78	690,317

- (a) Including printing and publishing, and the production of electric current.
- (b) Including municipal employees, hotel and restaurant, laundries, hospitals, etc.

## OLD AGE PENSIONS

### Recent Action by Parliament of Canada and in Other Countries

ON April 29 the Prime Minister moved a resolution for the appointment of a special committee of the House of Commons to make an inquiry into an old age pension system for Canada. The members of the committee are Messrs. Fontaine, Irvine, Logan, McConica, Munro, Neill, Preston, Raymond, Robichaud, Sexsmith, Spence and St. Pere. Mr. W. G. Raymond, member for Brantford, was elected chairman, and Mr. V. Cloutier of the House of Commons staff was appointed clerk of the committee.

Evidence was heard from Mr. Tom Moore, president of the Trades and Labour Congress of Canada, Mr. J. T. Foster, vice-president of that organization, Mr. John Keane of the Social Service Department, Ottawa, Mr. L. L.

Peltier representing the railroad brotherhoods, and Major Barnett, chairman of the Soldier Settlement Board. The labour representatives favoured the establishment of an old-age pension system, but the railroad brotherhoods, while agreeing that provision should be made for pensions for aged and indigent persons, stated that their organizations would be unwilling to exchange their present pension system for a general one to be created by Parliament.

It will be recalled that in the session of 1907 and 1908 Mr. R. A. Pringle, member for Stormont, brought the question of old age pensions to the attention of the House of Commons in resolutions suggesting a study of the problem by a committee, and in the latter

year a committee was appointed under the chairmanship of Hon. Rodolphe Lemieux, but no report was submitted. It was during this session that the Dominion Government Annuities Act was passed with the declared purpose of encouraging thrift and provision for old age.

In January, 1912, a select committee of the House was appointed in pursuance of a resolution moved by Mr. J. H. Burnham, member for Peterboro, for an inquiry into old age pensions. The members of the committee were nominated by Sir Robert Borden, the chairman being Mr. Burnham. The report, published in October, 1912, was put in the form of a memorandum containing information regarding the number of aged poor in Canada, the pension schemes for employees adopted by Canadian corporations, together with an outline of the provisions made for old age pensions in various countries.

In 1922, the House of Commons adopted a resolution moved by Mr. J. E. Fontaine to the effect that the Government should consider ways and means for establishing a system of old age pensions, and in the speech from the Throne at the opening of the session of 1923 it was stated that the matter would be given consideration in 1924.

The committee appointed during the current session has published in the first issue of its proceedings, May 6-7, 1924, a review, prepared by Mr. Cloutier, of legislation establishing old age pension systems in Great Britain, Australia, New Zealand, Belgium, France and Italy, together with copies of the laws passed in 1923 in the States of Montana, Nevada and Pennsylvania, and of the bill introduced in the United States Congress in February, 1924.

Non-contributory schemes have been established by the more recent laws of the three American states and by those of Great Britain, 1908, Australia, 1908, New Zealand, 1913, and Belgium, 1920, the cost of the pensions being met by the state. In France and Italy the principle adopted is that of insurance, the fund made up of contributions by the beneficiaries being subsidized by the state.

At the present time, systems of compulsory old-age insurance, usually assisted by the national treasury, are in operation in France, Germany, Iceland, Italy, Luxembourg, Netherlands, Portugal, Roumania, Serbia, Spain, Sweden and Switzerland. The non-contributory system has been adopted in Denmark and Uruguay as well as in Great Britain, Australia, New Zealand, Belgium and the three American states.

The pensionable age varies from 60 to 70 years, Great Britain, Montana and Pennsylvania imposing the higher age limit, and France and Nevada the lower. In Italy, Belgium, Australia and New Zealand the age at which a pension is payable is 65 years, but women are to be pensioned at the age of 60 in Australia and New Zealand.

In France and Italy the employer and employee contribute equal amounts to the fund. In all countries persons having an income greater or property valued at more than a specified amount are excluded from the operation of the Act. In Nevada and Pennsylvania the maximum amount of property that may be held is \$300; in Australia and New Zealand the value may not exceed £400 and £390 respectively. An annual income of 5,000 francs in France, and £49 17s. 6d. in Britain, disqualifies an applicant for a pension. In Italy, non-manual workers whose monthly income exceeds £14 and agricultural tenants whose annual income exceeds £144 are exempted from the operation of the Act. The total income, including pension, may not exceed \$300 a year in Montana, \$1 a day in Nevada and Pennsylvania, or £78 per annum in Australia and New Zealand.

In Britain 56 per cent of the population over 70 years of age, or slightly over 2 per cent of the entire population, were in receipt of pensions in 1919. In Australia 1.86 per cent, and in New Zealand 1.65 per cent of the population were paid pensions. The lower age limit increases the number of pensioners in these countries as compared with Britain, but the better financial condition of the poorer people in the Dominions enables a larger percentage to be self-supporting.

The population of Canada in 1921 was 8,788,483, of whom 419,107 were 65 years of age or over. If the same proportion of the population were pensionable as in Australia, the number would be 163,465. If the rate obtaining in New Zealand were applied to Canada, the number of eligible pensioners would be 145,099.

In February, 1924, a bill to provide old age pensions for persons over 60 years of age was introduced in the United States Congress and referred to the Committee on Labour, but no further action has been taken regarding it. The maximum pension that could be granted under this bill is \$8 per week payable to those whose weekly income does not exceed \$8. Persons with an income of more than \$12 a week are not pensionable, but those whose income falls between \$10 and \$12 would be given a weekly pension of \$4.

## RECENT LABOUR LEGISLATION IN ONTARIO AND NEW BRUNSWICK

SOME important labour legislation, enacted at the recent sessions of the legislatures of Ontario and New Brunswick, is outlined in the following pages.

### Ontario

The first session of the sixteenth legislature of Ontario opened on February 6 and concluded on April 17, 1924. The new legislation enacted during this period included several labour measures, and besides these acts the legislature approved in principle of the 8-hour day or 48-hour week and of the insertion of a fair wage clause in the more important classes of provincial government contracts. Resolutions passed by the House on these subjects were as follows:—

Resolved, that in the judgment of this House, as a general principle and subject to reasonable exceptions, including farm labour, the working hours of persons employed in public and private industrial undertakings ought not to exceed eight hours in the day and forty-eight in the week, but we recognize that until such eight-hour day becomes of general application its adoption in Ontario would make this province the victim of unfair competition from such countries as have not an eight-hour law in force.

The "fair wage" resolution was in the following terms:—

Resolved, that it is the opinion of this House a clause shall be inserted in all contracts made by the Government for the sale of timber, or pulpwood, or for the development of water-powers, providing that the wages to be paid by the concessionaire shall not be less than the wages generally accepted as current in each trade for competent workmen in the district where the work is carried out; and when renewals or transfers are made, or where the terms embodied in contracts now in existence are not fulfilled, the Government shall avail itself of the opportunity to insert such a clause, in so far as the due regard to vested rights and justice may permit.

*Workmen's Compensation.*—A new feature was introduced into the Workmen's Compensation Act by a provision authorizing the Board to assist in the retraining and rehabilitation of workers incapacitated by injury, which provision will come into effect on a day to be named in a proclamation by the Lieutenant-Governor in Council. A bill to reconstitute the Board by establishing new machinery for handling the more difficult cases has already been noted in the LABOUR GAZETTE (April, 1924, page 284, and previous issue). This bill, which would have placed the administration of the act in the hands of an administrator, who would dispose of the routine cases, leaving cases of a problematic nature to be settled by a Board of Control, was withdrawn by the Government in deference to the expressed desire of labour representatives, who anticipated that the proposed measure would give the employers an opportunity to contest

the rulings of the Board or its equivalent, whenever they were not satisfied with these rulings, and would thus revive the litigious proceedings in connection with industrial accidents which it had been the purpose of the act to eliminate.

The provision for "rehabilitation," is contained in a new section added to the act as follows:—

44c. To aid in getting injured workmen back to work and to assist in lessening or removing any handicap resulting from their injuries, the Board may take such measures and make such expenditures as it may deem necessary or expedient, and the expense thereof shall be borne, in Schedule 1 cases, out of the accident fund, and in Schedule 2 cases, by the employer individually, and may be collected in the same manner as compensation or expenses of administration; provided that the total expenditure under the provisions of this section shall not exceed \$100,000 in any calendar year.

Other amendments to the Workmen's Compensation Act, which also will take effect on a day to be named in a future proclamation, alter the existing provision in regard to non-resident dependents. Formerly the full benefits were only payable to such dependents on condition and to the extent that, by a reciprocal arrangement in their country or place of residence, similar benefits would be available reciprocally for the benefit of Ontario workmen and their dependents. The new amendment removes this condition in regard to dependents residing in other provinces of Canada, who will in future be paid as though residing in Ontario, and restricts its application to dependents residing outside Canada. This change brings a new class of dependents under the benefits of the act, and a new clause is added to the effect that the resulting increase in compensation is to apply only to payments occurring after the act takes effect on the date to be named in a proclamation by the Lieutenant-Governor in Council.

*Public Service Superannuation.*—Provincial civil servants who, after employment for at least 25 years, have been retired from the public service for any cause other than misconduct, were made eligible for superannuation allowances under the provisions of the act of 1920, on the same terms as are laid down in that act for those who have reached the regular age of retirement (This amendment is retrospective in its action to July 1, 1923). Some changes were made in the provisions as to the allowances payable to the

widow or children of a deceased employee who has served at least 10 years, the maximum amount which these dependents may receive in a lump sum being fixed at the "amount of the annual allowance to which the employee would have been entitled had he been superannuated at the date of his death." (The maximum payment was previously the average salary for the last three years). If this amount, however, is less than the sum of the contributions made by the deceased, with interest at 5 per cent, then the latter amount is to continue to be the maximum payable to the dependents. The constitution of the Board which administered the act was altered so that the Board would consist of three members appointed by the Lieutenant Governor in Council, one of the members being an active civil servant. (The Board was formerly a larger body, including political party representatives, and a representative of the Provincial Civil Service Association, in addition to the president of the executive council and the civil service commissioner). Another new provision gives former contributors to the Ontario Teachers' and Inspectors' Superannuation Fund the privilege of continuity of service in regard to superannuation on transferring to another branch of the public service.

*Assistance at Forest Fires.*—By amendment to the Forest Fires Protection Act employees of the Provincial Department of Lands and Forests were given authority to employ or summon the assistance, for the purpose of fighting a fire, of any male person between the ages of 18 and 60 years, excepting only trainmen, telegraphers, and despatchers on duty, doctors, and persons physically unfit.

*Masters and Servants.*—The limit of the amount of arrears of wages which a justice of the peace may order to be paid by a master, on the complaint of a workman, servant, or employee, of non-payment of wages, was by an amendment to the Masters and Servants Act, raised to \$100. Formerly the limit was \$80 in provisional judicial districts, and \$40 in counties.

*Voting by Employees.*—The special polls which were provided for railway employees under an amendment of 1919 to the Ontario Election Act are, by a new amendment, to remain open until 9 p.m. (instead of 5 p.m.) for the three days, exclusive of Sunday, immediately preceding the date of the election. Such facilities are provided for railwaymen whose employment is such as to necessitate their absence from time to time from their ordinary place of residence, and who are likely

to be absent on the day of the election or vote upon any question submitted to the electors.

A similar amendment was also made in the Railway Employees and Commercial Travelers Voting Act of 1923. This act governs municipal elections only, giving municipal councils power, on petition by specified numbers of the employees concerned, to provide by bylaw special polls for three days prior to the date of an election in which the method of voting is by ballot. The original time for voting on these days was from 9 a.m. to 5 p.m., but under the new amendment an extension of this time may be made by bylaw.

*Vocational Training.*—Numerous amendments were made in the school law having in view mainly the equalization of the means of support in the secondary schools and the revision of the method of distributing provincial aid to elementary schools. The Vocational Education Act of 1921 was amended by a new provision that pupils of 13 years of age or over who have attended auxiliary training classes, or who are eligible for admission to such classes, may be examined and admitted to special industrial classes established by the local board for the purpose of giving vocational instruction to such pupils where it is found that they have benefited by it.

*Children and Child Labour.*—The Immigrant Children's Protection Act provides for children under 18 years of age who are brought into Canada from overseas by a society or agent to be placed out in a foster home or apprenticed or hired out in the province. Societies or agents may be authorized for such work, subject to supervision by a provincial inspector. The Masters and Servants Act is to apply to the recovery by a society or agent of wages due to a child to whom the act applies. The judge or magistrate trying an action for recovery of wages earned by a child may direct payment even though the child may have left the service of the employer complained of before the expiration of the period for which he was engaged. Societies or agents must provide homes or shelters to which children may return if unsuited to their intended employers. Employers or others by whose cruelty or neglect the health of a child is injured are liable for the payment of all hospital and other charges connected with the child's restoration to health. The School Medical and Dental Inspection Act enables local educational boards to provide medical and dental inspection of pupils and render such other services relating to the health and wellbeing of the pupils as may be required by regulations under the Department of Education Act.

*Government Departments.*—A Department of Health was created, under a Minister of Health and with the chief officer of health for Ontario as deputy minister of health. The new department will administer and enforce the Public Health Act and all the other statutes relating to the protection of the health of the people of the province. A mining court was established to have jurisdiction in all matters arising under the Mining Act of Ontario.

*Other Legislation.*—New provisions were made in regard to the lien of a landlord for rent where a tenant becomes bankrupt, the preferential lien of the landlord being restricted to the arrears of rent due for three months (instead of one year) and for three months after date of assignment. Other

changes in the Landlord and Tenant Act related to the rights of the assignee, the rights of sub-tenants, the settlement of disputes and other matters.

A Warehousemen's Lien Act, like acts passed in several other provinces, gave warehousemen a lien upon goods deposited with them for storage.

An act was passed to provide for the licensing of sawmills and pulp and paper mills, and enabling the minister of lands and forests to make regulations for the construction and operation of stationary and portable mills. Another act provided for licensing and regulating dealers in unwrought metals, that is gold, silver, and other precious and rare metals.

### New Brunswick

Workmen's Compensation was the principal labour subject among those dealt with at the fourth session of the eighth Legislative Assembly of New Brunswick, which lasted from March 6 to April 17. Difficulties in connection with the existing act, and conflicts of opinion in regard to it between workmen and employers have been noted in recent issues of the LABOUR GAZETTE. A conference of representatives of the parties interested and of members of the provincial government met in January at the call of Premier Veniot (LABOUR GAZETTE, February, 1924, page 135), and the amending bill embodies a compromise between the conflicting opinions that were presented at that conference.

During the recess preceding the session the Government appointed a commission to investigate and report upon the question of Mothers' Allowances, but the report of this committee was not received in time to permit legislation to be laid before the House in accordance with its recommendations.

Several conferences, it was stated in the opening speech from the Throne, were held during the past year between representatives of the Government, employers and workers with a view to reaching a better understanding and co-operation between all persons interested in the development of industry in the province. Considerable attention has recently been given to public health, resulting in a marked decline in the rates of general and of infant mortality in the province.

The measures enacted at the recent session are summarized in the following paragraphs:

*Workmen's Compensation.*—The section of the act which provided in general for the payment of compensation to workmen for injuries was amended by a new conditional provision

authorizing the Board to withhold payments from persons leading an immoral or improper life, and to transfer them to other dependants (Similar amendments were made in 1922 in the Nova Scotia and British Columbia acts).

Where a disease which existed prior to injury becomes aggravated, compensation is only to be allowed in proportion to the degree of aggravation.

Another amendment relates to payments to non-resident dependants. The Board could formerly pay compensation to dependants in provinces or countries making reciprocal provisions, but under the new amendment the amount so paid may not exceed that which would be paid in the dependant's province or country of residence. Moreover, if the dependants are aliens residing outside Canada the Board may take into account the cost of living and conditions in their place of residence and pay compensation accordingly (The latter provision exists also in the British Columbia Act under an amendment of 1919).

The provisions of the Act as to the payment of compensation by the Board were declared to be in lieu of all claims to which the workman or his dependants are entitled. Workmen in industries covered by the Act were formerly permitted a remedy under common law in cases where the employer was at fault in regard to his obligations under the act.

The section relating to defaulting employers was recast. This section provides that any employer who refuses to furnish an estimate or pay any assessment to which he may be subject, must in addition to any penalty elsewhere provided, pay to the Board the full amount or capitalized value as determined by the Board, of the compensation payable with respect to any of his workmen which happens during the period of default. If the Board

considers, however, that there was an excuse for the default they may remit all or part of these penalties.

The section relating to the liability of contractors and sub-contractors was amended to provide that, where contractors have not been assessed, the workmen may be considered as being employed by the principal, who, however, may recover from the contractors any amount of assessment which may have been paid. A new subsection provided that an assessment or a judgment with respect to an assessment is to be a first lien on the property assessed, subject to municipal taxes. Where default is made by an employer in the payment of an assessment the Board may issue a certificate stating the facts, to be filed with the Clerk of the County Court or registrar of the Supreme Court, such a certificate becoming by this process an order of the Court upon which judgment may be entered for the amount mentioned. The right of appeal in such proceedings, formerly allowed under the act, was taken away by another amendment.

*Inspection of Sawmills, etc.*—The Factories Act was amended in the section which requires owners of new factories to supply the Workmen's Compensation Board (which in New Brunswick administers the Factories Act) with full information as required within one month of occupation of the premises. This time limit is reduced to one week for portable saw mills or lath mills, with a fine in cases of failure to report of \$25 to \$100, with imprisonment to three months in default of payment.

*Workingmen's Settlement Lots.*—An act was passed to provide for the granting of settlement lots to workingmen, enabling the Minister of Lands and Mines to have part of the Crown lands subdivided for homesteads for men engaged in mills and similar work, each lot containing not more than two acres, with access by road reservations. Applicants must not be owners of land, and must pay \$5 as a fee for survey, etc. They are required to perform the following duties. At least one-tenth of the lot must be cultivated; a house not less than 16 by 20 feet must be built; ten dollars worth of labour on a road connected with the settlement must be worked, or \$7.50 paid in lieu of labour. Three years continuous residence on the lot are necessary, and all duties must be performed within five years. Not more than half an acre may be cleared in any one year and the land so cleared must be cultivated before further clearing. Lumber must not be cut except with this condition.

*School Teachers.*—An amendment to the Schools Act vested in Boards of School

Trustees authority to provide retiring allowances for teachers of long and meritorious service. Considerable discussion took place during the session of the provision contained in the Schools Act of 1922 of minimum salaries for teachers. The minimum salaries from all sources are fixed as follows: in school districts having a valuation of \$20,000 and under, \$500; in districts having a valuation over \$20,000, \$600; and in those with a valuation over \$50,000, \$700. The act provided that the Board of Education may instruct the chief superintendent to withhold county and provincial grants from trustees who give and teachers who accept less than the stated minimum rates. A reduction of \$100 was proposed in the rates established under the Act of 1922, but the legislature made no change in the existing minimum scale.

*Landlord and Tenant.*—The Landlord and Tenant Act was amended by a definition of the word "trader" as used in the act, and by new provisions limiting the rights of a landlord in the distraining of a tenant's goods or chattels for rent in cases where the latter has made an assignment.

*Licensing of Nurses.*—Reciprocal privileges were allowed in connection with the granting of certificates to duly qualified nurses who have been trained in other provinces of Canada or in any state of the United States which has made a similar provision for granting certificates to nurses who have graduated in New Brunswick. The title of the "N.B. Association of Graduate Nurses" was changed by the substitution of the word "registered" for "graduate".

*Co-operation.*—A provincial Seed Potato Growers Association was incorporated for the purpose of co-operative marketing and a similar association of poultry producers was incorporated to promote that industry.

*Miscellaneous Legislation.*—An act was passed to provide for the payment to the proprietor of a lumber mill of compensation for the destruction of his mill by a forest fire, his men having been called out to fight a fire which threatened to destroy government timber. This Act was outlined in the last issue of the LABOUR GAZETTE (May, page 355).

An amendment to the Motor Vehicle Act, similar to a provision made in Ontario last year, forbade persons under the age of 18 years to operate a motor vehicle on a public road without a permit, to secure which an applicant must pass an examination. A person under 16 years of age may not receive such a certificate, and may not therefore drive a motor vehicle on a public road.

## WORKMEN'S COMPENSATION IN 1923

### Annual Reports of Boards of Ontario, Nova Scotia and New Brunswick

THE reports of the Workmen's Compensation Boards of Ontario, Nova Scotia and New Brunswick for 1923 have recently been issued. Marked increases in the volume of cases handled during the past year are shown in all these reports, the increases, however, being in accidents of a less serious type.

#### Ontario

The ninth annual report of the Ontario Board shows a continued increase in operations in 1923 as measured by the total amount of the benefits awarded during the year. A large increase is noted in the number of minor accidents, while fatal accidents on the other hand shows a decline. The decline in the more serious classes of accident, coupled with the adoption by the Board of new actuarial tables reducing the capitalized value of pensions, enabled the Board to afford some relief to the employers by reducing the assessment rates for 1923 for most industries. (The rates of assessment for 1923 and 1924 for certain industries were given in the April issue of the LABOUR GAZETTE, page 316.)

The Board intimates that a new merit rating of the various industrial groups will be undertaken during the present year. This will result in the further relief of those employers who have had a favourable record during the past three years in regard to safety, with a corresponding penalizing of those with a bad accident record.

Among other interesting information in the report, it is stated that about half of all the compensation awarded arises from cases of permanent disability, a little more than one-quarter from cases of temporary disability, and a little less than one-quarter from death cases. On the other hand considerably less than one per cent of all accidents reported are death cases; about four per cent are permanent disability; about half are temporary disability cases, and the rest either involve medical aid only, or no payment by the Board. The average cost of permanent disability cases was \$1,114.41, of death cases \$3,755.38, of temporary disability cases \$75.93, and of cases involving medical aid only \$5.21. Less than two per cent of the injured workers were females, about 60 per cent were married persons; 87 per cent were British subjects and 13 per cent foreigners. (The next largest national groups after the British are the Italians, followed by the Poles, Russians, Austrians, and those from the United States.)

The average wage of compensated workmen in 1922 was \$22.15 per week. In 1920 it was about \$25.50 and in 1915 about \$13.25. (The figure for last year is not given.) The average age of the injured workers was 35 years.

It may be noted that the employers of the province are under two systems as regards workmen's compensation. The majority are under the collective liability system, and are grouped together in "Schedule 1," while a smaller number, including chiefly municipal corporations, steam and electric railways and navigation companies, are individually liable for compensating their injured workers. These are included under "Schedule 2," which group also comprises certain operations of the Dominion and provincial governments, Dominion employees being under the provincial act by virtue of a Dominion statute of 1918 (chapter 15).

The number of workmen coming under the Act in 1923 is estimated at 450,000, reckoning the number included under schedule 2 as one-third of those under schedule 1. The total wages of these employees during the year was approximately \$525,000,000. The employers under schedule 1 numbered 22,201.

The total amount of compensation awarded during 1923, not including cost of medical aid, was \$5,384,956 (of which \$4,036,170 was in schedule 1, and \$374,938 in schedule 2 industries). The totals for the previous four years were as follows: in 1922, \$5,000,077; in 1921, \$5,526,470; in 1920, \$7,076,440; and in 1919, \$3,806,561.

Expenditure for medical aid in schedule 1 industries amounted to \$788,906 during the year, as compared with \$692,820 in 1922; in schedule 2 and in Crown industries this service is rendered by the employers.

Reports were received during 1923 of 61,109 accidents, including some not serious enough to involve compensation or aid. In 1922, the number of accidents thus reported was 50,411; in 1921, 45,191; in 1920, 54,851; and in 1919, 44,260.

Compensation or medical aid was given in 1923 in 53,638 cases, as compared with 42,509 in 1922. Of the total for 1923, 47,873 cases were in schedule 1, 3,849 in schedule 2, and 1916 were Crown cases. The total is made up of 318 death cases, 26 cases of permanent total disability, 2,350 of permanent partial disability, 30,338 of temporary disability in which some compensation was paid, and 20,606 in which medical aid only was paid.

The average rate of assessment on each \$100 of payroll in industries under schedule 1 was \$1.08 in 1923, as compared with \$1.34 in 1921, \$1.23 in 1920, and \$1.22 in 1919.

In seventeen out of twenty-four classes of industry in schedule 1 safety or accident associations are carried on under the management of the employers, the expenses being paid by the Board out of the Accident Fund. These expenses amounted to \$81,981 in 1923, as compared with \$69,226 in 1922, and \$46,697 in 1921.

A valuable appendix to the report contains an address by Mr. Samuel Price, chairman of the Board, in which the principles and practical working of the Act are described at length.

### Nova Scotia

The report of the Workmen's Compensation Board of Nova Scotia for 1923 shows a very considerable increase in both the number of accidents and their compensation cost in 1923 over the records of the previous year. The estimated cost of accidents in 1923 was \$1,315,964, an increase of \$450,952 over 1922. This increase is partly explained by the inclusion in the 1923 figure of provision for a large number of cases pending adjustment. Nevertheless the increase of approximately 50 per cent is described in the report as "startling." It is not to be accounted for by an increase in the payrolls in the latter year, which only amounted to 10 per cent over those of 1922, or \$52,332,000 as compared with \$47,660,000. The increased cost of accidents was mainly in the mining industry, followed by lumbering, provincial highways, iron and steel, transportation, general manufacturing, building and construction. On the other hand public utilities and shipping and navigation showed declines in accident costs.

The amount actually paid out during the year to workmen and dependents was \$607,930, of which \$236,089 was in the form of pensions, \$315,358 was compensation to disabled workmen and \$56,484 was for medical aid. The persons receiving monthly pensions at the end of the year are classified as follows:—

Widows.. . . . .	287
Children under 16.. . . . .	622
Dependent mothers.. . . . .	59
Dependent fathers.. . . . .	42
Other dependents.. . . . .	19
Permanently disabled.. . . . .	558

1,587

The estimated cost of providing medical aid for thirty days following the date of disability was \$61,304. The ratios of the cost of medical aid to the compensation cost of accidents, in those classes to which the Board paid medical aid, were as follows:—

Lumbering, sawmills, etc.. . . . .	12.7
General manufacturing.. . . . .	9.9
Building construction.. . . . .	6.5
Public utilities.. . . . .	8.7
Transportation.. . . . .	8.2

The ratio of the cost of accidents to the total wages paid was 2.51 in 1923, the highest figure since 1918 when the ratio was 2.56.

The numbers of compensable cases arising in 1923 and 1922, classified in order of their seriousness, are shown as follows:—

	1922	1923
Fatal, compensable.. . . . .	60	69
Permanent partial disability.. . . . .	242	168
Temporary total disability.. . . . .	4,186	5,133
Medical aid only.. . . . .	534	738
Total compensable claims.. . . . .	5,022	6,108
Pending adjustment.. . . . .		114
Fatal cases, not compensable.. . . . .	5	4
Other non-compensable cases.. . . . .	454	508
Totals.. . . . .	5,481	6,734

An amendment to the Act of 1923 (noted in the LABOUR GAZETTE for June 1923, page 616) provided that the salaries of members of the Board should thenceforth be paid out of the accident fund, instead of out of provincial revenue, as formerly. The effect of this amendment was to raise the ratio of administration expense to the total cost of accidents occurring in the year, to 7.96.

The Board appeals to employers and workmen in the province to co-operate with the Nova Scotia Accident Prevention Association in the work of reducing the excessive waste of life and resources involved in industrial accidents. The latter body is an approved association under the Act, having authority to make safety regulations in the industries represented in its membership, the expenses of the association being paid by the Board out of the accident fund.

### New Brunswick

In the fifth annual report of the Board of New Brunswick, covering the operations of 1923, a steady increase is noted in recent years in the number of industrial accidents in that province. Full statistics for the past year, however, are not included in the report, as the time for reporting accidents which occurred during that period had not ended when it was issued.

Referring to this increase the Board in its report remarks that "the only comment that seems to be necessary is that more stringent steps must be taken for the prevention of accidents as the only method of reducing the cost of the Act to the employer."

The total estimated income of the Board for 1923 was \$571,498, and the estimated expenditure \$584,535, leaving a provisional deficit of \$13,036. The cost of administration in which are included the commissioners' salaries and the cost of permanent equipment, is given as 8.9 per cent of the total amount expended by the Board.

In order to meet the increasing cost of accidents, for which increase the logging and lumbering group was largely responsible, the Board in August, 1923, ordered a further assessment of "Class 2," payable in three equal yearly instalments, deferred payments to bear interest at the rate of 7 per cent per annum. The rates of assessment for 1922 and 1923 were given in the LABOUR GAZETTE for January, 1924 (page 29). In "Class 2," which includes sawmills, logging, pulpmills, and various branches of the woodworking industry, the

provisional expenditure for 1923 was \$299,442, as compared with an expenditure of \$243,009 in 1922. The increased expenditure left the Board with a deficit in this class of \$27,945, the estimated income having been \$271,497.

Pending the receipt of full statistics for the past year the following tables show, for the last four years for which such information is available, the number of accidents by classes and the total amount of compensation in those years:—

—	1919	1920	1921	1922
Fatal accidents.....	25	47	35	30
Permanent total.....			1	1
Permanent partial.....	183	254	241	245
Temporary total.....	1,832	2,967	3,032	3,225
Medical aid only.....	656	796	1,037	1,310
Total cost.....	\$376,007	\$548,303	\$469,676	\$496,676

### MINIMUM WAGES IN THEATRES, ETC., IN ONTARIO

**T**HE Minimum Wage Board of Ontario recently issued orders governing female employees in theatres and amusement places throughout the province. Ushers, cashiers and cleaners are included among the employees covered by the new orders. The order relating to employees in Toronto took effect on April 14, and that relating to other parts of the province on June 1.

In Toronto the minimum wage is \$12.50 per week, except where an employee works less than 40 hours per week, in which case she must be paid not less than 30 cents per hour.

In cities with population over 30,000, except Toronto, the minimum rate is \$12 per week for employees working 40 hours per week or more; or 27 cents per hour for those working under 40 hours.

In the rest of the province the minimum rate is \$11, or 25 cents per hour for those working less than 40 hours per week.

No working period is to be reckoned for payment as less than two hours.

As is usual in all orders of the Board employers are required to keep a copy of these orders posted where it may be seen by the employees. Violations of the order are punishable under section 22 of the Act. Female employees not being paid as much as the order requires are invited to report their case to the Minimum Wage Board, Spadina Crescent, Toronto.

Previous orders of the Board have been noted in the LABOUR GAZETTE for March, and in previous issues.

A system of awards to shop employees for outstanding services has been adopted by the General Electric Company of the United States. Awards were recently made to 48 employees who had been selected with the greatest care from 80,000 of the company's employees throughout the country. Among those honoured were two foremen in one of the shops of the National lamp works at Cleveland, who perfected the tipless mazada bulb. A stenographer was rewarded because she thought out a better way to keep a record of relations with the customers. The awards were made under the Charles A. Coffin foundation, established in 1922 as a tribute to Charles A. Coffin, founder of the company. The income from a fund of \$400,000 provides the prizes.

The British Empire Steel Corporation recently reorganized its emergency hospital and first aid services at Sydney, N.S., in pursuance of a general policy of retrenchment. This institution is maintained principally for quick service to employees injured while at work. Formerly the hospital was served by eleven physicians under the plan of dividing the work among the medical men of the city, but it will henceforth be in charge of a staff composed of three doctors and their assistants.

## NOTES RELATIVE TO LABOUR UNION ACTIVITIES

THE Dominion Postal Porters and Transfer Agents' Association will hold its annual convention in Ottawa in July.

The first annual congress of the Federation of Pulp and Paper Mill Employees, which is composed of national and Catholic unions, will be held at Chicoutimi, Quebec, on August 1. It will be attended by representatives from Ontario and Quebec. One of the important matters to be considered will be Sunday work, which is said to be carried on still in certain mills.

International labour organizations having local branches in Canada will hold their regular conventions during July as follows:

National Brotherhood of Operative Potters, Atlantic City, N.J., July 1.

American Flint Glass Workers' Union, Atlantic City, N.J., July 1.

Glass Bottle Blowers' Association, Atlantic City, N.J., July 8.

Piano, Organ and Musical Instrument Workers' International Union, New York, N. Y., July 14.

International Brotherhood of Bookbinders, Chicago, Ill., July 14.

Retail Clerks' International Protective Association, Evanston, Ill., July 15.

International Broom and Whisk Makers' Union, Chicago, Ill.

International Stereotypers and Electrotypers' Union, Atlanta, Ga., July 21.

International Plate Printers and Die Stampers' Union, Boston, Mass., July 21.

Mr. J. T. Foster, vice-president of the Trades and Labour Congress of Canada, is acting president of the organization during the absence of President Tom Moore, who will be away from Canada for the next two months. Mr. Moore will attend the meeting in Vienna of the International Federation of Trade Unions, with which body the Trades and Labour Congress is affiliated, going from there to Geneva to be present at the meeting of the Governing Body of the International Labour Office, and subsequently attending the regular sessions of the International Labour Conference, to which Mr. Moore is the workers' representative for Canada.

Mr. John McClelland, of Montreal, will attend the annual meeting of the British Trade Union Congress to be held at Hull in September as fraternal delegate from the Trades and

Labour Congress of Canada. He will also attend the international conference on trade union education called by the International Federation of Trade Unions, which is to be held at Ruskin College, London, on August 17. Mr. McClelland had been selected as the representative of the Trades and Labour Congress of Canada to the British Commonwealth Labour Conference which was scheduled to meet in London, England, on August 18. According to press despatches, however, the meeting has been indefinitely postponed on account of the political situation in different parts of the empire.

The Syndicated Longshoremens of Montreal, which is an independent body, and the largest local trade union in the Dominion, having nearly 4,000 members, will shortly take possession of the new building which it has erected on the corner of Champ de Mars and Bonsecours streets. The structure is four storeys high, 86 by 86 feet in extent, and cost about \$225,000. The first and second storeys are to be used as stores and warehouses, and the two upper floors as the offices and assembly halls of the union.

The quarterly meeting of the executive council of the American Federation of Labour was held in Montreal last month, President Samuel Gompers and all members of the council being present. Many matters of internal and general interest were considered by the executive. A joint conference of the members of the executives of the American Federation and the Trades and Labour Congress of Canada was one of the features of the meeting. At this conference there was an exchange of views on the international trade union situation in Canada, and while no statement was made as to the decisions arrived at it is understood that the discussions were of a most friendly character and were indicative of the common interests existing between the organized labour movement of Canada, as represented by the Trades and Labour Congress, and that of the United States, as represented by the American Federation of Labour.

The Scottish Trade Union Congress, at its recent meeting held at Ayr, considered proposals made by the General Council for setting up machinery for the "mass control" of industry in the event of future developments in the nationalization of industries. The Congress, according to a report in *The Times*,

"frankly admitted that the great objective of trade unionism is the control of industry, and, while recognizing the difficulty underlying the scheme of the General Council, gave its approval to the proposals."

The same Congress passed the following resolution approving the "Washington Convention" establishing an 8-hour day:—

The Congress welcomes the announcement of the British Government to proceed with the immediate

ratification of the Washington Convention establishing the eight-hour day, and calls upon the Government to include all employees, manual and non-manual, within the terms of the Bill. Adequate provision, however, should be made to safeguard the position of workers now enjoying conditions better than the minimum conditions which the convention prescribes. The Congress considers that the principle of this measure, if adopted by Great Britain, will have the effect of stimulating the sense of obligation of other Governments in giving an active force to the conventions adopted by the International Labour Conference.

## CANADIAN MANUFACTURERS' ASSOCIATION

### Report of Industrial Relations Committee at Annual General Meeting

THE fifty-third annual general meeting of the Canadian Manufacturers' Association was held at Montreal on June 3 to 5, the president, Mr. W. C. Howard Smith, occupying the chair. Representatives of industries from all parts of Canada attended the convention. The membership of the association on April 30, 1924, was 4,057, the decrease of 231 from the figures of last year being attributed to business conditions this year. The report of the Industrial Relations Committee as presented to the convention was as follows:—

Your Industrial Relations Committee begs to report on the following subjects, which have come up for consideration during the past year:

#### International Labour Conference

The Fifth Session of the International Labour Conference was held last October at Geneva. The employers of Canada were represented by Mr. J. H. Sherrard, of Simmons, Limited, Montreal, a past President of the Association. The principal item on the agenda was the question of "the principles governing factory inspection" and, as a result of the conference, a series of general principles was laid down and recommended to the various nations, members of the International Labour Organization, which, if adopted, will not merely bring about uniformity as between the more advanced industrial countries but will also bring the less advanced countries up to the higher standard. As it depends upon the efficiency of factory inspection whether or not regulations are lived up to, it is obviously of great importance that factory inspection should be maintained in as efficient and as uniform a manner as possible. This, of course, was the object of putting this question on the agenda and the fact that the resulting Recommendation was passed unani-

mously gives hope that the various countries are fully alive to the benefits of proper factory inspection, and will endeavour to give effect to the principles laid down at this conference.

The Sixth Session of the Conference will be held at Geneva beginning the 16th of June, 1924, and the employers of Canada are to be represented by Mr. Melville P. White of the Canadian General Electric Co., Limited, Toronto, with Mr. H. W. Macdonnell, Secretary of the Committee, as advisor.

The agenda includes:—

1. Development of facilities for the utilization of workers' leisure.
2. Equality of treatment for national and foreign workers as regards workmen's compensation for accidents.
3. Weekly suspension of work for twenty-four hours in glass manufacturing processes where tank furnaces are used.
4. Night work in bakeries.

#### Dominion-Provincial Conference on International Labour Draft Conventions and Recommendations

In September, 1923, a Conference of representatives of the Provincial Governments and of the Dominion Government, as well as of labour and employers, was called at Ottawa to consider the question of legislation to give effect to the various International Labour Draft Conventions and Recommendations.\* As questions concerning hours and conditions of work come within the jurisdiction of the provinces, and as no one province is prepared to give legislative effect to any of these draft conventions, until all the provinces do the same, the result has been that Canada has not officially reported the ratification of any Inter-

\*The proceedings of the conference were reported in the LABOUR GAZETTE for October, 1923, pages 1107-1112.

national Labour conventions or recommendations. The conference in question, was called with a view to discussing whether anything could be done to secure united action by the provinces.

So far as the more important draft conventions dealing with the 48-hour week and unemployment insurance were concerned, neither the Government nor the labour representatives considered that these were "practical politics" in Canada at the present time. In the case, however, of a number of the less important conventions and recommendations, such as fixing the age for young people in industry at 14, and prohibiting night work for women in factories, etc., it was agreed that in practically all the provinces, there is already legislation fully as advanced as that recommended by the International Labour Conference. As regards these questions, it was agreed that steps should be taken to give formal notification of concurrence, so that Canada would get credit for her advanced legislation.

In this connection, attention may be drawn to the fact that Dr. W. A. Riddell, formerly Ontario Deputy Minister of Labour, and now Chief Research Officer for the International Labour Office, has spent the past three months visiting the various Provincial Governments, and representing that Canada should take steps to get full credit for her legislation instead of being listed, as at present, as one of the backward countries, in respect of labour legislation.

As a result of the Dominion-Provincial Conference referred to, and Dr. Riddell's visit, several of the provinces have notified the Dominion Government that their existing legislation is fully up to the standard recommended in six of the draft conventions and recommendations.

As regards the most important of the draft conventions, namely, the 48-hour week convention passed in Washington in 1919, the only province which has given it legislative effect is British Columbia, which at the past session passed a 48-hour week law to come into force on 1st January, 1925. Agriculture, horticulture, and dairying are excepted, and the provisions of the Act are only to be put into operation in respect to any particular industry, after a Board of Adjustment representing the Government, labour and employers shall have heard representations from interested parties.

#### **Workmen's Compensation**

In the provinces which have compulsory state insurance systems, there is still a marked tendency for labour each year to demand increase in the scale of compensation. Thus in

Alberta, Manitoba, and Ontario demands were made at the recent sessions of the Legislatures,—in Alberta for an increase from 55 per cent to 75 per cent; in Manitoba, for increased benefits to dependents; and in both Manitoba and Ontario for the contribution of money by the employers for the vocational training of injured workmen. As your Committee pointed out a year ago, it does not seem to be realized by a certain section of labour or, for that matter, by certain governments, that the scale of compensation was fixed at 55 per cent after the most careful study and consideration, having particular regard to the reasonable maintenance of workmen on the one hand, and to the danger of encouraging malingering on the other. The compensation was stated not as an absolute amount, but as a percentage of earnings,—the idea of course, being that the amount of compensation would rise and fall automatically with the wages. Your Committee makes no apology for reiterating what was emphasized last year, namely, that if the tendency constantly to increase the benefits is not curbed, not only will the cost of compensation become intolerable but the proper administration of the compensation acts will become impossible.

When the first of the Canadian compulsory state insurance schemes of workmen's compensation, namely, the Ontario Act, was introduced, it was provided that the state should make a substantial contribution towards the cost of administration. The reason for this was chiefly that the setting up of a Compensation Board would relieve the ordinary civil courts of a very large amount of work, estimated at from one-quarter to one-third of the total litigation, and thus effect a considerable direct saving to the community. It may also be pointed out that industrial employers, in addition to taking complete care of their own "casualties" as required by the Compensation Act, contribute their share to the cost of looking after the general community's "casualties"; and they are the only section of the community which is called upon to bear this double burden. The example of Ontario was followed in some of the other Provinces, but one by one they have withdrawn this contribution and now Ontario itself, on the plea of need of economy, has refused to continue the grant. The whole burden is thus cast on the Accident Fund—in other words on the employer.

This, in the opinion of your Committee, is inequitable. It cannot be denied that the community as a whole, derives great benefit, directly and indirectly, from the establishment of new civil courts such as the Compensation Boards and the community should make some return for the benefit it receives.

### Rehabilitation of Injured Workmen

In several of the provinces it has been proposed that money should be contributed by the employers to inaugurate schemes for the rehabilitation of injured workmen, and in Ontario a Government bill was passed authorizing the Compensation Board to spend up to \$100,000 out of the Accident Fund for this purpose. Your Committee is having a careful study made of this question.

Investigation made so far goes to show that, unless the greatest care is exercised, rehabilitation schemes may easily do more harm than good. The two chief factors that enter into the problem of getting injured men re-established in industry are,—

1st. The determination of the workman himself to get back to work and

2nd. The willingness of the employer to cooperate.

As regards the latter factor there is every reason to believe that the employers as a whole have not failed to do their part. As regards the first and most important factor, investigation has shown that the problem of rehabilitation is pre-eminently one of "the human equation." In other words the man of strong, self-reliant character, even with a major injury, re-establishes himself; the man of weak character, even though his injury be a minor one, tends to lose heart and look too much for outside assistance instead of relying on himself. In the latter case there is obviously great danger of any scheme of vocational training and rehabilitation being greatly abused, to the prejudice not merely of the employer who provides the money, but of the workman himself.

### Industrial Medical Service

Another question to which your Committee has given considerable attention is that of prevention of sickness in industry. Much has been done in recent years towards the prevention of accidents but it is too little recognized that sickness causes infinitely more loss to industry than accidents. Thus national insurance experience in England has shown clearly that sickness causes five times as much lost time as accidents, and this is confirmed by experience in the United States. Six days lost time per worker per year from sickness has been proved to be a most conservative estimate.

With a view to coping with this problem, many of the larger American concerns have established plant medical departments and no concern which has started

such a department has ever abandoned it. Where a concern is too small to employ a full-time physician by itself, the practice is adopted of joining with one or more other concerns in the same position. As regards the results of such industrial medical service, your Committee draws attention to the fact that reliable statistics show such reductions as the following:

- (a) From 6.5 days lost per man per year to 2.9 days, in the case of a large Ontario concern;
- (b) From 8 days to 4 days per man per year in the case of a large Milwaukee company; and
- (c) 75% reduction in the case of a large Massachusetts company.

In view of these striking facts your Committee feels that this is a question which, no less than accident prevention, should be given the most careful consideration by all employers.

### Industrial Disputes Investigation Act

This Act, as is well known, was passed in 1907, to apply primarily to industrial disputes in connection with railways, mines and public utilities. In 1918 the scope of the Act was enlarged so as to enable the Minister of Labour either on the application of any municipality, or of his own motion, to appoint a board of conciliation to enquire into and adjudicate upon industrial disputes in connection with any private industry. The idea behind this was, of course, that industrial disputes in private industry sometimes have so far-reaching an effect on the general public that they may be considered to be "affected with a public interest." It should, of course, be pointed out that the award of a board of conciliation appointed under the Act is in no way binding on either party.

The above being the general position under the Act, it is of interest to note that in a recent case the constitutionality of the Act has been attacked as regards its applicability to industrial disputes in connection with a purely local public utility. To assume jurisdiction over such industrial disputes was, it was alleged, to interfere with "property and civil rights," which, of course, comes within the jurisdiction of the provincial legislatures. The judgment of the Court, however, was to the effect that the jurisdiction of Parliament over criminal law includes power to make laws "the paramount purpose of which is the prevention of public wrongs and crime and the maintenance of public safety, peace and order." "Industrial disputes," it is declared, "are not

now regarded as matters concerning only a disputing employer and his employees, but such disputes are matters of public interest and concern."

While expressing no opinion upon the constitutional question involved, which is to be carried to the Privy Council, your Committee feels it is safe in saying that the Lemieux Act has proved of great benefit in the field which it was originally intended to cover. In support of this may be cited the fact that out of 540 disputes referred under the terms of the Statute, there have been only 36 cases in which the threatened strike was not averted.

### Labour Supply and Apprenticeship

As is well known, the amount of unemployment in Canada has been less during the past year than during 1922. Unfortunately, however, the reason for this is not so much increased activity on the part of Canadian industry as the very large exodus of workmen to the United States. A conservative estimate of this exodus is 180,000, which includes, of course, to some extent, the families of workmen. On the other hand the number of immigrants, although on the increase, has not compensated for the loss. Moreover, it is safe to say that the immigrants include only a small fraction of the number of skilled and semi-skilled workers who have left the country.

In these circumstances your Committee deems it proper to point out that when Cana-

dian industry resumes its normal activity there will in all probability be a great shortage of skilled and semi-skilled workers.

In this same connection your Committee feels that more attention should be given, than at present, to the question of training apprentices. This, in the opinion of your Committee, can best be carried out, not through an elaborate Government scheme financed by assessments upon all employers, but by groups of employers in the same industry, or even by individual employers independently. In this connection it may be pointed out that much has been accomplished by various plants in this direction by moving men on from one particular process to another so that in course of time they become skilled.

### Officers for 1924

The election of officers for the ensuing year resulted as follows:—

President: Colonel Arthur F. A. Hatch, of the Stanley Works of Canada, Limited, Hamilton, Ontario.

First Vice-President: J. H. Fortier, of P. T. Legare, Limited, Quebec, Quebec.

Second Vice-President: John M. Taylor, of Taylor-Forbes Company, Limited, Quebec, Quebec.

Treasurer: Thomas Roden, of Roden Brothers, Limited, Toronto, Ontario.

## CONVENTIONS OF GOVERNMENTAL LABOUR OFFICIALS OF CANADA AND THE UNITED STATES

THE annual conventions of the International Association of Public Employment Services and of the Association of Governmental Labour Officials of the United States and Canada were held simultaneously in the Congress Hotel, Chicago, on May 19-23, 1924. The two associations met in adjoining halls, but the first meeting was of a joint character. The joint session was presided over by George B. Arnold, director of labour, Illinois, and addresses of welcome were delivered by representatives of the Governor of Illinois and the Mayor of Chicago; other addresses on this occasion were delivered by John Hopkins Hall, Jr., president of the Association of Governmental Labour Officials of the United States and Canada; Charles J. Boyd, acting president of the International Association of Public Employment Services; Ethelbert Stewart,

commissioner, Bureau of Labour Statistics, United States Department of Labour; and R. A. Rigg, director, Employment Branch, Department of Labour, Ottawa.

Canadian delegates in attendance were T. M. Molloy, commissioner, Bureau of Labour and Industries, Regina, Sask.; D. L. McLean, deputy minister of Public Works, Winnipeg, Man.; H. C. Hudson, general superintendent, Ontario Offices, Employment Service of Canada, Toronto.

The topics discussed at both the conventions were of an eminently practical character, and all the sessions proved to be not only interesting but educational. The subjects dealt with at the session of the Association of Public Employment Services, together with the names of the persons introducing them, were as follows:—

Some uses of employment statistics, R. B. Cain, chief statistician, general advisory board, Illinois Free Employment Offices.

How the public employment service meets the need in the province of Ontario, H. C. Hudson, general superintendent, Ontario Offices.

How to interest business in the service of the Public Employment Offices, O. W. Brach, chief of the Division of Labour Statistics and Employment Service, Ohio.

Interviewing the applicant or fitting the man to the job, R. A. Flinn, chief of the Division of Employment, New York.

Where do the public employment offices fall down, A. L. Urick, commissioner of labour, Iowa.

Employment service in relation to labour unions, Bryce M. Stewart, past president of the Association.

What should be the relation of the Federal government to Public Employment Service, John S. B. Davie, Commissioner of Labour, Concord, N.H.

Canada's experience with private employment offices, R. A. Rigg, Director, Employment Service of Canada.

The need for a public employment service in the United States, Francis I. Jones, director-general, United States Employment Service.

How the public employment service meets the needs of the great wheat belt, J. H. Crawford, member, Court of Industrial Relations, Topeka, Kansas.

The subjects discussed at the sessions of the Association of Governmental Labour Officials, together with the principal contributors thereto, were as follows:—

Workmen's compensation laws and their relation to accident prevention, T. J. Duffy, chairman, Industrial Commission, Ohio.

Occupational disease compensation, John B. Andrews, secretary, American Association for Labour Legislation.

The industrial law of Colorado, W. I. Reilly, chairman, Industrial Commission, Colorado.

Statistics as related to law enforcement, Royal Meeker, secretary, Department of Labour, Penn.

Methods of factory inspection, G. R. Yearlesy, chief factory inspector, Industrial Commission, Utah.

Relation between the work of government labour officials and the work of legal aid organizations, John Bradway, secretary, National Association of Legal Aid Organizations.

Problems arising from the enforcement of minimum wage laws and hour laws, Ethel Johnson, assistant commissioner, Department of Labour, Mass.; Thomas M. Molloy, commissioner Bureau of Labour and Industries, Saskatchewan; Delphine M. Johnson, supervisor of women in industry, Department of Labour and Industries, Washington.

Federal child labour amendment, Grace Abbott, chief, Children's Bureau, United States Department of Labour.

Accidents to children and increased liability, Bernard Shientag, commissioner, Department of Labour, New York.

Street trades, Jennie V. Minor, secretary of New York Child Labour Committee.

A joint banquet and entertainment was held on the evening of May 22nd, presided over by Professor F. S. Diebler, Chairman General Advisory Board, Illinois Free Employment Offices, at which interesting addresses were delivered by W. S. Reynolds, director, Chicago Council of Social Agencies; Horace J. Mellum, secretary Nash Motor Company, Kenosha, Wisconsin; and Mary McDowell, commissioner of public welfare of Chicago.

Considerable attention was devoted to the subject of the amalgamation of the organizations of the Governmental Labour Officials and the Public Employment Services, and a committee, consisting of three representatives from each organization, reported unanimously in favour of the proposed step being taken. It was urged by the committee in submitting its report that the interests of the two organizations are so closely related that it appeared unwise to maintain the dual associations, that the duties of the two bodies in many instances overlap, and that the amalgamation would make for greater economy and stimulate attendance and interest. The committee's report met with a favourable response from the governmental labour officials, but was rejected by the Public Employment Services' conference. The Canadian delegates were unanimously in favour of amalgamation, but a considerable body of opinion, hostile to the proposal, was shown to exist among United States delegates.

Resolutions adopted at the business meeting of the Association of Governmental Labour Officials included:—

(1) That the Association of Governmental Labour Officials, in convention assembled, ask Congress to submit a constitutional amendment providing for a Federal forty-eight hour law for minors under sixteen, in order that legislation of this nature may be made uniform throughout the United States.

(2) That the President of the Association appoint a committee on uniform safety laws, or continue the life of the present committee in order to permit the adoption of uniform safety codes in the states.

(3) That the executive board of this association through its Secretary, be instructed to communicate with the governors and legislators of those states and provinces having unsatisfactory safety laws, in order that the influence of this organization may be directed to assisting such states and provinces in this humanitarian work; and that copies of this resolution be sent to the heads of the Departments of Labour, etc., in the states and provinces in order that proper consideration may be given to the matter of co-operation with the administrative authorities prior to such suggested correspondence with the governors, legislators, etc., in the states and provinces.

The election of officers for the Association of Public Employment Services resulted as follows:—

President: Charles J. Boyd, general superintendent Chicago Division, Illinois Free Employment Offices.

Past president: E. J. Henning, assistant secretary, United States Department of Labour.

1st vice-president: A. L. Urick, commissioner of labour, Des Moines, Iowa.

2nd vice-president: J. J. Burke, deputy commissioner of labour, Hartford, Conn.

3rd vice-president: R. A. Rigg, director, Employment Branch, Department of Labour Ottawa.

Secretary-Treasurer: R. A. Flinn, chief of the Division of Employment, New York.

Members of Executive Committee: Francis I. Jones, director-general, United States Employment Service, Washington, D.C.; Joseph Ainey, general superintendent, Quebec Offices, Employment Service of Canada, Montreal; T. M. Molloy, commissioner, Saskatchewan Bureau of Labour and Industries, Regina; Lilla H. Walter, superintendent women's division, Chicago Office, Illinois Free Employment Service; Mrs. E. E. Essman, superintendent, women's division, Free Employment Offices, Milwaukee, Wis.

The time and place of the next convention was left for decision to the new executive. Warm expressions of regret at the enforced absence through illness of Miss Marion Findlay, Ontario Department of Labour, Toronto, who for the past few years rendered efficient service as secretary-treasurer, were voiced.

The following were elected as officials of the Association of Governmental Labour Officials:—

President: George B. Arnold, director of labour, Illinois.

1st vice-president: T. A. Wilson, commissioner of labour, Little Rock, Arkansas.

2nd vice-president: H. C. Hudson, general superintendent, Ontario Offices, Employment Service of Canada, Toronto.

3rd vice-president: Maude Swett, director, Woman's Department, Industrial Commission, Milwaukee, Wis.

4th vice-president: Alice McFarland, director of women's work, Court of Industrial Relations, Kansas.

5th vice-president: Herman R. Witter, director, Department of Industrial Relations, Ohio.

Secretary-treasurer: Louise E. Schultz, superintendent, Division of Women and Children, Industrial Commission of Minnesota, St. Paul, Minn.

The delegates selected Salt Lake City, Utah, as the place for holding the next annual meeting of the Labour Officials' Association.

## CONVENTIONS OF THE ONTARIO LABOUR EDUCATIONAL ASSOCIATION AND WOMEN'S EDUCATIONAL FEDERATION OF ONTARIO

THE twenty-second annual convention of the Ontario Labour Educational Association, and the third annual convention of the United Women's Educational Federation of Ontario, an organization which works in conjunction with the Labour Educational Association, were held at St. Catharines on May 24 last. Substantial progress was reported for both organizations.

At the convention of the Labour Educational Association considerable discussion centered around the government immigration policy, and it was suggested that an immigration "quota" system be adopted to exclude immigrants unless the country was in a position to absorb them. Propaganda having a tendency to mislead persons in the British Isles and Europe to believe that there is not an adequate supply of labour for industries in Canada was condemned. The convention expressed itself in favour of an eight-hour day and 44-hour week for all workers, an eight-hour day for nurses, and preference in the purchase of Canadian-made goods. Among other matters to receive the approval of the Association were a number of resolutions which had been adopted by the United Women's Educational Association of Ontario and included in the third annual report of that organization and presented to the Association. These included

resolutions requesting that the Ontario Minimum Wage Act be amended to include minors of both sexes; that proportional representation be taught in all Ontario public schools as a subject of simple mathematics, for the purpose of laying the foundations of a more equitable electoral system; that an eight-hour day and 44-hour week be adopted for all minors in mercantile and industrial establishments; that the Mothers' Allowance Act be amended so as to provide an allowance for incapacitated husbands and to provide assistance for wives deserted for three years, instead of five years as at present; that the principles of citizenship be taught in Ontario public schools; that an investigation be made as to the advisability of forming centres of information relative to workmen's compensation, and that the Ontario section of the Canadian Manufacturers' Association and the provincial Department of Labour co-operate in expediting workmen's compensation payments; that hot meals be served to children of unemployed and to those otherwise undernourished, by extending domestic science classes to all public schools and utilizing their products for this purpose; that milk be served at cost to public school children; that provision be made for stricter supervision of Barnardo boys, and that the minimum age for placing of immigrant children

be 16 years instead of 14. The Federation expressed itself opposed to an open door immigration policy and against the sending of old men to jail farms. A resolution requesting the federal government to give favourable consideration to old age pension legislation was approved by the Federation.

Among the officers elected were the following: president, James A. Sullivan, Hamilton; vice-president, Walter Harris, St. Catharines; and secretary-treasurer, Joseph T. Marks, Toronto. Mr. James F. Marsh, who had served as president since 1918, withdrew from the presidential contest.

In addition to the recommendations as given in the preceding section the Women's Educational Federation, at their convention, adopted a resolution calling upon the provincial minister of health to assist local municipal health boards in the establishment of district physi-

cians and nurses for the accommodation of poor people in Ontario towns and cities. Another resolution adopted called upon the federal government to guarantee a measure of protection to immigrants induced to settle in Canada, and who often have no visible means of support. A resolution was adopted calling for government supervision of institutions supported and controlled by rich patrons. The convention instructed the secretary of the Federation to procure a detailed account of the methods employed in the placing of Barnardo children, and the extent of the investigations made as a preliminary to finding homes for these children.

The election of officers resulted as follows: president, Mrs. W. F. Singer, Toronto; vice-presidents, Mesdames G. Clay, Hamilton; C. Brown, Toronto, and F. Ackerman, Kitchener; general secretary, Mrs. H. G. Fester, Hamilton; treasurer, Mrs. I. Ingles, Bartonville.

## EFFECT ON INDUSTRIAL PRODUCTION OF LONG WORKING DAY

### Report of Industrial Fatigue Research Board of Great Britain

THE investigations into the effects of long hours on output, accidents, sickness and lost time in munition factories, which were carried out by the Health of Munition Workers' Committee in Great Britain between 1915 and 1917, demonstrated the importance of studying industrial processes from the point of view of their production of fatigue and its effect on industrial efficiency. On the disbandment of this committee, the Medical Research Committee and the Department of Scientific and Industrial Research, with the active encouragement of the Home Office, decided to form a committee to investigate the subject of industrial fatigue on more comprehensive lines by embracing all classes of factories within its scope of work.

The Industrial Fatigue Research Board was organized accordingly in July, 1918, and, with the aid of expert committees, it has made a large number of investigations into certain industries, the policy being to combine laboratory research with observation of actual working conditions in the factory. Reports have been issued on the tinsplate, iron and steel, boot and shoe, cotton, silk, pottery and laundry trades. In addition, certain general subjects not confined to any one industry but of common interest to all, have been studied and reports published.

During the current year, three reports have been issued: A comparison of different shift systems in the glass trade; two studies on rest

pauses in industry, and one on the extent and effects of variety in repetitive work.

#### Shift Systems in the Glass Trade

The first-named report is of special interest at the present time, its subject being related to one of the items on the agenda of the International Labour Conference to be held at Geneva during the present month. The conference will discuss the desirability of a weekly suspension of work for twenty-four hours in glass-manufacturing processes where tank furnaces are used. The report of the Industrial Fatigue Research Board contains the results of an investigation into the relative merits of the ten-hour and eight-hour shift systems in glass manufacture, this subject being taken up by the Board at the request and with the collaboration of the Glass Research Association.

The working day in glass factories in Britain up till 1919 was divided into two ten-hour shifts, but since that date three shifts of eight hours each have been adopted in some factories. The study was confined to the manufacture of bottles and tended to show that there was an almost consistent increase in the hourly rate of output as well as a decrease in the amount of spoilt work in the eight-hour as compared with the ten-hour shift. The total output of the shorter shift was, however, not so great as the total production of the ten-hour shift, but the output of three eight-hour shifts was greater than

that of the same factory running twenty hours in two shifts.

Night work under the three-shift system does not appear to put a markedly greater strain on the men than day work, but night work of six hours by men who work also on a day shift of six hours shows a decreased output as compared with day work.

As in the iron and steel industry and in tinplate manufacture, there is a marked seasonal variation in output, productivity being lower during the summer. It is suggested that fatigue might be lessened by alternating the work of the men working together on the same bottle so that the heavy work of gathering the molten glass from the pot would be taken in turn.

### Rest Pauses in Industry

The report on rest pauses is based on an investigation into the effects of introducing short rest pauses at definite intervals in the course of light repetitive work, the monotonous character of which is stated to cause a considerable decline in output about the middle of the work period.

In the opinion of the Board, the judicious introduction of a rest pause of fifteen minutes' duration half-way through the spell may not only tend to reduce monotony and so add to the contentment of the workers but it may often increase the rate of working to such an extent that production is increased from five to ten per cent.

### Variety in Repetitive Work

This report gives the results of investigations into the degree of variety in repetitive work and the effect of changes in activity.

The groups of workers studied were observed to get a certain degree of variety through changes in posture, short rest pauses or by different movements. The Board considers that the degree of variety can be increased in many industrial occupations by giving facilities for changes in posture.

The results of an investigation carried on in a factory show that too many changes in the form of activity are undesirable and have an adverse effect on production, but when a change is made at intervals of about half an hour, there need be no diminution of output and the dislike of the operatives for uniform activity is a factor for consideration.

### Proposal that Industrial Fatigue be Studied on International Lines

At a conference on the "International Labour Organization and Industrial Health"

held in London on June 19 and 20, 1923, under the auspices of the League of Nations Union of Great Britain, Mr. D. R. Wilson, secretary of the British Industrial Fatigue Research Board, proposed that steps be taken on international lines, co-ordinated by the International Labour Office, to develop the study of industrial fatigue. He referred to certain investigations conducted by the Board from which the conclusions are drawn that the worker unconsciously responds immediately to his physical environment to an extent which, if known before, had never been measured numerically, and that the selection of the best conditions for the workers is an economically sound proposition as well as a social duty.

The papers read at this conference have been published by the International Labour Office under the title "Industrial Hygiene and Safety and the International Labour Organization" (Studies and Reports Series F.—Industrial Hygiene—No. 9).

Mr. Laurent Lapierre, member of the Quebec provincial legislature for Megantic, was appointed early in June as minister without portfolio. It is understood that the new minister will represent the interests of labour in the provincial cabinet, the appointment fulfilling the promise made some time ago by Premier Taschereau that labour would be given a representative.

A recent issue of the *Telegraph-Journal* of St. John, N.B., contained an interesting account of the provisions made by the Nashwaak Pulp and Paper Company, Limited, for the comfort of their employees. In the rear of the general offices there is a bright lunch room equipped with a large electric range, where the office staff have a free lunch every noon hour. In another section of the mill a former storeroom has been transformed into a dining and recreation room for the workmen, containing tables, games, papers and magazines.

The president of the International Printing Pressmen and Assistants' Union recently instructed the officers of the Hamilton local to endeavour to obtain a better understanding between the employers and employees so as to place the industry in that district on a better basis. The local employers and unions are to be invited to a conference for this purpose.

## CONCILIATION LAW IN SOUTH AFRICA

THE legislature of the Union of South Africa has recently passed a law providing for the prevention and settlement of trade disputes and for the establishment of joint industrial councils and conciliation boards. Strikes and lockouts are prohibited in public utility services, and provision is made for compulsory arbitration in these services. The act applies to all industries, trades and undertakings, except the agricultural industries and government undertakings. Employers' organizations may agree with registered trade unions to establish joint industrial councils for their various districts, and these shall be registered with the Minister of Mines and Industries. In areas where a particular industry is not sufficiently organized for the establishment of a council, conciliation boards may be appointed by the Minister at the request of a sufficiently representative number of workpeople or employers. The parties to any dispute which is referred to a council or board may by agreement apply to the Minister to appoint a mediator, who shall endeavour to bring about a settlement of the dispute and shall make a report to the Minister.

A majority of the representatives of the employers and workpeople on a council or board may agree to abide by the decision of one or more arbitrators, but such agreement must provide for the appointment of an umpire should the arbitrators fail to agree. Any award thus made is to be binding on all the parties represented on the council or board which has agreed to the appointment of the arbitrator or arbitrators. Pending the issue of such award, or during its operation, it is unlawful to declare a strike or lockout.

If the parties make application that an agreement arrived at shall be binding on the parties thereto, the Minister may issue a public notice making the agreement so binding, and if he is satisfied that the parties are sufficiently representative of the industry concerned, he may extend the operation of the award so that it shall be binding upon all employers and workpeople in the industry in any defined area. In like manner he may extend the award of arbitrators or umpires.

In any undertaking, industry or trade covered by the act it shall be illegal to make or demand any alteration in the terms of employment without one month's notice being given, or such shorter notice as may previously have been agreed upon. Either party concerned may refer the matter to a council or board for consideration. The alteration of

terms of employment which is demanded shall not take effect until the council or board has determined or reported on the matter; but it is provided that the report is to be issued within one month of the date of reference.

In the case of disputes between local authorities and their employees in public utility services, when a council or board has failed to reach a settlement, the parties shall agree to the appointment of an arbitrator within three days. In the event of disagreement the Minister shall himself appoint an arbitrator, whose award shall be binding upon the parties to the dispute.

Power is reserved to the Minister to take over and operate a public utility service at the local authority's expense should such authority be unable or unwilling to continue the service by reason of any lockout, strike or concerted action of its employees.

It is provided that no strike or lockout may be declared until the matter in dispute has been reported upon by a council or board, and until any further period stipulated in any agreement between the parties, within which a strike or lockout shall not be declared, has expired. This provision, however, does not affect strikes or lockouts in public services, which in any circumstances are illegal.

The act also contains provisions for the compulsory registration of trade unions and employers' associations, and for the registration and regulation of private registry offices. Offences under the act are punishable by fines or imprisonment or by both. The act is to come into operation on a date to be fixed later.

The Canadian Engineering Standards' Association has made arrangements for the preparation of a draft code of rules and specifications for electrical appliances, which will be based on the already existing regulations in the various provinces and states. The draft when prepared will be submitted to a committee for approval, after which it will be submitted to the authorities of each province, so that ultimately a Dominion-wide standard of rules and regulations for electrical equipment may be established. It is expected that this work will occupy a year or more.

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

### Summary of Reports of the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics has recently issued reports on the automobile industry in Canada during 1923, the hosiery and knit goods industry during 1922, and on the printing trades, the starch and glucose industry, and the sash, door and planing mill industry during 1921 and 1922. Previous reports in this series relating to various industries were outlined in the LABOUR GAZETTE for May, 1924, and previous issues.

#### The Automobile Industry, 1923

The Mining and Metallurgical Branch of the Bureau, in a statement on this industry, shows that the production of motor vehicles in Canada during 1923 exceeded all previous records, and reached a total of 147,582 valued at \$97,369,814, as compared with 101,007 in 1922 and 94,144 in 1920. Included in the 1923 total were 380 trucks valued at \$755,638, manufactured by firms whose main products were not motor vehicles. The value of the production by the industry proper in 1923 was \$96,614,176. While this was 18 per cent greater than in 1922, it did not come up to the total value of the 1920 production of \$101,465,846. Service and service parts included in the 1923 total were valued at \$9,390,793, while the same item in 1920 amounted to \$12,754,125, leaving the value of the motor cars made in the automobile industry in 1923 at \$87,223,383, and in 1920 at \$88,711,721. There were 10 firms engaged in the industry in 1923 as against 15 in the previous year. The firms that went out of business were among the smaller ones, and in spite of the decrease in number the capital employed increased from \$47,761,964 to \$60,146,195. The estimated yearly capacity of the plants is 186,500 automobiles and 10,100 trucks, so that the production in 1923 (147,202 vehicles) was 75 per cent of capacity. The production during 1923 consisted of 106,226 pleasure cars, valued at \$69,904,073; commercial cars to the number of 19,226, valued at \$8,941,011; and 21,750 chassis, valued at \$8,378,299. Of the commercial automobiles, 1,751 were under one-ton capacity, 17,467 between one ton and five tons, and eight with capacity of five tons or over.

Employment was afforded to 9,305 persons, an increase of 1,961 over the previous year, and 1,024 over the number employed in 1920. Salaries and wages advanced to \$14,998,267.

an increase of \$3,724,624 over the previous year, and \$1,667,183 over 1920.

#### Hosiery and Knit Goods Industry, 1922

The number of individual plants reporting to the Bureau in 1922 was 141, an advance over the previous year of 14. There were 99 plants in Ontario, 26 in Quebec, 5 in Manitoba, 4 in British Columbia, 3 in Alberta, 3 in Nova Scotia, and one in New Brunswick. The capital invested in the industry increased in 1922 to \$44,238,091, from \$37,906,361 in the previous year. The total value of production in 1922 was \$44,963,254, as against \$36,689,534 in 1921. The number of salaried employees increased from 976 in 1921 to 1,038 (690 males and 348 females) in 1922, and the salaries of the clerical and managerial staff amounted to \$1,920,123, or an increase of \$80,742 over the previous year.

The number of employees working for wages was 13,141 (3,699 males and 9,442 females) in 1922, as compared with 9,471 in 1921, and the amount paid in wages rose during the same period from \$6,559,892 to \$8,652,353. The percentage increase in the latter class was 38.8 in the number of employees, and 31.9 in the amount of wages. In the wage-earning class the number of males increased over 1921 by 931, and the females by 2,756. There were in addition to the wage earners 1,390 outside piece-workers (5 males and 1,385 females) in 1922, with total payments of \$81,589. Ontario led the other provinces with 72 per cent of the number of males employed, nearly 78 per cent of the number of females, and 77 per cent of the total wage and salary outlay. Quebec came next with 20 per cent of the male employees, 16 per cent of the females, and 16 per cent of the total salaries and wages. The average operating time of all plants was 273.66 days, and of employees 8.6 hours per day and 48.4 hours per week.

#### Printing Trades, 1921 and 1922

The report on the printing trades includes five groups which are considered separately as far as possible, but a complete separation of statistics could not be made as one or more establishments often carry on two or more of the types of printing work. In 1921, there were 1,574 establishments in the trades, of which 836 were in the printing and publish-

ing group, 625 in the printing and bookbinding group, 87 in the lithographing and engraving group, 10 in the stereotyping and electrotyping group, and 16 in the blue prints group. In 1922 there were 1,533 establishments, of which 746 were in the printing and publishing group, 658 in printing and bookbinding, 106 in lithographing and engraving, 12 in stereotyping and electrotyping, and 11 in the blue prints group. The capital invested in the industry increased in 1922 to \$78,540,139, from \$75,646,334 in 1921, and the total value of production showed a decline from \$93,667,079 in 1921, to \$90,622,120 in 1922.

In 1922 there were 7,891 employees on salaries, their total earnings amounting to \$13,852,383, and 14,746 employees on wages whose earnings amounted to \$21,805,620. In the previous year there were 7,732 salaried employees with earnings amounting to \$13,505,367, and 17,990 wage earners who received \$21,819,621 for their services.

Firms which print their own newspapers and periodicals are included in the printing and publishing group. In 1921 the total number of employees in this group was 13,611 (8,155 on wages and 5,456 on salaries) with a total payroll of \$18,577,424 (\$10,093,957 for wage earners and \$8,483,467 for salaried workers). In 1922 there were 12,347 employees (7,115 wage earners and 5,232 salaried employees) with a payroll of \$17,951,144 (\$9,624,463 for the wage earners and \$8,326,681 for the salaried workers).

Under printing and bookbinding are included 658 establishments in 1922 and 625 establishments in 1921 which did not publish papers or periodicals, job printing representing over half of the amount received for sales and work done. The total number of employees in this group in 1922 was 7,440 (5,545 wage earners and 1,895 salaried employees) with a total payroll of \$12,619,578 (\$8,726,062 for wage earners and \$3,893,516 for salaried workers), as compared with a total of 9,492 employees in 1921 (7,718 wage earners and 1,774 salaried workers) with a payroll of \$12,645,649 (\$8,902,429 for the wage earners and \$3,743,220 for the salaried workers. The capital invested in the industry in 1922 was \$29,280,780, and in 1921, \$28,275,937.

There were 106 firms specializing in lithographing and engraving in 1922 as compared with 87 in the previous year. In 1921 there were 430 employees on salaries and 1,952 on wages with a payroll totalling \$1,164,583 for the salaried workers and \$2,587,378 for the wage earners. In 1922 there were 689 employees on salaries and 1,900 wage earners whose payroll totalled \$1,499,541 for the

salaried employees, and \$3,178,573 for the wage earners. The capital invested in 1921 amounted to \$7,990,272, and in 1922 to \$9,579,839.

In stereotyping and electrotyping there were 10 firms operating in 1921 and 12 in 1922. In the former year there were 48 salaried employees who received \$437,249 and 112 wage earners whose earnings amounted to \$192,348. In 1922 there were 68 salaried employees in this group whose earnings totalled \$119,200 and 156 wage earners with a payroll of \$248,717. The capital investment for 1921 amounted to \$437,249, and for 1922, \$621,276.

In the blue-prints group there were 16 firms operating in 1921 and 11 in 1922. The capital investment for the former year was \$153,903 and for the latter \$85,655. The earnings of the 24 salaried workers employed in 1921 totalled \$30,402, and of the 53 wage earners, \$43,509, while in 1922 there were 7 salaried employees who received in salaries \$13,445, and 30 wage earners who received \$27,805.

#### **Starch and Glucose Industry, 1921 and 1922**

In the starch and glucose industry there were two more plants in operation during 1922 than in the previous year when there were three plants active in Ontario and two each in Quebec and Prince Edward Island. In 1922 Ontario remained the same but Quebec had only one plant operating, and Prince Edward Island had three additional factories, making a total of nine. The total capital invested in 1921 was \$5,887,210, and in 1922, \$5,674,843, while the value of the products in the former year totalled \$4,436,328, and in the latter year \$3,871,977. The office force was augmented by nine and the salary list increased by \$1,576 during the two-year period, but although two additional establishments reported operations during the latter year, there was a considerable reduction in the average number of wage earners.

The number of male workers fell from 556 in 1921 to 424 in 1922, and the female workers from 58 to 28. The payroll also diminished to the extent of \$244,260, the wage earners receiving \$657,726 in 1921 and \$413,466 in 1922. There were 14 employees in the class "technical experts, chemists and accountants" in 1921 who received a total of \$36,164, while in the following year the same number were employed and their salaries totalled \$32,000. Forty-four employees in the class "clerks, stenographers, salesmen," etc., received in 1921 \$44,146, and in the following year 47 employees in this class received \$32,046.

The average number of hours worked by employees in 1921 was 9.4 per day and 56 per

week, and in 1922 the average was 9.5 per day and 56.6 per week. There was an increase in the number of days the plants were entirely idle from an average of 107.85 days per establishment in 1921 to 156.55 in 1922.

#### **The Sash, Door and Planing Mill Industry, 1921 and 1922**

The report on the sash, door and planing mill industry in Canada includes information regarding planing mills and mills engaged primarily in the manufacture of builders' millwork. The principal products of the industry, consisting of sash, doors, frames, millwork, moulding, matched and planed lumber, amounted in 1922 to \$33,224,476, as compared with \$27,717,575 in 1921. In addition to these principal products, many of these mills also manufactured as side lines and by-products other wooden commodities. In 1922 these secondary products amounted to \$4,202,191, as compared with \$7,468,560 in 1921. The total value of all products of this group of mills in 1922 was \$37,426,667 in 1922, and \$35,186,135 in 1921. The total capital invested in the industry in 1922 amounted to \$43,091,844 as compared with \$41,239,799 in 1921. The total

number of establishments in 1922 was 787, comprising 337 in Ontario, 301 in Quebec, 36 in Nova Scotia, 33 in British Columbia, 24 in New Brunswick, 19 in Saskatchewan, 17 each in Alberta and Manitoba, and 3 in Prince Edward Island. In 1921 there were 758 plants operating, comprising 313 each in Ontario and Quebec, 32 in British Columbia, 25 in Nova Scotia, 20 in New Brunswick, 18 each in Alberta and Saskatchewan, 15 in Manitoba, and 4 in Prince Edward Island.

The industry in 1922 gave employment to 9,255 people, consisting of 7,987 male and 48 female employees on wages, and 1,040 male and 181 female employees paid on a salary basis. The total payroll in 1922 was \$10,031,012, of which \$2,160,859 was paid to the salaried workers and \$7,870,153 to the wage earners. In 1921 there were 8,223 persons employed in the industry, 8,000 of whom were males and 223 females. There were 7,092 male and 55 female employees on wages and 908 male and 168 female employees on salaries. The total payroll for the year was \$9,721,305, of which \$7,778,033 was for wages and \$1,943,272 for salaries.

### **THE EMPLOYMENT SITUATION AT THE BEGINNING OF MAY, 1924, AS REPORTED BY EMPLOYERS**

THE volume of employment showed a decidedly upward movement at the beginning of May, according to reports from employers tabulated by the Dominion Bureau of Statistics. The expansion was partly seasonal in character, repeating that indicated at the beginning of May, 1923. The improvement a year ago was somewhat more pronounced, representing recovery from larger losses than had been recorded on April 1, 1924. The upward movement of the curve in the accompanying chart is, therefore, not quite as steep on the date being reviewed as at the beginning of May of last year, although it continues to be on a slightly higher level. The curve is, however, considerably above that of May 1, 1922 and 1921.

A combined working force of 760,700 persons was indicated by the 6,008 firms making returns, who had 740,162 persons in their employ on April 1. Reflecting this gain of between 2 and 3 per cent, the index number rose to 91.8 on May 1, as compared with 89.3 in the preceding month, with 91.4 on May 1, 1923; 83.3 on May 1, 1922 and 84.1 on May 1, 1921. Construction, manufacturing as a whole, mining, transportation, trade and communication recorded improvement, that in the

first named group being most marked. The textile industry reported considerable curtailment and reductions in personnel were also indicated in leather, iron and steel and logging.

Employment in all provinces showed an upward trend, the increases ranging from 2 to 4 per cent. Statements were tabulated from 557 employers in the Maritime District, showing that they employed 66,747 persons as compared with 64,399 on April 1. Seasonal activity in fish curing and preserving establishments, in sawmills and in construction, supplementing substantial gains in coal mining, caused the bulk of the increase. River-driving operations caused temporary recovery in logging, but transportation afforded less employment. Manufacturing in Quebec showed improvement, chiefly in tobacco, electric current, electrical appliance, mineral product, lumber and rubber factories. On the other hand, within the manufacturing group, textile and iron and steel works were slacker. Logging camps in Quebec showed a notable increase in activity in consequence of river-drives; construction, transportation and asbestos mines also recorded larger payrolls. An aggregate working force of 208,330 persons was

reported by the 1,311 firms making returns, who had employed 202,956 workers on April 1. Sawmills in Ontario registered considerable activity; construction also showed marked improvement of a seasonal character. In addition, expansion was evidenced in food, tobacco, brick, iron, steel and mineral product works, in mining, communication, transportation and trade. Leather, textiles, printing, logging and highway construction, however, showed reductions in staff. The 2,747 firms making returns in Ontario had 320,237 persons in their employ as compared with 312,858 at the beginning of April. Construction, particularly railway construction, absorbed a very much larger number of persons in the Prairie Provinces; iron and steel and mineral product factories and transportation also indicated considerable improvement. On the other hand, employment in coal mining, logging and sawmills showed a reduction. Returns were received from 777 employers, whose staffs comprised 95,896 persons or 3.070 more than in the preceding month. Seasonal activity in fish canning, sawmilling and in construction, metallic ore mining and in some other divisions caused a large increase in employment in British Columbia; these were however, partly offset by declines in trade, coal mining and logging. A combined working force of 69,490 persons was reported by the 616 firms making returns, who had employed 67,123 workers on April 1. The index numbers of employment in these areas are shown in the following table.

District	Relative Weight	May 1 1924	April 1 1924	May 1 1923	May 1 1922	May 1 1921
Maritime provinces.....	8.8	88.1	84.6	90.0	83.0	87.5
Quebec.....	27.4	94.1	91.5	90.3	81.2	80.8
Ontario.....	42.1	89.8	87.6	91.6	82.4	83.6
Prairie Provinces.....	12.6	89.4	87.0	90.4	85.4	86.6
British Columbia.....	9.1	102.9	99.6	97.5	91.3	90.1
Canada.....	100.0	91.8	89.3	91.4	83.3	84.1

Firms in all of the six cities for which separate tabulations are made indicated increased employment at the beginning of May. In Montreal 2,739 persons were added to the staffs of the 730 reporting firms, who employed 106,402 persons on May 1. Improvement in tobacco, electric current, electrical appliance and mineral product factories, supplementing gains in construction and transportation, caused the bulk of this increase of between 2 and 3 per cent. Textile, iron and steel works, however, were slacker. The expansion in Toronto was on a somewhat smaller scale, according to statements from 812 firms, employing 94,158

persons as compared with 93,257 in the month before. Retail trade, construction and mineral product factories reported a large share of the increase, while textile, printing, leather and non-ferrous metal works showed some curtailment. Seasonal activity in lumber mills accounted for practically all the improvement in Ottawa, where the working forces of the 126 reporting firms, rose from 9,684 persons on April 1 to 10,456 during the month under review. In Hamilton there was general but slight improvement in a number of industries, notably iron and steel, construction and transportation. Returns were tabulated from 206 employers, having an aggregate working force of 26,525 persons at the beginning of May, as compared with 26,102 on April 1. The largest gains in Winnipeg occurred in iron and steel, but there were a number of comparatively small additions to staffs in other industries. A combined payroll of 23,975 persons was reported by the 300 firms making returns, who had employed 23,733 in the preceding month. Sawmills and transportation employed a larger number of workers than in the preceding month at Vancouver, where 660 persons were added to the staffs of the 230 reporting firms. These concerns employed 22,487 persons on May 1. The following table gives the index numbers of employment in these cities.

City	Relative Weight	May 1 1924	April 1 1924	May 1 1923	May 1 1922
Montreal.....	14.0	92.3	90.1	88.8	82.1
Toronto.....	12.4	85.6	84.8	83.1	84.9
Ottawa.....	1.4	95.3	90.9	94.8	94.8
Hamilton.....	3.5	86.4	85.2	92.6	92.6
Winnipeg.....	3.2	83.0	82.3	86.3	85.6
Vancouver.....	3.0	102.2	99.8	91.8	95.4

### The Manufacturing Industries

The trend of employment in manufacturing continued to be favourable at the beginning of May, when the increases in staffs nearly equalled those recorded in the two months preceding. They were, however, very much less extensive than during the corresponding period of last year; the index number then stood higher than at the present time. Fish canning, curing and smoking establishments, dairies, lumber mills, sugar refineries, biscuit, brick, stone, rubber, tobacco, electric current, electrical appliance, railway car, steel ship, and mineral product factories were more fully engaged than at the beginning of April. On the other hand, fairly large declines were recorded in garment, cotton and knitting mills, in leather and in iron and steel works. Statements were received from 3,909 manufacturers whose establishments employed 435,954 per-

sons as compared with 429,691 on April 1. The difference represented an increase of 1.5 per cent.

**ANIMAL PRODUCTS—EDIBLE.**—There was a 7.4 per cent expansion in employment in this division at the beginning of May, there being increases in dairies, in fish canning, smoking and curing factories. The largest additions to staffs were recorded in the Maritime Provinces and British Columbia. According to returns from 180 firms, their staffs aggregated 13,417 as compared with 12,493 at the beginning of April. This gain was somewhat larger than that registered on May 1, 1923; the industry then, however, employed a smaller number of persons than at the present time.

**LEATHER PRODUCTS.**—Moderate declines were indicated in boot, shoe and leather factories. Contractions had also been recorded during the corresponding period of last year, when employment was in practically the same volume as at the present time. Reports were compiled from 204 manufacturers in the leather group, whose payrolls were decreased from 17,686 on April 1 to 17,374 at the beginning of May. Practically all this shrinkage occurred in Ontario.

**LUMBER AND PRODUCTS.**—Seasonal expansion was indicated by sawmills during the month under review, when 4,149 persons were added to the staffs of the 717 lumber firms making returns. Their payrolls comprised 46,323 persons as against 42,174 on April 1. In spite of the fact that this increase was more extensive than that recorded at the beginning of May, 1923, the index number now stands several points lower than at that time. All provinces except the Prairies shared in the upward movement indicated on the date under review, the increases in Ontario being the most noteworthy.

**PLANT PRODUCTS—EDIBLE.**—General improvement in a number of divisions of the edible plant product group resulted in an increase of 411 persons or 1.7 per cent in the number employed by the 311 manufacturers making returns. They employed 24,912 persons or 1.7 per cent more than on April 1. The greatest gains occurred in biscuit and sugar plants, while chocolate and confectionery works were rather slacker. Additions to staff on a some what larger scale had been registered at the beginning of April, 1923, when the index number was practically the same as at the present time.

**PULP AND PAPER.**—Very little change in the situation was shown in this division; minor increases in pulp, paper and printing establish-

ments were partly offset by declines in employment in miscellaneous paper products. A combined working force of 50,768 persons was reported by the 462 firms making returns, who employed 50,714 in the preceding month. The changes in the various provinces were comparatively slight. A marked increase in personnel was registered by the firms making returns for May 1 of last year and the index number then stood somewhat higher.

**RUBBER PRODUCTS.**—Employment in rubber factories showed slight improvement, mainly in Quebec. Reports received from 32 firms indicated that they employed 10,895 persons as compared with 10,751 on April 1. Additions to staffs of about the same size had been recorded during the same period of last year, when employment was in greater volume than during the month being reviewed.

**TEXTILE PRODUCTS.**—Large contractions in employment were indicated in the textile industry at the beginning of May, chiefly in garment, cotton and knitting factories in Quebec and Ontario. The 571 employers making returns reported 68,113 persons on their payrolls as compared with 69,186 in the preceding month. The difference represented a decline of 1.6 per cent. At the beginning of May, 1923, a percentage increase of about the same size had been recorded and the situation then was more favourable than at the present time.

**TOBACCO, DISTILLED AND MALT LIQUORS.**—A considerable revival in employment was shown by the reporting firms, the increases being in fact larger than the declines that had been recorded on April 1. The improvement occurred chiefly in tobacco factories in Quebec and Ontario. Statements received from 104 manufacturers indicated that they employed 11,286 persons or 5.2 per cent more than in the preceding month. This percentage increase is practically the same as that recorded on May 1, 1923; employment then was in rather smaller volume.

**CLAY, GLASS AND STONE PRODUCTS.**—Seasonal activity in brickyards and in other clay and stone product works caused a large increase in employment in this division, which, however, was partly offset by declines in glass factories. The gains were largely confined to Ontario, Quebec and the Maritime Provinces. An aggregate working force of 9,007 persons was reported by the 111 firms making returns, who had employed 8,607 persons on April 1. Very much larger increases had been recorded at the beginning of May of last year, when the index number had stood several points higher than at the present time.

**ELECTRIC CURRENT.**—Activity in electric current plants increased chiefly in Quebec. According to 95 employers, their staffs aggregated 11,642 persons as compared with 11,208 at the beginning of April. This expansion of 3.9 per cent was considerably larger than that recorded on May 1, 1923; the situation at that time was not so good as during the month under review.

**ELECTRICAL APPLIANCES.**—Employment in electrical apparatus plants expanded moderately, the improvement affecting practically the same number of persons as that recorded during the corresponding period of 1923. The index number then stood nearly 10 points lower than on May 1, 1924. Reports tabulated from 33 manufacturers showed that they employed 8,953 persons as compared with 8,763 at the beginning of April. The greater part of this increase of 2.2 per cent occurred in Quebec.

**IRON AND STEEL.**—A slight decline in employment was indicated by the 650 iron and steel manufacturers making returns, who employed 126,745 persons on May 1, as compared with 127,020 in the preceding month. Plants producing general machinery, agricultural implements, heating appliances, and wire were slacker, but railway car and steel shipbuilding works reported additions to their payrolls. Firms in Quebec registered curtailment of operations, while in Ontario and the Prairie Provinces improvement took place. Important recovery had been indicated on May 1 of last year, largely a reaction from shutdowns over the Easter holidays, which had affected the situation considerably. The index number then, however, stood a few points higher than on May 1, 1924.

**MINERAL PRODUCTS.**—General improvement was indicated by the 73 manufacturers of mineral products making returns. Their staffs, aggregating 9,662 persons, were larger by 733 or 8.2 per cent than on April 1. A somewhat similar increase had been recorded during the corresponding period in 1923, when employment was in rather smaller volume.

### Logging

Varying conditions in different parts of the country resulted in a net decline of 136 persons in the number employed by the 228 logging firms making returns. Their working forces comprised 21,046 persons. In the Maritime Provinces and Quebec there were substantial additions to staffs, owing to river-drives, but in Ontario and the Western Provinces further curtailment was indicated. Very

much larger contractions had been recorded on May 1, 1923, when the index number was a few points lower than at the present time.

### Mining

**COAL.**—The Maritime coal fields reported considerably greater activity than at the beginning of April, but reductions in personnel were shown in the Prairie Provinces and British Columbia. The 95 operators making returns employed 28,749 persons or 914 more than in the preceding month. This was an increase of 3.3 per cent. Employment was in the same volume on May 1, 1923, although important declines had been recorded at that time.

**METALLIC ORES.**—The trend of employment in metallic ore mines in Ontario and British Columbia was upward; 49 employers enlarged their working forces from 13,043 at the beginning of April to 13,356 on May 1. There was, therefore, an increase of 2.4 per cent. Additions to staffs on practically the same scale had been reported during the same period of last year; the index number then was considerably lower than at the present time.

**NON-METALLIC MINERALS (OTHER THAN COAL).**—General improvement was recorded in this industry at the beginning of May, when 534 persons were added to the staffs of the 72 firms making returns. As they employed 5,965 persons in comparison with 5,431 on April 1, this was an increase of 9.8 per cent. Very similar gains had been indicated on May 1, 1923.

### Communication

Further expansion was indicated in the communication group; telephones and telegraphs everywhere employed a larger number of persons than in the previous month. Statements tabulated from 167 concerns showed that they employed 22,283 persons as compared with 21,820 on April 1. The situation was considerably better than during the same period of last year, although increased activity had also been recorded then.

### Transportation

**STREET RAILWAYS AND CARTAGE.**—Recovery was shown in this industry by the 113 employers making returns; they employed 19,315 persons on May 1 as compared with 18,496 in the preceding month. Gains were indicated in all provinces except the Maritimes, where the situation remained unchanged. The improvement in Quebec was most pronounced. Expansion on a rather smaller scale had been registered on May 1, 1923, when the index number stood very slightly lower.

**STEAM RAILWAYS.**—Returns were compiled from 101 concerns and divisional superintendents in this division, who employed 75,314 workers; this was 395 or .5 per cent more than on April 1. There were declines in the Maritime Provinces, but elsewhere gains were recorded. Although the increase on the date under review was less extensive than on May 1, 1923, the index number stood somewhat higher than at that time.

**SHIPPING AND STEVEDORING.**—Fluctuations in employment in this division produced a net increase of 295 persons or 2.5 per cent according to reports from 59 employers. Their payrolls aggregated 12,149 persons as compared with 11,854 at the beginning of April. The closing of the winter ports caused a substantial falling off in employment in the Maritime Provinces, but in Ontario and Quebec there were large gains while British Columbia registered a minor improvement. Employment in this industry was much better than on May 1, 1923.

### Construction and Maintenance

**BUILDING.**—All provinces shared to some extent in the upward movement recorded by employment in this division at the beginning of May; the increases in Ontario, however, were much the largest. Statements were received from 309 contractors with an aggregate payroll of 18,564 persons, as compared with 16,691 on April 1. This expansion of 1,873 persons or 11.2 per cent was slightly smaller than that recorded on May 1 of last year, but nevertheless employment at that time was in less volume.

**HIGHWAY CONSTRUCTION AND MAINTENANCE.**—Eighty employers in this division reported 4,298 persons compared with 3,914 in their last report. The greater part of this increase occurred in British Columbia and Quebec, while in Ontario curtailment was indicated. Expansion affecting approximately the same number of persons was recorded on May 1, 1923.

**RAILWAY CONSTRUCTION AND MAINTENANCE.**—Substantial increases in personnel were registered by the 31 concerns and divisional superintendents from whom reports were tabulated. They enlarged their working forces from 26,775 persons on April 1 to 34,539 at the beginning of May. This gain of 29 per cent is larger than that recorded on the same date of last year, but the index numbers for the two periods are the same. All provinces shared in the improvement reported during the month being surveyed.

TABLE III—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

Industry	Relative Weight	May 1, 1924	April 1, 1924	May 1, 1923	May 1, 1922	May 1, 1921
<b>Manufacturing</b> .....	<b>57.3</b>	<b>87.7</b>	<b>86.5</b>	<b>90.5</b>	<b>79.0</b>	<b>80.2</b>
Animal products—edible.....	1.8	86.5	81.0	83.8	86.0	87.5
Fur and products.....	0.1	81.3	80.2	88.7	80.6	79.6

**Trade**

Employment in retail and wholesale trade showed moderate increases, 560 persons being added to the sales force of the 616 establishments making returns. As they employed 55,584 persons on May 1, compared with 55,024 in the last report, this was an increase of 1 per cent, of which the greater part occurred in retail stores in Ontario. This improvement repeats that indicated at the same period of

last year when employment was on practically the same level.

The table on page 502 gives the index number of employment by industries as at May 1 and April 1, 1924, and May 1, 1923 and 1922. As usual, the first column shows the proportion of employees in each industrial group in relation to the total number of workers reported in all groups for the month under review. (The number of workers employed in January, 1920, by the reporting firms equals 100 in every case.)

**EMPLOYMENT OFFICE REPORTS FOR APRIL, 1924**

THE volume of business transacted by the offices of the Employment Service of Canada during the month of April, 1924, showed a considerable gain over the preceding period, though less than during the corresponding period a year ago. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half month periods, shows a steady upward tendency throughout the month, the curves regaining the position held during the latter part of the winter before the spring slackness of trade set in. Owing to continued cold and unfavourable weather many outdoor industries, notably farming and building construction, were retarded until the latter part of April, when expansion again started. The reports from the offices show that the average number of applications reported daily during the first half of April was 1,532, as compared with 1,411 during the preceding period and 1,769 during the same period a year ago. During the latter half of the month applications averaged 1,771 daily, in contrast with 1,894 daily during the latter half of April, 1923. Opportunities for employment offered by employers averaged 1,354 and 1,642 daily

during the first and second half of the month, as compared with 1,604 and 1,903 daily during the same period last year. Vacancies notified during the latter half of March, 1924, averaged 1,102 daily. The average number of placements effected by the Service was 1,097 during the first half, and 1,351 during the latter half of the month under review, as compared with an average of 912 daily during the previous period, and with 1,263 and 1,464 daily during the corresponding periods of 1923. Placements effected in regular employment averaged 785 and 989 daily, while those in casual work were 312 and 372 daily during the first and second half of the month respectively.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924 (4 months).....	63,962	56,610	120,572

During the month of April, 1924, the offices made 30,907 references to employment and effected a total of 29,234 placements. Of the latter 21,088 (18,141 of men and 2,947 of women) were in regular employment and 8,146 in work of less than one week's duration. The number of applications registered at the offices was 39,401, of which 29,992 were of men and 9,442 of women. Employers notified the service of 16,258 vacancies for men and 9,379 for women, a total of 35,670 vacancies.

Placements in regular employment by provinces were as follows:—Nova Scotia, 262 men, 94 women; New Brunswick, 295 men, 81 women; Quebec, 649 men, 339 women; Ontario, 6,362 men, 1,089 women; Manitoba, 1,416 men, 377 women; Saskatchewan, 3,402 men, 391 women; Alberta, 3,702 men, 369 women; British Columbia, 2,053 men, 207 women.

#### MARITIME PROVINCES

A slight surplus of unskilled labour was reported, but with a fair-sized building programme in contemplation many of these workers will be absorbed as soon as more favourable weather approaches. Small additions to construction gangs and building staffs were made from offices at Chatham, Halifax and Moncton. In the logging industry little business was reported. Many river drivers and log men were available, but on account of the backward season few vacancies offered in this group. The demand in the farming group was fair.

#### QUEBEC

A decided improvement was noticeable in the building industry, the most active trades being plasterers, joiners and painters. Orders for building labourers were filled without difficulty. No marked advancement was shown in the farm group, although a good demand was shown from Quebec and Montreal. The logging industry was not active, as the river driving season had not yet reached its peak. Little activity was shown in the manufacturing groups, the clothing trades and woollen mills in Montreal and Sherbrooke showing the greatest activity.

#### ONTARIO

The unexpected slowness in spring expansion in industry was responsible for the continued large registrations of unemployed applicants. The farm group absorbed a large per cent of workers, but the number of experienced applicants available was considerably less than the vacancies offered. The building industry remained very quiet, but at most of the offices there was reported a large building programme ahead, but during the month on account of

unfavourable weather the number of applicants registered is not decreasing, while few vacancies have been registered. A few placements of railway construction labourers and gangmen were made from North Bay, Port Arthur and Sudbury, but the demand was not great. The logging industry was slack with a slightly increased call for river drivers toward the latter part of the month. A few mill men were placed from North Bay, Sudbury, Timmins, Ottawa and Port Arthur. Activity was reported from the mining district, the supply of labour at Cobalt, Sudbury and Timmins being such that no difficulty was experienced in filling vacancies. Industrial expansion was retarded and very few calls for unskilled factory workers were offered with an occasional demand for technically trained men. At the ports an improvement was anticipated very shortly. The women's sections were very active with many vacancies remaining unfilled in spite of the fact that applicants and new arrivals from the Old Country have been successfully placed.

#### MANITOBA

The demand for farm help continued very active, but the severe weather retarded placements slightly. The closing of municipal works and the absence of other forms of outdoor employment caused an increased registration of workers with few vacancies available. No demand was shown in the railway group with a large number of applicants offering. From Winnipeg a slight increase was reported in the number of men placed in the logging industry, although other than a few requests for river drivers, a further demand in this group is not anticipated. A satisfactory increase in the demand for experienced women workers for city and country employment was reported, with a steady supply of workers available.

#### SASKATCHEWAN

A shortage of experienced farm workers to meet the increased demand in the farming group was felt. All other industries were quiet with a surplus of applicants registered. Very little building was in progress, the calls at the offices being for a few skilled tradesmen and mechanics. Although work had begun on the railways the demand as yet was considerably less than the supply. From Saskatoon and Prince Albert a few river drivers were sent to the vicinity of The Pas and mill men and sawyers to points in British Columbia. A good demand for housekeepers and domestics for farms was met satisfactorily from Regina and Saskatoon. An increased call for day workers was noted during the month.

## ALBERTA

In spite of the unsettled weather farming operations continued very active with an increased placement of workers from all the offices. Building was more brisk than last month, but a number of mechanics and tradesmen were unemployed. At Medicine Hat the first heavy demand for section and extra gang men was registered and no difficulty was felt in securing sufficient workers. Tie gangs were also placed with the railway companies. In logging a decided though temporary revival in the demand for bushmen, mill hands and loaders, was reported from Edmonton. There was a slight increase in the number of vacancies for farm housekeepers and domestics with a shortage of applicants.

## BRITISH COLUMBIA

A substantial improvement in industrial activities was manifested during the month, although outside work was retarded somewhat by unfavourable weather conditions. Building and construction showed slight employment gains and there was a lessened number of unskilled labourers registered for work. Repairs to bridges and wharves in Kamloops and New Westminster and small repairs to buildings in the other cities gave work to several building tradesmen. The farming group showed increased activity in the vicinity of Kamloops, New Westminster, Vernon and Victoria. A slackening was noted in the logging group with plenty of applicants available to fill the orders on hand. Conditions in the mining group were about as previously reported, a few calls for machine miners being registered at Cranbrook. The demand for domestic workers was on the increase with the usual shortage of experienced women. Hotel and institutional workers were required in increasing numbers.

## Movement of Labour

During April, 1924, the offices of the Employment Service of Canada made 21,088 placements in regular employment, of which 14,522 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 2,342 were granted the Employment Service reduced transportation rate, 1,443 going to points in the same province as the despatching office and 899 to other provinces.

From the offices at Montreal, Que., three sawmill workers and one camp cook were sent to points within the zone and 40 river drivers and bushmen to Sault Ste. Marie and 13 stone cutters to Kingston, Ont. From the office at Hull, Que., seven bushmen were sent

to North Bay, Ont. Ontario offices granted 352 reduced rate certificates, one to a weaver going from Toronto to Sherbrooke, Que. Of the persons going to points within the province, 295 were bushmen, mill men and river drivers, 25 were construction labourers, linemen and carpenters, 10 were stone masons going to Kingston, two were farm hands, one a mining engineer and the remainder were factory labourers, cooks, waitresses, etc. Manitoba offices despatched 579 workers at the special rate, 376 to points within the province, 68 being chiefly bushmen, millwrights, river drivers and station workers going to Timmins and Port Arthur, Ont., 134 farm hands and women workers going to Estevan, Moose Jaw, Saskatoon and Regina, and one farm hand to Edmonton, Alta. The provincial transfers were 335 farm labourers, 15 domestic workers, the remainder being labourers and sawmill men going from Winnipeg to Dauphin and Brandon. The offices in Saskatchewan issued certificates to six river men and loggers going from Saskatoon to Port Arthur, Ont.; to five farm hands and one domestic going from Regina and Saskatoon to Winnipeg, Man.; to seven farm hands, one teacher and one housekeeper going to Edmonton, Calgary, and Medicine Hat, Alta.; and to 18 bushmen going from Saskatoon to Cranbrook, B.C. In addition 213 workers were sent to points in the province, of which 156 were farm hands, 30 were sawmill men and river drivers, three were teachers, the remainder included waitresses, cooks, mechanics and teamsters. From Alberta one bushman was sent to Kamloops, B.C., 103 farm hands, seven railway labourers and one farm housekeeper were transferred to stations in Saskatchewan. Of the 386 provincial transfers, 270 were farm hands, four were farm housekeepers, the remainder being mill hands, bushmen, loaders, with a few bricklayers and tie makers. Of the 588 workers who benefited by the reduced rate in British Columbia 113 chiefly bushmen, sawyers and mill labourers, with 35 machine miners and muckers and a few farm hands, were sent to points within the province and 475 to other provinces. To Alberta were sent 340 farm hands and domestic workers. To points in Saskatchewan were transferred 133 workers, mostly farm hands with one teacher going from Vancouver to Moose Jaw, one farm hand travelling at the reduced rate from Prince George to Port Arthur, Ont., and one farm worker from Victoria to Brandon, Man.

Of the 2,342 workers who benefited by the Employment Service reduced rate, 907 were carried by the Canadian National Railways and 1,435 by the Canadian Pacific Railway.

### BUILDING PERMITS ISSUED DURING APRIL, 1924

THE value of the building permits issued in 56 cities showed a large increase during April as compared with March, 1924, but there was a decrease as compared with April of last year. Statements received by the Dominion Bureau of Statistics showed that the reporting cities authorized building to the value of \$13,452,359, as compared with \$9,162,762 in the preceding month and with \$19,207,171 in the corresponding month of 1923. There was, therefore, an increase of \$4,289,597 or 46.8 per cent in the first comparison and a decline of \$5,754,812 or 30 per cent as compared with April, 1923.

Detailed reports were furnished by 47 cities, showing that they had issued some 1,600 permits for dwellings at an estimated cost of approximately \$7,000,000, and for nearly 3,400 other buildings at a proposed cost of \$6,000,000. Since the construction of several buildings is frequently authorized by a single permit, the number of buildings to be erected is usually greater than the number of permits issued.

Nova Scotia, Quebec, Ontario, Manitoba and Saskatchewan registered increases in the value of building permits issued as compared with March; those in Quebec of \$1,862,235 or 75.5 per cent and in Ontario of \$2,982,826 or 72.9 per cent were the largest actual gains. Saskatchewan, with an increase of \$256,254 or 324.5 per cent showed, however, the greatest proportional improvement. Of the declines

registered in the remaining provinces, that of \$957,511 or 48.2 per cent in British Columbia was the most pronounced.

As compared with April, 1923, all provinces except Nova Scotia and British Columbia registered reductions. In those two provinces there were gains of \$26,282 or 47.6 per cent and \$94,821 or 10.1 per cent, respectively. Quebec reported the largest decline in this comparison, of \$3,575,472 or 45.2 per cent.

The value of authorized building during April was greater than during March in Montreal, Toronto and Winnipeg, but those three cities showed declines as compared with April, 1923. Vancouver, on the other hand, reported the value of building permits issued to be less than in March but greater than in April of last year. Halifax, Sydney, Quebec, Sherbrooke, Westmount, Belleville, Fort William, Galt, Hamilton, Kingston, Niagara Falls, Owen Sound, Stratford, St. Thomas, Windsor, Woodstock, Moose Jaw, Saskatoon, New Westminster and South Vancouver showed increases in the value of estimated building in both comparisons.

The value of the building permits issued during the first four months of this year was lower than in either 1923 or 1922, but it was slightly in excess of the total for 1921. The aggregate for the first four months of 1924 was \$30,293,734; for 1923, \$38,296,355; for 1922, \$33,930,146 and for 1921, \$26,553,041.

There were therefore, declines of 20.9 per cent and 10.7 per cent in the first two comparisons, and an increase of 14.1 per cent over the 1921 total.

The accompanying table shows the value of

the building permits issued during April as compared with March, 1924, and with April, 1923. The thirty-five cities for which records are available since 1910 are marked by asterisks.

BUILDING PERMITS ISSUED IN FIFTY-SIX CITIES DURING APRIL

## FAIR WAGE CONTRACTS, MAY, 1924

**D**URING May, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to eight fair wage contracts awarded by the Department of Public Works of Canada. Six of these contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed. The remaining two contained fair wage schedules.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulations for the suppression of the sweating system and the securing of fair wages, etc.

### DEPARTMENT OF PUBLIC WORKS

Construction of a public building at Kamloops, B.C. Name of contractors, Kamloops Construction Company, Kamloops, B.C.

Date of contract, May 8, 1924. Amount of contract, \$69,876, and 65 cents per cubic yard for extra excavation and \$12 per cubic yard for extra concrete. The fair wage schedule inserted in the contract was as follows:—

### SCHEDULE OF WAGES AND WORKING DAY HOURS

Trade or class of labour	Rates of wages not less than	
	Per day or hour	Hours per day
Bricklayers.....	\$ c.	
Building labourers.....	8 50 per day	8
	4 00 to 4 75	8
	per day	
Carpenters and joiners.....	6 40 per day	8
Concrete workers.....	0 50 per hour	8 and 10
Common labourers.....	0 45	8 and 10
Electricians.....	6 80 per day	8
Masons.....	8 50	8
Painters.....	6 00	8
Plasterers.....	8 50	8
Plumbers and steamfitters.....	8 00	8
Sheet metal workers.....	8 00	8
Structural steel workers.....	9 00	8
Tile and marble setters.....	9 00	8
Tile and marble setters' helpers..	5 00	8
Tinsmiths.....	7 20	8
Teamsters, one horse and wagon	6 00	9
Teamsters, two horses and wagon	8 00	9
Teamster without team or wagon	4 50	9

Alterations and improvements to immigration building No. 2, Winnipeg, Man. Name of contractor, R. N. Wyatt, Winnipeg, Man. Date of contract, May 13, 1924. Amount of contract, \$5,116. The fair wage schedule inserted in the contract was as follows:—

SCHEDULE OF WAGES AND WORKING DAY HOURS

Trade or class of labour	Rates of wages not less than	
	Per hour	Hours per week
	\$ c.	
Masons and bricklayers.....	1 10	44
Plumbers and steamfitters.....	0 90	44
Carpenters.....	0 85	44
Cement finishers.....	0 70	50
Carters or teamsters.....	0 50	60
Labourers—skilled.....	0 50	50
Labourers—unskilled.....	0 42½	54

Extension of 100 feet to west wharf, concrete superstructure and timber substructure, Pelee Island, Ont. Name of contractor, Ed. Conroy, Peterborough, Ont. Date of contract, May 19, 1924. Amount of contract, schedule of prices.

Dredging outer harbour, entrance channel at Goderich, Ont. Name of contractor, W. I. Forrest, Goderich, Ont. Date of contract, May 22, 1924. Amount of contract, Class "A" \$2.60 per cubic yard, scow measurement; Class "B" 45 cents per cubic yard scow measurement.

Docking, repairing, renewals and painting of Dredge "No. 1," Q. & R. Name of contractors, Toronto Dry Dock Company, Limited, Toronto, Ont. Date of contract, May 16, 1924. Amount of contract, \$22,375.

Supply and installation of fittings in chemical laboratory, experimental farm, Ottawa, Ont. Name of contractors, Globe Furniture Company, Limited, Waterloo, Ont. Date of contract, May 12, 1924. Amount of contract, \$7,156.

Alterations and additions to heating system at Sydenham Hospital, Kingston, Ont. Name of contractor, Elliott Brothers, Kingston, Ont. Date of contract, May 10, 1924. Amount of contract, \$8,512.

Replacement of a breakwater at wharf at Broad Cove, Marsh, N.S. Name of contractors, Sydney Construction Company, Limited, Sydney, N.S. Date of contract, May 5, 1924. Amount of contract, schedule of prices.

POST OFFICE DEPARTMENT

The following is a statement of payments made in May, 1924, for supplies ordered by the Post Office Department subject to the regulations for the suppression of the sweating system, the securing of fair wages, and the performance of work under sanitary conditions:—

Nature of order	Amount of order
	\$
Making metal dating stamps and type and other hand stamps and brass crown seals.....	1,114 10
Making and repairing rubber stamps, daters, etc. Making up and supplying letter carriers' uniforms, etc.....	138 11
	1,614 39
Scales, hampers, etc., repaired.....	301 05
Stamping pads, ink, etc.....	158 10
Mail bag fittings.....	650 88
Letter carriers' satchels.....	819 73
Mail bagging, etc.....	438 31
Parcel receptacles.....	832 13

FAIR WAGES ON PROVINCIAL PUBLIC WORKS IN MANITOBA

IN compliance with the provisions of the Fair Wage Act of Manitoba of 1916 (chapter 121, with amendments) the Bureau of Labour, which is in the Department of Public Works, has issued new fair wage schedules of rates of wages and maximum number of working hours in connection with the execution of public works, the schedules to be in effect from June 1, 1924, to April 30, 1925, or until another order may be made by the Department on the recommendation of

the Fair Wages Board. The first schedule relates to the City of Winnipeg and a radius of thirty miles around it, and the second to the rest of the province.

The Fair Wage Board is composed of two representatives of the employers and two for the workers, with an official of the Department of Public Works. The schedules are drawn up after public hearings at which evidence is heard from parties interested, the rates being based on union or current rates in the district affected.

FAIR WAGE SCHEDULE FOR WINNIPEG

	Rate per Hour	Hours per Week
1. Labourers—

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. Most of the agreements are signed by both employers and employees, but verbal agreements are also included in the records. The latter are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Printing and Publishing

#### PETERBOROUGH, ONTARIO—THE EMPLOYING PRINTERS, AND INTERNATIONAL TYPOGRAPHICAL UNION, No. 248.

Agreement to be effective from May 1, 1924, to April 30, 1927, with 30 days' notice of change in wages, prior to May 1, 1925, business conditions and cost of living to be basis of negotiations.

Minimum wages, per week: newspapers, 48 hours: foreman, linotype machinist, and machinist operators, \$35; hand compositors, stone hands, proofreaders, machine operators, \$33; book and job, 44 hours: foreman, linotype machinists and machinist operators, \$32.30; hand compositors, stone hands, binders, machine operators, \$30.30.

Hours of labour: day work to be completed between 7 a.m. and 6 p.m., and night work between 6 p.m. and 6 a.m.

No union member is to work on the bonus or piece work system.

All work over eight hours in both offices, and Saturday afternoon in book and job departments is to be considered overtime, and paid time and one-half. Work on Sundays and holidays, double time. Workers coming late through their own negligence are required to work eight hours, and not count overtime until eight hours are completed.

Legal holidays are to be observed and no member is to be required to work either wholly or in part on holidays except those employed on morning newspapers and night shifts of evening papers, and such workers shall suspend work on either the following or previous day or night.

Only members of Local 248 are to be allowed to work in shops governed by the agreement.

Apprentices: one to four journeymen or major portion thereof regularly employed in each department, except when less than four journeymen are employed, when one apprentice shall be allowed to one man or more. Apprentices are to have at least a fair common school education before starting to learn the trade. Apprentices must not be less than sixteen years of age, and shall serve five years, being examined by the apprentice committee of the union after one year's service, and each succeeding year. If neces-

sary the apprentice may be dismissed. Hours and days the same as for journeymen. Neglect of duty or violation of office rules shall constitute the sole reason for the discharge of an apprentice after he has become a member of the union, foreman having full power, subject to appeal by aggrieved apprentice to the union. Wages per week: first six months, \$7; second six months, \$3; third six months, \$9; fourth six months, \$10; third year, \$12.50; fourth year, one-half of minimum scale; fifth year, two-thirds of minimum scale. Apprentices to complete the International Typographical Union course in printing.

Foremen may employ help, and may discharge for certain specified reasons.

Members employed on night work shall be paid \$2 per week above the day scale for the same class of work.

#### SYDNEY, NOVA SCOTIA—LOCAL EMPLOYERS OF NEWSPAPER AND BOOK AND JOB OFFICES, AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 460—

Verbal agreement in effect from January 1, 1924, until January 1, 1925, with the proviso that the wage scale shall not be binding on either party after six months, when negotiations may be re-opened with a view to readjustment. In event of a change being made, it shall not exceed 10 per cent.

Minimum wages, per week, newspaper offices: handmen, operators, day shift, \$32; night shift, \$35. Book and job offices: handmen, operators, day shift, \$30; night shift, \$33.

Hours, newspaper offices, eight per day for six days; book and job offices, eight per day for five days and four on Saturdays.

The agreements are the same as in effect during the years 1922 and 1923, as summarized in the *LABOUR GAZETTE* for February, 1922.

### Construction: Buildings and Structures

#### OTTAWA, ONTARIO.—THE OTTAWA BRANCH OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES, AND THE OTTAWA DISTRICT COUNCIL OF THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA.—

Agreement to be in effect from May 1, 1924, until April 30, 1925, and thereafter from year to year unless four months' notice be given by the party desirous of change.

Hours per day, eight for five days and four on Saturdays. Overtime from 5 p.m. to 10 p.m. and Saturday afternoons, time and one-half. Holidays, and hours between 10 p.m. and 8 a.m., double time. In case of two or more shifts being worked, regular rate is to be paid.

Wages are to be paid weekly, not more than two days' wages being held back.

Both parties agree to establish an industrial council for adjustments of disputes consisting of five members from each party, with an independent chairman; decisions of the council to be binding.

Recognized holidays: New Year's Day, Christmas Day and Dominion Day. No work is to be done on Labour Day except for the saving of life or property.

Accredited representatives of the union are to be allowed access to all jobs to confer with the shop steward.

Employees discharged to be paid within one hour, or thereafter to be paid waiting time at regular rate.

Both parties agree to adopt and enforce the National Apprentices System, as adopted at the conference of Building and Construction Industries in May, 1921.\*

The employers agree to employ only members of the union when available.

**HAMILTON, ONTARIO.—ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES, HAMILTON BRANCH, AND THE INTERNATIONAL UNION OF BRICKLAYERS, MASONS AND PLASTERERS, LOCAL No. 1.—**

Agreement to be in effect from May 1, 1924, to March 31, 1925.

Wages per hour, \$1.12½.

When working two or more shifts no employee shall work more than eight hours in the twenty-four. Eight hours shall be paid for seven hours' work on night shifts. Day shift, eight hours' pay for eight hours' work between 8 a.m. and 5 p.m.

The remainder of the agreement is the same as in effect from April 1, 1923, as summarized in the LABOUR GAZETTE for April, 1923.

**WINNIPEG, MANITOBA.—MASTER PLUMBERS' ASSOCIATION AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, No. 254.—**

Agreement to be effective from May 1, 1924, until May 1, 1925.

Hours of labour, eight on five days and four on Saturdays.

Minimum wage per hour, \$1.

Overtime, from 5 p.m. until 10 p.m., time and one-half; thereafter, Saturday afternoons, Sundays and holidays, double time. In a double shift, no member having worked eight hours is to be permitted to work another eight hours at single time.

Extra car fare and travelling time when out of city limit is to be paid for. Men sent out of town are to have transportation, board, and lodging paid for. Absolutely necessary repairs are to be done at regular rate.

Wages are to be paid once every two weeks, and not more than two days' pay is to be held back.

No sub-contracting is to be done.

One apprentice of each craft is to be allowed to each shop and one additional to each five journeymen; not more than four to each shop. Apprentices are to serve five years, three years helping and two years with the tools. Rate when using tools, per hour, first year, 40 cents; second and last year, 50 cents. Any additional helpers required are to be classed as labourers and not to be permitted to handle the tools of the trade.

A joint arbitration board of three from each party is to settle grievances.

**VANCOUVER, BRITISH COLUMBIA.—GENERAL CONTRACTORS' ASSOCIATION, THE ASSOCIATED CONTRACTORS OF BRITISH COLUMBIA, AND THE JOINT CARPENTERS' ORGANIZATION.—**

Verbal agreement, to be effective from June 1, 1924, until May 31, 1925, with 30 days' notice prior to this date if change is desired.

Hours per day, eight hours for five days and four on Saturdays. No work Saturday afternoon except to save life or property or to prevent serious interference with business.

\* See LABOUR GAZETTE, February, 1921, page 198.

Minimum wages per hour, 87½ cents.

Overtime, first four hours, time and one-half; thereafter and Saturday afternoons, Sundays and holidays, double time. All work done outside the regular hours is to be considered overtime. No work on Labour Day. A half-holiday is to be observed on Dominion and Provincial election days.

No sub-contracting, lumping or piece work is to be allowed.

Tools are to be kept in condition in the employer's time.

Friday is to be recognized pay day, but wages may be paid in cash on Saturday morning.

**TORONTO, ONTARIO.—INTERNATIONAL STONE CONTRACTORS AND QUARRYMEN'S ASSOCIATION INCORPORATED, AND TORONTO LOCAL OF JOURNEMEN STONECUTTERS OF NORTH AMERICA.—**

Agreement to be in effect from May 1, 1924, until April 30, 1925.

Only union members are to be employed as stonecutters for pneumatic and hand cutting, provided such are available. If other stonecutters are employed they shall join the union at once.

Wages per hour, \$1. Wages are to be paid weekly and not more than one day's time to be kept on hand.

Hours of labour, eight per day and four on Saturdays.

The agreement is unaltered from that previously in effect, summarized in the LABOUR GAZETTE for July, 1923.

**Transportation and Public Utilities: Street and Electric Railways**

**OTTAWA, ONTARIO.—THE OTTAWA ELECTRIC RAILWAY COMPANY, AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, No. 279.—**

Agreement to be effective from May 1, 1924, until May 1, 1926, either party desiring a change to notify the other in writing not less than 30 days prior to May 1.

The Company agrees to meet and treat through representatives of the Union on questions arising, including dismissal after suspension.

No discrimination is to be shown against any employee for membership in any employees' association.

Employees are not to be censured in public for infraction of rules; if offence is serious employee shall be suspended and case investigated, and if found not guilty employee shall be reinstated and paid for lost time.

Promotions or transfers shall be based on merit and seniority without discrimination, company being sole judge.

In reduction of staff, last on to be first laid off, and in resumption of work, last off to be first taken on.

No employee shall be granted leave of absence exceeding thirty days in one year without loss of seniority unless when member of a committee, or officer of an employees' association, or delegate to a convention.

Hours per day, nine, except in the water power plant. Employees are to be available for emergency work and to be paid at least time and one-half for special calls when off duty. Overtime on all days except Sundays and legal holidays, time and one-half. All work on Sundays and holidays, time and one-quarter.

Conductors and motormen are to choose their runs by a run guide, according to the seniority list.

Men failing to report for duty are to have a miss marked opposite their names

Spare men must report at barns or relief points at following hours: week days: 6 a.m., 10.30 a.m., and 5 p.m. Sundays: 12 noon, and remain as long as desired. They must report also when specially ordered.

A spare man not employed after reporting at the morning or evening reliefs will be credited with the full time he is held, which will not be less than two hours. Spare men are entitled to lay off one day as arranged in each week if they wish. Any spare man who misses will be charged two hours' pay time for first miss, four hours for second, and ten hours for third in any one pay period. After third miss he must see the superintendent before again reporting.

Provision of uniform clothing made for conductors and motormen.

The company will supply all conductors with tickets and change to the extent of \$45; students also to be supplied with change by the company.

The schedule provides for a lay-up of two minutes at the end of lines on each round trip.

After a student has passed his preliminary examination and been accepted, he shall be a spare man on probation for four months. After passing a final examination he shall be a permanent employee.

**Shop and shed men.**—Shops and sheds are to be heated during winter. Wrecking cars are to be equipped with protection against bad weather; men to be supplied with rubber coats and boots.

An employee engaged in any two or more classes of work for two days or longer shall be paid maximum rate for the work performed. This does not apply to apprentices.

Vacancies in shop or shed (day staff) are to be filled on probation by senior night employees in similar work.

A common rate of wages will be paid to all men employed under section except shop hands and apprentices.

**Line department.**—When temporary positions occur on any shift, men filling these positions shall receive rate that position calls for. Regular linemen and truck drivers are to have rubber boots, coat, and gloves, and pliers.

**Track department.**—Track maintenance men reporting, and unable to work owing to weather conditions shall be paid for time held on foreman's orders, this is not to apply to extra men taken on for emergency work in removal of snow, or construction gangs. Day gangs doing night work for two nights or less shall not be compelled to lose a day prior to commencement of night work, and shall be paid time and one-half for work in excess of nine hours.

Rubber boots are to be supplied when needed.

**Power plant.**—Hours per day in water plant, eight. Proper equipment to be supplied.

**Wages per hour.**—Permanent hourly employees (excepting shop hands and apprentices), from May 1, 1924, to April 30, 1925, one cent per hour over rates in effect on April 30, 1923; from May 1, 1925, to April 30, 1926, two cents per hour over rates in effect on April 30, 1923.

PORT ARTHUR AND FORT WILLIAM, ONTARIO.—  
CITIES OF PORT ARTHUR AND FORT WILLIAM, AND AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISION 966.—

Agreement to be in effect from January 1, 1924, until January 1, 1926.

The text of the agreement was given in the *LABOUR GAZETTE* for April, 1924 (page 291), in the section entitled "Proceedings under the Industrial Disputes Investigation Act."

## COMPARISON OF REAL WAGES IN TERMS OF FOOD IN LONDON AND CERTAIN CITIES THROUGHOUT THE WORLD, MARCH, 1923—MARCH, 1924

THE British Ministry of Labour in March, 1923, began the collection of statistics as to the wages of certain classes of employees in the chief cities in various countries, and as to the retail prices of certain staple foods in the same cities, so that a comparison might be made of the amount of food which might be purchased with the wages in each case. As food is the principal item in the expenditure of workingmen, this would afford some indication of the "real wages" or amount of goods obtainable with the money wages received in the respective countries, as compared with London, England.

The statistics were published in the *Ministry of Labour Gazette* for July, 1923, and have been kept up to date from month to month. A summary of the results was given in the *LABOUR GAZETTE* for November, 1923. A summary of the information down to March, 1924, is now given.

The statistics for each city were secured by the Ministry of Labour from the governmental office, state or municipal, responsible for their collection, or from the published reports of such bodies.

In averaging the index numbers the figures for each article of food were weighted according to its importance in working class family consumption in the United Kingdom. Averages were also calculated without allowing for the relative importance of each article, but these are not published each month.

The accompanying table gives the table for March 1st, 1924, as it appeared in the *British Ministry of Labour Gazette* for May, 1924, showing the index numbers of real wages for each trade in the several cities covered, as compared with London, the averages for all trades in each city for March, and the averages for all trades for each of the twelve months back to March, 1923.

The following explanatory note appears each month in the *British Ministry of Labour Gazette*.

The method by which the index numbers in the following table have been computed was explained in an article in the issue of this *Gazette* for July, 1923, pages 236-238. The numbers relate to purchasing power in terms of food alone, and, for the reasons given in the article referred to, they can only be accepted as affording a very rough indication of the differences that existed, on or about the date at the head of the table, between the real wage levels (in terms of food), in the various capitals, of the selected categories of typical urban male labour. The numbers for the various occupations are comparable horizontally but not vertically. The averages, however, are comparable both ways, provided it be understood (a) that this applies only to capitals other than London, and (b) that any difference between the indices for a given capital at two different dates does not imply a proportionate change in its real wage level between those dates, but only a proportionate change in the level in relation to that of London.

The following extracts from the first statement in the *British Ministry of Labour Gazette* for July, 1923, indicate in more detail the nature of the statistics.

The figures . . . were used first of all, to ascertain for each occupation, the quantities of bread, meat, flour, and so on, which could be purchased with the wages of 48 hours' work. It was found, for example, that the Berlin bricklayer's wage for 48 hours would purchase 390 lbs. of bread, or 123 lbs. of flour, or 10 lbs. of butter, or 227 eggs, and so on. The corresponding quantities purchasable with the wages of the London bricklayer were then taken as a basis and called 100, and a series of index numbers was computed, which showed, in respect of each article of food, taken separately, the relative purchasing power in London and in the foreign capitals under comparison, of the earnings of 48 hours in each occupation. In the case of the Berlin bricklayer referred to above, the numbers were found to be 88 for bread, 31 for flour, 26 for butter, 43 for eggs, as against 100 in each case for London.

It may be well perhaps to state with some emphasis that the index numbers shown afford no absolutely safe basis for conclusions as to differences in the *general* level of real wages even in the selected cities. For this purpose it would be necessary to secure wages data for a much larger number of occupations, including those in which women are largely employed. Still less can the figures be accepted as accurately reflecting differences in *national* real wage levels. The most that can be claimed for them is that they afford a rough indication of the differences that existed on or about 1st March, 1923, between the real-wage levels of the selected categories of typical urban male labour in the various capitals.

It is also pointed out in the article that for an accurate measurement of purchasing power

of wages in the various countries, figures as to items other than food would be required, especially figures as to rent and clothing. Owing to the scarcity of houses in some cities and the restrictions imposed by law on rentals in some countries, the greatest divergence is known to exist in the rents. For instance, in Germany reports indicate that rent is a negligible quantity in working class expenditure, while in New York owing to high rentals, this item is very important in family expenditure. A comparison made from figures including rent, as well as food, would, therefore, show the purchasing power of wages in Berlin somewhat higher than a comparison using food prices alone, and for New York, for instance, the reverse.

It is also pointed out in the *British Ministry of Labour Gazette* that information of this nature is usually considered from "either of two totally different points of view, leading to divergent and sometimes absolutely opposite conclusions: Thus there are those who are interested in "wages" chiefly as an element in the cost of production, and those who are concerned with "wages" only as constituting an essential factor in the standard of well-being of the manual worker. The former wish to compare the labour costs of a given quantity of work of a given quality executed under identical conditions in different countries, e.g., that of hewing a ton of coal or laying a hundred bricks. The latter are concerned to compare the money incomes of the workers in relation to their cost of living, irrespective of differences in the efficiency of labour. How divergent the conclusions drawn from these two methods of comparison may be is evident from the fact that competent American economists are of the opinion that in the United States the average labour cost of a given volume of production is at least as low as in Europe, although the average income of the working classes is certainly higher in America than in any European country.

"For the purposes of the present article the term "wages" is used exclusively in the sense in which it interests the manual worker, as being the standard by which he measures the level of his own material well-being against that of other classes in his own country or that of his own class abroad."

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1924

### Cost of Living, Prices of Staple Articles, and Index Numbers

THE movement in prices during the month continued toward lower levels, both the family budget in terms of retail prices and the various index numbers of wholesale prices again registering declines.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in about sixty cities in Canada at the beginning of May was \$9.89 as compared with \$10.16 for April; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.65 for May, 1920; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; \$11.82 for May, 1917; \$8.37 for May, 1916; \$7.84 for May, 1915; and \$7.43 for May, 1914. Butter showed a fall of 16 cents for the three pounds included in the budget while substantial declines occurred also in eggs, bacon, lard and cheese with smaller declines in sugar, milk, salt pork and veal. Sirloin steak, shoulder roast of beef, mutton, evaporated apples and potatoes advanced slightly. Including the cost of fuel and rent with that of foods, the total budget averaged \$20.20 at the beginning of May as compared with \$20.58 for April; \$20.89 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.92 for July, 1920 (the peak); \$26.44 for May, 1920; \$20.09 for May, 1918; \$18.50 for May, 1917; \$14.30 for May, 1916; \$13.83 for May, 1915; and \$14.21 for May, 1914. Fuel and rent averaged slightly lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 238 commodities in 1913 as 100, weighted according to the importance of the commodities, was again lower at 150.6 for May as compared with 151.1 for April; 155.2 for May, 1923; 153.9 for May, 1922; 171.4 for May, 1921; 256.9 for May, 1920 (the peak); and 201.2 for May, 1919. Thirty-seven prices quotations were higher, forty-nine lower, while one hundred and fifty were unchanged. This is the fourth consecutive month in which the index moved downward.

In the grouping according to chief component material four of the eight main groups were lower, one advanced, while three were comparatively steady. The vegetable products group advanced mainly because of higher prices for grains and vegetables and in spite of substantial declines in sugar and in foreign fruits. The animals group and the iron group both declined substantially, the former due to

seasonal declines in the prices of dairy products and in spite of advances in live stock and the latter because of lower prices for pig iron and steel billets. Lower prices for antimony, copper, lead, tin and zinc caused a slight fall in the index of the non-ferrous metals group. The chemicals group also showed a slight decline. The textiles group, the wood group, and the non-metallic minerals group were practically unchanged. In the former, declines in cotton yarns and silk were offset by advances in raw cotton, jute, and wool.

In the grouping according to purpose consumers' goods declined while producers' goods advanced. The fall in the former group was caused by a decline in foods due to lower prices for dairy products and sugar which offset advances in fish, meats, vegetables and eggs. In producers' goods declines in materials for the metal working industries were more than offset by advances in materials for the meat packing and the milling industries.

In the grouping according to origin domestic farm products and articles of marine origin were higher, while articles of mineral origin declined and articles of forest origin were practically unchanged. Raw or partly manufactured goods advanced, but fully or chiefly manufactured goods declined.

The index number based upon prices of 271 commodities in 1890-1899 published by the Department of Labour since 1910 again declined, being 220.7 for May as compared with 222.7 for April; 228.5 for May, 1923; 226.1 for May, 1922; 247.3 for May, 1921; 356.6 for May, 1920 (the peak); 275.8 for May, 1918; and 136.3 for May, 1914. The animals and meats group and the textiles group were higher while nearly all the others averaged lower. The principal advances occurred in western grains, cattle, beef, cheese, eggs, potatoes, onions, coffee, raw cotton, quicksilver, bar silver, and raw rubber, while American corn, peas, bran, shorts, hogs, butter, milk, bananas, lemons, oranges, sugar, molasses, raw silk, pig iron, steel billets, antimony, copper, lead, spelter, tin, bituminous coal, coke, white lead, linseed oil and turpentine showed the chief declines. As compared with a year ago fruits and vegetables and textiles were slightly higher. All the other groups were lower.

The index number published by the Department since 1910 has been reconstructed back

to 1913, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913.\* Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the *LABOUR GAZETTE* in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

The special index number comprising fifty of the more important commodities selected from the 271 in the Departmental list, including twenty foods, fifteen raw materials and fifteen manufactured goods, based upon price levels in 1913 as 100 declined to 149.4 for May as compared with 150.3 for April; 155.3 for May, 1923; 148.6 for May, 1922; 159.5 for May, 1921; 260.5 for May, 1920 (the peak); and 200.3 for May, 1918. The decline was due mainly to lower prices for milk, sugar, lead, copper, bituminous coal, and turpentine.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, declined to 147 for March as compared with 148 for February; 146 for January; and 155 for March, 1923. All groups were lower except consumers' goods which was unchanged.

Professor Michell's index of wholesale prices based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, was practically unchanged at 173.8 for May as compared with 173.9 for April; 179.1 for May, 1923; 160.9 for May, 1922; 180.5 for May, 1921; and 270.2 for May, 1920. Foods advanced somewhat while manufacturers' goods declined.

The Canadian Bank of Commerce index of exports rose from 145.82 for April to 146.69 for May, while that for imports fell from 163.87 for April to 161.61 for May. The combined index of both imports and exports fell from 154.85 to 154.15.

The table of retail prices and rentals shows the prices at the beginning of May of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the *LABOUR GAZETTE*.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of

\* *LABOUR GAZETTE*, June, 1923, pp. 639-695.

houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modification of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Cost of Electric Current for Householders\*

With rates in 1913 as 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

### Retail Prices

Prices of beef were higher. Sirloin steak showed a general advance in the average from 27.7 cents per pound in April to 28.4 cents in May. Round steak rose from 22.4 cents per pound in April to 23.1 cents in May. Shoulder roast rose from 14.8 cents per pound to 15.1 cents and stewing beef from 11.4 cents per pound to 11.6 cents. Veal fell from 18 cents per pound in the average to 17.3 cents while mutton advanced in the average from 27.8 cents per pound to 28.3 cents. Fresh pork, roast, showed little change at 23.2 cents per pound but salt pork declined from 22.8 cents per pound in the average to 22.4 cents and breakfast bacon from 33.6 cents per pound to 32.1 cents. Boiled ham was also lower, averaging 54.2 cents per pound. In fresh fish, cod, halibut and whitefish were slightly higher. Salt cod declined slightly while salt herrings advanced. Lard declined in the average from 21.4 cents per pound in April to 20.8 cents in May.

Fresh eggs again averaged lower, being 29.5 cents per dozen in May as compared with 32.4 cents in April and 47.7 cents in March. The decline was general. Cooking eggs showed about the same general decline as fresh, averaging 25.8 cents per dozen in May and 28 cents in April. Milk prices fell from an average of 12.2 cents per quart in April to 11.9 cents in May. Lower prices were reported from Three Rivers, Sherbrooke, St. Hyacinthe, St. Johns, Montreal, Ottawa, Oshawa, Toronto, Hamilton, Brantford, Windsor, Timmins, Moose Jaw, and Edmonton. Butter again showed a general decline, dairy averaging 36.1 cents per pound in May as compared with 41.2 cents in April and creamery averaging 40 cents per pound in May as compared with 46.1 cents in April. Cheese fell from an average of 31.4 cents per pound in April to 30 cents in May.

Bread and flour were unchanged in the average. Soda biscuits declined slightly, averaging 18 cents per pound. Rolled oats were steady. Rice and tapioca showed little change. Canned tomatoes rose slightly, averaging 19.4 cents per 2½ pound can in April and 19.7 cents in May. Beans and onions showed little change. Potatoes were up from an average of

\* *LABOUR GAZETTE*, December, 1923, page 1442.

\$1.62 per 90 pounds in April to \$1.68 in May. Advances occurred in most localities. Evaporated apples rose from 18.9 cents per pound in April to 19.4 cents in May. Prunes were steady. Raisins and currants averaged slightly lower. Canned peaches declined somewhat, averaging 30.1 cents per two pound tin. Granulated sugar again showed a general decline, averaging 11.6 cents per pound in May as compared with 11.9 cents in April and 12.1 cents in March. Yellow sugar showed about the same general decline as granulated, averaging 11.1 cents per pound. Tea was slightly higher.

Anthracite coal declined from an average of \$17.41 per ton in April to \$16.92 in May. Lower prices were reported from St. John, Bathurst, Sherbrooke, Sorel, St. Hyacinthe, St. John's, Montreal, Hull, Ottawa, Brockville, Peterborough, Orillia, Niagara Falls, St. Catharines, Brantford, Guelph, Woodstock, Stratford, London, St. Thomas, Windsor, Sarnia and Timmins. Bituminous coal declined from an average of \$10.88 per ton in April to \$10.62 in May. Hard wood, four feet long, was down in the average from \$12.49 per cord in April to \$12.33 in May. Lower prices were reported from St. John, Hull, Peterborough, and Oshawa. Soft wood showed little change, averaging \$9.19 per cord in April and \$9.15 in May. Coal oil was down slightly in the average to 30.7 cents per gallon. A decline in rent was reported from Ottawa and Brockville, while an increase was reported from Windsor.

### Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices advanced during May. No. 1 Manitoba Northern wheat at Winnipeg averaged \$1.04½ per bushel as compared with 98½ in April. The low price for the month was \$1.01½ per bushel at the beginning of the month and the high \$1.08 toward the end. Unfavourable weather conditions and predictions of a small crop in other quarters combined with a fair demand and the absence of heavy marketings were said to be the cause of the increases. Western barley rose from 62½ cents per bushel to 64½; oats from 37½ cents per bushel to 39 cents and flax seed from \$2.09½ per bushel to \$2.15½. Raw sugar

at Montreal fell from \$5.85 per hundred to \$5.55 and granulated from \$9.03 per hundred to \$8.17. Higher crop estimates and a poorer demand were reported to be responsible for the decrease. Potatoes at Montreal advanced from \$1.25 per bag in April to \$1.40 in May. Canned tomatoes at Toronto rose from \$2.17½ per dozen tins to \$2.22½. Soda biscuits due to the removal of the sales tax were down from 14 cents per pound to 13 cents. Raw rubber at New York continued to decline, being 22½ cents per pound in April and 20½ cents in May, Turpentine was down from \$1.63 per gallon to \$1.55. Shorts at Toronto again declined, being \$25.75 per ton in May as compared with \$28.50 in April. Hay advanced 50 cents per ton to \$15 and straw 15 cents per ton to \$9.65. Bananas were down from \$4.25 per bunch to \$3.75. Oranges also were lower at \$5.25 per case, while lemons advanced from \$3.75 per case to \$4. Choice steers at Toronto were up from \$7.12½ per hundred in April to \$7.54 in May, while choice butchers' cattle at Winnipeg were up from \$6.53 to \$6.75 per hundred. Hogs at Toronto rose from \$7.87 per hundred to \$8.15. Smoked hams also were slightly higher at 25 cents per pound. A seasonal decline in the price of milk occurred at both Toronto and Montreal. Creamery butter at Toronto declined from 38 cents per pound to 34 cents and dairy from 32 cents per pound to 27½ cents. New cheese at Toronto declined from 17 cents per pound to 16 cents and old cheese at Montreal from 26 cents per pound to 25 cents. Raw cotton prices continued to advance at New York, being 31½ cents per pound in May as compared with 30¼ cents in April. Low stocks of both raw cotton and finished goods with unfavourable weather conditions and new crops were said to be responsible for the increase. Raw silk at New York again declined, Japanese being \$5.70 per pound as compared with \$6.10 in April. Jute fell from \$8.19 per hundred to \$7.83. Pig iron at Montreal was down from \$30.95 per ton to \$28.95 and steel billets from \$38.50-\$50 per ton to \$37-\$50. Non-ferrous metals moved to still lower levels. Electrolytic copper was down from \$15.50 per hundred-weight to \$15.20 and copper sheets from 20½ cents per pound to 19½ cents. Lead fell from \$7.45 per hundred to \$7.10, tin from 54 cents per pound to 50 cents and zinc from \$7.75 per hundred to \$7.50. White lead was lower at \$16.50 per hundred.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. At the beginning of the second quarter of the year wholesale prices and the cost of living were both showing a tendency downward, in Canada, the United States, Great Britain and several other countries, notably Belgium, Denmark, Czechoslovakia, Poland and India. In France, and in China and Japan, wholesale prices had begun to turn downward after a sharp rise in the opening months of the year. A rising tendency was displayed by wholesale prices and cost of living in Norway, Austria, Germany, and Italy during the period. Prices in Switzerland and New Zealand remained fairly steady. In Sweden wholesale prices were slightly upward, with retail prices showing a slight decline.

### Great Britain

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures) recorded its second decline in April to 136.8, or a little over 0.1 per cent below the level for March. Foods advanced 2.5 per cent, vegetable and animal foods advancing and sugar, coffee and tea declining. Materials declined 1.9 per cent, both minerals and sundries declining while textiles advanced slightly.

The Board of Trade index number on the base 100 in 1913, showed a decline of 0.4 per cent from the previous month, reaching 164.7. Foods declined on the whole, meat and fish advancing while cereals and other foods declined. Materials advanced slightly, owing to an increase in prices of textiles, although metals and minerals and "other articles" declined.

The *Times* index number (1913=100) was 168.0 at the end of April, one point lower than its level at the end of March. In foods, there was a decline of 0.7 per cent in cereals, and an advance of 8 per cent in meat and fish, the latter being offset by a decline of 8.5 per cent in other food, owing to a reduction in the price of sugar due to the lowering of the duty. Iron and steel showed practically no change, other metals and minerals declining 5.1 per cent. Cotton advanced 5.8 per cent, and other textiles 0.4 per cent. Miscellaneous materials declined slightly.

COST OF LIVING.—The index number of the Ministry of Labour on the base 100 in July, 1914, declined 2 points to 171 at the beginning of May. Foods declined 4 points to 163. Other items showed no change, rent being 147; clothing, 225; fuel and light, 190; and sundries, 180.

### Austria

COST OF LIVING.—The official index number on the base July, 1914 = 1, fell from 11,996 to 11,977 in April. Foods and heating and lighting declined slightly, and clothing advanced. Rents remained unchanged.

### Esthonia

COST OF LIVING.—The index number of retail prices of food at Reval, on the base 100 in 1921, as compiled by the Central Bureau of Statistics, from the prices of 24 articles, was as follows for the first four months of the current year. January, 110.9; February, 112.7; March, 115.4; April, 114.6.

### Belgium

WHOLESALE PRICES.—The official index number of the Ministry of Industry and Labour, of which the base is 100 in April, 1914, fell from 642 in February to 625 in March, or 2.6 per cent. Advances were shown by the following groups: fuels, clay products, chemical products, construction materials, and resin products; declines were shown by food products, tar and products, metal products, fertilizer, fats, textile products, hides and leather goods and raw rubber. The following registered no change: petrol and products, glass products, tobacco, and paper products.

COST OF LIVING AND RETAIL PRICES.—The official index number of the cost of living (compiled by the Ministry of Industry and Labour) for a working class family of the lowest category, was, on the base of 100 in 1921, 125.83 for April, as against 131.95 for March, showing decline of 4.6 per cent. The principal change was a decline of 6.8 per cent in foods. The other groups showed very slight changes. The budget for a middle class family of moderate income declined from 129.00 in March to 124.65 in April, or 3.3 per cent. The principal changes were a decline of 5.8 per cent in foods and an increase of 5.2 per cent in sundries.

The official index number of retail prices of 56 articles in 59 localities fell from 510 in March to 498 in April, the base being 100 in 1914. This decline was 2.4 per cent.

### France

**WHOLESALE PRICES.**—The official index number of Statistique Générale, on the base 100 in July, 1914, fell in April to 459, or 10 per cent below the March level. All foods fell in price 7 per cent, and all industrial materials fell 12 per cent. All the sub-groups showed declines consistently.

### Italy

**COST OF LIVING.**—The index number of cost of living at Milan, as published in the municipal bulletin, on the base 100 in July, 1920, was 115.61 in March, a slight increase above the February level. Foods advanced 4 per cent and sundries declined 0.2 per cent. Other items showed no change.

### Germany

**WHOLESALE PRICES.**—The official index number of the Federal Statistical Office showing the trend of gold prices on the base 100 in 1913 was 124.1 for April, an increase of 2.8 per cent on the March level. Foods increased in price 3.1 per cent to 109.7, and industrial materials increased 2.4 per cent to 150.9. Goods produced increased 3.2 per cent to 111.7 and goods imported increased 1.5 per cent to 185.6.

**COST OF LIVING.**—The official index number for April was 112 billion times the pre-war level, an increase of 4.7 per cent. Foods, rent and clothing showed increases, while heat and light declined.

### China

**WHOLESALE PRICES.**—The index number of the Treasury Department's Bureau of Markets, showing the level of prices at Shanghai, on the base 100 in February, 1913, was 153.7 in April, or 2.4 per cent below the level for March. Cereals declined in price 6.3 per cent; textiles declined 4.3 per cent; and metals 2.7 per cent. Other food products, fuels, and sundries all showed slight advances.

### India

**COST OF LIVING.**—The official index number of the Bombay Labour Office on the base 100 in July, 1914, fell 3 points or 2 per cent in April to 150. The decline was caused by falling prices of foods, whose index fell from 147 to 143. Clothing rose one point to 230, and fuel and lighting and house rent showed no change.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 100 in 1913, fell two points in April to 148. The only advance was one of two points in

farm products. Building materials, house furnishing goods and the miscellaneous group showed no change, and all other groups showed declines, the most conspicuous being one of 5 points in metals and metal products.

Gibson's index number of wholesale prices of 22 foods fell from 76.5 for April to 73.7 for May, thus reaching the lowest level since December last.

Bradstreet's index number of wholesale prices showed for June 1, a total of \$12,2930, which was a decline of 2.1 per cent from the level of a month earlier. Every one of the thirteen groups contributed to the fall. This was the sixth successive monthly decrease, and the price level reached was 8.4 per cent below the level at December 1, 1923, and the lowest since September, 1922.

**COST OF LIVING.**—The index number of the National Industrial Conference Board showed a decline of 0.9 per cent in April from the March level, reaching 161.8.

Foods declined 3 points to 141, and fuel and light declined 4 points to 168. Clothing advanced 1 point to 177. Shelter remained at 185, and sundries at 174.

The official index number of Massachusetts, compiled by the Special Commission on the Necessaries of Life, on the base 100 in 1913, fell 0.9 per cent to 157.7 in April, from the March level of 159.2. Foods fell 2 per cent to 136.1; clothing fell 0.7 per cent to 184.9; fuel and light fell 0.9 per cent to 177.1. Shelter remained at 168.0 and sundries at 171.4.

The Atlantic Sugar Refineries, Limited, at St. John, N.B., now protect their employees by life, sickness and accident policies on the "group insurance" plan, the company paying the entire premium in each case. The amount of life insurance begins at \$500, increasing by \$100 each year until the maximum of \$1,000 is reached. Foremen and executives also begin at \$500, but the annual increase is \$200, up to a maximum of \$1,500. An employee over 60 years of age, becoming permanently incapacitated through accident or incurable illness will be paid his insurance money in instalments over several months. No medical examination for life insurance is required. Under the scheme for sickness and non-occupational insurance workmen are protected against risks from accidents outside the factory and from illness extending over a week. Beginning with the second week employees will be paid 55 per cent of their average earnings, but not less than \$10 per week, but not for a longer continuous period than 26 weeks.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

THE three legal decisions which are summarized below deal respectively with an action brought against a railway company by a station agent under the earlier Workmen's Compensation Act of Alberta (Revised Statutes, 1922, chapter 176), and with a seaman's action for alleged arrears of wages when he had not completed the period of service

for which he had contracted. The latter case also involved the point that the Admiralty Court, under the provisions of the Canada Shipping Act, had no jurisdiction in regard to seamen's claims for arrears of wages in which the amounts involved were less than \$200. The third case deals with the legality of a trade union organization.

### Duties of a Railway Station Agent are not to be Classed as Manual Labour

A railway station agent employed by the Canadian Pacific Railway Company at Irricana, Alberta, in the course of his duties on December 21, 1920, attempted to get the signal lamp in order to light it. To reach the lamp he used a ladder, which slipped on the snow or frost on the ground, injuring him so that he was laid off from his work for a certain period. He applied to the company for compensation under the Workmen's Compensation Act, 1908, but the claim was denied by the company on the ground that the agent's employment was "otherwise than by way of manual labour," the term "workman" being defined in the act of 1908 as including "every person who is engaged in an employment to which this act applies whether by way of manual labour or otherwise," but as expressly excluding "any person employed otherwise than by way of manual labour whose remuneration exceeds \$1,200".\* The remuneration paid to the agent exceeded \$1,200, and the question then arose

whether his duties could be classed as "manual labour." The court held that although the duties of the station agent involved unloading baggage and freight, handling it at the depot, sweeping the office, lighting the fires and furnace at the station, and lighting a train-order signal lamp, yet his employment on the whole was not substantially one of manual labour. The application was therefore dismissed.

*(Alberta—Dilley vs. Canadian Pacific Railway Company)*

\*The more recent Workmen's Compensation (Accident Fund) of Alberta, of 1918 (Revised Statutes, 1922, chapter 177), defines a workman as "a person who has entered into or works under a contract of service or apprenticeship, written or oral, express or implied, whether by way of manual labour or otherwise, and shall include any person engaged in training for mine rescue work or who, with the knowledge and consent of the management, is doing recovery work after an explosion, accident or catastrophe."

The application referred to in the text was, however, made under the earlier act.

### Seaman under Monthly Wage Contract Forfeits Wages unless Month's Service is Completed

A marine engineer was hired for four months at \$150 a month from July 4, 1923, on a ship used as a fish carrier between Steveston, B.C. and Seattle, Washington. He served on board the ship until October 25, when he left under circumstances held by the Court to be desertion. Subsequently he brought an action in the British Columbia Admiralty District of the Exchequer Court of Canada for the recovery of wages, claiming arrears up to the date of leaving. The defendant owner admitted arrears to the amount of \$134, but claimed that, whatever might be said of the amount due on October 4, no wages were due the seaman from October 4, the date of commencement of the last month of his contract of service. The court found that the wages must be deemed to be forfeited from October 4 the time of the last monthly payment which the contract contemplated.

In regard to payment of the balance of \$134, admitted by the defendant to be still due the seaman, the court declared it had no jurisdiction, the amount in question being under \$200, section 191 of the Canada Shipping Act providing that "No suit or proceedings for the recovery of wages under the sum of \$200 shall be instituted by or on behalf of any seaman or apprentice belonging to any ship registered in any of the provinces in the Exchequer Court on its Admiralty side or in any Superior Court. . . ." It was stated that the seaman was not hired by the defendant owner but by one who had chartered the vessel from the owner but had not paid the charter money, and for that reason the owner resisted the plaintiff's claim. The action was therefore dismissed with costs to follow the event.

*Canada—Ostram vs. the "Miyako"*

### Trade Union Held to be a Lawful Organization

In the issue of the *LABOUR GAZETTE* for April, 1923, a judgment was given by Mr. Justice Galt in the Court of King's Bench of Manitoba respecting the legal status of the International Brotherhood of Locomotive Engineers. Action was brought by the general chairman and secretary-treasurer of the Canadian Division of the Brotherhood, suing on their own behalf and on behalf of all the members of the Brotherhood, and of all other members of the General Committee of Adjustment of the Canadian National Railways against a former secretary-treasurer to recover trust monies. The defendant attacked the legal status of the labour organization claiming it was operating in restraint of trade, and moved for non-suit. The defendant's motion for a non-suit was allowed with costs. The Manitoba Court of Appeal reversed the decision of Mr. Justice Galt, it being held that in the present condition of the law the International Brotherhood of Locomotive Engineers was not "an organization so tainted with illegality that the Court would not lend its assistance to recover trust moneys of the Union, unjustifiably withheld by the late treasurer." Judgment was entered against the defendant.

The case was next taken to the Supreme Court of Canada which, on June 18, dismissed the appeal with costs, one judge dissenting. In the opinion of Mr. Justice Duff, as stated in the Supreme Court, "the primary objects of the Brotherhood plainly are to secure satisfactory arrangements for its members in relation to conditions of employment and rates of pay, and to provide means of settling disputes among its own members arising out of their service, and there is nothing to indicate that the constitution has in view any means other than lawful means for accomplishing these objects." Elsewhere he stated: "the question is of great importance in Canada because of the peculiar condition of trade union law in this country. The Canadian Act, which is chapter 125 of the Revised Statutes of Canada, has not been adopted by the Provinces, and as to many of its pro-

visions there is, to say the least, the greatest doubt as to the authority of the Dominion to enact them. Section 32, for example, in providing that the purposes of any trade union shall not, by reason merely that they are in restraint of trade, be deemed to be unlawful, so as to render void or voidable any agreement or trust, is, *prima facie*, dealing with the subject of civil rights and property. No doubt the declaration that trade unions, whose purposes are in unlawful restraint of trade, are not, on that ground, to be regarded as criminal conspiracies, coupled with the declarations on the subject contained in the Criminal Code which have been cited to us, establish beyond question, if there ever was a doubt upon the subject, that such a society as the Brotherhood of Locomotive Engineers is not a criminal society. But these declarations do not carry us beyond the point reached by the declaration in the first section of the Act of 1869. If the respondents' contention is sound, it is highly probable that every trade union in Canada is, as regards the security of its funds, absolutely at the mercy of the officials who have the custody of them. This would indeed be an extraordinary thing. Provincial and Dominion statutes for the past fifteen or twenty years have been directed to the encouragement of what is called "collective bargaining." Associations of employers, as well as associations of employees, must, if "collective bargaining" is to be effectual and bargains are to be carried out, have rules giving authority to discipline recalcitrant members; and must have funds, and most trade unions have rules vesting in some body authority to give a final decision upon the question of strike or no strike, a fact which the Industrial Disputes Act, section 15, explicitly recognizes. It would be singular indeed if the rights of the members of such associations in the funds provided for defraying expenses and salaries of officers, were left with no legal protection except that which arises from the liability to criminal prosecution."

(*Supreme Court of Canada—Starr vs. Chase.*)

# THE LABOUR GAZETTE

PREPARED AND EDITED IN  
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 24]

JULY, 1924

[NUMBER 7

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

**T**HIS issue of the *LABOUR GAZETTE* contains the regular monthly articles showing the movement of prices, details of new wage agreements and industrial disputes, and a general review of industrial conditions during the month of June. An outline is also given of the action of the Parliament of Canada in regard to old age pensions, civil service superannuation, the amendment of the Industrial Disputes Investigation Act, and certain draft conventions of the League of Nations International Labour Conference.

### Monthly Summary

The employment situation in Canada during May, the last month for which complete statistics are available, was reported by the offices of the Employment Service of Canada to be somewhat similar to that in the previous month, but with a slight increase in the number of applications for work, and a corresponding decline in the number of vacancies offered, this downward tendency being attributed partly to unfavourable weather conditions.

The average cost of a weekly family budget of twenty-nine staple foods was \$9.86 at the beginning of June as compared with \$9.89 for May; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920; \$12.79 for June, 1918; and \$7.49 for June, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 advanced to 152.2 for June as compared with 150.6 for May; 155.5 for June, 1923; 152.7 for June, 1922; 164.0 for June, 1921; 256.9 for May, 1920 (the peak); and 201.3 for June, 1919.

The time loss caused by industrial disputes during June was greater than the loss in the previous month, or in the corresponding month of last year, though more disputes were in progress a year ago. Twenty-two disputes began or were in progress in June, affecting 13,872 employees, and causing a loss in time of 244,673 working days. Corresponding figures for the previous month were as

follows: 12 disputes, 8,536 employees, and 218,453 working days; and for June, 1923: 28 disputes, 6,268 employees, and 42,406 working days.

### Industrial Disputes Investigation Act

The Department received three applications during June for the establishment of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907. A previous application was withdrawn by the employees, an adjustment having been reached as the result of the mediation of the Department.

### Validity of Industrial Disputes Act

The litigation arising out of the refusal of the Toronto Electric Commissioners last year to recognize the authority of a Board of Conciliation appointed under the Industrial Disputes Investigation Act has been followed in articles that have appeared from time to time in the *LABOUR GAZETTE*. It will be recalled that the validity of this Statute was called in question by the Toronto Electric Commissioners, who applied to the Ontario Supreme Court last August for an interim injunction restraining the Board from exercising the powers conferred upon it by section 38 of the Act. An interim injunction was accordingly granted by Mr. Justice Orde (*LABOUR GAZETTE*, October, 1923, page 1126). However, on the application of the Commission to the same court to have the injunction made permanent, Mr. Justice Mowat, who presided, refused the application, and upheld the validity of the Act (*LABOUR GAZETTE*, December, 1923, page 1452). The case was next taken to the appellate division of the Supreme Court of Ontario, which court also upheld the validity of the Act (The text of Mr. Justice Ferguson's judgment on this occasion was given in the *LABOUR GAZETTE* for May, 1924, page 384). As the case appeared to be of urgent importance counsel for the Commission appealed the decision of the appellate court

of Ontario direct to the Privy Council, and according to despatches from London the Privy Council on July 3 granted leave to appeal. The Deputy Minister of Justice for Canada, representing the Dominion Government, maintained that the appeal should have been taken before the Supreme Court of Canada. Lord Cave, however, announced that the Privy Council was satisfied that the question was one of great importance, and should be determined as speedily as possible.

### **Manitoba Child Welfare Act Proclaimed**

The Manitoba Child Welfare Act of 1922, which was to take effect on its proclamation by the Lieutenant-Governor in Council, is to become effective from September 1, 1924, the required proclamation having been made during June. The provisions of the Act, and of the amending act of 1924, have been noted in previous issues of the *LABOUR GAZETTE*, (May, 1922, page 489; May, 1924, page 373). This Act, at the time of its enactment, was described by Dr. J. A. Shearer, general secretary of the Social Service Council of Canada, as "the most modern child welfare act in Canada or on the continent." It was originally prepared by a committee of experienced social workers, who worked for four years upon its details before they recommended it to the government for enactment as law. The Act establishes a Department and Minister of Public Welfare and provides for the appointment of a child welfare director, a medical officer who is a trained psychiatrist, and a board of selection made up of public-spirited citizens specially interested in child welfare, in addition to providing for neglected dependent and delinquent children, the children of unmarried parents and such immigrant children as the Barnardo or those of similar organizations. If any defectives or delinquents are brought into the province they may be deported. If any become public charges the societies are compelled to care for them until sixteen years of age. All machinery necessary is provided for the adoption and guardianship of children. Juvenile courts, their establishment and governance are fully covered, and also all child welfare societies allowed to do work in the province.

The amendments to the Act which were made at the recent session of the provincial legislature provided among other changes for raising the age of children whose employment during the night is forbidden from 14 to 18 years, the act now providing that it shall be unlawful to employ habitually any child under

the age of 18 years between the hours of 9 p.m. and 6 a.m. The penalty for ill-treating a child was raised to imprisonment for five years with hard labour without the option of a fine. The earlier penalty for this offence was a fine of \$500, or in default two years' imprisonment, but the latter term might also be added to the fine.

### **Compensation for Canadian Air Force**

The rates of pay and other regulations governing the reorganized Royal Canadian Air Force were published in a supplement to the *Canada Gazette*, dated June 21, 1924. Part XVII of the new regulations deals with the compensation of men in the air service or of their dependants, on account of death, injury and disease on ordinary service. Such compensation is not payable unless it is established that such death, injury or disease was unavoidable and that the person affected was not culpable. Subject to these conditions, if an officer or airman dies or suffers any permanent disability as the direct result of the performance of his Air Force duties, otherwise than on active service, compensation may be awarded as the Governor General in Council may sanction, but the amount awarded will, as a general rule, not exceed the amount payable under the Workmen's Compensation Act, where applicable, in the province where the injury or disability occurred. As a general rule the class of case here referred to comes within the scope of the Pension Act, in which event any question of compensation, by way of pension or otherwise, will be dealt with by the Board of Pension Commissioners through the Department of National Defence.

### **Dominion First Aid Competition**

The results of the Dominion first-aid competitions, conducted by the St. John Ambulance Society, Canadian Branch, were announced during June.

The Montizambert trophy, emblematic of the championship of Canada, was won by "A" team, Western Fuel Corporation, Nanaimo, B.C.

The Wallace Nesbitt trophy (General) was won by No. 14 division, St. John Ambulance Brigade, Winnipeg, Manitoba.

The Wallace Nesbitt trophy (Railway) was won by the station team Canadian National Railways, Stratford, Ont., with the team of the car shops, Montreal, second.

The Coderre trophy (Miners) was won by the Canmore Coal Company, Canmore, Alberta, with the Western Fuel Company of Nanaimo, British Columbia, second.

The Otter trophy, awarded for the first time, presented by Sir W. D. Otter, K.C.B., and open to teams of the permanent and non-permanent militia officers of Canada, was won by the sub-staff, Military District No. 13, Calgary, Alberta.

The Sherwood Police trophy and the Shaughnessy (Eastern) trophy were won by "A" Division of the Royal Canadian Mounted Police, Ottawa.

The Shaughnessy (Western) trophy was won by No. 2 team Canadian Pacific Railway, Vancouver.

The Lady Drummond cup for proficiency in first-aid and home nursing, open to teams of ladies, was won by No. 1 Canadian National Railways team, Montreal.

In addition to these competitions, the following provincial shields were adjudged by the director-general as follows:

Alberta: International Coal and Coke Company, Coleman.

British Columbia: "A" team Western Fuel Company, Nanaimo.

Saskatchewan: Depot Division, Royal Canadian Mounted Police, Regina.

Manitoba: No. 14 Division St. John Ambulance Brigade, Winnipeg.

Quebec: Car Shops, Canadian National Railways, Montreal.

Ontario: "A" Division Royal Canadian Mounted Police, Ottawa.

New Brunswick: city police, St. John.

**The "University in Overalls"** provides educational facilities for workers in the construction and lumber camps of Canada, has appealed to the provincial governments for increased assistance. It is understood that the Ontario Government has increased its annual grant from \$4,500 to \$7,500, and has given a special grant of \$10,000 towards wiping out the deficit of \$15,000 now carried by the college. British Columbia has been asked to give a special donation of \$1,000 in addition to its annual grant of \$500.

The latest description of the College by its founder, Mr. Alfred Fitzpatrick, is in the title of his book "The University in Overalls." The work was started in the camps of Ontario in 1909 under the name of "The Reading Camp Association" and has spread throughout the frontiers of the Dominion from coast to coast. The aim is to provide an opportunity for education to all workers in places where schools are not provided. The ultimate objective is to provide well equipped instructors to every outpost and every settlement, camp and factory in Canada which is not adequately

served by existing educational institutions. This objective is expressed by the founder in his book "The University in Overalls"\* as follows:—

"Education must be obtainable on the farm, in the bush, on the railway, and in the mine. We must educate the whole family wherever their work is, wherever they earn their living; teaching them how to earn and at the same time how to grow physically, intellectually, and spiritually to the full status of their God-given potentialities. This is the real education. This is the place of the true university."

During the twenty-five years the College has been in operation it has sent more than 700 instructors into camps in various provinces and each year approximately 1,500 men receive instruction in all kinds of school work from simple arithmetic and English for foreign-born to higher mathematics and advanced work for university students.

The annual staff consists of 55 instructors, most of whom are university students or graduates. These men take their places in the gangs with the other men of the camps and do a full day's work in addition to the instruction given during the evenings. They are carried on the regular payrolls and receive a small additional salary from the College.

The incorporation of the Frontier College by a Dominion Act of 1922 was noted in the LABOUR GAZETTE for July, 1922, page 701.

### Early closing of stores in Quebec

Catholic and National Unions of Montreal, representing about 500 shop employees in the city, are asking the City Council to

require the closing of stores at 6 o'clock instead of 7 o'clock. It may be noted that the provincial act for the early closing of stores (Revised Statutes of 1919, article 5885) was amended at the last session of the Legislature (Statutes of 1924, chapter 59) by the substitution of the word "six" for "seven," so that this article now reads as follows:—

In every city and town, the municipal council may make, amend and repeal by-laws ordering that, during the whole or any part of the year, stores of one or more categories in the municipality be closed and remain closed every day or any day of the week, after the times and hours, fixed and determined for that purpose by the said by-law, but the times and hours so fixed and determined by such by-law, shall not be sooner than six (instead of seven) o'clock in the evening nor later than seven o'clock in the morning.

The above section is an "enabling" provision, involving no compulsion of municipalities to order the closing of stores at the hour mentioned.

\*This book was reviewed in the LABOUR GAZETTE, October, 1921, page 1289.

### Safety regulations for mines in Quebec

New safety regulations to govern mine shafts in the province of Quebec were given at length in the May issue of the *LABOUR GAZETTE* (page 403). These regulations, which were issued under the authority of the Provincial Mining Act, provided that "in shafts, inclines, quarries and other excavations of more than 50 feet in depth, signal to set in motion any machinery used for hoisting material or for travelling, shall be transmitted to the hoistman by a signalling apparatus." By a special order published in the *Quebec Official Gazette* on June 21 the following qualifying paragraph was added to the foregoing regulation:—

However, in the case of operations carried on with cable-derrick, the inspector of Mines may approve of the transmission of signals by motion of the hands.

### Superannuation for pilots in Canada

In reply to an inquiry in the Senate on June 12 it was officially stated that superannuation allowances are paid by the government to retired pilots in the port of Quebec only. This is done under an arrangement entered into in 1906 between the pilots of the Quebec pilotage district and the Department of Marine and Fisheries on the occasion of a reduction in the number of pilots and an extension of the district by twenty miles. The conditions resulting in the arrangement do not, it was stated, obtain in any of the other pilotage districts. Some account was given in the *LABOUR GAZETTE* for May, 1923 (page 454), of existing arrangements at other ports for the superannuation of pilots. In the districts of Sydney, Halifax and St. John superannuation benefits are provided by by-laws issued under authority of the Canada Shipping Act.

### Civic pensions in Toronto

Some account of existing systems for providing retiring allowances for municipal employees in various cities in Canada was given in the May issue of the *LABOUR GAZETTE*. Among these it was noted that the Toronto city council, on May 9, adopted the report of a special committee approving certain principles in regard to pensions. A draft by-law was subsequently drawn up, and this has now been approved by the special committee on pensions. It was hoped that the scheme would take effect in July, but the city will not be asked to contribute before 1925. The main features of the by-law are outlined in the press as follows: Only permanent employees are provided for, and no

employee entering the service after 35 years of age is to be placed on the list of permanent employees, or to be eligible to contribute to the fund, until he has paid what he would have had to contribute if he had entered the service at that age. The employees are to contribute five per cent of their salaries, and the city will contribute about \$30,000. The amount of benefit is based on the average yearly salary of an employee for the five consecutive years of highest salary. One-sixtieth part of that amount, multiplied by the number of years of continuous service, will give the amount of the allowance made to an employee, subject to the condition, that not more than forty years of service is to be taken into account, and that the yearly allowance shall not be greater than \$2,000 or less than \$624.

If a pensioner dies in the service a sum equal to his total contributions, plus interest at 3 per cent, will go to his next of kin. Any employee receiving, or who has received, compensation under the Workmen's Compensation Act will not be entitled to any allowance under the by-law, except where the compensation is less annually than the amount to which he would be entitled from the fund. After January, 1926, any employee reaching the age of 65, after 20 years' service, and any employee after 15 years' service, unfit for service, may retire and shall be entitled to an annual pension.

Any employee leaving the service will be entitled to receive the whole of his contributions with interest at three per cent.

The fund is to be administered by a Civic Pension Board, consisting of the mayor, the works commissioner, city clerk, city solicitor, a member of the city council and two contributing employees.

### First aid provisions in Manitoba

The report of the Manitoba Workmen's Compensation Board for 1922, only recently received by the Department, states that "it has been clearly demonstrated that compliance with the First Aid regulations promulgated by the Board in 1921 has proved a large factor in reducing the length of the period of disability in the case of injury, and also in the prevention of complications which without such attention would arise in a very large number of cases." The regulations referred to were outlined in the *LABOUR GAZETTE*, August, 1921, page 982. They require every employer with more than ten workmen to keep at his place of employment a first-aid kit, the quantity of materials in the kit to be graded according to the number of employees. Every

employer must provide and maintain a first-aid room if he has 100 or more workmen, or if he has 50 or more workmen working at a distance of five miles from a hospital. A standard first-aid kit must accompany the crew of every railroad train and vessel. During 1922 the Board distributed a bulletin containing directions on first-aid for inexperienced workers in places where there is no skilled attendant, with instructions that these directions be posted up beside the kit.

### Canadian Council on Child Welfare

The Canadian Council on Child Welfare held its annual meeting at Toronto, June 23-24, 1924, the chief topic for discussion being

juvenile immigration into Canada from Great Britain. The points emphasized in the report on this subject prepared by the honorary secretary, Miss Charlotte Whitton, were the need for more careful inspection of the physical and mental condition of children whom it is proposed to bring to Canada, and more adequate supervision when they are placed in Canadian homes. In reply to a statement of the need for statistics regarding child labour, it was announced that the volume on occupations of the people of the census, 1921, would contain in greater detail figures as to the number of children employed in Canada.

The council adopted the so-called children's charter drawn up at Geneva in May, 1923, by the General Council of the Save the Children Fund International Union, as follows:—

By the present declaration of the rights of the child, commonly known as the "Declaration of Geneva," men and women of all nations, recognizing that mankind owes to the child the best that it has to give, declare and accept it as their duty that, regardless of all considerations of race, nationality or creed:

(1) The child must be given the means requisite for its normal development, both materially and spiritually.

(2) The child that is hungry must be fed, the child that is sick must be nursed, the child that is backward must be helped, the delinquent child must be reclaimed and the orphan and the waif must be sheltered and succored.

(3) The child must be the first to receive relief in times of distress.

(4) The child must be put in a position to earn a livelihood, and must be protected against every form of exploitation.

(5) The child must be brought up in the consciousness that its talents must be devoted to the service of its fellowmen.

### "The Labour Bureau, Incorporated"

The Department recently received the annual report of "The Labour Bureau Incorporated" for 1923. The

Bureau operates in various centres in the United States, including New York, Boston, Chicago, Los Angeles and San

Francisco. This organization was founded in May, 1920, and is described as "a group of technicians rendering professional service to labour organizations and to others working for some public purpose of benefit to labour." It is stated that the Bureau is not in business for profit, and no dividends or other distributions of profit can be made under its by-laws. Fixed salaries are paid to members of the staff, and charges are reckoned on the basis of time spent, incidental expenses, etc. The general policy of the Bureau is to remain detached from partizanship and politics, and to maintain a strictly scientific attitude toward facts and their interpretation. Since its foundation it has done work for 212 unions, international, district and local, and has served other organizations affiliated with the trade union movement, as well as organizations and individuals working for public purposes associated with the interests of labour. Perhaps the most interesting work of the Bureau during 1923 was the service rendered by its consulting engineer, Mr. O. S. Beyer, Jr. to the railroad shopcrafts in connection with their experiment in joint co-operative management on the Baltimore and Ohio Railroad. This constructive policy and its subsequent application to the railway shops of the Canadian National Railways, was outlined in the LABOUR GAZETTE for May, 1924, (page 400). The Bureau also issues the monthly publication *Facts for Workers*, containing information useful to all persons connected with industry.

### Coal mine explosions and their prevention

The director of the United States Bureau of Mines contributes an interesting article on coal mine explosions to the current issue

of the *Monthly Labour Review*, published by the United States Department of Labour. He considers that if proper measures are taken the risk of such explosions may be eliminated.

A certain number of accidents due to risks of the occupation, such as the falls of roof, must be expected, but the present high rate is excessive. The great explosions, however, should not be considered to be normal occupational accidents. Explosions can and must be prevented. There is no reason, with the present knowledge, why local explosions in mines should spread throughout the entire underground workings. Miners and operators, as well as official inspectors, must take hold of the situation promptly and vigorously or there will be still more serious explosions and more men killed. Knowledge not applied is of no value, however practical it may be in its bearings.

Experimental explosions conducted by the United States Bureau of Mines in a Pennsylvania mine held by the government for the purpose of such experiments have proved that

coal dust is itself explosive, and is also the cause of a small local explosion spreading throughout the entire mine. It is stated that knowledge of coal dust explosions has now arrived at a point where, given a certain set of conditions in the mine, the engineers can propagate explosions and produce results predicted beforehand. Two methods are followed for preventing the wide spreading of minor explosions. The first is to wet the dust thoroughly so that no dry dust remains in the mine. To be effective the dust must be wet down every day. A better method is to dilute the coal dust with shale dust or limestone dust, or any non-inflammable dust, so that the explosion will not pass from point to point even though a dust cloud be raised by the concussion of blasting, or by the wreckage of a trip of cars. Utah is said to lead the other coal mining states in regulations for mine safety. (The new safety code of Utah was outlined in *LABOUR GAZETTE* for May, 1924, page 359).

#### Statistical Conference

The Governing Body of the International Labour Organization at its meeting in April decided that in view of the success of the Conference of Labour Statisticians held in October, 1923, the Director of the International Labour Office should be authorized to take appropriate steps for the calling of a second conference of Labour Statisticians in February, 1925. This second conference will be devoted mainly to the classification of industries and to statistics of cost of living, unemployment and wages. The object of these conferences of Government Labour Statisticians is to improve as well as to standardize the methods of statistics existing in the various countries throughout the world to the end that they may be comparable one country with another, and thus furnish valuable information for use in questions of industrial economics.

#### Clearing house of labor information

Important services are being rendered by the International Labour Office in supplying information on labour and industrial questions in response to inquiries received.

In the year 1923, the office sent detailed replies to 323 major requests for information, many of these involving research on more than one question.

Requests have been received from Governments, employers' associations, trade unions, universities, libraries, philanthropic and other institutions, belonging to the following coun-

tries: Australia, Austria, Belgium, Canada, China, Czechoslovakia, Esthonia, France, Germany, Great Britain, Holland, Hungary, India, Italy, Japan, Latvia, Latin America, Lithuania, New Zealand, Norway, Poland, Roumania, Spain, Sweden, Switzerland, United States and Yugoslavia.

Among the subjects on which information was requested were conditions of labour, including hours and wages, technical education, apprenticeship, vocational guidance, social assurance, including unemployment insurance, industrial health and safety, workers' control and emigration. The information supplied to Governments is of special importance in view of the fact that these particulars are frequently needed with a view to the preparation of new national legislative and administrative measures.

The Weekly Half Holiday Act of British Columbia (Statutes of 1916, chapter 75) has been applied to the town of Lillooet, where shops are henceforth to be closed on Wednesday afternoon.

The Royal Commission which has been studying the subject of Workmen's Compensation in the province of Quebec with a view to the possible amendment of the existing provincial statute held its final sessions at Chicoutimi and Quebec towards the end of June. It is stated that a final meeting is to be held later in the present year, when the employers and workmen of the province will be afforded an opportunity of summing up their cases. The Commission will then prepare its report, which is to be presented at the next session of the provincial legislature.

The total number of men employed in the coal mines of Canada during April was 20,683, of whom 15,815 worked underground and 4,868 on surface, as compared with a total of 28,655 in March, of whom 21,929 worked underground and 6,726 on surface. The monthly production per man was 48 tons for April, as against 54 tons per man for March. During April the production per man-day was 2.29 tons, as compared with 2.64 tons in March. The total Canadian output during April amounted to 989,121 short tons, or a decrease of 39 per cent below the tonnage for the previous month and 3 per cent below the average for April for the five preceding years. The tonnage lost, which was largely due to lack of orders in March, was charged in April to "other causes," this including strikes.

An Ordinance to regulate billiard rooms in the North-West Territories, published in the *Canada Gazette* on July 5, provides that "no person under the age of 18 years shall be employed in or about a billiard room for any purpose connected with the business thereof."

The Workmen's Compensation Board of Alberta has issued the following new Regulation (Number 11):—

Where the amount chargeable to the account of any employer is in excess of one hundred and five per cent of the Assessment received for the calendar year then last past, the assessment rate for the then current calendar year shall be increased over and above the basic rate of the class or sub-class in which the account is being carried one per cent on the basic rate for each one per cent that the amount chargeable exceeds one hundred and five per cent of the amount received, but in no case shall the increased rate exceed thirty per cent of the basic rate of the class or sub-class as fixed by the Board.

The Ontario Minimum Wage Board is holding a public hearing during the present month for the discussion of proposed minimum rates for female workers in the food trades, and for those in various other trades not already dealt with under previous orders. The proposed rates are similar to those for the factory group, namely \$12.50 in Toronto, and from \$11.50 to \$10 per week in other parts of the province according to density of population. Full particulars will be given of the new orders when they are officially published.

The Canadian Postmasters' Association, at their biennial convention held at Montreal in June, considered a proposal to form a beneficiary fund to endow the widows of postmasters in case of death and to provide for postmasters who might lose their positions.

New regulations governing the inspection of meats were published during June under the Meat and Canned Foods Act, the regulations issued in 1920 being rescinded.

Hon. Robert Drummond, member of the Legislative Council of Nova Scotia, is retiring from active editorial work on *The Mining Record*, a journal devoted to the coal mining industry in Nova Scotia, with which he has been connected for the past 50 years. Mr. Drummond was formerly Grand Secretary of the Provincial Workmen's Association.

As noted in the *LABOUR GAZETTE* for May, the Montreal city council is considering the formation of a contributory superannuation fund for civic employees. At a conference on pensions in June, delegates representing the firemen's and policemen's organizations stated that they would be willing to furnish \$10,000 each as a nucleus for a pension fund, and to

contribute four per cent of their wages annually, provided that the city would contribute a like amount. The policemen propose that they should receive a pension of \$100 a month after 25 years' service, and the firemen ask for \$75 a month as a retiring allowance. Provision for widows' pensions, and especially for the families of men killed while on duty is also expected. A delegation of firemen who had been retired under the existing superannuation scheme later informed the city council that the pension they received amounted only to one-sixth of their former pay, while the policemen received one-half.

Group life insurance is now in force on at least twenty-seven railroads in the United States, according to a compilation by *The Railway Age*. Together these lines are protecting more than 200,000 men. The aggregate value of policies representing this insurance is upward of \$260,000,000. The Union Pacific Railway started its plan as early as 1917, but a large part of the insurance has been underwritten within the past two years.

The Workmen's Compensation law of New York State has been amended by a reduction of the "waiting period" from fourteen to seven days. (Most of the provincial compensation Acts in Canada fix seven days as the minimum period of disability for which compensation is allowed). It is estimated that the amendment to the New York act will increase the number of injured employees in receipt of compensation by about 50 per cent.

The Pittsburg Labour Bank on August 25, 1923, opened its doors with the support of 38 local railroad organizations; five carpenters' locals; United Mine Workers, District No. 5; Street Railway Employees' locals, and several others, and on December 31, four months later, the bank had more than trebled its resources. The capital stock is now being increased from \$125,000 to \$500,000.

A committee of the American Chemical Society on occupational diseases and hazards in the chemical trades recommends that every applicant for work should be subjected to a rigid physical examination by a physician who knows the hazards of the industry, and that an industrial health survey should be taken of the chemical industries.

The Pennsylvania Railroad recently issued a notice to each of its 211,000 employees to undergo a complete physical examination at least once a month at the company's expense. Ten thousand employees of the same company have acquired 50,675 shares of the railroad stock by instalment payments.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation

CONTINUED improvement in employment was noted at the beginning of June, although this was not so pronounced as that recorded on June 1, 1923, when the situation was slightly better. Employment, however, continued to be in greater volume than during the corresponding period of 1922 and 1921.

At the beginning of June the percentage of unemployment among members of trade unions was 7.3 as compared with 5.1 per cent at the beginning of May, and with 4.5 per cent at the beginning of June, 1923.

A slight decline from the preceding period in the number of vacancies and placements, with an increased registration of applicants, was shown by the reports from the offices of the Employment Service of Canada for the month of May, 1924. A comparison with the same period a year ago shows a marked falling off in employment, the decrease being due in part to unfavourable weather.

The following survey gives the employment conditions at the end of June, 1924, as reported by the superintendents of the Employment Service.

In the Maritime provinces considerable construction work was under way both in the building and highway groups. Orders for carpenters, paperhangers and painters, were filled in many districts, but not in sufficient numbers to give work to all. River driving continued throughout the Province, but little or no demand for workers was recorded. Improved employment conditions in mining were shown. The usual business was transacted in the women's section, approximately the same demand for regular and day workers being offered.

In Quebec there was reported a slight improvement in the building industry, with an increase in the demand for bricklayers, plasterers, joiners and painters. Building labourers, however, were not in so great demand, but with the beginning of municipal road work more numerous opportunities were opening up. Farming activities were fairly brisk, with a large number of placements of workers from Montreal. Bushmen and mill hands were required in increasing numbers from the offices at Montreal, Quebec and Three Rivers, the calls being fewer than during the previous year. There was a declining demand for household workers, but a slightly increased demand for workers for hotel and institutional help was reported.

Employment conditions in Ontario remained quiet though uncertain. With an im-

proved demand in the building and construction groups, a large number of men were at work, although many craftsmen were available for employment. There was a promise of greater activity with the opening of highway work throughout the province. In some districts an increased call for farm workers was received, while in others the early spring demand had been satisfied. Outdoor work, including railway construction and maintenance and some logging operations, was supplied from the offices at North Bay, Ottawa, Sudbury and Timmins, to take care of local workers, with a few vacancies for skilled men, who were supplied from other zones. Slackness in industry continued, no marked improvements being reported, and in the Western Peninsula a surplus of labour was shown. Calls for women domestics remained numerous, with an increase in the casual department. The demand for institutional workers was not so great as is usual at this season of the year.

With the close of seeding operations in Manitoba a slackness in demand was reported in the farm group, followed by an increased call during the latter part of the week. Residential construction predominated in the building group, but the contracts awarded were not of sufficient size to care for the numbers out of work. Teamsters, section men and gang labourers for railway work were recruited without difficulty, as many men were seeking this class of employment. Trade and manufacturing were quiet.

In Saskatchewan dullness characterized the farming group, following the spring rush of orders for men for seeding. A small though persistent demand for farm labourers was still felt, however, in many districts with plenty of men available. The curtailment of building activities had lifted slightly with a resulting improved employment condition. From Regina reports indicated a minimum demand, with men in all trades available, while in Saskatoon tradesmen were well employed. The railway companies placed numbers of section and extra gang workers. The northern offices showed a decline in logging operations, sufficient men having been supplied for all outside work, and at Prince Albert, Regina and Saskatoon, a great many were reported as unemployed.

In Alberta the offices transacted a steady and consistent business in the farming group, placements keeping pace with the opportunities offered. Aside from this group, however, little work was available. The small building contracts under way were not sufficient to meet the demands for work and few oppor-

tunities were shown in the railway construction and maintenance group. A reduction in the demand for women day workers was reported, and an improvement recorded in regard to the orders for regular workers.

In British Columbia the depression in the building industry continued, and while numbers of men were employed on small repair jobs and on extensions to the outlying roads and bridges, the wet weather retarded work very considerably. There was a notable change in the logging group, some of the producers closing down, while others had curtailed operations very largely. The resulting decline in demand affected the work of the offices considerably. Mining was quiet, also the farming group, while manufacturing industries showed only a slight betterment. In the women's section fruit pickers and casual workers were in increasing demand with the usual routine number of orders for household workers.

#### EMPLOYERS' REPORTS.

Employment at the beginning of June showed an upward trend, although the expansion was not so pronounced as that recorded on the corresponding date of last year. The most marked increases were reported in construction, transportation and manufacturing; communication, services and trade also registered increased activity. Employment in all provinces was, on the whole, in greater volume than at the beginning of May; the largest percentage gain occurred in Quebec and the Prairie Provinces. In the Maritime Provinces manufacturers, especially fish preserving and lumber mills, were decidedly more active, as was construction. Logging, mining and transportation, however, showed large contractions, partly of a seasonal nature. In Quebec manufacturing, logging, transportation and construction reported marked improvement, while gains were also indicated in communication, mining, services and trade. In Ontario a large part of the improvement was in the construction and transportation industries, but manufacturing on the whole afforded less employment. In the Prairie Provinces the commencement of seasonal activity in railroad construction accounted for the bulk of the increase; sawmills, transportation and summer hotels also were busier, while firms in the logging, coal mining and iron and steel industries reported smaller pay-rolls. In British Columbia also marked improvement was registered in construction, but other industries, notably the logging, shipping, lumber, pulp and paper divisions were not so fully employed as at the beginning of May.

Firms in Montreal, Ottawa and Winnipeg registered improvement, while in Toronto,

Hamilton and Vancouver curtailment was shown. In Montreal shipping and stevedoring was decidedly more active and increases were also reported in construction, trade and some branches of manufactures. Textiles, and iron and steel, on the other hand, afforded less employment than at the beginning of May. The changes in Toronto were not large; manufactures registered declines, which were partly offset by improvement in construction. In Ottawa the largest increase was in construction. In Hamilton curtailment in textiles and iron and steel accounted for most of the reduction. In Winnipeg the changes were comparatively slight; the most pronounced gains occurred in construction, while retail trade afforded less employment. In Vancouver reductions in personnel in shipping caused the decrease.

Manufacturing continued to show moderate improvement. Seasonal activity in sawmills and fish canneries, together with improvement in pulp, paper, brick, electric current and mineral product works caused most of the increase, while the iron and steel, textile and leather groups were less fully employed. Employment in logging declined on the whole, although large additions to staffs were reported in Quebec and Ontario, owing to river drives. Practically no change in the whole was indicated in mining; improvement in the mining of metallic ores and of non-metallic minerals was offset by curtailment in coal mines. Employment in communication showed an increase, largely on telephones. Shipping and stevedoring registered substantial expansion, while employment on steam and street railways also improved. In construction and maintenance there were considerable seasonal gains in the building, highway and railway divisions. The trade and service groups also reported increased activity, that in the latter being due to the reopening of summer hotels.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of June, 1924.

#### TRADE UNION REPORTS.

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The volume of unemployment increased at the end of May as shown by returns tabulated

from 1,455 labour organizations with an aggregate membership of 158,023 persons, 7.3 per cent of the members being out of work as compared with 5.1 per cent at the end of April and with 4.5 per cent at the close of May, 1923. Nova Scotia, New Brunswick, Manitoba and Saskatchewan unions registered improvement over April, but considerable inactivity was reported in Quebec due to slackness in the garment trades, and declines on a smaller scale were registered in Ontario, Alberta and British Columbia. In comparison with May of last year less activity was shown in all provinces except Saskatchewan and Alberta and in these two provinces the gains were slight. Reports tabulated from 417 unions in the manufacturing industries, with a membership of 51,089 persons, showed that 6,610 persons were unemployed at the end of May, a percentage of 12.9 as compared with 4.5 per cent in April. Garment workers in Quebec accounted for the greater part of the inactivity shown in this group, though declines were also registered by iron and steel, glass and brewery workers and printing tradesmen. Cigar makers, metal polishers, jewelry workers and paper makers, on the other hand, were better employed. Slightly more unemployment was shown in the manufacturing industries than in May of last year. The situation for coal miners in Nova Scotia and Alberta remained practically the same as in April, and in the British Columbia mines no members were reported out of work. No inactivity was registered by quarry workers in Nova Scotia or asbestos miners in Quebec. In the building and construction trades some improvement was shown during May, though the percentage out of work was still considerably above that reported for May last year. Steam shovel and dredgemen, bricklayers, masons and plasterers, plumbers and steamfitters, granite and stone cutters, hod carriers and building labourers, carpenters and joiners and electrical workers were all better employed than in April, but bridge and structural iron workers, tile layers, lathers and roofers and painters, decorators and paperhangers registered slightly more idleness. In comparison with May of last year the situation for all tradesmen in the group, with the exception of bridge and structural iron workers, was not so favourable. Transportation workers were slightly more fully engaged at the end of May than in the previous month, 3.1 per cent of the members being out of work as compared with 3.6 per cent at the close of April. Steam railway employees, whose returns constitute nearly 80 per cent of the membership in the group, were slightly more active as were also street and electric railway employees. Workers in the shipping

division, however, were not quite so busy. Slightly less activity was reported in the transportation group at the end of May than at the close of May, 1923. Retail clerks were better employed than in April. Hotel and restaurant and theatre and stage employees were not so busy, but the situation for barbers and stationary engineers and firemen was more favourable. Fishermen and lumber workers reported no idle members.

**EMPLOYMENT OFFICE REPORTS** During the month of May, 1924, the offices of the Employment Service of Canada made 32,694 references to employment, and effected a total of 31,093 placements. Of these, the placements in regular employment were 21,569, of which 18,286 were of men and 3,283 of women. The placements in casual work numbered 9,524. Employers notified the Service of 33,219 opportunities for employment, of which 23,177 were for men and 10,042 were for women. The number of applicants for work was 43,445, of whom 32,142 were for men and 11,303 for women. A comparison of the reports for this period with the corresponding period a year ago indicates a marked decline in the volume of business transacted. This decrease reflected the slackness in business due to the unfavourable weather. Compared with the preceding month of this year approximately the same volume of business was handled, placements and vacancies showing a slight decline, while the volume of applications increased.

**PRODUCTION REPORT** The Dominion Bureau of Statistics reports a production of 84,987 long tons of pig-iron and 2,245 tons of ferro-silicon during May as compared with 83,875 tons pig-iron and 2,920 tons ferro-silicon in April. Basic iron advanced 6 per cent to 69,229 tons, malleable iron rose 96 per cent to 5,510 tons, but foundry iron dropped 35 per cent to 10,248 tons. The cumulative production of pig-iron for the five months ending May was 370,142 tons, this being the highest recorded for this period in the last three years, equalling the output for the same period in 1920. The average monthly output was 74,000 tons for the first five months of the current year; 67,000 tons in 1923; 33,000 tons in 1922 and 51,000 tons in 1921. During the month one furnace was banked at Sydney, Nova Scotia, leaving six furnaces in blast at the end of the month, two of these being at Sydney, Nova Scotia, one at Hamilton, Ontario, and three at Sault Ste. Marie, Ontario.

The production of steel ingots and castings in Canada during May advanced 4 per cent

over the April output to a total of 108,433 tons, this being the greatest tonnage for any month since October, 1920. The total production for the five months ending May was 419,819 tons, 96 per cent of which was for the use of the works reporting.

The Inverness Coal Company, Inverness, N.S., during the four weeks ending May 23, produced 12,535.35 tons of coal, with an average of 545 men employed. The Dominion Coal Company during the same period produced 221,856 tons, with about 9,680 men employed.

A report from the Department's correspondent at Cobalt states that eighteen car loads of approximately 1,380,364 pounds of silver ore were shipped during June, 1924, from the Cobalt camp, as compared with twenty-eight car loads of approximately 2,075,985 pounds of silver ore in May. The Nipissing mine shipped 176 bars containing 203,398.70 ounces of silver, and the Mining Corporation of Canada shipped 170 bars containing 170,869.75 ounces, making in all a total of 346 bars containing 374,268.45 ounces of silver shipped from these mines during June, as compared with 309 bars containing 342,148.01 in the previous month.

A report from the British Columbia Forestry Branch shows that 266,287,596 feet, board measure, of timber was scaled in the province during May, 1924. The total includes Douglas fir, 117,801,904 feet; red cedar, 66,087,504 feet; spruce, 19,220,096 feet; hemlock, 36,728,518 feet; balsam, 5,737,213 feet; yellow pine, 4,350,487 feet; white pine, 1,649,495 feet; jack pine, 7,263,369 feet; larch, 3,984,134 feet; cottonwood, 200,632 feet; maple, 1,939 feet; and species not specified, 3,262,305 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$19,350,770 in May, 1924, as compared with \$19,051,093 in the previous month and \$20,847,231 in May, 1923.

The gross earnings of the Canadian Pacific Railway Company for May, 1924, were given in a preliminary statement as \$14,426,679 in comparison with \$13,806,122 in the previous month, and, with \$14,355,539 in May, 1923.

According to the Dominion Bureau of Statistics the value of the building permits issued in 56 cities during May was \$14,215,670, as compared with \$13,452,359 in the preceding month and with \$18,610,611 in May of last year.

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded in Canada during June, 1924, was \$26,185,300 compared with \$32,966,900 in May, 1924, and with about \$50,674,000 in June, 1923. Residential building accounted for 35.6 per cent of the June total, amounting to \$9,322,900; business building amounted to \$7,620,900 or 29.2 per cent; industrial building to \$1,195,500 or 4.5 per cent; and public works and utilities \$8,046,000 or 30.7 per cent. The activity was distributed among the provinces as follows: Ontario, 46.5 per cent; Quebec, 28.9 per cent; British Columbia, 7.0 per cent; prairie provinces, 13.1 per cent; and the maritime provinces, 4.5 per cent. The total construction started from January 1 to June 30, 1924, amounted to \$128,723,100, compared with \$165,323,200 during the corresponding period of last year, and \$132,452,000 in 1922.

FOREIGN TRADE

A summary of Canadian trade prepared by the Department of Customs and Excise shows that in May, 1924, the merchandise entered for consumption amounted to \$72,247,330, as compared with \$60,203,141 in the previous month and \$84,265,266 in May, 1923. There was an increase in the value of merchandise exported which amounted to \$104,150,715 in May, 1924, as compared with \$48,880,914 in the previous month and \$74,814,554 in the corresponding month of 1923. The chief imports in May, 1924, were: iron and its products, \$14,921,567; fibres, textiles and textile products, \$12,504,260; agricultural and vegetable products, mainly foods, \$11,772,868; and non-metallic minerals and products, \$10,738,797. The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$53,132,966; wood, wood products and paper, \$20,944,741; animals and animal products, \$8,501,368; and non-ferrous metals and their products, \$6,778,229. During the first two months of the fiscal year, ending May 31, 1924, exports of agricultural and vegetable products, mainly foods, were valued at \$66,643,234; wood, wood products and paper at \$37,061,659; animals and animal products at \$14,149,680; non-ferrous metals and their products at \$10,973,858; and iron and its products at \$9,091,774.

Strikes

The time loss due to industrial disputes was greater than during either May, 1924, or June, 1923. There were in existence at some time or another during the month 22 disputes, involving 13,872 employees and a time loss of 244,673 working days, as compared with 12

BUILDING PERMITS AND CONTRACTS AWARDED

disputes in May, involving 8,536 workpeople, and a time loss of 218,453 working days. In June, 1923, there were recorded 28 disputes, involving 6,268 workpeople, and a time loss of 42,406 working days. Thirteen new strikes commenced during June, with a time loss of 35,908 working days. One of the strikes commencing prior to June, and nine of the strikes commencing during June, terminated during the month. At the end of the month, therefore, there were 11 strikes involving 8,693 workpeople.

### Prices

Retail food prices showed little change during the month. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in about sixty cities, was slightly lower at \$9.86 at the beginning of June, as compared with \$9.89 for May; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920; \$12.79 for June, 1918; and \$7.49 for June, 1914. Prices of butter, cheese, sugar, rice and lard were lower, while beef, veal, mutton, pork, eggs and potatoes advanced slightly. Including the cost of

fuel and rent with that of foods, the total budget averaged \$20.22 at the beginning of June as compared with \$20.24 for May; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.81 for June, 1920; \$26.92 for July, 1920 (the peak); \$20.36 for June, 1918; and \$14.27 for June, 1914. Fuel and rent showed little change.

The movement of wholesale prices, as indicated by the index number of the Dominion Bureau of Statistics, was slightly upward, the figure for June being 152.2 as compared with 150.6 for May; 155.5 for June, 1923; 152.7 for June, 1922; 164.0 for June, 1921; 256.9 for May, 1920 (the peak); and 201.3 for June, 1919. In the grouping according to chief component material two of the eight main groups advanced, four declined, while two were practically unchanged. Increases in the Vegetable Products group and the Animal and Animal Products group, due to changes in the prices of grain, eggs and butter, more than offset the declines in the Iron group, the Non-Ferrous Metals group, the Non-Metallic Minerals group, and the Chemicals group. The indexes for the Textiles group and the Wood and Wood Products group showed little change.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JUNE, 1924

**D**URING the month of June the Department received three applications for the establishment of Boards of Conciliation and Investigation, as follows:—

(1) from certain employees of the corporation of the city of Winnipeg, Manitoba, being linemen employed in the Hydro-Electric Department.

(2) from certain employees of the corporation of the city of Moose Jaw, Saskatchewan, being members of the Saskatchewan Brotherhood of Steam and Operating Engineers and the International Brotherhood of Electrical Workers. A Board was established, constituted as follows: Mr. N. R. Craig, of Moose Jaw, Saskatchewan, on the recommendation of the employer; Mr. William G. Baker, Moose Jaw, Saskatchewan, on the recommendation of the employees, and Mr. James Smith, Edmonton, Alberta, appointed by the Minister as chairman in the absence of a joint recommendation from the other members of the Board.

(3) from certain employees in the Transcona, Manitoba, shops of the Canadian National Railways, being machinists, blacksmiths, carmen, boilermakers, moulders, electricians, etc., members of the One Big Union and unorganized workers.

### Other Proceedings Under the Act

In the case of the dispute between the corporation of the city of Ottawa and certain of its employees, being firefighters, members of Local 162, International Association of Fire Fighters, the application for a Board was withdrawn by the employees, negotiations between the disputants having been renewed, and an adjustment of the dispute effected as the result of the mediation of the Department.

In the case of the dispute between the Roberval-Saguenay Railway Company and certain of its employees, being station agents, assistant agents, telegraph operators, railway conductors, locomotive engineers, firemen, brakemen and helpers on steam and electric railways, motormen, cleaners, maintenance of way employees, etc., members of the National Catholic Syndicate of Employees of the Roberval-Saguenay Railway Company, two Board members were appointed as follows: Mr. Adolphe Routhier, of Chicoutimi, P.Q., on the recommendation of the employer, and Mr. Arthur Frenette, of Chicoutimi, P.Q., on the recommendation of the employees.

**STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1924**

**T**HE number of strikes and lockouts in Canada in existence at some time or other during the month of June was 22, ten more than in May. The time loss for June was greater than in June, 1923, being 244,673 working days, as compared with 42,406 working days in the same month in the previous year.

Date	Number of disputes	Number of employees involved	Time loss in working days
June, 1924.....	22	13,872	244,673
May, 1924.....	12	8,536	218,453
June, 1923.....	28	6,268	42,406

Nine disputes, involving 8,354 workpeople, were carried over from May. One of the strikes commencing prior to June, and nine of the strikes commencing during June, terminated during the month. At the end of June, therefore, there were on record twelve disputes: coal miners in Alberta and British Columbia; boot and shoe factory workers at St. Hyacinthe; printing compositors at Halifax; three strikes of printing compositors at Montreal; printing compositors at Ottawa; printing compositors at Toronto; printing compositors at Winnipeg; moulders at Guelph; plumbers and steamfitters at Hamilton; and shipwrights and carpenters at Vancouver.

Nine of the new strikes which commenced during June were for increased wages; one was for increased wages and other changes; one, against a reduction in wages; one, against discharge of employees, and one was a sympathetic strike. Six strikes terminated in favour of the employers; two, in favour of employees; one in a compromise, and in one the result was indefinite.

In addition to the information received during June, word was received of a strike of boot factory workers at Quebec, which began during May and terminated early in June.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration or less, and disputes involving less than six employees, are not included in the

published record unless at least ten day's time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

**FISHERMEN, PORT ESSINGTON, B.C.**—Some 200 fishermen along the Skeena River went on strike June 16 for higher prices for fish paid by canners. On June 24, the fishermen resumed work at existing rates pending negotiations for a final settlement.

**COAL MINERS, ALBERTA AND BRITISH COLUMBIA.**—The strike of 8,000 coal miners which began April 1, against a reduction in wages on the termination of the agreement on March 31, remained unterminated at the end of June. Strike relief from the International headquarters of the United Mine Workers of America was distributed in some of the mining centres.

**COAL MINERS, STELLARTON, N.S.**—On June 5 a strike of 1,200 coal miners occurred because a number of men were suspended for sending up dirty coal. The superintendent refused to meet the committee of the employees while the strike was in progress. The men then resumed work June 6, pending a settlement.

**BOOT FACTORY EMPLOYEES, QUEBEC, QUE.**—Two strikes occurred in one boot factory. On May 27, four machine workers went on strike against the discharge of one employee. On June 11, 400 workers went on strike in sympathy with the machine workers. Negotiations were then entered into, and work was resumed June 12.

**BOOT FACTORY EMPLOYEES, ST. HYACINTHE, QUE.**—A strike of 53 employees occurred on June 12 for increased wages and other changes. This strike remained unsettled at the end of the month.

**LABOURERS, MURRAY, N.S.**—On June 6, a strike of 36 labourers, engaged in rossing pulpwood for a pulp and paper company, resulted from a demand for an increase in wages from \$2.50 per day to \$3.10 per day to cover the cost of meals. Negotiations were carried on, which resulted in twenty-two men resuming work June 7, while the remaining fourteen were replaced.

**PRINTING TRADES IN VARIOUS CITIES.**—The strikes of printing compositors in job offices in various cities for the 44-hour week were still in progress at the end of the month, involving then 349 employees, and resulting in a time loss of 8,725 working days.

**MOULDERS, GUELPH, ONT.**—On June 2, 17 moulders went on strike against a reduction in wages. The men had been receiving between 40 cents and 60 cents per hour, and were notified of a reduction of 12½ per cent. They stopped work, and were still idle at the end of the month.

**BRICKLAYERS, OTTAWA, ONT.**—Ten bricklayers went on strike June 12, for an increase in wages from \$1.10 per hour to \$1.25 per hour. After being on strike three and one-half days the men resumed work on June 17, under the same conditions as existed prior to the strike.

**BRICKLAYERS, WINNIPEG, MAN.**—Sixty bricklayers employed in a number of firms went on strike June 30, for increased wages. Previously the rate had been \$1.10 per hour and they demanded \$1.25 per hour. After being on strike one day work was resumed at \$1.25 per hour.

**CARPENTERS, VANCOUVER, B.C.**—Forty carpenters went on strike on June 9, for an increase in wages. The prevailing rate was \$6.90 for an 8-hour day. After being out seven days the men resumed work June 17, at \$7 per day.

**PLUMBERS AND STEAMFITTERS, HAMILTON, ONT.**—Sixty-six plumbers and steamfitters, in the employ of eighteen firms, went on strike on June 19 for an increase in wages from 85 cents per hour to 90 cents per hour. At the end of the month this strike remained unsettled.

**PLUMBERS AND STEAMFITTERS, KITCHENER, ONT.**—On June 16, 28 plumbers and steamfitters went on strike for an increase in wages from 75 cents per hour to 90 cents per hour. Negotiations were carried on, which resulted in the men resuming work June 30, at 80 cents per hour.

**SHIPWRIGHTS AND CARPENTERS, VANCOUVER, B.C.**—A strike of 208 shipwrights and car-

penters occurred in various shipbuilding plants on June 2, for an increase in wages from \$6 per day to \$7 per day. This strike remained unterminated at the end of June.

**POSTAL EMPLOYEES, MONTREAL, TORONTO, WINDSOR AND VARIOUS CITIES.**—On June 18, postal employees in several cities went on strike for a higher salary schedule than that provided for in new regulations. At Montreal, Toronto and Windsor, the strike was called off on June 30, but in several cities in Ontario some employees were out only for a day or part of a day. In Montreal, Toronto, and Windsor the strikers were partially replaced by new employees. On June 29 the striking employees were permitted to return to work, each individual agreeing by signed statement "to resume duty unconditionally as a postal helper in the Post Office staff."

The Post Office Department issued at the same time a statement to the effect that the offer contained in a letter, dated June 18, from the Acting Postmaster General to the Secretary of the Canadian Federation of Postal Employees, was still open. This offer was as follows:—

When Civil Service Commission has submitted its report upon the salaries of the entire service, opportunity will be given to the representatives of the employees in the Postal Department, or in other Departments of the Government who have objections to file against the salary revision proposed by the Government, and to discuss such matters of difference as fully as may be necessary to ensure a thorough understanding, and, it is hoped a final and satisfactory agreement on the points in dispute.

The position of the Government in regard to the demands of the postal employees was defined by the Prime Minister in a speech in the House of Commons on June 17, as follows:—

We are prepared, when the Civil Service Commission has submitted its report upon the salaries of the entire civil service, to consider that report carefully in the light of all the material which we have before us and to make to Parliament, if we think it advisable so to do, recommendations supplementing those which are contained in the report of the Civil Service Commission. But we do not feel that we are in a position to make any recommendations to Parliament at the present time with respect to the postal employees; and I hope that the employees of the Post Office Department will see that the position which the government is taking is one which is in the interests of the entire civil service of the country and in the interests of the taxpayers as well.

## STRIKES AND LOCKOUTS DURING JUNE, 1924

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and lockouts commencing prior to June, 1924.</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING.—</b>			
Coal miners, Alberta and British Columbia.	8,000	200,000	Commenced April 1, against a reduction in wages. Underminated.
<b>MANUFACTURING.—</b>			
<i>Leather, fur and products.—</i>			
Boot factory workers, Quebec, Que.	5	40	Commenced May 27, against discharge of employees. Settled by negotiations and work resumed June 13.
<i>Printing and Publishing.*—</i>			
Printing compositors, Halifax, N.S.	17	425	Commenced May 2, 1921, for shorter hours with same weekly pay. Underminated.
Printing compositors, Montreal, Que.	4	100	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Underminated.
Printing compositors, Montreal, Que.	76	1,900	Commenced June 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Montreal, Que.	12	300	Commenced September 15, 1922. Employers refused to negotiate new agreement with the union. Underminated.
Printing compositors, Ottawa, Ont.	15	375	Commenced June 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Toronto, Ont.	196	4,900	Commenced June 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Winnipeg, Man.	29	725	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement.
<b>(b) Strikes and lockouts commencing during June, 1924.</b>			
<b>FISHING.—</b>			
Fishermen, Port Essington, B.C.	200	1,400	Commenced June 16, for higher prices for fish. Settled by negotiations and work resumed June 24; indefinite.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING.—</b>			
Coal miners, Stellarton, N.S.....	1,200	1,200	Commenced June 5, against discharge of employees. Work resumed June 6, on employers' terms.
<b>MANUFACTURING.—</b>			
<i>Leather fur and products.—</i>			
Boot factory workers, Quebec, Que.	400	400	Commenced June 11, in sympathy with boot factory workers who went on strike May 27. Work resumed June 12, on employers' terms.
Boot factory workers, St. Hyacinthe, Que.	53	848	Commenced June 12, for increased wages and other changes. Underminated.
<i>Pulp, paper and paper goods.—</i>			
Labourers, Murray, N.S.....	36	36	Commenced June 6, for increased wages. Settled by negotiations and work resumed June 7; in favour of employers.
<i>Iron, steel and products.—</i>			
Moulders, Guelph, Ont.....	17	425	Commenced June 2, against a reduction in wages. Underminated.
<b>CONSTRUCTION.—</b>			
<i>Buildings and structures.—</i>			
Bricklayers, Ottawa, Ont.....	10	35	Commenced June 12, for increased wages. Settled by negotiations and work resumed June 17 on employers' terms.
Bricklayers, Winnipeg, Man....	60	60	Commenced June 30, for increased wages. Settled by negotiations June 30; in favour of employees.
Carpenters, Vancouver, B.C....	40	280	Commenced June 9, for increased wages. Settled by negotiations and work resumed June 17.
Plumbers and steamfitters, Hamilton, Ont.	66	660	Commenced June 19, for increased wages. Underminated.
Plumbers and steamfitters, Kitchener, Ont.	28	364	Commenced June 19, for increased wages. Settled by negotiations June 30; compromise.
<i>Shipbuilding.—</i>			
Shipwrights and carpenters, Vancouver, B.C.	208	5,200	Commenced June 2, for increased wages. Underminated.
<b>SERVICE.—</b>			
<i>Public administration.—</i>			
Postal employees, Montreal, Toronto, Windsor and various cities.	3,200	25,000	Commenced June 18, for increased wages. Men resumed work June 30 on employer's terms.

\* Reports indicate that strikers have been gradually replaced since the beginning of the strike.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### 6th International Labour Conference

THE sixth session of the International Labour Conference opened at Geneva on June 16, and concluded on July 5. The Canadian delegates to the conference were announced in the last issue of the *LABOUR GAZETTE*, and the programme was published in the April issue (page 300). Mr. K. Hjalmar Banting, former prime minister of Sweden, was unanimously elected president of the conference on motion of Miss Margaret Bondfield, M.P., Parliamentary Secretary of the British Ministry of Labour, supported by the leaders of the employers' and workers' groups in attendance at the conference. Draft conventions were passed dealing with the subjects of night work in bakeries, weekly rest in glass works, and equality of treatment of foreign workers as to workmen's compensation. It was agreed, however, that these draft conventions should be submitted again for final adoption at the next annual meeting of the conference. A recommendation was adopted relative to the utilization of worker's leisure time, and resolutions were also passed dealing with unemployment, and the protection of workers against anthrax. A full report of the proceedings of the conference will be given in the next issue of the *LABOUR GAZETTE*.

### Canada to Present Doors for International Labour Office Building

An Order in Council was adopted on June 23, on the recommendation of the Minister of Labour and the Minister of Trade and Commerce, authorizing a donation by Canada of the doors on the main floor of the permanent building which is now in course of erection in Geneva for the League of Nations International Labour Office. The intention of Canada was announced at the Sixth International Labour Conference on June 29, by the Canadian Government delegate, Mr. F. A. Acland. At the Third Assembly of the League of Nations, when the construction of this new building was decided upon, the hope was expressed that every member of the League would contribute to the structure by gift of building materials, ornaments, or works of art, representing the most characteristic forms of national production. This appeal has met with ready response, and Japan, Latvia, Italy, Denmark and the Netherlands have already made, or announced their intention of making, contributions. Authority has been granted to the

Minister of Trade and Commerce to arrange for the manufacture of the doors for the building in accordance with plans to be furnished by the architect, and a suitable tablet will be placed in the vestibule commemorative of the gift, and referring to the Canadian materials which will be employed in their manufacture. It is believed that this material evidence of Canadian participation in the great work of the International Labour Organization will bring encouragement to those who are engaged in the work, and that when the edifice is completed and the doors swing open to the world, the materials and workmanship of the doors will attract favourable attention to the Canadian resources and industries represented in their manufacture.

### Great Britain and the White Lead Convention

A bill was introduced in the British House of Commons during the present session for the purpose of giving effect to the provisions of the white lead convention, under the title Lead Paint (Protection against Poisoning) Bill "to make better provision for the protection against lead poisoning of persons employed in painting buildings."

With certain minor exceptions, it prohibits the use of lead paint in painting the interior of buildings and the employment of women and young persons in painting any part of a building with lead paint. It further empowers the Home Secretary to make regulations for the use of lead paint in painting buildings, and in particular as regards the use of lead compounds, the prevention of danger from lead paint in the form of spray, the prevention of danger from dust caused by dry rubbing down, the procuring of facilities for washing during and on cessation of work and for the use of protective clothing.

The Bill lays down penalties in respect of contravention of its provisions and empowers an inspector under the Factory and Workshop Act, 1901, to take samples for analysis of any paint used in the painting of buildings if he suspects that such paint contains a lead compound.

The Act is to apply where persons are employed in painting buildings by or under the Crown in like manner as if the employers were private persons.

The prohibitions contained in the Act are to come into force as from November 19, 1927, and the Act itself is to come into operation on July 1, 1924.

### Additional Ratifications

Seventeen additional ratifications of draft conventions adopted at the various International Labour Conferences were registered shortly after the recent Sixth Conference began, bringing the total number so far registered up to 113. Poland has ratified 13 conventions, namely all those of the 1920 and 1921 sessions, and those of the 1919 session relating to unemployment, minimum age for

industrial employment, and night work of young persons. Japan has ratified the convention of the 1920 session fixing the minimum age for child labour at sea, and that of the 1921 session concerning the medical examination of children and young persons employed at sea. Finally the Irish Free State has ratified the convention of the 1921 session concerning the rights of association of agricultural workers and concerning workmen's compensation in agriculture. The number of ratifications as given in the March issue of the LABOUR GAZETTE was 92 as at that date.

### Employment of Women and Children in Persia

Some time ago the International Labour Office made friendly representations to the Persian Government with regard to the conditions under which women and children were employed in the carpet weaving industry at Kerman and adjacent villages. In due course the Office was informed that steps had been taken to remedy the existing abuses and that more definite measures were pending (see LABOUR GAZETTE April, 1922, page 369; August, 1922, page 850; June, 1924, page 461). The office now learns by a communication from the Persian Minister at Berne that, in

accordance with the decision of the Persian Government, the Governor of the province of Kerman issued a decree dated December 17, 1923, confirming and in some respects extending the previous measures. The new decree provides for a maximum working day of eight hours, holidays with pay on Fridays and festivals, a minimum age of eight years for boys and ten for girls, separate work place for boys and for girls, with forewomen to supervise those for girls, prohibition of the employment of workers suffering from contagious disease, prohibition of underground or damp workshops, provision of windows facing south, disposition of the weaving frame and worker's seat such as to give the best possible working position for the young worker, and monthly sanitary inspection of workshops. The police authorities are instructed to enforce these requirements, any infringement of which is punishable by a fine or imprisonment for a period not exceeding twenty days.

Six of the fourteen provinces of the Argentine Republic have established the 8-hour working day by law. In three provinces the law applies to all work, and in the others to industry, commerce, and with one exception to agriculture, one province limiting the working day in the latter industry to 9 hours.

## ACCIDENTS AT METALLURGICAL WORKS IN UNITED STATES

ACCIDENTS to men employed in the metallurgical industry in the United States in 1922 resulted in the death of 45 men and in injury to 6,678 men, according to reports from operating companies to the Bureau of Mines of the Department of the Interior. The injuries include all that caused disability for more than one day. Based on a standard of 300 workdays to the year, the fatality rate for the year was 0.98 for each thousand men employed; the nonfatal-injury rate was 145.15. The rates for the previous year were 0.76 and 126.74 respectively. There were 44,000 men employed during the year, an increase of 32 per cent over 1921. The average working time per man was 314 days, an increase of 15 per cent; and the total exposure to risk—that is, the amount of labour performed by all employees—was equivalent to 13,802,318 man-days, an increase of 56 per cent over the revised figure for 1921. Of the 6,723 accidents during the year, 0.67 per cent were fatal, 0.03 per cent resulted in permanent total disability, 1.13 per cent resulted in permanent partial disability, 24.17 per cent

caused temporary disability of more than 14 days, and 74 per cent resulted in disability of more than one day but not more than 14 days. For the mills, the accident rates per 1,000 employees were 1.09 killed and 179.51 injured; for smelters, 0.77 killed and 143.71 injured; and for auxiliary works, such as yards, shops, and construction work, 1.21 killed and 120.26 injured. At the ore-dressing plants the outstanding causes of the fatalities were machinery, suffocation in ore bins, fall of persons, cyanide or other poisoning, scalding by steam or water, and electricity. At the smelters the fatalities were mainly due to falls of persons, haulage, and burns from matte, slag, or molten metal, and at the auxiliary works the principal causes were haulage, failure of ladders or scaffolds, and electricity.

According to information published by the International Labour Office, the first International meeting for the Study of Problems of Industrial Hygiene will be held in Geneva, Switzerland, July 18th to 20th, 1924.

## INTERNATIONAL EMIGRATION CONFERENCE AT ROME

A CONFERENCE of various countries was held at Rome during May at the initiative of the government of Italy, to consider certain administrative and technical matters in connection with immigration. The programme for this conference was given in the *LABOUR GAZETTE* for January (page 3). Representatives attended from Great Britain and other countries interested in immigration problems, but there was no direct representative of Canada.

*International Relations.*—Resolutions were passed on the following questions involving international relations: The definition of the terms "emigrant" and "immigrant"; the principles of an emigrants' charter; the principles of international agreements concerning settlement; equality of treatment concerning workmen's compensation for industrial accidents; agreements for the continuation of an emigrants' right to the benefits of social insurance; co-operation of administrative services for the payment of pensions under social insurance laws to beneficiaries residing abroad; and admission of foreign workers to conciliation and arbitration committees.

*Foreign Labour.*—On the subject of the demand for foreign labour, measures on the following subjects were recommended to the countries of immigration: Undesirable emigrants, simplification of passport formalities, state supervision of contracts providing for deductions from wages, the exchange of skilled workers, emigration of intellectual

workers, respect for the religions and traditions of immigrants, principles which should underly labour contracts, exchange of demographical information, regulations for the recruiting of bodies of workers, exchange of information concerning the conditions of the labour market in the countries concerned, identity cards for emigrants, the international co-ordination of statistics, and measures against secret emigration.

*Assistance for Emigrants.*—The Conference recommended that aids should be provided for immigrants by means of hostels at frontier stations, state supervision of emigrants' lodging houses, provision for emigrants to apply to consuls of other nationalities if no consul of their own nationality is available, post cards at reduced rates for emigrants, compulsory deductions from wages for the maintenance of families left in the emigration country, international assistance for war invalids, official information offices, state regulation of agents, associations for assisting immigrants, the publication of an emigrants' code, the participation of immigrants in co-operative societies, and facilitating the giving of legal assistance to immigrants.

Another series of resolutions related to the comfort and health of emigrants while in transit to other countries.

It is proposed to hold a second conference in an "immigration country" in 1927, and that in the meantime the committee of the recent conference should retain headquarters at Rome.

---

## SAFETY RULES FOR ELECTRIC LOCOMOTIVES

THE Board of Railway Commissioners for Canada issued during May a new series of rules and regulations for safety appliances on electric locomotives in road and switching service, supplementing the existing rules for steam locomotives. The new rules were made after representations on the subjects dealt with had been received from the Brotherhood of Locomotive Firemen and Enginemen, the Brotherhood of Locomotive Engineers, the Railway Association of Canada, the British Columbia Electric Railway Company, Limited, Michigan Central Railroad Company, Canadian National Railway Company, Oshawa Railway Company, Canadian Pacific Railway

Company and the London and Port Stanley Railway Company.

Specifications common to all electric locomotives are given, including rules for box steps, electric headlights, brakes, signal lamps, uncoupling levers, and couplers.

Other rules govern the box type of electric locomotive operated by pantograph on main line service, including specifications for platforms, pilots, uncoupling levers and pilot handholds; the box type used in tunnel and switching service with non-platform ends; and the steeple type of electric locomotive in regard to the protecting rail, handholds, foot-steps, footboards, location and pilot handholds.

ground throughout the year was 7,249, the tons mined per underground employee being 893 in 1923, as compared with 971 in 1922, 824 in 1921, and 1,055 in 1920. The *per capita* rate of production was highest in the bituminous field, reaching 1,008 per underground employee.

The number of tons of coal mined per fatal accident during the year 1923 was 312,133, the largest number on record since 1906. The heaviest toll of fatalities was recorded in the bituminous mines, in which 14 deaths occurred, giving 231,544 as the total tonnage mined in this group per fatality. Of the 22 fatalities in 1923, ten occurred in large mines having a

yearly production between 300,000 and 400,000, the remainder being distributed through the smaller mines. Full particulars of each fatality are given in the report.

The number of accidents, fatal, serious and slight, which occurred in the mines of the province during 1923 and in the previous years to 1920, were as follows:—

	1920	1921	1922	1923
Fatal.....	29	21	35	22
Serious.....	53	64	38	44
Slight.....	38	25	35	10

### REPORT OF ALBERTA BUREAU OF LABOUR FOR 1923

THE annual report of the Bureau of Labour of Alberta for 1923 has recently been received by the Department. The Bureau was established under the Bureau of Labour Act of 1922, chapter 80 (LABOUR GAZETTE, July, 1922, page 706). Its functions include inspections under the provisions of the Factories Act, the Minimum Wage Act, the Theatres Act and the Boilers Act. The Bureau also supervises the provincial government Employment Service Office.

The co-ordination of the inspection staff under the Bureau resulted in a more thorough inspection in 1923 than formerly, the Bureau's inspectors being required to make a complete inspection under each of the Acts under its authority, with the result that much of the previous overlapping is now prevented. The period reviewed in the report is from December 1, 1922, to November 30, 1923.

Returns received by the Bureau from 1,009 firms covered 22,220 male employees over, and 373 under 18 years; 2,428 female employees over and 116 under 18, and 264 apprentices. The total payroll for wages and salaries was \$34,285,043, of which sum \$31,047,167 was paid to wage earners. The report states that employment conditions were unusually stable in 1923.

The number of employees in the 2,056 factories inspected during the year was 18,625. The inspectors made numerous recommendations for the safety and health of these workers, also as to wages and hours, and the employment of children. Under the Minimum Wage Act 2,183 inspections were made of 1,974 business concerns, and 462 orders were made to employers to adjust wages and hours. Seven prosecutions were instituted for violations of the act during the year.

One of the tables in the report shows the number of shops, offices and factories at the chief centres of population, with the numbers of male and female employees at each establishment, as follows:—

Places Inspected	Ed- mon- ton	Cal- gary	Medi- cine Hat	Leth- bridge	Smal- ler towns
<i>Shops.....</i>	697	543	73	70	
Male employees.....	2,281	2,547	151	269	
Female employees.....	992	2,029	80	119	
<i>Offices and Office Buildings..</i>	457	344	27	33	
Male employees.....	367	557	9	13	
Female employees.....	357	490	21	19	
<i>Factories.....</i>	109	129	17	12	5
Male employees.....	2,235	4,697	524	233	275
Female employees.....	680	448	46	47	29

Numerous recommendations were made by the Bureau's inspectors for the greater safety of freight and passenger elevators. The gates of many of the former class of elevator were found not to be complying with the provisions of the Factories Act, requiring that where an elevator is operated by hand power the gates must not be less than three feet high, closing automatically.

#### Minimum Wages

The first annual report of the Minimum Wage Board of Alberta forms part of the general report of the Bureau. Before issuing orders the Board makes a practice of holding conferences with the employers and employees, the interested parties being in most cases satisfied to present their case and leave the Board to fix the rates of wages. In some cases however the majority of the conference submitted recommendations as provided by the law. The report discusses the benefits derived from such

conferences. One of the difficulties has been in the selection of employees' representatives in unorganized districts, and in the trouble experienced by these representatives in consulting with the body of employees.

Referring to the reduction from \$14 to \$12.50 a week in the minimum wage rate in manufacturing, laundry and retail establishments, (*LABOUR GAZETTE*, December, 1923, page 1392) the report states:—

It is to be regretted that the members of the board could not come to a unanimous decision in dealing with the orders in question. However, after a very careful consideration of the evidence available,—and it may be said that in the last series of conferences alone, the views of approximately 100 of the parties directly interested were presented,—a majority of the board's members came to the conclusion that, in view of the conditions now prevailing, it would not be wise to bring into effect the \$14 minimum in the industries covered by the orders in question. The industries affected were largely in competition with industries in Manitoba and the Eastern Provinces. In Quebec there is at present no minimum wage, and in Manitoba and Ontario the minimum wage is, generally speaking, considerably lower than the minimum fixed by these orders. The possibility, if not probability, that a higher minimum wage would result in the loss of employment for a considerable number of em-

ployees and short time for a further considerable number could not lightly be disregarded. The orders in question were accordingly rescinded and new orders in which the minimum wage was fixed at \$12.50 per week were issued. In arriving at this new minimum wage, the question of a living wage was carefully considered, and the board believes that the principle generally supposed to be involved in fixing a minimum wage, i.e., the providing of a living wage, has not been lost sight of.

### Steam Boilers

The report of the Steam Boilers' Branch shows a marked increase in the number of inspections made during the year. As the result of a fatality the chief inspector of boilers recommends the prohibition of the use of an extension electric light cord while the engineer is inside a boiler, or in any place where the user must come into contact with moist or damp surfaces. It is stated that two large colliery companies now provide acetylene lamps or electric torches for boiler room purposes. The Bureau's inspectors also use this method and find it effective and safe. Many other technical recommendations were made in the report.

## CONDITIONS IN CERTAIN INDUSTRIES IN NOVA SCOTIA

### Annual Report of Department of Industries and Immigration

THE annual report of the Department of Industries and Immigration of Nova Scotia for 1923 contains information on employment conditions in the province, with particular reference to the industries of agriculture and fishing (The mining industry is the subject of a separate report by the Department of Public Works and Mines). The new settlers in the province during the year included 311 industrial workers and their dependents, 235 farm settlers, 66 boys placed on farms (including 10 on the Dakyene Farm), 27 domestics and 76 houseworkers. These persons, with other classes, numbering in all 921, remained in the province as settlers. Many others passed through the provincial ports, including 3,196 immigrants from Newfoundland, who mostly work in the steel and coal mining centres, the majority however proceeding to the United States. Many of the boys placed on farms and of the household workers were brought out from Great Britain by the agency of the Salvation Army, and are stated in the report to be of a good class. Nova Scotia has a good record in regard to soldier settlement, only about 16 per cent of the soldiers who undertook farming under the Soldier Settlement Act having left their farms.

In regard to the problem of agricultural labour the report states that "the attitude of many farmers toward their help is becoming a serious handicap in attracting and keeping within our province really good men. Some farmers pay good wages and seem to be always satisfied, and get the most for their money. Many, however, do not attempt to compete with Ontario and the Western Provinces in the matter of wages." After quoting the ruling rates of farm wages in Ontario the report proceeds: "It is an exceedingly difficult thing to induce good classes of farm labourers to come to Nova Scotia when the best we can offer for three or four months' work in the majority of cases is a wage of \$25 per month. The average wage offered by farmers during the past season to help brought out by the Department was in the vicinity of \$20." The department expended \$246,039 under the Housing Act during the fiscal year, making a total of \$1,398,420 advanced to the various local housing commissions under that act. The number of houses erected or proposed to be erected under the act is 392, of which 187 houses are in Halifax. The amount of the loan on these houses averages in the neighbourhood of \$3,500.

The report discusses the difficulties under which the fishing industry is now labouring. The shore fishery in the Province is stated to be facing a crisis owing to disproportionate expenses. Once, it is stated, an outlay of \$100 would suffice for a year while the equipping and running of a modern motor boat costs \$1,500 for the same period, not counting loss. Gear must be mostly replaced every spring, and losses from storms made good. For a new boat \$2,000 is not sufficient. The existing freight and express charges are criticized, and the suggestion is made that the regula-

tions which govern the lobster and other fisheries should be passed by Parliament where all interests would be represented, instead of being, as at present, in the form of Orders in Council.

The annual report of the provincial branch of the Employment Service of Canada reported somewhat improved conditions during the period under review, as compared with the previous year. This improvement is attributed in some degree to the exodus of surplus labour to other parts, and to an improvement in the lumbering, mining, and steel industries.

## LEAD POISONING IN INDUSTRY

### Publication by Provincial Board of Health of Ontario

THE Provincial Board of Health of Ontario issued recently a valuable study of existing information on the subject of lead poisoning, with particular reference to the risks incurred by workers in lead and its products, and to the existing medical practice in treating this class of disease. It was compiled by Miss R. M. Hutton of the Division of Industrial Hygiene and is stated to be the first compilation to be prepared in this country on the subject. As the preface states, "such a book is a valuable and indeed a necessary preliminary to the task of controlling lead poisoning in Canada, for it makes available in brief, compact, and clear form the great wealth of practical experience and scientific knowledge of the subject which has been slowly and painfully acquired in other countries."

Lead poisoning, it is stated elsewhere, is the most important industrial poisoning, there being over 150 trades exposing the workers to this risk, including such staple industries as the manufacture of white lead, lead smelting and rolling, the manufacture of storage batteries, pottery and printing. Scientific knowledge of the disease is well advanced, and the experience of other countries shows that both the incidence and severity of lead poisoning may be greatly diminished by regulation of plant conditions and by medical supervision of workers. The present work brings together widely scattered material, and should prove of great service to physicians who are called upon to treat this disease. While mainly intended, however, for use by medical practitioners, it should interest employers and workers since it contains much general information as to individual risks, methods of prevention and facts as to the physiological effects of lead on those who handle it in the course of their work.

### Susceptibility to Poison

The danger of lead is in proportion both to solubility and dustiness, the latter quality being the most dangerous. There are three means for the entry of lead into the system—namely by the respiratory organs (this being by far the most frequent), by ingestion through the mouth and by the skin. Poisoning is caused by the continued daily inhalation of small quantities of lead rather than an occasional or single large dose. The inhalation of two milligrammes of lead daily for some time in the form of fume or dust is enough to produce poisoning. Investigations have shown that workers are very frequently exposed to air containing enough lead to cause the daily inhalation of far larger quantities by inhalation alone. This risk is often increased by further amounts swallowed owing to uncleanness, and in some cases by skin absorption through handling lead. Some persons are more susceptible than others to poison. In the same factory and at the same process workers are found who have been exposed for forty years without poisoning, and others who have contracted poisoning after only a few weeks' work. This wide variation is attributable to personal characteristics in the subject, abnormal susceptibility being due to impaired metabolism, which in turn may be traced to poverty and malnutrition, alcoholic excess, or to the presence of some other disease.

As a general rule, it is found that young persons have a higher susceptibility to poison than adults. Similarly women are more susceptible than men, though some authorities explain this by accidental circumstances, such as greater poverty among women workers, domestic work in addition to their industrial work, clothing, etc. The lead industries in which

women are commonly employed in America include the manufacture of litho transfer papers, finishing of glazed pottery and tiles, soldering tin cans, casting car seals, founding type, labeling paint cans, working with aluminium foil, manufacture of artificial flowers, wrapping cigars in tin foil, and work as commercial artists. There is a fairly general agreement that women are more subject than men to severe forms of lead poisoning, especially in its nervous and mental forms.

### Substitutes for Lead

An interesting chapter deals generally with the prevention of lead poisoning, the main principles that are to be observed being as follows:

(1) Use of substitutes for lead or use of the less soluble lead compounds.\* This section has special interest in view of the draft convention proposed by the third International Labour Conference in 1921, prohibiting the use of white lead in painting. It is stated that "the present tendency of opinion is toward the belief that for interior painting which is not exposed to the weather, zinc paints are as good, if not better, than white lead paints, not only from the hygienic point of view, which was known, but from the commercial. Zinc oxide or zinc sulphide, or a combination of the two, or zinc or lithopone, are the substitutes generally mentioned. Most of the many varieties of leadless paint appearing within recent years on the Austrian market contain iron, but some are compounded with zinc, aluminium, or manganese. In the United States and Canada a great many leadless paints are in use, especially for cheaper grades of painting."

\* The report of a British committee on lead substitutes, etc., was noted in the *LABOUR GAZETTE* for June, 1923, page 580. A report on diseases in the painting industry prepared by the New York section of the Brotherhood of Painters, Decorators and Paperhangers of America was outlined in the issue of January, 1924, page 31, and further reference to this subject is made in the issue of February, 1924, on pages 90-92.

The publication also gives information as to the use of substitutes for lead and its compounds in the textile trades (dyeing and weaving), in enameling porcelain, in the cutting of files, and in pottery.

### Prevention of Dust and Fumes

Recommendations for preventing the formation and circulation of lead dust and fumes include the following:—

Dry lead material should be kept covered, and water sprinkling used freely where possible.

Non-dust producing processes should be substituted for dust producing.

Fumes should be prevented by keeping lead below the fuming point where possible, by avoiding stirring, etc.

Mechanical devices should be employed for keeping the air pure. (A section of the present work outlines the legislative requirements in various countries including Canada, as to proper ventilation. The relevant provisions of the various provincial Factory Acts are shown in a useful table).

Dry sweeping should be avoided. (It is found that this practice is often followed even in plants having elaborate systems of ventilation).

Dangerous processes should be separated from non-dangerous, limiting the risk to workers actually required for a particular process.

Mechanical processes should be substituted for hand processes, reducing the numbers employed, and generally limiting exposure to danger.

Protecting clothing and masks should be provided. In regard to the latter it is found that workers often object to wearing masks, for which muslin is not an adequate substitute. On this point it is stated that "the need of guarding the respiratory organs against dust and fumes is so great that the problem of devising a suitable respirator should not be given up in despair."

### Medical Supervision

As some individuals are more susceptible to poison special care is recommended in selecting and placing applicants for work. The prohibition of women in the most dangerous lead trades, which is based upon the belief above mentioned that women are more susceptible than men, has had a marked effect in reducing poisoning among women, with its concomitant effect of sterility. The practice is recommended of alternating work on dangerous jobs and reducing the period of exposure to risk. For example, an English authority holds that no flue cleaner in smelting works should work more than two hour on end.

Beyond these primary preventive measures there should be frequent medical examination of all workers, lead poisoning being a cumulative disease without marked symptoms in its early stages. "The early symptoms of poisoning, anaemia, constipation and other apparently trifling ailments, do not figure largely among workers' complaints and are not connected in their minds with their occupation. It is only careful questioning by a physician who knows the possible significance of such conditions in lead workers, which will bring them to light."

### Importance of Personal Care

Great importance is placed upon the education of workers as to the need for personal precaution. To this end it is suggested that frequent interviews between the plant physician and the workers should be held, that notices should be posted stating the chief precautions either enforced or advised, that the legal requirements should also be posted, and explanations given in regard to any changes in working conditions which are made in the interest of health.

## UNEMPLOYMENT INSURANCE IN THE UNITED STATES

CONSIDERABLE attention is being directed at the present time in the United States to the subject of insurance against unemployment. So far the chief schemes that have been put into force have been those in the garment industry at Cleveland, Ohio, and the clothing industry at Chicago. (These schemes have been noted in previous issues of the *LABOUR GAZETTE*, June, 1923, page 576; July, 1923, page 705; May, 1922, page 500; July, 1922, page 695, etc.) These plans are based upon the principle of joint contributions from the employer and employee, but without participation by the State, such as is provided for in the British unemployment insurance plan. Another American school of economists would place the entire burden of unemployment insurance upon the employer, on the ground that "unemployment is a disease of industry, and that the burden of curing it should be placed upon the managers of industry".\* Supporters of this form of insurance argue that the enactment of an unemployment insurance law, in focussing the attention of the employers upon methods to combat unemployment, would undoubtedly have the same effect upon unemployment as a similar law—workmen's compensation—has had upon accidents. A bill embodying the principle of compulsory unemployment insurance, with the employers as the sole contributors, has been prepared in the state of Wisconsin under the supervision of Professor J. R. Commons, and an effort is being made by its supporters to educate public opinion from their point of view. It may be noted that the plan of insurance in force in the plant of the Hood Rubber Company at Boston, Massachusetts (*LABOUR GAZETTE*, October, 1923, page 1059) apparently makes the employers the sole contributors. That plan, however, is intended as a remedy for the absence of workers on account of illness, rather than from seasonal industrial unemployment. Mention may also be made of the unemployment relief plan of the Dennison Manufacturing Company of Massachusetts, under which the company has built up an unemployment fund from the profits of the business (*LABOUR GAZETTE*, September, 1922, page 998).

The Merchants' Association of New York recently concluded a study of the various plans that have been tried in the United States. They find that "there is considerable evidence to the effect that this idea of unem-

ployment agreements between the associations of manufacturers and associations of workers is rapidly gaining favour with labour organizations. The United Hat and Cap Makers of North America last fall drew up an unemployment insurance plan similar to the Chicago plan which it will seek to make effective in the principal headwear markets next July, when the present agreements expire, and the Baltimore branch of the Amalgamated Clothing Workers of America is in the midst of laying plans for introducing a similar agreement in the Baltimore clothing market some time in the near future".

The unemployment insurance arrangements of the United Cloth Hap and Cap Makers of North America, mentioned in the preceding paragraph, took effect on July 1 under a two-year agreement signed in New York on June 26 by the Cloth Hat and Cap Manufacturers' Association and representatives of the Union. This agreement contains the following section:—

(1) Recognizing that the industry should assume responsibility to its workers with regard to unemployment and should bear the burden of the hazards of unemployment as an overhead expense, as it does the hazards of fire and accident,—the agreement provides that every manufacturer, member of the Association, shall pay every week to the Union's unemployment fund, a sum equal to three per cent of his total payroll. This three per cent is in addition to the regular wages paid to the workers. Since the distribution of unemployment benefit involves the most intimate relations with the workers, the three per cent payment for the unemployment fund is considered as an increase in wages, but instead of being paid to every individual worker it is paid to them collectively, that is, to their Union. Accordingly the property, control and management of the unemployment fund rests entirely and exclusively with the Union.

The agreement requires the employers to pay their contributions to the Joint Union Council of New York, accompanied by a statement on a form supplied by the Union giving a list of the workers, the wages paid to each, and the total weekly wage payments on which the contribution of three per cent is based. These payments are to start on September 1 of the current year. (The union members employed by manufacturers outside the employers' association went out on strike on July 2 in order to secure benefits similar to those granted by the members of the Association to their employees.)

Compulsory unemployment insurance bills more or less analogous to the British Act have been introduced in various state legislatures, but so far no measure on these lines has passed. A number of industrial concerns have voluntarily adopted unemployment insurance plans providing for the payment of a

\* *American Labour Legislation Review*, June, 1924, page 132.

certain per cent of their regular wages to all employees who are temporarily laid off for lack of work, but in the opinion of the Industrial Bureau of the New York Merchants' Association, the most important of these plans are those known respectively as the "Cleveland" and the "Chicago" plan, already referred to. It will be recalled that under the "Cleveland" agreement, made in 1921 by the Garment Manufacturers' Association and the Ladies Garment Workers' Union, any worker is entitled to draw upon the unemployment

insurance fund after 12 weeks' idleness in any one year. In other words, the employer guarantees forty weeks of work each calendar year (the exact period varies by annual agreement). The agreement, entered into in April, 1923, by the Chicago Industrial Federation of Clothing Manufacturers and the Amalgamated Clothing Workers of America, provided for equal contributions to the fund by the employers and workers, the workers being entitled to receive unemployment benefits up to five weeks in the insurance year.

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

### Summary of Reports of the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics has recently issued reports on the women's factory clothing, the men's furnishing goods, and the tobacco manufacturing industries in Canada during the year 1922, and on the brewing, the paper products and pickle, sauce, vinegar and cider industries during the years 1921 and 1922. Previous reports in this series relating to various industries were outlined in the *Labour Gazette* for June, 1924, and previous issues.

#### Women's Factory Clothing Industry, 1922

The report on the women's factory clothing industry includes only factory production of the articles of women's wear under the following heads: (1) women's factory clothing; (2) ladies' and children's wear; (3) women's neckwear and fancy goods; (4) embroidery and trimmings; and (5) laces, tapes and bindings. Custom clothing, including dress and mantle making and millinery, the collection of which has been discontinued for the present are not included. The total number of establishments reporting during the year was 293, located as follows: British Columbia, 10; the prairie provinces, 9; Ontario, 150; Quebec, 121; and the maritime provinces, 3. There were 192 factories making clothing, 39 ladies' and children's wear, 5 neckwear and fancy goods, 46 embroidery and trimmings, and 11 laces, tapes and bindings.

The amount of capital invested in the industry was \$19,319,394 in 1921 and \$18,788,061 in 1922. Ontario furnished \$11,409,105 of the total for the Dominion, or approximately 60 per cent, and Quebec \$6,773,300 or 36 per cent.

The total production in the industry for 1922 amounted to \$41,653,514, as compared with \$44,669,728 in 1921, a decrease due to a falling market of \$3,016,214 or nearly seven per cent. The cost of materials during the period fell from \$23,189,442 to \$21,840,732, or a decrease of 5.8 per cent. An analysis of the cost of

production for 1921 shows that 29.32 per cent was accounted for in the payment of salaries and wages and 51.73 per cent for the cost value of materials. In 1922, the percentage of the cost of salaries and wages to the total value of production had risen to 31.02 per cent and the cost of materials to 52.43 per cent. The province of Ontario contributed 63 per cent of the total value of production and Quebec 33.3 per cent, and the remaining provinces 3.7 per cent.

The total number of workers employed in the entire industry was 13,458, of which 1,676 were salaried employees, 11,040 were wage earners and 742 were outside piece-workers. Of the total employed, 27 per cent were males and 73 per cent were females. Ontario provided employment to 8,396 persons or 62.4 per cent of the total, Quebec to 4,484 or 33.3 per cent and the remaining provinces 578 or 4.3 per cent. The month of highest employment during the year was March for both males and females there being employed 2,713 males and 9,372 females, whilst that of lowest employment was June in the case of males with 2,407 employed and August in the case of females with 7,899 employed. As compared with the previous year there was an increase of 33 in the number of salaried employees, and of 1,416 wage earners. The amount paid to employees on salaries in 1922 was \$3,494,763 and to employees on wages and piece-workers, \$9,425,991. In 1921 the amount paid in the former class was \$3,755,271 and in the latter \$9,343,340. In the aggregate amounts paid for salaries and wages, there was a decrease of \$177,851, as compared with 1921. The average salary, irrespective of sex, which in 1921 was approximately \$2,286, fell to \$2,085 in 1922, whilst the average wage fell from \$908 in 1921 to \$800 in 1922.

The average time of plants operating on full and part time for the Dominion was 282.42 days and that of employees 8.05 hours per

day and 45 hours per week. In Ontario the plants operated on full and part time an average of 283.59 days per plant, and the average working time of the employees was 7.90 hours per day and 44.55 per week; in Quebec, the days worked averaged 279.11, and the hours per day 8.23 and per week 45.48; in British Columbia, the days worked averaged 285.40, the hours per day 8, and per week 45.60; in the prairie provinces the days worked averaged 298.11, the hours per day 8.89 and per week 44; and in the maritime provinces the days worked averaged 300.33, the hours per day 9 and per week 49.

### Men's Furnishing Goods Industry, 1922

The report of the men's furnishing goods industry shows 53 factories operating in Ontario, 47 in Quebec, 8 in Alberta and Manitoba, 6 in British Columbia and 2 in New Brunswick and Nova Scotia. Twelve of the factories were making suspenders and 10 neckwear, while the remaining 94 were producing other articles of men's furnishings. (Statistics of the industry for 1921 were given in the *LABOUR GAZETTE* for May, 1924, on page 406).

The capital invested in the industry in 1922 amounted to \$17,215,963. Quebec supplied 46.8 per cent of the total investment, Ontario 43.2 per cent, Manitoba and Alberta 9 per cent, and the remaining provinces nearly one per cent. The total gross value of production was \$23,292,716 and in 1921, \$20,874,546. In 1922, the percentage of the cost of salaries and wages to the total value of production was 23.9 per cent, and the cost of materials 54.3 per cent, whilst in 1921 the percentage of the cost of salaries and wages was 19.9 and of the cost of materials, 56.9. The cost of materials rose from \$10,229,398 in 1921 to \$12,643,854 in 1922, although the cost price of the principal materials showed a decline when compared with the previous year.

Salaried employees increased from 708 in 1921 to 871 in 1922, and the salaries paid from \$1,389,669 to \$1,584,531. Wage earners, including outside piece-workers, increased from 3,121 in 1921 to 6,355 in 1922, and the amount paid in wages from \$2,764,546 to \$3,976,721 of which \$65,129 was paid to 340 piece-workers in 1921 and \$55,677 to 258 piece-workers in 1922. A classification of the employees by sex for 1922 shows 632 male and 239 female employees on salaries, 958 male and 5,139 female employees on wages, and 3 male and 255 female employees on outside piece-work. October was the month of highest employment for the males with 985 employed, and December for the females with 5,439 employed, whilst that of lowest employment for both

sexes was January when there were employed 893 males and 4,472 females. The average time each plant operated throughout the Dominion during the year was 285.77 days and the average hours worked per day was 8.14 and per week 45.41. In Ontario the average time in operation was 292.45 days in the year, 8.15 hours per day and 44.94 hours per week. In Quebec the average number of days worked was 277.08, the average hours per day 8.13, and per week 46.02. In British Columbia the days worked in the year averaged 302.50, the hours per day 8, and the hours per week 44.66. In Alberta and Manitoba the days in operation averaged 300.62, the hours per day 8, and the hours per week 43.75. In Nova Scotia and New Brunswick the average number of days the plants were in operation during the year was 203, the average number of hours worked per day 9, and the average hours worked per week, 52.50.

### Tobacco Manufacturing Industry, 1922

In the report on the tobacco manufacturing industry, the statistics are divided into two groups (a) plants whose chief product is cigars or cigarettes and (b) plants whose principal product is smoking or chewing tobacco and snuff. There were 142 factories producing manufactured tobacco in 1922 and of these 108 were manufacturing cigars and cigarettes as the chief product, and the remainder were engaged principally in the production of smoking and chewing tobacco and snuff. The province of Quebec led in both classes with a total of 75 factories, being 52.8 per cent of the total of the Dominion; Ontario had 46 plants or 32.4 per cent and British Columbia had 13 establishments or 9.2 per cent; Prince Edward Island had 3 establishments; Manitoba, 2; Alberta, 1; Nova Scotia, 1; and New Brunswick 1. The value of the tobacco produced during 1922 amounted to \$62,626,960 as compared with \$66,960,250 during 1921. The capital invested in the industry in 1922 amounted to \$43,859,914 of which \$39,590,766 or 90.2 per cent was invested in the province of Quebec. Although there were 23 more factories in operation during 1922 than in the previous year, there was a considerable reduction in the total number of persons employed and the amount of the annual payroll also showed a substantial decrease. For the year 1921 the total number of persons employed was reported at 4,810 males and 4,996 females, their yearly earnings amounting to \$8,599,189. In 1922 there were 3,936 males and 4,638 females employed, who received \$7,423,503 in salaries and wages. Of a total of 8,574 persons employed in 1922, 6,394 (2,932 males and 3,462

females) were engaged in the manufacture of cigars and cigarettes and 2,180 (1,004 males and 1,176 females) in the manufacture of smoking and chewing tobacco and snuff. There were 1,412 (1,124 males and 288 females) employed on salaries; 7,139 (2,800 males and 4,339 females) employees on wages; and 23 (12 males and 11 females) employees on outside piece-work. The amount of wages paid to the piece-workers in 1922 was \$7,917. The average number of idle days in cigar and cigarette factories was 35.1, whilst in smoking and chewing tobacco factories the amount of time lost, due to factories being entirely closed was 26.7 days. The average days labour for wage earners was 8.4 hours in cigar and cigarette factories, and in smoking and chewing tobacco factories 8.7 hours per day. The average number of hours per week was slightly higher in smoking and chewing tobacco factories, being 48.6 as against 47.3 hours in cigar and cigarette factories. For statistical purposes a year is reckoned at 304 working days.

#### **Brewing Industry, 1921 and 1922**

During 1921 there were 55 breweries in operation and in 1922 there were 53. One of the breweries which had ceased operating in 1922 was located in British Columbia and the other was in Manitoba. There were in 1922, 19 breweries in operation in Ontario, 10 in Quebec, 11 in British Columbia, 5 in Alberta, 4 in Manitoba, 2 in New Brunswick and one each in Nova Scotia and Saskatchewan. The amount of capital invested in the industry in 1921 was \$37,645,447 and in 1922, \$34,788,432. Fifty per cent of the total value of the production in 1921, and sixty per cent of the value of the production in 1922, was in the province of Quebec. Ontario came second with 20 per cent of the value of production in 1921 and 21 per cent in 1922, and Alberta next with 12½ per cent in 1922 and 7½ per cent in 1921. In 1921 there were 3,027 persons (2,951 males and 76 females) employed in the industry and in 1922 there were 2,857 persons (2,756 males and 101 females) employed, a decrease of 170, and the annual payroll was reduced to the extent of \$450,373. Although there was a reduction in the number of persons employed in 1922, there was an increase in the number of female employees from 55 to 68 among the salaried employees, and from 21 to 33 in the wage earners. During 1922 there were 31 less persons employed on the office staff, but the salaries paid were larger and required an additional \$51,901. Of a total of \$4,353,613 paid for salaries and wages in 1921, \$3,076,978 was paid in wages, and of a total of \$3,903,240 in 1922, there was \$2,574,884

paid in wages. The average number of days each plant was entirely inactive was slightly higher in 1922, being 9.9 days as against 8.5 days in the previous year. The hours of labour, daily and weekly, remained practically unchanged, 9 hours being the average hours worked per day in both years, and 52.4 being the hours worked per week in 1921 as compared with 52.2 in the following year.

#### **Miscellaneous Paper Products Industries, 1921-1922**

This group includes the manufacture of paper boxes, building and roofing paper, stationery and envelopes, wall paper, waxed and oiled paper, paper patterns, and other miscellaneous paper products. There were 152 plants engaged in these industries in 1922, and 143 in 1921. The capital invested in the industry increased in 1922 to \$26,865,897 from \$25,127,663 in 1921, and the total value of production showed an increase to \$29,387,783 from \$28,502,045 in 1921.

In 1922 there were in the combined industries 1,290 employees on salaries, their salaries amounting to \$2,648,395, and 5,244 employees on wages whose earnings amounted to \$4,253,452. In the previous year there were 1,274 salaried employees, with earnings amounting to \$2,584,805, and 4,950 employees on wages who received \$4,035,252 for their services.

Of the 86 plants manufacturing paper boxes and other containers in 1922, 54 were located in Ontario, 21 in Quebec, 4 each in New Brunswick and Manitoba, 2 in British Columbia and one in Alberta. In 1921 there were 89 plants operating. Some envelopes and other stationery were manufactured as side lines. This group of industries employed 3,478 people of whom 3,006 were wage-earners in 1922 and paid \$3,157,775 in wages and salaries (\$2,134,284 in wages and \$1,023,491 in salaries). In 1921 the total number of employees in the group was 3,325, of whom 2,873 were wage earners, with a total payroll of \$2,895,377 (\$2,002,154 to the wage earners and \$893,223 to the salaried employees). The capital invested in the industry was \$12,153,682 in 1922 as compared with \$11,022,338 in 1921, and the value of the products increased to \$11,233,443 in 1922 from \$10,133,177 in the previous year.

There were 13 firms manufacturing roofing and building paper in 1922 as compared with 14 in 1921, 7 being located in Ontario and 2 each in Quebec, Manitoba and British Columbia. Several of these firms operate paper mills and manufacture their own felts, and others are engaged in tar distillation and produce their own saturation materials. This industry employed 717 people in 1922 (218 salaried em-

ployees and 499 wage-earners), with a payroll of \$1,058,585 (\$486,606 to the salaried employees and \$571,979 to the wage-earners). In 1921 there were 761 employees (213 salaried employees and 548 wage earners), the salaries paid amounting to \$459,497 and the wages to \$659,707. The capital invested showed a decline to \$5,901,306 in 1922 from \$6,368,840 and the value of the products to \$6,565,850 in 1922 from \$7,465,482 in 1921.

In the stationery and envelopes group, envelopes, writing paper and writing pads form the bulk of the products, with some boxes, bags and paper cups as side lines. Of the 16 firms, 11 were located in Ontario, 3 in Manitoba and 2 in Quebec. In the previous year there were 12 firms engaged in the industry. There were 1,110 employees, mostly female in 1922 (263 salaried employees and 847 wage earners). There was paid to the salaried employees \$445,453 and to the wage-earners \$735,369 for their services, making a total payroll of \$1,180,822. In 1921 there were 262 employees on salaries and 708 wage-earners with payrolls of \$471,939 and \$635,199 respectively. The capital invested in the industry was \$3,505,028 in 1922 and \$2,851,801 in 1921, and the value of the products increased to \$4,876,562 in 1922 from \$4,392,161 in 1921.

There were 4 firms manufacturing wall paper in 1922. Two of these were located in Ontario and two in Quebec. In the previous year there were also four firms operating. The industry produced over 18,000,000 rolls of wall paper in 1922, giving employment to 558 people (155 salaried workers and 403 wage-earners), and paying \$403,783 to the salaried workers and \$351,919 to the wage earners or a total of \$755,702. The total capital invested amounted to \$2,499,834 in 1922 and \$2,506,994 in 1921 and the value of the products decreased to \$2,484,783 in 1922 from \$2,983,306 in 1921.

In the waxed and oiled papers group there were 7 factories operating in each of the years, these being located in the province of Ontario. The employees numbered 263 in 1922, with a payroll of \$364,344, including 193 wage earners who received for their services \$220,233. In the previous year there were employed 100 salaried workers and 171 wage-earners, the payroll for the former amounting to \$177,833 and for the latter \$212,237. The capital invested in the industry in 1922 was \$1,417,219 and in 1921, \$1,185,359. The value of the products in 1922 was \$2,103,306 and in the previous year \$1,610,631.

Paper patterns are manufactured in Canada by five factories in Ontario and one in Nova Scotia. In 1922 these firms employed 192 people, 61 salaried workers and 131 wage-earners. The payroll for the salaried workers

was \$71,456, and for the wage-earners, \$120,046. In 1921 there were 56 salaried employees and 134 wage earners, their payrolls being \$74,634 and \$109,607 respectively. The capital invested in the industry in 1922 was \$854,145 and in 1921, \$810,014, and the value of the products was \$1,326,118 in 1922 and \$1,309,567 in 1921.

Firms manufacturing other paper products numbered 20 in 1922 and 11 in 1921. These firms manufactured fly paper, fly poison pads, leather board products, black and brown print paper and cloth, photo mounts and mats, milk bottle caps, merchandise, shipping and alteration tags, labels and tapes. In 1922 there were employed 212 people, 50 salaried workers and 162 wage-earners, the salaries paid amounting to \$73,495 and the wages to \$119,622. In 1921 there were 30 employees on salaries and 119 wage earners with payrolls of \$47,222 and \$69,495 respectively. The capital invested in 1922 amounted to \$534,683 and in 1921 to \$382,317. The total value of the products for 1922 was \$797,721 and in 1921, \$607,727.

#### **Pickle, Sauce, Vinegar and Cider Industry, 1921-1922**

In the pickle, sauce, vinegar and cider industry in Canada there were in operation in 1921 60 factories as compared with 67 in the following year; 39 of these establishments in the former year and 44 in the latter year were located in the province of Ontario and 8 in 1921 and nine in 1922 were in the province of Quebec. There was a decrease in the capital invested in the industry from \$5,806,963 in 1921 to \$5,443,519 in 1922, while the value of the products in the former year showed an increase from \$2,492,475 to \$2,779,606 in the latter. In spite of an additional 7 factories operating there was a decrease in the average number of wage earners to the extent of 54 men and 18 women but the payroll was larger by \$5,867. The office force increased by 6 male and 3 female employees during 1922, but the salary payments show a reduction of \$17,342. There were 194 (164 males and 30 females) salaried workers in 1922, their payrolls totalling \$298,284, and 420 male and 227 female wage-earners with a payroll of \$544,803, and two males and seven females employed on outside piecework who received \$2,100 for their services. In 1921 with 60 factories operating the lost time amounted to 7,267 days or 121.1 days per plant, and the following year with 67 factories the number of idle days was 7,387 or 110.2 per plant. The hours of employment both per day and week underwent no appreciable change being 8.8 per day and 50.2 per week in 1921 and 8.9 per day and 50.7 per week in 1922.

## NOTES RELATIVE TO LABOUR UNION ACTIVITIES

SOME account of recent conventions of labour organizations having branches in Canada is given in the following pages. It will be noted that some of these unions are engaged in the study of unemployment insurance, in the further development of labour banks and other forms of co-operation, in the better regulation of child labour, and other subjects which concern Canada as well as the United States. Some of the resolutions quoted however, have reference to conditions only existing in the United States, such as those on the use of injunctions, the control of the railroads, the proposed child labour constitutional amendment, etc.

### Order of Railroad Telegraphers

The twenty-fourth regular and first triennial session of the Grand Division of The Order of Railroad Telegraphers was held at Cleveland, Ohio, on May 12 to 24, with about seven hundred delegates present representing about 67,000 employees on roads in all parts of the United States and Canada. The Canadian membership in the organization is about 6,000, and there are 13 branches.

A report on The Telegraphers National Bank, which is owned, controlled and operated by The Order of Railroad Telegraphers in accordance with the decision of the Grand Division at the convention in 1921, showed that it had commenced business on June 9, 1923, with deposits in the various funds amounting to \$1,316,483.41. On March 31, 1924, the bank statement showed a total of \$4,187,694.05 on deposit, while total resources had grown to \$4,979,827.15.

The convention approved the following lines of policy:

Support of the non-partisan political movement identified with the "Conference for Progressive Political Action," repeal of the Cummins-Esch law and public ownership of railroads, with democratic operation; reform of the courts by abolishing the practice of nullifying acts of Congress and state legislatures; the abolition of injunctions in labour disputes and of the power to punish for contempt without trial by jury; the enactment of adequate laws guaranteeing to the industrial and agricultural workers the right to organize and to conduct strikes for the maintenance or improvement of their standards of life, and for the protection of organization funds against attacks by capital; amendment of the constitution of the United States so as to confer upon Congress full power to protect children; the creation of a government marketing corpor-

ation, embodying the principles of the Norris-Sinclair bill so as to provide a direct route between farm producer and city consumer, assuring farmers fair prices for their products, and protecting consumers from the profiteers in foodstuffs and other necessities of life; surtaxes on large incomes, and other tax reforms; public ownership of the nation's water power and creation of a public super-power system; public control and permanent conservation of all natural resources, including coal, iron and other ores, oil and timber lands, in the interest of the people; reconstruction of the Federal Reserve System to provide for direct public control of the nation's money and credit, and legislation to permit and promote co-operative banking.

Resolutions embodying the principle of vacations with pay were adopted, as was also a resolution endorsing the "equal rights" policy of the American Federation of Labour, the National Women's Trade Union League, and the co-operating organizations of women. The policy referred to opposes blanket legislation for sex equality on the ground that it would conflict with the 8-hour, 9-hour, 48-hour and other labour laws for women in 47 states, mothers' pension laws in 39 states, and other social legislation. A resolution was also adopted in favour of the creation of a trust fund of at least \$1,000,000 for members who meet with financial distress on account of sickness or other misfortune. This fund will be raised by a semi-annual per capita tax, voluntary contributions, entertainments, etc.; when it reaches the amount of \$100,000, the Board of Directors with the approval of the president will adopt a uniform disbursement system the provisions of which are to apply only to members who have held continuous membership in the Order of Railroad Telegraphers for at least five years.

It was announced that permanent headquarters situated at 3674 West Pine Boulevard, St. Louis, has been purchased for the Order at a cost of \$65,000.

### Switchmen's Union of North America

The triennial convention of the Switchmen's Union of North America, held at Denver, Colorado, from May 12 to 19, was attended by about 400 delegates. During 1923, the organization had 9 branches in Canada and an estimated membership of 316, while the entire membership of the Union was estimated at 8,937.

Funeral benefits for members were increased from \$150 to \$300, the rates being raised so

as to cover the additional payments. The age limit for the "social department" benefits was raised from 55 to 60. Members who are too old for life insurance are eligible for this benefit. The convention urged the importance of stricter safety laws. *Labour*, the weekly journal owned by the sixteen railroad organizations is to be supplied to every member of the Union. All future conventions of the organization are to be held at Buffalo, New York.

The election of officers resulted as follows: president, T. C. Cashen, Buffalo, re-elected; first vice-president, James B. Conors, Chicago; second vice-president, William H. Burt, St. Louis, re-elected; third vice-president, J. D. Murray, Vancouver, B.C. The remaining officers were all re-elected namely, fourth vice-president, John M. Perry, St. Paul; fifth vice-president, Leo V. Kanan, St. Joseph; sixth vice-president, Thomas Clohessy, Chicago; secretary-treasurer, M. R. Welch; editor, W. H. Thompson.

#### **Amalgamated Association of Iron, Steel and Tin Workers of North America**

At the 49th annual convention of the Amalgamated Association of Iron, Steel and Tin Workers of North America, held at Pittsburgh, Pennsylvania, during April, a resolution was adopted abolishing the office of Canadian vice-president until such time as the conditions in Canada warrant its reestablishment. During 1923 there were 9 branches in Canada with a membership of 135, the entire membership of the Association being 14,520. A report to the convention during the fiscal year ended December 31, 1923, showed that the benefit department had handled 1,301 sick and accident claims, 99 members' death claims, and 16 total disability claims, making a total since inception of these features of 19,322 sick and accident claims, 1,585 members' death benefits, 875 wives' funeral benefit and 75 total disability benefit. A report of the wage committee making recommendations as to wage scales for the year 1923-24 was submitted to the convention.

#### **Amalgamated Clothing Workers of America**

This organization, which had 7,715 members in its Canadian units in 1923, held its sixth biennial convention at Philadelphia during May. It was attended by about 300 delegates, representing over 140,000 working men and women in every important clothing centre in the United States and Canada. President Sidney Hilman, whose name is identified with the remarkable development of this union during the past ten years, occupied the chair. The past achievements of the organization on

behalf of its members include the establishment of the 44-hour week for workers in the clothing industry; the founding of a scientific employment bureau, which is under the direction of Mr. Bryce M. Stewart, formerly director of the Employment Service of Canada; the establishment of labour union banks at New York and Chicago; and collective agreements in all important markets. The "Amalgamated" has also made an important contribution toward reconstruction in Russia (*LABOUR GAZETTE*, June, 1922, page 599), and paid out \$100,000 in support of the steel workers in their efforts for better conditions. The convention decided to maintain its policy of co-operation with other needle trade unions by continuing the affiliation of the Amalgamated Union with the Needle Trade Workers' Alliance.

*Labour Banks.*—On the subject of banking and co-operation, it was reported that the Amalgamated Trust and Savings Bank, established in July, 1922, and Amalgamated Bank of New York, established in April, 1923, had proved so successful as to cause a demand for similar banks in other cities. Working people, it was stated, had received much help financially from these institutions and the Executive Board was instructed to extend this service as widely as possible.

*Consumers' Co-operation.*—The convention favoured the development of consumers' co-operation among the members of the Union, this being described as "one of the few means by which the workers may enter into the field of constructive achievement, become acquainted with the problems of administration on a large scale, and acquire training in the the exercise of executive ability together with the sense of co-operative effort for the common welfare."

*Life Insurance.*—The Executive Board was further instructed to prepare details of a scheme for a National Amalgamated Insurance Fund to provide for the families and dependants of deceased members.

*Unemployment Insurance.*—The convention decided to extend the existing system of unemployment insurance. The unemployment fund established by the Amalgamated in Chicago in May, 1923, was reported to be well under way, and to have proved already that "an attack on the problem of unemployment, through an unemployment insurance fund, is entirely practicable." This policy was first followed by the Union as a result of instructions to the Board from the convention held at Boston in 1920 to "devise means to throw the burden of unemployment on the industry."

*Other Resolutions.*—The convention favoured a programme of political action and the formation of a political labour party. The restriction of immigration, as practised in the United States, was subjected to criticism. Other resolutions dealt with the subjects of child labour, and the 44-hour week for clothing drivers. A proposal to raise the amount of local dues is to be submitted to a referendum of the members.

Montreal was selected as the place of meeting of the next convention.

### International Ladies' Garment Workers' Union

The seventeenth biennial convention of the International Ladies' Garment Workers' Union held at Boston, Massachusetts, from May 5 to 17, with about 300 delegates present, marked the twenty-fifth anniversary of the Union, which has an estimated membership of 92,445, including 1,245 in seven locals in Canada. Among the subjects on which special reports were submitted to the convention were workers' education, the International Union Bank (mention of which was made in the LABOUR GAZETTE for January, page 6) and unemployment insurance.

In the report of the educational department for the years 1922 to 1924, it was shown that there had been at the various classes, social activities and outings conducted by the department, a total attendance of 216,903, 6,986 of those attending being registered outside of New York; 12,024 attended the workers' university of the Union and 162,400 the classes in English at unity centres. The attendance at the Jewish courses and single lectures totalled 9,417, and at the Russian 2,065, and 2,375 attended the physical training and health lectures. The same department recommended that more attention be paid in future to mass education; that students of special promise be selected yearly for training as leaders; that more attention be paid to educational activities outside of New York; that free circulation libraries be organized in union offices in every city where there are organizations of the Union; and that more stress be laid upon naturalization work among the Union's members. The children of the Union's members are to be assisted to spend the summer in camps so as to enable them to obtain a more thorough knowledge of conditions of life. The convention also decided to use its efforts to abolish child labour, to raise the age limit for compulsory education, as well as the minimum age of child workers in the United States.

It was announced that the membership of the International Union Bank in the Federal

Reserve system had been approved, and that there had been deposits of \$1,800,000 within the four months of its operation, making total resources of \$2,300,000. It was suggested that the many labour banks should eventually amalgamate and instead of scattering their strength into a number of individual institutions become one powerful bank.

The report of the committee on unemployment insurance was prefaced by a general survey of the unemployment situation both in the United States and in other countries. Plans for insurance that had already been tried in the United States were outlined. The committee favoured a plan proposed by general executive board to the cloak employers of New York, which calls for a guarantee of a fixed period of employment, made secure by the deposit of a certain portion of the employers' payroll weekly, to be used for payments to the workers if the guarantee is not fulfilled; and also that each employer pay an additional percentage of his payroll to a collective industrial fund to provide for those workers who are temporarily out of jobs.

A report on union-owned shops and stores, recommending that the in-coming executive begin immediately to study and work out a plan for the establishment of such co-operative shops, was approved, as was also a recommendation that a policy of sick benefit and family protective insurance be adopted by every local union affiliated with the International, and that the general executive board be instructed to prepare plans on these lines. The executive board was also instructed to work for a labour party and empowered to participate in the conference for independent political action to be held at Cleveland on July 4.

A resolution was adopted to call a conference immediately after the convention between the general executive board and the Amalgamated Clothing Workers of America, to establish the standards of the International Ladies' Garment Workers' Union in the clothing factories where women's garments are being manufactured. It was also decided to raise the *per capita* tax of the International Union from 10 to 15 cents beginning August 15, 1924.

Mr. Morris Sigman was re-elected president and Abraham Baro as secretary-treasurer, and the entire General Executive Board was re-elected.

### Ontario and Quebec Conference of Typographical Unions

The thirteenth convention of the Ontario and Quebec Conference of Typographical Unions met at London, Ontario, from June 12

to 14, 1924. The Executive Committee's report showed that there were nineteen affiliations, including the Mailers' Unions, existing in the organization in the two provinces. There was however, a decrease in the membership during the year owing to adverse trade conditions, and to the fact that many members had transferred their membership from Canadian to United States locals. The industry was reported to be in an unsettled condition, owing in part to the forty-four hour week struggle which still continued in Quebec, Montreal, Ottawa, Toronto, and Hamilton. This dispute, it was reported, had led to the installation of the multigraph machine in certain establishments, and to the displacement of a number of skilled mechanics in the industry. The question of the multigraph machine is to be considered at the coming convention of the International at Toronto.

The abolition of the Sales Tax was favoured by the convention. It was claimed that among the protective measures passed by the Canadian parliament during recent years the most outstanding was the Marking Act which calls for the imprint of the country of origin upon all printed matter imported into Canada.

The convention appealed for closer co-operation between the various crafts in the printing industry. To this end a conference of all the allied printing trades unions of Canada is to be called to assemble in London, Ontario, on September 13 before the annual convention of the Trades and Labour Congress of Canada which meets in that city on September 15. Representation at this conference will be on the same basis as that to the Congress, and invitations will be sent to the chief executive officer of each of the International printing trades unions. The conference will be under the auspices of the Ontario and Quebec Conference of Typographical Unions. The following agenda is proposed for the convention: (1) The state of the industry in Canada; (2) Co-operation of various organizations; (3) Unemployment; (4) Immigration; (5) Protective laws (Marking Acts, Copyright Act, Customs Duties, Workmen's Compensation, Old Age Pensions, etc.); (6) General matters.

Attention was drawn in the report to the correspondence during the year regarding a complaint that the International Typographical Union's lessons in printing are not printed in the French language, and it was decided that this matter should be brought up at the forthcoming convention of the International Typographical Union. It was reported that a printing department had been established in the Montreal technical school. Other matters

that had received the attention of the executive committee during the year were requests to the Dominion Government for granting of the right of peaceful picketing and to the International Typographical Union for increased strike benefits to Canadian jurisdictions. The former request not having been granted, it was decided to approach the government again. With regard to strike pay the Typographical Union had stated that as it was endeavouring to discontinue all strike rolls, the payment of additional benefits would be impossible.

### Ontario Carpenters' Council

The Ontario Provincial Council of the United Brotherhood of Carpenters and Joiners held a session at Kingston last month, when, according to the press report, it was reported that from 2,500 to 3,000 Ontario carpenters had migrated to the United States during the past two years. The standing offer to members of the British Amalgamated Society of Carpenters and Joiners in the province to transfer to the United Brotherhood without loss in standing, was renewed for a year. Only a few British carpenters in Ontario, it was stated, have failed to transfer their membership in compliance with this offer. The convention approved an old age pension scheme, and supported the proposed home to be established in Florida for old union members (LABOUR GAZETTE, November, 1923, page 1,188). It also decided to press for the recognition of the eight-hour day; for the raising from \$40 to \$100 of the maximum amount of wage arrears collectable in the police courts; and for the immediate opening up, by both Federal and Provincial Governments, of as many public works as possible. The Provincial Council which has paid-up membership of 2,768 in 55 local unions, will send the following members to the general convention of the United Brotherhood to be held next September at Indianapolis, when 350,000 carpenters and joiners will be represented—Thomas Brookes, Windsor; T. Jackson, Toronto; and F. Hawley, St. Catharines.

Two Canadian labour organizations will meet during the month of August as follows:

Canadian Electrical Trades Union, Niagara Falls, August 6-8.

Provincial Federation of Ontario Fire Fighters, Peterborough, August 13-15.

Of five international labour organizations having local branches in Canada which will hold conventions during August, one will meet in Toronto. The names of the organi-

zations, with place of meeting and dates, are as follows:

International Brotherhood of Foundry Employees, Chicago, August 4.

International Union of Mine, Mill and Smelter Workers, Denver, August 4.

International Typographical Union, Toronto, August 11.

International Photo Engravers' Union, Los Angeles, August 18-23.

## INTERNATIONAL FEDERATION OF TRADE UNIONS

THE third biennial congress\* of the International Federation of Trade Unions, sometimes called the Second or the Amsterdam International, was held at Vienna during June. Canada was represented by one delegate, Mr. Tom Moore, president of the Trades and Labour Congress of Canada, and Great Britain by eleven delegates. Mr. A. Purcell, chairman of the General Council of the British Trades Union Congress, was unanimously elected president. Other countries represented at the Congress were Austria, Belgium, Bulgaria, Czecho-slovakia, Denmark, France, Germany, Hungary, Italy, Latvia, Luxemburg, Netherlands, Palestine, Poland, Roumania, Kingdom of the Serbs, Croats and Slovenes, and Switzerland.

The Congress expressed regret at the continued absence of the Russian trade union organizations and instructed its executive officers, insofar as might be compatible with the dignity of the Federation, to continue negotiations for the purpose of securing the affiliation of the Russian workers with the organization which had been recognized by the chief trade unions of the world.

*Social Legislation.*—A programme proposed for general adoption in the countries represented at the congress included the following reforms: The introduction of compulsory instruction preparatory to vocational education. Not only should the Universities be open to all, but young persons below the age of 15 years should be prohibited from doing paid work.

Young persons between the ages of 15 and 18 should not work more than six hours a day, and every facility should be given them to attend vocational courses.

Women workers should not work more than four hours on Saturday. They should be prevented from doing night work and should not be allowed to engage in dangerous or unhealthy occupations. They should be entitled to a rest of twelve weeks before and after childbirth.

For workers in general hours of work should never exceed eight per day and 48

per week; night work should be forbidden, except where absolutely indispensable. Wage earners should, every week, enjoy an uninterrupted rest period of 36 hours, and all possible steps should be taken for the safety and well being of the workers.

All labour legislation should be extended to home workers.

The trade union movement demanded freedom of coalition.

Workers in a foreign country should enjoy the same labour conditions and the same liberties as nationals of the country in which they lived.

Unemployment insurance, accident insurance, sickness insurance, etc., should be legally regulated.

Special protective measures should be adopted in favour of seamen.

Effective measures should be taken to meet the housing crisis.

Finally, control by the workers must become a practical reality.

*Eight Hour Day.*—A unanimous resolution on the 8-hour working day was as follows (The Bureau mentioned in the resolution is the permanent office of the International):—

The Congress, holding that the incessant struggle for the eight-hour day and the 48-hour week should be among the first of the preoccupations of any workers' organization, agrees as follows:

(1) A general international campaign shall be prepared, with the following programme:

(a) The maintenance of the eight-hour day;  
(b) The regaining of lost advantages;  
(c) The recognition of the eight-hour day where it does not already exist.

(d) The ratification of the Washington Hours Convention.

(e) The final settlement of the reparations question.

(2) The Bureau and the General Council of the International Federation of Trade Unions are entrusted with the preparation and organization of this campaign. They will work in agreement with the various affiliated organizations in order that account may be taken as far as possible of requirements and possibilities in each country.

\* The congress will henceforth meet every three years.

(3) As regards the establishment of the eight-hour day in countries where it is not in force, a special effort will be required on the part of the national centres in France and Great Britain, in order that they may use all their influence to secure that legal advantages already obtained should be extended to workers in countries under the protectorate of the countries in question.

(4) As regards the establishment and maintenance of the eight-hour day, it will be the duty of the national centres and their affiliated organizations to avoid, in collective agreements, any clause which might prejudice the principle of this reform.

(5) As regards the settlement of the question of reparations, on which depends the reconstruction of Europe and the establishment of a lasting peace, the Congress instructs the Bureau of the I.F.T.U. to take any action within its power to secure the insertion in the final settlement of a clause safeguarding the rights and privileges of German workers.

(6) The Bureau of the I.F.T.U. is instructed to continue the negotiations begun with the Socialist Workers International, with a view to common action with the various Parliamentary groups in favour:

(a) of the ratification of the Washington Hours Convention;

(b) of the passing of legislation on the eight-hour day in all countries which have hitherto avoided this responsibility.

The Congress, being of opinion that the sole means of obtaining success in this connection in the near future is unanimity among the workers, makes an urgent appeal to the workers of the world to reinforce the trade union organization, which will lead them to the practical and complete achievement of the eight-hour day and the 48-hour week.

*Aims of the "International":*—The Congress adopted without discussion a resolution on the subject of the position of the I.F.T.U. in the international workers' movement. The most important passages of this resolution are as follows:—

The position of the I.F.T.U. in the International Labour movement is determined by the attitude, in principles and tactics, of the national trade union centres affiliated with it.

The common aim of the trade unions is to improve the economic and social conditions of the working class by means of organized self-defence. Social reforms on the part of the state, and laws for the protection of the workers, are appropriate means for carrying into effect the efforts of the trade unions in an efficient manner, for fortifying their success and for facilitating their struggle for the abolition of wage slavery.

To lead the political struggle is the task of the political labour party.

Like the employers' organizations, the trade unions also, as the representatives of the economic interests of the workers, exercise their activity within the sphere of political policy. Thereby, however, they do not place themselves at the service of a political party, nor could they make their activity dependent upon such a party. The trade unions must remain independent.

Of all political parties, only the special labour parties which stand for political democracy and socialism have hitherto decidedly supported the claims of the trade unions in parliaments. For this reason, the Socialist parties are in the closest connection with the trade unions.

*Officers Elected.*—The election of officers resulted as follows:—

Chairman: Mr. A. Purcell (Great Britain, replacing Mr. J. H. Thomas, resigned); first vice-chairman; Mr. Jouhaux (France); second vice-chairman: Mr. Mertens (Belgium); third vice-chairman: Mr. Leipart (Germany). Secretaries: Mr. Oudegeest (Netherlands); Mr. Sassenbach (Germany); Mr. Brown (Great Britain).

The next meeting of the Congress will take place at Paris in 1927.

### STRIKES AND LOCKOUTS IN GREAT BRITAIN

THE British *Ministry of Labour Gazette* for June, contains the following table which analyses the disputes in progress in May in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approximate time lost during the month in all disputes in progress:—

Groups of industries	Number of disputes in progress in May			Number of work-people involved in all disputes in progress in May	Aggregate duration in working days of all disputes in progress in May
	Started before May 1	Started in May	Total		
Mining and quarrying.....	7	9	16	22,700	224,000
Metal, engineering and shipbuilding.....	6	11	17	3,800	32,000
Textile.....	2	9	11	2,500	20,000
Woodworking and furnishing.....		2	2	1,500	33,000
Building, decorating, contracting, etc.....	3	6	9	1,400	29,000
Public administration service.....	4	6	10	1,500	27,000
Other.....	8	13	21	2,800	33,000
Total, May, 1924..	30	56	86	36,200	398,000
Total, April, 1924..	21	46	67	51,000	471,000
Total, May, 1923..	41	49	90	48,000	807,000

## LABOUR MEASURES AT LATE SESSION OF PARLIAMENT OF CANADA

REFERENCES have been made in recent issues of the LABOUR GAZETTE to matters of interest to workers that have arisen from time to time in the course of the Parliamentary session just concluded. The principal labour measures, and some of the proceedings in connection with them, are outlined in the following pages. Among these acts is one which gives effect to the Draft Convention of the League of Nations International Labour Organization regarding employment at sea. On the question of the 8-hour day reference is to be made to the Supreme Court of Canada for a decision as to the legislative competence of the Dominion Parliament and provincial legislatures. An act to provide for the superannuation of Dominion Government employees was passed, and the Militia Act was amended

on the lines suggested by the "Robertson Commission" which sat last autumn to take evidence on the calling out of the militia in connection with a labour difficulty at Cape Breton. A bill intended to amend the Industrial Disputes Investigation Act so as to clear up one or two difficulties in connection with its administration led to a disagreement between the Senate and the House of Commons, and had therefore to be dropped, thus meeting the same fate as a similar bill last year. Another important event at the late session was the presentation of a report from a committee recommending the establishment of old age pensions in Canada. This question is to be the subject of discussion during the coming recess between the Dominion and Provincial Governments.

### Canada Shipping Act Amended to Conform with Draft Conventions on Employment at Sea

A bill to amend the Canada Shipping Act so as to include the provisions proposed in the Draft Conventions relating to employment at sea, that were adopted by the International Labour Conference (League of Nations) in 1920 and 1921, was introduced in the House of Commons on July 1 by the Minister of Labour and passed by Parliament. The amending act will take effect on a date to be fixed by proclamation of the Governor in Council.

A series of resolutions proposed by the Minister in the House in May, setting forth the principles now incorporated in the amending act, were given in the last issue of this GAZETTE. The object of the act is to give effect in Canada to the proposals contained in four Draft Conventions of the International Labour Conference (League of Nations) relative to the employment conditions of seamen. The act accordingly provides as follows:—

(1) *Minimum Age for the Admission of Children to Employment at Sea.*—The employment of children under the age of fourteen years on vessels engaged in maritime navigation is prohibited.

(2) *Unemployment Indemnity in case of Loss or Foundering of the Ship.*—It is provided

that in the case of loss or foundering of vessels engaged in maritime navigation seamen employed thereon shall continue to receive payment from their employers of their regular rate of wages during any period of unemployment which may result therefrom not exceeding two months.

(3) *Minimum Age for Admission of Young Persons to Employment as Trimmers or Stokers.*—The employment of young persons under the age of eighteen as trimmers or stokers on vessels engaged in maritime navigation is prohibited.

(4) *Compulsory Medical Examination of Children and Young Persons Employed at Sea.*—It is required that the employment of any child or young person under eighteen years of age on vessels engaged in maritime navigation, other than vessels upon which only members of the same family are employed, shall be conditional upon the production of a medical certificate attesting fitness for such work signed by a doctor who should be approved by the competent authority; it is further provided that the continued employment at sea of such persons shall be subject to repetition of medical examination at intervals of not more than one year.

## Canada and the Eight-Hour Day

An article in the last issue of the *LABOUR GAZETTE* describes the action that had been taken by the House of Commons before June with reference to the Draft Convention adopted at the first session of the International Labour Conference in 1919, limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week. It will be recalled that the House on the motion of the Minister of Labour referred this question to the Select Standing Committee on Industrial and International Relations for consideration as to the question of the jurisdiction of the Dominion Parliament and the Provincial Legislatures. The recommendations of this committee are contained in their final report, which was adopted by them on July 9, as follows—

A Resolution was adopted by the House of Commons on May 23 declaring it expedient that a certain Draft Convention which was adopted at the 1st Session of the International Labour Conference of the League of Nations in 1919 limiting the Hours of Work in Industrial Undertakings to eight in the day and forty-eight in the week should be referred to the Select Standing Committee on Industrial and International Relations for examination and report, having regard to the Labour Provisions of the Treaties of Peace and to the Order in Council of November 5, 1920, dealing with the jurisdiction of the Dominion Parliament and the provincial legislatures.

Your Committee has held several sittings and made a careful examination of the Draft Convention, the Labour part of the Treaties of Peace and the Order in Council of November 6, 1920, dealing with the jurisdiction of the Dominion Parliament and of the provincial legislatures. Evidence was taken with respect to the present position of the eight-hour day in industrial employment in Canada and other countries. Information was presented to your Committee with reference to a Conference which was held in Ottawa in September last between representatives of the Dominion and Provincial Governments which indicated that notwithstanding the view expressed in the Order in Council of November 6, 1920, doubt existed in certain quarters as to the jurisdiction of the federal and provincial authorities, respectively.

It is accordingly recommended that measures be taken to refer the "Draft Convention limiting the Hours of Work in Industrial Undertakings to eight in the day and forty-eight in the week" to the Supreme Court of Canada for hearing and consideration under Section 60 of the Supreme Court Act together with such questions as will serve to secure an advisory judgment from the Court on the jurisdiction of the Dominion Parliament and of the provincial legislatures, respectively.

The foregoing report was adopted by the House of Commons on July 18. The following amendment was moved by Mr. J. S. Woodsworth:—

That the report be referred back to the committee with instructions to add the following words to the said report:

It is further recommended that the government should limit the hours on Dominion works and undertakings to eight in the day and forty-eight in the week.

And further, that the government should submit to the House legislation declaring that such works as may be advisable should be for the general advantage of Canada pursuant to the power by the British North America Act in that behalf provided and thus bring such works within the control of the Dominion for the purpose of limiting the hours of work to eight in the day and forty-eight in the week.

The Hon. James Murdock, Minister of Labour, speaking on the proposed amendment, stated that while personally he might be in hearty accord with it, he was not sure it would involve a recognition of the proper partnership that should exist between the federal and provincial governments. "If the views of my hon. friend from Centre Winnipeg were to prevail," he said, "it would simplify materially the work of the Minister of Labour while he occupies his present position. It would be very much easier for him to say: The eight-hour day applies at Edmonton; it applies on the Welland Ship Canal, and everywhere else. At the present time we have to carefully inquire as to what are the current hours and conditions of labour in the area where the work is to be performed, and then we have to be very careful to see that as nearly as possible we arrive at the current wage and the current hours. Personally I think that under our constitutional rights, yes, and in view of our constitutional restrictions, the action which is now being taken is the proper one if we are going to play the game fairly with our partners, who are the provinces in this confederation. So, regardless of how much I might personally desire to see the amendment proposed by my hon. friend prevail, I do not think that it would be fair at this particular time to go to that extent, and I hope the House will finally adopt the report which was submitted to it by the Committee on Industrial and International Relations."

The amendment was subsequently withdrawn by its mover, but a second amendment was subsequently moved, containing the same proposals in reference to working hours on Dominion public works. The Speaker ruled that this second amendment was out of order as it was substantially the same as Mr. Woodsworth's, already disposed of, and could not be accepted without the unanimous consent of the House, which was not forthcoming.

The Rt. Hon. Arthur Meighen, speaking on the subject of the report said that the question of the merits of the eight-hour day was not before Parliament. This had been recognized by the labour part of the Treaties of Peace, to which Canada was a party. It

was, therefore, necessary that the government should show this country's loyalty to the Treaty engagement by striving earnestly toward the goal. Unless an earnest effort was made towards realizing the eight-hour day, it would be better for Canada seriously to consider getting out from under the provision of the Geneva convention.

The Prime Minister said that "the broad principle of the application of the eight-hour

day is embodied in the report of the committee, and it is to enable this Parliament to appreciate more clearly exactly where its jurisdiction begins and ends in the matter that the committee are taking the first step necessary to have that settled once for all in the only manner in which these matters can be settled, namely, by judicial determination in the last analysis."

### Use of Militia in Industrial Disputes

An act to amend the Militia Act in regard to the calling out of the active militia in aid of the civil power was among the measures passed at the late session. This act was based on principles that were stated in a note in the last issue of the *LABOUR GAZETTE*. It was designed to give effect to recommendations made by the Commission appointed in September last year to inquire into the industrial unrest among the steel workers at Sydney, Nova Scotia. The provisions of the bill were explained by the Minister of National Defence in the House of Commons on July 16 as follows:—

Under the law hitherto the militia could be called out upon a requisition made either by the mayor of the community in which the difficulty arose or by

a judge, who was empowered to issue to the officer in command of the military district a requisition for the supply of certain troops. The officer in command thereupon proceeded to call out the troops and they remained till the trouble was over. The commission recommended that there should be another intervening party in addition to the judge, namely, the attorney general of the province. The theory on which the legislation is put forward is that the duty of preserving order in any particular province in the administration of the criminal laws rests in the hands of the attorney general. In some provinces there are provincial police but in others there are not. Another situation has arisen which has to be taken into consideration. During a considerable number of years the cost of maintaining the troops who were called out has fallen upon the municipality in which the disturbance takes place. But in practice that provision has been nugatory and the cost of the troops has not been collected. Under the law now proposed the province in which the difficulty arises will be liable for the expense.

### Proposed Amendments to Industrial Disputes Investigation Act

A bill to amend the Industrial Disputes Investigation Act was introduced in the House of Commons on March 12 by the Honourable James Murdock, Minister of Labour, and was passed by the House at the end of the same month. In the Senate, however, a further amendment to the Act was added to the bill, involving a new principle to which the House of Commons would not agree. This conflict of opinion between the two Houses continued in spite of a conference of representatives of the Senate and House of Commons, and resulted in the dropping of the bill. In the Senate the measure was explained by the Honourable Senator Dandurand and was strongly upheld by him.

The amending bill contained three sections, affecting respectively sections 15, 57 and 58 of the Act. The first section relates to cases in which the employers and employees have been unable to come together because one of the parties has refused to enter into negotiations, the amendment providing that a sworn declaration to this effect by the employer, or by the workers' representatives, shall afford sufficient grounds to the Minister to proceed with the forming of a board of conciliation

and investigation. The Senate agreed to this section without a division.

Section 2 was designed to amend the Act by placing clearly upon the party desiring the change the full responsibility for making an application for a board of conciliation. Section 57 of the Act, to which this section applies, requires that the relations of the parties concerned are to remain unchanged pending proceedings before a board. The amendment consists in the addition of a clause providing that "it shall be unlawful for the employer to make effective a proposed change in wages or hours, or for the employees to go on strike," until the dispute in question has been finally dealt with by a board; and in the further provision that "the application for the appointment of a board shall be made by the employers or employees proposing the change in wages or hours." This section was finally agreed to by a vote of 28 to 15.

An amendment to this section of the amending bill, proposed by the Honourable Senator Béique, was defeated by a vote of 31 to 13. This proposed amendment was explained by its mover as intended to give the employers or the employees "the right to change the

conditions of employment after giving 30 days' notice to the other parties," the decision of the Board to be retroactive. Senator BÉRIQUE'S proposed amendment was as follows:

It shall be unlawful for any employer without the consent of a majority of the employees evidenced in writing, signed by them or their authorized representatives or for any employee to make any change in the conditions of employment with respect to wages or hours, unless the party making the change has within thirty days before doing so applied for the appointment of a Board to which the dispute shall be submitted and, as regards wages, the Board may declare its decision retroactive to any date not anterior to that on which the change was made. On the failure of either party to abide by the decision of the Board, the other party may have recourse to a strike or lock-out as the case may be.

Criticizing Senator BÉRIQUE'S proposed amendment the Honourable Mr. DANDURAND said that it would result in a situation in which "the employer would give notice to the employees that he had applied for a Board, and that 30 days hence he would reduce the wages. The Board would then have to be organized, start its sessions, hear witnesses, and, if it had not succeeded in bringing the parties to an adjustment of their difficulties within those 30 days, then when the fatal hour intervened the conditions would be changed, the wages would be lowered, and the next day there would be a strike—just what the act was to prevent".

In the course of the discussion on this section the Honourable Senator ROBERTSON, former Minister of Labour, explained that the proposed amendments contained in the bill were intended to meet the requests of the railway employees that the act should be so changed as to apply equitably to all parties concerned. The railway employees made this request after the railway companies had, in 1921, forced upon the railway employees of Canada—about 200,000 in number—a loss of over two million dollars. While the employers had been able to reduce wages the employees had hitherto, when they desired an increase, followed the procedure laid down in the Act. After discussion among themselves the employees would open negotiations with the employer after giving him the required 30 days' notice. If an agreement had not been reached at the end of that time the employees had to apply for a Board. For seventeen years, he said, they had complied with that law, and waited until the matter was referred to a Board, and the Board had made its report as the law required.

In the course of the discussion the Right Honourable Sir George E. FOSTER, in opposing Senator BÉRIQUE'S proposal, paid the following tribute to the value of the Industrial

Disputes Investigation Act as a reconciling force in the community:—

Everybody knows, and it has been acknowledged on both sides of this House, that from 1907 there began on the labour side a spirit of gradual approach towards the contemplation of that law as a thing which might be advantageous to labour and under which employees might work for their own benefit. They were absolutely suspicious of it at first, and they remained to a certain extent suspicious of it year after year, but gradually they overcame their prejudices, lost a good deal of their suspicion, and came to work under the law as well, I think, as any body of men have been induced to work under any law. They have, in the main, kept the spirit of the law. They have obtained its advantages and have suffered whatever disadvantages came to them through their compliance with the statute. Therefore we find today a mightily improved spirit as between these two vast sections of our people, upon whose good relations with each other depends so much that third body of the people, the main body, who are always affected one way or another by these disputes between capital and labour.

Section 3 of the amending bill, amending section 58 which is the penalty section of the Act, so as to conform with the change in Section 57, was passed without division.

The Honourable Senator BEAUBIEN next proposed to limit the operation of the Act in regard to mines, to coal mines. This proposal was defeated by 18 votes to 13.

### Judges as Arbitrators

On the third reading of the amending bill the Honourable W. R. ROSS moved the following amendment, which was identical with an amendment moved last year by the Honourable G. LYNCH-STAUNTON, and which had been proposed in committee by the Honourable Senator L. C. WEBSTER, and been defeated on a vote of 16 to 14:—

4. (1) Subsection 2 of section eight of the said Act is hereby repealed and the following substituted therefor:

"(2) If either of the parties fails or neglects to duly make any recommendation within the said period, or such extension thereof as the Minister on cause shown grants, the Chief Justice of the province in which the dispute arose, or, if there be no such Chief Justice in that province, the Chief Justice of the highest court of last resort in civil matters in that province, or, in any case where the dispute did not arise in one province only, the Chief Justice of the Supreme Court of Canada, shall as soon thereafter as possible appoint a fit person to be a member of the Board; and such member shall be deemed to be appointed on the recommendation of the said party."

(2) Section 4 of the said section eight is hereby repealed and the following substituted therefor:

"(4) If the members chosen on the recommendation of the parties fail or neglect to duly make any recommendation within the said period, or such extension thereof as the Minister on cause shown grants, the Chief Justice of the province in which the dispute arose, or, if there be no such Chief Justice in that province, the Chief Justice of the highest court of last resort in civil matters in that province, or, in any case where the dispute did not arise in one province only, the Chief Justice of the Supreme Court of Canada, shall as soon thereafter as possible appoint a

fit person to be a third member of the Board, and such member shall be deemed to be appointed on the recommendation of the other two members of the Board."

(3) The following is hereby added to the said section 8 as subsection 6 thereof:

In subsections 2 and 4 of this section the expression, "Chief Justice" includes any judge duly authorized as and for the Chief Justice.

In support of the proposal Senator Ross said he had examined the arbitration acts in all the provinces of Canada and in Great Britain, and in every case, with the exception of the province of Quebec, it was provided that if the parties concerned cannot agree on an umpire, the appointment was to be made by a court. He claimed that the third man on a board should be "as impartial as it is possible for a man to be". "If the position of Minister of Labour", Senator Ross continued, "is occupied by a man in sympathy with labour, or if the government of the day is leaning that way, labour will in all probability have an advantage in the selection that would be made".

The proposed amendment was strongly opposed by the Honourable Mr. Dandurand and by the Honourable Mr. Robertson, who stated that the resulting delays in the operation of the Act would render it ineffective. On a division, however, the amendment was carried by a vote of 42 to 22, and the bill thus amended, was read the third time and passed.

#### Non-Concurrence by House of Commons

The Senate amendments were rejected by the House of Commons on July 7, on the ground that they introduced a new feature in the bill, and would complicate rather than simplify procedure in connection with the administration of the Act.

The Minister of Labour, in moving the vote of non-concurrence in the Senate's amendment, made a statement similar to that made by him in 1923 when the same course was taken by the House of Commons. This statement was in part as follows:—

The statute as it stands provides for the selection of a chairman by joint agreement when possible of the other two members of a conciliation board, and requires that, where no agreement is reached, the minister shall make the necessary appointment. In about one-half of several hundred boards which have been established a chairman has been secured by agreement. It had become a general though not invariable practice for the Minister of Labour, when called upon to appoint a chairman, to select a judge, but this practice ceased when two or three years ago the Judges' Act was so amended as to prohibit the acceptance by a judge of the fees ordinarily payable to a chairman or member of a conciliation board. It is true that the Minister of Labour is not under the Judges' Act, as it has been amended, prohibited from asking a judge to act as a chairman, nor is a judge apparently prohibited from accepting a chairmanship; but

since fees are no longer payable in such circumstances to a judge, it has not been thought reasonable as a rule to request a judge to undertake the duties involved in a chairmanship; such duties, it will be understood, are frequently of a severe and arduous nature and in nearly all cases are of the highest moment to employers and to large numbers of workmen, as well as frequently to the public. In two cases since the amendment of the Judges' Act, judges have been however, appointed, once by the Minister of Labour of the late administration and once by the present Minister of Labour, but in the latter case the appointment was made on the joint recommendation of the other board members. In both cases the judges concerned accepted from a sense of public duty; no fees were of course paid them. It may be said that there is every advantage in a chairman being secured by joint agreement and the Minister of Labour appoints a chairman with reluctance. Inquiry shows that this has been the case with most previous ministers. The chances of an agreement are manifestly increased when a chairman is secured by joint request of other board members. The method or system, however, under which different Ministers of Labour have made appointments has not been the subject of any known criticism, and certainly the files contain no communications requesting or suggesting a change in the present practice.

The objections to the system laid down in the Senate amendment are obvious. In the first place, the appointment of a chairman by a Chief Justice, whether the Chief Justice of a province or of the Supreme Court of Canada, would entail inevitable delay. Such delays would be particularly unfortunate since, despite every effort under present procedure, one side or other of the disputing parties is sometimes disposed to object to the time necessarily occupied in procedure. In the second place, a Chief Justice or other judge cannot possibly be as intimately seized of the nature of the dispute involved and of the particular type therefore of man wanted for the chairmanship as would be the Minister of Labour, who has established the board and has been in touch with details of procedure from its inception. It would be impossible to convey to a judge at a distant point by correspondence, which would of necessity be as a rule by telegraph with consequent serious expenditure and some danger of inaccuracy, all the particulars which should be properly at hand to enable the judge to reach a correct conclusion as to the type of person apparently best suited for the important duties involved. The judge would exercise his best judgment and the appointment might or might not prove to be a good one. In any case the minister who is charged with the administration of the statute would be freed from responsibility on this most vital aspect of administration and the judges would become involved in the technicalities of departmental procedure. Since a considerable proportion of the disputes dealt with under the statute extend to two or more provinces, the task of naming the chairman of conciliation boards would under the proposed Senate amendment fall most frequently to the Chief Justice of the Supreme Court, who from the nature of his functions may be presumed to be furthest removed from contact with industrial disputes and necessarily therefore the more dependent on the advice of others as to the type of person best suited for a chairman in a particular case. Despite the high legal and other attainments which a Chief Justice would undoubtedly possess, it is submitted that, in addition to the complication and delays in procedure which the proposed system of appointing chairmen would entail, the suggested change would be highly detrimental to the successful administration of the statute.

The Senate, on the return of the bill from the House of Commons, resolved, by a vote of 34 to 10, to insist upon their amendments, for the following reasons:—

The amendments of the Senate must be read with the other amendments to the Industrial Disputes Act which impose heavy penalties in certain contingencies. The employer and the employees will each have a representative on the board, and it is in accord with natural justice that the third arbitrator should be chosen as far as is legislatively possible, by a method that will guarantee an appointment free of political

or economic influences. The amendment is fair and just to both parties to disputes arising under the Industrial Disputes Act.

A free conference was subsequently held between representatives of the two Houses, in order, if possible, to effect a compromise in regard to the Senate's amendments. No agreement or understanding, however, was reached as a result of this conference, and accordingly the bill was dropped.

## Civil Service Superannuation

An act to provide for the superannuation of civil servants was passed by parliament toward the close of the late session. The act was based upon a recommendation contained in the report of the special committee appointed for the purpose of inquiring into the operation of the Civil Service Act (1918-19, chapter 12), which report had been presented to the House of Commons on June 22, 1923. The committee's recommendation regarding superannuation was as follows:—

### Committee's Recommendations

"The general principles on which modern superannuation schemes are based appear to be fairly definitely agreed upon. The basis most favoured is that under which both the employees and the employer contribute to the support of the scheme, the entire cost as a rule being borne approximately equally by both. The benefits derived or provided for include allowances on retirement after attainment of a stipulated age; allowances to widows and minor children in the event of the death of the employee during service or after retirement, the widow's allowance being usually one-half of the employee's allowance; and allowances to the employees on retirement from disability regardless of age. There is also usual provision made for the return of the employee's contributions without interest in the event of his voluntary retirement after a minimum period of service had been rendered.

"Your committee is of the opinion that the adoption of a superannuation scheme substantially on the lines of that above described would remove one of the greatest deterrents to efficiency and curtailment of staffs in many of the departments of the public service and it therefore commends that such a scheme be adopted by parliament at the earliest possible date."

### Provisions of Act

Mr. James Malcolm, chairman of the special committee which made the above report, outlined the provisions of the bill when it was under consideration in the House of Commons on July 3 as follows:—

1. The bill will apply to whole-time permanent civil servants receiving an annual salary of \$600 or over.

2. The rate of contribution is 5 per cent of the salaries, limited to the first 35 years of service.

3. The superannuation age is 65 optional and 70 compulsory, with a modification applicable for the next ten years to persons now 60 years and over.

4. The superannuation allowance, assuming at least ten years' service, is one-fiftieth of the average salary for the last ten years multiplied by the number of years of service, not exceeding 35. This applies to new appointees. The committee recommends that a change be made in this provision as regards those already in the service, reducing the time from ten to five years.

5. The retiring allowance available after ten years' service on disability or retirement from abolition of office is computed on the same basis as the superannuation allowance.

6. The withdrawal allowance available after ten years' service on voluntary retirement is the total amount of contributions without interest.

7. The widow's allowance is one-half the allowance the contributor received or would have received if superannuation had been payable at the time of death.

8. The children's allowance is 10 per cent of the contributor's allowance payable to each child until age 18, the total children's allowance not to exceed 25 per cent of the contributor's allowance if the widow survives. If the widow does not survive each child's allowance is 20 per cent, the total children's allowance not to exceed 50 per cent of the contributor's allowance.

9. In the event of disability or abolition of office before ten years' service has been rendered, a gratuity of one month's pay for each year of service may be granted, and, in the event of retirement on marriage being required, a gratuity of the contributor's contributions without interest. In the event of death in the service before ten years' service has been rendered a gratuity equal to the disability gratuity is payable to the widow and children.

10. In the event of dismissal from the service at any time the contributor's contributions may, in the discretion of the Governor in Council, be returned without interest.

The foregoing applies primarily to persons hereafter entering the service. Provision is made, however, for the optional transfer to the new scheme of permanent employees now in the service.

11. Persons now under the Retirement Fund having contributed thereto for their whole period of service may, at their option elect to come under the new act, and on such election the amount now standing to their credit in the Retirement Fund is transferred and they will become entitled to all the benefits of the new act to the same extent as if it had been in force from the date of their entry to the service. If they have not contributed for the full period of service the non-contributing period will be counted to the extent of one-half in computing all the benefits but such period may be counted in full on payment of arrears of contributions without interest.

12. Persons now on the Superannuation Fund may, at their option, elect to come under the new act, and on such election contributions, if any, will be there-

after at the rate of 5 per cent and the period for which contributions have been made to Superannuation Fund No. 1 or No. 2 will be counted in full in computing the contributor's superannuation and retiring allowances but only to the extent of one-half in computing widow's and children's allowances. Such period may be counted in full for the latter allowances on payment of the arrears of the difference between the rate actually contributed and 5 per cent. The period of service, if any, in respect of which contributions have not been made to the Superannuation Funds will be counted only to the extent of one-half in computing all allowances, but may be counted in full on payment of arrears of contributions at the rate of 5 per cent without interest.

13. Permanent civil servants who have never contributed to either Retirement Fund or the Superannuation Fund may, at their option, elect to come under the new act and on such election they shall thereafter contribute at the rate of 5 per cent and their period of service shall be counted for all allowances to the extent of one-half, but may be counted in full on payment of arrears of contribution at 5 per cent without interest.

14. In all cases arrears of contributions may be paid in one sum or in equivalent instalments as may be prescribed by regulation.

It is believed that the cost of the benefits proposed by the bill will be equally borne by the contributor and the government; that is, that the government's share of the cost will be 5 per cent of the salaries. There will be in addition an initial liability created in respect of the past service of persons now in the service who elect to come under the provisions of the act. The amount of this liability will depend upon the numbers transferring, their length of service and their dependents. On being ascertained, the amount of this initial liability can be extinguished by an annual charge extending over the probable period of service remaining to those contributors.

That amount can be spread over a period of 25 or 30 years. In the case of the British Local Government scheme it extends over 40 years.

The bill as originally introduced in the House of Commons was amended in the

House in some of its provisions, the principal amendments being as follows: The term "dependents" was defined as including the father, mother, brother, sister or child of a contributor, dependent on the contributor for support. The value of living and residential allowances, but not bonuses, etc., is to be included in the calculation of salary. If a deceased contributor leaves no widow or child, the Governor in Council may grant to his dependents an amount equal to his contribution without interest. Temporary employees in positions under the Civil Service Commission were placed on the same footing as permanent employees, that is, by contributing five per cent of the salaries received during the period of their temporary service. Employees working under certificates of temporary employment were excepted.

The House of Commons amendment in reference to temporary employees was modified when the bill came before the Senate. The Senate considered that an injustice was done to permanent employees who were required by the Act to pay into the fund not only a contribution of five per cent of their salaries, but also four per cent simple interest on that amount. Accordingly the act was amended so as to require the temporary staff to contribute not only five per cent of their salaries for the number of years of their service, but interest at the rate of four per cent as well. This amendment was accepted by the House of Commons, and with this change the Act was finally passed by both Houses.

## Conference to be Held on Old Age Pensions

The special committee of the House of Commons appointed last April to make an enquiry into an old age pension system for Canada presented its second and final report on July 1. Earlier proceedings of this committee were noted in the last issue of the LABOUR GAZETTE (June, page 477). The committee's final report was as follows:—

Your committee has inquired into the systems which are in operation in England, Australia, New Zealand and certain other countries, examined witnesses, carefully considered their suggestions, and compared the information obtained from thirty-one municipalities throughout Canada, in reply to a questionnaire sent to one hundred and thirty-five mayors of cities and towns in every province.

This question has been before this House at different times since 1907, but no definite recommendation was made by any of the communities to which it was referred.

After careful consideration of the information obtained from the sources enumerated, your committee respectfully recommends:

1. That an old age pension system be established at the earliest possible date for deserving indigent persons to seventy (70) years of age and upwards.

2. That applicants for pension must be British subjects of at least twenty (20) years' residence in Canada, or naturalized subjects of at least fifteen (15) years' naturalization and twenty-five (25) years' residence.

3. (a) That the maximum rate of pension be twenty (\$20) dollars per month which will be lessened by private income or partial ability to earn:

(b) That one-half the amount of pension payable be borne by the federal government; the other half, by the provincial governments of such provinces as express by legislation their desire to adopt the system—the cost of administration to be borne by the provincial governments.

Your committee has estimated that under such a system there would be approximately 98,841 eligible pensioners, and that if all of these were to receive the maximum rate of pension, namely, twenty (\$20) dollars per month, the federal government's portion of the total yearly expenditure would amount to \$11,860,920. This amount, however, would be reduced by any private income or partial earnings.

Your committee further recommends that the government communicate with the various provincial governments to ascertain if they are disposed to adopt the above system and enact the necessary legislation.

Your committee also begs to recommend that its proceedings together with the evidence taken, be printed as an appendix to the journals of this House.

For the information of the House, a copy of the proceedings and evidence, a synopsis of the communications received from the municipalities, and a statement of the expectation of life prepared by the Department of Insurance, are appended to this report. All of which is respectfully submitted.

The Prime Minister announced in the House of Commons on July 16 that in view of the recommendations contained in the foregoing report, the Dominion Government would during the coming recess communicate the report to the Provincial Governments and ascertain for the information of Parliament what action, if any, they are prepared to take with reference to its recommendations.

**Municipal Poor Relief**

In the course of their proceedings the committee issued a circular letter to 135 mayors of cities and towns throughout Canada where measures of relief had been instituted for the aged poor, in order to ascertain their views as to the desirability of establishing a federal pension system, and also to secure particulars as to local systems of poor relief. The information thus obtained as to local conditions may be summarized in the following table, which is based on information given in the committee's report:—

	Approval of federal pensions	Number of persons over 65, qualified for federal pensions	Number relieved by municipality in 1924, with amount paid to each	Number maintained in institutions, with cost
Brandon, Man.....	Yes.....	Not known.....	10 men, 7 women.....	5 men, 8 women (costs \$1,500 per year).
Brantford, Ont.....	Yes.....	85 men and 95 women.....	35 persons. 70 cents per day or \$20 per week.	18 men, 17 women besides others in philanthropic institutions.
Campbellton, N.B.....	Yes.....	About 20.....	10 or 12 persons receiving \$3 to \$5 per week.	Not stated.
Farnham, Que.....	Yes.....	3 men, 4 or 5 women.....	3.....	7, at \$10 to \$12 per month.
Fernie, B.C.....	Council's opinion divided.	10 to 20.....	None.....	3 at cost of \$700 per year.
Grand' Mère, Que.....	Yes.....	Not stated.....	Not stated.....	Not stated.
Hull, Que.....	Not stated.	Not stated.....	Not stated.....	15 men, 4 women 35 cents a day each.
Lethbridge, Alta.....	Yes.....	10 women, 9 men.....	10 women, 9 men, 60 cents a day each.	Not stated.
Magog, Que.....	Yes.....	6 men, 4 women.....	2 men and 2 women.....	4 men and 2 women.
Medicine Hat, Alta.....	Yes.....	Not known.....	13 men, 11 women, \$8 to \$30 a month each.	None.
Moncton, N.B.....	Yes.....	Not known.....	About 40 (occasional relief).	14 persons (municipal home costs \$6,000 a year).
New Westminster, B.C.....	Yes.....	About 50 (more women than men).	5 men and 8 women, about \$10 per month each.	2 men and 2 women in hospital at \$2.50 a day each; One man in private ward at \$20 a month; 5 men in Provincial home costing \$283 per month.
Ottawa, Ont.....	Yes.....	Not known.....	60 men, 76 women.....	88 men, 171 women, at about \$3.50 a month each.
Paris, Ont.....	Yes.....	Not stated.....	2, about \$20 altogether..	2 men, 3 women in House of Refuge at 14½ cents per day each.
Pembroke, Ont.....	Yes.....	About 9 men and 6 women...	One man at \$26 a month (several others privately maintained).	6 inmates of County House of Industry.
Peterborough, Ont.....	Not stated.	449 men; women not known. Not all these are unprovided for.	8.....	11 men and 7 women at \$3.50 per week; 5 men and 18 women in House of Providence to which lump sum is paid yearly.

	Approval of federal pensions	Number of persons over 65, qualified for federal pensions	Number relieved by municipality in 1924, with amount paid to each	Number maintained in institutions, with cost
Port Arthur, Ont.....	Yes.....	Not known.....	4 men and 8 women, from \$10 to \$25 a month each.	4 men and 2 women in homes, one at \$75 per year and the rest at \$150 a year.
Portage la Prairie, Man.....	No.....	11 men, 10 women.....	2 men and one woman, costing \$500 a year in all.	2 men and one woman at 50 cents a day each.
Regina, Sask.....	Yes.....	Not stated.....	5 men and 3 women, costing about \$30 a month.	3 men and 2 women at \$1 a day.
Prince Albert, Sask.....	Yes.....	Not stated.....	8 to 12 each year at about \$1 a day.	3.
St. Catharines, Ont.....	No.....	Not stated.....	About 100.....	12 men and 7 women in institutions; 2 women boarded out. City paid \$6,092 in providing homes for the aged.
St. Stephen, N.B.....	Yes.....	Not stated.....	One man at \$20 a month	2 in hospital, besides 5 or 6 men and more women supported privately.
Stellarton, N.S.....	Yes.....	Not stated.....	3 women, costing \$16 a month.	
Sussex, N.B.....	Not stated.	Not stated.....	2 men, one at \$1 a day, the other at \$3 a week.	None.
Three Rivers, Que.....	Yes.....	Not stated.....	7 men and 20 women at 50 cents a day.	38 men and 69 women at 45 cents a day each.
Westmount, Que.....	Yes.....	194 men; number of women not known.	Not stated.....	One woman in hospital.
Woodstock, Ont.....	No.....	Not known.....	One man and one woman at \$2 a week each.	8 men and 5 women; cost to city \$2.50 a week.
Saskatoon, Sask.....	Yes.....	Not stated.....	6 men and 5 women....	5 men and 3 women at Wolseley Home at \$1 a day each.
St. Lambert, Que.....	Yes.....	Not stated.....	None.....	None.
Sault Ste. Marie, Ont.....	Not stated.	Not stated.....	Very few.....	Very few.
Brantford, Ont.....	Yes.....	About 100 men and women...	About 50 at about \$10 a month.	50 men and 30 women, costing \$5 per week.
Charlottetown, P.E.I.....	Yes.....	140 men and 155 women.....	About 147 aided by societies, but none by municipality.	37 men and 44 women.
London, Ont.....	Yes.....	About 3,000 men and women over 65, but not all destitute	About 35, costing probably \$2,500 a year.	20 men and 15 women at 75 cents a day, 16 men and 7 women at \$1.50 a day, besides those in private institutions.
St. Thomas, Ont.....	Yes.....	Not known.....	None.....	15 men and 7 women, in private institutions.
Winnipeg.....	Yes.....	Not known.....	101 men and 47 women assisted by Social Welfare Commission.	42 men and 21 women at 50 cents a day from city and same from Province.
Montreal.....	No.....	No information other than in Census.	Old men's homes are supported by private charity assisted by municipality, 90% of the homes administered by religious communities.	

## NATIONAL CONFERENCE OF SOCIAL WORK

THE National Conference of Social Work, which held its forty-first annual meeting at Toronto from June 25 to July 2, provided those interested in social work in Canada with an unusual opportunity for becoming acquainted with American social workers, their problems and methods, and the progress being made in their solution. Canadians have for some years taken part in the annual conference, but not since 1899 have the sessions been held in Canada. The registration showed over 3,000 delegates in attendance, of whom 660 were Canadians.

Taking advantage of this occasion, the Canadian committee organized an "all-Canadian" programme for three afternoons, in order that fuller opportunity might be given the social workers of this country to discuss matters of special interest to them.

The programme for the National Conference, whose President was Miss Grace Abbott, chief of the Children's Bureau of the United States, provided for the division of the delegates into ten sections according to the subject in which they were interested. Each morning, the various groups studied problems relating to children, delinquency, health, the family, industrial and economic problems, neighborhood and community life, mental hygiene, the organization of social forces, public administration and the immigrant. General sessions were held in the evening and were addressed by two or three prominent speakers.

### Centralizing Social Work

Rt. Hon. Sir George E. Foster, in welcoming the members of the conference to Canada, referred to the greatly increased sense of social obligation, the application of practical business methods to social service, and the enlargement of organizations engaged in social work from the status of purely local bodies to that of international bodies. "These things," he said, "indicate that the world today is mobilizing all its common aspirations and hopes under one general direction."

In the section on industrial and economic problems, the subjects discussed included the ethical forces in raising standards in industry, workers' education, the stabilization of industry against unemployment, rehabilitation of industrial cripples, labour legislation and the means by which standards may be maintained.

The report made by a sub-committee on the ethical forces in advancing standards in industry emphasized the value of joint ma-

chinery for the settlement of differences, the education of the workers, and the voluntary efforts of employers, together with higher social ideals on the part of the press, colleges, churches and associations.

The progress made in workers' education in Canada was outlined by H. G. Fester, President of the Ontario Workers' Educational Association, and the educational work among the lumbermen by Rev. Alfred Fitzpatrick, Principal of the Frontier College.

Efforts to cope with the problem of unemployment in the United States and Canada were reviewed by Dr. J. B. Andrews, Secretary of the American Association for Labour Legislation, and by Prof. Gilbert E. Jackson, of the University of Toronto. Dr. Andrews laid stress on the schemes to prevent unemployment that had been adopted by certain industries in the United States. These efforts are experiments made by individual industries which are paving the way for the adoption of effective measures for the stabilization of all industry. Prof. Jackson paid a tribute to the Employment Service of Canada for its placement of workers and for the publication of statistics and other information regarding the labour market, but he considered a closer co-operation between the federal, provincial and municipal authorities necessary for effective dealing with the problem. Some provision for the promotion and transfer of employment officials was desirable if the services of experienced men were to be retained.

A report was submitted on behalf of a sub-committee by Dr. J. W. MacMillan, Chairman of the Minimum Wage Board of Ontario, on interprovincial co-operation in labour laws. Dr. MacMillan reviewed the methods by which the federal authority could assist the provinces in promoting higher labour standards. These were by taxation, regulation of interprovincial trade, conference, subsidies, enabling legislation, setting of standards and the publication of statistical and other information. At the same session Miss Mary Anderson, Director of the Women's Bureau of the United States Department of Labour, discussed the problem of federal and state co-operation in the administration of labour laws.

### "All-Canadian" Sessions

The "all-Canadian" sessions were devoted to short addresses designed to give a survey of recent developments in social work in Canada, the topics being child and family

welfare, juvenile courts, liquor traffic, labour legislation, community organization, mental hygiene, immigration and the training of social workers. Dr. J. A. Amyot, Deputy Minister of Health at Ottawa, reviewed the steps taken by the Dominion Department of Health to co-operate with the provincial authorities in promoting better health. Miss Elizabeth MacCallum, Associate Secretary of the Social Service Council of Canada, made a plea for fuller statistical information in regard to many matters that are of social interest and Mr. S. A. Cudmore, Chief of the General Statistics Branch of the Dominion Bureau of Statistics, explained the organization of the Bureau and outlined the fields that were being covered at the present time. A committee was chosen to draw up a statement

of the needs of Canadian social workers in the matter of statistics, and to take steps to place it before the proper provincial and federal authorities.

A resolution was put forward by Prof. C. A. Dawson of McGill University in favour of an annual Canadian conference of social workers at which all organizations interested in social questions would be represented, and which would provide the same opportunity for discussion of Canadian problems that the National Conference of Social Work provides for Americans. The part taken by Canadians in the larger conference is necessarily small, and the speaker felt that the time had come for similar action in Canada. The proposal was referred to a committee for further consideration and report next year.

---

## ACCIDENTS IN INDUSTRIES OF ONTARIO

**R**EPORTS from the factory inspection branch of the province of Ontario show a total of 2,483 industrial accidents reported to the branch during the first six months of 1924. Of these 420 occurred in January, 429 in February, 497 in March, 383 in April, 451 in May, and 303 in June. There were 19 fatal accidents during the half year. No fatalities were reported in the month of June.

Of the total accidents reported, 949 occurred in the metal trades, 700 in the pulp and paper factories, 246 in transportation, and 115 in the textile industries. Machinery and its connections were responsible for 579 of the accidents, 11 of the fatalities being due to this cause. Falling substances caused injuries to 469 persons which in two cases proved fatal. There were 297 persons injured by falls, death resulting in two instances from this cause. Being "crushed between articles" caused injuries to 215 persons, and in one case the injury resulted in death. There were 161 persons injured by burns and scalds, death resulting in one case. One fatality was caused by an elevator and one by cars. Sprains and strains caused injuries to 182 persons; hand tools, to 148; flying missiles, to 95; hooks, chains and cables, to 34; cranes and derricks, to 10; elevators, to 14; electricity, to 5; and explosions to 3 persons. There were 114 cases of infected wounds, and 42 injuries due to "foreign substances in eyes."

The total number of accidents reported to the Workmen's Compensation Board of Ontario during the first six months of the year was 28,204; of these 23,890 came under Schedule 1 of the Act, 2,395 under Schedule 2 of the Act; and 1,919 were Crown cases. There were 171 fatalities reported.

---

One effect of the work of the League of Nations International Labour Organization has been to stimulate organized effort in various countries by all parties concerned, to reach solutions of the most outstanding labour problems. Conferences were recently held in Great Britain, under the auspices of the labour department of the British League of Nations Union on the subject of industrial hygiene and safety, and on unemployment. The proceedings of the latter conference are to be published among the Studies and Reports issued by the International Labour Office (Geneva), and will be noted in a future issue of this GAZETTE.

---

The Toronto District Labour Council is represented, with many other social organizations, on the advisory board of the industrial school at Bowmanville, Ont., a new institution which is being established under an act passed at the last session of the Ontario Legislature.

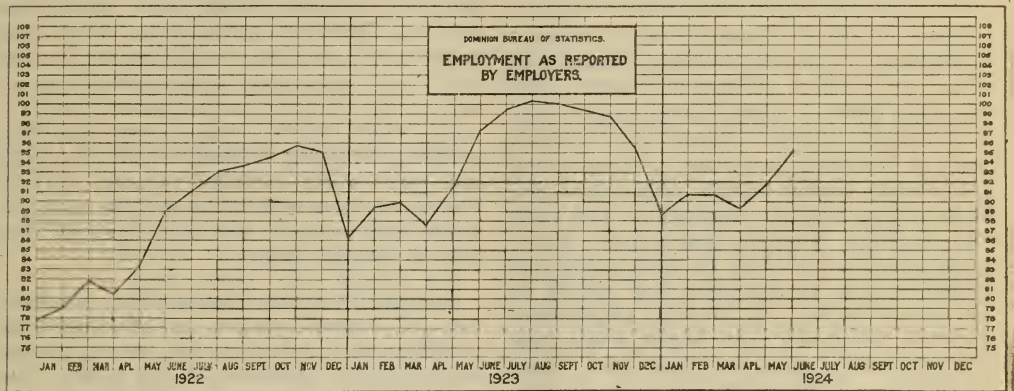

## THE EMPLOYMENT SITUATION AT THE BEGINNING OF JUNE, 1924, AS REPORTED BY EMPLOYERS

**E**MPLOYMENT showed a further upward movement at the beginning of June, when some 26,700 workers were added to the pay-rolls of the reporting firms. While this expansion was more pronounced than that indicated in the preceding month, it was considerably smaller than the increase registered on June 1, 1923. The curve in the chart that accompanies this article illustrates the upward trend recorded during the month under review, as well as the more sharply upward movement followed during the corresponding period of last year, which brought the level of employment then to a higher point than on June 1, 1924. This is the first month since the early spring of 1923 that the index num-

ber of employment, based upon the number employed in January, 1920, as 100, has not been above the level shown in the corresponding month of the preceding year. The situation, however, continues to be better than in either 1922 or 1921.

forces from 66,157 at the beginning of May to 67,615 on June 1. An important share of this gain of approximately 2 per cent occurred in fish canning and preserving plants, in lumber mills and in the construction industries; in all of these the improvement was seasonal. Logging and transportation on the other hand showed contractions, also seasonal, and coal mining afforded less employment. In Quebec there was an increase of nearly 6 per cent; 1,304 employers reported 220,884 persons as compared with 208,354 on May 1. Manufacturing as a whole, logging, transportation, construction, mining, services, communication and trade all reported heightened activity, that in logging being due to river-drives. Textiles

ber of employment, based upon the number employed in January, 1920, as 100, has not been above the level shown in the corresponding month of the preceding year. The situation, however, continues to be better than in either 1922 or 1921.

Statements were tabulated by the Dominion Bureau of Statistics from 5,965 firms, employing 785,714 persons on June 1 as compared with 759,026 at the beginning of May. The index number stood at 95.2 as compared with 91.8 on May 1, 1924, with 97.3, 89.2 and 86.6 at the beginning of June, 1923, 1922 and 1921, respectively. Manufactures, communication, transportation, construction and maintenance and services registered considerable expansion and trade also showed improvement.

Employment in all provinces increased on the whole; the largest gains were in Quebec and the smallest in British Columbia. According to returns from 559 firms in the Maritime Provinces, they enlarged their working

forces from 66,157 at the beginning of May to 67,615 on June 1. An important share of this gain of approximately 2 per cent occurred in fish canning and preserving plants, in lumber mills and in the construction industries; in all of these the improvement was seasonal. Logging and transportation on the other hand showed contractions, also seasonal, and coal mining afforded less employment. In Quebec there was an increase of nearly 6 per cent; 1,304 employers reported 220,884 persons as compared with 208,354 on May 1. Manufacturing as a whole, logging, transportation, construction, mining, services, communication and trade all reported heightened activity, that in logging being due to river-drives. Textiles

showed the declines incidental to this time of year and leather, iron and steel were also slacker. In Ontario, 2,718 firms reported the addition of 7,600 persons to their working forces, employing 327,660 persons at the beginning of June. Manufacturing as a whole showed curtailment, largely on account of contractions in iron and steel and textiles, while lumber mills and some other branches in this division were busier. Employment in logging, metallic ore mining, transportation, construction and retail trade was in greater volume than in the preceding month. The gains of over 6,700 persons in construction were most noteworthy. In the Prairie Provinces the working force of the 753 firms making returns stood at 99,905 as compared with 95,020 at the beginning of May. Seasonal activity in construction, particularly in the railway division, accounted for a very large share of this improvement of about 5 per cent. Transportation, hotels and restaurants, and

sawmills also indicated a more favourable situation, while iron and steel, logging and coal mining reported curtailment. Activity in British Columbia showed a slight increase, chiefly in construction, fish canneries and metallic ore mines. Shipping and stevedoring, logging, pulp, paper and lumber, on the other hand, recorded contractions. The index number of employment in these areas are shown in the following table:—

NUMBER EMPLOYED JANUARY, 1920=100

District	Relative Weight	June 1 1924	May 1 1924	June 1 1923	June 1 1922	June 1 1921
Maritime provinces.....	8.6	90.0	88.1	93.9	87.4	89.5
Quebec.....	28.1	99.9	94.1	99.1	88.1	83.4
Ontario.....	41.7	92.1	89.8	96.8	87.8	84.9
Prairie Provinces.....	12.7	94.1	89.4	95.5	92.8	91.1
British Columbia.....	8.9	103.4	102.9	100.4	96.6	93.3
Canada.....	100.0	95.2	91.8	97.3	89.2	86.6

Three of the six cities for which separate tabulations are made—Montreal, Ottawa and Winnipeg—reported increased activity, while the other three—Toronto, Hamilton and Vancouver, showed declines. The greatest improvement in Montreal took place in shipping and stevedoring; electric current, edible plant products, communication, construction and trade also registered increased employment. Statements were received from 723 firms, employing 110,682 persons as compared with 106,137 in the month before. In Toronto employment declined moderately; the largest losses took place in textile, glass, iron and steel works, but there were also minor reductions in some other industries. On the other hand, gas works were busier, and construction showed improvement. Eight hundred firms reported a total payroll of 93,327 persons as against 93,893 at the beginning of May. There were comparatively small additions to staffs in a number of industries in Ottawa, notably construction. Statements were received from 125 firms, employing 10,788; this was 401 or 3.9 per cent more than at the beginning of May. Textile and iron and steel establishments in Hamilton showed fairly large declines, according to returns from 199 employers, who reported a combined payroll of 25,385 persons. On May 1 they had employed 26,334 persons. In Winnipeg the most pronounced gain was recorded in construction, while trade was rather less active. The working force of the 287 employers making returns in Winnipeg aggregated 23,582 as compared with 23,446 in the preceding month. Curtailment in shipping and stevedoring principally caused the reduction in Vancouver, where 610 persons were

released by the 233 reporting firms who employed 21,913 persons on June 1. Construction in that city was more active. The following table shows the index numbers of employment by cities:—

City	Relative Weight	June 1 1924	May 1 1924	June 1 1923	June 1 1922
Montreal.....	14.0	96.2	92.3	95.4	85.9
Toronto.....	11.9	85.2	85.6	89.9	86.6
Ottawa.....	1.4	101.6	98.3	109.6	
Hamilton.....	3.2	83.1	86.4	94.6	
Winnipeg.....	3.0	83.6	83.0	87.1	92.5
Vancouver.....	2.8	99.7	102.2	94.7	97.9

### The Manufacturing Industries

A further upward movement was indicated in manufactures as a whole, but the increases were very much less extensive than those recorded at the beginning of June 1923, when the index number stood about five points higher. During the period under review, fish canning and smoking establishments, lumber mills, pulp and paper, brick, electric current and mineral product works showed improvement, while leather, cotton, thread, knitting, garment, chemical, automobile and other iron and steel works recorded reduced activity. Statements were received from 3,899 manufacturers, who enlarged their staffs by 3,374 persons to 437,559 workers.

ANIMAL PRODUCTS—EDIBLE.—The continuation of seasonal activity in fish preserving establishments and in dairies, caused further large additions to payroll in this group. The improvement was fairly generally distributed over the country, that in the Maritime Provinces and British Columbia being most noteworthy. The 204 firms making returns reported 15,019 persons on payroll as compared with 13,410 at the beginning of May. This increase of about 12 per cent compared with a gain of approximately 14 per cent during the corresponding period of 1923. Employment then, however, was in slightly less volume than at the present time.

LEATHER PRODUCTS.—Further moderate declines were indicated in boot and shoe factories at the beginning of June, chiefly in Quebec. Reports were compiled from 201 manufacturers of leather goods, employing 16,758 persons as compared with 17,259 in the month before. The difference was a decline of nearly 3 per cent. Contractions on a somewhat smaller scale had been indicated at the same period of last year, when the index number stood rather higher than on June 1, 1924.

**LUMBER AND PRODUCTS.**—Employment in sawmills continued to increase extensively, while wooden vehicle works were somewhat less active. The improvement registered, however, was not so pronounced as during the corresponding period of last year. Employment in this division then was better than during the month being reviewed. A combined working force of 53,791 persons was recorded by the 725 firms making returns, who had 46,409 names on their payrolls at the beginning of May.

**PULP AND PAPER PRODUCTS.**—Pulp and paper mills reported increased activity, but the production of miscellaneous paper goods declined. Statements were received from 457 firms, employing 51,338 persons as compared with 50,534 on May 1. Quebec and Ontario firms registered the bulk of this 1.6 per cent expansion, while in British Columbia curtailment was indicated. Additions to staffs on a much larger scale had been recorded on June 1, 1923; the index number then stood several points higher than at the present time.

**PLANT PRODUCTS—EDIBLE.**—Fluctuations in different divisions coming under this head resulted in a net increase of 10 persons in the payroll of the 302 reporting concerns. They employed 24,780 workers. Sugar and syrup, fruit and vegetable canneries afforded more employment, while starch and glucose and confectionery works were slacker. The situation at the beginning of June of last year had shown more pronounced improvement, and the index number then was somewhat higher than during the month under review.

**TEXTILE PRODUCTS.**—The trend of employment in this division continued downward. Contractions had also been registered on June 1, 1923, but activity then was greater. Thread, cotton, woollen, knitting and garment works recorded reductions in personnel on the date under review. Reports were compiled from 563 employers, with a combined payroll of 65,535 persons, as compared with 67,948 on May 1.

**CHEMICALS AND ALLIED PRODUCTS.**—There was a decline in the employment afforded in chemical and allied product plants, chiefly in Ontario. According to returns from 115 firms, they employed 6,549 persons as compared with 6,683 on May 1. Employment was in rather less volume than on June 1, 1923.

**CLAY, GLASS AND STONE PRODUCTS.**—Brick factories, chiefly in Quebec and the Prairie Provinces, registered improvement. This was, however, on a smaller scale than that indi-

cated on June 1, 1923. A combined payroll of 9,255 persons was recorded by the 116 reporting firms, who had employed 9,001 in the preceding month.

**ELECTRIC CURRENT.**—The production of electric current afforded more employment, 714 persons being added to the payrolls of the 88 firms making returns. They employed 11,989 persons. This expansion, which occurred mainly in Quebec and Ontario, was more pronounced than that indicated at the beginning of June, 1923, when employment was not so active.

**ELECTRICAL APPLIANCES.**—The trend of employment in this industry was rather unfavourable. Thirty-three employers registered a total payroll of 8,809 persons or 151 less than in the previous month. Works in Ontario recorded the bulk of this decline. Decreases on a somewhat smaller scale had been indicated during the corresponding period of last year, but the index number then was several points lower than on June 1, 1924.

**IRON AND STEEL.**—Lowered activity was indicated in iron and steel works at the beginning of June, mainly in automobile, railway car and machine shops, in foundries, steel shipyards, wire, structural iron and steel works and rolling mills. The largest decline occurred in Ontario, but the tendency was downward in all provinces except British Columbia. Statements were received from 642 manufacturers, employing 122,150 persons as compared with 126,257 at the beginning of May. Moderate improvement had been indicated at the same period of last year, and the situation then was somewhat better than at the present time.

**NON-FERROUS METAL PRODUCTS.**—An aggregate payroll of 11,527 persons was reported by the 108 firms making returns in this industry, who employed 11,724 on May 1. Factories producing lead, tin, zinc and copper articles showed declines in personnel, largely in Quebec. Additions to staff had been indicated by the firms making returns for June 1, 1923. At that time the index number was higher.

**MINERAL PRODUCTS.**—Firms in Quebec and Ontario recorded increased activity in this industry, chiefly in gas and petroleum works. Reports were compiled from 73 employers, with a total payroll of 9,987 persons as compared with 9,672 at the beginning of May. This improvement of over 3 per cent was very similar to that registered at the same period of 1923, but the situation then was not so favourable.

## Logging

In spite of considerable additions to staffs in Quebec and Ontario, due to river-drives, there were moderate reductions in the employment afforded in logging camps on the whole. The payroll of the 221 firms making returns declined from 20,938 on May 1 to 20,571 at the beginning of June. This decrease is in contrast with the large increase that had been reported at the beginning of June, 1923, although employment at the present time is slightly better.

## Mining

COAL-MINING.—Fairly general declines were reported in coal mining at the beginning of June, when 734 persons were released from the payrolls of the 92 operators making returns. They employed 28,010 persons. The trend of employment on June 1, 1923, had been upward; the index number then was rather higher than during the month being reviewed.

METALLIC ORES.—Metallic ore mines in Ontario and Quebec afforded more employment than in the month before, the 44 reporting firms having enlarged their payrolls from 13,192 on May 1 to 13,662 at the beginning of June. Employment also increased on the same date of last year, but conditions then were not so good.

NON-METALLIC MINERALS (OTHER THAN COAL).—Moderate but general improvement was recorded in this industry; the greatest increases took place in quarries in the Maritime Provinces. Returns were tabulated from 72 employers, with a combined working force of 6,216 persons as compared with 5,968 in the month before. Employment during the corresponding period last year was rather more active.

## Communication

Increased employment was afforded by the 168 firms making returns in the communication industries. Telephones reported most of the gain. A combined working force of 22,626 persons was indicated, as compared with 22,312 in the preceding month. Expansion had also been shown on June 1, 1923, when the index number was over seven points lower.

## Tranportation.

STREET RAILWAYS AND CARTAGE.—Slight additions to payroll were registered in all provinces by the reporting firms, 105 of which employed 19,324 persons or 173 more than on May 1. Increases on a larger scale had been recorded on June 1, 1923; the index number then stood slightly higher.

INDEX NUMBERS OF EMPLOYMENT  
BY INDUSTRIES

(Numbers employed Jan., 1920=100)

Industry	Relative Weight	June 1, 1924	May 1, 1924	June 1, 1923	June 1, 1922	June 1, 1921

**STEAM RAILWAYS.**—Further improvement was shown by the operation departments of the railways, chiefly in Quebec, Ontario and the Prairie Provinces. Very little change was indicated in British Columbia, while the Maritime Provinces reported the declines usually recorded in transportation at this time of the year. The payrolls of the 101 companies and divisional superintendents making returns totalled 76,758, or 1,462 more than at the beginning of May. The situation was slightly better than on June 1, 1923, when augmented activity had been shown.

**SHIPPING AND STEVEDORING.**—Substantial expansion in Quebec and Ontario more than offset reductions in employment in the Maritime Provinces and British Columbia and caused a net increase of 3,186 persons in this division. Sixty-two employers indicated a working force of 15,288 persons. Additions to staff had also been registered during the corresponding period of last year, when employment was in rather less volume.

### Construction and Maintenance

**BUILDING CONSTRUCTION.**—Statements received from 301 contractors, showed that they employed 22,831 persons as compared with 19,410 at the beginning of May. All provinces shared in this expansion of about 18 per cent, which brought the index number substantially above its level on June 1, 1923. Marked improvement had also been shown at that time.

**HIGHWAY CONSTRUCTION.**—Employment in this industry in all provinces showed further seasonal increases, 3,409 persons having been added to the payrolls of the 92 firms reporting. As they employed 7,766 workers on June 1, this was an expansion of about 78 per cent.

**RAILWAY CONSTRUCTION AND MAINTENANCE.**—There was another large increase in the number employed on railway construction and maintenance in all provinces. The gains in the Prairie district and Ontario, however, were

the most noteworthy. Reports were compiled from 30 concerns and divisional superintendents, with a combined working force of 45,242 persons, as compared with 34,524 in the preceding month. The seasonal increases indicated on June 1, 1923, had given work to a slightly larger number of persons, and the index number then stood 2 or 3 points higher.

### Services

**HOTELS AND RESTAURANTS.**—The reopening of summer hotels in Quebec and the Prairie Provinces, together with slight improvement elsewhere, caused an 11 per cent increase in the employment afforded in this division. Statements were received from 72 employers, whose staffs aggregated 7,726 persons as compared with 6,953 in the month before. This gain exceeds that indicated during the corresponding period of last year, when employment was not so good.

### Trade

Another moderate increase in employment was shown in the trade division; this repeats that indicated during the same period of 1923. The index number then, however, was very slightly lower than during the month under review. While most of the improvement occurred in retail stores in Quebec and Ontario, wholesale establishments on the whole also recorded increased activity. The 602 employers in this group making returns employed 55,587 persons as compared with 55,318 on May 1.

The table on page 588 gives the index numbers of employment by industries as at June 1 and May 1, 1924, and June 1, 1923, 1922 and 1921. As usual, the first column shows the proportion of employees in each industrial group in relation to the total number of workers reported in all groups for the month under review. (The number of workers employed in January, 1920, by the reporting firms equals 100 in every case.)

## Woman and Child Labour in China

According to information published by the International Labour Office, China is rapidly undergoing a far-reaching change in the industrial and economic life of her people. A striking feature of this change is the growing extent to which women and children are employed in modern factories. It is generally estimated that in cotton mills nearly 40 per cent of the workers are women, 40 per cent are children, and only 20 per cent are men. Many children of 8 and 9 are admitted into

factories and even some under 7 are known to be at work. In silk filatures in Central and South China, nearly all the workers are women and girls, but boys between 10 and 20 are largely used in North China. In Chefoo, of the 21,000 women and girls employed in industry, about 18,000 are in the hair net, lace and embroidery industries. Taking all branches of industry together, probably 15 per cent of the employees are women, 20 per cent boys and girls under 14, and 65 per cent men.

## EMPLOYMENT OFFICE REPORTS FOR MAY, 1924

THE offices of the Employment Service of Canada reported that approximately the same volume of business was transacted during the month of May, 1924, as during April, there being fewer opportunities for employment, while applications increased slightly. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half month periods, shows an increased registration of applicants during the first half of the month, followed by a slight drop. The downward trend in the curves of vacancies and placements reflects the slackness in employment, generally due in part to unfavourable weather. The reports from the offices show that the average number of applications reported daily during the first half of May was 1,818, as compared with 1,771 during the previous period, and with 1,887 during the same period a year ago. During the latter half of May applications averaged 1,524 daily, in contrast with 1,895 during the same period in 1923. Vacancies notified by employers averaged 1,423 during the first half of the month, as compared with 1,642 during the previous period, and with 1,844 during the same period last year. Vacancies notified during the latter half of the period were on an average of 1,131 daily, in contrast with 1,794 during the latter half of May, 1923. The average number of placements effected by the Service was 1,323 and 1,063 daily during the first and second half of the month respectively, in contrast with 1,541 and 1,574 during the corresponding periods a year ago. Placements during the latter half of April, 1924, averaged 1,361 daily. During the period under review the number of placements in regular employment averaged 933 and 721 daily, while those in casual work were 390 and 342 daily during the first and second half of the month respectively.

The accompanying table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924 (5 months).....	85,531	66,134	151,665

During the month of May, 1924, the offices referred 32,694 persons to employment and effected a total of 31,093 placements. Of the 21,569 placements in regular work, 18,286 were

of men and 3,283 of women, while the total placements in casual employment was 9,524. The Service received notification of 33,219 vacancies, of which 23,177 were for men and 10,042 for women. The number of applications during the period was 32,142 from men and 11,303 from women, a total of 43,445.

Placements in regular employment by provinces were as follows:—Nova Scotia—262 men, 82 women; New Brunswick—278 men, 65 women; Quebec—1,117 men, 476 women; Ontario—7,831 men, 1,226 women; Manitoba—1,285 men, 479 women; Saskatchewan—2,845 men, 302 women; Alberta—2,449 men, 375 women; British Columbia—2,219 men, 278 women.

### MARITIME PROVINCES

While there still existed a small amount of unemployment in a few districts, there were more opportunities for work evident throughout the province. Some outside construction work had commenced with several contracts awarded for highway construction at New Glasgow, Halifax and Chatham. The majority of the work available in the building section was of a casual nature. Work along shore especially at Bathurst and Campbellton was fairly good. A small demand for river drivers was received and was met from New Glasgow, Chatham and Moncton, with a few advance orders for mill men and sawyers. Women workers were required for hotel and institutional work with several vacancies for factory workers reported at New Glasgow.

### QUEBEC

The outlook for continued employment in building was very good, with many men engaged in casual and temporary jobs. The demands for farm hands continued very steady, with sufficient applicants available. The logging industry registered a declining demand, as most companies were well supplied with workers. Slackness was shown in the manufacturing trades, with a few calls for workers for the clothing and woollen industries. Women domestic workers were required in the usual numbers, with a supply sufficient to meet the demands.

### ONTARIO

The number of experienced farm workers registered at the offices remained adequate to meet the steady demand noted in the vicinity of Belleville, Guelph, London, Ottawa and

Toronto. Continued wet weather retarded building operations, but encouraging reports from all offices indicated slightly improved situation in this group. However, the work available as yet was not sufficient to give employment to those registered. The northern offices received many orders for section and extra gang hands. In addition to the usual calls for river drivers many millwrights, sawyers and mill hands were required, especially at Cobalt, Fort William, Ottawa and Sault Ste. Marie. It may be noted that on the whole industrial conditions showed a decided im-

provement, an increased call for factory hands being shown at Belleville, Oshawa, St. Thomas and Ottawa. With the opening of navigation on the lakes, longshore workers and elevator operators were re-employed. The placement of day and casual workers in the women's section remained very heavy, but the offices experienced some difficulty in supplying the demand for experienced household workers.

SASKATCHEWAN

ers were placed on section and extra gang work for the railways, but little building or construction work was in hand. There was an unusually heavy demand of a seasonal character for women day workers, with a correspondingly heavy call for farm household help.

An active, though slightly less brisk, demand for farm workers was reported with a fair supply of farm workers. There was little improvement in the construction and building group, although the calls for workers were

MANITOBA

During the early part of the month the placements of farm workers were very numerous, but with seeding operations nearing completion a slackening in demand was shown. With the decrease in the farming group and continued quiet conditions in other industries, a further decline was registered in the employment situation in this province. A few work-

ers were placed on section and extra gang work for the railways, but little building or construction work was in hand. There was an unusually heavy demand of a seasonal character for women day workers, with a correspondingly heavy call for farm household help.

mainly for jobs of a temporary nature. A number of graders, tie workers and section gangmen were placed at Moose Jaw, North Battleford, Regina, and Saskatoon. A few sawmill men and yard labourers were found employment at Prince Albert. The continued demand for housekeepers and farm domestics at Moose Jaw and Regina was filled without difficulty, while the calls for institutional workers throughout the province were satisfied.

ALBERTA

Farming and railroad operations continued to provide the bulk of employment, and there was very little work of any other nature available. A good demand for farm labourers and sheep herders was met satisfactorily from Calgary and Lethbridge. A slight gain in employment generally was shown in the building

group, but no large work had been undertaken. Medicine Hat and Calgary remained the centres for the calls for railway and section men, with a number of men employed, while from Edmonton many placements were effected in the logging group. Farm household help was required in increasing numbers.

#### BRITISH COLUMBIA

A lessening of unemployment was noted during the month, due to the resumption of building operations, and tradesmen and mechanics were slightly better employed. In most localities, however, there was an over-supply of labour. Inactivity characterized the farm group, with experienced hands only in demand. In the logging industry river driving created a brisk call for men, with a fair demand for pulp wood and cord wood cutters. The mining industry was dull, quartz machine miners being in demand at Vancouver and Cranbrook. Many stevedores were available, as work alongshore was quiet. Comparatively few women workers were available for household employment to meet the increasing demand, but the call for institutional help was less brisk than formerly.

#### Movement of Labour

During May, 1924, the offices of the Employment Service of Canada made 21,569 placements in regular employment, of which 13,707 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,650 were granted the Employment Service reduced transportation rate, 1,099 going to points within the same province as the despatching office and 551 to other provinces.

From Quebec province 125 workers were transferred at the reduced rate to points in Ontario. From Hull, 58 bushmen went to North Bay; from Montreal, 62 bushmen, one cook and one gardener to Sault Ste Marie and three masons to Kingston. Within the province five bushmen and 35 sawmill workers were placed from Montreal and Quebec. Ontario offices issued 407 certificates, three to farm hands going from Hamilton and Sudbury to Saskatoon and Prince Albert, Saskatchewan, and two to coal miners going from Ottawa to Sydney, N.S. Of the 402 provincial transfers, 324 were bushmen, mill hands, river drivers

and loggers, going to points near Pembroke, Sudbury, Port Arthur and Timmins. About 40 were station hands and railway construction labourers going to the northern offices, nine were stone masons going to Kingston; the remainder included paperhangers, carpenters and bricklayers. Manitoba offices despatched 347 workers at the reduced rate, 234 to points within the province and 113 to other provinces. From Winnipeg 204 farm hands were sent to the Brandon district, and six to points within the zone. The remaining provincial transfers included hotel and institutional workers, housekeepers and general domestics for farms. From Winnipeg to Port Arthur, Ontario, 40 workers were transferred, among whom were river drivers, lumber pilers, sawmill labourers, blacksmiths and elevator operators. More than 55 farm hands travelled at a reduction to points in Saskatchewan, and the remaining 18 workers going to this province included railway and construction labourers, carpenters, teamsters and general maids. The offices in Saskatchewan issued 106 certificates to workers going to points in the province, 77 of which were to farm hands going to Moose Jaw, Swift Current, Regina and Saskatoon and to the rural districts. Eight were to river drivers, 8 to sawmill labourers and teamsters from Prince Albert and Regina, the remaining being waitresses, housekeepers and domestic workers. From Alberta, four farm hands were sent to employment in Saskatchewan. 118 farm labourers, 20 railway construction workers, 12 tie makers, 28 mill hands and bushmen, 4 miners and a few cooks and teamsters were transferred to the rural districts. British Columbia offices transferred 131 farm workers to the vicinity of Moose Jaw, Regina, Swift Current, Saskatoon and 129 farm hands, two cooks and one housekeeper to Calgary and Edmonton, Alta., and one farm hand to Brandon, Man. In addition, certificates of transportation issued to points within the province numbered 124, of which about 15 were farm hands and fruit pickers, 60 were lumber pilers and sawmill men, 15 were miners, 20 railway labourers and construction workers and 14 were women domestic servants.

Of the 1,650 workers who benefited by the Employment Service reduced rate, 805 were carried by the Canadian National Railways, 839 by the Canadian Pacific Railway and six by the Pacific Great Eastern Railway.

## BUILDING PERMITS ISSUED DURING MAY, 1924

THERE was a slight increase in the value of the building permits issued during May as compared with April, but the total was a good deal lower than in May, 1923. According to reports from 56 cities, building to the value of \$14,215,670 was authorized last month as compared with \$13,452,359 in the preceding month and with \$18,610,611 in May of last year. The increase in the former comparison was 5.7 per cent and the decline in the latter was 23.6 per cent.

Reports in some detail were furnished by 48 cities which issued some 1,650 permits for dwellings at an estimated cost of more than \$7,000,000 and for almost 4,000 other buildings valued at over \$5,700,000. In addition, authority was granted for the construction of a grain elevator in Edmonton at a proposed cost of \$1,300,000.

New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia recorded increases in the value of the building permits issued as compared with April. The gain of \$1,392,156 in Alberta was the largest actual and percentage increase. Of the declines recorded in the remaining provinces, that in Ontario of \$1,583,614 or 22.4 per cent was the most pronounced.

As compared with May, 1923, Saskatchewan, Alberta and British Columbia registered increases in the value of authorized building. In this comparison also Alberta reported the largest gain; the value exceeded that for May of last year by \$1,198,870 or 233 per cent. In the remaining provinces the value of authorized building was lower. Ontario, with a decline of \$5,679,586 or 50.8 per cent, showed the largest decrease.

The value of the building permits issued in Montreal, Winnipeg and Vancouver was greater than in April, but in the two cities first named it was smaller than in May, 1923, while in Vancouver it was larger. Toronto reported declines in both comparisons. Quebec, Shawinigan Falls, Fort William, Guelph, Stratford, Moose Jaw, Saskatoon, Calgary, Edmonton, Medicine Hat, Point Grey and Victoria registered increases in the value of authorized building as compared with April, 1924, and also with May, 1923.

The building permits issued during the first five months of this year in the 56 cities had a lower valuation than in either 1923 or 1922, but the total was larger than in 1921. The aggregate for this year stands at \$44,509,404; as compared with the 1923 and 1922 totals of \$56,906,966, and \$53,242,862, this is a decline of 21.8 per cent and 16.4 per cent, respectively. In the first five months of 1921 the permits

issued were valued at \$40,761,706. The 1924 total, therefore, was larger by 9.2 per cent than in that year.

The accompanying table shows the value of the building permits issued during May as compared with April, 1924, and with May, 1923. The 35 cities for which records are available since 1910 are marked by asterisks.

**FAIR WAGE CONTRACTS, JUNE, 1924**

**D**URING June, the Department of Labour received for insertion in the **LABOUR GAZETTE** the following information relative to five fair wage contracts awarded by the Department of Public Works of Canada. These contracts contain the usual fair wage clause, which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

**DEPARTMENT OF PUBLIC WORKS**

Construction of a new hull and house for Snag-boat Samson. Name of contractor, the Star Shipyard Company, New Westminster, B.C. Date of contract, May 14, 1924. Amount of contract, \$37,985.98.

Supply and installation of post office and customs fittings in public building at Alexandria, Ont. Name of contractor, R. A. Sproule and Son, Ottawa, Ont. Date of contract, June 5, 1924. Amount of contract, \$2,199.

Supply and installation of post office fittings in public building at Sackville, N.B. Name of contractor, B. W. Lockhart, Limited, Moncton, N.B. Date of contract, June 9, 1924. Amount of contract, \$2,790.

Dredging at Kincardine, Ont., of outer harbour entrance channel and inner harbour. Name of contractor, W. L. Forrest, of Goderich, Ont. Date of contract, June 18, 1924. Amount of contract, Class "B" \$0.48 per cubic yard scow measure—entailing an approximate expenditure of \$6,900.

Dredging of channel at Nicolet, Que. Name of contractors, National Dock and Dredging Corporation, Limited, Quebec City, Que. Date of contract, June 27, 1924. Amount of contract, Class "A" \$8.00 per cubic yard scow measure; Class "B" \$0.53 per cubic yard scow measure, entailing an approximate expenditure of \$5,200.

**POST OFFICE DEPARTMENT**

The following is a statement of payments made in June, 1924, for supplies ordered by the Post Office Department subject to the regulations for the suppression of the sweating system, the securing of fair wages, and the performance of work under sanitary conditions:—

Nature of Order	Amount of Order
	\$ cts.
Making metal dating stamps and type and other hand stamps and brass crown seals.....	923 76
Making and repairing rubber stamps, daters, etc.	655 14
Making up and supplying letter carriers' uniforms, etc.....	19,213 65
Scales, hampers, etc., repaired.....	114 70
Stamping pads, ink, etc.....	352 80
Mail bag fittings.....	403 87
Letter carriers' satchels.....	1,506 90

**RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES**

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the **LABOUR GAZETTE**. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

**Fishing and Trapping**

**BRITISH COLUMBIA.**—**NEW ENGLAND FISH COMPANY, VANCOUVER, CANADIAN FISH AND COLD STORAGE COMPANY, PRINCE RUPERT, AND THE DEEP SEA FISHERMEN'S UNION OF THE PACIFIC.**

Agreement effective from January 1, 1924, until December 31, 1924, and to remain in effect continuously thereafter unless cancelled by either party by thirty days' written notice, and not to be broken on account of market conditions.

Only union members are to be employed, if obtainable. The companies shall not be compelled to engage men who are objectionable.

Prices for marketable fish caught by lines: halibut, 3½ cents per pound; black cod (sable fish) 2½ cents per pound; all others, 1½ cents per pound. These prices and conditions shall not apply to other trawling. Any bonus paid shall leave no effect or bearing on this agreement.

Fishermen shall take on board ice and bait, but not fuel and stores. Fishermen are to be careful with gear, but not to pay for gear lost.

Fishermen are to be paid half rate for fish if lost after having been iced, and stored in the vessels.

Fishermen shall be represented on the scales by one of their own members. Fishermen shall discharge fish as far as the scales, and receive full rate for all fish shipped from any port to a market.

When heads of fish are cut off, no deduction is to be made. When companies need fish discharged for shipment, fishermen shall attend to it at any hour.

Fishermen shall rig all fishing gear at all times without charge, except once a year after annual overhauling, when they shall receive each \$2.50 for rigging such new fishing gear and \$1.50 for overhauling old fishing gear if necessary.

When deckhands are not available, fishermen agree to do deckhands' work at deckhands' wages.

### Manufacturing: Vegetable Foods

**TORONTO, ONTARIO.—CERTAIN LOCAL FIRMS AND THE INTERNATIONAL UNION OF BAKERY AND CONFECTIONERY WORKERS OF AMERICA, LOCAL 181.**

Agreement to be effective from May 1, 1924, until May 1, 1925.

Only union members are to be employed.

Hours, eight per day, six days per week.

Sponge setter on Friday must be paid not less than \$1, work to be done by jobbers.

Minimum wages per week: foreman, \$48; second hand, \$44; third hand, \$40.

Jobbers sent by the local shall not be rejected when capable of doing the work assigned them.

Overtime; time and one-half; and for jobbers, not less than \$1 per hour.

If an employer works and needs only one man with him, he must employ a second hand.

No work is to be done on holidays and all Hebrew holidays shall be paid.

Every loaf must have the Union label. If the employer does not fulfil the agreement, the use of the label may be withdrawn.

A union representative shall have the right to enter the shop while work is in operation.

When the shop is run in partnership, only one of the partners may work in the shop, and he must be under union jurisdiction.

**EDMONTON, ALBERTA.—CERTAIN LOCAL FIRMS AND INTERNATIONAL UNION OF BAKERY AND CONFECTIONERY WORKERS OF AMERICA, NO. 276.**

Agreement to be effective from May 1, 1924, until April 30, 1925. The agreement is the same as previously in effect, which was summarized in the LABOUR GAZETTE in August, 1923.

### Manufacturing: Pulp, Paper and Paper Goods

**THOROLD, ONTARIO.—THE ONTARIO PAPER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOODS OF PAPER MAKERS, OF PULP, SULPHITE AND PAPER MILL WORKERS, OF ELECTRICAL WORKERS, AND OF STATIONARY FIREMEN, THE INTERNATIONAL ASSOCIATION OF MACHINISTS, THE UNITED BROTHERHOOD OF CARPENTERS, AND THE INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS.**

Agreement to be in effect from May 1, 1924, until May 1, 1925. This agreement is an extension of that in effect for the previous year, which was summarized in the LABOUR GAZETTE in September, 1923.

**SAULT STE. MARIE, ONTARIO.—THE SPANISH RIVER PULP AND PAPER MILLS, LIMITED, AND THE LOCALS OF THE INTERNATIONAL BROTHERHOODS OF PULP, SULPHITE AND PAPER MILL WORKERS, AND OF ELECTRICAL WORKERS, THE INTERNATIONAL ASSOCIATION OF MACHINISTS, THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA AND THE INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, IN MILLS OF THE COMPANY AT SAULT STE. MARIE, ESPANOLA AND STURGEON FALLS.**

Agreement to be in effect from May 1, 1924, to May 1, 1925.

The management will not be asked to act on any matters regarding jurisdiction between the Brotherhoods.

When the company hires or discharges preference shall be given to union members. All employees shall become members of their respective locals within fifteen days of employment.

Pulp mills shall be operated a standard week of not more than six days, except when stock is needed to keep paper mills running, when they shall operate on Sunday, the rate of time and one-half being paid. Operation of paper mills shall be not more than six days per week—from 8 a.m. Monday to 8 a.m. Sunday.

Hours for inside day workers and train and crane crews, eight per day, six days per week. Overtime, time and one-half.

Hours for outside day workers, eight per day, six days per week. Overtime, regular rate for first two hours, thereafter, time and one-half.

No employee who after punching out and completing his shift is sent on repair work shall receive less than four hours' pay.

Hours for four workers: 8 a.m. to 4 p.m.; 4 p.m. to midnight; midnight to 8 a.m., except as agreed. Work between 8 a.m. Sunday and 8 a.m. Monday, time and one-half. Four workers working overtime at other than four workers are to be paid time and one-half. In vacancies after two weeks, time and one-half shall be paid. If local is unable to provide competent men as required straight time will be paid on vacancies until vacancy can be filled permanently.

Work over certain holidays to be paid for at time and a half; Dominion Day, 32 hours; Labour Day, 24 hours; Christmas, 40 hours.

No strikes or lockouts shall occur during the life of this agreement.

The Rules governing Mill Employees shall become part of this agreement.

Provisions are made for reporting grievances to officials of the Company and of the Unions and in case of failure to reach a settlement, provision is made for arbitration.

Employee shown to have been unjustly discharged or laid off shall be reinstated without loss of time.

An apprentice system is in effect in the mechanical trades throughout the mills, under which youths and young men may learn their trades. Apprentices' wages shall be as follows:

1st year, 35 per cent of minimum rate; 2nd year, 45 per cent; 3rd year, 65 per cent; 4th year, 85 per cent.

In event of cessation of work, or a strike, through failure to renew the agreement, the union shall supply men to perform certain work—namely, electrical work, unloading of incoming freight purchased prior to cessation of work, power house operation, operation of dam or regulation of river flow, and similar work.

The rates of wages of common labour shall be set by the management. Rate is to be 40 cents per hour for

three months from May 1, 1924, any alteration to be discussed with representatives of this class of labour.

The Mutual Interest Board of an equal representation of management and men is to continue in operation to consider all matters of mutual interest exclusive of wages.

Wages per hour are given in the agreement for mills at "the Soo", Espanola and Sturgeon Falls. Those given below are for "the Soo" only. The others differ slightly.

Slasher and wood yard: sawyer, and powder man, 63 cents. Wood room: assistant tour foreman, 46 cents; knife setter, knife barker, chipperman, splitterman, 44 cents; knife grinder, oiler, 43 cents. Greenwood Mill: head grinderman, 61 cents; assistant head grinderman, 45 cents; stone sharpener, 63 cents; screen and deckers, 47 cents; grinderman, wood handler, 45 cents. Greenwood wet press: wet machine men, 43 cents. Sulphite Mill: cooks, 88 cents, 61 cents and 46 cents; blow pits, 46 cents; acid makers, 73 cents; sulphur burners, 50 cents. Sulphite wet press: Oilers, 43 cents; stock runner, 46 cents; Rogers wet machine, back, 44 cents; weighers, 59 cents; screen tenders, 42 cents; sulphite machine men, 43 cents. Beater Room: first helper, broke beater men, 44 cents. Finishing Room: head finisher, 46 cents; finishers' helpers, 42 cents; car cleaner, 42 cents; head loaders, 46 cents; weighers, 60 and 63 cents; truckers, 42 cents; core makers, 42 cents; tier, 44 cents; cuttermen, 59 cents. Boiler House: water tenders, 66 cents; firemen, 62 cents; firemen's helpers, 47 cents; ashmen and cleaner, 44 cents; head coal handler, 64 cents; oilers, 43 cents; steam engineers, 71 cents. Yard and tracks: 44-81 cents; Electrical department, 71-84 cents; Mechanical department, 53-88 cents; paper machine room; tour oilers, 61 cents; cleaners, 42 cents; Board mill: beater helper, oilers, 42 cents; labour foreman, 62 cents.

#### PORT ARTHUR, ONTARIO.—THE PORT ARTHUR DIVISION, PROVINCIAL PAPER MILLS, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS.

Agreement to be in effect from May 1, 1924, until April 30, 1925.

The agreement applies to sulphite workers, ground-wood workers, mechanics and mechanic helpers, yard labour, teamsters and slasher mill foreman, but does not include paper mill workers or slasher mill labour.

Preference of employment when taking on or laying off men is to be given to union members, married men and older employees in point of service being given employment, other things being equal; new employees are to be instructed to join the union in fifteen days, excepting outside labour, whose period shall be two months. Permanent employees who come under the agreement shall maintain membership in good standing in the union. Salaried men may join the union but are not affected by the agreement.

Operation of plant is to be six days per week and longer when mutually agreed. Hours for day workers, eight per day, six days per week. Overtime, time and one-half. Mechanics, electrical repair workers, or labourers in the maintenance department called back from home to do repair work shall receive not less than four hours' pay. Hours for slasher mill workers are to be ten per day unless otherwise arranged.

Hours for tour workers, eight per day, 7 a.m. to 3 p.m.; 3 p.m. to 11 p.m.; 11 p.m. to 7 a.m. Work from 7 a.m. Sunday to 7 a.m. Monday, time and one-half. Tour workers required to work overtime at other than tour work, time and one-half. Hours for wood room, 8 a.m. to 12 noon, and 1 p.m. to 5 p.m.; Second shift: 9 p.m. to 1 a.m.; 2 a.m. to 6 a.m. Hours in chlorine room to be dependent on the amount of liquid required, such to be mixed at straight time.

Victoria Day, Dominion Day, Labour Day Christmas Day, are to be holidays with no unnecessary work performed, the mills being closed for certain specified hours.

Maintenance men required to work on Sundays will where possible be permitted to have Saturday afternoon off, as many as possible having the whole day off. Time and one-half will not be granted for work on Saturday afternoons.

No strikes or lockouts shall occur during the life of this agreement.

No discrimination is to be shown in the case of members of the various committees of the union.

Provision is made for settlement of grievances by appeal to the management or by arbitration.

Wages per hour: cooks, 80 cents; cooks' helpers, 47 cents; acid makers, 65 cents; acid makers' helpers, 46 cents; wet machine tenders, 60 cents; wet machine back tenders, 55 cents; machine hands, 42 cents; press operators, 44 cents; truckers, 42 cents; screen room men, 43 cents; screenings machine operators, 43 cents; head blow pit man, 44 cents; blow pit helper, 42 cents; chlorine operators, 60 cents; chlorine helpers, 44 cents; Bellmer operators, 60 cents; drainer men, 46 cents.

Boiler House: water tenders, 62½ cents; firemen, 60 cents; boiler house labour, 40 cents. Wood Room: chipper men, drum barker men, 46 cents; Labour, 40 cents.

Yard: labour, 40 cents.

Mechanical department: millwrights, 70 cents; helpers, 60 cents; digester and screen repair men, blacksmith, electrician, machinists, pipefitters, 70 cents; painters, electricians' helpers, pipefitters' helpers, 60 cents; oilers, 44 cents; apprentices, 40 cents up. Greenwood Mill: labourers, 43 cents. Slasher Mill, 60 cents.

#### IROQUOIS FALLS, ONTARIO.—THE ABITIBI POWER AND PAPER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOODS OF PULP, SULPHITE AND PAPER MILL WORKERS, OF PAPERMAKERS, OF STATIONARY FIREMEN AND OILERS, AND OF ELECTRICAL WORKERS; THE INTERNATIONAL ASSOCIATION OF MACHINISTS, AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA.

The agreement is to be in effect from May 1, 1924 until May 1, 1925, and for another year unless 30 days' notice of change is given.

The agreement is similar in most respects to that summarized above in effect between the Spanish River Pulp and Paper Company, Limited and the International Unions. The provisions regarding operation, jurisdiction, membership, period of agreement interruption of work, grievances, mill rules and apprentice system are similar in the two agreements.

The Abitibi agreement provides in addition to limiting the operation of the Paper Mill to six days per week, from 8 a.m. Monday to 8 a.m. Sunday, that no employees shall be required to work on paper machines between 8 a.m. on Sunday and 8 a.m. on Monday, except on washing screens, oiling drier boxes and repair work, except as mutually agreed.

All manual labour on paper machines, such as operating machines and putting on clothing shall be done only by members of the Paper Makers' Union, except in cases where swipers, sweepers, and labourers may lend assistance where necessary.

Operation of pulp mills shall be a standard week of not more than six days per week. When deemed necessary by the Company to provide stock to keep the paper mill running, or for other reasons, pulp mills shall operate on Sundays, at time and one-half.

Other additional provisions are that day workers if ordered to do overtime work before punching out shall receive time and one-half for actual time worked over and above the eight hours. Tour workers engaged in putting on wires at a time other than their regular shift are to receive six hours for such work.

Holiday work is to be paid time and one-half as follows: Dominion Day, 48 hours; Labour Day, 24 hours; Christmas Day, 24 hours.

Common labour, though not included in the wage schedule must become members of their respective unions after sixty days continuous service, rate being set for a three months period by a committee of the unions and the Company.

Wages per hour Mechanical and Miscellaneous: boss millwright, 93 cents; digester repairer, 77 cents; lead burner, 87 cents; pump repairer, 82 cents; steam plant millwright, 70-84 cents; sulphur millwright, 70-81 cents; millwrights, 70-75 cents; pumphouse man, 62 cents; millwright helpers, 59-63 cents; screen coverer, 66 cents; lead burner's helper, 59 cents; coal crusher, 70 cents; saw filer, 84 cents; bullgang foreman, 80 cents; mill labour crew foreman, 81 cents; paper mill repairman, 70-91 cents.

Mechanics: machinists, 81 and 87 cents; tinsmiths, 70-80 cents; No. 3 machinist and blacksmith, 70-75 cents; driller, 70 cents; welders, 87 cents; machinist's, blacksmith's and tinsmith's helpers, 59-62 cents; tool room man, 67 cents.

Pipefitters: pipefitters, 70-81 cents; pipefitters' helpers, 59-63 cents; pipe machine, 70-75 cents.

Electrical Department: repair foreman, 86-88 cents; motor winder, 77-90 cents; linemen, 70 cents; electrical hoist runner, 70-75 cents. *Old Mill*: operators, 78 cents; helpers, 59 cents; maintenance man, 70 cents; assistant operators, 59 cents. *New Mill*: substation No. 1 operators, 78 cents; No. 2, 68 cents; No. 5 drive, 70 and 75 cents. *Twin Falls*: operators, 78 cents; assistant operators, 59 cents; oilers and rackmen, 45 cents; mechanic, 70-75 cents; helper, 59 cents.

Others: masons and bricklayers, 70-82 cents; carpenters, 70-75 cents; painters and glaziers, 70 cents; mason's helper, 40-59 cents; painters' and glaziers' helpers, 59-63 cents.

The rates shown under mechanical classification apply only to employees now receiving these rates. The minimum rate of 70 cents for mechanics and 59 cents for mechanics' helpers are the recognized rates for all new men.

### Manufacturing: Printing and Publishing

#### MONTREAL, QUEBEC. — EMPLOYING PHOTO-ENGRAVERS OF MONTREAL AND THE MONTREAL PHOTO-ENGRAVERS' UNION, No. 9, OF THE INTERNATIONAL PHOTO-ENGRAVERS' UNION.

Agreement to be effective from May 1, 1924, to May 1, 1925.

The agreement provides for a closed shop; for refusal of work emanating from a shop where a strike or lockout exists; that the union secretary shall furnish help as required; that one week's notice shall be given by employee or employer; that a position left vacant shall be filled by a joint committee; that foremen shall be good standing members of the union.

Minimum wages per week shall be: journeymen, \$40; foremen, not less than \$5 per week above journeyman's rate.

Overtime, first three hours, time and one-half; thereafter, and Sundays and certain holidays (differing in French speaking offices) double time.

Hours per week, forty-four; stopping at noon on Saturdays.

Permanent employees are not to be laid off temporarily owing to slackness of work.

Apprentices: term of apprenticeship, not less than six years, beginning at the age of sixteen or over; one apprentice to five journeymen.

Wage scale for apprentices, from \$8 per week in first year, with increases of \$2 per week every six months after the first year up to \$20 for first half of fourth year; then increasing \$4 per week every six months, reaching \$36 per week for last half of sixth year. Apprentices to be paid at regular day rates for all holidays during first three years of apprenticeship.

Night work: the union is against night work, except in special cases, where hours per week shall be 40, with one-half hour for supper; minimum wages, \$5 per week above day scale.

The employer agrees to the standard selling scale adopted by the Manufacturing Photo-Engravers' Association of Canada.

Disputes are to be submitted to an Arbitration Committee, and during arbitration, no strikes or lockouts shall be engaged in.

#### HULL, QUEBEC.—THE "SYNDICAT D'OEUVRES SOCIALES (LIMITÉE)," OWNER OF THE NEWSPAPER "LE DROIT," AND THE "SYNDICAT NATIONAL ET CATHOLIQUE DES IMPRIMEURS ET RELIEURS DE LA RÉGION DE HULL ET D'OTTAWA" (NATIONAL AND CATHOLIC SYNDICATE OF PRINTERS AND BOOKBINDERS OF THE HULL AND OTTAWA DISTRICT.)

1. The "Syndicat National et Catholique des Imprimeurs et Relieurs de la région de Hull et d'Ottawa" asks that preference be given its members in the shop of *Le Droit*; that whenever said Syndicat cannot furnish men to fill vacant positions, the "Syndicat d'Oeuvres Sociales (limitée)" agree to take in none but men who will agree to become members of the National and Catholic Syndicate recognized in the shop, within a month.

2. The working week shall be forty-eight hours (48), between seven (7) a.m. and six (6) p.m. for day work, and between three (3) thirty p.m. and four (4) a.m. for night work.

3. The minimum rate of wages for journeymen printers, linotypers and pressmen on the newspaper and job work, binders and rulers, shall be \$36 per week for day work and 25 per cent more for night work. The minimum rate for journeymen stereotypers shall be \$25 per week for day work as well as for night work.

4. The term of apprenticeship in typesetting, stereotyping, press work and ruling shall be five years and apprentices in said trades shall be paid according to the following scale of wages:

For apprentices in typesetting, press work, binding and ruling, wages shall be:—

For the first six months of the third year.	\$11.75
For the last six months of the third year.	13.25
For the first six months of the fourth year.	16.50
For the last six months of the fourth year.	17.75
For the first six months of the fifth year.	19.12
For the last six months of the fifth year.	22.50

For apprentices in stereotyping wages shall be:—

For the first year, day or night work.	\$12.00
For the second year, day or night work.	15.00
For the third year, day or night work.	18.00
For the fourth year, day or night work.	21.00
For the fifth year, day or night work.	25.00

5. Apprenticeship on the linotype or any other composing machine shall be for a term of six months and shall not begin until after the first six months of the fifth year in typesetting. To make an exception to this rule a two-third vote of the Syndicate of Printers and Bookbinders shall be required, and during their term of apprenticeship apprentices shall be paid as follows:—

When the linotype apprentice produces in an appreciable manner, his rate of wages shall be in proportion to his production during the first eight weeks, after which he shall receive, for the balance of his apprenticeship divided into three parts, \$22, \$26, \$30 per week.

6. The number of apprentices in the shop shall be, in any department, one apprentice to three journeymen or fraction thereof; one journeyman, however, shall be entitled to one apprentice.

7. After the regular working day, hours of labour shall be paid for at the rate of time and a half for the first three hours, and double time for subsequent hours.

8. Holidays shall be: every Sunday in the year and all Catholic holidays, Empire Day (May 24), Dominion Day (July 1), Labour Day (1st Monday in September), Thanksgiving Day and Civic Holiday.

Work on those days shall be paid for at double time.

9. Whenever, on account of lack of work, a reduction of the number of employees shall be necessary, the Syndicat of Printers and Bookbinders shall be notified of the same eight days in advance, and the men shall be laid off according to their seniority (commencing with the last ones taken in), providing their efficiency is the same.

As soon as work starts again, the men shall be taken back, commencing with the older ones. To make an exception to this rule, a two-third vote of the Syndicat des Imprimeurs et Relieurs de la région de Hull et d'Ottawa shall be necessary.

9a. An employee leaving work must give the employer one week's notice, and the employer shall do the same whenever he discharges an employee except for some serious cause.

10. The "Syndicat National et Catholique des Imprimeurs" asks that the label of the National and Catholic Unions be put on all work coming out of the shop of *Le Droit*, provided the same be not against the rules of the trade.

11. The "Syndicat National et Catholique de la région de Hull et d'Ottawa" agrees in its turn to work in the interest of the employer by all means in its power.

12. The present agreement shall bind the contracting parties for a period extending from February 1, 1924, to January 31, 1925.

#### TORONTO, ONTARIO.—EMPLOYING PHOTO-ENGRAVERS OF TORONTO AND INTERNATIONAL PHOTO-ENGRAVERS' UNION OF NORTH AMERICA, No. 35.

Agreement to be in effect from May 1, 1924, to May 1, 1926, and thereafter from year to year with sixty days' notice of change.

The agreement provides for a closed shop; for refusal of work from a shop where strike or lockout exists; that the union secretary shall furnish help as required; that one week's notice shall be given by employee or employer; that foreman shall be good standing member of the union.

Minimum wages per week for journeymen: during first year of agreement, \$45; during second year, \$47. Foremen, not less than \$5 above scale.

Overtime, first four hours, time and one-half; thereafter and Sundays and holidays, double time.

Hours per week, forty-four; stopping at noon on Saturdays.

Permanent employees are not to be laid off temporarily owing to slackness of work.

Apprentices: term of apprenticeship to be not less than five years, beginning at the age of sixteen or over. One apprentice to every five journeymen.

Minimum wage per week for apprentices, from \$8 for first year to \$18 for first half of fourth year, in-

creasing \$2 half-yearly. Fourth year, last half, \$25; Fifth year, first half, \$30; second half, \$35.

Night work: the union is against night work except in special cases where hours per week shall be between 5 p.m. and 1.30 a.m. with one-half hour for supper. Minimum wage per week, \$5 above day scale.

Disputes are to be submitted to a joint arbitration committee whose decision shall be binding. During arbitration no strikes or lockouts shall be engaged in.

#### VANCOUVER, B.C.—NORTHWESTERN PHOTO-ENGRAVERS' ASSOCIATION, AND INTERNATIONAL PHOTO-ENGRAVERS' UNION, No. 54.

Agreement, as amended, effective from January 1, 1924, until January 1, 1926.

The agreement provides for a closed shop; for refusal of work from a shop where a strike or lockout exists; that one week's notice shall be given by employees or employer; that the union secretary shall furnish help as required.

Minimum wages per week, \$51.50.

Night shifts, \$5 additional.

Hours per week: day work, forty-four hours in six consecutive days; night work, forty-two hours in six consecutive nights.

Overtime, first consecutive three hours, time and one-half; thereafter, and Saturday afternoons, Sundays and holidays, double time.

Apprentices: one to five journeymen; term, not less than five years, beginning at the age of sixteen or over.

Minimum scale for apprentices per week: first year, \$8; second year, \$12; third year, \$20; fourth year, \$27.50; fifth year, \$35.

Differences are to be settled by a local joint industrial council or failing settlement shall be submitted to the Northwest Joint Industrial Council, or to the Employers' Association and the Union.

#### TORONTO, ONTARIO.—EMPLOYING ELECTROTYPERS AND STEREOTYPERS OF TORONTO, AND THE INTERNATIONAL STEREOTYPERS' AND ELECTROTYPERS' UNION, No. 21.

Agreement to be in effect from July 1, 1923, until June 30, 1925.

Wages per week—in job offices, first year, \$40; second year, \$41. Wages for apprentices, after two and one-half years, \$21 per week, rising thereafter \$2 per week each six months, reaching \$29 for the 10th six months.

Hours per week, 48, ceasing at noon on Saturdays; night work for stereotypers on column plate work, 40 hours.

Overtime, time and one-half up to four hours' work after regular quitting time, and up to four o'clock on Saturday; double time thereafter, and on holidays.

Apprentices: electrotyping, one to the foundry and one to the finishing department. Where ten journeymen are employed, one additional apprentice shall be allowed.

Stereotyping, one apprentice where two journeymen stereotypers are regularly employed in any job or column plate foundry.

Helpers—there shall be no limit to the number of helpers provided their work is confined to certain specified branches.

The Union is to supply sufficient competent journeymen to meet the demand. Failing this, the employer may advance the senior apprentice in the finishing room or moulding room, and he shall be paid not less than 25 per cent more than the apprentice scale of his period.

No strike or lockout is to take place during the term of the agreement.

If the strike between the Typothetae and their employees in Toronto be settled during the period of this

agreement, the number of hours per week agreed upon shall obtain in this agreement, and the wages paid to Electrotypers and Job Stereotypers shall be the same rate as is being paid at the time of such settlement.

Disputes are to be reported in writing, and to be referred to arbitration.

**TORONTO, ONTARIO.—PUBLISHERS OF THE FOUR TORONTO DAILY NEWSPAPERS, AND THE STEREOTYPERS AND ELECTROTYPERS' UNION.**

Agreement to be in effect from July 1, 1922, to June 1, 1925.

The union is to supply competent and skilled help upon the demand of the employers.

Hours, eight per days, six days per week; seven hours per night.

For work on Saturday afternoons and evenings on Sunday editions of morning papers, 50 cents extra, work to be between 1 p.m. and 10 p.m. and classed as night work.

Overtime rate, time and one-half. Sundays and holidays, double time (this does not apply to morning papers). Any morning paper turning out special editions on Sundays and holidays, double time.

Apprentices—one to four men; two to seven men; three to ten men.

Wages per week—day work, \$40; night work, \$40.50.

Wages of foremen and assistants shall be set by the office.

A man called back half an hour after leaving the office shall be guaranteed \$1.50.

**GUELPH, ONTARIO.—THE GUELPH MERCURY PUBLISHING COMPANY, AND THE INTERNATIONAL TYPOGRAPHICAL UNION, No. 391.**

Agreement to be in effect from May 1, 1924, until April 30, 1926.

Only union members are to be employed.

A standing joint committee is to decide questions regarding the agreement.

Union may refuse work from unfair printers.

Foreman may employ help, and discharge for certain reasons.

Employees may be placed on a superannuation list through disability or old age, and receive wages agreed upon by employer and employees.

Apprentices: one to four journeymen; not more than three at once. Apprentice Committee is to examine applicants. Age of applicants is to be not less than fifteen years. Beginning with third year, apprentices are to take the International Typographical Union Course in Printing.

Wages of apprentices: third year, one-third of scale; fourth year, one-half; fifth year, two-thirds.

Journeymen learners on typesetting machines are to receive at least two-thirds of minimum scale of operators for a period not exceeding three months. Thereafter if competent they shall receive the machine scale.

Wages per week, hand compositors, machine operators, and make-up men, \$34. Foremen, at least \$2 above scale.

**WINNIPEG, MANITOBA.—DAILY NEWSPAPER PUBLISHERS OF WINNIPEG AND THE INTERNATIONAL PRINTING PRESSMEN'S AND ASSISTANTS' UNION, No. 35.**

Agreement to be in effect from September 1, 1923, until August 31, 1926, wage scale being subject to adjustment, effective September 1, 1925, with sixty days' notice of change.

Provision is made for arbitration of disputes and employment of union members only.

Hours— eight per day; seven per night.

Work outside of regular hours is to be paid for at overtime rate, time and one-half. Overtime rate on holidays is to amount to not less than a day's pay.

Foreman is to be a union member and to have the right to hire or discharge.

Each shift shall have one apprentice to ten men or less.

Wages per week: apprentices, first year, \$16; second year, \$21; third year, \$26; fourth year, \$31; fifth year, \$36; journeymen, \$42; man in charge, \$48.

**Manufacturing: Clothing**

**VANCOUVER, BRITISH COLUMBIA.—CERTAIN LOCAL MERCHANT TAILORS AND JOURNEYMEN TAILORS' UNION OF AMERICA, No. 178.**

Agreement to be effective from September 8, 1923, with 30 days' notice of change.

Union shop is to be maintained.

Minimum wage per hour: tailors, 82 cents; helpers, 57 cents.

Employment of apprentices is to be by special arrangement with the union.

Hours per week, forty-four, terminating at noon on Saturday. Overtime, time and one-half, not more than four hours overtime being allowed in any one week, and not more than one hour on Saturday afternoon. Holiday rate, time and one-half.

All work is to be equally divided in the slack season, and all work is to be done on the premises of the employer.

**Construction: Buildings and Structures**

**HULL, QUEBEC.—CERTAIN CONTRACTORS OF HULL AND THE NATIONAL CATHOLIC UNIONS OF BUILDING TRADES.**

Agreement to be in effect from May 15, 1924, until May 1, 1925.

Only union members are to be employed by the contractors.

Hours per day, nine from April 1 to November 1, and eight during other months.

A worker not giving satisfaction may be discharged by the contractor.

Disputes are to be settled by the contractor and the union or business agent.

The workers in the building trades agree not to contract for work exceeding in value one hundred dollars and in such cases they must place their tenders on the same basis as the contractors.

The unions agree to furnish competent men to the contractor.

Average rate of wages per hour: carpenters, 70 cents; bricklayers and masons, \$1; plumbers, 75-85 cents; painters 60-70 cents; bricklayers' and masons' labourers, 50 cents; other labourers, 40 cents.

**NIAGARA FALLS, ONTARIO.—BUILDERS' EXCHANGE, AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, No. 713.**

Agreement to be in effect from May 1, 1924, until December 31, 1925, and thereafter from year to year on three months notice of change.

Hours, forty-four per week.

Minimum wages per hour, 90 cents.

Work on Saturday afternoons, Sundays and holidays, double time.

When men are moved from one job to another, employers shall pay carfare.

The business agent may visit the job at all times, not interfering with progress of the work.

In case of a violation of the agreement the business agent shall not order a strike before the matter has been before the joint committee.

Provision is made for a permanent board of arbitration to settle disagreements.

Employers agree to employ only union men when available; non-union men if employed are to have fourteen days' notice to join the union.

Both parties agree that there is urgent necessity for an apprenticeship system.

**HAMILTON, ONTARIO.—MASTER HOUSE PAINTERS' ASSOCIATION AND THE BROTHERHOOD OF PAINTERS, PAPERHANGERS AND DECORATORS OF AMERICA, No. 205.**

Agreement to be in effect from May 1, 1924 to April 30, 1925.

Minimum wages per hour, 70 cents. Hours per day, eight, four on Saturdays; forty-four per week.

Saturday afternoons, time and one-half; Sundays, double time. Straight night work to be paid at the rate of nine hours' pay for eight hours' work. Time and one-half for all time after the first eight hours.

Employers are to pay travelling time and transportation both ways to men working twelve miles away from the City Hall; and inside that radius, travelling time one way and transportation both ways. Men required to stay on the job shall receive board and transportation.

No work is to be done on Labour Day. Overtime is to be eliminated as far as possible. Holiday rate, double time.

No men are to accept a sub-contract from their employer, or to accept work on their own behalf if fully employed by their employer.

**MOOSE JAW, SASK.—CERTAIN ELECTRICAL CONTRACTORS, AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, No. 802.**

Agreement to be in effect from March 1, 1924 until March 1, 1925.

Minimum wages per hour, journeymen wiremen, 80 cents; helpers, 35 cents, increasing according to ability.

Hours per day, nine, with four on Saturday. On Saturday afternoons one man may be employed in each shop to look after trouble jobs. All other employees are to receive overtime at regular rates. Overtime from 6 p.m. to 12 midnight, time and one-half. From midnight to 8 a.m. and Sundays and holidays, double time.

Men working out of the city are to work nine hours per day exclusive of travelling time. Travelling time is to be paid single time, and the contractor is to pay any additional living expenses.

**CALGARY, ALBERTA.—THE CALGARY ASSOCIATION OF SANITARY AND HEATING ENGINEERS, AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, AND GENERAL PIPEFITTERS, No. 496.**

Agreement to be in effect from May 1, 1924 until April 30, 1926 and for one year more unless three months' notice of change is given.

Hours per day, eight, with four on Saturdays, provided that one-half hour additional shall be worked at regular rates when necessary to complete a job in hand. Out of town hours of labour may be ten hours per day, with one hour for dinner.

Minimum wages per hour, journeymen, \$1; plumbers' improvers (having passed examination), fourth year, 65 cents; fifth year, 75 cents. Steam fitters' improvers shall receive 75 cents per hour for fifth year of their apprenticeship.

Overtime: first five hours after quitting time, time and one-half. Thereafter and Sundays and holidays, double time. Night shifts of ten hours (being of at last two nights' duration), time and one-quarter.

Men sent out of town are to have expenses paid. Men engaged continuously out of the city shall be allowed to come home at least one day every two months, with fare paid, but no travelling time allowed.

Term of apprenticeship for plumbers or steamfitters, five years. One plumber's apprentice to each shop, and one additional to each five journeymen. Not more than five plumbers' apprentices to a shop. A plumber's apprentice may use the tools after three years, and a steamfitter's apprentice after four years. One steamfitter's apprentice will be allowed to each shop with at least one licensed steamfitter who has been engaged for nine months. If shop has no steamfitting on hand, the apprentice shall be sent elsewhere to be trained. Not more than one steamfitter's labourer shall be employed to each journeyman steamfitter, except in cases of heavy lifting.

Only union members are to be employed, and preference is to be given by the union to members of the Association, but this does not affect men working for the city, the School Board, or the Governments, on maintenance work.

Disputes and grievances are to be settled by joint committees.

Members of one branch of the trade are prohibited from working at the other.

**VANCOUVER, BRITISH COLUMBIA.—CERTAIN LOCAL EMPLOYERS AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, No. 844.**

Working rules in effect by agreement, from May 1, 1924.

Hours per day, eight. Overtime, time and one-half. Sundays and holidays, double time. No work on Labour Day.

Transportation to be paid for. Travel pay to be eight hours' pay for twenty-four hours of travel.

Where engineers are required to raise steam before the regular work day starts, an hour's time is to be allowed.

Wages: steam shovel men, drag lines, dredges, and ditchers, per month; engineers, \$200 and board; crane-men, \$150 and board; firemen, \$110 and board; watchmen, \$95 and board; per day—derrick work, \$7; piledrivers, \$8; loco crane men, dinkey engineers, road rollers, pumps, \$7; per hour—firemen and oilers, 62½ cents.

No member is to take charge of a boiler supplying steam to an engine operated by a non-union engineer.

The business agent of the union is to be allowed on any job where union engineers are employed.

**Transportation—Water**

**ST. JOHN, NEW BRUNSWICK.—VARIOUS STEAMSHIP COMPANIES, AND INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL NO. 273, GENERAL LONGSHORE WORKERS.**

Agreement effective from December 1, 1923, until December 1, 1924.

The text of this agreement may be found in the LABOUR GAZETTE for December, 1923, pages 1362-1364, in the report of a conciliation board.

**MONTREAL, QUEBEC.—VARIOUS STEAMSHIP COMPANIES AND SYNDICATED LONGSHOREMEN'S ASSOCIATION OF THE PORT OF MONTREAL.**

Agreement to be in effect from May 3, 1924, until December 31, 1924.

This agreement is made in accordance with the report of the Board of Conciliation, see the *LABOUR GAZETTE*, May, 1924, page 365.

Working hours, day work, from 7 a.m. to noon, and from 1 p.m. to 6 p.m.; night work, from 7 p.m. to 11 p.m. and from midnight to 5 a.m.

Wages per hour: day work, 62 cents; night work, 72 cents.

Sundays, and work during meal hours and after, double time.

For cargoes of nitrate and bulk sulphur, and full coal cargoes; day work, 77 cents; night work, 87 cents.

Grain trimming and gaggng, per hour, day work, 77 cents, night work, 87 cents. The running of grain in pipes is to be stopped while men go down in the hold to work; two men to stand on deck during that time if necessary.

Men ordered out to work at night must be ordered out for 7 p.m. and be paid full time at prevailing rate until discharged or set to work.

Night meal hour, from 11 p.m. to midnight, the ship supplying good meals or paying cost thereof.

Coal handling on general cargo vessels, day work, 67 cents; night work, 77 cents.

The union undertakes to supply men to perform work under this agreement.

Mails and baggage are to be handled on Sundays, holidays and week days at prevailing rates.

Longshoremen are to sign a personal agreement with the Company, those having signed being given preference of employment when available.

Each party to the agreement is to deposit the sum of \$2,000 with Trustees, to be applied in payment of judgments or orders of any court in the Province of Quebec in favour of the other party, the balance if any being returned with interest.

The union shall have the right to appoint a representative on the wharves.

**MONTREAL, QUEBEC.—THE HARBOUR COMMISSIONERS OF MONTREAL AND THE HARBOUR UNION OF MONTREAL.**

Agreement to be effective from May 1, 1924, until May 1, 1925, in the case of employees of the grain elevator system, machine shop and shipyard and harbour yard shops, and until the close of the navigation season of 1924 for other employees.

Wages per hour—Grain Elevator System, Elevators Nos. 1, 2, and "B"—millwrights, 66 cents; weighmen, distributors, tripper men, 60 cents; feed tenders, machinery men, marine leg men, tower men, 55 cents; shovellers, 52 cents; oilers, helpers (elevator men), assistant trimpermen, sewers and baggers, 49 cents.

Conveyor System: assistant foremen, rope splicer, 60 cents; feed tenders, main towermen, 55 cents; conveyormen, 49 cents.

Harbour Yard Shops and Marine Shops—millwrights, plumber and coppersmith, 66 cents; electric welder, 65 cents; blacksmiths, boilermakers, 53 cents; assistant millwrights, rigger, 60 cents; shop painters, 55 cents; radial drill man, 52 cents; assistant plumber, 49 cents; 2nd class boilermakers, 48 cents; helpers, 42 cents; labourers, 38 cents.

Traffic Shop: fitters, 65 cents; pattern maker, 63 cents; boilermaker, 63 cents; painter, 60 cents; helpers, 42 cents; labourers, 38 cents.

Construction Forces: Foremen, 68 cents; assistant foremen, 57 cents; crane foremen, 66 cents; crane engineers, 64 cents; crane firemen, 44 cents; crane blockmen, 40 cents; locomotive engineers, 64 cents; locomotive firemen, 44 cents; locomotive foremen, 60 cents; locomotive helper, 42 cents; painters, 46 cents; switchmen, 49 cents; ironworkers, 52 cents; car inspector, 62 cents; carpenters, 61 cents; plumbers, 60 cents; concrete mixer runner, 60 cents; labourers, 40 cents.

Time and one-half on Sundays and holidays to such employees as may be required for emergencies. Day and night watchmen will not be entitled to overtime for Sundays or holidays.

*Conditions of work for Employees Including those in Conveyor Galleries*

Hours of labour, until December 15, 10 per day; from December 15 to the opening of navigation, 1925, 8 per day. Time and one-half after the ninth hour.

Overtime rate and Sunday and holiday rate for hourly men, time and one-half.

At close of navigation the Superintendent shall tell the men laid off at what time their services will be again required.

No work Sunday night after 6 p.m. except in emergencies.

Employees of machine shops on Notre Dame street and Guard Pier, hours, nine per day, and five on Saturday. Overtime after the ninth hour, and Saturday afternoons.

Employees of the traffic shop working Saturday afternoons, straight time.

Grievances may be brought before the Superintendent and later appeal may be made to the Commissioners.

Commissioners have the right to make promotions in all branches of the service.

## France Welcomes Immigrants

According to information published by the International Labour Office, France has become marked as a country of immigration and welcomes alien labour. The number of alien workers arriving in France in 1923 was 262,877 while those who departed numbered but 59,951. These figures are appreciably lower than the real amount of emigration and immigration.

Of the total number of 1923 arrivals, 103,013 were Italians, with Poles and Belgians next

in number with 31,447 and 25,107 respectively. Spaniards, Portuguese, Russians and Czechoslovakians also contributed largely to the total.

Industry absorbed 184,255 of these immigrants and agriculture 78,622. The larger number of those entering industry were unskilled labourers with a total of 48,376. The building industry took 40,547 and mining 31,040.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1924

### Cost of Living, Prices of Staple Articles, and Index Numbers

THE downward movement in prices during recent months was not apparent in June. The cost per week of a family budget in terms of retail prices showed only a slight decline, while in wholesale prices the index of the Bureau of Statistics and the Departmental indexes advanced, but the indexes of the Canadian Bank of Commerce and Professor Michell declined.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in about sixty cities in Canada at the beginning of June was \$9.86 as compared with \$9.89 for May; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. No important changes occurred during the month. Prices of butter, cheese, sugar, rice and lard were lower while beef, veal, mutton, pork, eggs and potatoes advanced. Including the cost of fuel and rent with that of foods, the total budget averaged \$20.22 at the beginning of June as compared with \$20.24 for May; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.81 for June, 1920; \$26.92 for July, 1920 (the peak); \$20.36 for June, 1918; and \$14.27 for June, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, weighted according to the importance of the commodities, showed an advance of 1.6 points for June to 152.2 as compared with 150.6 for May; 155.5 for June, 1923; 152.7 for June, 1922; 164.0 for June, 1921; 256.9 for May, 1920 (the peak); and 201.3 for June, 1919. Thirty-eight price quotations were higher, forty-eight were lower, while one hundred and fifty were unchanged.

In the grouping according to chief component material two of the eight main groups advanced substantially, four declined, while two showed little change. The vegetable products group showed the most important advance, a substantial decline in sugar being more than offset by increases in grains, flour, fruits and vegetables. The index of the animals and their products group rose because of higher prices for butter and eggs and in spite of declines in live stock and fish prices. Little change occurred in the textile group, declines

in raw cotton and silk being offset by advances in woollen yarns. The wood and wood products group was also practically stationary. Lower prices for pig iron, steel billets and rails caused a decline in the iron group. The non-ferrous metals group and the non-metallic minerals group were also lower, the former mainly because of lower prices for copper, tin and zinc and the latter because of a decline in the price of cement. The chemicals and allied products group declined slightly because of lower prices for white lead.

In the grouping according to purpose both consumers' goods and producers' goods advanced. In the former group foods were higher because of advances in the prices of flour, fruits, vegetables, butter and eggs which more than offset the declines in fish, fowl and sugar. Other consumers' goods such as boots, hosiery, underwear and household equipment showed little change. In producers' goods building and construction materials fell because of lower prices for cement and white lead. Manufacturers' materials advanced, declines in materials for the metal working and the meat packing industries being more than offset by increases in materials for the milling industries.

In the classification according to origin, domestic farm products rose because of increases in grains, butter, eggs and vegetables. Articles of marine origin, of forest origin and of mineral origin were lower. Raw or partly manufactured goods and fully or chiefly manufactured goods were both higher.

The index number based upon prices of 271 commodities in 1890-1899 published by the Department of Labour since 1910 again showed a slight advance to 221.5 for June as compared with 220.7 for May; 225.9 for June, 1923; 224.3 for June, 1922; 242.6 for June, 1921; 356.6 for May, 1920 (the peak); 349.3 for June, 1920; 280.6 for June, 1918; and 135.3 for June, 1914. The chief advances were in grains, live hogs, dressed lamb, butter, cheese, eggs, potatoes, flour, jute, calf skins and bar silver, while cattle, sheep, bananas, sugar, raw cotton, raw silk, pig iron, some non-ferrous metals, cement and white lead showed the most important declines.

The index number published by the Department since 1910 has been reconstructed back to 1913, by the Dominion Bureau of Statistics, the new index being weighted and based

upon the prices of 238 commodities in 1913.\* Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

The special index number comprising fifty of the more important commodities selected from the 271 in the Departmental list, including twenty foods, fifteen raw materials and fifteen manufactured goods, based upon price levels in 1913 as 100, advanced to 150.3 for June as compared with 149.4 for May; 153.0 for June, 1923; 149.3 for June, 1922; 154.1 for June, 1921; 260.5 for May, 1920 (the peak); and 203.6 for June, 1918. Advances in wheat, hogs, butter, cheese, eggs, potatoes and flour more than offset the declines in cattle, sheep, sugar, raw cotton, lead, copper and glass.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, declined substantially to 143 for April as compared with 147 for March and 156 for April, 1923. All groups were lower.

Professor Michell's index of wholesale prices based on forty articles, twenty foods and twenty manufacturers' goods, with prices during 1900 to 1909 as 100, was lower in June at 172.0 as compared with 173.8 for May; 177.2 for June, 1923; 164.5 for June, 1922; 176.6 for June, 1921; and 269.9 for June, 1920. The index for foods advanced slightly while that for manufacturers' goods declined.

The Canadian Bank of Commerce index of exports rose from 146.69 in May to 147.38 in June. That for imports declined from

161.61 in May to 158.97 in June. The combined index of both exports and imports fell from 154.15 in May to 153.15 in June.

The table of retail prices and rentals shows the prices at the beginning of June of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

\* LABOUR GAZETTE, June, 1923, pp. 689-695.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modification of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Cost of Electric Current for Householders\*

With rates in 1913 as 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

### Retail Prices

Beef prices continued to advance. Sirloin steak was up in the average from 28.4 cents per pound in May to 29.3 cents in June. Prices in most localities were higher. Round steak was up from 23.1 cents per pound to 23.7 cents and rib roast from 21.2 cents per pound to 21.9 cents. Shoulder roast rose from an average of 15.1 cents per pound in May to 15.6 cents in June, declines in some localities being more than offset by advances in others. Shoulder roast of veal advanced  $\frac{1}{2}$  cent per pound in the average to 17.8 cents. Mutton was up from 28.3 cents in the average in May to 29.1 cents in June. Fresh pork was slightly higher averaging 23.4 cents per pound. Salt pork and bacon showed little change. Fresh cod steak, halibut and white fish advanced slightly. Salt cod and finnan haddie were also higher. Lard declined slightly, averaging 20.6 cents per pound in June as compared with 20.8 cents in May.

Eggs advanced somewhat, fresh averaging 30 cents per dozen as compared with 29.5 cents in May and cooking 26.7 cents per dozen in June as compared with 25.8 cents in May. Milk prices were lower at Stratford, Cobalt and Prince Albert but advanced slightly at New Westminster. Butter showed a general decline, dairy averaging 34.2 cents per pound in June and 36.1 in May and creamery 38.5 cents per pound in June and 40 cents in May. Cheese was down from 30 cents per pound to 29.1 cents.

Bread was slightly lower at Thetford Mines. Soda biscuits, flour and rolled oats were steady. Rice and tapioca were slightly lower, the former averaging 10.4 cents per pound and the latter 15 cents. Canned vegetables advanced slightly, tomatoes averaging 19.8 cents per two and one-half pound can, peas 18.4 cents per two-pound can, and corn 17.8 cents per two-pound can. Onions advanced from 6.8 cents per pound in May to 7.8 cents in June. Potatoes rose from an average of \$1.68 per 90 pounds in May to \$1.80 in June. The increase was fairly general. Prunes rose from 16 cents per pound to 16.2 cents. Raisins and currants showed little change. Rasp-

\**LABOUR GAZETTE*, June, 1923., pp. 639-695.

berry jam was slightly lower at 95.2 cents per four-pound tin. Granulated sugar again showed a general decline, averaging 10.6 cents per pound in June as compared with 11.6 cents in May and 12.1 cents in March. Yellow sugar showed about the same general decline as granulated, averaging 10.2 cents per pound. Coffee and tea showed little change, the former averaging 54.4 cents per pound and the latter 59.7 cents. Cream of tartar declined somewhat averaging 64.7 cents per pound in June and 65.8 cents in May.

Anthracite coal declined from an average of \$16.92 per ton in May to \$16.77 in June. Lower prices were reported from Fredericton, Quebec, Thetford Mines, Hamilton, St. Thomas, Owen Sound, Timmins and Sault Ste. Marie. Bituminous coal also declined slightly, averaging \$10.62 per ton in May and \$10.55 in June. Hard wood, four feet long, showed little change averaging \$12.44 per cord. Soft wood advanced from an average of \$9.15 per cord in May to \$9.24 in June. Coal oil was steady at 30.8 cents per gallon. A slight increase in rent was reported from Quebec while a decline was reported from Brantford.

#### Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices continued to advance. No. 1 Manitoba Northern wheat rose from \$1.05½ per bushel at the beginning of the month to \$1.21½ at the end, the average for the month being \$1.14 per bushel as compared with \$1.04½ in May. A strong export demand together with poor crop reports were said to be the causes of the advance. Western oats advanced 39 cents per bushel in May to 40½ cents in June. American corn was up from 95 cents per bushel in May to \$1 in June. Flour at Toronto in sympathy with higher wheat prices advanced from \$6.10 per barrel to \$6.65. Rolled oats advanced 20 cents per

bag to \$3. Shorts at Toronto were up from \$25.75 per ton in May to \$27 in June. Sugar continued to decline, raw from \$5.55 per hundred to \$4.92 and granulated from \$8.17 per hundred to \$7.70. Short supplies of potatoes were said to be responsible for a rise in the price at Toronto from \$1.70 per bag to \$2.07½. Hay at Toronto rose from \$15.42 per ton to \$16, but straw declined from \$9.65 to \$9.25. Bananas at Montreal were again lower at \$3.50 per bunch while oranges advanced from \$5.25 per case to \$7 and lemons from \$4 per case to \$4.50. Choice steers at Toronto fell from \$7.54 per hundred to \$7.25 and choice butcher cattle at Winnipeg from \$6.75 to \$6.25. Sheep at Toronto also declined from \$8.92 per hundred to \$6.65 while hogs rose from \$8.15 per hundred to \$8.60. Creamery butter at Montreal was up from 32½ cents per pound to 35 cents and dairy prints at Toronto from 27½ cents per pound to 29½ cents. Cheese rose 2 cents per pound to 18 cents. Fresh eggs were up from 32-35 cents per dozen in May to 33-38 cents in June. Raw cotton at New York declined from an average of 31½ cents per pound in May to 30 cents in June. Improved weather conditions in the cotton belt were said to be the cause of the decline. Raw silk at New York continued to decline, Japanese being \$5.10 per pound in June as compared with \$5.70 in May. Basic pig iron at the mill fell from \$24 per ton to \$22 though some other lines were reported to be slightly higher. Steel rails declined \$1 per ton to \$49. Non-ferrous metals were again lower, copper at Montreal being \$14.60 per hundred as compared with \$15.20 in May. Tin at Toronto fell from 50 cents per pound to 46½ cents and zinc sheets at Montreal from 9¼ cents to 9 cents. Bar silver, however advanced from 65 cents per ounce to 66 cents. White lead declined from \$16.95 per hundred to \$14.90. Portland cement at Montreal declined from \$2.32 per barrel in May to \$1.97 in June.

INDEX NUMBERS OF WHOLESALE PRICES (WEIGHTED) CALCULATED BY THE DOMINION BUREAU OF STATISTICS

(Average Prices 1913=100)

Commodities	No. of Commodities	Average Prices 1913=100

in bulk. \* The higher price for Welsh coal. \*\* New houses as high as \$40 00 p r month. † Mining company houses \$20: others \$45-\$60. ‡ For new tenants \$30-\$35 and \$20-\$25. § Company houses \$10-\$20; others \$35-\$40.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

The decline in wholesale prices that had been noticed in Great Britain during the past few months showed a slowing down in May, and, according to the available information, a slight upward trend in June. The cost of living continued sharply downward in June. Wholesale prices in France, after the recent sharp decline, rose again in May, while retail prices continued to fall. The latest information available showed whole-

sale prices and the cost of living falling in Belgium, Czechoslovakia, Denmark, Netherlands, Poland, Sweden and Switzerland. Wholesale prices and the cost of living rose slightly in Germany, Norway and Spain. Wholesale prices in Egypt and South Africa were upward during the first quarter of the year. In Asiatic countries, wholesale prices in Japan, China and India were firm in the first quarter of the year, later information in the case of the last two countries showing a slackening tendency for the subsequent months. Index numbers for recent months of prices in Australia and in New Zealand were not available. Wholesale prices and the cost of living were generally steadily downward in the United States during the first half of the year. The following notes give this information in detail.

**Great Britain**

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures) showed another slight decline in May, falling from 136.8 for April to 136.4. Vegetable and animal foods both rose in price, but sugar, coffee and tea declined 13.8 per cent, so that all foodstuffs rose only 0.2 per cent. Textiles advanced slightly and minerals and sundries declined, making a decline in materials of 0.6 per cent.

The Board of Trade index number, on the base of 100 in 1913, showed a decline of one point from 164.7 in April to 163.7 in May. Cereals and meat and fish advanced and other foods declined, all foods advancing 0.5 per cent. Metals and minerals declined, cotton advanced, other textiles and "other articles" declined slightly, all materials declining 1.2 per cent.

The *Economist* index number, on the base 100 in 1901-05, registered a substantial de-

cline in May, falling to 205.8 from 210.8 in April. This was due largely to declines in sugar prices and in the price of tin. Cereals and meat advanced 0.9 per cent, other food products falling 8.9 per cent. Textiles declined about 0.5 per cent; minerals 4.4 per cent and miscellaneous goods 0.6 per cent. The index number for the end of June showed prices remaining steady, the index rising to 205.9. Cereals and meats advanced 0.2 per cent, other foods advanced 0.8 per cent, textiles declined 0.8 per cent, minerals advanced 1.5 per cent; and the miscellaneous group (rubber, timber, oils) declined 0.6 per cent.

The *Times* index number, on the base prices in 1913 = 100, declined each month from the high point 173.8 reached in January to 165.3 as the average for May. The decline from the previous month's level was 1.6 per cent. Foods declined 2.7 per cent and materials 1 per cent. Cereals

showed a slight advance, and the other food groups declined markedly. Iron and steel and other metals and minerals declined. Cotton advanced 2.5 per cent, while other textiles and other materials declined.

**COST OF LIVING.**—The index number of the Ministry of Labour, on the base 100 in July, 1914, declined 2 points to 171 at the beginning of June. Foods declined 3 points to 160, and fuel and light declined 5 points to 185. Rent remained at 147, clothing at 225, and sundries at 180.

#### Austria

**COST OF LIVING.**—The official index number, having as its base 1 in July 1914, rose from 11,977 in April to 12,209 in May an increase of nearly 2 per cent. The cost of foods rose 2.4 per cent to 14,169, and of clothing 2.4 per cent. Rentals showed no change at 751, and heating and lighting declined nearly 0.2 per cent.

**WHOLESALE PRICES.**—The official index number of the Statistical Office on the base prices in the first half of 1914=1, was 19,465 for April

and May. There was a slight advance in April over the March number of 19,120.

#### Belgium

**WHOLESALE PRICES.**—The official index number of the Ministry of Industry and Labour, on the base 100 in April 1914, fell to 555 in April from 625 in March, or 11.2 per cent. The group clay products showed a slight advance and all other groups showed declines, the most notable being 20 per cent in resin products and tar products, 18 per cent in raw rubber, 17 per cent in metal products, 16 per cent in food products and 15 per cent in fats and textile products.

**COST OF LIVING AND RETAIL PRICES.**—The official cost of living index number (compiled by the Ministry of Industry and Labour) for a working-class family of the lowest category was, on the base 100 in 1921, 119.46, showing a decline of 5.1 per cent from the previous month's level. The principal change was a decline of 7.2 per cent in foods. Rent and lodging, heat and light and clothing showed slight drops, while sundries rose slight-

(a) Figure for previous month. (b) Average for year. (c) Index published quarterly. (d) 15th of month up to (g) 15th of month. (h) Four chief cities. (i) January 1913-December 1920, 22 foods. (k) Cost of food budget.

\*October, 1923, 4,301 millions.

\*\*October, 1923, 3,657 millions.

† Gold prices on the base 100 hereafter

ly. The budget for a middle-class family declined 4.2 per cent to 119.37 for May. The changes were parallel to those in the budget for a working-class family, foods declining 6.6 per cent.

**Estonia**

RETAIL PRICES.—The official index number of retail prices of 24 foods at Reval, on the base 1921 prices = 100, was as follows for the first four months of the year: January, 110.9; February, 112.7; March, 115.4; April, 114.6.

**France**

WHOLESALE PRICES.—The official index number of *Statistique Générale*, on the base 100 in July, 1914, rose slightly in May to 468, as compared with 459 in April. All foods rose 2 points to 425, while materials rose 14 points to 506. Animal foods, sugar, coffee, and cocoa, and miscellaneous industrial materials fell in price while vegetable foods, minerals and metals, and textiles rose.

RETAIL PRICES.—The official index number of the cost of 13 articles at Paris, on the base

1000 for prices in July, 1914, was 3975 in June, as against 4065 in May and 4089 in April. The index number of 13 articles in the chief cities of France was 3946 for the second quarter of the current year, a decline of 1.7 per cent from the level of 4013 for the first quarter.

**Germany**

WHOLESALE PRICES.—The official index number of the Federal Statistical Office showing the course of gold mark prices (1913 prices = 100), showed a decline in May of 1.3 per cent, to 122.5. Foods declined from 109.7 to 106.6 but industrial materials advanced from 150.9 to 152.2 the gap between them thus becoming wider. Goods produced advanced slightly, from 111.7 to 112.2 and goods imported declined from 185.6 to 173.8. The price decline was general, at the end of May and the beginning of June, and was attributed to financial stringency. The price of coal kept firm, owing to the diminished production caused by strikes.

COST OF LIVING.—The official index number of the cost of living showed a marked decline

end of 1920; beginning of month thereafter. (e) Beginning of month. (f) Base is average for six capital towns.

in the latter half of May and at the beginning of June, the average for May being 1.15 billions on the base in 1913-14 as against 1.12 billions in April. In May foods were 1.26 billions; heat and light, 1.47 billions, rent, .55 billions and clothing 1.58 billions. During the period of decline following the middle of May, foods dropped 4.7 per cent, owing chiefly to the favourable weather conditions which affected farm products especially potatoes and other vegetables.

### Hungary

**COST OF LIVING.**—The index number of cost of living, on the base 100 in 1913-14 was 1,332,613 in March, an increase of 32 per cent above the level for February, which was 68 per cent above the January level. During March foods rose in price 24 per cent; clothing, 37 per cent; rent, 50 per cent. The figures for light and heat were not available.

### Italy

**WHOLESALE PRICES.**—The index number of wholesale prices compiled by the Chamber of Commerce at Milan, after rising for three successive months, fell 0.7 per cent in May to 546.55. There were noticeable declines in the groups vegetable foods, minerals and metals, miscellaneous vegetable products and miscellaneous industrial materials, and the group textile materials was slightly lower. There was a rise in animal foods as well as in chemical products and construction materials.

### Spain

**WHOLESALE PRICES.**—The index number compiled by the Director General of Statistics (1913 = 100) rose in April to 184, 4 points above the March level. Foods rose 3 points in 183, vegetable foods alone showing a decline, industrial materials rose 3 points

to 184 all groups advancing except chemicals and miscellaneous products.

RETAIL PRICES.—The index number of retail prices of 27 articles at Madrid rose 15 points in April to 195. Animal foods rose 1.2 per cent, vegetable foods rose 8 per cent and fuel and miscellaneous rose nearly 4 per cent.

**Sweden**

WHOLESALE PRICES.—The official index number of the Commerce Department, on the base 1913 prices = 100, was 160 for May, having declined one point from the April level. Raw materials showed no change at 147 while manufactured goods registered a decline of two points to 171. In the separate groups the only increases were shown by animal foods, mortar, brick, etc., and pulp and paper. Fertilizers, textile fibres and fabrics, and rubber goods, showed no change, and all other groups declined.

IN CANADA AND CERTAIN OTHER COUNTRIES  
except where noted)

COST OF LIVING.—The official index number, on the base 100 in July, 1914, fell 3 points from January 1 to 173 at April 1. Foods declined 2 points to 160; taxes 28 points to 173; and sundries 2 points to 185. Fuel and light advanced 2 points to 183. Housing showed no change at 178 and clothing at 192.

**Netherlands**

WHOLESALE PRICES.—The index number of the Central Bureau of Statistics, prices in 1913 being taken as 100, fell 1 point in April to 154. The index of the foods included in this index fell from 154 to 151 in the same period.

**China**

WHOLESALE PRICES.—The index number of wholesale prices in Shanghai, compiled by the Treasury Department's Bureau of Markets, on the base February, 1913 = 100, was 154.3 for May, which was 0.5 per cent higher

than the previous month. Cereals, other food products and the average of the four miscellaneous groups (fuels, building material, industrial materials and sundries) showed rises, while textiles and metals declined. Fuels and industrial materials rose and building materials and sundries declined.

### India

**COST OF LIVING.**—The official index number of the Bombay Labour Office on the base 100 in July, 1914, showed no change for May, remaining at 150. The total index for foods showed no change at 143; fuel and lighting rose three points to 166; clothing declined 3 points to 227; and house rent remained at 165.

### New Zealand

**WHOLESALE PRICES.**—The official index number of the Census and Statistics Office, on the base 1,000 in 1909-1913 was 1,859 in March, or the same level as in February. Flour, etc., general merchandise, building materials, and coal advanced in price while agricultural pro-

ducts, "wool, hides, tallow, butter and cheese," leather and chemicals and manures declined.

**RETAIL PRICES.**—The official index number of retail prices of food in twenty-five towns rose from 1,590 in February to 1,601 in March. The principal cause of this was an advance of 3 per cent in dairy produce. Meat advanced slightly and groceries showed no change.

### United States

Dun's index number of wholesale prices after falling for four months successively rose at July 1 by 0.9 per cent above the level of one month previous. The rise was due to the advance in the breadstuffs group, the higher prices for wheat and corn having an important influence. This increase exceeded 8 per cent and there were slight increases in the dairy and garden products and in "other foods." No change occurred in metals but there were further declines in clothing, the miscellaneous group and meats. The clothing

June											

(a) Quarter beginning in specified month. (b) Average for year. (c) Figure for previous month. (d) Following month-month. (j) Monthly average. (k) New index number is joined to old index number (38 commodities) and all converted hereafter. † In millions. \* In milliards.

index number was at the lowest point reached since the end of 1922, in spite of raw cotton being higher in price.

The index number of the Bureau of Labour Statistics (1913=100) fell 1 point in May to 147. All groups declined slightly except foods, which showed no change.

The Federal Reserve Board's index number, on the base 1913 prices = 100, fell 2 points in May to 156. Goods produced did not change, while imported goods declined 7 points. Goods exported rose 1 point. Raw materials and producers' goods both declined, while consumers' goods remained at their previous level.

Bradstreet's index number of wholesale prices showed another slight reduction on July 1, the seventh since December 1, 1923, and reached the level of \$12.2257, a decline of 0.5 per cent from June 1. Five groups, bread-stuffs, provisions, fruits, metals and chemicals and drugs, gained, while seven—live stock,

hides and leather, textiles, coal and coke, oils, naval stores and miscellaneous products—sagged.

**COST OF LIVING.**—The retail food index issued by the Department of Labour showed a decrease of 0.2 per cent from the retail cost of food in May 1924, as compared with April. The index number remained at 141, on the base 100 in 1913. Eleven articles decreased in price; butter 8 per cent; sugar 7 per cent; cheese 3 per cent; bananas 2 per cent and fresh and evaporated milk, lard, macaroni, raisins, bacon and oleomargarine less than 3 per cent. Twenty articles increased in price as follows: onions 14 per cent; cabbage 8 per cent; pork chops and potatoes 4 per cent; sirloin steak and round steak and oranges 3 per cent; chuck roast, plate beef, leg of lamb, fresh eggs, rib roast, ham, hens, rice, canned peas, canned tomatoes, coffee, prunes and tea less than 3 per cent. Other articles showed no change.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Injuries Due to Unreasonable Use of Privilege not Compensable

A MECHANIC employed at a railway company's roundhouse, having finished his shift, was proceeding home by the usual route followed by the workmen for years, crossing several railway tracks belonging to the company. There was another but longer way that the employee could have used for going to his home without crossing any side-tracks. On one of the tracks in the yard the mechanic, with another workman, found a freight train standing, and endeavoured to pass through it between two adjoining cars. As he did so the train moved, presumably without any signal, and the employee was permanently injured in one of his feet. He brought an action against the company in the Court of King's Bench, under the Workmen's Compensation Act, but the Court held that the accident did not "arise out of and in the course of his employment;" and that, assuming the route followed was used as a privilege with the knowledge and consent of the employer, the plaintiff was limited to a reasonable use of the privilege, whereas the plaintiff in his attempt to pass a train which he knew might move, was not reasonable in the use he made of it. The action was dismissed with costs.

(*Saskatchewan—Mackenzie vs. Grand Trunk Pacific Railway Company*).

### Employer not Held Liable for Wrongful Act by Employee

A coloured man was a passenger on a railway in British Columbia and had duly paid his fare. The conductor, immediately after collecting his ticket violently assaulted him, in a manner shown by the evidence to be without excuse. Action was brought by the passenger against the railway company for damages. The conductor was not called as witness, but it was assumed by the court which tried the case that he resented having the passenger call his attention to the fact that he had omitted to take up the latter's ticket when he took up those of the other passengers. The action was dismissed and the plaintiff appealed to the Supreme Court of British Columbia. The Court held that the railway company was not liable for damages, as the act was not done within the scope of the conductor's employment or for the company's benefit.

(*British Columbia—Jennings vs. Canadian National Railways and Canadian Northern Railway Company*).

### Claim of Parent of Deceased Workman under Workmen's Compensation

An employee of an asbestos company was fatally injured while working in a mine on February 6, 1920. Some years before the accident his mother had married again and she was living with her second husband. After the accident she took action to recover from the employer \$9,499 under the Workmen's Compensation Act. In the Court of King's Bench the judge stated that the mother must prove that her son was her principal support, that is, that he contributed at least 50 per cent of her living expenses, and second, that she was actually in need of that support. The evidence was held to have shown the contrary to be the fact. The action was dismissed with costs.

(*Quebec—Black Lake Asbestos and Chrome Company vs. Dame Marquis et al.*)

### Manitoba Act Before Privy Council

Argument was opened on July 14 before the Judicial Committee of the Privy Council in London in the appeal of the Lord's Day Alliance of Canada against the recent judgment of the Supreme Court of Manitoba upholding the validity of provincial legislation enacted in 1913, amending the Lord's Day Act of the province. The purpose of the act in question was to permit the operation of excursion trains from Winnipeg on Sundays. The Attorney General of Manitoba acted for the Province as respondent and the Solicitor General of Canada was also represented as intervener. The Dominion Lord's Day Alliance was represented by the Honourable N. W. Rowell, K.C. According to reports in the press Mr. Rowell's statements were chiefly concerned with legal precedents. He urged that the Manitoba Lord's Day Act permitting Sunday excursions was invalid because it dealt with a matter relating to criminal law which was within the exclusive competence of the federal government which had delegated no powers to the provinces to pass such legislation. Furthermore, it was beyond the ability of the Dominion parliament to delegate such powers. The Manitoba Act declared Sunday excursions to be valid "notwithstanding anything to the contrary in this or any other act of this legislature or in any law in force in this province over which the province has legislative authority." Mr. Rowell contended that the Dominion Lord's Day Act was not a law over which the province had legislative authority. The argument was adjourned.

PREPARED AND EDITED IN  
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 24]

AUGUST, 1924

[NUMBER 8

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

**T**HIS issue of the **LABOUR GAZETTE** contains the regular monthly articles dealing with recent conciliation proceedings, industrial disputes, wage agreements, employment conditions, movement of prices, etc. It also contains an annual report on the proceedings under the Industrial Disputes Investigation Act during the past fiscal year; quarterly reports on industrial accidents in Canada, the work of the Employment Service of Canada, unemployment in Canada as reported by trade unions, and immigration into Canada, all these reports covering the period of April to June inclusive; a report of the Sixth International Labour Conference (League of Nations), and other special articles.

### Monthly Summary

Reports from the offices of the Employment Service of Canada for the month of June showed little change from the somewhat depressed conditions that had prevailed in the previous month, but there was a continued decline in the volume of business transacted by these offices as compared with the same period in 1923. At the beginning of July the percentage of unemployment among members of trade unions was 5.8 as compared with 7.3 per cent at the beginning of June, and with 3.4 per cent at the beginning of July, 1923. Returns from 5,752 employers of labour throughout Canada showed an increase in the number of persons on their payrolls from 781,988 at the beginning of June to 785,507 at the beginning of July.

The average cost of a weekly family budget of twenty-nine staple foods was \$9.91 at the beginning of July, as compared with \$9.86 for June; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.92 for June, 1920 (the peak); \$16.84 for July, 1920; \$13.00 for July, 1918; and \$7.42 for July, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 advanced to 153.3 for July as compared with 152.2 for June; 153.5 for July, 1923; 154.1 for July, 1922;

163.4 for July, 1921; 256.1 for July, 1920; 256.9 for May, 1920 (the peak); and 202.3 for July, 1919.

The time loss caused by industrial disputes in July was less than in the previous month, or in July, 1923. Fourteen disputes began or were in progress during the month, affecting 9,224 employees, and causing a loss of 229,304 working days. Corresponding figures for the previous month were as follows: 22 disputes, 13,872 employees, and 244,673 working days; and for July, 1923, 23 disputes, 18,095 employees, and 307,433 working days.

### Industrial Disputes Investigation Act

During July the Department received a report from a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907. Six applications were received from employees for the establishment of similar Boards. In one of these cases further direct negotiations were held at the Minister's suggestion which resulted in a settlement of the dispute without further procedure, and in another case a Board was fully constituted.

### Arbitration of Labour Disputes in Quebec

Reference is made elsewhere in this issue, in the report on Strikes and Lock-outs during the past month, to the settlement of a dispute in the boot and shoe industry at Quebec by the mediation of the Provincial Registrar of Councils of Conciliation and Arbitration. The Registrar is a permanent official appointed under the Quebec Trades Disputes Act to receive and register all applications by employers or employees for reference to a council in connection with a trade dispute. He is further authorized to endeavour to act as mediator where a dispute exists or is threatened, when requested by either party or by the mayor of the city concerned to act in this capacity, or to intervene without awaiting formal request. "Councils of Conciliation" under the Act consist of four

conciliators, two to be appointed by each of the parties in a particular dispute. Failing an adjustment either party may apply to the registrar for a "Council of Arbitration," consisting of three members appointed by the Minister of Public Works and Labour, one on the recommendation of each party, and one on the Minister's choice, failing a joint nomination by the other two members. The award of a Council is not binding upon the parties concerned, but either party may, prior to the award, agree by writing to be bound by the award in the same manner as parties are bound by an award made under the Code of Civil Procedure.

In addition to this machinery for arbitration and conciliation available for use in all industries, the boot and shoe industry in Quebec has a joint committee, composed of representatives of the Manufacturers' Association and of three national unions of boot and shoe workers, part of the duties of this committee being to promote industrial peace.

#### **Mothers' Allowances in Manitoba**

The report of the Manitoba Mothers' Allowance Commission, reviewed elsewhere in the present issue, is presumably the last report to be issued by that body as at present constituted. After next September, when effect is to be given to the Child Welfare Act of 1922 (as amended at the last legislative session), the new Child Welfare Board is to assume charge of mothers' allowances, along with the other work carried on in the Province on behalf of children. When the amending act was under consideration last March members of the provincial government assured a delegation of women who were interested in the work of the commission that the proposed changes would make no practical difference in the work, and that the co-operation of various philanthropic societies would still be welcomed as it had been in the past.

The administration of mothers' allowances had been the subject of much discussion in the province for the past year. A strong feeling existed against the scaling down of the amount to be spent on mothers' allowances, but this sentiment was tempered by the general desire for lower taxes. A proposal to make the municipalities responsible for the whole cost of the allowances was resisted by the cities and towns, especially by representatives of the city of Winnipeg, on the ground that municipalities could not undertake full responsibility in the matter owing to the shifting of population toward the large centres when the breadwinners die. It was stated

that this movement was proved from the experience of Winnipeg with hospital patients and relief to the unfortunate. Municipalities, however, are not charged directly for the beneficiaries within their borders, the levy imposed by the Municipal Commissioners under the act being upon all municipalities at large, according to the judicial district to which they belong, upon the basis of equalized assessment. The new Child Welfare Act gives the director of Child Welfare power to arrange with the child's relations for the payment of a reasonable share in the cost of relief; the share of the province is to be determined by the amount of the special grant voted in the Supply Bill of that year to provide maintenance or partial maintenance for bereaved or dependent children, while the municipalities may be asked to repay the whole amount so expended, "or such portion thereof as may be just to recoup or partially recoup the province for the same." The provisions of the new act in this respect are thus practically the same as those of the act of 1916.

Under the Mothers' Allowance Act, now to be superseded by the Child Welfare Act, much of the work was of a voluntary nature. Since the Act was passed in 1916 ten commissioners have given their time and energy without any remuneration. Co-operation was secured by the Commission from several voluntary agencies. School teachers and inspectors, especially in rural districts, assisted by reporting on home conditions, and in following up particular cases, and public health nurses also rendered service in furthering the work of assisting families in need. Ladies' auxiliaries were organized for visiting families, under the guidance of "captains" in the Winnipeg district, while numerous semi-public bodies and private individuals contributed service as well as gifts of clothing and other necessities.

#### **Employment permits for children in Montreal**

The annual report of the Labour Department of the Province of Quebec for 1923, reviewed in the January issue, referred to the good results that had followed the amendments of 1919 to the Provincial Industrial Establishments Act, providing that boys and girls aged from 14 to 16 years who wish to obtain work must first apply to the Provincial Labour Department and obtain employment certificates. Some account of the Department's work at Montreal was given in a recent issue of the *Montreal Star*. The practice of the Department is to

grant a permit if the mother is a widow, and the child is healthy, but if the father of the family is alive and is working, and one or more members of the family are also contributing to the financial resources, the application is not usually granted, even in the case of large families. Permits are also granted after full investigation where the father is sick and unable to work.

Since this branch of the Department's work was opened in March, 1920, up to July of the present year, a total of 19,113 permits to leave school and begin work, or to work during vacations, have been granted to children in Montreal. During these four years inspectors note a great change for the better, both in the number of applications and in the percentage of illiteracy. When the work was begun the inspectors noted that ten to twelve per cent of the children applying were illiterate, whereas now the proportion is given at five to six per cent. One of the reasons given for this improvement is that parents know that their children will not be granted permits to work by the Department unless their children can read and write. Children over 14 years of age who are below the required standard are given permits conditionally upon their attendance at night school, and these permits may be cancelled if their attendance is not regular.

The inspectors further report that children now apply for permits at a later age than formerly. Four years ago, little children of nine and ten years often applied for permits to work, but recently the age of application has advanced to 11 or 12 years. It is stated that children applying for permits to-day read and write well, and that the illiterates are for the most part among the mentally deficient class.

**Sunday Rest for Firemen**

The Fire Department Hours of Work Act, enacted at the last session of the Legislature of British Columbia (LABOUR GAZETTE, January, 1924, page 25), has been found to involve serious additional outlay for fire-fighting in some of the cities affected by this legislation, which compels municipalities to give their firemen one day's rest in seven. It is stated for example that the effect of the provision is to reduce the effective strength of the Vancouver fire department by 26 men, as the city authorities refuse to increase the force to that extent to meet the new requirement. The men on rest are subject to a call for duty in case of fire, but they cannot be reckoned as being on the "effective strength" of the force at a given time, this expression meaning the number of

men who can be rushed to the spot upon the first alarm. It has been suggested that the city ask the Provincial Government to make a contribution toward the cost of the fire department which now amounts to half a million dollars a year. Meanwhile the British Columbia Fire Underwriters announce that unless twenty-six men are added, a ten per cent increase in insurance rates will remain in effect. Similar difficulties have been experienced in Victoria in connection with the fire department there.

**Functions of a Federal Labour Bureau**

An instructive paper on the functions and work of the Women's Bureau of the United States Department of Labour was read at the recent conference of Social Workers at Toronto by Miss Mary Anderson, Director of the Bureau. Legislative power to regulate the employment of women in industry belongs to the several States, as in Canada it belongs to the Provinces. The function of the Federal Bureau is therefore mainly consultative; in the writer's words it was "created as a standard maker with investigational powers, and is a fact-finding Bureau, designed to furnish information which will stimulate agencies having legislative and executive powers into progressive activity making for more uniformity in standards and policies in behalf of women workers." The necessity for co-ordination in the laws of the 48 states of the Union has become more evident from the rapid development of industry and the unification of business throughout the country as a whole. Employers in one state can now transplant their industries from a State where, they think, the regulations are too rigid, to another State with more elastic labour laws. Greater uniformity in industrial legislation thus becomes a matter of national concern. The Women's Bureau exists to promote the desired uniformity in so far as the welfare of women in industry is concerned. Its policy is to co-operate with the State labour bureaus, but without duplicating their work or usurping their functions. Investigations have even been carried out jointly by the Bureau and by State Departments respecting conditions of female employment in particular States. The Federal Government is well equipped for such work, while the State Department, being an administrative body, has rarely the funds or equipment required for intensive investigations, especially when information is needed as to conditions or legislation in other States or throughout the country. More generally, the Bureau exists as an information office for persons and

organizations who apply to it with inquiries on the various problems and phases of women in industry.

**Paper workers  
co-operate with  
management**

their employees in a period of reduced activity in the Company's plant:—

The directors of the Abitibi Power and Paper Company, Limited, desire to place on record their appreciation of the action of the various trade unions, of which the company's employees are members, forming a federated committee of the unions for the purpose of co-operation with the executive officers of the company in maintaining the efficiency of the company's plants and in eliminating uneconomic and wasteful methods of operation, and otherwise doing all in their power to increase the production and efficiency of the mills, thereby showing their realization that their best interests are indissolubly bound up with the success and prosperity, not only of the company of which they are employees, but of the pulp and paper industry as a whole.

The Board of Directors welcome their co-operation and feels a very legitimate pride that this loyal and patriotic action has been taken by the employees of the company, as it typifies in a most practical way the very good relations which have always existed between the company and its employees, and which it will be the constant endeavour of the board and of every officer to maintain in the future.

Some weeks previously the management of the Abitibi, Laurentide, and Spanish River companies had explained to their employees that the situation in the industry was such as to call for retrenchment and reorganization. The unions of the employees at the Abitibi Company responded to this appeal by appointing the "Federated Committee" referred to in the foregoing resolution. The situation in the affairs of the Laurentide Company was explained at a special meeting of the "Laurentide Council" last May when the workers were told of the reasons for which the Company had for some time past been operating at a reduced capacity. The same condition existed in most of the large Canadian newsprint producing plants. The statement of the Laurentide management proceeded:—

In considering the best method of meeting this situation, the first one that naturally presented itself was, of course, that the entire plant of the Laurentide Company might be closed down for a certain number of days per month and under the conditions as they now exist this would mean a loss of approximately two and a half days' pay for each of the employees. The management had considered this question carefully, and had concluded that rather than see so much lost time for the payroll men they wanted to take care of a large portion of the necessary curtailment by slowing back the old machines from six hundred and thirty feet per minute to around five hundred feet thus making each of them produce less paper per day than when run at their maximum speed. This plan of action is of benefit to the workmen as it allows them

to work a greater number of hours per month than would otherwise be possible and the company hopes to be at least partially compensated for this increased cost by being able to produce a better grade of paper and one that will be so desirable on account of its appearance and running qualities as to be more readily saleable in a competitive market.

**Copartnership  
and joint  
management.**

The copartnership plan, whereby employees are made joint stockholders in their employing firm, is followed by an increasing number of large concerns in Great Britain and the United States, and more recently in Canada, the most notable example being perhaps at the Lever works at Port Sunlight in England. The latest Canadian copartnership was reported in July, when the president of T. S. Simms and Company, Limited, of St. John, N.B., manufacturers of brushes and brooms, announced that the firm would in future be conducted as a profit-sharing concern. The new scheme guarantees the former stockholders a fair dividend on their investments. One-third of the balance of the profits goes to labour and two-thirds to the executive staff, this surplus being converted into stock entitling the employees to vote with the other shareholders.

Another form of employees' representation is illustrated by the "plant assemblies" which have been instituted at some of the branches of the Swift Packing Company in Canada and the United States. The Canadian branches of this firm are at Edmonton, Winnipeg, New Westminster, Vancouver and Toronto. Each "plant assembly" consists of an equal number of representatives of the employees, and management. They consider numerous subjects affecting the conditions of employment, including health and safety, recreation, compensation, employees' benefit, personal grievances, individual wage changes, general working hours, personal disputes with foremen or between employees, absenteeism, equipment, and suggestions for the improvement of service. Of 865 grievances which were considered by the joint plant assemblies in the various Swift establishments, two-thirds were decided in favour of the employees, nearly one-third in favour of the management, while a few were compromised, withdrawn or remained unsettled.

Somewhat similar in character, though perhaps more restricted in its function, is the trade board provided for under recent agreement made by the Toronto local of the International Association of Heat and Frost Insulators, and outlined in the section "Recent Industrial Agreements" in the present issue.

### Solving the problem of casual labour

Irregularity of employment is a feature of the building trades and many other occupations, but it is especially marked in connection with work along shore. Several experiments are now in progress for the "decasualization" of this industry. One most successful is the Seattle plan, devised by the joint employment committee of the Joint Organization of Longshoremen and Truckers and the waterfront employers at that port (LABOUR GAZETTE, April, 1924, page 280). This plan consists in a complete system of registration to eliminate "floaters", and the organization of the registered workers into permanent gangs with equalized earnings for the members of these gangs. A similar movement in Great Britain has also been mentioned in previous issues of this GAZETTE (November, 1920, page 1,509). In 1920 the Transport Workers' Federation of Great Britain proposed to pool labour resources, register all dock labour, and guarantee every registered docker a minimum weekly income, the guarantee to be backed by the industry as a whole by means of a special levy for the purpose upon all merchandise handled. In the same year a commission was appointed by the British Minister of Labour to inquire into the conditions of dock labour. The commission presented a report signed by Lord Shaw of Dunfermline and other commissioners approving the principles of the minimum scale for a guaranteed week, of registration, and the maintenance of unemployed casual labour, and recommending that a joint council should be established for this industry. Early in the current year the new British Ministry of Labour set up another committee for the purpose of developing the existing system of registration, and to examine further the proposal for a guaranteed week. This committee presented two interim reports, the first in June, the other in July. They recommend:

- (a) that a registration scheme should be set up forthwith in each port or group of ports;
- (b) that in the initial registration of dockers under a new scheme the trade union can best determine in the main what men are qualified;
- (c) that it should be made clear that initial registration does not confer permanent rights or impose permanent obligations;
- (d) that registers in operation should be constantly reviewed by the joint body which administers them in order that they may be made as effective as possible, and only include men who work regularly in the ports;

- (e) that the scheme of registration should be subject to review in the light of experience.

In regard to the guaranteed week the committee found that the basic question was that of cost, and the question could not be determined without knowledge of the exact number of men who normally and regularly seek their livelihood at the docks. They are therefore deferring further inquiry into this subject until an effective system of registration has been established.

### Medical examinations and vocational guidance

The physical fitness of the worker is often mentioned as one of the chief elements in the problem of industrial safety. It is found that physical unfitness has a close relation to frequency of accidents and to inefficiency, while for adolescents the question of fitness is the main factor in the choice of a suitable calling. For this reason more frequent and stricter medical examinations, particularly of young persons, are often recommended. Suggestions on this subject are contained in the report of a special committee recently appointed by the British Home Secretary to consider the subject in its relation to the employment of young persons in factories. The committee recommended that the age for certification should be raised from 16 to 18 years; that examinations should be required in all factories; that the form of certificate should be positive rather than negative, that is, it should be to the effect that the young person is physically fit for employment in the factory rather than a statement as to disability; that the surgeon should be able to grant, at his discretion, a qualified certificate, to which conditions may be attached respecting the nature of the work on which the young person may (or may not) be employed, the remedial or other measures which are to be taken in regard to the young person; or the certificate should be conditional upon re-examination within a stated period on account either of the physical state of the young person or of the industrial conditions; that the certificate should be obtained within fourteen days after the young person has started work in the factory, and should include a statement to the effect that the surgeon has seen the young persons school medical record; that the examination should be conducted at the factory; that the surgeon should have the duty of acquainting himself in every factory where he examines young persons with the process upon which they are, or are proposed to be employed, and of

recording in the register the date of his visits; that the standard of examination, the form of certificate and the nature of the conditions which may be attached to qualifying certificates should be prescribed by the Home Office, which should supervise the work of the surgeon.

### 8-hour day question in Great Britain

An Hours of Employment bill, designed to give effect to the Washington Draft Convention on an 8-hour day and 48-hour week was introduced in the British House of Commons in July by the Minister of Labour. The proposal to ratify this Draft Convention has brought out various opinions as to the extent of the obligation resting upon Great Britain. In 1921 the Government then in power decided against ratification, its decision being upheld by a vote in the House of Commons of 164 to 53. The present Government however considers that the country is committed to give effect to the Draft Convention. The railwaymen, however, are opposed to its general application. They declare that any attempt to enforce the conditions laid down in the Draft Convention "would meet with the united resistance of members of the National Union of Railwaymen, inasmuch as they would take away the guaranteed day and guaranteed week, independent of Sunday working and also of each day standing by itself for the purpose of calculating overtime." The railwaymen state further that "we realize that the provisions of the Washington Convention may benefit unorganized or badly organized workers, particularly in the sweated trades, and we are prepared to assist in placing on the Statute book any measure which does not take away from us conditions which have been obtained after many years of trade union effort." The General Secretary of the Union informed the Minister of Labour that if the railwaymen were not excluded from the bill they would refuse to work on Sundays, not merely in running trains, but also in repairing lines.

### Hours and wages of American steel workers

Further information on the elimination of the 12-hour day in the steel industry of the United States is given in the annual report of the United States Steel Corporation for 1923. Following the conference of 1922 and subsequent correspondence between the late President Harding and representatives of the iron and steel industry (LABOUR GAZETTE, August, 1923, page 879) the subsidiary companies of the Corpora-

tion, after a thorough investigation, decided that the proposed change could be made only when the supply of labour had increased, and selling prices had advanced to a level that would cover the necessary increase in expenditure. The report states that "prior to the midsummer of 1923 there was a marked shortage in the labour supply required fully to serve the mills on the plan under which they were then operating. But as it was considered about the beginning of July that this condition was likely to improve materially, it was decided to introduce the revision on August 16. The revised plan adopted established the hours for employees connected with continuous processes on an 8-hour basis, and those for all other employees on a 10-hour basis. The wage rates of employees whose working day was reduced from 12 to 8 hours were so adjusted as to afford earnings equivalent to an increase of 25 per cent in the hourly and base rates previously paid, and the wage rates of all employees reduced to, or continued on, a 10-hour basis were advanced 10 per cent, to equalise unbalanced conditions in rates brought about by the adjustments in the wage scale for employees from 12 to 8 hours. Rapid progress was made in effecting the change. By December 1 the 12-hour shift had been, broadly speaking, eliminated in all the subsidiary companies except one, where, on account of shortage of skilled labour, the change was not completely carried out until February, 1924. The number of additional employees required by these companies in which the plan had become effective and on the basis of operating conditions then prevailing, was 17,117, an increase of over 10 per cent."

### Child labour in the United States

The proposed "child labour" amendment to the United States constitution was noted in the LABOUR GAZETTE at the time that it was passed by the House of Representatives. The Senate later passed the measure by the required two-thirds majority, and it was signed by the President as an Act of Congress. The proposed amendment, before it becomes effective, must be ratified by three-fourths of the States, and action is expected to be taken by the various State Legislatures next year. The question mainly at issue is that of State rights. Previous efforts by Congress to legislate on child labour indirectly were found to be unconstitutional; the first attempt was an act of 1916 to prohibit the movement in interstate commerce of the products of undesirable child labour; the second was in 1919,

when Congress proposed to levy a tax upon such articles. The proposed constitutional amendment is as follows:

Section 1. The Congress shall have power to limit, regulate and prohibit the labour of persons under eighteen years of age.

Section 2. The power of the several States is unimpaired by this Article except that the operation of State laws shall be suspended to the extent necessary to give effect to legislation enacted by Congress.

**Co-operative labour bank in Denmark**

As frequent mention is made of "labour banks" in connection with labour organization both in this continent and in Europe, some

account may be given of the progress of the movement in Denmark, which has so far been the most successful field for co-operative enterprise. In June, 1917, a committee of representatives of trade unions and of the political and co-operative sides of the Danish labour movement was named to examine a proposal to establish a bank. This committee unanimously agreed that such an institution was desirable, and in April, 1919, the "Workers National Bank of Denmark" opened for business. The bank was founded as a limited society, and the following clause, which limits the holding of such shares to organizations, was inserted in the by-laws:—

"The following are eligible as shareholders:—

(a) Organizations belonging to the Labour Party in Denmark; also amalgamated societies, trade unions, and direct organizations of the Labour Party.

(b) Commercial enterprises, or societies of a commercial character founded by the Labour Party or the Workers Co-operative Societies, also consumers' unions.

The board of management consists of 15 members, all of whom are either active leaders of the various labour organizations or members of parliament. Five members of the board constitute a sub-committee, responsible for the daily activities of the bank. Besides the head office at Copenhagen the bank has three branches, and it is its intention gradually to open further branches not only in the metropolis, but also in the larger provincial towns. The activity of the bank is exactly the same as that of private banks, but with special regard to the interest of the working class. Credits are granted to reliable private commercial enterprises, but principally to the workers' own co-operative societies. Building loans are made when it is considered advisable, and ordinary loans to individuals are granted on mortgage or security. Loans are made also on goods, on bills of lading or warrants, reimbursements are opened, and credits are issued. The bank has relations with banks in various foreign countries, but in most

cases these are private banks. The management are anxious to establish better working relations among the existing co-operative trade union, and labour banks in the various countries.

To-day the share capital of the bank is 2,496,000 Kr.\* and its reserve fund Kr. 120,000. A large part of the capital of the bank is placed either in big national banking institutions or in easy redeemable bonds. This policy is rendered necessary because the bank's special character as a labour bank may, in case of labour conflicts, make great claims upon its resources.

The following table will be of interest, showing the classification of holders of deposit accounts:—

Trade unions.. . . . .	8.9 per cent
Amalgamated societies of trade unions.. . . . .	30.1 " "
Clubs inside the labour movement.. . . . .	2.1 " "
Co-operative societies.. . . . .	5.6 " "
Institutions for sickness and burial	4.4 " "

Since 1919 the deposit accounts in the bank have increased steadily, being upward of 25 million kronen in 1923. The amount of the loans made in the same year was about two and three-quarter millions.

Labour banks are conducted on the American continent by the Brotherhood of Locomotive Engineers, the International Ladies' Garment Workers' Union, the Brotherhood of Railroad Clerks, etc. (LABOUR GAZETTE, January, 1924).

**Juvenile employment in London**

The British public are being invited to contribute suggestions toward the solution of the problem of juvenile employment in London.

An Advisory Council for Juvenile Employment within the administrative area of the county of London was appointed last March to advise the Minister of Labour on the broad questions relating to the employment of boys and girls. The Council has invited public competition for prizes, ranging in value from \$500 to \$25, for essays upon "The London Problem of Juvenile Employment". The object of the competition is to elicit considered opinions upon this problem as a whole, or upon any of its aspects. Before the Advisory Council was established the duty of dealing with the employment and welfare of children was shared by the Ministry of Labour and the London County Council, but the County Council recently decided not to undertake the optional powers in this respect that were given

\* The par value of the Danish Krone is 26.8 cents.

to them under the Unemployment Insurance Act of 1923. Hence this duty devolved upon the Ministry, which is now assisted in this branch of its work by the Advisory Council. The latter body includes educationalists, both teachers and others, and representatives of employers and workpeople, with specialists in the several problems involved. Its work consists not only in advising the minister, but in co-ordinating the work of the juvenile advisory committees which are soon to be attached to each Employment Exchange in the County of London.

### **British agricultural wages bill**

A Bill "to provide for the regulation of wages of workers in agriculture, and for purposes incidental thereto" was recently introduced by the Minister of Agriculture and Fisheries in the British House of Commons. The Bill proposes to establish an agricultural wages committee for each county in England and Wales, with power to fix minimum rates of wages for workers employed in agriculture for time work, and also for piece work if and so far as they think it necessary or expedient. The rates fixed by the committees are to be subject to confirmation by the agricultural wages board, who are also empowered to fix rates of wages in default. The constitution of the agricultural wages committees and of the agricultural wages board is governed by the provisions of the schedule to the bill. It will be remembered that a Wages Board for agriculture was set up under the Corn Production Act of 1917 and abolished during 1921 (see *LABOUR GAZETTE*, July, 1921, page 859; September, 1921, page 1082; February, 1922, page 121, and March, 1922, page 269).

### **American manufacturers and "I.L.O."**

The National Association of Manufacturers of the United States, at their recent twenty-ninth annual convention, adopted a "Platform of American Industry", which included a statement of the views of the members on the International Labour Organization. "As industrialists," they state, "we are unwilling that the United States should become a party to the International Labour Organization as now organized and administered. We believe this organization is developing a philosophy in which individual freedom is largely sacrificed to federated control of individual and industrial liberty. We cannot surrender our interest in working out these problems by the largest measure of individual freedom of contract and employment necessary to achieve the best welfare of both the individual and the nation".

On the general question of the relation of the United States to the League of Nations the manufacturers reaffirm their opposition to any "compromise of national independence", while at the same time expressing the opinion that, without entering the League, the United States should "enter into closer relations with the other nations of the earth for the better administration of international affairs." Such relations, however, should be based on the principle of free co-operation in the development of international law.

The manufacturers also restated their claim to "freedom" in respect to wage and other agreements with their employees, such freedom being defined as the right "to make and maintain voluntary employment agreements, individual or collective, without respect to compulsory membership or non-membership in any organization".

### **American lawyers approve Kansas court**

The American Bar Association, at a convention held at Philadelphia in July, adopted a report of their committee on commerce, trade, and commercial law which strongly urged the need of devising means to end industrial warfare. The report refers to the "Kansas Court of Industrial Relations" (*LABOUR GAZETTE*, March, 1920, page 300; May, 1920, page 550, etc.) as providing the most effective machinery to this end so far established. "The members of the bar are beginning to see that an impartial tribunal free from political influence, with power to enforce its decrees, and so organized that every employer and every employee having a grievance can be sure of a speedy hearing and a just decision, is the only effective means of settling disputes. . . . The Kansas Industrial Court is opposed by the leaders of labour unions, as the court, if necessary, limits their absolute power. It is opposed by some employers because it curtails their autocratic authority. The most careful study yet made of the creation and action of the Kansas Court of Industrial Relations has been recently published by the National Industrial Conference. Three conditions are stated as necessary for the full success of the court; (1) Acceptance by employers and labour unions in essential industries of the principle that the public welfare is supreme; (2) Development of principles of law and rules of practice which will enable the court to deal with group organization in industry, since the court must deal with conflicts of groups as well as disagreements of individuals; (3) Complete removal of the court from the influence of partisan politics."

The number of assisted passages to Canada granted during June, 1924, in connection with schemes under the Empire Settlement Act of 1922 was 1,192. In the same month 2,008 assisted passages to Australia were granted, and 687 to New Zealand. The total number of actual departures from Great Britain to Canada from January to June, inclusive, was 5,879. Previous to 1924, 3,519 departures of assisted passengers were recorded. Some account of the work of the British Overseas Settlement Committee was given in the LABOUR GAZETTE for June (page 461).

The mining and engineering examinations conducted by the Nova Scotia government mining schools were held in the different industrial centres of the province during June. The examinations occupied three days, and were attended by 110 students from the New Waterford, Glace Bay and Sydney Mines districts. These schools give instruction regarding mine gases, the dangers of coal dust, the proper use of explosives and the care of safety lamps. The knowledge thus acquired is said to have had a disciplinary effect on the minds of the younger men whose lack of experience often tends toward carelessness.

The Quebec city council has decided to grant pensions to the labourers employed by the city, in proportion to the length of their service according to the following scale: \$6 weekly to those who have been from 5 to 10 years in the city's employ; \$7 weekly from 10 to 15 years; \$8 weekly from 15 to 20 years, and \$9 weekly for over 20 years.

A permanent economic board is being organized in Saskatoon composed of members representing respectively the Provincial Government, the Retail Merchants' Association, the Farmers' Union, the Womens' Labour League, the University of Saskatchewan, The Grain Growers' Association and its women's branch, The Trades and Labour Council, provincial loan, transportation and manufacturing companies, and banking corporations.

The Edmonton Trades and Labour Council has decided to appoint a permanent committee on education. The Council intends to press for amendments to the Dominion Government's "fair wage clause," in contracts for government work, so as to require the 8-hour working day. (This subject was discussed in the House of Commons on July 18, when the Dominion Government's position was explained by the Minister of Labour in connection with the proposed ratification of the 8-hour day Draft Convention of the Interna-

tional Labour Organization. The question of federal and provincial jurisdiction in this matter has been referred to the Supreme Court of Canada).\*

Regulations relating to the issue of certificates to marine motor engineers were issued in July, on the recommendation of the Minister of Marine and Fisheries, in accordance with the provisions of the Canada Shipping Act, section 578. These certificates are for competency to take charge of the machinery of vessels propelled by internal combustion engines, or by steam engines with flash boilers, or by electricity. Certificates are of four classes, according to the horse-power of the vessel which may be handled. Rules are given as to required term of apprenticeship and other qualifications and tests for each class.

The *Shawinigan Falls Review*, published by the industrial concerns of the district, reports that a marked decrease in the number of industrial accidents has resulted from the work of the Shawinigan Falls Safety League, founded in 1920 and the Shawinigan Welfare Association. A "safety cup" is awarded each year to the local company showing the highest rate of improvement in accidents causing loss of working time.

The eleventh annual meeting of the International Association of Industrial Accident Boards and Commissions will be held at Halifax, Nova Scotia, from August 26 to 28, 1924. The discussions will include the following: "state fund versus competitive insurance," "methods of rate making," and administrative and medical problems.

The election of officers at the recent annual convention of the Nova Scotia Accident Prevention Association resulted as follows: president, C. V. Monaghan, Moirs Limited, Halifax, N.S.; first vice-president, A. W. Macdonald, Dominion Coal Company, Glace Bay, N.S.; second vice-president, A. E. H. Chesley, Dominion Atlantic Railway, Kentville, N.S.; secretary-treasurer, H. R. Thompson, Canadian Manufacturers' Association; field officer, M. L. Fraser, Box 326, New Glasgow; and assistant secretary, R. J. Walsh, Box 267, Halifax, N.S.

The United States Bureau of Mines and the British Department of Mines are working in close co-operation in the development of safer methods in mining, and particularly the prevention of coal dust explosions.

\*Labour Gazette June 1924, page 575.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation

FURTHER improvement in the employment situation was noted at the beginning of July, although conditions were not so good as on the same date of last year. They were, however, better than on July 1, 1922 and 1921.

As reported by trade unions, the percentage of their numbers out of work in June was 5.8, in comparison with 7.3 in the previous month. As compared however with the same period a year ago the proportion of trade union members out of work was two points higher in June than at that time.

A decline from the preceding period in the number of vacancies and placements was shown by the reports from the offices of the Employment Service of Canada for the month of June, 1924, the general trend being on a much lower level than during the corresponding period a year ago. A more optimistic view may be taken, however, for the coming month.

The following is a survey of employment conditions at the end of July, 1924, as reported by the superintendents of the Employment Service.

The hay harvest in the Maritime Provinces employed a considerable number of workers, and in some districts small fruit pickers were in demand. Road building and bridge repairing was progressing rapidly and fewer construction labourers were unemployed than at any previous time this season. Carpenters, painters and skilled building mechanics were required in increasing numbers. The offices continued to place a few loggers and choppers in the bush camps. The demand in the manufacturing industry was steady although very quiet.

Industrial conditions have improved slightly in Quebec, although quite a number of persons were listed as unemployed. An active demand for farm workers, the resumption of lumber and saw-mill operations, as well as the building and road construction in progress throughout the province, supplied work to a considerable number. Manufacturing industries were not so busy as last year, but improvement is noted over the preceding period. A consistent demand for hotel and restaurant employees, with a steady call for household workers, was reported at the offices.

In Ontario the employment situation remained unsatisfactory. A considerable supply of orders for farm workers, chiefly for the haying season, were received and filled

throughout the province, but not in sufficient numbers to care for the applicants registered. Building was more brisk, and highway, street and road construction showed a vast improvement over the preceding period, but conditions were much below the standard of previous years. At the lake ports and at the northern offices, unskilled workers were employed on casual and railway maintenance and repair jobs. Logging and the pulpwood industry afforded work to many in the vicinity of North Bay, Sudbury, Timmins, etc. Trade and manufacturing industries remained very quiet, with the supply of workers exceeding the demand. Slackness prevailed in the Women's Sections, but conditions may improve to some extent on the return of employers to the cities.

In Manitoba the outlook for the crops was favourable, and with good weather an increased demand for farm help may be anticipated for the future. Haying employed many workers during the past month. Building trades remained very quiet, with no large projects under consideration, there being considerable unemployment among building trades mechanics. A few labourers were engaged for grading and forestry work near Dauphin. Demands for hotel and household workers remained brisk, with an additional call for women for market gardening.

In Saskatchewan the farm group afforded a slight increase in the number of opportunities for work, with an over-supply of applicants. Construction, including building roads and railways, was very quiet, a small number of orders being received. Domestic workers for farm and rural sections were required in increasing numbers, the demand being met satisfactorily in most sections. All other fields of employment for women were quiet.

The agricultural group in Alberta showed a fair demand and continued to provide the bulk of the work offered at the offices. The slight amount of building underway was progressing rapidly, but a number of carpenters, labourers and tradesmen were idle in the larger centres. A decline in placements on rural construction and maintenance was recorded. The work afforded to women was approximately in the same volume as formerly, with a slight increase in the number of applicants registered.

In British Columbia surplus of labour for all outdoor industries was noted at the larger offices. Building was advancing favourably, but conditions generally were very quiet. The logging industry was dull, the requirements

for this section being in the northern offices only. Very little demand was recorded in the farming group, with an excess of labour to meet the fruit farm requirements. In the Women's Section a decline in vacancies offered for permanent employment was noted, although difficulty was experienced in supplying well trained cook generals.

#### EMPLOYERS' REPORTS.

Continued expansion was indicated in reports from employers of labour to the Dominion Bureau of Statistics at the beginning of July.

The gains, however, were not so pronounced as those recorded during the corresponding period of last year. Seasonal activity in construction, railway operation, lumber mills, fruit, vegetable and fish canneries accounted for most of the increase, while communication, tobacco, clay, glass and stone also showed improvement. All provinces except Ontario reported more employment than at the beginning of the preceding month; the Prairie Provinces registered marked expansion but the gains in the other provinces that showed increases, were comparatively slight. In the Maritime District improvement in lumber and paper mills, in logging, railway transportation, construction and summer hotels was largely offset by curtailment in textiles, iron and steel, coal mining, shipping and stevedoring. Varying conditions were indicated in Quebec. Manufacturing as a whole afforded more employment in spite of seasonal dullness in some lines; this was largely due to summer operations in saw-mills. Construction also recorded increased activity, and services and railway transportation reported more employment than in the preceding month. On the other hand, logging registered further seasonal contractions; asbestos mines employed fewer persons, and shipping and stevedoring, in which employment usually fluctuates largely, reported reduced activity. In Ontario, declines in employment in manufacturing, chiefly in iron and steel, offset expansion in transportation, construction, services and communication. In the Prairie Provinces the gain was confined very largely to construction, while coal mining showed the slackness usual to this time of year. In British Columbia there were substantial increases in construction and also in fish preserving plants. The lumber industry, however, afforded less employment.

Employment in Ottawa and Winnipeg showed slight improvement, while in Montreal, Toronto, Hamilton and Vancouver reductions on a comparatively small scale were indicated. In Montreal the bulk of the

decrease took place in shipping, but manufacturing as a whole was slacker. In Toronto moderate improvement in construction and in some other divisions was offset by curtailment in manufacturing, chiefly in iron and steel. The improvement in Ottawa was largely due to seasonal activity in lumber mills and on highway construction. In Hamilton, there were general reductions in factory employment. In Winnipeg, construction, telephones and some branches of manufacturing recorded increased activity. In Vancouver, curtailment of operations in saw-mills caused a decline in employment, which was partly offset by improvement in construction and some other industries.

Manufacturing as a whole was less active, largely on account of decreases in iron and steel, textiles, leather and rubber. On the other hand, fish preserving plants, lumber mills, fruit and vegetable canneries, tobacco, clay, glass and stone works afforded more employment. Part of the declines in manufactures were probably due to the fact that, since Dominion Day fell on a Tuesday, a number of factories closed down over the week-end and did not reopen until after the holiday. Logging recorded further seasonal declines, while mining was not so fully employed. Construction in all its branches showed substantial improvement. Railway transportation employed a larger number of persons than at the beginning of June; a slight increase was noted in local transportation, while shipping and stevedoring was slacker than on June 1. Communication and services reported gains, but trade was not as active.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of July.

#### TRADE UNION REPORTS.

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Reports tabulated from 1,501 labour organizations with the combined membership of 158,325 persons at the end of June showed that 5.8 per cent of the members were out of work as compared with 7.3 per cent in May and with 3.4 per cent at the

close of June last year. Quebec, Ontario, Manitoba, Alberta, and British Columbia unions were more active than in May, increases in Quebec being, for the most part, due to greater employment for garment workers. Of the decrease in the other provinces the most pronounced was in Nova Scotia where reductions were reported by coal miners. In comparison with June, 1923, all provinces with the exception of Manitoba, Alberta and British Columbia reported a less favourable situation. Workers in the manufacturing division were busier than in May 10.3 per cent of the members being out of work at the end of June as compared with 12.9 per cent at the close of May. Reports were tabulated from 414 unions in the manufacturing industries with a membership of 49,041 persons, 5,068 of whom were out of work at the end of June. Cigar makers, metal polishers and glass workers were slacker and contractions in lesser degree were reported by iron and steel, textile, sugar refinery and paper mill workers, and bakers and confectioners. Considerable improvement was registered by garment workers and brewery workers also showed some activity. The situation in the manufacturing industry was less favourable than in June of last year. Coal miners in Nova Scotia reported considerably more unemployment than in May due to the temporary shut down of one of the mines. In Alberta, also, less work was afforded, but in the British Columbia coal mines no members were reported out of work. A number of coal miners in Alberta and British Columbia were still reported on strike. Quarry workers in Nova Scotia and asbestos miners in Quebec registered no idleness. In the building group an improvement over May was reported, 10.6 per cent of the members being out of work at the end of June as compared with 15.5 per cent at the close of the previous month. All tradesmen in the group, with the exception of electrical workers and plumbers and steam fitters reported a greater volume of employment. More unemployment was registered by building workers than in June, 1923. Reports tabulated from 589 unions in the transportation group with an aggregate membership of 55,566 persons showed that 2.6 per cent of the members were idle as compared with 3.1 per cent in May. All branches within the group participated in this increase. Retail clerks were not so fully engaged as in May. No idleness was reported by fishermen and lumber workers. Hotel and restaurant employees were more active and gains on a smaller scale were registered by barbers and stationary engineers and firemen. The situation for theatre and stage employees was slightly less favourable than in May.

#### EMPLOYMENT OFFICE REPORTS.

During the month of June, 1924, the offices of the Employment Service of Canada referred 25,968 workers to employment and made a total of 24,756 placements. Workers placed in regular employment numbered 17,343, of which 14,293 were men and 3,050 of women, as compared with 21,569 placements in regular work during May, 1924. Placements in casual work during the period under review were 7,413 as against 9,524 during the preceding month. Employers notified the Service of 27,907 vacancies, of which 18,605 were for men and 9,302 for women, as compared with 32,219 vacancies offered during the previous month. The number of applicants for work was 35,730, of whom 26,368 were men and 9,362 were women. A glance at these figures shows a decided decline in the volume of business during this month compared with May of this year, the general trend being on a much lower level than during the corresponding period a year ago. The decline may in some measure be due to unfavourable weather, the majority of offices taking a more optimistic view for the approaching months. In other sections of this issue will be found a detailed report of the work of the offices for the month of June and for the quarterly period April to June, 1924.

#### PRODUCTION REPORT.

The Dominion Bureau of Statistics reports a production of 56,963 gross tons of pig iron in Canada during June, a decline to about two-thirds of the output in the previous month, when 84,987 tons was produced. This tonnage was the lowest reported for any month this year. The production of basic pig iron was 28,865 tons, representing a decline of 58 per cent from the output of this grade in May. This decline more than offset the advance of 189 per cent in production of malleable iron to 15,916 tons. Foundry iron showed little change at 12,182 tons. The cumulative production of 427,105 tons for the first six months of this year showed little difference from the 435,146 tons produced in the same period of 1923, and exceeded the first six months outputs of 1922 and 1921, when the quantities were 192,187 tons and 309,206 tons, respectively. During the month two furnaces were banked at Sault Ste. Marie, leaving four furnaces in blast at the end of June. The active furnaces were located as follows: two at Sydney, N.S., one at Sault Ste. Marie, Ont., and one at Hamilton, Ont.

The production of ferro-silicon in June was 2,108 tons, or 6 per cent under the 2,245 tons produced in May. The cumulative out-

put of 15,768 tons exceeded the six months' total for the last three years when the tonnages were: 13,013 tons in 1923; 9,671 tons in 1922 and 10,781 tons in 1921.

The production of steel ingots and castings in Canada in June was 68,914 tons, or 37 per cent less than the 108,433 tons produced in May. This decline was mostly in the quantity of steel ingots produced for the further use of the reporting firms. The cumulative production for the first six months of the present year was 488,733 tons. This total exceeds the outputs for the corresponding periods of the last three years, when the quantities were: 476,430 tons in 1923; 177,080 tons in 1922, and 295,140 tons in 1921.

The production of coal in Pictou County, N.S., in June, was as follows: Acadia Coal Company, 34,679 tons (32,360 tons in May); Greenwood Coal Company, 2,848 tons (2,882 tons in May); Intercolonial Mining Company, 7,960 tons (12,747 tons in May).

A report from the British Columbia Forestry Branch shows that 244,870,420 feet of timber, board measure, was scaled in the Province during June, 1924, compared with 266,287,596 feet in the previous month. This total includes Douglas fir, 97,111,281 feet; red cedar, 52,692,449 feet; spruce, 31,480,356 feet; hemlock, 30,695,667 feet; balsam, 6,129,820 feet; yellow pine, 5,645,449 feet; white pine, 2,383,769 feet; jack pine, 8,699,494 feet; larch, 6,758,690 feet; cottonwood, 874,221 feet; and species not specified, 2,399,224 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement, amounted to \$19,678,067 during the month of June, as compared with \$19,350,770 in May, and with \$22,609,252 in June, 1923. The gross earnings from January to June, 1924, inclusive, was \$114,862,558, as compared with \$115,913,120 in the first six months of 1923.

The gross earnings of the Canadian Pacific Railway Company for June were given in a preliminary statement at \$15,135,633 in comparison with \$14,426,679 in the previous month, and with \$14,943,918 in June, 1923. The gross earnings for the first six months of 1924 were given as \$84,656,917, as compared with \$80,845,493 in the first half of 1923.

BUILDING PERMITS AND CONTRACTS AWARDED.

According to the Dominion Bureau of Statistics, the value of building permits issued in 56 cities during June showed a decline of 5.9 per cent as compared with May, and 6.4 per cent as compared with the same period of a year ago. The figure for June, 1924, was

\$13,373,987; for May, 1924, \$14,215,670; and for June, 1923, \$14,286,252.

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded in Canada during July, 1924, was \$23,818,400, as compared with \$26,185,300 in June. Residential building accounted for 30.4 per cent of the July total, amounting to \$7,222,600. Business building amounted to \$5,469,000, or 23.0 per cent; industrial building \$2,584,700, or 11.0 per cent, and public works and utilities \$8,542,100, or 35.6 per cent. The activity was distributed among the provinces as follows: Ontario, 42.3 per cent; Quebec, 36.4 per cent; British Columbia, 7.6 per cent; Prairie Provinces, 10.4 per cent; and the Maritime Provinces, 3.3 per cent. The total construction started from January 1 to July 31, 1924, amounted to \$152,541,500, compared with \$196,165,700 during the corresponding period of last year, and \$159,146,200 in 1922.

#### FOREIGN TRADE.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in June, 1924, the merchandise entered for consumption amounted to \$66,395,750 as against \$84,632,624 in June, 1923. The domestic merchandise exported amounted to \$87,218,747 in June, 1924, as compared with \$104,150,715 in the previous month and \$94,900,837 in the corresponding month of the previous year. Foreign merchandise exported amounted to \$1,109,342 in June, 1924, and \$1,337,055 in June, 1923.

The chief imports in June, 1924, were: iron and its products, \$12,554,431; non-metallic mineral products, \$12,289,570; fibres, textiles and textile products, \$11,055,168; and agricultural and vegetable products, mainly foods, \$10,763,582.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$36,270,803; wood, wood products and paper, \$21,178,609; and animals and animal products, \$10,103,053. During the three months of the fiscal year ended June 30, 1924, exports of agricultural and vegetable products, mainly foods, were valued at \$102,914,037; wood, wood products and paper, \$58,240,268; and animals and animal products, \$24,252,633.

#### Strikes

The time loss due to industrial disputes was less in July than in either June, 1924, or July, 1923. There were in existence at some time or other during the month 14 disputes, involving 9,224 employees and a time loss of 229,304

working days, as compared with 22 disputes in June, involving 13,872 workpeople and a time loss of 244,672 working days. In July, 1923, there were recorded 23 disputes, involving 18,095 workpeople, and a time loss of 307,433 working days. Two new strikes commenced during July. Three of the strikes commencing prior to July and the two new strikes commencing during July terminated during the month. At the end of the month, therefore, there were nine strikes involving 8,317 workpeople.

### Prices

Retail food prices showed little change during the month. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was slightly higher at \$9.91 for July as compared with \$9.86 for June; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.92 for June, 1920 (the peak); \$16.84 for July, 1920; \$13 for July, 1918; and \$7.42 for July, 1914. Slight advances occurred in the prices of flour, potatoes, butter, eggs, fresh pork, and sirloin steak while prices of sugar, mutton, bacon, cheese, beans, and prunes were lower. Including the cost of fuel and rent with that of foods, the

total budget averaged \$20.30 at the beginning of July as compared with \$20.22 for June; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); \$20.66 for July, 1918; and \$14.17 for July, 1914. Fuel and rent showed little change.

The movement of wholesale prices, as indicated by the index number of the Dominion Bureau of Statistics, was again slightly higher at 153.3 for July as compared with 152.2 for June; 153.5 for July, 1923; 154.1 for July, 1922; 163.4 for July, 1921; 256.1 for July, 1920; 256.9 for May, 1920 (the peak); and 202.3 for July, 1919. In the grouping according to chief component material three of the eight main groups were higher, three were lower, while two were practically unchanged. Increases in the prices of grains, butter, eggs, raw cotton and wool caused advances in the Vegetable Products group, the Animal and Animal Products group, and the Textiles group which more than offset the declines in the Iron group, the Wood and Wood Products group and the Chemicals group, due to lower prices for pig iron, steel sheets, lumber, wood pulp, coal tar, white lead, alum and soap. The Non-Ferrous Metals group and the Non-Metallic Minerals group were practically unchanged.

### Vacations With Pay

"Vacations with pay for factory workers" is the title of a pamphlet recently published by the Consumers' League of Eastern Pennsylvania. Describing conditions in the United States the writer states that office workers everywhere expect and receive vacations with pay as a matter of course, and retail stores have begun to extend this policy to their sales forces. Some large companies now grant vacations with pay to all their employees regardless of the nature of their work. There are five general types of vacation plans. The most common is to give a flat-time vacation, usually one week in duration, to all employees who have been continuously in the employment of the firm for a set minimum length of time, most frequently one year. Employees who have been temporarily laid off on account of lack of work, or who have been out because of any prolonged sickness of any other legitimate reason, are considered continuously employed. Another common type of vacation is one graduated in length according to

the years of service. A third and less frequently employed method is to make the vacation a form of attendance bonus; either giving a flat-time vacation but graduating the pay according to the attendance of the worker, or graduating the length of the paid vacation according to the attendance. The fourth plan is that of the vacation club. Current interest rates are paid on savings. In the summer, when vacations are granted, the employee draws his deposits and interests and receives from the company the vacation bonus approximating in amount the total of his savings. A fifth vacation plan is in substance a bonus for returning to work for the company after the vacation period.

The Women's Bureau of the United States Department of Labour publishes in bulletin form, with illustrative sketches, a number of short popular articles on various conditions surrounding the employment of women in industry. The articles were originally prepared and used for a series of "talks" over the radio.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JULY, 1924

**D**URING the month of July the Department received reports of a Board of Conciliation and Investigation established to deal with a dispute between the Corporation of the City of Moose Jaw and certain of its employees, being members of the Saskatchewan Brotherhood of Steam and Operating Engineers and of the International Brotherhood of Electrical Workers.

### Applications Received

During the month six applications for the establishment of Boards of Conciliation and Investigation were received, as follows:

(1) From certain employees of the Nipissing Central Railway, being motormen, conductors, brakemen, shop and shed men and linemen, members of Division 700, Amalgamated Association of Street and Electric Railway Employees of America. After the application had been received and at the Minister's suggestion further direct negotiations took place which resulted in a settlement being reached without board procedure.

(2) From certain employees of the Canadian Pacific Railway Company, being foremen, checkers, coopers, truckers, etc., employed on the Montreal wharf, represented by and members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

(3) From certain employees of the Canadian Pacific Railway Company in commercial telegraph service, members of the Commercial Telegraphers' Union of America.

(4) From certain employees of the Canadian National Telegraphs in commercial telegraph service, members of the Commercial Telegraphers' Union of America.

(5) From certain workmen, members of the Edmonton and District Miners' Federation and employed by various coal operators, members of the Northern Alberta Coal Operators' Association. A Board was established and the following members were appointed:

Mr. James Smith, Edmonton, Alberta, chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, Messrs. R. G. Drinnan and P. J. Rowe, both of Edmonton, Alberta, nominees of the employers and workmen respectively.

(6) From certain employees of the Canadian Pacific Railway Company, Western Lines, being clerks, freight handlers, baggage men, storemen, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

### Other Proceedings Under the Act

In the case of the dispute between the Roberval-Saguenay Railway Company and certain of its employees being station agents, assistant agents, telegraph operators, railway conductors, locomotive engineers, firemen, brakemen and helpers on steam and electric railways, motormen, cleaners, maintenance-of-way employees, etc., members of the National Catholic Syndicate of Employees of the Roberval-Saguenay Railway Company, a Board was completed by the appointment of Mr. Louis G. Demers, K.C., Quebec, P.Q., chairman, and Mr. F. X. Gosselin, Chicoutimi, P.Q., nominee of the employer in substitution for Mr. Adolphe Routhier, resigned; Mr. Arthur Frenette, nominee of the workers, had been appointed in June. The chairman was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board.

In the case of the dispute between the Montreal Street Railway Company and certain of its employees being members of Division No. 790, Amalgamated Association of Street and Electric Railway Employees of America, after the application had been received negotiations were resumed through the mediation of a representative of the Department and an agreement was reached without Board procedure.

### Report of Board in Dispute Between the City of Moose Jaw, Saskatchewan, and Its Steam and Operating Engineers and Electrical Workers

A report was received from the Board established to deal with a dispute between the Corporation of the City of Moose Jaw and certain of its employees, members of the Saskatchewan Steam and Operating Engineers

and the International Brotherhood of Electrical Workers. The Board was composed of Mr. James Smith, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other mem-

bers of the Board, and Messrs. W. G. Baker and N. R. Craig, nominees of the employees and employers respectively. The report was signed by the chairman and the employees' representative, and recommended the adoption of a wage schedule which had been prepared by the electrical superintendent of the city. Mr. Craig, the employers' representative, presented a minority report. The text of the two reports follows:—

### Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Corporation of the City of Moose Jaw, Employers, and certain of its employees being members of the Saskatchewan Steam and Operating Engineers and the International Brotherhood of Electrical Workers, Employees.

To the Hon. JAMES MURDOCK,  
Minister of Labour,  
Ottawa, Can.

HONOURABLE SIR,—The Board of Conciliation and Investigation appointed by you on the 18th of June, 1924, under the Industrial Disputes Investigation Act, 1907, have the honour to report as follows:

As appears from the formal application for the appointment of the Board in this case, the nature and cause of dispute, including claims and demands of either party upon the other to which exception is taken and the outline of efforts made by the parties concerned to adjust the dispute, are as follows:

The electrical workers entered into an agreement with the City of Moose Jaw on the 31st of March, 1922, at a certain fixed schedule of wages. This agreement expired on the 31st of March, 1924, and the electrical workers submitted a new agreement for the consideration of the City Council of Moose Jaw on or about the 1st day of April, 1924, in which the schedule of wages asked by the workers was set out as follows:

Plant electrician .....	\$ 190 00	per	month
Plant " assistant.....	120 00	"	"
Meter repairer & tester.....	150 00	"	"
Meter installer 1st $\frac{1}{2}$ year.....	.55	"	hour
" " 2nd $\frac{1}{2}$ " .....	.60	"	"
" " 3rd $\frac{1}{2}$ " .....	.65	"	"
" " 4th $\frac{1}{2}$ " .....	.70	"	"
" " after two years.....	.75	"	"
Sub-line foreman.....	.90	"	"
Journeyman lineman.....	.85	"	"
Apprentice lineman 1st year.....	.45	"	"
" " 2nd " .....	.55	"	"
" " 3rd " .....	.65	"	"
" " 4th " .....	.75	"	"

This being an increase of approximately .05c per hour over the schedule in the 1922 agreement.

The proposed new schedule was referred by the City Council to the electrical super-

intendent for his report. The superintendent brought in a report dated May 2nd, 1924, recommending the acceptance of the new schedule as submitted by the electrical workers. The City Council refused to act on this report, following which a request was made by the electrical workers for a reconsideration of their refusal, which request was also refused by the City Council.

The City Council has submitted no alternative agreement except a continuation of the terms of the expired agreement.

With regard to the steam and operating engineers a request was made for an increase in wages, but no amount was specified. The City Council refused to consider the request.

Early in the year 1924 both parties made application to the City Council for a new schedule of wages; following this application the delegates of the unions met a committee of the City Council and placed their demands before them. These demands came before the City Council, and, as a result, the electrical superintendent, J. D. Peters, representing the City, met the representative for the unions with a view to making an inquiry into conditions and reporting to the City Council. The workers were quite willing to accept the report of the electrical superintendent but the City Council refused to accept the same and refused to act on it.

The Board met at the City of Moose Jaw on Monday, July 7th, 1924. Commissioner Geo. D. Mackie was present to present the case for the City, while Stanley Guthridge acted for the Steam and Operating Engineers and Fred. Ridgeway for the electrical workers. J. D. Peters, electrical superintendent for the city, was also in attendance.

The Chairman outlined the purpose of the Board of Conciliation, stating that in accordance with the Industrial Disputes Investigation Act it was the duty of the Board, if possible, to bring about a settlement in the most amicable manner. Before taking testimony he desired to know if an adjournment of the session until Monday afternoon would enable the disputing parties to come to an agreement.

No agreement, however, could be effected and the Chairman recited the terms of the application made by the power house employees to the Minister of Labour for a Conciliation Board. He also referred to the request made by the City Council to the Electrical Superintendent, J. D. Peters, on behalf of the city for a report on the matter and to the fact that the latter recommended certain increases in salary.

In respect to the steam and operating engineers, Mr. Guthridge stated that no table

	New Rate	Old Rate
Shift Engineers.....	\$200.00 per mo.	\$194.00 per mo.
Stoker Operators.....	35.00 per wk.	34.05 per wk.
Spare Stoker Operators.....	33.50 " "	33.50 " "
Oilers—No change in schedule. Rate for oilers relieving stoker operators or engineers to be .05c. per hour less than rate of man relieved.		
Boiler Cleaner.....	.58 per hr.	.56 per hr.
Repairmen (Mechanics).....	.62½ " "	.60 " "
Coal Conveyer Operator.....	30.00 " "	28.80 per wk.
Master Mechanic.....	200.00 per mo.	28.00 " "
		182.50 per mo.

The position of shift engineer in our plant is a very important one and comprises the duties of switchboard operator and turbine operator as well as general supervision of the entire plant. In comparing these with the City of Regina, you will find that in addition to shift engineer there is on duty an assistant chief engineer while in Saskatoon there are both switchboard operators and turbine attendants in addition to the shift engineer. Our shift engineers are also entitled to some consideration on account of the increase in the plant equipment during recent years. This also applies to stoker operators, and in this connection, on account of our boilers being smaller, we have to operate more units than either Regina or Saskatoon, and this really determines the amount of work to be done by stoker operators. Shift engineers all work seven days per week.

The work of the Master Mechanic has increased greatly during recent years, due to more extensive repair work which becomes necessary as the plant becomes older and to the replacement of worn out equipment which has been going on during the last two years and which continue. He is subject to a great deal of Sunday and night work for which no extra pay is given and I consider his services to be worth at least as much as those of a Shift Engineer. The other increases are very nominal and are recommended because I find present rates too low for the class of work done, as compared with similar jobs elsewhere.

In fairness to our employees, I think these adjustments should be made and in so far as the addition to the pay roll is concerned I am quite confident that, by greater interest and closer attention to their duties, these employees will save for the city a great deal more than the extra cost.

The estimates for the year will cover these increases.

I also consider it advisable to continue to recognize the Saskatchewan Brotherhood of Steam and Operating Engineers and to incorporate the above schedule in their agreement, as well as posting the schedule in the power plant for the benefit of those employees who do not belong to this union.

I beg to remain,

Yours obediently.

(Signed) J. D. PETERS,

Electrical Superintendent.

JDP.

We cite a portion of the evidence to show that the conclusions in the report of the electrical superintendent are based on the evidence submitted to us and that the evidence submitted to us justifies the conclusion in the report.

Sibbald Proud, master mechanic of the power plant, stated that he had been employed by the city for eleven or twelve years, his duty was to effect repairs and put in new machinery, to bridge building and construction work both inside and out. He based his request for an increase in wages on increased work, increased responsibility and on the fact that the electrical superintendent,

who was acquainted with what he did, had recommended an increase. In the witness' opinion the work had greatly increased in the past few years and was likely to still further increase. The replacement of the old 500-kilowatt unit by the 3,500-kilowatt machine in 1919 had greatly increased the work. Giving particulars of the increase in work, he cited the installation of the street railway units and a gradual increase in machinery at the plant. He stated that the men often were told to go home after work and not to leave, but hold themselves in readiness to be called; that the expert of the General Electric Co., who came to Moose Jaw to superintend the installation of the shaft of the 3,500-kilowatt machine, declared that he never saw work more efficiently and better performed.

Thomas Loughton, a boiler washer at the power plant, had been in the employ of the city for eleven years. He asked for an increase of 2 cents per hour. He based his request on the fact that his labours had increased owing to not having any help.

W. Middleton, a conveyer operator at the power plant, had worked in that capacity for ten or eleven years. He based his request for increased wages on increased work at the plant and using more coal. The class of coal that he handled this year was different on account of the coal strike and the work was heavier on account of the breakdown of the 3,500-kilowatt unit. At times he had to work overtime, but received no pay for that.

Wm. Matheson, a repairman at the power plant, based his application for increased pay on the ground of extra work which had arisen since the installation of the 3,500-kilowatt unit. He stated that the Moose Jaw repairmen received 60 cents per hour. In Regina men doing similar work were paid from 73 to 80 cents per hour.

Stanley Guthridge, a shift engineer employed at the power plant, stated that he had been in the city's employ for the last seven years. His wages were \$194 per month. He based his claim for increased wages on increased responsibility due to installation of new machinery and the consequent duties involved. He specified the changes that oc-

curred in the year 1919 when the 500-kilowatt unit was taken up and the 3,500-kilowatt installed. Other additions to the plant in recent years were the street railway unit, six panels were added to the switch board with the necessary switches and meters. A water filter and water softener, which latter had been transformed into a double unit.

P. Boyle, a stoker operator, employed in the city for twelve years. He based his request of increase in pay on the installation at the plant of new stokers and greater coal consumption. There were five or six boilers under steam at the plant at one time in comparison with two under steam and one banked at Regina. He stated that the new boilers had increased his responsibility and that of the other stokers. He pointed out that the stoker operators at Moose Jaw were paid at 60 cents per hour. In Regina the rate was 65 cents per hour and in Saskatoon 64½ cents per hour.

Fred Ridgway worked as an electrical worker in the city at the power plant for fifteen years. He based his demand for increased wages on what other cities in the province and other provinces were paying and also on the wages paid in Moose Jaw by the Saskatchewan Government telephones to men employed in similar work. He declared that he had never been satisfied with the agreement entered into in 1922 and that the men never would be satisfied until they received the same wages as were paid in other cities for the same class of work. The journeymen linemen employed by the city were paid 80 cents per hour while the telephone department paid 85 cents per hour. In Saskatoon they were paid 86.2 cents per hour, Calgary 84.38 cents per hour, Winnipeg 89 cents per hour, Regina 90 cents per hour, Edmonton 90 cents per hour, and Brandon 89 cents per hour. He was asking for an increase from 85 cents per hour to 90 cents per hour.

Mr. Mackie, the City Commissioner, on behalf of the city of Moose Jaw, stated that in the year 1922 an amicable arrangement had been come to and a wage schedule satisfactory to the city and men drawn up. That in the year 1923 there was no agreement on the part of the men who had continued the 1922 agreement and he submitted that there was no change from April, 1923, to April, 1924, that would warrant an increase in wages.

Reading from the LABOUR GAZETTE, he gave cost of living from the year 1913 when it was based on 100. He stated that the peak was reached in the year 1920, when in July the figure was 201. When the last change

was made to the power house workers in April, 1922, the factor was 152. In April, 1923, it was 154, and in December, 1923, it was 154. The agreement was renewed in the year 1923, which Mr. Mackie contended was proof that the men were satisfied with the wages paid and the cost of living had not increased since that date and he argues that on that ground and that ground alone the Board was not justified in giving them an increase in wages. He also submitted blue prints showing comparative wages and costs of living from the year 1914 to 1923 for linemen and shift engineers. He also submitted figures as to the cost of a family budget from April, 1914, to April, 1924, and stated that if those figures show anything they show that the cost of a family budget is on the downward trend and that since the year 1922 the shift engineers' wages were materially above the family budget.

He also declared that the city council did not refuse to act on the electrical superintendent's report. The council, he stated, did act very emphatically by saying that there were no grounds for increase in wages over the year 1922. The council had felt that wages should come down but as the decrease in living conditions was not large the council had decided to leave the wages for 1924 as for the past year.

In reply the men stated that in the schedule of articles in the cost of living referred to by Mr. Mackie it did not include other items which ought to be available out of their wages and that, while they submitted to the terms of the agreement entered into in 1922, they were not satisfied with same but that they did it as citizens in order to help the financial conditions of the City of Moose Jaw.

Our conclusion from all the evidence submitted and the arguments presented to us is that the report and recommendation of Mr. Peters is fair and reasonable and should be adopted by the City and we find that an agreement should be entered into by the City with the workers granting the increases therein indicated and retaining to the workers the same conditions as at present are in force, all of which is

Respectfully submitted,

(Sgd.) JAMES SMITH,

*Chairman of the Board.*

(Sgd.) W. G. BAKER,

*Member of the Board.*

Dated at Moose Jaw,  
this July 11, 1924.

Witness,

(Sgd.) N. R. CRAIG.

### Minority Report

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Corporation of the City of Moose Jaw, Employer, and Employees, members of the Saskatchewan Steam and Operating Engineers and the International Brotherhood of Electrical Workers.

To the Honourable JAMES MURDOCK, Minister of Labour, Ottawa, Canada.

The undersigned member of the Board, being unable fully to concur with the majority of the Board, begs to report as follows:

The dispute in this matter is solely one of the rate of pay. No question of hours of labour or working conditions is submitted. Outside of the question of rate of payment the employees appear entirely satisfied with working conditions. The City appears to have in these employees men of a high type of character, many of whom have been with the City for years. Until the present dispute arose these employees and the City have always been able to satisfactorily compose any differences.

Both parties are to be commended on the spirit shown in the proceedings before the Board. There was an entire absence of acrimony. The representatives of the City and of the employees appear to have the greatest respect for and the kindest feelings toward each other.

The presentation of their case by the employees' representatives possessed me in favour of the men and if I could be guided only by sentiment or by personal predilection I would gladly concur in the majority finding of the Board.

The majority findings fully set out the differences which have been dealt with.

I concur with the majority in recommending:

a. That mechanics receive.....	62½c. per hour
b. That coal conveyer man receive.....	53½c. "
c. That sub. foreman of linemen receive.....	90 c. "
d. That linemen receive.....	85 c. "

I believe the master mechanic is entitled to an increase in view of the peculiarly high efficiency he is shown by the evidence to possess. The commendations he has received cannot be overlooked. While I think the present wage sufficient for the position as ordinarily filled, I would for the reasons given suggest an increase to the present master mechanic to \$190 per month.

I am unable to concur with the majority of the Board as to other findings. I will state as briefly as possible my reasons for the increases recommended by myself and for my inability to concur in the other increases recommended by the majority of the Board.

The employees based their case on:—

- a. Increased duties and responsibilities,
- b. Scale of wages in Regina and Saskatoon,
- c. The recommendation to the Council of Supt. Peters,
- d. The surplus earnings of the plant.

They entirely repudiated the theory that wages and cost of living are interdependent, although it appeared in evidence given by the City that the high cost of living was urged in 1919-1921 as a chief reason for increases then granted.

I was not convinced by the evidence that the duties of the employees are presently more onerous than in former years. Labour saving appliances have been installed. The employees urged this as a reason for increased pay alleging that these appliances have increased responsibility. I believe any increase of responsibility is compensated for by the greater ease and comfort with which the work can be done.

Comparisons of wage scales in the other cities is not very satisfactory and not at all conclusive. To take one example:—

In Regina	Shift Engineers get.....	86½c. per hour
In Saskatoon	" " ".....	75 c. "
In Moose Jaw	" " ".....	79½c. "

So far as the evidence discloses the duties in Saskatoon and Regina are similar, yet we have a spread of 11½c per hour.

The shift engineers of Moose Jaw urge that they have greater responsibility in the plant and more various duties than in Saskatoon and Regina. On the other hand it is obvious that in both Regina and Saskatoon the plant capacity and output are much greater than in Moose Jaw.

In Saskatoon they earn \$156 per month working 208 hours. In Regina \$179.92 working 208 hours. In Moose Jaw, \$194 working 244 hours.

It would appear as logical to conclude that Regina shift engineers should be reduced from 86½ cents to the Saskatoon rate of 75 cents, as to argue that the Moose Jaw rate should be raised towards the Regina rate.

The recommendations to the council of Superintendent Peters must be treated with consideration and respect and cannot be lightly dismissed. But granting this, it must be remembered that the City Commissioners and city council, being well acquainted with the circumstances and having the benefit of Superintendent Peters' report and advice, have entirely disagreed with his recommendations. To decide which opinion must carry greater weight is not, I conceive, a function of the Board. These opinions neutralize each other and are impotent as a factor in determining the difficulty.

The surplus earnings of the plant cannot properly be taken as an index to wages. This plant operates a monopoly. Prices are arbi-

trarily fixed. It is only necessary to raise the price to produce any desired surplus. The evidence discloses that in this particular year a deficit is anticipated on the present rates charged; therefore, if surplus is a guide, wages should be reduced.

My reasons for recommending increases a, b, c, and d are:—

In the case of the linemen the Government, which is a province-wide employer, pays this rate. The physical work is arduous. Inclement weather must be faced and the employment is extra hazardous. The mechanics and the coal conveyer men are paid greatly below similar employment elsewhere and the wage recommended would not appear greater than sufficient to cover the reasonable necessities of these employees under present conditions.

As to the whole matter, I think broader considerations that those urged by the employees must be applied.

Charts and other data furnished show that any change in cost of living since 1922 has been downward. Notwithstanding the contention of the employees, I cannot hold that wages and cost of living must not re-act on each other. In 1922 the parties to this dispute met and agreed on a schedule which appeared to be mutually satisfactory. It is true that the employees state that this was a compromise on their part. Doubtless it was also a compromise in the other direction on the part of the city. We cannot yet hope to find employers and employees seeing eye to eye on the question of wages. Any agreement reached must be a compromise. I conclude that the 1922 agreement was reasonably satisfactory. This being so, does any change in general conditions warrant a demand for an increase from this schedule? In Canada wages since 1922, where not stationary, are trending downwards. Unskilled labour is notably lower. Skilled labour has only succeeded by efficient organization in

avoiding substantial reductions. The Dominion Government has refused to recognize claims for increase over or even maintenance of scales of pay in force in 1922.

Yesterday's Moose Jaw paper carries an official chart showing house rents in Moose Jaw very much below the present Regina level and below the 1922 Moose Jaw level.

Neither can we overlook the fact that unemployment is a serious problem in Canada. So serious that a Dominion conference on the question is contemplated. If, as was asserted before the Board by the representative of the employees, the law of supply and demand is to govern, one is forced to the conclusion that when there is a surplus of labour the wage scale cannot increase.

A perusal of the award made in 1920 by the Board presided over by the Honourable Mr. Justice Taylor does not strengthen the case for the employees; on the contrary the principles followed in that report furnish an argument against the present demand. It would be tedious to amplify this and the report is on the files of your Department.

In conclusion I can only say that, in the absence of evidence that the present wage scale is inadequate to provide decent living conditions with that reasonable surplus that every worker is in my opinion entitled to, and in view of Dominion-wide conditions, I consider the present a most inopportune time for the demands made for increases.

The evidence does not satisfy me that the demands, with the exceptions noted, are warranted by either necessity or justice. My recommendation therefore is that, except as herein noted, the 1922 schedules and agreements shall continue in force.

Dated at Moose Jaw, Saskatchewan, this 11th day of July, 1924.

Respectfully submitted,

(Sgd.) N. R. CRAIG.

(Sgd.) JAMES SMITH,

Witness.

### Unemployment Insurance in Germany

According to the International Labour Office, considerable change has been made in the German unemployment insurance legislation as a result of the recent unemployment crisis. An order of February 16, 1924, contains some important new provisions. The contributions of employers and workers to unemployment insurance are fixed for each group at  $1\frac{1}{2}$  per cent of the wages. Contributions to unemployment insurance are compulsory for all workers insured against sickness. A certain number of trades in which unemployment is rare may be exempted from this

obligation. Exemption is given to all agricultural workers who, in addition to working as wage earners, cultivate an allotment. The order further provides that, to qualify for benefit, an unemployed person must have been employed for at least three months during the twelve months preceding his unemployment in a trade to which sickness insurance applies. The order abolishes benefits for persons partially unemployed, as well as benefits for unemployed young persons under 16 years of age.

## ANNUAL SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

THE tables presented below summarize the proceedings under the Industrial Disputes Investigation Act, 1907, for the fiscal year ending March 31, 1924, and from March 22, 1907, to March 31, 1924.

I. TABLE SHOWING PROCEEDINGS BY INDUSTRIES FROM APRIL 1, 1923, TO MARCH 31, 1924.

Industries affected	Number of applications for Boards received*	Number of Boards established	Number of strikes not averted or ended
I. Disputes affecting mines, transportation and communication and other public utilities—			
(1) Mines—			
Metal.....	1	1	0
(2) Transportation and communication—			
(a) Railways.....	12	3	0
(b) †Street railways....	4	4	0
(c) Shipping.....	5	2	0
(d) Telegraphs.....	1	1	0
(3) Miscellaneous—			
†Light and Power.....	3	2	0
II. †Disputes not falling clearly within the direct scope of the Act.....	2	0	0
Total.....	28*	13	0

\* Including six cases left over from preceding year, as stated below.

† During the period April 1, 1918, to March 31, 1923, jurisdiction under the statute in connection with disputes relating to industries under provincial or municipal control not being claimed by the Department, no proceedings under the statute took place, save by joint consent under Section 63, and any such proceedings were shown in Section II of the tables. During the present fiscal period, however, it has been held that jurisdiction in such matters rests with the federal authorities and proceedings in the case of disputes in industries to which the Act applies but which are owned or controlled by a municipal or provincial government have taken place without reference to Section 63; these proceedings are, therefore, now shown under their respective classifications in Section I and in the above table include three disputes, two involving street railways and one an electric light, heat and power plant.

The proceedings under the Act during the year include six cases in which certain proceedings had taken place during the preceding year, namely, disputes between (1) Canadian National Railways, Western Lines, and certain of its employees being members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6; (2) Canadian Pacific Railway Company, Western Lines, and certain of its employees being members of the International Brotherhood of Steam Shovel and Dredge Men, District No. 6; (3) Canadian National Railways, Western Lines, and its dining and sleeping car employees, members of the Canadian Brotherhood of

Railroad Employees; (4) Brantford Municipal Railway Commission and certain of its employees being street railway workers, members of Local Division No. 685, Amalgamated Association of Street and Electric Railway Employees of America; (5) Corporation of the City of Prince Rupert and certain of its employees being members of Civic Employees' Union No. 20, Trades and Labour Congress of Canada, and (6) Winnipeg Electric Railway Company and certain of its employees being members of the Gas Workers' Union of Winnipeg (Independent).

On March 31, 1924, results were still pending in connection with three applications concerning disputes between (1) Toronto Electric Commissioners and certain of their employees being linemen, groundmen and others concerned in the work of power transmission and distribution and being members of the Canadian Electrical Trades Union, Toronto

II. TABLE SHOWING PROCEEDINGS BY INDUSTRIES FROM MARCH 22, 1907, TO MARCH 31, 1924.

II. *Disputes not falling clearly within the direct scope of the Act.....	121	2
Total.....	619	37

\* During the period April 1, 1918, to March 31, 1923, jurisdiction under the statute in connection with disputes relating to industries under provincial or municipal control not being claimed by the Department, no proceedings under the statute took place, save by joint consent under Section 63, and any such proceedings were shown in Section II of the tables. During the present fiscal period, however, it has been held that jurisdiction in such matters rests with the federal authorities and proceedings in the case of disputes in industries to which the Act applies but which are owned or controlled by a municipal or provincial government have taken place without reference to Section 63; these proceedings are, therefore, now shown under their respective classifications in Section I of the tables.

Branch; (2) Cities of Port Arthur and Fort William and their employees in street railway service, members of Division 966, Amalgamated Association of Street and Electric Railway Employees of America, and (3) various shipping companies trading to the Port of Montreal, P.Q., and certain of their employees being members of the Syndicated Longshoremen of the Port of Montreal.

The figures contained in Table II may be thought to show discrepancies as compared with those appearing in the yearly summary. A closer examination will, however, show the respective statements to be in agreement. A

complete statement of proceedings for a year must show all disputes dealt with during the fiscal year. The figures of the yearly statement include, therefore, disputes carried over from the previous year and which are counted in the summary of that year's proceedings. Thus the same dispute may properly figure in the annual statement for each of two years. In the statistical recapitulation covering several years, as above, it is necessary that no dispute shall be counted more than once, and account is taken of the number of applications received during the year and thus brought within the purview of the statute.

### STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND IN JUNE

THE British *Ministry of Labour Gazette* for July contains the following table, which analyzes the disputes in progress in June in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approximate time lost during the month in all disputes in progress. The principal stoppages occurring in June were for advances in wages and other concessions for railway shopmen and power station employees, involving about 8,500 railway workers in London, South Wales, etc. Eight of the disputes, involving 10,000 workpeople, were settled in favour of the workpeople; 13 directly involving 11,000 workpeople, in favour of the employers; and 19 directly involving 4,000 workpeople, were compromised. In the case of 10 disputes, directly involving 14,000 workpeople, work was resumed pending negotiations:—

Groups of industries	Number of disputes in progress in June			Number of workpeople involved in all disputes in progress in June	Aggregate duration in working days of all disputes in progress in June
	Started before June 1	Started in June	Total		
Mining and quarrying.....	9	9	18	27,000	162,000
Metal, engineering and shipbuilding.....	2	8	10	8,000	59,000
Textile.....	4	.....	4	2,000	26,000
Building, decorating, contracting, etc.....	4	5	9	4,000	36,000
Transport.....	2	9	11	3,000	16,000
Other.....	14	26	40	6,000	57,000
Total, June, 1924..	35	57	92	50,000	356,000
Total, May, 1924..	30	56	86	36,000	398,000
Total, June, 1923..	47	54	101	99,000*	1,244,000*

\*Two disputes (one involving about 27,000 boilermakers etc., in federated shipyards, and the other involving 29,000 Dundee jute workers) accounted for most of the loss of time in June.

### STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1924

THE number of strikes and lockouts in Canada in existence at some time or other during the month of July was 14, eight less than in June. The time loss for July was less than in July, 1923, being 229,304 working days as compared with 307,433 working days in the same month in the previous year.

Date	Number of disputes	Number of employees involved	Time loss in working days
July, 1924.....	14	9,224	229,304
June, 1924.....	22	13,872	241,673
July, 1923.....	23	18,095	307,433

Twelve disputes, involving 8,494 workpeople, were carried over from June. Three of the strikes commencing prior to July, and the two new strikes commencing during July, terminated during the month. At the end of July, therefore, there were on record nine disputes; coal miners in Alberta and British Columbia; printing compositors at Halifax; three strikes of printing compositors at Montreal; printing compositors at Ottawa; printing compositors at Toronto; printing compositors at Winnipeg; and moulders at Guelph.

One of the new strikes commencing during July was against a reduction in wages, while

the second was against the discharge of employees. Four strikes terminated in favour of employees, while one was in favour of the employers.

Information was received in the Department, but too late for the July issue of the *LABOUR GAZETTE*, of two interruptions to industry which occurred in June in the Province of Quebec. On June 16 eight carpenters at Three Rivers stopped work demanding an increase from 40 to 50 cents per hour in their wages. After negotiations work was resumed on June 17 at the rates prevailing before the strike. At Montreal, on June 5, a cessation of work involved 12 stonemasons for a few hours in a dispute as to the enforcement of an agreement for a closed shop, most of the men concerned joining the union, and returning to work.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement:

**COAL MINERS, ALBERTA AND BRITISH COLUMBIA.**—During July, the strike of 8,000 coal miners which began on April 1 against a reduction in wages continued. Towards the end of the month the Minister of Labour announced his intention of proceeding to Calgary to hold a conference of miners and operators early in August.

**BOOT FACTORY EMPLOYEES, QUEBEC, QUE.**—A strike of 380 boot factory employees occurred on July 8, against the discharge of employees. The strike was settled on July 31, through the mediation of the Registrar of Councils of Conciliation and Arbitration of the Province of Quebec. The company reinstated the two men whose dismissal was the cause of the strike.

**BOOT FACTORY EMPLOYEES, ST. HYACINTHE, QUE.**—The strike of boot factory employees, which began on June 12, for increased wages ranging from 20 per cent to 50 per cent, for the prohibition of Sunday and holiday work and the posting of the piece-rate list in the factory, with certain other improvements in working conditions, was settled July 22. Practically all the demands were granted and work was resumed July 23.

**PRINTING TRADES IN VARIOUS CITIES.**—The strikes of printing compositors in job offices in various cities for the 44-hour week were still in progress in seven cities, involving 300 employees and resulting in a time loss of 7,796 working days. During July it was announced from the office of the secretary-treasurer of the International Typographical Union, Indianapolis, that assessments for the strike fund would be discontinued as the number still on strike was small and later it was announced that the strike would be called off at the end of August.

**LUMBER WORKERS, VICTORIA, B.C.**—On July 5, 350 lumber workers went on strike against a reduction of two and one-half cents per hour. Negotiations were carried on, and finally settlement was brought about through the mediation of the Deputy Minister of Labour for British Columbia. Work was resumed on July 12, labourers being reduced one to one and one-half cents per hour, and workers who received more than 40 cents per hour having their wages reduced on a sliding scale.

**MOULDERS, GUELPH, ONT.**—The strike of 17 moulders which occurred on June 2, against a reduction of wages, remained unterminated at the end of the month.

**PLUMBERS AND STEAMFITTERS, HAMILTON, ONT.**—The strike of 66 plumbers and steamfitters in the employ of eighteen firms, which began June 19, for an increase in wages, terminated July 26, the men resuming work at 90 cents per hour, an increase of five cents per hour.

**CARPENTERS AND SHIPWRIGHTS, VANCOUVER, B.C.**—The strike of carpenters and shipwrights in the shipbuilding industry which began at Vancouver on June 2, terminated on July 14, the men resuming work at the same rates of wages as existed prior to the strike, namely, \$6 per day.

## STRIKES AND LOCKOUTS DURING JULY, 1924

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and lockouts commencing prior to July, 1924.</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING.—</b>			
Coal miners, Alberta and British Columbia.	8,000	208,000	Commenced April 1, against a reduction in wages. Underminated.
<b>MANUFACTURING.—</b>			
<i>Leather, fur and products:—</i>			
Boot factory employees, St. Hyacinthe, Que.	53	954	Commenced June 12, for increased wages and other changes. Settled by negotiations; work resumed July 23; in favour of employees.
<i>Printing and publishing:*</i>			
Printing compositors, Halifax, N.S.	17	442	Commenced May 2, 1921, for shorter hours with same weekly pay. Underminated.
Printing compositors, Montreal, Que.	4	104	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Underminated.
Printing compositors, Montreal, Que.	76	1,972	Commenced July 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Montreal, Que.	12	312	Commenced September 15, 1922. Employers refused to negotiate new agreement with the union. Underminated.
Printing compositors, Ottawa, Ont.	15	390	Commenced June 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Toronto, Ont.	148	3,848	Commenced June 1, 1921, for increased wages and 44-hour week. Underminated.
Printing compositors, Winnipeg, Man.	28	728	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement.
<i>Iron, steel and products:—</i>			
Moulders, Guelph, Ont. ....	17	442	Commenced June 2, against a reduction in wages. Underminated.
<b>CONSTRUCTION.—</b>			
<i>Buildings and structures:—</i>			
Plumbers and steamfitters, Hamilton, Ont.	66	1,452	Commenced June 19, for increased wages. Settled by negotiations; work resumed July 26; in favour of employees.
<i>Shipbuilding:—</i>			
Shipwrights and carpenters, Vancouver, B.C.	58	580	Commenced June 2, for increased wages; settled by negotiations; work resumed July 14; in favour of employees.
<b>(b) Strikes and lockouts commencing during July, 1924.</b>			
<b>MANUFACTURING.—</b>			
<i>Leather, fur and products:—</i>			
Boot factory employees, Quebec, Que.	380	7,980	Commenced July 8, against the discharge of employees. Settled July 31, by mediation of Provincial Board of Conciliation and Arbitration; in favour of employees.
<i>Saw and planing mills:—</i>			
Lumber workers, Victoria, B.C.	350	2,100	Commenced July 5, against a reduction in wages. Settled July 11 through mediation of Deputy Minister of Labour for British Columbia; in favour of employees.

\*Reports indicate that strikers have been gradually replaced since the beginning of the strike.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Sixth Session of the International Labour Conference

THE Sixth Session of the International Labour Conference (League of Nations) constituted under the provisions of the Treaties of Peace, was held in Geneva, Switzerland, from June 16 to July 5.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreement. The five previous annual sessions of the Conference were held as follows: Washington, D.C., 1919 (see LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (see LABOUR GAZETTE, October, 1920); Geneva, Switzerland, 1921 (see LABOUR GAZETTE, January, 1922); Geneva, Switzerland, 1922 (see LABOUR GAZETTE, December, 1922); Geneva, Switzerland, 1923 (see LABOUR GAZETTE December, 1923).\*

Under the terms of the Treaties of Peace each State adhering thereto is entitled to four delegates to the International Labour Conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft International Convention. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment

and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

#### Countries represented

Of the fifty-seven countries which are members of the International Labour Organization, forty countries in all were represented at the 1924 Conference, as follows:—

Albania	India
Argentine Repub.	Ireland
Australia	Italy
Austria	Japan
Belgium	Kingdom of the Serbs, Croats and Slovenes
Brazil	Latvia
Bulgaria	Lithuania
Canada	Netherlands
Chile	Norway
China	Panama
Cuba	Poland
Czecho-Slovakia	Portugal
Denmark	Roumania
Esthonia	Siam
Finland	Spain
France	Sweden
Germany	Switzerland
Great Britain	South Africa
Greece	Uruguay
Guatemala	
Hungary	

The Conference consisted of 127 delegates with 155 advisers, making a total in attendance of 282. Sixty-nine of these were delegates appointed on behalf of Governments, 30 on behalf of employers and 28 on behalf of workers. There were besides 53 Government advisers, 44 employers' advisers and 5 substitute advisers and 53 workers' advisers.

#### Canadian Delegates

The Canadian delegation in attendance at the Conference was as follows:—

*Delegates representing the Government of Canada—*

Mr. F. A. Acland, of Ottawa, King's Printer for Canada.

Mrs. Charles H. Thorburn, of Ottawa, vice-president of the National Council of Women.

\* A bulletin of general information in reference to the International Labour Organization was published as a supplement to the February, 1922, issue of the LABOUR GAZETTE.

*Technical Advisers to the Government delegates—*

The Honourable R. W. Craig, K.C., of Winnipeg, Attorney General for Manitoba.

Mr. W. C. Noxon, Agent General for the Province of Ontario in London, England.

Mr. Pierre Beaulé, of Quebec, president of the Confederation of Catholic Workers of Canada.

*Delegate representing the employers of Canada—*

Mr. Melville P. White, of the Canadian General Electric Company, Limited, Toronto, Ontario.

*Technical adviser to the employers' delegate—*

Mr. H. W. Macdonnell, of the Canadian Manufacturers' Association, Toronto, Ontario.

*Delegate representing the workpeople of Canada—*

Mr. Tom Moore, of Ottawa, president of the Trades and Labour Congress of Canada.

*Technical adviser to the workpeople's delegate—*

Mr. W. L. Best, of Ottawa, legislative representative of the Brotherhood of Locomotive Firemen and Enginemen.

**Officers Elected**

The Conference elected as President Mr. Hjalmar Branting, former Prime Minister of Sweden. Messrs. Aguero y Bethancourt (delegate of the Cuban Government), Robert Pinot (France, delegate of the employers), and Corneille Mertens (Belgium, delegate of the workers), were elected vice-presidents. Mr. Albert Thomas, Director of the International Labour Office, acted as Secretary-General of the Conference.

**Agenda of the Conference**

The Agenda of the Conference comprised:—

I. Development of facilities for the utilization of workers' leisure.

II. Equality of treatment for national and foreign workers as regards workmen's compensation for accidents.

III. Weekly suspension of work for twenty-four hours in glass-manufacturing processes where tank furnaces are used.

IV. Night work in bakeries.

In addition to the above four items placed upon the Agenda by the Governing Body, the Conference considered various other matters including: the Report of the Advisory Committee on Anthrax, set up in virtue of the Resolution adopted by the Conference at its Third Session (1921); the Report of

the Director to the Conference; and the special Report of the Director on the Inquiry into Unemployment. Consideration was also given to a Resolution dealing with collaboration between the International Labour Office and the Economic and Financial Organization of the League of Nations for the study of measures for securing greater stability in the general level of prices; also to a Resolution regarding the inscription of the question of freedom of association on the Agenda of the 1925 Session of the Conference; and to a Resolution concerning the study by the International Labour Office of methods employed in various countries for the organization of conciliation and arbitration.

Questionnaires from the International Labour Office had been distributed in advance of the Conference to all governments entitled to representation therein, these questionnaires being in the form of discussions of the different items on the Conference Agenda. The information contained in the replies to the questionnaires was subsequently published in pamphlet form for the information of the delegates to the Conference. The separate items of the Agenda were all referred by the Conference to the following committees for examination and report.

*First Committee.*—Utilization of Workers' Spare Time (36 members—12 Government, 12 employers and 12 workers);

*Second Committee.*—Night Work in Bakeries (36 members);

*Third Committee.*—Weekly Cessation of Work in Glass Works (36 members);

*Fourth Committee.*—Equality of Treatment regarding workmen's compensation (36 members);

*Fifth Committee.*—Unemployment (30 members—10 from each group);

*Sixth Committee.*—Anthrax (24 members—8 from each group).

**The President's Address**

Mr. Branting, after thanking the delegates for the honour they had conferred, not only on himself but on his country and the other northern countries which, he said "have always done their best to ensure better conditions of living to men of all classes and to achieve from day to day a larger measure of social justice for the benefit of the wage earners," continued as follows:

"Those who, like myself, have been for many years connected with the efforts of workers' organizations towards that great end could not but welcome with joy the consecration, in the labour portions of the Treaties, of a great Charter of Labour in which is

found all the essentials of their immediate programme of protective legislation and social reform, for the realization of which the workers of all countries have for so long united their efforts. They could not do otherwise than be determined to do their best and devote all their energy and intelligence to its realization."

Mr. Branting went on to cite the Preamble to Part XIII of the Treaty and proceeded:

"In order fully to achieve this vast programme, your Conference will require to exert greater efforts, but we shall all of us never cease to work for this great end, sustained as we are by the conviction that this work of justice and solidarity is the condition of a better world.

"It may be that the Treaties of Peace concluded after the war require at the moment certain adjustments, or even certain modifications. But the Labour portions of the Treaties have never been substantially criticized by any nation. They constitute a positive reality, on the basis of which all peoples may unite in helping to build a solid edifice of justice and peace."

Continuing, Mr. Branting mentioned some of the difficulties encountered by the International Labour Organization, and added an expression of his confidence in the desire demonstrated by the peoples of the world for an enduring peace.

"The reason for our optimism is our common faith in the necessity for justice and peace. It is in peace that the peoples of the world, united in new bonds, will be able to ensure happiness and justice to all workers; it is by this work of social justice that peace will be guaranteed."

### The Director's Report

The report of the Director of the International Labour Office was prepared on the lines of the reports presented to previous sessions of the Conference and provided a general survey of the working and activity of the International Labour Office during the period from October, 1922, to December 31, 1923, as well as of the measures taken during this period by the different States Members to give effect to the Draft Conventions and Recommendations adopted by previous sessions of the Conference.

The first part of the report dealt with:

(1) Problems of organization—membership of the Organizations, composition of the Conference, Governing Body, interior organization of the Office, finance, and relations with the League of Nations;

(2) Results obtained since the last Report with regard to international labour legislation—Conventions, Recommendations, progress made in the various national legislations on the lines of the reforms recommended by the Conference;

(3) The research work of the Office, enquiries and publications; and

(4) The relations of the Office with organizations of employers and workers, associations dealing with social questions, etc.

The second part of the report contained a methodical summary of all the reports furnished by the States in pursuance of Article

408 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace. The object of Article 408 is to enable States which have ratified Conventions, and have thereby undertaken obligations towards each other, to provide a guarantee, by furnishing exact and official information, that they are strictly applying these conventions. The publication, for the first time, of a comparative summary of the reports received by the office makes it possible to measure exactly the results, both national and international, of the conventions of the International Labour Conference.

### Report on Unemployment

The report on unemployment, printed separately as an appendix to the report of the director, furnished an account of the measures adopted by the office in performance of the special duties entrusted to it in connection with unemployment by the 1921 and 1922 sessions of the conference.

### Ratifications

The Director informed the conference that on May 15 when his report was compiled, 96 ratifications of Draft Conventions had been registered. Since then, 30 additional ratifications had been received—seven from Austria, six from Spain, two from the Irish Free State, two from Japan and 13 from Poland, the total number of ratifications to date being therefore 126.

### Procedure

The Conference agreed that when a Draft Convention or Recommendation had been provisionally voted upon as a whole by the 1924 session and had received a two-thirds majority, the Conference should decide whether the final vote should be taken only at the 1925 session. If it so decided, the texts of the decisions would be sent to Governments within one month of the close of the 1924 Conference, and Governments would be entitled to submit such amendments as they considered necessary to facilitate their ratification or acceptance not later than four months before the opening of the 1925 session, facilities being given at this session for any necessary discussion on the amendments proposed.

### Facilities for the Utilization of Workers' Spare Time

A Recommendation on this subject was adopted by a final vote of the Conference. The Recommendation covers a very wide field, and is divided into a preamble and five

sections, dealing respectively with preservation of spare time, spare time and social hygiene, housing policy, institutions for the utilization of spare time and, finally, free use of institutions and co-ordination of local action.

The Conference also adopted a resolution inviting the International Labour Office to collect and publish up-to-date information as to the use of spare time throughout the world.

#### **Equality of Treatment for National and Foreign Workers as regards Workmen's Compensation for Accidents**

A Draft Convention and a Draft Recommendation were provisionally adopted, the final vote in each case to be taken in 1925. By the terms of the Draft Convention the States Members undertake broadly to grant to workers who are nationals of any other Member which has ratified the Convention the same treatment regarding workmen's compensation as to their own nationals. States which ratify the Convention and which do not already possess workmen's compensation systems undertake to institute them within three years.

The Recommendation deals with points of detail designed to facilitate the application of the Draft Convention and further recommends that States having no system of workmen's compensation shall, pending the institution of such a system, afford facilities to alien workers to benefit by the workmen's compensation legislation of their own countries.

#### **Weekly suspension of Work in Glass Manufacturing Processes where Tank Furnaces are Used**

By the terms of a Draft Convention, on which the final vote will be taken in 1925, States undertake to suspend work for twenty-four consecutive hours per week in glass manufacturing processes where tank furnaces are used, the suspension to occur in principle on Sunday or any other day already established by the legislation, traditions or customs of the country or district. Exceptions may be authorized by each State for work which must necessarily be carried on continuously for technical or economic reasons and for certain preparatory, complementary or repair work.

#### **Night Work in Bakeries**

By the text of this Convention (on which the final vote will be taken in 1925) States

undertake to prohibit the making of bread, pastry or other flour confectionery during a period of at least seven consecutive hours including the interval between 11 p.m. and 5 a.m. (or, where it is required by climate or season, the period between 10 p.m. and 4 a.m.) This applies to proprietors as well as workers, but not to work done by members of the same family for their own consumption. The Convention does not apply to the wholesale manufacture of biscuits. In certain circumstances permanent and temporary exceptions may be made.

#### **Unemployment**

The Conference adopted a resolution expressing approval of the decision of the Governing Body of the International Labour Office to convene in the near future an international conference of labour statisticians which would examine the possibilities of improving unemployment statistics, both as to their national value and international comparability, and suggesting that the work of the International Labour Office, and the League of Nations would be materially assisted if each Government made a report on its own unemployment problem, indicating precisely the nature of any remedies proposed.

#### **Prevention of Anthrax**

By fifty votes to forty-one the Conference rejected the proposal of the British Government that the question of the compulsory disinfection of infected wool should be placed on the agenda of the next session of the Conference, with a view to the discussion of a Draft Convention. The Conference thus set aside the Recommendation made by the Advisory Committee on Anthrax which was appointed by the Governing Body of the International Labour Conference after its third session at Geneva in 1921, and which subsequently met in London under the chairmanship of Sir William Middlebrook. At the same time the Conference approved proposals for placing on the agenda of a future session a Draft Convention for compulsory disinfection of horsehair used in the brushmaking and upholstery industries and of horns and hoofs prior to all industrial manipulation, and a Draft Recommendation providing for adequate regulation in relation to bones and the manipulation of horns and hoofs prior to their use in industry. The Conference also requested the International Labour Office to undertake a study of adequate regulation having for its aim the protection of transport

workers against various infections to which they are specially exposed.

### Other Questions

The report by the Director of the International Labour Office on the work of the Office between October, 1922, and December, 1923, was fully discussed, particular attention being paid by the delegates to the question of the ratification of the Hours Convention adopted at the first session (Washington, 1919), reference being made to the recent increase of working hours in Germany, and a resolution was moved requesting that the attention of the Reparations Commission be drawn to the international social consequences following the carrying out of any program adopted by the Commission (this resolution was referred to the Governing Body for consideration at its next meeting).

Copies of the Recommendation on the utilization of spare time, which was adopted on final vote by the necessary majority, are to be sent by the Secretary-General of the League of Nations to the States Members of the Labour Organization, and, in accordance with Article 405 of the Treaty of Versailles and the corresponding Article of the other Treaties, are to be brought before the competent national authorities for legislative or other action not later than July 5, 1925.

The Draft Conventions concerning equality of treatment, bakeries, and glassworks, and the Recommendation concerning equality of treatment, which were adopted on provisional vote, are to be sent by the International Labour Office to the States Members before August 5 next, with a view to the receipt and circulation in advance of next year's Conference of such amendments as the States may propose for consideration before the final vote is taken.

The various resolutions adopted by the Conference or referred by it to the Governing Body of the International Labour Office will be laid before that Body at its next meeting, which will be held on October 8, 1924.

### Results of Conference

The Session of the International Labour Conference, which closed on 5 July, resulted in decisions of interest and importance.

In the first place, the Conference instituted, experimentally and with application only to the current Session, a system under which a provisional vote might be taken at that Session on any Draft Convention or Recommendation and the final vote deferred until the 1925 Session. Proposals for a permanent

scheme of first and second readings are to be considered next year.

This new system was applied to several of the decisions of the Conference, as will be seen by the following list:

(1) Recommendation on the development of facilities for the utilization of workers' spare time. Adopted, *final vote*: 79 to 16.

(2) Draft Convention and Recommendation on equality of treatment of national and foreign workers as regards workmen's compensation for accidents. Adopted, *provisional vote*: 85 to 1.

(3) Draft Convention on weekly suspension of work for 24 hours in glass-manufacturing processes where tank furnaces are used. Adopted, *provisional vote*: 68 to 22.

(4) Draft Convention on night work in bakeries. Adopted, *provisional vote*: 73 to 15.

Other decisions of the Conference included a resolution, adopted by 86 votes to 5, providing that the question of a Draft Convention and a Recommendation on the disinfection of horsehair, horns, hoofs and bones against anthrax should be considered at a future Session. Another resolution, adopted unanimously, was in favour of the extension of the investigations by the International Labour Office into unemployment, with particular reference to the operation of credit, instability of prices, and dislocation of exchanges, as factors affecting stability of employment.

Apart from the actual resolutions which it adopted on the various items of its agenda, the Conference marked its corporate continuity by interesting and important discussions on the state of the ratifications of previous Conventions, particularly on that is dealing with the Eight-Hour Day.

### A Gift for the New Premises

A gift from Canada to the building now under construction in Geneva for the International Labour Office was announced during the Session of the Conference; other gifts were announced on behalf of Great Britain and Finland respectively.

Mr. F. A. Acland, Government delegate for Canada to the Conference, said:

"When, four weeks ago, I left Ottawa, the Minister of Labour had under consideration a proposition for contributing to the new premises of the International Labour Office an item which would at once mark the interest of the Canadian Government in the work of the International Labour Office, and also constitute a permanent illustration of the resources and workmanship of Canada.

"Now, the vast forests of Canada are among its most valuable resources and cause it to rank as one of the great lumber producing countries of the world, and the kindred industries of wood working are amongst its principal manufactures. The Government of Canada has therefore decided that its contribution to the new premises shall be representative of these large interests, and I am authorized to state

that the Government of Canada will contribute all the doors on the main floor of the new offices of the International Labour Office.

"The doors will be made in Canada by Canadian workmen and of Canadian wood. You may, I am confident, rely upon the workmanship being such as will reflect no discredit on Canadian workmen. The doors will be solid and of a substantial character destined to endure not merely for years but for

generations, and I am asked by the Minister of Labour to express the hope that the nations now constituting the International Labour Office will continue their interest in the work of the Office so long as these doors will last, unless it should happen—a perhaps unlikely event—that the particular evils for the remedy or amelioration of which the International Labour Office was erected, shall have in the meantime passed away."

## Text of Proposed Recommendations, Draft Recommendations, Draft Conventions and Resolutions

### *Draft Recommendation Concerning the Development of Facilities for the Utilisation of Workers' Spare Time*

Whereas in adopting at its First Session, held at Washington, a Convention on hours of work, the General Conference of the International Labour Organization had as one of its principal aims to secure for workers, beyond the necessary hours for sleep, an adequate period during which such workers could do as they please, or, in other words, an adequate period of spare time; and

Whereas during such spare time workers have the opportunity of developing freely, according to their individual tastes, their physical, intellectual and moral powers, and such development is of great value from the point of view of the progress of civilization; and

Whereas a well directed use of this spare time, by affording to the worker the means for pursuing more varied interests, and by securing relaxation from the strain placed upon him by his ordinary work, may even increase the productive capacity of the worker and increase his output, and may thus help to obtain a maximum of efficiency from the eight-hour day; and

Whereas while giving full weight to the customs prevalent in the different countries and to local circumstances, it may nevertheless be useful to lay down the principles and methods which at the present time seem generally best adapted to secure the best use of periods of spare time, and it may also be instructive to make known for the benefit of all countries what has been done in this direction; and

Whereas the value of this information is particularly great at the moment when the ratification of the Convention on hours of work is being considered by the Members of the International Labour Organization;

The General Conference makes the recommendations hereinafter appearing:—

1. *Preservation of Spare Time.*—Whereas it is agreed that in countries where limitations have been placed on hours of work by law, by collective agreement or otherwise, if all the benefits which may be expected from such measures are to be secured both for the wage-earners and for the community, steps must be taken to ensure that the workers shall have the undiminished enjoyment of the hours of spare time so secured to them as aforesaid; and

Whereas it is important that, on the one hand, the workers should fully appreciate the value of the periods of spare time which have been secured to them and should do their utmost, in all circumstances, to prevent this spare time from being encroached upon, and, on the other hand, that employers should always aim at establishing wages corresponding sufficiently with the needs of the workers to make it unnecessary for them to have recourse during their periods of spare time to additional hours of paid work; and

Whereas prohibitions against the continuance of paid work in their own occupation for the same or another employer, in excess of the legal working day, are recognized as being difficult to enforce, and may even at times, seem to infringe the workers' right of using their periods of spare time as they choose, the Conference nevertheless considers that attention

should be drawn to the steps which have been taken in this direction in a number of countries;

The Conference recommends that Governments should encourage and facilitate the conclusion of collective agreements which will ensure a normal standard of living to workers in exchange for the legal hours of work, and which will determine, by voluntary agreement between employers and workers, the measures to be taken to prevent workers from having recourse to additional paid work.

And whereas it is agreed that every facility should be given to the workers to enable them to make the best use of the periods of spare time so secured to them as aforesaid, the Conference recommends:—

(a) That each Member, whilst having due regard to the requirements of different industries, local customs, and the varying capacities and habits of the different kinds of workers, should consider the means of so arranging the working day as to make the periods of spare time as continuous as possible;

(b) That by means of a well conceived transport system and by affording special facilities in regard to fares and time-tables, workers should be enabled to reduce to the minimum the time spent in travelling between their homes and their work, and that employers' and workers' organizations should be extensively consulted by public transport authorities or private transport undertakings as to the best means of securing such a system.

II. *Spare Time and Social Hygiene.*—Whereas the utilization of the workers' periods of spare time cannot be separated from the general measures adopted by the community for promoting the health and welfare of all classes of society, the Conference, without attempting to examine in detail each of the great welfare problems, the solution of which would contribute to improving the workers' status, recommends to the Members:—

(a) The encouragement of individual hygiene by the provision of public baths, swimming pools, etc.;

(b) Legislative or private action against the misuse of alcohol, against tuberculosis, venereal disease and gambling.

III. *Housing Policy.*—Whereas it is of advantage to the workers and to the whole community to encourage everything tending to the harmonious development of the workers' family life; and

Whereas the most effective means of protecting the workers from the aforesaid dangers is to place within their reach a proper home;

The Conference recommends the increase in number, if necessary co-operation with the national or local authorities concerned, of healthy dwellings at low rentals in garden cities or urban communities under proper conditions of health and comfort.

IV. *Institutions for the Utilisation of Spare Time.*—Without attempting to differentiate between the innumerable institutions which afford to the workers opportunities for the free exercise of their personal tastes, the development of which is dependent on the manners and customs of each country or district, the Conference nevertheless draws the attention of the Members to the necessity of avoiding misplaced activities resulting from the establishment of institutions not called for by some well defined need. The Conference desire to emphasize the importance of taking into account in the establishment and development of these institutions, the desires, the tastes and the special requirements of the workers for whose use they are designed;

At the same time, among the institutions which may both assist full and harmonious development of the individual and of the family, and contribute to the general progress of the community, the Conference recommends those schemes which have for their object:

(a) the improvement of the workers' domestic economy and family life (gardens, allotments, poultry keeping, etc.) which combine the benefits of recreation with the feeling that some addition, however slight, is being made to the family resources;

(b) the development of the physical health and strength of the workers by means of games and sports which enable young workers who are working under the highly specialized conditions prevalent in modern industry to give free play to their energies in a manner which encourages initiative and the spirit of emulation;

(c) the extension of technical, domestic and general education (libraries, reading-rooms, lectures, technical and general courses, etc.) which meets one of the workers' most keenly felt needs and affords the best means of progress to industrial communities;

The Conference further recommends that Members should encourage these forms of activity by the grant of subventions to organizations concerned with the moral, intellectual and physical development of the workers.

V. *Free Use of Institutions and Co-ordination of Local Action.*—Whereas for many years past the workers in the great industrial countries have always sought to ensure that they may live their lives outside the factory or workshop in complete freedom and independence, and they particularly resent any outside interference in their private affairs, and this feeling is so strong as to provoke opposition to any attempts to deal

either nationally or internationally with the question of the use of spare time for fear that it may possibly restrain their liberty; and

Whereas the Conference, while expressing appreciation of the motives which have led to the creation of institutions for the encouragement of the wise use of the spare time of the workers, suggests that Members should draw the attention of the promoters of such institutions to the necessity of safeguarding the individual freedom of the workers against any system or scheme which has any tendency towards compelling the workers directly or indirectly to use any particular institution; and

Whereas the most practical and successful institutions are those which have been started and developed by the beneficiaries themselves, the Conference, while recognizing that in many cases where public authorities or employers lend financial or other assistance for the encouragement of allotments, games or educational institutions, and consequently have a legitimate claim to take part in their management, recommends that every care should be taken to avoid any encroachment on the liberty of those for whose use such institutions are intended.

While not contemplating any systematic organization of spare time occupations, but having in mind a number of successful efforts made to assist them, the Conference further recommends that each Member should consider the possibility of promoting the formation of district or local committees, composed of representatives of the public authorities, of employers' and workers' organizations, and of co-operative associations, for co-ordinating and harmonizing the activities of the various institutions providing means of recreation.

The Conference further recommends to the Members that an active and effective propaganda should be undertaken in each country for the purpose of educating opinion in favour of the proper use of the spare time of the workers.

### *Draft Resolution*

The Conference invites the International Labour Office, keeping in constant touch with the various Governments, to collect and keep up to date information concerning the use of spare time, and on the basis of the information communicated by the Members, or obtained from other sources, to publish regularly studies of the action taken and the results obtained in the different countries in the application of measures which have for their object the proper use of the workers' spare time.

### *Proposed Draft Convention Concerning Equality of Treatment for National and Foreign Workers as Regards Workmen's Compensation for Accidents*

ARTICLE 1. Each member of the International Labour Organization which ratifies this Convention undertakes to grant to workers who are nationals of any other Member which shall have ratified the Convention, and who suffer personal injury by an industrial accident happening in its territory, or to the representatives of such workers, the same treatment in respect of workmen's compensation as it grants to its own nationals.

This equality of treatment shall be guaranteed to foreign workers and their representatives without any condition as to residence: with regard to the payments which a Member would have to make outside its territory in the application of this principle, special arrangements shall be made between the Members concerned regarding the measures to be adopted.

ARTICLE 2. Special agreements may be made between the Members concerned to provide that compensation for industrial accidents happening to workers whilst

temporarily or intermittently employed in the territory of one Member on behalf of an undertaking situated in the territory of another Member shall be governed by the laws and regulations of the second Member.

ARTICLE 3. The Members who ratify this Convention and who do not already possess a system (whether by insurance or otherwise) of workmen's compensation for accidents agree to institute such a system within a period of three years from the date of ratification.

ARTICLE 4. The Members who ratify this Convention further undertake to afford each other mutual assistance with a view to facilitating the application of the Convention and the execution of their respective laws and regulations on workmen's compensation, and to inform the International Labour Office, which shall acquaint the other Members concerned, of any modifications in the laws and regulations in force on workmen's compensation.

*Proposed Recommendation Concerning Equality of Treatment for National and Foreign Workers as Regards Workmen's Compensation for Accidents.*

I. In order to facilitate the application of the Draft Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents, the Conference recommends that:

(a) When a person to whom compensation is due under the laws and regulations of one Member resides in the territory of another Member, the necessary measures be taken to facilitate the payment of such compensation and to ensure the observance of the conditions governing such payment laid down by the said laws and regulations;

(b) In case of dispute concerning the non-payment, cessation of payment, or reduction of the compensation due to a person residing elsewhere than in the territory of the Member where his claim to compensation originated, facilities be afforded for taking

proceedings in the competent courts of law in this country without requiring the attendance of the person concerned;

(c) Any advantage in respect of exemption from duties and taxes, free issue of official documents or other privilege granted by the law of each Member for any purposes connected with workmen's compensation be extended under the same conditions to the subjects of the other Members who shall have ratified the Convention.

II. The Conference recommends that, where in any country there exists no system (whether by insurance or otherwise) of workmen's compensation for accidents, the Government shall, pending the institution of such a system, afford facilities to alien workers to benefit by the legislation on workmen's compensation in their own countries.

*Proposed Draft Convention Concerning the Weekly Suspension of Work for Twenty-four Hours in Glass-Manufacturing Processes Where Tank Furnaces are Used.*

ARTICLE 1. Work shall be suspended for twenty-four consecutive hours per week in glass-manufacturing processes where tank furnaces are used subject to the conditions and exceptions laid down in the following Articles.

ARTICLE 2. Work shall in principle be suspended on Sunday or any other day already established by the legislation, the traditions or customs of the country or district.

ARTICLE 3. Exceptions to the provisions of the foregoing Articles may be authorized by each Member for the following work:

- (1) Work which must necessarily be carried on continuously for technical or economic reasons;
- (2) Preparatory, complementary, or repair work which must be carried out during the absence of the staff in order to secure the normal conduct of the undertaking on working days.

ARTICLE 4. A list of the classes of work referred to in Article 3 shall be drawn up by the competent authority of each Member after consultation with the responsible associations of employers and workers, wherever such exist, and shall be communicated to the International Labour Office.

The list shall be accompanied by a statement of the grounds on which each class of work is included.

ARTICLE 5. If a revision of the list referred to in Article 4 shall have been necessitated by subsequent modifications in technical processes or the organization of work in the glass industry, the Member concerned shall, in the annual report which it submits in accordance with Article 408 of the Treaty of Versailles and the corresponding Articles of the other Treaties of Peace, inform the International Labour Office of the changes made in this list, and state the reasons for which they have been made.

ARTICLE 6. Workers employed on work authorized during the general rest period shall be granted individually or in shifts a weekly rest of at least twenty-four consecutive hours, in conformity with the provisions of the Convention of 1921 concerning the weekly rest in industrial undertakings.

ARTICLE 7. Temporary exceptions to the provisions of Articles 1 and 2 may be allowed in case of accident, actual or threatened, or in case of urgent work to be done to machinery or plant, or in case of *force majeure*, but only so far as may be necessary to avoid serious interference with the ordinary working of the undertaking.

The employer shall inform the competent authorities in all cases in which he shall have made use of the temporary exceptions provided for above.

*Proposed Draft Convention on Night Work in Bakeries*

ARTICLE 1. Subject to the exceptions hereinafter provided, the making of bread, pastry or other flour confectionery during the night is forbidden.

This prohibition applies to the work of all persons, including proprietors as well as workers, engaged in the making of such products; but it does not apply to work which is done by members of the same family for their own consumption.

This Convention has no application to the wholesale manufacture of biscuits.

ARTICLE 2. For the purpose of this Convention, the term night signifies a period of at least seven consecutive hours. The beginning and end of this period shall be fixed by the competent authority in each country after consultation with the organizations of employers and workers concerned, and the period shall include the interval between eleven o'clock in the evening and five o'clock in the morning; when it is required by the climate or season, the interval between ten o'clock in the evening and four o'clock in the morning may be substituted for the interval between eleven o'clock in the evening and five o'clock in the morning.

ARTICLE 3. After consultation with the employers' and the workers' organizations concerned the competent authority in each country may make regulations to determine:

(a) The permanent exceptions necessary for the execution of preparatory or complementary work as far as it must necessarily be carried outside the normal hours of work, provided that no more than the strictly necessary number of workers and no young persons under the age of eighteen shall be employed in such work.

(b) The permanent exceptions necessary for requirements arising from the particular circumstances of the baking industry in tropical countries.

(c) The permanent exceptions necessary for the arrangement of the weekly rest.

(d) The temporary exceptions necessary to enable an undertaking to deal with unusual pressure of work or national necessities.

ARTICLE 4. Exceptions may be made to the provisions of Article 1 in case of accident, actual or threatened,

or in case of urgent work to be done to machinery or plant, or in case of *force majeure*, but only so far as may be necessary to avoid serious interference with the ordinary working of the undertaking.

ARTICLE 5. Each Member which ratifies this Convention shall take appropriate measures to ensure that the prohibition prescribed in Article 1 is effectively

*Resolution Directing the International Labour Office to Pursue its Activities Respecting Unemployment in Collaboration with the Economic and Financial Organizations of the League.*

"The Conference,

In consideration and confirmation of its Resolution of 1921 and 1922 relating to the Enquiry into Unemployment, and having taken cognizance of the Appendix of the Director's Report concerning the Enquiry, and of the correspondence exchanged in this connection between the Director of the International Labour Office and the Secretariat of the League of Nations;

(1) Expresses its approval of the decision taken by the Governing Body to convene in the near future an International Conference of Labour Statisticians which will include in its Agenda the examination of unemployment statistics with a view to improving them from the point of view both of their national value and of their international comparability;

(2) Expresses its recognition of the efforts hitherto made by the International Labour Office in its work of international information and co-ordination in connection with the question of unemployment, and decides that they shall be continued and if possible extended;

(3) As regards the collaboration established with the Economic and Financial Organizations of the League of Nations in pursuance of the Resolutions of 1921 and 1922;

The Committee, having considered the recommendations of the Advisory Committee relating to the disinfection of wool and hair used in the textile industry, is not prepared to recommend that any action should be taken by the International Labour Conference.

The Committee does not consider that there is any prospect of arriving at an international agreement on the question.

Nevertheless, the Committee expresses the hope that in the various industrial countries, the regulations in force will be examined and if necessary modified, in order that the greatest possible protection may be afforded to industrial and transport workers.

As regards animal products other than wool and long hair intended for the textile industry, the Committee was less sharply divided. Its conclusions, as embodied in the majority report (and by implication endorsed in the minority report also), may be summarized as follows:

Until a process of disinfection of hides and skins, which is effective and industrially practicable, has been

enforced; and shall enable the employers, the workers, and their respective organizations to co-operate in such measures, in conformity with the Recommendation adopted by the International Labour Conference at its Fifth Session (1923).

ARTICLE 6. The provisions of this Convention shall not take effect until 1st January, 1927.

(a) Notes with satisfaction that the International Labour Office has submitted to the Sub-Committee on Economic Crises, appointed by the Economic Committee of the League of Nations, a memorandum on economic barometers, and expresses the hope that a wider understanding and usage of these barometers will result therefrom.

(b) Invites the Director of the International Labour Office to submit to the mixed Committee of the League of Nations and the International Labour Office the investigation of the factors which may interfere with the regular and coincident expansion of consuming power and of production, and thus affect the stability of employment, such as the operation of credit, the general instability of prices, and the dislocation of the exchanges.

(4) Expresses the opinion:

(a) that the researches of the International Labour Office and the Economic and Financial Organization would be materially assisted if each Government represented would prepare a Report on its own Unemployment problem, indicating precisely the nature of any remedies proposed.

(b) that the compilation of such Report might usefully be entrusted in each country to an authoritative committee representative of the interests involved."

*Resolution Respecting Anthrax*

discovered, measures should be organized to combat anthrax by means of suitable regulations.

The prevention of anthrax among flocks is the essential condition for the prophylaxis of anthrax among human beings. The question of the protection of flocks should therefore be examined by the International Labour Office in collaboration with the International Institute of Agriculture at Rome.

There should be included in the Agenda for a future Conference the consideration of a Draft Convention on compulsory disinfection of horsehair used in the brushmaking and upholstery industries (except in the case of pigs' bristles) and of horns and hoofs prior to industrial manipulation; and also the consideration of a Recommendation providing for adequate regulation in relation to bones and to the manipulation of horns and hoofs prior to their use in industry.

The International Labour Office should be requested to undertake a study of regulations for the protection of transport workers against the various infections to which they are specially exposed.

## Nationalized Undertakings in Russia

An official Russian bulletin in 1923 contained the results of a census of undertakings as of January 1, 1923, which showed 165,781 undertakings in operation employing 1,619,403 workers. This same bulletin gives the percentage of workers employed in nationalized industries at 84.1; the number of private

industry, 12.4 per cent; and the number in co-operative undertakings at 3.5 per cent. The percentage of total output under the head of nationalized industry was 92.3; from private industry, 5 per cent; and from co-operative undertakings, 2.7 per cent.

## LABOUR LEGISLATION IN NOVA SCOTIA IN 1924

THE Department has received a copy of the Statutes of Nova Scotia for 1924. References have already been made in the *LABOUR GAZETTE* to certain proceedings at the recent session which began on February 14 and closed on May 9, being the fourth session of the thirty-seventh General Assembly of the Province. A resolution proposed by the premier, the Honourable E. H. Armstrong, endorsing the principles of certain draft conventions and recommendations of the International Labour Conference, and adopted by the Legislature, was given in the June issue (page 473). The proposals thus approved included the following Draft Conventions and Recommendations adopted at the Washington Conference in 1919, namely: articles numbers 1 and 4 of the Recommendation concerning unemployment; the Draft Convention fixing the minimum age of admission of children to industrial employment at 14 years; and that concerning the employment of women during the night. Also the following proposals adopted by the Conference of 1921, named sections 1, 2, 4 and 5 of Article 1 of the Recommendation concerning the prevention of unemployment in agriculture; that concerning the age of admission of children to agricultural employment; that concerning the rights of association and combination of agricultural workers, and the Recommendation covering the development of technical agricultural education.

The labour legislation of the session included the enactment, in a modified form, of an 8-hour day law for the mining industry. A bill to provide an 8-hour working day in the building trades and in steel plants was defeated. This bill would have made systematic "overtime" in these trades illegal. A new minimum wage act was enacted, and is now in effect. This act applies to all occupations in which women are employed, whereas the act of 1920, which was never in operation, referred only to factories and shops.

*Coal Mine Regulation.*—The following section was added to those sections of the Coal Mines Regulation Act which relate to wages and other conditions:—

39A (1) Subject to the provisions of this Act a workman shall not be employed at his working place below ground in a mine for the purpose of his work for more than eight hours during any consecutive twenty-four hours;

(2) It shall not be deemed to be a contravention of this section if a workman is below ground for the purpose of rendering assistance in the event of accident or for meeting any danger or for dealing with any

emergency or exceptional work which requires to be dealt with without interruption in order to avoid serious interference with ordinary work in the mine.

The bill as originally presented to the House would have provided for an eight-hour day "from bank to bank," a provision which is contained in the similar act of the Province of Alberta. When the bill was in committee, however, it was amended so that the time limit should apply to the time spent at the working face in the mine. The act thus only establishes by law conditions that were already in existence under agreement in the mines of the province. Members of the Government pointed out, however, the advantage of having the law on the Statute books, as in future years it would be possible to improve conditions by amending the act.

Other sections in the amending bill provide for safer conditions in submarine areas. No submarine seam of coal or stratified deposits may, as a general rule, be wrought under less cover than 180 feet of solid measures; barriers between leases must be of specified extent; plans for submarine workings must be approved by the Inspector of Mines; where workings are on the "long wall" system, or where pillars are being extracted, or any total extraction of coal is being made, an exploring drift must be driven at least 150 feet seaward in advance of such workings; depth of cover and soundings must be taken every three months and records kept, where overhead cover is less than 500 feet. The new act provides penalties for infraction of its provisions by the owner, agent or manager of a mine, of \$1,000 for the first offence. If the offence is continued without excuse, a court injunction may be issued on the application of the attorney-general prohibiting the working of the mine.

Another bill to provide that checkweighers in mines need not necessarily be in the employ of the colliery in which they are elected to hold office was rejected by the Legislature.

*Minimum Wages for Women.*—The new Minimum Wage Act, as stated above, applies to "every female person in any trade or occupation in Nova Scotia who works for wages." Farm workers and domestic servants, however, are expressly excepted. The Minimum Wage Board will consist of five members, two of whom must be women. Its members are to be appointed by the Governor in Council, the chairman to hold office

during pleasure, and the other members to hold office for a period to be determined in each case. The powers of the Board are defined as follows:—

(a) To establish after due inquiry a minimum wage and the maximum number of hours per week for which such minimum wage shall be paid. The Board may also establish a rate of wage for all time worked in excess of the established maximum number of hours.

(b) To establish a wage lower than the minimum wage for any handicapped employee, or for a part time employee or for an apprentice.

(c) Upon petition of employers or employees or upon its own motion, to suspend temporarily or to vary any of its orders, or to revise them in accordance with special or changed conditions in any industry or industries.

(d) To make different orders for the same industry or industries in different localities of the province, when in the judgment of the Board the different conditions in different localities justify such action.

(e) To make all necessary orders and regulations for the purpose of this section.

In addition to the fine of \$25 to \$100, which may be imposed on an employer violating orders of the Board, the employer may also be ordered to pay an employee who has been underpaid the difference between the wages she received and the wages established by the Board. The Governor in Council may make regulations under the act as follows:—

(a) Requiring employers or any class of employers to furnish information as to the names, ages and places of residence of all employees and such other information respecting the hours of labour and conditions of employment of such employees as may be deemed necessary for the proper carrying out of the objects of the Act.

(b) Defining and limiting the number of handicapped employees, part time employees and apprentices to whom a wage lower than the minimum wage fixed by the Minimum Wage Board may be payable by any employer.

(c) Fixing the amount to be allowed for witness fees and for other charges in connection with the proceedings of the Board, or of wage conferences.

(d) Generally for carrying out the purposes of this Act.

*Workmen's Compensation.*—The Board was given power to exclude from the scope of Part I of this Act workmen in an industry which only partly falls within that Part, and to exclude those working for employers who carry on an industry outside Part I as well as one within that part, when the workmen's services are chiefly in connection with the industry not under Part I.

An amendment to the Towns' Incorporation Act provided that towns may apply to have the members of fire and protection companies admitted within the scope of Part I of the Workmen's Compensation Act. Each member of such a company will be deemed to earn wages at the rate of \$65 a month for

assessment and compensation purposes, the town being liable as an employer for assessments. The town may cancel such an arrangement on giving due notice to the Workmen's Compensation Board.

*Public Health.*—Important amendments were made in the Public Health Act. Enlarged powers were given to the Provincial Health Officer in regard to precautions against epidemic diseases and the inspection of clinics for the treatment of communicable diseases. Provision was made for a contribution by the Government to assist municipalities in defraying the expenses in connection with the public health nurses under the Act.

*Poor Relief.*—The Poor Relief Act was amended in regard to the liability of the relatives of a pauper to contribute to his or her support, the limit of such contribution being raised from \$3 to \$6 per week, and the degree of relationship being declared to be in the following order, father, mother, child, children, brothers, sisters, grandfather, grandmother, grandchild and grandchildren. Contributions may be recovered in the name of the overseers of the poor as a debt.

*Education.*—The Council of Public Instruction was given power to authorize a school inspector to appoint itinerant teachers for sparsely peopled districts outside any organized school section, the salary of such teachers to be paid by means of equal contributions from the municipality, the province, and the parents or guardians of the pupils.

*Children.*—Municipal councils were given authority to make regulations governing the hours during which children under 15 years of age may be on the roads or street at night. (The earlier provisions of the Municipal Act was so worded as to limit the powers of councils in this respect to the prevention of such children being abroad after 9 p.m.)

*Superannuation.*—The Halifax city charter was amended so that the existing superannuation arrangements will not apply to employees appointed in the future.

The number of workpeople, other than seamen, reported as killed in the course of their employment in Great Britain and Northern Ireland in June, 1924, was 152, as compared with 236 in the previous month, and with 177 a year ago.

## MINIMUM WAGES FOR WOMEN IN ONTARIO IN 1923

THE annual report on Minimum Wages in Ontario in 1923 summarizes the results of the Board's work during the three years since its establishment. In all, thirty orders have been issued, affecting most of the working women of the province. The effect of the orders has been to raise the general standard of wages to a noticeable extent. In proof of this statement a table is given which shows the average wages in each trade before the orders were issued, and after these orders had been in effect for a year. It is pointed out that however the figures for "average" wages understate the prevalence of lower wages, since a few exceptionally high wages overbalance a large number of low wages.

AVERAGE WAGES BEFORE AND AFTER

for board and lodging, \$2.39 for clothing, and \$3.11 for sundries, making in all a total of \$12.50. This figure, representing the minimum cost of living, becomes the "minimum wage" for Toronto. As the cost of living varies with density of population the minimum wages are graded down for smaller cities, towns, and villages. Details are given of the various items included under the allowance for clothing, which for the "standard" employee referred to amounts to \$124.40 a year. "Sundries" include allowances for laundry, doctor and dentist, car fare, reading matter, postage and writing materials, recreation, church and charity, with incidentals including personal requirements, costing in all \$162 in the year.

Another table shows from a different point of view the improved conditions of female employees in regard to wages. The textile trades are taken as a characteristic group and the number working at various wage levels before and one year after the orders became effective. This table shows that the lowest wages have largely disappeared and that the highest wages have increased. It may be noted that the minimum rates as fixed by the Board's orders governing the textile industry range from \$6 a week for young girls in country districts to \$12.50 for experienced adults at Toronto.

*Cost of Living.*—The report explains that the wage schedules are based upon the estimated cost of living. The weekly budget of a saleswoman in Toronto taken as a standard from which to estimate the necessary expense of women in other trades and in other places. This standard allows a saleswoman living in Toronto a weekly expenditure of \$7

The Board issued ten orders during the year, for at least thirty trades, with a much larger number of trade ramifications, and covering about 70,000 female workers. These orders were outlined as they appeared, in former issues of the LABOUR GAZETTE.

*"Sweated" Plants.*—The Board comments on the wide range of variations in the wages

paid by the different factories, and also in the length of working hours. "In every trade," they say, "there are certain wages paid which are inconsistent with the maintenance of a wholesome standard of living. We have found no 'sweated' trades, but we have found 'sweated' plants in practically every trade. In some trades there are very few such plants. In other trades there are more, and no trade is without at least one or two."

*Hours of Labour.*—In the needle and textile trades, the two chief industrial groups employing female labour, there is a striking difference in the length of work periods outside Toronto, a difference which increases from city to town and from town to villages. Thus the average hours per week in Toronto in 1923 were 44.9 in the textile and 44.02 in the needle trades; in Hamilton, Ottawa, London and Windsor, 48.1 in the former, and 45.3 in the latter; in places of 5,000 to 30,000 population, 49.8 and 46.9 hours, and in places under 5,000, 51.6 and 47 hours respectively.

*Home Work.*—Besides the female workers who are employed in recognized factories, there is an increasing number, employed in housework, who do not come under any regulations of the Board. On this subject the Board says:—

There is one form of woman's employment which no one interested in the welfare of the workers will disregard. It is what is known as "home work" or "contracting out." In certain forms it is quite innocent, and many a quick-fingered wife or sister has used her skill and taste within her home to enlarge her income. But other forms are far from innocent. They contain all that a good factory rejects; long hours, child labour, unsanitary surroundings, wretchedly low pay. Thus the factory has to meet a type of competition peculiarly unfair and destructive, and

many of the home-workers are forced below the line of decent subsistence. Fortunately, there has been little of this debased type of "home work" in Ontario. But we have discovered that with the expansion and congestion of our cities, and the influx of foreign-born workers, it is beginning to show itself. The enquiries we have made have shown that it does exist, though in small degree, and that it does not welcome investigation. The Factory Act of the province deals with the conditions of labour in such places. Our function is to assert the principle of "the right to live" and so protect both the home-worker and their factory competitors.

*Number of Working Women.*—The following statement shows the number of women in the several trade groups of the province. No estimate is made however of school teachers, nurses, agricultural or domestic workers, or women of the employer or professional class.

## MOTHERS' ALLOWANCES IN MANITOBA

### Report of Commission for 1922-23

THE seventh annual report of the Mothers' Allowances Commission gives particulars of the administration of the Act of 1916 for the twelve months' period ending August 31, 1923.

The expenditures for allowances and administration during the period was \$441,646. The expense of administration was 3.6 per cent of this total, or an average of \$1.78 for each family per month. The average monthly allowance granted to beneficiaries was \$57.76, the lowest amount since the period 1917-18. (In 1920-21 the average monthly grant rose to \$69.55, owing to increased prices of food,

clothing, rent and taxes.) The month of highest expenditure each year is October, when an extra month's clothing is supplied, as well as extra fuel for six winter months.

The number of families in receipt of assistance at some time during the year was 722. The size of the families was as follows: fourteen families had one child at home; 267 had two children; 224 had three children; 118 had four children; 64 had five children; 28 had six children; and 7 had seven or more children at home. Allowances were discontinued in 118 cases, leaving 604 families on the list at the close of the period.

Thirty-seven applications were refused during the year, some for the reason that the applicant was considered to have a sufficient income to support her children, or that she had only one child under 15 years, this being the qualifying age in Manitoba. (In this connection the report points out that Manitoba is alone among the Canadian provinces that have Mothers' Allowance Acts, in setting the age limit for children below 16 years.) The number of children in the assisted families of 15 years and under was 2,224, there being also 385 children in these families over that age, 302 of that number working out, 50 working at home, while 75 were unemployed. Of the families assisted 64 per cent were of Canadian and British birth.

Of the mothers assisted 194 had been in receipt of public support before the Board granted them allowances, while about an equal number were helped by their friends, and 227 were living on their savings or in-

surance money. In 500 cases the assisted families were able to supplement the allowance given them by the Commission, the main source of this additional income being the children's earnings.

The Commission conclude their report by making the following suggestions for improving the act:—

That further consideration be given to the matter of putting into effect the full scope of the Mothers' Allowance Act in regard to families where the father is totally and permanently disabled and incapable of contributing to their support.

That permission be given in cases where the mother has died, to continue an allowance to a family, by the acceptance of a relative or other suitable person acting as a foster mother.

That provision be made for placing upon members of the family who are over sixteen years of age responsibility for younger brothers and sisters and for enforcing such responsibility.

That institutional or other adequate care be extended to those whose minds are feeble and who are unable to exercise proper self control and who are therefore a menace to the community and to themselves.

## TORONTO REHABILITATION COMMITTEE

### Federal Government Approves Plan for Placing Ex-soldiers in Employment

A "REHABILITATION Committee" charged with the duty of facilitating the placing of handicapped ex-soldiers in suitable employment has been established at Toronto with the sanction of the Federal Government. It is anticipated that this Committee will render a valuable service to ex-service men, and will provide business men with a solution of a difficult problem. Already it is stated that a similar scheme for Montreal is under consideration. The scheme was prepared early in the present year by a representative committee of professional and business men, in consultation with the Minister of Labour and the Minister of Soldiers' Civil Re-establishment, and after several conferences had been held at Ottawa and Toronto it was submitted by the Ministers to the Federal Government for its approval. The approval of the Government was given in Order-in-Council 798 of the present year, which explains the rehabilitation scheme.

When members of the Canadian Expeditionary Force first began to return disabled from overseas provision was made not only for hospital treatment but for the granting of courses of vocational training. A careful survey of industries in which disabled men could be employed was made which enabled the Government to train thousands of disabled veterans under actual working conditions.

Partly owing to a change in the economic situation since the war some of these men have been thrown out of employment. In other cases an increase in disability has resulted in failure to carry on. In all the principal industrial centres there are pensioners and others who are incapable of earning a full day's pay or competing successfully with fit men, and it is considered that a special effort should be made to place these men in a position to support themselves and their families.

Pension is granted for disabilities due to, incurred during or aggravated on service. In many cases only a small portion of the disability from which a man may be suffering can be included in this category but this further disability is an equal handicap in the labour market to that for which pension is granted.

Recently consideration was given to this subject by a group of leading business and professional men in Toronto and plans were discussed whereby employment might be found for a certain number of disabled ex-members of the Forces, whether their disability was due to or aggravated on military service or is due to other causes. Representations were made by this Committee to the Prime Minister and to the Ministers of Labour and of Soldiers' Civil Re-establish-

ment, and a definite scheme of rehabilitation was drawn up under which it was claimed by its sponsors that the unemployment situation, in so far as it affects the disabled man, might be materially ameliorated in the City of Toronto.

Hitherto the Department of Soldiers' Civil Re-establishment administered in all parts of the Dominion relief to pensioners out of employment, about half of which is required for Toronto and district. The new scheme may not at once reduce, to any extent, the amount of relief granted, but it is considered that ultimately it will result in an appreciable reduction.

#### Outline of Scheme

The scheme of rehabilitation referred to contains the following points:—

- (a) Partly-disabled ex-service men will be placed in permanent employment at a fair cost to the employer and a minimum cost to the Federal Government.
- (b) Partly disabled ex-service men will receive a livable or existing wage during the learning period.
- (c) The diligent partly-disabled ex-service men will be given ample assistance to become rehabilitated and the persistently indolent men will eventually be eliminated from this section of the labour market and from general relief.
- (d) All partly-disabled ex-service men will eventually be given assistance to become rehabilitated without prejudicially affecting the Federal Government's interpretation of war disabilities.
- (e) The cost of relief for unemployed partly-disabled ex-service men will eventually be reduced to a minimum.
- (f) The problem of unemployment may become more flexible.

The *modus operandi* will be somewhat as follows: Those in charge of the work will interview prospective employers and will arrange for the placement of men according to their ability and earning capacity. The amount earned by a man thus placed, plus pension, will be increased by the addition of a bonus to a living wage of 32½c. per hour during a probationary period. As soon as wages and pension reach 32½c. per hour the bonus will be discontinued, but the progress of the man will be watched until he is able to earn this amount or more without reference to his pension.

It was estimated that for a twelve-month period the cost of the scheme as outlined, and exclusive of administration, would not exceed the amount that would be required for the provision of unemployment relief.

The members of the committee making these proposals were as follows:

Melville P. White, chairman, Canadian Manufacturers' Association, Toronto branch; works manager, Canadian General Electric Company, Ltd., Toronto; R. A. Stapells, president, Board of Trade, Toronto, president, McIlroy Manufacturing Co.; A. O. Hogg, president, Hogg, Lytle Company (Grain); J. A. Tory, supervisor, Sun Life Assurance Company; F. D. Tolchard, secretary, Board of Trade, Toronto; John J. Gibbons, president, J. J. Gibbons Advertising Co.; J. M. McIntosh, secretary, Canadian Manufacturers' Association, Toronto Branch; Capt. W. W. Parry, Arnoldi, Parry & Campbell, barristers; Major B. Wemp, alderman, City of Toronto; Col. A. T. Hunter, Hunter & Hunter, Barristers; Brig-General J. A. Gunn, president, Gunns, Limited; Maj-Gen. Robt. Rennie, Wm. Rennie Company (Seeds); W. H. Alderson, Gutta Percha Rubber Co. (Vice-Pres.); C. J. Doughty, Board of Education, Manager of Maintenance; H. C. Cornish, newspaper reporter; Dr. A. H. Abbott, secretary, Canadian Red Cross; J. M. Godfrey, barrister; L. B. Beath, W. D. Beath & Sons, Limited; J. Warwick, secretary, Soldiers' Aid Commission; A. M. Hunter, executive, Y.M.C.A., Toronto; H. W. Nichol, industrial engineer, Canadian General Electric Co., Ltd., Toronto; Rev. T. Crawford Brown, minister; Dr. G. W. Graham, physician; T. A. Stevenson, Trades & Labour Council; B. J. Miller, B. J. Miller & Co. (Sanitary Engineers); J. R. Yeo, broker; W. T. Kernahan, manager, O'Keefe's Brewery; A. E. Padbury, Representative of Patients, Christie Street Hospital.

For the purpose of facilitating operation, and in order to afford proper protection to the funds provided, a Board of Trustees, responsible for all expenditures, was appointed, consisting of Mr. Melville P. White, chairman of the Canadian Manufacturers' Association, Toronto Branch, Mr. R. A. Stapells, president of the Board of Trade, Toronto, and Brigadier-General J. A. Gunn, president of Gunns, Limited.

The necessary funds for carrying on this work are to be provided by the Department of Soldiers' Civil Re-establishment out of the relief appropriation granted by Parliament. The Department will deposit the sum of \$30,000 at the beginning of the first month of operation to the credit of the Board of Trustees and shall thereafter meet monthly the expenditures of that Board, after making a complete audit as in the case of departmental accounts.

The Committee named above will act as the General Committee of Rehabilitation in charge of the work, with power to add to its number and to accept resignations.

The Board of Trustees will be in charge of all expenditures, provided that on the resignation of any member of this Board the Ministers are empowered to appoint a successor on the recommendation of the General Committee of Rehabilitation.

All regulations and methods of procedure in connection with the operation and general

working out of these proposals, also such modifications or amendments to the same as may be required from time to time, are left in the hands of the Ministers.

The Department of Soldiers' Civil Re-establishment is authorized to make the necessary expenditures to carry out these proposals, such expenditures to be charged against any appropriation granted by Parliament to the Department for the relief of former members of the Forces.

### ESTIMATED NUMBER OF PERSONS ELIGIBLE FOR OLD AGE PENSIONS IN TORONTO AND OTHER CITIES

THE last issue of the LABOUR GAZETTE contained an outline, in tabular form, of the information supplied the mayors of cities throughout Canada, in response to a request for information that had been addressed to them by the House of Commons committee to inquire into an old age pension system for Canada. The mayors were asked for an estimate of the number of persons eligible for pensions under an old age pension scheme in their several municipalities, of the present cost of relieving these persons, etc. The replies, with a few exceptions, favoured the establishment of a Government scheme. It will be noted, however, that the questionnaire sent out by the Committee asked for estimates of the number of eligible persons over 65 years of age, while the age limit mentioned by the Committee in their final report was 70 years. The number of eligible persons as estimated by the municipal authorities is therefore greater than the numbers who would come under the scheme recommended by the Committee, if adopted. The Committee's estimate of the number of eligible persons throughout Canada, aged 70 years or over, was 98,841.

Some of the larger cities, owing to the labour involved in compiling the information desired by the Committee, were unable to have their replies ready before the final report was presented to the House of Commons, but valuable material was received later from Toronto and other cities. However, the figures given are based upon estimates, and the number of eligible persons cannot be accurately ascertained.

#### Toronto

In reply to the first inquiry the Mayor of Toronto expressed approval of the principle of federal old age pensions. In support of

this opinion the Medical Officer of Health of the City reported that "under existing industrial conditions many men and women, especially married couples who have reared a family, have found it impossible to provide for their old age. Each year it becomes more difficult for these old people to find employment of any kind. In Toronto, with the exception of the House of Industry and the House of Providence, the institutions for the aged are filled and have a long waiting list. These private organizations accommodate at any time only a limited number, who are absolutely destitute.

"It has been our experience that a large number of old people will practically starve in preference to entering an institution. High rents, over-crowding in houses, make it difficult for the poor to provide for their aged parents. It has been the experience of social agencies that many of the old men and women in their districts are suffering from the lack of the necessaries of life."

The total number of known old people in Toronto who would probably qualify for old age pensions (taking into account the Jewish Old Folks' Home, an institution in which all the members are totally dependent, but which is not at present assisted by the City), is estimated at 1,057. This figure includes both those receiving relief in their own homes and those in institutions.

The total number of persons receiving relief at home, through either the city agency or private organizations, who would be eligible is estimated as being 87 men and 100 women. The only municipal aid given in Toronto to the aged in their own homes is food and fuel; 43 men and 40 women receive such relief. Private family welfare agencies report assistance to the destitute aged in their own homes to 44 men and 60 women. Figures are not

available as to the amount expended on people so relieved.

Figures for 1924 are not yet available as to the number of inmates of institutions for the aged who are dependent residents, paid for by the municipality, but the number of such totally dependent residents in 1923 was 591 males and 289 females. The city paid to the institutions caring for these patients the sum of \$40,699.

A detailed statement was given by the Mayor showing the number of persons 65 years of age and upward, assisted by the city through the House of Industry, in the year ending March 31, 1924, as follows: married men, 151; widowers, 25; separated from wives, 3; bachelors, 3; soldiers, 6;—total males, 188. Married women, 152; widows, 119; spinsters, 11; deserted wives, 2; woman (husband in asylum), 1; parted from husband, 2; soldiers widows and deserted, 8;—total females, 295; total male and female, 483. All these persons are British subjects, unable to secure the necessaries of life without aid from the city. All received municipal aid at their homes during the year, the cost per family for the year being \$41.05. An old age pension system is considered very desirable by the Board of the Toronto House of Industry.

#### Vancouver, B.C.

The City Clerk of Vancouver was unable to make any estimate of the number of persons of 65 years and over, living in the city, who would be qualified to receive the suggested Federal aid. The financial statement of the city's outlay in connection with the administration of the Vancouver Old People's Home showed that \$25,443 was expended for this purpose. The number of inmates in the Home at the end of 1923 was 46, including 36 men and 10 women. No figures were supplied as to the number of persons in receipt of out-door relief, or as to any expenditures so incurred.

#### Calgary, Alta.

The reply from Calgary was to the effect that a Federal old age pension scheme is an absolute necessity. Public sentiment, it was stated, favours such provision. Existing methods of relief are not uniform but are haphazard. Official figures were not available but it was estimated that the number of old people who would be eligible for pensions would be approximately three for each 200 families. With a population of 65,000 persons there would be, roughly, 85 men and 95 women eligible. Thirty-five old people, 18 men and 17 women received aid from the city directly or indirectly in 1923, the average amount paid to each individual being 70 cents a day, or \$20 a month. The amount contributed by the city directly amounts annually to \$6,800. Philanthropic institutions also care for a number of people over 65 years of age.

#### Nanaimo, B.C.

The Mayor of Nanaimo stated that in his opinion a Federal pension scheme was very necessary. About 6 women and 8 men would qualify for pensions at Nanaimo. Five of the women and two of the men receive aid from the city in amounts varying from \$5 to \$10 monthly, and four other men are retained on light jobs rather than be maintained by charity. Besides these there are others in various employments who would benefit under the proposed scheme.

#### St. Boniface, Man.

The Mayor of St. Boniface stated that the proposed old age pension scheme was very desirable. A list was given of seventeen persons over 65, qualified for Federal aid, who reside at home, the relief paid to these people amounting to about \$80 monthly. Besides these, there are 13 persons in charitable institutions, costing \$205 monthly.

## MINING OPERATIONS IN QUEBEC IN 1923

ACCORDING to the annual report of the Bureau of Mines of the Province of Quebec for the year ended December 31, 1923, the value of the products of the mines and quarries of the province was \$21,326,314. As compared with 1922, this is an increase of \$2,991,161 or 16.3 per cent. The mineral production of the province has always mainly consisted of non-metallics, the metallic products in 1923 only representing a value of one-half of one per cent of the total mineral

production. The highest proportion reached was in 1917, when the metallic products made up 15 per cent of the value of the mineral production of the province.

#### Seasonal Work

In the mines, and especially in the quarries, the workmen are not employed the whole year. In the sand pits the period of operation is shortest; in fact in some of the smaller pits the period of extraction

does not exceed two months during the summer season. The quarries are busy during the summer, but as winter comes, one by one, they close their plant. In the mines, operations are far more continuous, but even these partly close for a few weeks at Christmas time. Seldom does the period of operation last more than 250 days. There are certain industries, however, such as cement manufacturing, lime burning and brick making, which have to carry on continuously without interruption, including Sundays, during the entire year.

**Wages and Numbers Employed**

During 1923, 8,925 persons worked in the mines and quarries, while in 1922 there were 7,808. Some 4,173 worked in mines and 4,752 in the quarries in 1923, as compared with 3,771 and 4,037 respectively in 1922. In 1923 the amount paid in salaries in the mining industry amounted to \$7,608,582, the miners receiving \$3,863,495 and the quarrymen \$3,745,087, while in the previous year they received \$2,682,541 and \$3,031,891 respectively. The average salary of a workman of 300 days (the yearly basis adopted by the Bureau of Mines during the past ten years) in the industry during 1923 was \$1,068; in 1922, it was \$981;

and in 1921 \$1,320. The method used in calculating the number of "300-day" workers is as follows: The number of days actually worked by the 8,925 employees is divided by 300, giving as a quotient 7,123, which is a measure of the steady employment afforded by the industry throughout the year. In April, 1923, the wages of the asbestos miners were increased by 50 cents per day, following greater activity at the mines. During the period of stagnation which had preceded the wages had been reduced considerably. The number of "300-day workers" in the mines was 3,448 and at the quarries 3,675 in 1923. The increase of work in the mines was 28 per cent, of the quarries 15 per cent, and of the entire industry 21 per cent over the previous year. In the producing mines there were 3,817 men employed, or 3,256 300-day workers, the wages paid amounted to \$3,626,897 and the number of days worked to 976,808; in the non-producing mines there were employed 356 workers or 191 workers on a 300-day basis, the wages paid amounted to \$236,900 and the number of days worked to 57,435. The accompanying table shows for each mineral produced in Quebec, the actual number of workers engaged, the wages paid and the quantities produced in 1923:—

MINERAL PRODUCTION IN QUEBEC IN 1923.

Substance.	Number of workmen	Wages	Quantities	Value in 1923

## Accidents

During the year the Bureau of Mines was notified of 317 serious accidents of which 17 were fatal. Last year the number of accidents reported was 272 with 16 fatalities. The frequency rate of accidents having incapacitated a workman for ten days or more during 1923 was 45.2 per 1,000 men-year. The 17 fatal accidents in the mines and quarries during 1923 give an average of 2.38 per 1,000 men-year. This average was 3.36, 2.51 and 2.72 respectively for the years 1920, 1921 and 1922.

In mines proper the average of fatalities was 2.32 and in quarries a little higher, 2.42 per 1,000 men of 300 days per year though their operations are said to be less dangerous. Five fatal and 178 non-fatal accidents occurred to employees at the mines and of these 2 fatal and 25 non-fatal accidents occurred underground, 3 fatal and 116 non-fatal at the open pits, and 37 non-fatal at the surface. There were 7 fatal and 45 non-fatal in pits at the quarries and 2 fatal and 2 non-fatal at the surface of the quarries. In the connected plants there were 3 fatal and 75 non-fatal accidents, of which 2 fatal and 53 non-fatal occurred in concentrators, 1 fatal and 5 non-fatal in warehouses, 15 non-fatal in shops and 2 non-fatal in power plants. Falls of rock accounted for 8 fatalities, 4 at the mines and 4 at the quarries, electricity for one fatality at the mines, explosives for 4 fatalities at the quarries, and railroad trains for 1 fatality at the quarries, while in the connected plants 2 fatalities were due to falls of objects and 1 to machinery.

## Safety and Health

The report contains recommendations as to precautions to be followed in the operation of mines and quarries. It is recommended that at every mine some person should be made familiar with the practice of the Schaefer method of artificial respiration, this method having been successfully applied to persons who have apparently ceased breathing from electric shock. Greater care in blasting operations, especially in the quarries, is also recommended. Foremen of sand pit operations are advised not to let any mass of sand or gravel overhang working places, should supervise such operations carefully, and see that all frozen ground is taken down right along as sand is taken at the base of the talus. To avoid falls of rock there should be a careful examination of the roof of underground workings and of walls of open-cast pits, and a thorough scaling after every heavy blasting. Men at work at the loading of boxes at the foot of talus or jam of rock formed by blasting down the sides of the workings should bring down any overhanging rock or other pieces on the verge of falling to the floor.

For some time past a movement has been on foot to revise existing social and labour legislation in various countries with a view to more systematic classification and eventual codification of such legislation, according to reports of the International Labour Office. The most recent evidences of this tendency are found in Spain, Portugal, Chile and Columbia.

## NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE following notes relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Items are also included which have a direct bearing on the work of these schools in connection with the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities. The scope of the work affected by the grants was briefly outlined in the July issue of the *LABOUR GAZETTE*, and summaries of the progress being made have appeared from time to time during the past four years.

*Hamilton, Ont.*—The educational committee of the Hamilton Chamber of Commerce has decided to continue the business training classes which were successfully carried on in the Technical Institute last winter. Classes will be held twice a month on Monday evenings during the coming winter and the course of instruction will be enlarged and improved as a result of last winter's experience. The total enrolment for the past winter was 784 and the classes were well attended. It is expected that well over 1,000 men will enrol for the coming course. Experts in various branches of business life will be secured for lectures covering a wide field of subjects.

According to W. R. Rollo, Adolescent Attendance Officer for Hamilton, not more than a dozen permits to work in the canning factories have been issued to children between 14 and 16 years of age. In other years hundreds of children were employed in these factories. Only about 25 permits to work in factories of any kind have been given to children in Hamilton. This means that there are practically no boys and girls between the ages of 14 and 16 working in Hamilton except those who have working permits for the year and are attending part-time classes.

*St. Thomas, Ont.*—A joint committee of the Board of Education, the Vocational Advisory Committee of the Board and the City Council of St. Thomas, have approved plans for a new vocational school to cost about \$185,000. It is proposed that the City Coun-

cil issue debentures for \$250,000 to cover the cost of building, site and equipment.

*Chatham, Ont.*—The Board of Education in Chatham is considering the erection of a new vocational school or an addition to the existing Collegiate Institute. The schools are badly overcrowded and additional accommodation is urgently needed. Recommendations to this effect have been made to the City Council but a definite plan has not yet been agreed upon.

*Stratford, Ont.*—The congestion in the Stratford Collegiate Institute has been acute and the local Board of Education is seeking a remedy. A recent recommendation of the Board that a vocational school be erected at a cost of \$250,000 was turned down by the City Council. A joint committee of representatives from the Board of Education and the City Council is considering the problem.

*Toronto, Ont.*—The Summer Training School for Vocational Teachers in Ontario is larger this year than ever before. The total enrolment is 140, with about an equal number of men and women. Teachers of vocational subjects in Ontario who have not received recognized professional training are required to attend two summer sessions in Toronto before receiving an interim certificate. Two successful years as a teacher following this course are required before a permanent certificate is granted.

*Hull, Que.*—Mr. A. Buteau, formerly of the Quebec Technical School, has been appointed principal of the new technical school in Hull. Classes will be opened this fall. The school has been equipped with workshops in which carpentry, plumbing, electrical work, pattern-making, blacksmithing, engineering, etc., will be taught in a practical manner. There will be evening classes for men of all ages above 14 years, starting in October, and the regular classes for the study of drawing, mathematics, geometry, trigonometry, physics, chemistry and electricity. Practical work will be given for about twenty hours per week in the different shops, and the courses will be for three years. During the first year the student will spend about equal periods in each of the shops to learn the fundamentals, and then complete his training in the shop best suited to his requirements and abilities. The successful student at the expiration of the three-

year period will be entitled to a Quebec Provincial Diploma, and certain scholarships will be awarded. The use of tools in the shops is to be free. The tuition fees will be \$1.50 per month the first year, \$2 the second, and \$3 the third, together with a \$3 registration fee which will be refunded if the student attends 75 per cent of the classes registered for.

*St. John, N.B.*—The vocational committee of the St. John School Board has appointed sub-committees which are actively engaged in selecting a site, approving plans, and appointing a director for the new vocational school which will cost approximately \$350,000. Building operations will be commenced as soon as possible.

*Yorkton, Sask.*—The vocational committee of the Yorkton Collegiate Board has passed a resolution submitted by the Board which suspends vocational classes for one year. The resolution, which passed by a majority of one, is due to financial stringency and the fact that vocational classes are new. The work discontinued includes household science and manual training.

*Vancouver, B.C.*—The School Board of Vancouver is assisting 'teen-age boys and girls to secure temporary and permanent employment. In this work the trustees are receiving the co-operation of the Provincial Government Employment Bureau and the Kiwanis Club. More than 200 pupils over 15 years of age are seeking permanent employment and about 1,200 'teen-age pupils desire temporary work during the summer vacation. The school principals have had cards filled in for each applicant, giving full particulars, regarding experience, ability, work

preferred, etc. Employers are being canvassed and urged to co-operate and it is hoped that a permanent arrangement for placing pupils in satisfactory employment will result from this effort.

*New York, N.Y.*—A joint apprenticeship committee representing the Mason Builders' Association of Greater New York and five local bricklayers' unions has recently signed an agreement governing the training of bricklaying apprentices in New York city. This agreement provides, through the co-operation of the above organizations, the Apprenticeship Commission of the New York Building Congress and the Board of Education of the City of New York, that all apprentices working at the bricklaying trade must attend evening public vocational schools two hours a night for two nights a week during the regular evening school session. A special course of study is now being written by experts of the trade under the direction of this joint apprenticeship committee that will enable an apprentice to get the theoretical and related subjects which he cannot get on the job during the day.

The agreement also provides for the creation of a permanent joint apprenticeship committee, outlines the duties of the committee and term of apprenticeship, provides for continuous employment of apprentices, states the minimum wages to be paid and hours per week at work and in school, provides for the enforcement of school attendance by both the employers and the unions and sets up the method of supervision, regulations and adjustments.

The agreement has been approved by the organizations mentioned and by the executive committee of the bricklayers' union.

---

### Old Age Pensions in Great Britain

The British House of Commons recently accepted a proposal made by Mr. Philip Snowden, Chancellor of the Exchequer, to improve the position of old age pensioners. The changes now accepted have the effect of making a single person who has an income up to 25 shillings a week, eligible for the full pension of 10 shillings a week and a married couple who have an income up to 50 shillings, eligible for the full joint pension of £1 a week. At present there are 917,000 old age pensioners, of whom 854,000 are in receipt of the full amount. The remaining 63,000 had not been receiving the full amount, their aver-

age weekly pension being six shillings. Most of these now come on to the full scale. In addition, another 173,000 persons over 70 years of age, who formerly received no pension, are made eligible in proportion to their income. The annual cost of these concessions was estimated by the Chancellor at seven million pounds.

The Federal Workmen's Compensation Act of the United States has been amended so as to make "any disease approximately caused by the employment" an injury within the meaning of the act.

## NOTES ON LABOUR UNION ACTIVITIES

THE following notes contain an account of recent conventions of international labour organizations having branches in Canada. The widows' pension scheme of the Brotherhood of Locomotive Engineers, to which reference is made, became operative in December, 1923, when 281 widows were placed on the pension roll of the Brotherhood. This is said to be the first provision of the kind by a labour organization on this continent. The Brotherhood opened its first labour bank at Cleveland in 1920; and the Co-operative Trust Company was started last December at New York, being the ninth bank of the Locomotive Engineers' Organization.

### Brotherhood of Locomotive Engineers

The fourth triennial convention of the Brotherhood of Locomotive Engineers was held at Cleveland during June. There were present 415 delegates representing a total membership of about 87,000, of whom 6,342 are members of some 100 branches in Canada.

*Three Years' Record.*—The principal achievements during the three years since the last convention were the putting into effect on December 1, 1923, of a widows' pension scheme under which more than \$80,000 was paid to widows of deceased members; the organization of a \$10,000,000 investment company; the taking over of an interest in the Empire Trust Company of New York, the establishment of the Brotherhood of Locomotive Engineers Co-operative Trust Company of New York; and the control and operation of labour banks in various parts of the country. In the three years the Brotherhood acquired control of more than one hundred million dollars through its various institutions. In the same period the receipts and disbursements of the Insurance Association of the organization totalled \$29,798,356, or \$825,232 per month. The present rate of disbursement is about \$4,000,000 a year. There are 99,450 certificate holders who carry insurance of \$200,020,705. The Association through its Relief Fund will loan \$30 per month to members of the Brotherhood in necessitous circumstances having a continuous membership in the Association for ten years or more. Loans from the Relief Fund up to the beginning of 1924 had been made to 1,434 members, over 1,000 of whom had died, leaving 387 enjoying the benefit.

*Reorganization.*—The outstanding question before the convention was the reorganization

of the various activities of the Brotherhood under one executive head, with the Grand Officer in charge of each department directly responsible to the chief executive for its conduct. It was felt that the organization had grown to such proportions and its activities were of such different natures that they must adopt the methods of successful business corporations. The consolidation plan finally adopted provides for the union of all the Brotherhood's activities under a president, with a first vice-president and treasurer in charge of the financial activities; a second vice-president as head of both the pension and insurance associations, who will also serve as vice-president of the Brotherhood's banks; a grand chief engineer responsible solely for the labour and protective features, with nine assistant grand chiefs assigned for service to particular zones; and a general secretary of the insurance and pension associations and the Brotherhood, who will keep the records of all three departments.

*Pensions.*—The widows' pension plan was extended to protect the wives of all members of the Brotherhood, previously it had only applied to widows of members of the Pension Association. Like the other pension and insurance features of the Brotherhood, it is to be operated at the actual cost of the protection afforded. No age limit will be enforced against applicants prior to January 1, 1925. Members participating in the Brotherhood's regular pension are enabled to double the amount of their benefits by taking out a second certificate. Pension dues were also ordered remitted for all pension members over 65 years of age in active engine service, and for those over 70 years of age in other cases, and the age limit for eligibility was raised to 50 years in order to give the older members a final opportunity to secure pension protection. The convention also decided to enlarge the Relief Fund so as to continue the service of aiding members in financial distress by enabling them to borrow on their policies.

*Chicago Joint Agreement.*—A new standing committee on the "Chicago Joint Agreement" was elected, consisting of W. J. Burke of Richmond, Virginia; J. F. Emerson, chairman Central of Georgia, G.C. of A.; W. S. Blessing of Shawnee, Oklahoma; and H. B. Chase, chairman Canadian Northern section of the Canadian National lines. In addition the Grand Chief Engineer Giffing was authorized to appoint three members from the Advisory Board

to complete the committee. (The agreement referred to in this paragraph fixed the maximum mileage per month in order to benefit the spare men).

*Public Policy.*—A number of resolutions were adopted dealing with important public questions, including a declaration in favour of public ownership of "super-power" and other natural resources, and a request for legislative action to compel automobiles to stop at railway grade crossings outside of incorporated cities. A resolution providing for "political education of the members to extend their political rights and use the ballot intelligently, to the end that the government may be a government for and by the people, and not be used to further the ends of combinations of capital for its own aggrandizement" was adopted unanimously.

### American Federation of Musicians

At the twenty-ninth annual convention of the American Federation of Musicians, held recently at Colorado Springs, Colorado, there were present 254 delegates representing a membership of about 130,000 throughout the United States and Canada. (This organization during 1923 had 46 locals and an estimated membership of 7,000 in Canada). Changes were made in the scales of wages and working conditions governing travelling members and leaders, these changes to become effective August 1, 1924. The practice regarding theatrical engagements was changed so that one week's notice must be given by the management of the termination of the season of the company. For travelling bands an additional charge of \$2 per man for each day is to be made when single day or night, or two-a-day stands are played. Travelling bands and orchestras filling vaudeville engagements are not permitted to play miscellaneous engagements in the jurisdiction of any local without the local's consent. Travelling bands and orchestras filling an engagement other than in vaudeville in the jurisdiction of a local may, during the tenure of such engagement, accept any vaudeville engagement in the jurisdiction, but not in competition with local bands or orchestras, unless the local of the jurisdiction gives its consent. An amendment was made in the by-laws of the organization providing that "members who play for an individual, place, function, or with an organization of whatever kind, held and declared nationally unfair by the Federation, immediately suspend themselves by such action from the Federation, and can only be reinstated under such conditions as may be

imposed upon them by the Executive Board of the Federation."

Another new rule is that "members of orchestras playing season engagements at hotels outside the jurisdiction of any local of the American Federation of Musicians must not receive less than \$30 per man per week; leader, \$45; board and lodging, also transportation both ways. Time of playing not to exceed five hours daily; overtime, \$1 per half hour or fraction thereof, per man."

Other changes in the laws of the Federation were to the effect that members appearing as musicians in acts on the stage with travelling theatrical companies are not permitted to appear as musicians in the pit of any theatre, unless the local in the jurisdiction consents. In all cases of an appeal to a convention made in accordance with the laws of the Federation, notice of such appeal must be given within thirty days from the date that the decision which is to be appealed had been made. A local cannot interfere in the cancellation of contracts between members by mutual consent of the parties thereto. A guest conductor or producing leader who enters a jurisdiction as such cannot become the contractor for the engagement he entered the jurisdiction to fill until six months from the time of acquiring full membership in the local whose jurisdiction he entered.

The national executive board was instructed to consider the advisability of suggesting to locals the adoption of a six-day week rule, and also to investigate the feasibility of establishing a home for aged and tubercular members.

### National Women's Trade Union League of America

The National Women's Trade Union League of America recently held its ninth biennial convention at New York. The convention approved the following lines of policy: closer co-operation in the organization work of the American Federation of Labour and of its affiliated unions; the development of the League's training school for active workers; support of the movement for the ratification by the various States of the proposed federal child labour amendment; enactment of eight hour laws for women; minimum wages; restriction of night work; one day rest in seven; exclusive state-fund workmen's compensation; limitation of the use of the injunction in labour disputes; continuation of adequate appropriations for the Women's Bureau, the Children's Bureau of the United States Department of Labour, and for the Federal Board for Vocational Education; continued opposition to proposed "blanket"

legislation for sex equality, because of its danger to existing labour laws in the interest of women; and the establishment of an international committee of women to study industrial conditions in the Orient, especially as they concern women.

The convention re-elected its president Mrs Maud Swartz; its vice-president, Miss Rose Schneiderman, and its secretary-treasurer, Miss Elizabeth Christman. The executive headquarters is in Chicago, the president's office in New York, and the legislative headquarters in Washington.

### Toronto District Railway Employees Council

A District Council composed of delegates elected by the various divisions of the Canadian Brotherhood of Railroad Employees has recently been formed in Toronto. The objects of the Council are given in its by-laws as follows:—

1. To create a closer co-operation amongst the local divisions of the Canadian Brotherhood of Railroad Employees in the district of greater Toronto.
2. To create a knowledge of the Canadian Brotherhood of Railroad Employees benefits among non-members.
3. To assist officers of the Canadian Brotherhood of Railroad Employees in organizing non-members.
4. To suggest methods of inducing members to retain their membership in the local divisions.
5. In general to act in a consultative and advisory capacity to the local divisions in Toronto.

The District Council is thus a centralized body representing the Brotherhood as a whole, and organized to assist the local branches by advice and help. Already it represents from 1,500 or 1,800 employees of the Canadian National Railways, and the number is stated to be rapidly growing.

The Council will assist in preparing for the convention of the Brotherhood to be held next year at Toronto. The officers of the Council are Messrs. E. R. Graver, president, J. E. McDonogh, vice-president, and W. J. Brackner, secretary-treasurer.

### Amalgamated Society of Carpenters and Joiners

The Secretary of the Canadian Executive Board of the Amalgamated Society of Carpenters and Joiners writes to correct any wrong

impression that may have been created by a report appearing in the July issue of the *LABOUR GAZETTE* (page 571), of a recent meeting of the Ontario Provincial Council of the United Brotherhood of Carpenters and Joiners. This report referred to a "standing offer" by the United Brotherhood to members of the British organization, and continued: "Only a few carpenters in Ontario, it was stated, have failed to transfer their membership in compliance with this offer." The *LABOUR GAZETTE* printed this statement as part of a report of what took place at the meeting of the United Brotherhood's Provincial Council, and there was no intention to understate the strength of an organization which shows a membership in its Ontario Branches of 1,120.

### Dates of Coming Conventions

The Trades and Labour Congress of Canada will meet in London, Ont., on September 15, the convention continuing until all business is completed.

The Canadian Federation of Labour will hold its annual convention in Montreal, Que., from September 24 to 27.

International labour organizations which have local branches in Canada will also hold conventions in September as follows:

Bricklayers, Masons and Plasterers' International Union, Saratoga Springs, N.Y., September 8.

International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers of America, Kansas City, Mo., September 8.

United Textile Workers of America, New York, N.Y., September 8-15.

International Association of Fire Fighters, Kansas City, Mo., September 8-12.

Brotherhood of Railroad Signalmen of America, St. Louis, Mo., September 8-15.

United Brotherhood of Carpenters and Joiners of America, Indianapolis, Ind., September 8-18.

International Brotherhood of Blacksmiths, Drop Forgers and Helpers, Kansas City, Kansas, September 8-18.

International Union of Steam and Operating Engineers, Detroit, Mich., September 8-13.

Journeymen Barbers' International Union, Indianapolis, Ind., September 9-19.

International Association of Bridge, Structural and Ornamental Iron Workers, St. Louis, Mo., September 15.

International Association of Machinists, Detroit, Mich., September 15.

United Association of Plumbers, Gas and Steam Fitters, Atlantic City, N.J., September 15.

## CAUSES OF UNEMPLOYMENT

### Report of the International Labour Office, Geneva

THE International Labour Office at Geneva has issued a pamphlet under the title "Unemployment, 1920-1923," together with a supplementary report giving details of the work of the office in carrying out the request that was made by the Washington Conference of 1919 for such an inquiry.

The report attempts to discover the economic causes of the successive unemployment crises that have arisen in the various countries in the past four years. These periods of idleness are found to be the result of economic conditions that are similar in each country. In every case a crisis has followed violent fluctuations in prices. The common belief that unemployment is correlated mainly with fluctuations in foreign trade is not sustained. On the other hand there has been a close correlation between unemployment and price fluctuations:—

1. A rapid fall in prices has always been accompanied by a marked increase in unemployment.
2. A rise in prices not exceeding certain limits has almost invariably been accompanied by a marked reduction of unemployment.
3. A violent rise in prices such as has taken place in certain countries as the result of catastrophic inflation has ultimately led to a crisis of unemployment.
4. A period of price stabilization following such a rise has been characterized first by an increase in unemployment, but soon after by a revival of employment.
5. When the stabilization of prices has followed a period of falling prices, the reduction of unemployment has been slow.
6. When the stabilization of prices has followed a moderate rise, the rapid improvement in the labour market which had accompanied the rise has continued or the high level of activity reached has been maintained.

#### Unemployment and Prices

The report calls attention to the break in the world's economic solidarity that has resulted from the war. A universal currency system, based on a gold standard, existed before 1914. Movements of prices at that time were more or less uniform throughout the world. Since the war, on the other hand, in spite of movements towards better international understanding, the economic interests of the various nations have been less closely inter-related than formerly. For example, wide discrepancies are noted in the

dates at which the national unemployment crises have arisen, and, in the words of the report,—

Instead of speaking of a world crisis of unemployment, it would seem to be more exact to describe the calamitous period of 1920 to 1923 as one of a series of national crises.

This is so much the case, that economics, a science which becomes even more empirical in character, has been enriched during this period, not by a single large experiment, but by a whole series of experiments which have all led to the same conclusion: Crises of unemployment are a direct consequence of the instability of prices. Further, in each country the influence of the home market on industrial activity would seem to be more important than that of foreign markets, whence it follows that the restoration of the purchasing power of the mass of consumers is the most important condition for the recovery of trade. Moreover, it would seem that the regular growth of this purchasing power in proportion to the growth of production itself would be capable of preventing sudden changes in production, or at least of markedly attenuating them, without resulting in business stagnation or a setback to economic progress.

True, the instability of prices is an ultimate cause; for it is the effect itself of numerous causes, among the most important of which are variations in the volume of currency and credit and the condition of the exchanges. These factors themselves raise the important problems at present dominating international policy (interallied debts, reparations, etc.) which have a powerful influence on the individual financial and monetary policy of most countries.

Thus, in final analysis, the initial considerations laid before the conference by the representatives of world labour would appear to have been justified. If the recurrence of unemployment crises in different countries is to be prevented, an effort would have to be made, if the above suggestions are well founded, to stabilize prices; but perhaps such stabilization would not be possible in certain countries without first settling the important international political problems which have interfered with the financial ability of these countries.

The report points out, however, that the acute unemployment suffered throughout the world from 1920 to 1923 is not exclusively the result of the international disintegration caused by the war, but is due to the same causes that have produced recurring periods of unemployment for the past century. "Although the acute unemployment which has afflicted so many countries for four years is now generally abating, there is every reason to fear that the cyclical fluctuations inherent in the present economic system will lead to fresh crises. It is this which must be prevented."

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

### Summary of Reports of the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics has recently issued reports on the lumbering and boatbuilding industries in Canada for the calendar years 1921 and 1922. Previous reports in this series relating to other industries were outlined in the *LABOUR GAZETTE* for July, 1924, and previous issues.

#### The Lumbering Industry, 1921 and 1922

The statistics of the lumbering industry are divided into two sections: (1) saw-mill operations, and (2) operations in the woods. A peak had been reached in the net value of the products of the industry in 1920. Not only was the total production greater than it had been since 1912, but the average prices were the highest in the history of the industry. During the general depression of 1921, however, the industry showed reduced production by about one-third and a decrease in the average value of the lumber by over ten dollars a thousand feet. The net total for all products of the industry in 1922 was \$230,108,403, made up of products of logging operations such as hewn ties, pulpwood poles, piles, mine timber, square timber, firewood, etc., to the value of \$115,783,823, sawn lumber, \$84,554,172; lath, \$5,690,328; shingles, \$10,397,080, and miscellaneous mill products such as veneer, cooperage stock, sawn ties, etc., \$13,683,000.

*Saw-mill Operations.*—During 1922 the production of sawn lumber was higher by 9.4 per cent, or 269,291,000 feet board measure, than in 1921, and although there was a decrease from \$28.73 to \$26.94 in the average value per thousand feet, the total value increased by \$2,105,587. The total number of mills reporting was reduced from 3,126 to 2,922. The order of importance as lumber producers of the nine provinces of the Dominion remained the same in 1922 as in 1921. Increases in production were reported for British Columbia, Ontario, Quebec and New Brunswick, and decreases were shown in the remaining five provinces. Capital invested decreased in every province but Alberta, the total capital invested being \$186,019,994 in 1921 and \$162,835,219 in 1922.

The total number of employees increased from 30,336 in 1921 to 31,891 in 1922, the increase in the class of employees on wages being from 28,184 to 29,757. The peak of employment was reached in June of 1922

with 42,404 wage-earners employed, while January was the month of least employment, with 16,744 wage-earners. There was a small increase in the number of clerks and other salaried employees of from 1,238 to 1,263, and a decrease in the number of superintendents and managers of from 914 to 871. Female employees numbered 179 in 1921 and 190 in 1922, and of these 6 were superintendents and managers and 173 clerks in 1921, and 7 were superintendents and managers and 183 clerks in 1922.

The average annual earnings per employee decreased from \$880 in 1921 to \$866 in 1922, due to a decrease for employees on wages of from \$808 to \$795. The average annual earnings of clerks and other salaried employees rose from \$1,212 to \$1,276, and for superintendents and managers from \$2,611 to \$2,692.

Particulars are given as to the average daily rates of wages paid to the different classes of saw-mill employees. Band-saw filers received \$8 a day, the highest average daily wage paid in the industry in Canada, or in any province but Nova Scotia, Saskatchewan and Prince Edward Island. Band-sawyers came next with an average of \$5.79, followed by circular-saw filers at \$5.04, electricians at \$4.85, mill foremen at \$4.66, and gang-saw filers at \$4.60. Generally speaking the highest wages were paid in British Columbia and the Prairie Provinces, average wages were paid in Ontario, and lowest wages in Quebec and the Maritime Provinces.

During 1922 the average mill was in operation for only 90.2 days out of the total 304 working days in the year. This is a substantial increase from 82½ days operated in 1921, and is due to increases in every province but Alberta and Manitoba. British Columbia mills with an average of 180.6 days, operated for a longer period than those of any other province; Prince Edward Island came next with 150.3 days, and New Brunswick third with 112.9 days, while the fewest working days, 53.3, were in Manitoba. The average number of hours worked per shift was 9.8 in 1922, as compared with 9.6 in 1921, with little variation throughout the nine provinces, Nova Scotia and Manitoba leading. The hours worked per week averaged 57.7, as compared with 56.7 in 1921. Of the five more important lumbering provinces, Alberta, New Brunswick and Quebec

led in this respect with 58.5, 58.3 and 58.0 hours respectively.

*Operations in the Woods.*—The value of the products of woods operations showed a decrease from \$83,548,959 in 1921 to \$58,668,929 in 1922, while the amount of capital invested showed an increase from \$26,827,326 to \$29,311,797.

For the Dominion as a whole the months of highest employment are November, December and January, with a minimum in July or August. This condition is general throughout the eastern provinces, with certain exceptions. In Quebec the combined employment in the woods and on the drive brings the maximum in April. In the Prairie Provinces the logging season is about a month later on the average, and in British Columbia the heaviest employment is during the summer and fall months, with less seasonal variation than in the eastern provinces. In 1922 the peak of employment was reached in December with 36,480 wage-earners employed, while July showed least employment with 16,293 workers on wages. The average number of wage-earners employed in 1922 was 25,608, as compared with 23,807 in the previous year, while the total number of employees was 26,950 and 25,341 respectively for the two years. In 1922 there were 45 female employees, of whom 3 were classified as superintendents and managers, while in 1921 there were 40 female employees of whom one was in the superintendent class. The remainder of the female employees were in the clerks and other salaried employees' class. Wood operations were carried on throughout the Dominion for an average of 159 days in 1922 as compared

with 140 days in 1921. British Columbia led with an average of 204 days. In the case of hours worked per day the average for the Dominion was the same for both years at 9.3 hours, New Brunswick and Quebec leading with 9.6 hours. The average number of hours worked per week remained at slightly over 55, being highest in New Brunswick.

#### Boatbuilding Industry, 1921 and 1922

There were 99 establishments engaged in the manufacture and repair of boats and canoes in 1922, as compared with 95 in 1921. The distribution of these establishments by provinces was as follows: Ontario, 46; British Columbia, 17; Nova Scotia, 16; Quebec, 12; Alberta, 4; New Brunswick, 3, and Manitoba, 1. There was a capital investment of \$1,655,151 in 1922, and \$1,391,311 in 1921. The value of products and work done was \$1,299,972 in 1922, and \$1,374,245 in 1921.

In 1922 there were employed 517 persons, whose salaries and wages amounted to \$572,478. Of these 16 were salaried officers who received a total of \$34,540; 19 were superintendents and managers whose earnings totalled \$40,943; 5 were on the technical staff with earnings totalling \$6,112; 18 were clerks receiving \$21,009; and 459 were wage-earners receiving \$469,874. In 1921 the salaries of the 11 officers who were employed amounted to \$18,300, of the 23 superintendents and managers to \$60,800; 2 technicians received \$3,360; 21 clerks, \$22,387; and 464 employees on wages, \$542,013. There were 9 females employed on the clerical staff in 1921 and 11 in 1922, the remainder of the employees being males.

### TRADE UNION UNEMPLOYMENT BENEFIT

SOME account of unemployment insurance plans existing in the United States was given in the last issue of the *LABOUR GAZETTE*. Most of the plans there described were based on the principle that the industry, or perhaps the state, should assume responsibility, in greater or less degree, for the worker's insecurity in his employment. However, besides those unemployment insurance schemes in which the employers are the sole or main contributors, many trade unions provide benefits for their members who are out of work. The extent of this practice has been ascertained by the Bureau of Labour Statistics of the United States by means of an inquiry among 161 national and international unions.

The results of this inquiry are given in the United States *Monthly Labour Review* for July. Information was supplied by 138 unions to the following effect:—

Only 3 of the 138 national or international unions reported a plan for out-of-work benefit now in operation, 4 reported that such plans had been in operation, within the last few years but had been abandoned, and 13 that certain of their locals had such plans. Three organizations responded that unemployment insurance had been rejected by the national convention, and one that the convention voted to leave the matter to local action. One has recommended to locals that such action be taken. Six reported that negotiations are now in progress with employers looking toward action of some sort. Three stated that the next convention of the organization would consider the matter. Seven unions reported that their locals had made arrangements providing

for a guarantee of employment. One reported a national agreement providing such a guarantee. Seven unions explained that provision had been made for the division of work in slack periods by agreement with employers or through employment offices or both. Fifteen of the national or international unions reported provisions for payment of the dues of unemployed members. In some cases it was stated that because the nature of the work was continuous there was little need for such plans, and in others that the organization was too small to carry out such a plan. One union stated that such a plan was not favoured because of its effect upon individual initiative.

It is estimated from the data available that approximately 28,000 trade unionists may receive benefits under the regular out-of-work benefit plans which have been established by the national and international trade unions or their locals, the weekly benefits ranging from \$2.10 to \$30. About 37,800 are covered by the marked plans of unemployment insurance.

One of the three international unions reported above as now providing out-of-work benefits is the Amalgamated Society of Carpenters and Joiners, with headquarters at Manchester, England. This organization has

thirty branches in Canada, with an executive board for the Dominion at Toronto. The plan dates from as far back as 1860. Members are divided into two sections, Section 1 including those between the ages of 19 and 40 who have passed a physical examination and pay the highest dues, while in Section 2 the members pay half dues, the age limits being 19 to 60. The weekly benefit for Section 1 is \$4.20 for the first ten weeks, \$2.10 for the second ten weeks with maximum of \$63 per year. Section 2 members receive half these amounts, with maximum of \$31.50 per year. The waiting period is four successive working days. Benefits are drawn from a special fund made up by dues and special assessments. As a protection against malingering, a "vacant book" must be signed every day at an hour agreed upon. After benefits are exhausted members are not entitled to further benefit until they have worked four successive weeks at the standard wage of the district.

## HOUSING PROBLEMS SINCE THE WAR

THE International Labour Office has issued an elaborate study on European Housing Problems since the war (Studies and Reports, Series G—Housing and Welfare No. 1, Geneva, 1924). The immediate causes of the housing shortage were the cessation of building, war destruction, and changes in the distribution of population. The numerical shortage and the urgency of the demand for houses have surpassed anything previously known. Before 1914 the main problem was rather to improve the quality of existing housing conditions, but after the war the need was more fundamental—to avoid the danger of a homeless population. The public authorities in all countries intervened to an extent hitherto unparalleled in an attempt to meet the situation. For the first time the State intervened in the relation between landlord and tenant, and limited their previously unrestricted freedom of contract. Restriction of rent, which would otherwise have greatly increased owing to the demand for houses, was practised in all countries. But the shortage continued to grow more acute, and in some countries the authorities were compelled to control the actual use made of housing accommodation.

The cessation of building, the primary cause of the shortage, was due mainly to lack of capital, which found no remunerative investment in building. Accordingly most governments had a housing policy, which included the granting or guaranteeing of loans to asso-

ciations for the erection of small buildings, relief from taxation, and other features. The government and local authorities themselves undertook building operations, or took steps to reduce the cost of materials, and new organizations were formed to take their share in public schemes for building. These emergency measures however proved to be too heavy a drain on the public resources, and they were in time modified or discontinued. Yet there is still a shortage of houses in nearly every country, building costs are still high and the returns low, and the shortage of capital is still acute.

The conclusions reached by the study is that a full solution of the housing problem must await the slow process of economic recovery. The experience gained will not, however, be wasted. One positive result of the official attempts to solve the housing difficulty is the permanent provision against profiteering and other abuses that has been made in several countries. Contributions have been made toward the solution of questions such as the reduction of the cost of materials and of building in general, and, as the report states, "it may be possible in the future to deal more effectively with the problem of land values, which owing to the decrease in the value of house property have fallen markedly."

The report is a volume of 484 pages, containing a detailed study of housing problems in the several countries of Europe from 1914 to 1923.

## THE EMPLOYMENT SITUATION AT THE BEGINNING OF JULY, 1924, AS REPORTED BY EMPLOYERS

THE upward movement that employment began to show in April continued to be in evidence at the beginning of July, although it was greatly diminished in scale as compared with the earlier months. The gain was considerably less than during the corresponding period of last year. The curve in the accompanying chart shows the slightly upward tendency of employment as compared with the more steeply upward trend on July 1, 1923, when the situation was more favourable. Employment, however, continues to be in greater volume than at the beginning of July, 1922 and 1921.

The Dominion Bureau of Statistics tabulated returns from 5,752 employers of labour, whose staffs aggregated 785,507 persons on July 1, as compared with 781,988 at the beginning of June. This comparatively small gain caused the index number to rise to 95.9 as compared with 95.2 on June 1 and with 99.5, 91.1 and 87.5 on July 1, 1923, 1922 and 1921 respectively. Pronounced increases were indicated in construction, in which some 12,600 additional persons were employed by the reporting contractors; sawmills, fish, fruit and vegetable canneries, tobacco, clay, glass and stone works showed improvement, as did also communication, steam and electric railways and hotels. On the other hand, manufacturing as a whole, logging, mining, shipping and stevedoring and trade recorded curtailment.

### Employment by Provinces

All provinces except Ontario shared to some extent in the improvement indicated at the beginning of July. The gains in the Prairie Provinces were most extensive, while in the Maritime District, Quebec and British Columbia the additions to staff were comparatively slight.

*Maritime Provinces.*—Slight increases were indicated in manufacturing as a whole, largely on account of expansion in lumber and paper mills. Textiles and iron and steel, however, were slacker. Logging, steam railway operation, construction and hotels afforded increased employment, but coal mines were decidedly less fully engaged, and shipping and stevedoring showed further seasonal contractions. Statements were received from 525 employers, whose staffs were larger by 150 persons than on June 1, aggregating 66,890. Additions to staffs on a very much larger scale had been shown on July 1, 1923.

*Quebec.*—In this province substantial improvement was shown in construction; hotels, steam railways and manufactures also reported increased activity. Within the manufacturing group lumber mills, pulp, paper, confectionery, tobacco and iron and steel recorded improvement, while rubber and textiles were slacker. Logging, asbestos mining, shipping and stevedoring and retail trade also afforded less employment than in the preceding month. The payrolls of the 1,240 Quebec firms making returns totalled 220,282 persons as compared with 219,688 on June 1. This increase was less pronounced than that recorded during the corresponding period of last year.

*Ontario.*—According to returns from 2,629 firms in Ontario they decreased their staffs from 325,561 on June 1 to 322,922 at the beginning of July. Contractions in manufacturing and logging caused this decrease, while communication, transportation, construction and hotels registered increased employment. Within the manufacturing division the largest decline occurred in iron and steel, and in leather, pulp paper, rubber and non-ferrous metal product works. A small increase had been shown on July 1, 1923.

*Prairie Provinces.*—Summer activity in construction, together with improvement in summer hotels, communication, transportation and manufacturing accounted for an increase of 5 per cent in the Prairie Provinces. Coal mines and retail stores, however, reported smaller payrolls than on June 1. The working force of the 736 employers making returns increased from 99,999 persons in the last report to 104,482 during the month being reviewed. The percentage increase was very nearly the same as that recorded on July 1 of last year.

*British Columbia.*—Reports were tabulated from 622 firms in British Columbia, whose staffs aggregated 70,931 persons, an increase of 931 as compared with their June 1 payrolls. In this province, as in the others, the greatest improvement was recorded in construction, but fish canneries, mining and hotels also reported increased activity. Logging was decidedly less busy, and sawmills also registered slackness. Although the improvement in British Columbia on July 1 was less than at the beginning of the same month of 1923, the index number continues to be higher than at that time.

The following table gives the index numbers of employment in the five areas into which the Dominion is divided in these statistics.

(Number employed January 1920=100)

District	Relative Weight	July 1 1924	June 1 1924	July 1 1923	July 1 1922	July 1 1921
Maritime provinces.....	8.5	90.6	90.0	101.0	92.6	89.0
Quebec.....	28.1	100.6	99.9	100.5	88.0	87.2
Ontario.....	41.1	91.4	92.1	97.2	89.2	84.2
Prairie Provinces.....	13.2	99.1	94.1	101.4	99.7	94.7
British Columbia.....	9.0	105.8	103.4	103.9	99.2	92.6
Canada.....	100.0	95.9	95.2	99.5	91.1	87.5

**Employment by Cities**

An analysis of the returns by cities shows that firms in Montreal, Toronto, Hamilton and Vancouver recorded reductions, while in Ottawa and Winnipeg moderate improvement was registered. In Montreal, 684 firms reported an aggregate payroll of 107,712 persons as compared with 109,342 on June 1. A large part of this decline took place in shipping and stevedoring, in which employment is apt to fluctuate considerably. Iron and steel and rubber also recorded reduced activity. Tobacco and some other branches of manufacturing, construction and services, on the other hand, reported increased employment. In Toronto there were general but not particularly large declines in manufacturing, while firms in the construction, communication and transportation divisions indicated additions to staffs. Statements were compiled from 754 employers, whose staffs decreased from 92,330 persons on June 1 to 92,029 at the beginning of July. The concerns reporting in Ottawa, 121 in number, employed 10,736 persons or 111 more than in the preceding month. This increase was largely confined to seasonal improvement in lumber mills and construction. The largest declines in Hamilton occurred in iron and steel, but in no case were the contractions pronounced. The 200 firms from which returns were received decreased their payrolls by 467 persons to 24,933 in the month under review. The improvement in Winnipeg was due to fairly small additions to staff in a large number of industries, notably in construction and on telephones. Returns were tabulated from 279 Winnipeg employers with a combined working force of 23,715 persons as compared with 23,428 on June 1. In Vancouver there was a fairly large contraction in lumber mills; this, however, was partly offset by improvement in construction and some other industries. Two hundred and seventeen companies reported the release of 151 workers. Their payrolls aggregated 21,464 persons at the beginning of July. The following table shows the index numbers of employment in these cities:—

**The Manufacturing Industries**

For the first time since the beginning of this year, employment in manufactures showed

(Number employed January, 1920=100)

City	Relative Weight	July 1 1924	June 1 1924	July 1 1923	July 1 1922
Montreal.....	13.7	94.8	96.2	95.9	88.2
Toronto.....	11.7	83.9	85.2	89.5	88.4
Ottawa.....	1.4	101.3	101.6	110.3	
Hamilton.....	3.2	81.7	83.1	91.4	
Winnipeg.....	3.0	85.6	83.6	87.7	92.8
Vancouver.....	2.7	99.0	99.7	100.3	97.4

a downward trend. This was chiefly due to reductions in iron and steel, although textiles, rubber, leather and electrical appliance factories were also slacker. Since Dominion Day fell on Tuesday this year, it is likely that part of the declines were caused by works shutting down over the week-end and not reopening until after the holiday. Lumber mills, fish, fruit and vegetable canneries continued to show seasonal gains; tobacco and clay, glass and stone factories also registered improvement. Statements were compiled from 3,752 manufacturers who employed 429,835 persons as compared with 433,960 at the beginning of June. The index number of employment in manufacturing was lower than on July 1, 1923, when a slightly favourable movement had been in evidence.

*Animal Products—Edible.*—This group continued to show seasonal increases in employment, 819 persons having been added to the staffs of the 201 firms making returns. As they employed 15,523 persons as compared with 14,704 on June 1, this was an increase of 5.6 per cent. British Columbia reported the bulk of the expansion, but increases were also indicated in Ontario and the Prairie Provinces. The additions to staff at the beginning of July, 1924, greatly exceeded those recorded during the corresponding period of last year, and the index number stands over 6 points higher than at that time.

*Leather and Products.*—Statements received from 191 employers in this division showed that they employed 16,077 persons as compared with 16,428 in the preceding month. Firms in Ontario recorded most of this 2 per cent decrease; it occurred largely in boot and shoe factories, although other leather works were also slacker. Practically no change in the situation had been indicated at the beginning of July, 1923, when the index number was higher.

*Lumber and Products.*—Rough and dressed lumber mills registered further pronounced increases in employment, while furniture and carriage factories were somewhat slacker. All provinces except British Columbia shared in the improvement, which was most marked in Quebec. Statements were compiled from 701 employers, whose staffs aggregated 55,567 as

compared with 53,788 persons at the beginning of June. This increase was less than that recorded during the corresponding period of last year when the situation was more favourable.

*Plant Products—Edible.*—Fruit and vegetable canneries reported seasonal activity and starch and glucose works were also busier. Biscuit factories, however, showed some curtailment. The gains occurred mainly in Quebec, Ontario and British Columbia. An aggregate payroll of 25,284 persons, or 512 more than at the beginning of June, was indicated by the 307 firms making returns. Somewhat greater improvement had been noted during the corresponding period of last year, and employment then was in rather greater volume than at the present time.

*Pulp and Paper Products.*—Employment in pulp and paper mills increased, but printing, publishing and paper goods works were less fully employed. The result was a decline of 187 persons in the payrolls of the 448 concerns making returns, who employed 51,093 persons at the beginning of July. Increases were recorded in the Maritime Provinces and Quebec, while firms in Ontario reported less employment. Additions to staff had been registered at the beginning of July, 1923, when the index number stood several points higher.

*Rubber Products.*—The production of rubber goods showed a falling off in Quebec and Ontario, chiefly in footwear factories. The 32 manufacturers from whom returns were received reported 10,158 employees as compared with 10,818 in the preceding month. This decrease is considerably smaller than that registered on the same date of last year, although conditions indicated then were rather better.

*Textile Products.*—Cotton, woollen and thread works recorded a further falling off in personnel, while knitting mills were more fully engaged than at the beginning of June. The reductions were registered mainly in the Maritime Provinces and Quebec. An aggregate working force of 62,961 persons were reported by the 518 firms making returns, who employed 64,030 in the preceding month. The seasonal declines indicated at the beginning of July, 1923, greatly exceeded those registered during the month under review, but the index number at that time stood higher than it is now.

*Tobacco, Distilled and Malt Liquors.*—Employment in tobacco factories showed considerable improvement in Quebec, while in Ontario contractions were recorded. Statements were compiled from 98 manufacturers in the tobacco, distilled and malt liquors

group, whose staffs were increased from 11,047 on June 1 to 11,391 at the beginning of July. Expansion had also been indicated during the corresponding period of 1923, when the index number stood slightly higher.

*Chemical and Allied Products.*—The production of drugs and pharmaceutical preparations, mainly in Ontario, declined at the beginning of July, 121 persons having been released from the staffs of the 110 firms making returns. As they employed 6,353 persons as compared with 6,474 on June 1, this was a decrease of about 2 per cent. A reduction of nearly the same size had been reported at the beginning of July, 1923.

*Clay, Glass and Stone Products.*—Slight improvement was evidenced in the three branches of this division, principally in Ontario and the Prairie Provinces. This upward movement repeats that indicated during the corresponding period of last year. Reports were tabulated from 115 employers, whose staffs totalled 9,402 as compared with 9,218 in the month before.

*Electrical Appliances.*—A 3 per cent decline in employment was indicated in this group by the 33 reporting firms who employed 8,539 persons. The decrease occurred largely in Ontario. A slight improvement had been registered at the beginning of July of 1923, but employment then was in considerably less volume than at the present time.

*Iron and Steel Products.*—Employment in iron and steel works declined largely at the beginning of July, when 4,863 persons were released from the payroll of the 617 employers making returns. Their staffs aggregated 116,840 persons. Contractions in rolling mills accounted for about half the reduction, while foundries, machine shops, heating appliance, general plant machinery, agricultural implement, tool and structural iron and steel works were also slacker. Automobile factories were also fully engaged, but railway car shops registered improvement. By far the greatest decrease occurred in Ontario; there was also a reduction in employment in the Maritime Provinces, while elsewhere improvement was recorded. Contractions on a rather smaller scale had been noted during the corresponding period of last year when the situation was better than at the present time.

*Non-Ferrous Metal Products.*—Smelters and refineries registered curtailment of operations, mainly in Ontario. Reports were compiled from 98 firms in this group, whose payrolls aggregated 11,212 persons as compared with 11,354 in the preceding month. Minor decreases had been indicated during the corresponding period of 1923.

**Logging**

Further seasonal contractions were reported in logging, the largest occurring in Quebec and British Columbia. According to 215 employers, their staffs declined from 20,741 persons on June 1 to 16,481 on July 1. Seasonal reductions, though on a smaller scale, had been shown on the same date a year ago, when the index number stood slightly higher than at the present time.

**Mining**

*Coal Mining.*—Substantial declines in employment were indicated in coal mining in

During the period under review, the largest increases were registered on telephones in Ontario, the Prairie and Maritime Provinces. The working force of the 163 reporting employers rose from 22,478 persons at the beginning of June to 22,851 on July 1.

**Transportation**

*Street Railways and Cartage.*—Slight but fairly general improvement was noted in this industry at the beginning of July, when 101 persons were added to the pay-rolls of 107 employers who had 19,310 workers on their pay-lists. The additions to staff indicated on

the Maritime and Prairie Provinces, while there was a comparatively slight increase in British Columbia. Reports were received from 90 operators, employing 26,587 persons as compared with 28,147 in the preceding month. This decrease of about 5 per cent caused the index number to be lower than during the corresponding period of 1923, when less extensive contractions had also been indicated.

*Non-Metallic Minerals (Other than Coal).*—Asbestos mining in Quebec showed a considerable reduction, but in the Maritime Provinces and Ontario there were moderate increases in quarrying and other branches of the group that partly offset this contraction. Sixty-nine employers reported a combined working force of 5,804 as compared with 6,143 at the beginning of June. Employment during the corresponding month of last year had shown an increase and the index number then stood a good deal higher than at the present time.

**Communication**

Further improvement was indicated in communication, employment in this division now being better than at any time since 1920. Additions to staffs on a smaller scale had been indicated at the beginning of July, 1923, when the index number stood over 8 points lower.

July 1 of last year had been rather smaller than at the present time.

*Steam Railway Operation.* Considerable expansion was shown generally in this group, although the gains were not as pronounced as those recorded on July 1, 1923. The index number then stood very slightly higher. The 103 concerns and divisional superintendents making returns reported a combined working force of 78,697 persons as compared with 76,816 in the preceding month. The difference represented an increase of between 2 and 3 per cent.

*Shipping and Stevedoring.*—Firms in the shipping and stevedoring group in the Maritime Provinces, Quebec and British Columbia registered reductions in employment, affecting 1,856 workers. Since the payrolls of the 62 reporting employers comprised 13,318 persons, as compared with 15,174 on June 1, this was a decrease of over 12 per cent. Contractions had also been indicated during the corresponding period of last year, although they were then on a much smaller scale and the index number stood on a slightly higher level. Employment in this division is at all times apt to vary abruptly, depending largely upon the number of ships docking on the date to which the questionnaire applies.

### Construction and Maintenance

*Building Construction.*—Statements tabulated from 286 contractors showed that they employed 24,121 workers or 1,310 more than at the beginning of June. The improvement was fairly general, although the gains in Ontario were the largest. The level of employment was not so high during the same period of 1923, although the increases then were slightly larger than at the beginning of July, 1924.

*Highway Construction and Maintenance.*—Further pronounced increases in employment were reported in this group at the beginning of July, when 6,324 persons were added to the payrolls of the 100 employers reporting. As their staffs aggregated 14,925, this was an increase of 73.5 per cent over the number they employed on June 1. The improvement indicated at the beginning of July last year had provided work for a much smaller number of workers.

*Railway Construction and Maintenance.*—Increased operations were indicated in this division in all provinces except British Columbia. The gains in the Prairie District were especially large. Reports were compiled from 32 contractors and divisional superintendents, employing 50,279 persons as compared with 45,350 in their last report. This expansion is slightly less than that recorded on the same date of 1923, when employment was in greater volume.

### Hotels and Restaurants

There was a 12 per cent increase in the employment afforded in this division, largely on account of increased activity in summer hotels. The gains were fairly widely distributed. A combined pay-roll of 8,533 persons was registered by the 66 reporting establishments which had employed 7,621 persons in the preceding month. The seasonal gains reported on July 1 of last year were less extensive and the index number then stood a good deal lower.

INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES  
(Numbers employed January, 1920=100)

Industry	Relative Weight	July 1 1924	June 1 1924	July 1923	July 1 1922	July 1 1921	Industry	Relative Weight	July 1 1924	June 1 1924	July 1 1923	July 1 1922	July 1 1921

## UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING JUNE 30, 1924, AS REPORTED BY UNIONS MAKING RETURNS

**U**NEMPLOYMENT as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among members of trade unions deals with the situation reported during the quarter ending June 30, 1924. At the end of April the percentage of idleness stood at 5.1 or 1.6 per cent lower than in March. During the following month there was an increase in unemployment, 7.3 per cent of the members being out of work at the end of May. In June a more favourable situation prevailed, the percentage out of work on the last day of June being 5.8. When making a comparison with the corresponding quarter of last year we find that employment was at a slightly lower level during the period under review, the percentage out of work at the end of June being over 2 points higher than at the end of June of last year.

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters for 1916-17-18-19, and by months for 1920-21-22-23, and to June of this year.

TABLE I.—PERCENTAGE OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month		N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

May	1924	1.6	3.2	13.7	5.8	6.1	1.6	4.7	3.6	7.3
June	1924	6.4	5.2	9.4	4.9	4.9	2.3	3.7	2.2	5.8

During the first month of the quarter being reviewed the curve followed in the downward course begun in March. In May, however, the trend was upward and a similar course to that of April was followed during June, though the level as maintained in April was not reached. The trend during April and June of this year was similar to that of the

corresponding months of last year, but in May the course was in an opposite direction to that of the same month in 1923.

During April more employment than in March was afforded members in all provinces except New Brunswick. Improvement was shown in the mining, building and transportation groups but the percentage of idleness

bia. Of the contractions in the other provinces that of nearly 5 per cent in Nova Scotia was the most pronounced due to unemployment in the coal mining industry. Workers in the manufacturing, building and transportation divisions were more fully engaged.

Table I on page 683 summarizes the returns by provinces, and table III on page 688 shows the percentages of unemployment reported in the different groups of industries.

Slightly less activity was reported in the manufacturing group during April than in

the corresponding month of last year, textile, pulp and paper and iron and steel workers all reporting more unemployment. The situation for fishermen, lumber workers, coal miners and transportation workers, however, was more favourable, but the percentage of idleness in the building trades was considerably above that reported in April, 1923.

In May, unions in the manufacturing industries reported more unemployment than in May of last year, due to less work for textile, garment, glass, iron and steel, and pulp and paper mill workers. Building trades-

EMPLOYMENT OFFICE REPORTS FOR JUNE 1924

A DECLINE was noted in the volume of business transacted by the offices of the Employment Service of Canada during the month of June, 1924, in comparison with a year ago, while little change was recorded from the preceding month. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half month periods, shows a slightly increased daily registration during the first half, followed by a decline toward the latter half of the month. The fluctuations were slight, being more noticeable in the curves of applications and placements than in the curve of vacancies, the latter being slightly higher at the end of the period than at the end of May, 1924.

The employment situation shows little betterment, the offices continuing to record a larger number of workers unplaced than vacancies unfilled. During the first half of June, 1924, the reports indicated a daily registration of 1,563 applications, as compared with 1,809 during the same month last year, and with 1,524 daily during the latter half of May of this year. Applications averaged 1,426 daily during the latter half of June, in contrast with 1,629 during the same period last year. Employers notified the service of an average of 1,174 vacancies daily during the first half, and 1,154 daily during the latter part of the month, in contrast with 1,705 and 1,585 vacancies reported daily during the corresponding period a year ago. During the latter half of May, 1924, vacancies averaged 1,131 daily.

The average number of placements made daily by the Service during the first half of June was 1,090, of which 771 were in regular work and 319 in casual jobs, in comparison with an average of 1,466 placements daily during the first half of June, 1923. During the latter half of the month under review placements averaged 982 daily (682 in regular work and 300 in casual) as compared with 1,344 during the corresponding period a year ago. During the latter half of May, 1924, placements averaged 1,068 daily. The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924 (6 months).....	102,874	73,547	176,421

During the month of June, 1924, the offices made 25,968 references to positions, and effected a total of 24,756 placements. Of these, 17,343 were in regular work (14,293 of men and 3,050 of women), and 7,413 were in casual employment. Applications registered for employment numbered 35,730, of which 26,368 were from men and 9,362 from women, while the vacancies notified from employers were 18,605 for men and 9,302 for women, a total of 27,907.

Placements in regular employment by provinces were as follows: Nova Scotia, 233 men, 69 women; New Brunswick, 246 men, 66 women; Quebec, 1,077 men, 382 women; Ontario, 6,608 men, 1,036 women; Manitoba, 1,043 men, 370 women; Saskatchewan, 1,532 men, 308 women; Alberta, 1,645 men, 352 women; British Columbia, 1,909 men, 467 women.

MARITIME PROVINCES

While there was a considerable amount of unemployment in some districts more opportunities for work in the building trades were offered. Slight expansion in building operations was reported from New Glasgow, Chatham and Moncton, with a number of calls registered for teamsters, carpenters, stone crushers and labourers, for road and bridge repairs. A few farm hands were supplied, but requests for workers were not numerous. A consistent demand for river drivers and saw mill workers was met satisfactorily from Sydney, Chatham, Moncton and St. John. A slight improvement was shown in the manufacturing industries. An active demand for waitresses and housemaids for residences and institutions was shown at Halifax and Moncton, with sufficient applicants to meet the increased requirements.

QUEBEC

The building industry showed a decided improvement, with an expansion in the demand for bricklayers, plasterers and painters. From the Montreal district a number of farm workers were placed, but the other offices reported a decided decline in the calls in this group. An increasing number of bushmen and river men were sent to employment in Northern Quebec from the offices at Montreal, Quebec and Three Rivers.

ONTARIO

In contrast with other years the month of June offered very few opportunities for em-

ployment, the depression in business appearing to be general throughout the province. At London, Ottawa and Kingston, the orders for farm workers had fallen to a minimum, due to the completion of spring activities, while in the Niagara Peninsula the supplying of farm hands continued to provide a large part of the business of the offices. Several districts reported an advancement in building activities. Highway work and road repairs had been slow in commencing, but toward the latter part of the month many workers had been found employment with the provincial roads department. Building was confined chiefly to residential construc-

household cooks was greatly in excess of the supply.

MANITOBA

There was a steady demand for farm workers on a monthly basis, with sufficient experienced applicants to meet all calls. Unemployment in this province continued, especially among building tradesmen and labourers. Residential construction and repairs comprised most of the work on hand, with comparatively few vacancies offering. A slackening in the demand for railway workers and section men was reported, but no difficulty was experienced in supplying all

tion, and while the number employed was greater than during May, a decline from previous years was shown. Difficulty was felt in securing stone-cutters at Kingston, but most localities had a surplus of skilled mechanics available. At Sudbury railway construction and maintenance supplied jobs for the bulk of those out of work, while further employment in this group was to be found at Cobalt, Fort William, North Bay and Port Arthur. A small though steady demand for river drivers, pulp-wood cutters and saw-mill workers was recorded, and workers supplied from Cobalt, Ottawa, Sudbury and Timmins. Extreme quietness in the manufacturing industries was shown from all points. There was an increased registration of women workers of whom more than fifty per cent were looking for casual employment. The demand for generals and

workers required. While there was a nominal demand for household workers for city employment there were large numbers required for positions on farms and in country homes.

SASKATCHEWAN

During June there was a slackness in the demand in the farming group following the spring demand for workers. Slight improvement was reported in the construction group, an oversupply of skilled tradesmen and labourers being listed, while the vacancies offered were mostly of a temporary nature. Section men were employed in increasing numbers, but as yet the demand was considerably less than the supply. A few men were supplied for forestry work and fire fighting near Prince Albert. In the women's sections orders for day workers and

institutional help were easily filled, but positions for domestic workers on farms were cared for with difficulty.

#### ALBERTA

While few vacancies were received, conditions in the building and construction group showed some expansion and few tradesmen were idle. Work was progressing on the Provincial Highway and in the Dominion Park at Banff, several workers being sent from Calgary. Graders, teamsters and labourers were placed in increasing numbers on railway construction and maintenance jobs near Medicine Hat and Calgary. The farming group showed a further decided decline during the month. From the offices at Edmonton, Lethbridge and Calgary there was reported a scarcity of trained household workers both for town and country vacancies.

#### BRITISH COLUMBIA

Provincial road work started, with residential construction well underway. Labourers, carpenters and building mechanics were employed in slightly larger numbers at Kamloops, Nelson, Penticton and Vancouver, but the demand for railway workers was very slight. Saw mills were active, and few offices reported calls for labourers, but no requests for lumber workers were recorded. There was a surplus of miners at Vancouver, with few vacancies reported. A slack season was reported on the water front, with insufficient work to keep the longshoremen employed. Conditions are much the same as regards domestic work, there being a surplus of orders with few trained women applicants available.

#### Movement of Labour

During June, 1924, the offices of the Employment Service of Canada made 17,343 placements in regular employment, of which 10,813 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of these latter 1,115 were granted the employment Service reduced rate, 772 going to points within the same province at the despatching office and 343 to other provinces.

The offices in Quebec issued 222 transportation certificates, 178 to bushmen going from Hull and Montreal to North Bay and Sault Ste. Marie, Ont., and 30 to mill hands, 13 to river drivers, and one to a cook going

to lumber camps within the Montreal zone. Ontario offices granted reduced transportation to 233 workers, two of which were ship riveters going from Toronto to St. John, N.B. Of the provincial transfers 215 were bushmen, river drivers and mill men going to the northern offices, one was a mucker going from Sudbury to the Ottawa district, one stone-cutter and a paperhanger from Hamilton to Kingston, the remainder being carpenters, labourers, etc., for various points. In Manitoba 268 workers benefited by the Employment Service reduced rate, 15 scraper holders and one farm hand being sent from Winnipeg to Lethbridge and Edmonton, Alta. To the province of Saskatchewan 70 workers were transferred, fifty per cent of whom were farm hands, and 34 teamsters and road workers. From Winnipeg to the Port Arthur, Ont., district 24 bush workers and river drivers, three moulders, one chef, a waitress and two kitchen help were transferred. The provincial transfers numbered 151, and included 129 farm workers, 13 farm domestics and 9 labourers and institutional workers. Certificates issued by the Saskatchewan offices numbered 113, one of which was granted to a lineman going from Regina to Edmonton, Alta.; 7 were issued to miners, one each to a cook, a saw-mill hand, a maid and a teacher going from Saskatoon and Regina to Dauphin and Brandon, Man. Of the 101 workers sent to employment within the Province, 56 were farm hands, 19 were river drivers, mill labourers and blacksmiths, the rest including teamsters, gas engineers and cooks. Alberta offices granted reduced rate transportation to two farm hands, one maid and a berry picker, going from Calgary to Vancouver and Cranbrook, B.C., and to 14 farm hands going to the districts near Saskatoon and North Battleford, Sask. Of the workers going to points within the Province 70 were farm labourers, 25 were mill men and unskilled workers, 22 were teamsters and 2 blacksmiths. The offices in British Columbia despatched 142 workers at the reduced rate, 8 of which were farm hands going to Edmonton, Alta., and 7 farm hands and one housekeeper going to points in Saskatchewan. Among the 126 provincial transfers were 40 carpenters, 20 labourers and 2 miners, 23 muckers, several bricklayers, paperhangers and blacksmiths.

Of the 1,115 workers benefiting by the Employment Service reduced rate, 571 were carried by the Canadian National Railway, 538 by the Canadian Pacific Railway, and 6 by the Temiskaming and Northern Ontario Railway.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA DURING THE PERIOD APRIL-JUNE, 1924

A DEPRESSION in employment conditions was indicated by the reports from the offices of the Employment Service of Canada during the quarterly period from April to June, 1924. A comparison with the preceding quarter shows that in all provinces fewer vacancies were offered and fewer placements made in casual work, while placements in employment of a more permanent nature increased about 40 per cent. Increases in vacancies and placements were recorded in the farm group—a reflection of the spring demand for farm help—and in retail and wholesale trade. The declines, recorded in vacancies offered in the construction and maintenance, services, and transportation groups, were due to the fact that an abnormal number of casual vacancies incident to the season were offered during February; and during the following months the normal expansion in outdoor trades did not materialize. Manufacturing industries showed only slight gains from the preceding period.

A comparison with the corresponding period of 1923 indicates a marked decline in employment, there being a decrease of 26 per cent in opportunities offered and 21 per cent in placements made, while registrations declined more than 13 per cent. The severe and unfavourable weather conditions during April and May was responsible largely for the backwardness in all outdoor trades, while at the beginning of June only a slight expansion was shown. The farming group alone attained approximately the same level of last year, 22,480 vacancies and 18,924 regular placements being recorded this year, as against 24,266 vacancies and 19,116 placements last year. In this group a decided gain over last year was shown in Ontario only, the other provinces recording approximately the same number as in the previous year. All other industrial groups engaged fewer workers, this being especially notable in the manufacturing industries, where a decline was recorded of 52 per cent in vacancies offered, and about 60 per cent in placements in work of duration of more than one week.

The chart on page 690, which accompanies the article on the work of the Employment Offices for June, 1924, shows the trend of employment during the period under review. During April, the curves of applications, vacancies and placements, ascended in a course parallel to that of April, 1923, although on a slightly lower level, the gain representing the spring orders in farming and logging industries. In the following months there was a sharp drop in the curves, the declination being very abrupt during May with only a slightly downward trend during June. During May and June, 1923, a slight pause in the seasonal expansion was recorded, although at the beginning of May the demand was slightly in excess of the supply.

During the period April to June, 1924, the offices reported that they had made 89,578 references to positions, and had effected a total of 85,083 placements, 60,000 of which were in regular employment, and 25,083 in casual work. Of the placements in regular employment, 50,720 were of men and 9,280 of women. During the corresponding period of 1923, placements totalled 108,499, representing a decrease during this year of more than 21 per cent. During the quarterly period under review vacancies for work notified to the Service numbered 96,796, of which 68,040 were for men, and 28,756 for women workers, as compared with a total during the same period last year of 130,757 vacancies, a decline of about 26 per cent from the preceding year. The number of applicants registered for work at the offices during the period was 118,576, of which 88,502 were from men and 30,074 from women. This is in contrast with 136,129 applications for work reported during the same quarter of 1923, representing a decrease in registrations of about 13 per cent.

The accompanying table gives the vacancies and placements by industries of the offices of the Employment Service of Canada in the various provinces during the period under review (April-June, 1924). In another section of this issue may be found a detailed report of the transactions of the offices for the month of June, 1924.

**BUILDING PERMITS ISSUED DURING JUNE, 1924**

THE value of the building authorized in 56 cities during June showed a slight decline as compared with May, 1924, and also with June, 1923. Building permits to the value of \$13,373,987 were issued during the month; this was a decrease of 5.9 per cent as compared with the May aggregate of \$14,215,670, and of 6.4 per cent as compared with the total of \$14,286,252 for June, 1923.

Detailed statements were furnished by 48 cities which had issued some 1,200 permits estimated to cost approximately \$6,000,000. They also authorized over 3,000 other buildings at a proposed cost of about \$6,600,000.

As compared with May, 1924, Nova Scotia, New Brunswick, Quebec and British Columbia reported increases in the value of the building permits issued, while in Ontario and the three Prairie Provinces there were reductions. Cities in Quebec recorded the largest actual gain, of \$581,929 or 15 per cent, while the greatest proportional increase, of \$146,543 or 231.6 per cent was in Nova Scotia. Alberta registered the largest actual and proportional decrease, of \$1,383,715 or 85.3 per cent.

In comparison with the returns for June of last year New Brunswick, Ontario and Alberta showed declines in the value of building authorized, while in the remaining provinces improvement was indicated. The 26 cities reporting in Ontario recorded a reduction of \$2,599,280 or 32.2 per cent; this was the most marked decrease, actually and proportionally. British Columbia registered the largest increase, the value of the permits issued during the month under review exceeding that for June, 1923, by \$1,089,838 or 174.7 per cent.

The value of the building permits issued in Toronto and Vancouver was greater than in May, while in Montreal and Winnipeg it was less than in the preceding month. As compared with the figures for June, 1923, Vancouver only, of the four largest cities, showed a gain. Halifax, St. John, Quebec, Three Rivers, Westmount, Belleville, Chatham, Galt, Kingston, Ottawa, Peterborough, St. Catharines, Sarnia, Sault Ste. Marie, Woodstock, Brandon, St. Boniface, Lethbridge and Medicine Hat reported increases in the value of the building authorized in both comparisons.

The building permits issued in 56 cities during the first six months of this year had a lower valuation than in the corresponding period of 1923 and 1922, but the aggregate was slightly higher than in the first half year of 1921. The total for 1924 stands at \$57,883,371 as compared with \$71,193,218 for 1923; with \$70,295,444 in 1922 and with \$54,695,580 in 1921. There were, therefore, reductions of

18.7 and 17.7 in the first two comparisons and an increase of 5.8 in the last comparison.

The accompanying table shows the value of the building permits issued during June as compared with May, 1924, and with June, 1923. The 35 cities for which records are available since 1910 are marked by asterisks.

## FAIR WAGE CONTRACTS, JULY, 1924

**D**URING July, the Department of Labour received for insertion in the **LABOUR GAZETTE** the following information relative to fourteen fair wage contracts awarded by the Department of Public Works of Canada, and one by the Department of Railways and Canals. These contracts contain the usual fair wage clause, which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

### DEPARTMENT OF PUBLIC WORKS

Dredging berth (Canadian Locomotive Works Wharf) at Kingston, Ont. Name of contractors, The Randolph Macdonald Company, Limited, of Toronto, Ont. Date of contract, July 15, 1924. Amount of contract, Class "A" \$5.25, Class "B" 80 cents per cubic yard, place measure. Approximate expenditure, \$12,000.

Dredging approach channel at Grimsby, Ont. Name of contractor, The Randolph Macdonald Company, Limited, of Toronto, Ont. Date of contract, July 12, 1924. Amount of contract, Class "B" 85 cents per cubic yard, place measure. Approximate expenditure \$17,060.

Dredging Burlington Channel, Ontario. Name of contractors, The Randolph Macdonald Company, Limited, of Toronto, Ont. Date of contract, July 12, 1924. Amount of contract, Class "B" 70 cents per cubic yard, place measure. Approximate expenditure, \$9,100.

Alterations to heating apparatus, Dormitory Building, Royal Military College, Kingston, Ont. Name of contractors, Elliott Brothers, Kingston, Ont. Date of contract, July 19, 1924. Amount of contract, \$6,269.

Dredging berth at Canadian National Railways wharf, Huntsville, Ont. Name of contractor, Robert Carson, Midland, Ont. Date of contract, July 10, 1924. Amount of contract, Class "B" \$1.42 per cubic yard, place measure. Approximate expenditure \$4,785.

Dredging turning basin, Collingwood, Ont. Name of contractor, The C. S. Boone Dredg-

ing and Construction Company, Limited, Toronto, Ont. Date of contract, July 18, 1924. Amount of contract, Class "B" \$1.10 per cubic yard, place measure. Approximate expenditure, \$28,600.

Dredging parts of channel and turning basin at Marysville, Ont. Name of contractor, The Frontenac Dredging Company, Limited, of Toronto, Ont. Date of contract, July 23, 1924. Amount of contract, Class "B" 90 cents per cubic yard, place measure. Approximate expenditure, \$8,100.

Installation of boilers in post office building at Deseronto, Ont. Name of contractors, McKelvey and Birch, Limited, Kingston, Ont. Date of contract, July 21, 1924. Amount of contract, \$1,435.

Installation of boilers in custom house, St. John, N.B. Name of contractors, J. H. McPartland and Son, St. John, N.B. Date of contract, July 22, 1924. Amount of contract, \$5,690.

Alterations to heating apparatus, Postal Station "H," Montreal, Que. Name of contractor, Laurie Engine Company, Montreal, Que. Date of contract, July 22, 1924. Amount of contract, \$1,470.

Dredging inner harbour, Cobourg, Ont. Name of contractor, The Frontenac Dredging Company, Limited, Toronto, Ont. Date of contract, July 25, 1924. Amount of contract, Class "B" 65 cents per cubic yard, scow measure. Approximate expenditure, \$25,775.

Dredging channel and basin at Abercrombie Point, N.S.; dredging basin and wharf at Pictou Island, N.S.; and dredging ferry slip, Pictou Landing, N.S. Name of contractor, The Halifax Dredging Company, Limited, Halifax, N.S. Date of contract, July 23, 1924. Amount of contract, Class "B" 90 cents per cubic yard, scow measure. Approximate expenditure for the three places, \$10,710.

Removal of headblock and repairs to the lake end of the North Pier, Burlington Channel, Ont. Name of contractor, The Randolph Macdonald Company, Limited, Toronto, Ont. Date of contract, July 12, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure \$4,491.50.

Reconstruction of wharf east side of the harbour at Bamfield, B.C. Name of contractor, W. H. Huntley, of Victoria, B.C. Date of contract, June 10, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$6,654.55.

DEPARTMENT OF RAILWAYS AND CANALS

Supply and delivery of material for high-way bridge at Merrickville Lock station, Ont. Name of Contractors, Sarnia Bridge Company, Limited. Date of contract, July 31, 1924. Amount of contract, unit prices as set forth in contract.

POST OFFICE DEPARTMENT

The following is a statement of payments made in July, 1924, for supplies ordered by the Post Office Department subject to the regulation for the suppression of the sweating

system, the securing of fair wages, and the performance of work under sanitary conditions:—

Nature of order	Amount of order
	\$
Making metal dating stamps and type and other hand stamps and brass crown seals.....	649 96
Making and repairing rubber stamps, daters, etc.	96 88
Making up and supplying letter carriers' uniform, etc.....	19,837 09
Stamping pads, ink, etc.....	55 26
Mail bag fittings.....	1,236 25
Letter carriers' satchels.....	1,664 54

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Non-Metallic Mineral Products

MONTREAL, QUEBEC.—CERTAIN EMPLOYERS AND THE JOURNEYMEN STONECUTTERS' ASSOCIATION, MONTREAL LOCAL.

Agreement verbally accepted, to be effective from June 1, 1924, until May 31, 1925.

Minimum wage per hour, stonecutters, and machine men, 75 cents; carvers, at least \$1.00 per day more than stone cutters.

The union advises the sub-contractors to take necessary precautions against having to finish a subcontract, should the original contractor get into difficulty with the union. In such a case the union shall refuse its services to the second contractor as well as to the first.

GRANITEVILLE, QUEBEC.—QUARRY MASTERS, AND PAVING CUTTERS' UNION OF THE UNITED STATES AND CANADA, LOCAL NO. 60.

Agreement to be in effect from January 1, 1924, until December 31, 1924, with three months' notice of change prior to expiration.

The union agrees to cut blocks at the rates per thousand of \$27, \$30, and \$33, according to size; 4 inch cubes, \$17 per thousand; flange blocks, 3½ to 4½ inches wide, 4¼ to 5½ inches deep, 9 to 10 inches long, with equal numbers 5 to 6 inches long, \$47 per thousand. Prices for other sized blocks are to be readjusted subject to approval of the district director.

Wage rate per hour, 67½ cents.

Hours, eight per day and four on Saturdays.

Should the average paving cutter through rough stone or other cause not be able to make a standard rate of pay, prices will be adjusted.

The quarry masters agree to employ none but union men or those eligible to join. The union is to supply men as required.

Construction: Miscellaneous

EASTERN CANADA—EAST OF FORT WILLIAM, ONTARIO.—SCHEDULES OF RATES AND CONDITIONS FOR THE INTERNATIONAL BROTHERHOOD OF STEAM SHOVEL AND DREDGE-MEN.

To be in effect from April 1, 1924.

Minimum wages, per month—engineers, \$250; crane-men, \$200; firemen, \$150.

Hours per day, revolving shovels, draglines, and excavators without cranemen, eight, the ninth hour being paid extra, pro rata, or board included for working the ninth hour. After nine hours, time and one-half.

For railroad type shovels, revolving shovels, draglines and excavators employing cranemen, hours per day, nine or a fraction thereof. The tenth hour to be paid extra, pro rata, or board included for working the tenth hour. After ten hours, overtime rate, time and one-half.

(On jobs in Newfoundland rate of wages is to be 10 per cent higher than scale.)

Rate on Sundays and holidays, repairs, time and one-half; moving machines, or digging on Sundays and holidays, double time.

Transportation to the job is to be furnished or refunded within fifteen days by the employer. Members leaving jobs are to give six days' notice, and to notify union to arrange for filling vacancies.

Any member violating these rules will be subject to a fine.

**Construction: Buildings and Structures****TORONTO, ONTARIO.—CERTAIN LOCAL EMPLOYERS AND INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, LOCAL No. 20.**

Agreement effective from May 1, 1924, to April 30, 1925.

Agreement is to be in effect within 30 miles of the City Hall.

Hours per regular work day, eight, with four on Saturday.

Not more than one improver is to be employed to each mechanic.

Overtime and Saturday afternoons, time and one-half. From 10 p.m. to 8 a.m. and Sundays and observed holidays, double time. No work is to be performed on Labour Day except in cases of emergency, and then only when triple time is paid.

Provision is made for a Trade Board of one representative for each employer signing agreements and an equal number of members of local No. 20. The board is to have the right to investigate labour operations of the parties to this agreement, having the right to summon, question and examine any party to the agreement, and take care of disputes.

The trade board is to be governed by by-laws, providing for quarterly meetings, with special meetings by request, the board having power to impose fines.

There are to be no lockouts except general ones ordered by the Building Trades Employers' Association, and no strikes except when of a general nature and when ordered by the Building Trades Council. Trade disputes or grievances are to be settled without cessation of work, and if parties fail to agree matter shall be referred to the Joint Trade Board.

The employers are not to sub-let any contracts, and the employees agree not to contract, sub-contract, or estimate on work.

When an emergency exists and the union fails to supply mechanics or improvers, the employers may secure the emergency number agreed upon, the men thus engaged working under a union permit until replaced by union members.

Wages per hour: mechanics, 85 cents; improvers, first year, 45 cents; second year, 55 cents; thereafter, 65 cents. Improvers are to be eligible for mechanics' examination after four years in the trade.

Employees shall receive board when on jobs requiring same and transportation allowance. Night travelling is to be paid single time unless a berth is provided.

On certain specified work the employers agree to employ only members of the local.

The union agrees to give preference in labour supply to master insulators.

The union agrees that there shall be no limitations or restrictions placed on the individual working effort of its membership.

The masters agree that no mechanic shall be paid less than 85 cents per hour, men capable of taking charge of jobs being paid more or as the master values the services.

**OTTAWA, ONTARIO.—THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRY, OTTAWA BRANCH, MASONS AND GENERAL CONTRACTORS' SECTION, AND BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION OF AMERICA, LOCAL No. 7.**

Agreement to be in effect from June 1, 1924, until April 30, 1925.

Wages per hour, \$1.10.

Hours, eight per day for five days and four on Saturdays.

Overtime from 5 to 10 p.m., time and one-half; thereafter and Saturday afternoons, Sundays and holidays, double time.

Only good-standing union members or those competent and intending to become so are to be employed.

Any member desiring to engage in contracting must resign his membership before doing so.

Members hired to go out of the city to work shall have travelling expenses and board paid.

The union agent will be permitted to examine cards of members working on any job.

A member discharged must be paid at once or paid waiting time.

No member is to quit work to take part in any sympathetic strike except on a direct order from the executive board of the union.

Any firm of contractors having been established in Ottawa for two years, employing two or more bricklayers during the whole of the second season may have an apprentice; if established four years and employing five bricklayers they may have two apprentices. Apprentices must serve four years under indentures.

Foremen are to be practical mechanics and members of the union, and to receive not less than ten cents per hour over the regular scale.

When a firm of contractors is comprised of more than two members, not more than two of the firm shall work with the tools.

Violations of any article of the agreement shall be reported to and dealt with by the joint arbitration committee.

**HUMBERSTONE, ONTARIO.—LOCAL CONTRACTORS AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS No. 1168.**

Agreement to be in effect from June 1, 1924, until June 1, 1925, and from year to year unless notice of cancellation or change be given on or before February 1.

Hours per day, eight; four on Saturdays.

Overtime, first four hours, time and one-half; work thereafter, and on Sundays and holidays, double time.

Minimum wages, per hour, journeymen carpenters, 80 cents; foremen, 85 cents. Foremen must be union members.

Apprentices: one to five journeymen. Apprentices may work overtime only when working with journeymen, receiving double pay for overtime.

Carpenters in planing mills or contractors' shops, regularly on supply work or in factories on maintenance work (not construction) may work nine hours per day except on Saturday when they shall stop at noon. Wages per hour 75 cents.

Only union men are to be employed if available. If the union is unable to supply the same, non-union men may be employed, being given 14 days' notice to become members of the union.

Men sent out of the city to work shall be paid carfare above 10 cents per day.

When a contractor sub-lets a job he shall stipulate to the sub-contractor that the terms of the agreement shall be fulfilled.

The business agent may visit the job at any time.

Journeymen doing job work for other than a contractor shall receive not less than 5 cents per hour above the minimum rate.

When work is carried on in two or more shifts, second and third shifters shall be paid eight hours time for seven hours' work. Men shall not work on more than one shift in twenty-four hours.

**WINDSOR, ONTARIO.—THE BUILDERS' AND CONTRACTORS' ASSOCIATION OF ESSEX COUNTY, AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL No. 494.**

Agreement to be in effect from June 1, 1924, until June 1, 1925, and from year to year unless notice of termination is given by either party on or before March 1 in any year.

Minimum wages per hour, \$1.

Hours, eight per day and four on Saturdays.

Overtime, first hour, time and one-half, thereafter and Sunday and holiday work, double time.

Disputes are to be referred to a joint committee. No carpenter shall quit work until ordered to do so by the proper officers of the union.

Only union members are to be employed as foremen and journeymen.

Provision is made for a joint arbitration committee of four members of each party, to meet once in three months.

Apprentices: Both parties agree there is urgent need for an apprenticeship system. One apprentice may be employed to ten journeymen and two or more than ten.

Rate of wages for apprentices: first year, 40 per cent of journeyman's rate; second year, 55 per cent; third year, 70 per cent; fourth year, 85 per cent; thereafter, journeyman's rate.

Hours of labour, same for apprentices as for journeymen. Apprentices shall not be allowed to work overtime unless journeymen are working overtime.

**WINDSOR, ONTARIO.—THE BUILDERS' AND CONTRACTORS' ASSOCIATION OF THE COUNTY OF ESSEX, GENERAL CONTRACTORS' AND ENGINEERS' SECTION, AND INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCAL No. 871.**

Agreement to be in effect from May 1, 1924, until April 30, 1925, and from year to year unless notice of termination is given before March 1 in any year.

The union is to be known as stationary and hoisting engineers.

Hours per day on building and constructing, eight with four on Saturday; on excavating and sewer work, nine per day, and five on Saturdays.

Overtime, time and one-half, Sundays and holidays, double time.

Wages per hour on steam shovels and trench machines, \$1.25; on all kinds of derricks and pile drivers operated by two or more drums, \$1.10; on all other hoisting and portable machines, \$1.

Engineers are to report every work day, and if there is no work they must receive two hours' pay, unless previously instructed not to report. For Sundays and holidays, double time shall be paid at broken time.

Engineers shall be paid full time for all time held on the job whether running or not.

When overtime is required the engineer who has been running that machine shall be allowed to work the overtime provided it amounts to less than six hours. Overtime amounting to more than six hours shall require another engineer if there are any unemployed.

**Transportation and Public Utilities: Street and Electric Railways**

**HULL, QUEBEC.—THE HULL ELECTRIC COMPANY AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISION No. 591.**

Schedule of wages and working conditions in effect to July 1, 1924, to continue in effect unchanged for a period of one year and thereafter from year to year, subject to revision upon notice given in writing thirty days before the expiration of any yearly term.

Wages per hour: freight crew (ten-hour day), conductors and motormen, 40 cents; brakemen, 40 cents; trolleyman, 38 cents; power plant employees (eight-hour day), power-house operators, 45 cents; substation operators, 42 cents; power-house oilers, 39 cents. Trackmen (nine-hour day), track foremen, 45 cents; trackmen, 40 cents. The following are wages per hour in a nine-hour day shift, or a ten-hour night shift: machinist, first-class, 62 cents; armature winder, first-class, 50 cents, second class, 40 cents; blacksmith, 44 cents; carpenter, first-class, 52 cents, second class, 44 cents; air brake fitter, 42 cents; pitmen and troublemen, first-class, day shift, 46 cents, night shift, 44 cents, second class, day shift, 44 cents, night shift, 41 cents; car cleaners, first-class, 39 cents, second class, 37 cents; sweepers and snow-plough work, 3 cents in addition to schedule rates; flagmen or switchmen, \$2.70 per day; Aylmer station agent, \$130 per month. Per hour, conductors and motormen, 1st year, 38 cents; 2nd year, 41 cents; 3rd year, 43 cents; 4th year, 45 cents. The following work nine hours per day: linemen, 1st class, 51 cents, second class, 48 cents; metermen, 1st class, 39 cents, second class, 37 cents. Provisions are made for clothing allowances.

Listed spare men reporting for duty three times each day shall be paid a minimum of \$30 per half month, but if they work in excess of the hours to cover this amount, they shall be paid scheduled rates per hour.

Overtime over schedule time, time and one-half, until relieved.

Differences arising out of suspension, dismissal charges, accidents, wages, etc., may be investigated by a committee selected from and by the employees.

**BRANTFORD, ONT.—THE BRANTFORD MUNICIPAL RAILWAY COMMISSION AND THE BRANTFORD MUNICIPAL RAILWAY EMPLOYEES' UNION.**

Rules and rates of pay in effect from April 1, 1924, until April 1, 1925, and from year to year on thirty days' notice of change.

The Commission agrees to meet and treat through its proper officers with the representatives of the employees, should any differences arise during the term of this agreement.

No discrimination against employees for joining any organization.

Hours per day, nine, to be performed in nine consecutive hours, wherever practicable, but not to exceed twelve hours in any event.

Overtime: for all work in excess of nine hours, time and one-half.

Employees on regular scheduled runs are to be paid a minimum of nine hours except when power is not available, then pay shall be for time on duty.

Certain provisions are made for uniforms.

In a reduction of force, junior shall be laid off in order of length of service and re-employed according to seniority.

Employees suspended may have a hearing and if found not guilty shall be reinstated and paid for time lost.

Rate for training students, 3 cents extra per hour.

Wages per hour: motormen and conductors, 1st year, 46 cents; 2nd year, 48 cents; 3rd year, 50 cents.

Motormen and conductors other than those engaged on regular Sunday runs, time and one-quarter for Sunday work.

**SASKATOON, SASK.—CIVIC BY-LAW TO REGULATE RATES OF WAGES, WORKING HOURS AND OTHER MATTERS RESPECTING THE MUNICIPAL STREET RAILWAY AND ITS EMPLOYEES.**

By-law to be effective from January 1, 1924, until December 31, 1924.

The bylaw is the same as the one in effect for the previous year, as summarized in the LABOUR GAZETTE for June, 1923.

**Transportation and Public Utilities:  
Telegraphs and Telephones**

**WINNIPEG, MAN.—THE MANITOBA TELEPHONE SYSTEM AND THE INDEPENDENT ORDER OF TELEPHONE OPERATORS.**

Agreement to be effective from May 1, 1924, until April 30, 1925, unless amended by sixty days' notice in writing.

Employees are not to be discriminated against for affiliation with the union.

A Commissioner will at all times receive a committee of the operators concerning grievances or working conditions.

Operators shall receive the rates contained in the schedule according to length of similar operating experience. Experienced operators in other grades shall be given credit for two-thirds of previous experience. Promotions will be made according to seniority governed by efficiency.

In any lay-off or readjustment of staff, due to the extension and introduction of the automatic system, the operators shall be retained in the service according to seniority; this also to apply in the filling of vacancies.

All operators of one year's service shall receive two weeks' holidays with pay in each successive year, and those with three months' service and less than one year prior to the holiday period—commencing May 1—one day with pay for each successive month's service. Holidays will be arranged by the Superintendent. Operators desiring Sunday afternoon off may, with the consent of the chief operator, take the same without pay. Operators laid off will be given two weeks' notice.

Hours of service: Forty-eight per week, eight per day. Overtime, time and one-half. Operators working Sundays or legal holidays shall be allowed a day off during the week. Where an employee is absent from duty the time lost shall be calculated on the number of working days in that month.

When an operator is suspended, a committee may take up the matter with the Commission, and if so decided, the operator shall be reinstated and paid for time lost.

An employee may be allowed leave of absence to work for the Union in Manitoba.

An efficiency test system shall be maintained.

Wages: Probationers during school period if appointed; \$2 per day. Thereafter per month on "local" and "information" from \$55 to \$77.50. On "toll" from \$55 to \$82.50. Long distance rate clerks, same as "toll" operators. Supervisors and night chief operators, per month, "local" and "information" from \$87.50 to \$97.50; toll from \$92.50 to \$102.50. Assistant chief operators, per month local and information from \$97.50 to \$107.50; toll from \$102.50 to \$112.50. Complaint clerks from \$85 to \$95. Information Service clerks \$77.50 and \$82.50. Summary clerks \$90 and \$97.50. Routine test clerks, \$87.50 per month.

All overtime is to be paid on a basis of 48 hours per week and actual working days in the month.

Experienced routine test clerks in automatic exchanges shall receive \$87.50 and to be on duty forty-four hours, per week. Overtime, time and one-half.

*Winnipeg, Man.*—The Manitoba Telephone System and Telephone Workers. Working conditions and schedule of wages, effective from May 1, 1924 until April 30, 1925, with thirty days' notice of change or amendment by May 1, 1925. In the event of any change in the Commissionership, the agreement may be terminated by either party by sixty days' notice prior to May 1.

The Manitoba Telephone System will not discriminate against any employee for membership in the Independent Brotherhood of Telephone Workers, or for another affiliation.

At all times, the employers will receive a committee of the employees.

Hours on city and exchange work, eight per day and four on Saturday; Employees on shift work shall be paid straight time for any eight consecutive hours, forty-four hours constituting a week's work.

Overtime: On city and exchange work, time and one-half; and from 12 midnight until 8.00 a.m., and Sundays and holidays, double time, excepting men on monthly rate.

After twelve months' continuous service all members of the telephone system shall receive one week's holidays with regular pay, and after two years, two weeks.

A journeyman must have served four years at one or more branches of the work.

Apprentices must be seventeen years of age, or over, and be permanently engaged by the Department. The period is to be four years; apprentices receiving training and experience in at least four grades of the work and not spending less than six months at one grade. Employees shall be notified in advance if not considered competent to receive the annual increase in salary.

Employees promoted shall be on probation for one month, receiving one-half the regular increase.

Seniority shall be governed by approved lists of promotion, reversion and lay-off.

Employees laid off owing to shortage of work, shall be taken on according to seniority, if the staff is increased.

In event of any vacancy, the senior employee who can prove himself efficient shall be given the position.

Men refusing promotion shall forfeit their places. Employees promoted and unable to fulfil duties of the higher grade shall revert to previous position.

The Telephone System shall furnish tools and badges. Employees sent to work away from headquarters will be given an allowance for board and lodging. In certain cases transportation and living expenses will be allowed.

The Telephone System is to be responsible for any contagious diseases contracted by employees in performance of duty.

Employees who have been suspended or discharged shall have the right to have case investigated by a committee of the Union, with right of appeal to the superintendent. If employee is shown to have been unjustly dealt with he shall be reinstated and paid for time lost. If decision of Superintendent is not satisfactory, the Committee will have right of appeal to the Commissioner.

Wages per hour: Apprentices, 1st year, 35 cents; second year, 45 cents; third year, 58 cents; fourth year, 70 cents. Journeymen, rackmen and installers, 87 cents; inspectors (combination), P.B.X. installers and inspectors, test clerks 89 cents; switch board men, 92 cents; shop instrument repairmen and mechanics, 87 cents; shop switchboard construction, 89 cents. Other employees are on a monthly basis.

PORT ARTHUR, ONT.—THE PUBLIC UTILITIES COMMISSION OF THE CITY OF PORT ARTHUR AND THE EMPLOYEES OF THE TELEPHONE DEPARTMENT, KNOWN AS TELEPHONE OPERATORS.

Agreement to be in effect from January 1, 1924 until December 31, 1925.

The Commission is not to discriminate against employees for membership in the Employees' Union.

Wage Scale: per month—chief operators, \$82.50; night and assistant chief operators, information and supervisors, \$70. Regular operators from \$42.50 to \$67.50; relief, extra and spare operators are to be considered as regular operators, regular spare operators being paid a minimum of \$25.00 per month.

Each employee is to have one day holiday per annum in addition to two weeks' annual holiday with pay, after being in the service for one year and over.

Leave of absence of a day or less may be arranged with the superintendent or chief operator provided the service does not suffer. Leave for a lengthy period will be granted, if possible.

Change in positions at the switch board will be made every two weeks. Promotions will be made according to seniority and efficiency. In case of promotion to the senior grade no employee will be discriminated against on account of membership in the employees' union, but will cease, after promotion, to be a member of such union.

Schedule of working hours: Chief operator; 8.30 a.m. to 12 noon; 1.30 p.m. to 5.30 p.m.; assistant chief operator, 8.00 a.m. to 11.30 a.m., 1.00 p.m. to 5.00 p.m.; night chief operator, 9.00 p.m. to 8.30 a.m.; operators "A" shift, 8.00 a.m. to 1.00 p.m., 6.00 p.m. to 9 p.m.; operators "B" shift, 1.00 p.m. to 6.00 p.m. Shifts "A" and "B" alternate daily. Special schedules for extra and relief operators; spare operators as required. Night chief operator and operators, 9.00 p.m. to 8.00 a.m.; operators must remain at switch board until midnight; after midnight operators have supper and alternate rest periods.

Sunday shifts, 1st Sunday 8.00 a.m. to 1.00 p.m., 6.00 p.m. to 9.00 p.m.; 3rd Sunday, 1.00 p.m. to 6.00 p.m.; 2nd and 4th Sundays off duty.

Operators work one Saturday of each two weeks, 7.00 p.m. to 10.00 p.m. and when required, 8.00 p.m. to 11.00 p.m. Each operator in turn, is to take two weeks' night duty, the same falling due every five months; also two weeks 7.00 p.m. to 10.00 p.m. evening shift, falling due every two and one-half months. In changing from night duty, the operator will be allowed a period of twenty-four hours rest.

Each operator will have thirteen minutes relief morning and afternoon and seven minutes in the evening. Extra operator is to work every Sunday from 6.00 p.m. to 8.00 p.m. only. Relief operator is to work every alternate Sunday, and spare operators when necessary; night chief operator is to have two nights off duty each month, in addition to two weeks' annual holiday. Supervisors are to have every alternate public holiday in addition to two weeks' annual holiday. Chief operator and assistant are to have every public holiday and two weeks' annual leave.

A schedule has been drawn up of deductions to be made from operators' salaries during absence from work based on average number of hours worked in a month.

PORT ARTHUR, ONT.—THE PUBLIC UTILITIES COMMISSION OF THE CITY OF PORT ARTHUR AND THE EMPLOYEES OF THE ELECTRIC LIGHT AND TELEPHONE DEPARTMENT.

Agreement to be in effect from January 1, 1924 until December 31, 1925.

The Commission will be willing at all times to interview the employees or any committee of the same on any subject for the mutual benefit of the employees and the Commission in its relation to the general public.

The Commission will not discriminate against any employee because of his connection with any association. The employees will not limit the rights of the Commission or of any officer authorized by the Commission.

Wages per hour: first class linemen, 77 cents; second class linemen, 71 cents; groundmen, 40-50 cents; overtime, time and one-half; Sundays and Holidays, double time.

Working hours, week days, 7.30 a.m. to 12 noon and from 1.00 p.m. to 5.30 p.m. Saturdays 7.30 a.m. to 12 noon. As soon as it can be arranged, one man in each department, when found necessary and at the discretion of the Commission, will work from 1.00 p.m. to 5.00 p.m. and from 7.00 p.m. to 11.00 p.m. six days per week, straight time being paid during such hours.

The Commission will supply appliances necessary to prevent accidents, on the understanding that each employee will make the best use of the same for his own protection. One hour each week will be given for the practice of first aid and resuscitation methods by all employees.

Promotion to foreman or wire chief is to be by seniority and efficiency. No employee will be discriminated against on account of being or having been a member of any association, but on promotion he will cease to be a member.

## Increase in Italian Emigration

A heavy increase has recently been noted in the number of emigrants from Italy, both overseas and continental. On the other hand, there has been little change in the volume of repatriation, as the increase in continental repatriation has been offset by the diminution in that of overseas repatriation. The total number of emigrants from Italy in the year 1923 amounted to 348,079, showing an increase

of more than 100,000 over the figures for 1922. France continues to be by far the most important country of destination of Italian continental emigrants (142,990 immigrants in 1923 as compared with 85,815 in 1922). There has been a slight increase in Italian emigration to most other European countries.

A total of 177,798 Italians emigrated overseas during the year.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1924

### Cost of Living, Prices of Staple Articles, and Index Numbers

PRICES in July for the most part showed an upward tendency. The family budget in terms of retail prices and the indexes of wholesale prices calculated by various authorities advanced somewhat.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in about sixty cities in Canada at the beginning of July was \$9.91 as compared with \$9.86 for June; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.92 for June, 1920 (the peak); \$16.84 for July, 1920; \$13 for July, 1918; and \$7.42 for July, 1914. Slight advances occurred in the prices of flour, potatoes, butter, eggs, fresh pork and sirloin steak while prices of sugar, mutton, bacon, cheese, beans and prunes were somewhat lower. Including the cost of fuel and rent with that of foods the total budget averaged \$20.30 for the beginning of July as compared with \$20.22 for June; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); \$20.66 for July, 1918; and \$14.17 for July, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, weighted according to the importance of the commodities, showed an advance to 153.3 for July as compared with 152.2 for June; 153.5 for July, 1923; 154.1 for July, 1922; 163.4 for July, 1921; 256.1 for July, 1920; 256.9 for May, 1920 (the peak); and 202.3 for July, 1919. Forty-seven price quotations rose, thirty-nine fell and one hundred and fifty were unchanged.

In the grouping according to chief component material three groups advanced, three were lower, while two were practically unchanged. The vegetable products group advanced substantially mainly because of higher prices for grains, flour, and milled products, though foreign fruits, sugar, and glucose were also considerably higher. Vegetables were lower. The index of the animals and their products group advanced, declines in live stock being more than offset by advances in butter and eggs. Higher prices for raw cotton, raw silk, and wool caused an advance in the textiles group. In the wood and wood products group the decline was due to lower prices for lumber, pulp, and matches. There were no important advances. Lower prices

for pig-iron and steel sheets were responsible for the lower level reached by the iron and its products group. The chemicals group was lower because of lower prices for coal tar, white lead, and soap. Non-ferrous metals and their products and non-metallic minerals and their products showed little change.

In the grouping according to purpose consumers' goods declined slightly while producers' goods advanced. In the former group increases in flour, fruits, butter, eggs, bacon, and ham were more than offset by decreases in fresh meats, vegetables, matches and soap while in the latter group the advance was due to increases in the prices of materials for the milling industries in spite of declines in building and construction materials and in materials for the metal working, chemical, and meat packing industries.

In the grouping according to origin farm products advanced while articles of marine origin, of forest origin, and of mineral origin declined. Raw or partly manufactured goods advanced because of higher prices for fruits, grains, eggs, wool and cotton in spite of declines in vegetables, fresh meats, lumber, and smelted products. Fully or chiefly manufactured goods rose because of higher prices for flour and sugar.

The index number based upon prices of 271 commodities in 1890-1899 published by the Department of Labour since 1910 showed little change at 221.6 for July as compared with 221.5 for June; 224.7 for July, 1923; 223.0 for July, 1922; 238.6 for July, 1921; 356.6 for May, 1920 (the peak); 346.8 for July, 1920; 284.0 for July, 1918; and 134.6 for July, 1914. The chief advances were in grains, bran, shorts, flour, oatmeal, onions, raw cotton, and window glass while sheep, dressed lamb, potatoes, honey, calfskins, coke, gasoline, spruce, birch, and newsprint showed the most important declines.

The index number published by the Department since 1910 has been reconstructed back to 1913, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913.\* Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to

\* LABOUR GAZETTE, June, 1923, pp. 689-695.

afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

The special index number comprising fifty of the more important commodities selected from the 271 in the Departmental list, including twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels in 1913 as 199, declined slightly to 149.4 for July as compared with 150.3 for June; 151.2 for July, 1923; 150.7 for July, 1922; 153.3 for July, 1921; 249.7 for July, 1920; 207.8 for July, 1918; and 100.2 for July, 1914. The decline was due mainly to lower prices for sheep, potatoes, and spruce which more than offset the advances in wheat, flour, raw cotton, and glass.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, was 143 for May, the same level as for April, as compared with 147 for March and 155 for May, 1923. Raw materials and export goods advanced, producers' and consumers' goods declined, while both domestic and imported goods were unchanged.

The Canadian Bank of Commerce index of exports declined from 147.38 in June to 145.98 in July. The index of imports advanced from 158.97 to 161.17. The combined index of both exports and imports advanced slightly from 153.17 for June to 153.57 for July.

The table of retail prices and rentals shows the prices at the beginning of July of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that

the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evap-

orated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Cost of Electric Current for Householders\*

With rates in 1913 as 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 93.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

#### Retail Prices

Beef prices again averaged slightly higher. Sirloin steak was 29.7 cents per pound in July and 29.3 cents in June. Rib roast averaged

22.1 cents per pound in July and 21.9 cents in June. Shoulder roast was unchanged. Mutton declined from an average of 29.1 cents per pound in June to 28.5 cents in July. Fresh pork averaged slightly higher at 23.6 cents per pound. Breakfast bacon was slightly lower at 35.7 cents per pound. Fresh halibut and fresh whitefish declined slightly while salt cod advanced. Lard was steady.

Fresh eggs advanced from an average of 28.1 cents per dozen in July to 30 cents in June. No changes were reported in milk. Butter prices were up, dairy averaging 34.4 cents per pound in July and 34.2 cents in June and creamery 39.3 cents per pound in July and 38.5 cents in June. Cheese fell from an average of 29.1 cents per pound in June to 28.4 cents in July.

No changes were reported in bread. Flour advanced from an average of 4.1 cents per pound in June to 4.3 cents in July. Soda biscuits showed little change. Rolled oats were steady. Canned tomatoes advanced slightly, averaging 20 cents per 2½-pound tin. Onions were up from 7.8 cents per pound in June to 8.3 cents in July. Potatoes continued to advance, averaging \$1.92 per ninety pounds as compared with \$1.80 in June. Evaporated apples were unchanged. Prunes declined from an average of 16.2 cents per pound in June to 15.9 cents in July. Raisins and currants were steady. Raspberry jam was slightly lower at 94.4 cents per four-pound tin. Canned peaches declined from 30.1 cents per two-pound tin to 29.8 cents. Granulated sugar again averaged lower at 10.2 cents per pound as compared with 10.6 cents in June and 11.6 cents in May. The decline was general. Yellow sugar was also lower, averaging 9.8 cents per pound as compared with 10.2 cents in June. Coffee showed little change. Tea declined slightly, averaging 69.4 cents per pound.

Anthracite coal averaged \$16.74 per ton as compared with \$16.77 in June. Lower prices were reported from Charlottetown, Quebec, and Brockville. Bituminous coal was practically unchanged in the average. Hard wood, four feet long, was unchanged. Soft wood was slightly lower at \$9.20 per cord. Coal oil was unchanged.

No changes were reported in rent.

#### Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics:

Grain prices again moved to considerably higher levels. No. 1 Manitoba Northern wheat at Winnipeg advanced from \$1.19½ per

\* LABOUR GAZETTE, June, 1923, pp. 689-695.

bushel early in the month to \$1.55½ toward the end. Reports of short crops in several wheat-growing countries and of drought in parts of the Canadian west caused the advance. Prices declined slightly toward the end of the month, however, due to more favourable weather conditions in Canada. Western oats rose from 40½ cents per bushel to 50 cents and American corn from \$1 per bushel to \$1.23. The advance in grain prices was also reflected in the price of flour and of other milled products. Flour at Toronto rose from \$6.65 per barrel to \$7.40, oatmeal from \$3.75 to \$4.25 per bag, and shorts from \$27 to \$29.75 per ton. Glucose advanced from \$4.20 to \$4.75 per hundred. Granulated sugar at Montreal was \$7.8375 per hundred as compared with \$7.695 in June but later in the month the price declined. Ontario grades of old potatoes at Toronto fell from \$2-\$2.15 per bag to \$1-\$1.25. Hay advanced from \$16 per ton to \$17.50 and straw from \$9.25 per ton to \$9.75. Bananas at Montreal advanced from \$3.50 per bunch to \$3.75-\$4. Lemons rose from \$4.25-\$4.75 to \$4.50-\$5.50 per case at Toronto and oranges at Montreal from \$7 per case to \$7.50. Choice steers at Toronto fell from \$7.25 per hundred pounds to \$7 and sheep from \$6.65 per hundred pounds to \$5.50. Hogs advanced slightly from \$8.60 per hundred pounds to \$9.03. Beef, dressed, forequarters, at Toronto, declined from \$8.50 per hundred to \$8.25.

Bacon and lard at Toronto were slightly higher. Creamery prints at Toronto rose 1 cent per pound to 38 cents. Fresh eggs were up from 33-38 cents per dozen to 37-40 cents. Raw cotton because of unfavourable crop reports showed a rising tendency. At New York the price advanced from 29.6 cents per pound early in the month to 35.3 cents toward the end. The average for the month was 32 cents per pound as compared with 30 cents in June. Raw silk advanced slightly to \$5.15 per pound. Raw wool also advanced 1 cent per pound. Poor export demand and keen competition for domestic trade were said to be responsible for declines in lumber and timber. Birch at Toronto fell from \$70 per M to \$65, British Columbia fir from \$52 per M to \$48, red oak from \$120 per M to \$110, and pine, good sidings, from \$150 per M to \$140. Pig iron was down from \$29.20 per ton to \$27.95. Some of the non-ferrous metals showed improvement but others were lower. Copper continued to decline, being \$14.45 per hundred in July as compared with \$14.60 in June. Copper sheets fell from 19½ cents to 18½ cents per pound and copper wire from 18 cents per pound to 17½ cents. Lead advanced from \$7.40 per hundred to \$7.45 and tin ingots from 46½ cents per pound to 47½ cents. Glass advanced from \$4.60 per box to \$5.40. White lead fell from \$14.90 per hundred in June to \$13.90 in July. Lime was 50 cents per hundred lower at \$8.50.

in bulk. \* The higher price for Welsh coal. \*\* New houses as high as \$40.00 per month. † Mining company house \$20; others \$45-\$60. ‡ For new tenants \$30-\$35 and \$20-\$25. § Company houses \$10-\$20; others \$35-\$40. ¶ Houses with conveniences not extensively occupied by workmen but some at \$40.00. †† On page 614 of the LABOUR GAZETTE for July, in the column of localities, Truro should have been omitted and Sudbury inserted between Owen Sound and Cobalt, as on pages 610 and 612.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 100 in 1913, declined 0.7 per cent from the May level to 162.6 in June. Cereals and meat and fish advanced and other foods declined, the "total food" index rising 0.3 per cent. Iron and steel, cotton and other textiles all declined and other articles advanced slightly. The index of "total not food" declined 1.1 per cent.

The *Statist* index number (in continuation of Sauerbeck's figures) declined by a slight fraction of one per cent from the level at the end of May to 136.3 at the end of June. All the food groups advanced, the commodities showing increased prices being wheat, flour, oats, beef, mutton, butter, sugar and tea. Minerals and textiles declined and sundries advanced, materials declining 0.9 per cent.

The *Times* index number, on the base prices in 1913=100, fell 0.4 per cent from the May level to 164.7 as an average for June. Foods rose 0.9 per cent and materials declined 1 per cent. The principal change was a decline of 4.3 per cent in cotton.

**COST OF LIVING.**—The official index number of the Ministry of Labour, on the base 100 in July, 1914, rose one point to 170 at the beginning of July. Foods rose 2 points to 162 and all the other groups remained at the level of the previous month. At the beginning of August the cost of living index rose one point to 171. This was due to a rise of 2 points in the index for food, as rent, clothing and sundries showed no change, and fuel and light declined slightly.

### Austria

**WHOLESALE PRICES.**—The official index number of the Statistical Office, on the base first half of 1914=1, was 19,465 for May, the same level as that of the previous month. The figure for June was 18,282, a decline of 6.1 per cent. This level is the lowest thus far reached in 1924.

**COST OF LIVING.**—The official index number, having as base July, 1914=1, rose 1.9 per cent to 1,244.2 in June. Foods and clothing both advanced moderately, and rentals rose 33 per cent, or from 751, the level of the three previous months, to 1,002.

### Belgium

**WHOLESALE PRICES.**—The official index number of the Ministry of Industry and Labour rose 2 points to 557 in May, on the base April, 1914=100. The principal increases were in the groups food products, tar, petrol, fats and textiles, and the chief declines were registered by chemical products and fertilizer.

**RETAIL PRICES AND COST OF LIVING.**—The official index number of retail prices of 56 articles at Brussels, on the base 100 in April, 1914, was 524 in June, an increase of 2 per cent for the month. The index for the Kingdom rose 1.4 per cent to 492.

The official index number of the cost of living for a working class family of the lowest category was, on the base 100 in 1921, 124.41 for June, an increase of 4.1 per cent over the May level. This was chiefly due to an increase in the foods index. Rent and clothing rose slightly and heating and sundries declined somewhat. The budget for a middle-class family rose 3 per cent to 123.01, the changes in the items of the budget corresponding closely to those for the working-class family.

### France

**WHOLESALE PRICES.**—The index number of the Federal Reserve Board of the United States rose in June 3.3 per cent to 442, on the base 1913=100. Domestic goods rose 3.4 per cent, and imported goods rose 3.5 per cent. Export goods rose 5 per cent. In the grouping by stage of manufacture, raw materials rose 3 per cent, producers' goods rose 3.2 per cent and consumers' goods rose 3.7 per cent.

### Germany

**COST OF LIVING.**—The official index number of cost of living showed a slight advance on the average for May over that for April, being 115 billions for May as against 112 billions for April, on the base paper mark prices in 1913-14=1. The weekly index number, however, reached the peak at the middle of May, and declined during the following weeks.

### Netherlands

WHOLESALE PRICES.—The index number of the Central Bureau of Statistics, prices in 1913=100, was 153 in May, or one point below the previous month's level. The foods index was 150, also one point lower.

### Sweden

WHOLESALE PRICES.—The official index number of the Commerce Department, on the base 1913=100, was 158 for June, a decline of 2 points. Raw materials declined nearly 3 per cent and manufactured goods a fraction of one per cent. The only group to show a rise was mortar, brick, cement and glass. Declines occurred in feed and forage, fuel and lubricating oils, hides and leather, vegetable foods and iron and its products. Other groups showed no change.

### China

The Treasury Department's Bureau of Markets index number of wholesale prices at Shanghai, on the base 100 in 1913, was 151.8 for June, a decline of 1.6 per cent from the previous month's level. Cereals and textiles advanced and all the other groups showed declines during the month.

### India

COST OF LIVING.—The official index number of the Bombay Labour Office, on the base 100 in July, 1914, advanced from 150 in May, to 153 in June. Foods advanced from 143 to 147 but the other groups showed no change from the May levels, the index for fuel being 166, for clothing 227, and for rent 165. The advance in foods was due mainly to higher prices for cereals, except wheat. Sugar and potatoes also advanced substantially, the increase in potatoes being seasonal.

### United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics (1913=100) fell 1.6 per cent from the May level to 144.6 for June. All groups declined with the exception of the cloths and clothing group, which advanced slightly.

Bradstreet's index number of wholesale prices showed an advance for the first time since December, 1923, to \$12.6231, as compared with \$12.2257 in July. Ten groups of commodities advanced including breadstuffs, live stock, provisions, hides and leather, textiles, metals, coal and coke, oils, naval stores and miscellaneous products, while fruits, building materials and chemicals and drugs were slightly lower. This index is now 1.5 per cent below the level of a year ago, but is 4.5 per cent above August, 1922, and 18.8 per cent above the level of June, 1921. Compared with the peak of 1920, the index is now 39 per cent lower, but is still 45 per cent above the level of August, 1914.

COST OF LIVING.—The combined cost of living index figure for Massachusetts (compiled by the Special Commission on the Necessaries of Life) rose by a slight fraction of one per cent from the May level to 157.7 in June, on the base 1913=100. The food index showed an increase of about one-half of one per cent, the greatest change being an increase in the price of potatoes due to the change from the old crop to the new. There was a decrease of about 0.9 per cent in the clothing index, a slight increase in the fuel and light index, and no change in shelter and sundries.

## Unemployment in Great Britain

A report recently issued by the British Ministry of Labour relating to an investigation into the personal circumstances and industrial history of persons claiming unemployment benefits shows that in the opinion of the interviewing officers, 66.5 per cent of all the males interviewed and 73.5 per cent of all the females were persons who in normal times would be usually in regular employment, while only 3.6 per cent of males and 2 per cent of the females were regarded as "verging on the unemployable."

The analysis, it is added, shows that the number of men and women who were considered to be "verging on the unemployable" is in great part made up of elderly or aged persons. Over half the men placed in this category and over one-third of the women

were aged 60 years or more and a heavy proportion suffered from poor physique, poor health, or some manifest physical defect.

An act was recently promulgated in France to provide for the compulsory employment of ex-soldiers and ex-sailors in receipt of disability pensions. Industrial and commercial undertakings, with certain specified exceptions, employing more than ten persons over 18 years of age, and agricultural undertakings employing more than 15 such persons, are required to employ war pensioners on a scale to be fixed for each class of establishment by the minister of labour, up to 10 per cent of the staff. An undertaking employing more than 50 per cent female labour is subject to the payment of an annual due.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1924

ACCORDING to information received by the Department of Labour there were 313 fatalities reported in the industries and trades of Canada during the quarter ended June 30, 1924. Of these 107 occurred in April, 97 in May, 91 in June, while 18 had occurred during the first quarter of the year. There were therefore 295 fatalities during the second quarter of 1924, as compared with 285 in the previous quarter and with 350 in the corresponding quarter of 1923. In the transportation and public utilities group 69 accidents were reported, of which 25 were in the steam railways and 19 in the water transportation groups. There were 47 deaths due to accidents in the construction group, 44 in logging, 43 in manufacturing, 42 in mining and 22 in agriculture.

The most serious accident during the quarter was due to an explosion at the Allan Mine, Stellarton, Nova Scotia, which resulted in the loss of four lives and the temporary shutting

down of the mine. Although an investigation was conducted no light could be thrown on the origin of this explosion. There were ten fatalities due to handling explosive substances, one to an explosion at an oil plant, and one to the explosion of a steam pipe. Eighteen deaths were due to electrocution, six to infection, and four were elevator accidents, two of these being due to the workers being struck by an ascending lift after a wrong signal had been given accidentally.

The following table of industrial accidents has been prepared from information received from all sources available. It does not, however, necessarily include all the industrial accidents that may have occurred.

In addition to the fatalities mentioned above four deaths were reported during the quarter as the result of accidents that had occurred in previous years. Three of these accidents occurred in 1923 and one in 1921.

### FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1924

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE—</b>				
Farmer.....	Havelock, Ont.....	April 3	.....	Fell while pruning tree.
Farm hand.....	Glenmorris, Ont.....	" 4	23	Kicked by horse.
Farmer.....	St. Narcisse de Beau- rivage.	" 7	30	Struck by saw which broke loose while operating.
Wood sawyer.....	North Monaghan, Ont..	" 16	43	Caught in pulley of sawing machine.
Farmer.....	Collingwood, Ont.....	" 8	23	Struck by falling tree.
Farmer.....	Near McGregor, Man...	" 23	68	Fell from load.
Farmer.....	Venenville, Ont.....	May 2	43	Kicked by horse.
Farmer.....	Grenfell, Sask.....	" 3	56	Found near seed drill with neck broken. (No further particulars.)
Farmer.....	Near Drumheller, Alta.	" 7	over 21	Thrown from disc harrow and run over.
Farmer.....	Tofield, Alta.....	" 17	.....	Crushed beneath tractor.
Farmer.....	Kipling, Sask.....	" 18	.....	Thrown under drill when team bolted.
Farmer.....	Near Revelstoke, B.C..	" 23	.....	Thrown from wagon when horses bolted.
Farmer.....	Thomasburg, Ont.....	" 25	.....	Kicked by horse.
Farmer.....	Near Kingston, Ont.....	" 28	69	Burned in putting out meadow fire.
Farmer.....	West Lorne, Ont.....	June 2	80	Thrown beneath harrow when team bolted
Farm hand.....	Edgerton, Ont.....	" 4	56	Thrown under cultivator when team bolted.
Farm hand.....	Uno Park, Ont.....	" 5	25	Crushed under tractor plough which tilted backward.
Farmer.....	Springdale, Alta.....	" 6	over 21	Struck by lightning.
Farmer.....	Near Gravelbourg, Sask	" 11	.....	Struck by lightning.
Farmer.....	Calgary, Alta.....	" 15	.....	Struck by lightning.
Farmer.....	St. Ubald (Portneuf Co.) Que.	" 18	over 21	Fell from wagon.
<b>FISHING AND TRAP- PING—</b>				
Lobster fisherman.	Petite Rivière, N.S.....	April 2	24	Motor stalled and craft capsized.
Trapper.....	Near Pembroke, Ont....	" 10	22	Canoe upset while examining traps.
Trapper.....	Lundar, Man.....	" 26	36	Lightning struck shovel which he carried.
Lobster fisherman.	Yarmouth, N.S.....	May 15	30	Became entangled in boat gear and carried overboard.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1924 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
Logging— Employees with lumber company, (2). Employee.....	St. Raphael de Belle- chasse, Que.	April 1	both over 21	Drowned while repairing dam.
Woodsmen.....	St. Casimir de Portneuf, Que.	" 1	50	Crushed under rolling logs.
Logger.....	Doucetteville, N.S.....	" 1	30	Crushed by falling tree while crippled by falling on axe.
Feller.....	Port Alberni, B.C.....	" 3	36	Crushed by falling tree.
Logger.....	Menziess Bay, B.C.....	" 5	50	Struck by falling tree.
Axeman.....	Stillwater, B.C.....	" 5	34	Struck by falling tree.
Logger.....	Bowsman, Man.....	" 9	35	Struck by falling tree.
Woodsmen.....	Deep Cove, B.C.....	" 10	35	Struck by log from pile.
Logger.....	Loughboro Inlet, B.C.....	" 14	35	Caught in log haul and dragged into machinery.
Woodsmen.....	Deep Cove, B.C.....	" 14	27	Struck by falling limb.
Logger.....	Embros, Ont.....	" 16	45	Fell on saw.
Logger.....	Powell River, B.C.....	" 17	35	Chain on whipple tree gave way while swinging pole on to car.
Logger.....	Alice Arm, B.C.....	" 18	36	Falling tree struck snag which fell on workman.
Employee.....	Cap Magdeleine, Que.....	" 22	27	Fell, striking head while unloading car of lumber.
Woodsmen.....	Collins Inlet, Ont.....	" 27	.....	Drowned.
River driver.....	Gardon River, Ont.....	April 28	18	Drowned.
Feller.....	Shawinigan Lake, B.C.....	" 29	51	Falling tree uplifted log on ground which struck workman.
Logger.....	Simoon Bay, B.C.....	May 1	.....	Broken legs and internal injuries. (No further particulars).
Logger.....	Near Ladysmith, B.C.....	" 1	22	Crushed between logs.
River driver.....	Williamsdale, N.S.....	" 1	.....	Fell into water—drowned.
Foreman.....	Davenport, Ont.....	" 2	58	Struck by log.
River driver.....	Lac aux Roggons, Que.....	" 4	.....	Fell through hole in ice while going for mail.
River driver.....	Foleyette, Ont.....	" 5	.....	Drowned.
Logger.....	Johnston Straits, B.C.....	" 6	33	Struck by falling snag.
River driver.....	Booth Lake, Ont.....	" 8	.....	Drowned.
Tail sawyer.....	New Westminster, B.C.....	" 9	38	Crushed between carriage knee and saw husk when end of cant caught.
Employee at mill.....	Breakeyville, Que.....	" 10	46	Logfell while being moved by mechanical device.
River driver.....	Nelson, N.B.....	" 13	.....	Struck by logs being rolled into stream.
River driver.....	La Tuque, Que.....	" 15	over 21	Drowned when canoe upset.
River driver.....	Near Campbellton, N. B.	" 15	.....	Struck by rock falling from landing.
River drivers (2).....	Restigouche Co., N.B.....	" 16	23	Drowned when boat upset.
River driver.....	Temagami River, Ont.....	" 17	.....	Drowned.
Logger.....	Victoria, B.C.....	" 28	25	Crushed against spar tree by swiaging log.
River driver.....	Madawaska River, Ont.....	" 28	17	Drowned.
Rigging slinger.....	Myrtle Point, B.C.....	" 30	20	Crushed by rolling log.
River drivers (2).....	Madawaska, Ont.....	June 4	.....	Drowned. Boat upset while breaking jam.
Logger.....	Whonnock, B.C.....	" 4	21	While loading ties slipped and fell over edge of wharf.
Foreman of grading crew.	Murrayville, B.C.....	" 6	60	Struck by falling tree.
Logger.....	Alice, B.C.....	" 13	34	Crushed against tree when fallen tree being sawn sprung back.
Chokerman.....	North Vancouver, B.C.....	" 24	27	Struck by log which upended while being tightened.
MINING, NON-FER- ROUS SMELTING AND QUARRYING— Metaliferous Mining: Crane chaser.....	Anyox, B.C.....	April 5	37	Crushed by draw bar. Collision occurred while coupling motor to mine car.
Powderman.....	Glacier, B.C.....	" 9	45	Struck by rock falling from roof.
Miner.....	Prince Rupert, B.C.....	" 14	.....	Fell over cliff. Snow gave way while inspecting aerial tramway.
Miner.....	Sandon, B.C.....	" 18	51	Fall of rock.
Scaler.....	Timmins, Ont.....	" 23	28	Fell down slope.
Contract mucker.....	Kirkland Lake, Ont.....	" 28	35	Crushed between ore car and wall of drift.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1924 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Metal Mining (Contd.)</i>				
Miner.....	Timmins, Ont.....	May 5	.....	Caught in rockslide.
Miner.....	Cassidy, B.C.....	" 17	.....	Fall of rock.
Mucker.....	Lythmore, Ont.....	" 14	.....	Struck by bucket.
Miner.....	Timmins, Ont.....	" 23	over 21	Fall of rock in stope.
Miner.....	Deloro Township, N. Ont.	" 29	37	Caught by blast.
Miner.....	Premier, B.C.....	" 29	over 21	Explosion. Stayed too long lighting fuses.
Chute loader.....	Anyox, B.C.....	June 16	35	Caught between fingers of air valve and side of chute.
Brakeman.....	Coniston, Ont.....	" 24	.....	Crushed between cars.
Miner.....	St. Thomas Township, Ont.	" 25	35	Explosion. Tampering with misfired charge of explosive in shot hole.
Miner.....	South Porcupine, Ont....	" 30	.....	Explosion of blast in shaft.
<i>Coal Mining:</i>				
Miner.....	Inverness, N.S.....	April 11	38	Struck by falling roof rock.
Miner.....	Inverness, N.S.....	" 14	36	Struck by piece of coal from pick.
Driver.....	Inverness, N.S.....	" 17	21	Caught between boxes.
Timberman.....	Inverness, N.S.....	" 19	42	Struck by falling roof rock.
Miner.....	Caledonia Mines, N.S....	May 10	.....	Caught between full box and timber.
Miner.....	Cassidy, B.C.....	" 14	43	Struck by falling rock.
Miner.....	Nanaimo, B.C.....	" 19	45	Struck by rock from roof.
Miners (2).....	Cumberland, B.C.....	" 22	over 21	Caught by fall of rock.
Shiftmen (4).....	Allan Mine, Stellarton, N.S.	June 30	50	Explosion in mine shaft.
<i>Non-metallic mineral mining and quarrying:</i>				
Shoveller at asbestos mine.	Thetford Mines, Que....	April 28	.....	Fall of rock while scaling walls.
Quarryman.....	Redonda Island, B.C....	" 26	.....	Fall of rocks.
Quarryman.....	Kingston, Ont.....	May 8	45	Struck by boom shaft.
Gravel pit worker..	Onoway, Alta.....	" 9	under 21	Run over by pony car.
Employee at cement plant.	Port Colborne, Ont.....	" 28	22	Caught in machinery.
Oiler at mine.....	Thetford Mines, Que....	June 5	over 21	Caught by shaft.
Quarryman.....	Rosemount, Que.....	" 5	45	Box of dynamite sticks exploded when carrier slipped and fell.
Oiler.....	East Broughton, Que....	" 16	over 21	Clothing caught in shafting.
Field superintendent at oil plant.	Pakowki Lake, Alta....	" 27	29	Explosion and fall of derrick.
<i>Clay products and structural materials:</i>				
Stone contractor...	Kingston, Ont.....	May 8	.....	Struck on head by stone.
Labourer at cement plant.	Port Colborne, Ont.....	" 21	22	Caught in mucker.
Foreman at brickyard.	Toronto, Ont.....	" 28	41	Buried in sand pile.
Employee at cement plant.	Victoria, B.C.....	" 30	.....	Caught in machinery.
Employee at brickyard.	Nelson, N.B.....	June 11	32	Thrown to ground and run over when part of cart gave way.
<i>MANUFACTURING—Vegetable foods, drink and tobacco:</i>				
Miller.....	Leamington, Ont.....	April 4,	62	Infection, Finger caught in belt.
Labourer at milling company.	Port Colborne, Ont.....	June 7	.....	Fell from ladder—drowned.
Workman at brewery.	Montreal, Que.....	" 20	48	Scalded. Fell into vat of hot hops.
<i>Animal edible products:</i>				
Labourer at packing plant.	Toronto, Ont.....	May 23	52	Cut finger—infection.
Helper at creamery	Petrolia, Ont.....	" 26	53	Struck by automobile.
Driver for meat market.	Halifax, N.S.....	June 10	43	Kicked by horse. Stepped on pole behind horses when mounting wagon.
Driver for dairy....	Toronto, Ont.....	" 11	.....	Struck by truck.
<i>Textiles:</i>				
Brakeman with oil-cloth company.	Montreal, Que.....	April 14	42	Fell and run over by cars. Attempted to jump from ladder of car to platform.

FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1924 (*Continued*)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Pulp, paper, and paper goods:</i>				
Employee at pulp-wood plant.	Bathurst N.B.....	April 5	.....	Caught in fall of logs from pile and thrown against carrier chain.
Employee at paper mill.	Portneuf, Que.....	" 21	over 20	Drowned.
Employee at paper mill.	Donnacona, Que.....	" 30	51	Caught by belt while adjusting it.
Employee of pulp mill.	Hawkesbury, Ont.....	May 10	.....	Fell while removing chain blocks from trestle.
Clean-up man at paper mill.	Port Arthur, Ont.....	" 22	54	Caught in revolving shaft.
Loader at pulp mill.	Burks Falls, Ont.....	June 16	.....	Load slid forward when stakes broke and horses took fright.
Employee of pulp mill.	Smooth Rock Falls, Ont	" 16	.....	Suffocated and scalded by steam and gas when caught in pit.
<i>Printing and publishing:</i>				
Web pressman.....	Edmonton, Alta.....	April 24	over 21	Caught between press rollers.
Pressman.....	Toronto, Ont.....	June 25	18	Burned.
<i>Saw and planing mills:</i>				
Owner of saw mill.	Cooper's Falls, Ont.....	April 7	46	Foot caught between belt and pulley. Died of shock.
Employee at saw mill.	Chichester, Que.....	" 9	.....	Caught in shaft.
Employee at saw mill.	Harrington, Ont.....	" 16	47	Caught in circular saw.
Employee at saw mill.	Landers Station, N.B...	" 25	27	Fell on rotary saw.
Employee at saw mill.	Madawaska, N.B.....	May 8	24	Fell 40 feet.
Saw operator.....	Montreal, Que.....	" 13	65	Struck by piece of wood from saw.
Cutler at stove saw.	Spearhill, Man.....	June 5	17	Caught in belt or shafting.
<i>Wood products:</i>				
Employee at sash factory.	Montreal, Que.....	May 10	65	Struck by board which whirled upward while being placed beneath saw.
Carpenter at wood-working plant.	Cornwall, Ont.....	" 22	68	Fell down stairs.
Operator at lath mill.	Minasville, N.S.....	June 10	.....	Struck by flying pulley.
Teamster, for beaver board factory.	Frederickhouse, Ont....	" 18	61	Knocked down by block of pulpwood from conveyor chute which slid over a loaded core.
<i>Iron, steel and products:</i>				
Carpenter at steel plant.	Guelph, Ont.....	April 4	.....	Fell off roof.
Garage man.....	Montreal, Que.....	" 5	.....	Fell down elevator shaft.
Moulder at iron foundry.	Toronto, Ont.....	" 19	53	Fell while dismounting from car.
Carman.....	Lethbridge, Alta.....	" 23	57	Blood poison. Taking out king pin, car fell on finger cutting it off.
Employee at steel mill.	Roachvale, N.S.....	" 23	54	Struck by steel pulley which burst.
Labourer at auto works.	Ford, Ont.....	May 12	.....	Struck by train.
Hoist inspector at elevator factory.	Montreal, Que.....	" 15	30	Accidentally pressed button was crushed by ascending lift.
Machinist.....	Lachine, Que.....	" 23	24	Struck by channel iron which fell while being drilled.
Elevator operator at metal factory.	Toronto, Ont.....	" 23	68	Sliver in foot—infection.
Core room foreman at foundry.	Oshawa, Ont.....	June 10	41	Explosion of gases while lighting oil burner.
Labourer at smelting works.	Deloro, Ont.....	" 4	41	Electrocuted while working at switch.
Employee at steel plant.	Montreal, Que.....	" 18	24	Fell from step ladder.
Boilermaker.....	Trail, B.C.....	" 25	24	Struck by an electric crane.
<i>Chemical and allied products:</i>				
Employee at oil works.	Toronto, Ont.....	April 29	39	Burned—while filling still with naphtha, funnel broke and naphtha spilled on clothing ignited from hot fire box.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1924 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Miscellaneous manu- facturing:</i>				
Foreman at lamp company.	Toronto, Ont.....	May 27	.....	Burned.
<i>CONSTRUCTION— Building and struc- tures:</i>				
Steeplejack.....	Pakesley, Ont.....	April 2	40	Fell off scaffold.
Labourer.....	Dane, Ont.....	" 25	54	Fell striking head.
Workman.....	Vancouver, B.C.....	" 28	70	Fell from ladder which slipped.
Labourer.....	Thorold, Ont.....	" 29	.....	Struck on head by door.
Labourer.....	White Cove, Queens Co., N.B.	May 2	76	Crushed by collapsing frame shed.
Sign painter.....	Calgary, Alta.....	" 13	30	Fell from window while adjusting sign.
Labourer.....	Guelph, Ont.....	June 2	.....	Struck on head by derrick.
Painter.....	St. Raymond, Que.....	" 2	over 21	Fell from scaffold when tackle rope gave way.
Labourer.....	Eastview, Ont.....	" 5	37	Struck by falling plank.
Employee of roofing company.	Marpole, B.C.....	" 7	.....	Burned. Asphaltic solution caught fire while tank was being filled.
Labourers.....	Guelph, Ont.....	" 14	.....	Struck by falling plank.
Labourer.....	Quebec, Que.....	" 14	50	Fell from scaffolding.
Carter.....	Montreal, Que.....	" 14	79	Fell from wagon.
Workman.....	Montreal, Que.....	" 14	56	Fell from window.
Ironworker.....	Montreal, Que.....	" 13	47	While removing cable from derrick it touched high voltage wire.
Carpenter.....	Vancouver, B.C.....	" 19	48	Sling broke. Lost balance and fell 16 feet
Mason.....	St. John, N.B.....	" 20	35	Crushed finger—infection.
Carpenter.....	Quebec, Que.....	" 16	50	Fell off scaffold.
Tinsmith.....	Toronto, Ont.....	" 24	29	Fell from scaffold.
<i>Railway construction:</i>				
Labourer.....	Townsend Centre, Ont..	April 2	.....	Cut hand.
Painter (building department).	Stratford, Ont.....	" 10	24	Fell from scaffold at shops.
Employee.....	Near Kirkland Lake, Ont.	" 24	54	Fell on rock in avoiding material from blast.
Labourer.....	Kaministiquia, Ont.....	" 25	.....	Crushed by shovel.
Labourer.....	Leaside, Ont.....	" 24	.....	Struck on head by chuck.
Labourer.....	Leaside, Ont.....	" 24	.....	Train ran over foot while man was ballasting
Ex-gang labourer...	Kaministiquia, Ont.....	May 3	.....	Struck by train.
Ex-gang labourer...	Tuffnall Br., Sask.....	" 4	20	Fell in attempt to get on moving train.
Labourer.....	Tilbury, Ont.....	" 8	23	Stepped from boarding car in front of train.
Workman.....	North Bay, Ont.....	" 21	.....	Scalded by steam when wrecker crane upset.
<i>Shipbuilding:</i>				
Caulker.....	Victoria, B.C.....	April 7	42	Stumbled when near side of steamer and fell over deck to floor of drydock.
Riveter.....	Dartmouth, N.S.....	" 30	.....	Struck by timber which fell from sling while hoisting.
Carpenter.....	North Vancouver, B.C..	June 9	24	While working between decks fell into hold.
<i>Miscellaneous con- struction:</i>				
Electrician at dam.	Hanover, Ont.....	April 5	38	While opening sluice plank was swept over dam by floods.
Bridgeman.....	Deep Cove, B.C.....	" 14	27	Struck by falling tree.
Workman with en- gineering comp'y.	La Gabelle, Que.....	" 22	27	Fell several feet on to stone pile.
Labourer on canal.	Meritton, Ont.....	" 30	25	Struck on jaw when crowbar slipped.
Bridgeman.....	Toronto, Ont.....	" 23	.....	Fell from girder
Foreman with con- tractor.	St. Catharines, Ont.....	May 15	42	Fell over side of canal when bank gave way.
Engineer.....	Smithers, B.C.....	" 15	47	Slipped from pier while examining bridge
Employee of wreek- ing company.	Sarnia, Ont.....	" 27	.....	Drowned. Fell from boom of logs while preparing them for removal.
Roadman.....	Murrayville, Que.....	June 9	60	Struck by falling tree.
Teamster.....	Alfred, Ont.....	" 12	68	Fell from wagon.
Workman at gas works.	Montreal, Que.....	" 17	19	Slipped on loose plank and fell from scaf- fold.
Hydro worker.....	Queenston, Ont.....	" 23	.....	Bolt fell down from above banks.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1924 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Miscellaneous construction: (Cont'd.)</i>				
Road construction employee.	Estevan, Sask.	" 22	25	Cave-in of earth.
Employees at dam (2).	St. Joseph d'Alma, Que.	" 21	over 21	Struck by steam-shovel.
Labourer.	Windsor, Ont.	" 27	35	Fell into excavation.
<i>TRANSPORTATION AND PUBLIC UTILITIES—</i>				
<i>Steam Railways:</i>				
Engineer.	Armstrong, Ont.	April 5	.....	Crushed when engine turned over.
Brakeman.	Kapuskasing Siding, Ont.	" 9	41	Foot caught in switch point and train backed over him.
Yardman.	Calgary, Alta.	" 12	38	Run over.
Workman.	Lambton, Ont.	" 12	.....	Struck by train.
Yardman.	West Toronto, Ont.	" 12	46	Run over.
Yardman.	Montreal, Que.	" 14	42	Slipped while getting off side ladder. Run over.
Fireman and brakeman (2).	Highgate, Sask.	" 26	.....	Derailment. Engine struck rock.
Sectionman.	Bar River, Ont.	" 19	56	Fell off hand-car. Run over.
Brakeman.	Valleyfield, Que.	May 1	26	Crushed while coupling.
Track watchman.	Cloister, B.C.	" 6	62	Struck while walking along track.
Sectionman.	Auburn, Ont.	" 7	62	Thrown off car.
Switchman.	Heatherdown, Alta.	" 9	20	Fell in front of car while leaning over brake pole.
Yardman.	Hamilton, Ont.	" 12	28	Crushed between cars.
Car checker.	Windsor, Ont.	" 12	57	Run over by train.
Sectionman.	Dorval, Que.	" 13	22	Struck by train.
Coalman.	Armstrong, Ont.	" 14	.....	Electrocuted.
Brakeman.	Mimico, Ont.	" 21	.....	Crushed between engine and box car.
Sectionman.	Leeds, Que.	" 22	40	Struck by rail which fell from flat car.
Sectionman.	St. Paul Jet., Alta.	" 26	50	Run over by motor car.
Sectionman.	Winnipeg, Man.	June 6	50	Knocked down by car being shunted.
Fireman.	Shawanaga, Ont.	" 9	28	Fell through opening when engine and tender parted.
Brakeman.	Richmond, Que.	" 19	31	Slipped and fell under wheels.
Car inspector.	Sarnia, Ont.	" 20	60	Crushed between cars during switching operations.
Sectionman.	Innerkip, Ont.	" 28	53	Struck by train.
<i>Street and Electric Railways:</i>				
Electrician.	Winnipeg, Man.	April 1	42	Electric shock. Fell off scaffold.
Electrician's helper.	Winnipeg, Man.	" 1	29	Knocked off ladder by falling body of fellow worker who had been electrocuted.
Lineman.	Premier, B.C.	" 9	.....	While repairing tram line moved out on to overhanging snow ledge, which gave way—fell 200 feet.
Lineman.	Victoria, B.C.	June 3	35	Thrown to ground when pole gave way.
Lineman.	Cobourg, Ont.	" 16	23	Struck by engine.
<i>Water transportation.</i>				
Longshoreman.	Vancouver, B.C.	April 3	40	Fell off pile while stowing sugar.
Ship liner.	St. John, N.B.	" 12	63	Infection. Splinter entered thumb.
Employee at harbour elevator.	Montreal, Que.	" 22	17	Fell from car shaler.
Checker.	Vancouver, B.C.	" 30	32	Struck by falling boom on steamer.
Longshoreman.	Montreal, Que.	May 23	30	Thrown from gangplank between ship and wharf.
Foreman with towing company.	Sarnia, Ont.	" 27	.....	Drowned
Stevedore.	Halifax, N.S.	" 28	.....	Caught in winch rope.
Canal helper.	Thorold, Ont.	" 29	.....	Drowned. Lost balance reaching for line thrown from steamer.
Sailor.	Three Rivers, Que.	" 30	21	Drowned.
Sailor.	Montreal, Que.	June 2	25	Thrown to deck when rope ladder broke.
Stevedore.	Port McDiarmid, Ont.	" 2	16	Drowned when canoe upset.
Stevedore.	Tufts Cove, N.S.	" 4	.....	Crushed by rolling log.
Sailor.	Quebec, Que.	" 4	25	Fell in hold of vessel.
Deckhand.	Kootenay Landing, B.C.	" 14	23	Fell from barge—drowned.

## FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1924 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Water transport:</i>				
(Cont'd.)				
Deckhand.....	Fort William, Ont.....	" 26	19	Drowned. Struck by ice which fell while being loaded.
Seaman.....	Montreal, Que.....	" 27	21	Fell from scaffold while painting.
Deckhand.....	Lake Superior, Ont.....	" 27	19	Drowned—lost balance while scrubbing top of aft house.
Sailor.....	Montreal, Que.....	" 28	21	Fell from scaffold striking side of vessel drowned.
Deckhand.....	Gravenhurst, Ont.....	" 30	16	Drowned.
<i>Storage and local transportation:</i>				
Chauffeur for bank.....	Montreal, Que.....	April 1	.....	Shot by bandits.
Labourer at elevator.....	Goderich, Ont.....	May 16	39	Crushed by car.
Electrician at elevator.....	Montreal, Que.....	" 27	32	Turned switch wrong way and struck by ascending elevator.
Driver for oil company.....	Halifax, N.S.....	June 10	.....	Kicked by horse and run over by truck.
Teamster.....	Windsor, N.S.....	" 10	.....	Fell under team.
Carter.....	Montreal, Que.....	" 14	56	Fell from livery wagon.
Driver.....	Vancouver, B.C.....	" 14	41	Knocked down while attempting to stop runaway horses.
<i>Telephone and telegraphs:</i>				
Cableman.....	Near Wymark, B.C.....	April 21	19	Stepped off bunk on a gravel pile and fell under wheels of moving car.
Lineman.....	Dundas, Ont.....	May 19	24	Electrocuted while hauling new wire over telephone poles.
<i>Public utilities, n.e.s.:</i>				
Lineman.....	Springford, Ont.....	April 2	.....	Electrocuted. Caught wire when losing balance.
Lineman.....	Petrolia, Ont.....	" 5	.....	Electrocuted. Neglected to put on rubber gloves when stringing wires.
Lineman.....	Niagara Falls, Ont.....	" 23	36	Fell from pole.
Engineer.....	Rosetown, Sask.....	" 11	.....	Electrocuted. Short circuit between switch and a lantern placed between victims feet.
Power house employee.....	Montreal, Que.....	" 28	35	Fell under wheels of automobile truck.
Hydro cable splicer.....	Hamilton, Ont.....	May 1	.....	Electric shock caused fall from pole.
Lineman.....	Saskatoon, Sask.....	June 5	.....	Electrocuted while tapping high tension wire.
Janitor.....	London, Ont.....	" 5	.....	Electrocuted while dusting electrical apparatus.
Power house employee.....	Montreal, Que.....	" 19	over 21	Electrocuted. Too strong current broke switchboard.
Lineman.....	Moose Jaw, Sask.....	" 23	38	Burned. Touched bare wire with back of neck.
Helper.....	Windsor, Ont.....	" 28	31	Touched live wire while pulling tarpaulin over pole during storm.
TRADE—				
<i>Retail:</i>				
Employee of hardware merchant.....	Three Rivers, Que.....	April 5	63	Fell into elevator shaft.
Employees at coal yard (2).....	Montreal, Que.....	May 28	43, 36	One electrocuted by current supplying coal loading machine and the other in attempting to assist first victim.
Salesman.....	Montreal, Que.....	June 16	18	Tripped and fell through window from high building.
SERVICE—				
<i>Public and municipal:</i>				
Surveyor.....	Bowman, Man.....	April 12	.....	Struck by falling tree.
Park ranger.....	Algonquin Park, Ont.....	" 17	.....	Drowned in lake when going for provisions.
Constable.....	Magrath, Alta.....	" 22	59	Slipped on step and fell to pavement.
Fire rangers (2).....	Lac a la Place, Que.....	June 25	.....	Drowned—canoe upset.
<i>Domestic and personal:</i>				
Hospital orderly.....	Montreal, Que.....	April 18	58	Touring car and ambulance collided.
Cook.....	Harbour Bouche, N.S.....	" 23	.....	Drowned.
Electrician at hospital.....	Toronto, Ont.....	June 23	.....	While greasing sides of elevator fell between ascending car and frame.

FATAL INDUSTRIAL ACCIDENTS DURING THE SECOND QUARTER OF 1924 (Concluded)

Trade or Industry	Locality	Date	Age	Cause of Fatality
<i>Laundering, dyeing and cleaning:</i> Dry cleaner.....	New Glasgow, N.S.....	April 18		Gas exploded—burned—shock.
MISCELLANEOUS—				
Workman.....	Mount Forest, Ont.....	April 1		Struck by falling tree.
Workman.....	Lachute, Que.....	" 5		Drowned. Became entangled in wire cable which he grasped when ice struck ferry.
Workman.....	Mount Lehman, B.C.....	" 6		Injured while using mechanical stump puller.
Shop apprentice....	Blairmore, Alta.....	" 13	19	Fell off platform.
Labourer.....	Vancouver, B.C.....	" 15	42	Struck by automobile.
Workman.....	East Bathurst, N.B.....	" 26		Kicked by horse.
Labourer.....	Bouth Lake, Ont.....	May 7		Drowned.
Boiler engineer.....	Sayabec, Que.....	" 16	over 21	Burned. In starting a motor steam pipe exploded.
Labourer.....	Athabasca River, Alta..	" 18	22	Drowned.
Labourer.....	Bamberton, B.C.....	" 30	47	Caught by driving pulley of screw conveyor.
Labourer.....	Lauzon Levis, Que.....	June 2	15	Struck in abdomen by piece of firewood.
Beltman.....	Montreal, Que.....	" 17	24	Fell down a ladder while putting belt on pulley.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING PREVIOUS TO THE SECOND QUARTER OF 1924

Coal miner.....	Fernie, B.C.....	Jan. 15	53	Fall of coal.
Railway machine shop labourer.	Calgary, Alta.....	" 30	over 21	Automobile went over bank.
Brakeman.....	Blairmore, Alta.....	Feb. 25	26	Ran into loaded cars while braking on tail end of trip.
Stonemason.....	Vancouver, B.C.....	" 26	40	Crushed under block of granite which tilted off rollers while being moved.
Woodsmen.....	Restigouche Co., N.B...	" 28	51	Caught by falling tree.
Labourer.....	St. Joseph d'Alma, Que.	" 29		Killed by explosion due to using iron rod in tamping explosives.
Bushman.....	Bull River, B.C.....	" 29	62	Crushed under log which slipped from pile on skidway.
Yardmaster.....	Sault Ste. Marie, Ont.....	Mar. 1	31	Head crushed. (No further particulars.)
Teamster.....	Hectanooga, N.S.....	" 7		Crushed by falling horse.
Riggingman.....	Hotham Sound, B.C.....	" 18		Struck by falling log.
Mill worker.....	Restigouche Co., N.B...	" 20	38	Crushed by falling tree.
Workman.....	Weymouth, N.S.....	" 26		Struck by stub.
Railway labourer....	Earlton, Ont.....	" 26	39	Crushed by cable.
Mine inspector.....	Hillcrest, Alta.....	" 27	38	Tumor on brain. Slipped and fell.
Rigger.....	Headquarters, B.C.....	" 29	23	Struck by falling tree.
Logger.....	Coleman, B.C.....	" 29		Struck by falling tree.
Yardman.....	Nanoose Bay, B.C.....	" 29	40	Fell while getting down from scow.
Miner.....	Bellevue, Alta.....			Died June 2 from injuries received some months earlier.

IMMIGRATION TO CANADA DURING SECOND QUARTER OF 1924

THE accompanying table, compiled from information furnished by the Department of Immigration and Colonization, gives some details respecting the total number of immigrants into Canada during the second quarter of 1924. For purposes of comparison the figures for the previous quarter and for the corresponding quarter of 1923 are also given.

The table on page 726 gives the nationality, sex, occupation and destination of all immigrants, who entered Canada during the quarter under review.

IMMIGRATION TO CANADA DURING THE SECOND QUARTER OF 1924

Period 1924	Great Britain and Ireland	U.S.A.	Other countries	Totals
April.....	9,410	1,855	8,065	19,330
May.....	10,561	1,810	6,823	19,494
June.....	8,188	1,807	4,426	14,421
Second quarter 1924.....	28,459	5,472	19,314	53,245
First quarter 1924.....	8,792	3,274	11,814	23,880
Second quarter 1923.....	22,553	6,399	12,000	40,952

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Mechanics' Lien on Mortgaged Property

**I**N 1921 the owners of certain land in Alberta sold it under an agreement of sale, the purchaser taking possession after the first payment. The purchaser erected a building on the land, obtaining material from a lumber company. This company not receiving payment claimed a mechanics' lien on the whole of the vendor's interest in the land. The trial court dismissed this claim, holding that a lien could be claimed only on the increase in the value of the land that had been brought about by the improvements in respect of which the claim arose, and not on the whole value of the property. The lumber company appealed in the Supreme Court, which confirmed the decision of the lower court, pointing out that although the building was erected with the knowledge and consent of the vendor, the work was not done at the latter's request in writing, as required by section 9 of the Mechanics' Lien Act, which determines the priority of a mechanics' lien over mortgaged premises. The appeal was therefore dismissed with costs.

*(Alberta—Rogers Lumber Yards Ltd. versus Jacobs et al).*

### Employer Held Liable for Wrongful Act of Workman

A carter in the employ of the Dominion Transport Company, a subsidiary company of the Canadian Pacific Railway Company, lent his lorry to two men, who called at the offices of a certain manufacturing concern and asked if any shipment was ready for the Canadian Pacific Railway. As it was the usual custom for carters in charge of the Transport Company's teams to call for freight, the manufacturers' shipper, not suspecting any irregularity, delivered to the driver goods valued at \$1,344 for transportation to London, Ont. The driver signed the bill of lading with a fictitious name and the two men loaded the freight on the lorry. They then carried this freight to the premises of a receiver of stolen goods. The actual carter met them there and assisted them in disposing of the goods, receiving payment for his share in the transaction. Action was brought by the manufacturing company against the Canadian Pacific Railway and the claim was allowed by the Superior Court, this decision being later confirmed on appeal on the ground that the individual who obtained delivery of the goods in question, if not the actual agent of the Railway Company, was a person whom the manufacturers' shipper had reasonable cause to believe was an agent. In

giving judgment the appeal court held that while both parties in the action were innocent the claimant was entitled to greater consideration.

*(Quebec—Canadian Converters Company, Limited, versus Canadian Pacific Railway, Company, Limited.)*

### Decision in Pennsylvania Railroad Case

The United States Circuit Court of Appeals gave judgment in July in a long standing controversy between the Pennsylvania Railroad and its unionized employees in the shop crafts, the railway and steamship offices, freight sheds, etc. The subject of the dispute was the employees' claim to be represented, in their negotiations with the company, by delegates chosen by their union, whether these delegates were actually in the company's service or were on strike or otherwise not in employment. It will be recalled that during the war, in 1918, the Railroad Administration entered into the "National Agreement" with the national body of employees of the classes mentioned above, represented by the American Federation of Labour and its affiliated organizations, including "System Federation No. 90" (the Pennsylvania System). Subsequently, in February, 1920, Congress passed the Transportation Act, ending federal control of the railways and returning them to the private owners. The Railroad Labour Board was established in April of the same year, assuming jurisdiction in labour disputes.

In 1920 a dispute was in progress between the Pennsylvania Railroad and its employees in regard to a demand by the latter for increased wages and better conditions. The Labour Board in giving a decision in this case, issued a statement of the principles it intended to follow in future disputes. These principles included the following:

The right of lawful organizations to act through their own representatives to be recognized by the management;

The right of employees to be consulted prior to a reduction in wages etc., the employees being represented in such consultations by a majority of each class; the majority of any craft or class of employees to have the right to determine what organization shall represent them.

In view of the approaching ending of the National Agreement the Labour Board requested the Company and its employees to meet together and compose their differences, and a meeting was accordingly held on May 24, 1921. It was at this meeting that the question of the workers' representation arose.

The officials of System Federation No. 90 stated that their organization comprised a majority of the Pennsylvania employees, and, in lack of proof, this claim was denied by the company. The company then prepared a form of ballot, to which the employees objected on the ground that it made no provision for representation of the employees by a labour organization, and that it excluded every one not actually employed in the company. Two votes were taken, one on the company's ballot, the other on a ballot prepared by the employees. Most of the employees, including men on strike and at work, voted on the employees' ballot, but the company held a conference with the representatives of the minority, elected on the other form of ballot. The Labour Board decided that neither form of ballot was proper, and ordered a new election for which it prescribed new rules. This order the company refused to obey, adhering to this decision though the action of the Board was upheld by the courts.

System Federation No. 90 later informed the company that its members were ready to resume work on the terms established by the Labour Board, but the company refused this offer, adhering to the agreement entered into with the labour delegates elected on the company's form of ballot. The System Federation next brought action for damages for loss of employment of their members who had been "discharged by the company for refusing to waive their rights under the Transportation Act". In giving judgment in this case the Court of Appeals said:—

"We find nothing in the Statute (Transportation Act) which makes it compulsory upon the employer to confer with the representatives of the employees or further to contest the matter before the Labour Board. Though liable to such punishment as public opinion may inflict, the employer (and likewise, in a reverse situation, the employees) may, for any reason, or no reason at all, decline further to engage in the dispute. As obedience to the mandate of the decision of the Labour Board respecting a new election of representatives was not compulsory upon the Company, its refusal to obey the decision violated no legal or equitable rights of the complaining employees."

# THE LABOUR GAZETTE

PREPARED AND EDITED IN  
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 24]

SEPTEMBER, 1924

[NUMBER 9

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

THIS issue of the *LABOUR GAZETTE* contains an account of the proceedings of the Conference on Unemployment held at Ottawa during the first week of the present month, in accordance with the Dominion order in council issued on June 3. It also contains the regular monthly articles showing the movement of prices in Canada; employment conditions as reported by the Employment Service of Canada, employers and trade unions; on conventions of labour organizations, recent industrial agreements, etc., besides special articles dealing with various subjects of interest to labour.

Reports from the offices of the Employment Service of Canada showed that employment in July was at a slightly lower level than in the preceding month, the reduction being more marked in comparison with July, 1923. At the beginning of August the percentage of unemployment among members of trade unions was 5.4 as compared with 5.8 at the beginning of July, and with 2.9 per cent at the beginning of August, 1923. Returns from employers of labour showed a downward tendency at the beginning of August, when 775,759 workers were employed, as compared with 786,378 on July 1.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.19 at the beginning of August, as compared with \$9.91 for July; \$10.52 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 advanced to 158.1 for August as compared with 153.3 for July; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; 256.7 for May, 1920 (the peak); and 207.0 for August, 1919.

The time loss caused by industrial disputes was less in August than in the previous month, but more than in August, 1923. Sixteen disputes began or were in progress during the month, involving 10,469 employees and a loss of 228,572 working days. Corresponding figures

for the previous month were as follows: 18 disputes, 9,438 employees, and 231,428 working days; and for August, 1923, 17 disputes, 3,035 employees and 36,017 working days.

### **Industrial Disputes Investigation Act**

During August the Department received a unanimous report from the Board of Conciliation and Arbitration appointed in connection with the dispute in the coal-mining industry in Northern Alberta. Three new boards were established during the month. A compromise was effected in the dispute between the city of Moose Jaw and certain of its employees, based on the majority and minority reports of the Board. The application from the employees on the Montreal wharf was withdrawn, the dispute in which they were involved with the Canadian Pacific Railway Company having been settled through the mediation of the Department.

### **Labour Day in Canada**

Labour Day was observed on September 1 as a public holiday throughout Canada, labour organizations in the various industrial centres holding processions and meetings at which the speakers dealt with the progress of the labour movement and present-day problems. The first record of any action being taken in America with regard to Labour Day is a suggestion by the New York Labour Union in May, 1882. It was decided to observe the first Monday in September as a holiday, and to celebrate it by street parades, picnics, etc. In 1884, the American Federation of Labour declared the first Monday in September Labour Day. From this date action was taken by the states of the Union to make the first Monday in September a public holiday. Finally in 1894, Congress passed a law making this date a public holiday in the District of Columbia. Even in the few States which at that date had no law on this subject, observance of the day was general. The demand for a special holiday arose in Canada in sympathy with that in the United States, and in 1894, a few months

after the action of the United States, the Dominion Parliament passed a law (Statutes of Canada, 1894, chapter 55), adding the words, "the first Monday in September to be designated 'Labour Day'" to the list of public holidays in the Interpretation Act and in the Bills of Exchange Act. This amendment to the Interpretation Act means that the word "holiday" in all Canadian legislation includes the first Monday in September.

### Alternative to reductions in C.N.R. Staff

A ballot has been taken by the Shopmen in the Central Region of the Canadian National Railways, the result of which will determine the future permanent policy of the management in regard to staff reductions when retrenchment in expenditure becomes necessary. The ballot is in the following form: "Are you in favour of staff reduction, or are you in favour of shorter hours to keep the staff employed?" The practice on the system has hitherto been governed by the existing agreement between the Railway Association of Canada and Division No. 4, Railway Employees Department, concerning rates of pay and rules of service for the locomotive and car departments, which provides as follows:—

"Rule 27.—When it becomes necessary to make a reduction in expenses at any point, the force at such point, or in any department or subdivision thereof, shall be reduced by dispensing with employees with less than six months' continuous service in such department or subdivision thereof, after which the hours may be reduced to forty (40) per week before further reduction in forces is made. When the force is reduced seniority as per Rule 31 will govern; the men affected to take the rate of the job to which they are assigned."

The circumstances leading to the present ballot were as follows:

A reduction in staff being necessary last June, the management, in accordance with the terms of the agreement, let out the newest employees and reduced the working week to 40 hours, but as these measures were not sufficient, and as the further reductions required would involve about 1,200 men, it was suggested, as an alternative, that a further reduction in working hours be effected by means of a "lay-off" of one week in each month. The employees in the locomotive and car departments at St. Malo, Quebec, and Point St. Charles, Montreal, the car department at Ottawa and London, and the locomotive department at Stratford, all fell in with this proposal; and the first "lay-off" was accordingly made in these shops in the last week of July. Other departments at the same point preferred to continue the existing arrangements by which further reductions in staff were carried out, namely, the car department

at Stratford, the locomotive departments at Ottawa and London, and the locomotive and car departments at the Leaside Shops, Toronto. Reductions in staff have recently been made in the locomotive and car shops of the Atlantic and Western Regions of the System. As stated above the result of the ballot now being taken will determine which of the two methods of curtailing expenditure will be followed in future. The Canadian Pacific Railway, as a general rule, is said to follow the plan of reducing staffs in times of retrenchment, but the Angus Shops, Montreal, have closed down temporarily from time to time, thus making further reductions unnecessary. Similarly, the shops of the Père Marquette Railway at St. Thomas, closed down in July.

### Mine safety in Nova Scotia

It is stated that the Mines Department of Nova Scotia, considering the special dangers attending coal mining in the province, is inviting the co-operation of Mr. George S. Rice, the well-known mining expert from the United States Bureau of Mines, to assist in devising means of securing safer conditions of operation. Mr. Rice has already acted as an adviser in connection with certain coal mining problems in the western provinces. The British Empire Steel Company is co-operating with the Department in its present forward policy in furthering mine safety measures. The *Canadian Mining Journal* welcomes the recent activities of the Provincial Government in this direction. "The Government of Nova Scotia," it states, "has fully awakened to the dangers and difficulties of her coal mines. The great quantities of fire-damp; the coal dust; the spontaneous combustion causing mine fires; deep mines with heavy vertical lateral pressure causing 'bumps', 'crush', or 'squeeze', the largest undersea collieries anywhere, and many other conditions—are all well known to the Mines Department."

Mr. Rice is the chief mining engineer of the United States Bureau of Mines, and is chairman of the reconstituted Mine Safety Board. This Board now has its headquarters at Washington and supersedes the mine safety committee at the Bureau's experimental station at Pittsburg.

### Prevention of Coal Mine Accidents

The report of a special inquiry into the explosion at the Allan shaft in the Stellarton coal mines in Nova Scotia, by which four men lost their lives on June 30, has failed to reveal the causes of the disaster. Judge Paterson, who conducted the inquiry, found (1)

that the accident was not in the ordinary sense preventable; (2) that no neglect either caused or contributed to the explosion; (3) that there was no defect in or about the mine, or in the mode of working the mine, or in the observance of the Act, or of any general or special rules. "In all the evidence," he continues, "there is no hint that any precaution was omitted that should have been taken, or that anything was done that was not in accordance with good mining practice." Judge Patterson, however, makes the following suggestions: (1) that perhaps the use of explosives of any kind might be dispensed with in such work (taking out a very high pillar) as the men were doing; (2) that "it is perhaps not the safest way to fire one shot on top of another" "Might it not happen," he asks, "that there might be some even the least bit of fire under the coal brought down by the first shot that might be covered up and not detected for some time after another shot was fired and more coal thrown on top of it?"

As already noted in the LABOUR GAZETTE a recent mine disaster in the State of Utah led to the forming of a rigid safety code in that state; its provisions being settled at a conference between state officials and the mining interests. The movement thus begun has not spread to other American states. For example, measures are now under way in Illinois for the organization of a state council of mine safety. Plans for this council were drawn up in June at a meeting of coal company officials, mine safety engineers, representatives of the United States Bureau of Mines, and regional representatives of the National Safety Council. Some comments by the Director of the United States Bureau of Mines on accidents due to the use of explosives in coal mines were quoted in the July issue of this GAZETTE. In this connection it may be noted that the Nova Scotia Accident Prevention Association is now considering the drafting of safety regulations to apply to all the portable mills in the province believing that the standardization of practice would result in lessening the large number of accidents for which the portable mills have hitherto been responsible.

The following information has been contributed to the **Safety education in Canada** LABOUR GAZETTE by Mr. W. **Cement Plants** J. H. Cam, power and safety engineer of the Canada Cement Company, Limited. Good progress has been made in the last four years by the Company in teaching safe habits to their workers. The plant in Montreal, which

employs over 600 men, presents the following figures:—

	1920	1921	1922	1923
Lost time accidents.....	51	31	16	9
Accidents per million man-hours.....	23.4	16.7	9.3	4.5
No accident months.....	0	2	4	8
Compensation per cent of payroll.....	1.90	1.24	1.37	0.40
Production per man-hour.....	100	111	140	133

The records of this plant demonstrate that systematic education along safety lines will reduce accidents, save compensation expense, reduce production cost by increasing labour efficiency, and reduce labour cost by decreasing labour turnover.

The Port Colborne plant of this Company, which in the four years 1920 to 1923 had 42, 66, 16 and 21 accidents, has had only two accidents to date in 1924. In the West, the Exshaw plant near Calgary had 14 accidents in 1920, 8 in 1921, 2 in 1922, none in 1923, and 1 to date in 1924.

These results have been obtained by methods of education described in the LABOUR GAZETTE, January, 1923, page 4. In the words of the safety engineer of the Company: "Safety work pays because it convinces the workers that the employer is out to give them a square deal, and thereby develops their pride in the plant and loyalty to the Company."

**Jury recommend annual inspection of boilers** The Coroners' jury which investigated the cause of an accident near Kemptville, Ontario, on August 12, when three men were killed as the result of a

boiler explosion in a cheese factory, recommended "that the Provincial legislature pass and enforce a law requiring inspection of all steam boilers by competent inspectors at least once a year." The evidence at the inquiry showed that the boiler was sold to the factory five years ago, and that it had not been inspected for four years. The Steam Boiler Act of Ontario provide for the inspection of every steam boiler during its construction and before it is removed from the place of construction; and for the inspection of boilers when repaired, sold, or exchanged. The Minister of Public Works may also employ any boiler insurance company registered in the Department of Insurance, or any inspection company engaged in the inspection of steam boilers, to make any inspection of steam boilers during their construction, required by the regulations, a report to be made within fourteen days. The provisions of the Factory, Shop and Office Building Act (Revised

Statutes of Ontario, 1914, chapter 229) in regard to the inspection of boilers, are as follows. The section quoted took effect on January 1, 1919:—

57. (1) No boiler in a factory, shop, bakeshop or office building or in any other building on any other premises or in any other place or in a highway or any other public place shall be operated or used unless the same is insured in some boiler insurance company, registered in the Department of Insurance, or has been inspected within one year by some person authorized in writing by the Deputy Minister of Labour.

(2) Every such boiler insurance company shall annually on the thirtieth day of November transmit to the chief inspector, a report of the boilers in Ontario, insured by it, and when the insurance is cancelled the company shall forthwith give notice thereof to the chief inspector.

(3) Whenever, the inspector is of opinion that a boiler is in such position, or is so located or operated as to be dangerous to life or property he may, by written notice to the owner and employer, and to the person operating or using such boilers, direct that the use of the boiler shall be discontinued until it has been inspected as provided in subsection 1 and a certificate has been given by the inspector that the boiler may be safely operated.

(4) A factory, shop or office building in which a boiler is used in contravention of the requirements of this section, after such notice from the inspector and before a certificate has been given as provided in subsection 3, shall be deemed to be kept so that the safety of the persons employed in the factory, shop or office building is in danger.

### Workers and accident prevention

The New Brunswick Lumbermen's Safety Association recently formed by employers coming under Part II of the Workmen's Compensation Act of the Province (LABOUR GAZETTE, May, 1924, page 358) has opened a campaign of education by means of posters and bulletins distributed in every sawmill and logging camp throughout the Province. The lumbermen realize, it is stated, that mechanical devices cannot solve the accident problem, and that it is more important to secure the active co-operation of the workers themselves in preventing accidents. This opinion is supported by American authorities in a recent issue of *Safety Engineering*. In their judgment, mechanical means at the best can prevent only from 25 to 50 per cent of industrial accidents, and for the remainder the only remedies is in education and improved morale. The record of the United States Steel Corporation, the New York Edison Company, and other large concerns point to the same result. An article in the July issue of the same magazine suggests that in connection with intensive safety efforts it is important to keep the employees informed as to the progress made in accident prevention, as their continued interest and co-operation cannot be expected otherwise. As an example of the methods that are employed by many large concerns to secure the workers' co-operation, the work of the Shop

Safety Committee on the Delaware and Hudson Railway may be mentioned. These committees are composed of employees with the master mechanic as chairman, and are assisted by the company's safety agent. Foremen are instructed to pay particular attention to unsafe conditions and to correct them if possible. The safety agent spends considerable time assisting the foreman and talking to the men about certain practices in their own or other shops. Each morning the master mechanic ascertains the result for the previous day, and discusses with the foreman and workers the points that may be raised. The result of this intensive safety effort was that within a definite period there were no accidents in shops which previously had had accident records.

### Benefits of automatic couplings

In pursuance of a resolution adopted at the fifth session of the International Labour Conference last year the International Labour Office has undertaken an investigation on the subject of automatic couplings from the standpoint of the safety of the workers. As a preliminary study, the Office has just published a volume dealing mainly with statistics of accidents due to coupling and uncoupling operations. The results of this study show that automatic couplings have been very beneficial to workmen in those countries where they have been introduced. Canada and the United States are mentioned as showing the benefits to be secured by these devices. The improvement in accident records in the latter country due to automatic couplings is estimated at between 70 and 80 per cent in non-fatal accidents due to this cause. As regards Canada, the improvement could not be measured by the compilers of the report who had not access to the records for the period before automatic couplings were introduced. Recent figures, however, would appear to indicate that conditions are slightly better in this country than in the United States. Thus the rate of coupling and uncoupling accidents per thousand employees is in the United States 0.14 for fatal, and 1.91 for non-fatal accidents, as compared with 0.10 and 1.11 in Canada. Similarly the rate per million train-miles is in the United States 0.11 for fatal, and 3.04 for non-fatal accidents, the corresponding Canadian figures being .13 and 1.55. The records for the two countries, however, are not strictly comparable, as the United States averages are for the period 1905 to 1914, while the Canadian averages are for 1912 to 1920.

The British percentages for this class of accident are lower than in any other country, though Great Britain is included among those

countries where couplings are non-automatic. This good record was said by an expert in 1908 to be due to the abolition of the "D shackle", to better lighting, better discipline among the men, and particularly to the universal adoption of the shunting pole, which makes it unnecessary for the men to go between freight cars for the purpose of coupling. In most of the countries of continental Europe the risk is higher than either in the United Kingdom or in North America.

### Chinese and female employment

When Chinese restaurant proprietors applied last month to the city councils of Regina and Moose Jaw for permits to employ resident white women, it was pointed out that the law of Saskatchewan no longer discriminates against orientals in regard to their right to employ female white labour in hotels, restaurants and laundries. The existing restrictions apply to all employers alike. An act of 1919 (Revised Statutes of Saskatchewan, of 1920, chapter 185) provides that "no person shall employ a white woman or girl in any capacity requiring her to reside or lodge in or to work in any restaurant or laundry, without obtaining a special license for the purpose from the municipality in which such restaurant or laundry is situated, which license the Council of every municipality is hereby authorized to grant." Before 1919 chapter 17 of the statutes of 1912 forbade the employment of women or girls in the restaurant, laundry or other place of business or amusement owned, kept or managed by a Chinaman.

The British Columbia legislature in 1923 repealed the section of the Municipal Act which conferred powers upon municipalities to discriminate against the Chinese in regard to the employment of female labour, and a general law (Statutes of British Columbia, 1923, chapter 76) was enacted giving authority to provincial and municipal police officers to control the employment of women or girls by persons of questionable character irrespective of race.

An amendment of 1914 to the Ontario Factory, Shop and Office Building Act (Revised Statutes of Ontario, 1914, chapter 229, section 31a) provides that "No Chinese person shall employ in any capacity, or have under his direction or control any white person in any factory, restaurant or laundry." This section, however, has never taken effect, as the act calls for its special proclamation, and no proclamation has been made. Similarly a Manitoba Act (Statutes of 1913, chapter 19) which discriminates against all orientals in the same way, still remains inoperative in the

absence of the required proclamation. On the other hand, the Winnipeg charter was amended last year (Statutes of Manitoba, 1923, chapter 101), to give the city power to pass a by-law to prohibit, except under special license, the employment of females in specified businesses owned, managed or conducted by Chinese.

### Vaccination of employees in New Brunswick

The New Brunswick Lumbermen's Association recently passed a resolution declaring that:—

Whereas by Act of the New Brunswick Legislature the employer who engages men who have not been vaccinated is responsible for the expense incurred by the Health Department should a case of smallpox occur in the camp or boarding house through the unvaccinated person; therefore resolved, that the members of the New Brunswick Lumbermen's Association will in future insist on all persons applying for work as above to produce their vaccination certificate and that, by way of notice, this action be made public through the press and also that each employer take this matter up with the clergy in his own diocese and request that they explain the situation to their congregations and bespeak their co-operation.

The Act to which the foregoing resolution refers is the provincial Public Health Act (Statutes of New Brunswick, 1918, chapter 36, as amended in 1919), which provides as follows:—

Section 30. No person shall be employed in any camp, ship, factory or other place wherein the employees come at frequent intervals into close and prolonged contact one with another, unless and until such person produces to the employer or the employer's representative a certificate, signed by a regularly qualified medical practitioner, of successful vaccination, or of a like signed certificate that he is immune to vaccinia as proven by three consecutive non-successful vaccinations, or that he is immune to smallpox by reason of having had the disease, and no employer shall employ any person in employment as set forth above, without such certificate being produced. When any person contracts smallpox, who is at the time of the inception of his sickness employed as set out in this section, or who was so employed within fourteen days prior to the inception of his sickness, or who has not complied, or been required to comply, by said employer or employer's representative, with the foregoing provisions prior to his employment; then in such case the employer shall be primarily liable to pay all such costs, charges and expenses as the sub-district Board of Health concerned may have incurred in necessarily protecting the public health; provided such charges, costs and expenses were incurred in or about the necessary precautions relative to, or immediately appertaining to, any such case of smallpox, and such costs, charges and expenses may be sued for and recovered with costs, in the name of the chairman of the subdistrict board incurring the same, in any court of competent jurisdiction, within six months of the recovery or death of any such person. Such liability shall be in addition and without prejudice to any liability for any penalty provided for any violation of the provisions of this Act.

New Brunswick appears to be the only province of Canada which makes statutory provision in regard to the vaccination of em-

ployees in camps, etc. The health laws of the other provinces empower the provincial Board of Health to make any regulations that may be considered necessary. In Nova Scotia, the employer is required to secure a permit from the local medical officer before he can operate a camp, etc.

#### Organization of Canadian school teachers

The president of the Canadian Teachers' Federation, Mr. H. C. Newland, in his address at the annual meeting of the Federation last month at Victoria, stated that many teachers now favour the incorporation of their organization by statute. He suggested that a teachers' registration council should be formed after the pattern of an existing council in England and Wales. "A central bureau of information and educational statistics is beginning," he said, "where it will be possible for teachers in any part of Canada to obtain accurate and up-to-date information by letter or telegram as to school law, teaching conditions, educational administration, salaries, contracts, and so forth, in any part of Canada. In this way it may be possible, through the constituent provincial organizations to have the school acts or ordinances of the various provinces so amended that the law relating to the rights, duties and obligations of teachers may be standardized throughout Canada." He recommended that teachers should be granted a professional status, and be so trained as to be able to assume the leadership in dealing with educational problems and in framing educational policy. "Teachers themselves," he pointed out, "must receive a training in scientific education which compares in intensity and duration with a course in medicine and in law. We should look forward to the day when no person will be granted a license to practise teaching in Canada without having first taken a five years' course in education at a university. It is indeed gratifying to learn that several of our leading Canadian universities have already established courses and special degrees in education. This movement will no doubt lead ultimately to the absorption of our normal schools by the universities."

#### Schemes for social insurance

"Social Insurance" is a general term that has lately come into special prominence from its inclusion in the agenda of the International Labour Organization. In Canada, apart from the Workmen's Compensation Acts, no centralized public systems of insurance against sickness, invalidity, old age, etc., are in existence apart from the various superannuation systems for the benefit of Dominion, Provincial

and municipal employees. The proposed Dominion old age pensions, now under consideration, would however be a form of social insurance as the term is generally understood. The subject is discussed in its general bearings, especially as it relates to conditions in the United States in chapter 8 of the "Principles of Labour Legislation," the well-known work of Professor J. R. Commons and J. B. Andrews, which was prepared in co-operation with the American Bureau of Industrial Research. A new book was published this year in London entitled "Social Insurance Unified" with administrative problems in connection with a centralized or state scheme. The author recommends the appointing of a Royal Commission to examine the scope of existing laws and ascertain whether a comprehensive system can be built up by the state that will give the working class family security in all the recognized social emergencies. Having in his mind the conditions existing in Great Britain, he advocates a centralized and comprehensive insurance scheme under state control, with the employment exchanges as the foundation of administrative machinery required. However, as a state monopoly would inevitably be opposed by existing insurance companies he proposes as a compromise the establishment of a state "competitive" scheme. Compulsory insurance already exists in Great Britain, and might he thinks be extended to cover pensions for widows and orphans, non-industrial accidents, and medical benefits to women and children. All branches of insurance could thus be administered by developing the machinery already at work. The employment exchanges could be transformed into social insurance offices to deal with unemployment insurance, old age pensions, pensions for widows or orphans, insurance against non-industrial accidents, and sickness benefits. The same offices might also handle certain forms of voluntary insurance, such as employers' insurance against industrial accidents, voluntary provision by employees for health insurance, and voluntary arrangements by workpeople for burial insurance.

Ten new labour banks will be organized within the next few months in the States of New York and New Jersey, according to a report in the

#### Developments in labour banks

*New York Post.* A new corporation, the Brotherhood of Locomotive Engineers Security Corporation of New York, has been organized and incorporation papers filed in Albany. The new banks will be financed through this concern. According to tentative plans, Albany, Syracuse, Buffalo and at least one city in New Jersey will be

four of the locations. Warren S. Stone of Cleveland is president of the finance corporation. William P. Prenter of Cleveland is secretary and treasurer, and George T. Webb is vice-president. All are directors of the Empire Trust Company in New York, in which labour owns a substantial interest.

The first labour bank was the Brotherhood of Locomotive Engineers Co-operative National Bank of Cleveland, which opened its doors November 1, 1920. This was followed by the organization of the Brotherhood of Locomotive Engineers Co-operative Trust Company in New York, and by labour banks in Boston and other cities. There are now ten such financial institutions, with total resources of \$127,000,000. Some account of existing labour banks has been given in previous issues of the LABOUR GAZETTE.

**Second and Third Internationals in consultation** According to *Industrial and Labour Information*, the national Labour Office weekly Bulletin of the International Labour Office (League of Nations) at

Geneva, the question of the re-establishment of trade union solidarity, which has for two years been the subject of negotiations between the International Federation of Trade Unions and the Moscow International, appears to be entering on a new phase. The third Congress of the Moscow International, which took place at Moscow in the second week of July, has decided to enter upon a general propaganda campaign in favour of a single trade union International, to be formed by the amalgamation of the International of Moscow and Amsterdam. The Moscow International will instruct its members to enter the organizations affiliated to the Amsterdam Federation. Further, in accordance with the decision taken at its Congress at Vienna, the International Federation of Trade Unions has sent an invitation to the Russian organizations to enter into negotiations with it. The Russian organizations have replied that they are ready to send delegates to a meeting of this nature. An account of the recent convention of the "Amsterdam International" appeared in the July issue of the LABOUR GAZETTE.

**French national economic council** The new French Government has revived proposals that have been discussed since the war for the establishment of a National Economic Council, to act as a technical body to advise the state. The idea of setting up a national organization to deal in a non-political manner with economic problems took shape during the war and had the strong support of the General Confederation of Labour.

It is stated to have been suggested during the war by the nation's urgent necessities in regard to food supply, raw materials, transport, mining, etc. Opposition to the proposal was based on the fear that such a council might be at variance with established forms of government, but the workers' organizations denied any intention of restricting the authority of the national Parliament. The Economic Council will consist of representatives of the State, and of producers, technicians, consumers, jurists and health experts. The Government has now set up a committee of enquiry "to consider in what way labour, with all its organizations and aspirations, and in what way also the interests of public health, can be represented on such a council." The committee will draw up a programme for the Economic Council. The committee is composed of state representatives, and of representatives of the following groups or organizations: Agricultural and industrial interests and undertakings run on the principle of co-partnership in profit and administration; the General Confederation of Labour; workers' producers' associations; intellectual workers; craftsmen; International Labour Organization; Consumers' co-operatives; health experts; and jurists.

The annual convention of the Trades and Labour Congress of Canada opened on September 15 at London, Ont. A full report of the proceedings will be given in the next issue of the LABOUR GAZETTE.

The accident prevention committee of the American Gas Association met in Toronto early in August. The Schaeffer prone pressure method of resuscitation was favourably considered, and an educational "safety" campaign is to be undertaken among the employees.

Mr. J. R. Stewart, of New Glasgow, Nova Scotia, vice-chairman for Nova Scotia of the Canadian Legislative Board of the Brotherhood of Locomotive Firemen and Enginemen mentioned in a recent address a number of enactments which he claimed had been secured through the efforts of the various railway organizations. Among these were amendments to the Nova Scotia Railway Act providing for locomotive boiler inspection, dump ash-pans and automatic couplers on all rolling stock, the railway features of the Federal Workmen's Compensation Act, and increased exemption or income under the Nova Scotia Assessment Act. Referring to compensation he said that "in every province in the Dominion with the exception of Prince Edward Island a Federal Government employee who receives injuries while in the discharge of his

duties is compensated therefor on a liberal scale and in the event of accidental death his dependents are properly provided for."

Miss Violet Smart of Victoria has been appointed inspector under the Minimum Wage Act of British Columbia, in succession to Mrs. Winifred Mahon, recently deceased, who was appointed about a year ago. The late inspector was president of the Vancouver local of the United Garment Workers of America. The Honourable A. M. Manson, provincial Minister of Labour, lately referred to her as an invaluable official, who never spared herself in any effort to improve the lot of the female workers of the Province.

Miss Margaret Bondfield, parliamentary secretary of the British Ministry of Labour and labour representative of the Overseas Settlement Committee, will arrive in Canada at the end of the present month, on the invitation of the Dominion Government, to enquire into conditions existing in Canada in reference to the immigration of children.

Mr. R. A. Stapells, president of the Toronto Board of Trade, is investigating allegations that have been made by a representative of the International Ladies' Garment Workers' Union as to unsanitary conditions alleged to exist in some of the smaller workshops in the city. The union representative had no cause of complaint in regard to the larger shops, finding them to be well lighted, clean, well-ventilated, and provided with the comforts necessary to make work healthful and pleasant. But many of the so-called "kitchens," from which ladies' and children's garments are supplied to the retail trade, are stated to be highly insanitary, being badly ventilated, penetrated by fumes from gas irons, etc.

In the quarterly report on industrial accidents in Canada, in the last issue of the LABOUR GAZETTE, the Canada Cement Company's plant at Port Colborne, Ontario, was reported as having had two fatalities instead of one. Some account of the safety work carried on by this company is given elsewhere in this issue.

The convention of the British Trade Union Congress was held at Hull, England, early in September, an account of which will be given in the next issue of this GAZETTE.

An Order issued by the Swiss Federal Department of Public Economy, dated June 16, 1924, authorizes further extension of the normal working hours to 52 a week in certain branches of the embroidery trade, the cotton trade and hat and cap making. The Order is valid for these trades until June 30, 1925. A similar extension of hours is authorized by the same Order in certain branches of the flax-spinning and rope-making trades until the end of the present year. The Order came into force as from July 1, 1924.

The Calgary City Council have fixed the amount of the annual license fee for master plumbers in the city at \$10, to be retroactive to the beginning of the present year. The master plumbers had proposed an initial license fee of \$25, with a subsequent annual fee of \$5.

The Miners' Federation of Great Britain, at a conference held recently at Swansea, passed unanimously a resolution instructing their executive committee "to press that membership of the Federation shall be a condition of employment at the collieries."

### Public Works in Alberta

THE annual report of the Department of Public Works of Alberta for the calendar year, 1923, contains lists showing the work carried on during the year and the expenditures on each portion. The main highway construction programme consisted only of the most urgent work, owing to the limited appropriation for that purpose. The total number of bridges dealt with was 444, as compared with 520 during the year 1922. The total number of ferries operated by the Department in 1923

was fifty-eight. There were also three Government-owned ferries which were maintained by the Department, but privately operated. Three new ferries were installed during the year, and seven new scows were constructed. The total amount of money received during the year and deposited with the Provincial Treasurer was \$205,284.54. The total amount available for the year was \$959,132.27. Of this amount there was expended \$353,863.59, leaving a balance of \$605,268.68 to be carried forward for the year 1924.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation

**E**MPLOYMENT at the beginning of August showed a fairly large contraction for this time of year, largely on account of reductions in manufacturing, together with early declines in railway construction. Although the situation was not so good as at the beginning of August, 1923, it continued to be better than on that date in 1922 and 1921. At the beginning of the month the percentage of unemployment among members of trade unions was 5.4, as compared with 5.8 per cent at the beginning of July, and with 2.9 per cent at the beginning of August, 1923.

A decline from the preceding period is recorded by the reports from the offices of the Employment Service of Canada for the month of July, 1924, while a comparison with the corresponding period a year ago shows a very marked falling-off in employment.

The following is a survey of employment conditions at the end of August, 1924, as reported by the superintendents of the Employment Service of Canada.

The farming group in the Maritime Provinces continued very quiet, and slackness prevailed in the construction groups. However, at Halifax, New Glasgow and Moncton, harbour development, street and highway work, was progressing favourably and a considerable number of workers were employed. The offices reported very few skilled building tradesmen as unemployed. Orders for saw mill workers were satisfactorily filled at St. John and requests for lumber men and labourers were supplied from Sydney and Chatham.

Very little change in the industrial situation from the preceding month was reported by the employment offices in the Province of Quebec. There was a decrease in the demand for farm workers, but an improvement in the lumbering industry, orders and placements for bushmen being on the increase. Asbestos mines in the Sherbrooke district were reported inactive. The metal trades, boot and shoe industries and textiles were quiet and no improvement in cigar factories. Some improvement was reported in the building industry, bricklayers and plasterers being in demand. Orders for building labourers were also more numerous than during the month of July. There was considerable activity in municipal works in the Cities of Montreal and Quebec. The demand for hotel and restaurant help decreased considerably, due to the closing of

summer establishments in the country districts. Active demand for household workers continued.

In Ontario the demand for farm help continued fairly good, especially in the western Peninsula. There were some placements of experienced farm help in the northern sections of the province, but the large number of workers transferred to the western harvest fields has greatly improved the general employment situation. In the construction groups highway work, street paving, sewer and water main construction jobs continued to provide work for large numbers of men. In some sections an increase was noted in the calls for labourers, carpenters and skilled building mechanics. Railway construction, bush operations and western farm orders supplied the chief employment from the offices in the northern sections of the Province. However, bush operations were not very brisk, but a large business was anticipated for the future. Trade and manufacturing industries were quiet with the supply of workers in excess of the demand. Slackness prevailed in the women's section with an increased number of casual workers in demand.

A slightly improved employment situation was evident in Manitoba due to the increased demand for farm help. The cutting of the crop, although slightly later than in previous years, was expected shortly to be under way, with a plentiful supply of applicants to meet all demands. Little change was apparent in the building groups, there being a decided decrease from building activities of the preceding year. The demand for railway workers was not quite so brisk, but large numbers of section labourers and extra hands were placed. A consistent demand for household and hotel help was reported in the women's section.

In some districts of Saskatchewan the cutting of the crop had started, with a resultant increase in the demand for farm help. No difficulty was experienced in filling orders, as a considerable number of experienced workers were available. There was little call for men for the building group, the demand being mostly for labourers for road and street repairs. A large number of placements of men on railway section gangs was made. A heavy demand was recorded for domestic and farm household help with a decided shortage of applicants.

In Alberta some harvest work was already under way, the prospects were good for a

much improved demand for farm workers. A large supply of experienced help was available at all the offices. The construction groups afforded little work, although experienced building mechanics were employed. The demand for section and extra gang hands for railway work was steady. Approximately the same volume of business was transacted in the women's section, the demand being mainly for domestic workers for rural sections.

Construction in British Columbia showed an increased activity, especially in the vicinity of Cranbrook, Kamloops and Penticton, with demands for carpenters and building labourers. The larger municipalities reported fewer registered unemployed, this being in part due to the large number of men sent to the Prairie Provinces to assist in the harvest. Placements of farm hands locally were not numerous. Railway maintenance and construction work continued to provide employment for a few workers, section and extra gang hands being placed from Vancouver, Prince George and other points. The logging and mining industries were very quiet with few opportunities offered. Demands for household workers remained as formerly reported with an additional call for casual help.

#### EMPLOYERS' REPORTS

There was a decline in employment as reported by employers at the beginning of August according to returns tabulated by the Dominion Bureau of Statistics. This is in contrast with the slight upward tendency that had been indicated on August 1, 1923, when the situation was somewhat more favourable. There were large contractions in manufacturing, logging and railway construction, while building and highway construction, communication, shipping and stevedoring reported continued improvement and canneries registered important seasonal gains. British Columbia was the only province to record an increase in employment, while elsewhere curtailment of operations was indicated.

In the Maritime Provinces, manufacturing, logging and coal mining afforded less employment than in the preceding month. On the other hand, transportation, construction and trade were more active.

In Quebec the employment afforded in manufacturing declined considerably, chiefly in the iron and steel division; logging and railway construction were also slacker. Communication, transportation, building and highway construction and services, however, reported improvement.

In Ontario, curtailment in some branches of manufactures, notably in iron and steel and

textiles, was counterbalanced to some extent by seasonal gains in canneries. Logging camps reported further reductions; transportation, railway construction and trade were also less fully employed, while mining, communication, building and highway construction reported improvement.

In the Prairie Provinces there were contractions in railway construction, which were partly offset by increased activity in iron and steel factories and in breweries. There was, however, a net decline in employment in this district.

In British Columbia, the trend of employment continued to be favourable. Manufacturing was decidedly more fully employed, particularly in the sawmilling and fruit canning divisions. Transportation, building and railway construction, trade and mining also showed improvement. Logging and highway construction, however, employed smaller working forces than at the beginning of July.

An analysis of the returns by cities shows that Montreal, Winnipeg and Vancouver registered improvement, while in Toronto, Ottawa and Hamilton reduced activity was recorded. In Montreal there were considerable declines in railway car shops, but this was offset by expansion in other branches of manufactures, in communication, water transportation and construction. In Toronto, there were large contractions in manufacturing, of which those in textiles and iron and steel were most pronounced. In Ottawa, there was a general but slight falling off in activity. In Hamilton, considerable contractions in iron and steel were partly counteracted by improvement in building construction and canneries. In Winnipeg, there was very little change in the situation; slight increases were recorded in abattoirs, trade and construction, while textiles showed small declines. In Vancouver, there was general improvement. Manufacturing, trade and building construction registered the most marked gains.

Manufacturing recorded a fairly large decrease on the whole in spite of substantial improvement in canneries and in other food factories, in boot, shoe and electric current works. Reductions in vehicle works chiefly caused this reduction but there were also substantial losses in textile, fish preserving, lumber, rubber, chemical, glass, electrical apparatus and nickel works. Further contractions were indicated in logging camps. Coal mines employed smaller working forces, but metallic ore mines were busier. Telephones and telegraphs reported improvement, as did also shipping and stevedoring. Building and highway construction continued to show increased

employment, but railway construction reported curtailment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of August.

#### TRADE UNION REPORTS

The term unemployment in the following report has reference to involuntary idleness due to economic causes.

Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment as indicated by reports received from 1,483 labour organizations representing 155,429 members showed slight decline at the end of July 5.4 per cent of the members being idle as compared with 5.8 per cent at the end of June. The situation however, was less favourable than in July of last year when the percentage out of work was 2.9. Manitoba, Saskatchewan, Alberta and British Columbia unions reported reductions in activity in comparison with June which were more than offset by the increases in the remaining provinces. The largest percentage gain was shown in Nova Scotia where coal miners reported considerable improvement. In comparison with July of last year a lower level of employment was maintained in all provinces except Alberta. Reports tabulated from 407 unions in the manufacturing industries with 46,755 members showed that 7.6 per cent of the members were out of work as compared with 10.3 per cent in June. Cigar and tobacco workers were busier and increases on a smaller scale were also reported by bakers, paper makers, garment, iron and steel and glass workers. Printing tradesmen, leather, furniture, textile and brewery workers were less fully engaged. In some instances considerable short time was reported by the unions making returns. A larger percentage of unemployment was reported in the manufacturing group than in July of last year when 4.3 per cent of the members were reported out of work. Coal miners in Nova Scotia reported considerable improvement over June and in the Alberta and British Columbia mines no inactivity was registered. Asbestos miners in Quebec reported no idle members. Slightly more unemployment was shown in the building trades 12.1 per cent of the members being out of work at the end of July as compared with 10.6 per

cent at the close of June. Steam shovel and dredgemen, carpenters and joiners, electrical workers and granite and stone cutters were better employed but less work was afforded bridge and structural iron workers, bricklayers, masons and plasterers, painters, decorators and paper hangers, plumbers and steamfitters, tile layers, lathers and roofers and hod carriers and building labourers. In comparison with July of last year bridge and structural iron workers were more active; the situation for steam shovel and dredgemen remained unchanged and all other tradesmen in the group registered declines. Less activity than in June, was indicated in the transportation group 3.9 per cent of the members being out of work at the end of July as compared with 2.6 per cent at the close of the previous month. Workers in the steam railways and shipping and stevedoring divisions were not quite so fully employed and no change was reported by street and electric railway employees. Fishermen were fully engaged. Lumber workers and loggers reported some inactivity. Hotel and restaurant employees, stationary engineers and barbers were less active. Theatre and stage employees were busier.

During the month of July, 1924, the offices of the Employment Service of Canada referred 25,779 persons to employment and effected a total of 24,361 placements. The number of workers placed in regular employment was 17,646 and 6,715 in casual work. Of the placements in regular employment 14,036 were of men and 3,610 of women. Employers notified the Service of 18,502 vacancies for men and 8,807 for women, a total of 26,589. Applications for employment numbered 36,105, of which 26,048 were from men and 1,057 from women. A comparison with the reports of July, 1923, shows a marked reduction in the volume of business transacted by the offices, and a slight decline is indicated as compared with the preceding month of this year. In another section of this issue may be found a detailed report of the work of the offices for July, 1924.

#### PRODUCTION REPORT

The Dominion Bureau of Statistics reports a production of 45,480 tons of pig iron in Canada in July, 1924, as compared with 56,963 tons in the previous month. The July output of 6,960 tons of foundry iron was 43 per cent below the June total of 12,182 tons; malleable iron fell off 79 per cent to 3,399 tons. Basic iron on the other hand showed an advance of 22 per cent to 35,121 tons. The cumulative output for the seven months totalled 472,585 tons. The

total for the corresponding period last year was 516,793 tons. Although the tonnage recorded during the first seven months of this year showed a decline from the production during the same period in 1923, it was greater than in 1922 or 1921. The number of furnaces in blast at the end of the month remained unchanged at four, located as follows: two at Sydney, Nova Scotia; one at Sault Ste. Marie, Ontario; and one at Hamilton, Ontario.

The production of 2,197 tons ferro-silicon was four per cent over the 2,108 tons in June and consisted entirely of the grades containing up to 50 per cent silicon.

The production of steel ingots and castings in Canada in July amounted to 52,237 long tons, being 24 per cent under the June output of 68,914 tons. The curtailment was mostly in the quantity of basic open-hearth steel ingots produced for further manufacture by the reporting firms. This grade declined 24 per cent to 50,211 tons. Direct steel castings at 1,768 tons marked a drop of 30 per cent. The cumulative production of steel ingots and castings during the first seven months of the year was 540,970 tons comprising 520,020 tons of steel ingots and 20,950 tons direct steel castings. This output was about 10,000 tons less than the total output for the corresponding period in 1923 and exceeded the 1922 and 1921 totals for similar periods by 43,000 tons and 27,000 tons respectively.

The report of the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of July as follows: Acadia Coal Company, Limited, 30,309 tons (34,679 tons in June); Intercolonial Coal Mining Company, Limited, 13,209 tons (7,960 in June). The Allen Mine did not operate during July owing to explosions of June 30, and July 2.

Reports from the Employment Office superintendents show a total of 277,919 tons of coal produced by the Dominion Coal Company in the vicinity of Glace Bay, Nova Scotia. The 15 collieries worked a total of 282½ days during the month and the average number of men employed was 9,331. At the Nova Scotia Steel and Coal Company, Limited, mines at Sydney Mines there was produced 58,149 tons of coal during the month. The number of days worked by the two collieries was 48 and the number of men employed averaged 2,233. The mines of Inverness Coal Company, Inverness, Nova Scotia, were closed during the month.

A report from the Department's correspondent at Cobalt shows that nine carloads of

approximately 655,687 pounds of silver ore were shipped during August as compared with eight carloads containing 667,561 pounds in the previous month. The Nipissing Mine shipped 176 bars containing 202,518.47 ounces of silver, and The Mining Corporation of Canada shipped 152 bars containing 151,431.01 ounces of silver, making a total of 328 bars containing 353,949.48 ounces of silver shipped during August as compared with 476 bars containing 517,195.58 ounces in the previous month.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$19,986,670 during the month of July, 1924, as compared with \$19,678,067 in June and with \$20,819,752 in July, 1923. The gross earnings from January to July 31, 1924, were \$134,849,228 as compared with \$136,732,873 for the same period last year.

The gross earnings of the Canadian Pacific Railway Company for July were given in a preliminary as \$14,883,677 in comparison with \$15,135,633 in the previous month, and with \$15,677,836 in July, 1923. The gross earnings for the first seven months of 1924 were given as \$99,540,594, as compared with \$96,523,329 for the same period in 1923.

BUILDING PERMITS AND CONTRACTS AWARDED	According to the Dominion Bureau of Statistics, the value of building permits issued in 56 cities during July showed a decline of 17.1 per cent as compared with June, and 11.5 per cent as compared with the same period of a year ago. The figure for July, 1924, was \$11,090,760; for June, 1924, \$13,373,987; and for July, 1923, \$12,532,422.
--	---

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded in Canada during August, 1924, was \$26,664,500, as compared with \$23,818,400 in July. Residential building accounted for 30.8 per cent of the August total, amounting to \$8,178,600; business building amounted to \$8,031,900 or 30.0 per cent; industrial building to \$1,055,100 or 3.9 per cent; and public works and utilities to \$9,398,900 or 35.3 per cent. The activity was distributed among the provinces as follows: Ontario, 41.8 per cent; Quebec, 36.7 per cent; Prairie Provinces, 9.2 per cent; British Columbia, 6.3 per cent; and the Maritime Provinces, 6.0 per cent. The total construction started from January 1 to August 31, 1924, amounted to \$179,206,000, compared with \$223,654,400 during the corresponding period of last year, and \$184,333,700 in 1922.

FOREIGN  
TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in July, 1924, the merchandise entered for consumption amounted to \$72,631,365 as against \$77,074,230 in July, 1923. The domestic merchandise exported amounted to \$87,059,218 in July, 1924, as compared with \$87,218,747 in the previous month and \$82,997,748 in the corresponding month of the previous year. Foreign merchandise exported amounted to \$1,161,310 in July, 1924, and \$1,480,150 in July, 1923.

The chief imports in July, 1924, were: fibres, textiles and textile products, \$14,149,655; non-metallic minerals and products, \$13,830,938; agricultural and vegetable products, mainly foods, \$12,440,722; and iron and its products, \$12,036,350.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$29,436,694; wood, wood products and paper, \$22,931,839; animals and animal products, \$14,587,882; and non-ferrous metals and their products, \$7,266,765. During the four months of the fiscal year ending July, 1924, exports of agricultural and vegetable products, mainly foods, were valued at \$132,350,731; wood, wood products and paper at \$81,172,107; animals and animal products, \$38,840,515; and non-ferrous metals and their products, \$25,977,890.

## Prices

Retail food prices advanced somewhat during the month due chiefly to seasonal changes. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.19 at the beginning of August as compared with \$9.91 for July; \$10.52 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. A substantial increase occurred in the price of potatoes with the marketing of the new crop. Advances also occurred in the prices of eggs, butter, bread, flour, evaporated apples, fresh pork, bacon, lard, cheese, rolled oats, rice, beans, coffee and tea while prices of beef, mutton, milk and sugar were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$20.57 for August as compared with \$20.30 for July; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.60 for August, 1920; \$26.92 for July, 1920 (the peak); \$21.20 for August, 1918; and \$14.41

for August, 1914. Fuel and rent showed little change.

The movement of wholesale prices as indicated by the index number of the Dominion Bureau of Statistics continued upward. This index stood at 158.1 for August as compared with 153.3 for July; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; 256.7 for May, 1920 (the peak); and 207.0 for August, 1919. In the grouping according to chief component material four of the eight main groups advanced while four declined. The Vegetables and Their Products group and the Animals and Their Products group advanced substantially, the former because of higher prices for grains, flour, and milled products, bread and potatoes and the latter because of higher prices for hogs, bacon, lard and tallow which more than offset the declines in cattle, fish, leather, boots and shoes. The Non-Ferrous Metals group was higher because of the higher prices for copper, lead, silver, tin and spelter. The Textiles group advanced slightly due to increased prices for silk, wool, and jute. The Iron and Its Products group declined because of lower prices for steel bars, steel sheets and horseshoes and the Wood and Wood Products group because of lower prices for newsprint and spruce. Both the Non-Metallic Minerals group and the Chemicals and Allied Products group showed small declines.

## Strikes and Lockouts

The time loss due to industrial disputes was less in August than in July, but more than in August, 1923. There were in existence at some time or other during the month 16 disputes, involving 10,469 employees and a time loss of 228,572 working days, as compared with 18 disputes in July, involving 9,438 employees and resulting in a time loss of 231,428 working days. In August, 1923, there were recorded 17 disputes involving 3,035 workpeople and a time loss of 36,017 working days. Five strikes and lockouts commenced during August, and of these four were terminated during the month. Eight of the strikes and lockouts which commenced prior to August were terminated during the month. There were, therefore, still in existence at the end of the month, four disputes involving 8,064 workpeople. The difference in the number of employees involved and the time loss in August this year, as compared with last year, is due to the numbers involved in the strike of 8,000 coal miners in Alberta and British Columbia.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF AUGUST, 1924

**D**URING the month of August the Department received a report from the Board of Conciliation and Investigation established to deal with the dispute between various coal operators, members of the Northern Alberta Coal Operators' Association and certain of their employees, members of the Edmonton and District Miners' Federation.

### Other Proceedings Under the Act

In the case of the dispute between the city of Moose Jaw and certain of its employees, members of the Saskatchewan Steam and Operating Engineers and the International Brotherhood of Electrical Workers, information was received during the month that an adjustment had been reached, based on a compromise between the majority and minority reports of the Board. The text of these reports was given in the last issue of the *LABOUR GAZETTE*.

In the case of the dispute between the Canadian Pacific Railway Company and certain of its employees, being foremen, checkers, coopers, truckers, etc., employed on the Montreal wharf, represented by, and members of, the Brotherhood of Railway and Steamship Clerks, etc., a representative of the Department intervened, after the application had been received, and through his mediation negotiations between the disputants were renewed, and an agreement was reached. The employees accordingly withdrew their application for a Board.

### Report of Board in Dispute between certain coal operators in Northern Alberta and the Edmonton and District Miners' Federation

The text of the report which was received during the month from the Board established to deal with this dispute is given below. The Board consisted of Mr. James Smith, Edmonton, chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, namely, Messrs. R. G. Drinnan, nominee of the employer, and P. J. Rowe, nominee of the employees. The Board was unanimous in its report.

#### Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between various coal operators, members of the Northern Alberta Coal Operators' Association, employer, and certain of their employees being members of the Edmon-

ton and District Miners' Federation, employees.

In the case of the dispute between the Canadian Pacific Railway Company and certain of its employees in the commercial telegraph service, members of the Commercial Telegraphers' Union of America, a Board was established during the month, two members being appointed, namely the Honourable E. H. Phippen, K.C., of Toronto, on the recommendation of the employer, and Mr. James Simpson, Toronto, on the recommendation of the employees.

In the case of the dispute between the Canadian National Telegraphs and certain of its employees in the commercial telegraph service, members of the Commercial Telegraphers' Union of America, a Board was established and the same two members were appointed as in the preceding case. In neither of these two cases had the chairman been appointed at the close of the month.

In the case of the dispute between the Canadian Pacific Railway Company, western lines, and certain of its employees, being clerks, freight handlers, baggagemen, storemen, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, a Board was established composed of Mr. Travers Sweatman, of Winnipeg, on the recommendation of the employer, Mr. David Campbell, of Winnipeg, on the recommendation of the employees, with the Honourable Mr. Justice R. M. Dennistoun, of Winnipeg, as chairman, appointed on the joint recommendation of the other two members.

Hon. JAMES MURDOCK,  
Minister of Labour,  
Ottawa, Ont.

HONOURABLE SIR,—The Board of Conciliation and Investigation appointed by you on the 18th of July, 1924, in the above matter under the Industrial Disputes Investigation Act, 1907, have the honour to report as follows:—

As appears in the formal application for the appointment of the Board in this case, the nature and cause of dispute, including claims and demands of either party upon the other, to which exception is taken, and the outline of effort made by the parties concerned to adjust the dispute, are as follows:

On the 30th of May, 1924, the Edmonton and District Miners' Federation gave notice to the Northern Alberta Coal Operators' Association that they would like to continue the agreement which expired on the 30th of June, 1924, but with certain changes which would allow for payment for dead work and also certain increases in some of the mines, so that there would be a standard rate of pay at all the mines coming under the jurisdiction of the Operators' Association and the Miners' Federation. Copy of these demands had been sent to the Minister of Labour.

The Operators' Association on their part put forward a counter proposal to standardize wages, but at a rate that would mean a thirteen per cent reduction for men employed at certain of the mines in this district.

Several meetings were held between the Miners' Federation representatives and a committee appointed by the Operators' Association, but neither party could meet the demands of the other, and so the dispute could not be terminated.

The Board, consisting of James Smith, Chairman, R. G. Drinnan, of Edmonton, and P. J. Rowe, of Edmonton, met at the City of Edmonton on the 2nd day of August, 1924. The Federation of Miners was represented by William Walker, E. Fisher and L. Smith. The Operators' Association was represented by J. Clyne, E. B. Johnston and C. W. Leonard.

The Chairman outlined the purposes of the Board of Conciliation, stating that, in accordance with the Industrial Disputes Investigation Act, it was the duty of the Board, if possible, to bring about a settlement between the parties in the most amicable manner, and before taking testimony he desired to know, if an opportunity were presented to the disputing parties to discuss the matter, if there would be any chance of their coming to an agreement.

No agreement, however, could be effected and the Federation produced several witnesses, who were all duly examined, and the Operators also produced some witnesses. The Board was in session ten days, hearing evidence from both sides.

After the evidence was presented, the Board heard the arguments of the different representatives and met the following day to consider the evidence and deliberate on the report, and, after consideration, adjourned until the next day when it resumed consideration and arrived at a unanimous decision.

Among the operators in this dispute there are two who pay a wage of \$5 per day and there are five who pay a wage of \$5.60 per day. Outside of these operators, there are seven mines in the Edmonton district who pay a wage of from \$3.80 to \$5 per day.

The mines which pay from \$3.80 to \$5 per day furnish approximately forty-five per cent of the total output of coal in this district.

Both the miners and operators in this dispute wish to standardize the wages. The miners ask for a wage of \$5.60 a day at all mines included in the North Alberta Coal Operators' Association. The operators are willing to pay \$5 per day, claiming that, owing to the mines that are paying from \$3.80 to \$5 per day competing with them in the sale and output, they are unable to pay \$5.60 per day and, if forced to do so, will have to go out of business or lose money on their operations, and that wages should be adjusted in harmony with the industrial conditions of the locality and the wages therein paid for similar class of work, and that this would not amount to more than \$5 per day.

Our conclusion from all the evidence submitted and the arguments presented to us is:

1. That in all mines included in the Operators' Association there should be standardized rates of wages for all company men, and these rates to be the same as are now paid in the Penn Mine, viz.:

Company work	Per 8 hours
Miner on Company work.....	\$5 00
Brushers and tracklayer.....	5 00
Drivers and Chief Cager.....	5 00
Pushers and Assistant Cagers.....	4 50
Coupler (under 18 years).....	3 50
Assistant Tracklayer.....	4 50
	Per hour
Boys under 18 on surface.....	0 35
Outside labour.....	0 50
Blacksmith.....	0 65

2. That all contract rates in the different mines be continued as they were in the agreement that expired on the 30th day of June, 1924;

3. That for dead work we recommend that bone or clay in excess of six inches in thickness be paid extra, and also cars pushed in excess of three hundred (300) feet be paid extra;

4. No overcrowding of contract miners during busy season.

5. That a man working in a wet place be also paid extra, and we define a wet place as "where water is dripping from the roof in sufficient quantities to wet all a man's clothing, or where the floor is covered to depth of six (6) inches or more.

With these changes, as stated herein, we find that the agreement that expired on the 30th of June, 1924, should be continued.

All of which is respectfully submitted.

(Sgd.) JAMES SMITH,  
*Chairman of the Board.*

(Sgd.) R. G. DRINNAN,  
*Member of the Board.*

(Sgd.) P. J. ROWE,  
*Member of the Board.*

Dated at Edmonton, this eighteenth day of August, 1924.

## STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1924

THE number of strikes and lockouts in Canada in existence at some time or other during the month of August was 16, as compared with 18 in July. The time loss for August was more than in August, 1923, being 228,572 working days as compared with 36,017 working days in the same month in the previous year.

Date	Number of disputes	Number of employees involved	Time loss in working days
August, 1924.....	16	10,469	228,572
July, 1924.....	18	9,438	231,428
August, 1923.....	17	3,035	36,017

Of the 227,161 working days lost during the month, 208,000 were due to one strike, that of 8,000 coal miners in western Canada, which began on April 1st.

Eleven disputes, involving 8,512 workpeople, were carried over from July. Eight of the strikes and lockouts commencing prior to August, and four of the new disputes commencing during August, terminated during the month. At the end of August, therefore, there were on record four disputes; coal miners in Alberta and British Columbia; moulders at Guelph; moving picture projectionists at Hamilton; and boot factory employees at St. Hyacinthe. Of the disputes which commenced during August, one was against alleged violation of agreement, one against reduction in wages, one for an increase in wages, one was an alleged lockout of union employees, and the other was to secure the dismissal of other employees. Two disputes terminated in favour of employers, two in favour of employees, and eight were partially successful.

Information reached the Department during August, too late for insertion in the LABOUR GAZETTE, as to a strike of eight cap makers in Montreal, for recognition of union, increases in wages and certain other changes in working conditions on June 30. Work was resumed on July 4, the employees' demands being conceded. The disputes involving moving picture projectionists at Hamilton, and asbestos workers at Montreal, and the strike of cap makers, noted in this issue as in existence during August, also began during July.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement:

**COAL MINERS IN ALBERTA AND BRITISH COLUMBIA.**—The strike of coal miners, which began on April 1, with the expiry of the agreement between the United Mine Workers of America, District 18, and the Western Coal Operators' Association, remained unsettled. The Federal Minister of Labour called a joint conference of the operators' association with a committee representing the union on August 12 and 13, but the negotiations did not result in a settlement. The Minister stated that he had proposed that the operators and the miners' scale committee should go into separate session to consider a reduction of one-eighth in the wage scale existing as at March 31. One reason for the suggestion was to meet the difference between the hours worked in District 18, 8 hours "from bank to bank," and the hours in the central competitive region in the United States, where 8 hours "at the face" prevails, involving 9 hours' time in the mine on the average. The respective parties went into separate session, as proposed by the minister. After consideration the operators stated that, if the reduction applied to surface employees as well as to underground workers, it would be, for all practical purposes, the same as their proposal of a reduction of \$1.17 per day in the wages paid (before the strike) and that they believed an agreement could be reached on this basis. The miners' committee replied that the proposal was regarded by them as an unjust basis for settlement, and should not be conceded; they also absolutely declined to submit it to a referendum of the miners, basing their position on the committee's mandate at the beginning of the strike, which provided that the men were not to vote on any proposal which contemplated a reduction in wages existing as at March 31 last. This position of the committee was approved at a special convention of the District, called on the demand of the local unions early in September, but the convention gave the committee a free hand in further negotiations. Thereupon the resident officer of the Federal Department of Labour took steps to arrange for another conference.

**CAP MAKERS IN MONTREAL.**—Employees in several establishments, some 200 in number, went on strike July 19, for recognition of the union. Some of the employers proposed a reduction in piece rates of wages. The settlement on August 9 provided for an agreement at increased rates.

**PRINTING COMPOSITORS IN VARIOUS CITIES.**—The strikes of printing compositors in job

printing offices in Halifax, Montreal, Ottawa, Toronto and Winnipeg, for the 44-hour week, which began in the spring and summer of 1921, were called off by the union at the end of August. In the intervening three years, similar strikes had been called off in certain other cities. Strikes for the same objective were in progress in a number of cities in the United States. In calling off the strike, the union stated that the 44-hour week had become the prevailing condition in this section of the printing trade. The number of employees involved in the strikes in Canadian cities at the beginning was 2,451, and, by August, 1924, the number of employees involved was 298, settlements having been made by the union with various employers from time to time. At the beginning, numbers of pressmen and bookbinders were involved in some localities.

MOULDERS, GUELPH, ONT.—The strike of moulders which occurred on June 2, against a reduction in wages, remained unterminated at the end of the month. Information received indicates that some of the men have obtained work elsewhere, that eight men were still on strike at the end of the month, and that the employer had replaced the strikers.

MOVING PICTURE PROJECTIONISTS, HAMILTON, ONT.—Employees in various moving picture theatres who joined a union were dismissed during July, and the dispute has not yet been settled. The employers secured injunctions compelling the union to cease picketing their establishments, with the result that appeals were entered, and the cases were still before the courts at the end of the month.

BOOT AND SHOE FACTORY EMPLOYEES, ST. HYACINTHE, QUE.—On August 18, a number of leather cutters in a boot manufacturing establishment went on strike for the dismissal of certain apprentices and other employees, one of the issues involved in a previous strike.

PAPER MAKERS, JOLIETTE, QUE.—A cessation of work occurred following an announcement of a reduction of 10 per cent in wages by the employer on account of unfavourable trade conditions, to which the employees objected; there was also an objection by the employer

to recognizing a union or employing members of a union. Through the mediation of officers of the Department of Labour, a settlement was reached, providing for the re-opening of the establishment, and a reduction of 10 per cent in wages, with a minimum rate of 25 cents per hour. Both parties agreed that no discrimination would be made between union and non-union employees, and provision was made for a shop committee representing the employees to take up any grievances with the management.

CLOTHING WORKERS, MONTREAL, QUE.—On August 20, 1,700 clothing workers in a number of shops went on strike against infractions of an agreement concluded in January, 1924. Negotiations between the Clothing Contractors' Association and union officials resulted in the former agreeing to be bonded to observe the said agreement, and to appoint members to a joint committee to report on and to promote better sanitary conditions in working places. Between August 22 and 30, a majority of the employees returned to work as settlements with various employers were concluded.

CONSTRUCTION LABOURERS, AYLMEYER, QUE.—On August 19, 75 men employed by a contractor on sewage and waterworks construction went on strike against a reduction in wages from 35 cents to 30 cents per hour. The mayor mediated on behalf of the employees, and, at noon August 21, a number returned to work on the employer's terms. The remainder of the men were re-engaged later, when certain repairs to machinery had been completed.

THEATRE MUSICIANS, OTTAWA, ONT.—On the termination of an agreement at the end of July, the employees demanded an increase of \$2 per week in the rate of wages, which was refused by the various employers. A strike accordingly occurred on August 2, and continued until August 23, the employees returning to work on the terms of the expired agreement. Some of the employees reached a settlement on this basis a week earlier.

## STRIKES AND LOCKOUTS DURING AUGUST, 1924

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and lockouts commencing prior to August, 1924.</b>			
MINING, NON-FERROUS SMELTING AND QUARRYING.— Coal miners, Alberta and British Columbia.....	8,000	208,000	Commenced April 1, against a reduction in wages. Underminated.
MANUFACTURING.— <i>Clothing:—</i> Cap makers, Montreal, Que. . .	200	1,600	Commenced July 19, for recognition of union. Terminated August 9, in favour of employees.
<i>Printing and publishing:—</i> Printing compositors, Halifax, N.S.....	17	442	Commenced May 2, 1921, for shorter hours with same weekly pay. Called off by union, August 30.
Printing compositors, Montreal, Que.....	4	104	Commenced June 14, 1921. Objection of men to perform work that came from shop where strike existed. Called off by union, August 30.
Printing compositors, Montreal, Que.....	76	1,976	Commenced July 1, 1921, to secure increased wages and 44 hour week. Called off by union, August 30.
Printing compositors, Montreal, Que.....	12	312	Commenced September 15, 1922. Employers refused to negotiate new agreement with union. Called off by union, August 30.
Printing compositors, Ottawa, Ont.....	15	390	Commenced June 1, 1921, for increased wages and 44-hour week. Called off by union, August 30.
Printing compositors, Toronto, Ont.....	146	3,796	Commenced June 1, 1921, for increased wages and 44-hour week. Called off by union, August 30.
Printing compositors, Winnipeg, Man.....	28	728	Commenced July 1, 1921. Alleged lockout following refusal of employers to renew agreement. Called off by union, August 30.
<i>Iron, steel and products*:</i> — Moulders, Guelph, Ont.....	8	208	Commenced June 2, against a reduction in wages. Underminated.
SERVICE—RECREATIONAL— Moving picture projectionists, Hamilton, Ont.....	6	156	Commenced during July. Alleged lockout of union employees. Underminated.
<b>(b) Strikes and lockouts commencing during August, 1924.</b>			
MANUFACTURING.— <i>Boots and shoes:—</i> Boot factory employees, St. Hyacinthe, Que.....	50	600	Commenced August 18, to secure the dismissal of other employees. Underminated.
<i>Pulp and paper products:—</i> Paper makers, Joliette, Que... ..	120	780	Commenced August 4. Alleged lockout of union employees. Settled by compromise; work resumed August 12.
<i>Clothing:—</i> Clothing workers, Montreal, Que.....	1,700	9,200	Commenced August 20, against violations of agreement. Gradual resumption of work; majority returned by August 30.
CONSTRUCTION.— <i>Waterworks, etc.:</i> — Labourers, Aylmer, Que.....	75	150	Commenced August 19, against wage reduction. Terminated August 21, on employers' terms.
SERVICE—RECREATIONAL.— Theatre musicians, Ottawa, Ont.	12	130	Commenced August 2, for wage increase. Terminated on August 23, in favour of employers.

\*Reports indicate that strikers have been gradually replaced since the beginning of strike, or that settlements have been reached with individual employers.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND IN JULY, 1924

THE British *Ministry of Labour Gazette* for August contains the following table, which analyses the disputes in progress in July, 1924, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approximate time lost during the month in all disputes in progress. Of the 57 disputes beginning in July, 17 arose out of demands for advances in wages, 16 on other wages questions, 6 on details of working arrangements, 9 on questions of trade union principle, and 9 on other questions. In addition, 38 disputes which began before July were still in progress at the beginning of the month. Settlements were effected in the case of 27 new disputes, directly involving 12,000 workpeople, and 14 old disputes, directly involving 2,000 workpeople. Of these new and old disputes, 11, directly involving 4,000 workpeople, were settled in favour of the workpeople; 14, directly involving 3,000 workpeople, in favour of the employers; and 16, directly involving 7,000 workpeople, were compromised. In the case of 8 disputes directly involving 5,000 workpeople, work was resumed pending negotiations.

Groups of industries	Number of disputes in progress in July			Number of workpeople involved in all disputes in progress in July	Aggregate duration in working days of all disputes in progress in July
	Started before July 1	Started in July	Total		
Mining and quarrying.....	8	16	24	17,000	187,000
Brick, glass, pottery, etc.....	3	5	8	3,000	14,000
Metal, engineering and shipbuilding.	7	17	24	6,000	73,000
Textile.....	2	4	6	1,000	27,000
Building, decorating, etc.....	2	2	4	†	†
Other.....	16	13	29	7,000	49,000
<b>Total, July, 1924.</b>	<b>38</b>	<b>57</b>	<b>95</b>	<b>†</b>	<b>†</b>
<b>Total, June, 1924.</b>	<b>35</b>	<b>57</b>	<b>92</b>	<b>50,000</b>	<b>356,000</b>
<b>Total, July, 1923.</b>	<b>37</b>	<b>37</b>	<b>74</b>	<b>95,000†</b>	<b>1,665,000†</b>

†Particulars were not available as regards the number of workpeople involved in the general dispute in the building industry. It is provisionally estimated that the number of workpeople who went on strike or were locked out or were thrown out of work at establishments where disputes occurred, in consequence of the disputes, in all of the 95 disputes in progress in July was not far from 150,000, and that the aggregate number of working days lost in all disputes during the month was about 2,000,000.

†Two disputes (one involving about 30,000 boilermakers, etc., in Federated shipyards and the other involving about 40,000 dock workers in various ports in England and Wales) accounted for most of the loss of time in July, 1923.

### Use of Statistics in Preventing Unemployment

Economic barometers are now prepared in various countries with a view to forecasting industrial booms and slumps. A recent study of the International Labour Office submitted to the Economic Committee of the League of Nations contains an examination of the methods by which economic fluctuations are regularly observed in certain countries with a view to foreseeing industrial unemployment. The scientific treatment of statistics, for the purpose of assisting in the prediction of future conditions, has been greatest in the United States, but has also developed in Canada, Great Britain, and to a certain extent on the continent of Europe. The severity of economic fluctuations, with resulting periods of acute unemployment, is found to be due in part to lack of adequate foresight.

If the power of forecasting with reasonable accuracy is facilitated, variations in economic prosperity are likely to be less marked. If a period of rising prices is shown to be ending and a fall is probable, then producers will know that they should diminish their output early. Then, when prices fall, the glut on the market will be less than if there had been no warning of an approaching change in prices, and the fall of prices is likely to be less. In consequence the check on production, caused by the fall in prices, will be less severe. The more accurate and complete the information available for making forecasts and the greater the number of people who act in accordance with that information, the steadier will be the course of economic life.

## NATIONAL CONFERENCE REGARDING WINTER EMPLOYMENT IN CANADA

A CONFERENCE was held in the Parliament Buildings, Ottawa, on September 3-4, on the initiative of the Government of Canada, for the consideration of the subject of winter employment in Canada, with particular reference to the coming winter. Attending the conference were representatives of the Federal and Provincial Governments, the principal municipalities, the Canadian Manufacturers' Association, the Association of Canadian Building and Construction Industries, the two transcontinental railways, the Trades and Labour Congress of Canada and important union organizations in the building trades.

This meeting resulted in a free exchange of views among all those in attendance, and in the unanimous adoption of certain resolutions, which it is hoped may lead to the systematic co-operation of all public authorities and others interested in creating and maintaining a reasonable volume of employment during the winter months.

The Honourable James Murdock, Minister of Labour, acted as chairman of the Conference, and associated with him in the representatives of the Dominion Government was the Honourable Dr. J. H. King, Minister of Public Works.

Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, acted as secretary to the Conference.

A complete separate report of the proceedings and recommendations of the Conference has been published by the Department of Labour.

In the Order in Council of June 3,\* authorizing the holding of the Conference it was pointed out in a joint report from the Minister of Labour and the Minister of Public Works that:—

The evil of unemployment has at no time afflicted Canada with the suffering and distress which, particularly, during the post-war years, it has brought on the older communities of Europe.

Climatic conditions in Canada impose industrial changes between season and season, with resulting unemployment in many of the larger centres, particularly during the winter months when out-of-doors industrial activities are largely suspended over considerable portions of the Dominion.

The Ministers have, after careful inquiry and consideration, reached the conclusion that whilst these features of Canadian industrial life may be accepted as on the whole permanent, none the less, by consultation and co-operation between the various public authorities and others deeply concerned in and affected by the conditions in question, much may be done to mitigate these conditions in their severest aspects and greatly to increase the prospect of employment winter and summer alike for all who are willing and able to work.

A certain degree of co-operation as between the federal, provincial and municipal authorities was attempted and effected during the period of acute industrial depression occurring, largely as an aftermath of the Great War, in the winters of 1920-21 and 1921-22. The efforts of those years lessened the sufferings of the time but the means employed can hardly be regarded as adequate to meet the more permanent, if less severe, conditions arising from seasonal fluctuations in industry.

### Delegates

The following is the list of delegates in attendance at the Conference:—

#### *Dominion Government Representatives—*

Hon. James Murdock, Minister of Labour.  
Hon. Dr. J. H. King, Minister of Public Works.

#### *Provincial Government Representatives—*

Hon. Dr. Forbes Godfrey, Minister of Public Health and Labour, Ontario.  
Jas. H. H. Ballantyne (adviser), Deputy Minister of Labour, Ontario.  
Hon. E. H. Armstrong, Premier, Nova Scotia.  
W. B. MacCoy (adviser), Secretary Department of Industries and Immigration, Nova Scotia.  
Hon. W. R. Clubb, Minister of Public Works, Manitoba.  
Mrs. Edith Rogers, M.L.A. (adviser), Representing Government of Manitoba.  
Thos. M. Molloy, Commissioner of Labour and Industries, Regina, Sask., Representing Government of Saskatchewan.  
Louis Guyon, Deputy Minister of Labour, Quebec.  
J. Ainey (adviser), Department of Labour, Montreal, Que.  
J. D. McNiven, Deputy Minister of Labour, Victoria, B.C.  
Hon. R. G. Reid, Provincial Treasurer, Alberta.  
W. Smitten (adviser), Commission of Labour, Edmonton.  
J. S. Martin, M.L.A., Chatham, Representing the Government of New Brunswick.

#### *Municipal Representatives—*

S. J. Farmer, Mayor, Winnipeg, Man.  
W. R. Owen, Mayor, Vancouver, B.C.  
T. W. Jutten, Mayor, Hamilton, Ont.  
W. W. Hiltz, Mayor, Toronto, Ont.  
B. J. Miller (adviser), Alderman, Toronto, Ont.  
Joseph Samson, Mayor, Quebec, P.Q.  
Charles Duquette, Mayor, Montreal, P.Q.

Albert Chevalier, Director of Public Assistance, Montreal, P.Q. (advisor.)

John Murphy, Mayor, Halifax, N.S.

C. J. Tulley, Controller, Ottawa, Ont.

F. L. Potts, Mayor, St. John, N.B.

K. A. Blatchford, Mayor, Edmonton, Alta.

G. H. Webster, Mayor, Calgary, Alta.

Fred Cook, Secretary-Treasurer, Union of Canadian Municipalities, Ottawa, Ont.

*Representing the Canadian Manufacturers' Association—*

J. B. Thomson, Chairman, British Columbia Division, Vancouver, B.C.

J. R. Shaw, Ex-President, Woodstock, Ont.

Paul Joubert, Ex-Chairman, Quebec Division, Montreal, P.Q.

J. E. McLurg, Chairman, Maritime Section, Sydney, N.S.

*Representing the Association of Canadian Building and Construction Industries—*

Joseph M. Pigott, President, Hamilton.

John B. Carswell, Ex-President, Toronto.

K. D. Church, Eastern Vice-President, Montreal.

Harry J. Mero, Representative from the Manufacturing and Supply Section, Windsor.

*Representing Labour—*

Thomas Izzard, Fourth Vice-President of the Bricklayers', Masons' and Plasterers' International Union, Toronto.

Tom Moore, President, Trades and Labour Congress of Canada, Ottawa.

John W. Bruce, General Organizer, United Association of Plumbers and Steamfitters of America, Toronto.

E. Ingles, International Vice-President, International Brotherhood of Electrical Workers, London, Ontario.

Arthur Martel, United Brotherhood of Carpenters and Joiners, Montreal, P.Q.

Joseph P. Hunter, International General Vice-President, Brotherhood of Painters, Decorators and Paperhangers of America, Niagara Falls, Ontario.

A. J. Crawford, Amalgamated Sheet Metal Workers' International Alliance, Toronto, Ontario.

*Representing the Canadian Railways—*

A. F. Hills, Assistant to Vice-President, Canadian National Railways, Montreal, P.Q.

W. M. Neal, Assistant to Vice-President, Canadian Pacific Railway, Montreal, P.Q.

*Representing the Employment Service Council of Canada—*

C. Grant MacNeil, President, Ottawa.

**Proposals of Labour Delegates**

A memorandum containing the following proposals was submitted by Mr. Tom Moore, President of the Trades and Labour Congress of Canada, on behalf of the labour delegates:

1. It is proposed that all Federal, Provincial and Municipal Government work now under construction should be continued with a full complement of employees during the winter months.

2. It is proposed that all Federal and Provincial Government work that has been provided for during the past sessions of Parliaments should be immediately undertaken and continued during the winter months with a full complement of employees.

3. It is proposed that a National Committee be appointed by the Federal Government, with the consent of the Provincial Governments, for the purpose of determining where necessary work can be initiated to best relieve unemployment, and to find ways and means for financing the proposed work, this class of work to be commenced as soon as possible.

4. It is proposed that an eight-hour day should be made effective on all that class of work undertaken by the Federal, Provincial and Municipal Governments, and that the prevailing rates of wages should be paid.

**Memorandum of Canadian Association of Building and Construction Industries**

A memorandum on behalf of the Canadian Association of Building and Construction Industries was submitted by Mr. Joseph M. Pigott, President in the terms following:—

A great deal has been said in the last five years of our "problem" of seasonal employment—meaning that certain of our industries operate at a high peak during the summer and almost cease operating during the winter. The outstanding example is the Building Industry.

An examination of the figures, as presented by MacLeans Daily Reports for contracts awarded, shows to what an extent the general public clings to the idea that if you cannot build in the spring or early summer—then don't build until you can. We see that in 1922 that orders were placed in June totalling \$36,000,000, and that in January they fell to \$9,000,000. Last year orders totalled \$50,000,000 in June and dropped to \$3,000,000 in January.

These figures show quite clearly the public attitude. This association feels, that, largely through the changes in method of construction, of recent years—*this attitude is not justified*, and further—we have a duty to perform in the interest of national progress—in doing all that is in our power to correct this condition.

The crowding of the market in June, and the neglect of it in January, is one of the most important causes for high costs in construction. The summer congestion means high cost not only for summer but for the whole year. It is the scarcity of men at that time which dictates our relations with labour both as to working conditions and rates of wages: It is the short abnormal market which affects our material prices. Contrast the excitement of the summer months of an average building season with its scarcity of workmen, its material and supply houses vainly trying to keep everyone satisfied with deliveries, with the unemployment of the winter and the idle plants and

material yards with overhead charges piling against them higher every day. *What a burden summer construction, yes, all construction carries on account of this.*

If then it can be shown as fact that the prejudice against fall and winter work is not properly founded—it becomes an urgent duty on the part of all of us who have a knowledge of these things to correct this condition as quickly as possible.

Without going into too many details let me point out a few features of the question as they appeal to me. In the first place the actual winter period is a matter of but 8 to 10 weeks duration—the last week in December, the months of January and February. In the second place there are only certain parts of the work of constructing a building that are affected, namely—mass concrete, reinforced concrete, form work for concrete, brick, tile, and other materials laid in mortar.

These two features alone confine our problem to narrow limits, which if only properly understood would change the attitude entirely of the layman interested directly or indirectly in building undertakings.

But further than that, we claim that modern methods which make for such fast building operations have practically eliminated the dangers of construction in this 8 or 10-week period. There are many who contend that we have not yet overcome the difficulties of reinforced concrete construction in low temperatures. Admitting for argument's sake that there is a risk there, and for the same purpose admitting that additional cost is there—*why need this work be done at this time?* Certainly it is no reason why April, May and June are overloaded in the way they are.

Will anyone claim that, under modern approved methods, there is any danger or additional cost to a building once closed in during this period? With such methods the exposure to cold of the particular kinds of work referred to for this short period is unnecessary and almost 100 per cent controllable. My own company erected the reinforced concrete structural portion of a six-storey building 120 ft. by 120 ft. in 3½ working days. Other companies are doing the same thing. In buildings that take anywhere from six months to a year to complete it is unreasonable to claim that the contractor now controls this factor?

But, we are not going to admit that even those 8 or 10 weeks present any insurmountable difficulty. We do not contend that it is just as safe in the winter period as any other time, for it certainly requires more attention and undoubtedly as certain points causes additional expense. That is why we say—do this particular part of the work at the proper time. But in the odd instance where it has been done and undoubtedly will be done with greater and greater frequency—a study of the results does not support the high cost objection. In Ontario, at any rate, and during the past two years in particular, judging from my own experience, winter costs in concrete and form work do not suffer by comparison with our best summer costs. We are prepared to present the cost data to support this. However, we have colder provinces than Ontario, and we have had colder winters than the last two, so in the matter only of exposed reinforced concrete construction we say—do this at the proper time—it is a very small part of the problem. Of all the balance of the exposed work, brick, framing, formwork, I have cost data which is actually in favour of winter work—and for the inside work the protected work—there can be no argument about that.

There is probably a good deal to be said in favour of launching house construction in the spring and early summer. In this class of work it is usually the objective to have everything finished and ready for occupancy before cold weather. A great deal of what I have said applies only to larger undertakings. There

is no particular reason why the housing portion of our building programme should be changed, and a good deal is to be said in favour of the present custom. Housing, however, represents only one-third of our building. If May and June were given over to housing, and September and October to public buildings and construction of buildings of the larger type, say from \$50,000 up—what a change there would be in that curve! What a reasonable, logical thing to do—and yet how hard it is and will be to bring it about.

It is of course very easy for a contractor who has made any study of this matter to set facts as he has found them before a very limited number of people. It appears to me, however, that this might be done for years without any definite progress being made. It is possible that a proper investigation made by your Government, assuming that its findings agree with our contentions, followed by proper publicity would have the desired effect. Furthermore—again assuming that we are right—governing bodies of all kinds would then be justified in taking the initiative—by launching their building programmes in the fall.

In any steps that this conference sees fit to take to set about changing the prevailing customs of this country in respect to the building season, you may depend upon the enthusiastic support of this association.

### Chairman's Address

Honourable James Murdock, Minister of Labour, in a brief introductory address said:—

The object in view in convening the present Conference was set out in the letter of invitation of May 31, which was addressed to the public authorities and others concerned, namely, that in the opinion of the Dominion Government 'the time has arrived when all public authorities as well as those persons most intimately involved, whether as employers or workmen, in the problem of unemployment, should come together in conference for the purpose of endeavouring to devise a certain regularization of industrial employment, having regard particularly to building and other out-of-door work during the winter season.' The Dominion Government, he continued, had made inquiry to ascertain what Federal public works might be undertaken during the coming winter to guard against the occurrence of unemployment with its attendant distress and loss. He hoped that the other authorities represented at the Conference had come prepared to indicate the amount of winter work that they were respectively in a position to undertake. Canadian climatic conditions encouraged the execution of out-of-doors work in general in summer rather than in the winter months, but the feasibility of continuance during winter of certain classes of constructional operations had already been established, and it was recognized that building and construction in Canada could be undertaken in winter with but slightly increased cost. The Minister further observed that the only satisfactory remedy for unemployment was employment, work being preferable to cash relief both from the workers' and the com-

munity point of view. As most of the work in Canada was connected with private business undertakings, the responsibility under normal conditions for regular employment must fall in the main upon private employers. Nevertheless, Governments and other authorities connected with public activities were also concerned; for not only did governments and municipalities desire to avoid the distress incident to irregularity of work among their own employees, but it was to the public authorities that the unemployed of all classes looked for relief in periods of industrial and commercial depression.

**Views of Delegates**

The representatives of the Canadian Manufacturers' Association did not submit a memorandum, but the delegates of the organization discussed in brief addresses the present position of the manufacturing industries in Canada.

Dr. S. J. McLean, acting Chairman of the Board of Railway Commissioners of Canada, on the invitation of the Chairman, addressed the Conference regarding the railway grade crossing fund administered by the Board, from which fund grants are made towards the elimination of railway grade crossings and other means of avoiding the dangers connected therewith.

Messrs. W. M. Neil and A. J. Hills, assistants to vice-presidents of the Canadian Pacific Railway Company and the Canadian National Railways respectively, spoke of the special attention the subject of winter work was receiving at the hands of both these systems.

The provincial and municipal representatives in attendance at the Conference spoke of the employment condition in their respective areas. There was general agreement on their part as to the desirability of utilizing public works as far as possible to provide for any unemployment which might otherwise exist.

**Position of the Dominion Government**

The Minister of Labour read a statement to the Conference regarding the position of the Federal Government in relation to unemployment relief. This position was, he said, set out in a telegram dated December 22, 1922, which had been addressed by him to the Premiers of Manitoba and British Columbia, respectively. In this message it was stated that neither the present Government, nor, so far as could be gathered from the records on file, the late administration, had at any time contemplated that the Federal assistance which was granted to municipalities and in some cases to provinces on account of unorganized districts during the previous two years, should be regarded as a precedent for Federal par-

ticipation in the responsibilities of the municipal and provincial authorities, save under conditions comparable to those existing during the winters of 1920-21 and 1921-22, when, over the larger part of the Dominion, unemployment existed on a wholly unprecedented scale. The situation existing throughout Canada at the close of 1922 was not regarded by the Federal Government as one which justified action on their part in "assuming at present any portion of the obligations falling customarily to the municipal and provincial authorities".

From the time of Confederation down, relief of any existing distress was attended to by the local authorities. The British North America Act, indeed, provided that matters of property and civil rights were within the exclusive powers of the provincial legislatures. Apart from the foregoing, paragraph 7 of Section 92 of the British North America Act included among the subjects of exclusive provincial legislative jurisdiction, the establishment, maintenance, and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals.

In certain quarters, the Minister continued, it had been contended that the Dominion Government should contribute towards unemployment relief on the ground that the present conditions have grown out of Canada's part in the European War. Those who urged this view overlooked, however, the financial burdens which are being borne by the Dominion growing out of the war. If, indeed, the matter were one of other financial assistance, the participation of the Dominion Government in unemployment relief might be regarded as interference with provincial rights. Apart from the question of principle involved, the local authorities were in the best position to ascertain the facts in relation to any unemployment existing locally and were also in the best position to administer the requisite relief.

**Resolutions of the Conference**

The views of the Conference, following a comprehensive survey of the whole situation, were embodied in the following resolutions which were adopted unanimously:—

This Conference, having heard views of representatives of all the various bodies called together for the purpose of considering ways and means of dealing with the unemployment situation, desires to place itself on record in the following recommendations:—

The unanimous opinion of the Conference is that assistance in the form of money or doles should not be entertained but that work of some description be encouraged in every

locality, with special consideration to be given to work of a permanent nature such as building, construction, etc.

From representations made it is the judgment of this Conference that certain classes of work, which in the past have been discouraged during the winter season, can with perfect safety and economy be undertaken throughout this country.

We recommend:—

That all Federal, Provincial and Municipal Government work now under construction should be continued with a full complement of employees during the winter months.

That all Federal and Provincial Government work that has been provided for during the past session of the different Parliaments, should be immediately undertaken and continued during the winter months with a full complement of employees.

That inasmuch as the Federal Government has during the past few years had in contemplation the construction of certain public buildings, for which plans and specifications are already in hand, that we recommend that they be asked to call for tenders at once on such of this work as can be proceeded with.

Further, that the greater the number of hours worked per day on all work undertaken the smaller will be the number engaged, and inversely, the shorter the hours the greater the number who will be provided with some earnings to tide them over the period of scarcity of employment and it is recommended that this policy be adopted.

That a National Committee be appointed consisting of representatives of Federal and Provincial Governments, for the purpose of determining where necessary work can be initiated to best relieve unemployment, and to find ways and means for financing the proposed work, this class of work to be commenced as soon as possible.

---

The *Canadian Co-operator* remarks that economic co-operation has made greater progress in Saskatchewan than in any other province of Canada. "Saskatchewan has demonstrated that co-operative distribution can be extensively practised with success in this country as elsewhere, but both there and throughout the country there is a great need of co-operative education of the people."

#### EMERGENCY RELIEF

The Conference is satisfied from representations placed before it that in certain provinces a considerable amount of unemployment at present exists, and that we must anticipate its being materially aggravated during the winter months.

Under these circumstances we feel that some definite understanding should be had between the various bodies concerned as to the lines along which such a condition should be handled.

The Conference desires, therefore, to recommend that where after full and careful investigation emergency relief is found to be necessary, that such relief should be extended. The expense involved to be borne by the Federal, Provincial and Municipal authorities involved, on the basis of 50 per cent by the Municipality, the balance of 50 per cent to be taken care of equally by the Federal and Provincial Governments concerned.

#### EMPLOYMENT SERVICE COUNCILS

After hearing representations respecting the work carried on by the Committees appointed under the Employment Offices Co-ordination Act we feel justified in recommending to the Federal Government that these Advisory Councils be properly constituted and their activities be placed on a working basis and continued during the coming winter.

#### IMMIGRATION POLICY

The existing conditions are being aggravated by the present policy of bringing immigrants to this country who are drifting to our industrial centres as casual labourers, without possibility of employment. Immediate action being necessary to correct this condition, we urge upon the Federal and Provincial Governments that all such immigration shall be immediately regulated until it is proved that there is a reasonable demand for labour and that it is possible of being absorbed.

---

The number of assisted passages to Canada granted during July, 1924, in connection with schemes under the Empire Settlement Act (Great Britain) of 1922, was 833. In the same month 1,882 assisted passages to Australia were granted, and 927 to New Zealand. The total number of actual departures from Great Britain to Canada from January to July, 1924, was 6,673.

## EMPLOYMENT SERVICE COUNCIL OF CANADA

THE sixth annual meeting of the Employment Service Council of Canada was held in the Parliament Buildings, Ottawa, on September 2nd and 5th under the chairmanship of Mr. C. Grant MacNeil. The Council is formed "to assist in the administration of the Employment Offices Co-ordination Act and to recommend ways of preventing unemployment," and to act in an advisory capacity to the Minister of Labour in respect of these matters. The following members of the Council were in attendance:—

Joseph Ainey, General Superintendent of Quebec Employment Offices, representing the Province of Quebec.

James H. H. Ballantyne, Deputy Minister of Labour, representing the Province of Ontario.

T. M. Molloy, Commissioner of Labour and Industries, representing the Province of Saskatchewan.

W. Smitten, Commissioner of Labour, representing the Province of Alberta.

J. D. McNiven, Deputy Minister of Labour, representing the Province of British Columbia.

J. T. Foster and A. J. Crawford, representing the Trades and Labour Congress of Canada.

E. Blake Robertson and H. W. Macdonnell, representing the Canadian Manufacturers' Association.

J. W. Ward, Winnipeg, and W. A. Amos, Palmerston, Ont., representing the Canadian Council of Agriculture, the latter substituting for J. J. Morrison who was unable to be present.

S. N. Berry, representing the Railway Brotherhoods.

C. Grant MacNeil, representing the returned soldiers' organizations.

Major A. M. Wright, substituting for Major E. Flexman, Director of Administration, representing the Department of Soldiers' Civil Re-establishment, and

Mrs. R. R. Jamieson, Calgary, Miss Jane Barclay, Toronto, and Mr. R. A. Rigg, Director, Employment Service of Canada, representing the Federal Department of Labour.

Hon. James Murdock, Minister of Labour, attended one of the sessions of the Council and expressed his appreciation of the assistance

rendered to him through its deliberations and recommendations. The Council was also favoured with the attendance of Mr. A. L. Jolliffe, Commissioner of Immigration and Colonization, while certain matters affecting immigration were under discussion.

In addition to receiving the minutes of the last annual meeting and of various executive meetings, the Council discussed the following questions:—

The Employment Service transportation rate;

Private employment agencies;  
Harvest labour;

Placement work for handicapped ex-soldiers;  
Federal appropriation for Employment Service work;

Relation of employment offices to the unemployed in respect to relief;

Admission of labour from other countries;  
Organization of the Employment Service Council of Canada.

The views of the Council concerning the various subjects will be submitted to the Minister of Labour at an early date by the Council Executive.

At the invitation of the Minister of Labour the members of Council attended the conference held in the Parliament Buildings on September 3 and 4, to consider the subject of providing work during the coming winter by means of building and construction work. The invitation was accepted by the members of Council, the privilege of attending being greatly appreciated by them.

The following officers for the ensuing year were elected:—

Chairman—J. T. Foster, Vice-President  
Trades and Labour Congress of Canada.

Vice-Chairman—James H. H. Ballantyne,  
Deputy Minister of Labour of Ontario.

Secretary—R. A. Rigg, Director, Employment Branch, Department of Labour.

In accordance with the terms of the constitution of the Council the balance of the Executive will be composed of one representative from the Canadian Manufacturers' Association, Trades and Labour Congress of Canada and the Canadian Council of Agriculture, the selections to be made from among the Council representatives of these organizations.

## LABOUR CONDITIONS IN BRITISH COLUMBIA IN 1923

### Annual Report of Provincial Department of Labour

THE annual report of the Department of Labour of British Columbia presents full information in a concise form regarding labour conditions in the Province during 1923. Tables containing statistics of the payrolls of the various industries are a valuable feature of the report, the average wages being shown for each industry, with the number of workers employed at each wage level, the average working hours, and other information. An outline of new legislation during the year is also included (the Labour enactments at the recent session were outlined in the January issue of this GAZETTE).

The Department's report for 1922 had forecasted an improvement in industrial conditions during the following year, an anticipation that was realized, as appears from the following summary of conditions during the past year:—

The year 1923 was a very favourable period for those dependent upon the industries of this Province. Labour disputes were few in number, and though there was a big strike on the water-front of our Coast cities in the latter part of the year, which involved a considerable displacement of labour, it did not bring about any reduction in the pay-roll of the province. Dealing generally with all industries, a careful estimate shows that the pay-roll for the year exceeded that of the previous year by at least \$20,000,000. Most of the industrial groups afforded an average increase in the wages of employees. In addition to these evidences of progress, we have the undoubted fact that unemployment was far less serious in extent than in the past two or three years. At certain periods of the year there were indications of an actual shortage of labour, while in the winter months, when some slackening off may be looked for in our important seasonal industries, the number of persons out of work was noticeably less than in the average winter. One result of this was that cases where assistance was needed were dealt with through the normal channels by the municipalities, there being no acute unemployment crisis such as in previous years had led to measures of relief being taken by the Governments of the Province and the Dominion.

In connection with the longshoremen's strike toward the end of the year, which is referred to in the foregoing paragraph, the report mentions that a representative of the Dominion Government co-operated with the Provincial department in working toward a settlement. (This dispute and its settlement were noted in the issues of the LABOUR GAZETTE of November, December and January last. It was finally settled with the help of the mediation of the Dominion Fair Wages Officer at Vancouver.)

The Department was active during the year in enforcing the requirements of the semi-monthly Payment of Wages Act (Statutes of 1917, chapter 73). Further co-operation on the part of the workers themselves in reporting infractions of this law is desired before it can be rendered fully effective.

The statistics of the trades and industries are based upon returns received from 3,375 employers of labour, a large increase in the number replying to the questionnaire sent out yearly by the Department. The total amount paid by these firms during the calendar year in salaries and wages was \$106,796,959, of which amount \$89,630,116 represents wages, \$8,329,069 was paid in salaries to clerks, salesmen, etc., and \$8,837,773 to officers, superintendents and managers. These totals, however, do not represent the Province's total industrial payroll, which is estimated at about \$145,000,000. The latter estimate adds several classes of labour to those included in the returns (e.g. butchering, cartage and teaming, coal and wood yards, janitors, warehouses, wholesalers, etc.) as well as employees on the transcontinental railways in the Province, and Dominion and Provincial Government employees.

The number of employees covered by the returns is shown by months in the accompanying table. Seasonal fluctuations in employment have been less marked during the past two years than formerly, winter stoppages of work having been shortened:—

AVERAGE NUMBER OF WAGE-EARNERS

During the month of	Males	Females
January.....	55,335	3,429
February.....	56,848	3,497
March.....	61,382	3,601
April.....	64,436	3,707
May.....	68,006	3,786
June.....	70,630	4,293
July.....	17,150	4,753
August.....	71,274	4,849
September.....	69,149	5,034
October.....	68,158	4,829
November.....	66,050	4,231
December.....	60,668	3,910

The lumbering group showed the highest rate of increase in activity during the year. This industry accounts for nearly one-third of the Province's industrial payroll. The increase is explained by the progressive advance in exports for several years, stimulated last year by the demand created by the earthquake in Japan. A good feature of the gains in lumbering is that they were fairly uniform in the logging and in the manufacturing branches, indicating that the greatly increased cut of logs was largely absorbed by the mills of the Province and was not exported to be manufactured.

A comparative statement of payrolls for the past two years is given in the accompanying table for some of the principal industries:—

Industry	1922		1923		Average full week's Wage in each industry (Adult males only)
	No. of firms reporting	Total Pay-roll	No. of firms reporting	Total Pay-roll	
		\$		\$	\$
Builders' materials.....	53	1,274,969	55	1,192,472	26.83
Coal-mining.....	18	9,470,552	20	9,460,416	36.96
Coast shipping.....	80	4,068,736	102	5,079,427	28.36
Contracting.....	716	9,783,517	797	11,000,574	28.31
Food products.....	255	6,584,845	309	7,141,381	25.61
Garment-making.....	55	765,693	70	753,115	29.85
Laundries, cleaning and dyeing.....	51	1,022,161	61	1,117,436	25.07
Lumber industries.....	667	23,827,205	922	35,268,880	25.92
Metal trades.....	333	3,634,163	378	3,970,988	28.04
Metal-mining.....	126	3,700,008	161	6,173,426	32.21
Printing and publishing.....	89	2,375,804	99	2,690,755	38.09
Pulp and paper mills.....	9	2,639,681	11	4,819,792	27.90
Ship-building.....	31	946,531	30	1,176,506	25.88
Smelting.....	3	2,932,768	4	3,782,254	34.16
Street-railways, etc.....	62	7,048,967	73	7,406,183	29.42
Manufacturing wood (n.e.s.).....	51	1,045,915	56	1,478,536	23.33

The average weekly wage for all adult male wage-earners for the years 1918 to 1923, is estimated as follows: 1918, \$27.97; 1919, \$29.11; 1920, \$31.51; 1921, 27.62; 1922, \$27.29; 1923, \$28.05. The main feature of the movement of wages in 1923 was the advance in pay of workers receiving less than \$20 a week. A summarized table shows the weekly wage rates of employees by groups:—

CLASSIFIED WEEKLY WAGE-RATES (WAGE-EARNERS ONLY)

For week of employment of greatest number	Males		Females		Apprentices
	18 years and over	Under 18 years	18 years and over	Under 18 years	
Under \$6.00.....	23	35	15	22	65
\$ 6.00 to \$ 6.99..	20	61	8	10	32
7.00 to 7.99..	25	65	11	5	39

50.00 and over.....	3,278	.....	.....	.....	.....
Totals.....	88,139	1,309	5,178	514	891

The average working week in the industries of the province during the year was 51.46 hours. The workers included in this calculation numbered 90,696, of whom 16,498 worked less than 48 hours weekly, 30,980 worked 48 hours, and 43,218 worked more than 48 hours weekly. This last number included 3,546 workers in metal mining, who work from over 48 and up to 56 hours under an 8-hour law which permits of work being carried on 7 days in the week. Smelting is a continuous process, the normal period of work being 8 hours daily in a 7-day week. These workers are not affected by the "Hours of Work Act," of 1924, nor are those engaged in coast shipping or in dairying. In the latter two classes 1,690 and 237 respectively work over 48 hours each week.

Of the total number of employees 34.55 per cent were native Canadians, and 30.29 were from the British Isles, natives of English-speaking countries forming 69.61 per cent of the total. The Asiatic races supplied 13.85 of the workers, as compared with 14.61 per cent in 1922. The majority of the orientals employed in industry are engaged in the lumbering industry, being 22.34 per cent of the workers of this class in the province.

The French Minister of Labour recently introduced a bill in the Chamber of Deputies for the ratification of the Washington Draft Convention limiting the hours of work in industrial undertakings to 8 in the day or 48 in the week.

## THE MINING INDUSTRY OF BRITISH COLUMBIA

THE annual report of the British Columbia Bureau of Mines, an illustrated volume of over 400 pages, contains a full account of mining conditions throughout the province, with details regarding the individual mines in the six mining districts into which the province is divided. The report shows that the mineral production of the province reached a higher level in 1923 than in any previous year of normal conditions. The value of all products during the year was \$41,304,320, an increase of 17.5 per cent over 1922. This figure was only slightly exceeded in 1916 and 1918, when production was stimulated by the demand for war materials and by the high prices offered for metals.

From the point of view of labour perhaps the most important section of the report is that dealing with the mining of coal. Coal was formerly the most valuable mineral produced, but metalliferous mining now leads in the total value of its products. Lode-mining

of gold, silver, copper, lead and zinc began as late as 1894, but has since risen with great rapidity to its maximum of \$31,483,014 in 1916, and of \$25,347,062 in 1923. The aggregate of the values of the colliery products of the province in 1923 was \$12,678,548 and the gross value of the metalliferous products was \$25,676,062. So far there has been no metallic iron produced in the province, but it is anticipated that a smelting plant may soon be started as a sufficient supply of magnetite iron ore exists in the coast to justify such an undertaking. The output during 1923 of structural materials, such as cement, lime, building stone, sand and gravel, brick and other clay products, was more than in the preceding year, being \$2,809,292 as against \$2,533,926.

The relative importance of the various branches of the mining industry in the province is shown in the following table:—

	1921		1922		1923	
	Quantity	Value	Quantity	Value	Quantity	Value
		\$		\$		\$
Gold placer..... oz.	11,600	233,200	18,240	364,800	20,320	420,000

		28,066,641		35,158,843		41,304,320

*Metalliferous Mines.*—The output from the metalliferous mines was 2,421,839 tons, being an increase of 848,653 tons over the tonnage for 1922. This tonnage was produced from seventy-seven shipping mines of which twenty-eight shipped over 100 tons. There were also thirty-five working non-shipping mines and eighty-five idle mines. There were 3,618 persons employed in and around the metalliferous mines, an increase of 1,508 persons compared with the figures for 1922. Of these, 3,373 were employed by the mines which shipped ore and 245 by the non-shipping mines. There were 2,102 persons employed below ground and 1,516 above ground at these mines. It is

stated, however, that the returns of the non-shipping mines are necessarily incomplete, as they include only the mines reporting to the Department, and not the prospects and properties under preliminary development, which in the aggregate gave employment to a large number of men.

*Coal Mines.*—The total gross tonnage produced by the coal mines of the province for the year was 2,542,987 tons (2,240 pounds) but of this amount 89,764 tons was used in the manufacture of coke. There were 6,149 men employed in and around the coal mines, as shown in the accompanying table:—

EMPLOYEES IN COAL MINES IN 1923

Helpers.....	99	.....	99
Labourers.....	67	297	364
Total men employed.....	4,342	1,807	6,149

Accidents

There were twelve fatal accidents in and around the metalliferous mines during the year, causing the death of twelve persons, an increase of six in the number of fatalities compared with the figures for 1922. The ratio of fatalities per 1,000 persons employed was 3.03, compared with 2.84 for the previous year. The ratio for the last ten-year period was 2.936. The tonnage mined per fatal accident was 201,811 tons in 1923 and 262,197 tons in 1922. Four deaths were due to falling down raises and stopes, two to mine cars and haulage, and two to powder explosion and blasting, one to electrocution when struck by trolley line, and one to a fall down a shaft.

The fatalities in and around the collieries during the year totalled 45 as a result of twelve accidents. In the previous year there were 31 fatalities. The ratio of accidents per 1,000 persons employed was 7.32, compared with 4.66 in 1922 and 1.45 in 1921. The average ratio for the last ten years was 4.66. The number of tons of coal mined per fatal accident during 1923 was 56,511, compared with 83,255 tons in 1922 and 85,921 tons for the last ten years. Thirty-three deaths were due to explosions, seven to falls of rock, four to mine cars and haulage and one through a screen at surface.

Considerable interest was manifested during the year in mine-rescue and first-aid work. There were twenty-seven certificates of competency in mine-rescue work issued by the Department of Mines—one at Fernie station, three at Cumberland station, and twenty-three at the Nanaimo station. Testing was carried out at the various stations of a small apparatus known as the "Self Rescuer" which, the manufacturers claim, will give seventy minutes' protection in an atmosphere containing one per cent of carbon monoxide. From tests conducted under the supervision of the United States Bureau of Mines, men wearing this apparatus were able to stay in an atmosphere containing 1.05 per cent carbon monoxide for a period of seventy-five minutes. Rules concerning the use of rock-drills, removal of gas, and fencing off places were put into force, pursuant to the provisions of the "Coal-mines Regulation Act," and during the session of the Legislative Assembly an Act to amend the "Coal-mines Regulation Act" (chapter 47) was passed, which provides for the reporting of dangerous occurrences, whether personal injury or disablement is caused or not, and for increasing the penalties for violation of the Act. (See LABOUR GAZETTE, January, 1924, page 26). There were twenty-two prosecutions under the "Coal-mines Regulation Act."

During the year thirteen coal companies operated sixteen collieries, with thirty-seven mines. In the supervision of underground employees there were twenty-one managers, three safety engineers, thirty overmen, and 187 firebosses and shotlighters, a total of 241 officials, or one official for every eighteen persons employed underground.

The number of tons of coal mined per employee in 1923 was 413 and per underground employee 585; the corresponding figures for 1922 being 388 and 547 tons respectively. During the year mining machines produced 125,258 tons of coal, or 4.92 per cent of the total production. The number of tons of coal mined per pound of explosive used was 4.65. Particulars with regard to the average daily wages paid in certain districts are also contained in the report.

Two examinations for candidates for certificates of competency were held during the year under the Board of Examiners for Coal-Mine Officials. The total number of candidates at these examinations was as follows: For first-class certificates, 10 (none passed); for second-class certificates, 6 (4 passed and 2 failed); for third-class certificates, 25 (15 passed and 10 failed); for mine surveyor certificates, 4 (3 passed and 1 failed). In addition to these examinations there were sixty-one examinations for candidates for certificates of competency as coal miners and 426 certificates issued, it being required that every coal miner shall be the holder of a certificate of competency as such, the term miner being defined as "a person employed underground in any coal-mine to cut, shear, break, or loosen coal from the solid, whether by hand or machinery."

## MOTHERS' ALLOWANCES IN ALBERTA IN 1923

THE Superintendent of Neglected Children of the province of Alberta has issued the fifteenth annual report of the Neglected Children's Branch of the Attorney-General's Department, covering the operations of the year 1923. The duties of this official have, since 1919, included responsibility in connection with the administration of the Mothers' Allowance Act. The other acts coming under his supervision at the present time are the Children's Protection Act, the Juvenile Courts Act, and the Dominion Delinquents Act. Under the provisions of the Mothers' Allowance Act of Alberta, the Superintendent acts as a connecting link between the provincial government and the municipal authorities, having authority to check all the recommendations made by municipal inspectors for the granting or suspension of allowances.

Since the Act was passed in 1919 the number of mothers provided for under the Act has steadily increased, those in receipt of allowances having been 245 in 1919, 477 in 1920, 562 in 1921, 721 in 1922 and 758 in 1923. At the end of last year, however, the number of beneficiaries began to fall, being 595 during December as compared with 619 in the same month in the previous year. The beginning of 1923 showed the high-water mark in the number of mothers on the waiting list for assistance. In this connection it may be recalled that in Alberta, as in other provinces, the amount paid to mothers under the Act is limited by the amount of money appropriated by the legislature each year for this purpose. The Department sends to each municipality concerned a quarterly statement of the amounts paid in respect to each case, the municipality being liable to the province for half the amount so paid. At the beginning of 1923 the annual appropriation from the province was reduced from \$300,000 to \$250,000. This reduction came when, as stated above, the requirements of administration were at their highest point, and when an additional \$1,800 a month over the previous year could have been expended upon the relief of necessitous families. The report states that the reduction in outlay was accomplished with a minimum amount of complaint, and the year 1923 actually ended with a balance to the credit of the fund. The Superintendent hopes to keep with in the limit of the 1924 appropriation, but, as he points out, conditions may arise this year that may curtail the ability of mothers on the poverty line in the province to provide for their families.

The reduction of outlay last year was made possible by discontinuing "one child" cases

(the Acts of the four western provinces permit payment of allowances to mothers, etc., where there is only one child in the family). The Superintendent reports that the appointment of municipal inspectors has proved a decided success, as these officials prevent endless controversies which formerly arose between the province and the cities and towns as to the merits of particular cases.

Of the 594 mothers receiving allowances at the end of December, 1923, 570 were widows, while in 24 cases the husband was detained in a hospital for mental diseases. The total amount expended by the Provincial Government on allowances in 1923 was \$242,686, of which \$125,786 was refunded by the various municipalities. In 1922, \$246,750 was expended, and \$103,208 returned. The cost of administration was reduced from \$5,493 in 1922 to \$2,616 in 1923, the reduction being partly attributed to the work of the local municipal inspectors in co-operating with the Superintendent. During 1923 164 allowances were discontinued for the following reasons: improved circumstances, 54 cases; left the province, 18 cases; one child only, 31 cases; re-married, 31 cases; husband released from asylum, 1 case; immorality of mother, 3 cases; mother died, 9 cases. The number of children benefitting by allowances in December, 1923, was 1887, and the total amount paid in relief during the same month was \$20,476.

A code of lighting for factories, mills and other work places has been recently issued by the Bureau of Labour Statistics of the United States Department of Labour. It is pointed out that insufficient and improperly applied illumination is a prolific cause of industrial accidents. According to a prominent authority on insurance, "there is some foundation for assuming that 18 per cent of our industrial accidents are due to defects in lighting installations. That this condition could exist year after year is all the more reprehensible because of the fact that the remedy is so easily applied." Another Bulletin in the "Safety Code," series gives rules for the protection of industrial workers in foundries. The latter code is sponsored by the National Founders' Association, the American Foundrymen's Association, and is approved by the American Standards Committee.

## MINIMUM WAGES FOR FEMALE WORKERS IN ONTARIO Order Governing the Rubber and Tobacco Trades.

THE Minimum Wage Board of Ontario announces that the same regulations as those contained in the previous order Number 30, governing the electrical trades, are on October 1 to be enforced in respect to the wages paid to female employees in the rubber

and tobacco trades in the province. Particulars of the order governing the electrical trades were given in the January issue of the LABOUR GAZETTE (page 36). The minimum rates of wages are shown in the accompanying table:—

Population groups	Experienced adults (over 18 yrs)	Inexperienced adults (over 18 years)	Young girls (under 18 years)
	\$	\$	\$
Toronto.....	12 50	6 months at 10 00 " 11 00	6 months at 8 00 " 9 00 " 10 00
Cities of 30,000 population or over.....	11 50	6 months at 9 50 " 10 50	6 months at 8 00 " 9 00 " 10 00
Cities and towns between 5,000 and 30,000 population	11 00	6 months at 9 00 " 10 00	6 months at 7 00 " 8 50 " 10 00
All below 5,000 population and rural parts.....	10 00	6 months at 9 00 " 10 00	6 months at 6 00 " 7 50 " 9 00

The rules in respect to inexperienced adults, piece-workers, deductions for absence, payment for time spent in waiting, handicapped

workers, etc., were stated in the January issue in connection with the order governing the electrical trades.

## MINIMUM WAGES FOR WOMEN IN BRITISH COLUMBIA IN 1923

THE sixth annual report of the Minimum Wage Board of British Columbia forms part of the Annual Report of the Department of Labour of the Province which is reviewed elsewhere in the present issue. The number of the employees protected by orders of the Board in 1923 was 9,612 experienced and 1,251 inexperienced workers, as compared with 8,989, and 1,242 respectively in the previous years. It should be noted that domestic servants, fruit pickers, and farm labourers are not at present within the scope of the Minimum Wage Act. The general average of wages actually paid during the year to experienced workers was \$17.14, the highest rate since 1920, when wages were at their peak. The average for inexperienced workers suffered a slight decline, from \$10.10 to \$10, but the percentage of young employees in comparison with the total staffs also dropped to 11.52 this being the lowest percentage since these statistics were first compiled. The Act, it is noted, permits the employment of inexperienced workers in the proportion of 35 per cent of the total working force. Very little change is revealed

in the average working hours in the various industries covered by the Board's orders.

An interesting table shows the labour "turn-over" in each group. The record for office workers shows more continuous service than other groups, and wages are also higher for this class of work. The employees have had considerable preliminary training, and promotion acts as an inducement to remain with their employers.

An important event of the year was the conference held during the summer on the manufacturing industry. Availing themselves of a provision of the Act the employers in the manufacturing group petitioned for a reconsideration of the existing order fixing the minimum wage rate at \$14, and asked that the rate should be reduced to \$12.50. The manufacturers alleged that most of their employees were not self-supporting, but lived with their parents, and were not under such heavy expenses as workers in centers like Toronto, where many girls employed in factories come from homes outside the city. They favoured moreover the grading

of minimum rates by districts in accordance with population, as in Ontario. The employers further asked, in regard to hours of labour, that the Factory Inspector should be given discretionary power to allow a longer period than 52 hours a week in exceptional cases, while in regard to apprentices, they asked that all learners, irrespective of their age, should be placed upon an equal footing, that the learning periods be placed at 6, 12, and 18 months, and that the rates for these learning periods should be fixed respectively at \$7, \$8.50 and \$10.50 weekly.

After a full public discussion the Board decided unanimously to retain the \$14 weekly maximum for a working period of 48 hours for experienced workers in the manufacturing group, and to leave the adjustment of the learners' wages to the Board. (The rates that were finally decided upon were given in the LABOUR GAZETTE for August, 1923, page 822) The distinction between apprentices and adult learners was abolished and the industries were divided into three groups according to the degree of skill required in each, the wages ranging from \$7 to \$8 on commencing, and from \$12 to \$13 on completing the learning period.

The report concludes with the claim that "with the raising of the age at which boys and girls may enter industry to 15 years to correspond with the compulsory school age, the protection of the prospective mother from dismissal for six weeks before and six weeks after confinement (with provision for nursing period), and the "Women's Protection Act," designated to safeguard the moral well-being and prevent the exploitation of women and girls, British Columbia is well in the forefront in labour legislation for the benefit of women and children."

The accompanying table shows, for each industry or occupation covered by an order of the Board, the number of firms reporting, the number of employees under and over 18 years of age, the minimum wages and the average actual weekly wages of each class, and the average number of hours of employment in the week. The information contained in the statistical report on the numbers employed, etc., relates to the week ending December 1, 1923, except in regard to the seasonal occupations, namely the fruit and vegetable and the fishing industries. For the last two divisions the Board called for returns for the week of greatest employment during the season of 1923:—

Industry or occupation	No. of firms reporting in 1923	No. of employees		Legal minimum wages		Average weekly wages actually paid		Average hours per week
		Over 18	Under 18	Over 18	Under 18	Over 18	Under 18	
				\$	\$	\$	\$	
Mercantile.....	325	2,000	364	12.75	7.50 to 12.75	15.26	9.12	42.95
Laundries.....	53	558	60	13.50	8.00 to 13.50	14.38	11.12	44.33
Public housekeeping.....	287	1,174	47	14.00	12.00	16.32	14.61	45.42
Offices.....	1,133	2,595	93	15.00	11.00 to 15.00	19.38	12.42	41.90
Personal service.....	34	91	18	14.25	10.00 to 14.25	16.87	11.56	40.07
		experienced	inexperienced			experienced	inexperienced	
Manufacturing.....	234	1,107	249	14.00	7.00 to 13.00	16.90	10.02	43.82
Fish preserving.....	7	31	1	15.50	12.75 to 15.50	15.79	13.50	49.12

Telephones and telegraphs....	94	1,089	204	15.00	11.00 to 15.00	17.84	11.22	41.34

The Australasian Workers' Union, otherwise known as the One Big Union was recently refused registration in the Federal Arbitration Court at Melbourne. Forty bodies objected to the application, the list of objectors including most of the employers' associations and some of the unions opposed to the One Big Union. The ground for refusing registration was apparently connected with the existence of another organization of the same name.

A recent wages agreement effected by the National Joint Industrial Council of the flour milling industry of Great Britain sets no

period for its duration. The Council's annual report discusses this unusual feature as follows: "It was felt that the setting of a time limit to an agreement was in itself an encouragement to one side or the other to press for a new agreement when once that time limit had been reached, and that an agreement which was liable to termination at any time at two months' notice was more likely to secure a lengthy observance than one in which a date for possible termination was fixed. The sequel will be watched with interest."

## ORGANIZATION IN INDUSTRY, COMMERCE AND THE PROFESSIONS IN CANADA

Annual Publication of Department of Labour, Ottawa

THE Department of Labour of Canada has issued its Third Report on Organization in Industry, Commerce and the Professions in Canada. This report forms a useful directory of employers and other organizations, giving full information in regard to each, and may serve as a companion volume to the Department's Annual Report on Labour Organizations in Canada. The associations included in the report are 1,228 in number, an increase of 202 over the number recorded in the previous volume in the series. There are 703 main organizations, with 525 branches, the aggregated reported membership being 861,933, as compared with 743,447 in the last report. Some of the membership figures apply to firms, but most of them represent individuals. The figures, however, are not quite complete, as some existing associations fail to report. The objects of the various organizations are mainly the advancement of the common interests of those associated and in some instances are to promote desired legislation. A large number are Dominion-wide, others are provincial in scope, and some are purely local bodies but all are more or less important in their respective spheres. The bulk of the associations are wholly Canadian, but some are affiliated with kindred organizations having their headquarters in the United States. The report classifies the organizations as follows:—

- I. Manufacturing.
- II. Building and Construction.
- III. Mining.
- IV. Transportation.
- V. Printing.
- VI. Laundering, Cleaning, etc.
- VII. Personal Service and Amusement.
- VIII. General Manufacturers and Employers.
- IX. Financial.
- X. Agriculture.
- XI. Dairying.
- XII. Horse, Live Stock, Sheep Breeders, etc.
- XIII. Co-operative Societies.
- XIV. Wholesale Merchants.
- XV. Retail Merchants.
- XVI. Real Estate Dealers.
- XVII. Professional.
- XVIII. Technical and Scientific.
- XIX. Insurance.
- XX. Funeral Service.

The first eight divisions enumerated above include those associations whose members are mainly concerned with industries that are large employers of labour. Some of these employers' associations negotiate agreements with the corresponding unions of workpeople. In others the employment of labour is only incidental, and in these with the exception of the personal

service and amusement and the retail merchants' groups, there is no general corresponding body of organized employees. Some of the information in the report regarding the more important groups is as follows:—

*Manufacturing.*—The most important organization in the manufacturing group is the Canadian Manufacturers' Association, a body which is organized on an extensive scale, with territorial divisions and local branches in the chief industrial centres; departments are also maintained for the purpose of supplying expert services to its members. Included in this group are also other important associations of employers in specific lines, some of which are Dominion-wide, while others are confined to a much smaller area, the various organizations being subdivided into classes. For the purpose of promoting British trade throughout Canada, associations have been established in Montreal and Toronto under the name of Canadian Association of British Manufacturers and Their Representatives.

*Building and Construction.*—Chief of the building trades organizations is the Association of Canadian Building and Construction Industries, connected with which are building trades organizations in many of the principal cities of the Dominion, as well as a body composed of builders' supplies dealers. Two important branches of the building trade, however, have their own organization, viz., the master painters and master plumbers, the body comprising the first-named being an affiliate of the Master Painters and Decorators of the United States. The master plumbers' association operates under the title of Canadian Society of Domestic, Sanitary and Heating Engineers, with provincial as well as local branch affiliations. There are also two independent associations of plumbers located respectively at Ottawa and Vancouver. Of the five associations grouped under the heading of electrical contractors, two are affiliates of the National Association of Electrigists with headquarters in New York. The names of three other associations in the electrical industry are given a place in this section, but they are not strictly associated with the building industry. There are five other associations included in the building and construction group, one of which, the International Cut Stone Contractors and Quarrymen's Association, has its head office in Chicago, Canada being classed as division No. 4, with a reported membership of 19. The remaining four consist of three contracting plasterers' associations and one of mason contractors. An association of plumbing inspectors is also included in this group.

*Mining.*—The mining industry is represented by nine associations, six of which are concerned with the production of coal or minerals. The functions of the other three are designed to promote and develop the industry by the dissemination of accurate information.

*Transportation.*—This group contains the name of the Railway Association of Canada, an organization which represents the leading railways of the Dominion in dealing with representatives of trade unions of different classes of railway employees for the adjustment of wage schedules and other matters. Included also is the Canadian Passenger Association, with which many of the railways are identified, and whose functions relate mainly to tariffs and ticket regulations. An organization with somewhat similar aims so far as they apply to express transportation is the Express Traffic

Association of Canada. The three shipping federations, chief of which is the Shipping Federation of Canada, are designed among other things to protect the interests of vessel owners and to seek the improvement of the water-carrying trade by securing what are considered necessary aids to navigation. The group contains the names of two associations whose headquarters are in the United States, but which include in their affiliations Canadian individuals or companies, one being concerned with the standardization of railroad signals and the other being similar in character to the Canadian Electric Railway Association, the precise objects of which are briefly stated in the report.

*Printing Trades.*—Most of the associations in Canada composed of employers in the book and job printing trade are affiliated with an international organization known as the United Typothetae of America. Although the bulk of the membership of the Typothetae is composed of employing printers in the United States, the association concedes to Canada a vice-presidency. In this group are included associations of newspaper men, two of which are Dominion-wide, embracing respectively daily and weekly newspaper publishers. There is also listed the name of Canadian Press, a co-operative news-gathering association of the daily newspapers in Canada, as well as the names of those

of magazine and directory publishers, the organization embracing the latter having its headquarters in the United States, and of which a Canadian directory publisher was last year president. By reason of the relation between publishing and advertising the names of associations interested in the latter pursuit, one of which is an international body with a strong Canadian membership, are given a place in this section.

*Financial.*—The chief body in this group is the Canadian Bankers' Association, whose powers and privileges are defined under chapter 93 of the Dominion Statutes of 1900. Subsections of the association are in operation in Winnipeg and Vancouver. Other important bodies in this section are the Bond Dealers' Association of Canada, the Dominion Mortgage and Investment Association, and three credit men's bureaus, the first two named and one of the latter being Dominion-wide organizations.

The report also contains valuable information regarding organizations among farmers, and also on the general subject of co-operation in Canada. In regard to organizations of professional men it is stated that they now include practically all professional occupations.

## "WORKERS' SPARE TIME" IN CANADA

### Existing Provisions for Workers on Farms

THE *International Labour Review*, the monthly magazine published by the International Labour Office (League of Nations) at Geneva, contains useful studies from time to time of economic conditions in the various countries of the world, especially in relation to the several Draft Conventions and Recommendations of the International Conference. One of these studies describes existing conditions in Canada in regard to the Draft Recommendation on the "Utilization of Workers' Spare Time," which was printed in full in the last issue of this GAZETTE. It deals in particular with the measures taken in this country to promote the amenities of social life in rural districts.

Owing to their vast territories and scattered population, Canada and the United States differ from European countries in regard to the problems connected with the fostering of a rural civilization. In England, for example, a farmer is generally an employer of agricultural labour, but in Canada he frequently depends upon his own exertions to make a living and possibly to pay back the loan that has enabled him to make his venture. "The initial problem," as the writer sees it, "was to break through the barriers which make for intellectual loneliness in farm life."

The home of the individual farmer remains the social unit even when hired labour is considered. The hired man who works all the year round is generally an unmarried man and lives in the farmer's house, taking part in the

family life and having his share of the family recreations. The writer notes in this connection that the Provincial Governments in Canada are beginning to consider the need for more definite provisions for hired men in regard to housing accommodation. Thus Ontario offers farmers a loan of money of 5 per cent interest extended over a period of 20 years, on condition that the farmer sets aside one or two acres for the use of the farm hand. Generally speaking, however, no difference exists in Canada between the interests of the farmer and his hired man in regard to organized opportunities for recreation, excepting only "industrialized" farms connected with the fruit canning and dairying, which are mostly within reach of urban centres.

Modern conditions, however, are tending to modify the loneliness of farm life. The writer observes, for instance, that in Canada and the United States the automobile has entirely changed the habits of the farmer and his family. In Manitoba, Alberta and Saskatchewan alone nearly 20,000 motor cars have been purchased by farmers, and although these are used primarily for business purposes they add to the value of "spare time" after work. The rural telephone systems also tend to break down the isolation in which farmers and their families formerly lived.

*Community Halls.*—The province of Ontario by the Community Halls Act of 1920, enables local authorities, by means of by-laws,

to provide community halls and athletic fields in rural communities. The Provincial Government may grant one-fourth of the cost of a hall up to a maximum amount of \$2,000. This grant is also payable when community hall accommodation is provided in consolidated schools. It is intended that an athletic field shall be attached to every hall, unless adequate provision for athletic purposes is otherwise provided in the district. Under the regulations made in accordance with the Act every hall must include an assembly room with movable seats, stage and other equipment as may be approved by the Minister of Agriculture, as also accommodation for a library and reading room where required by the Minister. It is intended that these halls shall be available for all gatherings and meetings of a community nature, the building and athletic ground being "for the use of all the people," and to emphasize the character and purpose of every hall or field thus established, the Act requires that the word "Community" shall be part of the name of each and shall be prominently displayed. The site proposed and the plans and specifications of the hall must be approved by the Minister. Model plans are provided by the Department of Agriculture on request. Every community hall and athletic field established under the Act must be directed and controlled by a Board of Management, appointed by the Council of the Municipality. An amending Act (1923) provides for the management being in the hands of the Board of School Trustees when a consolidated schools building is used for community hall purposes. The 1923 Report of the Ministry of Agriculture records that 22 community halls had already been completed and had received the grant (14 were in course of construction in October, 1923), and that visits had been made to a number of other centres where initial steps had been taken to establish halls.

*Agricultural Representative.*—The writer pays a tribute to the far-reaching effects of the Agricultural Extension Act of 1913 in developing the social side of farm life in Canada. The object of this act, it is stated, was the introduction of a decentralized form of agricultural education, and to provide an "Agricultural representative," or local adviser, in each district. These officials, in the writer's opinion, "equipped with a practical knowledge of farm life and inspired by a desire to be of use to country communities, have stimulated and encouraged these to recognize their local problems and to work towards their solution. They have often made a valuable contribution to further this end by the dis-

covery of latent powers of leadership within the community itself and by helping their development, and it is impossible to make even a cursory study of the work of these public servants without being impressed by their success in widening the outlook of a section of the people who are living under conditions which tend to limit their vision to the more material side of their daily occupations."

Approximately two-thirds of the annual Dominion grant which has been made since 1913 towards agricultural instruction in order to supplement provincial appropriations is devoted to bringing instruction to farming populations in their homes. Each agricultural representative has an office in some town centrally situated in relation to his district, and most of the local recreational activities such as Women's Institutes and Boys' and Girls' Clubs look to him for inspiration and encouragement. It is part of his duty not only to act in an advisory capacity to clubs and other organizations within his area, but also to bring together all the local branches of such societies at annual or half-yearly gatherings. Smaller meetings of a group of neighbouring communities are also organized by the agricultural representative or county agent in their respective countries. Whether the meetings are large or small recreation is the dominant feature.

*Public Libraries.*—The writer finds that Canada is in advance of older countries in the provision made for libraries, especially travelling libraries. In Ontario the demand for library privileges is greater among rural communities than in towns, and at the present time 350 out of 470 stationary libraries in this province are in country districts. The travelling libraries are maintained entirely by the Legislature and are conducted by the Public Libraries branch of the Provincial Department of Education. The Department shares with the borrowing community the cost of transport of book cases for use in the Community halls. Saskatchewan supplements the travelling libraries by an "open shelf library" established at Regina, containing books on economics, sociology, history, the arts, etc., for the use of associations or individuals requiring them. Most of the readers are farmers, who are found to devote more time to study than people in cities.

*Women's Institutes.*—Women's Institutes were first established in Ontario in 1897 by a group of farm and village women, and the success of the movement soon caused them to spread throughout the Dominion.

"In many rural centres the responsibility for organization of entertainment for the community has been

shouldered by wives and daughters who first learned from their Institute leaders how to stage an amateur play, lead community singing, or, in addition to 'getting up' an entertainment, to take a worthy part in it themselves. The Institutes have been active in raising money to build community halls since the passing of the Act of 1920 and have also shown a considerable amount of resource in renovating old halls to meet their requirements. They have established tennis courts in many rural districts, provided communities with pianos for their halls, and in several cases they have purchased moving picture equipment

on the plan of instalment payments arranged by the Government, and are making use of Government films. Donations to buy books do not by any means represent their whole contribution to library work in Canada, many Institutes render considerable personal service to library organization, some hold a story hour for the children of the neighbourhood. Everywhere they have stood for the establishment or increase of wholesale recreation, and their success in this is largely due to the fact that the Institute is non-partisan, non-sectarian and without class distinction."

## SASKATCHEWAN ECONOMIC BOARD

THE Permanent Economic Board of Saskatchewan convened for its first session in the Farmers' Building, Regina, August 19 and 20, the following members being present: W. H. Thomson, Bankers' Association; H. W. Givins, Mortgage Association; W. E. Stokes, Labour Union; Mrs. T. V. Hanway, Women's Labour League; Honourable C. M. Hamilton, Saskatchewan Government; J. H. Craig, Retail Merchants' Association; George F. Edwards, Saskatchewan Grain Growers' Association; Mrs. Ida McNeal, Women's Section, Saskatchewan Grain Growers' Association; Dr. W. W. Swanson, Saskatchewan University; James Strathdee, Wholesalers' Association; G. H. Williams, Farmers' Union of Canada, secretary; W. E. Stokes, Labour Union; H. W. Givins, Mortgage Association; and Mrs. Ida McNeal, Women's Section, Saskatchewan Grain Growers' Association.

A committee was provided for to study the Canadian immigration problem, especially the propagandist literature of the immigration authorities, and an investigational committee

was appointed to enquire into the question of mixed farming, especially with regard to marketing and transportation.

The Board expressed appreciation of the action of the Federal Government in forwarding the programme of building certain branch railway lines in Saskatchewan.

Much of the time of the board was taken up with a discussion of financial conditions in the Province. The financiers on the board were of the opinion that the economic reconstruction of Western Canada depended to a great extent on the available supply of money which could be drawn on to further finance agriculture. It was considered by the board that some form of federal rural credit was necessary to take care of credits between short terms, which could be taken care of by the banks, and long term mortgage loans. The agricultural representatives, although agreeing in part with the view of the financiers, were of the opinion that, in order to solve the problem of financing agriculture, it would be necessary in some manner to readjust the issue and control of our currency medium.

## UNEMPLOYMENT INSURANCE FOR GARMENT WORKERS IN NEW YORK

AN unemployment insurance fund, to be maintained by weekly contributions from the workers and employers in the ladies' garment industry at New York was established last month on the lines approved by the International Ladies' Garment Workers' Union at their recent annual convention at Boston (LABOUR GAZETTE, July, 1924, page 570).\* The agreement establishing the fund includes several other constructive principles, under which a system of standardized production is instituted, the amount of wages paid to each worker being related to the work he turns

out; a new type of machinery for the arbitration of labour disputes is set up, and a distinctive type of sanitary label is agreed upon, to be placed upon all garments made under labour conditions that have been approved by the various associations concerned.

The new agreement, it is hoped, will provide a final solution of difficulties that have always existed in this industry, but have been specially acute during the past three months. A dispute between the jobbers and the workers in the cloak and suit trade threatened to end in a general strike of all International union members. This trade presents peculiar difficulties in regard to the reaching of agreements. Instead of the usual two well-defined

\*A similar scheme, established at Chicago last year on the initiative of the Amalgamated Clothing Workers of America, was noted in the LABOUR GAZETTE, July, 1923.

groups, employers and employees, there are several groups in the employing class, each with divergent interests. About 80 per cent of the cloak and suit production, it is stated, is now handled by the jobbers, or distributors, who do not actually manufacture the garments they sell, but buy the cloth and farm the work out to sub-manufacturers and contractors, the sub-manufacturers cutting and sewing the garments, and the contractors making them up. The latter two classes, although both in the employing class have in the past been engaged in a continuous conflict among themselves. There were further the manufacturing firms that manufactured on their own premises, but these have recently been out-distanced in importance by the jobbers. The recent troubles have centred round the jobbers and those who manufacture for them. The work for these classes is mostly done in small shops, employing at most ten or twenty workers.

The recent dispute in the industry arose on expiration, on May 31, of an agreement between the jobbers' association and the International Union, and the latter body, acting on the advice of Morris Hillquit, proposed to solve the problems that were involved by eliminating the smallest competing units and providing for more stable relations between those that remained. The jobbers' association at first refused to accept these proposals and the union then called a general strike. As the situation involved the public interest, Governor Al. Smith, of New York, appointed a commission of mediation. The union co-operated with the Governor's commission, and agreed to accept its award as binding. The commission reported in July that the various groups concerned had accepted its recommendations and were preparing to enter into formal agreements to carry them out.

In regard to seasonal employment and unemployment insurance the Commission recommended as follows:—

The Association shall co-operate with the union in establishing and maintaining an unemployment insurance fund for the benefit of the members of the union. The fund shall be made up of contributions from the manufacturers and the union or individual members of the union. The contribution of the employers to the unemployment insurance fund shall be equal to 2 per cent of the weekly pay-roll and that of the workers to be 1 per cent of their weekly wages. The fund shall be administered jointly under proper rules and provisions, to be agreed upon by both parties.

By the middle of August collections for the unemployment insurance fund began among the 60,000 cloakmakers in New York city, the workers contributing 1 per cent of their wages. The employers, on their side, were contributing 2 per cent of their weekly profits. It was estimated that the amount thus raised would total \$1,750,000 yearly and this amount will be distributed to the workers who are unemployed during the dull season.

The industrial commissioner of New York State, B. L. Shientag, comments on the results achieved by the new agreement as follows:—

"The Commission believes that the acceptance of its recommendations lays the foundation for permanent peace in the cloak and suit industry in New York . . . . The most significant features of the commission's report to my mind are the scientific investigation of the technical problems of the industry, particularly with a view to stabilizing employment, which investigation is to be conducted under the direction of the commission itself; the establishment of impartial machinery for the adjustment of disputes in which all four factors in the industry will participate, to the end that the welfare of the industry as a whole shall be considered, and the creation of a committee of three impartial business men, designated by the commission, to formulate a code of trade practices to govern the dealings between the jobbers and sub-manufacturers."

### The Working Day in Japanese Mines

A recent investigation made in the coal mines in Japan employing more than 100 persons each, showed that for workers employed on day work only, the standard daily hours are 9 to 10, overtime rates being paid for work done in excess of these hours. The result of an investigation made into the hours of work in important coal mines, average hours of work standing at 10, showed that 42 per cent of the workers worked less than 10 hours, 22 per cent worked 10 hours, and 36 per cent worked more than 10 hours.

The long hours of work, and the insufficiency and badness of the air underground,

have had a bad effect on the rate of attendance of miners. Among hewers the attendance is generally less than 60 per cent, and, as four days' rest are granted to miners each month, the actual number of days' attendance at the mine is about 15 or 16 per month. Therefore, although the number of hours of work of miners is long, the hours of work for a week on an average are fewer than 48.

A striking feature of the investigation was the fact that 27 per cent of the underground workers and 29 per cent of the surface workers were women.

## NOTES ON LABOUR UNION ACTIVITIES

### Confederation of Catholic Workers of Canada

The third Annual Congress of the Confederation of Catholic Workers of Canada was held at Port Alfred, P.Q., on August 2-5, the Chevalier Pierre Beaulé, president, acting as Chairman. Several dignitaries of the church and officers of the state were present. The Federal and Provincial Departments of Labour were represented by Messrs T. Bertrand and A. Crowe respectively. Seventy-seven delegates representing 98 associations or syndicates attended the congress.

About forty resolutions were proposed and discussed, the most important of which are the following:

Favouring the compulsory adoption throughout the year of solar time.

Requesting the Provincial Government and the labour organizations in the province to hasten the abolition of Sunday work.

Requesting the Government to amend the Workmen's Compensation Act by placing industrial diseases on the same footing as industrial accidents.

Requesting the Provincial Government to vote grants towards the establishment of night schools conducted by labour unions.

Requesting that the hours of labour in cotton mills be reduced from 55 per week, as at present, to 48 per week, with stoppage of machinery during the noon hour and after the regular closing hour at night.

Requesting the amending of the Quebec Industrial Establishment Act so as to provide suitable places for the taking of meals at the factories.

Recommending the installation of a suitable system of ventilation in the cotton mills; that factory inspectors be instructed to see that the toilet rooms are suitably placed and that they are in charge of caretakers.

Recommending that the Women's Minimum Wage Act be put into force as soon as possible.

In reference to unemployment, the Government was asked: 1. To put an end to the present immigration policy, as being out of proportion to Canadian needs and capacity for assimilation; 2. To take means to revive industry in the rural districts; 3. To help existing industries to continue to carry on; 4. To help to educate the builders, especially by dissuading them from looking, without sufficient reasons, for their labour in the rural districts, or from employing foreign workers in preference to our own; 5. To help in educating the consuming public; 6. To help to

shorten the dead season through public undertakings and to establish unemployment funds for the labour organizations; 7. To vote grants for the establishment and maintenance of trade union employment offices; 8. To facilitate land settlement to those who wish to work on that line.

Requesting the Provincial Government to prohibit night work in bakeries and to fix at 4 a.m., the hour at which work may be started.

Requesting the Legislature to enact the bill affecting the practice of the barber's trade which was submitted to the Provincial Government last year.

Requesting enforcement of the Stationary Engineers' Act of Quebec, IV George V, chap. 43, in all its principles.

Suggesting that the Federal Government impose a preferential duty of 20 per cent on any ship built or bought outside of Canada which may be registered for navigating in Canadian waters.

Asking the Government to abolish the duties on machines or materials required for repairs to ships in order to assist Canadian firms in their competition with foreign companies.

Recommending the adoption of the 48-hour week in pulp and paper mills.

The Constitution of the Confederation was amended so as to add a second vice-president, thus bringing to five the number of executive officers.

Recommending that preference be granted to products bearing the label of the Confederation.

Requesting that industrial and vocational courses be conducted in small centres.

Recommending that all the building trades bodies which are under the jurisdiction of the C.C.W.C., be grouped in one Federation.

Fixing the headquarters of the Confederation at Quebec for the next five years.

Requesting the Federal Government to grant to the Confederation the recognition to which it is entitled.

Recommending the enactment of a bill to create a Superior Labour Council for the province of Quebec. (The suggested bill is given below.)

The elections gave the following results:—  
General President: Pierre Beaulé, Quebec, re-elected by acclamation.

1st Vice-President: A. Morin, Hull, re-elected by acclamation.

2nd Vice-President: J. G. Bolduc, Three Rivers.

General Secretary: Fred. Laroche, Quebec, re-elected by acclamation.

Secretary-Treasurer: J. Comeau, Lachine, re-elected by acclamation.

The city of Three Rivers and the town of Granby were put in nomination for the next year's Congress. The town of Granby was selected for 1925.

DRAFT BILL CREATING A SUPERIOR LABOUR COUNCIL IN THE PROVINCE OF QUEBEC

Proposed by the Confederal Bureau:—

Art. I.—A Superior Labour Council is created in the Province.

Art. II.—This Superior Labour Council is a research body purely consultative as regards social legislation.

Art. III.—It shall consist of an undeterminate number of members and its composition until a decision to the contrary shall be as follows: The Minister of Labour of the Province of Quebec; a member of the Legislature; and a member of the Legislative Council, both selected by the Lieutenant-Governor in Council; a professor of Laval University; and a professor of the University of Montreal, selected by their respective corporation; three members of manufacturing and industrial organization elected by those organizations regularly incorporated in the Province;\* two members elected by the Chambers of Commerce of the Province; one member elected by the railway and street car employers' organizations incorporated in the Province; two members elected by the unions of building workers regularly incorporated in the Province; two members elected by the unions of shoe workers regularly incorporated in the Province; one member elected by the unions of railway employees regularly incorporated in the Province; one member elected by the unions of street car employees regularly incorporated in the Province; one member elected by the unions of textile and clothing workers regularly incorporated in the Province; a representative of each organized general labour association regularly incorporated in the Province.

Other branches of trade and industry and labour may be represented if the Minister of Labour deems it necessary.

Art. IV.—The Superior Labour Council shall have a president, a secretary and four directors of whom two shall be workers elected on a majority vote of the members. The said executive shall be known as Permanent Committee of the Superior Labour Council.

Art. V.—Members shall be elected for a period of three years but in order to give to the work of the Superior Labour Council a character of continuity, half of its original members, upon selection by the Minister of Labour, shall be elected for only a year and a half.

Art. VI.—The permanent committee of the Superior Labour Council shall hold a meeting every three months upon being called together by its president. It shall have the power to choose subjects for discussion besides receiving suggestion to that effect from bodies represented on the Council or directly from the Minister of Labour. It shall decide if the subjects submitted for study are of general or private interest and shall be empowered to request the advice of the interested employers' and workers' bodies. It shall make after study those recommendations which seem opportune, sending an authentic copy of such recommendations to the Minister of Labour and the interested parties. If the interested parties are not satisfied, they may request the Superior Council sitting

in full session to reconsider the subjects submitted for study. The permanent committee shall also have the power to refer directly the study of questions submitted to the Superior Labour Council.

Art. VII.—The Superior Labour Council shall study in full meeting the questions which shall be submitted by the permanent committee. If after study the Superior Labour Council does not see itself in a position to make any recommendations, it may refer the questions submitted to the permanent committee or to any other committee appointed to that effect by the members. If it finds itself sufficiently enlightened it shall make a final report. Each one of its decisions shall be made known to the Minister of Labour and the interested parties (employers and workers). It shall meet once a year in September for a session which shall not last more than a week.

Art. VIII.—For the formation of the first Council, the Minister of Labour shall request all syndicates or associations summoned to elect one or more representatives to address him within a period which he shall himself determine the certificated list of their members. Then he shall name a date for the nomination of the candidates and fix a period for the polling of the votes. During that period each association or syndicate shall make its members vote by secret ballot and send to the Minister of Labour a statement as to the result of the ballot drawn under oath of the President and Secretary of the said association or syndicate as well as all voting bulletins which have been used. The secretary of the Superior Labour Council shall then be requested to perform these formalities and to make a report to that effect to the Minister of Labour and to the interested associations or syndicates.

Art. IX.—While they are in session members of the permanent committee and the Superior Labour Council shall be remunerated at the rate of . . . by the Province. The Secretary and the President shall receive an extra remuneration of . . . which shall be paid by the Minister of Labour.

The present bill shall take effect on the day of its sanction.

International Typographical Union

THE International Typographical Union held its sixty-ninth annual session in Toronto from August 11 to 16, under the presidency of Mr. Charles P. Howard. This union had an average paying membership for the twelve months ending May 31, 1924, of 68,944, an increase of 800 from the year 1923, but 5,411 less than the average membership for the year ending May 31, 1921. At the close of the fiscal year registered numbers were held by 70,800 members, of which 69,018 were affiliated with local unions, the remainder being in unorganized towns or out of the business and in possession of travelling cards. There were registered at the headquarters 24,290 persons who previously held membership in the organization, but who now stand suspended or expelled—5,796 who are in possession of honourable withdrawal cards and 5,838 who hold expired travelling cards. The total membership of all Canadian unions paying per capita tax for April, 1924, was 4,326.

President Howard in his report dealt with the movement among the Canadian membership for a national union. He gave the amount of money expended by the International Union

\* The Act respecting Professional Syndicates or Trade Unions, passed at the recent session of the Provincial Legislature, was outlined in the LABOUR GAZETTE, April, 1924, page 303. This act authorizes the incorporation of unions, with the usual rights and privileges of legally incorporated bodies.

in Canada for the three years ending May 31, 1924, in strike benefits and special assistance to local unions as \$4,422,251.91. The sum, which would equal \$1,227 for each and every member affected by the strike, was drawn by 19 printers' unions and two unions of mailers in Canada, with a membership of 3,609. The total amount expended in four years by the Union in strike benefits and assistance to local unions throughout its entire jurisdiction was \$15,391,342. The president dwelt upon the financial support extended to the Canadian unions in the fight to establish the 44-hour week. The total membership of all Canadian unions paying per capita tax for April, 1921—the last month previous to the strike—was 5,239. The difference in membership as compared with that of previous years, he said, affects Canada only, as members unable to secure sustaining employment in Canadian cities had transferred to jurisdictions in the United States. A determined effort, he stated, had been made to return the affairs and activities of the International Union to a normal condition. A comparison between the three months ending with May in 1923 and the similar period in 1924, he said, showed that the members of the union as an aggregate were receiving \$500,000 a month more in gross earnings in the latter period.

The secretary's report showed a balance in three funds of \$5,158,984, including the balance from the General Fund of \$2,203,478; the Mortuary Fund, \$2,049,946, and the Old Age Pension Fund, \$905,559. From June 1, 1923, to May 31, 1924, Canadian locals of the International Union paid a grand total in contributions to the international headquarters of \$222,284.43, and during the same period they drew from the International in benefits \$622,033.09.

The secretary also showed that the average earnings of members in 1909 as \$897 a year, and in 1924, \$2,093.69. The average earnings per member were given as follows: 1909, \$897; 1910, \$953; 1911, \$974; 1912, \$992; 1913, \$1,023; 1914, \$1,042; 1915, \$1,026.51; 1916, \$1,041.18; 1917, \$1,086.43; 1918, \$1,145.15; 1919, \$1,264.88; 1920, \$1,615.25; 1921, \$1,909.03; 1922, \$1,795.44; 1923, \$1,919.23; 1924, \$2,093.69.

The convention decided to take a referendum of the members to ascertain their views on a proposal that the dues should be apportioned between the funds as follows: thirty cents to the Union Printers' Home, three-quarters of one per cent on earnings of members to the old age pension fund, one-quarter of one per cent to the mortuary fund, and the remainder to the general fund.

The convention decided to call off, from August 31, 1924, the strike for a 44-hour week which has been in progress since May, 1921.

The question of a bank and trust company to be controlled by members of the union in good standing was discussed. Resolutions setting forth that there was a strong sentiment among union printers in favour of such an institution, and asking that a committee be named to draw up a comprehensive plan by which the bank would be formed, were defeated. In reference to arbitration a resolution was put forward with the object of limiting the bargaining powers of the executive council. The proposition was defeated, however, and the executive left with full power in all arbitration proceedings.

A proposal to change the six-day week to a five-day week was reported on unfavourably by the law committee. New York delegates favoured a five-day week on newspapers but the Western delegates were opposed. It was pointed out that a five-day week would bring about a nine-hour day for some of the members. The convention also turned down a proposition to increase pension funds in any way.

Mr. James M. Lynch, of Syracuse, New York, president-elect of the Union, will take office in November.

Kalamazoo, Michigan, was chosen as place of meeting for the convention in 1925.

### International Brotherhood of Bookbinders

The eighteenth biennial convention of the International Brotherhood of Bookbinders was held at Chicago, Illinois, from July 14 to 19, under the presidency of Walter H. Reddick. This was the first convention of the Brotherhood since October, 1920, the 1922 convention having been postponed because of the depleted state of the treasuries of the International and many of the locals, due largely to the struggle for the 44-hour week.

Financial reports to the convention, however, showed a balance on hand on April 30, 1924, of \$48,746.92. Outstanding debts had been liquidated to an amount of \$104,023.67, and although there was still some indebtedness on account of deferred strike benefits, these were being taken care of as fast as conditions warranted, a total of \$35,762 having been paid by the Brotherhood from September, 1921. Canadian locals were reported to have received from the International Brotherhood for strike benefits an amount far in excess of the money paid by them for per capita tax.

*44-hour week.*—It was reported that since May, 1921, the beginning of the 44-hour campaign, 78 local unions had not only gained the 44-hour week, but at least 44 of them had also received substantial increases in pay.

Most of these increases were received through conciliatory methods. Thirty-two of the locals had maintained their former position as to rates of wages, but had now a shorter work week. Nineteen locals, while not having contracts providing for the 44-hour week (the 48-hour week still being in operation in their respective localities), reported higher wage scales than at the beginning of the period. In the latter localities the locals were, as a rule, handicapped by conditions peculiar to them. Many members were lost to the Brotherhood through the struggle, but the membership at the time of the convention was approximately 14,000. The estimated membership for 1923 was 13,943 in 455 locals, of which 12 locals and 443 members were in Canada.

*Organization of Women.*—Reference was made in the President's report to a movement initiated by the American Federation of Labour at its convention in October, 1923, for the more thorough organization of working women. As a result of subsequent meetings called by the president of the Federation, at which representatives of the Brotherhood were present, each union affiliated with the Federation was asked to state what financial support it could contribute and how many organizers it could assign to the work which would be under the supervision of Federation officers. The convention authorized payment of the Brotherhood's pro rata share of the expense of this plan and appointed a representative to serve on the organizing council in charge of the campaign. In the bookbinding industry, it was stated, about 20,000 women are employed, 6,000 of whom maintain affiliation with the International Brotherhood of Bookbinders. The laws of the Brotherhood relating to Apprentices, recognize as members workers with three months' experience. Membership may therefore be granted to practically all the women employed in the industry.

*Benefits.*—A law of the Brotherhood which became effective since the convention of 1920 provides that members who have reached the age of 65 years with a continuous membership of 15 years and who are incapacitated, are exempted from the payment of dues. At the time of the convention there were 125 members in this category. Since the enactment of the law many thousands of dollars have been paid in funeral benefits to superannuated members. A comparison of the death benefits paid in 1923, a period of twelve months, with the thirteen months included from July 31, 1920 to September 6, 1921, shows an increase of about 100 per cent in the later period.

The conference approved a proposal for providing some form of pension or annuity for aged or indigent members as soon as practicable.

*Health Survey.*—The Brotherhood incurred an expenditure of \$1,125 as its share in a general health survey of the printing and allied industries to determine, among other things, the tendency of different craftsmen to diseases such as tuberculosis, eye strain, etc., and the causes of various occupational diseases. Consideration was given to this matter in 1922 by the International Joint Conference Council of which the Brotherhood is a component part, and the investigation was undertaken by Dr. Frederick Hoffman, a noted authority on such matters, acting in conjunction with officials of the United States Government. A report of the survey will soon be available to members of the Brotherhood.

*Standard Contract.*—The convention approved a proposed "Standard Layout" with reference to the drafting of wage scale contracts and arbitration agreements. These proposals were enthusiastically received by the delegates and unanimously endorsed as a standard form of contract to be recommended for the use of local unions under the Brotherhood's jurisdiction.

*Employment Service.*—A report on the Service Department (which is divided into an employment section, and a statistical section to give information as to wages, hours, working conditions, etc.) showed that the employment section had been somewhat slack owing to the depression of the trade and the struggle for the 44-hour week. However, many members who could not secure employment in their own city had been placed elsewhere. The statistical department, it was claimed, had proved to be of inestimable assistance to local unions when negotiating wage scales and entering into arbitration with employers.

*Apprentices.*—The convention decided that apprentices should not only be trained in the processes of the trade, but should also receive an education in the principles of trade unionism. The laws of the Brotherhood provide that boys in the second year of their trade, and girls with three months' experience (if it is found that they are adapted to the trade) are admitted as junior members, and their pecuniary benefit standing begins with the date of their registration at headquarters.

#### International Plate Printers and Die Stammers' Union of North America

Among the resolutions adopted at the thirty-second annual convention of the International Plate Printers and Die Stammers'

Union of North America, held at Boston, Massachusetts, from July 21 to 26, was one in favour of the creation of an International death benefit. Those who have been members of the International for at least three months prior to death, whose per capita has been paid, who are not more than 60 days in arrears in their respective locals, and who were in good standing 30 days prior to death, are entitled to receive benefits. In the event of the death of any member of the International Union, each local is to be assessed at the rate of 50 cents per member, the assessment to be paid to the International Secretary within 30 days from the date of notice of death, and the benefit to be paid to the local secretary within 60 days of the same date. The assessment becomes effective and payable on October 1, 1924.

A proposal that the name of the International be changed to the International Intaglio Printers of North America, and that in cities where there are both plate printers and die stamper's unions the same be amalgamated into one union, was referred back to the locals for action at the next convention.

Mr. Walter A. Burke, of Boston, Massachusetts, was elected president and Mr. James E. Goodyear was re-elected as secretary-treasurer. During 1923 this Union had only one local and 46 members in Canada.

#### **International Stereotypers and Electrotypers' Union of North America**

The twenty-third annual convention of the International Stereotypers and Electrotypers' Union of North America was held at Atlanta, Georgia, on July 21 to 26, 1924. The Union has a total membership of 6,553 with 10 locals and 270 members in Canada. Resolutions were adopted in favour of the passing of the proposed twentieth amendment to the Federal Constitution of the United States concerning child labour. Another resolution protested against any action by the American Newspaper Publishers' Association or its representatives in discriminating against any member of the International Stereotypers and Electrotypers' Union of North America in good standing. It was recommended that negotiations for an arbitration agreement with the American Newspaper Publishers' Association be continued, and that if a tentative agreement is reached by the interested parties such agreement should be submitted to a referendum vote of the membership. It was pointed out that in 1901 an experimental arbitration agreement was consummated between the International Typographical Union and the American Newspaper Publishers' Association for one year, in which the International Stereotypers and Electrotypers' Union had

tentative participation until some years later when a direct arbitration agreement between the latter Union and the Publishers' Association was entered into. The last agreement expired April 30, 1922, and has not been renewed, the Publishers' Association demanding conditions which the union could not concede.

It was decided that no defense or other fund which may from time to time be created through an assessment on the members of the Union shall be used for any other purpose than that designated at the time of the creation of the fund, unless a proposition indicating such other purpose shall have been first submitted to the referendum in accordance with the laws of the Union, nor then, unless it shall have a two-thirds vote of the members voting. It was decided to hold the next annual meeting of the Union in Milwaukee, Wisconsin, in July, 1925.

On July 31, 1924, the death was announced of the president James J. Freel who had presided during the convention and was in apparently good health at its close. He had been president of the Union from January 1, 1902, until his death.

#### **Sheet Metal Workers' International Association**

The Amalgamated Sheet Metal Workers' International Alliance, a body representing about 31,850 members, of whom about 600 are in Canada, held its twenty-first convention at Montreal, P.Q., in July, about 150 delegates attending. The name of the organization was changed to "Sheet Metal Workers' International Association."

Weekly strike benefits were increased to \$9 per week, and where 25 or more members are involved the extra benefit to the local union is increased from \$15 to \$25; provision was made for a fund of \$250,000 to be maintained in the Defense Fund, and where the fund falls below that amount an assessment is to be levied until it again reaches that figure.

The monthly rate of dues was increased to \$2.50 per month. Funeral benefits for twenty-year continuous good standing members were increased to \$400, this new benefit feature to become effective January 1, 1930.

Provision was made for the printing of the constitution of the organization in French so that eastern Canadian locals having French-speaking members may benefit.

Resolutions to extend organization work in the assortment shops and tinware manufacturing plants, and providing for the amalgamation of copiersmiths' locals with the building trades

local unions and for the amalgamation of locals in closely related districts were passed by the convention. Provision was made for an increase in organizers' salaries to \$25 a month, and for district councils to be represented at future conventions, and also that members out on withdrawal cards must renew the withdrawal card each year. A resolution favouring the proposed amendment to the United States constitution to prohibit child labour was approved, as was also a resolution favouring the Howell-Barkley Railroad Bill. A resolution with proposal to create a new labour party in the United States was referred to the general executive board.

### International Fur Workers' Union

A decision to ask for a minimum wage scale for fur workers in Montreal in preferential union shops when the present wage agreement expires in January next, was reached at the semi-annual conference of Canadian locals of the International Fur Workers' Union which met in Montreal during July. Delegates attended from Montreal, Toronto, Ottawa and the International Union headquarters. The purpose of the conference was to formulate organization plans for these localities, and to decide upon what basis negotiations should take place for the renewal of agreements in Toronto and Montreal.

### Federation of Ontario Firefighters

This Federation held its fifth annual convention during August at Peterborough. It was reported that action had been taken by the legislative committee to secure the consolidation into one act of the Fire Departments Two-Platoon Act and the One Day in Seven Act. The committee, it was stated, had laid before the provincial government proposals for the superannuation or pensioning of firefighters. It was stated that most of the smaller city municipalities of Ontario made no provision in this respect for their permanent firefighters, and it was proposed that these municipalities should be brought under the Workmen's Compensation Act, and be required to establish pension or superannuation funds. This applies to such cities as Brantford, Peterboro and Kingston. Stratford, on the other hand, has a pension system in operation.

The following officers were elected for the ensuing year: president, J. J. O'Kelly, Ottawa; first vice-president, W. O'Rourke, Sault Ste. Marie; second vice-president, John McGrattan, Brantford; secretary-treasurer, D. H. Lamb, Toronto. Members of the executive board, are: C. F. McCarthy, Hamilton; R. Lyons, Toronto; J. Connor. Galt; R. Rollo,

Peterborough; E. Grant, Sarnia; and J. R. Coulbeck, Brantford.

The convention for next year will be held at Kitchener, Ontario, during the month of June.

### Locomotive Engineers' Pensions

The *Locomotive Engineers Journal*, which was the source of the information given in the last issue of the LABOUR GAZETTE in reference to the Brotherhood's pension scheme, corrects the statement that pension dues have been remitted for all pension members over 65 years of age in active service, and over 70 years in other cases. The actual provisions in this respect are that members reaching the above ages may, if they so elect, retire permanently from service and become eligible for their pension. All pensioners are now relieved from paying dues on and after October 1, 1924, until it is found that the state of the funds require further payments. At the recent convention provision was made for the extending of the widows' pension for the wives of all members of the Brotherhood of Locomotive Engineers, regardless of the husband's age, if application is received properly executed before January 1, 1925. After January 1, 1925, the wives of members over 50 years of age will not be eligible. The new Widows' Pension Department became effective August 1, 1924. A member of the Brotherhood may provide an income of \$30 per month for his widow during her lifetime while she is not remarried. Dues for members under 50 years of age are \$2.10 per month; of 50 and under 60 years of age, \$2.40 per month, and for those of 60 years, \$2.70 per month. All applications in the two classes over 50 years of age must be handed in not later than January 1, 1925.

### District 18 U. M. W. of A.

A special convention of District 18, United Mine Workers of America, was held at Calgary, beginning on September 3, attended by delegates from the various mining camps in Alberta and British Columbia, and by representatives of the Board of the International Union from Indianapolis. The purpose of the convention was to discuss the strike situation (the progress of this strike is noted elsewhere in the present issue, in the section "Strikes and Lockouts in Canada"). The proceedings were not made public, but it was stated that support was given to the stand taken by the Committee representing the union, at the conference with the Minister of Labour and the Western Coal Operators' Association, in refusing to accept any reduction in wages.

### Dates of Coming Conventions

International Brotherhood of Pulp, Sulphite and Paper Mill Workers, on October 7.

American Federation of Labour, at El Paso, Texas, on November 17.

Industrial Workers of the World, at Chicago, Illinois, on November 17.

### The late Mr. E. H. Williams

Mr. Edward Howard Williams, an old member of the Brotherhood of Locomotive Engineers, and an original member of the staff of the Department of Labour at Ottawa, passed away at Toronto on August 24, in his seventy-fifth year. The late Mr. Williams was born in London, England, in 1849. He entered the service of the London and North Western Railway Company at the age of 13 and was in this employment for 16 years. He

took a prominent part in public affairs in the Salford district where he resided, and promoted the election of the first labour representative elected to the British House of Commons. Coming to Canada in 1880 Mr. Williams settled at Hamilton, Ontario, and was employed as a locomotive engineer in the Midland Railway before its incorporation with the Great Western, and later with the Grand Trunk Railway. His gifts as a public speaker were soon recognized, and in 1883 he was nominated by the trade unionists and Knights of Labour to represent Hamilton in the Ontario provincial legislature. He retained his membership in the Brotherhood to the end. Coming to Ottawa when the Department of Labour was established in 1900 Mr. Williams served under Sir William Mulock, the first minister of labour in the Laurier cabinet, and Mr. Mackenzie King, deputy minister of labour. He retired from active service about two years ago.

## NEW BRITISH FACTORY RULES

Among the measures considered at the last session of the British Parliament was an act to amend and consolidate factory legislation. The amendments include new regulations as to cleaning painting and whitewashing and increasing the cubic space required for each worker to 400 cubic feet. (In Canada the factory acts of New Brunswick Ontario, Saskatchewan and Alberta require 300 cubic feet of room space for each employee; the regulation in Quebec requires 400 cubic feet during the winter months). The minimum temperature allowed is 60 degrees. The Secretary of State may prescribe a standard of adequate ventilation and lighting. District councils are given power to enforce such regulations, closer contact than formerly existed being provided between these councils and the inspectors. The Home Secretary may order special medical supervision where the amount of sickness among workers in any factory warrants such action. Stringent safety and health regulations are added including provision of drinking water and standard washing facilities and of seats for women whose work is performed standing, to enable them to take advantage of intervals for rest. Accommodation must be provided for keeping and drying clothing put off during working hours. Other regulations cover the removal of dust and fumes, spitting, meals in certain dangerous places, prohibition of white phosphorus in the manufacture of matches, employment of women and young persons, prohibition of night work in bake

houses, "shuttle-kissing" (shuttles lending themselves to this practice to be prohibited after five years), metal grinding, humid factories, and underground workrooms. The importation and sale of articles made with prohibited materials, or by certain processes, is prohibited. The existing system of notification of accidents and industrial disease is enlarged and lightened.

In regard to the employment of women and young persons it is provided that young persons must be certified in regard to employment (1) in a particular factory; (2) in any class of factories, and (3) in a particular process or class of work. Local authorities may be required to arrange for the medical examination and certification of workers under this section. Local education authorities are to arrange for the production to an appointed doctor, of the medical record of any young person.

The British Government propose shortly to inform the League of Nations that they are prepared to accept the Recommendation of the International Labour Conference "Concerning the general principles for the organization of systems of inspection to secure the enforcement of the laws and regulations for the protection of workers." The principles laid down in the Recommendation are for the most part similar to those on which factory for inspection in the United Kingdom is based, and no new legislation will be entailed by its acceptance.

## NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the **LABOUR GAZETTE** relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Items are also included which have a direct bearing on the work of these schools in connection with the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

*London, Ont.*—A school employment bureau is being organized in connection with the London Technical and Art School under the direct patronage of the city's large industrial corporations. It is a development of the past efforts of the principal and staff to find suitable, permanent employment for graduates of the school and those who drop out as well as temporary jobs for students during vacations. The heads of each school department, with the help of teachers, have prepared complete records of each student showing special abilities, training, personal characteristics, etc. Applications for students are received in the school office and carefully followed up. It is planned to maintain contact with each student placed in employment for at least a year and to make necessary changes and adjustments to suit both employers and students.

A new one-year commercial course is being organized in the London school this fall to provide intensive training for boys and girls who have had two or more years' training in high schools and who plan to enter mercantile life or office positions. The course will be confined to practical commercial subjects such as penmanship, book-keeping, shorthand, type-writing, office practice, business forms and commercial law.

*Hamilton, Ont.*—In connection with the re-organization of the commercial classes in Hamilton, a questionnaire was sent to all pupils being graduated from grade VIII, in order to find out how many intended to enter the various secondary school courses. Returns were received from 919 pupils and showed that 451 intended to enter the collegiate institute, 257 desired commercial training and 211 intended to enter the technical institute. In other words, 49 per cent desired academic training and 51 per cent intended to enter vocational courses.

A new programme for the training of apprentices in the Canadian Westinghouse Company has been put into operation in co-operation with the Hamilton Technical Institute. Principal Gill states that the scheme will be applied to other industries as soon as the necessary arrangements can be made. The following conditions have been accepted by the parties concerned:—

All apprentices taken on after this date are to have an educational standard equivalent to high school entrance.

All apprentices are to attend classes at the Technical Institute four hours per week during the day (forenoon or afternoon of one day, as may be arranged) and evening classes two hours per week (one evening).

All apprentices are to be paid the regular rate of pay for the time in attendance at day school. Pay is to be deducted in case of absence from school on the same basis as deductions are made for absence from work.

The Technical Institute is to submit a weekly absentee report to the Canadian Westinghouse Company, Limited.

All apprentices are to be required to write on an examination every six months (end of June and end of December), said examination to be set jointly by the Canadian Westinghouse Company, Limited, and the Technical Institute.

The results of examination will be taken into consideration in fixing rates of pay.

The Canadian Westinghouse Company, Limited, will pay the registration fees for the evening classes, at which regular attendance is required, and non-attendance without reasonable excuse or permission will be considered cause for dismissal.

The schedule of work is to be prepared jointly between the principal of the Technical Institute and a representative of the Canadian Westinghouse Company, Limited.

*Toronto, Ont.*—James M. Lynch, president-elect of the International Typographical Union, in addressing the 69th convention of that organization expressed the opposition of the union to schools which turn out so-called printers in six months. He advocated the training of qualified printers with a knowledge of every branch of the trade and condemned the practice of producing specialists with very limited experience.

*Chatham, Ont.*—The City Council of Chatham has authorized the Board of Education to expend \$55,000 for the purchase of the Hotel Sanita which is to be converted into a vocational school. It is understood that

tentative plans for the necessary alterations have received the approval of the provincial Department of Education and detailed plans are to be prepared immediately. An advisory vocational committee of twelve members has been appointed to complete the necessary arrangements and to operate the new school.

*Owen Sound, Ont.*—The new Collegiate Institute and Vocational School at Owen Sound is to be opened early in September. A special effort is being made to acquaint the parents and prospective pupils with the nature and scope of the new vocational courses and it is expected that a good enrolment will be secured.

*Halifax, N.S.*—The Halifax Technical College has adopted the policy of supplementing its industrial correspondence courses by short-term resident courses which enable the students to gain practical experience in applying the knowledge obtained through correspondence and which bring the students together for intensive instruction by experts. The latest of these supplementary courses to be established is for telephone workers engaged by the Maritime Telegraph and Telephone Company. The course lasts for two weeks. Lectures are given for two hours each morning and the remainder of the day is divided between lectures, recitations and laboratory work. Five special lecturers have been secured and eleven correspondence students from various parts of the province have enrolled for the first course.

*Fredericton, N.B.*—Plans have been completed and approved for the new composite high school to be erected this fall in Fredericton. The new school will provide courses in commercial work, pre-vocational work, home economics and general industrial subjects in addition to the regular academic high school courses. The building will cost approximately \$150,000. It will have a fine auditorium, a gymnasium, library and office accommodation for the principal and local school board. In addition to the regular classrooms, shops are to be equipped for woodworking, metalworking, motor mechanics and printing. The girls' work will include cookery, sewing, dress-making and millinery. It is expected that the building will be completed early in the coming year.

*St. John, N.B.*—Speaking before the convention of the Union of Municipalities in St. John on August 21, Dr. George J. Trueman, President of Mount Allison University, Sackville, referred to the need for vocational education in New Brunswick as follows:—

Between 12 and 18 is the period of most rapid growth, the time when learning processes are easy, and when life's friendships are formed, and life's ideals are settled. In fact these are the years in which it is largely decided what kind of citizens our youth will make. Yet in these momentous days the state is doing very little to prepare them for citizenship, for industry, or for the responsibilities of parenthood. To the small per cent of our children who continue through high school and go from there to Normal school or the university, or other institutions of higher learning, the old standard high school is pre-vocational and of great value. But what can we do for the ninety per cent who never go through high school? In 1921 only some 615 people per 100,000 of our population were reported at high school. How many of those were eliminated in the progress of the grades; some dropped out because they had no taste for the work of the classical high school; many others had not the ability to do the work and, after years of retardation in the public schools, dropped out thanking God that they had left the schoolhouse forever. Others again left school of necessity to help out the all-too-meagre family income. I do not need to say more to remind you how very necessary is the vocational programme which has been started in our province, and how strongly it should be supported by all who have at heart the welfare of the mass of our people. We should have compulsory education for all at least to the age of 17, but, until schools are established, with courses that will profit all of these young people, until subjects are taught in them that they can understand and like, until schools are in session at such times as they can attend, and are taught by teachers who are thoroughly prepared for their work, it will be useless to pass compulsory laws for children over 14 years of age.

*Vancouver, B.C.*—The educational survey commission was recently appointed by the provincial government to make a thorough survey of the educational systems of British Columbia is receiving many suggestions and recommendations for changes in the existing institutions. Among the suggestions affecting vocational education are the following:—

1. A girls' technical school for Vancouver.
2. A chair of commerce in the University of British Columbia and adequate representation of commerce on the senate of the university.
3. A provincial school of arts and crafts for the purpose of training skilled workers in various industrial occupations.

*New South Wales.*—Under the provisions of the amended Industrial Arbitration Act, 1912, the New South Wales Board of Trade is charged with the administration and regulation of apprenticeship throughout that Dominion. The Act applies only to industries which desire to come under its provisions and which organize for apprenticeship training according to prescribed regulations. Special regulations are issued governing the organization and operation of apprenticeship in each industry. Since September, 1923, when the first industry organized for training, fifteen others have come within the provisions of the Act. In view of the efforts being made to re-establish apprenticeship in the building trades in Canada, it is interesting to note that most

of the trades affected are in this group. A complete list follows—boilermaking, bricklaying, carpenters and joiners, coachmaking (road), engineering, electrical fitters and electrical mechanics, fibrous plaster fixers, marble

and slate workers—masons and polishers, metal ceiling fixers, painting and decorating, plasterers, plumbers, slaters, tilers and shinglers, stonecutters and setters, stonemasons—stonepolishers, tilelayers.

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

### Report of Dominion Bureau of Statistics on the Pulp and Paper Industry in 1923

THE Dominion Bureau of Statistics has recently issued a report on the pulp and paper industry in Canada for the calendar year, 1923. Previous reports in this series relating to other industries were outlined in the LABOUR GAZETTE for August, 1924, and previous issues.

The net value of production for the pulp and paper industry, considered as the sum of value of pulpwood exported, pulp made for export, and paper manufactured, was \$183,226,218 for 1923, as compared with \$152,209,711 for 1922, \$157,426,587 for 1921 and \$230,199,717 for 1920. In the latter year the value of production in the industry reached its maximum. There were 110 mills in operation in 1923, 104 in 1922 and 100 in 1921. Of those in operation in 1923, 43 manufactured pulp only, 32 manufactured both pulp and paper and 35 manufactured paper only; 48 of these mills were in Quebec, 43 in Ontario, 7 in British Columbia, 7 in Nova Scotia and 5 in New Brunswick.

The 75 mills manufacturing pulp produced 2,469,305 tons valued at \$98,886,110 in 1923 as compared with 2,150,251 tons valued at \$84,947,598 in 1922. Of this total 1,400,454 tons valued at \$42,633,826 were made in the combined pulp and paper mills for their own use in the manufacture of paper, and 217,427 tons, valued at \$14,156,652, were sold to other paper mills in Canada, and 851,424 tons valued at \$42,095,632 were made for export.

The 67 mills manufacturing paper in 1923 produced 1,582,799 tons of paper, which with certain miscellaneous pulp products, were valued at \$127,605,582, as compared with 1,366,815 tons in 1922, valued at \$107,085,766.

The estimated total production of pulpwood in 1923 was 4,648,663 cords valued at \$57,029,212, of which 70.2 per cent or 3,264,433 cords, valued at \$43,504,208, were manufactured into pulp in Canadian pulp-mills and 29.8 per cent or 1,384,230 cords, valued at \$13,525,004, were exported to the United States in the raw or unmanufactured state. The figures show an increase in the proportion of pulpwood exported from 25.8 per cent of the total in 1922 to 29.8 per cent in 1923. Domestic consumption increased by 12 per cent, while exports

increased by 36.9 per cent. The exports of wood pulp from Canada during 1923 amounted to 873,359 tons valued at \$47,027,496, as compared with 818,257 tons valued at \$41,037,849 in 1922, an increase of about seven per cent. During the same period the imports amounted to 17,288 tons, valued at \$947,225, a slight decrease from the imports for 1922.

The total capital invested in the industry in 1923 was \$417,611,678 an increase of \$36,605,334 or 9.6 per cent of the capital of 1922.

The total number of employees on salaries and wages in the industry in 1923 was 29,179, and the total pay-roll was \$38,305,157, as compared with 25,830 employees in 1922 with a pay-roll of \$32,918,955. Of these 14,079 were employed in the province of Quebec, their pay-roll totalling \$17,245,376; 10,614 in Ontario with a pay-roll of \$14,862,467; 2,730 in British Columbia with a pay-roll of \$4,480,262; 1,277 in New Brunswick with a pay-roll of \$1,481,318; and 479 in Nova Scotia with a pay-roll of \$235,734.

Of the total number of employees 25,451 were male and 908 female; 379 of the female employees were on the clerical staff, 10 were technical experts and one was a salaried officer. There were in all 209 salaried officers who received for their services a total of \$1,731,250; 338 superintendents who received a total of \$1,511,016; 356 technical experts, etc., who received a total of \$870,586; 1,917 clerks who received a total of \$2,956,344, and 26,359 employees on wages who received a total of \$31,235,961.

The thirteenth annual safety congress of the National Safety Council (United States), will be held at Louisville, Kentucky, on September 29, to October 3. In addition to the general session, at which the problems of safety and health will be discussed in their general bearings, sessions will be held of the following sections: Health, engineering, automotive, cement, construction, chemical, rubber, education, electric railway, marine, metals, mining, packing and tanning, paper and pulp, petroleum, plant publications, public safety, public utilities, steam railroad, taxicab and delivery, textile, and woodworking.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Progress of Ratifications

THE Secretary General of the League of Nations recently informed the Government of Canada of further ratifications of Draft Conventions and Recommendations adopted by the International Labour Conference, as follows:—

*Spain.*—Formal ratification by Spain of the following conventions adopted at the Geneva Conference in 1921 has been registered by the League of Nations:—

1. Concerning the use of white lead in painting (article 9).
2. Concerning the application of the weekly rest in commercial establishments (article 9).
3. Fixing the minimum age for the admission of young persons as trimmers and stokers (article 8).
4. Concerning the compulsory medical examination of children and young persons employed at sea (article 6).

Ratifications of the following conventions adopted by the Genoa conference, 1920, were also registered:—

1. Fixing the minimum age of admission of children to employment at sea (article 8)
2. Concerning unemployment indemnity in case of loss or foundering of ship (article 7).

*Austria.*—Ratification by Austria of the following conventions, adopted at the Washington conference in 1919, was registered (subject to the condition of its ratification by the principal state members of the Organization, and by the states adjoining Austria):—

1. Limiting the hours of work in industrial undertakings to 8 in the day and 48 in the week (article 18).
2. Concerning unemployment (article 7).
3. Concerning employment of women at night (article 11).
4. Concerning night work of young persons in industry (article 10).

Ratification by Austria of the following conventions adopted at the conference of 1921, was also registered:—

1. Concerning the age for admission of children to employment in agriculture (article 5).
2. Concerning the rights of association and combination of agricultural workers (article 3).
3. Concerning the use of white lead in painting (article 9).

*Poland.*—Ratification by the Polish Republic of the following conventions adopted at the conference of 1921 was registered:—

1. Fixing the minimum age for admission of children to employment at sea (article 8).
2. Concerning unemployment indemnity in case of loss or foundering of the ship (article 7).

3. Establishing facilities for finding employment for seamen (article 14).

Ratification by Poland of the following conventions adopted by the Washington conference, 1919, was also registered:—

1. Concerning unemployment (article 7).
2. Fixing the minimum age for admission of children to industrial employment (article 10).
3. Concerning night work of young persons employed in industry (article 11).

*Belgium.*—Ratification by Belgium of the following convention adopted by the Washington Conference, 1919, was registered:—

1. Concerning employment of women during the night (article 11).
2. Fixing the minimum age for admission of children to industrial employment (article 10).
3. Concerning night work of young persons employed in industry (article 11).

### Progress in Canada

The International Labour Office puts on record the act relating to child welfare which was passed at the last session of the Legislature of Manitoba (LABOUR GAZETTE, May, 1924, page 373) as giving effect in that province to the Washington Draft Convention prohibiting the night employment of young persons under 18 years of age in industry.

Note is also made at Geneva of the action of the Dominion Government in referring to the Supreme Court of Canada the Washington Hours Convention in order to obtain an advisory judgment from the Court on the question of the jurisdiction of the Dominion Parliament and of the Provincial Legislatures (LABOUR GAZETTE, July, 1924, page 574). ✓

### Joint Maritime Commission

The Joint Maritime Commission, established under a decision of the Genoa Conference of the International Labour Organization, 1920, formulated at the session at London last December a draft "International Seaman's Code" (LABOUR GAZETTE, March, page 207). This draft was submitted to the various interested parties, including shipowners' and seamen's organizations, who were asked to return it with any changes they might wish to propose. The Commission meets again during the present month for the purpose of reconsidering the draft code in the light of the criticisms that have been made on it by those concerned in its provisions.

The Department recently received a copy of the minutes of the London session of the Commission.

## THE EMPLOYMENT SITUATION AT THE BEGINNING OF AUGUST, 1924, AS REPORTED BY EMPLOYERS

**E**MPLOYMENT showed a downward tendency at the beginning of August, when over 10,000 persons were released by the 5,727 firms making returns. They employed 775,759 workers as compared with 786,378 on July 1. This decline caused the index number (based on the number employed January 1920 as 100) to fall from 95.9 in the preceding month to 94.7 at the beginning of August. On the same date in 1923 the index was 100.2; in 1922, 93.1 and in 1921, 88.9.

The contraction indicated by employers on August 1 is shown in the accompanying chart, as is also the moderately upward movement that had been recorded on the same date of the three previous years. The situation, while not so good as on August 1, 1923, continues to be better than on the same date in 1922 and 1921.

Firms in the manufacturing division as a whole, notably in iron and steel, and in logging and railway construction, reported curtailment of activity, but communication, ship-

ping and stevedoring, building and highway construction showed further improvement; canneries also registered large additions to staffs.

### Employment by Provinces

British Columbia was the only province to record an increase in employment at the beginning of August. Elsewhere there were reductions, of which those in the Maritime Provinces were the smallest and those in the Prairie Provinces were the largest.

*Maritime Provinces.*—Manufacturing as a whole, in spite of improvement in the sugar refineries and confectionery works, showed considerable contractions, chiefly in the iron and steel, fish canning and textile divisions. Logging camps and coal mines registered fairly large declines in employment, while shipping and stevedoring and construction recorded increased activity. Statements were received from 523 firms employing 67,159 persons or 154 less than on July 1.

**Quebec.**—The trend of employment in manufactures in Quebec also was downward; the largest losses were recorded in iron and steel, textile, nickel refining, rubber, pulp, paper and tobacco factories, while biscuit, starch and glucose works reported increased activity. Logging camps showed further seasonal curtailment; railway construction and retail trade were also slacker. On the other hand communication, transportation, building and highway construction and hotels afforded more employment than at the beginning of July. The 1,222 employers from whom returns were tabulated employed 216,562 workers as compared with 220,895 in the preceding month.

**Ontario.**—An aggregate working force of 318,929 persons was indicated by the 2,624 reporting firms; on July 1 they employed 322,881 persons. Curtailment in some branches of manufacturing, notably iron and steel, textiles, lumber, pulp and paper, glass and rubber factories, was partly offset by improvement in fruit and vegetable canneries, tobacco and leather works. Metallic ore mines, communication, building and highway construction also registered increased employment. On the other hand, logging camps recorded a continuation of the seasonal losses they have recently indicated and the railways released large numbers of workers, from both their

operations and construction departments, particularly from the latter. Retail stores, moreover, reported smaller sales forces.

*Prairie Provinces.*—Contractions in railway construction in the Prairie Provinces were partly offset by improvement in manufacturing generally, chiefly in iron and steel. There was, however, a net reduction of 2,975 or between 2 and 3 per cent in the pay-rolls of the 754 firms making returns. They employed 101,698 persons at the beginning of August.

*British Columbia.*—Employment in British Columbia continued to show an upward movement, 793 persons having been added to the pay-rolls of the 606 reporting employers. Their staffs comprised 71,409 workers at the beginning of July. Manufacturing, particularly pulp, paper, canning and iron and steel factories, was decidedly busier; mining, transportation, building and railway construction and trade also recorded increased employment, but logging and highway construction showed considerable curtailment.

The following table gives the index number of employment in the five areas into which the Dominion is divided in these statistics.

(Number employed January 1920=100)

District	Relative Weight	Aug. 1 1924	July 1 1924	Aug. 1 1923	Aug. 1 1922	Aug. 1 1921
Maritime provinces .....	8.7	90.2	90.6	97.8	94.0	91.2
Quebec .....	27.9	98.7	100.6	101.9	90.3	87.8
Ontario .....	41.1	90.3	91.4	97.1	90.8	85.0
Prairie Provinces .....	13.1	96.4	99.1	104.3	101.5	97.5
British Columbia .....	9.2	107.1	105.8	107.2	99.8	96.3
Canada .....	100.0	94.7	95.9	100.2	93.1	88.9

### Employment by Cities

Firms in Montreal, Winnipeg and Vancouver registered additions to staff, while in Toronto, Ottawa and Hamilton contractions were indicated.

*Montreal.*—Considerable declines in employment in railway car shops were more than offset by expansion in other branches of manufactures, in communication, transportation and building. According to returns from 670 employers, they had 107,454 persons on their pay-lists as against 107,202 on July 1.

*Toronto.*—The reductions in Toronto were comparatively large, 1,125 persons having been released by the 747 employers making returns, whose staffs included 90,611 workers. Contractions in manufacturing, chiefly in textiles, iron and steel, printing and furniture works, caused a large share of the decline; trade also was less active. Biscuit and confectionery

factories and road construction, on the other hand, recorded improvement.

*Ottawa.*—Employment in Ottawa showed a general but slight falling off, according to statements tabulated from 123 firms employing 10,721 persons as compared with 10,825 in the preceding month. The largest decreases occurred in sawmills, although these were not particularly pronounced.

*Hamilton.*—Further though less extensive losses were registered in Hamilton, where the 197 reporting firms employed 24,472 persons or 389 less than at the beginning of July. There were substantial contractions in iron and steel, but improvement in building construction and canneries partly counteracted these declines.

*Winnipeg.*—The situation in Winnipeg showed very little change; abattoirs, trade, building construction and brick works registered moderate improvement, while small decreases were noted in printing and textile plants. A combined working force of 23,675 persons was reported by the 279 firms making returns; they employed 23,613 on July 1.

*Vancouver.*—General improvement was shown in Vancouver. Manufacturing, trade and building construction registered the most marked gains, but employment on highways declined slightly. Reports were compiled from 218 firms, employing 22,146 workers on August 1, as compared with 21,473 at the beginning of July.

The following table shows the index numbers of employment in these cities.

(Number employed in January 1920=100)

City	Relative Weight	Aug. 1 1924	July 1 1924	Aug. 1 1923	Aug. 1 1922
Montreal .....	13.9	95.1	94.8	97.3	88.6
Toronto .....	11.7	83.9	83.9	89.1	88.1
Ottawa .....	1.4	100.6	101.3	109.3	
Hamilton .....	3.2	80.9	81.7	93.3	
Winnipeg .....	3.1	85.5	85.6	87.5	96.5
Vancouver .....	2.9	102.3	99.0	103.6	98.3

### The Manufacturing Industries

In spite of substantial improvement in fruit and vegetable canneries and gains on a somewhat smaller scale in thread woollen, biscuit, flour, starch, boot, shoe and electric current factories, there was a fairly large decrease in employment in manufacturing as a whole. Railway car, automobile and knitting plants reported large reductions; cordage, cotton, fish, preserving, lumber, rubber, chemical, glass, electric apparatus and nickel works also recorded curtailment of operations. The 3,723

manufacturers reporting employed 423,671 persons, or 6,848 less than in the preceding month. Contractions on a smaller scale had been indicated during the corresponding period of 1923 and the index number then was higher.

*Animal Products—Edible.*—For the first time since the beginning of March the trend of employment in this industry was downward. The reduction duplicates that indicated on August 1, 1923, when the situation was considerably less favourable. Statements were compiled from 189 firms, employing 15,091 persons as compared with 15,367 in their last report. The greater part of this decline of between 1 and 2 per cent occurred in fish canning, smoking and curing establishments in the Maritime Provinces. In British Columbia, however, employment continued to expand moderately.

*Leather and Products.*—Boot and shoe factories reported increased activity, this being the first increase that has been recorded in the leather group since February. The improvement occurred chiefly in Ontario. An aggregate working force of 15,838 persons was indicated by the 179 reporting firms; they had employed 15,659 on July 1. Employment at the beginning of August, 1923, had shown a considerable decrease, but the index then was slightly above its present level.

*Lumber and Products.*—Lumber mills, container and furniture factories registered small declines in activity, but match factories were rather busier. There was a net reduction in employment of 347 persons, according to returns from 705 employers, whose staffs comprised 55,444 workers. Employment in all provinces except Quebec and British Columbia showed a slight falling off, while the largest contractions occurred in Ontario. A moderate increase in employment was shown during the corresponding period of last year, and the number employed by the reporting firms was then a good deal greater.

*Plant Products—Edible.*—Seasonal activity in fruit and vegetable canneries, together with improvement in flour, cereal, starch, glucose, biscuit and confectionery factories caused an increase of 8.9 per cent in the employment afforded in the edible plant products group. While all provinces shared in the expansion, the gains in Ontario were most pronounced. The 303 firms from which returns were tabulated employed 27,523 persons or 2,238 more than in the preceding month. This increase greatly exceeds that reported on August 1, 1923, and the index number at the present time stands slightly higher.

*Pulp and Paper Products.*—Another minor decline was recorded, on the whole, in this industry. Plants producing paper goods and printing and publishing shops reported reductions, while pulp and paper mills were rather more fully engaged. Firms in Quebec and Ontario registered curtailment of operations, but in British Columbia there was an increase. Reports were compiled from 450 employers, whose staffs aggregated 51,101 persons as against 51,213 at the beginning of July. A very slight increase in activity had been indicated early in August of last year, when employment in pulp and paper was in rather greater volume.

*Rubber Products.*—Rubber tire and footwear works in Ontario and Quebec respectively, afforded less employment than at the beginning of July, 418 persons having been released from the pay-rolls of the 31 firms reporting in the rubber group. As they employed 9,738 persons as compared with 10,156 at the beginning of July, this was an increase of 4.1 per cent. Contractions on a very much larger scale had been registered on August 1, 1923, and the index number then was below its 1924 level.

*Textile Products.*—Employment in the textile industries continued to decline. Knitting, hosiery, cotton and cordage works reported substantial losses, while improvement was noted in thread and woollen works. The largest reductions took place in Ontario, but there was also a considerable falling off in Quebec and the Maritime Provinces. A combined working force of 61,363 persons was recorded by the 517 firms reporting, who had employed 63,060 at the beginning of July. Curtailment of operations, though on a smaller scale, had also been indicated at the same period of last year; employment at that time was on a higher level.

*Chemicals and Allied Products.*—Activity in drug, pharmaceutical and other chemical works in Quebec and Ontario showed a decrease of about 3 per cent, according to returns from 112 employers, whose staffs comprised 6,287 persons, as compared with 6,487 in the preceding month. A similar falling off had been reported on the same date of last year.

*Clay, Glass and Stone Products.*—Glass factories in Ontario were less fully employed, but stone works, especially in the Maritime district, recorded improvement. Statements received from 116 firms showed that they employed 9,212 workers as compared with 9,443 at the beginning of July. Reductions in employment had also been noted at the same

period of last year; the declines then, however, were not as extensive and the index number stood higher.

*Electric Current.*—An aggregate working force of 11,998 persons was reported by the 82 firms making returns, who employed 11,885 persons on July 1. The greater part of this 1 per cent increase occurred in Ontario and British Columbia. This improvement was rather less than that recorded at the same period last year, but the situation then was not as good as during the period being reviewed.

*Electrical Apparatus.*—A further moderate decrease in employment was registered by electrical appliance factories on August 1; this movement is very similar to that indicated at the beginning of August, 1923, when employment was in smaller volume than at the present time. The contraction was very largely confined to Ontario. Reports compiled from 33 manufacturers showed that their staffs declined from 8,539 persons on July 1 to 8,360 at the beginning of August.

*Iron and Steel Products.*—Railway car shops recorded substantial reductions in personnel, while automobile, tool and agricultural implement works, foundries and machine shops also afforded less employment at the beginning of July. Wire and iron pipe plants, however, indicated a more favourable trend. An aggregate working force of 111,197 persons was registered by the 616 firms reporting, who employed 116,749 at the beginning of July. The difference was a reduction of 4.8 per cent, which was very much larger than that shown at the corresponding period of last year; the index number at that time was a good deal higher.

*Non-Ferrous Metal Products.*—Nickel smelting and refining in Quebec reported a fairly large decline in employment, owing to the closing down of important works. Very little change was noted in the remaining divisions of the non-ferrous metal group; what there was, was favourable. Statements were tabulated from 97 employers, whose staffs comprised 10,731 persons as compared with 11,046 in the preceding month. This reduction exceeds that indicated on August 1, 1923, when a large number of persons were employed in this industry.

*Miscellaneous Manufacturing Industries.*—Roofing material factories in Quebec, and pipe and photographic apparatus works in Ontario were not quite so busy as at the beginning of July. The 57 firms in miscellaneous manufactures employed 3,341 persons or 185 less than in the month before.

### Logging

Further large losses in employment were indicated in logging camps in every province; the most pronounced decreases were registered in Ontario and Quebec. Reports were compiled from 211 firms, whose staffs declined from 16,427 persons on July 1 to 13,797 on the date herein covered. Curtailment of operations on a slightly smaller scale had been reported at the beginning of August, 1923, after which an upward trend was noted. The index number then was slightly higher than on August 1, 1924.

### Mining

*Coal Mining.*—According to returns from 92 operators, they employed 25,893 persons as compared with 26,603 in the preceding month. This decline of 2.7 per cent was recorded in the Maritime Provinces; employment in the Prairie Provinces and British Columbia showed a slight increase. The trend on August 1, 1923, had also been unfavourable, although greater activity was noted then.

*Metallic Ores.*—Improvement was reported in the metallic ore mines in Ontario and also in British Columbia, though to a less extent. The 48 firms making returns increased their working forces by 509 to 14,388 persons. This increase was practically the same as that recorded on August 1, 1923, but the index number at the present time stands higher than in any month since 1920; it is some 17 points higher than at the same period of last year.

### Communication

The trend of employment in communication continued to be favourable in all provinces. The most pronounced gains occurred in Ontario. Statements were compiled from 163 employers, whose staffs comprised 23,331 persons as compared with 22,863 at the beginning of July. This increase is substantially larger than that recorded during the corresponding period of 1923, when the index number stood several points lower.

### Transportation

*Street Railways and Cartage.*—Further slight additions to staffs were registered by street railway companies at the beginning of August. Firms in Quebec reported gains, while in Ontario there was a decline. The working force of the 108 reporting concerns aggregated 18,792 as against 18,728 on July 1. Greater expansion had been indicated at the beginning of August, 1923, and conditions were rather more favourable.

*Steam Railway Operations.*—Employment in the operation departments of the railways was in less volume than at the beginning of

July. All provinces except the Maritimes, where there was no change, registered curtailment of activity, but the decline in Ontario was the largest. A combined pay-roll of 78,833 persons was reported by the 107 firms and divisional superintendents making returns; they employed 79,335 in the preceding month. An increase in employment had been recorded at the beginning of August, 1923, when the situation was somewhat better.

*Shipping and Stevedoring.*—Heightened activity was reported in water transportation in the Maritime Provinces, Quebec and British Columbia, while in Ontario there was a nominal gain. This expansion greatly exceeds that registered during the corresponding period of last year; the index then was below its present level. Returns were tabulated from 60 employers, whose staffs were enlarged from 13,289 persons on July 1 to 14,564 at the beginning of August. The difference represented an increase of 9.8 per cent.

**Construction and Maintenance**

*Building Construction.*—General improvement, except in the Prairie Provinces, was recorded in this industry; 714 persons were added to the pay-rolls of the 295 reporting contractors, who employed 25,536 persons. Somewhat larger additions to staff were registered on August 1, 1923, when the level of employment was higher.

*Highway Construction.*—Work on highways and roads in the Maritime Provinces, Quebec and Ontario showed a substantial increase. In the Prairie district there was a minor gain, while in British Columbia curtailment was indicated. Reports were compiled from 101 employers in this division, whose staffs, standing at 17,074, were larger by 2,052 or 13.7 per cent than on July 1. Expansion on a rather smaller scale had been noted at the beginning of August of last year.

\*Number employed in January 1920 by reporting firms=100.

*Railway Construction and Maintenance.*—Contractions were indicated by the 35 concerns and divisional superintendents making returns. They employed 45,489 persons, as compared with 50,446 in the preceding month. In the Maritime Provinces and British Columbia increased activity was evident, but in the other provinces there were declines, of which that in the Prairie district was much the largest. These reductions in working force are a month earlier than the seasonal declines began last year; the number employed is considerably smaller than August 1, 1923.

### Trade

Retail merchants reported a small decline in sales force, which was partly offset by an increase in wholesale trade. The movements in these divisions repeat those indicated at the

same time of last year, although the decrease in retail trade is smaller and the increase in wholesale trade is larger. The index number, however, is practically the same as at the beginning of August, 1923. Statements were received from 554 employers in the trade group, whose staffs comprised 53,814 persons as compared with 53,891 on July 1.

The accompanying table shows the index numbers of employment reported by employers, by industries, as at the first of August and the first of July of this year, and also at the first of August, 1923, 1922 and 1921. The column headed "relative weight" shows the proportion that the number of employees reported in the indicated industry bears to the total number of employees reported in Canada by the firms making returns on August 1.

## EMPLOYMENT OFFICE REPORTS FOR JULY, 1924

**E**MPLOYMENT during the month of July, 1924, did not reach expectations, a slight decline from the preceding month being recorded in the business of the offices of the Employment Service of Canada. A comparison with the reports of July, 1923, showed a marked reduction and a general slackness in employment. As shown by the accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, the curves of applications and placements rose slightly during the first half of the month, followed by a drop towards the end of the period. These curves followed the same trend as during July, 1923, but were at a much lower level. The curve of vacancies declined consistently throughout the month, while at the beginning of July of last year vacancies were greater in number, and increased rapidly throughout the month.

The reports from the offices indicate that during the first half of July, 1924, applications for employment averaged 1,464 daily as compared with 1,426 daily during the latter half of the preceding month and with 1,772 daily during the same period of last year. During the latter half of the period under review applications averaged 1,324 daily, as compared with 1,740 daily during the latter half of July, 1923.

Employers notified the service of an average of 1,051 and .998 vacancies daily during the first and second half of July, 1924, in contrast with a daily average of 1,587 and 1,770 daily during the corresponding periods a year ago. During the latter half of June, 1924, vacancies averaged 1,154 daily.

The average number of placements made daily by the service during the first half of July was 999, of which the average in regular employment was 733 daily and in casual work 266. This is in contrast with an average of 982 daily during the preceding period and with an average of 1,423 daily during the same period a year ago. During the latter half of the month placements averaged 884 daily, the average in regular employment being 632 and in casual work 252. The average number of placements made daily during the same period of last year was 1,389.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,90
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924 (7 months).....	120,520	80,262	200,782

During the month of July, 1924, the offices made 25,779 references to positions and effected a total of 24,361 placements. Of the latter 17,646 were in regular employment and 6,715 in casual work. The placements in regular employment were 14,036 of men and 3,610 of women. The number of applications for employment registered at the offices was 26,048 from men and 10,057 from women, a total of 36,105. Vacancies reported to the Service by employers numbered 26,589, of which 18,502 were for men and 8,087 for women workers.

The placements in regular employment by provinces were as follows:—Nova Scotia—342 men, 52 women; New Brunswick—298 men, 94 women; Quebec—1,183 men, 419 women; Ontario—6,483 men, 1,430 women; Manitoba—982 men, 428 women; Saskatchewan—1,135 men, 339 women; Alberta—1,671 men, 453 women; British Columbia—1,942 men, 395 women.

MARITIME PROVINCES

A few vacancies for the hay harvest and for a number of small fruit pickers were offered at New Glasgow, Sydney, and Moncton. Although street and road work formed the bulk of the employment offered, no large additions to staffs were made. There were fewer unemployed registered at the offices during the

month than at any previous time this year. Some bridge and construction work at Moncton required carpenters and teamsters, while repairs to dwellings and public buildings gave work to many. Lumbering and saw mills were active, the offices receiving a considerable number of calls for men. The demand for domestic workers was fair with a good supply of applicants.

QUEBEC

The offices reported an improved industrial situation during the month, a marked increase in placements being recorded. There was an active demand for farm workers especially in the vicinity of Montreal. Road building in the province and street work in the municipalities afforded employment to large num-

bers, and many tradesmen, carpenters and labourers were at work on the erection of buildings. Manufacturing was not so busy as desired and trades were quiet. There was a consistent demand for hotel and restaurant employees with a large number of vacancies available for domestic work.

ONTARIO

The employment situation in Ontario continued to show a marked decrease from the preceding years. The supply of farm workers was more than sufficient to fill the vacancies offered, a large number of which were recorded at Toronto, Hamilton and the offices in the Western Peninsula. Improved conditions were shown in the building industry with highway,

street and road construction employing considerable numbers. Building was slack, although carpenters and skilled bricklayers, painters, etc., were well employed. Railway maintenance construction and repair work employed many workers in the vicinity of Port Arthur, Fort William, North Bay, Timmins and Sudbury. In the logging and saw-mill industries experienced bushmen, sawyers, edgermen and skilled labour were placed, the offices at North Bay, Sault Ste. Marie, Timmins and Port Arthur, making a considerable number of placements in this group. Manufacturing industries remained very quiet with an oversupply of workers available. A slackness in demand for domestics and women house workers was shown with a normal number of placements in casual work.

## MANITOBA

An increased number of orders for general farm labour was received at the offices, with a few calls for tractor operators and hay harvesters. A general though slight increase was shown in the building group from the offices at Dauphin and Winnipeg. The increased demand, however, was not sufficient to employ all experienced labourers and tradesmen. Railway construction work was not so brisk, but men were procured very easily for section and extra gang work. In Winnipeg an unusual demand for experienced domestic and hotel help was reported, with a corresponding increase in placements.

## SASKATCHEWAN

General employment conditions were slack. The demand in the farming group showed improvement from the preceding period, especially in the vicinity of Regina, Swift Current and Estevan, with more than sufficient applicants to meet the requirements. The increase in the construction groups continued, a few vacancies offering for carpenters, painters, bricklayers and tinsmiths, but the supply of workers was still in excess of the demand. Some road improvements were underway and railway maintenance continued to offer a large amount of work. From Moose Jaw and Regina an increased demand for domestics for rural districts was reported, with quietness prevailing in the demand for the urban districts.

## ALBERTA

The demand for farm help continued fair with an early increase anticipated for the coming months. At Edmonton, Drumheller and Calgary the greater number of building mechanics were employed, but throughout the province quietness prevailed in the building and construction groups. Further demands for track men, section hands and gang workers were met satisfactorily from Calgary, Lethbridge and Drumheller. Quietness characterized the logging industry, with a number of orders for bushmen and labourers at Edmonton. There is a brisk demand for casual women workers with a steady call for trained women workers.

## BRITISH COLUMBIA

Hay making afforded seasonal employment for workers in the districts near Kamloops, New Westminster, Vancouver and Victoria and a few berry pickers were required for the Okanagan Valley. Highway construction and road repairs and railway maintenance afforded

the bulk of the employment in the construction groups, although several skilled building tradesmen and labourers were placed in the larger municipalities. The logging industry showed depression in the numbers employed with only a slight improvement in the work available at the lumber mills. Longshore work was quiet, a few deck hands and stevedores being required at Prince Rupert and Vancouver. A falling off in the demand for women domestics with hotel and restaurant work fairly quiet, was reported during the month.

## Movement of Labour

During July, 1924, the offices of the Employment Service of Canada made 17,646 placements in regular employment, of which 11,242 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of these latter 870 were granted the Employment Service reduced rate, 587 going to points in the same province as the despatching office and 283 to other provinces.

The offices at Hull and Montreal issued 183 transportation certificates, 167 of which were to bushmen going to lumber camps near North Bay, Sudbury and Sault Ste. Marie, Ont., the remaining 16 being issued to saw-mill hands going to points in the Montreal district. Reduced transportation rates granted by Ontario offices numbered 141, all workers being sent to points within the province. Certificates were issued to 111 bushmen going to the northern offices, to five carpenters and four bricklayers and one auto mechanic going to Sarnia, North Bay and Port Arthur. From Toronto and London three stonecutters were transferred to Kingston. A miner and a diamond driller were sent from Sudbury to Ottawa and to Cobalt. The remainder of the provincial transfers included cooks, farm hands and labourers. Of the workers benefiting by the Employment Service reduced rate in Manitoba, 10 were transferred to Alberta districts, six of which were farm hands, one glazier, two foremen and one sheet metal worker. Of the 44 workers dispatched from Manitoba to Saskatchewan, 28 were farmers, 4 were teamsters and graders, 6 domestic workers for rural districts, the remainder including waitresses and kitchen help. To the province of Ontario were sent 6 saw-mill labourers, one stenographer, one fisherman, two cooks and one housekeeper. Of the 212 provincial transfers 192 farm hands were sent to outlying districts from the Winnipeg office; the remainder included housekeepers and generals, waitresses, cooks and bakers. Saskatchewan offices granted reduced rate

transportation to one hotel porter and one cook going from Regina to Brandon, Man., and to 79 workers going to various points within the province. Of the latter 47 were farm workers and hay makers, 24 were bushmen, saw-mill workers, teamsters and blacksmiths, 7 were housekeepers and domestics and one steam engineer. From the province of Alberta 8 farm hands were sent to the districts near Saskatoon, Moose Jaw and North Battleford and 12 fruit pickers and 2 flume builders to various points in British Columbia. Of the 72 workers dispatched at the reduced rate to points within the province, 17 were farm hands, 20 were bushmen and mill labourers, 25 were teamsters and carpenters and 10 were cooks and cooks' assistants. British Col-

umbia offices issued 94 reduced rate certificates, 17 to farm workers going to points in the province of Alberta and 10 to farm hands destined for points near Regina, Saskatoon and Moose Jaw, Sask. Of the 67 provincial transfers 9 were fruit pickers and farm hands going to the Okanagan Valley, about 25 were bushmen and saw-mill workers, approximately 30 were railway construction labourers, carpenters, bricklayers and engineers for points near Prince Rupert, Prince George and Nelson, the remainder being housekeepers and waitresses.

Of the 870 workers, who benefited by the Employment Service reduced rate, 336 were carried by the Canadian National Railway, 529 by the Canadian Pacific Railway and 5 by the Pacific Great Eastern Railway.

## BUILDING PERMITS ISSUED DURING JULY, 1924

ACCORDING to statements received by the Dominion Bureau of Statistics, a substantial decrease was recorded in the building permits issued last month in 56 cities; their value, following the usual seasonal trend, declined from \$13,373,987 in June to \$11,090,760 in July. This was a reduction of \$2,283,227 or 17.1 per cent. As compared with the same month of 1923, there was also a falling off in the permits issued, of \$1,441,702 or 11.5 per cent.

Forty-nine cities furnished detailed reports showing that they had issued some 1,200 permits for dwellings valued at approximately \$4,900,000, and for over 2,700 other buildings estimated to cost more than \$6,000,000.

New Brunswick and Alberta showed increases of 631.1 and 51.6 per cent, respectively, in the value of the building authorized as compared with June, while declines were recorded in the remaining provinces. The reductions of \$819,741, or 18.4 per cent, in

Quebec, and of \$185,865, or 88.6 per cent, in Nova Scotia, were respectively the largest actual and proportional decreases.

As compared with July, 1923, New Brunswick and Quebec registered increases in the amount of prospective building; the former province showed a gain of 119.1 per cent and the latter of 49.4 per cent. Of the declines indicated in the other provinces, that of \$2,162,050, or 31.2 per cent, in Ontario was actually the most pronounced, while the largest percentage reduction of \$63,690 or 72.7 per cent, was in Nova Scotia.

The value of authorized building in Montreal was greater than in the preceding month and also than in July, 1923. In Toronto, Winnipeg and Vancouver there were declines in both comparisons. Of the other cities, St.

John, Kingston, Niagara Falls, Peterborough, Stratford, Sault Ste. Marie, Calgary, Point Grey and Prince Rupert registered increases in projected building as compared with both June, 1924, and July, 1923.

The value of building permits issued in 56 cities during the first seven months of this year was lower by 17.6 per cent than in 1923 and by 19.6 per cent than in 1922. It was, however, 5.4 per cent greater than in 1921. The aggregate for the period January to July, 1924, was \$68,974,131; for 1923, \$83,725,680; for 1922, \$85,742,989 and for 1921, \$65,451,255.

The accompanying table shows the value of the building permits issued during July as compared with June, 1924, and with July, 1923. The 35 cities for which records are available since 1910 are marked thus "X."

## FAIR WAGE CONTRACTS

**D**URING August the Department of Labour received for insertion in the *LABOUR GAZETTE* the following information relative to fifteen fair wage contracts, fourteen of which were awarded by the Department of Public Works of Canada, and one by the Department of Railways and Canals. These contracts contain the usual fair wage clause, which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

### DEPARTMENT OF PUBLIC WORKS

Dredging entrance channel and inner harbour at Kingsville, Ont. Name of contractors, The Randolph Macdonald Company, Limited, of Toronto, Ont. Date of contract, July 30, 1924. Amount of contract, Class "B" 70 cents per cubic yard, scow measure. Approximate expenditure, \$21,000.

Dredging Wabassa Park, Hamilton Harbour, Ont. Name of contractors, The Randolph Macdonald Company, Limited, Toronto, Ont. Date of contract, July 31, 1924. Amount of contract, Class "B" 68 cents per cubic yard, place measure. Approximate expenditure, \$5,850.

Docking, painting, etc., dredge *King Edward*. Name of contractors, Westminster Marine Railway Company, Limited, New Westminster,

B.C. Date of contract, August 1, 1924. Amount of contract, \$4,500.

Docking, cleaning, etc., dredge *Mastodon*. Name of contractors, Wallace Shipbuilding and Dry Dock Company, Limited, Vancouver, B.C. Date of contract, July 31, 1924. Approximate expenditure, \$19,900.

Reconstruction of revetment walls of inner harbour at Kincardine, Ont. Name of contractor, William Hunter, Kincardine, Ont. Date of contract, August 4, 1924. Approximate expenditure, \$17,494.67.

Installation of boilers and alterations to heating apparatus, old Custom House, Montreal, Que. Name of contractors, Hickey and Aubut, Limited, Montreal, Que. Date of contract, August 1, 1924. Amount of contract, \$9,900.

Repairs to wharf, Cockburn Island, Ont. Name of contractor, George P. Sandie, Thessalon, Ont. Date of contract, August 7, 1924. Approximate expenditure, \$4,496.58.

Replacement of wharf at Hardy Bay, B.C. Name of contractor, William Greenlees, Vancouver, B.C. Date of contract, August 4, 1924. Approximate expenditure, \$18,669.54.

Reconstruction of eastern breakwater at Collingwood, Ont. Name of contractor, W. P. R. Holdcroft, Kingston, Ont. Date of contract, August 11, 1924. Approximate expenditure, \$13,503.05.

Dredging berth at Miramichi Lumber Company's wharf, Douglastown, N.B. Name of contractor, Miramichi Dredging Company, Limited, Newcastle, N.B. Date of contract, July 19, 1924. Amount of contract, Class "B" 59½ cents per cubic yard, scow measure. Approximate expenditure, \$3,275.

Boiler and alteration to hot water heating plant in public building at Maple Creek, Sask. Name of contractors, Messrs. Marsh and Scott, Medicine Hat, Alta. Date of contract, August 7, 1924. Amount of contract, \$1,850.

Waterproofing basement walls of the detention building, Savard Park, Que. Name of contractor, Ign. Bilodeau, Limitée, Quebec, Que. Date of contract, August 15, 1924. Amount of contract, \$1,403.

Repairs to wharf, Nootka, B.C. Name of contractor, William Greenlees, Vancouver, B.C. Date of contract, August 19, 1924. Approximate expenditure, \$3,240.

Supply and installation of new smokeless boilers in customs examining warehouse at Toronto, Ont. Name of contractors, W. G. Edge, Limited, Ottawa, Ont. Date of contract, August 20, 1924. Amount of contract, \$3,347.

#### DEPARTMENT OF RAILWAYS AND CANALS

Rebuilding cribs and deepening the north entrance to St. Peters Canal. Name of contractors, The Atlantic Dredging Company,

Limited, Louisburg, N.S. Date of contract, August 6, 1924. Amount of contract, \$56,819.

#### POST OFFICE DEPARTMENT

The following is a statement of payments made in August, 1924, for supplies ordered by the Post Office Department subject to the regulation for the suppression of the sweating system, the securing of fair wages, and the performance of work under sanitary conditions:—

Nature of orders	Amount of orders
	\$
Making metal dating stamps and type and other hand stamps and brass crown seals.....	459.51
Making and repairing rubber stamps, daters, etc.	121.44
Making up and supplying letter carriers' uniforms, etc.....	1,200.24
Stamping pads, ink, etc.....	703.86
Mail bag fittings.....	2,559.00
Letter carriers' satchels.....	179.02
Repairs to boxes, etc.....	103.41
Portable letter boxes.....	265.00
Scales repaired.....	78.75

#### Hours of Work in Germany

**I**N view of the tendency for increased working hours in Germany, the General Federation of German Trade Unions recently undertook to survey the situation in the spring, choosing seven of the most important industries and receiving reports covering 46,122 undertakings employing 2,453,523 workers. The International Labour Office has published the results of the survey data in its official publications.

For the past few years Germany has been operating on an eight-hour basis, but the working day has been lately extended in many industries. The general average of all the workers and industries covered shows that 33.5 per cent of the undertakings are now operating more than 48 hours per week, and 54.7 per cent of the workers are employed for longer than 48 hours per week. Of the undertakings, 5.1 per cent are operating more than 54 hours per week, and 13 per cent of the workers are employed more than 54 hours per week.

The industries covered were building, printing, chemical, wood, metal, boot and shoe, and textile. The greatest percentage of undertakings and workers operating more than 48 hours per week is found in the textile industry where 78 per cent of the undertakings and 82 per cent of the workers are operating the longer period. The metal industry is next with 52 per cent of the undertakings and 63 per cent of the workers; and the chemical industry third with 50 per cent of the undertakings and 44 per cent of the workers operating more than 48 hours per week. The metal and chemical industries lead in operating more than 54 hours per week with about 10 per cent of the establishments in each industry operating on such a basis. Other industries show almost no undertakings working more than 54 hours in the week.

The building industry shows the smallest percentage of operation over 48 hours with 10 per cent of the undertakings and 11 per cent of the workers on such a basis.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that has recently been received by the department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Vegetable Foods, Drink and Tobacco

LETHBRIDGE, ALBERTA.—THE LETHBRIDGE BREWERIES, LIMITED, AND THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL NO. 354.

Agreement to be in effect from June 1, 1924 to May 31, 1925, with 30 days' notice of change.

Only good standing members are to be employed, provided the union secretary can furnish the same. Extra help may be employed by permit cards during the busy season.

No member shall be discharged or discriminated against for upholding union principles.

Hours per week: 48;  $8\frac{1}{2}$  hours per day;  $5\frac{1}{2}$  hours on Saturday. Overtime and holidays, time and one-half.

Minimum wages: Engineering department—operating engineers, 79 cents, and one week's holidays per year with pay; machinists, standard rate of wages. Brewing and bottling department: First cellar, brewhouse men, \$36 per week; helpers, \$34.50; cooper, \$36; beginners, first six months, \$27; thereafter, \$30, excepting in soft drink department where wages shall be \$24 per week. Beer driver, \$140 per month; teamsters, \$125 per month; hours per week 48 (exclusive of stable work).

Apprentices: the company may employ one in each department, term being two years; minimum rate per week, first year, \$18; second year, \$21.

Men shall receive former position on recovery from sickness.

In case of lay-off, men shall be laid off by seniority.

Differences shall be referred to a board of arbitrators of two from each party to the agreement, and if these fail to agree they shall choose a fifth party.

All material shall be union-made if procurable.

### Manufacturing: Animal Foods

VANCOUVER AND NEW WESTMINSTER, B.C.—FRASER VALLEY MILK PRODUCERS' ASSOCIATION AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL NO. 464, MILK DRIVERS AND DAIRY EMPLOYEES.

Agreement to be effective from June 15, 1924 until June 15, 1925.

Members of the union in good standing shall be employed unless other suitable persons are desired or unless union men are not available. Non-union men if employed shall make application to join the union within two weeks. The local shall not consider an applicant unworthy of membership because a union man is out of employment.

In event of a route being vacant employees of not less than six months' standing shall be given an opportunity of changing. The employee changing shall learn the new route in his own time, not exceeding five days free, the Company paying him when he takes the route.

The employees shall provide their working apparel, the employer supplying aprons.

No workman shall be discharged or discriminated against for upholding union principles; any man who works according to the instructions of the union, or who serves on a committee, shall not lose his position or be discriminated against for that reason.

Men are to have one day off in seven or one week off in seven, according to decision of employers. A driver's day's work is to consist in covering his route satisfactorily. For employees other than drivers, hours per day, eight. Overtime, time and one-half.

In case of accidents or breakdowns, when there is loss or damage, men shall be given a fair hearing.

All new employees are to sign a copy of the agreement with thirty days.

Employees shall receive seven days' notice before being discharged and shall give employers same notice.

The management is to call meetings on stated dates to discuss problems of interest to dairy salesmen.

The union agrees that members shall be fined or suspended on proven charges of drunkenness, dishonesty, or incompetency while on duty.

In case of breakdown of machinery, men shall be notified to lay-off during the anticipated time for repairs, men kept standing-by being paid overtime rates provided said standing-by causes them to work longer than stipulated eight hours.

In event of a strike of employees of any other firms, with which business is done, the employees are not to be asked to perform any labour they do not ordinarily perform, and they agree to perform their usual work.

Wages per month for driver salesmen, from \$100 to \$130 according to value of load, drivers of loads over \$1,001 shall receive 3 per cent commission on sales over that amount. On butter sales commission shall be one cent per pound retail and  $\frac{1}{2}$  cent per pound wholesale. If any load is split the driver shall receive the same rate of wages for a period of three months as he has received prior to the load being split.

Wages per month: truck drivers, \$130; truck helpers, \$120; checkers, \$125; stable helpers, \$120; all other inside help, \$120; inside relief men, \$125; relief men (outside), \$150.

New employees, \$20 less than the above rates. First three months \$100; next three months, \$110; after six months, scale.

Employees discharged (except for dishonesty) may appeal case to the management through union officials. New men on routes shall not be paid for the first three days' learning.

There is to be no cessation of work or lockouts and there are to be no sympathetic strikes during the terms of the agreement.

In any controversy between the employers and the union the men shall continue to work and controversy shall be adjusted by representatives of the employer and of the union, with a third disinterested party selected by them, the decision of any two members of the board being final and binding, and both parties abiding thereby.

**Manufacturing: Printing and Publishing****ST. JOHN, NEW BRUNSWICK.—CERTAIN FIRMS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 85.**

Agreement to be in effect from May 1, 1924 until May 1, 1925.

The employers are to employ in their composing room and the departments thereof only mechanics and workmen who are members of the union, provided the union furnishes enough competent help.

Overtime and holiday rates: Job and news offices, overtime and holidays, time and one-half, Sundays, double time. Holidays in news offices, Dominion Day Labour Day and Christmas Day.

Hours per week: book and job offices, forty four; on newspapers, eight hours for day work and seven and one-half for night work.

Proof readers holding union cards shall receive the minimum scale. All work must be time work.

Minimum wages per week, day work: Book and job: all foremen, linotype operators and machinists, \$33; floor hands and monotype keyboard operators, \$30.80; newspapers: all foremen, linotype operators and machinists, \$34; floor hands, \$32.

Scale for apprentices: third year, two-fifths journeymen's pay; fourth year, one-half; fifth year, two-thirds.

Night work: Foremen, operators and machinists, \$37; floormen, \$35. Apprentices, third year, two-fifths of journeyman's pay; fourth year, one-half; fifth year, two-thirds.

Apprentices: news, one to six journeymen; job, one to three journeymen, not more than three in an office. Term of service, five years.

Registered apprentices shall be given the same protection as journeymen. Apprentices are to enroll in the course of lessons approved by the International Typographical Union. Apprentices shall not leave to work in another office without written consent of the employer and the president.

**CALGARY, ALBERTA.—THE ALBERTAN PUBLISHING COMPANY, LIMITED, AND THE INTERNATIONAL STEREOTYPERS' AND ELECTROTYPERS' UNION, LOCAL No. 109.**

Agreement to be in effect from May 27, 1924 until May 27, 1925.

Minimum wages per week, foreman, day \$47.30; night, \$50.30; journeymen, day, \$42.30; night, \$45.30. Apprentices scale—first year, one-quarter of journeyman's scale; second year, one-third; third year, one-half; fourth year, two thirds; fifth year, three-quarters.

Hours of labour: forty-five hours per week on day shift; forty-two hours on night shift.

**NEW WESTMINSTER, B.C.—CERTAIN LOCAL EMPLOYING PRINTERS, AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 632.**

Agreement to be in effect from January 1, 1923 until December 31, 1925.

The foreman is to select, supervise, control and discipline the employees. The employers will have no right to object to rules made by the union for government of members if not conflicting with the agreement.

Only journeymen members of the union shall handle type in the composing room.

Wages per week: Day work, \$45, 45 hours per week, 7½ hours per day. Men working second shift, commencing at 3 p.m., to be paid same rate as day men. Night work: \$49.50 per week, 45 hours per week, 7½ hours per night.

The newspaper scale for typesetting machine operators shall govern in book and job shops and publications other than daily newspapers. Wages per week of 44 hours in book and job shops, \$40.50. Foreman, at least 50 cents extra per shift. Machinist operators, at least 50 cents extra per shift for first four machines. If more than four machines are in operation a regular machinist shall be employed. Overtime rate, time and one-half. Holiday rate, double time. For work on morning newspapers on holidays, five hours shall be paid as a full shift.

Wages per week for apprentices, first six months of third year, \$13.50; last six months, \$16; first six months of fourth year, \$19; last six months, \$22; first six months of fifth year, \$27; last six months, \$30.

Learners on typesetting machines, (not working more than six days nor less than an average of four days per week), first four weeks, \$20; next three weeks, \$25; following three weeks, \$30; final three weeks, \$35. If not proficient the learner will be allowed an extra three weeks at \$35 per week. One learner to an office; learners to have been journeyman members for at least three months. Learners shall not work more than 7½ hours per shift nor more than 6 days per week. Overtime at time and one-half if no journeyman is available.

**Manufacturing: Pulp, Paper and Paper Goods****SAULT STE. MARIE, ESPANOLA AND STURGEON FALLS, ONTARIO.—THE SPANISH RIVER PULP AND PAPER MILLS, LIMITED, AND THE LOCALS OF THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS.**

Agreement to be in effect from May 1, 1924, until May 1, 1925.

Certain provisions of the agreement namely those regarding jurisdiction, union membership, hours for tour workers, holidays, interruption of work, mill rules and grievances are contained in the Company's agreement with other international unions as summarized in the LABOUR GAZETTE for last month.

Paper mill schedule, not more than six days per week, no employee being permitted to work on paper machines between 8 a.m. Sunday and 8 a.m. Monday, except on maintenance and repair. Hours for day workers, 8 per day, 6 days per week. Overtime, time and one-half. No employee required to go on duty for repair work shall receive less than four hours' pay.

Members putting on wires other than during regular shift are to receive six hours' time.

An additional provision regarding grievances is that any grievances of the management which it and the officers and local grievance committee of the union cannot agree upon shall be referred to the general manager or his assistant and the International president or his representative. If an agreement is not reached the matter shall be handled under arbitration.

**IROQUOIS FALLS, ONTARIO.—THE ABITIBI POWER AND PAPER COMPANY AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS.**

Agreement to be in effect from May 1, 1924, until May 1, 1925.

The terms of the agreement and mechanical and miscellaneous rates were summarized in the LABOUR GAZETTE for last month. The wages are as follows: Per hour—Paper makers: rates based on standard classification for speed of machines and width of bottom couch. Machine tender, \$1.13-\$1.49; back tender, 95 cents to \$1.36; third hand, 74-90 cents; fourth hand, 60-62 cents; fifth hand, 59-61 cents. Wrapper machine: machine tender, 90 cents; back tender, 72 cents; third hand, 63 cents; fourth hand, 56 cents; fifth hand,

55 cents. Beater engineer, \$1.06; rewinder man, 74 cents; clothing man, 78 cents; oilers, 59-61 cents; broke-hustlers, 42 cents; cleaners and sweepers, 45 cents.

General Mill rates: Wood room—foreman, 81 cents; assistant foreman and knife changer, 61 cents; drum operators, 61 cents; sawyers, oilers, 45 cents; knife grinder, 43 cents; others, 42 cents. Grinder room—Assistant foreman and jiggerman, 63 cents; others 45 cents. Sulphite mill, cooks, 88 cents; acid makers, 82 cents; stockrunners, 70 cents; cook's first helper, 64 cents; screenmen, 47 cents; oilers and cleaners, cook's second helper, burner men, 45 cents; blow pits, deckers, 42 cents. Wet room—foremen, 81 cents, helpers, 61 cents; refiners, oilers, 45 cents; screenman, wet machines, deckers, 42 cents. Finishing room—foreman, head core-maker, 70 cents; electrical truckers, 67 cents; finishers, weighers, coremakers, 45 cents; markers, 43 cents; others, 42 cents.

**Construction: Buildings and Structures**

NIAGARA FALLS, ONTARIO.—LOCAL BOSS PAINTERS AND CONTRACTORS, AND PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL No. 631.

Agreement to be in effect from April 1, 1924 to April 1, 1925.

Hours per day, eight. Overtime, time and one-half; Sunday and holidays, double time.

Only union men shall be employed.

Minimum wages, per hour: journeymen, 70 cents; on bridge and high structural iron work, 75 cents; signwriters, trade grainers, and freehand fresco painters, 75 cents.

Transportation to be paid men working out of the city.

One apprentice to every shop employing two or more men, no apprentice to work alone.

No journeyman member may contract while there is a contractor to employ him. No boss painter shall give a union member permission to take contracts.

Contractors' grievances shall be submitted to the shop steward. In case of trouble arising on a job, no members shall be called off until the business agent and the boss painter have tried to adjust the same.

Grievances shall be submitted to a joint committee.

**Dusting of Coal Mines**

The *Engineering and Mining Journal-Press* points out that the supplying of dust to prevent explosions in coal mines promises to provide an important market for various producers of non-metallic minerals. The success of the so-called "dusting" method has been demonstrated by the United States Bureau of Mines at Pittsburgh and by actual practice in Europe (LABOUR GAZETTE, July, 1924, page 537). "It is noteworthy," it is stated, "that the general practice of coal-mine dusting would open up an important by-product market for the limestone and gypsum industries. These industries would profit even at very moderate prices, for the products sold might otherwise be wasted. The incentive of en-

**Transportation and Public Utilities: Electric Power Plants**

CALGARY, ALBERTA.—THE CALGARY POWER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 348.

Agreement to be in effect from May 1, 1924 until May 1, 1925, with 60 days' notice of change or cancellation.

Any committee of employees appointed to interview the management shall be given immediate hearing.

Hours per day, nine. Overtime and holidays, double time. Time off to vote on election day with pay.

Any employees called to work after 5 p.m. shall receive double pay until relieved. They shall be relieved for eight hours except when they report for work between 4 a.m. and 8 a.m. Time worked will be double time and when this does not equal 8 hours' pay, employees may work following eight hours at straight time.

Employees sent away from headquarters construction camp shall have board and lodging paid for.

Employees shall be furnished with necessary transportation.

Employees giving orders or having charge of men must be foremen, having had at least four years' experience in the trade. Journeymen must have had four years' experience. Apprentices must serve four years except when journeymen cannot be obtained. Not more than one apprentice to four journeymen.

The agreement contains special provisions regarding work on high voltage wires, elevations, erection of poles and blasting.

Board and lodging are to be allowed employees away from headquarters on temporary jobs.

Mattresses and blankets will be supplied by the company free of charge. Board is to be furnished by the Company at \$1.25 a day.

Wages per hour: lead covered cable foreman, \$1.11½; journeyman cable splicer, \$1.00; foreman, \$1.02½; sub-foreman, 93 cents; journeyman lineman, 90 cents; apprentices, first year, 61½ cents; second year, 71 cents; third year, 80½ cents; fourth year, 86½ cents.

couraging and taking part in the highly humanitarian work of conserving miners' lives will, it is hoped, deter dusting material producers from taking advantage for an increasing market unduly to advance prices."

Economic difficulties in Austria, and, in particular, the reduction in the numbers of civil servants, have had an effect on the membership of the Austrian trade unions, according to the International Labour Office. At the end of 1923 the General Confederation of Trade Unions numbered 47 central and eight local trade unions. The total membership was 896,763 (692,839 men and 203,924 women) as against 1,049,949 in 1922.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1924

### Cost of Living, Prices of Staple Articles, and Index Numbers

PRICES in August continued upward, due in some instances to seasonal increases. Both the family budget in terms of retail prices and index numbers of wholesale prices calculated by various authorities were higher.

Retail food prices were higher, due chiefly to seasonal changes. The cost per week of a list of twenty-nine staple foods for an average family of five in some sixty cities was \$10.19 at the beginning of August as compared with \$9.91 for July; \$10.52 for August, 1923; \$10.44 for August, 1922; \$11.44 for August, 1921; \$16.42 for August, 1920; \$16.92 for June, 1920 (the peak); \$13.41 for August, 1918; and \$7.68 for August, 1914. A substantial increase occurred in the price of potatoes with the marketing of the new crop. Advances also occurred in the prices of eggs, butter, bread, flour, evaporated apples, fresh pork, bacon, lard, cheese, rolled oats, rice, beans, coffee and tea while prices of beef, mutton, milk and sugar were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$20.57 for August as compared with \$20.30 for July; \$21.03 for August, 1923; \$20.88 for August, 1922; \$21.98 for August, 1921; \$26.60 for August, 1920; \$26.92 for July, 1920 (the peak); \$21.20 for August, 1918; and \$14.41 for August, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, weighted according to the importance of the commodities, showed an advance to 158.1 for August, as compared with 153.3 for July; 153.5 for August, 1923; 151.7 for August, 1922; 165.5 for August, 1921; 250.2 for August, 1920; 256.7 for May, 1920 (the peak); and 207.0 for August, 1919. Sixty-six prices quotations were higher, thirty-two were lower and one hundred and thirty-eight were unchanged. This index has advanced for three consecutive months and is now at the highest point reached since September, 1921. In the interval the low point of 147.5 was reached in September, 1922.

In the grouping according to chief component material four of the eight main groups advanced and four declined. The vegetable products group and the animals and their products group showed the most important advances, the former mainly because of higher prices for grains, flour and milled products, bread, and vegetables and the latter because of higher prices for hogs, sheep, bacon, lard and tallow which more than offset the declines

in cattle, fish, leather and boots. Higher prices for copper, lead, silver, tin, and spelter caused the advance in the non-ferrous metals group while in textiles group the advance was due to higher prices for silk and wool. The iron and its products group declined because of lower prices for steel bars, steel sheets and horseshoes and the wood and wood products group because of lower prices for newsprint and spruce. Both the non-metallic minerals group and the chemicals and allied products group showed small declines.

In the grouping according to purpose, consumers' goods advanced, declines in clothing and household equipment being more than offset by advances in flour, rolled oats, bread, ham, bacon, pork, lard, butter and eggs. In producers' goods, building and construction materials and materials for the metal working industries declined slightly while materials for the textile, the leather, the meat packing and the milling industries advanced substantially.

In the grouping according to origin both raw and partly manufactured goods and fully or chiefly manufactured goods advanced, the former because of higher prices for grains, hogs, eggs, hides and skins, rubber, sugar, silk, and non-ferrous metals, and the latter because of increases in the prices of milled products, bread, glucose, oils, prepared meats, milk products, copper products, zinc sheets and solder. Articles of farm origin advanced while articles of marine origin, of forest origin, and of mineral origin declined slightly.

The index number based upon prices of 271 commodities in 1890-1899 published by the Department of Labour since 1910 advanced to 223.2 for August as compared with 221.6 for July; 222.7 for August, 1923; 223.0 for August, 1922; 236.4 for August, 1921; 330.2 for August, 1920; 356.6 for May, 1920 (the peak); 284.3 for August, 1918; and 136.3 for August, 1914. The most important advances occurred in grains, bran, shorts, hogs live and dressed, lard, butter, cheese, eggs, oatmeal, bread, flour, beaver cloth, raw silk, jute, antimony, lead, spelter and tin while cattle, veal, lamb, onions, raw cotton, quicksilver and spruce were lower.

The index number published by the Department since 1910 has been reconstructed back to 1913, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913.\* Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in sum-

mary form in the *LABOUR GAZETTE* in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

The special index number comprising fifty of the more important commodities selected from the 271 in the departmental list, including twenty foods, fifteen raw materials, and fifteen manufactured goods, based upon price levels in 1913 as 100, advanced to 151.4 for August as compared with 149.4 for July; 153.0 for August, 1923; 148.3 for August, 1922; 158.0 for August, 1921; 236.7 for August, 1920; 207.4 for August, 1918, and 102.4 for August, 1914. The advance was due mainly to higher prices for wheat, oats, hogs, sheep, bacon, cheese, eggs, flour, beaver cloth and turpentine.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, was 145 for June as compared with 143 for May and 153 for June, 1923. Producers' goods and imported goods were lower. All the other groups advanced.

The Canadian Bank of Commerce index of exports rose from 145.98 for July to 150.04 for August, that for imports rose from 161.17 for July to 163.49 for August. The combined index of both exports and imports advanced from 153.57 for July to 156.76 for August.

Professor Michell's index of forty articles with prices during 1900 to 1909 as 100 declined slightly to 175.5 at the end of July as compared with 175.6 for August; 178.6 for August 1923; 254.4 for August, 1920 and 118.4 for August, 1914. Foods advanced slightly but manufacturers' goods declined.

#### EXPLANATORY NOTE

The table of retail prices and rentals shows the prices at the beginning of August of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty

cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the *LABOUR GAZETTE*.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these

† Eight commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915.

items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Cost of Electric Current for Householders\*

With rates in 1913 as 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

#### Retail Prices

Beef prices averaged slightly lower. Sirloin steak fell from an average of 29.7 cents per pound in July to 29.5 in August, round steak from 24.1 cents per pound in July to 23.8 cents in August rib roast from 22.1 cents per pound in July to 21.8 cents in August, and shoulder roast from 15.6 cents per pound in July to 15.4 cents in August. Veal showed little change. Mutton averaged slightly lower at 28.2 cents per pound in August as compared with 28.5 cents in July. Fresh pork advanced from an average of 23.6 cents per pound in July to 24.3 cents in August. Slight increases were reported from most localities. Breakfast bacon was up from an average of 31.4 cents per pound in July to 32.1 cent in August. Boiled ham also averaged higher at 55.2 cents per pound. Fresh cod and fresh halibut advanced slightly. Salt cod was slightly lower but salt herrings advanced. Smoked finnan haddie was also higher. Lard was up from an average of 20.6 cents per pound in July to 21 cents in August. The advance was general.

Egg prices showed a general advance. Fresh averaged 34.8 cents per dozen in August as compared with 31.8 cents in July and cooking 31 cents per dozen in August and 27.6 cents in July. Butter, dairy and creamery, advanced slightly, the former from an average of 34.4 cents per pound in July to 35 cents in August and the latter from 39.3 cents per pound in July to 40.1 cents in August. Cheese advanced slightly, averaging 28.6 cents per pound.

Higher prices for bread were reported from New Glasgow, Belleville, Guelph, Kitchener, Saskatoon, Moose Jaw, Medicine Hat, Drum-

heller, Edmonton, New Westminster, Vancouver, Victoria and Prince Rupert. Flour was up from an average of 4.3 cents per pound in July to 4.6 cents in August. Prices in most localities averaged higher. Soda biscuits were unchanged in the average. Rolled oats advanced slightly, averaging 5.5 cents per pound. Rice was up from an average of 10.4 cents per pound to 10.6 cents. Increases occurred in most localities. Canned tomatoes, canned peas, and canned corn averaged slightly higher. Beans and onions showed little change. Potatoes averaged \$2.24 per 90 pounds as compared with \$1.92 in July. This advance was probably due largely to the coming of the new crop on the market. Evaporated apples were up slightly from an average of 19.5 cents per pound in July to 20.1 cents in August. Prunes were slightly higher at 16 cents per pound. Raisins and currants showed little change. Canned peaches advanced from an average of 29.8 cents per two pound can in July to 30.3 cents in August. Marmalade and corn syrup showed little change. Both granulated and yellow sugar were slightly lower, the former averaging 10.1 cents per pound and the latter 9.6 cents. Coffee advanced from an average of 54.5 cents per pound in July to 55.5 cents in August. Tea was up from an average of 69.4 cents per pound in July to 71.8 cents in August. Advances were general in the Eastern provinces. Cream of tartar was up from 64.3 cents per pound to 67.1 cents.

Anthracite coal averaged \$16.69 per ton in August as compared with \$16.74 in July. Lower prices were reported from St. John, Fredericton, Kingston, Belleville, Peterborough and London. Bituminous coal was practically unchanged at an average of \$10.54 per ton. Hardwood, four feet long, was slightly higher at \$12.50 per cord. Coal oil was steady.

A slight decline in rent was reported from Brantford, Ontario.

#### Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices again moved to higher levels. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis averaged \$1.43 per bushel in August as compared with \$1.35 in July. The high price of \$1.51 was reached at the beginning of the month, the low of \$1.33½ towards the end. Improved crop reports toward the end of the month were said to be the cause of the decline. Coarse grains fluctuated in sympathy with wheat. Western oats advanced from 48 cents per bushel in July to 55 cents in August, American corn from

\*LABOUR GAZETTE, December, 1923, page 1442.

\$1.22½ per bushel in July to \$1.32½ in August, western barley from 81 cents per bushel to 87 cents, and flax from \$2.28 per bushel to \$2.33¾. Flour at Toronto advanced from \$7.40 per barrel to \$8.20. Rolled oats were up from \$3.15 per bag to \$3.90, and shorts from \$29.75 per ton to \$31. Bread also advanced. Raw sugar advanced from \$4.88 per hundred in July to \$4.98 in August. Glucose was up from \$4.75 per hundred to \$4.95. Canned peas rose from \$1.57½ per dozen two-pound tins to \$1.85 and tomatoes from \$2.10-\$2.35 per dozen two and one-half-pound tins to \$2.25-\$2.35. Raw rubber was up from 21 cents per pound in July to 26 cents in August. Linseed oil advanced from \$1.09¼ per gallon to \$1.11¼. Cattle prices were lower. Western at Winnipeg declined from \$6.31 per hundred in July to \$5.88 in August and choice steers at Toronto from \$7 per hundred in July to \$6.63 in August. Hog prices advanced at Toronto from \$9.03 per hundred to \$10.96. Choice sheep also advanced from \$5.50 per hundred pounds to \$6.25. Beef, dressed forequarters, at Toronto, fell from \$8.25 per hundred to \$7.20. Dressed hogs advanced \$2 per hundred pounds to \$13.50. Bacon at Toronto was up from 22½ cents per pound to 26 cents. Finest creamery butter at Montreal advanced from 35 cents per pound to 37 cents and creamery prints at Toronto from 38 cents pound to 39 cents. Cheese at Toronto was 1 cent per pound higher at 19 cents. Fresh eggs, due to

smaller supplies, rose from 38½ cents per dozen to 43½ cents. Lard was up from 14½ cents per pound to 17½ cents. Canned salmon was lower at \$3.65 per dozen tins as compared with \$4.05 in July. Raw cotton at New York fell from 32 cents per pound in July to 29½ cents in August. The lower price was said to be due to improved crop conditions with a consequent upward revision of estimates. The advance in raw silk continued, the price being \$6 per pound in August as compared with \$5.15 in July. Prices in the iron and steel market for the most part remained steady. Black steel sheets and galvanized sheets, however, declined, the former being \$3.40 per hundred as compared with \$3.65 in July and the latter \$4.50 as compared with \$4.80 in July. Steel bars fell from \$2.70 per hundred pounds in July to \$2.60 in August and horse shoes from \$6.95 per keg to \$6.55. Substantial advances occurred among the non-ferrous metals. Copper at Montreal was up from \$14.45 per hundred in July to \$15.50 in August and copper sheets from 18½ cents per pound in July to 19½ cents in August. Lead was up from \$7.45 per hundred to \$7.70, tin from 47½ cents per pound to 56 cents, spelter from \$7.45 per hundred to \$7.80, and zinc sheets from 9 cents pound to 9½ cents. Later in the month somewhat lower levels were reached. Silver advanced from 66 cents per ounce to 68 cents. Gasolene at Toronto was down 1 cent per gallon to 26½ cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

### Great Britain

THE following notes give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

During the latter part of the second quarter of the year and the early part of the third quarter, wholesale prices, which showed a rising tendency in Canada and the United States, were on the increase also in Great Britain, France, Belgium, Norway and Austria. Downward tendencies were shown in Sweden, the Netherlands, Switzerland and Czechoslovakia, and South Africa and China, while there was little change in prices in Denmark, Germany, Italy and Spain. The cost of living rose in Austria, Germany, and India, and declined slightly in Belgium and Finland. In Sweden, Norway and Italy the level was constant during the period.

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures), rose 1.5 per cent to 138.4 at the end of July. Foodstuffs as a whole showed very slight changes, there being advances in vegetable foods, including wheat, flour, barley, maize and rice, and a sharp fall in potatoes. In animal foods, pork and butter rose, while beef and mutton declined. Sugar fell but coffee and tea advanced. Materials as a whole advanced 2.8 per cent, textiles rising 6.3 per cent, minerals rising 2.1 per cent and sundries showing no change.

The Board of Trade index number (prices in 1913=100) showed only a very slight change in its level for July, reaching 162.7, an advance of less than one-tenth of one per cent. Foods advanced one point, cereals rising considerably and meat and fish and other foods declining. Materials declined slightly, iron

and steel and cotton declining slightly and other groups advancing slightly.

The *Times* index number (1913=100) of wholesale prices showed that the level for July was 1.7 per cent higher than that for June, the index reaching 167.5. Foods rose one point to 159.4, and materials rose 2.3 per cent. The rise in the index number was the first recorded since January. The main features during the month of July were a sharp rise in cereals, particularly wheat, and a renewed upward movement in cotton. All groups were higher except the groups of other food and iron and steel.

The *Economist* index number, on the base 100 in 1901-05, showed an advance in July 2.8 per cent to 211.7. The principal increases were in the cereals and meat groups and the textile group. Slight increases were shown by minerals and by the miscellaneous group; other foods declined slightly.

### Austria

**WHOLESALE PRICES.**—The official index number of the Federal Statistical Office on the base 1 for the first six months of 1914 was 20,136 for August, an increase of 5 per cent on the July level. The index for foods was 19,195 and that for industrial materials was 22,244. The chief increase in the foods group was in grain prices and was due to reports of unfavourable harvests in other countries. In the industrials group higher prices were shown by cotton, leather, hard coal and most metals.

**COST OF LIVING.**—The official index number, with base 1 for prices in July, 1914, was 13,142 in August, an increase of 6 per cent over the level for July. This was due chiefly to an increase of 9 per cent in the foods group. Rent and heating and lighting both increased 2 per cent. Clothing declined 1 per cent. The chief changes in foods were increases in the prices of flour, bread, vegetable oil, sugar, lard and beef. Potatoes declined in price and other articles showed no change.

### Belgium

**WHOLESALE PRICES.**—The index number of the Ministry of Industry and Labour rose in June to 565 on the base April, 1914=100, or 1.4 per cent above the May level. The principal increases by groups were in metal products, petrol and products, clay products, chemical products, fertilizer, fats, textile products, and construction materials. The principal declines were in food products, fuels, tar and products and resin products. Other groups changed very little.

**RETAIL PRICES AND COST OF LIVING.**—The official index number of retail prices of 56

articles at Brussels, on the base 100 in April, 1914, was 521 in June, a decrease of nearly 0.6 per cent from the May level. The index number for the kingdom advanced one point to 493 during the same period.

The official index number of the cost of living for a working class family of the lowest category was, on the base 100 in 1921, 125.84 in July, an increase of 1.1 per cent on the June level. Foods increased in price 1.5 per cent and clothing 1.6 per cent. Other groups remained almost unchanged. The budget for a middle class family rose 2.3 per cent. Here also the principal changes were an increase of 3.5 per cent in food and an increase in clothing of 0.8 per cent.

### Bulgaria

**COST OF LIVING.**—The official index number of food costs on the base 1901-10=100 was 3,430 for May, a slight decline from the April level. The index for heat, light and sundries was 3,649, slightly above the April level. Figures for clothing and the total cost of living were not available.

### France

**WHOLESALE PRICES.**—The official index number of Statistique Générale, on the base 100 in July, 1914, rose from 468 in May to 475 in June and 491 in July, increases of 1.3 per cent and 3.4 per cent respectively. Foods and industrial materials advanced in both periods. The vegetable foods group, however, declined slightly in July.

**COST OF LIVING.**—The official index number of the Commission of Studies on the Cost of Living in Paris, on the base 100 in July, 1914, was 366 in the second quarter of 1924, only one point above the level for the previous quarter. Foods declined one point to 377. Heat and light declined 6 points or 1.7 per cent to 350. Clothing advanced 8 points or 1.9 per cent to 420. Rent remained unchanged at 200 and sundries at 440.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office for gold prices, 1913=100, was 115.0 for July (monthly average) a decline of 0.7 per cent from the June level. Foods rose in price 4.4 per cent and materials declined 7 per cent. Goods produced increased in price 0.3 per cent and goods imported declined 5.2 per cent.

**COST OF LIVING.**—The official index number, on the base 1913-14=1, rose from 112 billions for June to 116 billions in July, an increase of 3.5 per cent. Foods increased in price during the month 5 per cent, and rent

increased nearly 20 per cent. Heat and light declined in price 2 per cent and clothing declined 6 per cent.

### Italy

**WHOLESALE PRICES.**—The index number of the Chamber of Commerce at Milan, on the base 100 in 1913, was 544.88 in July as against 536.71 in June. Both the food groups (animal and vegetable) showed decided declines in price while all the industrial material groups advanced. The figures for July are not strictly comparable with those for June as several substitutions were made in July in the list of commodities.

**COST OF LIVING.**—The index number published in the Milan Municipal Bulletin on the base 100 in July, 1920, showed practically no change for the total budget in May and June. This was true of all items in the budget, the figures for June being: food, 114.85; clothing, 91.59; rent, 283.30; heat and light, 86.01; sundries, 133.69; cost of living, 116.41.

### Netherlands

**WHOLESALE PRICES.**—The official index number of the Central Bureau of Statistics, compiled on the base 100 in 1913, was 151 in June as against 153 in May. The index for foods alone fell one point during the month to 149.

**RETAIL PRICES.**—The official index number of retail prices of food in six cities, on the base 100 in 1893, was 171 in June, showing no change from the May level.

### Spain

**WHOLESALE PRICES.**—The index number of the Director-General of Statistics, on the base 1913=100, declined from the April level of 184 to 179 in May and June. The foods index declined from 183 in April to 177 in May and 178 in June; and that of materials declined from 184 in April to 180 in May and 179 in June.

**RETAIL PRICES.**—The official index number of retail prices at Madrid fell from 195 in April to 180 in May and rose again to 186 in June. Animal foods rose 10.6 per cent in June and in the same month vegetable foods fell 3.4 per cent, and fuel and sundries remained at the same level.

### China

**WHOLESALE PRICES.**—The index number of the Bureau of Markets, on the base February, 1913=100, was 151.5 in July, being 0.2 per cent lower than the previous month. Cereals, and textiles rose in price while other food

products, metals and miscellaneous industrial materials declined.

### India

**WHOLESALE PRICES.**—The index number of the Bombay Labour Office, of wholesale prices in Bombay, on the base 100 in July, 1914, rose from 181 in May to 185 in June. The total food index increased from 171 to 175, the chief increases being in cereals and in pulses. The total non-food index increased from 187 to 190, the chief increases being in oilseeds and in textiles other than cotton. The miscellaneous group showed a considerable decline, and the remaining groups showed only slight changes.

**COST OF LIVING.**—The official index number of cost of living at Bombay, rose from 153 in June to 156 in July. All foods increased in price 2.7 per cent; clothing increased 0.9 per cent; and fuel and lighting and house rent showed no change.

### United States

**WHOLESALE PRICES.**—Bradstreet's index number showed a rise of 1.4 per cent in commodity prices during August reaching \$12.8095 at September 1. This was the highest point reached since March, but was 0.8 per cent below the level of September 1, 1923. During the month under review, nine groups rose, including provisions, metals, fruits, miscellaneous products, hides and leather, naval stores, live stock, chemicals and drugs, and coal and coke. There were decreases in textiles, breadstuffs, oils and building materials.

Gibson's index number of the average cost of foodstuffs was 80.6 for August, an increase of 4 per cent over the July level. The average for the first eight months of the year was 76.0.

The index number of the Bureau of Labour Statistics (1913=100) rose 1.7 per cent in July to 147.0. There were considerable increases in farm products and foods, the chief advances being in grains, hogs, eggs and wool, and in coffee, flour, corn products, lard and cottonseed oil; and declines were shown in lambs, poultry, hay and potatoes. The cloths and clothing group showed a slight increase, cotton and woollen goods being lower and raw silk and yarns higher. Prices of metals and of building materials were lower owing to declines in pig iron, steel, copper, lumber, brick, sand, gravel, and lime. In the fuel group there were declines in coke, gasoline and crude petroleum. In chemicals and drugs and in house furnishing goods prices were slightly lower for the month.

The index number of the Federal Reserve Board on the base 1913=100 was 156 in July,

an increase of 2 points or 1.3 per cent on the previous month's level. In the grouping of commodities by origin, both goods produced and goods imported rose in price. Goods exported rose slightly. In the grouping by stage of manufacture, raw materials and consumers' goods rose in price but producers' goods showed no change.

Dun's index number showed a slight increase over the previous level rising 0.36 per cent to \$188.71 at September 1. The principal changes were an increase of 4 per cent in the price of meats, an increase of 1.5 per cent in the price of dairy and garden produce and a decline of 1.3 per cent in the price of clothing. Slighter increases were shown in

the breadstuffs, metals and miscellaneous groups, and the other food groups showed a slight advance.

**COST OF LIVING.**—The index number of the Bureau of Labour Statistics showed a slight decline for June from the March level, being 169.1 (on the base 1913=100), 0.7 per cent lower. The chief changes were a decline of 3.1 per cent in fuel and light and one of 2.4 per cent in furniture. Food and clothing fell slightly and housing rose one point. The June index numbers of the items of the budget were as follows: food, 142.4; clothing, 174.2; housing, 168.0; fuel and light, 176.7; furniture, 216.0; miscellaneous, 201.1.

## PRICES AND PRICE INDEXES, 1913-1923

### Second Report on Wholesale Prices in Canada Issued by the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics, which is attached to the Department of Trade and Commerce, has issued a report on prices entitled "Prices and Price Indexes, 1913-1923," the second to be issued by the Bureau. The first, entitled "Prices and Price Indexes, 1918-1922" issued in 1923 was reviewed in the LABOUR GAZETTE for June, 1923. These reports are in continuation of the series issued by the Department of Labour between 1910 and 1918, which covered the course of wholesale prices in Canada back to 1890. By an arrangement made in 1919 under the Statistics Act, 1918, the Bureau undertook the collection and compilation of statistics of wholesale prices in Canada, the calculation of index numbers, etc. It was arranged that the Department of Labour should continue to compile the existing index number of 272 commodities, based upon prices in 1890-1899 as 100, and publish the group figures in the LABOUR GAZETTE each month until the Bureau should have available the reconstructed index number. The first report issued in 1923 (*Labour Gazette*, June, 1923) contained an unweighted index number calculated from the prices of 238 commodities during 1919, 1920, and 1921, based upon prices in 1913 as 100. This index number was carried back to 1890 by using the figures of the Department of Labour record of prices for those of the 238 commodities in the new index number which were also in the old index number, thus affording an indication of the trend by the principal groups during that interval.

A weighted index number has also been constructed, including these 238 commodities, and the figures by the principal groups were

given for the year 1922 in the first report. In the present report the new unweighted index is discontinued and the weighted index is given for all groupings and each commodity and carried back to 1913. The unweighted figures from 1913 back to 1890 calculated from the Labour Department's records are also included by the principal groups in the classification according to "Chief Component Material."

In the next index numbers constructed by the Bureau three distinct groupings of commodities are used. The grouping chiefly used throughout for presentation of the data and in the analysis is that adopted by the Bureau for other statistics relating to commodities, namely according to "Chief Component Material," vegetable, animal, etc. The other groupings are according to "Purpose," and according to "Origin."

The report gives the prices by months for the years 1922 and 1923 with a detailed analysis of the prices movement during that time, the index numbers being given by groups and commodities by months for 1922 and 1923 and by years for 1914 to 1923. The methods used in the construction of the index number, as to weighting, grouping, etc., were dealt with in an appendix to the first report as well as in the second report and were described in the LABOUR GAZETTE for June, 1923, pp. 690-692.

The report contains a section on retail prices in Canada, being compiled from the data given monthly in the LABOUR GAZETTE, with certain index numbers in the form of percentages of changes calculated by the Bureau. There is also a section on prices in other

INDEX NUMBERS OF WHOLESALE PRICES IN CANADA BY GROUPS ACCORDING TO "PURPOSE",  
1914-1923

(PRICES IN 1913=100)

Groups and Number of Commodities	I. Consumers' Goods			II. Producers' Goods

countries in which the principal index numbers of prices, wholesale and retail, are given by years from 1913 to 1923 and by months for 1919 to 1923. These tables are similar to those given monthly in the LABOUR GAZETTE up to 1923 and from time to time since (LABOUR GAZETTE, July, 1924, pp. 616-623) but most of the index numbers based on periods prior to 1913 have been brought to that year as a basis.

The index numbers of wholesale prices for the year 1924 to date will be found in the regular article on prices in the LABOUR GAZETTE in summary form, being compiled from a monthly statement in some detail issued by the Dominion Bureau of Statistics.

## WEIGHTING

In connection with weighting two questions have to be decided: (1) whether to use as weights the

quantities of commodities marketed, produced or consumed, and (2) what formula to select for the purpose of combining the quantities and prices into index numbers. The Bureau follows the principle now widely accepted, that an index number which is weighted with even approximate accuracy, is more reliable than one which is unweighted. In fact, to call any series "unweighted" is a misnomer. Weights are present even in a series where the prices of commodities have been equalized in the base year by representing each by 100. For example, if one gives pepper equal importance with flour, the former is in reality being weighted at the expense of the latter, for in the trade of the community flour is relatively much more important. It has been claimed that a long series tends to weight itself. This is doubtless true, but unless the list of commodities is extremely long—much longer perhaps than in any existing index—a random selection is apt to go wide of the mark in representing actual conditions; classes of commodities will be disproportionately represented and within each particular class the relative importance of each individual item

has still to be considered. On the other hand, if sufficient data as to consumption and production figures are available to enable a proper selection of commodities to be made, then a rational system of weighting has in effect been introduced. If, however, such data be available, it would seem preferable to apply them directly to weighting the commodities instead of achieving a somewhat similar result by a more indirect and less easily understood method.

The quantities used by the Bureau for the purpose of weighting are the quantities of the commodities actually marketed. In other words the weighting of each commodity is in relation to its commercial importance. Weighting according to quantities consumed or produced would doubtless give different results, but the method of weighting according to quantities marketed or exchanged is more logical, seeing that much of what is produced does not reach the market in its original state, if at all, and would not affect prices in the same way as if it had. A strict consumption standard would not take account of quantities exported.

In arriving at the weights, duplication was avoided as much as possible. For example, wheat appears again as flour and flour as bread. A deduction was, therefore, made from wheat for the amount that went into the manufacture of flour and from flour for the quantities made into bread. The same principle was applied throughout, as in the case of pig iron and its finished products; oats, rolled oats and oatmeal; barley and malt; cotton and its products, and so on.

COLLECTION OF PRICES

The collection of prices is perhaps the most important matter in connection with index numbers. No matter how accurate the weighting or how useful the classification, unless the fundamental data are reliable the final results lose a great deal of their value. In collecting prices the policy of the Bureau is to secure as many as possible from reliable individual firms, with whom direct contact has been established. The prices are carefully scrutinized as they arrive and if any doubt arises in connection with them the firm is immediately communicated with and the difficulty removed before the price enters into the computation. Certain trade papers are used for quotations on commodities having organized markets, as for example grain, but for other commodities quotations from representative firms, in so far as they can be obtained, are employed.

The Bureau does not adhere rigidly to any one system as to the kind of price used. Many of the prices are those current on the fifteenth of each month, but where a commodity is subject to frequent fluctuations, the price prevailing on a single day of the month may not be representative. This method has, therefore, been supplemented by the use of monthly averages, averages of weekly quotations (one quotation per week being taken) or the selection of a predominant price. By this means it is thought that a more representative series of prices is obtained.

## LEGAL DECISIONS AFFECTING LABOUR

### Employer May Not Assume Employee Guilty of Misconduct Without Fair Inquiry

A CONDUCTOR who had been in the service of the Canadian Pacific Railway Company in Alberta for nearly twenty years was dismissed by the company in October, 1923, on the ground of alleged misconduct. The company was stated to have received information from reports supplied by agents usually spoken of as "spotters," to the effect that the conductor had on two occasions accepted cash fares from passengers of which he made no return to the company. The employee sued for a declaration that his dis-

missal was void and of no effect, and that he had not been proven guilty of the charges against him on which the dismissal was based; also for restoration of the position from which he had been dismissed, with an award of the wages due since the date of his dismissal, or else damages. The case was tried in the Supreme Court of Alberta.

The plaintiff's employment was under the terms of a schedule of rates and rules that had been subscribed on behalf of the company, the Order of Railway Conductors and the Brotherhood of Railroad Trainmen, which provided that an employee in these labour organizations could not be dismissed for misconduct

until his case had been investigated and he had been proven guilty, and that such an employee, if dissatisfied with the decision of the investigating officials, could appeal to the higher officials of the company.

The court held that although this schedule was not in the form of a contract, it was in fact and law a contract, which should determine the rights of the employees covered by its terms. The employee had not been notified of the charges preferred against him until six or seven weeks after the dates on which the alleged misconduct took place, and in the meantime the company had retained him in its service in his usual employment. On this point the trial judge commented as follows:—

He was thus left quite at the mercy of the spotters, as these employees of the defendant are usually spoken of, with his lone word pitted of necessity, because of this delay, against that of five of them. I think that it should have suggested itself to the defendant as a bit of elementary justice that these charges should be communicated to him, without any loss of time, so that before all traces of them had vanished he might be able if possible to meet the stories of those who witnessed against him, with those of the men with whom they charged that he had committed these corrupt acts.

The company by retaining the employee in its service for several weeks after they had full knowledge of the alleged misconduct was held to have practically condoned it. Such condonation made it impossible for the company, under common law, to dismiss the plaintiff peremptorily and might also be alleged as a ground for questioning the company's right to dismiss him as the result of a subsequent investigation. Moreover, no agreement, such as that contained in the schedule mentioned above, could supersede the "inherent jurisdiction" of the courts of the province to decide the legality or illegality of proceedings leading to the dismissal of an employee. The Court held, again, that the whole trend of judicial decisions was against granting a mandatory injunction to compel a dismissed employee's restoration to his former position, and further that a purely declaratory judgment would not be advisable as it would afford no relief to the plaintiff

Judgment was given for the plaintiff for \$10,000 with costs.

(*Supreme Court of Alberta—Caven versus Canadian Pacific Railway Company*).

### **Injunction Against Picketing Applies Only to Individual Members of Union**

Six moving picture projectionists who had been employed in various picture theatres at Hamilton, Ontario, became involved during July in an alleged lock-out of Union employees, and lost their employment. In order to gain public support for their action in joining the local union they "picketed" the theatres where they had been employed. On the motion of the proprietor a local judge granted an interlocutory injunction restraining them from exhibiting notices, etc., in and about the vicinity of these theatres. Substantive motions were later made by the plaintiffs at the Weekly Court at Toronto for an enlargement of scope of the injunction, and to restrain the defendants and their agents from publishing by means of handbills, etc., any defamatory statements concerning the theatres, and from watching and besetting these places for the purpose of persuading or otherwise preventing any persons from entering. They further asked for an enlargement of the proceedings to include other members of the local union and that the defendants should be considered as representing the union. The court granted an order, as petitioned by the plaintiffs, restraining the defendants from persisting in the actions complained of and adding other union members as defendants. On the other hand, the Court refused to declare the defendants to be representatives of their union. There was no allegation, it was held, to the effect that the union was possessed of a trust fund, or that such circumstances existed as would entitle the plaintiffs to resort to a fund in satisfaction of their claim.

# THE LABOUR GAZETTE

PREPARED AND EDITED IN  
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 24]

OCTOBER, 1924

[NUMBER 10

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

**T**HIS issue of the *LABOUR GAZETTE* contains reports of the recent conventions of the Trades and Labour Congress of Canada, the Canadian Federation of Labour, and other labour organizations, and special articles on various other subjects of interest to labour. The usual monthly articles contain statistics of the recent movement of prices, retail and wholesale, in Canada; reports on the employment situation, based on returns from the Employment Service of Canada, from employers and from trade-unions; notes on vocational education in Canada; on recent industrial disputes, recent industrial agreements, etc.

### Monthly Summary

Reports from the offices of the Employment Service of Canada showed a marked increase in the volume of business transacted in August, as compared with July, but a marked decline as compared with the exceptionally high level reached in August of last year (the complete figures for September are not available as this *GAZETTE* goes to press). At the beginning of September the percentage of unemployment among members of trade-unions stood at 6.5, as compared with 5.4 at the beginning of August, and with 2.2 at the beginning of September, 1923. Returns from employers of labour showed a continued decline in employment at the beginning of September, when 767,204 persons were on the payrolls of the reporting firms, as compared with 775,759 on August 1.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.28 at the beginning of September as compared with \$10.19 for August; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920, (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined to 153.6 for September, as compared with 158.1 for August; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for

September, 1921; 245.5 for September, 1920; 256.7 for May, 1920 (the peak); and 213.7 for September, 1919.

The time loss caused by industrial disputes in September was less than in the previous month, but more than in September of last year. Eight disputes began or were in progress during the month, involving 8,501 employees, and resulting in a time loss of 205,634 working days. Corresponding figures for the previous month were as follows: 16 disputes, 10,469 employees, and 228,572 working days; and for September, 1923, 18 disputes, 1,729 employees, and 30,773 working days.

### Industrial Disputes Investigation Act

During September the Department received three new applications for the establishment of Boards of Conciliation and Investigation.

In one of these cases the dispute was subsequently settled through direct negotiation between the employers and workers, and it became unnecessary to appoint a Board. Boards were also completed in connection with the two existing disputes involving commercial telegraphers employed on the Canadian National and Canadian Pacific systems.

### Sunday laws in Canada

The provisions of the provincial Lord's Day Act of Alberta have been under discussion during the past month in connection with the selling of gasoline and the opening of confectionery and ice-cream parlors on Sundays. A complaint was made to the attorney-general's department at Edmonton that the provincial act was being violated at Calgary by the illicit sale of gasoline, and the department brought the matter to the attention of the local police, who had no option but to prosecute persons alleged to be breaking the law. However when a charge was preferred in the Calgary police court against certain garage proprietors, the magistrate ruled that the service at garages is a work of necessity, and that the exemptions mentioned in the act include such means of

transportation as automobiles. It is stated that the magistrate's decision is to be taken to a higher court. Complaints were made in Calgary about the same time that the Lord's Day Act was not being enforced in regard to confectionery and ice cream dealers, and the proprietor of a café was prosecuted for selling goods on Sunday. Decision on this case was deferred. The Alberta Retail Confectionery Association, a new organization, has decided to invite an expression of public opinion on this question, before proceeding with preparation of a test case in the higher courts. Recent test cases in British Columbia and Manitoba resulted in decision which upheld the opinion of the retail dealers that they could lawfully open for business on Sunday.

It will be recalled that the question of the validity of recent legislation in Manitoba on the subject of Sunday observance was brought before the Privy Council during the past summer by the Lord's Day Alliance of Canada, counsel for the Alliance alleging that the Federal Government had not delegated power to the Provinces to enact legislation in regard to the observance of Sunday. No decision has yet been rendered by the Privy Council in this case (LABOUR GAZETTE, July, 1924, page 624), but the judgment is awaited with interest, as some ambiguity exists in regard to the position of the Dominion and the Provinces in the matter of Sunday legislation. The Dominion Lord's Day Act prohibits Sunday work except in emergencies, unless the employees are allowed another complete day of rest, and also declares unlawful the employment for gain of any person in connection with the sale of goods on Sunday. The Dominion act, however, contains the declaration that it shall not be construed to repeal or in any way affect any provincial legislation on this subject, and provides further that prosecution under the Dominion Act may only be undertaken with the consent of the attorney-general of the province concerned.

#### Organization of disabled workers

Representatives of the German, Belgian and French federation of men disabled in industry met at Geneva, Switzerland, in September, and took steps towards forming an international federation which disabled workers in all countries will be invited to join. The following resolution was communicated to the International Labour Organization (League of Nations):—

Whereas in all countries men who were disabled in industry before the war are receiving inadequate allowances out of all proportion to existing salaries and the existing cost of living;

And whereas in all countries the claims of such disabled workers are answered by an appeal to the dangers

of international competition, which threaten those national industries which are weighed down under the financial burdens of insurance;

And whereas the object of the International Labour Organization is to equalize the situation of workers in the various countries by means of international conventions;

The representatives of the German, Belgian and French associations of men disabled in industry request that, in the draft International Convention on Labour Accidents, to be adopted by the next International Labour Conference, some provision should be inserted to the effect that in every state men disabled in industry should be given allowances in proportion to the existing cost of living.

#### Retraining of injured civilian workers

An article elsewhere in this issue describes the work that has been already done in the United States, through joint federal and state action, in the retraining of civilians incapacitated through accident or disease from carrying on their usual occupations. The United States followed the Canadian model in regard to the re-establishment of disabled soldiers, but having provided retraining for soldiers, the United States advanced beyond Canada by undertaking similar responsibilities in regard to disabled civilians. So far, Ontario is the only province of Canada in which any action has been taken in this direction.

The Honourable James J. Davis, United States Secretary of Labour, speaking recently on the new policy of rehabilitation, said: "The value to the working man, and to the economic advance of our country as a whole, of such an advance in social and economic legislation, cannot be over-estimated. The experience of the States which have carried on this work in co-operation with the Federal Government in the last three years and a half has demonstrated beyond the shadow of a doubt that it is one of the most important national programmes in the advance of human conservation. . . . The basic principle underlying rehabilitation is that society requires that every individual shall, to the fullest measure of his mental and physical capacity, contribute to his self-support. Under this requirement the obligation would seem to rest clearly upon society to provide for disabled workers such opportunities for re-education and readjustment as will enable them to become, as nearly as possible, self-supporting, whatever the nature of the disability that industry has imposed upon them."

The aim of rehabilitation is to adapt handicapped persons, by advice, training and guidance, to occupations in which they may be employed upon the same conditions as normal workers. The Director of Rehabilitation of New York State describes it as the third phase of the general plan for the protection of

workers against the risks of industry. The first phase is safety, health, and sanitation in the places of employment; the second phase is compensation, and medical and surgical service for the injured; and the third phase is rehabilitation for those who are injured and cannot return to any occupation without some special training or assistance.

### Holidays with pay in Canada

Two of the industrial agreements that are outlined elsewhere in this issue contain a provision that certain classes of employees are to have two weeks' holidays with pay. The workers who enjoy the privilege, in these two cases, are those on monthly salary not receiving overtime, and those working regularly for seven days each week. Provision for an annual holiday is frequently made in Canada for office workers, caretakers, and other classes of employees whose employment is considered as being of a permanent nature, the most general arrangement being one week's vacation after 12 months' employment, and two weeks' vacation after two years. Workers who are paid on the basis of a daily or weekly wage rate are less frequently provided with a yearly vacation with pay, but considerable attention has been given to the question during the past four years, especially in connection with municipal employment and in industries where employment is steady and regular. Thus under agreements recently in force, a vacation was allowed by the city of Saskatoon to the municipal street railway motormen and conductors, and to the employees in the mechanical department; the city of Winnipeg allowed the same privilege to its employees in the Light and Power, Waterworks, and other departments; the city of Moose Jaw granted to employees in the sewage disposal and the incinerating works two weeks' holidays with pay each year, to compensate for Sunday work; and the city of Edmonton allowed one week with pay to hourly employees. In the industrial field the privilege of an annual vacation at the expense of the employer was given to commercial telegraphers employed by the Canadian Press; to the power-house employees in the Nova Scotia Tramways and Power Company; to sub-station operators and power men employed on a street railway in Ontario; to electrical workers employed by certain power companies in British Columbia; to the teamsters employed by the Winnipeg City Dairy Company; to printers employed by publishing companies in Saskatchewan and elsewhere; to the workers employed by the Montreal Light, Heat and Power Company, etc.

Some account of a similar movement in the United States was given in the August issue of the *LABOUR GAZETTE*. Returns from 163 American manufacturers to whom questionnaires were recently sent showed that 49 firms were granting vacations with pay.

### Inspection of scaffolding on buildings.

The Trades and Labour Council of Vancouver has asked the City Council to provide means for the inspection and certification of all scaffolding in the city. The city building inspector, it is stated, already makes inspections of the scaffolding on buildings for which building permits have been taken out, but no general supervision is at present exercised by the city over scaffolding owing to the large staff that would be required for such work. In the Province of Quebec, municipalities are required by an act passed in 1921 to employ an inspector of scaffolding, from whom builders must obtain a certificate of safety of any scaffolding they may erect over 15 feet in height. The Building Trades Protection Acts of Alberta, Saskatchewan and Ontario provide for the appointment of municipal inspectors to enforce the provisions of these acts in regard to security of scaffolding. In Manitoba, scaffolding on buildings are supervised directly by inspectors connected with the Provincial Bureau of Labour.

### Short time or staff reductions

The last issue of this *GAZETTE* referred to a ballot taken recently by the shopmen of the Central Region of the Canadian National Railways to decide the railways' future policy in the matter of staff reductions. The results of this ballot are summarized in the Canadian Railway and Marine World as follows:—

Employees in the car and locomotive departments at Stratford, Ontario, and Montreal, Quebec, have decided to work a 40-hour week and lose one week's work each month until the present slack time is terminated, rather than have the staff cut to the extent which a strict interpretation of the schedule\* would necessitate. Employees in the car and locomotive departments at Leaside, London, Mimico, and Ottawa, Ontario, St. Malo, Limoilou and Joliette, Quebec, and Dearing, Maine, decided to work a 40-hour week and allow the staff to be cut to the extent demanded by the schedule agreement rather than lose one week's work each month.

A similar ballot was taken later in the Canadian Pacific Railway shops to ascertain whether the majority of the employees preferred temporary "close-downs" of the shops, or sufficient "lay-offs" to enable the remaining employees to obtain 40-hours employment

\**LABOUR GAZETTE*, September, 1924, page 732.

weekly. According to press reports the majority of the men voted in favour of a reduction of staff in preference to shorter hours.

The shopmen's views on the question of extreme short time as an alternative to staff reductions were given in the August issue of the *Federated Railwayman*, a periodical publication of Division No. 4, Railway Employees' Department of the American Federation of Labour. The shopmen's union in Canada, it is recalled, agreed during the readjustment period following the war to set aside existing agreements if circumstances so required, and to accept short time in lieu of staff reductions. Many shopmen, under this arrangement, worked extremely short time, in some cases 12 days in the month, with the result that many earned less money than they would have received if they had been unemployed and receiving municipal relief. It is claimed that the shopmen who were thus on short time shouldered the entire burden of taking care of the unemployed in that branch of the railroad industry; and that not being eligible for public relief many went heavily into debt at that time. It is further alleged that the railroads abused the arrangement and hired additional new men when business revived, closed their shops during slumps, and contracted with outside firms for new equipment and supplies. These conditions, it is stated, undermined the spirit of the men, many of whom dropped their union membership.

The shopmen's publication concludes that "about all that was accomplished by the shopmen who agreed to extreme short time in lieu of staff reductions was to relieve the various governments of the expense and responsibility of taking care of a number of what would otherwise have been unemployed, in return for which all of the shopmen suffered extreme poverty for a number of years."

#### Health of workers in camps

The Department of Public Health of New Brunswick has issued regulations governing conditions in lumber, saw-mill, railway and other construction camps, in camps connected with maintenance work, mines, smelting and cement works, in fishing camps, and generally in places designated for intermittent occupation and used for the housing of employees. Similar regulations for the province of Quebec were noted in the May issue of the *LABOUR GAZETTE* (page 354). Owners or managers are required to notify the district Medical Health Officer before establishing a camp, giving particulars of the number of workers to be housed, etc. All premises must be in a

healthful position and be kept sanitary. Every house, tent, or other building occupied or used as a camp must contain at least 300 cubic feet of air space for every occupant, and be properly constructed, lighted, heated and ventilated. Every camp must have proper facilities for maintaining the cleanliness of its occupants, and such cleanliness must be maintained. Provision must be made for the proper disposal of refuse, for the exclusion of flies from kitchens, dining rooms, etc. Stables, manure heaps and privies must be so placed that they cannot contaminate the water supply, which must be plentiful. The regulations or a synopsis thereof in English and French are to be posted conspicuously in each camp. The usual rules are included as to nuisance, and contagious diseases. In regard to medical attendance, the Department may require the owners or managers to provide one or more qualified medical practitioners to attend and treat any employees affected with a notifiable disease and to take other measures, as required, in connection with such sickness. First-aid dressings and remedies may be ordered by the Department to be provided and maintained in any camp. A separate room must be provided to accommodate sick or injured workers, until they can be transferred to a hospital or other proper place.

Referring to varying conditions that prevail in the camps of Ontario and Quebec, the chief sanitary inspector for the Ontario Department of Health recently stated: "One of the great advantages Ontario has is the large size of its camps. In 751 lumber camps of the province there are employed 29,000 men. In Quebec, on the other hand, the 31,000 men in the woods are distributed among 5,000 camps. In the small camp the same health supervision is impossible as compared with the bigger one. Our yearly returns of typhoid fever in all the industrial camps of the province show only thirty cases, and pneumonia is practically wiped out, and, if we can only secure the co-operation of the camp owners in proper handling of manure, we would wipe out virtually all the dysentery, of which 98 per cent of the cases are directly due to infection of food by flies. When you consider that every man working in the woods now has a single bed of his own, that he is entitled to medical attention and to hospital treatment, when needed, and all this has been done at no cost to the industry, but rather at a saving, you will see that the health work has progressed. Our work is health insurance, and is designed to keep the worker well, and a well worker is a more economical factor to the boss than an ill one."

### Office workers under workmen's compensation.

The position of clerical and office workers in relation to workmen's compensation is left ambiguous under some of the provincial acts, the claims of this class being dealt with by the Boards or Courts on the merits of the several cases coming before them. The term "workmen" for the purpose of compensation, is defined in the various Acts, excepting that of the province of Quebec, as including "persons who enter into or work under a contract of service whether by way of manual labour or otherwise." The acts of New Brunswick and Manitoba, however, expressly exclude those clerical workers who are not exposed to the hazards of the industry in which they are employed. An amendment to the British Columbia act in 1922 gives power to the provincial Board to include clerical workers as they see fit, and this power is presumably exercised in connection with individual claims. The Alberta act was amended in 1920 to include under its provisions the clerks employed in the industries to which it applies. The Quebec act includes workers in factories, but makes no mention of the office workers in these establishments, any claims on the part of these employees being left for the civil courts to decide. Similar conditions prevail in Saskatchewan, the other province of Canada without a compensation board. The Manitoba act, as mentioned above, excludes office workers who are not exposed to the hazards of the industry, but in 1921, the Board, to clear up any remaining ambiguity in regard to office workers, issued the following ruling:—

Employees, even though usually engaged in clerical work, whose duties sometimes take them into the factory, works or plant where the industry is carried on, are to be considered workmen under the Act, and are to be included in the net pay-roll, but members of the office staff who may merely go into such premises for their own purposes or otherwise than in the discharge of their duties are not to be considered workmen.

In cases where there is a general hazard to all employees, arising from the nature of the industry—for example, risk of explosion—there will, of course, be no clerical exclusion, and it will not, in such cases, be necessary to ascertain whether any of the office staff do or do not go into the factory or through the works in the performance of their duties.

### Larger local unions are favoured

The Sheet Metal Workers' International Federation, at their recent convention at Montreal, approved the policy of amalgamating small local unions and forming larger units within the same labour organizations (The proceedings of this convention were outlined in the last issue). The General Executive

board supported the policy for the following reasons: "Amalgamation into one local union of several locals in a given territory has quite conclusively proven the wisdom of this policy, for in every district where it has been given a trial membership has increased in some cases to double the number of men employed in exactly the same territory where two or more locals were previously chartered. We can draw but one conclusion from this result, that our jurisdiction was not protected under the old condition and that others than sheet metal workers were engaged in at least some branches of our work. Furthermore, the amalgamation plan is a more attractive proposition to the non-union man who can see in it better protection, greater opportunity to improve his working conditions and increase his wages, than under the old system of several local unions in a small area with divers policies, limited influence and their economic strength of little value because seldom if ever used unitedly. Amalgamation is further to be desired as it makes possible the employment of a sheet metal worker as business representative, a man having a knowledge of the trade and able to demonstrate that sheet metal work should be made and erected by sheet metal workers. A useful man in the field increases the prestige and gains respect for the organization and best of all instils confidence in the members themselves in the knowledge that their interests and welfare are constantly being looked after by one familiar with their ambitions and desires."

The ineffectiveness of small locals was discussed at the Conference of International Printing Trade Unions, reported elsewhere in this issue, and joint locals were suggested as a means for strengthening the printing and allied organizations in scattered districts. In this case, however, the suggested amalgamation or union was between the locals of the allied internationals, rather than between small locals within the same international.

### Aims of local joint industrial councils

President Matthew Woll, of the International Photo-Engravers' Union, in his annual report to the convention of that organization, reported elsewhere in this issue, recommended the extension of local joint industrial councils to supplement the work of the International Joint Council which was revived about a year ago in the photo-engraving industry. "It is evident," he said, "that the spirit and method of co-operation can permeate the industry only when national joint councils are duplicated locally." He points out that the men who handle the tools

and materials are in a position to give the soundest advice on general policies in regard to such problems as the elimination of waste, the discarding of inefficient practices and processes, and the selection of better methods. He looks forward to a constructive development in the industry as the result of the co-operation of all the elements concerned in production, and that the methods of force will become unnecessary when efficient machinery has been set up for "research, experimentation and decisions upon the basis of facts." As a necessary condition of such a state of harmony the president assumes that there must first be "unreserved recognition that the trade union is the natural and indispensable agency through which workmen manage their collective affairs and render a constructive service to industry."

The presidents of the Photo-Engravers and Flint Glass Workers' unions, both cautioned their members against abuse of profit sharing or so-called co-operative schemes.

#### **Settlement of trade disputes in India**

A bill for inquiry into and settlement of trade disputes is being considered by the Bombay Legislative Council. The bill is similar in its general provision to the Industrial Disputes Investigation Act of Canada, making provision for courts of inquiry and for the settlement of disputes by conciliation and arbitration. The court of inquiry is to consist of a chairman and of such number of members as the Governor in Council sees fit to appoint. When the Governor is satisfied that a trade dispute exists or is apprehended he may refer any matters relevant to this dispute to such a court, which shall thereupon inquire into the causes and circumstances of the dispute in question and submit a report to the Governor. The rules of procedure are to be drawn up by the Governor in Council. Subject to such rules the court of inquiry may enforce the production of books, papers, etc., require the attendance of any person, and take evidence on oath. Where a trade dispute exists or is apprehended, the Governor in Council may bring the parties together with a view to a settlement. If both parties consent he may, moreover, refer any dispute to the arbitration of one or more persons appointed by him, or to a board of arbitration consisting of one or more persons representing the employers concerned, an equal number representing the workmen concerned and an independent chairman nominated by the Governor, such persons to be drawn from panels previously constituted. According to the London *Times* the bill has been held in abeyance

at the instance of the Government of India, who wish to further all-India legislation, making arbitration practically compulsory.

Industry in the Bombay presidency is practically confined to three towns, Bombay, with some 200,000 factory operatives, Ahmedabad, with 55,000 and Sholapur with 20,000. Most of these operatives are employed in the textile industry. Except in Ahmedabad, there is practically no effective trade union organization apart from strike committees.

#### **Unemployment insurance in Poland**

An act for the insurance of the unemployed came into force in Poland on September 1, 1924. It applies to all workers over 18 years of age employed in the industry, trade, transport, smelting and mining, and also to those engaged in other concerns which employ at least six workers, even if these concerns are not working for profit. Non-manual workers and seasonal workers who work for less than ten months in the year are exempted from its operation. The insurance contributions are reckoned at 2 per cent of the wages paid: of this proportion, one fourth (one-half per cent) is deducted direct from the worker's wages, while the other three-fourths (one and a half per cent) is payable by the employers. The conditions which the unemployed person must fulfil for eligibility for benefit are the following:

- (1) In the year immediately preceding the unemployment he must have had permanent employment for at least twenty weeks;
- (2) he must notify the labour exchange within four weeks of the date of his discharge;
- (3) he cannot receive benefit until ten days have elapsed since the notification prescribed in (2).

The benefits paid are: 30 per cent of his normal wage for a worker who has to provide for himself alone, 35 per cent when a family of two has to be provided for, 40 per cent for a family of five, and 50 per cent for a family exceeding five in number.

#### **British mining practices**

A writer in the *Coal Age* of September 11, records the impressions of American coal operators who recently visited the coal mines of Great Britain, noting several features in which British methods appeared to be worthy of imitation. "Every coal mine in England now," he states, "is making stone dusting a regular practice. The cost of dusting has been reduced to the point where it is less than a penny per ton. In one of the mines visited by the Americans, in South Yorkshire, there has been no fatal accident in five

years. The property is over 3,000 feet deep and employs 2,700 men. It is typical of many others. The Americans were amazed at the low point to which mortality has been reduced. The methods employed in safeguarding workmen are not all directly applicable to the natural and competitive conditions which exist in this country, (United States), but their success in promoting safety is regarded as of the greatest significance and deserving of close study by American engineers." (The recommendations of the United States Bureau of Mines in regard to the "Dusting" of coal mines were noted in the *LABOUR GAZETTE* for July, page 537).

The visitors noted the efficient arbitration machinery in the British industry. In this connection he says: "In Durham and Northumberland particularly the Americans were impressed with the friendly and businesslike methods employed and the wholesome respect the representatives of each group seemed to have for the other. Day-to-day adjustments were being handled with complete absence of friction. The Americans were much interested in their method of evening up the differences occasioned by a bad working place. Every three months in each mine the men draw lots for the working places and shift about so that those who have been working under difficulties have a chance to get a better place during the next quarter. This system, which is known as "caveling," may not be applicable elsewhere, but it is indicative that the inequality of opportunity in working places is recognized.

"In Northumberland they seem to have worked out a means of readjusting the piece-rate in different seams and in different mines without changing the general level of rates. If the miners in a given mine can show that they are making 5 per cent less than the 'county average' they have an argument for an increase which may be taken up before the joint conference. In similar fashion, if the operator believes rates in his mine are out of line with rates in other mines, and if he can show that the average earnings elsewhere are 5 per cent higher than his earnings, he has shown cause for the consideration of a reduction and can bring his case before the joint conference. Under this system of bargaining the great inequalities of earnings, such as occur in our anthracite region, are eliminated."

The Legislative Assembly of British Columbia has been summoned to meet in its annual session on October 27.

The British Columbia Government has issued new tables for determining the value of superannuation allowances under the

Superannuation Act of the Province (The provisions of this act were outlined recently in the *LABOUR GAZETTE*, February, page 131, and May, page 391).

New regulations have been issued under the provisions of section 78 of the Canada Shipping Act, relating to the examination of masters and mates of coasting and inland vessels.

The Canadian Pacific Railway Company has 430 apprentices employed at the Angus shops at Montreal. The apprentice course lasts five years and the management offers prizes to be competed for by each of the five classes. At this year's competitions C. Girdwood took first prize in the fifth year class, completing his record as first prize winner in each year of his apprenticeship.

The Ontario Government has appointed Miss Sampson as investigator of Mothers' Allowances for the area of Northern Ontario. An act passed at the last session of the Legislature of the province established the northern section as a separate administrative unit. Mr. F. H. Keefer was appointed secretary for the northern area.

It is stated that the Ontario Minimum Wage Board, having practically covered the field of industries in which women are employed, is about to make a survey of the conditions under which women and girls are employed in home work, with a view to the fixing of piece-work rates and the registration of the workers so engaged.

Miss Margaret Bondfield, Chairman of the British Overseas Settlement Committee, and Parliamentary Secretary for Labour in the British Government, arrived in Canada at the end of September, at the invitation of the Dominion Government, to study conditions in regard to the migration and settlement in Canada of Children from the United Kingdom. Other members of the delegation are Mrs. Harrison Bell, of the Labour Party Executive; G. F. Plant, secretary of the Overseas Settlement Committee, and W. Garnett acting as secretary to the delegation. The Overseas Settlement Committee is a Department of the British Colonial Office, Miss Bondfield being a member of the committee ex-officio.

The managers and secretaries of the Agricultural Co-operative Association of Saskatchewan, at a recent convention at Regina, decided unanimously in favour of a collective buying agency, plans for which are being submitted to the various associations in the Province.

The American Federation of Labour, at its last annual convention, made workers' education for the first time an integral part of the American Labour movement (LABOUR GAZETTE, November, 1923) and last year the Federation's permanent committee arranged with the Workers' Educational Bureau, an affiliated body, for carrying out a programme of education in matters of special concern to wage earners. In pursuance of this policy the first summer labour school in the eastern states held a session during the past summer at Brookwood College, Katonah, New York. Members and officials of over twenty national organizations attended the session. Lectures and discussions were held on many labour questions of the day, including coal mining problems, labour's responsibility in production, company unions, labour banks, the labour press, the extension of unionism, apprenticeship, and women's position in industry. The lecturers included several well known authorities on economic and industrial subjects. It is stated that similar sessions will be held in other centres throughout the jurisdiction of the Federation.

Thirty-five persons, employees and relatives of employees of the Canadian Pacific Railway Company at Quebec, among them 18 women, recently received St. John's Ambulance Association first aid awards. The Canadian Pacific Railway has always encouraged the expert study of first aid among its employees, and since the Canadian Pacific Railway council of the association was formed in 1909 instruction has been given to 20,177 persons. To accomplish this result it has been necessary to hold 781 classes, each class lasting about ten weeks.

The Ontario Hospital Association, meeting in Toronto early this month, referred to their executive committee the question of the payment of doctors' fees by the Workmen's Compensation Board and other public bodies. The Association held that the hospitals should not be required to meet the cost of treating the patients sent to them by the Board. On the subject of the ten-hour day for nurses, it was stated that such an arrangement might interfere with the work of the hospital by requiring relief for the day nurses before the night nurses came on, but that it could be conveniently arranged to take these two hours off early in the afternoon, say from two to four. This should be possible without any interference with the work of the hospital.

A special effort to encourage the use of the union label, shop card and button, was made during August and September by the Union

Label Department of the American Federation of Labour. In Canada, it is stated, an effort will be made to secure the enactment at the next session of Parliament of a law to permit the registration of union labels.

The French-speaking physicians of North America, at their eighth annual congress held at Quebec in September, passed a resolution asking the provincial legislature, in amending the Workmen's Compensation Act at the next session, to insert a clause requiring employers to pay the medical fees for injured workers pending a decision on their case. Another resolution recommended that municipalities with populations over 10,000 persons should be obliged to keep records as to the sanitary conditions of tenements and other dwellings in their jurisdiction.

The Railway Association of Canada calls attention to the danger of unloading or sampling gasoline in tank cars under trolley wires. This subject has been brought into prominence by a recent accident at a station in Ontario. In this case an employee of the consignee, accompanied by a Custom's officer, attempted to draw a sample of gasoline from a tank car with the aid of a can attached to a long iron rod. The latter came in contact with an overhead trolley wire carrying fifteen hundred volts direct current, with the result that the employee suffered a severe shock and the gasoline in the car took fire.

An inquiry was held early this month at Glace Bay, Nova Scotia, into the death of a miner who was killed several weeks ago at one of the local mines when the rear of a train of empty coal cars struck him while he was in the act of shifting another string of cars under the coal screen by means of a pinch bar. Judge Finlayson, who presided at the inquiry, expressed the opinion that some signal system should be installed at the mines whereby men "tapping coal cars, especially those working inside the cars near the screen, would be notified of the approach of other cars.

The jury empanelled to investigate the circumstances surrounding the deaths caused by a local explosion of three miners at the Midland Mine, Drumheller, Alberta, on August 2, 1924, were unable to determine the cause of the explosion but believed it was the result of careless and unusual action on the part of the deceased. The victims of the explosion had gone down into the mine for the purpose of laying track and brushing the mine and making repairs.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation

THERE was a further decline in employment at the beginning of September, repeating the movement usually indicated at this time of year when workers are taken from industrial employment to the harvest fields. The situation continues to be less favourable than at the same period of last year.

At the beginning of September the percentage of unemployment among members of trade unions stood at 6.5 as compared with 5.4 per cent at the beginning of August and with 2.2 per cent at the beginning of September, 1923.

A comparison of the reports from the offices of the Employment Service of Canada for the month of August, 1924, shows a marked increase from the preceding period in the volume of business transacted, in contrast with a decline from the exceptionally large volume of business done during August, 1923.

Following is a survey of employment at the end of September, 1924, as reported by the superintendents of the offices of the Employment Service of Canada.

*Employment in the Provinces.*—In the Maritime provinces the farming group employed very few workers as harvesting operations were delayed by wet weather. The building industry continued very quiet. Highway and street repair work supplied a large number of men with employment, and it was reported that the majority of carpenters and building tradesmen were well employed. Orders to supply experienced pulp wood cutters and lumbermen continued to be received at the offices, although in some sections the operators were well supplied with men. There was an increase in the number of orders received in the women's division due largely to the return of residents to their city homes.

Employment in the building trades in the Province of Quebec continued very active, with all tradesmen employed. In Montreal bricklayers, plasterers and painters were in demand, with a decline in the calls for building labourers. There was a slackening in the number of vacancies offered for road workers and highway labourers. Bushmen were required in increasing numbers for the lumber camps in the vicinity of Montreal and Quebec. A continued decline in farming operations throughout the Province was reported. Very slight changes were noticed in the manufacturing and industrial activities, a depression being recorded in the metal trades,

textile and clothing industries, with a slightly renewed activity for boot and shoe workers. A brisk demand was shown for women workers, especially in Montreal, with an insufficient supply of applicants.

In the Province of Ontario the industrial situation remained practically unchanged. The heavy demand for farm labour and harvesters continued, especially in the Western Peninsula, with a good supply of applicants to fill the positions. There was an increase in the demand for labourers for road construction, and sufficient applicants to meet the calls for railway maintenance work, but on the whole the construction groups did not show the activity usual for this season of the year. At Kingston experienced stone cutters were in demand. Bush work provided employment for numbers of men, and in some sections the demand was far in excess of the supply. From Peterboro', Chatham, Oshawa and other industrial centres a slightly improved situation was reported in the factory districts, but all offices throughout the province continued to show a surplus of unemployed workers. There was an increased demand for cook-generals and domestic workers, with a scarcity of trained women to fill the positions.

In the Province of Manitoba farming operations continued very active, in spite of the fact that rain had held up harvesting operations to some extent. Considerable difficulty was experienced in recruiting a sufficient number of harvest workers to meet the demand throughout the Province. In the building trades a general slackness prevailed, with very few orders for men. Extra gang labourers and section men were supplied to the railway companies in considerable numbers from Brandon and Winnipeg. The demand for farm household domestics predominated in the women's section, with an increased call for household and hotel workers for the urban districts.

The cutting of the crops in Saskatchewan had been completed but in most sections threshing was still in progress during the month under review. Heavy demands for men were recorded in all districts, with a shortage of applicants. If the fine weather continued, further increased demand for workers was anticipated. Construction activities were very quiet with little demand for building tradesmen or labourers. The calls for teamsters for road work and for section and gang labourers for the railways were sup-

plied in most districts without difficulty. Early calls for men for the logging district were received at Prince Albert and Saskatoon. In the women's section the shortage of applicants to supply the needs of the harvest districts and rural sections was serious, while sufficient applicants were available to care for all city orders.

In Alberta harvesting operations continued almost without interruption, with a very active demand for workers. With the number of men transferred in from British Columbia there was little difficulty experienced in filling the majority of orders. Employment in the construction group was mostly of a casual nature, but building tradesmen and labourers were on the whole well employed. Railway maintenance continued to provide work for a large number. The demand for farm domestics declined about fifty per cent, but there were still a large number of workers required.

In the Province of British Columbia it was reported that most of the farmers had secured all the help required and any surplus labour had been sent to the Prairie Provinces. There was very little demand for men in the construction group. Road grading, dock repairs and street work, afforded the chief employment. There were, however, few building tradesmen out of work. Prospects for the winter months were not very bright and as yet only gradual improvement has been recorded in lumber and logging industries. A considerable surplus of all kinds of labour was available at the offices. In mining, conditions continued quiet and work along shore was not so brisk as formerly reported. Orders continued to outnumber placements in the women's section, due to the scarcity of experienced cook-generals and resident household workers.

#### EMPLOYERS' REPORTS

The trend of employment at the beginning of September continued to be downward, according to employers' returns tabulated by the Dominion Bureau of Statistics. This movement repeats that indicated at the same period of last year, and is partly due to harvest demands upon the labour market. The decline in employment this year is larger than that recorded at the same period in 1923, and the index number stands lower than at that time. Manufacturing suffered further large losses, mainly in iron and steel; nickel mines, steam railway and water transportation, highway and railway construction and maintenance also registered considerable curtailment. On the other

hand, logging camps, building construction, coal mines and many branches of manufacturing, notably food, pulp and paper, reported substantial improvement. Trade also was rather more active.

Employment in all provinces declined; the reductions in personnel in Ontario were largest and in British Columbia smallest.

In the Maritime District the iron and steel, transportation and construction industries recorded heavy losses, while improvement was shown in coal mines.

In Quebec, manufacturing as a whole, chiefly in the iron and steel and textile divisions, was decidedly less active; transportation and railway construction also reported a substantial falling off. Building and highway construction, trade, electric current, pulp, paper and rubber works, on the other hand, employed a larger number of persons than in the preceding month.

Large contractions in iron and steel works in Ontario, together with reductions in nickel mines, construction and steam railway operation, caused the shrinkage in employment in Ontario. Food, textile, oil, gas and some other classes of factories, however, showed increased activity and logging camps recorded substantial seasonal expansion.

In the Prairie Provinces the most pronounced reduction occurred in railway construction and maintenance, but steam railway operation and railway car works also reduced their staffs. Coal mines, food and textile works and building construction showed increases.

Manufacturing in British Columbia was considerably more active, largely on account of seasonal expansion in fruit and vegetable canneries, together with improvement in sawmills. Logging, mining and building construction also showed improvement which was, however, more than offset by reductions in highway and railway construction.

Four of the seven cities for which separate tabulations are made reported curtailment of operations, while in three employment increased. Reductions in personnel in textile and iron and steel works and in shipping and stevedoring chiefly caused the decline in Montreal. Substantial improvement was indicated on the other hand in construction and in some other branches of manufacturing. The changes in Quebec city were not large, the decrease in leather, boot and shoe works being most pronounced. In Toronto, textile, food, printing and publishing factories were much more fully employed than at the beginning of August. The general improvement in this city is the first that has been

recorded since April. In Ottawa pulp and paper and lumber mills afforded less employment. In Hamilton marked recovery was indicated in textiles, but the gains in this and some other branches of manufacturing were more than offset by contractions in iron and steel. Firms in Winnipeg recorded further improvement, chiefly in manufacturing and construction. Additions to staffs in manufactures, transportation, construction and trade in Vancouver accounted for the improvement in that city.

An analysis of the returns by industries shows that practically all branches of iron and steel shared in the pronounced declines recorded, those in railway car shops, agricultural implement and automobile works being most extensive. Leather, textiles and non-ferrous metal factories also afforded less employment than in the preceding month. On the other hand, food, pulp and paper, electric current and some other branches of manufacturing registered improvement. Logging camps registered important seasonal gains; coal mines, building construction and trade also recorded improvement. Metallic ore mining, transportation, highway and building construction, however, showed pronounced curtailment of operations.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of September.

The term "unemployment" in the following report has reference to involuntary idleness, due to economic causes.

Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The volume of unemployment as reported by 1,496 trade unions with a combined membership of 155,117 persons was slightly greater at the end of August than at the close of the preceding month, and on August 31, 1923, 6.5 per cent of the members being out of work, as compared with percentages of 5.4 at the end of July and with 2.2 at the close of August last year. New Brunswick, Manitoba and Saskatchewan unions reported a more favourable situation than in July, but less work was afforded in the remaining provinces. The

decline in Nova Scotia was most pronounced, due to more unemployment in the coal mines. In comparison with August of last year employment was on a lower level in all provinces, Nova Scotia and Quebec recording the most noteworthy reductions. Less activity than in July was reported in the manufacturing group, 10.1 per cent of the members being out of work as compared with 7.6 per cent at the close of the previous month. Textile, iron and steel and glass workers, metal polishers, cigar-makers, papermakers and printing tradesmen were not so busy, but leather workers were considerably better employed, and gains on a smaller scale were indicated by brewery, furniture and garment workers. Bakers and confectioners reported the same percentage of idleness as in the previous month. More unemployment was registered in the manufacturing group than in August of last year. Coal miners in Nova Scotia were slacker than in July and in Alberta also the situation was slightly less favourable. No unemployment was reported by asbestos miners in Quebec and coal miners in British Columbia. Reports tabulated from 168 unions in the building trades with a membership of 17,711 persons showed little change in comparison with July, 11.8 per cent of the members being idle as compared with 12.1 per cent at the close of the preceding month. The greater part of this unemployment continued to be registered in the provinces of Ontario and Quebec. Granite and stonecutters, plumbers and steamfitters, tile layers, lathers and roofers, and hodcarriers and building labourers were busier, but bricklayers, masons and plasterers, carpenters and joiners, electrical workers, painters, decorators and paperhangers, bridge and structural iron workers, and steam shovel and dredgemen were not so fully employed. All tradesmen except tile-layers, lathers and roofers reported larger percentages of idleness than in August of last year. Practically no change took place in the transportation group, 3.8 per cent of the members being idle as compared with 3.9 per cent in July. More employment was registered in the steam railway division, but declines occurred in water transportation. The situation for street and electric railway employees remained unchanged. No unemployment was reported by fishermen, while lumber workers and loggers indicated considerable idleness. Hotel and restaurant employees showed very little change. Theatrical stage employees, barbers and stationary engineers and firemen were slacker than in both the preceding month and in August of last year.

**EMPLOYMENT OFFICE REPORTS**

During the month of August, 1924, the offices of the Employment Service of Canada made 34,911 references to positions and effected a total of 33,498 placements. Of these the workers placed in regular employment numbered 27,143 (of which 23,459 were men and 3,684 women) and those placed in casual work were 6,355. During the corresponding period of last year the total placement of workers was 64,702. Applications for work were received at the offices from 34,665 men and 9,892 women, a total of 44,557 applications, in contrast with 73,033 during August, 1923. During the period under review vacancies reported numbered 35,302, of which 26,768 were for men and 8,534 for women in comparison with 74,440 vacancies during the same period a year ago. The marked reduction noted in the volume of business transacted during August of this year in comparison with the same period of 1923 was largely due to unfavourable weather conditions in the harvest areas of the Prairie provinces which had delayed the cutting and threshing considerably. In some localities it was noted that local labour was almost sufficient to carry on the work of the harvest. In another section of this issue may be found a detailed report of the work of the offices for August, 1924.

**PRODUCTION REPORT.**

The Dominion Bureau of Statistics reports a production of 23,072 gross tons of pig iron in Canada in August, 1924, as compared with 45,480 tons in July, the August production being the lowest reported for any month since the commencement of monthly records in 1917. Foundry and malleable iron registered substantial increases, but this was more than offset by the drop in the quantity of basic pig iron produced for the use of the reporting firms. This grade fell 83 per cent to 5,942 tons, while foundry rose 71 per cent to 11,911 tons, and malleable iron advanced 54 per cent to 5,220 tons. The average monthly production of 62,000 tons for the eight months ending August, although less than the average of 76,000 tons for the same period in 1923 exceeded the averages for 1922 and 1923, when the quantities were 31,000 and 52,000 tons respectively. During the month two furnaces were banked at Sydney, Nova Scotia, leaving two furnaces active at the end of August, namely one at Hamilton, Ontario, and one at Sault Ste. Marie, Ontario. The production of 2,195 tons ferro-silicon marked little change from the 2,197 tons produced in July.

The August production of 22,736 tons steel ingots and castings in Canada reached the lowest level reported since the war and marked a drop of 56 per cent from the 52,237 tons produced in July. Steel ingots at 21,419 tons marked a drop of 58 per cent from the July output of 50,469 tons, and steel castings fell 26 per cent to 1,317 tons, as compared with 1,768 tons in the previous month. The cumulative production for the eight months ending August was 563,706 tons, comprising 541,439 tons steel ingots and 22,267 tons steel castings.

A report from the Department's correspondent at Cobalt, shows that thirteen carloads containing approximately 963,481 pounds of silver ore were shipped from the Cobalt camp during the month of September as compared with 9 carloads of silver ore containing 655,687 pounds in the previous month. The Nipissing mine shipped 307 bars containing 355,229.82 ounces of silver, and The Mining Corporation of Canada shipped 154 bars containing 155,120.24 ounces of silver, making a total of 461 bars containing 510,350.06 ounces of silver shipped during the month of September as compared with 328 bars containing 353,949.48 ounces in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of August, 1924, at the Intercolonial Coal Mining Company, Limited, at Westville, where there was produced 9,957 tons, and at the Greenwood Coal Mining Company, Thornburn, Nova Scotia, where there was produced 3,946 tons.

As complete figures for the coal production for Canada are not available for the month of August, the statistics for the coal mining industry for the previous month are given at the end of this section.

A report from the British Columbia Forestry Branch, shows that 193,390,539 feet of timber, board measure, was scaled in the province during August, 1924. This total includes Douglas fir, 67,754,214 feet; red cedar, 43,246,432 feet; spruce, 31,582,185 feet; hemlock, 25,298,520 feet; balsam, 6,943,559 feet; yellow pine, 2,437,710 feet; white pine, 2,165,562 feet; jack pine, 4,961,023 feet; larch, 6,101,915 feet; cotton wood, 250,434 feet; cypress, 1,280 feet; and species not specified, 2,647,705 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement, amounted during the month of August to \$18,323,938, as compared with \$19,986,670 during July, and with \$21,750,980.81

in August, 1923. The gross earnings from January to August 31, 1924, were \$153,173,166 as compared with \$158,483,853.58 for the same period last year.

The gross earnings of the Canadian Pacific Railway Company for August, were given in a preliminary statement as \$14,324,121 in comparison with \$14,883,677 in the previous month, and with \$16,417,124 in August, 1923. The gross earnings for the first eight months of 1924 were given as \$113,864,715, as compared with \$112,940,453 for the same period in 1923.

*Coal Statistics for July.*—During July the output of coal from Canadian mines according to estimates by the Dominion Bureau of Statistics fell to a new low level for 1923, and was 2 per cent below the figure for the previous lowest record in May. Every coal-producing province except New Brunswick, reported a decreased output during July as compared with June, due principally to lack of orders, but in Alberta to the continuance of a strike among the employees of District 18 of the United Mine Workers. The total Canadian output during July amounted to 668,571 short tons, a decrease of 8 per cent below the tonnage for the previous month, and 35 per cent below the preceding five-year average for July. The percentage of decrease from the preceding month by provinces was greatest in Saskatchewan, which suffered a decline of 28 per cent, followed by Alberta and British Columbia with a decline of 9 per cent each, and by Nova Scotia with a decline of 6 per cent. Production in New Brunswick advanced 6 per cent. The kinds and quantity of coal produced were as follows: bituminous, 570,000 tons; sub-bituminous, 12,000 tons and lignite, 87,000 tons. The corresponding figures for June were: bituminous, 614,000 tons; sub-bituminous, 12,000 tons, and lignite, 97,000 tons.

The output by provinces was as follows:

Nova Scotia, 389,941 tons.

New Brunswick, 16,056 tons.

Saskatchewan, 12,972 tons.

Alberta, 89,841 tons.

British Columbia, 159,761 tons.

The total number of men employed in the coal mines of Canada during July was 17,522, of whom 13,392 worked underground and 4,130 on the surface, as compared with a total of 20,630 in June, of whom 15,788 worked underground and 4,852 on the surface.

The monthly production per man was 38.1 tons for July as against 34.7 tons per man for June. During July, the production per man-day was 2.0 tons, as compared with 1.9 tons in June.

#### BUILDING PERMITS.

According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during August

showed a decline of 14.7 per cent as compared with July, and of 14.1 per cent as compared with August, 1923. The figure for August, 1924, was \$9,463,756; for July, 1924, \$11,090,760; and for August, 1923, \$11,011,758.

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded during September, 1924, was \$22,506,300, compared with \$26,664,500 in August. Residential building accounted for 34 per cent of the September total, amounting to \$7,652,000. Business building amounted to \$6,049,400, or 27 per cent; industrial building to \$800,000, or 3.5 per cent, and public works and utilities to \$8,004,900, or 35.5 per cent. The activity was distributed among the provinces as follows: Ontario, 48.3 per cent; Quebec, 29.3 per cent; Prairie Provinces, 9 per cent; British Columbia, 8 per cent; and the Maritime Provinces, 5.4 per cent. The total construction started from January 1 to September 30 has amounted to \$201,712,300 compared with \$247,036,500 during the corresponding period of last year, and \$213,647,200 in 1922.

#### FOREIGN TRADE.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in August,

1924, the merchandise entered for consumption amounted to \$61,969,577 as against \$78,825,677 in August, 1923. The domestic merchandise exported amounted to \$73,821,631 in August, 1924, as compared with \$87,059,218 in the previous month and \$80,021,409 in the corresponding month of the previous year. Foreign merchandise exported amounted to \$999,995 in August, 1924, and \$1,308,627 in August, 1923.

The chief imports in August, 1924, were: fibres, textiles and textile products, \$13,011,511; non-metallic minerals and products, \$10,602,696; iron and its products, \$9,914,745; and agricultural and vegetable products, mainly foods, \$9,240,951.

The chief exports in the same month were: wood, wood products and paper, \$21,108,309; agricultural and vegetable products, mainly foods, \$20,028,493; and animals and animal products, \$15,430,256. During the five months of the fiscal year ending August 31, 1924, exports of agricultural and vegetable products, mainly foods, were valued at \$152,379,224; wood, wood products and paper at \$102,280,416; and animals and animal products at \$54,270,771.

### Strikes and Lockouts

The time loss due to industrial disputes was less in September than in August, but greater than in September, 1923. There were in existence at some time or other during the month 8 disputes, involving 8,501 employees, and a time loss of 205,634 working days, as compared with 16 disputes in August, involving 10,469 employees and resulting in a time loss of 228,572 working days. In September, 1923, there were recorded 18 disputes involving 1,729 workpeople and a time loss of 30,773 working days. Four strikes and lockouts commenced during September and of these three were terminated during the month. One of the strikes which commenced prior to September terminated during the month. At the end of the month, therefore, there were four strikes and lockouts involving 8,334 workpeople. The decrease in the number of employees and in the time loss as compared with August was partly due to the calling off of the strikes of job office printing compositors in five cities, involving 298 employees, on strike since 1921. The increase in the number of employees involved and in the time loss as compared with September last year was due to the strike of 8,000 coal miners in Alberta and South Eastern British Columbia.

### Prices

Seasonal increases were again mainly responsible for the advance in retail food prices in spite of a substantial decline in the price of potatoes. The cost per week of a list of twenty-nine staple foods, for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.28 at the beginning of September, as compared with \$10.19 for August; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. Besides potatoes there were slight declines in the prices of beef, evaporated apples, and tea. Prices of eggs, butter and lard advanced substantially, while there were smaller advances in the prices of fresh and salt pork, bacon, cheese, bread, flour and rolled oats. Including the cost of fuel and rent with that of foods the total budget averaged \$20.65 at the beginning of September, as compared with \$20.57 for August; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38 for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined substantially, the level for September being 153.6 as compared with 158.1 for August; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; 256.7 for May, 1920 (the peak); and 213.7 for September, 1919. In the grouping according to chief component material five of the eight main groups declined, two advanced, and one was practically unchanged. The Vegetables and Their Products group declined because of lower prices for flour, vegetables, straw and hay, and in spite of advances in rubber, sugar, cocoa beans and coffee. Lower prices for cotton and cotton fabrics caused a decline in the Textiles and Textile Products group. The Iron and Its Products group was lower, mainly, because of decreases in the prices of steel billets and steel bars. The Wood and Wood Products group and the Non-Metallic Minerals group were also somewhat lower, the former, mainly because of lower prices for lumber, and the latter because of lower prices for gasoline. The Animals and Their Products group advanced, decreases in the prices for live stock, dressed beef, bacon and ham being more than offset by advances in prices for fish, butter, cheese and eggs. The Chemicals and Allied Products group also advanced slightly, while the Non-Ferrous Metals group was practically unchanged.

### Unemployment in Various Countries

The downward trend of unemployment in March and April continued during May and June in most countries for which new information is available, according to the International Labour Office. In the United States and Poland, however, unemployment substantially increased. No definite statement can be made as to the movement of unemployment in Canada; the trade union statistics for May show a slight increase in unemployment, while the index number of employment based on returns from employers indicates an increase of over three points, and the situation appears to be more favourable than in either 1922 or 1921. In Germany total unemployment declined still further. The decline was, however, much smaller than in previous months and was to a certain extent counterbalanced by an increase in short time. In Belgium, France, and Great Britain the situation remains almost unchanged, while for the remaining countries the available statistics for May and June show in every case a further improvement.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF SEPTEMBER, 1924

**D**URING the month of September the Department received three applications for the establishment of Boards of Conciliation and Investigation, as follows:—

(1) from the Canadian Press, in a dispute with its press telegraphers, members of Canadian Press Division No. 82, Commercial Telegraphers' Union of America. After the Minister had authorized the establishment of a Board on September 10 the men went on strike, but through the mediation of the Minister the strike was called after ten days, and Board members were appointed as follows: Mr. J. G. O'Donoghue, K.C., of Toronto, for the employees; Mr. E. Norman Smith, of Ottawa, for the employer, and Mr. Colin G. Snider, K.C., of Hamilton, appointed as chairman on recommendation of the other two members of the Board.

(2) from certain employees of the Canadian National Electric Railway, being members of the International Brotherhood of Electrical Workers, International Association of Machinists, Brotherhood of Railway Car-men and International Brotherhood of Blacksmiths and Helpers.

(3) from the underground coal miners employed by the Western Fuel Corporation of

Canada, Limited. Shortly after informal application by telegram had reached the Department the dispute was settled through direct negotiations between the employers and employees, and when the formal application was received the services of a Board therefore were not required.

### Other Proceedings Under the Act

In the case of the dispute between the Canadian Pacific Railway Company and certain of its employees in commercial telegraph service, members of the Commercial Telegraphers' Union of America, the Board established during August was completed on September 16 by the appointment as chairman of Mr. R. Home Smith, of Toronto, on the recommendation of the other two members.

In the case of the dispute between the Canadian National Railways and certain of their employees in commercial telegraph service, members of the Commercial Telegraphers' Union of America, the same chairman was appointed as in the preceding case, the boards in both cases being as follows: Mr. R. Home Smith, Toronto, chairman, the Honorable F. H. Phippen, K.C., representing the employer, and Mr. James Simpson, Toronto, representing the men.

## STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1924

**T**HE number of strikes and lockouts in Canada in existence at some times or other during the month of September was 8, as compared with 16 in August. The time loss for September was greater than in September, 1923, being 205,634 working days, as compared with 30,773 working days in the previous year.

Date	Number of disputes	Number of employees involved	Time loss in working days
September, 1924.....	8	8,501	205,634
August, 1924.....	16	10,469	228,572
September, 1923.....	18	1,729	30,773

The decrease in the number of employees on strike and in the time loss, as compared with August, was due to the calling off of the strikes of job office printing compositors in five cities, involving 298 employees, who had been on strike since 1921. A considerable reduction was also caused by the cessation

of the strike of 1,700 clothing workers in Montreal at the end of August. The increase in the number of employees involved and in the time loss, as compared with September last year, was due to the strike of 8,000 coal miners in Alberta and South Eastern British Columbia.

Four disputes, involving 8,064 workpeople, were carried over from August. One of the strikes beginning prior to September and three of the strikes commencing during September terminated during the month. At the end of September, therefore, there were on record four disputes: coal miners, Alberta and British Columbia; coal miners at Coalhurst, Alta.; moulders at Guelph, and moving picture projectionists at Hamilton.

Of the disputes which commenced during September one was owing to the refusal of the employer to collect certain union dues under the "check-off"; another was owing to a demand of the employees for increased wages, while the employer proposed a reduction in

wages; the third was for recognition of the union, union wages and working conditions; and the fourth was for shorter hours. One of the strikes which terminated during September resulted in favour of the employees; one in favour of the employers; one ended in a compromise; while in the fourth the result was indefinite, the dispute being referred to a Board of Conciliation.

Information reached the Department during September, but too late for the September issue of the *LABOUR GAZETTE*, of a strike of 17 cap makers in Toronto. This strike commenced July 8, and was called when the employer declared his establishment an "open shop," and refused to negotiate with the union officers. During August negotiations were carried on between the employer and the employees, and work was resumed on August 18, on the employer's terms.

A dispute was reported as occurring at Hull, Que., involving the employees of a match manufacturing establishment, it being alleged by the employees that the employer proposed changes in the working conditions to take effect on the reopening of the plant. Apparently the dispute did not cause sufficient time loss during September, to constitute a strike or lockout.

**NOTE.**—The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement:

**COAL MINERS, ALBERTA AND BRITISH COLUMBIA.**—The strike of coal miners which began April 1 with the expiry of the agreement between the United Mine Workers of America, District 18, and the Western Coal Operators' Association, remained unsettled at the end of the month. As stated in the August issue of the *LABOUR GAZETTE*, the miners held a convention early in September at which the position taken by the strike committee at the conference in August was approved, but the convention gave the committee a free hand in further negotiations. Towards the end of September another conference was held on the request of the Minister of Labour and under the chairmanship of the resident officer

of the Department of Labour. After several meetings had been held, the miners proposed a renewal of the wage agreement with a reduction in wages of one dollar per day for contract men, and  $\frac{1}{3}$  or 12½ per cent for day wage men. The miners' committee later accepted the suggestion of the departmental officer that wages of contract employees be reduced by \$1.17 per day, and those of datal men be reduced  $\frac{1}{3}$  or 12½ per cent, the agreement to run for three years. This proposal was declined by the operators, principally on the ground of the length of the contract. The joint conference then adjourned until the second week of October, when it was expected the Minister of Labour would be present. Between October 6 and 10, negotiations were carried on, the Minister of Labour and the Premier of Alberta being present. On October 10 a settlement was reached, renewing the agreement which expired March 31, 1924, until March 31, 1927, subject to six months' notice from either party after March 31, 1925, the wage scale to be reduced as mentioned above. This settlement was subject to ratification by ballot of the members of the miners' union, who, on October 16, voted for ratification.

**COAL MINERS, COALHURST, ALTA.**—On September 18, 320 coal miners went on strike following the refusal of the company to deduct an assessment of 10 per cent from the wages of the miners for the Strike Relief Fund. The union claimed that the 10 per cent assessment in question was included in the provision in the agreement for the "check-off," and that consequently the company had broken its agreement with the union. This strike remained unsettled at the end of the month.

**BOOT FACTORY EMPLOYEES, ST. HYACINTHE, QUE.**—The strike of leather cutters which commenced August 18, to secure the dismissal of employees, was terminated on September 20 by the letting out of some of the strikers and the return of the others to work.

**TELEGRAPHERS, VARIOUS CITIES THROUGHOUT CANADA.**—A strike of 77 press telegraphers in various cities throughout Canada, members of the Commercial Telegraphers' Union, began on September 11, as the result of a dispute with the Canadian Press in regard to the renewal of an agreement. The employees had demanded an increase in wages, while the employer proposed a decrease. Two days prior to the strike, the Canadian Press made application to the Department of Labour for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, and the Minister of Labour authorized

the establishment of a Board. The employees, however, took a strike vote which resulted in the calling of a strike. The telegraphers had been receiving a minimum salary of \$45 per week, and a maximum of \$51 per week, but they now asked for increases to \$60 and \$72.50 per week. The Canadian Press presented a counter proposition for a reduction of from \$3 to \$7 per week. The telegraph operators refused to accept arbitration of anything but their claim for an increase. The Canadian Press offered to submit the dispute to arbitration, under a clause in the expiring agreement, but the employees held that the clause in question did not apply. The telegraphers of the commercial telegraph companies refused to handle press matter during the early days of the strike, and took a vote as to a sympathetic strike, but the majority were against a strike. It was pointed out that the Federal statutes\* required the commercial telegraph companies to accept all matter presented for transmission. On September 21, the strikers decided to refer the dispute to

the Board already authorized by the Minister of Labour. Work was resumed on September 22. Information as to the proceedings under the Industrial Disputes Investigation Act, 1907, will be found on another page.

**MOVING PICTURE OPERATORS, MONTREAL, QUE.**—On September 1, a strike of six moving picture operators occurred in Montreal for recognition of the union, and for union wages and working conditions. After negotiations the demands of the employees were granted and work was resumed on September 3.

**MUSICIANS (MOVING PICTURE THEATRES), VANCOUVER, B.C.**—An alleged lockout at two theatres in Vancouver occurred on September 1, on the expiration of an agreement on August 31. Thirty-four musicians were affected. The musicians asked for a new agreement on the basis of a 5½-hour day instead of a 6-hour day. Negotiations resulted in a compromise whereby the managers agreed to give additional rest periods during the 6-hour day in lieu of a straight 5½-hour day. Work was resumed on September 6.

**STRIKES AND LOCKOUTS DURING SEPTEMBER, 1924**

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and lockouts commencing prior to September, 1924.</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING.—</b> Coal miners, Alberta and British Columbia.	8,000	200,000	Commenced April 1, against a reduction in wages. Underminated.
<b>MANUFACTURING.—</b> <i>Leather, fur and products:—</i> Boot factory employees, St. Hyacinthe, Que.	50	850	Commenced August 18, to secure the dismissal of other employees. Replacement of strikers by other workers, September 20. In favour of employers.
<i>Iron, steel and products:—</i> Moulders, Guelph, Ont.....	8	200	Commenced June 2, against a reduction in wages. Underminated.
<b>SERVICE.—</b> <i>Recreational:—</i> Moving picture projectionists, Hamilton, Ont.	6	150	Commenced during July. Alleged lockout of union employees. Underminated.
<b>(b) Strikes and lockouts commencing during September, 1924.</b>			
<b>MINING, NON-FERROUS SMELTING AND QUARRYING.—</b> Coal miners, Coalhurst, Alta....	320	3,520	Commenced September 18. Refusal of company to collect the union checkoff. Underminated.
<b>TRANSPORTATION AND PUBLIC UTILITIES.—</b> <i>Telegraph system:—</i> Telegraphers, various cities....	77	732	Commenced September 11, against a proposed reduction in wages when the employees had demanded an increase in wages. Work was resumed September 22, pending a final settlement before a Board of Conciliation and Investigation. Indefinite.
<b>SERVICE.—</b> <i>Recreational:—</i> Musicians (Moving Pictures), Vancouver, B.C.	34	170	Alleged lockout, commenced September 1, for shorter hours. Settled by negotiations and work resumed September 6. Compromise.
Moving picture operators, Montreal, Que.	6	12	Commenced September 1, for recognition of the union and for union wages and working conditions. Settled by negotiations September 2; in favour of employees.

\*Telegraphs Act, Revised Statutes of Canada, chapter 126.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING AUGUST, 1924

THE British *Ministry of Labour Gazette* for September contains the following table which analyses the disputes in progress in August, 1924, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approximate time lost during the month in all disputes in progress.

Of the 53 disputes beginning in August, 29, directly involving 19,000 workpeople, arose out of demands for advances in wages; 14, directly involving 3,000 workpeople, on other wages questions; 2, directly involving 4,000 workpeople, on details of working arrangements; and 8, directly involving 3,000 workpeople, on other questions. In addition, 43 disputes which began before August were still

in progress at the beginning of the month. Settlements were effected in the case of 29 new disputes and 17 old disputes. Of these new and old disputes, 14 were settled in favour of the workpeople, 12 were settled in favour of the employers, and 20 were compromised. In the case of 13 disputes work was resumed pending negotiations. It is provisionally estimated that the number of workpeople who went on strike or were locked out or were thrown out of work at establishments where disputes occurred, in consequence of the disputes, in all the 96 disputes in progress in August was not far from 150,000, and that the aggregate number of working days lost in all the disputes during the month was about 2,000,000.

Groups of Industries	Number of Disputes in Progress in August			Number or work-people involved in all disputes in progress in August	Aggregate duration in working days of all disputes in progress in August
	Started before August 1	Started in August	Total		
Mining and quarrying.....	12	11	23	17,000	133,000
Metal, engineering and shipbuilding.....	11	11	22	15,000	162,000
Building, decorating, contracting, etc.....	3	4	7	*	*
Transport.....		7	7	5,000	44,000
Other.....	17	20	37	12,000	96,000
Total, August, 1924.....	43	53	96		
Total, July, 1924.....	38	57	95		
Total, August, 1923.....	28	45	73	**	**
				68,000	1,200,000

\*Particulars were not available as regards the number of work-people involved in the general dispute in the building industry. The negotiations between the parties in connection with this dispute resulted on August 22, in a settlement under which work was resumed at nearly all centres throughout the country on August 25.

\*\*Two disputes (one involving about 34,000 boilermakers, etc., in Federated shipyards and the other involving about 18,000 dock workers in London), accounted for the most of the loss of time in August, 1923.

## Unemployment and Credit

A recent report published by the International Labour Organization under the title "Unemployment 1920-1923," reviewed in the August issue of the *LABOUR GAZETTE*, declared that a close relation existed between price fluctuations and unemployment. This opinion was in agreement with the principle laid down at the Economic Conference at Geneva in 1922, that "the essential requisite for the economic reconstruction of Europe is the achievement by each country of stability in the value of its currency." The best means of restoring such stability, and more particu-

larly the relation between currency control and unemployment were discussed at a recent meeting of the British Independent Labour Party, and a resolution was submitted to the Labour Party Conference on October 6, declaring that "in view of the power of the Bank of England to lessen, by scientific regulation of credit, disastrous 'booms' and 'slumps' and the unemployment which they bring about, the Government should take steps, by nationalizing the Bank of England and otherwise, to ensure that the control of credit is exercised in the public interest of powerful financial groups."

## DOMINION GOVERNMENT'S LIABILITY FOR INDUSTRIAL ACCIDENTS TO WAR VETERANS TO CONTINUE

**A**N Order in Council (P.C. 1639) was issued on September 18, extending for a further period of one year the operation of the order in council dated December 29, 1921, under which the Government of Canada assumed the liability that would otherwise rest upon employers on account of industrial accidents to returned soldiers in their employment who have a war disability reckoned as 20 per cent of their full earning power or over (LABOUR GAZETTE, March, 1922, page 310). This arrangement, and the results that have followed in three years, are described in the new order in council, approved by His Excellency the Governor General on September 18, as follows:—

The Committee of the Privy Council have had before them a report, dated 15th September, 1924, from the Minister of Soldiers' Civil Re-establishment, submitting that by Order in Council P.C. 4432, dated the 29th December, 1921, as amended by Order in Council P.C. 2247, dated 27th October, 1922, authority

was granted to the Department of Soldiers' Civil Re-establishment to assume the cost of compensation in respect of pensioners of 20 per cent and upwards, who are engaged in industry. The salient features of this authority are that the department shall pay to every employer of a pensioner who is in receipt of not less than 20 per cent pension, the amount of assessment if any, paid by such employer to a Workmen's Compensation Board with respect to the wages or other allowance paid or made to such pensioner, and where the compensation has been paid by the Workmen's Compensation Board or by an individual, the department shall reimburse the Board or the individual, less all amounts paid or payable to employers by way of refund of assessment.

The Minister states that it was provided that the authority should remain in force for three years from the 1st September, 1921.

The expenditure has been considerably less than was at first anticipated, though as the benefits are being more widely known by employers the claims will slightly increase. Only two provinces, however, have availed themselves to any extent, of the benefits of this legislation, namely, Ontario and Alberta. The following statement shows the expenditure made by the Department of Soldiers' Civil Re-establishment since the coming into force of the Orders in Council:—

—	1921-22	1922-23	1923-24	1924-25 (to July 31, 1924)	Total
Employers' Assessment.....	\$	\$ 44 00	\$ 749 57	\$ 556 40	\$ 1,349 97
		Alta. 1	Man. 5 N.S. 4	Man. 4 B.C. 1	
Workmen's Compensation.....	Alta. 2 40 88	15,631 50	17,332 65	16,216 32	49,221 35
		Ont. 9 Alta. 40 N.S. 1 Man. 2	Ont. 158 Alta. 47 N.S. 12	Ont. 80 Alta. 11	
Grand total.....	40 88	15,675 50	18,082 22	16,772 72	50,571 32

The operation of the foregoing Orders in Council has proved most satisfactory in many cases. It has been impossible for many employers to refuse employment to a disabled man on the grounds that his disability would make him an additional Workmen's Compensation risk.

The Minister, therefore, recommends that the provisions of Order in Council P.C. 4432, dated the 29th

December, 1921, as amended by Order in Council P.C. 2247, dated the 27th October, 1922, be extended for one year until the 1st September, 1925.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) E. J. LEMAIRE,  
*Clerk of the Privy Council.*

## REHABILITATION OF DISABLED CIVILIAN WORKERS AND OF RETURNED SOLDIERS

**A**TENTION is now being directed in Canada to the problem of retraining industrial workers who have been disabled through injuries from following their accustomed occupations. Such retraining has already been given for some years past, with remarkable results, to disabled soldiers, through the Vocational Training Branch of the Department of Soldiers' Civil Re-establishment,

and it has been suggested that this work might be extended so as to include injured civilian workers in the benefit of "rehabilitation."

### Vocational Training for Returned Soldiers

The Government of Canada was the first of the Allied Governments to recognize that the retraining of the disabled men at public

expense was a definite and necessary post-war problem and the Military Hospitals Commission was authorized to provide facilities for such retraining and for the issue of pay and allowances while it was in progress. At the commencement of the vocational training work arrangements were made for the opening of special schools for the utilization of existing provincial and private institutions, and for the placement of men in industry, where an intensive apprenticeship to the new trade could be carried out. As an adjunct, a special employment and "follow-up" service was established. Large numbers of disabled men availed themselves of these facilities, the peak of the load being reached in March, 1920, when upwards of 26,000 (inclusive of minors referred to below) were undergoing training.

The total number who had commenced training up to December 31, 1923 was 52,228; these are accounted for as follows:—

Graduated, 1919.. . . . .	9,455
" 1920.. . . . .	27,371
" 1921.. . . . .	5,086
" 1922.. . . . .	693
" 1923.. . . . .	309
In training at 31-12-23.. . . . .	101
Cancelled or discontinued since commencement.. . . . .	9,213
Total.. . . . .	52,228

Practically 64 per cent of those trained obtained employment in line with their training. Owing to the unsettled state of industries in general during the post-war period, this high percentage reflects the training provisions in a very favourable light. It should be borne in mind that many of those who did not obtain employment in line with training, but accepted employment in other lines, did so by preference and not through necessity, and were enabled to do so because of their training.

Employed as trained.. . . .	27,448	63.96
Employed otherwise.. . . .	10,724	24.99
Total.. . . . .	38,172	88.95
Presumed employed.. . . .	2,553	5.95
Not a success.. . . .	219	.51
Gone abroad.. . . . .	991	2.31
Sick.. . . . .	866	2.02
Deceased.. . . . .	113	.26
Total.. . . . .	42,914	100%

Those who received training have ranged from youths to men of 50 years, from the illiterate to the university student, and from the lowest grade labourer to the highly skilled mechanic.

Owing to the marked decrease of training activity, the Department has now been able to close all vocational schools. Men now

accepted for training are, in the majority of cases, placed with industries on promise of employment upon completion of course. Other cases are placed with business colleges or schools.

Another aspect of the training activities has been developed, namely occupational therapy in the hospitals. It was found in the early stages of the work that time hung heavily on the hands of those who were becoming convalescent and classes and ward occupations were established to relieve the tedium. A special corps of ward aides was trained, and it has now become a regular part of the procedure in all departmental hospitals for men to spend a portion of the day in performing some useful occupational work. This training is often commenced while the patient is bed-ridden. The sale of the articles produced has proved a welcome addition to the Departmental allowances.

### Retraining of Injured Civilians

*Ontario Act.*—A beginning in the application of the principle of "rehabilitation" to civilians has already been made in the province of Ontario, where the Workmen's Compensation Act was amended at the last session of the legislature to provide for the retraining of injured civilian workmen. The amending act, however, has not been proclaimed, as required, and is, therefore, not yet in operation. The new section is as follows:—

2. The Workmen's Compensation Act is amended by adding thereto the following section:—

44c. To aid in getting injured workmen back to work and to assist in lessening or removing any handicap resulting from their injuries, the Board may take such measures and make such expenditures as it may deem necessary or expedient, and the expense thereof shall be borne, in Schedule 1 cases, out of the accident fund, and in Schedule 2 cases by the employer individually, and may be collected in the same manner as compensation or expenses of administration; provided that the total expenditure under the provisions of this section shall not exceed \$100,000 in any calendar year.

*Progress in United States.*—The United States Government now participates with the States in establishing and maintaining retraining services. The movement started in 1920, when Congress enacted the Civilian Rehabilitation Act. As the result of this Act a rehabilitation service is now flourishing in thirty-six states.

Something of the economic and social gain effected by these services is indicated from the fact that last year 4,530 persons started earning \$4,530,000 in wages instead of having \$1,359,000 expended for their maintenance.

During the year closing June 30, 1923, 4,530 handicapped persons were rehabilitated, and there were under the care of the 36 State

bureaus on July 1, 11,267 active cases. In 1921 there were only 457 rehabilitated and in 1922, 1,890. The increase of 2,640 during the fiscal year of 1923 indicates that the rehabilitation effort is reasonably well established and is becoming effective. Less than 50 per cent of the Federal appropriations have been called for by the States and the total expenditures from Federal and State funds for the last year amounted to \$1,159,811.63, or a per capita cost of \$253.84. Obviously, the per capita cost in the large industrial States will be much lower than in the sparsely settled States. It is a significant economic and social fact that physically handicapped persons can be returned to gainful occupations at a per capita cost of little more than \$250, which includes all administrative expenses, tuition, supplies, travelling expenses, artificial appliances, and everything that is done for them. The exact cost of maintaining a dependent person in a public institution for the whole country is not known, but in many States it costs \$300 per capita, and in private homes or institutions, a larger amount.

The information given below is derived from the Year Book of the United States Federal Board for Vocational Education for 1923.

A special branch of the Federal Board for Vocational Education has been organized to administer the Civilian Rehabilitation Act of 1920. Under this Act Congress set up a programme of co-operation with the States, under which persons disabled in industry or otherwise, to the extent of being vocationally handicapped, should be retained and returned to remunerative employment. Because the direct responsibility of this work rests with the individual States, the Federal Government did not undertake to organize and direct the work, but rather provided for financial contributions or grants to encourage the work within the States and to give advice and assistance in all matters of organization and administration.

The Federal Act, which provides for the participation of the National Government in the vocational rehabilitation of civilians, contemplated a permanent programme, but it provided funds for four years only. The annual appropriations were as follows:—

Year	General	Special
1920-21.....	\$ 750,000	\$ 46,000
1921-22.....	1,000,000	34,000
1922-23.....	1,000,000	34,000
1923-24.....	1,000,000	34,000

part of Congress to limit Federal co-operation to this period. Allotment to a State from general appropriations is based on the proportion of the State's population to that of the United States, excluding Territories, outlying possessions, and District of Columbia. Five thousand dollars is the minimum allotment to any one State for one year. The special appropriations are for raising allotments to the minimum that otherwise would fall below that figure. For the administration of the Federal Act an annual appropriation of \$75,000 is made. Federal money expended in the States out of these appropriations must, under the provisions of the Act, be matched with State or local money, dollar for dollar.

The Federal civilian rehabilitation act provides, as one of the conditions under which a State will receive allotments of Federal money, that co-operative relations be set up between the State board for vocational education which administers the rehabilitation work, and the State agency which administers the workmen's compensation law. In a number of the States, co-operative relationship between these two agencies means considerably more than the reporting of potential cases to the rehabilitation service. They are found working hand in hand to the common end of restoring disabled workers as completely as possible to positions of self-support.

Due largely to an experiment which was begun in one of the States at the instance of the Federal board two years ago, a number of States have discovered the possibilities of what has been designated as "organized co-operation." The plan varies from State to State, but in general it is one of securing in each community, city, or county some clearing agency which will take the responsibility of locating, reporting, and investigating cases, and which will co-operate with the State department in carrying out the details of the complete plans of rehabilitation. In some communities the clearing agency works under the direction of a rehabilitation committee or, as it is sometimes called, council composed of prominent persons representing different fields of business and other activities, who feel a responsibility for the handicapped, and who very often are interested in all phases of social work and contribute money for it. These committees or councils have periodic meetings, at which methods as well as the specific needs of cases are discussed. Many placements are made simply through the influence or connections of persons on these committees. The work of the committee in general is, of course, subject to the approval of agents of the State rehabilitation depart-

While the Federal Act of 1920 provided appropriations for a four-year period, there appears to have been no intention on the

ment, and, wherever expenditure of State and Federal funds is involved, the plan under which such expenditure is to be made must be approved by the State rehabilitation department. In smaller communities such duties are often assumed by individuals, such as a public health nurse, a Red Cross secretary, the president or secretary of a manufacturers' association, a Rotary or a Kiwanis Club or other similar business men's organization, or by a prominent interested employer.

As an evidence of the great extent to which the rehabilitation work has aroused the interest of agencies, it may be pointed out that in one State one fraternal organization alone has raised a fund of \$70,000 to be devoted in one year to the rehabilitation of disabled minors. The work is being done in co-operation with the State department of rehabilitation. Church, fraternal, civic, and business organizations are investing time as well as money in the rehabilitation movement, both locally and nationally. Another outstanding development of the national programme of rehabilitation is the effect it has had on the activities of the medical and surgical fraternities all over the country, who are awakening to the need for improved methods of vocational restoration of the physically disabled.

Illustration of the beneficial effects of this awakening of interest in physical rehabilitation is the experience of one Southern State which has been very active in developing facilities for rendering this service. An orthopedic surgeon in the State has, in a little over

a year performed successful operations on 65 persons, resulting in restoration of function of disabled members. These cases were referred to him by the rehabilitation service of the State. Because of crowded conditions in the local hospitals it has been impossible for him to handle a large number of cases. This limitation upon the work will, however, be removed in the near future, since a local church organization has leased its hospital—a three-storey building—to the surgeon for a period of three years without charge, on the understanding that it will be used for rehabilitation cases.

It was not until the establishment of the rehabilitation programme under State and Federal auspices that employers were generally convinced of the feasibility of employing the disabled. In the past employers have been loath to employ disabled workers, since they have assumed that production by such workers would be below normal and that paying them regular wages would, therefore, be a poor investment. State departments of rehabilitation, through the process of re-education, have demonstrated beyond any doubt that a disabled person can, in most instances, be made an efficient employee. The problem is one of adjustment. Experience under this act, during the brief period elapsed since its passage, has demonstrated conclusively that in a great majority of cases vocational handicaps can be completely overcome and the wage-earning capacity of the disabled person completely restored.

---

## ASSOCIATION OF WORKMEN'S COMPENSATION BOARDS OF CANADA

THE Annual Convention of the Association of Workmen's Compensation Boards of Canada, composed of representatives of the Provincial Boards of Nova Scotia, New Brunswick, Ontario, Manitoba, Alberta, and British Columbia, was held in Winnipeg on September 15-16-17. Mr. V. J. Paton, Chairman of the Nova Scotia Board, and Chairman of the Association, presided over the sessions and among those in attendance were Messrs. J. A. Sinclair, Chairman of the New Brunswick Board; Samuel Price, Chairman of the Ontario Board; H. G. Wilson, Commissioner of the Manitoba Board; and John T. Stirling, Chairman of the Alberta Board. Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, attended the conference by invitation for purposes of information on behalf of the Government of Canada.

The agenda comprised the following among other subjects: Preparation of a permanent partial disability schedule to be used as a guide by the Provincial Boards; preparation of a schedule for merit rating for the consideration of the Provincial Boards; present methods of rate making and suggestions for desirable changes; problems arising with respect to strains and hernias; methods of procedure against a principal when a contractor of that principal has been assessed; advisability of employing doctors in large centres to examine disabled workmen on behalf of the Provincial Board; cost of medical aid for accident where unlimited medical aid is allowed; adoption of a definition of the term disaster; problems arising out of the administration of the Dominion Workmen's Compensation Act by Provincial

Boards; advisability of uniformity of decisions as to accidents occurring on premises when an employee is going to or coming from work; methods of determining compensation which should be paid to non-residents; consideration of recent amendments to the Provincial Workmen's Compensation Acts and the desirability of any further changes.

The Assistant Deputy Minister of Labour of Canada addressed the conference in relation to the proposed Draft Convention and Recommendation which were adopted, respectively, at the Sixth Session of the International Labour Conference (League of Nations) in June last concerning "Equality of Treatment for National and Foreign Workers as regards Workmen's Compensation for Accidents." It was explained that the Seventh Session of the International Labour Conference, meeting in Geneva next year, would be devoted in the main to the consideration of problems connected with workmen's compensation.

A resolution was adopted by the conference in the terms following:—

That inasmuch as the assumption by the Dominion Government of responsibility for industrial accidents to great war pensioners of twenty per cent or more war disability has worked out very satisfactorily and has been of great advantage to injured veterans in securing employment, this association is of opinion that it is very desirable that the same should be continued.

It may be noted that a Federal Order in Council providing for the continuance of this policy for one year was adopted on September 18, 1924. (This order is printed on another page of the present issue).

The sessions of the conference were devoted to an exchange of views on the various items of the Agenda. It was decided that the conference next year should be held in Vancouver. The following officers were elected for the ensuing year: Messrs. H. G. Wilson, of Winnipeg, President; E. S. H. Winn, K.C., of Vancouver, and V. J. Paton, of Halifax, Vice-Presidents; and N. Fletcher, of Winnipeg, Secretary.

## WORKMEN'S COMPENSATION IN ALBERTA AND MANITOBA IN 1923

### Alberta

THE sixth annual report of the Workmen's Compensation Board of Alberta covers the operations of the calendar year 1923. Owing to amendments to the act from time to time the records of payments, accidents, etc., for last year are not strictly comparable with those for the previous years. Thus, in 1920 new classes were brought under the act, including clerical workers in the industries covered, and in the following year the Legislature changed the method employed in determining the amount of individual compensation from a stated sum to a percentage of the worker's earnings as in other provinces. Compensation payments therefore now vary according to the injured worker's wages. In 1921 moreover the Board was authorized to accept applications from new classes of employers to come under the act.

The act now covers practically all industries in the province with the exception of agriculture, ranching, the "running trades" of the railways, and the operation of retail stores and office buildings. Injured workers have hitherto received compensation on the basis of 55 per cent of their average earnings (this was raised during the session of 1924 to 62½ per cent), while awards to widows were at the rate of \$35 per month, and in addition \$7.50 for each child (a sliding scale is now established, ranging from \$12 for one child to \$8

each in cases where the family is large). The cost of compensation includes also burial expenses and the cost of medical aid.

The number of employers within the scope of the act on December 31, 1923, declined to 2,857, from 3,004 in the previous year. On the other hand the number of wage earners in 1923 was 37,760 males and 3,969 females, as compared with 37,365 males and 3,130 females in 1922. Of the employees in 1923, 8,991 were in schedule 1 (mines, etc.), and 40,495 were in schedule 2 (the general industrial group). The total pay rolls in 1923 amounted to \$62,289,344 as compared with \$58,677,484 in 1922. Of the total payroll of 1923, \$18,109,458 was in the mining, and \$44,179,887 in the general industrial group.

The total number of accidents reported during the year was 9,160 as compared with 7,518 in 1922; 7,069 in 1921, and 6,418 in 1920. Of these 9,160 accidents 58 proved fatal, 76 resulted in some degree of permanent disability, and 9,026 resulted in temporary disability. The total amount paid on account of compensation and medical aid during the year was \$485,101, as compared with \$399,578 in 1922; \$367,102 in 1921; and \$243,936 in 1920. In addition to these payments the sum of \$363,290 was transferred to the Pension Fund to cover awards made to dependants and pensioners on account of fatal and permanent disability cases. At the close of 1923 the sum of \$1,024,-

721 stood at the credit of the Pension Fund, out of which 409 dependants of deceased workmen, and 58 pensioners, were receiving monthly payments totalling \$124,039 during the year.

The total number of cheques issued during the year was 23,300, of which 9,114 were in payment of compensation, 8,945 were for medical aid, 2,559 for pensions to dependants and permanently disabled workmen, 1,881 for general accounts, and 801 for mine rescue accounts.

The administration expense (excluding expenditure on account of Mine Rescue) shows a reduction of \$9,473.37 as compared with the year 1922, while the expenditure on account of Mine Rescue was also reduced \$10,886.94 as compared with the previous year.

Assessments outstanding and unpaid at the end of 1922, together with those levied during 1923, totalled \$793,689, of which amount \$747,897, or 94.23 per cent were collected and \$23,971 was cancelled, leaving \$21,821 unpaid on December 31.

For medical aid the collections during the year totalled \$164,357. (The Alberta act authorizes the Board to require employers to deduct a fixed amount, generally about a cent a day, from the wages of their employees to be paid into the accident fund.)

The loss in time caused by accidents in connection with which compensation or medical aid was paid during the year was, in permanent disability cases, 6,548 total days, or 225.78 average days, and, in temporary disability cases, 106,114 total days, or 25.46 average days. The average age of the injured workers is given as 33.98 years, and their average weekly wage at \$31.07.

*Accident Prevention.*—The Board now makes a practice, before issuing safety regulations, of holding conferences with groups of employers and workmen in the various industries, and the existing accident prevention regulations are based largely on conclusions thus reached.

An interesting section of the present report describes the mine rescue and first aid work carried out during the month with the co-operation of the Board. The Accident Prevention Committees, joint bodies composed of workers' and employers' representatives, now number 101 and their suggestions are incorporated in many of the Board's safety regulations. The Board's chief inspector reports that "while there have been a few cases where workmen have expressed a fear of being discriminated against by employers on account of their activity in these committees, such cases have been very few, and our ex-

perience generally in connection with the operation of Accident Prevention Committees is that employers generally are now actively co-operating with their workmen and the Board in bringing their various plants up to the standard required by the Regulations." He states that safety conditions have been greatly improved in woodworking factories and sawmills, but there are still many cases where the workmen discard machinery guards and consequently meet with serious accidents.

Many new first-aid classes were organized during the year, and the employees of the Alberta Government Telephones and the Canadian National Railways are mentioned as being specially interested in this work. During 1923, 204 male and 33 female employees received industrial certificates.

The report also contains an account of the work done during the year under the Electrical Protection Act, which is administered by the Workmen's Compensation Board.

### Manitoba

The report of the Manitoba Workmen's Compensation Board for 1923, recently issued, contains information in respect to the cost of administration, the total number of accidents, and the aggregate days of disability for all cases treated during that year. It also gives an analysis of the accidents occurring during 1922.

The Workmen's Compensation Act of 1920 became effective on January 1, 1921, and is applicable to all cases of injury arising on or subsequent to that date, but the Act of 1916 remains applicable to all cases of injury arising between March 1, 1917, and December 31, 1920, inclusive. The act, it is noted, provides that the assessments or insurance rates levied on employers shall be sufficient to provide in each year capitalized reserves which shall suffice to meet the periodical payments of compensation accruing in future years in respect of all accidents which occur during the year. The Board has adopted the tables used by the Ontario Board for the rating of permanent disabilities, and for the calculation of capitalized values of payments awarded to workmen who suffer permanent disabilities, and to the dependants of workmen killed in industry. During 1923, nineteen employers in industries not formerly under the Board's authority were brought under Part 1 of the Act, in conformity with the section which provides that "any industry or workman not within the scope of this Part may on the application of the employer be admitted by the Board as being within the scope of this Part

subject to such terms and conditions and for such period as the Board may deem adequate and proper." There were also forty-eight employers who secured protection for themselves and their dependants under Part 1 of the Act on application approved by the Board. The number of employers in Class "G," which represents the general body of employers, assessed by the Board during 1923 was 4,116, as compared with 4,315 in 1922, a decrease of 4.6 per cent.

The total number of accidents reported by employers to the Board in 1923 was 9,546, as compared with 9,676 during 1922, a decrease of 1.3 per cent. During the year the Board's chief medical officer treated 870 cases of minor injury for which, had fees been paid, the sum of \$6,621.50 would have been disbursed. The number of cases treated during 1922 was 893, with fees chargeable \$7,366. The aggregate days of disability for all cases treated in 1923 was 2,872 days, an average of 3.3 days per case, as against an average of 4.2 days per case in 1922.

There was an increase of 18.3 per cent in the amount of money disbursed by the Board in 1923 as compared with the previous year, the figures being \$670,524 for 1923 and \$562,316.55 for 1922. It is explained in the report that the Board's disbursements will continue to increase year by year owing to the continual addition of beneficiaries by reason of fatal and permanent disability accidents, until the number of beneficiaries being added to the Board's books is equalled by the annual number removed by cessation of pension owing to death or other causes. The number of cheques issued by the Board was 20,934 in 1923 as compared with 18,781 in 1922. The value of the Board's orders during 1923 for the payment of compensation, which includes orders respecting Dominion Government employees and also amounts set aside to provide for pensions awarded, was \$844,289.27, as compared with \$858,785.45 for 1922, a decrease of 1.7 per cent.

1922:—The number of accidents which occurred in 1922, (including those reported by employers as given above), was 9,747, these being divided as follows:

Medical aid only.....	1,962
Temporary disability (over three days).....	3,305
Permanent total disability.....	3
Permanent partial disability.....	171
Fatal.....	39
Rejected claims.....	147
Minor disabilities (under three days, no expense).....	4,120

Of the 39 fatal accidents during the year, 17 occurred to workmen in the steam railway service, and 7 to men engaged in the general

contracting industries. The greatest number of permanent disability cases also occurred in these groups, there being 48 cases reported in the steam railway service, and 16 in the general contracting and construction group. The total days lost through permanent disability during the year numbered 22,931, and the average days per accident were 131.78. There was lost through death cases a total of 1,026 days and an average per accident of 26.30 days. The total days lost through temporary disability was 66,639, and the average days lost per accident, 20.16. The average age of all classes injured during the year was 31.51 years, and the average weekly wage of the injured workers was \$26.07.

In regard to the nationalities of the injured workmen, 2,787 owed their allegiance to Britain (of these 2,610 incurred temporary disabilities, 150 permanent disabilities, and 27 received injuries resulting in death); 145 to Austria, 97 to Poland, 71 to Russia, 62 to the United States, 61 to Ukraine, 48 to France, 47 to Italy, 35 to Sweden, 27 to Belgium, 19 to Roumania, 16 to Germany, 12 to Iceland, 9 each to Denmark, Finland and Norway, 5 to Switzerland, 3 each to Spain and Holland, 2 to China, and one each to Bulgaria and Japan. There were 49 cases where the nationality was not specified.

The actual payrolls on which employers were assessed for 1922 amounted to \$54,869,710.85 compared with \$59,678,980.88 for 1921. Figures showing the details for the various classes are as follows:—

Class	1921		1922	
	actual payroll		actual payroll	
	\$	cts.	\$	cts.
A. Canadian Pacific Railway Company.....	8,578,609	64	8,826,879	98
B. Grand Trunk Pacific Railway Company.....	827,826	18	800,000	00
C. Canadian National Railways.....	9,715,726	65	9,307,547	52
D. Province of Manitoba.....	2,594,720	87	2,145,165	02
E. City of Winnipeg.....	2,617,882	33	2,409,759	40
G. General body of employers	32,843,129	46	28,876,219	23
H. Winnipeg Electric Railway Company.....	2,501,085	75	2,504,139	70
Totals.....	59,678,980	88	54,869,710	85

The coroner's jury rendered a verdict of accidental death in the case of an employee of the parks and playground department, Montreal, Quebec, who was electrocuted while engaged in trimming trees, on September 13, last, when he touched a wire concealed by branches. They recommended that all civic employees engaged in such work be issued gauntlets and compelled to wear them.

## MINIMUM WAGES FOR FEMALE EMPLOYEES IN ONTARIO

THE Minimum Wage Board of Ontario recently issued orders numbers 34, 35 and 38. The first of these orders governs female employees in factories making or preparing food (excepting seasonal canneries) and supersedes earlier orders of the Board, numbers 2, 7, and 8, which were summarized in the LABOUR GAZETTE for September, 1921, page 1157, and January, 1922, page 72. Order number 35 governs female employees in all factory trades not dealt with in other orders (excepting seasonal canneries), and order number 38 female employees in the jewellery trades throughout the province. The mini-

imum rates of wages for the electrical trades (number 30), the tobacco trades (number 36) and the rubber trades (number 37) were given in the issues of the LABOUR GAZETTE for January, 1924, and September, 1924, respectively. Owing to an error in the order governing the electrical trades, as first issued, in regard to inexperienced adults over 18 years in the population group "All below 5,000 population and rural parts," attention is again drawn to these orders. Orders numbers 34 and 35 took effect on September 1, and orders 36, 37 and 38 on October 1, 1924. All orders are subject to annual revision by the Board.

TABLE 1.—MINIMUM WAGES FOR FEMALE EMPLOYEES IN THE ELECTRICAL TRADES, FACTORIES MAKING OR PREPARING FOOD (EXCEPT SEASONAL CANNERIES), ALL FACTORIES NOT DEALT WITH IN OTHER ORDERS (EXCEPT SEASONAL CANNERIES), THE TOBACCO TRADES, AND THE RUBBER TRADES.

Population Groups	Experienced adults (over 18 yrs.)	Inexperienced adults (over 18 years)	Young girls (under 18 years)
Toronto.....	\$ 12.50	6 months at 10.00 6 months at 11.00	6 months at 8.00 6 months at 9.00 6 months at 10.00

## EMPLOYMENT AND WAGES IN VARIOUS INDUSTRIES IN CANADA IN 1922

**S**UMMARIES of reports prepared by the Dominion Bureau of Statistics on employment and wages in the various industries in Canada are published from time to time in the *LABOUR GAZETTE*. A report on the pulp and paper industry was outlined in September, and reports on various other industries appeared in earlier issues. Statistics showing the number of employees and the wages paid in some of the principal groups of industries in Canada in 1922 are given in the following table.

*Wages in agriculture.*—In certain industries such as agriculture and fishing it is impossible to state exactly the total wages paid. The wages paid to farm helpers during the summer season of 1922 were for men \$59 and for women \$39, including board, the average value of which was \$21 for men and \$17 for women. For the complete year 1922 the average value of wages and board was \$594 for men and

\$418 for women, as compared with \$669 for men and \$449 for women in 1921. The average yearly value of board in 1922 was \$235 for men and \$191 for women, as compared with \$248 for men and \$200 for women in 1921. By provinces the average wages for men and women respectively in the summer season, and including board, were in 1922 as follows, the figures for 1921 being given within brackets for comparison:

- Prince Edward Island, \$40 and \$27 (\$45 and \$27).
- Nova Scotia, \$50 and \$29 (\$56 and \$31).
- New Brunswick, \$53 and \$32 (\$54 and \$31).
- Quebec, \$53 and \$29 (\$58 and \$32).
- Ontario, \$57 and \$37 (\$60 and \$38).
- Manitoba, \$63 and \$43 (\$79 and \$50).
- Saskatchewan, \$64 and \$46 (\$80 and \$51).
- Alberta, \$64 and \$45 (\$78 and \$54).
- British Columbia, \$75 and \$54 (\$79 and \$54).

STATISTICS OF EMPLOYMENT AND WAGES BY GROUPS OF INDUSTRIES, in 1922

Groups and Kinds of Industries	Salaried Employees			Wage Earners			Total Employees	Salaries and Wages
	Male	Female	Salaries	Male	Female	Wages

\*Estimated figure based on a comparison of the number of farms in 1921 with number of farms in 1911 and on the number of agricultural workers given in census of 1911. †Female employees are included with male workers in the mining, metallurgical, structural material and clay products industries. ‡Including \$25.97 paid to 16 piece workers.

## REPORT ON THE MANUFACTURING INDUSTRIES OF ONTARIO FOR 1922

THE Dominion Bureau of Statistics recently published statistics of the forty leading manufacturing industries of the province of Ontario in 1922. Flour and grist mills occupy first place in the value of production, followed closely by the slaughtering and meat packing and automobile industries. In capital investment the electric light and power industry

stands first, with pulp and paper second, and agricultural implements third. In the number of persons employed on wages, the hosiery and knit goods industry was in first place, pulp and paper second, and saw-mills third. The construction industries, hand trades, custom clothing stores, millinery shops and repair shops are not included in the tables which follow:—

FORTY LEADING INDUSTRIES IN THE PROVINCE OF ONTARIO, 1922

PLUMBERS' EXAMINING BOARD IN NEW BRUNSWICK

THE Minister of Health of New Brunswick, under the Public Health Act of 1918, has issued a series of regulations for the examination and licensing of plumbers in the province. The provincial Board of Health of British Columbia has power to issue similar regulations (Revised Statutes, 1911, chapter 98, section 7). In Ontario the Consolidated Municipal Act (Statutes of 1922, chapter 72) enables municipal councils to pass by-laws for the licensing of journeymen plumbers.

The new regulations in New Brunswick are in part as follows:—

Examination and Licensing of Plumbers

(No. 264-272 Inclusive)

264. No person unless holding a Plumber's License as hereinafter provided, after the expiration of six

months from date of approval of these regulations by the Executive Council of this province, shall work as a plumber or engage in the art of plumbing within the province except under direct and immediate supervision by a plumber duly licensed by these regulations except that a person who has for three years been engaged in the mechanical work of plumbing may be deputed by his employer to perform minor plumbing work under the general direction of the latter.

265. There shall be established a Board to be known as the Plumber's Examining Board of New Brunswick, one of whom shall be the Chief Medical Officer of New Brunswick and two others—one a journeyman and the other an employing plumber—and each of the latter two shall be qualified to hold a plumber's license under these regulations and shall be appointed by the Minister of Health.

266. The last two named members of said Board shall hold office during the current calendar year for which they are appointed and in the month of December in each year after the first said appointments the said Minister shall appoint two said like

members for the ensuing calendar year. Retiring members or either of them may be reappointed at the discretion of the Minister. In case of death, resignation or neglect to serve of either or both of such two members, the Minister shall forthwith make such other appointment or appointments as may fill such vacancy or vacancies.

267. Such Examining Board, upon appointment shall meet at some convenient place, and may draw up such rules for its governance and conduct as shall not be inconsistent with these regulations. It shall meet at least annually, and oftener, if thought necessary by the Board and shall appoint a place and time for the semi-annual examination of all such persons as shall present themselves before it for examination for license, and written application for such examination must be made by applicant to the examining Board at least one week before the date set for such examination. Such examination, which may be written or oral, or both, notice of the date and place of which shall be published by the Board in the Royal Gazette and in two daily newspapers of the province one month in advance, shall include questions upon the theory and art of plumbing and upon the Plumbing regulations of the province, as well as any ocular demonstration of the art of plumbing as may be required by the Board. The fee for examination and license shall be five dollars for each applicant, which fee shall be applied (1) to defray the expenses of

said Examining Board, and (2) the balance divided between the members of said Examining Board. Three dollars of such fee shall be returned to any applicant who fails to obtain a license.

268. Each plumber, who, at the time of the approval of these regulations by the Executive Council, has been working as a plumber for a period of five years prior to such approval, upon giving proof thereof to the Examining Board, and upon application for a license and upon payment of fee, shall be entitled to receive and be granted such license, without further examination, if such application and payment be made within six months after said approval, but not otherwise.

269. Any person, other than one mentioned in the last preceding regulation who shall satisfy the Examining Board that he has worked at the art of plumbing for a period of five years as a learner or assistant under direct and immediate supervision of one or more plumbers entitled to a license under these regulations, shall be deemed entitled to a license under these regulations and be granted such, upon the payment of aforesaid fee, and upon passing the examinations as provided for herein, subject to the following section.

(The next section relates to registration, etc.)

### AGE AND OCCUPATION OF BRITISH IMMIGRANTS TO CANADA, 1921-1923

THE British Board of Trade Journal for September 18, contains tables showing the number of emigrants from the British Isles to various non-European countries, including Canada, during the years 1921, 1922 and 1923. The numbers for each country are divided into age groups. In its issue of August 28, the same journal gave information as to the number of emigrants over 18 years

of age classified by their occupation. The following tables reproduce this information in so far as relates to Canada.

EMIGRANTS FROM GREAT BRITAIN TO CANADA IN 1921, 1922, AND 1923 BY AGE GROUPS

Males	1921	1922	1923
Under 12 years.....	6,296	3,895	6,041
12 to 17 years.....	2,565	2,056	3,598
18 to 20 years.....	2,053	1,523	4,653
21 to 25 years.....	5,314	3,749	13,208
26 to 30 years.....	4,859	3,124	9,916
31 to 45 years.....	8,876	6,094	13,649
46 years and over.....	3,429	2,616	4,329
Total males*.....	33,504	23,080	55,443

Females	1921	1922	1923
Under 12 years.....	6,130	3,741	5,988
12 to 17 years.....	2,133	1,386	2,290
18 to 20 years.....	1,760	1,312	2,187
21 to 25 years.....	4,940	3,341	5,347
26 to 30 years.....	5,710	3,612	5,425
31 to 45 years.....	9,394	6,091	8,182
46 years and over.....	4,195	3,234	3,590
Total females*.....	34,403	22,738	33,450

\*Inclusive of emigrants of 12 years of age and over, whose ages were not specified.

EMIGRANTS FROM GREAT BRITAIN TO CANADA IN 1921, 1922 AND 1923 BY OCCUPATIONS

Males	1921	1922	1923
Agricultural.....	4,996	3,601	9,815
Commercial, Finance and Insurance.....	2,526	1,492	2,243
Professional.....	835	494	552
Skilled Trades—			
Mining and Quarrying....	554	648	1,344
Metal and Engineering....	1,334	1,103	2,816
Building.....	340	208	687
Other.....	1,811	1,230	2,610
Transport and Communications.....	667	366	725
Labourers not in Agriculture or Transport.....	3,551	1,016	3,827
Other and ill-defined occupations.....	1,483	1,234	1,630
*Total (18 years and over)	18,097	11,302	26,249

Females	1921	1922	1923
Domestic, Hotel, etc., Service.....	4,764	3,279	3,852
Commercial, Finance and Insurance.....	850	380	426
Professional.....	802	524	486
Clothing Trades.....	324	215	270
Wife or Housewife (not otherwise described).....	10,975	6,455	8,622
Other and ill-defined occupations.....	908	652	1,040
†Total (18 years and over)	18,623	11,505	14,696

\*Inclusive of 152 males of 12 years of age and over in 1921, 75 in 1922, and 82 in 1923, whose ages were not specified.

†Inclusive of 138 females of 12 years of age and over in 1921, 99 in 1922, and 64 in 1923, whose ages were not specified.

## UNION AND NON-UNION JOINT COUNCILS

THE results of a study of "Workmen's Representation in Industrial Government" are given in a recent work by Earl J. Miller, an instructor in economics in the University of Illinois (University of Illinois Studies in the Social Sciences, Volume X, Nos 3 and 4). The author investigated the pronounced movement of recent years towards the formation of joint industrial councils, joint works councils, works committees, shop committees, and related bodies. His main purpose was to arrive at an estimate as to the comparative merits of joint schemes based on the recognition of existing trade unions, and the typically American schemes based on non-union employee representation. He notes a tendency among advocates of the non-union council movement in the United States to enlarge upon the virtues of this new form of industrial democracy, apparently implying that industrial democracy had not been previously developing in American industrial life. Against such an assumption he has brought together numerous examples of practical "joint industrial management" effected by the trade unions through shop committees, joint councils and trade agreements, and in existence long before the more recent movement began.

Both forms of organization are designed to counteract in some measure the "deadening and dwarfing effect" of minute subdivision of labour under modern industrial conditions. The early days cannot be recalled when the activities of the skilled artisan called for the full exercise of his diverse faculties. Scientific management, with paternalistic control intensifies the problem by imposing ever minuter tasks on the worker, and by relieving him of the last vestige of responsibility. At this point democratic industrial management offers the workers a new opportunity to study and think in connection with their occupations.

### Union Joint Councils

The sentiment of the labour movement now definitely favours joint management in some form. At the 1919 convention of the American Federation of Labour the following resolution was passed:—

"The Executive Council believes that in all large permanent shops a regular arrangement should be provided whereby,

"First.—A committee of the workers would regularly meet with the shop management to confer over matters of production; and whereby,

"Second.—Such committees could carry beyond the foreman and superintendent to the general manager or to the president, any important grievance which the workers may have with reference to wages, hours, and conditions."

Matthew Woll, vice-president of the American Federation of Labour, writes as follows:—

"It is not urged that the 'Shop Committee' plan as a supplemental branch to the trade unions cannot be made to serve a most helpful purpose in industry. To the contrary, the necessity of team work between all workers in a plant or shop is fully and freely conceded. Indeed, the formation of shop committees is required by many trade unions as a method of considering problems of production with the shop management, to secure team work, to adjust conflicts, and if need be, to take up all shop questions with the highest officials of the plant.

"The trade unions fully recognize that there are many questions closely affecting daily life and comfort in the success of business, and in no small degree, efficiency in production, which are peculiar to the individual workshop and factory. Confined to these purposes \* \* \* \* shop committees, as supplemental branches of the trade union movement, are not alone favoured but recommended."

An instructive chapter deals with the constructive work that has been accomplished by trade unions in the direction of co-operating in industrial management. Details are given regarding numerous joint councils that have existed in many organized trades for the purposes of framing agreements between the employers and employees for regulating all matters in which the workers are directly concerned. For example, the joint conference plan for drawing up trade agreements has been followed in the coal industry since 1898: "An inter-state joint conference has been held annually in the central competitive field, composed of eight miners and eight operators from each state (Illinois, Indiana, Ohio, and Pennsylvania). A unanimous vote is always necessary to reach a decision. The state joint conference follows the inter-state joint conference. It deals with local matters, and is very much the same in organization and methods as the inter-state conference. Most of the work of the state joint conference is carried on by a scale committee, which is composed of two operators and two miners from each of the nine districts." Agreements of a similar nature, in which the labour unions are directly concerned, are mentioned in connection with the moulders, glass workers, potters, brewery workers, garment workers, printers, and other trades.

Another phase of joint management, carried out with the collaboration of trade unions, is the Local Union Joint Council, which exists mainly for the purpose of applying the trade agreements locally. This is largely a matter of settling disputes which arise between the local parties to an agreement. Such joint bodies exist among the sheet metal workers, the stereotypers and electrotypers, the painters, decorators and paperhangers, the potters,

machinists, brewery workers, hod-carriers, etc., printers, pressmen, garment workers, pulp and paper workers, brick and clay workers, laundry workers, cigar makers, and other organized bodies of workers.

A third form of joint management in which unions participate is that of certain national or international joint councils, organized not for the purpose of making agreements, but "to promote a spirit of co-operation." Such a council was formed in 1919 in the photo-engraving industry, composed of five representatives of each party; and exists also in the commercial and periodical branches of the printing industry and the electrical construction industry.

The various forms of joint management that are carried on with the co-operation of trade unions show, in the author's opinion that the unions "have dealt with the same vital problems of industrial management as have non-union councils; they have dealt with them in essentially the same manner \* \* \* \* moreover, the total accomplishments of non-union councils have been insignificant in comparison with the accomplishments of the unions."

### The Non-Union Councils

The author finds that the non-union and the union joint councils represent two antagonistic movements. It is true that most of the non-union council schemes contain an express proviso that there shall be no discrimination against union members, and that employees forego none of their rights as members of labour organizations. He suspects however that this proviso is based on the employers' belief that the joint plans will create indifference among the workers as to the need for belonging to a union.

It has been estimated that between 700 and 800 non-union council plans are now in operation in the United States, and that more than a million workers participate in them. In theory these councils obtain for the workers a larger share in industrial control than they would have otherwise. They vary widely, however, in the degree in which they rely on democratic methods. In the settlement of disputes most of the councils make provision for the discussion and settlement of differences by joint action, with final arbitration in case of disagreement, but in practice, recourse is seldom had to arbitration, this fact suggesting that the workers are able to exercise sufficient influence in the joint council to secure their own interests. On the other hand there may be an element of domination by the managers, and in any case, as the author points out, the main consider-

ation in this connection is the grade of workers involved in the discussions and decisions of the joint council, and the reality of the workers' choice of their representatives.

Among the positive benefits that have resulted from the non-union councils the author states that they have fostered the spirit of goodwill and co-operation between the employers and their workers; that they have definitely increased the efficiency of the staffs; that mutually satisfactory wage rates are agreed upon more readily; that labour "turn over" has been greatly reduced; that discipline has improved; and that grievances are settled more promptly.

The advantages of the system are summed up as follows:—

"For the workers, it has broadened their knowledge of the problems of management; has brought them to see the importance of the problem of production; has helped to retain men to take more responsible positions; has shown them, in many cases, that their employers, according to their concept of justice and a square deal, are sincerely trying to treat labour fairly; and has taught them the advantages which can result from constructive co-operation.

"For the employers, it has greatly increased their ability to handle men successfully, by showing them the viewpoint, problems, and worries of the worker, as set forth in the joint council. In other words, it has been an education in industrial psychology, which many employers need. It has taught them the important fact that most of the trouble between labour and management is due to ignorance and misunderstanding, and is, therefore, easily remedied in joint bodies where each presents its view and the facts are jointly determined. It has taught them that the workers are fair-minded and capable of helping in management, instead of being radical, selfish, ignorant, and incapable of sharing in industrial control. It has shown them, through results gained, that there are great possibilities of increased efficiency if the human factor is properly managed so that its spontaneous constructive co-operation will be gained. And it has taught them that more democratic and less autocratic management is one pathway which leads to that spontaneous and constructive co-operation."

### Effect on Labour Unions

The author concludes with an estimate of the influence that is likely to be exercised by the "non-union joint council movement on the future development of labour organizations:—

"There seems to be little probability that the non-union council movement will destroy many existing unions in the near future. Nevertheless, the experience in the packing industry has shown that union leaders have a new and serious factor with which to contend. The council plan of the Pennsylvania Railroad is well established, and if similar plans are adopted in any substantial proportion of the railroad industry, the outcome of another great railroad strike might be such as to break the strength of even the strong railroad brotherhoods. In any event, their power would be seriously lessened. However, the non-union council movement, if the present rapid rate of increase continues long, cannot fail to check materially the growth of unions. It is in this direction, rather than in destroying existing unions, that its effects will be most harmful to the plans of organized labour."

## NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities are also noted which have a direct bearing on the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

*Windsor, Ont.*—Plans are being made for the organization of classes in several subjects to be held in the Windsor-Walkerville Technical School under the auspices and direction of the Workers' Educational Association. The classes will include economics (both advanced and beginners) and public speaking.

*London, Ont.*—Several new courses have been organized in the London Technical and Art School. Girls who take the new course in marketing will be weekly visitors in London groceries, butcher shops and the city market. Girls taking this course will go out into life, it is hoped, prepared to effect real economy in their future homes or to take paying positions where knowledge of practical marketing may be required.

Another new course for girls announced is costume designing which, should any students concerned have real talent, would lead to a profession whose members consider a \$10,000 a year salary as a beginner's wage. Hitherto the Technical School dressmaking course has laid emphasis on following patterns set by teachers. This fall the senior year girl pupils will design their own model garments, make the pattern and then the dress.

House furnishing and interior decorating will also be offered girls and such boys as may have special ability. The course will cover the whole range of furnishings, colour harmonies, lighting and strength of materials.

*Toronto, Ont.*—A new programme reconstructing the elementary educational system in Ontario is of interest to teachers in vocational schools in that it provides for greater flexibility in the courses of study and aims at serving the needs of the various types of students in so far as practicable.

The reconstruction of the public school courses of study has been undertaken with the purpose of—

1. Adjusting subjects of study to meet more directly the needs of the pupils.

2. Reducing pressure, especially in graded schools, and giving greater opportunity for study during school hours, with a view of preventing an undue amount of homework.

Selecting material for carrying out the first of the purposes mentioned above, the course of study has been divided into two parts:—

1. A minimum prescription of work for pupils in all elementary schools.

2. Supplementary courses in certain subjects which are optional with schools on the approval of the inspector. These courses make it possible, where it is practicable and desirable, to extend instructions to meet varying conditions, depending, on the one hand, on the needs of pupils, and on the other hand upon the facilities for teaching which can be offered. For example, these supplementary courses make possible a certain amount of differentia between the courses offered in urban and rural schools.

The reductions referred to above are secured in the following ways:—

(1) Through cutting out material which has found a place in the past in the courses of study but which has a very remote relation to the needs of the child.

(2) Through postponing material which however good itself can be presented to the pupil at a later stage. This is made possible by the extension of the period of compulsory education. Mathematical and science problems demand a certain maturity of reasoning and a mistake has been made in the past in forcing these upon the attention of the children at too early a stage.

(3) Through combining and correlating subjects of study which are naturally related in subject matter. These combinations are provided for in the following cases: literature and reading, composition and spelling, nature study and agriculture, physical culture and health, art and constructive work.

The regulations then name as the obligatory courses; reading and literature, arithmetic, composition and spelling, grammar, history, geography, health and physical culture, art and constructive work (a minimum course). The courses listed as supplemental are art and constructive work, nature study and agriculture, music, manual training, household science.

The principal feature of the new regulations, so far as home-work is concerned, is that in each school day of five and one-half hours there is to be a non-teaching period of one and one-half hours during which the scholars will devote themselves to independent work and study, under the guidance of their teachers.

*Iroquois Falls, Ont.*—The Associated Boards of Trade of Northern Ontario, in a resolution passed at its recent convention in Iroquois Falls, recommended to the Ontario Government, the establishment of correspondence courses for children in the outlying districts

of Ontario. Such courses are now being given in British Columbia and Alberta.

*Moncton, N.B.*—The Moncton Central Amalgamated Labour Unions, at their regular semi-monthly meeting on September 26, discussed and approved of the evening vocational classes to be conducted in that city during the coming winter.

*Vancouver, B.C.*—The extent and variety of the evening school classes being conducted in Vancouver are indicated by the following extract from *The Vancouver Province*:—

The sixteenth session of the Vancouver city night school classes will be operated from October 6 to March 31.

The night classes are especially established to enable men and women to continue their education beyond what they have received in the day school and to further train them for the successful prosecution of the trade, business or occupation in which they are engaged.

The classes are open without restriction to any pupils more than 14 years old who are regularly employed during the day. Certificates, stamped with the approval of the Vancouver School Board, will be awarded to students who attend regularly and whose progress, shown by class work during the session, has been reported by the teachers and instructors as satisfactory.

The fees, payable in advance, are but nominal, and are returnable to students taking the continuation short course and who make 85 per cent or over of the total attendance of the entire season. Last year 1,200 attended the courses, and this year the trustees are preparing for 1,600 students.

Courses are given in such subjects as shorthand, typewriting, book-keeping, commercial English, cookery, millinery, cabinet-making, machine construction and drawing, electrical engineering, printing, wireless telegraphy, elocution, acting and the works of Shakespeare; also study in geology, mineralogy and mining, drawing, and English for foreigners, painting, advance choral and orchestral work, plumbing, technical drafting, public speaking, advanced accounting and auditing, and many other subjects of practical use to those in various occupations.

Special classes in lumbering are conducted during the winter months by the B.C. Lumber Manufacturers' Association in Vancouver. Membership in the classes is comprised largely of men who are employed in the mills of the city, and the course of study is designed to give them expert practical and technical knowledge. Various studies, in manufacturing, grading, tallying, inspection, lumber sales and export trade are carried on.

In addition, a series of lectures is arranged for each season on a wide range of subjects of interest to the industry. There have been as many as seventy-five enrolled in the classes in the past winter. This year the number is expected to be larger.

*Victoria, B.C.*—Apprenticeship and the need for training workers in the mills was discussed at the last quarterly meeting of the Pacific

Northwest Millwork Association, held in Victoria, on August 23. The subject was introduced by Mr. L. B. Travers, State Vocational Supervisor for the State of Washington. After pointing out the urgent need for apprentices Mr. Travers stated that the best system appeared to be an indenture system, commencing with an introductory probationership, as a *bona fide* indenture would check the boy's lack of responsibility. Mr. Travers thought the boys should begin about sixteen years of age, and have at least two years in part-time schools, as they had in Washington, where the work of the shops would be explained to the boys in the classrooms. When a boy had reached the age of eighteen he would appreciate the value of the evening schools, in which the students had a larger measure of freedom than in supervised half-time schools. On the part of the employer there must be a determination to teach the apprentices through the journeymen, and not allow them to waste so much time cleaning up the shops. Concurrently there should run a system of transfers, so that an apprentice who could not learn the whole of his craft in one shop could pick up the balance of it in another.

*British Labour Organizations and Education.*—In a lecture at the Institute of Politics, Williamstown, Mass., on August 23rd, Mr. R. H. Tawney, British Labour Party economist, described the attitude of the British labour movement towards education. The new thing in education during the past decade, he said, was that the demand for improvement of educational facilities was coming from the rank and file of manual workers, while in the nineteenth century educational reform had come from above, from the churches, universities and the State. What the workers desired was not to destroy existing educational values, but to widen the range of their influence. The aim of educational organization was to prepare children to define their own attitude to the world for themselves, whether that attitude was acceptable or not to existing political institutions and accepted social conventions. The principal problems of the public education system in England, as seen by the labour movement, were improvement of the quality of primary education, including that of the teacher; development of secondary education in such a way that instead of 85 per cent of the children ending their education at 14, all normal children may attend secondary school from 11 to 12 to 16; strengthening of university education by provision of more liberal financial assistance; removal of economic barriers which still make access to a university

by men and women of small means too difficult, and development of extra-mural work undertaken by the universities in the shape of adult education for working class students. Labour was anxious, the speaker stated, to encourage the development of initiative among the children, rather than the acquisition of information. He described the educational facilities provided for men and women, mostly manual workers, through residential colleges, summer schools, evening classes and especially the modern educational association, with the co-operation of the universities and the state. The modern labour educational association, he explained, was a federation of some thousands of trade unions, co-operative societies and other working class organizations, together with universities and public education committees. Its object, he said, was not to turn manual workers into professional men, but to equip men and women in the trade unions, workshops and co-opera-

tive societies to spend their leisure reasonably and to understand the problems of political and industrial organization with which democracy in Europe is confronted.

*World Federation of Education.*—Dr. Augustus O. Thomas, Commissioner of Education for Maine, and president of the World Federation of Education Associations, recently announced the appointment of a world-wide commission on the removal of illiteracy. The Crown Prince of Japan has placed a million yen in the hands of the Japanese Education Association to be expended in wiping out illiteracy in that country in ten years. China has opened a campaign and adopted a slogan "China a literate nation in one generation." A movement has been started in Honduras to make Honduras a literate nation in five years. Mexico is carrying on an effective campaign and has taught 200,000 to read and write in the last two years.

## EMPLOYMENT EXCHANGES IN SOVIET RUSSIA

The employment exchanges in Soviet Russia owed their origin to the war, which showed the necessity of distributing labour, of which there was a shortage, on a more rational basis. After the Revolution of March, 1917, under the Provisional Government, employment exchanges developed and became the chief organizations for the recruiting of labour. After the Revolution of November, 1917, the Soviet Government allowed the exchanges to remain untouched for several weeks, and it was not until the beginning of 1918 that they were transformed into "labour distribution departments," attached directly to the Commissariat of Labour. As their name implies, the work of the departments was to distribute labour in accordance with the orders of the Commissariat of Labour.

When the "new economic policy" was introduced in 1921, the resuscitation of commerce and the reappearance of private undertakings necessitated a return to free labour agreements. The old order on employment exchanges was once more put into force and the labour distribution departments received the name of employment exchanges.

Discussions in the Soviet press show the probability of the extension of the reform to all employment exchanges. At a recent conference of the Central Committee of Trade Unions, the representatives of the Commissariat of Labour stated that, in view of the general discontent with employment exchanges

and of the inadequacy of measures hitherto adopted, there would be a progressive reorganization of labour exchanges.

Thus, the employment exchanges, or labour distribution departments, which under the Communist regime were alone competent to distribute labour according to the instructions of the Government and which, after the abandonment of the Communist system, preserved the monopoly of placing labour, are now having their rights more and more restricted, and are in course of transformation into mere optional institutions for placing the unemployed.

## Prices and Cost of Living

The International Labour Office reports that on the whole there were no important changes in the movement of prices during June and July. A further increase in wholesale prices was recorded in June for France and Belgium, while the figures for Germany, Italy, and Czechoslovakia show a noteworthy decline. Among the countries which publish cost-of-living index numbers a rise may be noted in the figures for Finland and Luxemburg. In the first-named country this was due almost entirely to the abolition of rent restrictions on June 1, which was followed by a substantial rise in rents. In Germany the cost of living declined about 3 per cent in June, thus following the movement of wholesale prices.

## TRADES AND LABOUR CONGRESS OF CANADA

### Summary of the Proceedings of the 40th Annual Convention

THE fortieth annual convention of the Trades and Labour Congress of Canada was held in London, Ont., from September 15 to 19, the meeting place being the Masonic Temple. The opening session was presided over by Mr. J. McGuire, president of the London Trades and Labour Council, who welcomed the delegates on behalf of organized labour. Mr. G. A. Wenige, mayor of the city, and Mr. Frank White, local member in the House of Commons, extended a welcome on behalf of the municipality. Others who addressed the opening session were Rev. Quintin Warner, judge of the Juvenile Court, and Mr. Gordon Ingram, president of the London Chamber of Commerce. Mr. Tom Moore, president of the Congress, replied to the addresses of welcome, thanking the local committee for the complete arrangements which had been made for the convenience of the delegates.

The first order of business was the report of the Credential Committee, which as finally submitted showed that credentials had been received for 258 delegates, divided as follows: fraternal delegates, 3; delegates from international organizations which had affiliated the whole of their Canadian membership, 44; 16 trades and labour councils, 28 delegates; 128 local unions, 183 delegates.

On the recommendation of the executive council the president appointed the customary committees, together with the associate secretary, sergeant-at-arms and translator, the services of the last-named officer being necessitated by the main business of the convention being conducted in both English and French.

Following the naming of the Resolutions Committee the chairman stated that there were 25 resolutions which had not been submitted 20 days previous to the opening of the convention, as required by the constitution. The subject matter of some of them were already covered by resolutions regularly presented. The convention decided that no action be taken on the resolutions which were not submitted within the prescribed time, except those from the postal workers and the Montreal police union.

The report of the committee on rules and order recommended that the same procedure be followed as at earlier conventions, except that to secure a roll call rate it should require 75 instead of 50 delegates to make the demand. After slight objection to the latter recommendation the report was adopted.

### Report of the Executive Council

The report of the Executive Council, containing 45 pages, gave an outline of the various matters which had been dealt with during the past year. The opening passages of the report stated: "Continual trade depression, with its consequent unemployment, and similar problems, coupled with the activities of those who seek to destroy the trade union movement, has made the work more difficult, and we wish at this time to extend our appreciation and thanks for the loyalty and support of our affiliated membership who have contributed so materially to the progress that has been made." The following is a synopsis of the report of the executive council:

*Legislative Programme, 1924.*—Under this heading the Executive Council referred to the interview with the Dominion Government on January 14, at which the legislative programme of the congress was presented (LABOUR GAZETTE, February, 1924, page 126.)

*Legislation.*—In this section the executive council enumerated the legislation enacted at the last session of the Dominion Parliament, particular reference being made to the amendments to the Militia Act, and to amendments to the Canada Shipping Act by the adoption of four draft conventions of the International Labour Office pertaining to the conditions of employment of seamen. Reference was also made to bills 256, 257, 258 and 190, providing for the expenditure of money on harbours and railways, as well as to other matters which were before the House of Commons.

*Affiliations and Advisory Councils.*—The Congress has maintained its affiliation with the International Federation of Trade Unions, the Women's Trade Union League of America, Canadian Council on Child Welfare, and the League of Nations Society in Canada. Representatives of the Congress had attended meetings of other bodies, brief reports of the proceedings of which were given.

*International.*—The report referred to the cordial relations of the Congress with the American Federation of Labour and its international affiliates, and outlined the proceedings of the convention of the International Federation of Trade Unions at Vienna, which President Moore had attended.

*Position of Eight-Hour Day.*—In regard to the decision of the Dominion Parliament to

refer the Washington convention of the International Labour Conference on the hours of work to the Supreme Court of Canada for decision as to the power of Parliament to give legislative effect to the eight-hour day, the executive council made the following recommendations:—

(a) That we reiterate our demands for legislation to give immediate effect to the eight-hour day for all Government employees and those engaged on Government works.

(b) That we urge upon the Dominion Government to insert in all Fair Wage Contracts a clause limiting the hours of work to eight in the day.

(c) That the incoming Provincial Executives urge their respective legislatures to enact eight-hour day legislation as has already been done by the British Columbia Legislature.

(d) That the Dominion Government be requested to take such steps as will ensure the views of organized labour being properly presented to the Supreme Court when dealing with the defining of the jurisdictional rights between the Federal Government and the provinces.

"*Congress Journal.*"—A contract had been made with the *Canadian Railroader* to publish the official journal of the Congress. The executive submitted a statement showing that notwithstanding an appeal for financial assistance and a contribution from the funds of the Congress, there was still an outstanding debt of \$5,000. To liquidate this debt they recommended (1) that another appeal be made to the local unions for financial assistance, and (2) that the members be urged to subscribe for the journal so as to ensure its continued publication.

*Immigration.*—Under this caption the report stated "Your executive has kept the trade union centres of Great Britain and a number of European countries in touch with the facts as to the actual situation in Canada, and in that way offset, to a considerable degree, the campaigns of misrepresentation that have been carried on." A summary of the information furnished to the various countries was given, as was also a summary of a memorandum on immigration prepared for the proposed British Commonwealth Labour Conference, in which the official policy of the Congress on this subject was stated to be:—

To ask the British Government for closer supervision of immigration advertising and control of booking agents.

Provision in the Immigration Act (Canada) to place amongst the prohibited classes labour hired to replace strikers, or those hired without the sanction of the Employment Service of Canada.

Prevention of hiring of labour outside of Canada by private employers and closest co-operation with the Employment Services of Canada and of Great Britain.

The memorandum also sets forth that organized labour in Canada believes that all advances made to assist immigrants should be from Government sources and under Government control.

*International Legislation.*—This section of the report gave an account of a conference called by the Dominion Government, at which the congress was represented, for the purpose of considering the obligations of Canada arising out of the labour section of the Treaty of Peace. A list of the items dealt with and the decisions arrived at was appended.

*Old Age Pensions.*—To the committee appointed by the House of Commons to make inquiry into an old age pension system for Canada the Congress had submitted a memorandum incorporating the declarations which had been made in regard to this subject, and appended the recommendations which the committee had presented.

*Unemployment.*—Mention was made of the programme which had been adopted by the Congress at earlier conventions on the unemployment question, and also of the conference which had been recently held in Ottawa. The proposals of the labour group attending the conference were set forth, as were also the recommendations which had been adopted with a view to relieving unemployment during the coming winter season.

*Industrial Disputes Investigation Act.*—In this section reference was made to the amendments in the act which had been sought by organized labour, and which had been rejected by the Senate. Attention was also called to the constitutionality of the act being challenged in the courts, the case now being before the Privy Council.

*Injunctions.*—Under this heading the executive council directed attention to two widely differing judgments in suits to restrain trade unionists from picketing. In this connection the executive reiterated the demand of the Congress for amendments to the Criminal Code to make clear the position of organized labour in regard to picketing.

*Conclusion.*—The concluding section of the report dealt with a number of items which had been referred to the executive council by the previous convention, as well as others which had been brought to their attention during the year. These included among others (1) release of Bernard Markson, J. B. McLachlan and others from prison, (2) the postal workers' strike, (3) anti-war day, (4) Chinese on Nova Scotia boats, and (5) fair wage violations.

#### Reports of Provincial Executive Committees and Provincial Federations of Labour

In addition to the above report the executive council submitted a synopsis of the legislative work of the provincial executive com-

mittees and provincial federations, together with a summary of the legislation requested and legislation enacted in the various provinces.

### Reports of Fraternal Delegates

Mr. Jas. A. Sullivan, fraternal delegate to the American Federation of Labour, and Mr. J. W. Wilkinson, fraternal delegate to the British Trades Union Congress, submitted reports in which they summarized the more important matters which had been dealt with by the respective organizations.

### Report of Committee on Officers' Reports

The above reports were referred to the committee on officers' reports which expressed satisfaction with the work of the executive council and concurred in the various recommendations submitted. The committee also recommended as follows:—

(1) That this executive council urge that work authorized under House of Commons bills Nos. 256, 257, 258 and 190 be proceeded with in order to relieve the unemployment situation; to this recommendation was added a request that the government be asked to grant money to the Canadian National railways to care for equipment; (2) That the executive council press for legislation providing for unemployment insurance along lines of a bill drafted by the Winnipeg Trades and Labour Council; (3) That further amendments to the Militia Act be sought in accordance with the resolution of the congress adopted in 1923; (4) That efforts be continued to secure the desired amendments to the Industrial Disputes Investigation Act.

The committee further recommended that the executive council press for legislation providing for the transferable vote in Dominion elections and for the abolition of the Senate. The report of the committee on officers' reports, which was adopted, also commended the provincial executive committees and provincial federations for their efforts on behalf of the workers, and instructed the executive council to continue its efforts to secure desired legislation.

### Report of Secretary-Treasurer

Mr. P. M. Draper, secretary-treasurer, submitted the financial statement which showed that the total receipts for the fiscal year, including the balance from the previous year, amounted to \$27,190.01; the expenditures for the same period were \$24,875.71, leaving a balance of \$2,314.30. The total affiliated membership of the congress at the close of the year was 117,110, a decrease of 4,732 as compared with 1923. The secretary-treasurer also presented the report of the trustees of the congress headquarters in Ottawa. The receipts for the year were \$1,445, and the cost of maintenance was \$1,609.89, showing a deficit of \$154.89. The Audit Committee, to which

these reports were referred, subsequently reported that the accounts were found correct. The report was adopted.

The report of the Ways and Means Committee, which was approved without discussion, recommended an appropriation of \$900 to the fraternal delegate to the British Trades Union Congress, and \$600 to the delegate to the American Federation of Labour, and also recommended referring to the executive council the payment of certain incidental convention expenses. A further recommendation was a grant of \$200 to the striking coal miners in Alberta.

### Representation Refused to Women's Labour Leagues

A resolution from the Toronto District Labour Council, which was referred to the committee on Constitution and Law, requested the Congress to admit to membership the Canadian Federation of Women's Labour Leagues. The committee recommended that as this Federation was not an economic organization it should not be admitted, and pointed out that working women were eligible for membership in the various trade unions. After a brief discussion the recommendation of the committee was adopted.

### Union Label Committee

To the Union Label Committee was referred a resolution which sought to condemn the provisional officers of District 26 of the United Mine Workers for sending out printed matter without the union label being affixed. The committee in reporting regretted the absence of the union label on union printing and urged that trade union members demand the union label on all goods purchased. The committee recommended (1) that legislation be secured to protect the union label, (2) that a page be set aside in the *Congress Journal* for the purpose of union label propaganda. During the discussion of the report it was stated by one of the speakers, in referring to the charge against the officers of District 26, that the complaint should have been sent to the headquarters of the United Mine Workers and not to the Congress. The report of the committee was adopted.

### Hours of Labour

Sixty-five regularly submitted Resolutions were referred to the Committee on Resolutions for consideration and report. Some of them, however, were not dealt with, being covered by other resolutions on the same subject. In some instances the committee disapproved of the resolutions, and in nearly all cases the committee's report was adopted.

The first resolution reported upon asked that the Ontario Government should instruct the various commissions appointed under its auspices which have control of the erection of buildings or other public works to call for the adoption of the eight-hour day, which the resolution declared was the established working period in the building industry. The convention approved of the resolution and instructed the executive council to press for legislation to meet this demand.

By another resolution the Congress reaffirmed its declarations in favour of the eight-hour day, and demanded that the Federal Government bring into effect the Washington convention of the International Labour Conference on the hours of work.

This question was also brought to the attention of the convention in the report of the executive council previously referred to, in which certain recommendations were made regarding the eight-hour day, and to all of these the convention gave its approval.

### Unemployment

Three resolutions were submitted on the subject of unemployment. The first demanded that an appeal be made to all public bodies and the various governments to commence all work possible in order to give employment, "so that the public funds can be used for work instead of charity." This resolution was adopted, as was also a demand that the Government pass an unemployment measure suitable to the conditions of the country. The convention adopted a resolution laying down the principle that "the first charge upon industry is of right, and ought to be, the adequate maintenance of workers engaged in it," and urged the Congress to call on trades councils to assist in the organization of the unemployed with a view of co-ordinating their efforts to secure employment.

### Immigration

Three resolutions on the subject of immigration were reported upon by the Committee on Resolutions and all with slight amendments were adopted. One of the resolutions called upon the Government to provide means whereby the services of immigrants as well as those of the unemployed workmen may be utilized in the development of natural resources, and instructed the executive council to make the necessary representations to the Government. The executive council was also instructed to keep in close touch with the European trade unions, and to "inform them of the true situation in this country, thus offsetting the false advertising profusely scattered on the other side of the ocean."

Objection was raised to the immigration regulations of the United States, and it was decided to request the Dominion Government to approach the United States Government with a view to having the regulations amended so as to remove the barrier against naturalized Canadians.

### Fair Wage Regulations

A resolution was adopted that the Prime Minister be requested to have amendments made to what was termed an objectionable section of the fair wage policy of the Dominion Government as issued in April, 1924. The clause to which objection was taken is as follows:—

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which employee or employees belong or to the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It was also decided to ask the Federal Government to (1) have the fair wage policy adopted by the Harbour Commission of the city of Quebec; (2) instruct the fair wage officers to enforce the fair wage regulations.

The executive committee of the Province of Quebec was instructed to urge the Provincial Government to enact a fair wage law, based on equitable principles, and similar in character to that adopted by the Federal Government.

The convention approved of a resolution asking the Dominion Government to pay to all marine engineers the same scale of wages as is paid in the province of British Columbia.

### Picketing and Injunctions

Three resolutions were submitted on peaceful picketing and injunctions, one of which referred to recent injunctions against the Hamilton picture machine operators' union,\* and requested that the law-making bodies of the Dominion be petitioned to so amend the statistics so as to legalize peaceful picketing. In the event of the petition being refused it was requested that a demonstration, with a one-day cessation of work, be arranged by the Trades and Labour Congress. This resolution was not adopted, but the convention reiterated the protest of the Congress against injunctions in labour disputes, and instructed the executive council to take steps to have the Criminal Code amended so as to permit peaceful picketing, and if this is not sufficient, that efforts be made to have the provincial

\* LABOUR GAZETTE, September, 1924, page 814.

legislatures adopt amendments to the civil law along similar lines.

### Opposed to "Councils of Action"

A resolution presented stated that "further and more terrible wars are the inevitable result of modern Imperialism," and called upon the Congress to set up "councils of action" for the purpose of organizing the labour forces in opposition to all Imperialist wars. The proposal was defeated on the recommendation of the committee on resolutions.

Another resolution set forth that "only the rapid and thorough mobilization of the working class on the basis of the class struggle for the complete destruction of capitalism and the rule of the capitalist class, and the elevation to power of the working class, can give assurance of the prevention of future wars." The resolution also stated that the policy of the "leaders of the Amsterdam International\* and their support of the League of Nations and the International Labour Bureau would be chiefly responsible for any catastrophe that may again befall the international working class." This resolution was also defeated on the recommendation of the Committee on Resolutions.

### Defeat Proposal for International Congress

Through a resolution request was made that the Congress favour convening a congress of unions affiliated with the International Federation of Trade Unions and the Red International of Labour Unions for the purpose of arriving at a common programme and platform of action. The Committee on Resolutions recommended non-concurrence in the proposal. Before any discussion took place inquiry was made as to whether or not a telegram had been received from Russia. After a slight delay a copy of the telegram was produced and read as follows:—

Greetings fortieth convention Trades and Labour Congress of Canada. For relentless struggle against re-action and exploitation, and the emancipation of the workers of the world. Hail the unity of international trade unionism. Tomski, Gen. Sec. A.R.C. C.T.U.

After a brief discussion, in which the supporters of the Red International were condemned for their alleged disruptive tactics, the recommendation of the committee was adopted. No action was taken on the telegram from Tomski.

### Autonomy and Amalgamation

Resolutions introduced requested (1) that the Congress take the necessary steps to secure the autonomy of the labour unions of

Canada so that mass action by the Canadian working class may become a reality; (2) that the Congress press for the amalgamation of existing craft unions into powerful industrial unions on the basis of one union for each industry.

Another resolution sought to change the existing plan of organization, and suggested as follows—

1. That, to the end that the Congress may be the real centre of trade union power in Canada, power be given it to increase its per capita, levy assessments and accept the affiliation of any bona-fide trade union operating in the Dominion of Canada.

2. That each international union affiliated with the Trades Congress establish Canadian departments, with well defined power and autonomy, all economic and financial activity to be co-ordinated through duly elected officers at the department head.

3. That each department of the A. F. of L. set up Canadian sections as has been done by the metal trades and the railroad departments.

4. That Canadian departments of international unions be conceded the sole authority and the initiation and the right to strike; affiliate with the Canadian Labour Party, and participate in any economic and political activity in the interests of the Canadian working class.

The Committee on Resolutions pointed out that the above resolutions were similar in their demands to certain resolutions introduced at the convention held in Vancouver in 1923, and recommended the same substitutes as were adopted on that occasion. These resolutions which were designated A and B, reiterated the policy of the congress in regard to (1) organization and (2) political action, and were as follows:—

A. Whereas, the preamble and the platform of principles of the Trades and Labour Congress of Canada clearly set forth the aims and objects for which the Congress is in existence and deal with the various phases of the legislative, economic and industrial matters that vitally affect wage earners throughout the Dominion; and whereas, the constitution of the Congress was drawn with the specific object of working in co-operation with the international trade unions on the American continent, wherein autonomy in the industrial field is vested in the said international trade unions and the American Federation of Labor; and, whereas, experience has demonstrated that it is only by a continuance of this policy and the maintenance of the present form of international trade unionism that we can hope to successfully cope with organized capital and its ramifications; therefore, be it resolved, that the Trades and Labor Congress of Canada, assembled in annual convention in the City of Vancouver, B.C., hereby reiterates its adhesion to the present form of organization, providing as it does the machinery for closer co-ordination of international craft unions which, in the opinion of your Committee, has worked so successfully in the past and been the means of very materially improving the wages and working conditions of the workers, not only in the Dominion of Canada but on the American continent.

B. Whereas, at the Victoria Convention in 1906, a definite policy was laid down committing the Congress to a recognition of the necessity for labor political organizations as a means of securing the amelioration of industrial conditions and to promote the passage of laws concerning the welfare of workers in the mines, the factories, the forests, in fact in all walks of life;

\* The International Federation of Trade Unions, sometimes called the Second International.

and, whereas, it has been made manifestly plain that effective legislation in this regard and energetic enforcement of such laws can best be obtained by the presence in Parliament, in the Provincial Legislatures, and in other elective bodies of representatives elected from the ranks of labor for the direct interest of labor; and, whereas, following the decision of the Ottawa Convention in 1917, the Congress took steps to co-ordinate the different working-class political bodies in the various provinces, which action has later resulted in the creation of a Dominion-wide Labor Political Organization; therefore, be it resolved, that Labor political autonomy be left in the hands of this established labor political party, and the congress again urge all labour organizations to affiliate, and inasmuch as the Platform of Principles of this Congress contains the epitome of the best thought of Organized Labour during the whole period of its existence and struggles, that this Congress continue to act as the legislative mouthpiece for Organized Labour in Canada independent of any political organization engaged in the effort to send representatives of the people to Parliament, the Provincial Legislatures or other elective bodies of this country.

After a protracted discussion, which was brought to a close by the previous question being called, the recommendation of the committee was approved by a large majority, the Congress thus maintaining its former attitude.

#### Postal Workers' Demands

A resolution was presented which protested against conditions in the Post Office Department (1) in connection with certain regulations issued to employees on termination of postal strike on June 29; (2) against the payment of helpers' wages to experienced employees; (3) the penalizing of employees who went out on strike; (4) the compelling of strikers to educate strike-breakers in the performance of their duties. The resolution also recommended the dismissal of all strike-breakers as a means of restoring harmony in the service.

After some discussion, during which a statement was made as to the part taken in the postal strike by the executive council, the resolution was adopted.

The postal workers' delegates also submitted four other resolutions which asked:—

(1) that amnesty be granted to all who participated in the strike; (2) that the Civil Service Act be amended to provide for an investigation board for the settlement of disputes, or that the scope of the Industrial Disputes Investigation Act be extended to apply to postal workers; (3) that the government be asked to pay sufficient pension to retired postal workers (who are not covered by the compensation laws) who may be injured in the discharge of their duties, notwithstanding that they may not have the required 35 years' service to their credit; (4) that full citizenship rights be granted to all public servants.

All of the foregoing resolutions were adopted.

#### Favour Old Age Pensions

The convention adopted without discussion a resolution that the Dominion Government

be requested to promote legislation to provide adequate pensions for citizens of Canada who have reached the age of 65 years, and who have been residents for 20 years.

#### Recommendations as to Education in Quebec

The convention adopted a resolution instructing the executive committee for Quebec to petition the Legislature for the adoption of the following measures:—

1. Free and compulsory education.
2. Compulsory and uniform teaching of the French and English languages in all the schools of the Province.
3. All text books to be issued by the Government, upon the recommendation of the Boards of Education, and to be sold at cost price, pending their free distribution to scholars.
4. All school books to be uniform throughout the Province, it being one of the principal requirements for proper education.
5. All courses in the Provincial Government's schools, technical and others, to be given free of charge.
6. No person to be permitted to teach in any school who is not the holder of a Normal School diploma, except in the case of primary courses such as those given in kindergartens and similar institutions.
7. That all persons under the age of 21, working in factories, workshops or any other places of employment, who are not able to read and write one of the two official languages of this country fluently be compelled to attend an evening class.
8. The laws governing education to be amended by the Provincial Government, to provide for a minimum salary for school teachers in keeping with the cost of living and to permit the prosecution of School Commissions who pay less than said minimum salary.
9. A Minister of Education to be appointed whose duties should consist in supervising the proper administration of School Commissions, the enforcement of the programme of education adopted by the Provincial, Catholic and Protestant Boards of Education and all other rules and regulations pertaining to education.

#### Government Liquor Control

The last resolution on the agenda was one in regard to the liquor question. As recommended for adoption by the Committee on Resolutions the resolution read as follows:—

Whereas, the Trades and Labour Congress of Canada, in convention assembled, has gone on record as opposed to the Ontario Temperance Act, and whereas, a referendum vote is to be taken on amendments to the Ontario Temperance Act on October 23rd, 1924, therefore, be it resolved, that this convention of the Trades and Labour Congress of Canada favours Government control and the sale of light wines and beer.

A short debate ensued in which three delegates opposed the recommendation. The delegates from Quebec, on the suggestion of some of their colleagues, abstained from voting. The resolution as recommended was adopted by a large majority.

#### Defeat Demand for Full Time Services

A resolution was presented protesting against officers of the Congress holding Government positions, and requested that action

be taken to alter this condition by electing officers who are willing to devote full time services to the work and welfare of organized labour. While some of the delegates were opposed to officers holding dual positions, others defended the secretary-treasurer, who is a government employee, stating that the affairs of the Congress were ably attended to. The Committee on Resolutions recommended non-concurrence, and this recommendation was adopted.

Another resolution which was defeated requested that legislation be demanded to compel all employers employing more than ten employees permanently to give at least two weeks' annual holidays with full pay to all employees who have been in their service for more than ten months.

### Other Resolutions Adopted

Other resolutions which were approved by the convention were briefly as follows:—

Protesting against the issuing of any orders in council permitting Norwegian or other foreign ships or crews to operate in Canadian coast-wise port to port waters and trade.

In favour of the Dominion Government having all bonds for Canadian loans printed in Canada from steel plates.

To ask the Dominion Government to lead the way in discouraging the practice of dispensing with the services of employees who have reached the age of 45 years, which, it is claimed, was in force in a number of industries in Canada.

To ask the Dominion Government to give preference to widows and self-supporting women in the appointment of office cleaners, and also that such class of employees be paid on annual salary basis with the same privileges as other employees.

Protesting against the high price of lumber and building material.

In favour of a complete rewriting of the Canada Shipping Act so as to prevent evasions of the law.

Protesting against the Canadian Pacific Railway "farming out" certain classes of work to private contractors.

In favour of Minimum Wage Act of Quebec being brought into operation.

In favour of the amending of the Ontario Workmen's Compensation Act so that all workers shall be eligible for compensation.

In favour of the Quebec executive committee continuing efforts to secure a more satisfactory compensation law for the workers in that province, and that a request be made for the publication of the proceedings of the Quebec commission which investigated the subject of compensation laws.

In favour of the use of paint-spraying machines being prohibited unless efficient ventilating systems are employed.

In favour of adequate regulations to protect the workmen employed in the construction of electrical lines.

In favour of sheltered quarters for men employed on the repair tracks of railroad companies.

In favour of requesting the Railway Commission to set the maximum length of railway sections and the minimum number of men to be employed thereon.

In favour of seeking legislation providing that all automobile mechanics must pass an examination, and that a minimum wage be set for such employees.

In favour of efficient locomotive inspection.

In favour of asking the Ontario Government to enact a standard code of building laws for all municipalities in the province.

In favour of amending Mothers' Allowance Acts to include mothers with one child, also mothers whose husbands are serving prison terms of three months or over, and urging that Provinces which have no mothers' allowance acts adopt such legislation at an early date.

In favour of compulsory school attendance for all children until they reach the age of 16 years.

Opposing the present system of granting free scholarships to students and favouring the spending of such money to attract to Canadian colleges professors of repute.

In favour of asking the Quebec Government for the complete abolition of private employment agencies, with the exception of those directed by trade unions.

In favour of the executive council appointing parliamentary representatives in each Province whenever possible.

In favour of the Government continuing to have Canadian currency bills, revenue and other stamps engraved and printed from steel plates, and that competent steel plate printers be appointed to act as inspectors of such work.

In favour of the Government doing all possible to reimburse Home Bank depositors 100 per cent.

Protesting against the subsidies to the Royal Mail Steam Packet Company and requesting the government to equip the Canadian Government Merchant Marine steamers to carry perishable goods between the Maritime Provinces and the West Indies, or to build new ships suitable for the trade.

In favour of the seizure of the goods and chattels of company directors or other persons responsible for fraudulent bankruptcies.

In favour of Canadian material and Canadian workmen being employed in the construction of the proposed war memorial to be erected by the Ontario Government.

In favour of Montreal policemen being permitted to belong to a labour union.

A resolution protesting against large corporations and private individuals holding millions of dollars' worth of tax exempt bonds was referred to the executive council for consideration.

### Collection for Striking Miners

Fraternal greetings were received from District 18 of the United Mine Workers (comprising Alberta and southeastern British Columbia), whose members have been on strike since April, 1924, in which appeal was made to the delegates to ask their respective local unions to endeavour to have financial assistance sent to the strikers. It was suggested that the Congress send a contribution, which on motion was sent to the Ways and Means Committee for consideration. This committee recommended a grant of \$200, which, as previously reported, was adopted. It was also decided to take up a collection for the strikers, an additional sum of \$207.50 being realized.\*

\*This strike was settled on October 10, subject to ratification by a vote of the men. (See page 830).

### Fraternal Messages

The special order of business for the Wednesday morning session was the hearing of fraternal addresses. Mr. W. W. Britton, Cincinnati, Ohio, president of the Metal Polishers' International Union, fraternal delegate from the American Federation of Labour, in his address referred to the action of the organized workers in the United States in endorsing for President Senator Robt. M. Lafollette, a candidate who was considered to be more in accord with the views of labour. Mr. Britton stated that there was a serious unemployment situation in the United States, and believed that with the great advances being made in labour-saving machinery that there would be still more unemployment, to cope with which there must be shortening of the work day.

Mr. J. H. Brownlie, secretary of the Amalgamated Engineering Union of Great Britain, fraternal delegate from the British Trades Union Congress, in conveying greetings to the convention said that the British trade union movement was the cradle of the organized labour movement in Canada. In referring to the loss in trade union membership in Great Britain, Mr. Brownlie stated that this condition was not peculiar to the British movement, but existed in other parts of the world. This situation, however, had been made the occasion for some young members of the movement to agitate for a different form of organization. This, the speaker stated, was not a new theory. He had heard it proposed more than 30 years ago. There were over one million unemployed in Great Britain and wages had been reduced, but the British workers were not discouraged. The British Trades Union Congress had refused to listen to the plea that immigration was the panacea for the ills of the unemployed. The reason for unemployment was under-consumption not over-production or other causes advanced. The speaker averred that the remedy for unemployment was to bring the power of consumption to equal production by increasing wages. While "ca' canny" had been practised, it was the fear of unemployment that caused the restriction of output. The employers were also guilty of the same practice, which Mr. Brownlie declared to be reprehensible. Mr. Brownlie said that the Labour Government, which had only been elected by the slow, patient work of the organized workers, had accomplished much during its short existence. He favoured the amalgamation of unions of kindred trades where it was in the interests of the workers to combine. To bring about a more direct

control, the speaker suggested the formation of shop stewards or works committees, which had proved eminently satisfactory in Great Britain. The workers of the British Isles were international because capital was international. The International Federation of Trade Unions, with which the British Trades Union Congress was affiliated, was the greatest international in the world, and was destined to wield great influence in the politics of Europe and other countries. Those who denounce the organization were young men who were carrying out instructions from elsewhere, and knew not what they were doing. The Communists had been responsible for the breaking up of the trade union movement in several European countries. The Red International wanted to get into the International Federation, but it could only be admitted by the acceptance of its rules and regulations. The wages of the Russian metal workers were so low, Mr. Brownlie stated, that they were a menace to the western European workers. He was anxious to have mutual relations between the Russian and the other workers, because the latter had something to offer the Russians which would be for their benefit, and he believed that the time would come when all would be united.

Miss Mabel Leslie, of Boston, Mass., fraternal delegate from the National Women's Trade Union League, in presenting fraternal greetings gave an outline of the functions of the organization and reported on the progress which had been made. The league was endeavouring to assist the women workers in their efforts to improve their position in life. A school had been established in Chicago for the training of women for the trade union movement.

Mr. W. L. Best, of Ottawa, legislative representative of the Brotherhood of Locomotive Firemen and Enginemen, in extending greetings, stated that his organization was prepared to assist the Congress in its legislative activities, and hoped to see not only the Brotherhood of Firemen but all kindred bodies affiliated with the Congress.

Delegate Joseph T. Marks, of Toronto, was granted the privilege of addressing the convention on the proposal to establish a new labour paper for the province of Ontario, to be published under the auspices of the Ontario Labour Educational Association.

Delegate J. A. P. Haydon, Canadian representative of *Labour*, a paper published in Washington under the auspices of the sixteen standard railway organizations, was also granted the privilege of the floor to bring the publication to the attention of the convention.

Others who addressed the delegates were Mr. Robt. Birrell, chief of the London police force, and Mrs. J. H. Rose, president of the London Local Council of Women.

Fraternal messages were received from the Sackville branch of the Metal Polishers' International Union and from the Canadian delegation to the convention of the Journeymen Barbers' International Union being held in Indianapolis.

To commemorate their visit the fraternal delegates from the British Trades Union Congress and the American Federation of Labour were presented with diamond scarf pins; to the fraternal delegate from the National Women's Trade Union League was given a brooch. Mrs. Kathleen Derry and Mrs. Wells, members of the local ladies' entertainment committee, were also presented with brooches.

### Condolence

As a mark of sympathy for delegate Martin Guthro, of Glace Bay, whose daughter had died while he was in attendance at the convention, the delegates observed a minute's silence. A note of sympathy was passed to the families of the 70 miners who lost their lives in an explosion in the Wyoming mining district.

### Election of Officers

The election for the presidency of the Congress was presided over by Mr. W. W. Britton, fraternal delegate from the American Federation of Labour. President Tom Moore was opposed for re-election by Mr. Tim Buck of Toronto, the Canadian representative of the Trade Union Educational League. Of the 200 ballots cast Mr. Moore received 156 and

Mr. Buck 44. Two of the former vice-presidents were defeated for re-election, being succeeded by two Toronto delegates. While two of the vice-presidents were elected on the first vote, it required three other ballots to complete the slate. The full list of officers, provincial executive committees and fraternal delegates for 1924-5 is as follows:—

President, Tom Moore, Ottawa.

Sec.-Treas., P. M. Draper, Ottawa.

Vice-Presidents, J. T. Foster, Montreal, James Simpson and Bert Merson, Toronto.

Provincial executive committees: Nova Scotia—Chairman, J. W. McLeod, Glace Bay; committee: Wm. McKay, New Waterford; N. Roberts, Glace Bay, and R. Clark, Reserve Mines. Quebec—Chairman, Gus Franco, Montreal; committee: Omer Fleury, Quebec; Joseph Pelletier and J. A. Beland, Montreal. Ontario—Chairman, Frank McKay, London; committee: H. S. Mitchell, Hamilton; Rod Plant, Ottawa; James M. O'Brien, Windsor. Manitoba—Chairman, J. L. McBride, Winnipeg; committee: J. Leslie, G. W. Howard and J. Addison, Winnipeg. Saskatchewan—Chairman, A. M. Eddy, Saskatoon; committee: J. Hazeltine, Regina; A. Baker and C. J. Green, Moose Jaw. British Columbia—Chairman, R. P. Pettipiece, Vancouver; Councils of Vancouver, Victoria and Prince Rupert to name other members.

Fraternal delegate to the British Trades Union Congress—J. F. Marsh, Toronto, Ont.

Fraternal delegate to the American Federation of Labour—J. Colbert, London, Ont.

Ottawa was chosen as the convention city for 1925.

## NOTES ON LABOUR UNION ACTIVITIES

THE following notes contain an account of recent conventions of Canadian unions and of international labour organizations having branches in Canada. The recent convention of the Trades and Labour Congress of Canada is reported elsewhere in this issue.

### Canadian Federation of Labour

The twenty-second annual convention of the Canadian Federation of Labour opened in Montreal September 8, under the chairmanship of Mr. H. Chartrand, President of the Central Council of Montreal. After the opening speeches of Messrs. C. Duquette, mayor of Montreal, T. Bertrand, representing the Federal Department of Labour, and A. Robert, representing the Provincial Government, Mr. D. Giroux, General President of the Federation, took the chair, welcomed the delegates and thanked the guests for their

attendance to the opening session and for their good wishes.

Thirty-five credentials were presented at the Convention and twenty-seven delegates were in session, representing approximately 17,000 members, divided between thirty-eight local unions and three trade federations as follows: Federation of Electricians, six local unions; Federation of Miners of Alberta, three local unions; and Federation of Bricklayers, Masons and Plasterers, eight local unions.

The following resolutions were passed:—

Requesting the amendment of the constitution of the Bricklayers' Federation in order to have its name altered to: "Federation of Bricklayers, Plasterers, Masons and other Building Trades";

Requesting the executive to take the necessary steps to induce the Federal Government

to recognize the Canadian Federation of Labour as the representative national organization in Canada;

Requesting that the various Workmen's Compensation Acts be amended so that injured workmen be granted the privilege of choosing their own doctor, and that physicians' organizations be invited to co-operate to this end;

Approving the plan of the late Woodrow Wilson, ex-president of the United States, that the workers of each country organize nationally and appoint a Labour Council one or more representatives of which would be delegated to his country as the representative of the workers;

Protesting against the appointment of a non-eligible person as Canadian representative at the Geneva Convention, on account of his allegiance to an International Organization the headquarters of which hold their meetings outside of Canada;

Requesting the province of Quebec to re-establish the Museum of Appliances for the prevention of industrial accidents and to give to the Museum more life and vigour;

Recommending that means be found whereby the revenue of the Federation may be increased in order to make a success of the organization campaign;

Requesting the new Executive Committee to draw the Postmaster General's attention to the necessity of a satisfactory settlement of the Montreal Postal Workers' grievances;

Requesting the local organizations and the particular members to become subscribers to the *Canadian Trade Unionist*, the official organ of the Federation.

Fraternal delegates of the Postal Workers' Union attended the deliberations of the Convention and explained to the delegates the facts and conditions of their last strike.

The report of the Secretary-Treasurer, showed an effective force of 17,000 members and receipts for the year of \$1,397.24 and expenses of \$1,102.92, leaving a balance of \$294.31.

The meeting place of the next convention was left with the Executive. The election of officers gave the following results:—

General President, D. Giroux, Montreal, re-elected; 1st Vice-President, G. W. Potts, Toronto, re-elected; 2nd Vice-President, G. Francoeur, Montreal; 3rd Vice-President, C. W. McCallum, Toronto; 4th Vice-President, H. Perrin, Quebec; General Secretary, C. J. Whitley, Toronto, re-elected.

The names of the Provincial Vice-Presidents who were elected follow: A. Marois, Quebec; A. Barnes, Ontario; W. Watts, Saskatchewan and Alberta.

### Photo Engravers' Union of North America

The twenty-fifth annual convention of the International Photo Engravers' Union of North America was held at Los Angeles, California, from August 18 to 23, with 43 delegates present, representing a membership of 6,548, of whom 291 are in Canada.

The law requiring the international union to collect payment of loans made by local unions to individual members was eliminated from the laws of the union, and a new law was added requiring six months of membership before issuance of travelling certificates to those admitted to journeymen membership other than by the apprenticeship system. A proposal to hold biennial instead of annual conventions was disapproved as was also a proposal to substitute the referendum system of electing the Union's officers.

Inquiries that had been made regarding the feasibility of providing an old age pension and also death insurance to the amount of \$1,000. showed that the latter could not be successfully undertaken unless made compulsory on all present and future members, and that a compulsory system might present many obstacles. The matter was therefore left for further consideration by the executive council.

The convention concurred in a recommendation that wherever agreements are entered into jointly between local groups of employers and local unions, such collective agreements shall be held to embrace collective obligations, and that failure on the part of one of such group of employers to observe these collective obligations shall be sufficient cause to cancel further negotiations for collective agreements, and to negotiate agreements with individual employers instead. In the event of the American Photo-Engravers' Association exercising influence, power or control over local collective agreements on the part of its members, it was held that the collective obligation referred to should apply immediately to their national association, so that the same guarantee of performance may be required of the employers in respect to their members as is demanded of the International Union in respect to its members. This policy should also apply to the newspaper publishers. The Conference decided to discourage the practice of newspaper plants producing engravings for other newspaper publishers, or else to insist that such a practice shall be on a basis fair and equitable to all employers and the International Union. It was resolved "that the practice of newspaper publishers in giving away engravings as a gratuity or other form of unfair competition in the soliciting of ad-

vertising be discouraged, and that the industry be placed on a standard of fair competition between all newspaper publishers and commercial employers."

The joint industrial council of the International Union was stated to have accomplished little of a practical character, but it was believed that "the existence of this body is fully justified by the potential possibilities inherent in such an industrial policy-making device." To enforce the decisions reached by this Council, it was claimed, requires determination on the part of both employers and employees' organizations. The executive council was vested with power to give enforcement to decisions of the Council in such matters as the formation of local industrial councils. Any arrangement between employer and member for the sale or transfer or gratuity of stock or any other form of reward or of financial interest, is to be regarded as a contractual relation coming within the terms of collective agreements requiring individual contracts to be first approved by the local union involved. The executive council is to appoint a joint committee on technical research, and further technical education among the apprentices.

Individual members were advised not to invest their savings in employees' stock arrangements, and the president was authorized to prepare a booklet for distribution among the members on the subject of stock jobbing under guise of stock buying.

Approval was expressed of the two year term of contract when the proper minimum wage standard warrants the making of an agreement for a period longer than one year. The annual international wage survey of the International Union was stated to be giving satisfaction, but some difficulties had been experienced, and it was recommended that local unions be advised how to compile wage statistics.

Closer co-operation between the employers and the local unions was urged in the selection and placing of apprentices in the several branches of work, and certain local unions were commended for not only providing for, but also requiring that apprentices should receive technical education in addition to the shop practice.

A recommendation was endorsed in favour of extending the service of the official journal to make available technical information to both journeymen and apprentices, with a more elementary series of articles for the apprentices

and more advanced literature for the journeymen, and for the distribution in pamphlet form of all contributions of a helpful, constructive and educational nature. The president was authorized to appoint an advisory and co-operative committee to assist in this work, and an appeal will be made to the employers and all interested in the craft for contributions to a technical education fund.

The research and technical education facilities of the Union are to be extended to include photo-lithography and offset. Efforts will be continued for the affiliation of members of the Amalgamated Lithographers with the Union.

The Convention discussed the weaknesses in the Union's plan of securing control of non-union shops, and the need for the broadening of the educational campaign against the further development of small shops. It approved a suggestion for the encouragement of attempts to gather cost data, provided such information is made available to local unions as well as to employers and that it is not used for checking the efficiency of workers or creating an artificial competition between them. Members of the organization were stated to have shown a keen interest in trade improvements, and in methods and means of production, and they were urged to give a fair and just trial to every process, device or machine presented for trial and experiment. Reports should be filed on this subject monthly with the office of the president and the patent rights of all rightful owners should be observed.

The president was authorized to negotiate an understanding on the subject of the influx of foreign craftsmen with workers' organizations abroad, in order to safeguard members of the Union and to assure the co-operation and goodwill of fellow-workers abroad. The Convention also discussed the problem created in Canada by the recent enacted American Immigration law.

Industrial hygiene was also discussed, and it was shown that there is a growing need for the study of lighting in the engraving shop, general sanitation, the posture of the workers, etc., as well as of trade diseases and ailments.

The president, Matthew Woll, first vice-president E. J. Volz, and secretary-treasurer, Henry F. Schmal, were re-elected by acclamation. It was decided that the next convention should be held in Cleveland, Ohio, in August, 1925.

### International Allied Printing Trades Conference

A meeting of the International Allied Printing Trades Unions, called by the Ontario and Quebec Conference of Typographical Unions, was held at London, Ontario, on September 13. The purpose of the conference was to deal with the situation described in a statement taken from the records of the interprovincial typographical conference held in the same city last June (LABOUR GAZETTE, July, 1924, page 570); as follows:—

Matters have reached the stage where we believe a greater measure of co-operation should exist between the various crafts employed in the printing industry. Our industry at the present time is in a chaotic condition, due in part to the forty-four hour week struggle, handicaps under which our industry is now operating owing to high taxation—notably the Sales Tax—and to the installation of the multigraph machine. Large numbers of the most skilled mechanics in our industry have been compelled to migrate to the United States in order to follow their calling. While this movement has been general throughout Canada little concentrated action has been taken to stop it. Notwithstanding the above, printing mechanics are being recruited in Great Britain and this movement will undoubtedly lower the standard of living of those already resident in Canada. Protective laws now on the statute books are being assailed and further beneficial legislation retarded.

While individual unions, councils, etc., have protested against a continuance of this policy, we believe the most effective way to combat it would be by joint action on the part of all allied printing trade unions.

Mr. J. A. P. Haydon, of Ottawa, presided, and Mr. Hugh S. Bentley, of Hamilton, acted as secretary of the conference. The delegates included representatives, both international and local, of the International Typographical Union; the International Printing Pressmen and Assistants' Union; the International Brotherhood of Bookbinders; and the International Stereotypers and Electrotypers' Union. A communication was also received from the president of the International Photo-Engravers' Union.

The delegates described the conditions prevailing in their several districts. Unemployment was attributed in part to the common practice by Canadian firms of having their printing done abroad. The bulk of such work carried no union label, it was stated. According to several speakers unemployment resulted from the existence of too many small shops, with consequent price-cutting. One speaker deplored the prevalence of one-man or "bedroom" printing shops, and stated that the Canadian Pacific Railway Company had its printing done in New York, and that the Health Department of Quebec had a four-coloured pamphlet printed in Paris. Another delegate alleged that employers, during the recent 44-hour struggle, had killed business by circularizing the consumers of printing, ask-

ing them to withhold orders until absolutely needed. Much of the work formerly done by printers was now done by multigraph and mimeograph machines. The 44-hour week dispute had the result in Toronto, it was stated, that much printing was sent out to small towns. Employers in Toronto, however, were adjusting prices to meet outside competition. The present immigration policy of the Government was also mentioned in connection with unemployment. Attention was called to the "sticker campaign" of the Montreal Allied Printing trades, which was meant to educate consumers of printing in the advantages of having their work done in Canada by Canadian workmen.

### American Flint Glass Workers Union

The forty-eighth convention of the American Flint Glass Workers' Union was held at Atlantic City, New Jersey, from June 30 to July 9. The membership of the Union at the close of the fiscal year, May 31, 1924, was 7,323. Of these 5,530 were employed in the trade, 1,327 were employed outside the trade, and 466 were unemployed. (The Canadian members of the Union in 1923 numbered 135, these being in three locals, one in Quebec, one in Ontario and one in Alberta.) Statistics showed that the organization had lost 629 members during the year, the membership figures being the smallest recorded since 1908. From a financial standpoint, however, the year was successful, there being \$685,197.15 in the treasury at its close, notwithstanding the fact that \$22,500 had been expended for strike benefits during the year.

The president called attention to the changed conditions in the industry at the present time as compared with forty-six years ago when the Union was in its infancy, especially through the use of automatic machines. At that time twelve hours constituted a day's work for which the worker was paid \$2. During the past year the average wage for each employed member was \$35.40 for 50 weeks, and the average yearly income was \$1,770.27, while the time worked was four hours for a turn and eight for a day. Another change mentioned was that during the past seven years girls had been brought into the industry to do work formerly done by boys. The president stated that the conditions under which these girls and boys are required to labour was not always congenial. There had been complaints as to the way some men treated these children, and he urged the members to see that the "small help" are well treated. He also urged them to use their influence with the legislatures of their various states to ratify the proposed amendment in the

United States constitution with regard to child labour. On the subject of journeymen doing boys' work he explained that a number of men were willing to do boys' work if an equitable wage scale were agreed upon that would give them a compensation in excess of what is now paid boys for doing this class of work, but this scale must be lower than the journeyman's regular rate in order to secure the co-operation of the manufacturers.

With regard to summer vacations with pay, which had been discussed at the previous convention of the Union, he explained that a proposal had been made to the manufacturers at a conference held in March last, but it had been rejected by them. Other matters dealt with in his report included "turn work," the three shift system, and a warning against members taking stock in so-called co-operative factories.

Dealing with the subject of "turn work" the convention asked the locals to see that members exercise more care in this work in order to protect the conscientious workmen who may need the protection of the turn work rule. With regard to journeymen doing boys' work, it was decided that in no case should members take the place of boys on strike unless in the judgment of the local union and of the national officers the boys were in the wrong. It was also decided to refer the question of wages paid members when doing boys' work to each locality in order to obtain the best wages possible. The executive board and national officers are to bring this matter before the manufacturers with the object of increasing the wages of the older members above the boys' wages.

The delegates were asked to bring the question of members taking stock in co-operative factories to the attention of their local unions. With regard to the three-shift system it was felt that the present was not an opportune time for its adoption.

The National officers were empowered to investigate and to act if they deemed it ad-

visable, to establish a co-operative bank, and to investigate and report at the next convention with regard to the home for the incapacitated members.

The following officers were elected: president, William P. Clarke; vice-president, Joseph M. Gilhooly; secretary-treasurer, Charles J. Shipman, and assistant secretary, Harry H. Cook. Toledo, Ohio, was chosen as the place of meeting for the 1925 convention.

#### **International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada**

The International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, at a recent convention held at Cincinnati, Ohio, considered the question of the increasing number of unknown and financially irresponsible individuals who are organizing and taking out theatrical troupes. It was stated that the majority of such enterprises failed, and that members of the Alliance had been unable to collect salary and transportation dues. A resolution was adopted instructing the International President to take up with the proper managerial interests the subject of requiring irresponsible theatrical promoters to enter into bonds covering salaries and railroad transportation for members of the Alliance before service is furnished. A full report will be made on this subject to the next meeting of the General Executive Board.

#### **Dates of Coming Conventions**

American Federation of Labour, at El Paso, Texas, on November 17.

Industrial Workers of the World, at Chicago, Illinois, on November 17.

International Alliance of Bill Posters and Billers, at St. Louis, Missouri, on December 6.

### **Progress of Co-operation in Great Britain**

The Co-operative Union of Great Britain has recently published statistics relating to co-operative societies in 1923, which show that the membership in 1923 reached in some branches the highest figure ever recorded. The statistics cover 1,441 societies, including all types, with a total trade turnover of £258,449,666. The membership of these societies was increased by 49,730 members; share

capital was increased by £2,612,424; loan capital by £3,882,809; and reserve funds by £991,945, or little short of a million sterling. In 1923 the movement employed 186,500 workers, the total wages bill for the year amounted to £24,218,709. Farming is carried on by 158 societies, with £2,451,943 invested in land, £976,509 in implements, etc. The societies own 66,447 acres and rent 9,124 acres.

**TRADES UNION CONGRESS OF GREAT BRITAIN**

THE fifty-sixth annual Trades Union Congress of Great Britain was held at Hull on September 1 to 6. The membership in 1924 showed little change from the previous year, the principal change being a decrease in the public administration group, due to the amalgamation of a large municipal union with a general labour union, and a corresponding increase in the general labour group. The delegates in attendance numbered 724, representing 4,328,000 workers, distributed by industries as follows:—

Agriculture. . . . .	30,000
Mining and quarrying . . . . .	789,411
Metal, engineering and shipbuilding . . . . .	670,782
Textile . . . . .	405,807
Clothing . . . . .	160,086
Woodworking and furnishing. . . . .	74,206
Paper, printing, etc. . . . .	159,835
Building, decorating, etc. . . . .	303,553
Railway service . . . . .	446,241
Other transport . . . . .	411,867
Commerce and finance . . . . .	162,250
Public administration . . . . .	146,864
Miscellaneous . . . . .	85,875
General labour . . . . .	481,458

A. A. Purcell, M.P. (Furnishing Trades Association, Manchester), who had been elected president of the Congress by the General Council when Miss Bondfield took office in the Government, referred in his presidential address to the advent of the first labour government and commented on the work it had already done. He pointed out, however, the danger of relying too much on parliamentary action. "The political labour party," he said, "is only strong and healthy in proportion to the health and strength of a united and scientifically organized industrial movement." The president concluded a review of home conditions with a reference to the million unemployed workers in Great Britain. "Relief work, digging holes and filling them up again, is not a remedy," he said. "Emigration offers no way out; additional training in other industries and every such method will not cut out this cancer in our social system \* \* \* \* Our task is to deal with the problem of poverty at its roots and to solve it by bringing about a more equitable distribution of the wealth produced by the labour of our class."

The Canadian delegate to the Congress was Mr. J. A. McClelland, of the Trades and Labour Congress of Canada, vice-president of the International Association of Machinists, who referred in his address to the problem of migration from the Canadian workers' point of view.

*Industrial Workers Charter.*—The Congress unanimously adopted a charter embodying the following principles:—

- Public ownership and control of natural resources and services.
- Legal maximum working week of 44 hours, and legal minimum wage for each industry or occupation.
- Suitable provisions in relation to unemployment, with adequate maintenance of the unemployed.
- Establishment of training centres for unemployed juveniles.
- Extension of training facilities for adults during industrial depression.
- Provision of adequate housing accommodation.
- Provision of educational facilities by the State from elementary schools to the universities.
- Adequate maintenance and compensation in respect of all forms of industrial accidents and diseases.
- Pensions for all at the age of 60 years, and pensions for widowed mothers and dependent children.

*Fair Wages.*—In regard to the "Fair Wages Clause" it was proposed that trade union labour should be employed on all government and municipal contracts; that clerks should be included within its operation, and that the clause should be extended to include requirements as to working conditions and housing of the workers.

*Safety and Health.*—The safety and health of workpeople were the subject of numerous resolutions, including the following: Proposing minimum limits of age for those in charge of locomotives and capstans or engaged in shunting, pressing for an enquiry into the mechanical departments of the mining industry, supporting the Offices Regulation Bill, revising the regulation as to certificates of competency for officials under the Mines Act, and drawing the attention of the Government to the insufficiency of inspection in the textile industries. Other resolutions urged the compulsory employment of trailer men on trailers, and the improvement of workshop accommodation.

*Industrial Disputes.*—A series of resolutions were put forward by the General Council, and carried, extending the powers of the General Council in regard to industrial disputes. Under these resolutions trade unions are required to keep the Council informed upon all disputes arising between themselves and employers or between one union and another, and the Council is to disseminate, if deemed advisable, such information to all affiliated unions that might be directly or indirectly affected. If negotiations break down, the Council are authorized to take steps to call the representatives of the unions concerned together, and to render such advice or assistance as they deem necessary, any unions who

refuse such assistance or advice to be reported to Congress. If, in spite of this procedure, a stoppage takes place, the Council are forthwith to take steps to organize on behalf of the union or unions concerned all such moral and material support as the circumstances of the dispute may appear to justify.

Arising out of the strike of porters at Covent Garden Market a resolution was unanimously approved reaffirming "the vital constitutional right of trade unions to assist each other by direct industrial action or moral support in any strike or lockout that may arise."

By another resolution that was carried unanimously the Congress reaffirmed its determined opposition to compulsory arbitration, and declared that under no circumstances would it permit any interference with the right to strike.

*Education.*—A composite resolution on education was agreed to, recommending that the school-leaving age should be raised to 15 years, with maintenance allowances where necessary; that fees in municipal secondary schools should be gradually abolished; that the scholarship system should be extended with a view to the development of free secondary, technical, and university education; and that education in continuation schools should be made obligatory in the employers' time up to 18 years.

After a considerable amount of debate a resolution was also approved instructing the General Council to take a more active part in the furtherance of working class education.

*Trade Union Organization.*—A composite resolution dealing with trade union organization declared,—

- (a) that the time has arrived when the number of trade unions should be reduced to an absolute minimum.
- (b) that the aim should be as far as possible organization by industry, with every worker a member of the appropriate organization.
- (c) that it is essential that a united front be formed for improving the standards of life of the workers.

The General Council was instructed to draw up (1) a scheme for organization by industry; and (2) a scheme which may insure unity of action, without the definite merging of existing unions. After some discussion this was agreed to by 2,503,000 votes to 1,428,000.

Another resolution, carried unanimously, instructed the General Council to use all possible influence in urging all trade unionists to secure the enrolment in their appropriate trade unions of all members of their families and their relations working at any occupation.

*Other Resolutions.*—Other resolutions passed by the Congress related to the Russian treaty, the international organization of workers; safeguarding the interests of emigrants; Asiatic labour on British ships; representation of workers on Royal Commissions; payment of wages to ship-wrecked and sick sailors; political rights of civil servants, etc.

## Agricultural Labour in Japan

The 'Agricultural Workers' Labour Union of Japan, with 395 affiliated local unions and a total membership in 1924 of 40,857 persons, was founded in 1921, and is the largest union in Japan. It admits as members both so-called tenant farmers and agricultural day labourers. At present it is not affiliated to the General Federation of Labour in Japan, but there are close ties of friendship between the leaders, and the union also maintains friendly relations with other organized groups, such as miners and factory workers.

Statistics concerning, agricultural holdings in Japan are as follows:—

Acreage	Number
Less than 1 acre. . . . .	1,916,583
1 to 2 acres. . . . .	1,822,173
2 to 4 acres. . . . .	1,142,930
Over 4 acres. . . . .	573,995

## Labour Court in Argentina

The President of the Argentine National Department of Labour recently submitted to the Minister of the Interior a bill for the creation of a labour court to deal with questions arising out of the application of Acts on labour, social betterment, salaries, benefit funds, and decisions of the courts of conciliation and arbitration. It would have a body of three members to exercise the powers conferred by the proposed Act, which also provides for proceedings for exacting fines for the infringement of labour Acts, the inspector of the Department of Labour to act as plaintiff in such cases. It provides that 30 per cent of the proceeds of such fines shall be used to provide a fund for social betterment, and 70 per cent for the expenses incurred by special studies to improve the application of Argentine labour legislation.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Ratifications of Draft Conventions of the International Labour Organization

THE number of ratifications of draft conventions reported at the sixth session of the International Labour Conference (League of Nations) was given in the *LABOUR GAZETTE* for August as 126. The Director's report to the twenty-fourth session of the Gov-

erning Body, Geneva, on October 9, 1924, shows that 136 ratifications of the draft conventions were registered, that 23 ratifications were authorized, and that 135 ratifications were recommended. The previous report of the Director, of May 15 last, gives the number of ratifications registered as 96, the forty additional ratifications being as follows:—

DRAFT CONVENTIONS	RATIFICATION REGISTERED BY
<i>1st Conference (Washington), 1919—</i>	
Hours of work in industry.....	Austria*
Unemployment.....	Austria, Poland
Night work of women.....	Austria, Belgium
Night work of children.....	Austria, Belgium, Poland
Minimum age of admission of children to industrial employment.....	Belgium, Poland
<i>2nd Conference (Genoa), 1920—</i>	
Fixing the minimum age of admission of children for employment at sea....	Japan, Spain, Poland
Unemployment indemnity in the case of loss of ship.....	Italy, Poland, Spain
Facilities for finding employment for seamen.....	Italy, Poland
<i>3rd Conference (Geneva), 1921—</i>	
Age of admission of children to agricultural employment.....	Austria, Italy, Poland †(Latvia)
Right of association and combination for agricultural workers.....	Austria, Irish Free State, Italy, Poland, †(Latvia)
Workmen's compensation in agriculture.....	Irish Free State, Poland
Use of white lead in painting.....	Austria, Spain, Poland †(Latvia)
Weekly rest in industry.....	Italy, Spain, Poland †(Latvia)
Minimum age of admission of young persons as trimmers and stokers.....	Italy, Poland, Spain
Compulsory medical examination of young persons employed at sea.....	Italy, Japan, Poland, Spain †(Latvia)

### Ratifications Authorized

The Director's report also contains the information that the Bulgarian Parliament on June 6, 1924, approved the ratification of all the Geneva Conventions (1921), and that the ratification of these draft conventions has already been published in the Bulgarian Official Gazette.

*Fourth Conference (Geneva) 1922.*—Recent information with regard to the progress of ratifications in Norway is contained in *Industrial and Labour Information* published by the International Labour Office. On July 22, 1924, the Parliament unanimously adopted the proposals of the Social Committee that effect be given to the recommendations adopted by the Fourth session of the International Labour Conference concerning communication to the International Labour Office of statistical and other information regarding emigration, immigration and the repatriation and transit of emigrants (see *LABOUR GAZETTE*, December,

1922, pages 1270 to 1280). The report of the Ministry of Social Affairs, which the Committee had approved, states that the Recommendation can be put into effect in Norway without any considerable cost. On June 22, 1923, the Ministry issued the necessary instructions for the application of paragraphs I and II, dating from, and including, the third quarter of 1923; the Central Statistical Bureau had stated, however, that paragraph I could be carried out as regards immigrants only with great difficulty, and only partial effect is therefore given to it. Paragraph II is stated to require no special measures. (Paragraph III is still under consideration by the Ministry of Social Affairs.)

### Ratifications Recommended

*Belgium.*—On June 26, 1924, the Chamber of Representatives adopted a Bill approving all the Genoa draft conventions (which were signed by France and Belgium on June 1, 1921).

\* A résumé of the proceedings of the first International Labour Conference together with the text of the Conventions and Recommendations was published in the *LABOUR GAZETTE*, December 1919, pages 1425-1440.

† A résumé of the proceedings of the second International Labour Conference, together with the text of the Conventions and Recommendations, was published in the *LABOUR GAZETTE*, October 1920, pages 1316-1323.

‡ A résumé of the proceedings of the third International Labour Conference, together with the text of the Convention and Recommendations, was published in the *LABOUR GAZETTE*, January 1922, pages 40-59.

\* The application by Austria of the convention on hours of work is made subject to its ratification by the European countries "of the greatest industrial importance" (Germany, Belgium, France, Great Britain and Italy) and by the states adjoining Austria (Kingdom of Serbs, Croats and Slovenes, Poland, Switzerland, Czechoslovakia and Hungary).

† In addition to the 40 ratifications mentioned above, as reported by the Director, a report has been received showing that Latvia registered 5 ratifications on September 9, these being included in the above table. The authorization of the ratification of these conventions was mentioned in the Director's report.

On July 2, 1924, the Belgian Government submitted a Bill to the Chamber of Representatives approving the Convention concerning the weekly rest in industry, which was signed by France and Belgium on January 28, 1924.

*Canada.*—In May, 1924, the Federal Government tabled resolutions in the House of Commons proposing the ratifications of the Genoa draft Conventions concerning the minimum age of admission of children to employment at sea and unemployment indemnity in the case of loss of ship, and of the Geneva draft Conventions (1921) concerning the minimum age of admission of young persons to employment as trimmers and stokers and the compulsory medical examination of young persons employed at sea.

The Legislature of Nova Scotia on April 30, 1924, adopted a resolution approving the principle of the Washington Draft Conventions concerning the minimum age of admission of children to industrial employment and the night work of women, and the Geneva (1921) draft Conventions concerning the minimum age of admission of children to agricultural employment and the right of association and combination for agricultural workers.

The Legislature of Saskatchewan, on March 19, 1924, adopted a resolution approving the principle of the same draft conventions as those approved by the Nova Scotia Legislature above mentioned.

*Chili.*—On August 7, 1924, the Government submitted proposals to the National Congress for the ratification of all the draft conventions adopted at Washington, Genoa, and Geneva (1921). (Later information has been received stating that the Chilean Government on that date recommended to the National Congress the acceptance of the decisions of the five sessions of the International Labour Conference 1919 to 1923.)

*France.*—On August 25, 1924, the Government tabled a Bill in the Chamber of Deputies for the ratification of the Geneva draft convention concerning the use of white lead in painting. On July 31, 1924, a Bill for the ratification of the eight hours' draft convention was tabled in the Chamber of Deputies.

*Great Britain.*—On April 3, 1924, the Government brought in a Lead Paint Bill in the House of Commons. It proposes the ratification of the Geneva draft convention concerning the use of white lead in painting. It passed its second reading in the House of Commons on June 20, 1924.

*Hungary.*—On May 23, 1924, the Government introduced a Bill in the National Assembly for the ratification of the draft convention concerning the use of white lead in painting. If the Bill is passed, it will only come into force when the draft convention has been ratified by Germany, France and Great Britain. (This Bill proposes to incorporate the convention in the Hungarian Code.)

*Latvia.*—On May 6, 1924, the Cabinet approved the ratification of the Washington draft conventions concerning the employment of women before and after childbirth, the night work of women, the minimum age of admission of children to industrial employment, and the night work of children in industry. On June 5, 1924, the Cabinet approved the ratification of the draft conventions fixing the minimum age of admission of children to employment at sea and concerning facilities for finding employment for seamen, as well as the conditional ratification of the draft convention concerning unemployment indemnity in the case of loss of ship. The latter draft convention is not to be put in force in Latvia until it has been ratified by the "principal maritime states."

*Measures which may Facilitate the Ratification of Draft Conventions.*—Some important measures have been taken in certain countries which may themselves facilitate the subsequent ratification of certain of the draft conventions. In Belgium, on July 31, 1924, the Government introduced in the Senate a Bill concerning the use of white lead and paints containing white lead. In Canada, an act amending the Canadian Merchant Shipping Act gives effect to the Genoa draft conventions fixing the minimum age of admission of children to employment at sea and concerning unemployment indemnity in the case of loss of ship, as well as to the Geneva (1921) draft conventions fixing the minimum age of admission of young persons to employment as trimmers and stokers and concerning the compulsory medical examination of young persons employed at sea, which will come into force at a date to be fixed by proclamation of the Governor in Council (LABOUR GAZETTE, July 1924, page 574). In France, on August 25, 1924, the Government introduced a bill to amend the Labour Code so as to give effect to the draft convention concerning the use of white lead in painting. In Great Britain a bill giving effect to the Genoa Convention concerning unemployment indemnity in case of loss of ship, and to the Geneva Conventions concerning the minimum age of admission of young persons to employment as trimmers and stokers, and concerning the compulsory med-

ical examination of young persons employed as trimmers and stokers, and concerning the compulsory medical examination of young persons employed at sea, passed its second reading in the House of Commons on June 16, 1924. The Lead Paint Bill mentioned above gives effect to the Geneva draft convention concerning the use of white lead in painting. In Czechoslovakia the Bill concerning the use of white lead in painting was amended by the Senate on April 25, 1924, and sent back to the Chamber of Deputies.

#### Canadian Delegation at Geneva

On September 25 the International Labour Office received a visit from the Canadian delegation to the Fifth Assembly of the League of Nations—the Hon. Senator R. Dandurand, Minister of State and representative of the Government in the Senate; the Hon. E. M. Macdonald, Minister for National Defence; Mr. O. D. Skelton, Counsellor to the Ministry for External Affairs; and Messrs. R. O. Campney and E. M. Macdonald, Jr., secretaries.

The visitors were received by the Director, Mr. Albert Thomas; the Deputy Director, Mr. H. B. Butler; and the Chiefs of Divisions and Services of the Office.

In the course of an exchange of greetings, the Director cordially acknowledged the close and continuous interest which Canada had always displayed in the work of the International Labour Organization. He referred to the efforts which were being made by the Dominion Government, not only for the ratification of those International Labour Conventions which concerned questions within the federal jurisdiction, but also to bring about the application in the various Provinces of those Conventions which concerned questions within provincial jurisdiction. Canada had not been content merely to fulfil strictly its obligations as a Member of the Organization but had also demonstrated by its gift of doors for the new premises of the office the wholehearted support which it extended to the Organization. He rejoiced to know that in Canada the Organization had a powerful ally with whom it was in perfect harmony.

Senator Dandurand, in expressing the pleasure of the delegation in making the visit, said that Canada occupied a somewhat special position with regard to industrial questions. In Canada, the interests of workers and employers had not so far clashed to the same extent, perhaps, as in some other countries, and Canada was therefore not quite so directly preoccupied with those labour questions which engrossed the attention of European countries. Nevertheless, Canada realized that just

as it was necessary to work through the League of Nations for the maintenance of international Peace, so it was equally essential to collaborate in the establishment of internal social peace in every country. Canada recognized the good results of the collaboration of Governments, employers, and workers around the table in the International Labour Office. Canada had a growing population, and its children would have hard problems to solve. He believed that the solution of those problems would be made easier by the work which the International Labour Office had begun and pursued with so great zeal.

The Deputy Director spoke of the special importance of the part played by Canada in the Organization as the representative of the North American Continent, in view of the regretted absence of the United States. In a great many questions with which the International Labour Organization had to deal, particularly questions relating to emigration, the free and full expression of the point of view of North America through the voice of Canada was of the utmost value.

Mr. Macdonald associated himself with Senator Dandurand in declaring Canada's lively interest in the work of the League and of the Labour Organization. Canada was proud to be one of the eight States of chief industrial importance which had a right to participate in the work of the Governing Body of the Office. He thought that Canada had perhaps not given sufficient attention in the past to the continuity of representation in the Governing Body, and on his return to Canada he would, he hoped with the support of Senator Dandurand, press on the Government the need for appointing a permanent representative on the Governing Body.

#### Concerted Ratification of Hours Convention

The Labour Ministers of Great Britain, France, Belgium and Germany held a conference at Berne, Switzerland, on September 8, to consider the question of a concerted ratification of the Washington Convention on the Hours of Labour. The official report of the Conference was as follows:—

The Ministers were agreed in thinking it desirable, particularly on social grounds, to arrive at a practical application of the principle of the Eight Hours Day on the basis of the Washington Convention. They then proceeded to discuss the Draft Convention article by article. The purpose of the discussion was to remove any difficulties as to interpretation which might exist between them and thus to facilitate the process of ratification for each of their respective governments. They were glad to find that on most points their views coincided exactly and that where divergencies existed they were not considerable. Thus the Conference closed with the unanimous feeling that the common ratification of the Convention was possible.

### Advisory Committee on Industrial Hygiene

The Advisory Committee on Industrial Hygiene of the International Labour Office, a committee composed of technical experts which was set up in 1921 (see *LABOUR GAZETTE* August, 1921, page 979) as a result of a suggestion made by the First Session of the Conference at Washington in 1919, met in Geneva for three days during July, last. (The Office consults the members of the Committee from time to time, mainly by correspondence, and occasionally by holding meetings of members of the Committee who are experts on the particular questions under examination). Experts were present from the following countries: Austria, Belgium, France, Germany, Great Britain, Italy, Japan, Poland, and the Serb-Croat-Slovene Kingdom. The meeting was called for the examination of various questions in connection with industrial hygiene and pathology, including anthrax infection among workers, the possibility of placing in-

dustrial diseases on the same footing as industrial accidents from the point of view of compensation and the preliminary enquiries which would be required to prepare for uniformity of colour vision tests for railwaymen and seamen. The Committee formulated various suggestions with regard to the disinfection of hair, horns and hoofs, and with regard to measures for the protection of workers in certain occupations against the risk of anthrax infection. On the subject of workmen's compensation, it was of the opinion that workers who were victims of specified diseases, of which it compiled a list, should have a right to compensation at least equal to that which they would receive if they were victims of industrial accidents. Views were expressed with regard to the functions of medical men in connection with factory inspection, and lines laid down which it was believed should be followed in any scheme for periodical medical examination of workers in unhealthy occupations.

## RIGHT OF ENTRY OF FOREIGNERS INTO PROFESSIONS AND OCCUPATIONS IN VARIOUS COUNTRIES

**F**OLLOWING is the text of a memorandum which was submitted to the Fifth Assembly of the League of Nations in Geneva, containing a summary of information as to the practice in various countries with regard to the right of foreign nationals and companies which have been duly admitted into the several countries to exercise a profession, industry or occupation, also as to their freedom of residence and travel. The information was presented to the Assembly in the form of an interim report and will be extended later.

### 1. Ordinary open professions, industries and occupations

The practice as to individuals is as follows:—

In the majority of states—Belgium, Canada, Denmark (in the case of "non-licensed" trades), Finland, Germany, India, Italy, Japan, Latvia, The Netherlands, Roumania, Spain, Switzerland, New Zealand, etc.—national laws in principle assure to foreign nationals the same treatment with regard to the right to carry on any open profession, industry or occupation as is enjoyed by the nationals of the state. This right is, however, subject to certain restrictions. Foreigners are either excluded from the exercise of certain professions

or occupations or they are subject to special conditions as regards their admission (right of residence, etc.).

The national laws of certain states—Austria, Czechoslovakia, Hungary, Poland etc.—make the granting of national treatment contingent upon equal treatment being accorded to their nationals in the respective foreign country. In the absence of general reciprocity guaranteed by treaties, foreigners can (in Austria, Czechoslovakia, etc.) carry on an industry, trade, etc., only upon receiving a special license and after having proved the existence of reciprocity in each particular case.

The laws of other states (*e.g.* Denmark, Norway) impose special conditions. The laws of Denmark regarding "licensed trades" require either a residence of five years or the existence of a special treaty, or in the absence of both a special royal decree. In the case of trade, Norway requires a residence of one year.

Some of the professions and occupations from which foreigners are excluded in certain states are:

Hawkers (Czechoslovakia, Hungary); stockbrokers (Hungary, Japan, Roumania); agents or other exchanges (Roumania); bookmakers (Hungary); members of the Bourse (Japan);

printers; hotel or restaurant keepers (Finland); exploitation of cinematographic enterprises (Hungary); maritime insurance agents (Roumania).

The practice as to foreign companies is as follows:—

Except in certain cases, the regulations with regard to the right of foreign companies to carry on industry and trade are analogous to those applying to foreign individuals.

Among the additional restrictions which apply chiefly to the composition of the managing board the following may be mentioned.

In Denmark, foreigners can only be members or directors of a joint stock company on the condition that they have resided therein for five years or that they have the right of denizenship.

Hungarian laws prescribe that foreign insurance companies not established in Hungary must submit all policies taken out with them to the Government for approval.

In Finland, foreigners cannot be members of the managing board of a joint stock company; further, they cannot be partners in an "open" banking company, neither active partners of other "open" commercial companies.

The Italian law prescribes that all members of managing boards and at least one-third of the capital of a company exploiting sulphur or phosphate mines must be Italian.

In Latvia, two-thirds of the controlling board of a commercial company and one-third of an industrial company must be Latvians.

### *2. Liberal professions and other similar occupations*

As regards liberal profession, such as medical practitioners, dentists, midwives, pharmaceutical trade, veterinary surgeons, legal practitioners, etc., the general practice may be said to be that foreigners are excluded or only admitted in exceptional cases and upon fulfilment of special conditions required by law. Some countries (e.g. Canada) admit foreigners if they possess the necessary qualifications prescribed by law; others (e.g. Spain) admit them on the condition of reciprocity. Several countries exclude foreigners from medical practice (e.g. with a few exceptions Austria, Czechoslovakia, Poland, etc.), dental practice (e.g. Austria, Czechoslovakia, etc.), pharmaceutical trade, (Austria, Czechoslovakia, Denmark, Hungary, Japan, Poland, Switzerland, etc.) from practising as veterinary surgeons (e.g. Austria, Czechoslovakia, etc.), legal practice (South Africa, Austria, Czechoslovakia, Great Britain in the case of solicitors only, Denmark,

Japan, Poland, etc.). Other countries admit foreigners to practice certain of these professions upon fulfilment of special conditions, e.g. medical practitioners (Great Britain, South Africa, Denmark, Hungary, Japan, Switzerland, etc.), dentists (South Africa, Great Britain, Denmark, Hungary), midwives (Great Britain), pharmaceutical trade (South Africa on condition of reciprocity), veterinary surgeons (Hungary, Switzerland).

### *3. Occupations the carrying on of which is conditional on obtaining a concession or permit from the State*

The information received only refers to a very few countries and, in the first place, refers to the restrictions to which foreigners are subject as regards their admission to exercise such professions. In most cases the restrictions apply to shipping, pilotage, exploitation of mines, railways, tramways, gas and water supplies, undertakings for obtaining light or electric power, trade in alcoholic liquors, etc.

### *4. Occupations the exercise of which by foreigners is prohibited or subject to restrictions for the protection of essential national interests*

Information obtained up to the present shows that foreigners are generally excluded from service in the army, navy, air force and civil service. In certain countries the manufacture of, and trading in, munitions and explosives is reserved to nationals (e.g. Austria, Poland, etc.). Some countries impose special restrictions on foreigners with regard to the right to own shares in certain banks (e.g. Japan) and others on the right to vote on the general assembly of certain banks (e.g. Denmark).

### *5. Occupations which are the subject of monopolies*

From the spare information available it appears that the trading in products (salt, tobacco, etc.) which are subject to Government monopoly, if permitted at all, is in most cases reserved to nationals.

### **Freedom of Residence and Travel**

Generally speaking when duly admitted into a country, foreigners enjoy full freedom of residence and travel, subject, however, to certain police regulations as regards registration, changes of address, etc. Most of the existing commercial treaties in this respect are based on most-favoured-nation treatment.

## BRITISH EMPIRE CONFERENCE ON INTERNATIONAL LABOUR LEGISLATION

AN interesting feature of the recent British Empire Exhibition at Wembley was the conference held during the summer on the "British Empire and International Labour Legislation." Canada was represented at this conference by Messrs. F. A. Acland, formerly Deputy Minister of Labour, Tom Moore, president of the Trades and Labour Congress of Canada, and Wm. N. England, of the Federated Labour Party of British Columbia.

Lord Burnham, in his opening address, said the International Labour Organization was probably the best and most lasting part of the Treaty of Versailles. It was the only part of the organization of the League of Nations that was built on a popular and responsible basis.

Miss Bondfield (Parliamentary secretary, British Ministry of Labour) suggested that the next subject of a world inquiry should be wages. After statistical and economic committees had issued their reports, each country, she suggested, should collect and furnish statistics as to what its real wages were and should be, taking into account the stage of cultural development, and the degree to which money wages might be supplemented in agricultural areas. What real return for their labour did the workers get, and what was their standard of comfort? There were thousands of obstacles to overcome before they could employ a uniform measuring rate between countries, and yet this was most vital. They might be unable, in their lifetime, to get any international legislation on the subject, but they must make a beginning somewhere, and it would be best made through the International Labour Office. So long as sweated labour existed anywhere upon earth every country was responsible for it.

The discussion brought out the opinion that there were two questions calling for immediate inquiry. The first was that of the relation and contrast between wages paid in the sheltered and unsheltered, or, the competitive and non-competitive industries. The other question was that of conciliation in disputes between employers and workers. The International Labour Office could by investigation and research shed light on these practical questions by means of information gathered from all the industrial states of the world.

Mr. W. L. Hichens, of Great Britain, while not claiming authority to speak for British employers, stated his conviction that the great majority of them would welcome international legislation on labour matters. They

had long accepted national legislation in this connection. The theory of *laissez-faire* in industry was dead. The reasons which justified national legislation, justified international legislation. Just as the former not only protected the worker, but protected the humane employer against the unscrupulous, so the latter protected the more progressive nation against the competition of nations which worked longer hours and paid lower wages, and whose standards were generally lower.

Mr. S. W. Pascall, another British employers' representative, believed that both employers and workers in Great Britain should heartily welcome the establishment of an organ of international labour legislation. But whatever legislation was introduced by the "International Trade Board" of the future must carry with it the informed public opinion of all the nations concerned. It would be impossible to bring some regulations into force until the chief industrial countries were prepared to recognize them, with full knowledge and acceptance of their effects upon world trade and industry. If too many progressive conventions were passed by a certain number of countries, but not ratified by their competitors, the former would feel that they were fighting with their hands tied behind their backs.

Mr. Tom Moore, referring to conditions in Canada, said that the ideals of Canadian labour were much the same as those of labour in the rest of the Empire—to give better education, to reduce infant mortality, and in all ways to promote child welfare; to give security to the worker against illness, accidents, old age, and periods of unemployment, a security that should carry with it no stigma of charity; to establish reasonable working hours and an adequate living wage, and generally to raise the status of labour. The attempt was now being made to embody all these ideals in both national and international labour legislation.

Officers of the Ford Motor Company are stated to have made records during the past summer of the production in the various shops that were operating only five days in each week, the results showing that the rate of production per employee in the short week almost equalled that for a week of six days. It is recalled that several years ago Mr. Ford suggested a "five-day plan" as likely to prove advantageous for both employer and worker.

## INTERNATIONAL SEAMEN'S CONFERENCE

THE International Seamen's Conference, held under the auspices of the International Federation of Transport Workers, met at Hamburg in August. Organizations from Great Britain, France, Germany, Belgium, Denmark, Japan, the Netherlands, Norway and Sweden were represented.

The principal subject discussed was the proposed International Seamen's Code, and the limitation of hours of work at sea. The seamen's code would establish uniform legislation in regard to such questions as procedure for the engagement and dismissal of seamen; the employment of coloured labour; fines and punishment; illness on board ship or abroad; indemnities in case of shipwreck; work of women and children on board, hygiene, safety, and civil rights.

The advisory committee of the Seamen's Section of the Transport workers union recommended the adoption of the draft Seamen's code (Part I) submitted to the Joint Maritime Commission by the International Labour Office, and which is now under consideration by the Commission (LABOUR GAZETTE, September, page 778). The Conference however added three subjects which in their opinion should be included in an international code, namely, the right to indemnity in case of accident; penalties applicable to seamen; institution of ships' councils.

The Conference further requested the International Labour Office to work for the establishment of ships' councils to represent the seamen employed, and to defend their rights and interests with the master and the shipowners. The procedure for election and the functions of these ships' councils are laid down in detailed provisions suggested by the Seamen's Conference.

The following resolutions on the 8-hour day were adopted:—

In view of the fact that the eight-hour day or forty-eight-hour week figures in Part XIII of the Treaty of Versailles; that seamen of all classes and ratings have the same right to reasonable working conditions as land workers; and that the general introduction of the eight-hour day or forty-eight-hour week on vessels of the contracting States cannot be regarded as a burden for the ship-owners; the representatives of the Seamen, meeting at Hamburg on 4, 5, and 12 August, 1924, under the auspices of the I.T.F., decide and undertake to demand from their respective Governments the enforcement of the eight-hour day, and to make every effort and use every means at their disposal to create around this question such an atmosphere as will lead to its prompt and international realization.

The Bureau of the I.T.F. in submitting to the International Labour Office the above resolution adopted unanimously by the International Seamen's Conference held at Hamburg in connection with the international Transport Workers' Congress, requests that this question of the eight-hour day or forty-eight-hour week for seamen be placed on the agenda of the next International Conference of the International Labour Organization.

## Women's Thrift Fund in Great Britain

A recent issue of *Industrial and Labour Information*, published by the International Labour Office gives the following details with regard to the special provision made for female employees in connection with superannuation and pension arrangements for the staff of the British Bleachers' Association, Limited. It is stated that such provision for women workers is something of a novelty in Great Britain:—

The staff pension fund proper covers only male members of the staff, there being difficulties in the way of including both sexes in a fund of this kind. During the past year, however, a thrift fund has been constituted for female employees, on a contributory basis. There is no question of providing pensions by this fund, but any member retiring for legitimate reasons from the service of the Association, or dying while in its service, is entitled to receive the whole of the moneys standing to that member's account, including

the contributions made by the Association, together with accrued interest. Thus provision is made both for women who leave the service of the Association after a few years for the purpose of getting married, and for those who wish to retire at the age of 45. Such provision for women workers is something of a novelty in Great Britain.

## France and the Hours Convention

The French Minister of Labour, Mr. Godart, has introduced a Bill in the Chamber of Deputies for the ratification of the Draft Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week, adopted by the International Labour Conference at Washington in 1919.

It will be remembered that a Bill for this purpose is also before the British House of Commons.

## THE EMPLOYMENT SITUATION AT THE BEGINNING OF SEPTEMBER, 1924, AS REPORTED BY EMPLOYERS

**E**MPLOYMENT showed a further decrease at the beginning of September, paralleling the movement indicated at the same time in 1923 and 1921. The declines recorded at this time of year are usually due in part to the farmers' demands for harvest workers. The decrease in the index number (based on the number employed in January 1920 as 100) that was caused by the contraction recorded on September 1, was, however, larger than the average reduction on the same date of the last three or four years. The 5,942 firms reporting to the Dominion Bureau of Statistics employed 767,204 persons on September 1, or 14,374 less than on August 1. The index number declined from 94.7 on the latter date to 93.1 at the beginning of September, as compared with 100.0, 93.7 and 88.7 on September 1, 1923, 1922 and 1921, respectively. The course of employment since the beginning of 1922 is illustrated in the accompanying chart.

Employment in manufacturing showed a further decline, in spite of improvement in some lines, owing chiefly to contractions in iron and steel. The re-opening of logging camps resulted in a considerable increase in employment in that industry; coal mining, building construction and trade also afforded more employment than at the beginning of August. Nickel mines, steam railway and water transportation, highway and railway construction, on the other hand, showed considerable declines.

### Employment by Provinces

The trend of employment in all provinces was downward. Firms in Ontario recorded the most extensive actual losses in payroll, although the percentage reduction in the Maritime Provinces was larger. Business activity in British Columbia showed the least falling off.

*Maritime Provinces.*—Rolling mills, construction and transportation registered pronounced contractions, but textiles and coal mines were busier. According to returns from 520 firms they had 64,610 persons in their employ as compared with 67,449 on August 1.

*Quebec.*—The largest decreases in Quebec were shown in iron and steel, textiles, transportation and railway construction. Starch and glucose, leather and non-ferrous metal factories and logging, also recorded curtailment of activity. Building and highway construction, trade, lumber, pulp, rubber, tobacco and electric current works, however, afforded employment to a larger number of workers

than in the preceding month. Returns were received from 1,316 employers whose staffs aggregated 216,622 persons or 2,280 less than at the beginning of August.

*Ontario.*—Declines in iron and steel principally caused the contraction in this province, although nickel-copper mining, rubber, railway transportation and construction afforded less employment, as did also leather, lumber, brick and non-ferrous metal works. Logging camps, on the other hand, were decidedly busier and textiles, food, musical instrument, chemical, pulp, paper and mineral product plants showed improvement. The 2,714 firms making returns employed 315,208 persons as compared with 321,088 on August 1.

*Prairie Provinces.*—Reductions in railway construction and operation were responsible for most of the decrease of between two and three per cent in this district; trade and railway car shops were also slacker. Abattoirs, coal mines and building contractors, however, reported increased activity. Statements tabulated from 767 firms showed that they employed 99,632 persons; in the preceding month they had 102,546 persons on their pay-rolls.

*British Columbia.*—Manufacturing, particularly in the lumber and canning divisions, and logging, recorded improvement, but highway and railway construction registered declines on a larger scale. The result was a decrease of 461 in the staffs of the 625 firms reporting, who employed 71,132 persons on September 1.

The following table gives the index numbers of employment in five areas into which the Dominion is divided in these statistics:—

(Number employed January 1920=100)

District	Relative weight	Sept. 1 1924	Aug. 1 1924	Sept. 1 1923	Sept. 1 1922	Sept. 1 1921
Maritime Provinces.....	8.4	86.6	90.2	101.4	90.3	93.5
Quebec.....	28.2	97.8	98.7	100.1	91.6	87.4
Ontario.....	41.1	88.9	90.3	98.1	91.9	83.7
Prairie Provinces.....	13.0	93.9	96.4	101.1	101.2	98.5
British Columbia.....	9.3	106.0	107.1	106.6	102.0	95.6
Canada.....	100.0	93.1	94.7	100.0	93.7	88.7

### Employment by Cities

Firms in Montreal, Quebec, Ottawa and Hamilton reported reduced employment, while in Toronto, Winnipeg and Vancouver increased activity was noted.

*Montreal.*—Textile and iron and steel factories indicated considerable decline, as did also shipping and stevedoring. Starch and glucose works showed smaller reductions. Building construction, on the other hand, absorbed a very much larger number of men and improvement was also indicated in trade

*Winnipeg.*—Further improvement was registered in Winnipeg; 290 firms reported 24,220 persons on payroll, or 276 more than in the preceding month. Building contractors, abattoirs and some other branches of manufacturing recorded the gain, while trade was slightly less active.

and in roofing and electric current works. According to the 719 reporting employers their staffs declined from 109,278 on August 1 to 106,899 at the beginning of September.

*Quebec.*—A slightly downward tendency was noted in Quebec city, largely due to curtailment in leather factories. A combined working force of 8,588 persons was indicated by the 95 firms reporting; these had 8,631 persons on payroll in the preceding month.

*Toronto.*—For the first time since the end of April employment in Toronto showed a favourable turn. This was largely owing to improvement in manufacturing, mainly in textile, food and printing works. Telephones afforded slightly less employment, as did also building construction. Statements were received from 787 firms employing 92,209 persons or 792 more than in the preceding month.

*Ottawa.*—A further decline was recorded in Ottawa; pulp and lumber mills showed the largest losses. A combined working force of 10,682 was recorded by the 128 firms making returns, who employed 10,929 persons on the date of their last report.

*Hamilton.*—Employment in iron and steel showed a pronounced falling off, which was partly offset by substantial recovery in textiles. With the exception of a moderate gain in electric current works, the changes in other industries were slight. Reports were compiled from 199 employers, whose staffs aggregated 24,077 as compared with 24,476 on August 1.

*Vancouver.*—Employment in sawmills, food factories, construction and transportation increased moderately in Vancouver, where 468 workers were added to the staffs of the 226 firms making returns. They employed 22,488 persons at the beginning of September.

The following table shows the index numbers of employment in these cities:—

(Number employed January 1920=100)

City	Relative Weight	Sept. 1 1924	Aug. 1 1924	Sept. 1 1923	Sept. 1 1922
Montreal.....	13.9	92.9	95.1	93.6	90.5
Quebec.....	1.1	96.4	96.9	.....	.....
Toronto.....	12.0	85.3	83.9	89.6	88.3
Ottawa.....	1.4	100.6	100.6	107.5	.....
Hamilton.....	3.1	79.4	80.9	92.2	.....
Winnipeg.....	3.2	86.4	85.5	89.9	98.9
Vancouver.....	2.9	104.0	102.3	104.3	102.2

**The Manufacturing Industries**

Further large declines in iron and steel caused a net reduction in employment in manufacturing; these pronounced contractions were supplemented by losses on a smaller scale in leather, textile, brick and non-ferrous metal works. There were, however, offsetting increases in meat-packing and slaughtering, musical instrument, fruit and vegetable canning, confectionery, paper goods, printing and publishing, electric current and electrical apparatus, petroleum and roofing factories. Statements were received from 3,862 manufacturers employing 416,728 operatives as compared with 426,440 on August 1. The trend

of employment during the corresponding period of last year was also retrogressive, although the index number then was rather higher than at the present time.

*Animal Products—Edible.*—Employment in meat-packing and fish preserving establishments generally increased, while dairies were somewhat slacker. An aggregate working force of 15,331 persons was employed by the 170 firms reporting, as compared with 15,096 at the beginning of August. The difference was a gain of 1.6 per cent, which compares with a minor decline at the beginning of September, 1923, when employment was in less volume.

*Leather and Products.*—The improvement indicated on August 1, was not maintained during the month, there being a decrease on September 1, of 371 persons in the staffs of the 197 firms from which returns were received. As they employed 16,066 persons as compared with 16,437 in the preceding month this was a decline of 2.3 per cent which occurred largely in tanning and boot and shoe factories. Firms in Quebec and Ontario registered the bulk of the loss. Contractions had also been indicated on September 1, 1923, although they were then on a rather smaller scale and the situation was slightly more favourable.

*Lumber and Products.*—Varying movements in the different divisions coming under this heading resulted in exactly the same number of persons being employed by the firms making returns as on August 1. The payrolls of the 721 manufacturers reporting totalled 55,691 persons. Rough and dressed lumber mills recorded further substantial improvement, but furniture, vehicle and match factories released a large number of workers. Employment in lumber increased on the whole in Quebec and British Columbia, while in Ontario and the Prairie Provinces there were declines. Contractions on a large scale had been indicated on the same date of last year; conditions then were better.

*Musical Instruments.*—Greater activity was registered in musical instrument factories, thirty-eight of which increased their pay-rolls by 195 persons to 2,761 on September 1. The improvement was reported almost wholly in Ontario. The trend of employment during the same period of last year was downward.

*Plant Products—Edible.*—Continued, though smaller gains were apparent in this division. Fruit and vegetable canneries, chocolate and confectionery works reported considerable improvement, but starch and glucose factories were less fully employed. The additions of staffs were recorded very largely in Ontario,

while in Quebec there were declines. Reports were tabulated from 314 firms employing 28,421 persons, as compared with 27,708 in the preceding month. The difference was an increase of 2.6 per cent. The index number stands several points higher than on September 1, 1923, a slightly unfavourable tendency having been in evidence then.

*Pulp and Paper Products.*—Recovery from the losses recorded in the two preceding months was indicated at the beginning of September, when the 458 reporting firms increased their payroll by 365 persons to 51,371. This increase occurred largely in plants producing paper goods and in printing and publishing establishments in Quebec and Ontario. Practically no change on the whole was shown in pulp and paper mills. Although declines had been recorded at the same period of last year employment then was slightly above its present level.

*Rubber Products.*—Improvement in rubber footwear factories in Quebec was offset by declines of practically the same size in Ontario footwear and tire works. According to returns from 32 employers, their staff aggregated 9,627 persons as compared with 9,649 in the preceding month. Substantial improvement had been registered at the beginning of September 1923; the situation then was rather more favourable.

*Textile Products.*—A further though very much smaller reduction in personnel was indicated by the 562 textile manufacturers reporting, who employed 62,437 operatives, as compared with 62,690 at the beginning of August. Substantial improvement was shown in cotton, hosiery and knitting mills, while garment and woollen works were decidedly slacker on the whole. Firms in the Maritime Provinces, Ontario and the Prairie Provinces showed considerable gains; but in Quebec there were large declines. The contractions registered during the corresponding period of last year were very much more extensive. The index number then, however, was rather higher.

*Clay, Glass and Stone Products.*—Brick-yards, chiefly in Ontario, were slacker than at the beginning of August, and stone works afforded slightly less employment. Returns were tabulated from 118 employers who had 8,974 persons working for them, or 220 less than in the preceding month. Slight improvement was shown at the beginning of September, 1923, and the index number then was higher.

*Electric Current.*—The production of electric current showed an increase in Quebec, while elsewhere little change in the situation

was indicated. This expansion is very much more marked than that registered on the corresponding date of last year, when the index number was several points below its present level. An aggregate working force of 12,279 persons was reported by the 87 concerns making returns on August 1, as compared with 12,077 in the preceding month.

*Electrical Appliances.*—An upward movement was shown in factories producing electrical appliances, chiefly in Quebec and Ontario, according to reports from 34 employers whose staffs aggregated 8,478 persons. On August 1 they had employed 8,371. A somewhat larger increase had been recorded on the same date of last year, employment then being in rather less volume.

*Iron and steel products.*—Pronounced contractions were indicated in many of the groups coming under this heading; the largest of these occurred in railway car shops, automobile, rolling, forging and agricultural implement works. General machine shops, foundries, shipyards and structural iron and steel factories were also slacker. On the other hand, works producing heating appliances and tools were busier than at the beginning of August. All provinces shared to some extent in the losses, which were especially heavy in Ontario. The working force of the 646 firms making returns declined from 112,156 persons on August 1, to 101,283 at the beginning of September. This reduction was in contrast with the increase in employment indicated on the same date of last year, when the index number was considerably higher.

*Non-ferrous metal products.*—This industry employed a smaller number of persons than in the preceding month, chiefly in the lead, tin, zinc and copper division. Reports were compiled from 103 manufacturers with 10,583 employees or 326 fewer than at the beginning of August. The decreases occurred mainly in Ontario and Quebec. Employment in this industry was not so active as on September 1, 1923, on which date a slightly upward tendency had been evident.

*Mineral Products.*—Gas, petroleum and baking powder works in Ontario were busier than at the beginning of August. Statements were received from 70 firms in the mineral group employing 10,034 persons as compared with 9,865 in the preceding month. This improvement compared with a decline in the same month last year, when employment was on a lower level.

*Miscellaneous Manufactures.*—Roofing works in Quebec afforded more employment than in the preceding month, 160 persons having been

added to the staffs of the 64 concerns reporting throughout the Dominion. They employed 3,715 persons.

### Logging

Substantial improvement was indicated in logging camps at the beginning of September; the gain was very much more pronounced than that reported on the same date of 1923, although the index then was practically the same as at the present time. The expansion this year occurred mainly in Ontario and British Columbia, while in Quebec there was a further small decline. A combined working force of 17,002 persons was reported by the 211 firms making returns who employed 14,161 at the beginning of August.

### Mining

*Coal.*—Employment in coal mining in the Maritime and Prairie Provinces increased moderately, while in British Columbia there was a nominal gain only. Improvement on a larger scale had been reported on September 1, 1923, and activity in coal mines was then considerably greater. Returns for September 1, 1924, were compiled from 90 operators whose staffs aggregated 26,470 persons as compared with 25,895 at the beginning of August.

*Metallic Ores.*—Pronounced contractions were registered in metallic ore mines in Ontario while there was a small increase in British Columbia. Curtailment of operations in nickel-copper mines accounted for the loss in the former province. Forty-seven mines reported a working force of 13,284 persons as compared with 14,288 in the preceding month. This was a reduction of over 7 per cent. Although some improvement had been indicated on September 1, 1923, the index number at the present time stands some 15 points higher.

### Communication

A slight falling off in employment on the whole was reported in the communication industries; telegraphs afforded rather more employment, while telephones were slacker. According to 166 companies in the division, 23,252 persons were employed as compared with 23,424 in the preceding month. The reduction was registered largely in Ontario. Expansion had been indicated during the corresponding period of last year but the situation was less favourable than at the present time.

### Transportation

*Steam Railway Operation.*—A further and rather larger reduction in personnel was indicated by the operating departments of the

railways at the beginning of September; 1,885 persons were released after August 1 by the 103 concerns and divisional superintendents making returns, who employed 76,295 workers. All provinces shared to some extent in the contractions, those in the Prairie Provinces being most pronounced. The number of persons employed in railway transportation during the corresponding period of last year exceeded the present payrolls. Employment on September 1, 1923, had shown an upward trend.

*Shipping and Stevedoring.*—Water transportation in the Maritime Provinces and Quebec afforded considerably less employment on September 1 than in the preceding month. The declines, however, affected a much smaller number of persons than those registered on the same date in 1923 when the index number

was over 30 points lower. Statements were tabulated from 60 employers whose staffs aggregated 13,472 persons as compared with 14,582 on August 1.

**Construction and Maintenance**

*Building Construction.*—For the sixth consecutive month, employment in building construction increased substantially, according to returns from 316 contractors who employed 27,013 persons. This was 1,020 or 3.9 per cent more than at the beginning of August. Firms in Quebec, the Prairie Provinces and British Columbia showed expansion, but elsewhere employment declined slightly. Additions to staffs on a smaller scale were recorded on September 1, 1923. The index number then, however, was somewhat above its present level.

**INDEX NUMBERS OF EMPLOYMENT IN CANADA, BY INDUSTRIES, IN SEPTEMBER, 1924, ETC**

\*The term "relative weight" is explained in the last paragraph of the accompanying article.

*Highway Construction and Maintenance.*—For the first time since the end of February, employment in this industry showed a downward trend. All provinces except Quebec shared in the shrinkage; in that province there was a considerable increase in personnel. Reports were received from 114 employers whose payrolls declined from 17,738 persons on August 1 to 16,538 at the beginning of the month under review. Contractions had also been registered at the beginning of September of last year.

*Railway Construction and Maintenance.*—Continued curtailment of operations was indicated by the 35 concerns and divisional superintendents making returns in this division. They released 3,959 persons, reducing their staffs to 41,523. Decreases were recorded in all provinces, but those in the Prairie district were much the largest. The declines registered on September 1, 1923, were not so extensive as on the same date in this year

and a higher level of employment was recorded by the reporting firms.

#### Trade

Moderate improvement was shown in both retail and wholesale trade, repeating the movement indicated at the same time in last year. The largest increases were in Quebec and Ontario, while retail trade in the Prairie Provinces declined to some extent. Statements were tabulated from 579 establishments with a total sales force of 54,813 persons as compared with 54,632 at the beginning of August.

The accompanying table shows the index numbers of employment reported by employers, by industries, as at the first of September and the first of August, 1924, as compared with September 1, 1923, 1922 and 1921. The column headed "relative weight" shows the proportion that the number of employees reported in the indicated industry bears to the total number of employees reported in Canada by the firms making returns on September 1, 1924.

### EMPLOYMENT OFFICE REPORTS FOR AUGUST, 1924

**D**URING the month of August, 1924, the reports from the offices of the Employment Service of Canada showed a marked increase in the volume of business transacted as compared with the preceding month. The expansion was recorded during the latter half of the month and was mainly in the prairie provinces where harvesting and threshing operations created an active demand for workers. The calls this year, however, were not so heavy as during August of last year, the decline being attributable to cold and unfavourable weather in the grain areas. A further expansion was anticipated, however, for the early part of September. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, shows that the curves of applications, vacancies and placements remained at approximately the same level during the first half of August, followed by a favourable upward trend, marking the expansion at the commencement of the harvest period. Further augmentation will, no doubt, be recorded for the following month. That the curves did not show the same expansion as in previous years was due largely to delayed operations on account of wet weather in the Western provinces, and also to the fact that other outdoor industries have not been so active during this year.

The offices reported that an average of 1,367 applications for employment were received daily during the first half of August, in comparison with 1,324 daily during the preceding period, and with 2,257 daily during the corresponding period of 1923. During the latter half of August applications for work averaged 2,060 daily, in contrast with 3,121 daily during the same period last year.

The average number of vacancies reported by employers to the Service daily was 967 during the first half and 1,749 during the latter half of the month, in comparison with 2,143 and 3,327 daily during the corresponding periods of August, 1923. During the preceding period (July, 1924) vacancies averaged 998 daily.

The average number of placements made daily by the offices of the Service during the first half of August was 885, of which the average number in regular employment was 659 daily, and in casual work 226. This is in comparison with an average of 884 during the preceding period and with 1,931 during the corresponding period a year ago. During the latter half of the month placements averaged 1,692 daily, in contrast with 2,828 during the same period a year ago. Of the placements during the latter period, the average number in regular employment was 1,429 daily, and 263 in casual work.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924 (8 months).....	147,663	86,617	234,280

During the month of August, 1924, the offices referred 34,911 persons to employment, and effected a total of 33,498 placements. Of the latter, 27,143 were in regular employment and 6,355 in casual work. Placements in regular employment numbered 23,459 men and 3,684 women. The Service received notification of 35,302 opportunities for employment, of which 26,768 were for men and 8,534 for women workers. Applications for employment numbered 34,665 from men and 9,892 from women—a total of 44,557 applications.

The placements in regular employment by provinces were as follows:—

- Nova Scotia: 307 men, 54 women.
- New Brunswick: 222 men, 65 women.
- Quebec: 991 men, 432 women.
- Ontario: 6,130 men, 1,111 women.
- Manitoba: 2,417 men, 482 women.
- Saskatchewan: 4,657 men, 469 women.
- Alberta: 3,182 men, 501 women.
- British Columbia: 5,553 men, 570 women.

#### MARITIME PROVINCES

A decline in employment was recorded in the Maritime Provinces. Work was available on provincial roads and highways, on bridge repair work and harbour development. In some localities street and sewer work was under way and a number of carpenters and building labourers were placed in short alteration and repair jobs. Few requests for lumbermen were received at Sydney and New Glasgow, a number of men having been sent to the woods, while from Chatham, Moncton and St. John orders for sawmill workers were satisfactorily filled. There was a steady demand for domestic workers for hotels, restaurants and residences, with a slight increase in the applications received.

#### QUEBEC

There was little change reported in the industrial situation, a decline being shown in the demand for farm workers. A very slight improvement was reported in the building industry, with bricklayers, plasterers and

building labourers required in considerable numbers. An increased number of vacancies was available in the lumbering industry, several shipments of men being made to the northern camps. A decline was recorded in the calls for hotel and restaurant workers, with an active demand for domestic help.

#### ONTARIO

A steady demand for farm help was recorded at all the offices, the calls for harvest workers, however, being fewer in number than in previous years as rainy weather had delayed operations to some extent. Toward the latter part of the month a large number of harvest and threshing hands were transferred to the Western harvest fields and this movement of labour tended greatly to improve the local employment situation. Building activities throughout the province were limited in scope, and numbers of building mechanics were unemployed. Road repairs and highway construction provided work for many men near Belleville, Chatham, Ottawa and Toronto, while street paving and sewer work was under way in most municipalities. A good employment outlet was provided in railway construction work at North Bay, Hamilton, St. Thomas, Toronto and Port Arthur. At the latter point men were required for the grain elevators. A few orders for bushmen, pulpwood cutters and tie-makers were received at Toronto, Timmins, and North Bay, and signs of an improved demand in this group were reported from Cobalt and Sault Ste. Marie. Continued slackness prevailed in manufacturing industries, the number of calls for workers being at a minimum. Difficulty was experienced in supplying sufficient work in hotels and institutions for the trained women applying, but experienced resident household workers were greatly in demand.

#### MANITOBA

Unsettled weather delayed the cutting and harvest operations throughout the province, but toward the latter part of the month a marked advance was shown in the placement of experienced workers. The augmented demand for harvest hands was met satisfactorily by the large numbers of men transferred in from the Eastern provinces. This increased call for harvest labour is chiefly responsible for the improved employment situation as noted in this month's report, although a slight expansion in the work available in the building and railway construction groups has aided materially. In the Winnipeg district most of the work available was confined to residential construction, while a number of

men were placed with the railways as section and extra gang hands. However, the offices continued to register a considerable number of unemployed building tradesmen. The activities in the Women's Section showed a decline in the urban orders, with a marked increase in the number of workers required as farm housekeepers and domestics.

SASKATCHEWAN

Harvest activities were not general as yet in Saskatchewan, but the work in this group provided the bulk of employment offered during the month. Cutting was well under way with an increased demand for workers

ALBERTA

With the improved weather conditions toward the latter part of the month, the calls for experienced harvest workers increased rapidly, but the demand was not so large as in previous years. Little improvement was shown in the construction groups; building activities were slack; highway, road and park development declined slightly, and only a small number of workers were placed on irrigation work at Calgary. Carpenters and building labourers were required for work at the grain elevators throughout the province. In spite of this and the continued activity in railway maintenance, many skilled trades-

in the districts near North Battleford, Prince Albert, Regina and Saskatoon. The larger number of harvest workers required toward the latter part of the period were readily supplied by local applicants and by men transferred in from British Columbia and Ontario points. In the building group most tradesmen were busy and few vacancies for workers were available at the offices. Near Estevan and Moose Jaw road work afforded several opportunities for employment, while teamsters, labourers and sectionmen were in demand for railway construction and maintenance work at Saskatoon, Yorkton and Swift Current. Logging was quiet, a few calls for river work being supplied from the Prince Albert district. A marked increase was recorded in the placement of domestic workers in rural sections

men and labourers were unemployed. No change was recorded in conditions in the mining group.

BRITISH COLUMBIA

Agricultural workers were not in great demand locally and many experienced men were sent to employment in the harvest fields of Saskatchewan and Alberta, these transfers lessening the number of unemployed in the province. Occasional requests for building tradesmen, carpenters, etc., were recorded at the offices, but the reports indicate that while the number of vacancies offered in this group were very slight few experienced and able-bodied mechanics were without employment in the larger centres. Some excavation, road work and bridge building were under way, and railway maintenance con-

tinued to provide employment for several. The logging group showed little of interest to report, the small demand for coremakers and swampers being easily satisfied. There was a slight improvement in the mining industry, though vacancies offered were small in number. A slight increase in vacancies for domestic and institutional workers was recorded at Vancouver and Victoria, with a ready supply of applicants. Numbers of women were sent as cooks and housekeepers to employers in the harvest fields and the prairie provinces.

#### Movement of Labour

During August, 1924, the offices of the Employment Service of Canada made 27,143 placements in regular employment, of which 21,464 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 7,315 were granted the Employment Service reduced rate, 2,360 going to points in the same province as the despatching office and 4,955 to other provinces.

From the office at Montreal 3 bushmen were sent at the reduced rate to camps within the zone and from Hull, Montreal and Quebec, 248 certificates were granted to bushmen going to the vicinity of North Bay, Sudbury and Sault Ste. Marie. Of the workers who were granted the Employment Service reduced rate in Ontario one was a baker going from Pembroke to Hull, Que., and one a farm hand travelling from Port Arthur to Moose Jaw, Sask. Of the 619 provincial transfers the majority were bushmen and labourers going to northern camps, 34 were potato peelers going from Hamilton to Windsor, one an engineer from St. Catharines to Niagara Falls, two stone masons from Hamilton and Toronto to Kingston and several carpenters and miners from Sudbury to the Ottawa zone. From Manitoba offices 936 workers were transferred at the reduced rate, 549 of whom were harvesters going to points within the province, the remaining 40 provincial transfers including housekeepers, do-

mestic workers, waitresses and hotel help for sections near Brandon and Dauphin. From the office at Winnipeg one general worker was sent to domestic employment at Vancouver, 3 harvesters, 4 cement finishers and 2 carpenters to Calgary, Edmonton and the rural districts of Alberta, 261 harvesters and farm workers to various points in Saskatchewan and 71 lumber workers including pulp cutters, post markers, river drivers and camp cooks were transferred to Port Arthur, Ont. Special transportation certificates granted by Saskatchewan offices number 675, of which 7 were issued to harvest hands going from Saskatoon and Regina to Manitoba and 3 were farm hands going from Regina to various points in Alberta. Of the 665 provincial transfers, 610 were farm hands and harvest workers going from Saskatoon, Moose Jaw and Regina to various points, 7 were cooks, 10 were river drivers, the remainder being chiefly housekeepers, domestic workers and general help, for the rural sections of the province. From the Calgary office one logger was transferred to Prince George, B.C., and 46 farm hands to various points in Saskatchewan. Of the workers travelling at the reduced rate within the province 220 were farm hands and harvest workers, 134 were labourers, teamsters, dump men, carpenters and mill hands, going from Edmonton to points within the zone. British Columbia offices issued 4,431 transportation certificates, 1,573 being granted to workers going to the harvest fields in Alberta, and 2,685 to men destined to the grain areas in Saskatchewan. The 43 workers sent to Manitoba were chiefly harvest labourers. Within the province the offices granted 130 certificates, 50 to fruit workers, 5 to miners, and the remainder were granted to bushmen going to the camps north of Prince George and Prince Rupert.

Of the 7,315 workers, who benefited by the Employment Service reduced rate, 1,910 were carried by the Canadian National Railways, 5,398 by the Canadian Pacific Railway and 7 by the Pacific Great Eastern.

## BUILDING PERMITS ISSUED DURING AUGUST, 1924

REPORTS from 56 cities, tabulated by the Dominion Bureau of Statistics, show that there was a decline in prospective building during August, when the value of the permits issued was \$9,463,756, as compared with \$11,090,760 in July, 1924. This was a decrease of \$1,627,004 or 14.7 per cent, which was considerably more than the average decline registered during August as compared with July, based on figures for 35 cities in the last fourteen years. In comparison with August, 1923, there was a falling off of \$1,548,002 or 14.1 per cent; the value for that month was \$11,011,758.

Detailed statements were furnished by 46 cities, showing that they had issued nearly 800 permits for dwellings valued at over \$3,000,000, and some 2,000 permits for other buildings estimated to cost more than \$2,000,000.

The value of the building authorized in Nova Scotia, Quebec and Saskatchewan was higher than during July, there being increases of 266.0, 22.7 and 91.4 per cent, respectively, in these provinces. Of the declines recorded in the remaining provinces, that of \$1,629,794, or 34.3 per cent in Ontario was the largest actual loss, while the most pronounced proportional reduction, of \$688,093 or 86.1 per cent, was in New Brunswick.

As compared with August, 1923, Nova Scotia, New Brunswick, Quebec and Saskatchewan registered increases in the value of

permits issued; those in Quebec of \$1,966,975 or 78.6 per cent and in New Brunswick of \$81,284 or 269.1 per cent, were most marked. The 26 cities reporting in Ontario recorded a decline of \$2,289,640 or 42.3 per cent, while in British Columbia there was a decrease of \$1,204,340 or 59.1 per cent.

The value of prospective building in Montreal was higher than in July, 1924, and also than in August, 1923. In Toronto, Winnipeg and Vancouver, however, there was a falling off in both comparisons. Halifax, Fredericton, Quebec, Shawinigan Falls, Three Rivers, Belleville, Chatham, St. Catharines, Welland, Moose Jaw, Regina, Saskatoon, Nanaimo and New Westminster recorded gains as compared with the preceding month and also with August of last year.

The value of the building permits issued in 56 cities during the first eight months of this year was 17.2 per cent lower than in the same period of 1923, and 24.4 per cent lower than in 1922. There was, however, an increase of 2.9 per cent as compared with 1921. The total for the January-August period 1924 was \$78,437,887; in 1923, \$94,737,438; in 1922, \$103,689,217 and in 1921, \$76,245,999.

The accompanying table shows the value of the building permits issued during August as compared with July, 1924, and with August, 1923. The 35 cities for which records are available since 1910 are marked with asterisks.

## FAIR WAGE CONTRACTS, SEPTEMBER, 1924

**D**URING September the Department of Labour received for insertion in the *LABOUR GAZETTE* the following information relative to fifteen fair wage contracts awarded by the Department of Public Works of Canada. Fourteen of these contracts contain the usual fair wage clause as follows:—

All mechanics, laborers, or other persons who perform labor in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

The remaining contract contains a fair wage schedule, the following clause being included in regard to labour conditions:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for

overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or fail at any time to pay to any employee or employees for any services performed or for any hours of labour wages according to the rates set forth in the schedule or fixed therefor by the Minister of Labour hereunder regarding overtime and classification, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

### DEPARTMENT OF PUBLIC WORKS

Construction of seed laboratory and alterations to residence Collier street, Toronto, Ontario. Name of contractor, Britnell Contracting Company, Limited, Toronto, Ontario. Date of contract, September 2, 1924. Amount of contract, \$43,834. The fair wage schedule inserted in this contract is as follows:—

Terrazzo floors and alterations to toilets, immigration shed, Louise Embankment, Quebec, Quebec. Name of contractor, Messrs. Brousseau and Frere, Quebec, Quebec. Date of contract, August 30, 1924. Amount of contract, \$4,150.

Construction of public wharf at La Reine, Quebec. Name of contractors, Messrs. Farley and Grant, Ottawa, Ontario. Date of contract, September 4, 1924. Approximate expenditure, \$3,650.10. Unit prices set forth in contract.

Alterations to heating apparatus and erection of a porch at Bellevue Office Building, Halifax, Nova Scotia. Name of contractor, Farquhar Brothers, Limited, Halifax, Nova Scotia. Date of contract, September 2, 1924. Amount of contract, \$4,095.

Installation of an auxiliary water supply system in Immigration Building, Quebec Quebec. Name of contractor, J. B. A. Lachance, Levis, Quebec. Date of contract, September 3, 1924. Amount of contract, \$6,180.

Dredging eastern entrance at Toronto Harbour, Toronto, Ontario. Name of contractor, John E. Russell, Toronto, Ontario. Date of contract, September 4, 1924. Amount of contract, Class "B," 54 cents per cubic yard, scow measure. Approximate expenditure, \$26,295.

Cleaning out of a shoal in the King Edward Cut, Fraser River, British Columbia. Name of contractors, Pacific Construction Company, Limited, Vancouver, British Columbia. Date of contract, September 2, 1924. Approximate expenditure, \$19,800.

Dredging Rivière St. François, Quebec. Name of contractor, Aimé Laperrière, Pierreville, Quebec. Date of contract, September 4, 1924. Amount of contract, Class "B," 30 cents per cubic yard, place measure. Approximate expenditure, \$7,880.

Alterations to heating apparatus, Post Office Building at Arnprior, Ontario. Name of contractor, D. C. O'Grady, Arnprior, Ontario. Date of contract, September 3, 1924. Amount of contract, \$1,185.

Fittings in post office, Southam Building. Calgary, Alberta. Name of contractor, Baird Construction Company, Limited, Calgary, Alberta. Date of contract, August 20, 1924. Amount of contract, \$4,844.

Repairs to wharf, Tofino, British Columbia. Name of contractors, McDonald and Wither, Victoria, British Columbia. Date of contract, September 6, 1924. Approximate expenditure, \$4,671.21. Unit prices set forth in contract.

Dredging of Pentecost River, Quebec. Name of contractors, Canadian Dredging Company, Limited, Midland, Ontario. Date of contract, September 11, 1924. Amount of contract, Class "B," 52 cents per cubic yard, scow measure. Approximate expenditure, \$38,000.

Breakwater at Portuguese Cove, Nova Scotia. Name of contractor, W. E. Landry, Antigonish, Nova Scotia. Date of contract, September 8, 1924. Approximate expenditure, \$15,203.10.

Installation of hot water boilers at the Customs House, Kingston, Ontario. Name of contractor, Messrs. McKelvey and Birch, Kingston, Ontario. Date of contract, September 11, 1924. Amount of contract, \$1,683.

Repairs to breakwater at Port Greville, Nova Scotia. Name of contractors, Reid Construction Company, Granville Ferry, Nova Scotia. Date of contract, September 22, 1924. Approximate expenditure, \$31,627.89. Unit prices set forth in contract.

#### POST OFFICE DEPARTMENT

The following is a statement of payments made in September, 1924, for supplies ordered by the Post Office Department subject to the regulation for the suppression of the sweating system, the securing of fair wages, and the performance of work under sanitary conditions:—

Nature of Orders	Amount of orders
	\$
Making metal dating stamps and type and other hand stamps and brass crown seals.....	916 90
Making and repairing rubber stamps, daters, etc.	223 80
Making up and supplying letters carrier uniforms, etc.....	2,697 02
Stamping pads, ink, etc.....	197 30
Mail bag fittings.....	8,58- 30
Scales repaired.....	200 07
Repairs to boxes, etc.....	70 00

#### Economic Cost of Fatalities

The United States Bureau of Statistics estimates the economic loss resulting from a fatality as being 6,000 shifts. If each fatality was to be compensated for this amount of lost time and at half-time wages, using an average wage of \$5 per shift, the amount required would be about \$15,000. An actuary of the Pennsylvania Insurance Department recently made a similar estimate, namely that the benefits payable for a fatality under the State Compensation Act, which are about \$3,000, amounted to no more than 20 per cent of the total economic cost of the fatality.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Pulp, Paper and Paper Goods

**FORT FRANCES, ONTARIO.**—FORT FRANCES PULP AND PAPER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, THE INTERNATIONAL ASSOCIATION OF MACHINISTS, AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS.

Agreement to be in effect from May 1, 1924, to May 1, 1925, and for another year unless 30 days' notice of change be given.

Where employees belong to a trade which has no organization under the agreement they shall be members of the Pulp, Sulphite, and Paper Mill Workers' Union. When new men are hired preference shall be given to members of the organizations mentioned above when competent employees are available. An employee shall join a union within fifteen days of employment.

Operation of groundwood and sulphite mill shall be six days per week and six and one-half days when pulp is needed, or when it is necessary to prevent waste of water, and a longer period when necessary for operation of paper machines.

Hours of labour—day workers, eight per day, six days per week. Overtime, time and one-half. Hours of tour-workers shall change at 8 a.m., 4 p.m., and midnight. Work between 8 a.m. Sunday and 8 a.m. Monday shall be paid time and one-half. Tour workers working overtime at other than tour work shall receive time and one-half. Holiday work, time and one-half. Holidays: Dominion Day, Labour Day, Christmas Day.

The usual mill rules shall be effective.

When an occupation ceases by reason of shutdown of any part of the mill, the companies will endeavour to retain employees at other occupations. When employees are eliminated by the installation of labour saving devices they will be given preference for any position that may be open that they are qualified to fill.

Grievances shall be reported to the superintendent who shall reply within forty-eight hours. If grievance is then not adjusted, it shall be taken up by the president of the companies and the president or representative of the unions, and further if necessary re-

ferred to arbitration, decision being final and binding. If a discharged employee claims an injustice he shall present his grievance and if proven unjustly discharged shall be reinstated and paid for lost time.

In cases of promotion, or lay off the oldest man in point of service shall be preferred, efficiency being considered.

Wages per hour—wood room: oiler, 40 and 42 cents; sawyers and helpers, 40 and 42 cents; drumblers, 41 cents; drum cleaners, pulp unloaders, and conveyor man, 40 cents. Groundwood: head grinder man, 64 cents; repair man, 59 cents; grinder man, screen man, 45 cents; block handlers, 44 cents; oilers, 43 cents. Boiler house: head fireman, 68 cents; firemen, 59 cents; hog fuel and cinder men, 42 cents; steam engineers, 68 cents. Broke beater, 43 cents. Finishing and loading, checkers, roll finishers, loaders, 45 cents; new men, minimum 42 cents. Yard labourers, 40 cents. Mechanics, 70 cents; helpers, 59 cents; coremen, 44 cents. Storeman, 42 cents.

### Transportation and Public Utilities: Water Transportation

**MONTREAL, QUEBEC.**—THE HARBOUR COMMISSIONERS OF MONTREAL AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA.

Agreement to be in effect from June 5, 1924, until May 1, 1925.

Wages per hour, carpenters and caulkers in the ship-yard, 61 cents per hour. In the case of one or more shifts, time over ten hours per day, time and one-half.

Work on Sundays and holidays, time and one-half.

A place for tools and a place for eating lunches in fall and winter is to be provided.

The union representative is to be allowed access to the job.

In case of misunderstanding or violation of any of the clauses of the agreement work shall not be stopped before an appeal has been made to the commissioners.

### Service: Public and Municipal

**MOOSE JAW, SASKATCHEWAN.**—CITY OF MOOSE JAW AND THE SASKATCHEWAN BROTHERHOOD OF STEAM AND OPERATING ENGINEERS, LOCAL No. 2.

Agreement to be in effect from August 1, 1924, until March 31, 1925, and for one year thereafter unless notice of change be given prior to January 31, 1925.

Hours per day, eight. Overtime first eight hours, time and one-half; thereafter and Sundays and legal holidays, double time.

The following shall receive fourteen days as annual holidays with pay:—

(a) Those on a monthly or weekly salary not receiving overtime pay.

(b) Those working regularly seven days a week.

Employees after twelve months' continuous service shall receive full pay for time lost on account of personal illness, not exceeding three weeks in one year, a medical certificate being furnished if requested.

In filling a vacancy, seniority of service shall receive preference.

Engineers and stoker operators shall give one month's notice of their intention to leave the employ of the city, and the city agrees in case of dismissal of such employees to give one month's notice or one month's pay.

Minimum pay: shift engineers, for an eight hour day and seven days per week, with no extra pay for work

on Sundays and holidays, \$197 per month. Stoker operators, for an eight hour day, seven days per week, no extra pay for Sundays and holidays, \$149.50 per month. Spare stoker operators, \$33.50 per week.

For work over 56 hours per week, other than that made necessary by weekly change of shift, shift engineers, 75 cents per hour; stoker operators, 58 cents per hour, time and one-half being allowed.

Oilers (eight hour day and seven day week) per month, first six months, \$50; second six months, \$61; second year (without certificate) \$72; second year (with third class certificate) \$90; third year with third class certificate, \$105; after three years with second class certificate or at option of the Superintendent, with third class certificate, \$125; master mechanic, \$190. Per hour, repairmen, 62½ cents; boiler washer, 58 cents. Per week, conveyor operator, for a seven day week, eight hours per day except on Sundays or holidays when only necessary work will be carried on, \$30.

Repairmen and boilerwasher are to receive pay for not less than forty-eight hours per week.

**MOOSE JAW, SASKATCHEWAN.—CITY OF MOOSE JAW AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL No. 802.**

Agreement to be in effect from August 1, 1924, until terminated on thirty days' notice in writing.

A journeyman shall be an employee who has had four years' experience in one or more branches of the electrical trade. An apprentice shall have had three months' actual service at some branch of the electrical trade.

Hours per day, eight and one-half, and five hours on Saturday. The city shall have the right to order shorter hours owing to scarcity of work or interruption by weather conditions.

Overtime for the first six and one-half hours, time and one-half; work commenced after midnight up to 8 a.m. or until relieved, double time.

In emergency calls between 10 p.m. and 8 a.m. men are to be paid for at least two hours.

Holiday rate, double time.

Holidays and sick leave are to be allowed as in the agreement of Steam and Operating Engineers summarized above.

Apprentices must serve at the trade four years.

A journeyman lineman in charge of from one to four men shall receive 2½ cents per hour over scale; if in charge of more than four men, sub-foreman's wages.

Vacancies are to be filled by seniority.

Electrical workers entering on employment may be required to pass an examination.

Minimum rates per hour—meter installer, 50 to 65 cents; sub-line foreman, 90 cents; journeymen lineman, 85 cents; apprentices, 45, 55, 65 and 75 cents. Helper, 50 cents.

## COST OF LIVING ADJUSTMENT OF WAGES OF VANCOUVER ISLAND COAL MINERS

THE Cost of Living Commission appointed on January 21, 1919, to determine every three months the changes in the cost of living for coal miners on Vancouver Island, and to report the amount by which wage rates should correspondingly be increased or decreased in accordance with an agreement between certain mine operators and their employees, has forwarded its report to the Department of Labour for the quarter ending June 30, 1924.\* The Commission consisted of Mr. Matthew Gunness, representing the miners; Mr. Tulley Boyce, representing the operators, and Mr. F. E. Harrison, Fair Wages Officer of the Department of Labour, chairman.

As in previous investigations, forms containing a list of groceries, provisions, meats, etc., were sent out to the merchants and dealers with whom the majority of the miners were accustomed to trade in the various localities. The method of computing the changes for the period under review was the same as used for previous adjustments, namely, to determine the percentage of increase or decrease, as the case may be, of prices at the end of the quarter, over the prices at the end of the preceding quarter, for groceries, provisions, meats, etc., and to add a further two-fifths of this in-

crease (or decrease) as an equivalent to cover a similar increase (or decrease) in clothing, etc.

For the quarter ending June 30, 1924, a decrease of 3 per cent was ascertained which amounted to a decrease in wages of 9 cents per day in the district where the base rate was \$3.15, such decrease to become effective on August 1, 1924, and to apply to all underground, surface, clerical and office employees.

No changes were noted in split peas, small white beans, brown beans, rice, canned peas, canned corn, white swan soap, copco soap, graham flour, rolled oats, cornmeal, cheese, bacon, evaporated milk, currants, raisins, prunes, apricots, matches, beef steak, roast beef, stewing mutton and mutton legs. Slight increases were noted in lima beans, canned beans, canned corned beef, canned roast beef, brooms, buckwheat flour, oatmeal, cookies, coffee, figs and peaches. Sharp increases were noted in canned salmon, flour, and flavouring extracts. Slight decreases were noted in molasses, syrup, barley, sago, tapioca, canned tomatoes, lunch tongue, fels naptha soap, master mechanic soap, vinegar, wholewheat flour, pastry flour, soda biscuits, lard, ham, stewing beef, mutton chops, mutton shoulders, veal chops, and veal legs. Sharp decreases were noted in sugar, jams, pickles, butter, tea, cream tartar, pork chops, pork shoulders, pork legs and veal shoulders.

\* For previous adjustments see LABOUR GAZETTE, June, 1924, and previous issues.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1924

### Cost of Living, Prices of Staple Articles, and Index Numbers

**R**ETAIL food prices were slightly higher in September, due chiefly to seasonal changes, but substantial declines occurred in the various index numbers of wholesale prices.

The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.28 at the beginning of September, as compared with \$10.19 for August; \$10.46 for September, 1923; \$10.28 for September, 1922; \$11.82 for September, 1921; \$15.95 for September, 1920; \$16.92 for June, 1920 (the peak); \$13.31 for September, 1918; and \$7.83 for September, 1914. Potatoes were substantially lower, with slight decreases also in the prices of beef, evaporated apples and tea. The most important advances occurred in the prices of eggs, butter and lard, while there were smaller increases in the prices of fish, salt pork, bacon, cheese, bread, flour and rolled oats. Including the cost of fuel and rent with that of foods, the total budget averaged \$20.65 at the beginning of September as compared with \$20.57 for August; \$20.97 for September, 1923; \$20.90 for September, 1922; \$22.37 for September, 1921; \$26.38 for September, 1920; \$26.92 for July, 1920 (the peak); \$21.11 for September, 1918; and \$14.33 for September, 1914. Fuel and rent were practically unchanged.

In wholesale prices, the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, weighted according to the importance of the commodities, declined to 153.6 for September, as compared with 158.1 for August; 154.6 for September, 1923; 147.5 for September, 1922; 161.7 for September, 1921; 245.5 for September, 1920; 256.7 for May 1920 (the peak); and 213.7 for September, 1919.

In the grouping according to chief component material, five of the eight main groups were lower, two advanced, and one was practically unchanged. The vegetable products groups declined substantially because of lower prices for flour and milled products, vegetables, straw and hay, and in spite of increases in the prices of rubber, sugar, cocoa beans and coffee. Fibres, textiles and textile products were also considerably lower because of declines in the prices of raw cotton, cotton thread and cotton fabrics. Declines in the prices of steel billets and steel merchant bars caused a fall in the iron and its products group. The wood and wood products group and the non-

metallic minerals group were also somewhat lower. The animals and their products group advanced, higher prices for fish, butter, cheese and eggs, more than offsetting the declines in live stock, dressed beef, bacon and ham. The chemicals and allied products group also rose slightly, while the non-ferrous metals group was practically unchanged.

In the grouping according to purpose both consumers' and producers' goods declined. In the former group the decline in foods, beverages and tobacco was caused by the lower prices for flour, beef, bacon, ham and vegetables, which more than offset the advances in fish, sugar, fowl, coffee, butter, cheese and eggs. In producers' goods, both producers' equipment and producers' materials were lower, the former because of decreases in coal and gasoline and the latter because of declines in building materials chiefly lumber and in materials for the textile, the meat-packing, the leather and the metal working industries. Miscellaneous producers' materials were also substantially lower.

In the grouping according to origin both raw or partly manufactured goods and fully or chiefly manufactured goods were lower. In articles of farm origin field products declined substantially while animal products advanced slightly. Domestic farm products were lower. Articles of forest origin and articles of mineral origin were lower, while articles of marine origin were higher.

The index number published by the Department since 1910 has been reconstructed back to 1913, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 233 commodities in 1913.\* Ultimately the reconstructed index will be carried back to an earlier date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the *LABOUR GAZETTE* in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings, but the sub-groups in detail shown monthly

\**LABOUR GAZETTE*, June, 1923, and September, 1924.

since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.
