The index number based upon prices of 271 commodities in 1890-1899, published by the Department of Labour since 1910, declined to 221.7 for September, as compared with 223.2 for August; 221.3 for September, 1923; 220.5 for September, 1922; 232.7 for September, 1921; 326.6 for September, 1920; 285.3 for September 1918 and 141.3 for September 1914. The most important advances occurred in the prices of butter, eggs, salmon trout, whitefish, lemons, oranges, sugar, veal, lard, tallow, wool, raw silk, bar silver and rubber, while flax, hay, bran, shorts, cattle, hogs, dressed lamb, potatoes, onions, flour, raw cotton, cotton fabrics, tin and gasoline showed the most important declines.

The special index number comprising fifty of the more important commodities selected from the 271 in the departmental list, including twenty foods, fifteen raw materials and fifteen manufactured goods based upon price levels in 1913 as 100 declined to 148.8 for September, as compared with 151.4 for July; 151.6 for September 1923; 145.3 for September 1922; 150.4 for September 1921; 229.9 for September 1920; 209.6 for September 1918; and 102.9 for September 1914. The decline was due to lower prices for cattle, hogs, beef, potatoes, flour, raw cotton, cotton fabrics, gasoline and turpentine.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100 advanced to 147 for July as compared with 145 for June; 143 for May and 151 for July 1923. In the grouping by stage of manufacture, producers' goods and consumers' goods declined, while raw materials advanced.

The Canadian Bank of Commerce index of exports declined from 150.04 for August to 147.82 for September, while that of imports fell from 163.49 to 160.53. The combined index of both imports and exports fell from 156.76 for August to 154.17 for September.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, declined to 172.9 for September as compared with 175.5 for August; 178.8 for September 1923; 247.4 for September 1920; and 116.6 for September 1914. Both foods and manufacturers' goods were lower.

## EXPLANATORY NOTE

The table of retail prices and rentals shows the prices at the beginning of September of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no al-

lowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Cost of Electric Current for Householders\*

With rates in 1913 as 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

#### Retail Prices

Beef prices again averaged slightly lower in September. Sirloin steak averaged 29.3 cents per pound as compared with 29.5 cents in August. Prices in most localities were down. Rib roast averaged 21.6 cents per pound in September and 21.8 cents in August. Shoulder roast declined from an average of 15.4 cents per pound in August to 15 cents in September. Veal and mutton showed little change in the average. Both fresh and salt pork showed a general advance, the former from an average of 24.3 cents per pound to 25.7 cents and the latter from 22.6 cents to 23.4 cents. Breakfast bacon also advanced, averaging 38.1 cents per pound in September and 36.7 cents in August. Ham was up from 55.2 cents per pound to 57 cents. Fresh cod steak was slightly higher while halibut declined. Finnan haddie was slightly lower. Lard showed a general advance, averaging 22.6 cents in September and 21 cents in August.

Prices of eggs advanced substantially, fresh from an average of 34.8 cents per dozen in August to 39.5 cents in September and cooking from 31.0 cents per dozen in August to 34.6 cents in September. Higher milk prices were reported from St. John, N.B., and North Bay. Dairy butter rose from an average of 35 cents per pound in August to 36.8 cents in September and creamery from 40.1 cents in

August to 41.9 cents in September. Cheese advanced slightly averaging 28.8 cents per pound.

Higher prices for bread were reported from Montreal, Hamilton, Brantford, Woodstock, Stratford, London, St. Thomas, Owen Sound, Sault Ste. Marie, Prince Albert, Moose Jaw, Medicine Hat, Calgary and New Westminster. Flour continued to advance, averaging 4.9 cents per pound in September as compared with 4.6 cents in August. Tapioca was slightly lower. Canned vegetables showed little change. Onions were down from 8.2 cents per pound to 7 cents. Potatoes showed a substantial seasonal decline, averaging \$1.73 per 90 pounds as compared with \$2.24 in August. Evaporated apples and prunes were slightly lower, the former averaging 19.2 cents per pound and the latter 15.9 cents. Canned peaches and marmalade were slightly higher. Granulated sugar was unchanged in the average, advances in some localities being offset by declines in others. Coffee and tea averaged slightly lower.

Anthracite coal averaged \$16.78 per ton in September and \$16.69 in August. Higher prices were reported from Charlottetown, St. John, Fredericton, Orillia, Toronto, Hamilton and Timmins. Bituminous coal was slightly lower at \$10.49 per ton. Hardwood was lower at Belleville, Brantford and Stratford. Coal was unchanged. No changes were reported in rents.

#### Wholesale Prices

The following is a summary of a statement on prices changes during the month, prepared by the Dominion Bureau of Statistics.

Grain prices advanced considerably toward the end of the month, but the monthly averages showed little change from the August levels. Wheat rose from \$1.33½ per bushel early in September to \$1.53¼ toward the end. Prices were low toward the first of the month because of favourable weather conditions, which, however, became bad later on, and this with unfavourable reports from Europe caused an advance in prices. Western oats rose from 55 cents per bushel to 58 cents, barley from 87 cents per bushel to 89½ cents, and American yellow corn from \$1.32 per bushel to \$1.34. Flaxseed was down from \$2.33 per bushel to \$2.21. Flour at Toronto fell from \$8.20 per barrel to \$7.80. Raw rubber advanced from 26 cents per pound to 28 cents. Raw sugar was up from \$4.98 per hundred to \$5.46, and granulated from \$7.70 per hundred to \$8.03. Coffee prices were higher because of short supplies due to drouth and the revolution in Brazil. Cocoa beans were

\*LABOUR GAZETTE, December, 1923, Page 1442.

also higher at 11½ cents per pound. Potatoes at Montreal fell from \$1.50 per bag to \$1.05, and at Toronto from \$1.58 per bag to \$1.05. Hay at Toronto was down from \$17.50 per ton to \$14.45. Prices of livestock were lower, western cattle at Winnipeg being \$5.22 per hundred, as compared with \$5.88 in August, and choice steers at Toronto being \$6.50 per hundred, as compared with \$6.63 in August. Hogs at Toronto were down from \$10.96 per hundred to \$10.28, while sheep advanced from \$6.25 per hundred to \$6.65. Beef, hind-quarters, declined from \$16 per hundred to \$14.80. Bacon and ham each fell 2 cents per pound, the former to 24 cents and the latter to 27 cents. Creamery butter at Montreal was up from 39 cents per pound to 40 cents. Cheese at Toronto advanced 1 cent per pound to 20 cents. Fresh eggs at Montreal rose from 42-45 cents per dozen to 43-48 cents. Fowl at Toronto was up 2 cents per pound to 20 cents. Fresh halibut advanced from 12 cents per pound to 13 cents, and salt cod

from \$7.50 per quintal to \$7.75. Raw cotton at New York declined from an average of 29½ cents per pound in August to 24 cents in September. Prices, however, advanced toward the end of the month due to bad weather reports. Wool prices advanced one to two cents per pound. Jute was up from \$9.29 per hundred to \$10.10. Lumber prices were again lower. Birch at Toronto fell from \$65 per M to \$60, fir from \$48 per M to \$46, hemlock from \$30 per M to \$28, white pine from \$50 per M to \$48 and spruce from \$35 per M to \$34. Cedar shingles were lower at \$5 per M. Steel billets were lower. Steel merchant bars declined from \$60 per ton to \$50. Tin ingots declined from 56 cents per pound to 51 cents and copper from \$15.50 per hundred to \$15.15. Antimony advanced from 7½ cents per pound to 9 cents and bar silver from 68 cents per ounce to 69½ cents. Anthracite coal advanced slightly to \$12.24 per ton. Gasoline at Toronto declined from 26½ cents per gallon to 24½ cents.

DEPARTMENT OF LABOUR INDEX NUMBERS OF WHOLESALE PRICES BY PRINCIPAL GROUPS OF COMMODITIES FOR SEPTEMBER 1924, AUGUST 1924, SEPTEMBER 1923, 1922, 1921, 1920, 1919, 1918, 1917, 1916, 1915, 1914 AND 1913.

## RIGHT OF ASSOCIATION OF EMPLOYERS AND WORKERS UNDER THE TREATIES OF PEACE

AT the Sixth Session of the International Labour Conference (League of Nations) a resolution was presented by Mr. Suzunki, Japanese Workers' delegate, requesting that an effort be made through the International Labour Conference to remove international legislation, wherever existing, which hindered the development of organized labour among working people. This resolution was referred to the Selection Committee of the Sixth Conference in the terms following:—

"The International Labour Conference, considering that respect for the principle of freedom of association is essential to the proper working of the Organization, which should unite in a common effort the Governments and the most representative associations of employers and workers.

That the development of international social legislation, the object for which the Organization exists, cannot be fully realized unless this right is freely recognized and conceded,

Recalls the fact that amongst the principles enumerated in the Labour Portion of the Treaties of Peace, the right of association of the workers is expressly affirmed.

Instructs the Governing Body of the International Labour Office to continue the documentary enquiry regarding liberty of associations and to enlarge its scope so as to deal with the actual application of principle in different countries.

And requests the Governing Body, when this enquiry is completed to consider the advisability of placing the question on the Agenda of a future Session of

the Conference, with a view to determining, measures to ensure full respect for the principles of freedom of association".

The Workers' Group in the International Labour Conference had previously requested the International Labour Office to undertake an inquiry into the application of the principle of freedom of association existing in different countries, and the resolution in the terms following had been adopted by the Governing Body of the International Labour Office in 1923:—

"The Governing Body considering that the Permanent Organization created by Part XIII of the Treaty is, under the terms of Article 387, entrusted with the duty of carrying out the programme set forth in the Preamble of that art of the Treaty.

Considering that the programme affirms, *inter alia*, the principle of the freedom of association,

Draws the attention of the Director of the International Labour Office to the value of collecting the most complete documentary evidence with reference to the position in all countries which are Members of the International Labour Organization with regard to the application of this principle.

The International Labour Office has since entered upon its study of the right of association in various countries and preliminary reports on certain countries have been prepared.

## EMPLOYERS PROVIDE COAL STORAGE

THE American Engineering Council has published the results of a study lately conducted by its coal storage committee on the possibility of financing the storage of coal for industries and also for employees. The committee found that banks were willing to finance storage for employers, and that employers would finance storage for their workers. The report states:—

The large army of wage-earners, because of financial and housing conditions, cannot store their coal unless some agency renders financial aid in some form. It is exceedingly gratifying to report that a number of industrial and commercial managers have realized that they could be of service to their employees and the community in which they live by promulgating plans whereby their employees could secure their coal upon satisfactory and easy terms.

This study indicates that such a procedure is being practised to some degree. Several employers purchase and store a quantity of coal, which is subsequently sold to employees at cost. A few render aid only in periods of severe coal shortage. One concern contracts and buys coal in April, delivery to be made at any time; payments are deducted weekly from May to November. Another obtains coal from a dealer, paying in full, and deducting payments in reasonable instalments. Several sell their by-product coke and coke breeze at cost.

In one company an employee mutual benefit association has been formed to pool purchases for members. A number of plants operate and handle on a club plan. One company charges cost plus a reasonable amount to cover the expense of a man competent to handle purchase and delivery.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

As will be seen in the tables, wholesale prices have recently fallen in Canada and risen in the United States. In Europe, late in the summer, wholesale prices rose in Great Britain, Germany, Denmark and Italy, and fell somewhat in France, Switzerland, Austria, Poland and Czechoslovakia. Retail prices and the cost of living displayed rising tendencies in Canada, the United States, Great Britain, France, Belgium, Denmark and Austria, and falling tendencies in Germany, Poland and the Netherlands.

Great Britain

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures) declined 0.3 per cent in August. The change was due to a decline in the index number for materials, which fell 1.8 per cent, as against a rise in foodstuffs of 2 per cent. The only groups to show increases were animal foods and sugar, coffee and tea.

The *Economist* index number, on the base 1901-05=100, declined in August 0.6 per cent to 210.3. There were slight increases in minerals and in the "other foods" group. Textiles and cereals and meat declined, and the miscellaneous group showed no change. The index reached 214.9 at the beginning of September, an increase of 2.2 per cent over the August level. Cereals and meat increased 6.5 per cent; other foods 4.4 per cent; textiles

0.7 per cent; and the miscellaneous group 2 per cent. Minerals declined in price 2.4 per cent.

The Board of Trade index number, on the base 1913=100, rose 1.6 per cent in August to 165.2. Foods rose 3.2 per cent, and materials rose 0.8 per cent. The other groups to show declines were other foods, iron and steel, and other metals and minerals.

The *Times* index number, on the base 100 in 1913, was 169.1 at the end of August, an increase of 1 per cent for the month. The principal change was an increase of 10.2 per cent in meat and fish, all commodities except English beef being up in price, American beef rising 34 per cent, and Irish bacon 9.6 per cent. Cotton declined 6.9 per cent and other textiles rose 5.4 per cent.

**COST OF LIVING.**—The index number of the Ministry of Labour, on the base July, 1914=100, was 173 for September 1, an increase of 1.2 per cent for the month. Foods rose 2

points to 166; clothing rose 2.5 points to 227.5; fuel and light rose 2.5 points to 185; rent and sundries showed no change.

**Belgium**

**WHOLESALE PRICES.**—The index number of the Ministry of Industry and Labour, on the base April, 1914=100, was 566 for July, an increase of one point over the previous level. The principal changes were increases in prices of chemical products, fats, textiles and raw rubber and declines in food products, tar and products, and petrol and products.

**RETAIL PRICES AND COST OF LIVING.**—The index number of retail prices of 56 articles at Brussels on the base April, 1914=100, was 526 for August, one per cent above the July level. The index number for the Kingdom also advanced one per cent, reaching 498.

The official index number of cost of living of a working class family of the lowest category, on the base 1921=100, was 127.83, an

increase of 1.6 per cent over the previous month's level. Foods increased 2.2 per cent and all other groups increased slightly. The index number of cost of living of a middle class family of moderate income increased 0.9 per cent to 127.09. Foods increased in price 1.3 per cent, and all other groups increased slightly.

**Denmark**

**COST OF LIVING.**—The official index number of the Department of Statistics, compiled on the base July, 1914=100, showing changes in the cost of living at half-yearly periods, was 214 in July, an increase of 2.4 per cent above the January level. Foods rose 3.1 per cent to 200; clothing (including footwear and laundry) rose 5.1 per cent to 267; housing rose 6.25 per cent to 170; fuel and light rose 3.5 per cent to 298; taxes and dues declined 2.4 per cent to 248; and sundries remained at the previous level, 207.

**France**

**WHOLESALE PRICES.**—The index number of Statistique Générale, on the base July, 1914=100, was 487 in August, a decline of 0.8 per cent from the July level. Foods declined 1.1 per cent and materials 0.6 per cent. All groups showed declines except animal foods which rose slightly.

**Germany**

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office for gold prices, 1913=100, was 120.4 for August, an increase of 4.7 per cent on the July level. Goods produced increased 6.2 per cent and goods imported declined 0.5 per cent. Foods increased in price 8.5 per cent and materials declined 0.6 per cent. All the food groups showed marked advances and among industrial materials the only groups to show declines were textiles and coal and iron.

**COST OF LIVING.**—The official index number declined 1.7 per cent to 114 billions on the

(k) Cost of food budget. (l) \*October, 1923, 4,301 millions. \*\*October, 1923, 3,657 millions. † Gold prices on the base 100 hereafter

base 1913-14=1 for August. Foods declined 3.7 per cent to 122 billions; heat and light declined 1.4 per cent to 141 billions; clothing declined 2 per cent to 142 billions and rent advanced 3 per cent to 70 billions.

**Hungary**

**COST OF LIVING.**—The index number of the cost of living, on the base 1913-14=100 was 1,527,075 in May, or 14 per cent over the April level. Foods rose 22 per cent, and clothing and heating and lighting showed no change. Rentals increased 275 per cent, or from 57,600 to 216,000. This was due to the continuance of the governmental policy of graduated repeal of tenant protection, started by an order in council of March 16, 1923. The index number of rents at that time was 611.

**Italy**

**WHOLESALE PRICES.**—The index number of the Chamber of Commerce, on the base of

100 in 1913, was 546.05 for August, an advance of 2.1 per cent from the July level. Foods declined 0.54 per cent and materials rose 0.53 per cent.

**Poland**

The index numbers of the Central Statistical Office for wholesale prices and cost of living have been calculated exclusively in "zloty," the new monetary unit, since the beginning of May. In addition the old index figures for wholesale prices on the paper mark basis, from the beginning of 1922 have been revised and calculated on a gold basis. One zloty is equal to one gold franc and to 1,800,000 Polish paper marks. The base is January, 1914=100. The index was 104.0 for May and 100.6 for June. The index numbers by groups in June were: wheat and vegetable products, 85; animal products, 113; colonial products and sugar, 106; hides and leather, 75; raw material and finished textiles, 145; metals and coal, 119; construc-

end of 1920; beginning of month thereafter. (e) Beginning of month. (f) Base is average for six capital towns. Gold prices hereafter, Jan. 1914=100.

tion materials, 78; chemical products and miscellaneous, 89.

**COST OF LIVING.**—The official index number of cost of living at Warsaw (gold prices, in January, 1914=100) was 131 in April, 129 in May, and 128 in June. In the last month food was 150, a decline for the month of 6.8 per cent; clothing was unchanged at 237; fuel and light fell 1.8 per cent to 112; lodging and water rates rose 68 per cent, from 28 to 47, thus reaching 47 per cent of pre-war rate; and sundries rose 2.1 per cent to 96. A Rent Bill recently passed in Poland provided for the restoration of 75 per cent of the gold value of pre-war rents by January, 1929.

**Sweden**

**WHOLESALE PRICES.**—The official index number of the Department of Commerce, on the base of 1913=100, was 160 for August, or three

points above that for July. Raw materials rose 2.8 per cent and manufactured goods rose 1.2 per cent. Foods increased 4 per cent and the other groups showed slight increases or no change.

**COST OF LIVING.**—The index number of the Board of Social Welfare, July 1914=100, fell two points from April 1 to 171 at July 1. Foods fell 5 points to 155; fuel and light fell 1 point to 182; and sundries fell two points to 183. Housing at 178, clothing at 192 and taxes at 173 showed no change.

**China**

**WHOLESALE PRICES.**—The index number of the Ministry of Finance, Bureau of Markets, on the base February, 1913=100 declined 1.8 per cent to 148.8 during August. The fall was reported as being due to the war preparations and the panic of the money market.

"Wholesale business had practically ceased and those who kept spot goods were anxious to dispose of them in view of the financial stringency." Consequently there were declines in foods other than cereals, textiles, metals and miscellaneous (excepting industrial materials, which rose for various reasons). Cereals rose, on account of the suspension of supply from producing regions.

**India**

**COST OF LIVING.**—The official index number of cost of living at Bombay rose 2.5 per cent in August to 160. Foods rose 3.3 per cent and clothing rose 0.9 per cent. The general tendency of the index was downward for the first five months of the present year, and upward for the following three months. The last increase was due chiefly to increases in the prices of all the cereals and pulses.

**Japan**

The following note on prices in Japan is from the *Federal Reserve Bulletin* for September, 1924:—

The movement of prices in Japan during the past year and especially since the earthquake of last September has presented certain features not found in other countries. The (accompanying) table presents significant figures.

	Japanese prices		United States prices	British gold prices	Yen exchange, per cent of par
	In currency	In gold			
June, 1923.....	186	183	164	162	98.4
December, 1923.....	205	193	163	159	94.3

In June, 1923, Japanese currency prices and gold prices were very nearly the same, as the yen averaged 98.4 per cent of its par value. The gold index for Japan, however, was about 11 per cent above the American index and nearly 13 per cent above the British gold index for the same month.

Following the earthquake in September, Japanese prices rose rapidly from 179 in August to 205 in December, an advance of over 14 per cent in four months. The Japanese gold index for that month stood at 193, or over 18 per cent above the American and more than 21 per cent above the British gold index. Since early this year Japanese prices have fallen 8 per cent, but as this was accompanied by a material decline in the exchange, gold prices fell 19 per cent between December and June. As a result, the Japanese gold index is now substantially the same as those of England and the United States, and yen exchange is approximately at its purchasing power parity with the dollar and the pound sterling.

### United States

WHOLESALE PRICES.—Bradstreet's index number of wholesale prices showed a slight upward trend at October 1, reaching \$12.9987. Eight

groups rose, including provisions, textiles, hides and leather, breadstuffs, live stock, coal and coke, chemicals and miscellaneous products. Five groups declined in September, including fruits, metals, oils, naval stores and building materials. During the month under review thirty-four products advanced, twenty-four declined, and forty-eight remained unchanged.

The index number of the Bureau of Labour Statistics (1913=100) rose 1.8 per cent to 149.7 in August. The rise was chiefly due to large increases in farm products and foods. Among farm products advances in grains, hogs, eggs, hay, hides, tobacco and wool off-set declines in lambs, cotton and cottonseed, onions and potatoes. In foods there were increases in fresh and cured pork, hams, coffee, rye and wheat, flour, lard, lemons, oranges and vegetable oils. Important articles in the groups of cloths and clothing, chemicals and

(a) Quarter beginning in specified month. (b) Average for year. (c) Figure for previous month. (d) Following month. month. (j) Monthly average. (k) New index number is joined to old index number (38 commodities) and all converted hereafter on the base 100. † In millions. \* In milliards.

drugs and miscellaneous commodities also showed price increases. Building materials and house furnishing goods rose slightly, and fuels declined. Metals and metal products showed no change.

The index number of the Federal Reserve Board (1913=100) was 158 in August, an increase of two points for the month. Grouped by origin, domestic goods increased one point to 160 and imported goods increased 7 points to 139. Export goods declined 3 points to 177. Grouped by stage of manufacture, raw materials advanced one point to 164; producers' goods rose 2 points to 149 and consumers' goods rose 2 points to 156.

Gibson's index number of the average cost of foodstuffs was 80.8 for September an increase of .24 per cent.

**COST OF LIVING.**—The index number of the Massachusetts Special Commission on the

Necessaries of Life, on the base 1913=100, was 158.4 in August, a slight increase over July. Food was 138.5; clothing, 178.8; shelter, 172.0 (an increase of about 2½ per cent over the previous month); fuel and light, 177.4; sundries, 170.5.

The retail food index of the United States Bureau of Labour Statistics showed an increase of ⅓ of one per cent in the retail cost of food in August as compared with July, being 143.3 in July and 144 in August, on the base 1913=100. Twenty articles increased in price the largest increases being: pork chops, 15 per cent; lard and strictly fresh eggs, 13 per cent; flour, 6 per cent; bacon, 5 per cent; ham and corn meal 4 per cent. Ten articles decreased in price, the chief decreases being: potatoes, 21 per cent; cabbage, 14 per cent; onions, 6 per cent. The remainder of the goods showed no change.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Minimum Wage Order in Alberta

IN the Supreme Court of Alberta, Mr. Justice Simmons, in chambers, gave an opinion recently in a case involving the position of the Hudson's Bay Company, Limited, in regard to order No. 6 of the Minimum Wage Board, governing female employees in shops, stores, and mail order houses. This order, as published by the Board in the *Alberta Gazette* on March 31, 1923, fixed the minimum wage to be paid to inexperienced workers in the fifth three-month period of their employment at \$12 per week.\*

Two clerks who had been employed by the Hudson's Bay Company for over one year, were being paid at a lower regular weekly rate of wages than the \$12 required by the Board. The Company resisted the order of the Board to comply with the order for the following reasons:

First, the Company alleged that the order was illegally made in that it was stated to become effective on a future date, whereas the Minimum Wage Act provided that any order "shall become operative at the date of publication thereof in the *Alberta Gazette*."

Second, it was alleged that the Company actually paid these two employees the required minimum. In making this claim the Company took into consideration the money paid to each of them for holidays, under the Company's "Holidays with Pay" plan, but at the same time treated these holidays as a period during which the employees were not employed.

Third, the Company claimed that its clerks received a commission on sales, and added the amount of these commissions to the employees' regular wage. The Minimum Wage Board, on this point, claimed that these commissions should not be taken into consideration except to the extent that they may be added to the wage paid during the week the commissions were earned, for the purpose of determining the minimum paid for that week.

The Court's ruling on the various points raised by this case was as follows:—

The Board was bound by the provision of the Act in regard to the date on which its orders should become operative. On the other hand, the fact that the Board in its order attempted to override the statute in regard to the date, should not vitiate the effect of that order, and could be neglected. The Board's order was therefore valid, subject to the qualification that it became effective on the date of publication, and not on a postponed date named in the order.

\* The minimum rates were changed when this order was reissued at the end of 1923, *LABOUR GAZETTE*, December, 1923.

On the second point the Court found that, in regard to the Company's practice of granting the employees a week's holiday with pay, "the presumption is that they are paid on the same basis as during the period of employment, and that they (the Company) cannot employ or use the amount so paid for the holiday week in raising the average of the other weeks' employment."

In regard to commissions, the Court ruled that "since the Act has to deal with a minimum wage, such commissions or bonuses should apply only on the week on which they are earned and should be confined to the said period."

### Recent Decisions on Picketing

The Executive Council of the Trades and Labour Congress of Canada, in their report to the Congress, outlined elsewhere in this issue, called attention to the wide range in the judicial interpretations of those sections of the Criminal Code that have a bearing on picketing. To show the existing conflict of opinion in Canada, the report quotes from two recent judgments, the first in a case against members of the Hotel and Restaurant Employees International Alliance, at Calgary, last November (*LABOUR GAZETTE*, November, 1923, page 1341); the other in a case which was outlined in the last issue of the *LABOUR GAZETTE* (page 814) involving the Motion Picture Projectionists' Union at Hamilton, Ont.

In the first of these judgments, Mr. Justice Ives ruled as follows:—

There is no doubt that the defendants agreed together to picket the City Café when at the special meeting the resolution was adopted. And at the time it must have been in the minds of the defendants that the result of such picketing would reduce the café business. Indeed they could have no other object than that such reduction would compel a compliance with the union's terms of employment. But there is no evidence that any malice actuated the defendants or that injury to the plaintiff was their primary object or intent. They did legally what they were legally entitled to do. The public patronage of the plaintiff's business was entirely voluntary. His customers could lawfully cease their patronage at any moment and were induced to do so by the defendants in an effort to advance the legitimate interests of themselves and other members of the union.

In the recent case at Hamilton, Mr. Justice Rose, made an order as follows:—

There will be an order restraining the defendants and each of them, their servants and agents, etc., from publishing by means of handbills or banners or otherwise the statements complained of by the plaintiffs as defamatory and from watching or besetting the theatres for the purpose of persuading or otherwise preventing persons from entering the same, or for the purpose of persuading or otherwise preventing persons working for the plaintiffs, or in the theatres, or for any other purpose, and from procuring or endeavouring to procure any person or persons to break his or their contracts with the plaintiffs or with the theatre.

# THE LABOUR GAZETTE

PREPARED AND EDITED IN  
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 24]

NOVEMBER, 1924

[NUMBER 11

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

THIS issue of the LABOUR GAZETTE contains the regular monthly articles relating to the recent movement of prices, to employment conditions, industrial disputes and conciliation proceedings, fair wage contracts, technical education, trade union activities, etc.; also quarterly reports on industrial accidents in Canada, on the work of the Employment Service of Canada, on unemployment as reported by trade unions, and on immigration into Canada, all these reports covering the period of July to September, inclusive. Special articles are also included dealing with current topics that concern labour.

### Monthly summary

Reports from the Employment Service of Canada indicate that the increased activity which began during the second half of August continued throughout September, the volume of business transacted by the offices in the latter month being about the same as in September, 1923 (complete figures for October are not available as this GAZETTE goes to press). At the beginning of October the percentage of unemployment among members of trade unions was 5.9, as compared with 6.5 per cent at the beginning of September and with 2.0 per cent at the beginning of October, 1923. Returns from employers of labour show that the trend of employment was upward at the beginning of October, when 771,932 persons were on their payrolls, as compared with 765,422 in August.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.31 at the beginning of October as compared with \$10.28 for September; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100 advanced to 157.0 as compared with 153.8 for September; 153.1 for October, 1923; 148.1 for October, 1922;

155.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak); and 214.0 for October, 1919.

The time loss caused by industrial disputes in October was less than in the previous month, but greater than in October last year. Six disputes began or were in progress during the month, involving 8,656 employees, and resulting in a loss in working time of 141,448 days. Corresponding figures for the previous month were as follows: 8 disputes, 8,501 employees, and 205,634 working days; and for October, 1923, 16 disputes, 2,322 employees, and 50,402 working days.

### Industrial Disputes Investigation Act, 1907

Shortly after the close of October the Department received a report from the Board of Conciliation and Arbitration appointed in connection with a dispute between the Canadian Pacific Railway Company and its station employees on the company's western lines. This report is given elsewhere in the present issue. Agreements were concluded during the month between the miners' union and employers in Northern Alberta, based on the award of the Board appointed in connection with a recent dispute in that industry. This report was printed in the last issue of the LABOUR GAZETTE.

### Manitoba committee on Workmen's Compensation

The Legislature of Manitoba, at its last session, provided for the establishment of a committee to investigate the subject of Workmen's Compensation, with the object, as stated in a resolution of the Legislature "to put workmen's compensation on a permanent and satisfactory basis, and bring to an end the annual fight which is waged before this committee with the presentation of legislation by both employers and employees" (LABOUR GAZETTE, May, 1924). The form of the committee was fixed by the resolution passed by the Legislature as follows:—

"That the whole subject of workmen's compensation be referred to a special committee during the recess

with a view to making recommendations at the next session of the Legislature in regard to legislation on this subject, said committee to be appointed by the Government and to consist of five representatives of employers, five representatives of employees and five members of the legislative Assembly."

The Hon. R. W. Craig, Attorney-General of the province, has been appointed chairman, the other members of the Legislature serving on the committee being Mr. John Queen, Mrs. Edith Rogers, Mr. W. J. Short and Mr. George Compton. The employers' representatives were Messrs. Fred Beale, H. B. Lyall, Charles F. Roland, L. J. Reyeroft, K.C., and J. H. Elliott, and the representatives of the employees were Messrs. James Leslie, James Addison, F. W. Nicks, Thomas J. McMurray, K.C., and C. A. Tanner, M.L.A. Mr. Nicholas Fletcher, secretary of the Workmen's Compensation Board, was appointed as secretary.

The committee opened its inquiry on November 3, the first questions considered being in respect to the calculation of the "waiting period" of three days, the time limit for notification of accidents and rates of compensation. The committee's recommendations will be given in a future issue of the LABOUR GAZETTE.

### British Columbia 8-hour day legislation

The "Hours of Work Act, 1923," of British Columbia, establishing the 8-hour day and 48-hour week in industrial undertakings in the Province, will take effect on January 1, 1925. The provisions of this Act were outlined in the January issue of the LABOUR GAZETTE in the course of a general review of the work of the session of the Legislature then recently concluded. The Provincial Government has already appointed the members of the Board of Readjustment, which is to administer the act, as follows:—Mr. J. D. McNiven, Deputy Minister of Labour, chairman; Mr. T. F. Patterson, of Vancouver, representing the employers; and Mr. F. V. Foster, of the Brotherhood of Locomotive Engineers, representing the employees. The Board will have extensive powers under the Act, which confers upon it authority to hold public inquiries and to make regulations determining (a) The permanent exceptions that may be allowed in preparatory or complementary work which must necessarily be carried on outside the limits laid down for the general working of an industrial undertaking, or for certain classes of workers whose work is essentially seasonal or intermittent; and (b) The temporary exceptions that may be allowed so that industrial undertakings may deal with exceptional cases of pressure of work. Regulations may be made only after inquiry, and the

board is required to fix the maximum of additional hours in each instance, and the rates of pay for overtime shall not be less than one and one-quarter times the regular rate. The permanent exceptions made by the Board will have the same effect as if incorporated in the Act.

As already noted, British Columbia, by this Act, is the first Province in Canada to give effect to the Draft Convention on the 8-hour day adopted by the International Labour Conference at its first session, held at Washington, D.C., in 1919.

### "Delegated Legislation"

The powers vested in the Board of Adjustment under the Hours of Work Act of British Columbia afford another example of the practice now common in British countries by which Boards or Commissions are set up for the purpose of applying in detail the general principles that have been sanctioned by statute. A similar method is followed in the administration of Workmen's Compensation, Minimum Wages, Railway legislation, etc. On this subject Professor Gutteridge of London University writes in the *International Labour Review* as follows:—

Under modern conditions there are many matters which can only be dealt with rapidly and effectively either by a government department or by some other body extraneous to Parliament, as the procedure of the House of Commons does not lend itself to the discussion of intricate and very technical details and the framing of complicated rules relating to matters of urgency. In such cases Parliament is often content to declare its general policy in the form of a statute, and to depute the framing of the detailed regulations necessary to carry that policy into effect to some other body, such as a government department or a municipal authority. In all such cases Parliament is careful to prescribe limits within which the delegated powers can be exercised, and also to reserve to itself the right to override regulations made in this way, though in practice this right is very rarely exercised. This power of delegated legislation takes one of two forms. In may in the first place consist in the power of making "provisional orders" which require confirmation by Parliament, or more frequently takes the form of the power to make "special orders" which have to be submitted to Parliament, but become effective unless objected to by resolution either of the House of Commons or of the House of Lords within a specified period.

### Cape Breton miners as co-operators

The *Canadian Co-operator* calls attention to the half-yearly report presented at a recent meeting of the British Canadian Co-operative Society, Limited, of Sydney Mines, Nova Scotia. This Society, which has branches at North Bay, Florence, Cranberry and North Sydney, is composed mostly of miners in Cape Breton, who for the past eighteen years have been conducting a thriving co-operative business in retail distribution. The last re-

port showed a membership of 2,659 members, who, on the basis of five to each family represent a community of over thirteen thousand persons served by the organization. The sales for the six months ending August 6 amounted to \$704,072. Notwithstanding the industrial depression which has been as acutely felt in Cape Breton as anywhere in Canada, the record shows an increase of \$55,100, or an average of more than \$2,000 weekly, over the corresponding period of the previous year. The share and loan investments amount to \$255,376, an average of \$96.04 per member. The available surplus amounted to \$83,535, leaving a balance of \$46,217, after all liability had been met. This balance was allocated mainly to the payment of a 12 per cent purchase dividend on members' purchases. The cash balance was \$65,227, of which \$20,000 was to the credit of the Saving Account and \$44,840 on current account. The amount owing to trade creditors was only \$8,519. The *Co-operator* estimates that the Society, during the 18 years of its existence, has returned to the members about a million dollars in savings on their purchases, and concludes:—

The British Canadian Co-operative Society, while, as to available population, not having the opportunities open to some other societies on this continent, is by far the greatest and most successful consumers' society in North America.

### Mining in Nova Scotia

Mr. George S. Rice, chief mining engineer of the United States Bureau of Mines, whose visit to the coal mines of Nova Scotia was mentioned in the September issue of the *LABOUR GAZETTE*, has since presented to Premier Armstrong a report on "bumps" in the Provincial mines with particular reference to the "bump" in a slope in the Dominion Coal Company's Mine No. 1.B. The Premier of the province had invited his expert advice in dealing with this serious condition in the mines of Nova Scotia. A large "bump" occurs also in British Columbia in the Crow's Nest field, and Mr. Rice's advice was obtained recently in connection with it. A "bump" is a shifting of the floor and roof of a mine carrying with it the adjacent portions. Mr. Rice's report has not been published, but in an interview with the *Morning Chronicle* (Halifax), he spoke of the efficient methods he found in use in mines of the province. Referring to the Springhill mine he said:—

"In this mine I found one of the finest mine tracks over which I have ever passed, equipped with the most modern electric haulage installed in intake airway. The walls of this extensive haulage had been concreted and the roof supported by heavy steel 'I' beams. This haulage throughout had been

stone dusted, the stone dusting system employed being the most recent method of preventing the initiating or propagation of an explosion. There was also an automatic block system of moving trains of mine cars, worked by lights the same as any modern railway block system.

"I certainly may say much in praise of the high type of our mining men. They are highly competent, but are ever confronted with increasing difficulties such as I have mentioned, greater depth of working, increasing gas, longer haulage as compared with the conditions in the United States bituminous fields where the coal beds seem to gently fold up. The primal conditions which formed your beds were evidently, from a geological viewpoint, far more chaotic.

"I saw excellent organization for rescue and first aid at all the mines, and observed very excellent equipped wash houses. I wish also to say that I was particularly impressed with the type and class of intelligent workmen whom I met in my short visit to the mines. I was everywhere received with utmost courtesy and on every hand was shown utmost facility in my inspection."

### Railwaymen's views on wage reductions

The Canadian Brotherhood of Railroad Employees recently presented to the Board of Railway Commissioners for Canada a memorandum in support of a claim that the wages of railway workers have not increased over the 1913 wage level to the same extent as those of other trades. The memorandum was in reply to an application made to the Board by the Tudhope-Anderson Company, Limited, of Winnipeg and Orillia, for a reduction of freight rates, on the ground that high wage rates were the cause of the increased rates for freight. The Brotherhood maintained, on the contrary, that since 1913, the increase in railway freight rates has been considerably smaller than the average increase in prices of commodities carried by the railways, while the increase in the railwaymen's rates of pay has also been much smaller than in the rates in other occupations. Quoting from official statistics, the memorandum pointed out that the ratio of salary and wages to operating expenses in 1913 was 63.5 per cent, while in 1923 the ratio was 60 per cent, proving, it was claimed, that actually wages and salaries form a smaller proportion of operating costs to-day than they did before the war. It was also contended that a smaller number of employees were operating a greater mileage of railways in 1922 as compared with 1913, and that, consequently, the average employee is now giving proportionately greater service. The Brotherhood quoted figures compiled by the Dominion Bureau of Statistics which showed that the average wages and salaries of all railway employees in 1923 was \$1,381 per year, including presidents and other high-paid officials, and that the average wages for that year in the United States was \$1,488, and contended that when the proportion accounted for by

high salaries was deducted, the ordinary employee's earnings were not sufficient to maintain a fair standard of living. It was also pointed out that the railwayman's earnings were obtained at a risk of life and limb far beyond that involved in other industries. The memorandum showed that in 1913, 178,652 Canadian railway employees operated 29,304 miles of railway. In 1922, 165,635 railway employees operated 39,773 miles of railway; that in ten years the number of employees was reduced by 13,017, and that the number of miles of railway operated increased by 10,469 miles.

### Sick pay for teachers in Toronto

The Toronto Public School Teachers' Association are asking the Board of Education of the city to establish some form of cumulative sick allowances for teachers. It is proposed that one-fifth of the unused sick allowance of a teacher in any year, which is twenty days, shall be at the disposal of the teacher in the case of any disability happening to that particular teacher. Under present arrangements a teacher, it is claimed, might teach for twenty years and never be sick a day, while in the twenty-first year he might be sick for three months. Under the cumulative plan, on the other hand, the teacher would have 400 unused days' sick allowance after the same period of service, one-fifth of 400 being eighty days. It is understood that the statutes enable local School Boards to extend the time allowed with pay.

### Gains secured by workmen's compensation

The report of the Workmen's Compensation Board of British Columbia for 1923, reviewed elsewhere in this issue, claims that the experience of the past seven years has demonstrated the superiority of the collective liability system of accident insurance over the old method of individual liability. "The absence of litigation, promptness in adjusting claims of workmen and their dependants, and the completeness of the protection afforded to employers and employees under the Act, have, it is believed, met with general approval. . . . Smaller employers no longer dread financial ruination as a result of a serious industrial accident to an employee, and crippled workmen and their dependants have no fear of utter want by being left without compensation, or with an incollectible judgment. Besides that, employers are no longer in the position of contestants, but have a common interest in seeing that those entitled receive the exact amount due them." The report

points out the low operating cost of workmen's compensation as now administered, stating that \$96.58 was paid out for compensation out of every \$100 collected from the employers during 1923. In making a comparison, however, of the cost of administration under state and private systems of compensation it should be noted that section 60 of the British Columbia Act provides as follows:—

(2) The salaries of the Commissioners shall be payable out of the Consolidated Revenue Fund, and, subject to the provisions of this subsection, shall be fixed by the Lieutenant-Governor in Council. The salary of the chairman shall be not less than five thousand dollars nor more than six thousand five hundred dollars per annum, and the salary of each of the other Commissioners shall be not less than four thousand dollars nor more than five thousand dollars per annum.

### Seamen and workmen's compensation

An instructive paper written by Mr. V. J. Paton, K.C., chairman of the Nova Scotia Workmen's Compensation Board, appears on another page of this issue. The "extra-territorial problem" with which the writer deals, arises in workmen's compensation cases through the overlapping of Dominion and provincial jurisdiction in regard to seamen and longshore workers. As Mr. Paton points out, the difficulty is met in Nova Scotia by means of a section of the Act which declares that the employers of such workmen are understood to assume responsibility in case of accidents to these workers unless they have expressly exempted themselves from this obligation in writing.

In British Columbia the problem of accidents occurring outside provincial territory is dealt with by section 8 of the Workmen's Compensation Act as follows:—

8. (1) Where an accident happens while the workman is employed elsewhere than in the province, which would entitle him or his dependants to compensation under this Part if it had happened in the Province, the workman or his dependants shall be entitled to compensation under this Part:—

(a) If the place or chief place of business of the employer is situate in the Province, and the residence and the usual place of employment of the workman are in the Province, and his employment out of the Province has immediately followed his employment by the same employer within the Province and has lasted less than six months; or

(b) If the accident happens on a steamboat, ship, or vessel, or on a railway, and the workman is a resident of the Province, and the nature of the employment is such that in the course of the work or service which the workman performs it is required to be performed both within and without the Province.

(2) Except as provided as subsection (1), no compensation shall be payable under this Part where the accident to the workman happens elsewhere than in the Province.

(3) In any case where compensation is payable in respect of an accident happening elsewhere than in the Province, if the employer has not fully contributed to the Accident Fund in respect of all the

wages of workmen in his employ who are engaged in the employment or work in which the accident happens, the employer shall pay to the Board the full amount of capitalized value, as determined by the Board of the compensation payable in respect of the accident, and the payment of such amount may be enforced in the same manner as the payment of an assessment may be enforced.

(4) The Board, if satisfied that the default of the employer in respect of his contribution to the Accident Fund was excusable, may in any case relieve the employer in whole or in part from liability under subsection (3).

**New Brunswick compensation regulation altered**

Regulation No. 7 of the Workmen's Compensation Board of New Brunswick has been amended by the Lieutenant-Governor of the Province in Council, under the authority of section 74, subsection (3), of the Workmen's Compensation Act, 1918, which provides as follows:—

"Any such regulation (i.e. of the Workmen's Compensation Board) may at any time be revoked or amended by the Lieutenant-Governor in Council."

Order No. 7 related to the penalty imposed on employers who fail to pay their assessments under the Act. It fixed the penalty for failure to pay the required amount, or any prescribed portion thereof, within 10 days after notice, at an additional 1 per cent of the amount for each calendar month or fraction thereof that the default continued. The new regulation reduces the penalty to 7 per cent per annum of the amount remaining unpaid. This penalty is in addition to that provided in section 61 of the Act, as follows:—

61. (1) Any industry in respect of which the employer neglects or refuses to furnish any estimate or information as required by section 43 shall, during the continuance of such default, be deemed to be an industry within Part II, and such employer shall be liable for damages as provided in Part II, except as provided in subsection (3) no compensation shall be payable under Part I during the continuance of such default.

(2) Notwithstanding subsection (1) such employer shall be liable to pay to the Board the full amount of capital value of any compensation payments to which any workman would be entitled under Part I by reason of any accident occurring during the continuance of such default, such amount or capital value may be assessed against, and collected from, such employer by like process and means as in the case of other assessments under Part I.

Part II of the Act, referred to above, applies to industries to which Part I does not apply, employers under Part II being held individually liable for personal injuries to their employees due to negligence on the part of the employer or of another employee, etc.

The order giving effect to the change in Order No. 7, above described, states that it was made on the recommendation of the Provincial Premier, who considered that the

rate of 1 per cent per month was too high. It will be recalled that Premier Veniot took a prominent part in a conference of employers, employees and members of the Provincial Government held last January at St. John, N.B., to discuss problems that had arisen in connection with the administration of Workmen's Compensation in the Province (LABOUR GAZETTE, February, 1924).

**Attempts to evade minimum wage orders**

Some prominence was given in the public press in Toronto in October to the case of a female worker who, it was found, had not

been paid by her employer the wage to which she was entitled under the Minimum Wage Act. The District Trades and Labour Council became interested, and the charge was made that the employing firm had allowed the girl to work as a learner, and that when she was about to become entitled to the minimum wage of an experienced worker, she was discharged and later re-engaged for a new term at a learner's rate of wages. Through the mediation of the Minimum Wage Board the sum of \$142 was paid to the girl as arrears of wages. As the Labour Council was proposing to institute criminal proceedings against the employer the chairman of the Board made a statement to the effect that while it was open to any one who wished to institute proceedings in the courts, the policy of the Board was to exhaust peaceful methods of settlement before incurring the expenses and publicity of legal proceedings. "Particularly," he added, "we wish to save our clients, the working women of the Province, from the costs and notoriety involved." He mentioned that the Board often settled similar cases, and had found that the most effective method was to take them up directly with the parties concerned, as had been done in the case just mentioned.

**Garment workers' union to conduct a factory**

The International Ladies' Garment Workers' Union has announced that it will shortly open a cloak and suit factory at Cleveland, Ohio, under an agreement

with an existing clothing firm that the latter will sell the goods produced by the union. Several years ago one of the conventions of the organization passed a resolution authorizing the Executive Board to formulate plans for a plant owned and operated by the union. At that time it was proposed to go into the business in competition with the established clothing concerns and to undertake both the manufacturing and selling of the finished product. The present proposal is a modification

of the original idea. "Instead of opening our own factories," the union's representative stated in a recent press interview at New York, "and becoming competitors of our employers, we are going to co-operate with them. We will show them that the union can take over the production end of the business and run it efficiently. We shall confine ourselves to the production and leave the marketing to the employers."

The vice-president of the union states that the proposal is designed to demonstrate the economy and efficiency of large-scale production, to put an end to sweat-shop conditions and to act as a stabilizing factor in the industry. The present practice of the clothing concerns is to buy their material and have it made up from them into cloaks and suits in outside factories by sub-manufacturers on a contract basis, and then to sell and distribute the final product. The peculiar conditions existing in this industry were noted in the *LABOUR GAZETTE* for September (page 776). The union plant will employ about 300 workers, and will be owned and operated by the organization. Capital will be raised among the members of the union, who have already approved of the proposal, by a special assessment. If the plan works well in Cleveland, the union intends to establish similar factories in New York and other large clothing centres.

#### Caution as to labour banks

The Executive Board of the Sheet Metal Workers' International Association, in their report to the recent convention held at Montreal (*LABOUR GAZETTE*, September, 1924, page 772) spoke a word of warning as to the labour bank movement as follows:—

We have been invited on numerous occasions to deposit the funds of the Alliance in various labour banks that have been formed in different cities throughout the country. At the time of preparing this report there are about thirty labour banks either doing business or about ready for business and perhaps an equal number under consideration. It would be quite impossible to make each of the labour banks a depository of the funds of the Alliance and from a business viewpoint, impractical. We are not enthusiastic about the rapid growth of the number of labour banks, and believe that further experience of existing trade union banks is essential before additional institutions of this kind embark in the banking business. We have deposits in two banks at Washington, one of which is considered a trade union bank, the other having labour representatives on the board of directors. Admittedly, there is a growing tendency on the part of trade unions to enter into the business of pooling their funds and savings to increase the earning power of their moneys, and to balance the credit power now exercised by employing interests. Caution should be the watchword in such endeavours and unless the proposed establishment of trade union banks guarantee a degree of stability, and men of practical banking experience whose honesty and in-

tegrity are beyond question are chosen to actively direct such institutions, we would not advise our local unions to allow their funds to be used in their formation. Trade unions quite often are in immediate need of their funds and the conversion thereof of the whole or an undue portion of the financial assets of local unions into permanent and fixed investments, not subject to quick litigation, for use when an emergency may arise, is a danger that we wish to warn against. Such a condition may arise by the investment of the funds of local unions in the capital stock necessary for the formation of trade union banks.

#### Unemployment insurance fund for clothing workers

An unemployment insurance fund is to be started in New York on December 1, under the auspices of the Amalgamated Clothing Workers of America, on the same lines as the fund established by the same union last year at Chicago (*LABOUR GAZETTE*, July, 1923, page 705). The Chicago fund completed its first year on October 30. During that period the total collections were \$1,562,421 and the amount paid out to unemployed members was \$865,952, the balance in the treasury at the end of the financial year being \$640,775.

The New York fund is to be formed in accordance with the provisions of a recent collective agreement entered into by the Amalgamated Union with the Clothing Manufacturers' Exchange of New York. The manufacturers and contractors have agreed to contribute weekly one and one-half per cent of their total pay-roll, and the workers will contribute the same proportion of their weekly earnings, these contributions to form a fund, from which the workers will receive unemployment benefits.

The success of the Amalgamated Clothing Workers in their handling of the unemployment problem at Chicago has attracted the attention of unions in similar trades, and similar unemployment funds are now in existence for members of the International Ladies' Garment Workers, the United Cloth Hat and Cap Makers, and the International Fur Workers Unions. (The establishment of the Garment Workers' Unemployment fund was noted in the September issue of this *GAZETTE*).

A party of mine managers of Cape Breton left towards the end of October on a tour of inspection of some of the chief mining centres in the United States, including Pennsylvania, Illinois, and West Virginia.

The report of the special commission headed by Mr. Justice Ernest Roy, which has been investigating the subject of Workmen's Compensation in the province of Quebec during the present year, is expected to be made public at the opening of the next session of the Provincial Legislature early in January.

The *Canadian Mining Journal* notes that the average daily production is steadier and larger at the present time than in the past, owing to improvements in the condition of the collieries and to the fact that miners take fewer days off when work is broken. The *Journal* anticipated that the present activity in the coal industry would continue into November, followed by a slowing down for several months.

An unemployment council is being organized at Hamilton, Ontario, with the support of the Hamilton District Trades and Labour Council in co-operation with the Mayor and Board of Control of the city.

The number of assisted passages to Canada that were granted in connection with agreed schemes under the Empire Settlement Act (Great Britain) during September was 473. The total number of assisted passages to Canada, granted from January 1 to September 30 was 7,531, besides 24 to Ontario. During 1922 and 1923, 3,557 passages to Canada, and 1,343 passages to Ontario were granted. The total number of actual departures during 1924, to the end of September was 7,525 to Canada, and 44 to Ontario.

The proceedings of the Special Committee of the House of Commons appointed during last session to make an inquiry into an old age pension system for Canada, has been published as a separate report (App. No. 4-1924), price 25 cents. The various reports of this Committee were noted in the July issue of the *LABOUR GAZETTE*, and in previous issues.

The Workmen's Compensation Act passed by the Indian Legislature in 1923, came into force on July 1, 1924.

The International Labour Office has published a Bibliography of Industrial Hygiene, containing a list of the most important works on this subject, including both those of a general character and also books on the special diseases of the various industries, methods of treatment, etc.

Traders and commercial travellers intending to trade in Denmark as representatives for foreign commercial houses or for their own account are required to take out a license. The license is valid for one year and entitles the holder, at a cost of 400 kroners (\$66) to represent one firm only. If the traveller wishes to represent more than one firm, additional licenses can be obtained for each firm represented at a cost of 200 kroners (\$33) each. The license must be taken out at the first customs station arrived at after reaching Danish territory, the applicant being required to produce a declaration, signed by himself, stating that he intends to trade either for his own account or for the account of others, or if he is representing a single firm a declaration signed by the firm to the effect that he is their agent. The declaration should be signed before a notary in Canada and the notary's signature must be legalized by a Danish consular officer. The regulations governing commercial travellers' licenses in Denmark may be consulted by interested Canadian firms at the Department of Trade and Commerce, Ottawa.

---

### Shot-Firing in British Coal Mines

An order made by the Secretary for Mines of Great Britain regarding the firing of shots in coal mines in which danger may arise from firedamp or coal dust became operative in October. The new requirements provide that no person may be newly appointed to fire shots unless he possesses the prescribed qualifications as regards age and practical experience underground, and that no person may be appointed whose wages depend on the amount of mineral to be gained.

The examination for gas, which has to be made by the shot-firer immediately before the firing of each shot, is specially to include an examination for any gas issuing from the shot-hole itself and from any break within a radius of 20 yards. Shot firing is prohibited within 20 yards of cavities and breaks that are not accessible to examination for gas contained in or issuing from them.

Every place where a shot is to be fired is to be thoroughly treated with stone dust or water unless the shot-firer is given written permission by the manager or the under-manager to dispense with this precaution. Where two shot-holes are close enough together to make it possible that the firing of one shot will relieve the work to be done by the other, the first shot must be fired before the second hole is charged. The object is to safeguard against the second hole being over-charged, as it might well be if it were charged before the firing of the first shot had shown the shot-firer the amount of work left for the second shot to do. A limited exception to this requirement is made in respect of shots to bring down the coal in long wall faces, subject to the condition that the shots are fired between shifts.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation

**E**MPLOYMENT as reported by employers showed an upward movement at the beginning of October, but the situation continued to be less favourable than at the same period of last year, although contractions had been indicated then.

A continued expansion is shown by the reports from the offices of the Employment Service of Canada during the month of September, following the rise noted early in August. The volume of vacancies increased very rapidly during the month, followed very closely by applications and placements. A comparison, however, with the previous year showed a decline in business for the period under review.

The following is a survey of employment conditions at the end of October, 1924, as reported by the Superintendents of the offices of the Employment Service of Canada:—

*Maritime Provinces.*—Conditions remained much as previously reported. Several orders for farm help were received and suitable applicants placed. In New Brunswick construction work had fallen off considerably owing to colder weather, although a considerable amount of work was still going on. Work on highways was nearing completion, the clearance of drains and dikes being the first work in view. In the province of Nova Scotia unemployment was evident among construction mechanics and tradesmen, and with a view to alleviating this condition a few municipalities have advanced plans for additional street and sewer work. The logging season opened with a large number of vacancies available and several placements were made in this group.

*Quebec.*—Little change was recorded in the demand for farm workers in this province, with only a very slight number of orders registered. The situation in the building trades was very quiet with a small quantity of work offered for bricklayers, plasterers, plumbers and steamfitters. A decline was recorded in the calls for building labourers, especially in Montreal, and from Sherbrooke it was reported that a number of workers were still employed on road and highway repairs. A very brisk demand was shown in the logging industry, a large number of experienced bushmen and loggers being transferred from Quebec, Montreal and Hull offices, to the camps in the northern sections of the province and in Ontario. Little improvement was shown in the manufacturing

industries, and commercial activities created a very small demand. At the latter part of October more women household domestics were available for work than there were vacancies offered, a situation which is not usual at this time of year.

*Ontario.*—A more optimistic report regarding employment generally was given by the superintendents, the continued fine weather no doubt aiding materially with reference to all outdoor trades. The demand for farm workers continued fairly brisk at Brantford, Kingston, and London, with the supply equal to the demand, and at Chatham a few beet workers were placed. The labour available was more than adequate to take care of the continuation of construction and repair work in connection with highways, city streets and sewers. In some localities building construction was active, but only a small demand for skilled and unskilled workers was recorded, the exception being stonemasons, a scarcity of these workers being reported from several districts. The logging industry continued to be the main source of employment at the northern offices, and from Toronto an increasingly large number of orders for bushmen and camp workers was filled. At Cobalt, Sault Ste. Marie and Timmins reports indicated an insufficient supply of experienced men. The mining industry was very slack, few demands being recorded. Industrial operations have shown reductions during the past month and a slight recession in demand was apparent in several important industries. An increased registration of women for permanent institutional positions was recorded in Toronto, but the demand for experienced residential household workers was considerably greater than the supply.

*Manitoba.*—With the continued good weather a brisk demand for threshers and help for fall ploughing was sustained, and orders were filled as quickly as received. Business in the building groups continued as formerly reported, the majority of the work under way progressing towards completion. More than enough applicants were registered to satisfy any immediate requirements. A fairly large number of placements were made in logging, but until requests for harvest labour cease it will not be possible to make more than average progress in meeting the demand. Experienced domestic help for urban and rural communities were required in large numbers, although fewer workers for the latter sections were needed.

*Saskatchewan.*—In the agricultural group the reaction from the peak demand of last month had set in, and although a heavy demand was still recorded it was not nearly so great as formerly. Applications for farm work were greatly in excess of the positions available. Extra gang hands and labourers were placed with the railway companies in considerable numbers, while the continuation of the building under way supplied work for tradesmen and building mechanics. Road grading and highway work supplied employment for several. A decrease in the demands for housekeepers and domestics for farms was reported, although there was still a shortage of suitable applicants to fill the calls for general workers.

*Alberta.*—Threshing operations were about completed and the calls for farm workers were for fall ploughing mainly and were very easily satisfied. Although a general slackness prevailed in the construction group, a good deal of work was supplied to carpenters, plasterers, painters, and general labourers, in various districts and irrigation work near Banff provided some employment. A few workers were supplied to the railway companies for extra gang and section work. The demand in the logging group was very brisk with prospects of a continued and fairly active demand throughout the winter months.

*British Columbia.*—A slightly improved employment situation was reported, although a considerable number of men were registered as unemployed. Building and construction work was progressing rapidly and although no demand for trades mechanics or labourers was reported, the surplus of these workers registered at the offices had not increased perceptibly. Some irrigation work was nearing completion and a few vacancies were offered in the railway construction and maintenance group. The small local demand for farm workers was met satisfactorily. Quietness characterized the logging group, a small demand for tie makers, loggers and sawyers being recorded. Very few vacancies occurred in the mining group and a large number of idle men were reported in the cities. Improvement was shown among the shipping and longshore trades, but a large number of experienced men were available for any work offering in this group. In the women's section, notwithstanding a very large registration, difficulty was experienced in supplying suitable applicants to meet the demands for experienced cooks, generals and household positions.

#### EMPLOYERS' REPORTS.

The trend of employment at the beginning of October was upward, according to reports tabulated by the Dominion Bureau of Statistics from employers of labour. Although the situation was more favourable than on September 1, 1924, the index was lower than on October 1, 1923, when declines had been reported. The largest gains since the preceding month were registered in manufacturing, especially in the textile, iron and steel, canning and confectionery divisions. Logging, transportation and trade were also more active, while further though smaller declines were noted in construction. Firms in the Maritime Provinces and Ontario enlarged their working forces, but in the remaining provinces contractions were indicated.

In the Maritime Provinces, iron and steel, textiles, logging, construction and trade reported improvement; employment in coal mines, paper and lumber mills and summer hotels, on the other hand, declined.

In Quebec there were fluctuations in different industries resulting in a small net reduction in employment. Textile, tobacco and confectionery factories, logging, transportation and trade were decidedly busier but saw-mills showed marked seasonal curtailment and construction, rubber, iron and steel plants were slacker.

Substantial improvement was noted in manufactures in Ontario; textile, food, iron and steel works reported the largest additions to staffs. Logging camps also recorded considerable expansion. The only decreases of any size were those in construction.

In the Prairie Provinces reductions in personnel in railway car shops, together with declines in construction and in summer hotels caused a shrinkage in employment. Coal mining was more active, as were also local transportation and printing establishments.

In British Columbia, losses in construction, canneries and summer hotels were partly offset by gains in logging, metallic ore mines, shipping and stevedoring and trade.

An analysis of the returns by cities shows that employment improved in Montreal, Quebec, Toronto, Hamilton, Winnipeg and Vancouver, while in Ottawa there was no general change in the situation. In Montreal manufacturing as a whole registered expansion, especially in the textile division. Transportation and trade also employed larger working forces, but iron and steel and construction were slacker. In Quebec City leather and clothing works were rather busier and improvement was also recorded in wholesale

trade. In Toronto, manufacturing showed considerable revival, textile works especially making large additions to pay-rolls. Trade also was more active. Additions to staffs in pulp and paper works and in trade in Ottawa were offset by declines in construction and in a few other industries. In Hamilton food, iron and steel factories were more fully employed than at the beginning of September, but there were decreases in construction. The increase in Winnipeg occurred largely in the pulp, paper and printing industry. In Vancouver there were increases in employment in electric current works, shipping and stevedoring, building construction and trade, but reductions that nearly offset these gains were reported in food and non-ferrous metal factories and in road construction. The result was a very small net increase.

Improvement was indicated in manufacturing on the whole, although edible animal products, lumber, brick and glass works were slacker. The largest gains were recorded in textiles, all branches of which shared in the expansion. The automobile, crude, rolled and forged and some other divisions of iron and steel also registered considerable gains, but these were partly offset by further curtailment of operations in railway car shops. Leather, canning, confectionery, paper, printing, tobacco and electric current works reported the addition of large number of operatives. Logging camps continued to show seasonal expansion in nearly every section of the country. Coal mines, on the whole, were rather slacker, but improvement was indicated in metallic ore mines and, on a smaller scale, in non-metallic mineral mines. Telegraph and telephone companies reported reductions in personnel. Street railways and cartage and shipping and stevedoring employed larger working forces than on September 1, while steam railways showed further, though less pronounced contractions. Continued curtailment of operations was indicated in construction; the building, highway and railway divisions all shared in the shrinkage. Summer hotels reported the falling off in activity usual at this time of year while other branches of the service group registered very little change. Improvement was recorded in both retail and wholesale trade, that in the former being more pronounced.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of October.

#### TRADE UNION REPORTS.

Unemployment as used in the following report has reference to involuntary idleness, due to economic causes.

Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The percentage of unemployment reported by 1,527 trade unions with 154,181 persons at the end of September was rather smaller than that registered at the end of the previous month, 5.9 per cent of the members being idle as compared with 6.5 per cent at the close of August. The situation was not so favourable as in September of last year when 2 per cent of the members were reported idle. More work than in August was afforded members in all provinces except Nova Scotia and Manitoba. The change in Nova Scotia was nominal in character, but in Manitoba it was considerable, due, for the most part, to inactivity in railway car shops. All provinces reported more idleness than in September of last year, Nova Scotia, Quebec, and Manitoba showing the most noteworthy declines. Employment in the manufacturing industries increased slightly over the previous month, owing to improvement in the garment, pulp and paper, and glass groups. No change in the situation was reported by printing tradesmen, but in the iron and steel group reductions occurred, chiefly among machinists and railway carmen. There was also considerable inactivity among textile workers. Coal miners in Nova Scotia reported slightly more unemployment than in August; in Alberta they were more fully engaged and no idleness was shown in British Columbia. Asbestos miners in Quebec were fully employed. The building trades indicated a small fractional percentage increase in unemployment and the level of unemployment was also above that of September of last year. Carpenters and joiners, electrical workers, plumbers and steamfitters, steam shovel and dredgemen, and tile layers were better employed than in August, but the inactivity among bricklayers, masons and plasterers, bridge and structural iron workers, granite and stonecutters, painters, decorators and paper-hangers and hod carriers just more than counter-balanced this improvement. In comparison with September of last year, brick-

layers, masons and plasterers, painters, decorators and paperhangers and hod carriers were less active, and declines of smaller magnitude were reported by carpenters and joiners, electrical workers, granite and stonecutters and plumbers and steamfitters. In the remaining trades there was slight improvement. More work than in August was registered in the transportation group, both navigation workers and steam railway employees sharing in the gain. The situation for street and electric railway employees remained unchanged. Fishermen were fully engaged. Theatre and stage employees and stationary engineers and firemen reported smaller percentages of idleness. Hotel and restaurant employees and barbers were not so busy.

A summary of employment during the quarter ending September 30, 1924, as reported by trade unions, appears elsewhere in this issue.

#### EMPLOYMENT OFFICE REPORTS

During the month of September, 1924, the offices of the Employment Service of Canada made 53,104 references to positions and effected a total of 51,621 placements; of these the workers placed in regular employment numbered 43,832, as compared with 51,740 during the same period a year ago, while those in casual work were 7,789. The number of men placed in regular employment was 40,309 and of women 3,523. Employers notified the Service during the month of September of 56,707 vacancies for men and 9,002 opportunities for women,—a total of 65,709 orders,—in contrast with a total of 67,065 during the corresponding period in 1923. During the month 62,465 applications for employment were reported at the offices, of which 51,385 were from men and 11,080 from women. During September, 1923, applications for work numbered 67,097. It will be noted that approximately the same volume of business was transacted during this September as during the same period last year, yet at no time did the daily transactions of the offices approach the high level noted at the middle of September, 1923. The expansion begun during the latter part of August, 1924, was continued consistently throughout September as may be seen by the chart which accompanies the article on another page of this issue on the work of the Employment Offices during that month. Elsewhere in this issue will be found a statement of the transactions of the offices during the third quarter of 1924.

#### PRODUCTION REPORT

The Dominion Bureau of Statistics reports that the production of pig iron rose slightly in September to 23,202 long tons or 0.6 per cent over the 23,073 tons of the preceding month. Compared with August the output of basic iron fell to 3,997 tons, a loss of 1,945 tons. No malleable iron was produced, but foundry iron advanced to 19,205 tons, a gain of 7,294 tons. The cumulative production of pig iron during 1924 reached 518,860 tons at the end of the third quarter. While 165,736 tons lower than the output for the same period of 1923, this total exceeded the first nine months' production in 1922 by 242,871 tons, and that in 1921 by 61,703 tons. The production of basic iron for the nine months was 338,080 tons, or about double the output of this grade in 1922, and slightly less than that in 1921. The production of foundry iron, at 138,070 tons, was about 60 and 70 per cent greater than that of 1922 and 1921 respectively; the 42,710 tons of malleable iron produced was 120 and 50 per cent over the production in the same two years. During September one furnace was blown in at Sydney, Nova Scotia, resulting in three furnaces being active at the end of the month, namely, one at Hamilton, Ontario, one at Sault Ste. Marie, Ontario, and one at Sydney, Nova Scotia. The production of ferro-silicon during the month was 1,898 tons, a decrease of 297 tons from the August output of 2,195 tons.

The production of 18,005 tons steel ingots and castings in Canada in September was, with the exception of May, 1922, the lowest recorded since the commencement of monthly statistics in 1917. Compared with 22,736 tons in August, it marked a drop of 21 per cent. Basic open hearth ingots fell to 16,585 tons, a loss of 22 per cent from the 21,150 tons reported for August while basic open hearth castings dropped to 442 tons as compared with 677 tons of the previous month. The other grades showed slight increases, alloy steel ingots advancing 71 per cent to 459 tons. The cumulative production of steel for the nine months amounted to 581,711 tons composed of 558,483 tons steel ingots and 23,228 tons steel castings. This output, while lower than the 1923 figures by 139,641 tons, exceeded the production reported for the first nine months of 1922 and 1921, when the quantities were 334,835 tons and 477,588 tons respectively.

A report from the Department's correspondent at Cobalt shows that sixteen carloads, containing approximately 1,353,079 pounds of silver ore, were shipped from the Cobalt camp during the month of October, as compared with thirteen carloads of silver ore, containing

963,481 pounds, in the previous month. The Nipissing mine shipped 230 bars, containing 262,581.36 ounces of silver, and The Mining Corporation of Canada shipped 160 bars, containing 161,088.99 ounces of silver, making a total of 390 bars, containing 423,670.35 ounces of silver, shipped during the month of October, as compared with 461 bars, containing 510,350.06 ounces, in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of September, 1924: at the Acadia Coal Company, Limited, 30,783 tons, at the Intercolonial Coal Mining Company, Limited, 12,099, and at the Greenwood Coal Company, Limited, 5,094 tons.

As complete figures for the coal production in Canada are not available for the month of September, the statistics for the previous month are given at the end of this section.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement, amounted during the month of September to \$19,311,459, as compared with \$18,323,938 during August, and with \$21,653,714 in September, 1923. The gross earnings from January 1, 1924, to September 30, 1924, were \$172,484,625 as compared with \$180,137,568 for the same period last year.

The gross earnings of the Canadian Pacific Railway Company for September, 1924, were given in a preliminary statement as \$15,493,984 in comparison with \$14,324,121 in the previous month and \$17,745,909 in September, 1923. The gross earnings for the first nine months of 1924 were given as \$129,358,699, as compared with \$130,686,362 for the same period in 1923.

*Coal Statistics for August.*—During August the output of coal from Canadian mines, according to estimates by the Dominion Bureau of Statistics, was the lowest for the current year. The decrease from the previous month's production amounted to 7 per cent, the output falling from 730,316 tons in July to 682,978 tons in August. Compared with the average production for August during the past five years the decrease was still greater, amounting to 45 per cent. These decreases may be explained by the continuance of the coal strike in "District 18," Alberta and British Columbia. The average monthly production of Alberta and British Columbia for the five preceding years was 686,485 tons, as against 254,519 tons during August of this year. There was also lessened activity in Nova Scotia, where the average monthly production fell from 504,014 tons to

403,739 tons, or a decrease of 20 per cent. The provinces of New Brunswick and Saskatchewan also showed decreases. The production by provinces was as follows:—Nova Scotia, 403,739 tons; New Brunswick, 13,029 tons; Saskatchewan, 11,691 tons; Alberta, 131,572 tons; British Columbia, 122,947 tons.

The total number of men employed in the coal mines of Canada during August was 19,280, of whom 14,682 worked underground and 4,598 on the surface, as compared with a total of 17,522 in July, of whom 13,392 worked underground and 4,130 on the surface.

The monthly production per man was 35.4 tons for August as against 38.1 tons per man for July. During August the production per man-day was 1.9 tons as compared with 2.0 tons in July.

BUILDING PERMITS AND CONTRACTS AWARDED	According to the Dominion Bureau of Statistics the value of the building permits issued in 56 cities during September was the highest in any month of this year, showing an increase of 53.9 per cent over the previous month, and of 39 per cent over September, 1923. The total value of the permits in September, 1924, was \$14,566,504; for August, 1924, it was \$9,463,756, and for September, 1924, \$10,478,618.
---	---

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded during October, 1924, was \$21,066,800, compared with \$22,506,300 in September. Residential building accounted for 38.3 per cent of the October total, amounting to \$8,066,900; business building amounted to \$6,154,100, or 29.2 per cent; industrial building to \$774,500, or 3.7 per cent; and public works and utilities to \$6,071,300, or 28.8 per cent. The activity was distributed among the provinces as follows: Ontario, 49.7 per cent; Quebec, 30.3 per cent; British Columbia, 8.6 per cent; Prairie Provinces, 7.3 per cent; and the Maritime Provinces, 4.1 per cent.

FOREIGN TRADE	The summary of Canadian trade prepared by the Department of Customs and Excise shows that in September, 1924, the merchandise entered for consumption amounted to \$63,911,289 as against \$71,351,200 in September, 1923. The domestic merchandise exported amounted to \$80,960,729 in September, 1924, as compared with \$73,821,631 in the previous month and \$67,602,641 in the corresponding month of the previous year. Foreign merchandise exported amounted to \$1,494,898 in September, 1924, and \$1,214,930 in September, 1923.
------------------	--

The chief imports in September, 1924, were: fibres, textiles and textile products, \$13,624,350; non-metallic minerals and products, \$10,933,997; iron and its products, \$9,850,320; and agricultural and vegetable products, mainly foods, \$9,444,560.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$23,477,793; animals and animal products, \$17,063,329; and wood, wood products and paper, \$21,533,165. During the six months of the fiscal year ended September, 1924, exports of agricultural and vegetable products, mainly foods, were valued at \$175,857,017; wood, wood products and paper at \$123,813,581; and animals and animal products at \$71,334,100.

### Strikes and Lockouts

The time loss due to industrial disputes was less in October than in September, but greater than in October, 1924. There were in existence at some time or other during the month six disputes involving 8,656 employees and a time loss of 141,448 working days, as compared with eight disputes in September, involving 8,501 employees and resulting in a time loss of 205,634 working days. In October, 1924, there were recorded 16 disputes involving 2,322 workpeople and a time loss of 50,402 working days. Two strikes and lockouts commenced during October, one of which terminated during the month. Three of the strikes and lockouts which commenced prior to October terminated during the month. At the end of the month, therefore, there were two strikes and lockouts involving 280 workpeople. The increase in the number of employees involved and in the time loss as compared with October last year was due to the strike of 8,000 coal miners in Alberta and Southeastern British Columbia.

### Prices

Retail food prices were slightly higher, seasonal declines in the prices of potatoes and beef being more than offset by seasonal advances in dairy products and eggs. The cost per week of a list of twenty-nine staple foods, for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.31 at the beginning of October as compared with \$10.28 for September; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. Potatoes and sirloin steak declined substantially and there were smaller declines in roast beef, mutton, fresh and salt pork,

and in prunes. The most important advances occurred in the prices of eggs and butter, while there were less important advances in cheese, rolled oats, lard, beans, evaporated apples and sugar. Including the cost of fuel and rent with that of foods, the total budget averaged \$20.67 at the beginning of October as compared with \$20.65 for September; \$21.16 for October, 1923; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced to 157.0 for October as compared with 153.8 for September; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak); and 214.0 for October, 1919. In the grouping according to chief component material four of the main groups advanced, two declined, and two showed little change. The vegetables and their products group and the animals and their products group advanced substantially, the former because of higher prices for grains, flour, milled products and rubber and the latter because of higher prices for hogs, sheep, fish, milk, eggs and cheese. Fibres, textiles and textile products rose because of higher prices for cotton, wool and jute. Higher prices for silver, lead, tin, zinc and antimony caused an advance in the non-ferrous metals group. The non-metallic minerals group declined because of lower prices for gasoline and coal oil. The wood and wood products group was also somewhat lower, while the iron and its products group and the chemicals and allied products group were both practically unchanged.

The effect of temperature on the frequency of accidents in a factory was discussed at a recent meeting of the Institute of Industrial Welfare workers in England. In one factory experiment it had been found that there was a minimum of accidents when the temperature was 65 to 69 degrees. When the temperature fell five degrees there were 6 per cent more accidents. Another five degrees lower, accidents increased by 16 per cent, while another drop in the temperature of five degrees involved a 35 per cent increase in the number of accidents. At temperatures above 69 degrees accidents again increased in frequency. One very obvious and simple means of decreasing mining accidents, it was stated, was to improve the ventilation of mines.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF OCTOBER

**T**HE Board of Conciliation and Investigation established to deal with the dispute between the Canadian Pacific Railway Company, western lines, and its clerks, freight handlers, etc., continued its investigations during October, and presented its report shortly after the close of the month. The Board was composed of Mr. Travers Sweatman, representing the employers, Mr. David Campbell for the employees and the Hon. Mr. Justice Dennistoun, as chairman, appointed on the joint recommendation of the other two members. The report was signed by all three members, Mr. Sweatman dissenting, however, respecting certain points.

### Other Proceedings under the Act

In connection with the recent dispute between certain coal operators, members of the Northern Alberta Coal Operators' Association, and certain of their employees being members of the Edmonton and District Miners' Federation, agreements based on the award of the Board were reached shortly after the close of the month between the Miners' Federation and the various operators concerned. The report of the Board in this case was printed in the September issue of the *LABOUR GAZETTE*, page 744.

### Report of the Board in Dispute between the Canadian Pacific Railway Company, (western lines), and its clerks, freight handlers, baggagemen, etc.

IN THE MATTER of The Industrial Disputes Investigation Act, 1907, and of a dispute between The Canadian Pacific Railway Company, Western Lines, Employer, and certain of its employees, being clerks, freight handlers, baggagemen, storemen, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Employees.

Winnipeg, Manitoba,  
3rd November, 1924.

To the Honourable,  
The Minister of Labour,  
Department of Labour,  
Ottawa.

SIR,—In this matter the Board constituted under The Industrial Disputes Investigation Act, and consisting of Mr. Justice R. M. Dennistoun, Chairman; Mr. David Campbell, K.C., appointed by the employees, and Mr. Travers Sweatman, K.C., appointed by the employer, have the honour to make the following report:

The Board met in Winnipeg on Monday, the 22nd day of September, 1924, and on the following days: 23rd, 25th, 26th, 29th, 30th September, 2nd, 8th, 9th, 11th, 28th, 30th October, and 1st November.

At most of the sittings the employees were represented by Messrs. J. L. Pateman, J. J. Bell, J. Parkinson and J. Brody.

For the railway company there appeared Messrs. W. A. Mather, J. Lorimer, Macdonald, Anderson and McLennan.

The views of both parties were admirably, lucidly and temperately presented, and the Board desire to express their appreciation of the courtesy extended to them during the hearings by all concerned.

The basis of the negotiations was an agreement between the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees with Canadian Pacific Railway Company, Western Lines, of which the rules became effective on 1st September, 1922, and the rates effective 1st January, 1923, which was filed as Exhibit No. 6 with the Board.\*

On the 1st April, 1924, Mr. J. L. Pateman, General Chairman of the employees, gave the required thirty days' notice to the company for a revision of this agreement, Exhibit 6, and attached to his letter were the employees' proposals, a copy of which accompanied the application to the Honourable the Minister for the appointment of this Board. Following this, meetings were held between committees representing both parties. These meetings commenced on the 29th April, 1924, and terminated about the 23rd May, 1924, during which time the greater proportion of the proposals submitted were agreed to. In the answer filed on behalf of the railway company to the application for the appointment of this Board, the General Manager for Western Lines says as follows, in paragraph 8:

\* This agreement was noted in the *LABOUR GAZETTE*, April, 1923, page 405.

"As a result of the meetings of the said joint committees an agreement satisfactory to the employer and the employees was arrived at on nearly all points referred to in the list of proposed amendments submitted by the employees, but on matters hereinafter more particularly referred to it was found that the employer's committee and the employees' committee could not arrive at an agreement."

It was at this point that this Board, with the concurrence of the representatives of both parties, decided to commence its work. Members of the Board take it for granted that the points referred to by Mr. Pateman and Mr. Murphy, General Manager, Western Lines, as having been agreed to will be incorporated in the new formal agreement which will be prepared, and the Board now proceed to deal only with the points upon which an agreement was not arrived at.

*Point I.* Article 2 "E". Add: "In the event of any of the specified holidays falling on a day that an employee is given in lieu of Sunday, such an employee will be allowed a day off in lieu of same or be given an extra day's pay." The Board are of opinion that this amendment to the rules is reasonable and should be allowed, Mr. Sweatman dissenting.

*Point II.* Article 2 "H". The amendment to the rules asked for is new, and is as follows:—"Hourly rated employees required to report for duty will be paid a minimum of three hours at pro rata rates for which three hours' service may be required, provided however, that if required to report for duty on their regularly assigned seventh day off, or any of the holidays in Clause "D" of this Article, the minimum of three hours at pro rata rates shall be for two hours' service or less." The Board are unanimously of opinion that this alteration in the rules should be allowed.

*Point III.* Article 3 "J". Application is made to supplement this Article by adding the following: "with the following exception: all vacancies or new positions created in the freight shed, shed office and freight office shall be bulletined in each of the above-mentioned departments in accordance with Clause "D" of this Article. If an employee from the shed is appointed to a clerical position or vice versa his seniority for the purpose of promotion shall be counted from the date of such appointment. In case of reduction of forces seniority of service shall govern." The Board are of opinion that this amendment to the rules should be allowed, Mr. Sweatman dissenting.

*Point IV.* Article 5. This is an application to add a new clause to the existing rules to read as follows:—

"Employees at Vancouver who are required to travel on Sunday to meet incoming trans-Pacific steamers at Victoria will be paid at the rate of time and one-half time. Reasonable expenses will also be allowed."

In lieu of the rule applied for the Board unanimously recommend the adoption of the following rule:—

"Employees at Vancouver who are required to travel on Sunday to meet incoming trans-Pacific steamers at Victoria will be allowed a three-hour call in respect of this service."

*Point V.* Article 7 "B". This is an application to insert a new paragraph in the rules to read as follows:—

"After one year's service monthly rated employees will be allowed twelve working days' vacation with pay each year. When a statutory holiday falls within the prescribed twelve days, an extra day will be allowed."

The Board are of opinion that this amendment to the rules should be allowed, Mr. Sweatman dissenting.

*Point VI.* Article 7 "D". This is an application to insert a new rule as follows:—

"Where the work of an employee is kept up by other employees without cost to the company a monthly employee who has been in the continuous service of the company one year and less than two years, will not have deduction made from his pay for the time absent on account of bona fide case of sickness until he has been absent six working days in the calendar year; a monthly employee who has been in continuous service two years and less than three years, nine working days; a monthly employee who has been in continuous service three years or longer, twelve working days. Deductions will be made beyond the time allowance specified above. The employing officer must be satisfied that the sickness is bona fide, and that no additional expense to the company is involved. Satisfactory evidence as to sickness in the form of a certificate from a reputable physician, preferably a company physician, will be required in cases of doubt. The above limits of sick leave may be extended in individual meritorious cases and under the conditions specified, but only by agreement of the representatives of the company and of the employee."

The Board are of opinion that this rule, which has been in force for some time in respect to unorganized clerks and for these employees prior to the adoption of a schedule agreement, is reasonable and should be allowed, Mr. Sweatman dissenting.

*Point VII.* Article 7. This addition to the rules is new. It reads as follows: "Employees on leave of absence will, after three months, lose their seniority unless mutually agreed otherwise by the Company officers and representative employees." The Board are unanimously of opinion that this amendment to the rules should be allowed.

*Point VIII.* The employees request that the scope of the agreement be widened to cover the following positions:—

Pursers and Freight Clerks, B.C. Lake and River Service;

Janitor, Baggage Room, Edmonton;

Janitor, Agents' Payroll, Cranbrook;

Checkers (2 positions), Kenora;

Record Clerks (3 positions), Kenora;

Call Boys, Mechanical Department, at all points now covered;

Ticket Clerks, Lethbridge, and at all points where on Agents' Payroll;

Accountants at Fort William, Regina, Moose Jaw and Saskatoon;

Assistant Foreman at Fort William, Brandon, Regina, Moose Jaw;

Chief Clerks at all yard offices;

Locomotive Foreman's Clerk at Weyburn;

Junior Clerk, Stores Department, Winnipeg;

Chief Clerks at Freight Offices, Port Arthur, Brandon, Regina, Swift Current, Saskatoon, Medicine Hat and Lethbridge.

In view of the fact that these employees are at the present time members of this union, the Board are of the opinion that they should be included within the scope of the agreement, but that, in so far as the pursers and freight clerks of the B.C. Lake and River Service are concerned, a separate set of rules should be prepared to govern the conditions of their employment.

Mr. Sweatman wishes to dissent in the following particulars:

Firstly, in respect to the B.C. Lake and River Service, he is of the opinion that it would be better if this new agreement were negotiated in a separate schedule and not included under the present schedule. They are a different class of employees and he thinks that this would make for more harmony than if there were a separate agreement under the present schedule.

Secondly, Mr. Sweatman wishes to dissent in the inclusion of all the various other positions with the exception of:

Janitor, Baggage Room, Edmonton;  
 Janitor, Agents' Payroll, Cranbrook;  
 Checkers (2 positions), Kenora;  
 Junior Clerk, Freight Department, Winnipeg.

*Point IX.* From Tuesday, 26th August, to 2nd September, 1924, pending the consideration of this application for a Board of Conciliation, the Stores Department in Winnipeg was ordered closed. This was reported to the Honourable the Minister, and it was claimed that in view of the pending dispute there was a violation of Section 57 of Chapter 20, Industrial Disputes Act, 1907, and it was requested that the matter be made part of the reference to this Board. By letter of 28th August, 1924, the Minister wrote Mr. Pateman that there would be an opportunity of discussing this subject with the Board when formed. It is in this indefinite way only that the point comes up for consideration. It is established that the Stores Department was closed without any reference whatsoever to the pending dispute, but because the shops were closed on the dates referred to and the services of the Stores Department were, therefore, not required. In the Minister's letter he states: "It would not appear that the Act contemplates preventing the company from closing down for a time some branch or department of its usual activities." The Board concur in this view and find that no violation of the section of the Act has been established.

*Point X.* General Wage Increase. This was an application for a general increase in the wage schedule. Considerable evidence was given in respect to the cost of living and to wage conditions in other departments and on other railways both in Canada and the United States. In view of general trade conditions throughout the country and the prevalence of unemployment due to economic conditions, the Board are of opinion that the application for a general increase in wages should be postponed until some future date.

There are submitted herewith the exhibits filed on the hearing, together with the written arguments submitted on behalf of both parties.

All of which is respectfully submitted by the undersigned, who have the honour to be, Sir,

Your obedient servants,

(Sgd.) R. M. DENNISTOUN,  
*Chairman;*

(Sgd.) D. CAMPBELL,  
*Member of Board;*

(Sgd.) TRAVERS SWEATMAN,  
*Member of Board.*

## PROCEEDINGS OF THE CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

**F**IFTEEN new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This board was established under an Order in Council dated July 11, 1918, the war still being in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods. A summary of the recent decisions of the Board is given in the following paragraphs. Summaries of earlier decisions appeared in the issue for May, 1924, and in previous issues.

### **Case No. 207—The Canadian National Railways (Central Region) and the Brotherhood of Railway Trainmen.**

A yardman who had been dismissed in a reduction of yard crews, on applying for a similar position in another yard where junior men were employed, was informed that he could not exercise his seniority rights in that position. The railway stated that this man had been employed by the Grand Trunk Railway before the co-ordination of the two services, and that he had been dismissed for cause. On behalf of the yardman it was claimed that as the railways had not objected to his continuance in their employ he should be allowed the same privileges as were conceded former Canadian National yardmen under the Agreement of October 15, 1920, relative to the merging of yardmen's rights at Toronto as between the Canadian National and Grand Trunk men, resulting from the co-ordination of the yard services at Toronto.

The Board decided that the yardman should be permitted to exercise his full seniority rights and be paid for the time he had lost, less any amount he might have earned in any employment during that time.

### **Case No. 208—The Canadian National Railways (Western Region) and the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen.**

Three engineers who had been discharged were reinstated with seniority restored in accordance with the Engineers' schedule which provided that discharged engineers upon re-employment within six months should hold their former rank. Later, however, at the request of the general chairman of the engineers, the seniority list was altered, setting

back the seniority of the three men to a date to agree with their enlistment for military service, and the list remained as altered for eight months. The employees claimed seniority to latter date.

The employees' claim was sustained by the Board to the extent of setting these men back on the seniority list to the date of their enlistment.

### **Case No. 209—Canadian National Railways (Western Region) and United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.**

The question at issue was as to whether a certain signalman was an employee of the Canadian National Railways or of the British Columbia Electric Railway Company. The employee was for some time on the payroll of the Electric Railway Company who billed the Canadian National Railways. For convenience it was arranged to transfer him to the payroll of the Railways, while he still received the Electric Company's rate of pay. The employee claimed that he was entitled to wages under the Maintenance of Way schedule of the Canadian National Railways.

The Board decided in favour of the employer's contention that the signalman was an employee of the Electric Railway Company, the position having been created under a provincial Order in Council which provided that the signalman at the point mentioned in the Order should be an employee of that company.

### **Case No. 210—Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen.**

A brakeman was arrested for alleged theft but found not guilty. He claimed wages for time held out of service under Rule 40 of the schedule of the Duluth, Winnipeg and Pacific Railway. The employer contended that this rule had no bearing on such cases.

The Board denied the brakeman's claim.

### **Case No. 211—The Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen.**

A brakeman was dismissed for alleged insolvency and a claim was made for his reinstatement. It appeared that the Assistant Superintendent had sent him orders to move an engine, but that the brakeman had questioned orders given to him by anyone but his fore-

man. Later it was alleged he showed discourtesy toward his superior officer.

The Board upheld the employee's claim to the extent of reinstatement without pay for time lost.

**Case No. 212—Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen.**

This dispute concerned the interpretation of Article 19 of the Grand Trunk Pacific Railway schedule, dated April 1, 1918, which provides that "when a train making an objective terminal is held out of such terminal at the semaphore, yard limit board, or behind other trains similarly delayed on account of yard being congested, or other conditions which make it impossible for the train to be taken in promptly, the crew shall be paid from the time first stopped until able to proceed and be relieved from duty without delay". Claim was made on behalf of eight brakemen for payment for time under this rule, the employees alleging that their trains had been delayed by congestion of outlying stations. The Railways contended that the trains in these cases were not delayed by congestion but by other causes, and that the article quoted did not contemplate payment of arbitrary time except to trains held on the main line outside a terminal.

The Board denied the claim of the employees.

**Case No. 213—Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen.**

This dispute concerned the claims of two passenger trainmen for detention time under Article 19 of the Grand Trunk Pacific Railway schedule, dated April 1, 1918, which provides that "it is understood that trainmen on trains detained between their terminals by annulment of trains or other avoidable cause will be allowed 12½ miles per hour for the first eight hours of each twenty-four so held, whether held two hours, two or three days, or more. This to apply to passenger trainmen on the basis of twenty miles per hour." The two trainmen were delayed, one by his train being off the track, the other by a breakdown of the engine. The Railway officials claimed that when this clause was drafted it was intended to cover trains delayed in the mountains by slides and washouts, but not that the arbitrary allowance for delays should be paid to trainmen in connection with their own trains.

The Board sustained the claim of the employees, believing that the delays were due to unavoidable causes.

**Case No. 214—Canadian National Railways (Western Region) and the Order of Railway Conductors**

A conductor was assigned to a mixed train with a run of 73.8 miles which was held at a way station for one hour and ten minutes for unloading coal. The employees claimed that under Article 3 clause (d) of their agreement with the Railways conductors should be paid for work-train service when time occupied was one hour or more; also that payment for work train service was an "arbitrary payment."

The Board disallowed the employees' claim, holding that the work for which the claim was made did not come within the intent of the work-train rule.

**Case No. 215—Canadian National Railways (Western Region) and the Order of Railway Conductors.**

Claim for payment of detention time was made on behalf of four conductors in freight service under Rule 9, Clause (A) of Conductors' schedule: "Conductors switching or delayed at terminal or turn around points will be paid for actual time so occupied at through freight rates. This time will be in addition to mileage or hours made on the trip." The conductors were required to stop at a certain junction and to get into touch by telephone with the yard office as to yarding their trains.

The Board denied the employees' claim on the ground that the telephone was connected with the yard office and was for the purpose of facilitating train movements into the yard, a stop of the kind not coming under the rule quoted.

**Case No. 216—Canadian National Railways (Western Region) and the Order of Railway Conductors.**

Rule 9, Clause A, of the conductors' schedule provides: "Conductors switching or delayed at terminals or turn-around points will be paid for actual time so occupied at through freight rates. This time will be in addition to mileage or hours made on the trip." A conductor was assigned to a run, part passenger and part mixed service. He claimed all the time from the moment he stopped to set out freight cars at terminal until his arrival at station as terminal detention. The contention of the Railways was that a mixed train crew was only entitled to the delay in setting out freight cars from their train in the yard before arrival at the depot, and that in this particular case the freight cars with the road engine were cut off, and backed into a siding, the yard engine taking the coaches into the depot. The employees con-

tended that the train stopped in the freight yard and set out the freight cars, and that the switch engine coupled on to the caboose and pushed them to the passenger depot, and they claimed that the conductor was entitled to terminal time from the time the first stop was made within the terminal yards until released from duty at the depot.

The Board upheld the claim of the employees for terminal detention time, holding that road time ceases when terminal time commences.

**Case No. 217—The Canadian National Railways (Western Region) and the Order of Railway Conductors.**

A caboose was run into and put out of commission. The conductor, on arriving at terminal, booked "rest", which expired next day. He then applied to the assistant superintendent for another caboose, and was told that a caboose was being sent and would arrive the following day. He was not however provided with a caboose for six days, thereby losing 934 miles for which he claimed. The Railways contended that the conductor was given an opportunity to work in the interval, and that his loss of time was due to his own refusal.

The Board denied the employees' claim, considering that the railways' responsibility in the matter was not apparent.

**Case No. 218—Canadian National Railways (Western Region) and the Order of Railway Conductors.**

A conductor was employed on a work-train between Fort Frances and Rainy River, and when it was discontinued he was sent to Rainy River from Fort Frances, where he bid in. It was claimed that he was entitled to work out of that point if he wished, and that he intended to go back to the work train when it resumed. However, instructions were issued to move his caboose to Winnipeg. He claimed for 181 miles for deadhead mileage to the latter point.

The Board sustained the employee's claim, holding that when the work train was cancelled the conductor should have been continued in service on the same sub-division, unless he otherwise elected.

**Case No. 219—Canadian National Railways (Western Region) and the Order of Railway Conductors.**

A conductor was sent to get some cars from a point distant 100 miles, and he brought them back. The time occupied by the trip was allowed to him as "terminal time", and included along with a trip which he made later. The employees claimed that the com-

pany had no right to couple up this trip with another. The railways contended that the circumstances of the case were unusual there having been a block on the line 1.2 miles from the station, and that they should not be required to pay more than terminal time.

The Board sustained the claim of the employees.

**Case No. 187 (Further hearing). Canadian National Railways (western region) and the Order of Railway Conductors.**

Rule 23 of the Conductors' schedule provides that where no conductors' spare board is kept the oldest available spare conductor shall be entitled to car or run, if it is to be vacant for less than ten days. In this case the conductor being the senior available conductor, took the place of a man who had laid off for an indefinite period. Five days later he was relieved of his car by another conductor. The employees claimed that the car was not known to be vacant for ten days or more until it was actually vacant for that time, that he should not have been displaced till the car was actually vacant for ten days, and that he was entitled to the difference between the pay of a brakeman and conductor up to the end of that period.

The Board at a hearing last December found the evidence contradictory as to the existence of a spare board, but that if such a board existed the claim of the employees should be denied, while if not their claim should be sustained. When the case was heard again on October 15 the Board concluded that a conductor's spare board was in existence, and while the employees did not appear to have been parties to its establishment, neither did it appear that they had protested against the manner in which it was handled.

The employees' claim was therefore denied.

**Case No. 221—Canadian National Railways (Western Region) and the Order of Railway Conductors.**

A conductor was required to take engines on six different occasions between two terminals. The employees claimed that it was a recognized practice that conductors were entitled to a minimum day for running between two terminals, namely 100 miles at conductor's rates for each trip in question. The Railways contended that he was entitled only to terminal time, and that the employee was employed as a trainman.

The Board sustained the claim of the employees, holding that the conductor was called to pilot engines quite apart from his road service.

**Case No. 222—Canadian National Railways  
(Western Region) and the Order of  
Railway Conductors.**

Rule 6 of the conductors' schedule provides that "One hundred miles or less, 8 hours or less, to constitute a day, in through and irregular freight, local freight, and mixed train service." A conductor on a work train, upon completion of his regular day's work was ordered to accompany the work-train engine to the other end of the run and for this trip he claimed the minimum day of 100 miles. Two days later he received a similar order, and claimed 100 miles for this trip also.

The employees contended that these trips could not be figured in connection with his work-train assignment, and that if they were so figured the company should have supplied him with two brakemen as required by the Schedule, Article 4, Clause C, which states: "work-trains will have at least two (2) trainmen." The Railways contended that the conductor worked continuous time after his regular days work.

The claim of the employees was sustained, the Board considering that the Company's claim as to continuous employment was not supported by the work-train rule for the employment of a full crew.

**STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1924**

**T**HE number of strikes and lockouts in Canada in existence at some time or other during the month of October was 6, as compared with 8 in September. The time loss for the month was greater than in October, 1923, being 141,448 working days, as compared with 50,402 working days in the previous year.

fore, there were on record two disputes, involving match workers at Hull, Quebec, and moulders at Guelph, Ontario.

Of the disputes which commenced during October one was an alleged lockout, it being claimed by the employees that the employer proposed changes in the working conditions to take effect on the reopening of the plant. The second dispute was for increased wages and shorter hours. One of the strikes which terminated during October was in favour of the employers, two resulted in a compromise and the fourth was indefinite.

In addition to the information published for September, word was received of a strike of fish packers at Prince Rupert, which began during September and terminated early in October.

A cessation of work of coal miners at Nanaimo, B.C., for one day, reported in the press as a strike, was in fact by mutual agreement of the employer and employees. The dispute is described in a special article in this issue.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement:—

**FISH PACKERS, PRINCE RUPERT, B.C.**—Forty-eight fish packers went on strike September 27, against the employment of non-unionists, as three fish packers had refused to pay their union dues to the organization. Negotiations were carried on and a settlement was brought about through the mediation of two of the company's engineers. The non-union men paid their fees and the fish packers agreed to give the company 30 days' notice before a strike is called. Work was resumed October 3. The union then surrendered its charter and

Date	Number of disputes	Number of employees involved	Time loss in working days
October, 1924.....	6	8,656	141,448
September, 1924.....	8	8,501	205,634
October, 1923.....	16	2,322	50,402

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department and the figures are given in the annual review.

The increase in the number of employees involved and in the time loss, as compared with October last year, was due to the strike of 8,000 coal miners in Alberta and South Eastern British Columbia which lasted for sixteen days during October.

Four disputes, involving 8,373 workpeople, were carried over from September. Three of the strikes and lockouts beginning prior to October, and one of the strikes and lockouts commencing during October, terminated during the month. At the end of October, there-

applied for affiliation with another labour organization.

**COAL MINERS, ALBERTA AND BRITISH COLUMBIA.**—A special article relating to the coal miners' strike will be found elsewhere in the present issue of the LABOUR GAZETTE.

**COAL MINERS, COALHURST, ALTA.**—The strike of 320 coal miners which began September 18 for checkoff of 10 per cent assessment for district relief fund was terminated when the district strike ended and work was resumed October 22.

**MATCH WORKERS, HULL, QUE.**—Reference was made in the October issue of the LABOUR GAZETTE (page 830) to a dispute occurring at Hull, Que., involving the employees of a match manufacturing establishment. About 12 employees were involved at first, but an alleged lockout followed, commencing on October 1, and involving 275 employees. The twelve employees had refused to return to work on September 26 under conditions different from those before the plant was closed down for stock taking. The union reported

that they were requested to sign the following:—

I (name in full).....hereby apply for employment as.....

I agree that in accepting the position asked for I will have nothing to do with any trade union association or organization during working hours, nor will I interfere with others choosing or not to become a member of any union or association.

I further agree that, if not satisfied with the wages, conditions or hours of labour, I shall not quit work without giving the company a full day's notice.

The employing company then proposed an agreement with the union with some clauses different from the agreement in force prior to the shut-down, and this being refused on September 30, closed the plant indefinitely. This cessation of work involved about 275 employees directly and about 80 indirectly. Negotiations were carried on and conferences held between officials of the company and the union concerned, from time to time during the month but no settlement was reached and the dispute remained unterminated at the end of the month.

**MUSICIANS (MOVING PICTURE THEATRES), EDMONTON, ALTA.**—A strike of eight musicians in the employ of two moving picture theatres

**STRIKES AND LOCKOUTS DURING OCTOBER, 1924**

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and lockouts commencing prior to October, 1924.</b>			
<b>FISHING.—</b>			
Fish packers, Prince Rupert, B.C.	48	96	Commenced September 27, against the employment of non-unionists. Settled by mediation and work resumed October 3. In favour of employers.
<b>MINING, NON-FERROUS SMELTING AND QUARRYING.—</b>			
Coal miners, Alberta and South Eastern British Columbia.	8,000	128,000	Commenced April 1, against a reduction in wages. Settled by mediation and work resumed October 20; compromise.
Coal miners, Coalhurst, Alta....	320	5,760	Commenced September 18. Strike for checkoff of 10 per cent assessment for district strike fund; work resumed October 22 when district strike ended.
<b>MANUFACTURING.—</b>

occurred October 11, following the refusal of employers to accede to scale of wages for 1924-25. The musicians had been receiving \$40 per week winter and \$25 per week summer, for a 6-hour day winter, and 3 hours during summer. They asked for \$40 per week winter, and \$30 per week summer, for a 5½-

hour day winter, and 3-hour day summer. Negotiations were carried on which resulted in a compromise being effected, the musicians resuming work October 17 on the basis of \$40 per week for a 5½-hour day during the winter, and \$27.50 per week in the summer for 3 hours per day.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING SEPTEMBER

THE British *Ministry of Labour Gazette* for October contains the following table which analyses the disputes in progress in September, 1924, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approxi-

3,000 workpeople, and 11 old disputes directly involving 6,000 workpeople. Of these new and old disputes, 7, directly involving 1,000 workpeople, were settled in favour of the workpeople; 11, directly involving 3,000 workpeople, in favour of the employers; and 16, directly involving 5,000 workpeople, were

Groups of Industries	Number of Disputes in Progress in September			Number or workpeople involved in all disputes in progress in September	Aggregate duration in working days of all disputes in progress in September

†A general dispute in the building industry accounted for most of the loss of time in August, 1924.

‡A dispute involving about 40,000 boilermakers, etc., in Federated shipyards accounted for most of the loss of time in September, 1923.

mate time lost during the month in all disputes in progress.

Of the 41 disputes beginning in September, 14, directly involving 800 workpeople, arose out of demands for advances in wages; 12, directly involving 1,100 workpeople, on other wages questions; 7, directly involving 1,200 workpeople, on questions respecting the employment of particular classes or persons; and 8, directly involving 400 workpeople, on other questions. The total number of workpeople involved in these disputes (including those thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes) was approximately 5,000. In addition about 23,000 workpeople were involved either directly or indirectly, in 34 disputes which began before September. Settlements were effected in the case of 23 new disputes, directly involving

compromised. In the case of 2 disputes, directly involving 400 workpeople, work was resumed pending negotiations.

### Sheet Metal Workers' Benefit

The Sheet Metal Workers' International Association, at their recent convention at Montreal, adopted the following rule as to the payment of death benefits:—

"This Association will pay to the designated beneficiary upon the death of any member of the International Association who has been in continuous good standing one year and less than three years, the sum of \$100; for three years and less than five years, the sum of \$150; for five years and less than ten years, \$200 and for ten years or more, \$300. Effective January 1st, 1930, members who have been in continuous good standing for twenty years or more, this International Association will pay a funeral benefit of \$400. In all cases there must accompany the regular application blank a certificate of death from the State, Provincial or Municipal Board of Health or certificate of the coroner or medical examiner."

## THE STRIKE OF COAL MINERS IN SOUTHERN ALBERTA AND SOUTH EASTERN BRITISH COLUMBIA, APRIL TO OCTOBER, 1924

THE strike of coal miners in Alberta and Southeastern British Columbia, members of the United Mine Workers of America, District 18, against a reduction in wages, which began on April 1, 1924, was settled on October 10 by an agreement, subject to ratification by a ballot of the members, providing for a reduction in wages of \$1.17 per day in the case of contract miners, and of one-eighth, or twelve and one-half per cent, in the case of those on day wages. As contract miners' earnings had averaged about \$9.50 per day, the \$1.17 was approximately one-eighth in their case also. As day wages ranged from \$6.58 for surface labourers, to \$7.50 for a handpick miner and similar skilled classes, the average decrease for these was estimated to be about 90 cents per day.

The agreement was voted on by the union on October 16 and approved by a majority of 306, there being 3,237 in favour of the settlement and 2,931 against; spoiled ballots 48; total vote, 6,216. The figures by localities indicated that the majority in Alberta were against the settlement, but the majority in British Columbia were in favour of it. The Union had reported about 9,000 members in good standing prior to the strike, and on the vote at that time taken to authorize the strike the figures were 4,696 in favour of the strike and 282 against it. It was, however, commonly reported in the district that the result of the voting was a foregone conclusion and that many of the miners left the district for the summer as soon as the negotiations broke down in March. Another feature of the dispute is that in Alberta many of the mines are usually closed down to a great extent during the summer owing to lack of demand for the coal, particularly the lignite coal used chiefly for household consumption. Many of the miners therefore work on farms at such times, and also naturally to an increased extent during a prolonged strike. In British Columbia conditions are different, the demand for the high grade bituminous coal produced is not so seasonal, coal being used considerably by railroads and for coke making for the smelters, and there is no extensive farming country adjacent to the coal mines where miners may find work at such times.

### Cause of the Strike

As stated in previous issues of the LABOUR GAZETTE, the dispute arose owing to the expiration of the agreement between the

Western Canada Coal Operators' Association and District 18 of the United Miners on March 31, 1924. This agreement made provision for the wages and working conditions of an agreement reached in 1920 on the basis of an award of wage increases to bituminous coal miners in the United States made by the Federal Coal Commission. This agreement was published in the LABOUR GAZETTE for August, 1920, page 1047, and an amendment providing for an increase in day wages, but not in contract rates, was published in the issue for November, 1920, page 1547. This amendment also was based upon increases in wages for coal miners in the United States. The wage scales so agreed to remained in force until the close of the recent strike, except for a few days after the close of the strike in April to August, 1922, when a reduction of fifteen per cent was in force for a short time.

The dispute in 1924 hinged largely on the cost of living bonus of \$1.17 per day provided for in the 1920 agreement, the employers proposing to eliminate it on the ground that the cost of living had fallen, and that in order to sell the coal the mining costs and selling prices must be reduced. This cost of living bonus originated during the war, when from time to time increases were made in the wages owing to the increases in the cost of living, but as the employers felt that the cost of living would fall to some extent some of the increases were given as percentage changes in the wage schedule, and others in the form of a cost of living bonus.

### History of the Cost of Living Bonus

In 1915 the wage schedule adopted at the termination of the strike in 1911, providing for a ten per cent increase, was extended for two years, that is until March 31, 1917, but during 1916 in July and November bonuses were given. A new wage scale in effect from April, 1917, absorbed these increases providing for a scale approximately twenty-five per cent higher than that of 1911. It was also provided that every four months the increase in the cost of living should be ascertained and a bonus given. Coal mining operations and sales of coal were at this time placed under the direction of a Director of Coal Operations by the Dominion Government. By December, 1918, this bonus amounted to 92 cents per day, after which no further inquiries were made (after the Armistice),

and the cost of living was comparatively steady for some time. In the autumn of 1919 a fourteen per cent increase was given to bituminous coal miners in the United States with provision for a Federal Coal Commission to ascertain whether further increases should be given. In the spring of 1920 this Commission recommended a further increase of thirteen per cent, for the United States miners, making an increase of twenty-seven per cent altogether. The operators and miners in District 18 agreed to adopt this as a basis for increases in Canada, and the bonus of 92 cents per day was increased by twenty-seven per cent, making it \$1.17, and added to the schedule for the men on day wages. For contract miners the cost of living bonus was not absorbed into the wage rates, but it was provided that the piece work rates should be

tember, 1922, page 954). This scale was renewed from time to time until March 31, 1924.

**Negotiations during 1924**

When negotiations for a new agreement were entered into in March, 1924, the agreements in the United States had been renewed until March 31, 1927, by the "Jacksonville Agreement." The operators in Western Canada proposed a reduction of \$1.17 per day, the amount of the cost of living bonus, and argued that the cost of living had fallen and that the wages in District 18 were as high as in the United States, while the hours per day were eight "at the face" in the United States, but in District 18, eight hours "bank to bank" and, therefore, on an average one hour less in working time than in the United States.

increased by twenty-seven per cent, and that the cost of living bonus of \$1.17 per day should be paid in addition. In October, men on day wages were given another increase amounting to \$1.15 per day and upwards. The jurisdiction of the Director of Coal Operations ceased on June 4, 1921.

**Dispute of 1922**

In March, 1922, when the 1920 agreement was about to expire the operators proposed a wage scale twenty-five to forty per cent above the 1915 wage scale, which was the same as the 1911 scale, and a strike was in progress from April 1, 1922, to the end of August, when work was resumed at a reduction of fifteen per cent in wages until a settlement should have been made in the United States involving not less than seventy-five per cent of the Union miners in the Central Competitive Field. By September 1 such a settlement had been made providing for the same wages as from 1920 to March, 1922, and, therefore, in District 18 the 1920 scale was restored (LABOUR GAZETTE, Sep-

They reported that United States coal was competing in the natural markets for District 18 and had made it necessary to close mines extensively in 1923 and 1924. The miners did not agree to this proposal, pointing out that owing to the loss of time on account of lack of demand for coal the yearly earnings of the miners were too small, and a strike began on April 1. As in previous strikes it was provided that the maintenance men should continue at work at the rates of pay prior to the strike, and that operators should be allowed to carry on development work as long as no coal was produced for sale.

During the summer negotiations were carried on, and the committees of operators and miners met the Minister of Labour at Calgary in August. The Minister proposed that the two parties should consider a settlement on the basis of a reduction in wages of one-eighth to meet the difference in hours worked in District 18 and in the United States. The operators stated that this corresponded approximately to their proposal of \$1.17 per day,

and they were willing to negotiate on that basis. The miners' committee considered the proposal and replied that in the discussion in the joint committee it had been amply shown by them that in actual practice no differential of one hour existed and they could not agree to the proposal. They also refused to submit it to the membership by referendum on the ground that their instructions precluded them from submitting any proposal for a decrease. The conference, therefore, broke up, but a number of the miners' locals called for a special District Convention which was held early in September. The convention approved the action of the committee, but gave it a free hand in further negotiations. The resident officer of the Labour Department thereupon arranged for another joint conference of operators and miners. This conference met on September 25, and after several meetings the miners proposed a compromise on the basis of a decrease of \$1 per day for contract miners and one-eighth for men on day wages. Later the miners agreed to a reduction of \$1.17 for the contract miners and one-eighth for the men on day wages, but the operators did not agree, principally on the ground of the length of the contract desired by the miners. The conference then adjourned till the second week in October, when it was expected that the Minister of Labour could be present. At the renewed negotiations both the Prime Minister of Alberta and the Federal Minister of Labour were present, and a settlement was reached on October 10, as described in the first paragraph.

#### Period of New Agreement

During these negotiations considerable difficulty was met with over the term of the agreement, the miners holding out for a three-year term, that is till March 31, 1927, as in the United States and the operators desiring a limitation till March 31, 1925, or September 30, 1925. The miners proposed that the previous agreement should be renewed till an investigating commission representing the various interests involved might report on the following points: Capital invested by coal companies; total cost of production; cost of material per ton; labour cost per ton; selling price of coal at the mines; cost of transportation; profits of middlemen; cost of distribution; profits of the dealer; cost of coal to the public; yearly earnings of the miners; housing conditions of the miners; cost of living to the miners; living conditions of the miners. The Minister of Labour proposed that the agreement should run till March 31, 1925, or until the Coal Commission to be appointed by the Alberta government should have reported, and

a Board under the Industrial Disputes Act, 1907, had also reported. This was not agreed to, but later the provision to run till March, 1927, subject to six months notice after March 31, 1925, was made.

A similar agreement was reached between the Union and other coal mine operators not members of the Western Canada Coal Operators' Association.

#### Loss in Working Days and in Production

The number of employees involved in the strike was about 8,000, of whom approximately 1,500 were in the Crownsnest Pass District in British Columbia and the balance in Alberta south of Edmonton. The other mines in Alberta and British Columbia were not involved but the shut-down in the mines involved in the strike naturally increased the demand for coal from the mines in operation. Some of the union mines in Alberta had arranged with the Union to operate at the old scale of wages pending a settlement. In some of the non-union mines the Union organizers succeeded in securing union wages or working conditions or in causing a stoppage. The time loss in man working days at full employment from April 1 to October 20, when work was generally resumed, works out at about 1,500,000 days. Some allowance, however, can be made for the fact that during the spring and summer months the mines are usually closed to some extent owing to lack of demand for coal. The actual loss in the production of coal for these six months appears to be about two-thirds. The number of man working days for the strike area for the same six months in 1923 was approximately 1,150,000 days. Therefore the time loss in working days due to the strike was approximately 775,000 days, after thus making allowance for the usual slack time each year.

The accompanying tables from the reports on coal statistics for Canada, published by the Dominion Bureau of Statistics, indicate the loss in production during the strike in 1924. The figures for 1923 show production, days worked, etc., for the year from month to month, the considerable falling off from March to September in Alberta being quite noticeable.

#### Alberta Coal Commission

On October 30 the Government of Alberta appointed a Royal Commission to inquire into the coal mining industry of the Province. Such an inquiry had been approved by the Legislature in a resolution in March, when the negotiations between the coal miners and the operators appeared about to be broken off, moved by Mr. P. M. Christopher, Labour

member for Rocky Mountain House (LABOUR GAZETTE, June, page 458). The resolution was supported by the government and carried without opposition. As the strike began shortly after this the government waited until its settlement to proceed with the investigation. The Commission consists of the chairman, Mr. M. E. Evans, Mr. R. G. Drinnan of Edmonton, to represent the mine operators, and Mr. Frank Wheatley of Blairmore, to represent the mine workers. Mr. Evans was recently a member of the Municipal Finances Commission and was formerly connected with the coal mining industry in Northern Alberta. Mr. R. G. Drinnan is connected with the Rocky Mountain and Luscar Collieries, and represented the operators on the Board of Conciliation and Investigation for the district in 1922, and in 1924 on the Board dealing with a dispute in the Edmonton district. Mr. Wheatley is President of the Alberta Federation of Labour and a coal miner.

The scope of the inquiry as set out in the Order in Council covers:—Coal, mining titles, capitalization, financial arrangements and costs of production, transportation of products, marketing, uses of by-products, selling prices, coal reserves, conservation and waste of coal; mine workmen, their earnings, living costs and conditions, housing conditions and educational facilities, mining conditions, mining methods, use of labour saving devices and provision for the safety of workmen, conditions elsewhere, and particularly in competitive fields, legislation affecting the industry in Alberta and elsewhere.

The subjects to be covered in the investigation therefore include those brought up by the miners' committee during the negotiations.

### Text of Agreement

The text of the agreement follows:—

This Agreement made this tenth day of October, 1924, between The Western Canada Coal Operators' Association, hereinafter referred to as the operators of the one part, and The United Mine Workers of America, District 18, hereinafter referred to as the Union of the other part;

Witnesseth that it is mutually understood and agreed between the parties hereto as follows:

1. That, subject to the changes expressed hereunder, the Agreement which expired on March 31st, 1924, shall be continued to March 31st, 1927, unless sooner terminated by six months' notice in writing from either party to the other; Provided that such notice shall not be given in any event before March 31st, 1925.

2. That the wages paid to all contract men shall be reduced by the War Bonus of \$1.17 per man per day.

3. That the day wage rates paid to all datal employees shall be reduced by 12½ per cent per man per day.

4. That the rates provided in the General Clauses under the captions "Miners taken to do company work" and "Minimum Rate" shall be reduced by 12½ per cent.

5. This agreement shall be forthwith submitted by the Union for ratification by referendum vote to its membership in District 18, and upon being ratified by a majority voting upon such referendum, this agreement and all and every the provisions hereof shall be deemed to have become and to have been binding on the Union and upon each and every of its members in the said District, as and from the day of the date hereof.

In witness whereof the parties hereto have hereunto set the hands of their proper officers this tenth day of October, nineteen hundred and twenty-four.

THE WESTERN CANADA COAL OPERATORS' ASSOCIATION.

(Sgd.) LEWIS STOCKETT, for President.

(Sgd.) R. M. YOUNG, Secretary.

THE UNITED MINE WORKERS OF AMERICA, DISTRICT 18.

(Sgd.) W. A. SHERMAN, President.

(Sgd.) ROBERT PEACOCK, Secretary.

Witnesses:

(Sgd.) H. GREENFIELD.

(Sgd.) JAMES MURDOCK.

(Sgd.) F. E. HARRISON.

AGREEMENTS IN SETTLEMENT OF DISPUTE BETWEEN COAL MINERS AND OPERATORS IN EDMONTON DISTRICT

THE Report of the Board of Conciliation and Investigation in the dispute between certain coal operators in Northern Alberta and the Edmonton District Miners' Federation appeared in the LABOUR GAZETTE for September (pages 744-745). Early in November the parties concerned reached agreements on the basis of the Board's report, which was unanimous, to continue in force until June 30, 1925. Seven collieries and about 1,000 miners were involved.

The dispute was in regard to rates of wages, the scale for some of the mines being higher than for others. The Board recommended that the day rates for the mines in the city of Edmonton should be adopted for all, thus standardizing the day rates for the principal mines in the district, but that the contract rates for all mines should be unchanged. This involved a reduction of about ten per cent for some classes of employees. The miners voted on whether the award should be accepted and there was a small majority against it. The officers, however, did not call a strike owing to the small majority and reopened negotiations. In the meantime in the mines in Alberta south of Edmonton an agreement for a decrease of 12½ per cent in wages was reached, and some of the operators at

Edmonton proposed a 13 per cent reduction for some classes of employees. The miners refused this, pointing out that the wage scale for Edmonton was already much below that for the southern part of Alberta and that the Board's recommendation would reduce some of the wages by ten per cent. The agreements on the basis of the Board's report were eventually reached through the mediation of the Chairman of the Board, separate agreements being made between the Federation and each operator.

Provisions of the Agreements

THE EDMONTON AND DISTRICT FEDERATION AND SEVEN OPERATORS OF COAL MINES IN EDMONTON AND DISTRICT:—Agreements to be in force from October 31, 1924, to June 30, 1925, provided that should either party desire to continue the wages and working conditions after June 30, 1925, notice of at least thirty days shall be given and negotiations shall thereupon commence. The employer to deduct and pay to the Federation union dues when authorized by the employee; mine managers, foremen, etc., not to be members of the Union; for the settlement of any dispute or grievance a pit committee of three employees elected to represent the employees, one of whom may be

a check weighman or other employee of the company; a settlement between this committee and the management to be final; if settlement is reached, an independent chairman to be agreed upon and any decision reached to be final; if no chairman is agreed upon either party may apply for a Board of Conciliation; no stoppage of work pending a settlement; employees laid off for lack of work and not discharged to have preference over new employees for available work.

Wages: Miners on company work, brushers, tracklayers, drivers and chief cagers, \$5.00 per day of eight hours; pushers, assistant

cagers and assistant tracklayers, \$4.50 per day of eight hours; blacksmiths 65c per hour; surface labourers 50c per hour; boys on the surface 35c per hour; couplers, boys, \$3.50 per day of eight hours. It was provided in each agreement that if any reduction in wages should be made during the life of the agreement by any of the seven operating companies who signed these agreements, such reduction should apply.

In one of the agreements a provision was inserted that the Federation undertook to organize the other mines in the neighbourhood of Edmonton.

## AGREEMENTS BETWEEN COAL MINERS AND OPERATORS IN VANCOUVER ISLAND

### Cost of Living Bonus to be continued, adjusted for November 1, 1924

**W**AGES and working conditions in the principal coal mines in Vancouver Island have been determined by agreements between the operators and committees of their employees elected at mass meetings called for that purpose, there being no organization of employees since the strike of 1912-1913 for the recognition of the United Mine Workers of America to which many of the miners belonged for a time (LABOUR GAZETTE, April, 1914, page 1184, and various preceding issues.)

Toward the end of 1918 the agreements in the largest collieries provided for a cost of living bonus to be adjusted every three months, and the Federal Government was asked to appoint a Royal Commission to ascertain the change in the cost of living for the miners every three months, and to determine the extent of change to be made in the bonus. At that time the bonus was \$1.25 per day, both parties having agreed to this as the amount estimated by the Fair Wages officer of the Federal Department of Labour to be necessary to supplement a thirty per cent increase in 1917 to cover the increase in the cost of living since 1913.

Accordingly on January 31, 1919, a Cost of Living Commission was appointed, consisting of one representative of the miners and one for the operators with the Fair Wages officer of the Federal Department of Labour resident in British Columbia as Chairman.

Between February 1, 1919, and November, 1920, the bonus increased from \$1.25 to \$2.10 per day and then gradually receded, being as low as 68½ cents in August, 1924.

On October 25, 1924, the Commission reported on the changes in the cost of living

between June 30 and September 30, and found an increase of 2.58 per cent, which, applied to the base rate of \$3.15 per day, involved an increase of 8 cents per day, making the bonus 76½ cents from November 1, 1924.

The principal collieries in this arrangement were those of the Canadian Collieries (Dunsmuir) Limited at Ladysmith and at Comox. The company has separate agreements with the employees at these mines expiring on October 31, 1924. These agreements were renewed for another two years. These agreements were summarized in the LABOUR GAZETTE for November, 1923, page 1301.

The Western Fuel Corporation of Canada Limited had a similar agreement with its employees, and renewed it from October 1, 1924, the bonus being changed from \$1.00 per day as it had been from September, 1922, to September, 1924, and reduced to 90 cents per day. On the expiration of the agreement at the end of September the employees made an application for a Board of Conciliation under the Industrial Disputes Investigation Act, but the dispute was settled on the above terms. Work was suspended by mutual agreement for one day during which the terms of the agreement were settled. The expiring agreement was summarized in the LABOUR GAZETTE for November, 1922, page 1214.

The "Russell Sage Foundation," in announcing the publication in the near future of the results of an extended study of unemployment state that between 10 and 12 per cent of all wage earners in the United States and Canada are always unemployed.

## RAILWAY ASSOCIATION OF CANADA AND WAGE CHANGES SINCE 1922

THE Railway Association of Canada, at the recent annual meeting at Montreal, received from its Executive Committee a report which contained the following résumé of recent events in connection with the wages of railway employees. The Association was organized on December 1, 1919, to represent the leading railways in dealing with representatives of trade unions of different classes of railway employees for the adjustment of wage schedules and other matters. The members of the Association operate approximately 94.8 per cent of the total railway mileage of Canada.

The Association, representing the major portion of the membership, has carried on wage agreement negotiations with Division 4, Railway Employees' Department, American Federation of Labour, representing employees engaged in shop trades, and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Early in 1922, the Association served notices upon these organizations of its desire to modify certain unduly burdensome rules governing working conditions which had been forced into the agreements under stress of war-time conditions. After several weeks' negotiations, amicable agreements were reached in both cases, which afforded the railways some relief. Later in the same year, it became evident, in view of reductions that had been made in railway tolls, that the carriers would have to secure such a reduction in rates of pay as appeared warranted by the change in living and other conditions, and the Association again served notices on the organizations referred to, suggesting decreases equivalent to those that were being made effective by United States carriers under orders of the United States Railway Labour Board. In the United States, as a result of the application of the decreased rates, employees engaged in shop trades upon the railways throughout the country went on strike. Similar classes of employees in Canada refused to accept the Association's proposal that the decreases should be tentatively applied until such time as the dispute was settled in the United States, when, it was felt, an agreement could be more easily reached, and appealed to the Minister of Labour for the establishment of a board of conciliation and investigation to consider the matter. The Board held sittings in August 1922 and after hearing all parties to the controversy rendered a majority report recommending that the Association's proposal to tentatively put into effect the reduced rates pending settlement in the United States should be accepted by the employees as a fair and reasonable offer. Subsequently, after the situation on the other side of the boundary clarified, it became possible to enter into an agreement with Division 4 covering the reduction in rates proposed. In the meantime, while the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers protested against any reductions in rates of pay, they agreed to accept the Association's offer of a tentative application of the reductions, pending settlement in the United States. At that time the Brotherhood had an appeal before the United States Railroad Labour Board for reconsideration of its previous action, on the ground that conditions did not warrant, in their case, the full reductions ordered. In the autumn of 1922, the United States Railway Labour Board issued a decision which had the effect of modifying to some extent its

previous order, and upon the basis of this later decision, the Association was able to reach an amicable agreement with the representatives of employees in the maintenance of way department. It will be appreciated that both of these negotiations required patience and tact, and credit must be given to your committees for avoiding in Canada the serious situation that developed in the United States.

The year 1922 was a favourable one for railways in the United States, due to improved industrial conditions and the fact that railway tolls had not been reduced to anything like the same extent as in Canada. The United States carriers showed large increases in net revenues, and consequently when presented with demands by their employees engaged in shop trades and track maintenance for increased compensation, they met such demands early in 1923, by conceding certain changes in working conditions and, in some cases, also adjustments in rates of pay. Subsequently, similar classes of employees in Canada made demands upon the Association for increases in rates of pay and improved working conditions. The situation that had developed in the United States was an embarrassing factor in our negotiations. However, in view of the conditions prevailing in Canada the Association was compelled to decline to agree to any increases in rates of pay, and after prolonged negotiations an agreement was reached with Division 4 maintaining the basic rates. Unfortunately it was impossible to reach an understanding with representatives of the maintenance of way employees, and they took the matter before a board of conciliation and investigation. This board rendered an award recommending amongst other things, that employees receiving less than 40 cents an hour should be granted an increase of 2 cents an hour. The board in its award failed to make any attempt to justify its recommendation, which appeared to be merely a compromise not based upon the merits of the case developed in argument before that board. The evidence submitted appeared to substantiate from every angle the position taken by the railways that conditions then prevailing in this country did not in any way warrant an increase in rates of pay of railway employees, and in fact tended to show that if any change in rates was to be made it should be downward. For these reasons the Association declined to adopt the Board's recommendation, and that it was justified in this course appears to be confirmed by the fact that a few months ago the employees' representatives reopened negotiations and we were able to conclude an agreement maintaining the basic rates then in effect for one year from April, 1924.

The Summary Report of the Geological Survey of Canada for 1923 gives the results of a preliminary investigation of coal deposits in north-western Alberta that are likely to prove an important mining area. The deposits lie in a strip of land 80 miles in length, 8 or 10 miles wide at the south eastern end, 25 miles wide at the north-western end, extending in a north-westerly direction from Brulé, 180 miles east of Edmonton. The coal varies in grade from bituminous to semi-anthracite. The measures belong to the Kootenay formation, and where worked are noted for their evenness.

## HOW NOVA SCOTIA HANDLES ITS EXTRA-TERRITORIAL PROBLEMS

By V. J. Paton, K.C., Chairman, Nova Scotia Workmen's Compensation Board\*

ACCORDING to the program arranged for this convention I am expected to address you upon the subject of longshoremen and to tell you how Nova Scotia handles its extra-territorial problems. In dealing with longshoremen I am also going to incidentally refer to railway employees, because I believe these to classes of workmen have presented more difficulties in the administration of the Compensation Acts in the United States than any other two subjects that could be named.

It is my purpose to briefly refer to those difficulties and to contrast the position of a longshoreman and of a railway employee under State Compensation Acts with the position of such workmen under the Compensation Act of Nova Scotia, and to show that though there is at present a great divergence between the law in the States and the law in Canada, it is because of what might be considered a mere accident that we in Canada escaped the difficulties you in the United States have had and still have and will likely always have, with respect to longshoremen and railway employees, and a mere accident that you did not escape those difficulties altogether as we did.

### Longshoremen

If there is one thing more desirable than another for employer, workmen and those who have the responsibility of administering a Compensation Act, it is that there should be absolute certainty that a workman when engaged in any particular kind of work, is within or without the scope of the Act during the whole period that he is performing that work. Unfortunately since the decision in the Nordenholt case handed down by the Supreme Court of the United States in May, 1922 (259 U.S., 263), a longshoreman in the United States is in this predicament, that one minute he may be within, and the next minute outside the scope of a State Compensation Act. Take for example a stevedore who is conveying freight from a vessel to the wharf. While he is on the vessel and during his passage over the gang plank he is under maritime law and not entitled to compensation if injured, but he is under the Compensation Act the moment both feet are on the wharf, as the wharf is considered an extension of the shore.

The decision in the Nordenholt case appears to draw the line between Maritime Law and the Compensation Act at the water's edge.

\*Paper read before the International Association of Industrial Accident Boards and Commissions, at its 11th annual session held at Halifax, N.S. in August.

A railway employee is really in a worse plight because it is impossible to draw a line, like the shoreline in the case of stevedores, which can be easily recognized as a dividing line between work which has to do with interstate commerce and work which is of a local character. As illustrations I shall refer to three cases:

1. In one case a man was injured while removing grass and weeds from a railway yard. He was not entitled to compensation because interstate cars as well as intrastate cars were switched about in the yard. (*Quirk vs Erie Ry.*, 230, N.Y., 405).

2. In another case a man employed to repair a railway bridge was injured while carrying bolts needed in the work. He was not entitled to compensation because interstate trains as well as intrastate trains passed over that bridge. (*Penderson vs Del. Lock & Ry.* cited *Sp. Bul.* 118, June 1923).

3. On the other hand a railway workman who was injured while repairing a set of track scales was held to be entitled to compensation although the scales were used to weigh merchandise delivered for interstate transportation. (*Vacca vs. Genesee & N.Y. Ry. Co.* 233 N.Y. Rep. 613).

The distinctions are so fine that one tribunal may take one view and another tribunal may take another view. Uncertainty leads to litigation, and while in Canada we have had practically no litigation over the right of a workman to compensation, I notice that the Industrial Commissioner for the State of New York says in the Special Bulletin which came to hand last week that in New York State alone several thousand appeals in compensation cases were argued in the courts in the ten years the law has been in force.

The source of all these perplexing problems is to be found in the division of legislative authority between the Federal Government and the State Legislatures, whereby certain subjects like Maritime Law and Interstate Commerce were assigned to the Federal Government.

In Canada we might have had a similar situation, because we also have a distribution of legislative authority between the Dominion Parliament and the Provincial Legislatures. At the time of Confederation in 1867 the British North America Act assigned to the Dominion Parliament the exclusive right to make laws in relation to certain subjects including,—

- (a) The regulation of trade and commerce;
- (b) Navigation and shipping;
- (c) Sea coast and inland fisheries;
- (d) Lines of railways, lines of steamships or other ships, and other works and undertakings connecting the Province with any other Province or extending beyond the limits of the Province.

These are the same subjects that are assigned to the Federal Government in the United States. Nevertheless it is unquestionably true that longshoremen are within the scope of the Nova Scotia Workmen's Compensation Act and are entitled to compensation whether the accident causing disability happens on the vessel which is being loaded or unloaded or whether the accident happens on the wharf. This is true irrespective of the nationality of the vessel or of the trade in which the vessel is engaged. The only exceptions are those made by regulations of the Compensation Board for administrative purposes only. In Nova Scotia it is the duty of the Board to discover and assess every employer who carries on an industry within the scope of the Compensation Act. Owing to the difficulty of assessing or collecting an assessment from a vessel that may be in port for a few hours, the Board, as it is empowered to do, excluded stevedoring when carried on by persons employed by the captain of a foreign vessel.

In the case of railway employees it is also true that they are entitled to compensation under our Nova Scotia Act though handling trains or cars engaged in interprovincial traffic. And this is so in spite of the fact that the regulation of all trade and commerce is within the exclusive jurisdiction of the Canadian Parliament.

In passing I may say that the only railway employes in Nova Scotia who are not directly subject to the provisions of the Provincial Act are the employees of the Dominion Government itself, but even they are entitled to compensation in accordance with the provisions of our Act by virtue of an Act to that effect passed by the Dominion Parliament, which authorizes the Provincial Compensation Board to treat Dominion Government employes the same as if they were employed by a private individual.

In view of the similarity in the exclusive powers conferred on the United States Federal Government and those given to the Canadian Parliament, with respect to shipping and navigation and trade and commerce, it excites one's curiosity to find out how it is possible that employers carrying on and workmen engaged in those industries may become subject to a

Provincial Compensation Act. The answer is to be found in the fact that the Privy Council in England, which is the highest court for all parts of the British Empire, outside of the British Isles, with wonderful wisdom and foresight, as we think, rejected a line of argument and process of reasoning which the Supreme Court of the United States accepted and made the basis of its decisions. Similar arguments were used before the Privy Council, as were presented to the Supreme Court of the United State, in the attempt to have provincial legislation touching subjects assigned to the Dominion Government, declared unconstitutional. There was nothing to prevent the Privy Council from taking a view quite the contrary to the one adopted and the great variance between the present state of our law and the law as it is in the United States is due to the mere accident that the learned judges of the two great courts happened to differ in their ideas as to the proper solution of very difficult problems. This is emphasized by the fact that the United States Court divided five to four in at least two cases of supreme importance.

The decisions of the Privy Council to which I referred were not rendered in compensation cases, but were given before our modern compensation acts were passed, in connection with other matters which involved principles that are applicable to compensation legislation. For instance, the Dominion Parliament is given the exclusive jurisdiction to legislate with regard to "Banks and Banking." On the other hand the provincial legislatures are given the power to make laws in relation to the following, among other subjects:

- (a) Direct taxation within the Province in order to raise revenue for Provincial purposes;
- (b) Property and civil rights within the Province;
- (c) Generally all matters of merely a local or private nature in the Province.

It will be seen that by giving the fullest effect to the meaning of the powers conferred upon the Dominion and those conferred upon the Province, there must be an area of overlapping. A Company desiring to carry on a banking business must obtain its incorporation from the Dominion Parliament. On the other hand, the Provincial Legislature has the right to impose taxation for the purpose of raising revenue for Provincial purposes. A question arose some time ago in a case that went to the Privy Council as to whether a Provincial Legislature could tax a Bank doing business within the Province. The argument was pressed that the Provincial Legislatures

might lay on taxes so heavy as to crush a Bank out of existence, and so nullify the power of the Dominion Parliament to erect banks under its exclusive legislative authority. The Privy Council upheld the right of the Province to impose the tax upon Banks, and stated that if on the due construction of the British North America Act a legislative power falls within the section under which the Provincial Legislatures get their powers, it would be quite wrong to deny its existence because by some possibility it may be abused or may limit the range which otherwise would be open to the Dominion Parliament.

Other cases decided by the Privy Council illustrate the principle that subjects which in one aspect and for one purpose fall within the powers exclusively conferred upon the Dominion Parliament, may in another aspect and for another purpose fall within the powers of the Provincial Legislatures. In one case the Court said it is necessary that the literal meaning of the words "Regulation of Trade and Commerce" should be restricted in order to afford scope for powers which are given exclusively to the Provincial Legislatures; for taken in their widest sense they would authorize legislation by the Parliament of Canada in respect to several of the matters specially enumerated in the powers conferred upon the Provincial Legislatures, and would seriously encroach upon the local autonomy of the Provinces.

Applying those principles to compensation legislation we see that the Province may impose taxation upon employers of longshoremen as well as other employers as a means of raising a revenue for Provincial purposes, viz., for the purpose of taking care of injured workmen.

#### Extraterritorial Problems

As Nova Scotia is surrounded by water with the exception of the isthmus that connects it with New Brunswick, and as the railway running between Nova Scotia and New Brunswick is owned by the Dominion Government, the only extraterritorial problems encountered in Nova Scotia were in connection with the operation of vessels. Under the British North America Act the powers of the local Legislature are confined to the Province, and of course the Compensation Act could not apply to navigation and shipping beyond the three mile limit. This gave rise to confusion and difficulties in the case of concerns operating a line of steamships between Digby and St. John, between Yarmouth and St. John, and to the operation of vessels between Nova Scotia and New Brunswick, Prince Edward Island and Newfoundland. For instance, if an accident occurred

on a vessel it was necessary to determine whether the ship was at the time inside or outside the three mile limit, which was not always an easy matter. It also became necessary to adopt some kind of a working rule to arrive at what percentage of wages of the crew should be included in payroll returns to cover the period the vessel was within the three mile limit and subject to the provisions of the Act. It is obvious that such a condition in the law was most unsatisfactory. In the case of fishing vessels leaving Nova Scotia for the Grand Banks the same unsatisfactory condition prevailed. There was a strong desire manifested to have the fishermen covered during the entire period that they were engaged in fishing, and to find some method of enabling the Act to be applied to vessels running between Nova Scotia and nearby places. The Legislature, of course, could not simply say that the Act should apply beyond the three mile limit, for that would be *ultra vires*. It was necessary to find some other way out of the difficulty and I will tell you how it was accomplished.

I mentioned before that under the British North America Act the Provincial Legislature was given jurisdiction over "Property and Civil Rights within the Province." That furnished a clue to the discovery of what turned out to be a solution of the problem. The power to legislate concerning Property and Civil Rights includes the power to legislate with respect to contracts made with the Province. So legislation was passed whereby every contract between an employer and a workman should, unless there is an express agreement in writing to the contrary, be deemed to include a covenant on the part of the employer that before he should permit the workman to perform any services out of Nova Scotia the employer would apply to the Workmen's Compensation Board to have the industry to be carried on out of Nova Scotia admitted as being within the Compensation Act, and that the employer would pay all assessments required to keep the industry within the scope of the Act, and if the employer should neglect or fail to do so the workman, or his dependents in case of his death, should be entitled to recover against the employer an amount equal to the compensation that would be payable under the Compensation Act if the accident had happened in an industry within the scope of that Act. The covenant was made to apply only to voyages between Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland, and to fishing voyages made from a Nova Scotia port, and then only in connection with vessels registered in Nova Scotia

or operated by an employer residing or having a place of business in Nova Scotia. The workman, on the other hand, was deemed to enter into a covenant with his employer to the effect that if the employer brought his industry under the Compensation Act the workman would accept such compensation as the Board might award in lieu of all other rights or causes of action that the workman might otherwise have against the employer. To protect the employer against double payments for the same protection, and to prevent the giving of double rights to the workman, it was necessary to provide that the

covenants referred to should not apply while the workman is in a jurisdiction in which there is a Compensation Act under which the employer is liable to be assessed or taxed, and the workman is entitled to compensation.

In conclusion I may say that since we solved our extraterritorial problems the fishermen engaged in Lunenburg's great fishing fleet and the seamen and sailors of Nova Scotia are to a large extent entitled while out of Nova Scotia to the benefits of our Compensation Act as fully as workmen employed in industries carried on within the Province.

## RATE MAKING IN THE CANADIAN PROVINCES

By T. Norman Dean, Statistician, Workmen's Compensation Board of Ontario\*

IN six Canadian Provinces the Compensation systems are similar, collective liability under a Provincial Workmen's Compensation Board. In Quebec, Prince Edward Island and Saskatchewan, as well as in the Yukon and Northwest Territories, there is court administration of damage actions, and hence, such insurance as exists in these Provinces and Territories, is that supplied by private insurance companies "contracting out" the liability of individual employers. In each of the six collective liability Provinces—Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia and Ontario, the liability to pay compensation rests upon the whole group of employers covered by the Compensation Act, the money being raised by assessment and collected and disbursed by the Workmen's Compensation Board of the Province. As these six systems are very similar in operation and procedure, and almost identical as to principle, discussion hereafter is confined to the method of rate-making used by the Workmen's Compensation Board of Ontario.

Fundamentally, rate making in Ontario involves the collection of enough money each year to meet the obligations incurred during that year through the occurrence of compensable accidents plus a reasonable amount for expenses of administering the Act, the obligation being levelled equitably over the employers under the Compensation Act.

For assessment and compensation purposes under the Act, the industries covered are divided into twenty-four classes. Each class stands upon its own footing and carries its

own burden, except that up to 1923 a very small general fund, one per cent per annum, known as the Disaster Reserve was set aside to assist in meeting any extraordinary call that might arise in any class. With the exception of this Disaster Reserve, the moneys collected are just what are considered necessary to take care of the accidents that have actually happened.

Separate accounts are kept of all assessments received and all compensation and medical aid awarded for each of these classes. Each of the 24 classes of industry is thus in effect a mutual insurance association of the employers in that class.

The rates for each class are fixed and the assessments made much in the same way as a municipality levies its taxes. They are governed by the requirements. The rates fixed for the year are intended to cover the burden for that year. At the beginning of the year each employer is required to furnish the Board with an estimate of his probable pay roll for the year and he is assessed provisionally upon that estimate. At the end of the year the actual amount of pay roll is ascertained and the assessment is adjusted accordingly, the rate provisionally fixed being also altered where the accident experience shows this to be necessary.

The rates are fixed in accordance with the accident experience. The amount of compensation and medical aid and the amount of assessments in the class for the preceding year are ascertained, an estimate being made of the amount still remaining to be paid for accidents which by reason of continuing disability or for lack of reports, have not been finally disposed of before the end of the year, and allowance being also made for the differ-

\*Paper read before the International Association of Industrial Accident Boards and Commissions at its 11th annual session, held at Halifax, N.S., in August.

ence between the estimates given by employers at the beginning of the year and the actual figures as ascertained and shown in their pay roll statements at the end of the year. In this way the total expenditure and the total income of the class for the year are arrived at as nearly as possible, and the sufficiency or insufficiency of the rate charged determined.

If it is seen that the rate charged has produced sufficient money, or if the surplus or deficit is small, the rate will be maintained. If there is any considerable difference, it will be increased or decreased accordingly.

It is to be remembered always that any surplus to the credit of a class remains in the class funds, and this is also taken into consideration in fixing the rates.

All industries in the same class do not necessarily, nor usually, bear the same rate. The classes are sub-divided into groups, and even within the groups the rates are different where this is shown to be justified. The experience is kept for the group as well as for the class. In fixing the rates, however, regard must always be had to the fact that each class is an insurance group and that all lines of industry in the class must share to some extent the good or ill fortune of the class as a whole. The rating for each separate line of industry cannot be made to depend upon the experience in that particular line alone. This is especially the case where the total amount of the pay rolls in any line of industry is small. To charge that line of industry with its own cost might place a very excessive burden upon its employers for one year while perhaps relieving them almost wholly from assessment another year. This would destroy the underlying principle of collective liability or mutual insurance which is the basis of the system.

Individual distinction between employers even in the same line of industry is made according to their accident experience by a system of merit rating. Where the accident cost exceeds or falls short of the amount of assessment by a stated percentage a merit rating charge or a merit rating refund, within specified limits, is made accordingly. This is apart from and subsequent to the ordinary levy or adjustment of assessment, as the accident experience cannot usually be ascertained until late in the following year.

It is obvious that in estimating compensation yet to be paid, some standards must be used and contingent reserves set up. The totality of all capitalized values of pensions awarded and contingent reserves is known actuarially as the loss-reserve. "The loss-reserve might be defined as that sum which,

with incidental accretions of interest, is sufficient to mature every outstanding obligation, known and unknown, on account of all accidents which have occurred prior to the date of which the reserve is being calculated. It should contain two essential characteristics: it must be adequate and it must not be excessive. If it is not adequate the true purpose of the reserve is lost: If it be excessive the apparent costs will be exaggerated, the true cost rates will be obscured. Redundancy should not exceed a reasonable limit and the reserve should reflect with reasonable fidelity the true probability of future payments."

The following standards are used for calculating loss reserve in Ontario:—

- (1) *Continuing Disabilities*: The addition of the sum actually paid for continuing disability and individual estimates for each likely case of permanent disability and death.
- (2) *Suspended Mortality*: No account taken.
- (3) *Outstanding Accident*: One-sixth of the total compensation burden (for the first five years one-fifth)
- (4) *Disaster Reserve*: The difference between one per cent of the gross estimated assessments and one per cent of the assessments collected.
- (5) *Outstanding Medical Aid*: The difference between fifteen per cent of the total compensation (actual and estimated) and the actual medical aid paid.
- (6) *Merit Rating*: No account taken
- (7) *Tables used for pensions*:
  - (a) Workmen's pension table—5 per cent interest per annum based on United States Life Table 1910.
  - (b) Children's Pension Table—5 per cent based on United States Life Tables 1910.
  - (c) Widows' Pension Table—5 per cent based on Dutch Remarriage Experience and United States Life Table 1910 for mortality.
- (8) *Two period accounting*: Assuming the accuracy of the Pension Tables and their application, the Ontario method has brought rather close results. If allowance had been made for merit rating and for prior years overlapping, the margin of difference would have been very small indeed.

Marine insurance companies in British Columbia are reported to be advocating an amendment to the Canada Shipping Act which would require the certification of pilots in the Coast district. It is proposed that every pilot who has served for three years in the capacity of public pilot shall be granted a certificate by an examining body, provided that he passes a physical examination, but that all other applicants shall be required to undergo an examination for proficiency and submit their record. It is held that only men who have served as masters of coast vessels should be considered. Under present conditions on the western coast ship owners have no official guarantee as to the qualifications of the pilots who handle their vessels.

## WORKMEN'S COMPENSATION IN BRITISH COLUMBIA IN 1923

THE seventh annual report of the Workmen's Compensation Board of British Columbia covers the operations of the calendar year 1923. The pay-roll return of industrial firms in the province showed a steady expansion in business, the number of active firms at the end of the year being 6,524 as compared with 6,379 in the previous year. In addition to the employers whose operations were automatically covered, there were 22 farmers and 68 other employers of labour, who by special application took advantage of the optional protection made possible for their workmen, under the amendments of 1922, which were in effect throughout the year. These amendments increased the rate of compensation from 55 per cent to 62½ per cent of the wage loss, and the funeral allowances from \$75 to \$100 and enabled farmers, on application, to cover their workmen, while in the industries already under the Act provision was made to include employees engaged in office or other clerical work (LABOUR GAZETTE, March, 1923, page 265).

The cost of assessing employers, auditing pay-rolls, collecting assessments, enforcing first-aid and accident prevention regulations, investigating claims for compensation, payment for office staff, rent and other expenses amounted in all to 3.42 per cent of the total assessment. The result of this low cost of administration was that out of every \$100 collected from employers, \$96.58 went directly for the payment of compensation to injured workmen and their dependants.

Under the Act the cost of all accidents disposed of during the year are paid in full out of the funds collected from employers operating during the year. Provision is made for the creation of a "reserve" fund composed entirely of moneys set aside each year "to meet the periodical payments of compensation accruing in future years in respect of all accidents which occur during the year." Funds set aside are required by the Act to be invested in securities specified for the investment of trust funds, such as public funds of Great Britain, or in Dominion or Provincial or Municipal Government bonds. The purchases made by the Board gave an average yield of 5.85 per cent.

During 1923, 24,184 accidents were reported, of which 268 were fatal, making an average of 80 accidents for every working day of the year, and of five fatalities for every week. There were also several trivial accidents in which first aid treatment alone was necessary and where no expenditure from the Board was

required, the time loss in these cases being less than three days. Compensation for time loss paid to workmen, payment for medical attention, including specialist treatment, hospital care, drugs and appliances, pensions awarded permanently disabled workmen and dependants of those who met death through accident, together with funeral expenses for the year, amounted to \$2,672,679.98.

Of the claims disposed of 48 per cent of the total arose out of accidents which occurred in the lumber industry; 9 per cent in coal mining; 8 per cent in the railroading groups; 8 per cent in manufacturing; 7 per cent in construction; 5 per cent in metal mining; 4 per cent in navigation and longshoring; 3 per cent in delivery, and 8 per cent in all other industries.

Of the fatal accidents, 42 per cent were in the lumbering industry; 21 per cent in coal mining; 12 per cent in the railroading groups; 8 per cent in construction; 2 per cent in navigation, and 5 per cent in all other industries. The lumbering industry, as in past years, took a larger toll of life than any other industry. Thirty-three of the fatal cases were the result of the coal mine disaster which occurred in February in Cumberland (LABOUR GAZETTE, June, 1923, page 628). Outside of that catastrophe, coal mining was responsible for 14 fatalities during the year. Dependency was established and pensions granted in 131 of the fatal cases, pension awards for these amounting to \$761,594.99. The number of claims for burial awards dealt with during the year was 220 for which there was expended \$20,868.95.

There were 545 workmen left with some permanent partial disability during the year including 186 accidents to fingers, 43 to thumbs, 40 to hands, 18 to arms and 5 to wrists, 70 to eyes, 56 to legs, 28 to feet, 21 to toes and 9 to ankles.

Finalled claims in connection with temporary total disability cases numbered 12,365, including claims of 12,271 males and 94 females who received injuries of this nature. The average period of disability resulting from the non-fatal accidents was 31.12 days, and the average cost per accident was \$61.98. The total wage loss to workmen due to these accidents amounted to \$1,489,441.68, the average daily wage as at date of accident was \$4.64 and the average age of the injured workers was 36. The injured workers included 5,949 married persons and 6,062 single, while in 354 cases the conjugal state was not known.

The nationality of the claimants is given as follows: 6,861 British, 2,259 Canadian, 725

Japanese, 494 Chinese, 454 Scandinavian, 387 American, 375 Russian, 364 Italian, 62 Hindu, 53 Austrian, 43 French, 24 German. There were 264 of the injured whose nationality was not stated. The following table shows period of disability and the cost of claims for temporary total disability cases:—

Length of disability	No. of accidents	Compensation cost	Average cost per claim
		\$	
Three days, etc., up to 14 days.....	5,675	82,665 10	14-57
Over 2 or 3 weeks...	2,220	77,800 71	35-05
Over 3 to 4 weeks...	1,263	65,533 87	51-89
Over 4 to 5 weeks...	832	58,083 50	69-81
Over 5 to 6 weeks...	540	47,117 14	87-25
Over 6 to 7 weeks...	375	39,524 28	105-40
Over 7 to 8 weeks...	274	33,389 81	121-86
Over 8 to 9 weeks...	191	28,911 58	151-37
Over 9 to 10 weeks...	137	21,409 24	156-27
Over 10 to 11 weeks...	104	17,176 95	165-16
Over 11 to 12 weeks...	85	16,042 27	188-73
Over 12 to 13 weeks...	79	15,809 50	200-12
Over 13 to 26 weeks...	382	117,747 51	308-23
Over 26 to 39 weeks...	111	54,664 33	492-47
Over 39 to 52 weeks...	49	33,011 57	673-71
Over 52 weeks.....	48	57,519 80	1,198-33
	12,365	766,407 16	

Average cost per accident \$61.98.

In a résumé of the benefits derived from the workmen's compensation legislation in the Province during the seven years of operation,

the report states that provision was made for workmen and their dependants in connection with 135,987 accidents, 1,549 of which were fatal. Compensation to injured workmen and their dependants, together with medical, surgical and hospital treatment, etc., during the period cost \$13,049,999.71.

The Board notes an improvement during the year in regard to accident prevention and first aid. The drain on industry through payment for costly periods of time loss, medical attention, increased labour turnover, permanent disablement and loss of life is being recognized as an important item in the cost of production. Encouraging results have been obtained where "safety thinking" has become a permanent institution, spasmodic safety work having failed to be of much service. Prompt first-aid attention has prevented many serious accidents from becoming fatal and many trivial accidents from developing serious complications. During the past year there were in the Province 400 establishments of a size and nature to require the continuous service of a first aid attendant. These attendants hold certificates entitling them to do first aid work, which work was usually done in addition to other regular duties. Including the certified first aid men engaged in coal mining, there were over 2,000 workmen in the Province doing first aid work.

### British Trade Union Membership in 1923

The British Ministry of Labour has issued its preliminary returns of trade union membership for 1923. Contrary to expectations, there was again a small decrease in the total membership of all trade unions; but this was of less than 4 per cent, compared with a fall of 20 per cent in 1921 and over 15 per cent in 1922. Practically, then, stability was reached, and it is probable that there has been at least a corresponding increase this year. Total trade union membership is now more than a million and a quarter above the pre-war total, and practically the same as in 1917. In 1914 there were rather over four million trade unionists. At the end of 1923 there were nearly five and a half millions. It is true that in 1920, at the top of the post-war boom, the membership rose to nearly eight and a half millions; but this was a somewhat unreal figure, including a large number of war-time workers who have since dropped away. Unemployment has, of course, taken a heavy toll, and the fall of membership has been greatest among engineering workers and general labourers, who were, in fact, largely

the less skilled personnel of the munition factories. The number of separate trade unions has fallen from 1,350 in 1919 to 1,135 in 1923; but this is chiefly due to the amalgamation of small societies into larger units. By far the greater part of the membership is to be found in about fifty large associations, which really constitute the active power of trade unionism. It is interesting to note that the number of local trades councils is 482, in comparison with 328 in 1913, and that these now represent a considerably larger proportion of the total number of trade unionists.

A record day's coal production was reported recently from the collieries of the British Empire Steel Corporation in the Glace Bay area. The total quantity hoisted on October 17 was 18,203 tons, the largest day's production since October 15, 1915, on which day the output was 18,312 tons. No. 11 pit made a new mark with a production of 1,723 tons, breaking the previous record of 1,629 tons mined on July 22 last.

**PROPORTION OF FATALITIES IN VARIOUS INDUSTRIES  
IN CANADA**

THE Department of Labour has for some years collected and published statistics and facts regarding industrial fatalities, with the idea of furnishing information that may tend to increase the safety of workers. The Department has also made a study of means for the prevention of accidents not only in Canada but in other countries. For some of the industries it has been impossible to obtain full accident statistics. In the provinces of Nova Scotia, New Brunswick, Ontario, Manitoba, Alberta and British Columbia, where

The report on industrial fatalities during the third quarter of the present year is published elsewhere in this GAZETTE. These quarterly reports indicate to some extent the degree in which the various industries may be classed as dangerous, but in order to obtain the true ratio of accidents for each industry it would be necessary to have complete figures as to the number of workers during the actual period covered. Such information is not yet available for a more recent date than 1922. In the present article,

PROPORTION OF INDUSTRIAL FATALITIES TO EMPLOYMENT IN 1922

Group and Kinds of Industries	No. of Employees	No. of Fatalities	Per cent of workers killed in industries
Agriculture (Estimated number of operators, farm labourers and farmers' sons over 14 years).....	988,000	65	0.006
Fishing.....	57,880	20	0.034
Logging.....	26,950	153	0.567
Mining, metallurgical works, structural materials and clay products industries.....	62,249	170	0.273
Metallics (Metallurgical works and metallic Mining).....	13,138	37	0.281
Non-metallics (other than coal).....	6,120	22	0.359
Coal mining.....	31,838	97	0.304
Structural materials and clay products.....	11,153	14	0.125
Manufacturing.....	463,864	164	0.035
Vegetable products.....	63,217	10	0.015
Animal products.....	49,595	12	0.024
Textile products.....	88,048	4	0.004
Wood and paper products.....	118,462	74	0.062
Iron and its products.....	75,334	42	0.055
Non-ferrous metals and products.....	18,222	2	0.010
Non-metallic mineral products.....	15,130	4	0.026
Chemical and allied products.....	14,085	8	0.056
Miscellaneous industries.....	21,771	8	0.036
Boat building.....	517	1	0.193
Transportation.....	211,555	167	0.078
Steam railways.....	165,635	143	0.086
Electric railways.....	18,099	8	0.044
Telegraph.....	8,500	16	0.057
Telephones.....	19,321		

Workmen's Compensation Boards exist, fuller statistics are available than in the provinces of Quebec and Saskatchewan where there are no such Boards. In regard to accidents among agricultural workers, the Department has to depend almost entirely upon press reports. British Columbia, however, has recently made provision enabling farmers to provide compensation for their workmen, and some information in regard to this group is now supplied by the Workmen's Compensation Board of that province. Railway accidents in Canada are reported by the Board of Railway Commissioners, and mining accidents by the Mines Departments and the Workmen's Compensation Boards

therefore, the accident records for that year are taken, and compared with the number of workers employed in the various industries in the same period, the proportion of fatalities being thus established for each industry on the basis of the records of 1922. The construction industries, however, which have a bad accident record, are not included, as the actual numbers employed in this group cannot be accurately determined owing to the nature of the employment.

From the above table it will be seen that the logging industry had a higher fatality record in proportion to the number of workers employed than any of the other industries, during the year 1922. The various mining

industries followed, with non-metallic mining showing the highest rate in these groups. The steam railway service is shown as the next most hazardous occupation in that year, followed by the manufacture of wood and paper products (including saw and planing mills), and the group comprising employees in the telephone and telegraph services.

With regard to non-fatal accidents in Canada, the only statistics available are those obtained from the Workmen's Compensation Boards of the six provinces from which the following information is taken:—

Province	Fatal accidents in 1922	Non-fatal accidents in 1922	Totals
Nova Scotia.....	65	5,416	5,481
New Brunswick.....	30	4,781	4,811
Ontario.....	418	49,993	50,411
Manitoba.....	40	9,636	9,676
Alberta.....	66	7,452	7,518
British Columbia.....	169	19,478	19,647
	788	96,756	97,544

Of the accidents in the logging industry, drownings among river drivers, falling trees, branches etc., and accidents in the rolling, loading and piling operations, cause the greatest loss of life. As an indication of the cost of accidents in this industry the British Columbia Workmen's Compensation Board in its report for the year 1922 gives the amount of final awards for both fatal and non-fatal accidents in logging in that province as \$309,774, and for accidents on logging railways as \$43,156, making a total of \$352,930. Compensation for accidents at saw and planing mills are not included in these figures as these are classified in the manufacturing group. In 1922 64 of the 153 fatalities in the logging industry occurred in British Columbia, Ontario having the next highest record with 53 fatalities. (Comparative figures for Quebec, which is one of the largest lumbering provinces, cannot be given as there is no Workmen's Compensation Board in that province. Reports of eight fatalities were received from the Department's correspondents and from press reports.)

In the non-metallic mineral mining and quarrying group the greatest number of accidents occurred in 1922 in the province of Quebec, the chief cause of the fatalities being the fall of loose rock accidentally detached from the side of open pits. The Department of Colonization, Mines and Fisheries of the province has drawn attention to the danger from overhanging walls in workings having parallel walls and dipping more or less steeply, pointing out that the serpentine under the hanging wall should not be withdrawn, or if it must be mined, that the overhanging country rock should be brought down, and that there

should be a straight face without overhanging ledges. It has also pointed out that undermining in sand and clay pits should be absolutely forbidden and that foremen should see that all frozen overburden, either overhanging or bordering the edges of open pits is removed before undertaking work of any kind in the vicinity. It also recommends that there should be greater care in blasting operations, especially in the quarries, and that at every mine there should be some person familiar with the Schaefer method of artificial respiration.

In the coal mining industry, falls of rock and coal, haulage accidents and explosions, one of which was due to an open sparking caused by an arc in electric trailing cable at sprocket, were the chief causes of the fatalities in 1922. British Columbia and Alberta had each 35 fatalities and Nova Scotia had 25. Close investigations are now made into the causes of all coal mine disasters,\* and as a result of these inquiries new regulations and legislation have been adopted. Some important amendments of recent years in the mining acts of the several provinces were outlined in the LABOUR GAZETTE for May, 1924, on page 378. Recently frequent accidents in the Nova Scotia collieries have been due to "bumps," which are explained as caused by pressure of the earth above, these coming without warning and with the force of an explosion.

Perhaps no industry more than the steam railway service requires more care on the part of all concerned. Many of the accidents in the service are due to collisions, derailments, and being struck by, run over or crushed by or between cars and engines and falls from cars. Continual watchfulness is necessary in switching and shunting operations and in the giving and taking of orders. Of the accidents in the telephone and telegraph services and public utilities the chief causes were coming in contact with electric current and falls from poles. In the construction industries falls from scaffolds, from ladders, and through hoist openings, the collapse of supports, cave-ins of excavations, and being struck by derricks caused most of the fatalities. In agriculture the nature of the work is so varied that fatalities due to many causes are recorded; the greatest number of deaths are, however, due to being kicked by horses or being gored by bulls. A great number of deaths among these workers are due to lightning, falls from loads, and through the handling of machinery.

Accidents, both fatal and non-fatal, that are common to all industries are those due to the handling of materials, including strains, striking against sharp or rough objects, and being

\*LABOUR GAZETTE, October, 1922, page 1113; June, 1923, page 628; September, 1924, page 732; and October, 1924, page 822.

crushed between objects handled and other objects. Objects dropped, or objects falling from piles, falls into elevator shafts and being crushed by elevators have also caused a great number of injuries. Of all non-fatal accidents, it is claimed that eye accidents cost more in compensation, in medical treatment, and in loss of productive efficiency than any other form of accident. Among the chief eye hazards in industries are flying chips of metal, minerals and wood, splashing liquids such as

molten metals, acids and other injurious chemicals, and explosions of all varieties. There are also the hazards of infection and of eye diseases which arise from neglect of eye injuries, incompetent first-aid treatment, contact from carriers of contagious diseases, and exposure to excessive industrial heat, and eye strain resulting from improper and inadequate lighting, improper vocational placement and from ignorance or disregard for the existence of defective vision.

## MOTHERS' ALLOWANCES IN ONTARIO

THE third annual report of the Ontario Mothers' Allowance Commission covers the operations of the Mothers' Allowance Act of the Province for the fiscal year ended October 31, 1923. In addition to the statistical statement the report contains much interesting information in connection with the administration of the Act. The investigators for example, play an important part as vocational guides, helping the adolescents of the assisted families to secure suitable employment and advising them during the latter days of their schooling as to possibilities for their future life. The efforts of many mothers to supplement their allowances, and the co-operation of business and social clubs, including women's organizations, in the work of the Board, are also described.

The cost of administration showed a reduction of from 5.42 per cent during the fiscal year 1921-1922 to 4.58 per cent during 1922-1923, the total cost in the latter period being \$74,020.76. This cost is borne by the Province, and includes the entire cost involved in the services rendered by the investigators and by the 98 local Boards, and all expenses in connection with the administration at the head office. The total cost incurred in the operation of the Boards, including travelling expenses, stationery, postage, etc., was \$2,409.15, or an average cost per Board of \$24.50. About 500 persons served voluntarily on the Boards attending meetings, visiting the homes of beneficiaries, etc.

The total amount of benefits paid during the year was \$1,612,701, the average benefits paid to each beneficiary being about \$35.50 monthly. Of the total amount \$586,090 was distributed to the counties, \$339,676 to the cities, \$31,049 to the "separated towns," \$2,810 to Indian reserves, and \$153,076 to judicial districts. In most cases the cost of the allowance is met jointly by the Province and the local authority. The municipality is chargeable with half the amount of the al-

lowance where the beneficiary has resided within its boundaries for a year. It is necessary, however, for all applicants to have two years' continuous residence in Ontario immediately prior to the date of application. (In this connection the report states that it has been reported that widows from Quebec were moving into Ontario in great numbers to share in the benefits of the Act, but an examination of the records has shown that there is no foundation for the report). The total contributed by the municipalities in the fiscal year 1922-1923 was \$681,634.77. The municipalities co-operated by promptly paying their share, the Commission furnishing each with a statement showing the names of the beneficiaries in their district and the amount paid in each case.

The vast majority of the beneficiaries proved worthy of the allowance and gave good care to the children, but constant supervision of some mothers was necessary, and in a few cases the allowance was cancelled because the mother proved to be "not a fit and proper person."

The number of mothers who were drawing allowances on October 31, 1923, was 3,870, as compared with 3,580 at the beginning of the fiscal year. Considered by nationalities the beneficiaries were mostly Canadian, these numbering 2,686, English numbering 652, Scottish 184, Irish 87, American (United States) 72, Russian 59, Italian 37, Polish 19, Finnish 18, German 16, Swedish 8, Welsh 5, and other nationalities 27.

The occupations of the fathers were as follows: labourers, 1,105; clerks, 192; trades, 671; business, 268; professions, 27; farmers, 534; miscellaneous, 101, and 972 were not given. The most frequent causes of death of the fathers were pneumonia, tuberculosis and influenza, these accounting for 646, 392, and 389 deaths respectively out of a total of 3,255.

In the homes of the beneficiaries there were 11,791 children under 16 years of age. The number of children by families is shown in the following table:—

	Families	Children
Families of one child, an incapacitated father, or older child.....	35	35
Families of two children.....	1,651	3,302
“ three children.....	1,071	3,213
“ four children.....	626	2,504
“ five children.....	296	1,480
“ six children.....	112	672
“ seven children.....	52	364
“ eight children.....	23	184
“ nine children.....	3	27
“ ten children.....	1	10
Total.....	3,870	11,791

The allowance is not in itself sufficient to maintain a family, and where there are no sons and daughters of wage-earning age, the usual means of supplementing it is by the mother's own earnings. In the rural districts and small towns where rents are lower the allowance is more nearly adequate than in the larger cities, and in many cases the country mothers manage with very little outside employment, in a very few cases with none. A mother who is able to manage without outside employment usually owns her home and grows her own vegetables, and in some cases supplements the allowance by the

sale of fruit and vegetables, butter, eggs, milk, flowers, bulbs and perennial roots. Other mothers have added to their income by such employment as caring for schools and churches, the keeping of small grocery stores, by cleaning and pressing, and a very few by giving music lessons. Hand sewing is another common means of earning, and in many of the urban districts office cleaning is convenient part-time employment. The usual employment of the mother is charwork and general domestic service, this being the work most can do without special aptitude for training, and the easiest way of getting part-time employment. Many mothers do laundry work in their own homes, and in one or two instances the Commission received reports of mothers who had bought electric washing machines on time payments, thus supplementing their allowance at a saving of time and strength and resulting in improved home conditions. Full-time factory and store employment is discouraged by the Commission but part-time employment can often be arranged which does not take them from the home more than charwork would. The nature of the occupation of the beneficiaries was as follows: Housewives, 1,730; charwork, 924; boarders or roomers (no other employment), 450; sewing, knitting, etc., 249; factory work, 182; farm work, fruit picking, etc., 135; clerical work, 102; business, 65; nursing, 26; and professions, 7.

## WOMEN'S INSTITUTES IN CANADA

**A**N article in the *LABOUR GAZETTE* for September (page 764) describing existing conditions in Canada in regard to the draft recommendation of the International Labour Office (League of Nations) on the "Utilization of Workers' Spare Time," referred to the part being taken by Women's Institutes in improving social conditions in the rural centres. The first of these Institutes was organized in Ontario in 1897 and the movement spread so quickly that in 1915 there were Institutes in every province of Canada. The aims and objects of these organizations, as set forth by the Ontario Institute are as follows:—

The disseminating of knowledge relating to domestic economy, including household architecture, with special attention to home sanitation; a better understanding of the economic and hygienic value of foods, clothing and fuel, and the more scientific care and training of children with a view to raising the general standard of health and morals of our people; and the consideration of any problem or the carrying on of any line of work which has for its object the uplift of the home, or the betterment of conditions surrounding community life.

In addition to their recreational activities the Institutes in several of the provinces pay particular attention to newly arrived immigrants, welcoming them to the districts and helping them to realize that they have a part to play in advancing community interests. They see that immigrant children are placed in homes, attend school regularly and they report cases of cruelty, neglect or overwork by employers to the authorities. The Institutes have done pioneer work in establishing medical inspection in rural schools, and have clinics to remove remediable physical defects of the children. In many schools they serve hot lunches for children who come from a distance. The school also has been used as a medium for stimulating agriculture and the encouragement of school fairs has been a feature of the Institute work. They have inaugurated a school garden movement in some districts and have obtained good results from donating prizes to children. In some districts

they have encouraged the studies of poultry raising and dairying, and many Institutes hold horticultural fairs and flower shows.

There is no Dominion legislation concerning these Institutes, as they are regulated entirely by provincial laws. In several of the provinces there are clauses in the Acts concerning agricultural associations which provide for the formation of Women's Institutes, while New Brunswick and Alberta have special Acts on the subject. Section 3 of "The Women's Institute Act," of the latter Province states that the objects of the Women's Institute shall be the improvement of social conditions in rural and other communities by means of:—

(1) The study of home economics (including home nursing, household science, sanitation, food values, sick-room cookery, house furnishing, sewing, and other matters), child welfare, prevention of disease, local neighbourhood needs, industrial and social conditions;

(2) Establishing the Women's Institute as a social and educational centre in the community and by utilizing it as a means of welcoming new settlers;

(3) The encouragement of agriculture and improvement of agricultural conditions;

(4) The holding, establishment and maintenance of demonstrations, lectures, short course schools, travelling and other libraries, exhibitions, competitions, meetings, conventions and such other utilities and attractions as may from time to time be deemed useful for the promotion of the foregoing objects or any of them.

To organize an institute in Alberta an application must be signed by not less than eight qualified women and forwarded to the Minister of Agriculture of the province, who issues a certificate of incorporation. In all the provinces the rules regarding organization are very simple.

The work of the Women's Institutes in each province is directed by a superintendent who is an officer of the provincial Department of Agriculture. He is usually assisted by a corps of women, known as lecturers and demonstrators, who travel through the Province visiting the different Institutes and giving demonstration lectures in home economics, etc. The Institutes are assisted by small grants from the Provincial Governments and by the Provincial Departments of Agriculture under the provisions of the Dominion Agricultural Instruction Act. Membership in the Institutes is not limited to mature women, but includes girls as well, Girls' Institutes working in cooperation with Women's Institutes being an important feature of Institute organization in the different provinces. Women of all classes are included as it is believed that mutual help and combined effort can only be achieved by an understanding of each other's needs and interest and of the points of view from which these are regarded.

In addition to the local Institutes there are in most of the provinces district Institutes and provincial Institutes, and in 1919 there was formed a National Federation of Women's Institutes of Canada, one of its objects being to co-ordinate the various provincial Women's Institutes. This Federation has resolved to press for the establishment of a division in the Dominion Department of Agriculture to be known as the Women's Institute Division having the same relation to the Dominion Government as the similar divisions have to the provincial governments.

Women's Institutes are now in existence in Great Britain, France, Belgium, the United States and in other countries.

### Legal "Colour Bar" removed in South Africa

The Supreme Court of the Union of South Africa recently declared *ultra vires* the existing regulations in the Transvaal and Orange Free State which establish a "colour bar" in regard to occupations of a responsible or dangerous nature in mines or in connection with machinery in any industry. Discussing the situation thus created the annual report of the Department of Mines and Industries for 1923 says:—

The question of policy now arises whether this so-called "colour bar" should be legally established by Act of Parliament, or whether it would not be sufficient to provide for competence without any race differentiation. There does not appear to be any indication at present that the abolition of the legal "colour bar" has had any adverse effect on the general ratio of white to coloured workers on the mines. On the contrary, at the time of writing that ratio has increased, and, so long as competence is insisted upon, it will probably be many years before the removal of the legal "colour bar" would disclose any marked effect on European employment on the mines.

### British Emigration

The Canadian Woollen and Knit Goods Manufacturers' Association Bulletin quotes the following comment in an English paper on the British Emigration returns in relation to Empire settlement:—

The nature of British emigration is commented upon in the October issue of the Bradford Chamber of Commerce. It says. The main ground for anxiety is the fact that while emigration on the whole is not so large as before the war, it consists of a very much larger degree of the highly skilled class of artisans. The proportion of young men is unusually large. Another rather disquieting feature of the returns is the reduced proportion of emigrants who make their new home within the Empire. In 1913 there were 71.2 per cent of the total; in 1923 there were 57.8 per cent. The gain was to the United States, and the chief loss was to Canada.

## NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities are also noted which have a direct bearing on the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

*Nova Scotia—Evening Classes.*—The enrolment in evening classes at Halifax exceeds that of any previous year and is particularly heavy in dressmaking, millinery and motor mechanics. Over eleven hundred students were enrolled during the opening week in twenty-two subjects. Classes in home nursing and sign painting are offered for the first time. A number of students are taking advanced work following the previous year's instruction. The ages of pupils ranged from thirteen to fifty years.

In Yarmouth, 110 pupils were enrolled before the opening night in seven subjects. This is a record enrolment.

Evening classes are conducted in 25 centres throughout the province. Last winter the total enrolment exceeded 3,000.

*Nova Scotia—Course in Telephony.*—The first summer school of the Maritime Telegraph and Telephone Company at Halifax, Nova Scotia, dealing with telephone work, proved to be very successful, according to the company's monthly bulletin. The complete resources of the Nova Scotia Technical College were placed at the disposal of the industries of the Province. The college authorities and company officials met together and worked out a careful plan for a short-term course that would cover general principles of electricity, electrical machinery testing, and technical knowledge of telephone traffic, construction, accounting, etc. The company's offer to its employees was that it would grant two weeks' leave on full pay, and also pay the college fees, the student to pay his own travelling expenses and board.

*New Brunswick—Evening Classes.*—The St. John Vocational Committee is conducting evening classes at four centres, including West St. John. It is expected that the enrolment will equal, if not exceed, that of previous years.

Successful evening classes are conducted in Fredericton, Moncton, Edmundston, and four other municipalities in New Brunswick. The total enrolment last year was over 1,000.

*Quebec—Evening Classes.*—Evening vocational classes are conducted in 18 centres in the province of Quebec and the enrolment last year exceeded 6,500. Courses are conducted by the provincial schools, the Council of Arts and Manufactures, religious societies and other organizations.

*Ontario—Evening Classes.*—A new evening class for real-estate brokers and salesmen is being conducted in the Windsor-Walkerville Technical School. Over 60 students have enrolled for a lecture course given by experts under the direction of the Border Cities Real Estate Board.

Windsor, London, St. Thomas, Woodstock, Hamilton, Burlington, Toronto, Owen Sound, Ottawa, Sudbury and other municipalities report increased enrolments in evening classes. Several places have started new courses and very few centres report decreased enrolments in any course.

Last year fifty-seven municipalities conducted evening vocational classes with a total enrolment of 36,684. An average of 39 out of every 1,000 people in these places attend evening classes.

*Ontario—School Buildings.*—The new vocational schools in Chatham and Owen Sound are being opened early in November, and the additional story to the workshop unit of the Ottawa Technical School is now in use.

The Director of Technical Education for Toronto has been asked to prepare a report regarding the establishment of a technical school in the west end of the city. A new High School of Commerce is being erected in the east end of the city. If the proposed west end school is erected, Toronto will have five secondary vocational schools, two commercial and three technical.

Plans for an addition to the shop unit of the Hamilton Technical Institute have been submitted for the approval of the Provincial Department of Education. The proposed wing is to house the motor mechanics department. The Building Trades Council of Hamilton is urging the immediate erection of the vocational teacher-training college and additional accommodation for collegiate classes.

The principal of the London Technical School states that despite the recent addition of a new wing to the school, the increased enrolment in day and evening classes will

make it necessary to add another wing in the immediate future.

*Guelph—Baking School.*—Over \$15,000 has been subscribed by members of the Bread and Cake Bakers' Association of Canada towards the erection of a baking school in connection with the Guelph Agricultural College. The Association is to build and equip the school which is to be maintained by the provincial government. Every branch of the trade is to be taught and students will be enrolled from all parts of the Dominion. The school will be managed by a joint committee selected from the Bakers' Association and representatives of the Ontario Agricultural College.

*Manitoba—Evening Classes.*—Evening classes in Manitoba are confined to the city of Winnipeg where 2,051 pupils received instruction during the past winter. The enrolment in evening classes has remained fairly constant during the past five years.

*Saskatchewan—Evening Classes.*—Very successful evening classes are reported from Regina and Saskatoon. Five classes have been started in Moose Jaw and it is hoped that several others will be organized during the winter. The requirement of a minimum enrolment of ten students in each class and the limited field for industrial classes in each community makes it difficult to organize classes except in the few larger cities. Last year the work was carried on in three cities and over 800 students were enrolled.

*Alberta—Evening Classes.*—Over 2,500 students were enrolled in evening classes in seven centres throughout Alberta, during the past year. A number of the places in which classes had been discontinued are organizing classes for the coming winter and it is expected that the total enrolment will be considerably increased.

*British Columbia—Evening Classes.*—During the past year thirty-six municipalities in British Columbia conducted evening classes, having a total enrolment of over 5,000 pupils. This represented an increase of approximately 1,500 over the preceding year, and recent reports indicate that a similar increase may be expected this year. Well organized classes in Vancouver are attended by over 1,500 workers. Instruction is provided in thirty subjects covering all phases of commercial and industrial occupations.

*Vancouver—Vocational Officer.*—The Vancouver school board is arranging for the appointment of an official to co-ordinate the work of schools and industry. He is to advise pupils regarding the choice of their life work, to locate suitable openings for pupils leaving

school, and to establish co-operation between the schools and local employers.

### Vocational Guidance

In view of the efforts being made to introduce vocational guidance into Canadian schools, it is important that teachers, parents, employers and students understand what is involved in this undertaking. The following extracts from a recent pamphlet issued by the National Vocational Guidance Association of the United States clearly set forth the need for and aims of vocational guidance in a school system.

*Definitions.*—Vocational guidance is the giving of information, experience and advice in regard to choosing an occupation, preparing for it, entering it, and progressing in it.

Educational guidance is the aid furnished individuals in making such decisions as choice of studies, choice of curriculums and the choice of schools.

*Need for Vocational Guidance.*—Education is provided to enable pupils to become useful members of society. Vocational guidance will prepare them to make more wisely the important decisions which they are called upon to make throughout life. Therefore the service of vocational guidance should be provided for in the curriculums of the public schools.

Since work occupies one-half the waking time of active individuals and presents complex difficulties which can be solved only through the extension of education, careful study should be given to all the problems involved in vocational life.

Modern life demands as never before right contacts and co-operation. Vocational guidance of some sort is inevitable. No one can avoid the need for making occupational decisions. Adequate guidance should be provided under supervision to offset the unwise and false guidance of untrustworthy advertisements, suggestion, selfishness, ignorance, and other prejudiced or unscientific sources.

*Aims of Vocational Guidance.*—To assist individuals in choosing, preparing for, entering upon, and making progress in occupations.

To help the worker to understand his relationships to workers in his own and other occupations and to society as a whole.

To give a knowledge of the common occupations and of the problems of the occupational world, so that pupils may be prepared for vocational as well as political citizenship.

To secure better co-operation between the school on the one hand and the various industrial, commercial and professional pursuits on the other hand.

To help adapt the schools to the needs of the pupils and the community, and to make

sure that each pupil obtains the equality of opportunity which it is the duty of the public schools to provide.

### Workers' Educational Association

The following extracts from the sixth annual report of the Workers' Educational Association of Toronto and District summarize the purpose, organization and operation of the work of the Association as carried on in Ontario. Branches are organized in Hamilton, Kitchener, Windsor and Ottawa.

The Association is established to provide an opportunity for the workers to obtain the benefits of University Education, and assist them to acquire the knowledge which is essential to intelligent and effective citizenship. To that end, political and economic science, history, English literature and other subjects are taught. There are two classes of membership, namely, general members, who are admitted to special lectures and privileges, and students who form the study groups.

Lecturers are appointed by the Executive Council and are paid for their services. The tutorial secretary organizes a syllabus of lectures, acts as librarian, convenes meetings of tutors, and otherwise assists with the general conduct of the classes.

The educational work of the Association is organized on the basis of student membership, the course including lectures, discussion of lectures and writing of essays; and general membership, with the privilege of special popular lectures. Classes or lectures are held during the evening, or at such other times as may be deemed advisable.

In order to constitute a W. E. A. Class, the following conditions are requisite:—That the class shall consist predominantly of working men and women; and that all new members of the W. E. A. shall be provided with a copy of the constitution at the time when the membership card is issued.

The W. E. A. in Hamilton began work in October, 1920, and the first season had one class in economics, with total enrolment of 18, which has now increased to six classes with total enrolment of 259. Of this number there are 95 men and 164 women.

The analysis of occupations covers 216 of the total membership, the balance not being available when the information was asked for. The result is as follows: Skilled workers, patternmakers 4, carpenters 4, plumbers, blacksmiths, machinists, toolmakers, etc., 15, painters 2, steel workers 1, draftsmen 5; total 31; unskilled labourers 16, housekeepers, married ladies and girls at home 30; clerks, various, 25; stenographers 16, Government service 1, cashiers, bookkeepers, accountants, salesmen, shippers 14; total of this class, 61; milliners and hairdressers 4, teachers, school and music, etc. 18; nurses 12, social service 3; total of this section, 33; foremen 6, efficiency clerks 3, inspectors 1; total 10; law clerks or students 3, business men, managers, superintendents, assistant superintendents, etc., 8; total 216.

The attendance at classes shows the following average for the entire term; economics, 17½; public speaking, 37½; literature, 23; civics, 14; psychology, 1st year, 46½; psychology, 2nd year, 34. Total of averages, 172½.

### Winter Construction and Unemployment

The campaign for more building and repair work during the winter months, aimed at reducing unemployment and giving the public greater returns for the money it spends on construction, is finding much of its most energetic support from manufacturers and distributors of building materials in the United States. Many of the most prominent concerns, as well as organizations doing a smaller business and retailers, have called attention in various ways to the advantages of winter building.

The usual let down in construction during the winter has in the past cut down retail sales, and consumption of practically all building materials, to a fraction of summer business. The uneven demand extends back to the raw products from which materials are made, and results in irregular employment and decrease in purchasing power on the part of a large

section of the community. The seasonal fluctuations in railroad traffic are increased, and there is a generally upsetting influence on business and employment. The vigorous campaign for a more even building year is therefore being supported by manufacturers who are not only contributing to public education on the subject, but are working on the technical problems which concern builders in making winter work easy and economical.

The basic idea in the campaign is that all persons planning new construction or the employment of building trades workers for repairs or other purposes should take into account probable employment conditions in determining when to start the work. In this way the unemployment of building trades workers and of building material producing organizations during several months of the year is being reduced and the public is profiting.

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

### Report of Dominion Bureau of Statistics on the Fishing Industry

THE Dominion Bureau of Statistics has recently issued a report on the fishing industry in Canada for 1923, prepared in collaboration with the Dominion and Provincial Fisheries Departments.

The total value of the fisheries products as marketed, whether fresh, domestically prepared or factory made, for the year 1923 was \$42,565,545, compared with \$41,800,210 for 1922 and \$34,931,935 for 1921. British Columbia led in the value of products these amounting to \$20,795,914; Nova Scotia came next with products valued at \$8,448,385; and New Brunswick third with products valued at \$4,548,535.

*Primary Operations.*—The amount of capital represented in the vessels, boats, nets, traps, piers and wharves, ice houses, etc., engaged in the primary operations of catching and landing the fish in 1923 was \$23,645,316, compared with \$25,648,650 in 1922, and \$26,257,487 in 1921. The number of employees engaged in these operations in 1923 was 53,517, compared with 57,880 in 1922, and 55,230 in 1921. Of the total number of men employed in 1923 44,064 were employed in sea fisheries and 9,453 in inland fisheries, the nature of the employment of the men in each of these divisions being as follows:—

Sea fisheries: On steam trawlers, 193; on vessels, 5,797; on boats, 37,329; on carrying smacks and scows, 745.

Inland Fisheries: On vessels, 704; on boats, 6,404; on carrying smacks and scows, 4; and in fishing not in boats, 2,341.

*Fish Canning and Curing Establishments.*—The fish canning and curing establishments in operation in 1923 totalled 938, comprising 621 lobster canneries, 70 salmon canneries, 15 clam canneries, four sardine and other fish canneries, 220 fish curing establishments and eight whale oil and fish oil factories. The number of lobster canneries increased over the preceding year by 35, salmon canneries by three, and clam canneries by five. The number of miscellaneous fish canneries decreased by four and of fish curing establishments by 34. An increase of five is shown in the number of all establishments. Of the total establishments 533 were operated by individuals, 193 by partnerships, and 212 by joint stock companies. There were 437 establishments operating less than 60 days during the year; 291 operating between 60 and 119 days; 97 operating between 120 and 179 days; 52 operating between 180 and 239 days; and 61 operating 240 days and over.

The total selling value of the output of the establishments was \$25,374,763, a decrease from 1922 of \$190,726. The value of the fish canned, cured or otherwise prepared amounted to \$19,528,661, and of the fish marketed for consumption fresh \$5,846,102. Canned salmon contributed 47 per cent and canned lobster 23 per cent of the total value of the manufactured fish product.

There were 418 establishments having a production for the year valued at less than \$5,000; 155 having a production valued from \$5,000 to under \$10,000; 182 having a production valued from \$10,000 to under \$20,000; 83 having a production valued from \$20,000 to under \$50,000; and 100 establishments having a production valued at \$50,000 and over. Comprised in the last group are 57 salmon canneries, 26 fish curing establishments, 11 lobster canneries, four oil factories, and two sardine and other fish canneries.

The amount of capital invested in fish canning and curing establishments in 1923 was \$24,027,549 compared with \$22,116,338 in 1922, and \$19,411,990 in 1921. These totals represent value of land and buildings, machinery, products and supplies on hand and cash and operating accounts.

A classification for the number of employees shows, 625 establishments with an average of five employees or over and 236 establishments with an average of less than five employees. Establishments having no employees numbered 77, the work in these establishments being performed by the operators themselves. The total number of persons employed in the industry was 15,447 with salaries and wages amounting to \$3,769,914; 585 persons were classified as officers, superintendents, clerks, etc., with salaries of \$681,101; 11,265 were factory workers with wages of \$2,443,971; and 3,597 were contract and piece workers with wages of \$644,842.

In the canning factories of British Columbia, a large part of the work is done under contract, the contractor engaging and paying his own help and being himself paid by the factory according to the quantity of fish packed. Comparative figures for 1922 give the total number of employees in the establishments during that year as 16,577, with salaries and wages amounting to \$3,641,730. A classification of the wage-earners by sex, as shown by the payrolls on the fifteenth of each month is given as follows: for January, 1,005 males and 83 females; February, 997

males and 89 females; March, 1,092 males and 104 females; April, 2,770 males and 925 females; May 5,317 males and 4,276 females; June, 6,196 males and 4,374 females; July, 5,040 males and 2,870 females; August, 3,320 males and 820 females; September, 2,932 males and 707 females; October, 2,676 males

and 575 females; November, 2,031 males and 316 females; and December, 1,609 males and 267 females. The highest employment was, therefore, shown in May with 10,570 persons employed and the least employment in January when only 1,088 persons were employed.

## NOTES ON LABOUR UNION ACTIVITIES

### The United Brotherhood of Carpenters and Joiners of America

THE quadrennial meeting of the United Brotherhood of Carpenters and Joiners of America, being the 21st general convention of the organization, met in Indianapolis, on September 22. There were 648 delegates seated and five fraternal delegates from district and state councils, twelve of these being from the Dominion of Canada.

The total membership of the organization was shown to be 350,391 forming 2,173 local unions, 100 of which are located in Canada. The General Treasurer reported that he had handled over \$7,000,000 during the four years, and showed a balance of \$1,142,875 on hand, \$449,383 of which is in the Home and Pension fund. This was an increase in the cash balance of \$367,631 since the last convention. Money appropriated for local assistance in organizing was given in detail and showed Canada to have been dealt with generously in this respect, Toronto having received \$11,516; Montreal \$1,597; Ottawa \$320 along with other appropriations of smaller amounts to other Districts during that period.

In support of strikes and lockouts amongst the larger payments to Canadian Districts are Ottawa \$15,297; Hamilton, Ont., \$7,260, Jonquières, Que., \$2,070, Winnipeg, Man., \$1,704. Toronto, Ont, \$1,782. These sums are all additional to the amounts paid for death and disability donations which average out at a cost of 12 cents per member per month and of general organizing expenses, cost of journal, etc.

The General Treasurer in his report pointed out that the per capita tax paid to the General Office on each member since the Home and Pension Fund project became a law is 50 cents per member per month or \$6 per year and to receive the maximum benefit a member can receive upon the death of his wife and his own disability he would have to be a continuous dues-paying member for almost 79 years. To receive the maximum wife's funeral donation and death donation, a beneficial member would be required to pay per capita tax to the General Office for 62½ years

before he would pay in the amount he would be entitled to receive. In addition arrangements are now being made to care for the aged and infirm members through the Home and Pension Scheme.

The Convention was addressed by Phillip Murray, first Vice President, United Mine Workers of America, General Secretary Frank Duffy, John J. Manning, Secretary of Union Label Trades Department, American Federation of Labour, and James Duncan, first Vice President of the American Federation of Labour. A telegram conveying fraternal greetings was received from Samuel Gompers, President of the American Federation of Labour, and a number of similar telegrams from other Labour organizations.

Reports were presented from the General President, W. L. Hutcheson; first Vice-President, J. T. Cósgrave; General Secretary, Frank Duffy; General Treasurer, Thomas Neale, and the General Executive Board, each of which was referred to a separate committee whose reports were accepted by the convention in each case without debate.

Nominations for officers, which will be voted on by referendum of the membership and also for representatives to the American Federation of Labour, the Label Trades Department and the Trades and Labour Congress of Canada were held on Thursday, September 25. President Hutcheson is to be opposed by Willis K. Brown of Peoria, Ill., and Morris Rosen, New York City.

First General Vice President has opposition in the person of Jos. Walsh, New York City. Second General Vice President, General Secretary and General Treasurer were elected by acclamation.

Opposition candidates are nominated to five of the seven Executives Board Members. Those receiving acclamation are J. W. William of the Fifth District and Arthur Martel of the Seventh District (Canada).

A motion was adopted relative to representation at the American Federation and the Label Trades Department which provides for a system of election whereby changes in the delegation would be made each year, thus

allowing a much larger number of delegates to participate in this honour and at the same time assuring the interjection of a certain amount of new blood into the delegation each year. On the same principle it was decided to accept two to represent the Brotherhood at the Trades and Labour Congress of Canada, one for the first and third years and one for the second and fourth years. T. Jackson, Secretary Ontario Provincial Council and Pierre Lefevre, Secretary of the Quebec District Council were elected by acclamation to fill these positions.

The number of resolutions and amendments to the constitution which were submitted was much smaller than at the previous conventions, and again only a small number of those submitted received the endorsement of the Convention. Those approved will be sent out for referendum vote of the membership.

Considerable attention was paid to the matter of encouraging apprentices and a decision reached to make the maximum initiation fee for apprentices \$10, although the Convention rejected a proposal to raise the age at which apprentices might start to learn their trade from 22 to 25 years.

The Convention also went on record as strongly opposed to the introduction of piece work and of the accepting of Labour Contracts only by members of the organization.

A matter of general interest is the progress being made towards the institution of an old age home and pension scheme. A large tract of land has been bought in Lakeland, Florida, on which to build the home. A number of proposals will be submitted to the membership on this matter, the chief of which are that the choice of living in the home or being paid a monthly pension shall be optional with members entitled to the same. To become eligible to these pensions a member must be not less than 65 years of age, and have held 30 years' membership in the organization. A wife may accompany her husband to the home providing she is 55 years old, and married to the member at least 10 years. About 3,000 members of the organization are at present eligible for these benefits.

It is expected that the home will be partly maintained from the sale of oranges and other produce grown on the property. This will be sold direct to the members through the local unions, and thus bring into effect practical demonstration of co-operative production and distribution.

Special efforts are to be made to further organize the Woodworking factories of the United States and Canada, and secure the wider use of furniture and other products

bearing the union label of the United Brotherhood.

A resolution was adopted to hold the next convention at the Lakeland, Florida, providing that sufficient accommodation for the great number of delegates attending is available by that time.

A special resolution was adopted by the convention on the 200th anniversary of the founding of the Carpenters Company of Philadelphia which was the first form of carpenter trade organization in America. The anniversary was celebrated in the original Carpenters Hall, Philadelphia on September 2f.

The convention was the shortest on record, only sitting eight days and finishing on Tuesday, September 30, without the necessity of any night sessions.

### Delegation from Confederation of Catholic Workers of Canada Waits on Dominion Government

A delegation representing the Confederation of Catholic Workers of Canada visited Ottawa on October 24, to lay before the Dominion Government certain resolutions passed by the Confederation at their third annual conference held last August at Port Alfred, Quebec. (LABOUR GAZETTE, September, 1924, page 768.)

The Government was represented at the interview by the Honourable James Murdock, Minister of Labour and the Honourable Ernest Lapointe, Minister of Justice. Mr. D. J. E. Fontaine, member of Parliament for Hull, accompanied the delegation, which was headed by Chevalier Pierre Beaulé, president of the organization.

The resolutions were presented by Mr. T. A. Morin, of Hull, first vice-president, and Mr. Thomas Poulin, of Quebec, secretary of the Confederation, and were as follows:—

1. That the Federal Government fix the hours of labour in the pulp and paper industry at a maximum of 48 per week.

2. That in order to relieve unemployment in some measure the Federal Government should consider the revision of the present immigration policy so as to prevent the exodus of Canadians and limit the admission of foreigners; that as many contracts as possible should be awarded for federal public works; that a commission should be appointed to consider the establishment of an unemployment fund in Canada; and that the Federal Government should vote appropriations for the establishment and maintenance of trade union unemployment offices.

3. That a preferential tariff of 20 per cent should be charged on any vessel built or purchased abroad and used on the coast service in Canada. In support of this proposal it was

stated that at present most of the ships so used are built in Great Britain; that Canadian shipbuilders have made heavy outlays to meet the requirements of Canadian shipping, and that no tariff is now imposed on British built vessels.

4. That an end should be made of the practice of specifying that certain machinery manufactured abroad should be used in connection with contracts for maritime construction and repairs. Canadian firms were at present hampered in competing with outside firms through having to pay duties on such machinery. If the foreign machinery was necessary the duties should be abolished.

5. That the right of the Confederation to be represented wherever the views of organized labour in Canada are sought, should be completely recognized.

The Ministers promised a thorough consideration of the resolutions stating that these would be placed before the various departments affected. On the subject of the first resolution they reminded the delegation that the matter of the 8-hour day was now before the courts to determine whether legislation on this subject was within provincial or federal jurisdiction.

### Brotherhood of Railroad Signalmen of America

The second biennial convention, being the seventeenth regular meeting, of the Brotherhood of Railroad Signalmen of America, was held at St. Louis, Missouri, on September 8-13, 1924. This Brotherhood has six local unions in Canada. The President's report noted as the outstanding achievements of the organization since its convention in 1922, the re-establishment of the 8-hour day with time and one-half for all over-time, Sunday and holiday service; the establishment of "one-day off in seven" for signal department employees, with time and one-half for services on the seventh day; more favourable basic rules governing working conditions; and the final elimination of the inequality in the wages of signal department mechanics, the hourly rate having formerly varied to the extent of 4 cents an hour.

The above concessions were secured from the United States Railroad Labour Board in Decision number 1538, effective February 1, 1923. During the same period the Brotherhood maintained a fund for the relief of its sick and distressed members, while many subordinate lodges conducted district funds on the same lines.

The President criticised the action of the United States Railroad Labour Board in having rejected the Brotherhood's request for

general increases in rates of pay, causing resentment and dissatisfaction which had resulted in a proposed amendment to the Transportation Act of 1920, (referred to as the Howel-Barkley Bill).

*Signal Schools.*—Signal schools have been started by many local lodges of the Brotherhood and were said to have created a favourable impression among railroad officials and established better mutual understanding between the various parties concerned. The schools are attended by outsiders as well as by members. Addresses are given by the local signal department officials as well as by representatives of the signal accessory companies. Railroad officials now co-operate with the Brotherhood Committees in making the school meetings attractive. The President considered that "the benefits accruing to our membership and to the signal employees in general cannot be estimated". He recommended that the members should be given all available information on automatic train control and stop devices, and the circuit plans in connection therewith.

*Protective Fund.*—Under the Brotherhood's Protective Fund members receive a payment of more than \$140 in the event of death or total disability. The fund is a voluntary plan of insurance. At present it has 1,476 participants. Only three death claims have been paid to date, and no further assessments can be levied until seven more death claims have been paid. In an appeal to the members to join the fund it was stated that if the entire membership had participated since it was founded in April, 1923, the 55 members of the organization who had since died would each have received \$712, and the cost to the members would have been at the rate of only \$4.40 a year.

*Wage Increases.*—The Convention resolved that each system committee on roads that have not secured wage increases should immediately prepare data and endeavour to meet the management with a view of securing an increase in wages, and that the data when collected be sent to the Grand Lodge with a further recommendation that they be forwarded to the Labour Board.

*Injunctions.*—The following resolution on this subject was passed:—

Whereas, the attitude of antagonism toward organized workers by the courts in a great many jurisdictions in the United States has manifested itself lately in an ever-growing number of sweeping and severe injunctions against labour unions engaged in the legitimate struggle to maintain living standards and to elevate and better mankind; and whereas, such injunctions have in some instances been accompanied by opinions from the bench proclaiming it a crime and a conspiracy for organized labour to peacefully persuade their fellow-workers to join a labour union on the

spurious ground that these unorganized workers have been forced by their employer to sign upon entering employment fake agreements binding them against becoming members of organized labour and making such peaceful activity punishable by fine and imprisonment; and whereas, the modern and extensive use of this writ of injunction, especially as used in labour disputes, is involuntary and destructive, alarming, and menaces the very existence of American workers as free men; therefore, be it resolved, that the Brotherhood of Railroad Signalmen of America, in regular convention assembled, emphatically and solemnly protest against this practice of the courts; and be it further resolved, that this convention instruct its officers to do their utmost in conjunction and co-operation with all other organizations of labour to check this intolerable practice by legislative relief or otherwise.

*Workers' Leisure.*—The Convention resolved that:—

Whereas, through the successful efforts of organized labour there has been achieved larger leisure in which to enjoy a broader and richer life, and whereas, the rush and strain of modern existence entail unfortunate physical and nervous results which must be guarded against; therefore, be it resolved, that the Brotherhood of Railroad Signalmen of America, in convention assembled, hereby express its belief that in the wise use of the leisure time of the workers along constructive recreation lines lies a great opportunity not only of meeting the before-mentioned needs, but also of promoting a happier and fuller citizenship, and we, therefore, urge upon all local unions to arrange for more recreation activities for the benefit of their members and members' families, and also to take part in movements to better and extend community recreation facilities in their several cities and towns.

D. W. Helt was re-elected Grand President for another term. V. Saunders, of Toronto

was elected to represent the Canadian District on the Grand Executive Board.

### Retail Clerks International Protective Association

The eighteenth triennial convention of this organization was held during the past summer at Evanston, Illinois. Since the last convention, in 1918, the number of locals in Canada had increased from 3 to 13. The annual meeting of the international executive board was abolished, and international conventions are to be held henceforth every five years instead of every three years; the payment of sick benefits to affiliated members was discontinued, but the funeral benefits are to continue, with a slight increase in the graduated amounts. The funeral benefits payable for members in good standing range from \$25 after 6 months to \$200 after 5 years. The International *per capita* tax was increased to 40 cents per month for beneficiary members and 15 cents per month for non-beneficiary members. The sick benefit paid during the past 6 years amounted to \$54,345, and the funeral benefits \$49,385, or a total of \$103,730.

The convention resolved to place women organizers in the field as a means for building up a more powerful organization, and a campaign is to be started to induce members of all labour unions, before making purchases in stores to insist that the clerks who serve them carry a union card.

## FARMERS' CO-OPERATION IN CANADA

THE Advisory Agricultural Committee of the International Labour Organization, in a report last year, recommended that the Organization should further the co-operation of agricultural workers (LABOUR GAZETTE, September 1923). In this connection the Hon. Charles A. Dunning, Premier of Saskatchewan, in the course of an address on agricultural co-operation at the British Empire Exhibition, remarked that in Canada government assistance in co-operative marketing is primarily directed along legislative lines:—

"The various provinces have from time to time enacted legislation facilitating the formation of co-operative organizations of farm producers for marketing in some cases specific products; in other cases, generally. I think I may say that every province in Canada has legislation facilitating co-operative organization for marketing purposes among farmers.

"The outstanding features of such legislation are: first, cheap, easy incorporation; second, standardization of methods, and third, the ensuring that the organization when created shall remain co-operative in spirit, and not become an ordinary capitalistic corporation dominated by a majority financial interest. In these organizations the man, the producer, counts rather than

the investment of the producer in the capital of the organization. I think I may say that this is characteristic of the forms of co-operative organization in all of the various provinces of Canada.

"Another form of state assistance that is present in some of the provinces of Canada, and to a very great extent at times in Saskatchewan, is assistance by way of State management. I know State management of co-operative marketing does not sound very good at first blush, but I may say that the manner in which it has been conducted up to the present time, has been markedly successful in placing upon their feet co-operative organizations for the marketing of specific farm products, whereas in all probability if they had been left to tread the thorny road of ordinary experience themselves, the organizations would never have lived through it."

In Saskatchewan, Premier Dunning stated "the method was evolved that the Co-operation and Markets Branch of the Department of Agriculture would undertake to market that particular product for these farmers co-operating for the purpose, not as a permanent undertaking however, but on the distinct understanding that just as soon as the product assumed sufficient importance in the eyes of those producing it and was produced in sufficient volume to allow it to be done, a co-operative organization entirely composed of the farmer-producers should undertake the work of marketing at first done by the branch of the Department of Agriculture."

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### 1925 Session of International Labour Conference

THE next session of the International Labour Conference will open at Geneva on May 19, 1925.

### Agenda of the 1926 Conference

It has been decided that the programme of the Conference in 1926 will include items concerning maritime labour.

### Governing Body of International Labour Office

A meeting of the Governing Body of the International Labour Office was held in Geneva October 9-11. The Government of Canada was represented on this occasion by Mr. O. D. Skelton, of the Department of External Affairs, who acted as substitute for the Minister of Labour. The Director's report pointed out that since the previous session of the Governing Body in June forty additional ratifications of conventions adopted by the International Labour Conference have been registered with the League of Nations.

It was decided that the International Labour Office should continue an inquiry already in progress into the application of the right of association of employers and workers in various industries.

After considering a resolution of the Conference which called attention to the advisability of preparing the way for official relations between the International Labour Organization and Russia and of informing the Russian workers about the activities of the Organization, the Governing Body left the Director to determine the most opportune moment for such action, and to submit to it proposals for suitable steps in the direction indicated.

The Governing Body accepted the transfer to the International Labour Office, of the work of the High Commissariat for Refugees hitherto attached to the League of Nations. The work consists mainly in aiding the work of finding employment, by emigration or otherwise, for the thousands of Russian and Armenian refugees now scattered over Europe and the Near East, insofar as these refugees are employable. The decision referred to was made by the adoption of the following resolution:—

The Governing Body requests the Director to prepare a scheme of the services which can be given in the providing of employment facilities for refugees within the limits of the 203,000 francs voted by the Assembly of the League of Nations, and to examine this estimate in the light of the expenditure in previous years of the High Commissariat.

It is understood that what is asked of the International Labour Office is the investigation, co-ordination and communication of offers of employment which may be made to the refugees, the examination of the conditions under which the refugees may take advantage of these offers, and the preparation of an estimate of the number of refugees who can be placed in employment; provided that the expenditure shall not exceed the allotted credit.

It is understood that there is no question of paying relief or travelling expenses to the hundreds of thousands of refugees out of the relatively small sum voted.

It is understood also, that this is a temporary work, and should be terminated as soon as possible.

### Joint Maritime Commission

It will be remembered that, some time ago, in accordance with decisions of the Second Session of the International Labour Conference at Geneva in 1920, the International Labour Office undertook the drafting of an international seamen's code, beginning with seamen's articles of agreement. The draft of this part of the Code was discussed by the Commission at a former meeting. At a meeting held in September the Commission recommended that the question of the International codification of regulations relating to seamen's articles of agreement should be placed on the agenda of the 1926 Session of the Conference, the Commission being given an opportunity for further examining the preliminary draft in the meantime.

The seamen's representatives raised the question of putting on the agenda of a future Session of the Conference the subject of hours of work on board ship. Reference was made to the recent demand to this effect on the part of the International Transport Workers' Federation, and to the conversations which took place a few weeks ago between British and French Ministers on the subject.

The ship owners' representatives took the view that no ground had been disclosed for re-opening the hours question, and that legislation which would necessitate the carrying of larger crews would impose hardship upon seamen, shipowners and the community by reducing the volume and increasing the cost of maritime transport.

On the vote, the members of the Commission were equally divided on the seamen's proposal, and no recommendation was therefore adopted.

### League of Nations and Child Welfare

The Fifth Assembly of the League of Nations held recently at Geneva ratified the decision adopted by the Council at the session in March, 1924, providing that the work hitherto carried on by the International As-

sociation for the Protection of Children should henceforth be entrusted to the Secretariat of the League of Nations.

The Assembly requested the Council to re-constitute the Advisory Committee on the Traffic in Women and Children under a new name and with two groups of assessors, one group to attend whenever questions relating to the traffic in women and children are dealt

with and the other when questions relating to the protection of children are discussed.

The Assembly also endorsed the Declaration of the Rights of the Child, commonly known as the "Declaration of Geneva" and the President pointed out that the Assembly, by approving this Declaration, had made it "the charter of child welfare of the League of Nations."

## QUESTIONNAIRE ON WORKMEN'S COMPENSATION

### Issued to State Members by International Labour Organization

THE Governing Body of the International Labour Office (League of Nations), at its twentieth session held at Geneva last January, decided to include the general subject of Workmen's Compensation in the programme of the Seventh session of the International Labour Conference, to be held in 1925.

Two phases of Workmen's Compensation have been dealt with by previous Conferences. In 1921 a Draft Convention was adopted concerning Workmen's Compensation in Agriculture, and at the Sixth Conference held at Geneva during the past summer, a Draft Convention and a Draft Recommendation on the subject of equality of treatment of national and foreign workers as regards workmen's compensation for accidents were adopted, subject to ratification by a two-third majority at the next Conference, after having been communicated to the governments and the most representative organizations of employers and workers in each country in the interval between the two sessions. The text of these proposals was given in the August issue of the *LABOUR GAZETTE*, pages 656-657.

Apart from these two aspects of the subjects that have already been considered, the general problem of Workmen's Compensation legislation will be discussed at the Conference of 1925. The procedure to be followed will be the same as at the past two annual Conferences, the Conference at one session adopting a proposal by a simple majority, and a two-thirds majority of the succeeding Conference being necessary to its final adoption.

In order to provide a basis for discussion at the next Conference, the Governing Body has prepared a "questionnaire," to be filled in by all the state members of the International Labour Organization. The various governments are of course free to formulate any other proposals, but the questions presented below are believed to include the main features on which international uniformity might be desirable. The questionnaire was received

from Geneva by the Government of Canada, and has been forwarded by them to the various provincial governments, who have jurisdiction in Canada in regard to Workmen's Compensation.

#### QUESTIONNAIRE

1. Do you consider that, if the Conference decides to adopt a Draft Convention concerning workmen's compensation, the Draft Convention should contain a clause providing that laws and regulations on workmen's compensation are to apply to all undertakings? or

Do you consider that the sphere of application of the laws and regulations should be restricted to certain undertakings or classes of undertakings? If so, please indicate the undertakings or classes of undertakings which you consider should be excluded.

2. Do you consider that, if the Conference decides to adopt a Draft Convention concerning workmen's compensation for accidents, the Draft Convention should contain a clause providing that laws and regulations on workmen's compensation should apply to all workers employed in or by the undertakings which they cover? or

Do you consider it necessary to make provision for restrictions or exceptions in regard to certain workers or classes of workers? If so, please indicate the classes of workers who you consider should be excluded.

3. Do you consider that the Draft Convention should deal with accidents arising out of or in the course of employment? or

Do you propose another formula, and if so, what formula?

4. Do you consider that the Draft Convention might contain a provision to the effect that occupational diseases should be treated on the same basis as industrial accidents?

5. Do you consider that the Draft Convention might contain a provision to the effect that, as a general rule, compensation especially in case of death or serious incapacity should

be paid in the form of a pension, except where proper guarantees may be secured for a wise utilisation of the lump sum?

6. Do you consider that the Draft Convention might contain a clause providing that extra compensation shall be granted to seriously injured workers who have very largely to depend on the assistance of another person?

7. Do you consider that the Draft Convention might contain a provision to the effect that medical aid should be a necessary part of compensation, whether it be organized by the employer or under the accident insurance system, or be undertaken by sickness or invalidity insurance institutions?

8. Do you consider that the Draft Convention might state that the medical benefits alluded to in the preceding question should include treatment by specialists, whether physicians or surgeons, whenever such treatment is found necessary?

6. Do you consider that the Draft Convention should contain a clause dealing with the right of injured workers to be gratuitously furnished with and to have periodically renewed during their lifetime any artificial limbs which they need in consequence of accidents, or to be awarded extra compensation in cash?

10. Do you consider that the Draft Convention should contain a clause dealing with guarantees against the employer's or insurer's insolvency for which provision should be made in the laws and regulations on workmen's compensation?

11. Do you consider that the laws which simply include the claim of the injured worker among the privileged claims on the employer's or insurer's goods afford inadequate security?

12. If you consider that the Draft Convention should make provision for made adequate security, is it desirable in your opinion to provide that

(a) a security fund is to be instituted; or

(b) that the employer is to be required to insure himself, having free choice of the insurer, with an institution under State supervision; or

(c) that the employers should be made collectively responsible through trade associations or local institutions?

13. Do you consider that the Draft Convention might contain a provision to the effect that the bodies which should deal with workmen's compensation disputes should be,—

(a) joint councils composed of workers and employers;

(b) boards on which the adjudicators include an equal number of workers and employers;

(c) civil courts which should consult workers and employers in an expert capacity in case of disputes on occupational questions and in particular as to the degree of incapacity; or

(d) joint councils of workers and employers as primary tribunals with the civil courts as appellate tribunals?

## CANADA AND THE PROPOSED DRAFT CONVENTION ON SUNDAY REST IN THE GLASS INDUSTRY

**A**MONG the proposed draft conventions adopted at the sixth session of the International Labour Organization held at Geneva during the past summer was a "Draft Convention concerning the weekly suspension of work for twenty-four hours in the Glass Manufacturing Process where Tank Furnaces are used." This proposed Draft Convention was given in full in the report of the proceedings of the conference which appeared in the *LABOUR GAZETTE* of August (page 657). In accordance with the procedure now followed in connection with Draft Conventions it will come up for final approval at the Conference of 1925.

In Canada, glass is manufactured mainly in the provinces of Quebec and Ontario, and some account may be given of the practice that is followed in the factories in these provinces in regard to the subject of the Draft Convention.

The operation of melting glass may be carried out in pots (called also crucibles), or on the bottom of the furnace itself, which thus becomes a "tank." Pots are used particularly in the manufacture of plate glass, hollow glass and crystal glass. Tank furnaces, which were introduced about 1869, are usually, if not invariably, used at the present day in the manufacture of sheet glass and glass bottles. In the manufacture by means of pots, except in the special case of pots with different compartments, the operations of melting and feeding are carried out alternately, but where tank furnaces are used the operation of melting is not necessarily interrupted and the work can be carried on night and day without any break. The tanks are fed from one end at regular intervals and the glass is gathered at the other end. Tank furnace glass works are, therefore, undertakings in which the process is continuous.

The International Labour Organization, at its session of 1921, adopted a Draft Convention applying the principle of the Sunday rest to industrial undertakings generally, special consideration however, being given (as also in the "Hours of Work" Convention) to industries in which the processes carried on are continuous. As the manufacture of glass by means of tanks is a continuous process it became necessary to deal separately with this industry. It may be noted that the prohibition of Sunday work in the glass industry has been advocated for many years both by workers' trade unions and Sunday rest day associations in various countries. In Great Britain, a weekly suspension in tank furnace glass works is of long standing. In France, Germany and Austria foundry work has been restricted for about twenty years, and in Belgium women or children cannot be continuously employed throughout the week.

Some information as to the Canadian practice in regard to the observance of a Sunday rest in this industry is given below:—

#### Ontario

There are four glass factories in Ontario that manufacture pressed and blown ware, bottles and hollow ware, and window glass. Polished plate glass, wired glass, rough plate, etc. is not manufactured but imported. Continuous tanks are used in these lines of manufacture but not to the entire exclusion of the pot furnace. The use of the continuous tank is largely determined by the character and quantity of the product. When the product is uniform as to colour and kind, such as window glass and bottles, and is produced in large quantities, the use of the continuous tank is most advantageous.

Pot furnaces are used when variety of shape and dissimilarity of colour, such as is common for illuminating and high class table where products manufactured in small quantities, are the outstanding features. The number of tank and pot furnaces in Ontario used in the manufacture of pressed and blown ware, bottles and hollow ware and window glass is seven and two respectively.

The number of workmen employed at tanks or pot furnaces is conditioned on the size of the tanks or furnaces and the quantity of goods being manufactured. There are 76 skilled men at one pot furnace located in an establishment in the city of Toronto and in a similar establishment at Wallaceburg, Ontario, there are 40 skilled men employed at one tank furnace. In the glass industry in Ontario the same men may be employed during different occasions at either continuous tanks or pot

furnaces. This is due to the development of this industry in Ontario being somewhat circumscribed by having to import a great deal of the basic materials for glass manufacture.

The Lord's Day Act of Canada (Revised Statutes of Canada, 1906, chapter 153) applies to the glass industry in common with other industries. Exemptions from the general provisions of this act are for maintenance purposes only, but no actual manufacture of glass products is permissible on Sunday. In Ontario the practice is as follows—

The length of the working day and weekly hours of work are chiefly determined by custom of the trade and agreement between employers and organizations of employees, principally trade unions. Due to the similarity of manufacturing processes and products in glass factories within the province, the length of the working day and weekly hours of work for the worker or the establishment is fairly uniform.

Such questions are regulated by mutual agreement between employer and employee. So far as the employees are concerned such agreements are of a provincial character and the employers, either singly or collectively accept the conditions pertaining to the control of hours of work. Due to the technical nature of the glass industry which involves a large degree of continuous operation, the length of the actual working day for the carrying on of glass manufacturing processes is 16 actual hours, two shifts of eight hours each are worked by separate groups of workmen. Day and night work per week is done alternately. The average working day for employees is one of eight hours composed of two shifts of four hours each exclusive of a rest period of one hour for meals, and the average working week is 44 hours.

#### Quebec

There are three glass factories at Montreal, two of these being under one company, and all operating with tank furnaces. The hours of work are eight hours with two shifts, which change each week, giving both shifts an equal amount of day and night work, no work being done on Saturday afternoon or Sunday. Questions relating to hours of work, etc., are governed by the rules of the Glass Bottle Blowers Association and the American Flint Glass Workers' Union, these rules being the result of agreements between the manufacturers and workers in Canada and the United States. Information supplied by the manufacturers indicates that the existing arrangements are satisfactory from their point of view.

## INDUSTRIAL CONDITIONS AND INTERNATIONAL FINANCE

### "Dawes Plan" as a stabilizing agency

ONE of the admitted causes of unemployment and unsettled industrial conditions in Canada in common with other countries is the instability of monetary conditions that has hampered international trade since the war. The main cause of the disturbance of international credit has been generally recognized as being connected with the problem of reparations by Germany for the damages of the war. Accordingly, the Reparation Commission of the Allied Powers established last year an international committee of experts to inquire into fiscal conditions in Germany and their relation to the problem of reparations. This committee presented its report last May. It is generally referred to as the "Dawes Report" from the name of the president of the committee, General Dawes, one of the representatives of the United States. Its recommendations were approved by the Commission, and were subsequently adopted by the Allied Powers and by Germany. The "Dawes plan" has been in operation since August, and already its effect is stated to be evident in more stable financial conditions in Europe, which in turn may be expected to influence the financial and industrial situation in Canada.

The essential features of the "Dawes plan" are a schedule of reparation payments to be made by Germany directly out of taxation and through the imposition of a mortgage debt upon German railways and industry; the separation of collections in Germany, for which the German Government is to be held responsible, from the transfer of funds abroad, which is to be controlled by a committee representing the Allies whose function it will be to make the maximum transfers consistent with maintenance of exchange stability; the establishment of a new bank of issue to unify and stabilize German currency; and the flotation of a foreign loan intended to assist in the establishment of the bank and in enabling Germany to meet her most urgent immediate obligations. The committee pointed out that while the plan does not "attempt a solution of the whole reparation problem, it foreshadows a settlement intending in its application for a sufficient time to restore confidence, and at the same time is so framed as to facilitate a final and comprehensive agreement as to all the problems of reparation and connected questions as soon as circumstances make this possible."

The first four years of the operation of the plan are regarded as a period of recuperation

and transition, with a gradual increase of payments to the fifth year, when the amount to be paid reaches a standard total. During the first two years no payments are to be made out of ordinary budget receipts, but during the following years payments from this source are made progressively so that in the standard year the budget furnishes one-half of the total payments.

The progress already made in the work of carrying out the "Dawes plan" is described in a recent report by Mr. Owen D. Young, Agent General of Reparations, as follows:—

The ease with which the machinery under the Dawes Plan has been installed and the smoothness of its operation during the next six weeks is the best testimony of the existence of a new spirit determined to restore tranquility in Western Europe. In advance of any assurances of a loan, Germany has paid in the last six weeks more than \$30,000,000, most of which in one way or another has been distributed to the creditor countries.

Now that the loan is completed and the proceeds put under the control of the Agent General, practically all of the funds are in hand for the first year's operation of the Dawes Plan. At the same time, the Reichsbank will have in hand sufficient gold to cover a circulation on a forty per cent basis as large at least as the circulation of Germany before the war. The creditor countries will receive either through delivery in kind or by direct payment substantially \$250,000,000 during the coming year. The German producers will receive payment for the goods supplied at regular market prices, and France and Italy and other countries dependent upon German raw materials are assured of their supplies.

In addition the German railroads have been turned over to a private company with a foreign commissioner in control and there have been delivered for the account of the creditor countries more than two and a half billion dollars of first mortgage railway bonds which will bear 5 per cent interest and a sinking fund sufficient to amortize the principal in less than forty years. There have also been delivered \$1,250,000,000 of industrial debentures which are a first general charge on German industry and \$125,000,000 of those debentures are the obligations of individual German concerns of high standing.

A substantial part of these individual industrial bonds will, in my judgment, be redeemed during the next few years.

The above are in addition to the payments to be made under the Plan from the German budget.

The Agent General has received not only the full co-operation of the German Minister of Finance as President of the Reichsbank but he has also received the co-operation of the French and Belgians in the occupied territories and of English and Italians in all matters affecting them. If this spirit can be maintained the Dawes Plan will work. It will work irrespective of whether it is as good as its most ardent supporters believe or as bad as its worst enemies charge. With this spirit of co-operation the worst plan will succeed, without it the best plan will fail.

Nothing could be more helpful to the restoration of confidence and hope to the discouraged people of Europe than the magnificent expression of confidence by the American people as shown in their over-subscription of the German loan.

## INTERNATIONAL CONGRESS ON SOCIAL POLICY

**A**N International Congress on Social Policy was held at Prague, Czechoslovakia, early in October. The delegates included representatives of Great Britain, France, Germany, Czechoslovakia, Switzerland, The Netherlands, Austria, Spain and Poland. The resolutions of the Congress were reported to the International Labour Office as follows:—

The International Congress on Social Policy notes, with satisfaction, in all countries a revival of the movement for social reform and International Labour Legislation.

The presence in Prague of 1,100 delegates representing 28 nationalities shows what an influence can be exercised even now upon public opinion.

The Congress expresses the desire that these forces, which must always act more and more together and must organize themselves, should help to realize in its entirety the programme, which was laid down at the Congress of Zurich in 1897 and which has been consecrated by the signatures of Governments to the Peace Treaties.

By an active and persevering effort the decisions of the International Labour Conference will henceforward have more chance of being ratified by the Governments and put into force.

But the Congress considers it its special duty to draw the attention of public opinion in all countries to the new problems of the future, which arise both from the organization of production and from the growing selfconsciousness of the working class.

A new Social Policy is put forward.

It covers not only the protection of women and children and of the unfortunate wage earners in backward countries but also the affirmation of the rights of the manual and intellectual producer in the system of production and in the general economic system.

This policy aims at a definition and realization of those rights in all fields: in the regulation of Labour, Social Insurance, Emigration, etc.

But it appears that as far as the eight-hour day, the participation of workmen in management and the prevention of unemployment are concerned certain definite measures might be studied and adopted immediately.

Consequently the Congress has adopted the following resolutions:

**Eight-Hour Day.**—Whereas the eight-hour day has had beneficial results from the point of view of the self-respect of the worker, of his health, his home life, general and technical education, and in assisting him to fulfil his civic and professional duties;

Whereas it has been demonstrated that, far from resulting inevitably in a diminished efficiency, the eight-hour day actually tends to increase efficiency, especially when accompanied by efficient industrial methods;

Whereas the social value of the eight-hour day is of such importance that political, economic or financial arguments should not be considered a justification of its abandonment in any country, thus endangering its general application and causing social conflicts;

The Congress, convinced that the best means of guaranteeing in all countries the maintenance of the eight-hour day is by obtaining an international agreement, calls for the immediate and unconditional ratification of the Washington Convention by all States Members of the International Labour Organization.

It further calls upon countries not members of that Organization to introduce legislation on similar lines.

The Congress recommends the extension of the eight-hour day to all workers by International Treaty with

the necessary modifications as soon as the best means of its application have been worked out.

It also calls for the limitation of overtime, for the establishment of a weekly rest-day, and of workers' holidays by International Conventions.

**Works Councils.**—An important fact dominates modern social life, namely, that the working classes are realizing more and more clearly the value of labour, both manual and intellectual, in production. Consequently, it is desirable that, in the organization of peace, the right of representation of all interests, which has been demanded for a long time past and frequently with success by the trade unions, should be recognized as legitimate. All workers should be granted a share in the organization and management of all branches of economic life, production, trade, transport, and agriculture. As work alone is capable of increasing production, it must be done by workers who are interested, and who find pleasure, in the task they have undertaken.

The Congress, therefore, welcomes the establishment of works councils in several European countries, with very successful results. These councils, if established in agreement with the trade unions, can guarantee the social rights of the workers and can introduce a new creature force into economic life.

The Congress of Social Policy considers, generally speaking, that it is desirable that the workers should be invited to collaborate in the systematic organization requisite to improve and increase production, both as workers and as citizens. With this object in view it calls for the setting up by law in all establishments of representative bodies of workers and salaried employees, taking national conditions into account, whose duty it would be in co-operation with the trade unions to supervise working conditions and to co-operate in establishing and maintaining working rules particularly in regard to the fixing of rest periods and holidays, the maintenance of the minimum wages prescribed by collective agreements, the method and dates of payment of wages and salaries, health-measures, the prevention of accidents and industrial diseases, the maintenance and transformation of plant, and industrial and technical education.

The Congress is of opinion that, in addition to the creation of these bodies, the collaboration of workers' and employers' organizations should be promoted in respect of all important questions of social and economic policy. For this purpose a special body should be created without prejudice to works councils, whose composition and functions should be determined in accordance with the circumstances in each country.

**Unemployment and Migration.**—The International Congress on Social Policy, while continuing to emphasize the need for the development, with State assistance, in accordance with the Conventions and Recommendations of the International Labour Conference, of the measures already adopted in certain countries for dealing with unemployment crises, namely, the establishment of public employment exchanges, of institutions for vocational guidance, of unemployment insurance schemes and the necessary measures for a better distribution of public works over the different periods of the trade cycle,

Invites the partisans of social progress in all countries to promote the newer policy of preventing unemployment by calling on Governments to adopt the necessary economic measures, in particular, those directed towards the stabilization of the general level of prices, in conformity with the resolutions adopted by the International Conference at Genoa for the economic reconstruction of Europe.

The Congress calls upon Governments to adopt suitable national measures and conclude international agreements with a view to facilitating such migration as is called for by the needs of the labour market.

## INTERNATIONAL ASSOCIATION ON UNEMPLOYMENT

THE managing committee of the International Association on Unemployment, which met at Prague, Czechoslovakia, on September 30 and October 1, with a view to defining the general lines of a policy against unemployment, adopted the following general principles:—

1. Generalizing the application of unemployment insurance by making it compulsory; and the consideration of the suggestions of experts and the results of practical experience, with a view to securing stability of employment and production.

2. The greatest possible combined effort

- (a) to develop the economic efficiency of the individual by the improvement of education, both technical and general;
- (b) by vocational guidance to direct labour into the various branches of production in accordance with the capabilities of the individual and the requirements of the labour market.

3. The development of an adequate and permanent system of public employment exchanges, with co-operation between the systems of different countries.

4. The provision of facilities for desirable migratory movements.

5. The advance planning of public works, so that their execution may be concentrated on periods of industrial depression; rendering more plastic the budgetary regulations affecting public works, so that the necessary credits may be reserved for years of depression.

6. The establishment in each country, and as far as possible on uniform lines, of full statistics, not only of the unemployed in each occupational category, but also of the production and consumption of the different kinds of goods by quantity and value, also of financial statistics, economic barometers, etc., relating to the labour market.

7. The promotion of the application of all financial measures, public and private, for preventing fresh currency crises and for restoring greater stability of the foreign exchanges and ensuring stability of the general level of prices in each country by means of the control of credit.

8. Instead of multiplying customs barriers in the pursuit of a chimerical national independence, the organization and facilitation of international trade based on co-operation between nations.

---

## ECONOMIC PROBLEMS OF PEACE

THE fourth annual Democratic International Congress for Peace was held in London from 17-19 September. It was attended by delegates from Great Britain, France, Germany, United States, Spain, Italy, Russia, Holland, Belgium and Austria.

The commission on economic problems, over which Sir George Paish presided, drew up a number of resolutions bearing on the work of the International Labour Organization.

These were discussed and adopted in full Conference on September 19. They are as follows:—

I. The Commission is convinced that the distressing economic and financial situation which now exists throughout the world is due more to political than to economic causes; calls upon the statesmen and people of all nations to adjust their political differences without further delay, actively to co-operate in the work of restoring the credit and productive powers of Europe and the commerce and trade of all the nations, and thus to raise the standard of the workers of every country.

II. The Congress expresses the wish that there be established within the League of Nations an office of study and research having as its duty to publish periodically:

(1) The constitution, the object, the capital and the areas of exploitation of the great industrial consortiums engaged in the extraction of raw materials, their manufacture and their distribution, and also the constitution, social capital, object, and areas of exploitation of the great financial syndicates of the industrial and commercial concerns which they control or in which they participate.

(2) The world distribution of raw materials such as corn, iron, cotton, oil, rubber, copper, etc., and in general of all the raw materials in which the great world capitalists enterprises are concerned.

(3) The number and volume of the transactions throughout the world in those raw materials and in metallurgical products and others in which the great world capitalists enterprises are concerned—with the name of the interested combines and the number and volume of their exchange operations, whether against real sales or as operations of pure speculation.

III. *Respect for the Treaty Clauses Protecting Labour.*—Considering that, in order to prevent their becoming a factor in international competition, the clauses of the Labour Charter (Part XIII of the Treaty of Versailles) which guarantee justice and social peace ought to be universally observed,

The Congress is of opinion:

That the State which signed either the Treaty of Peace or subsequent Agreements cannot without peril to the workers of all countries permit the non-observance within any nation of any clause whatsoever of the Labour Charter: in particular no extension of the 8-hour day can be permitted, even

on the pretext of political or economic exigencies indirectly imposed by the execution of the Treaty of Versailles, of the Experts' Report and of the London Agreement.

*IV. On the International Labour Organization's Means of Action.*—In view of the fact that the Permanent Labour Organization is to-day without means for efficiently enforcing the ratification or even the examination by States Members of the League of Nations of the Recommendations or Draft Conventions adopted annually by the International Labour Conference;

The Congress expresses the opinion that the Recommendations and Draft Conventions adopted by the Labour Conference should be submitted to effective examination by the public authorities of the States Members of the League of Nations, the League being empowered, if necessary, to demand that the discussion of the Conventions be placed on the Parliamentary Agenda, and that decisions on these should be taken within the maximum period of eighteen months.

The Congress meanwhile urges democrats of every country to bring pressure to bear upon their respective Governments with a view to ratification of the Conventions adopted since 1919 by the International Labour Conference at Washington, Genoa and Geneva for the international organization of labour.

*V. Social Transformation.*—Considering that, in order to abolish the risks for the international security of countries and for world peace involved in the excesses of the capitalist régime, it is desirable to ensure increasing participation by the workers in the direction of industrial and commercial concerns, and to put capital at the service of labour;

Considering also that, because of the growing interdependence of states, all social transformations and social progress ought, in order to produce their full effect, to be simultaneous and universal,

The Congress must pledge democrats of every country to take the initiative in far-reaching reforms which work in the direction of social transformation and of the emancipation of the workers without violence or catastrophic revolution, by purely democratic and pacific means.

## PROFIT SHARING PLAN OF GENERAL MOTORS CORPORATION

THE General Motors Corporation, as the result of the system established in 1919 for the encouragement of thrift among its employees, will be able shortly after the close of the present year, to distribute \$1,036,000 in cash, in addition to stock valued at \$1,364,000, among the employees who joined the scheme when it started five years ago. This company has its headquarters in New York, with a Canadian branch at Oshawa, Ontario, besides numerous subsidiaries throughout the United States.

The stock will consist of 23,500 shares of new common stock of the General Motors Corporation and this, added to the cash distribution, will carry the total division to \$2,400,000. This amount represents the extent of the participation of these employees in the savings and investment fund class of 1919, into which these employees paid \$760,000 from their wages, and which they have left with the corporation for five years. It means a return in five years of \$3 for every \$1 so invested. On the average the investment in 1919 was \$97.60, and the average distribution will be \$292.70, leaving a net profit to the employee investor of \$195.10.

Under the General Motors plan a new class is formed each year, the first having been started in 1919, each class maturing in five years. Employees have the right to pay into each class as it is formed 10 per cent of their annual wages, not to exceed \$300. The corporation agrees to put into the investment fund, which is credited to the employees over the five-year period, 50 cents for each dollar that the employee pays. Interest is compounded semi-annually at the rate of 6 per

cent per annum. Employees have the right to withdraw their money at any time, but in order to derive the full benefits it is essential to leave the money in the fund until the end of the five years when the class matures.

Employees are assured under the plan of a minimum return of over 20 per cent a year over a five-year period. At the present time 55 per cent of those eligible are participating in the plan, the number being 28,000 employees working in the various plants of the corporation.

In addition to the plan for the encouragement of saving, the corporation, in 1919, also created an organization to assist employees to become home owners through the savings and investment fund. Out of the 8,200 employees who are in the 1919 class there are 1,752 who are buying homes through the aid of the savings plan. In all the classes since the fund has been established there have been in excess of 5,000 employees who have utilized the housing fund to help them become home owners.

Dr. Royal K. Meeker, head of the Pennsylvania state department of labour has resigned. He was formerly connected with the International labour office of the League of Nations at Geneva, and was United States commissioner of labour statistics from 1913 to 1920.

Arrangements have been completed by the Consolidated Mining and Smelting Company of British Columbia whereby any smelter employee may take out insurance with a private company on his life and have the premiums deducted from his pay by the pay-master.

## THE EMPLOYMENT SITUATION AT THE BEGINNING OF OCTOBER, 1924, AS REPORTED BY EMPLOYERS

**T**HE volume of employment on October 1 showed a small upward movement, contrasting with the fairly heavy decline registered on the same date of last year. The situation then, however, was rather more favourable, as may be seen in the accompanying chart. According to returns from 5,855 employers of labour tabulated by the Dominion Bureau of Statistics, their staffs aggregated 771,932 persons as compared with 765,422 in the preceding month. This gain caused the index number to rise to 93.9 as compared with 93.1 on September 1 and with 99.5, 94.6 and 90.2 on October 1, 1923, 1922, and 1921, respectively.

Manufacturing as a whole afforded more employment; there were large gains in textile, automobile and some other iron and steel works, and in the edible plant products division. On the other hand, sawmills and fish canneries continued to record seasonal declines and rubber, glass, brick and electric current works were also slacker. Apart from manufactures, logging, metallic ore mining, transportation and trade registered considerable expansion, while construction services and communication showed substantial declines.

### Employment by Provinces

Employment in the Maritime Provinces and Ontario recovered considerably, but elsewhere there were declines.

*Maritime Provinces.*—Marked reaction from the losses recorded in the preceding month was indicated in the Maritime Provinces, where manufacturing, especially of iron and steel and textile products, logging, construction, transportation and trade reported greatly increased activity. Coal mining and summer hotels on the other hand, registered declines as did also pulp and lumber mills. The 514 firms reporting in this district employed 65,813 persons, or 1,209 more than at the beginning of September. Employment on the first of October, 1923, had shown a decidedly downward trend, but the index number then was higher.

*Quebec.*—In spite of improvement in textile, food, tobacco and electrical appliance factories and in logging, transportation and trade, there was a reduction in the general average of employment. This was due to large seasonal contractions in lumber mills, supplemented by decreases in rubber, electric current, iron and steel works and in construc-

tion. An aggregate working force of 215,332 persons was registered by the 1,281 firms making returns, whose staffs included 215,686 in their last report. Additions to payrolls on a rather large scale were reported during the corresponding period of last year and employment then was above its present level.

*Ontario.*—Firms in Ontario showed the largest gains they have registered in any one month of this year, with the exception of the marked recovery in January from the year-end losses. Although the tendency on October 1, 1923, had been decidedly downward, the index number then stood at 96.0 as compared with 91.6 at the present time. Manufacturing generally was more active; the gains in automobile and other iron and steel, textile, fruit and vegetable canning, confectionery, rubber, lumber, leather, pulp, paper and electrical apparatus works, in particular, were large. The only declines of any importance in this group were those in abattoirs, dairies and sugar refineries. Logging, mining and trade also afforded greatly increased employment, but construction and hotels reported the release of fairly large numbers of employees. Statements were tabulated from 2,685 firms whose staffs were increased from 315,173 workers on September 1 to 324,515 on the date under review.

*Prairie Provinces.*—A continuation of the downward movement that began in July was indicated by the firms making returns for October 1. This was largely due to contractions in railway car shops, construction and summer hotels. Pulp and paper factories, coal mines and electric railways, however, afforded more employment than in the preceding month. A combined working force of 97,686 persons was employed by the 764 concerns making returns; on September 1 they had 99,925 employees. The resulting decline is slightly more extensive than that indicated on the same date of last year when employment was in greater volume.

*British Columbia.*—According to returns from 611 firms, employing 68,586 persons, the trend of employment in British Columbia was downward. In their last report these same employers had 70,034 names on payroll. This decline was a good deal smaller than that recorded on October 1, 1923, but the index numbers on the two dates were practically the same. Activity in manufacturing declined; contractions in fish, fruit and vegetable canneries were partly offset by expansion in

electric current works. Metallic ore mining, trade, shipping and stevedoring also afforded more employment, but highway and railway construction and maintenance and summer hotels recorded considerably reduced payrolls.

The following table gives the index numbers of employment in the five areas into which the Dominion is divided in the statistics.

(NUMBER EMPLOYED JANUARY 1920=100)

District	Relative weight	Oct. 1 1924	Sept. 1 1924	Oct. 1 1923	Oct. 1 1922	Oct. 1 1921
Maritime Provinces.....	8.5	88.3	86.6	97.0	91.8	93.1
Quebec.....	27.9	97.6	97.8	104.0	92.0	89.2
Ontario.....	42.0	91.6	88.9	96.0	93.6	85.0
Prairie Provinces.....	12.7	91.4	93.9	100.7	101.9	100.0
British Columbia.....	8.9	104.0	106.0	104.2	100.1	96.4
Canada.....	100.0	93.9	93.1	99.5	94.6	90.2

*Quebec.*—Leather and garment factories in Quebec showed improvement, and trade was more active. Reports were tabulated from 90 employers whose staffs, standing at 8,651, were greater by 223 persons, than on September 1.

*Toronto.*—Textile works recorded marked revival in Toronto; printing and baking powder factories also reported improvement supplemented by smaller gains in a number of other manufactures. Iron and steel works were somewhat slacker. Outside the manufacturing industries there was very little change, on the whole. The payrolls of the 781 firms making returns totalled 93,365 as compared with 92,160 in the preceding month. This expansion was considerably larger than that noted during the corresponding month of last year.

**Employment by Cities**

An analysis of the returns by cities shows that six of the seven for which separate tabulations are made reported improvement, while in the remaining city, Ottawa, no change on the whole was indicated.

*Montreal.*—Considerable recovery from the losses recorded in the preceding month was indicated by the 705 firms reporting in Montreal. Their staffs aggregated 107,268 persons as compared with 106,197 on September 1. This increase took place largely in textile factories, transportation and trade, although improvement was also registered in lumber, confectionery and electrical appliance works. Operations in iron and steel, mineral product, brick, glass and electric current plants, on the other hand, were curtailed, as was also building construction. Reductions in personnel on a large scale were made by the firms reporting on October 1, 1923, when the index number was higher than at the present time.

*Ottawa.*—Small gains in manufacturing and trade were exactly offset by similar declines in construction and communication. A combined working force of 10,681 persons was reported by 126 firms making returns. A moderate reduction was indicated on the first of October, 1923.

*Hamilton.*—For the first time since early in May, employment in Hamilton showed an increase, 357 persons being added to the working forces of the 197 reporting firms. They employed 24,385 persons on October 1. Although reductions in personnel had been recorded on the same date of last year, the index number then was on a higher level than at present. The most pronounced increases at the beginning of October, 1924, were those in iron and steel works and in canneries. Building construction, on the other hand, was somewhat slacker.

*Winnipeg.*—Printing establishments in Winnipeg reported marked improvement and

smaller gains were noted in iron and steel factories, wholesale trade and local transportation. Declines that tended to offset these increases occurred in confectionery works, in communication and retail trade. Reports were received from 291 employers having 24,418 workers on the payroll as compared with 24,187 in the month before. Although the trend of employment on October 1, 1923 was downward, the situation then was rather more favourable.

*Vancouver.*—Very little change was indicated, on the whole, in Vancouver; what change there was, however, was favourable. Canneries were less fully employed but transportation, construction and trade afforded more employment. The result was a net increase of 63 persons in the staffs of the 208 reporting firms who employed 21,645 workers at the beginning of October. Large contractions had been indicated at the commencement of October, 1923, when the index number was several points lower.

The following table shows the index numbers of employment in these cities.

(NUMBER EMPLOYED JANUARY 1920=100)

City	Relative weight	Oct. 1 1924	Sept. 1 1924	Oct. 1 1923	Oct. 1 1922
Montreal.....	13.9	93.7	92.9	98.7	92.3
Quebec.....	1.1	98.8	96.4	.....	.....
Toronto.....	12.1	86.4	85.3	80.1	90.9
Ottawa.....	1.4	100.8	100.6	105.5	98.4
Hamilton.....	3.2	80.4	79.4	91.1	87.4
Winnipeg.....	3.2	86.1	86.4	89.4	98.8
Vancouver.....	2.8	104.0	104.0	101.6	100.7

### The Manufacturing Industries

Some recovery from losses recorded in recent months was indicated in reports from 3,821 manufacturers employing 422,440 persons or 6,073 more than at the beginning of September. The improvement in textiles was particularly noteworthy and marked gains were also registered in iron and steel, canning and confectionery factories. Additions to staff on a somewhat smaller scale were noted in leather, musical instruments, printing, paper, tobacco, electrical appliance and mineral products. The commencement of seasonal slackness in lumber, fish canning, meat preserving and dairy plants and in glass and brick works partly offset the gains in the industries enumerated above. Employment was on a higher level on October 1, 1923, although at that time contractions on a rather larger scale were indicated by the firms making returns.

*Animal Products—Edible.*—Dairies and fish canning establishments recorded seasonal declines in employment. While all provinces

shared in the contraction those in British Columbia and Ontario were largest. Statements were tabulated from 179 employers whose staffs decreased from 15,649 persons at the beginning of September to 14,985 on October 1. Reductions in personnel on practically the same scale had been noted at the beginning of October, 1923, when the situation was less favourable than at the present time.

*Leather Products.*—Boot and shoe factories, mainly in Ontario, were more fully employed than in the preceding month. The 190 firms making returns in the leather group had 16,022 persons in their employ, as compared with 15,860 in the preceding month. This improvement is less than that recorded on October 1 of last year; the index number then stood a few points above its present level.

*Lumber and Products.*—Seasonal contractions in lumber mills, supplemented by declines in match factories caused a fairly large reduction in employment in this division. Furniture works, on the other hand, recorded marked improvement. The firms reporting, 715 in number, employed 54,545 persons or 1,297 less than at the beginning of September. Reductions were noted in all provinces except Ontario, those in Quebec being largest. More extensive shrinkage had been registered at the beginning of October, 1923, although employment at that time was in somewhat greater volume.

*Musical Instruments.*—The production of musical instruments in Quebec and Ontario afforded more employment, 124 workers being added to the payrolls of the 39 manufacturers from whom returns were received. They had 2,861 persons on payroll on October 1. A slight gain had also been reported on the corresponding date of last year.

*Plant Products—Edible.*—Flour and other cereal, fruit, vegetable, biscuit and confectionery factories enlarged their working forces, while sugar refineries were not so busy. Firms in Ontario reported the bulk of the expansion, although improvement was also shown in Quebec, the Prairie and Maritime Provinces. Reports were compiled from 314 manufacturers whose staffs, standing at 30,115, were larger by 1,358 or 4.7 per cent than on September 1. Rather more extensive gains had been indicated at the beginning of October of the preceding year but employment was in smaller volume than at the present time.

*Pulp and Paper Products.*—Pulp and paper mills were less fully engaged, but the production of miscellaneous paper goods increased and printing and publishing establishments were busier. The net expansion pro-

vided work for 403 persons, according to returns from 462 firms employing 52,107 workers. The improvement took place in Ontario and the Prairie Provinces, while in the Maritime Provinces there was a falling off in employment. Very little change in the situation was reported at the beginning of October, 1923, but the index number then was a little higher.

*Rubber Products.*—Additions to staffs in rubber factories in Ontario were slightly more than offset by decreases in Quebec. Statements were compiled from 31 manufacturers; their staffs totalled 9,515 persons as compared with 9,627 on September 1. This decline is substantially less than that recorded at the beginning of October of last year. The situation then was much the same as at the present time.

*Textile Products.*—Practically all branches of this division shared in the revival reported on the first of October; cotton, woollen, hosiery, knitting, garment, headwear and cordage factories registered very large gains. The additions to staffs in Quebec and Ontario were most pronounced. A combined working force of 65,934 persons was employed by the 529 manufacturers making returns, whose staffs aggregated 61,610 in the preceding month. The recovery is very much more pronounced than that recorded on the same date of last year.

*Tobacco, Distilled and Malt Liquors.*—Tobacco works in Quebec reported moderate gains which more than offset small declines in this group in other provinces. One hundred employers had 11,827 persons on payroll as against 11,661 at the beginning of the preceding month. Very pronounced increases were recorded at the beginning of October of last year but they represented recovery from temporary shutdowns and the level of employment then was practically the same as at the present time.

*Clay, Glass and Stone Products.*—Continued curtailment of operations was indicated in this division, there being losses in brick and glass factories in Ontario, Quebec and the Prairie Provinces. The 121 firms making returns reported the release of 338 persons; their staffs aggregated 8,910 workers. Reductions in personnel on a slightly smaller scale had been registered by the firms reporting for October 1, 1923, when conditions were better.

*Electric current.*—Contractions in electric current plants in Quebec were partly offset by improvement in British Columbia. Reports were compiled from 85 producers whose employees declined from 12,261 on September 1 to 12,094 on the date under review. The situa-

tion is much more favourable than on the same date of last year; more extensive shrinkage had been indicated then.

*Electrical apparatus.*—The trend of employment in this industry continued upward, according to reports from 34 manufacturers. Their staffs, aggregating 8,862, were larger by 380 persons than on September 1. Quebec and Ontario recorded the bulk of the improvement. Rather small decreases had been reported at the same time of 1923 and the index number was then about 8 points lower.

*Iron and Steel Products.*—Partial recovery from the losses recently suffered was evident in reports from employers in this industry; 640 increased their payrolls from 100,867 persons in the preceding month to 102,410 on October 1. The most pronounced improvement occurred in automobile factories in Ontario, but crude, rolled and forged mills, shipyards, tool works, foundries and machine shops were also considerably busier. The production of agricultural implements, on the other hand, showed a further falling off and railway car shops were slacker. Although substantial reductions were reported on October 1 of last year, the index number then was a good deal above its present level.

*Mineral Products.*—Baking powder, petroleum and other mineral product works in Ontario and Saskatchewan afforded slightly more employment. The number employed in this group by the 69 reporting manufacturers increased from 9,683 on September 1 to 9,793 at the beginning of October. The firms making returns for the same date of last year had reported curtailment of operations and the payrolls then was smaller.

### Logging

Seasonal expansion on practically the same scale as that registered on October 1, 1923, was indicated on the date under review, when 3,647 persons were added to the payrolls of the 210 firms reporting. As they employed 20,734 persons as compared with 17,087 at the beginning of September, this was an increase of over 20 per cent. While the gains were fairly widespread, those in Ontario were much the most extensive.

### Mining

*Coal.*—The employment afforded in coal mining in the Maritime Provinces showed a fairly large decline, in the Prairie Provinces there was a substantial increase, while very little change was indicated in British Columbia. The result was a net decline of 275 persons in the staffs of the 91 operators making returns, who employed 26,195 workers

at the beginning of October. Additions to staffs had been reported by the firms making returns for the same period of last year and employment then was considerably above its present level.

*Metallic Ores.*—Metallic ore mines in Ontario and British Columbia increased their working forces moderately, repeating the movement indicated on the same date of last year, when employment in this industry was not so good. Statements were tabulated from 47 mines employing 13,606 persons compared with 13,310 in the preceding month.

### Communication

Continued curtailment in personnel was indicated in the communication industries. All provinces shared to some extent in the reductions which were much heavier on telegraphs than on telephones. A combined working force of 22,873 persons was employed by the 163 companies making returns, which had 23,152 persons on pay-roll at the beginning of September. A minor increase was indicated by the firms reporting for October 1, 1923, but improvement has been recorded steadily during the greater part of this year with the result that the index number remains on a higher level than in last year.

### Transportation

*Street Railways and Cartage.*—A further and more pronounced increase in employment was noted in this division. A small gain had been registered in the corresponding month of 1923, when the volume of employment was greater. The expansion during the month under review occurred mainly in Quebec and the Prairie Provinces. The firms reporting, 113 in number, enlarged their working forces by 367 persons to 19,836 at the beginning of this October.

*Steam Railways.*—Employment on steam railways showed a further though less extensive decline, 352 workers having been released by the 102 concerns and divisional superintendents making returns in the industry. As they employed 75,938 persons on October 1, this was a decrease of .5 per cent. British Columbia reported practically all the loss. Slight improvement had been recorded on the same date in 1923 and employment then was in rather greater volume.

*Shipping and Stevedoring.*—Activity on vessels and around the docks in Quebec increased largely and there were also gains in British Columbia. The 60 firms from which returns were received employed 14,659 persons, as compared with 13,489 at the beginning of September. Although additions to staff

on a larger scale were made at the beginning of October, 1923, the index number then was lower than at the present time.

### Construction and Maintenance

*Building Construction.*—For the first time since the beginning of March, employment in building construction showed a downward movement. Although the decline recorded on the first of October was less extensive than that registered on the same date of last year the index number at the present time is several points lower than it was then. Quebec contractors showed the heaviest losses but all provinces except British Columbia shared in the contraction. A combined working force of 25,570 persons was reported by the 294 contractors making returns, who employed 26,753 workers in the preceding month.

*Highway Construction.*—Further shrinkage in employment on highway construction and maintenance was noted; 1,017 men were released by the 109 concerns reporting. As they employed 15,432 persons as compared with 16,449 on September 1, this was a decline of 6 per cent. Important gains were indicated in the Maritime Province, but elsewhere there were large reductions. More pronounced contractions had been registered on October 1 of last year.

*Railway Construction and Maintenance.*—Further large decreases were evidenced in railway construction and maintenance. These declines, however, were very much less extensive than the seasonal losses recorded on October 1, 1923. In the Maritime Provinces increased activity was reported, but in the remaining provinces the tendency was downward. Returns were tabulated from 36 employers whose staffs, aggregating 39,613 persons, were smaller by 1,910 than at the beginning of the preceding month.

### Services

*Hotels and Restaurants.*—The closing of summer hotels in the Maritime and Prairie Provinces, Ontario and British Columbia resulted in a decline of 922 persons in the pay rolls of the 69 hotels and restaurants reporting. They employed 7,665 persons at the beginning of October. This contraction affected a slightly larger number of workers than that indicated at the same date in 1923.

### Trade

There was an increase of between one and two per cent in the number of persons employed in the trade group. Retail and wholesale trade showed improvement, but the gains in the former were more pronounced. Firms in Ontario reported the largest increase. Statements were received from 574 employers

whose staffs aggregated 54,851 persons as compared with 54,041 at the beginning of September. The increase registered on the same date of last year was somewhat smaller.

The accompanying table shows the index numbers of employment by industries as at the first of October and the first of September,

1924, as compared with October 1, 1923, 1922 and 1921. The column headed "Relative Weight" shows the proportion that the number of employees reported in the indicated industry bears to the total number of employees reported in Canada by the firms making returns on October 1, 1924.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES, IN OCTOBER, 1924, ETC

\*The term "relative weight" is explained in the last paragraph of the accompanying article.

### Nobel Peace Prize for 1925

The Nobel Committee of the Norwegian Parliament has sent to the Government of Canada a circular regarding nomination for the Nobel Peace Prize for 1925, with a request that the conditions of the Prize be made known to those bodies and persons who are qualified to nominate candidates. All proposals of candidates for the next prize, which is to be distributed on December 10, 1925, should be laid before the Nobel Committee by a duly qualified person before February 1, 1925. The persons so qualified include members of Parlia-

ment of the various states, university professors of political science and of law, history and philosophy, etc. The Nobel Peace Prize is awarded to those persons who have rendered conspicuous service to the cause of peace during the year. Every written work, to qualify for the prize must have appeared in print. The prize may be awarded to individuals, or to institutions or associations. The grounds upon which any proposal is made must be stated and handed in along with such papers as may therein be referred to.

## UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING SEPTEMBER 30, 1924, AS REPORTED BY UNIONS MAKING RETURNS

UNEMPLOYMENT as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among members of trade unions deals with the situation reported during the quarter ending September 30, 1924. The percentage of unemployment at the end of July stood at 5.4 or slightly lower than in June. The situation during the following month was less favourable when 6.5 per cent of the members were unemployed but improvement was registered in September, 5.9 per cent of the members being idle on September 30. A lower level of employment was maintained during the quarter under review than in the same period of last year, the percentage of idleness at the end of September standing nearly 4 points higher than at the close of September, 1923.

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters for 1916-17-18-19, and by months for 1920-21-22-23 and to September of this year. The situation during the three months being reviewed was better than in May when the percentage of work was the greatest for the previous quarter but at no time was the situation as favourable as in April which was the peak of employment for the quarter. More unemployment, however, was registered in all three months under review than in the corresponding quarter of last year.

During July a better situation than in June was shown by unions in Nova Scotia, New Brunswick, Quebec and Ontario, but in the remaining provinces reductions occurred. The mining and manufacturing groups registered improvement but slightly more unemployment was reported in the building trades and the transportation groups also showed a slight decline.

In August New Brunswick, Manitoba and Saskatchewan unions reported slight increases in employment over July. Of the decreases in the other provinces that of 6 per cent in Nova

Scotia was the most noteworthy. The lumbering group showed a considerable drop, and declines in lesser degree were registered in the mining and manufacturing industries. Building tradesmen and transportation workers were slightly better employed.

During September only the Nova Scotia and Manitoba unions registered more unemployment than in August, and the decreases were

TABLE I.—PERCENTAGE OF UNEMPLOYMENT IN  
TRADE UNIONS BY PROVINCES

Month		N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Sept. 1924.....	9.3	2.9	7.6	5.1	7.2	4.0	4.7	4.3	5.9	

not very great. The improvement in the remaining provinces was of a rather general nature. The situation in the lumbering, mining, manufacturing, and transportation industries was slightly better. Very little change, however, was noted in the building trades.

Table I on page 974, summarizes the returns by provinces by months from January, 1921, and Table III on page 980, shows the percentage of unemployment reported in the different groups of industries also by months from January, 1921.

During July more unemployment than in the same month of 1923 was recorded by unions in the manufacturing industries, particularly in the textile trades and among glass workers. The mining industry showed improvement, but considerable slackness was reported in the building trades. The transportation industries registered minor reductions.

Less activity was indicated in the manufacturing industries during August than in the same month of last year, the percentage out of work standing slightly over 7 points higher than at the close of August, 1923. Garment, textile and pulp workers were responsible for a large share of this unemployment. Lumber

workers were less fully engaged and reductions on a much smaller scale were reported in the building, transportation and mining groups.

In the building group the percentage of unemployment at the end of September was over 7 points higher than at the close of September of last year. A slight decline was also reported by transportation workers. A lower level of employment was indicated in the manufacturing industries, textile, iron and steel and glass workers all reporting considerable inactivity.

The accompanying tabulation (Table II) show the percentages of unemployment for the months of July, August and September for all Canada and also by Provinces for the month of September. For these months reports were received from 1,527 labour organizations with an aggregate membership of 154,181 persons, of whom 9,156, or a percentage of 5.9 were unemployed.

TABLE II.—UNEMPLOYMENT ON SEPTEMBER 30, 1924.

## EMPLOYMENT OFFICE REPORTS FOR SEPTEMBER, 1924

**D**URING the month of September, 1924, the reports from the offices of the Employment Service of Canada showed a further continued increase in the volume of business transacted as compared with the preceding month. This advance was a reflection of the demand for harvest hands and threshers in the Prairie Provinces. The call for workers reached the maximum during the latter part of the month, and for the first time this year applications for employment were less numerous than the opportunities offered. Owing to unfavourable weather conditions, the demand for harvesters was not so brisk nor so intense as during 1923, when an unusual large number of vacancies was offered throughout the grain harvesting season. A very slight reduction is recorded also from the high record period of 1922. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half month periods, shows a continuous upward movement in the curve of vacancies, which though on a considerably lower level than during 1923, was yet a marked advance from any period this year, almost reaching the level of the curve in 1922. The trend of the placement curve was upward though considerably below the level of the curves of vacancies and applications. The ascent of the latter was very rapid, although exceeded during the first half of the month by the vacancies.

During the first half of September, 1924, applications for employment averaged 2,325 daily, as compared with 2,060 daily during the preceding period and with 3,327 daily during the corresponding period of last year. During the latter half of the month the average number daily was 2,658, in contrast with 2,265 daily last year. The number of vacancies recorded by the Service was an average of 2,526 daily during the first half and 2,723 daily during the second half of the month, as compared with averages of 3,977 and 2,445 daily during the corresponding period a year ago. During the latter half of August, 1924, vacancies averaged 1,749 daily. The reports indicate that during the first half of September an average of 1,877 placements were effected daily in comparison with 3,044 during the corresponding period of last year and with 1,692 during the preceding period. During the latter half of the month placements averaged 2,238 daily in contrast with 1,939 during the latter half of September, 1923.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	230,518	75,233	355,756
1922.....	297,827	65,695	393,522
1923.....	347,165	115,387	462,552
1924 (9 months).....	191,495	94,406	285,901

During the month of September, 1924, the number of persons referred to employment was 53,104, while placements effected totalled 51,621. Of the latter 43,852 (of which 40,309 were of men and 3,523 of women) were in regular employment and 7,789 in casual work. Applications for work numbered 62,465, of which 51,335 were from men and 11,080 from women. Vacancies notified by employers numbered 65,709, of which 56,707 were for men and 9,002 for women workers.

The placements in regular employment by provinces were as follows:—

- Nova Scotia 236 men, 49 women.
- New Brunswick 192 men, 95 women.
- Quebec 1,181 men, 408 women.
- Ontario, 6,507 men, 1,172 women.
- Manitoba 6,197 men, 471 women.
- Saskatchewan 15,961 men, 443 women.
- Alberta 7,591 men, 582 women.
- British Columbia 2,444 men, 303 women.

## MARITIME PROVINCES

A very few orders for farm workers were received at the offices at Halifax, New Glasgow and Sydney, the majority of the farmers appearing to be well supplied with help. Little change was recorded in the building and construction groups; some repairs and public building progressing rapidly, while in a few districts, municipal street repairs and construction work had been retarded by severe weather. The logging industry showed increased activity, much pulpwood cutting being done in Eastern Nova Scotia, and in New Brunswick, choppers and first class woodsmen were in demand.

## QUEBEC

Building tradesmen were actively employed in this province, a large demand for plasterers, painters and bricklayers, being recorded in Montreal. A decline was shown in the number of operations on roads, highways and street repairing, and a general slackening in the calls for labourers. The logging industry continued to show improvement, the placements in this group comprising a large part

of the business of the offices at Hull, Quebec and Montreal. Quietness characterized the industrial and manufacturing industries, a few vacancies being recorded for textile and shoe workers. Calls were received for domestic workers with an insufficient supply of experienced applicants.

ONTARIO

Farm work has been fairly active and agricultural employment was afforded to large numbers, especially in the Niagara and Western Peninsulas. A general slackening was

manufacturing industries appeared to be readily supplied with workers. The women's sections reported an increased registration of workers, largely in excess of the demand, although, as yet, it is not possible to meet all requirements for experienced resident workers.

MANITOBA

With threshing operations well under way, the demand for harvesters and threshers, engineers, etc., grew more insistent and on the whole the offices found little difficulty in meeting the requirements. In some sections

evident in the construction group although a slight increased number of calls was received for carpenters, plasterers and building labourers, to finish work already under way. However, paving and highway work continued to provide a considerable number of men with employment, while section labourers and extra-gang hands were placed with the railways on construction and maintenance work. At the northern offices logging continued to be the main outlet for the unemployed, the supply of bushmen being inadequate to cope with the large demand and most districts report an outlook for a very busy season. At the lake ports the supply of labourers available was sufficient to meet the increased calls for stevedores and longshoremen. At Sarnia a few sailors were placed. The manufacturing industries afforded only a few opportunities for work, temporary employment being supplied to large numbers in the pickle and canning factories of the Western peninsula. Other

the supply of workers was greatly in excess of the demand. Industrial operations have slackened somewhat during the past month and a slight recession in employment was apparent in the building industry. Labourers, sectionmen and extra-gang hands, were placed in considerable numbers from Brandon, Dauphin and Winnipeg. From the latter office pulpwood cutters, bushmen, sawyers, etc., were supplied in increased numbers to the lumber camps in Northern Ontario and Manitoba. The demand for household and hotel help predominated in the women's sections, the scarcity of experienced help being recorded in the decline in regular placements among the women workers.

SASKATCHEWAN

The heavy seasonal demand for harvesters and agricultural workers reached its peak in this province during the month and the number of vacancies recorded were largely respon-

sible for the excess of vacancies over applications shown in the accompanying chart. A supply of farm labourers to meet this demand was found lacking, especially in the vicinity of Regina, Saskatoon and Estevan. Requirements were very few in the construction groups but consisted mainly of vacancies for labourers for building and road work. Calls for casual labour declined considerably with more than sufficient applicants available. The railway companies were supplied with graders, gang men and section labourers from the offices at Prince Albert, Moose Jaw and Saskatoon. There was a reduction in the number of women placed in employment in rural districts but a large demand was still recorded for urban workers.

#### ALBERTA

The continued fine weather resulted in increased calls for agricultural workers, the chief business of the offices for the month being the placement of threshers and harvest hands. Building activities have been limited, and with the exception of repair and alteration jobs few opportunities were available in the construction groups. A slightly heavier demand for railway labour was reported from Medicine Hat, Lethbridge, Edmonton and Calgary, and no difficulty was experienced in supplying workers. Very little change was recorded in the demand for women workers; a large number being placed on farms, while in cities an increased demand for casual help was recorded.

#### BRITISH COLUMBIA

The rural districts appeared to be supplied with sufficient help, but from Victoria, Vancouver, and other cities, a large number of harvesters were transferred to employment in the grain fields of the Prairies. No shortage of work was shown in the building trades, although business continued fairly quiet. Several rock men, graders, bridge workers and teamsters, were required near Prince George and Kamloops, while railway construction jobs gave employment to a few throughout the province. The logging and lumber industries were inactive, with applications for bushworkers greatly in excess of the orders received. Along the water front conditions were reported as very quiet with a minimum number of jobs offered for longshoremen. Manufacturing industries showed little change, a demand for canners being received from the Okanagan Valley. In the women's section a fairly good demand was recorded and from Vancouver and Victoria several houseworkers and general cooks were sent to the Prairie Provinces for the harvest period.

#### Movement of Labour

During September, 1924, the offices of the Employment Service of Canada made 43,832 placements in regular employment, of which 37,342 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 5,148 were granted the Employment Service reduced transportation rate, 2,860 going to points within the same provinces as the despatching office and 2,288 to other provinces.

The offices in Quebec granted 498 transportation certificates, 83 of which were issued by the Montreal and Quebec offices to bushmen, cooks and mill labourers, going to points within these zones, and 415 were granted to bushmen going to lumber camps near Sault Ste. Marie, Sudbury and North Bay. The offices in Ontario despatched 1,087 workers at the reduced rate, of whom three were farm hands going to Prince Albert and Regina in Saskatchewan and 61 were harvest workers going to points in Manitoba. Of the provincial transfers 993 were bush workers going to the camps in the vicinity of North Bay, Port Arthur, Sault Ste. Marie and Timmins, 20 were carpenters and labourers going from Toronto to Timmins, one was a plasterer destined to Port Arthur, 2 stone cutters were sent from Hamilton and Toronto to Kingston, 4 miners were sent to Cobalt district and one dredgeman and two riggers to the Northern districts. The number of reduced rate transportation certificates issued from Manitoba offices was 1,692. In the province of Manitoba 1,031 harvesters were placed on farms, the remaining 45 being farm domestics, hotel cooks and waitresses, going to various points in the province. From the office at Winnipeg one domestic servant was sent to Vancouver, B.C., 15 cement workers, one rock blasting foreman, two labourers, harvester and one farm domestic were sent to points near Calgary, Alberta. To the province of Saskatchewan 457 harvesters, 12 farm domestics and domestic workers and one separator operator were transferred from the office at Winnipeg. To the district near Port Arthur, Ont., were sent 45 pulpwood cutters, 47 bushmen, 11 sawmill labourers, 10 cooks and cookees, 9 cordwood cutters and two teamsters. Saskatchewan offices placed 212 persons in employment at a distance, of which one was a harvester and one an electrical mechanic going to Lethbridge, Alberta, and 7 were harvesters and 2 were cooks going to points in Manitoba. Of the 201 provincial transfers, 156 were harvest workers and dairy operators, 20 were cooks and domestic workers, 5 were miners, and 10

\*1155 Placements effected by offices since closed.

bushmen, the remainder being gas and steam engineers, lathers and building labourers. Alberta offices issued 360 certificates to persons going to points within the province and 265 to persons travelling outside the province. Of the latter, one was a harvester going from Medicine Hat to Manitoba, 10 were carpenters and 2 loggers going from Calgary to Fernie and Cranbrook, B.C., and 252 were harvesters, labourers, cooks and teamsters going to Saskatchewan. Within the province Calgary and Edmonton sent 289 harvesters to work on farms, 8 cooks, 13 labourers, 30 mill hands and teamsters, several bricklayers and masons and a few waitresses and domestic servants to other parts of the province. Of the 1,034 workers benefiting by the reduced rate in British Columbia 2 harvesters and 2 cooks were sent to points in Manitoba; 495

workers, mainly harvesters and domestic workers were sent to points in Saskatchewan and 418 labourers, threshers and harvesters to points in Alberta. More than 70 of the 117 provincial transfers were issued to bushmen, saw-mill workers and labourers going to the Northern offices, 11 were granted to farm workers and fruit pickers for the Okanagan valley, 12 to miners and muckers; 14 to building labourers, carpenters, plasterers, etc., and a few to housekeepers, domestics and waitresses.

Of the 5,148 workers, who benefited by the Employment Service reduced rate, 1,422 were carried by the Canadian National Railways, 3,661 by the Canadian Pacific Railways, 33 by the Pacific Great Eastern Railway and 32 by the Temiskaming and Northern Ontario Railway.

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA DURING THE PERIOD JULY-SEPTEMBER, 1924

THE business of the offices of the Employment Service of Canada for the third quarter of 1924 showed a considerable expansion as compared with the preceding period. Vacancies offered increased more than 40 per cent, while the gain in placements in regular work was 48 per cent, and in casual work 16 per cent. This very large advance was a reflection of the fall demand for harvesters and thresher hands in the prairie provinces, the gains approximating 160 and 150 per cent in vacancies and placements, while extensions in logging were 50 per cent in vacancies and 13 per cent in placements, and in transportation an increase of 16 per cent in placements effected was shown. Declines from the previous quarter, April-June, 1924, were recorded in manufacturing industries—notably iron and steel and lumbering—and in the construction and maintenance and the services groups. A decrease was shown in the vacancies offered in the transportation group.

A comparison of the reports with the corresponding period of 1923 indicates a marked recession in employment activities, the decline in employment offered in the Dominion being more than 33 per cent, while the falling-off in placements approximated 36 per cent. The harvesting in the prairie provinces required fewer workers this year than previously, owing to unfavourable weather, a reduction in vacancies of 34 per cent, and 36 per cent in placements made being recorded. Losses were shown in the construction and maintenance, transportation, and services groups; and the manufacturing indus-

tries,—especially lumber, rubber, electric current, iron and steel, and mineral products—registered declines. While contractions were shown in the vacancies available in the logging group, an increase of more than 16 per cent was recorded in placements effected during this quarter, as compared with July-September, 1923.

The chart on page 982, which accompanies the article on the work of the Employment Service for September, 1924, shows the trend of employment during the period under review. During July applications, vacancies and placements rose slightly, followed by declines during the latter part of the month. The fluctuations in curves continued until the middle of August when the demand for harvest workers and farm help for prairie provinces began to be felt. The curves rose steadily until the end of September, the peak being reached at this period. It will be noted that at no time during this year did the curve approximate the high record of last year, although the high level of 1922 was attained. During the latter part of September, as is usual during the harvest season, vacancies exceeded applications quite considerably.

During the period July-September, 1924, the offices reported that they had made 113,794 references to positions and had effected a total of 109,480 placements, 88,621 of which were in regular employment and 20,859 in casual work. Of the placements in regular employment 77,804 were of men and 10,817 of women workers. This may be compared with 85,083

placements made during the second quarter of 1924, and with 159,601 placements recorded during the corresponding period of 1923. During the period under review employers notified the Service of 127,600 vacancies, of which 101,977 were for men and 25,623 for

women, as compared with a total during the same period last year of 193,770 vacancies. The number of vacancies recorded during the preceding quarter was 96,796. Applicants registered for work at the offices numbered 143,127, of which 112,098 were men and 31,029

**FAIR WAGE CONTRACTS, OCTOBER, 1924**

**D**URING October the Department of Labour received for insertion in the *LABOUR GAZETTE* the following information relative to twenty-two fair wage contracts awarded by the Department of Public Works. Twenty of these contracts contain the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rate so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

The remaining two contracts which come first in order in the following list, contain fair wage schedules, the following clause being included in regard to labour conditions:—

Where there are special circumstances which in the judgment of the Minister of Labour make it ex-

pedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or fail at any time to pay to any employee or employees for any services performed or for any hours of labour wages according to the rates set forth in the schedule or fixed therefor by the Minister of Labour hereunder regarding overtime and classification, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

**DEPARTMENT OF PUBLIC WORKS**

Relaying of pavement around Western Block, Ottawa, Ontario. Name of contractor, O'Leary, Limited, Ottawa, Ontario, Date of contract, October 17, 1924. Amount of contract, \$5,999. The fair wage schedule inserted in the contract is as follows:—

Trade or class of labour	Per hour	Hours per day
Cement mixer, engineer.....	\$0 70	8
Cement worker, tamber.....	0 53	8
Cement workers, labourers.....	0 50	8
Asphalt workers, rakers.....	0 55	8
Asphalt workers, tamperers.....	0 53	8
Wood block layers.....	0 75	8
Steam roller engineer (per day).....	6 00	8
Labourers.....	0 50	8
Teamsters, one horse and cart.....	0 70	8
Teamsters, two horses and wagon.....	1 00	8

Alterations to post office and customs building at Sydney, Nova Scotia. Name of contractor, Chappells, Limited, Sydney, Nova Scotia. Date of contract, October 21, 1924. Amount of contract, \$29,000. For excavation, \$1.25 per cubic yard, and for concrete, \$14.50 per cubic yard. The fair wage schedule inserted in the contract is as follows:—

Trade or class of labour	Per hour	Hours per day
Carpenters.....	\$0 80	8
Painters and glaziers.....	0 80	8
Sheet metal workers.....	0 61	8
Bricklayers.....	0 90	8
Stonemasons.....	0 90	8
Concrete workers.....	0 35	9
Plumbers.....	0 75	8
Electrical workers.....	0 80	8
Steam fitters.....	0 75	8
Structural steel workers.....	0 65	8
Labourers.....	0 35	9
Carters and one horse.....	6 00	per day
Teamsters and two horses.....	10 00	per day

Repairs to wharf at New Massett, British Columbia. Name of contractor, A. W. Watson, Victoria, British Columbia. Date of contract, September 20, 1924. Amount of contract, unit prices; approximate expenditure, \$2,298.46.

Dredging St. Mary's River, Birch Point and Outer Bar, Nova Scotia. Name of contractors, The Halifax Dredging Company, Limited, Halifax, Nova Scotia. Date of contract, October 7, 1924. Amount of contract, Class "B", 59 cents per cubic yard, scow measure. Approximate expenditure, \$35,116.

Dredging inner harbour at Port Hope, Ontario. Name of contractors, The Randolph Macdonald Company, Limited, Toronto, Ontario. Date of contract, October 17, 1924. Amount of contract, Class "A" \$5.90 per cubic yard, place measure. Class "B" 65 cents per cubic yards, place measure. Approximate expenditure, \$10,850.

Construction of wharf at New Harris, Nova Scotia. Name of contractor, D. A. Cameron, Halifax, Nova Scotia. Date of contract, October 13, 1924. Amount of contract, unit prices. Approximate expenditure, \$6,820.03.

Paving yard and driveway, Printing Bureau, Ottawa, Ontario. Name of contractor, O'Leary, Limited, Ottawa, Ontario. Date of contract, October 17, 1924. Amount of contract, \$2,722, and at the following prices for any changes: For excavation, \$2.50 per cubic yard; for concrete pavement, \$1.80 per cubic yard.

Dredging at Mitchell's Bay, Ontario. Name of contractors, Chatham Dredging and General Contracting Company, Limited, Chatham, Ontario. Date of contract, October 16, 1924. Amount of contract, Class "B," 22½ cents per cubic yard, place measure. Approximate expenditure, \$18,000.

Reconstruction of portion of super-structure of breakwater at Rimouski, Quebec. Name of contractor, Ludger Lemieux, Rimouski, Que-

bec. Date of contract, October 14, 1924. Amount of contract, unit prices. Approximate expenditure, \$7,775.84.

Steam pipes supports and repairs to boiler at Westminster Hospital, London, Ontario. Name of contractor, Scott Murray and Son, London, Ontario. Date of contract, October 14, 1924. Amount of contract, \$2,650.

Construction of two cottages at Partridge Island, Quarantine Station, St. John, New Brunswick. Name of contractors, Kane and Parker, St. John, New Brunswick. Date of contract, October 17, 1924. Amount of contract, \$9,500.

Reconstruction of wharf and approach in concrete at Lavaltrie, Quebec. Name of contractors, F. A. Grothe and Fils, Montreal, Quebec. Date of contract, October 17, 1924. Amount of contract, unit prices. Approximate expenditure, \$3,345.50.

Dredging Byng Inlet (Rabbit Island Narrows), Ontario. Name of contractor, W. L. Forrest, Goderich, Ontario. Date of contract, October 16, 1924. Amount of contract, Class "A," \$7.50 per cubic yard, place measure; Class "B" 80 cents per cubic yard, place measure. Approximate expenditure, \$46,341.

Dredging Cross Point, Quebec. Name of contractor, Felix Michaud, Buctouche, New Brunswick. Date of contract, October 4, 1924. Amount of contract, Class "B," \$1.12½ per cubic yard, scow measure. Approximate expenditure, \$9,337.

Repairs to East Pier at Port Maitland, Ontario. Name of contractors, A. W. Robertson, Limited, Montreal, Quebec. Date of contract, October 27, 1924. Amount of contract, unit prices. Approximate expenditure, \$175,660.

Dredging outer entrance to harbour, Cobourg, Ontario. Name of contractors, The Frontenac Dredging Company, Limited, Toronto, Ontario. Date of contract, October 17, 1924. Amount of contract, Class "A" \$6 per cubic yard, scow measure. Class "B," 68 cents per cubic yard, scow measure. Approximate expenditure, \$20,000.

Renovating, etc., Immigration Building, Louise Embankment, Quebec, Quebec. Name of contractor, Juneau and Frere, Enregistré, of Quebec City, Quebec. Date of contract, October 20, 1924. Amount of contract, \$3,998.

Electric wiring and fittings, public buildings at Hampton, New Brunswick. Name of contractor, D. A. Massie, St. John, New Brunswick. Date of contract, October 23, 1924. Amount of contract, \$750 and \$18 for any additional single light complete, etc.

Construction of breakwater at Oshawa, Ontario. Name of contractors, Lumsden En-

gineering and Transport Company, Limited, Toronto, Ontario. Date of contract, October 17, 1924. Amount of contract, unit prices. Approximate expenditure, \$53,550.

Rendering and repairing of exterior walls, Louise Embankment, Quebec, Quebec. Name of contractors, Juneau and Frere, Enregistrée, of Quebec City, Quebec. Date of contract, October 20, 1924. Amount of contract, \$1,390.

Electric light plant, wiring system and fittings in public building, Guysborough, Nova Scotia. Name of contractor, W. W. Hoyt, Halifax, Nova Scotia. Date of contract, October 17, 1924. Amount of contract, \$1,505 and \$9.75 per any additional single light complete, etc.

New roofing armory at Chatham, Ontario. Name of contractors, Canadian Rogers Steel Metal and Roofing, Limited, of Toronto, Ontario. Date of contract, October 22, 1924. Amount of contract, \$4,495.

POST OFFICE DEPARTMENT

The following is a statement of payments made in October, 1924, for supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of Orders	Amount of orders
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	\$ 876 26
Making and repairing rubber stamps, daters, etc..	80 90
Making up and supplying letter carriers' uniforms, etc.....	21,355 02
Stamping pads, ink, etc.....	85 96
Mail bag fittings.....	2,771 16
Scales repaired.....	169 95
Repairs to boxes, etc.....	68 55
Satchels supplied.....	1,682 82
Mail bagging.....	1,992 80
Leather straps.....	594 00

BUILDING PERMITS ISSUED DURING SEPTEMBER, 1924

THE value of the building permits issued in 56 cities showed a considerable increase in September as compared with the preceding month and also as compared with September, 1923. According to returns tabulated by the Dominion Bureau of Statistics the building

authorized last month was valued at \$14,566,504, while in August, 1924, it was \$9,463,756 and in September of last year it was \$10,478,618. There was, therefore, an increase of \$5,102,748 or 53.9 per cent in the former comparison and of \$4,087,886 or 39.0 per cent in

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS.

*St. Thomas.....	9,860	10,380	10,110				

the latter. The total for September is the highest in any month of this year; it is also the largest recorded in September of any year since 1913.

Detailed statements were furnished by 48 cities, showing that they had issued over 1,100 permits for dwellings valued at nearly \$4,500,000, and for some 2,500 other buildings estimated to cost approximately \$9,500,000.

Quebec, Ontario and British Columbia recorded substantial increases in the value of the building permits issued; the percentage gains were 63.6, 62.5 and 55.3, respectively in these provinces. Prince Edward Island also reported improvement over August. Elsewhere there were declines on a rather small scale, that of \$42,659 or 38.3 per cent in New Brunswick being the largest proportional loss. The decrease of \$85,023 or 21.7 per cent in Manitoba was the most extensive actual reduction.

As compared with September, 1923, New Brunswick, Quebec, Ontario, Saskatchewan and British Columbia registered increases in the estimated value of building. The gain of \$3,927,713 or 116.0 per cent in Quebec was most pronounced. Of the declines recorded in the remaining provinces, that in Alberta

of \$192,440 or 51.4 per cent and in Manitoba of \$216,809 or 41.4 per cent were the largest.

An analysis of the returns by cities shows that in Montreal, Toronto and Vancouver the value of contemplated building was higher than in August, 1924, and also than in September, 1923. In Winnipeg, on the other hand, there were declines in both comparisons. Fredericton, Quebec, Westmount, Galt, Guelph, Niagara Falls, Oshawa, Owen Sound, Peterborough, Stratford, Windsor, Woodstock, Moose Jaw, Saskatoon and Calgary registered increases in both cases.

The building permits issued in the first three-quarters of this year had a lower valuation than in the corresponding nine months of 1923 and 1922 but the total was higher than in 1921. The aggregate for 1924 is \$93,017,431; for 1923, \$105,216,056, for 1922, \$115,113,336 and for 1921, \$86,970,447. The decline in the first two comparisons were 11.6 and 19.2 per cent, respectively, and the gain as compared with 1921 was 7 per cent.

The accompanying table shows the value of the building permits issued during September as compared with August, 1924 and with September, 1923. The 35 cities for which records are available since 1910 are marked with asterisks.

## STEEL COMPANY'S "NO FATALITY" RECORD

VISITORS from five different countries, one each from Canada, Armenia, China, Japan and the Philippine Islands, have lately studied the safe building practices of the Truscom Steel Company of Youngstown, Ohio. This company which employs nearly 5,000 men and women has maintained a clean fatality record for twenty years. An article appearing in the *National Safety News* for October describes the work of the Employment and Safety Departments. The safety director sees that each new employee understands the rules for safety in the plant before starting work. In the medical division there is a hospital equipped for the handling of accident cases with a physician and nurse in attendance at all times. New employees are instructed by the physician in charge on the importance of reporting every injury and cases of infection from injuries are rare at the plant. Employees' families also may avail themselves of the medical service furnished as the company's officials believe that if the home is kept free from sickness the efficiency of the employee will be unimpaired. Yard gangs and cleaners within the buildings are constantly at work and crews of men are assigned to the work of piling the steel units in an

orderly manner, carelessness being punished with immediate dismissal. Machine guards throughout the big plant are all of expanded metal, painted green with a red "danger" sign attached. To avoid overloading travelling cranes, a "spotter" on the ground marks the weight of each bundle, assigns a crane to it, and follows the bundle through until it is placed in position. When the cranes are in operation, red lights on the sidewalls and constant sounding of bells and whistles warn the workers to stay clear. Long green and white signs are painted over each covered driveway warning truck operators to drive cautiously and not over six miles per hour. A safety bulletin board is placed beside every time-clock. In the handling of paints and oils, rigorous regulations are applied, all employees being required to sign a ticket for the inflammable materials and to surrender that ticket with the unused portion at the close of the day.

The article states that credit for the plant's record goes to the chief of the Industrial Service Department, under whose supervision six departments function: safety, employment, health, service, workmen's compensation, welfare and recreation.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1924

### Cost of Living, Prices of Staple Articles, and Index Numbers

**T**HE movement in prices in Canada was upward during October, both the family budget in terms of retail prices and the index numbers of wholesale prices calculated by various authorities being somewhat higher than in September.

Retail food prices were higher, owing chiefly to seasonal advances in the prices of dairy products and eggs. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.31 at the beginning of October as compared with \$10.28 for September; \$10.65 for October, 1923; \$10.23 for October, 1922; \$11.48 for October, 1921; \$15.83 for October, 1920; \$16.92 for June, 1920 (the peak); \$13.54 for October, 1918; and \$7.99 for October, 1914. Prices of potatoes and sirloin steak were substantially lower while there were smaller declines in the prices of beef roast, mutton, fresh and salt pork, and in prunes. The most important advances occurred in the prices of eggs and butter while there were less important advances in cheese, rolled oats, lard, beans, evaporated apples and sugar. Including the cost of fuel and rent with that of foods the total budget averaged \$20.67 at the beginning of October as compared with \$20.65 for September; \$21.16 for October, 1923; \$20.87 for October, 1922; \$22.01 for October, 1921; \$26.46 for October, 1920; \$26.92 for July, 1920 (the peak); \$21.48 for October, 1918; and \$14.48 for October, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, weighted according to the importance of the commodities, advanced to 157.0 as compared with 153.8 for September; 153.1 for October, 1923; 148.1 for October, 1922; 155.6 for October, 1921; 236.3 for October, 1920; 256.7 for May, 1920 (the peak); and 214.0 for October, 1919. Sixty-five prices quotations were higher, thirty-one lower and one hundred and forty unchanged.

In the grouping according to chief component material four of the main groups were higher, two were lower, and two were practically unchanged. The vegetables and their products group and the animals and their products group advanced substantially, the former because of higher prices for grains, flour, milled products, and rubber, and the latter because of higher prices for hogs, sheep, fish, milk, eggs, and cheese. Fibres, textiles and textile

products rose because of higher prices for cotton, wool, and jute. Higher prices for silver, lead, tin, zinc, and antimony caused an advance in the non-ferrous metals group. The non-metallic minerals group declined because of lower prices for gasoline and coal oil. The wood and wood products group was also somewhat lower while the iron and its products group and the chemicals and allied products group were both practically unchanged.

In the grouping according to purpose both consumers' goods and producers' goods advanced. The increase in the former was due to advances in breadstuffs, fish, milk, butter, cheese, and eggs in spite of lower prices for beef, sugar, potatoes, coal oil and gasoline. The increase in the latter group was due to higher prices for some building materials and for materials used in the textile industries, the leather industry, the metal working industries, the chemical using industries, the milling industries and in miscellaneous manufacturers' materials.

In the grouping according to origin, raw or partly manufactured goods, and fully or chiefly manufactured goods advanced. In articles of farm origin both field and animal products advanced. Canadian farm products were also higher. Articles of marine origin advanced while articles of forest origin and of mineral origin declined.

The index number published by the Department since 1910 has been reconstructed back to 1913, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 238 commodities in 1913.\* Ultimately the reconstructed index will be carried back to an early date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings but the sub-groups in detail shown monthly since 1912 are omitted. The special index

\* LABOUR GAZETTE, June, 1923, and September, 1924.

number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

The index number based upon prices of 271 commodities in 1890-1899, published by the Department of Labour since 1910, advanced to 223.0 for October as compared with 221.7 for September; 221.2 for October, 1923; 219.8 for October, 1922; 229.2 for October, 1921; 317.6 for October, 1920; 289.6 for October, 1918; and 138.7 for October, 1914. The principal advances occurred in grains, bran, shorts, bacon, sheep, dairy products, eggs, flour, oatmeal, raw cotton, jute, oak and linseed oil, while cattle, beef, dressed lamb, potatoes, sugar, raw silk, gasoline, coal oil and benzene were substantially lower.

The special index number comprising fifty of the more important commodities selected from the 271 in the Departmental list, including twenty foods, fifteen raw materials and fifteen manufactured goods, based upon price levels in 1913 as 100, advanced to 150.5 for October as compared with 148.8 for September; 151.9 for October, 1923; 147.3 for October, 1922; 147.7 for October, 1921; 221.5 for October, 1920; and 208.8 for October, 1918. The advance was due mostly to higher prices for grain, sheep, bacon, eggs, flour, raw cotton, and linseed oil.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, advanced to 149 for August as compared with 147 for July; 145 for June; and 150 for August, 1923. Producers' goods was unchanged but all the other groups advanced.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100 advanced to 174.0 for October as compared with 172.9 for September; 174.2 for October, 1923; 238.4 for October, 1920; and 119.9 for October, 1914. Both foods and manufacturers' goods advanced.

The Canadian Bank of Commerce index number of exports advanced from 147.82 for September to 150.04 for October. The number for imports rose from 160.53 for September to 161.74 for October. The combined index of both exports and imports advanced from 154.17 to 156.21.

#### EXPLANATORY NOTE

The table of retail prices and rentals shows the prices at the beginning of October of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and

every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Cost of Electric Current for Householders\*

With rates in 1913 as 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

#### Retail Prices

Beef prices continued to decline, sirloin steak averaging 29c. per pound as compared with 29.5c. in September, round steak 22.4c. per pound as compared with 23.6c. in September, shoulder roast 14.6c. per pound as compared with 15c. in September. Veal showed little change. Mutton was down from an average of 28.2c. per pound to 27.7c. Fresh pork fell from 25.7c. per pound to 25.1c. Bacon averaged slightly higher at 33.9c. per pound. Fresh cod and fresh halibut were slightly higher. Lard was up from an average of 22.6c. per pound to 22.8c.

Eggs advanced substantially, fresh averaging 45.7c. per dozen as compared with 39.5c. in September and 34.8c. in August, and cooking averaging 39.8c. per dozen in October, 34.6c. in September, and 31c. in August. Milk was higher in Three Rivers, Prince Albert, and Medicine Hat. Butter, both dairy and creamery, advanced, the former from an average of 36.8c. per pound in September to 38.7c. in October, and the latter from 41.9c. per pound in September to 42.8c. in October. Cheese rose from an average of 28.8c. per pound to 29.1c.

Bread and flour were unchanged in the average. Rolled oats was slightly higher, averaging 5.7c. per pound. Rice and tapioca showed little change. Canned vegetables were steady. Onions were down from an average of 7c. per pound in September to 5.7c. in October. Potatoes showed a general decline averaging \$1.39 per 90 pounds in October as compared with \$1.73 in September and \$2.24 in August. Evaporated apples were up from an average of 19.2c. per pound to 19.6c. Prunes declined slightly, averaging 15.6c. per pound. Raspberry jam was down from 93.9c. per four-pound tin to 92.9c. Marmalade also was slightly lower, averaging 81.2c. per four-

pound tin. Granulated sugar was up from an average of 10.1c. per pound in September to 10.3c. in October, and yellow sugar from 9.6c. per pound in September to 9.8c. in October. Coffee and tea showed little change.

Anthracite coal was down in the average from \$16.78 per ton to \$16.58. Lower prices were reported from Amherst, Bathurst, Sault Ste. Marie, Port Arthur and Port William. Soft wood was up from an average of \$9.17 per cord to \$9.28. Coal oil showed little change at an average of 30.8c. per gallon. No changes were reported in rent.

#### Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

The outstanding change during the month was the movement of grain prices which carried them to considerably higher levels. No. 1 Manitoba Northern wheat at Port Arthur averaged \$1.59½ per bushel in October as compared with \$1.42 in September. The high price for the month was \$1.69¾ reached in the second week. Prices then declined to the low level of \$1.50¾ about the end of the month. Strong export demand and unfavourable crop reports from the Argentine and India were said to be the cause of the higher prices, while later in the month competition of lower priced wheat from the United States together with favourable crop conditions in the Canadian West caused a decline. Western oats rose from 58¾c per bushel to 63c, barley from 89½c per bushel to 92¾c and flaxseed from \$2.20 per bushel to \$2.33. American corn was down from \$1.34 per bushel to \$1.26½. Flour prices moved in sympathy with wheat being \$9.05 per barrel at Toronto as compared with \$7.80 in September. Rolled oats at Toronto advanced from \$3.80 per ninety pound sack to \$4. Shorts were also up from \$30 per ton to \$31.80. Granulated sugar at Montreal declined from \$8.03 per hundred in September to \$7.73 in October. The advance in raw rubber continued, the price for Ceylon being 31c per pound as compared with 27¾c in September. Linseed oil at Montreal advanced from \$1.12 per gallon to \$1.22 and cottonseed oil from 15c per pound to 16c. The coffee market continued strong, Santos advancing 1c per pound to 30c. Quebec potatoes at Montreal declined from \$1-\$1.10 per ninety pounds to 70c and Ontario potatoes at Toronto from \$1-\$1.10 per ninety pounds to 90c-\$1. Prices of cattle were again lower, western cattle at Winnipeg being \$5.15 per hundred as compared with \$5.21 in September and choice steers at Toronto being \$6.25 per hundred as compared with \$6.50 in September. Live hogs at Toronto rose from

\* LABOUR GAZETTE, December, 1923, Page 1442.

\$10.28 per hundred to \$10.74. Choice sheep at Toronto were up from \$6.65 to \$7.60 per hundred. Bacon and ham were slightly lower. Fresh whitefish at Toronto rose from 16c-18c per pound in September to 19c-20c in October and salt cod at Halifax from \$7.75 per quintal to \$10.75, salt herrings from \$6.50 per barrel to \$7 and salt mackerel from \$9 per barrel to \$10. Dairy products and eggs showed seasonal advances. Milk at Toronto was up from \$1.75 per eight gallon can to \$1.95. Creamery butter at Toronto rose from 38½c per pound to 39c and dairy prints from 33½c per pound to 35½c. Fresh eggs at Montreal were up from 43c-48c per dozen to 53c-60c. Cotton advanced slightly averaging 24.5c per pound in October as com-

pared with 24c in September. The upward movement in wool continued, Eastern rising from 36c per pound to 38c-40c and Western range wool from 40c per pound to 41c. Jute again advanced being \$11.26 per hundred as compared with \$10.10 in September. Raw silk at New York declined slightly. Newsprint paper declined from \$3.65 per hundred to \$3.50. Several non-ferrous metals advanced: lead from \$7.75 per hundred to \$8.15, tin from 51c per pound to 51½c and spelter from \$7.80 per hundred to \$7.85½. Silver again advanced being 71½c per ounce in October as compared with 69½c in September. Gasoline at Toronto fell from 24½c per gallon to 20½c, and coal oil from 22c per gallon to 20c.

DEPARTMENT OF LABOUR INDEX NUMBERS OF WHOLESALE PRICES BY PRINCIPAL GROUPS OF COMMODITIES FOR OCTOBER 1924, SEPTEMBER 1924, OCTOBER 1923, 1922, 1921, 1920, 1919, 1918, 1917, 1916, 1915, 1914 AND 1913.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. With only a few minor exceptions the general tendency of both wholesale prices and the cost of living was upward in the autumn.

### Great Britain

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures) rose to 141.3 at the end of September, or 2.4 per cent above its level at the end of August. This was the highest level recorded for three years. The only decline for the month under review was one of 1.3 per cent in animal food. All foods rose 3.1 per cent and materials rose 1.9 per cent.

The *Times* index number at the end of September was 173.4, on the base 100 in 1913. This was 2.5 per cent above the level of the previous month. Foods rose 6.7 per cent and materials rose 0.2 per cent. The groups to show declines were iron and steel, other metals and minerals, and cotton. The increases were as follows:—9 per cent in the price of cereals; 4.8 per cent in meat and fish; 6.6 per cent in other foods; 5.1 per cent in textiles other than cotton; and 0.8 per cent in other materials.

The Board of Trade index number, on the base 1913=100, rose slightly to 166.9 in September, about 1 per cent above the August level. Food prices rose by 3.1 per cent, cereals rising 5.2 per cent, meat and fish 3.8 per cent, and other food 0.9 per cent. Reductions in prices of cotton materials averaged 4.9 per cent and increases in prices of other textiles averaged 5.2 per cent. Materials on the whole declined in price by 0.1 per cent.

The *Economist* index number rose 2.5 per cent in October to 220.3, on the base 100 in 1901-05. Textiles rose 3.4 per cent; cereals and meat rose 2.5 per cent; minerals rose 2.6 per cent; and the remaining groups rose slightly.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 176 at the beginning of October, an increase of 1.7 per cent for the month previous. Foods rose 3.6 per cent and all other groups showed no change. At the beginning of November goods were 4 per cent higher, at 179, and the cost of living had reached 180.

### Austria

WHOLESALE PRICES.—The official index number of the Federal Statistical Office, on the base prices in the first six months of 1914=1, was 19,373 in September, a decline of 3.8 per cent from the level of the previous month. Foods and industrial materials each declined about 3.8 per cent. In October the index number advanced again, 3.7 per cent to 20,086, chiefly owing to advances in cereals, meats and sugar.

COST OF LIVING.—The official index number showed a very slight advance in September, reaching 13,162 on the base July, 1914=1, about 0.15 per cent above the previous month's level. Foods declined about 0.2 per cent; heating and lighting declined 1.5 per cent; clothing advanced 2.7 per cent; and rent showed no change. In October the cost of living rose one per cent to 13,307. Foods and clothing rose one per cent. Heating and lighting declined slightly and rentals showed no change.

### Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry and Labour, on the base April, 1914=100, was 547 for August, a decline of 3.4 per cent for the month under review. Declines were shown by all groups, with the exception of hides and leather and raw rubber, which rose slightly, and resin, tobacco and paper products which showed no change.

RETAIL PRICES AND COST OF LIVING.—The index number of retail prices of 56 articles at Brussels, on the base April, 1914=100, was 529 in September as against 526 in August. The index number for the Kingdom advanced 5 points to 503.

The official index number of cost of living of a working class family, on the base 1921=100, was 128.37 for September, a slight increase on the August level. Slight increases were shown by all groups except heat and light. The budget for a middle-class family also showed a slight increase in its total index. All groups advanced, the figure for foods being about 2 per cent above its previous level.

### France

WHOLESALE PRICES.—The index number of *Statistique Générale* rose 1.8 per cent to 496 in September, on the base 100 in July, 1914. Foods rose 2.1 per cent, although the sugar, coffee and cocoa group showed a decline. Industrial materials rose 1.7 per cent, all groups contributing to the increase.

**Germany**

**WHOLESALE PRICES.**—The official index number of the Federal Statistical Office, on the base 100 in 1913, rose 5.4 per cent over the average for August, reaching 126.9. Foods rose 8.8 per cent while materials rose only 0.2 per cent. Goods produced rose 6.9 per cent and goods imported rose 0.2 per cent.

**COST OF LIVING.**—The official index number on the base 1913-14=1, was 1.16 billions in September as compared with 1.14 in August. Food increased 2.4 per cent; heat and light declined 0.7 per cent; clothing advanced 1.4 per cent, and rent showed no change.

**Italy**

**WHOLESALE PRICES.**—The index number of the Milan Chamber of Commerce, on the base 100 in 1913, was 546.97 in September, a slight increase over the previous level. Foods increased in price by less than one per cent and industrial materials decreased very slightly.

**Spain**

**WHOLESALE PRICES.**—The index number of the Director General of Statistics, on the base 1913=100, was unchanged for August, at 182. Foods declined in price one point and materials rose one point.

**RETAIL PRICES.**—The index number of retail prices at Madrid, on the base 100 in 1914, declined 2 points to 180 in August. Animal foods and fuel and sundries declined in price while vegetable foods showed no change from the level of the previous month.

**China**

**WHOLESALE PRICES.**—The index number of the Ministry of Finance, Bureau of Markets, Shanghai, which has as base prices in February, 1913=100, rose slightly in September to 149.3, or 0.3 per cent above the August level. Hostilities had been declared, money was very scarce, and business had almost ceased. Cereals and some other foods showed rising prices owing to limitation of supply. The groups building materials and sundries also rose, and all the remaining groups declined.

**United States**

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics, on the base 1913=100, was slightly lower in September, being 148.8, or 0.6 per cent below the August level. There were decreases in farm products, clothing materials, fuels and metals, and increases in foods, building materials, chemicals, house furnishing goods and the miscellaneous group.

The *Annalist* index number of 25 foods at the middle of October was \$194.436, an increase of 1.3 per cent on the level at the middle of September. The index, after showing a fairly steady rise since June, has reached its highest level since September, 1922.

Gibson's index number of prices of 22 foods rose to 83.7 in October, an increase of 3.6 per cent over the previous month's level.

The Federal Reserve Board index number for September, on the base 1913=100, was 156, 2 points or one per cent below the August level. Goods produced fell slightly in price while goods imported rose. Goods exported fell 8 per cent. Raw materials and producers' goods fell slightly and consumers' goods showed no change.

Bradstreet's index number of wholesale prices rose in October for the fourth successive month, reaching \$13.3499, a gain of 2.7 per cent over the October 1 level. The principal gain for the month was shown by the price of provisions. Hides and leather, metals and miscellaneous products also gained and fruits, oils, building materials and chemicals rose slightly. Breadstuffs, live stock, textiles, and naval stores declined slightly.

Dun's index number for November 1 was \$193.734, having shown its fifth consecutive monthly rise. This was a gain of 1.5 per cent over the October 1 level. All groups showed increases with the exception of breadstuffs, which declined very slightly. All foods advanced 2.4 per cent.

**COST OF LIVING.**—The index number of the Massachusetts Special Commission on the Necessaries of Life rose 1.3 per cent to 160.5 in September, on the base 1913=100. Food, clothing and fuel and light all showed increases in price, and shelter and sundries showed no change.

**Hours of Labour in Great Britain**

During 1923 the General Council of the British Trades Union Congress sent a questionnaire to its affiliated organizations for the purpose of ascertaining the normal working week recognized in industries in which members of the trade unions were employed. The result of this enquiry was as follows:

<i>Hours per week.</i>	<i>Numbers of workers.</i>
40.....	24,500
42.....	800,600
44.....	305,687
46.....	8,500
46½.....	11,590
47.....	964,224
48.....	1,409,613

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1924

**D**URING the third quarter of 1924 the Department of Labour received reports of 355 fatalities due to accidents among workmen while employed in Canada. Of these 120 occurred in July, 132 in August, and 77 in September, and 26 occurred during the first six months of 1924, making the following totals for the three quarterly periods of the year: 291 fatalities in the first quarter, 315 in the second quarter, and 329 in the third quarter. In 1923, there were reported 307 fatalities in the first quarter, 351 in the second quarter, and 375 in the third quarter.

The highest number of accidents occurred in the transportation and public utilities group, there being 80 in this group as compared with 72 in the construction group, 37 in manufacturing, 37 in agriculture, 36 in mining, 28 in logging, and 15 in the fishing industry. In the separate industries the steam railway service had the highest record with 39 fatalities, agriculture came next with 36 and building construction third with 34. The ratio of employees killed to the number of workers employed during the month is hard to determine exactly, but it may be estimated approximately on the basis of the number of employees engaged in 1922, shown in the September issue of the *LABOUR GAZETTE* (page 841), as follows: agricultural workers, 988,006; manufacturing industries, 463,864; steam railway service, 165,635; mines, 62,249; fishing and logging industries, 57,880 and 26,950 respectively. These figures would appear to indicate that logging with 28 fatali-

ties was the most hazardous of all occupations during the quarter, that mining ranked next and that the steam railway service was third. The construction industries showed an exceptionally high fatality record with 72 fatalities as compared with 173 fatalities in this group for the whole of the year 1923. Statistics showing the number of employees in the construction industries are not available. An article elsewhere in this issue deals with the causes of accidents in 1922, and the ratio of accidents in certain industries.

A hurricane off the coast of Nova Scotia during the latter part of August caused quite a considerable loss of life among fishermen. Three deaths occurred in a mine at Drumheller, Alberta, due to an explosion, and three deaths were due to an explosion of a steam boiler in a cheese factory at Kemptville, Ontario, one of the victims in the latter case being a young boy who had gone with a friend to the factory. The greatest loss of life during the quarter was, however, due to persons coming in contact with electric wires, there being seventeen persons electrocuted while at work in the various industries. Eight deaths were reported as due to infection. Exceptionally large also are the number of deaths due to breaking of harness, ropes, cables, etc.

The following table of industrial accidents has been prepared from information received from all sources available. It does not, however, necessarily include all the industrial accidents that may have occurred.

### FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1924

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE—</b>				
Farmer.....	Beynon, Alta.....	July 5	5	Kicked by horse.
Farm hand.....	Huxley, Alta.....	" 5	5	Struck by lightning.
Chauffeur on tractor	Ste. Philomene, Que....	" 10	over 20	Lost control of tractor which hit tree.
Farmer.....	Loverne, Sask.....	" 10	10	Kicked by colt.
Farmer.....	Roseneath, Ont.....	" 17	24	Gored by bull.
Farmer.....	Unionville, Ont.....	" 19	45	Rope broke causing fall, while pulling back car of hay fork.
Farmer.....	Bergeronnes, Que.....	" 19	57	Horse bolted and carriage overturned.
Farmer.....	Durham, Ont.....	" 20	20	Struck by bag of chop which rolled from wagon.
Farmer.....	Breadalbane, P.E.I....	" 21	over 21	Struck by harness which broke while driving horse on hay fork.
Farmer at road work	Chauvin, Alta.....	" 22	59	Cut by scraper which fell back when man lifting it into rig slipped.
Farm hand.....	Valleyfield, Que.....	" 23	17	Drowned.
Farmer.....	Westport, Ont.....	" 24	24	Struck by pulley from hay fork.
Farmer.....	London, Ont.....	" 25	54	Fell from load of hay.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1924—Con.

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>AGRICULTURE—Con.</b>				
Farmer.....	Morrisburg, Ont.....	" 29	70	Collapse of scaffold.
Farmer.....	St. Cuthbert, Que.....	Aug. 1	over 21	Kicked by horse.
Farmer.....	Rustico, P.E.I.....	" 2	.....	Fell from bridge—drowned.
Farm hand.....	Huxley, Alta.....	" 4	over 21	Struck by lightning.
Farmer.....	Kinkora, Ont.....	" 6	.....	Fell when staging gave way.
Farmer.....	Sherbrooke, Que.....	" 12	over 21	Electrocuted. Hay hoist touched live wire.
Farmer.....	Embrun, Ont.....	" 13	.....	Struck by rotating hay fork.
Farmer.....	Hanley, Sask.....	" 13	43	Run over by horses. Horse shied when it stepped on broken board.
Farmer.....	Didsbury, Alta.....	" 14	36	Team took fright while being unhitched.
Farmer's son.....	Brussels, Ont.....	" 16	16	Fell from load of grain—run over.
Farm hand.....	Stratford, Ont.....	" 19	.....	Dropped dead while unloading hay.
Farm hand.....	Ingersoll, Ont.....	" 20	.....	Caught in separator belt.
Farm hand.....	Weyburn, Sask.....	" 20	.....	Struck by lightning.
Rancher.....	Kamloops, B.C.....	" 25	.....	Gored by bull.
Farm hand.....	Wayne, Alta.....	" 26	.....	Slipped off wagon and run over.
Harvester.....	Wilson, Sask.....	" 28	35	Truck overturned.
Farm hand.....	Kingston, Ont.....	" 29	14	Crushed under horse which fell on him.
Farmer.....	Clanwilliam, Ont.....	" 29	.....	Buried by cave-in of septic tank.
Farmer.....	Ladner, B.C.....	Sept. 12	.....	Gored by bull.
Farmer.....	Edmonton, Alta.....	" 19	38	Fell into pot of boiling mash.
Farm hand.....	Regina, Sask.....	" 20	29	Crushed beneath wagon.
Farmer.....	Red Point, P.E.I.....	" 23	over 21	Gored by bull.
Farm hand.....	Moose Jaw, Sask.....	" 24	.....	Fell from wagon.
Farmer.....	Bangor, Sask.....	" 29	.....	Crushed while backing tractor.
<b>FISHING AND TRAP-ING—</b>				
Fisherman.....	Skeena River, B.C.....	July 29	18	Slipped from boat—drowned.
Fisherman.....	Rivers Inlet, B.C.....	" 30	.....	Fell from boat—drowned.
Fisherman.....	Lunenburg, N.S.....	Aug. 23	.....	Drowned. Fell off wharf in darkness.
Fishermen (2).....	Lunenburg, N.S.....	" 26	.....	Washed overboard—drowned.
Fisherman.....	Stonehurst, N.S.....	" 27	.....	Washed overboard—drowned.
Fishermen (6).....	off Nova Scotia Coast.....	" 27	.....	Drowned during hurricane.
Fisherman.....	St. John, N.B.....	" 27	.....	Succumbed to exhaustion while keeping craft afloat during storm.
Fisherman.....	Yarmouth, N.S.....	" 28	.....	Drowned in wreck of fishing smack.
Captain on fishing schooner.....	(near) Gloucester, Mass.....	" 28	.....	Drowned in wreck of schooner.
<b>LOGGING—</b>				
Labourer.....	Erie, B.C.....	July 5	53	Struck by falling tree.
Labourer.....	Petawawa, Ont.....	" 8	26	Drowned.
Stamper.....	Kingcome River, B.C.....	" 8	60	Struck by outside bunk log on logging truck and rolled under wheels.
Labourer.....	Goulais Bay, Ont.....	" 9	59	Thrown off wagon.
Gas engineer.....	Myrtle Point, B.C.....	" 9	29	Collision of gas car with fogging car.
Chokerman.....	Ocean Falls, B.C.....	" 9	.....	Struck by choker which struck a stump and glanced sideways.
Logger.....	Cowichan Lake, B.C.....	" 9	30	Struck by choker hook which caught on limb while being drawn.
Engineer.....	Kenora, Ont.....	" 12	26	Crushed by machinery.
Labourer.....	Serpent River, Ont.....	" 14	16	Drowned.
Setter.....	Powell River, B.C.....	" 16	26	While raising saw cable broke.
River driver.....	Turbine, Ont.....	" 24	.....	Drowned while sluicing logs.
River driver.....	Petawawa River, Ont.....	" 25	23	Fell from log—drowned.
Logger.....	Steelhead, B.C.....	" 26	62	Slipped and rolled down embankment.
Labourer.....	Whitney, Ont.....	Aug. 7	.....	Hit by slab.
Hauling contractor.....	North Vancouver, B.C.....	" 9	.....	Slipped and crushed by timber being loaded.
Woodsman.....	Edmonton, Alta.....	" 10	35	Drowned.
Mill hand.....	Canoe Lake, Ont.....	" 13	.....	Leg amputated between gear and lumber.
Wood worker.....	Isaac's Harbour, N.S.....	" 18	.....	Drowned, boat upset.
Labourer.....	Victoria Co., N.B.....	" 19	40	Struck by falling lumber from pile.
Labourer.....	Fanny Bay, B.C.....	" 27	30	Fell from car while tallying lumber.
Woodsman.....	Pembroke, Ont.....	" 28	26	Struck by falling tree.
Labourer.....	Glendale, Ont.....	" 30	.....	Struck by tree.
Logger.....	Bainbridge, B.C.....	Sept. 2	47	While sawing wind-fall portion rolled over victim.
Woodsman.....	Alberni, B.C.....	" 14	.....	Struck by falling tree.
Employee.....	Vancouver, B.C.....	" 5	44	Crushed by falling pile.
Donkey engineer.....	Lagoon Inlet, B.C.....	" 6	39	Slipped and caught between piston rod and gears.
Employee.....	Les Cedres, Que.....	" 8	.....	Fell from boat—drowned.
Employee.....	Chatham, N.B.....	" 26	.....	Struck by falling tree.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1924—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MINING, SMELTING AND QUARRYING—</b>				
<i>Metaliferous mining:</i>				
Labourer.....	Timmins, Ont.....	July 12	36	Fell from ledge.
Blaster.....	North Bay, Ont.....	" 25	.....	Struck by flying material.
Miner.....	Timmins, Ont.....	" 26	33	Crushed by slide of rock.
Miner.....	Britannia Beach, B.C.....	Aug. 6	32	Fall of rock from wall of mine.
Miners (2).....	Kirkland Lake, Ont.....	" 14	28	Crushed by falling rock.
Miner.....	Stabell Mine Ont.....	" 14	48	Fell from bucket which struck timbers.
Foreman.....	Glacier, B.C.....	" 15	.....	Struck by falling rock in tunnel.
Mucker.....	Kimberley, B.C.....	" 17	21	Crushed between car and post.
Miner.....	Tough Oakes, Ont.....	" 29	24	Fell against open switch—electrocuted.
Smelterman.....	Trail, B.C.....	Sept. 5	under 20	Plank broke causing man to fall into lead furnace.
Labourer.....	Cobalt, Ont.....	" 27	.....	Struck by rock.
<i>Coal mining:</i>				
Miner.....	Sydney, N.S.....	July 5	.....	Fall of coal.
Surface man.....	Glace Bay, N.S.....	" 21	.....	Crushed under runaway box.
Miners (3).....	Drumbeller, Alta.....	Aug. 2	.....	Explosion.*
Labourer.....	Nanaimo, B.C.....	" 3	.....	Run over by coal car.
Miners (2).....	Springhill, N.S.....	" 4	51, 47	Fall of coal.
Miner.....	Nanaimo, B.C.....	" 7	49	Cut thumb—infection.
Shooter and loader.	Caledonia Mines, N.S.....	" 19	46	Fall of coal.
Miner.....	Lethbridge, Alta.....	" 23	.....	Gas explosion.
Miner.....	Hardieville, Alta.....	" 23	21	Burns. Fan belt broke while tender was away. A large pocket of gas was struck which ignited.
Miner.....	River Hebert, N.S.....	" 29	.....	Struck by runaway coal box.
Car runner.....	Nanaimo, B.C.....	Sept. 8	45	Caught between timber and side of moving car.
Timberman.....	Stellarton, N.S.....	" 15	52	Fall of coal.
Miner.....	Sydney, N.S.....	" 24	.....	Fall of coal.
Miner.....	Medicine Hat, Alta.....	" 27	25	Struck by falling coal following blast.
<i>Non-metallic mineral mining and quarrying:—</i>				
Miners (2).....	Thetford Mines, Que.....	July 19	19, 25	Fall of rock in open cast pit.
Foreman.....	Dubuisson Township, Que.	Aug. 18	.....	Fell from bucket in vertical shaft.
Labourer.....	Black Lake, Que.....	Sept. 3	.....	Fall of wooden tower.
Brakeman on gravel train.	Fuller Station, Ont.....	" 23	.....	Run over. Knocked off tender when head struck chute.
<i>Clay products and structural materials:—</i>				
Labourer at stone works.	Sherkston, Ont.....	July 3	63	Suffocated when sand caved in.
Employee at cement works.	Montreal, Que.....	" 9	30	Struck by gear which slipped from iron beam supporting machinery.
<b>MANUFACTURING—</b>				
<i>Vegetable foods, drink and tobacco:</i>				
Miller with milling company.	Goderich, Ont.....	July 9	.....	Leg broken. (No further particulars.)
Carpenter at biscuit factory.	London, Ont.....	" 15	72	Thrown off table.
Workman at bakery	Woodstock, Ont.....	" 21	60	Caught hand in roller—infection.
<i>Animal edible products:</i>				
Employees at cheese factory (2).	Kemptville, Ont.....	Aug. 12	25,—	Explosion of steam boiler (see <i>Labour Gazette</i> , September, 1924).
Dairyman.....	Lethbridge, Alta.....	Sept. 29	43	Slipped and fell while washing floor.
<i>Textiles:</i>				
Carder's assistant..	Huttonville, Ont.....	Aug. 15	35	Hand caught in machine—infection.
<i>Printing and publishing:</i>				
Pressman.....	Hamilton, Ont.....	Sept. 24	29	Leg caught in gears.

\*A blast shot was fired but the regulation firing apparatus had not been used.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1924—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>MANUFACTURING—</b>				
<i>Con.</i>				
<i>Pulp, paper and paper goods:</i>				
Employee of paper mill.	Van Brussels, Que.....	July 1	over 21	Crushed by cart which overturned when horse bolted.
Employee of paper mill.	Kenora, Ont.....	" 12	.....	Fell into tank and got caught in revolving mixer, while using a stick to move material.
Employee of paper mill.	Pentecote River, Que...	" 19	.....	Drowned.
Labourer at paper mill.	Port Arthur, Ont.....	Aug. 1	.....	Caught in machine.
Labourer at paper mill.	Hawkesbury, Ont.....	Sept. 21	.....	Explosion—burned.
Employee at paper mill.	Merritton, Ont.....	" 25	.....	Boiler explosion.
<i>Saw and planing mill:</i>				
Mill worker.....	St. John, N.B.....	July 5	38	Slipped and fell while carrying lumber.
Labourer.....	Welland, Ont.....	" 7	68	Struck by board.
Mill worker.....	Eastman, Que.....	" 15	21	Struck by board.
Mill worker.....	Ymir, B.C.....	" 17	.....	Trapped by forest fire.
Loader.....	South Westminster, B.C.	" 31	40	Fell from locomotive crane truck.
Yardman.....	Edmonton, Alta.....	Aug. 5	41	Struck by iron hook while rolling lumber.
Labourer.....	Stave Falls, B.C.....	" 6	24	Struck by arm of electric shovel.
Mill worker.....	Fortierville, Que.....	Sept. 9	.....	(No particulars).
Mill worker.....	Fredericton, N.B.....	" 16	23	Struck in eye by splinter from edger.
Mill worker.....	Timmins, Ont.....	" 22	18	Thrown against post—head injured.
<i>Wood products:</i>				
Employee at shingle mill.	Vancouver, B.C.....	Aug. 25	40	Caught in cogs of conveyer.
<i>Iron, steel and products:</i>				
Railway shop employee.	Calgary, Alta.....	July 2	over 21	Automobile accident.
Machinist.....	Montreal, Que.....	" 9	30	Struck on head when main gear of elevator broke.
Employee of pipe fitting factory.	Oshawa, Ont.....	" 10	45	Explosion of core oven.
Railway company machinist.	St. Thomas, Ont.....	" 28	35	Arm fractured. (No further particulars).
Labourer at motor company.	Oshawa, Ont.....	Aug. 1	.....	Perforation of bowels from air forced by hose.
Machinist at railway shop.	Winnipeg, Man.....	" 8	63	While repairing a pipe, through a misunderstanding cars were moved by switch engine.
Sorter at horse shoe factory.	Hamilton, Ont.....	" 25	.....	Fell from elevation.
Employee at railway shop.	Clinton, Ont.....	Sept. 7	35	Explosion.
Employee of iron works.	Guelph, Ont.....	" 8	17	Fell into vat of scalding sulphuric acid.
<i>Non-ferrous metal products:</i>				
Zinc roaster employee.	Trail, B.C.....	Aug. 16	over 21	Explosion of coal dust when car of coal was dumped by trestle in front of furnace.
<i>Chemical and allied products.</i>				
Furnace repairman at carbide company.	Shawinigan Falls, Que..	Aug. 15	35	Fell from scaffold while repairing iron girder.
Workman at oil refinery.	Lethbridge, Alta.....	" 24	.....	Burned when still exploded. Was attempting to perfect a new pressure still.
<b>CONSTRUCTION—</b>				
<i>Building and Structures:</i>				
Iron worker.....	Lakefield, Ont.....	July 2	50	Fell from building.
Carpenter.....	Orillia, Ont.....	" 9	.....	Scratched finger—infection.

FATAL INDUSTRIAL ACCIDENTS DURING THE THIRD QUARTER OF 1924—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
<b>CONSTRUCTION—</b>				
<i>Building and Structures—(Cont'd.)</i>				
Carpenter.....	Vancouver, B.C.....	" 9	49	Fell from scaffold.
Painter.....	Quebec, Que.....	" 10	29	Fell from church belfry.
Workman installing fixtures.	Montreal, Que.....	" 10	.....	Fell from scaffold.
Carpenter.....	Archydale, Sask.....	" 15	23	Fell from ladder.
Labourer.....	Point-du-Lac, Que.....	" 15	.....	Buried when earth in excavation caved-in.
Painter (Sign).....	Quebec, Que.....	" 23	21	Fell from scaffold.
Carpenter.....	Limoilou, Que.....	" 24	.....	Fell from balcony.
Riveter.....	Campbellford, Ont.....	" 24	40	Struck by falling plank.
Labourer.....	Lynn Creek, B.C.....	" 26	45	Struck by clam shell bucket.
Workman.....	Montreal, Que.....	" 31	19	Fell from scaffold.
Carpenter.....	North Bay, Ont.....	" 31	65	Fell from scaffold.
Carpenter.....	Levis, Que.....	Aug. 6	over 21	Fell from scaffold.
Labourer.....	Montreal, Que.....	" 19	42	Crushed by falling concrete.
Engineer.....	Vancouver, B.C.....	" 19	.....	Fell from roof.
Carpenter.....	Toronto, Ont.....	" 19	60	Fell between risers on stand.*
Workman.....	Toronto, Ont.....	" 20	50	Fell. -Lost balance when stepping from scaffold to ladder.
Labourer.....	Toronto, Ont.....	" 21	.....	Buried in quicksand in excavation.
Workman.....	Montreal, Que.....	" 20	42	Struck by falling concrete block.
Labourer.....	Port Dalhousie, Ont.....	" 21	.....	Fell from barn rafters.
Carpenter.....	Port Hope, Ont.....	" 28	61	Fell from ladder.
Labourer.....	Lambton Mills, Ont.....	" 29	18	Fell. Rope broke while cleaning brick work of water tank.
Labourer.....	Kenogami, Que.....	" 29	.....	Collapse of wall.
Painter.....	Montreal, Que.....	Sept. 4	37	Fell through skylight from roof.
Plumber.....	Farnham, Que.....	" 6	.....	Electrocuted. Aerial wires fell on electric wires.
Employee.....	Montreal, Que.....	" 10	20	Lost balance and fell into lift.
Carpenter.....	Pasqua, Sask.....	" 16	44	Cut with knife—infection.
Plumber.....	Montreal, Que.....	" 18	52	Struck by iron plate.
Carpenter.....	Vancouver, B.C.....	" 18	37	Fell from scaffold. Got too near edge when moving concrete buggy.
Iron worker.....	Oshawa, Ont.....	" 20	22	Fell off scaffold.
Employee.....	Montreal, Que.....	" 23	.....	Fell off scaffold.
<b>BUILDING CONSTRUCTION—</b>				
Carpenter.....	Ford, Ont.....	" 24	.....	Fell off tower.
Employee.....	Montreal, Que.....	" 24	27	Collapse of scaffold.
<i>Railway Construction:</i>				
Bridgemen (2).....	Wye, Ont.....	July 3	34, 56	Drowned.
Driller.....	Glacier, B.C.....	" 17	41	Explosion. Drill struck unexploded shot.
Pile driver (engineer).	Near Croyden, B.C.....	Aug. 1	37	Collision.
Carpenter.....	Shafford, Que.....	" 5	60	Struck by train.
Employee at track construction.	Humberstone, Ont.....	" 15	34	Crushed when dump car slipped from track.
Bridgeman.....	Actonvale, Que.....	" 29	58	Struck by train.
Employee at camp.	Lomond, Alta.....	Sept. 3	50	Knocked down and run over by frightened team.
Employee.....	Lemberg, Sask.....	" 11	37	Run over by train.
Pile driver (engineer).	Nabor bridge, Inverness Siding, N.S.....	" 15	31	Struck by crank which came off.
Labourer.....	Port Arthur, Ont.....	" 29	.....	Derailment of flat car carrying workers.
<i>Miscellaneous Construction:</i>				
Labourer.....	Windsor, Ont.....	July 2	34	Cave-in.
Labourer.....	St. Catharines, Ont.....	" 3	45	Pinned under derrick car.
Pitman.....	Thorold, Ont.....	" 5	40	Head crushed between padlock and dipper arm.
Labourer.....	Three Rivers, Que.....	" 12	24	Asphyxiated. Buried under earth and sand.
Employee.....	Welland, Ont.....	" 11	.....	Toppled over with derrick car.
Labourer.....	Peterboro, Ont.....	" 10	.....	Fell under moving truck.

\*Jury considered that drop bolts should have been used in the construction of the staging in question, and on all similar stagings.

Employee.....	Port Arthur, Ont.....	" 17	47	Blown from dredge following the bursting of a sleeve valve on suction pipe.
Labourer.....	Nipigon, Ont.....	" 18	.....	Drowned.
Riveter.....	Niagara Falls, Ont.....	" 22	37	Missed blow at rivet and fell against ironwork of bridge.
Watchman.....	Toronto, Ont.....	Aug. 5	55	Drowned.
Employee.....	Montreal, Que.....	" 8	32	Fell from coal car.
Bridgeman.....	Winnipeg, Man.....	" 8	64	Caught between cars.
Carpenter.....	St. Catharines, Ont.....	" 13	.....	Electrocuted. Head struck low hanging power wire.
Employee.....	Thetford Mines, Que.....	" 15	about 45	Dynamite explosion.
Car repairer.....	Port Colborne, Ont.....	" 15	.....	Caught between drawbars on end cars.
Crane operator.....	St. Catharines, Ont.....	" 16	44	Slipped and fell to concrete floor of lock.
Employee.....	Glacier, B.C.....	" 16	.....	Struck by falling rock.
Engineer.....	St. Catharines, Ont.....	" 18	60	Struck by falling clay loosened by dynamite explosion.
Labourer.....	Toronto, Ont.....	" 21	32	Fell from bridge.
Well digger.....	Speers, Sask.....	" 18	.....	Poisoned by gas while going down well. Fell from carrier having failed to strap himself in.
Labourer.....	Montreal, Que.....	" 20	32	Slipped from edge of car to ground.
Well digger.....	Clanwilliam, Man.....	" 29	.....	Cave-in of well shaft.
Labourer.....	Blackwater, Ont.....	Sept. 6	73	Struck by steam shovel.
Labourer.....	Bath, Ont.....	" 11	.....	Crushed with load.
Workman at gas main in sewer.	Montreal, Que.....	" 15	58	Struck by bucket.
Labourer at road construction.	St. Louis Nazaire, Que..	" 19	under 21	Premature explosion of dynamite.
Employee at trench construction.	Rosemount, Que.....	" 27	43	Accidentally set off a charge of dynamite.
<b>TRANSPORTATION AND PUBLIC UTILITIES—</b>				
<i>Steam Railways:</i>				
Conductor.....	Grand Birch subdivision, Man.	July 1	.....	Myocarditis from being shaken up. Had previous heart trouble.
Engineer.....	St. John, N.B.....	" 2	65	Fell entering building. Internal hemorrhage.
Conductor.....	Minto, Man.....	" 10	47	Sprained knee while unloading freight. Later phlebitis and suppuration.
Sectionman.....	Lynden Junction, Ont...	" 11	59	Struck by train.
Labourer.....	Brooks Siding, Alta.....	" 15	.....	Struck by train.
Railway agent.....	Rosedale, Alta.....	" 17	.....	Engine hit truck which in turn hit agent.
Trackman.....	Aultsville, Ont.....	" 17	.....	Struck by engine.
Employee.....	Minaki, Man.....	" 18	53	Boiler explosion due to lack of water in boiler.
Sectionman.....	Ashcroft, B.C.....	" 19	50	Struck by train.
Trainmen (2).....	Birch Island, Ont.....	" 22	46, 45	Head-on collision.
Employees with wrecking crew.	Walton, Ont.....	" 23	50, 47	Struck by swinging boom and knocked off flat car.
Employees (2).....	Big River, Sask.....	July 24	.....	Derailment due to a small boy placing wooden slab on rails.
Trackman.....	Vancouver, B.C.....	" 25	56	Struck by automobile.
Flagman.....	Near Ogilvie, Man.....	" 26	55	Struck by engine.
Trainman.....	Shannonville, Ont.....	Aug. 8	.....	Fell from car.
Employees.....	Winnipeg, Man.....	" 8	64	Struck by cars and run over.
Section labourer.....	Near Revelstoke, B.C.....	" 8	.....	Struck by train.
Sectionman.....	Sarnia, Ont.....	" 14	.....	Struck by engine.
Sectionman.....	Ritchie, B.C.....	" 16	.....	Speeder struck rock slide.
Sectionmen (2).....	Allanwater, Ont.....	" 16	38, 43	Motor car collided.
Yard foreman.....	Calgary, Alta.....	" 18	62	Struck by log from car.
Trainman.....	Minnedosa, Man.....	" 19	26	Fell from top of car.
Yardman.....	Kenora, Ont.....	" 21	43	Fell off moving car.
Sectionman.....	Springhill, N.B.....	Sept. 3	28	Train struck lorry.
Brakeman.....	Farnham, Que.....	" 8	over 21	Lost balance while fixing brakes—crushed.
Brakeman.....	Lemberg, Sask.....	" 11	37	Fell from top of car.
Foreman.....	Windsor, Ont.....	" 12	38	Run over.
Sectionman.....	London, Ont.....	" 13	.....	Struck by train.

### International Enquiry into Production

The International Labour Office published about a year ago Volume 1 of the Enquiry into Production which contained a general account of the production crisis which took place after the war. The third volume, containing 1,022 pages, has just appeared. It contains seven sections, dealing with the following subjects: (1) the shortage of raw material; (2) the shortage of equipment; (3) shortage of transport; (4) the lack of capital; (5) the lack of markets; (6) the exchange crisis; (7) other general factors.

Since the year 1920, the two economic factors which dominated the movement of production are the lack of markets and the exchange crisis, the latter being considered as

the pivot of the whole economic world crisis. Special attention is devoted to the methods of stabilization adopted in Central and Eastern Europe. When the League of Nations stabilized the Austrian Crown, the dollar rose in Austria at the rate of 21 crowns a day. When Poland effected the stabilization of its mark, the price of the dollar at Warsaw mounted at the rate of 68 Polish marks per minute. When Russia established the tchervonetz, the value of which is 10 gold roubles, the dollar soared at Petrograd at the rate of 18,000 roubles per second. When Germany stabilized the mark by the creation of the rentenmark, the dollar shot up at Berlin at a speed of 75,000 marks a second.

### IMMIGRATION INTO CANADA DURING THIRD QUARTER OF 1924

THE accompanying table, compiled from information furnished by the Department of Immigration and Colonization, gives some details respecting the total number of immigrants into Canada during the third quarter of 1924. For purposes of comparison the figures for the previous quarter and for the corresponding quarter of 1923 are also given.

The table on page gives the nationality, sex, occupation and destination of all immigrants, who entered Canada during the quarter under review.

## LEGAL DECISIONS AFFECTING LABOUR

### Pooling of Wages by Pilots

THE right of the pilots on the St. Lawrence River to pool their wages in accordance with an agreement made among themselves in 1918, was upheld by a decision of the Supreme Court of Canada in a recent judgment. The circumstances leading to this judgment are outlined below.

In December, 1918, the pilots for the District of Montreal associated themselves together in a partnership under the name of the "United Montreal Pilots." The partnership was formed for a period of twenty-five years, the pilots' agreement containing a provision that no member could withdraw as long as he remained a pilot or had not been expelled. It was further stipulated that all members of the partnership renounced any individual right to collect their pilotage dues, such right being delegated to the partnership with a view to an even distribution among all the pilots irrespective of individual earnings.

In 1921 one of the associated pilots, Alberic Angers by name, declined to pay a portion of his earnings into the common fund, and the United Montreal Pilots took action against him on the ground that he had earned \$2,400 during the previous season which, under the terms of the contract referred to, he was obliged to pay over to the partnership for distribution, but that he refused to do so when so required.

The Shipping Federation of Canada supported the stand taken by Angers on the ground that the effect of the pooling agreement was to take away from individual pilots the incentive to render the best service, and that the pilots' association was a body inimical to the public interest generally, and especially to merchants and shipowners. They cited enactments and regulations contained in the Pilotage Act and in the by-laws of the Pilotage Authority for the purpose of compelling pilots to do their duty, and referred to "the constant endeavour, by fresh regulations, to supply the want of the stimulus supplied by freedom of employment."

The Shipping Federation cited the Pilotage sections of the Canada Shipping Act (Revised Statutes of Canada, 1906, chapter 113) which provide as follows:—

433. Subject to the provisions of this Part, or any Act for the time being in force in its pilotage district, every pilotage authority shall, within its district, have power from time to time, by by-law confirmed by the Governor in Council, to—

(b) make regulations respecting the approval, licensing, management and maintenance of pilot boats, and respecting the distribution of the earnings of pilots and pilot boats, etc.

A by-law (No 45) under this provision is in effect as follows:—

"All pilotage dues shall be payable to and collected by the Pilotage Authority, who shall deduct therefrom the amount required for the Pilots Pension Fund, and pay to each pilot the balance of such pilotage dues earned by him. The method and time of such payments shall be as the Pilotage Authority directs."

The foregoing provision of the Act, and the by-law, were cited as suggesting that the intention of the Act was that the pilots should receive their own earnings individually.

DECISION OF SUPREME COURT.—The lower courts having given judgment in favour of the United Montreal Pilots, the case was carried by Angers to the Supreme Court of Canada, by whom the appeal was dismissed in June of the present year.

The Supreme Court was unanimous in its decision, judgments being given as follows:—

#### *Mr. Justice Mignault:*

I do not see anything contrary to the public order in agreement between many persons practising the same profession or the same industry, to unite and contribute to a common fund for their benefit, which funds would be divided among all the members of the society in the proportion agreed upon among them. The United Montreal Pilots Association, which the appellant consented to join, is an association of this kind which has been voluntarily formed for the mutual advantage of its members. This association is to last twenty-five years, and the appellant, before the expiration of this period, refuses to pool his earnings, giving as a reason that the association is illegal and contrary to the public order. Universal societies for pooling earnings are not unknown in civil law, as shown by Article 1858 of the Civil Code. Anyone joining them of their own free will should observe the conditions while the society lasts. The pilots who formed that association are all licensed pilots for the pilotage district of Montreal, and the public order, a word which is sometimes abused, is not concerned by the agreement which they made of pooling their earnings. The appellant considers that he would earn more money if he retained his earnings instead of contenting himself with the share which would be allowed him by this social pact. This is quite possible. But then he should not have joined this association. As long as it shall exist he will have no valid reason for retiring from it and will have to respect the agreement he entered into with his co-members. His contention that he is a sort of public officer and that for that reason he cannot associate with his confreres is groundless.

The appeal should be dismissed with costs.

#### *Mr. Justice Idington:*

I cannot see that the parties hereto because of being licensed as pilots, can be held to be such public officers as to bar their right to pool their receipts from fees got for service.

I should be glad if I could see otherwise, for the appellant seems to have been rather improvident in joining.

It can easily be rectified if the Government is satisfied, as appellant's counsel contends is the fact, that pooling receipts tends to impair efficiency of the service, and sees fit to shape its regulations so as to prevent its continuance. Meantime I cannot say as matter of law that the system so operates.

I conclude that in my opinion this appeal should be dismissed with costs.

#### *Mr. Justice Malouin:*

I am of the opinion that the pilots are not public officers. I would dismiss the present appeal with costs.

for the reasons given by the Court of King's Bench, Court of Appeal.

*Mr. Justice Anglin:*

I would affirm the judgment of the Court of King's Bench for the reasons assigned by the learned Chief Justice and Mr. Justice Dorion.

*Mr. Justice Duff:*

The question is a difficult one, but on the whole I think the agreement in question is not within the principle which withholds from assignments of the salaries of public officers the assistance of the law.

Here it is questionable, to say the least, whether the assignors are public officers within the scope of the principle; and, moreover, the object of the agreement is to provide for the whole body of pilots greater pecuniary security. That such an agreement would, in fact, be detrimental to the public service seems to me to be very debatable, and I know of no established legal doctrine which requires me to say that it is.

The appeal should be dismissed with costs.

*(Supreme Court of Canada—Angers versus Gauthier.)*

### Employers' Liability

An employee in the warehouse premises of the General Wholesalers, Limited, an organization affiliated with the United Farmers' Co-operative Company, Limited (Ontario), sustained serious injury, in June, 1922, from falling into an elevator shaft. His work consisted in receiving, checking, and putting in place, goods as they came on the premises, and in connection with this work he operated an elevator. On the day of the accident, after unloading, he stepped back to re-enter the elevator, but as it had been moved and the gate was not in place, he fell into the shaft. He brought action against the company for damages on the ground that their servant or agent had removed the elevator without giving him the necessary warning, and had left the shaft unguarded. The company claimed that the plaintiff had shewn disregard of conditions of which he was aware, and that he was himself responsible for the injury he had sustained.

The court found that the effect of decisions in similar previous cases, and of sections 106 and 107 of the Workmen's Compensation Act, was to place the liability on the defendants, notwithstanding that the negligence was that of a fellow workman, but that contributory negligence had been shown by the plaintiff. Moreover the provisions of section 58 of the Factory, Shop and Office Building Act (requiring that elevators in these establishments should be provided with doors) were not observed by the defendants. The plaintiff's contributory negligence was taken into account in assessing the damages, in accordance with section 108 of the Workmen's Compensation Act, these damages being assessed at \$800. It may be noted that the industry followed by the defendants in this case is one of those coming under Part II of the Workmen's Compensation Act of the province. The sections

of the Act which govern in the case are in part as follows:—

106. (1) Where personal injury is caused to a workman by reason of any defect in the condition or arrangement of the ways, works, machinery, plant, buildings or premises connected with, intended for or used in the business of his employer or by reason of the negligence of his employer or of any person in the service of his employer acting within the scope of his employment the workman or if the injury results in death the legal personal representatives of the workman and any person entitled in case of death shall have an action against the employer, and if the action is brought by the workman he shall be entitled to recover from the employer the damages sustained by the workman by or in consequence of the injury, and if the action is brought by the legal personal representatives of the workman or by or on behalf of persons entitled to damages under The Fatal Accidents Act they shall be entitled to recover such damages as they are entitled to under that Act.

(4) A workman shall not by reason only of his continuing in the employment of the employer with knowledge of the defect or negligence which caused his injury be deemed to have voluntarily incurred the risk of the injury. See R.S.O. 1914, cap. 146, s. 6, last part.

107. A workman shall hereafter be deemed not to have undertaken the risks due to the negligence of his fellow workmen and contributory negligence on the part of a workman shall not hereafter be a bar to recovery by him or by any person entitled to damages under The Fatal Accidents Act in an action for the recovery of damages for an injury sustained by or causing the death of the workman while in the service of his employer for which the employer would otherwise have been liable.

108. Contributory negligence on the part of the workman shall nevertheless be taken into account in assessing the damages in any such action.

*(Ontario—Pitt versus United Farmers' Co-operative Company, Limited).*

### Master and Servant

A salesman entered into a covenant with his employer that he would not at any time before May 31, 1925, within a specified district, or within seven miles, carry on, or be interested in, "whether as principal, partner, agent, employee, servant, or in any other way," any business similar in whole or in part to the business of the company. The employee having violated this agreement, the employer brought action for an injunction restraining the employee from carrying on business similar to their own prior to the date mentioned. The defendant made a counter-claim against the company, both cases being tried without a jury. The court held that the agreement was based upon a valuable consideration, that the restriction was not broader than was necessary for the protection of the plaintiffs, and did not unfairly hamper the defendant in the exercise of his calling; that it was not unreasonable as to duration or area, was not contrary to the public interest or public policy, and ought to be enforced. The injunction was granted up to the date named and the counter-claim was dismissed.

*(Ontario—Dominion Loose Leaf Company, Limited versus Manuel).*

# DEPARTMENT OF LABOUR, CANADA

MINISTER—THE HONOURABLE JAMES MURDOCK

DEPUTY MINISTER—H. H. WARD

## Functions of the Department

**Industrial Disputes Investigation Act, 1907.**—The administration of the Industrial Disputes Investigation Act, 1907, which provides for the establishment of Boards of Conciliation and Investigation in cases of disputes affecting mines and public utilities.

**Conciliation.**—The maintenance of a staff of officers at various points whose services are utilized in the adjustment of labour disputes.

**Fair Wages.**—The administration of the Fair Wages policy of the Government of Canada which provides for the observance of the current wages rates and hours of the district on Government contracts and on railway construction towards which financial aid has been voted by Parliament.

**Labour Statistics and Information.**—The collection, compilation and publication of statistics of wages, hours, prices, cost of living, strikes and lockouts, industrial accidents and industrial agreements; also of labour organization and organization in industry, commerce and the professions; the conduct of investigational and research work bearing on industrial relations and labour conditions; the publication of bulletins of information on these subjects.

**Labour Gazette.**—The monthly publication of the "Labour Gazette" containing a review of the industrial situation throughout Canada, a record of proceedings under the Industrial Disputes Investigation Act, statistics of wages and hours, wholesale and retail prices in Canada and other countries, strikes and lockouts, industrial accidents, summaries of laws and legal decisions affecting labour and other information on current matters of industrial and labour interest.

**Labour Legislation in Canada.**—The compilation and publication of reports containing the texts of the labour laws of the Dominion Parliament and of the Provincial Legislatures.

**Library.**—The maintenance of a library of publications on labour and economic subjects.

**Employment Service of Canada.**—The administration of the Employment Offices' Co-ordination Act under which, in co-operation with various provincial governments, free public employment offices are maintained in 66 centres; statistical information relative to employment conditions is also collected and published.

**International Labour Organization (League of Nations).**—The collection and transmission of information required by the International Labour Conference and Office; correspondence with Federal and Provincial Government departments and with organizations of employers and employees relative thereto; the representation of Canada at the International Labour Conference and on the Governing Body of the International Labour Office.

**Technical Education.**—The administration of the Technical Education Act which provides for grants to the provinces for the purpose of promoting technical education; the collection and publication of information in the form of bulletins and otherwise.

**Canadian Government Annuities.** The administration of the Government Annuities Act, 1908, whereby provision may be made for old age by the purchase of annuities by individuals, or associations on behalf of their members, or by employers on behalf of their employees.

**Combines Investigation Act, 1923.**—The administration of the Combines Investigation Act, 1923, which provides means for investigation of alleged combines.

of Labour of Canada*

PUBLISHED MONTHLY, in English and French.

SUBSCRIPTION RATES—Canada, United States, and Mexico, 20 cents per annum, postage prepaid; all other countries \$1.00 per annum; postage prepaid. All subscriptions payable in advance. Single copies three cents each.

CHANGE OF ADDRESS—When a change of address is ordered both the new and the old address must be given. The notice should be sent to the Circulation Manager, Department of Labour, Ottawa.

HOW TO REMIT—Remittances should be sent by Postal Note or Money-Order, payable to the order of the Labour Gazette. Cash should be sent in Registered Letter. Remittances must not be made in postage stamps.

LETTERS should be sent to The Editor if in reference to the subject matter of the publication, and to the Circulation Manager if in reference to subscription; in each case the address being the Labour Gazette, The Department of Labour, Ottawa. Communications thus addressed, may be sent free from any part of the Dominion, if addressed in care of the Deputy Minister.

# THE LABOUR GAZETTE

PREPARED AND EDITED IN  
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 24]

DECEMBER, 1924

[NUMBER 12

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

THIS issue of the LABOUR GAZETTE contains the regular monthly articles on the industrial and labour situation in Canada during the past month, including reviews of the recent movement of prices and cost of living, the employment situation, industrial disputes and conciliation proceedings, recent industrial agreements, fair wage contracts, etc.; also the usual notes on labour union activities, vocational training and apprenticeship, and special articles on various current topics of interest to labour.

### Monthly Summary

Reports from the Employment Service of Canada indicated a contraction in the volume of business during October, following the increased activity of the two preceding months, and employment generally was on a lower level than in the same month a year ago. This contraction continued during November. At the beginning of November the percentage of unemployment among members of trade unions was 6.8 as compared with 5.9 per cent at the beginning of October and with 4.8 per cent at the beginning of November, 1923. Reports from 5,737 employers of labour showed a slight decline in the number of persons employed by them on November 1, when 762,848 persons were on the combined payroll as compared with 770,595 on October 1.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.46 at the beginning of November as compared with \$10.31 for October; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, advanced to 157.7 for November as compared with 157.0 for October; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.5 for November, 1920; 256.7 for May, 1920 (the peak); and 217.5 for November, 1919.

The time loss caused by industrial disputes was less in November than in either the pre-

ceding month or November, 1923. Two disputes were in existence, one of these being carried over from October, but as both were settled during the month there was no official record of any strike or lockout in Canada on November 30. The two disputes referred to affected 313 employees, and resulted in a loss in working time of 4,808 working days. Corresponding figures for the previous month were as follows: 6 disputes, 8,656 employees, and 141,448 working days; and for November, 1923, 15 disputes, 2,237 employees, and 55,978 working days.

### Alleged Combine in the Distribution of Coal

Mr. David Campbell, K.C., of Winnipeg, was appointed on October 23, 1924, a Commissioner under the Combines Investigation Act, 1923, to investigate an alleged combine of coal dealers—retail and wholesale—and coal mine owners, resulting in the controlling of the purchase or sale of coal in the Province of Manitoba and elsewhere to the injury of consumers.

Mr. M. G. MacNeil, barrister, of Winnipeg, has been instructed by the Department of Justice to conduct the investigation before the Commissioner.

Public sittings commenced on November 7 at the Provincial Law Courts, Winnipeg,

### Alleged Combine in the Distribution of Fruit and Vegetables

Mr. Lewis Duncan, barrister, of Toronto, was appointed on July 2, 1924, a Commissioner under the Combines Investigation Act, 1923, to investigate an alleged combine of jobbers, brokers and others resulting in the controlling of the prices, purchase and sale of fruits and vegetables produced in British Columbia and elsewhere to the injury of producers and consumers.

Sittings commenced on July 11 at Vancouver, B.C., and have continued to be held at other points, including Vernon, Calgary, Edmonton, Regina, Montreal and Ottawa. The investigation is still proceeding.

**Industrial  
Disputes  
Investigation  
Act, 1907**

and its telegraphers, members of the Commercial Telegraphers' Union of North America. These reports are printed elsewhere in the present issue.

**Death of  
Samuel  
Gompers,  
President,  
A.F. of L.**

During November the Department received reports from the Board of Conciliation established in connection with a dispute between the Canadian Press and its telegraphers, members of the Commercial Telegraphers' Union of North America. These reports are printed elsewhere in the present issue.

News of the death on December 13 of Mr. Samuel Gompers was received with deep regret throughout Canada. At the recent convention of the American Federation of Labour at El Paso, Texas, reported elsewhere in the present issue, Mr. Gompers was elected president for the forty-third term. After the convention he had gone to Mexico to attend a

**SAMUEL GOMPERS**

joint meeting of the American Federation of Labour, and also to be present at sessions of the Pan-American Federation of Labour, of which he was president. While in the Mexican capital he was attacked by an illness to which he had lately been subject, and passed away at San Antonio, Texas, on his way home.

As president of the American Federation of Labour since its inception in 1881, with the exception of one term, Mr. Gompers had become well known in all parts of the world, but nowhere, outside of the United States, more intimately than in Canada. Of Eng-

lish birth, he came to the United States at the age of thirteen, taking up the cigar makers' trade, in which his father had been engaged, and as a young man was one of those instrumental in organizing the Cigar Makers' International Union, in which he retained membership up to his death. For a number of years past he was vice-president of this organization. As head of the American Federation of Labour he was recognized as the most outstanding figure in the labour movement of North America, and his death will be a great loss to the cause of wage earners everywhere, for whom he had valiantly fought throughout his long lifetime.

During the war Mr. Gompers was a member of the United States Council of National Defence, and in this capacity visited Canada in April, 1918, and delivered an address to the Parliament of Canada. On the conclusion of hostilities he was appointed president of an International Commission on Labour Legislation at the Paris Peace Conference which assisted in drafting the labour part of the Peace Treaty.

His latest visit to Canada was in May, 1924, when he attended the regular meeting of the Executive Council of the American Federation of Labour in Montreal. On this occasion, as previously, Mr. Gompers spoke of the importance of good relations between the workers of Canada and the United States, and of the desire of the American Federation of Labour to be helpful to organized workers in both countries alike.

**Joint  
Management  
in C.N.R. Shops**

A series of conferences between the operating officers and representatives of the maintenance equipment employees on the Canadian National Railways terminated during November in a tacit understanding to put into effect a plan of joint management within certain defined limits. It will be recalled that the representatives of the shop crafts on the Canadian National system, in conformity with the instructions of their union, interviewed the management of the lines early this year with a view to the establishment of some form of joint control. It was then agreed that a survey should be made of the main railway shop centres in order to make a test of the new method. Under the new arrangement a joint committee is to be established next January in the Moncton shops for the purpose of promoting closer co-operation in regard to welfare, shop suggestions, efficiency methods and other matters where wage rates are not involved. No written agreement, however, was entered into as

to the formation of a joint committee, but if it should be found in practice to be a success, the understanding is that a similar arrangement will be made in other regions of the Canadian National system.

### Fatality caused by "bump" at Springhill mine

early in December at the Springhill coal mine:—

"What is designated locally as a bump—described as a slide, pinch or squeeze by various authorities—occurred during the noon hour in No. 2 mine of the Cumberland Coal and Railway Company, here on Saturday, December 6. Twenty-one employees were at work in bords leading right and left from inclines 3, 4 and 5 driven from the 5,400 feet level. All of them excepting one man, had left the faces and were at dinner. The bump affected all the inclines stated, expelled the coal from the faces, overturning the supporting timbers and causing large portions of roof to fall. The man referred to, John Sweeney, 26 years of age, married and with a family of two, was caught in the roof fall. The vibration resulting from the bump extended over a large area and was felt like an earthquake shock throughout the town and neighborhood. Volunteers from amongst those who were uninjured undertook to recover Sweeney and the work varied by relief parties who reached the spot through communicating roads from a lower level succeeded in recovering his remains on Sunday morning. This was the most severe bump suffered in Springhill mines since the peculiarity became frequent a number of years ago. In most cases the bumps are confined to a single face, from which the coal is suddenly squeezed out as from a gun shot, often injuring and sometimes killing the man or men there engaged. Fatalities following these accidents are said to number fourteen in a twelve-year period."

The subject of "bumps" in the Nova Scotia mines lately was investigated by Mr. George S. Rice, chief mining engineer of the United States Bureau of Mines, who came to the province at the request of Premier Armstrong. Mr. Rice's opinion of the Springhill mine was quoted in the last issue of the LABOUR GAZETTE.

### Dangerous Practices at Railway Crossings

dangerous practices at railway crossings. In many cases, they point out, accidents at highway crossings are due to the negligence of those driving automobiles and other vehicles, and of pedestrians. This negligence is found both at unprotected and protected crossings. The Canadian National Railway lines, from March 25, to October 31 of the present year, show 49 cases where accidents occurred at protected crossings due to the negligence of those using the

The Springhill correspondent of the LABOUR GAZETTE sends the following account of a fatality caused by a "bump" which occurred

crossings. The Toronto, Hamilton and Buffalo lines, from April 30 to October 31, show three cases. The Canadian Pacific Railway lines from October 16, 1923, to September 30, 1924, show 554 cases. The Board publishes tables showing the causes of these accidents in the hope of educating motor drivers and others to be more careful at crossings. The tables show that all these accidents were caused by disregard of signals, by driving or walking under the gates, by driving too fast, or by other forms of carelessness.

### Old Age Pension Association of Canada

An organization is being formed under the title "The Old Age Pension Association of Canada," with headquarters at Toronto, for the purpose of developing public opinion in favour of a system of old age pensions as recommended by the special committee of the House of Commons at the last session of the Parliament of Canada (LABOUR GAZETTE, July, 1924, page 580). The officers of the Association are Mr. Harry Woodrow, chairman; Mr. James Stephenson, secretary; Mrs. Thomas McGarragh, treasurer; Messrs. Joseph Gibbons and James Watt, vice-presidents. These officers are all identified with the trade union movement, but it is hoped that other organizations will support the association, which is non-sectarian and non-political. A convention is to be called within six months after incorporation, at a place to be chosen by the first directors. The association will enroll active members among Canadians who are fifty years of age or over, the membership fee being one dollar. The fund thus collected will be used in connection with public meetings and other work for the furtherance of the work throughout Canada.

Labour organizations in the western provinces are taking steps to secure provincial co-operation with the Federal Government in any measures that may be taken to give effect to the report of the old age pension committee.

### Public opinion in Labour Disputes

In the introduction to a pamphlet entitled "Labour and Industrial Peace," Mr. Tom Shaw, former British Minister of Labour, makes a number of statements illustrative of the Labour Party's attitude and policy with regard to the prevention and settlement of labour disputes.

There is, he says, no question that arbitration is becoming more and more a practical method of settling disputes. For many years it was very difficult to convince working men

that the arbitrators generally selected held the balance even. They were suspected of looking at things always from the employers' point of view. Gradually, however, arbitrators have been found whose good faith is beyond dispute, and the probabilities are that arbitration will make more rapid strides in the immediate future. It seems absolutely impossible at the moment even to dream of any compulsion. There is, in the present state of things, apparently no way of making an employer run a concern if he does not desire to do so, nor will the worker willingly give up his right to cease work either individually or in combination with his fellows, if the terms and conditions of his employment are not satisfactory.

There is, however, Mr. Shaw continues, a third party to be recognized. When a great transport dispute or a miners' dispute, for instance, breaks out, it is not merely the transport workers or miners or the employers who suffer. The whole of the general public suffer in disputes of that kind, although they have neither part nor lot in the dispute itself. He concludes:—

"It is because I have recognized this suffering of the public that I have determined so long as I remain in office to use the powers of the Ministry in setting up Courts of Inquiry in all cases where a dispute seems likely to inconvenience the public. When a dispute is ventilated and when the facts are laid open before the public, there is always a tendency on the part of the latter to realize the true state of affairs and to form a judgment on the real issues. Public opinion still is a tremendous force with both employers' organizations and trade unions."

#### **Employees receive medals for life saving**

The Canadian Electrical Association, on December 9, presented bronze medals to Claude Bradshaw and John McGraw, members of the line construction staff of the Ottawa Electric Railway Company, who were instrumental in saving the life of a fellow employee, Leo Clemens, on May 17. Clemens, while working on a pole line in Ottawa, touched a 2,200 volt line wire with his ear, and was rendered unconscious. His two companions succeeded in resuscitating him by applying the Schaeffer or prone method. Mr. A. A. Dion, general manager, of the Ottawa Electric and Gas Companies, presented the medals on behalf of the Canadian Electrical Association. He pointed out that this method of resuscitation had been adopted by all electrical companies throughout the continent to the exclusion of all mechanical apparatus,

and had been more successful in saving life than any other. The prone method, he stated, is equally efficacious in cases of drowning and asphyxiation. Its advantages are that it does not require an expert to apply it; that it can be easily taught; that it is independent of any mechanical contrivance, and, most important of all, that it can be applied immediately, during those first few seconds that have so great an influence on the victim's chance for recovery, moments that too often are lost while awaiting the arrival of resuscitation apparatus. Mr. Dion hoped that before long the method would be taught to all, even to the children, and offered the assistance of the company's trained staff for demonstration to any interested parties.

Mr. Wills Maclachlan of Toronto, official investigator of reported cases of resuscitation for the Canadian Electrical Association, related several instances in which the prone method of resuscitation had proven its superiority.

#### **Municipal share in mothers' allowances**

Mrs. M. E. Smith, who is one of the representatives of Vancouver in the legislature of British Columbia, referred in the House to differences between the provisions of the Mothers' Allowances Act of British Columbia and those of the Acts of other provinces, and suggested that municipalities should be required as in several other provinces to bear half the burden. Mrs. Smith alleged that municipalities in British Columbia were not taking their proper share in the relief of distress. The local authorities in Ontario and Alberta are required to contribute one-half the amount paid in allowances to residents within their boundaries. The Manitoba Mothers' Allowances Act (now the Chief Welfare Act) provides that the Municipal Commissioners may be authorized by Order in Council to levy upon municipalities in the Province "the whole amount so expended (i.e. in providing maintenance for bereaved or dependent children), or such portion thereof as may be just to recoup or partially recoup the Province for the same."

The Saskatchewan Act of 1922 makes no provision for the sharing of Provincial expenditures by municipalities.

#### **Family allowances**

Among the social experiments which have attracted wide attention in recent years is the adoption and extension in various countries during and since the war of the practice of supplementing the wages of workers by special allowances in

respect of their dependents. So numerous were the requests from different quarters addressed to the International Labour Office for information on this subject that it was decided to undertake a detailed investigation, and this was begun early in 1923. Shortly afterwards the University of Chicago approached the International Labour Office with a view to co-operation in the investigation, and agreed to make a grant from its funds in order to enable the Office to extend the range of its inquiries. The results of these inquiries have been published by the International Labour Office in a volume entitled "Family Allowances—The Remuneration of Labour according to Need". The information used for this report was gathered mainly from official publications, from studies by private organizations or individuals, and from the regulations or collective agreements governing the payment of family allowances. These data were supplemented by information obtained by correspondence with government departments in a number of countries and by special reports from external collaborators. The study made by the International Labour Office was purely objective in character. It presents the main features of the situation so far as these are available, together with opinions, more especially those of employers' and workers' organizations, on the system itself and on the methods of applying it. The general introduction outlines the principal features of the system and the main problems involved. This is followed by a description in some detail of the development in the different countries.

Unfortunately, precise figures of the workers covered by such systems are available for few countries. In France more than a million workers are employed in undertakings affiliated to equalization funds; if to these are added civil service employees, railway employees, and workers in the mining and other industries, the total amounts to about 2,700,000 workers. Excluding those paid by the State, the total of allowances amounts to about 300 million francs a year. In Belgium, the total number of workers in establishments covered by family allowance schemes was estimated at the middle of 1924 at about 280,000 and the total amount of allowances paid at about 20 million francs a year. In the Netherlands some 87,000 workers are covered. For other countries complete figures are not available, but it has been estimated that in Europe as a whole, excluding State employees nearly eight million workers are employed in establishments paying family allowances in some form or another.

### Public and Private Employment

An English writer, E. Colston Shepherd, in a recent work entitled "The Fixing of Wages in Government Employment," notes a tendency in the conditions of public service in Great Britain to approximate to those in private industry. Under the old conditions the state employee had constant work, was secure for the whole of his life, was given medical attention when necessary, with pay during illness, and had a pension to look forward to. These ideal conditions of employment have been considerably abridged of late in consequence of the multiplication of state departments and state functions, and the resulting increase in the number of public employees. In order to secure a supply of efficient labour successive governments have been forced to fall into line with the rule of supply and demand which prevails in outside industry in regard to the fixing of wages, hours of labour, and other questions. For example, the "fair wages" now required in government undertakings follow wage scales that have been arrived at through collective bargaining in the industrial field. The author points out the difficulty of retaining the feature of permanence that was formerly one of the most attractive features of government service. "The assurance of continuity in government employment constitutes one of its greatest difficulties in this respect," he says. "The fear of dismissal may not be held over the worker who fails to give his best. The stopping of an increment may have some effect, but can only be partial; and the path of promotion has not been sufficiently unencumbered in the past to form a powerful incentive."

### Sunday rest for Alberta Fire Departments

The Fire Department's Hours of Labour Act, which became law at the last session of the Alberta Legislature (LABOUR GAZETTE, May, 1924, page 376) contained the provision that it should not be adopted in any particular city until the electors should have voted in favour of such action. It is now stated that the question of the adoption of the Act is to be submitted to the voters at the civic elections in the province in December. Objection is taken to the act on the ground that its adoption would involve the municipalities in the heavy additional expense that would be required to maintain the existing effective strength of the fire brigades if the weekly rest were granted. The firemen's case is stated in a recent issue of the *Alberta Labour News* as follows:—

The firemen now work under what is known as the "Two Platoon" system, which in other words is two shifts. Each platoon works an average of 12 hours per day, 7 days per week, 365 days per year, or 84 hours per week, 52 weeks per year, less two weeks' vacation. No meal hours are allowed and as is generally known they are subject to call while off duty, and must receive permission from the chief of the department before going outside the city limits.

If granted the "One Day Off," the firemen will still be at a disadvantage compared with other workers, for they will still be on duty a total of 72 hours per week, while other workers average about 48 hours, and also have a week-end off and all statutory holidays, to which the fireman is not entitled. The firemen feel that they are being unjustly discriminated against by reason of their occupation, and as 95 per cent of them are married, they feel that it is only their just right and due that they should be given the day off per week to spend with their families. The home life of the men is seriously interfered with, and is also a monotonous time for the wives of firemen, especially in the winter on night duty, when the husband and father is away from his home a matter of 14 to 15 hours straight.

### **Oriental Employees in British Columbia**

The speech of the Lieutenant Governor of British Columbia, at the opening of the Provincial Legislature on November 3, stated that the percentage of Orientals engaged in industries in the province had materially decreased. Answering a question in the Legislature as to recent action taken by the Provincial Government to bring about this reduction the Provincial Minister of Labour said: "Letters have been written to several large employers of labour in the province, including railway companies; employment officials have been instructed to work toward the gradual elimination of Orientals in industry and to impress upon employers the advisability of this course; no opportunity has been lost by members of the Government, on the platform and in conversation, to urge that Orientals be replaced by whites. As a direct result of the activities of the Department of Labour, 2,070 Orientals were replaced by whites on railroad work alone in 1922. Representations were also made by the Attorney-General to the Minister of Fisheries of Canada that fishing licenses should be issued in decreasing numbers to Orientals, and this has been done."

### **Inoculation of employees in British Columbia**

Children employed as berry pickers at Hatzic, British Columbia, were inoculated last summer against diphtheria on the order of the local medical health officer.

The speech of the Lieutenant Governor of British Columbia, at the opening of the Provincial Legislature on November 3, stated that the percentage of

that the Department had instructed him to take charge. "His reports," it was stated, "disclosed the fact that the methods adopted were those recognized as the proper means universally adopted for the control of diphtheria." The legislature was further informed that the children were not allowed any option whether they would or would not be inoculated, and that the consent of their parents or guardians was not obtained before the operation was performed. The Health Act of British Columbia authorizes health officers or local boards when outbreaks of such diseases occur, to "use all possible care to prevent the spreading of the infection or contagion," and requires that "no person having access to any person affected with any of the said diseases shall mingle with the general public until the regulations of the Provincial Board in that behalf and such sanitary precautions as may be prescribed by the Local Board shall have been complied with." Reference was made in the September issue to the compulsory vaccination of certain employees in New Brunswick in accordance with a statutory provision in that province.

### **School nurses in Saskatchewan**

According to official information given in the Legislature of Saskatchewan on December 4, fourteen nurses were employed on the school hygiene staff during 1923. The duties of these nurses are: (a) To promote health teaching in the schools and to cultivate good health habits in the children; (b) to influence public opinion toward healthful school surroundings; (c) to indicate to parents signs of remediable physical defects in school children. They do not diagnose cases, but point out symptoms, and request parents to take the children to medical practitioners for diagnosis. During 1923 the nursing staff visited 1535 schools and examined 45,737 pupils. In 31,864 cases they found signs of remediable physical defects, and in 11,285 of these cases treatment was given. The nurses also paid 1,296 visits to the homes of the children.

### **League of Nations and Peaceful Picketing**

The League of Nations has made the following provision in connection with trade disputes in the Saar Territory, supplementing the German Industrial Code in that territory:—"It shall be lawful for one or more persons, acting on their own behalf or on behalf of a trade union or of any person or body so instructing him or them in contemplation or furtherance of a trade dispute, to attend at or near a place where another person works or carries on business

if they so attend merely for the purpose of obtaining or communicating information without threats and acts of violence, or of peacefully persuading any person to work or abstain from working. It shall not be lawful, in contemplation or furtherance of a trade dispute,—(a) to use violence to or to intimidate in any way any other person, or his wife or children, or to injure his property; (b) to follow persistently such other person from place to place; (c) to hide any tools, clothes or other property owned or used by such other person, or to deprive him of or hinder him in the use thereof; (d) to watch or beset the house or any other place where such other person resides, works, carries on business, or happens to be, or the approach to such house or place; (e) to follow such other person with two or more persons in a disorderly manner in any street or road."

#### Fixing farm Wages in England

The Agricultural Wages (Regulation) Act, of Great Britain the introduction of which was noted in the

LABOUR GAZETTE for August,

came into effect during that month. The act sets up an agricultural wages committee for each county of England and Wales, and a Central Agricultural Wages Board. Each committee consists of an equal number of employers' and employees' representatives together with two impartial members appointed by the Minister of Agriculture, and a chairman. The wages board similarly consists of an equal number of representatives of employers and employees, together with members appointed by the Minister, whose numbers may not exceed one-quarter of the total number of members of the board. The committees have authority to fix minimum rates of wages, subject to approval by the board. When so approved the rates of wages so prescribed are enforceable in a court of law.

The Legislature of the Province of Quebec has been summoned to meet in its annual session on January 7.

The fifth session of the fifth Legislature of Saskatchewan opened on November 13.

According to returns compiled from returns submitted to the Minimum Wage Board of British Columbia 10,863 women and girls were employed in the province in the last year. The Act, however, does not apply to domestic servants, farm labourers or fruit pickers, and these classes are therefore not included in the above total. Girls in banks are also excluded, as the Dominion Bank

Act takes precedence over the Provincial Statute and the banks are not asked by the Board to send in returns.

The number of mothers benefiting under the Mothers' Pensions Act of British Columbia from the date of the last annual report until November, 1924, was 849, of whom 547 were widows. The number of children in respect to whom the pensions were granted was 2,269. New applications were received from 34 mothers, half the number being widows, with 67 children in all. Sixteen applications were refused, including those of ten widows, the number of children represented being 31.

Successful experiments have been made at Springfield, Illinois, in establishing communication by radio between the surface and the interior of a coal mine, where 250 feet of soil and rock intervened, the transmission being direct and vertical, the ground being the only conductor. The experiments, which are expected to have importance in connection with mine rescue and safety work, were conducted by members of the Springfield High School Radio Club acting in co-operation with the United States Bureau of Mines. An article in a recent issue of the *Coal Age* describes the apparatus employed.

The Police Commission of Moose Jaw, Saskatchewan, has reduced the working hours of the city policemen from ten to eight, adding a sufficient number of new men to the force.

The number of assisted passages to Canada granted during October, 1924, in connection with schemes under the Empire Settlement Act (Great Britain) of 1922, was 401. In the same month, 1,966 assisted passages to Australia were granted, and 837 to New Zealand. The total number of actual departures from Great Britain to Canada from January to October, 1924, was 7,943 (44 of these being to Ontario).

The Supreme Court of Appeals of West Virginia, in a decision dealing with the liability of coal companies for injury or death of boys under 16 employed in the mines in violation of the state mining laws has held that "A parent who consents to employment of his child under the age of 16 years in a coal mine is not precluded from recovery as the sole beneficiary if the accident causing the death of the child in the mine is the result of negligence of the employer for which recovery would be had if the employment had been legal."

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### The Labour Situation

**E**MPLOYMENT at the beginning of November showed a rather slight decline, mainly of a seasonal nature. The situation was not so good as on November 1, 1923.

During the month of October the offices of the Employment Service reported a contraction in the volume of business following the rise noted during August and September. Employment generally was on a lower level than during October, 1923.

The following is a survey of employment conditions at the end of November, 1924, as reported by the Superintendents of the offices of the Employment Service of Canada:—

The majority of the farmers in the Maritime Provinces had completed all outside work and consequently very few requests for workers were received. The demand for workers in the logging group was very active, especially in the province of New Brunswick and a fair supply of experienced men were employed. The cessation of work on highways, bridges and streets had thrown a number of men out of work, this surplus being absorbed very slowly in casual jobs.

Industrial conditions in the province of Quebec showed very little change, there being a very slight decrease in the number of orders for workers. Although fewer opportunities for building mechanics and labourers were available there was still a large number of tradesmen employed throughout the province. The demand for bush men was fair, the majority of camps being now fully supplied with men until the opening of the new year. The manufacturing industries were very quiet, while a slight increase was noted in trade due to the approach of the holiday season.

A slump in employment generally was reported throughout Ontario and the registration of applicants increased rapidly. However, the majority of offices were optimistic of a slightly improved situation during the Christmas trade. No new work was offered in building and construction, but several projects were underway which continued to employ a large number of men. Outside work was nearly finished, with the consequent depletion of staff on railway, highway and construction gangs. Some municipalities were providing work on water mains and sewers. The logging industry was brisk and placements in this group continued to occupy a large part of the business of the northern offices. Industrial operations slackened somewhat, with a recession in employment in several industries.

Dullness in demand was reported in all groups in Manitoba, the heaviest decline being in the farm group. There was, however, a slight call for thresher hands and for fall workers near Brandon. There was no demand in the province of Manitoba for loggers, but from the office at Winnipeg several transfers were made of experienced workers to the camps in Northern Ontario. Little work was available in the building group, the majority of the jobs offering being of a temporary nature only.

There continued a fairly active demand for farm workers in Saskatchewan, but at the majority of the offices there was a surplus of applicants registered. Quietness characterized the building and construction groups, and numbers of men were out of work owing to the completion of out door jobs. There was a decline in the demand in logging.

In Alberta there was an improved condition in the farming group until the completion of threshing operations, when the demand fell to the normal calls for workers for fall ploughing. Railway construction and out door work offered very little employment, but in some sections work was still underway on residences, sewers and road improvements. A slightly reduced demand for bushmen was shown but an improvement is anticipated in the near future.

The registration of workers at the British Columbia offices had increased considerably, due to the return of harvesters from the east. The situation was being met very satisfactorily. Some construction work was in progress, but most of the building was completed and orders have slackened off considerably. Casual work, however, was offered in increasing amounts. Few vacancies were available for railway construction workers, but plans were underway to continue dam repairs and road improvements as a remedy for unemployment. Conditions were quiet in the logging group and most lumber camps were well filled.

**EMPLOYERS' REPORTS.** According to the Dominion Bureau of Statistics, employment as reported by employers declined moderately

at the beginning of November, affecting approximately the same number of workers as did the contractions indicated on the same date of last year. The level of employment then, however, was higher than at the present time. Employment in manufacturing as a whole decreased and there were further losses

in construction, hotels and shipping. Seasonal expansion was noted in logging; mining, steam railway operation and trade also showed improvement.

Greater activity was indicated in the Prairie Provinces, but in the remaining provinces there were declines. The closing down of sawmilling and construction operations chiefly caused the reduction in the Maritime Provinces. In Quebec, sawmills, iron and steel, transportation and construction reported losses in personnel; there were, however, gains in rubber, leather, logging, trade and communication. In Ontario, marked seasonal expansion in logging, together with smaller gains in abattoirs, electrical apparatus and non-ferrous metal works and in transportation, was largely offset by decreases in sawmills, canneries and construction. In the Prairie Provinces improvement was registered in manufacturing, particularly in iron and steel, while sawmills and brick and cement works were slacker; the greatest gains in this district were, however, recorded in logging, coal mining and steam railway operation. In British Columbia, there was seasonal curtailment of operations in fish and fruit canneries and sawmills and in construction, but iron and steel, logging and railway transportation were more active. Of the seven cities for which separate tabulations are made, five—Montreal, Ottawa, Hamilton, Winnipeg and Vancouver—showed decreased employment, while in Toronto and Quebec increased activity was noted. Seasonal contractions in shipping and stevedoring, together with reductions in manufacturing, caused the decline in Montreal. Communication, construction and trade, on the other hand, showed gains. In Quebec, there were increases in leather and transportation, while clothing works were somewhat slacker. Manufacturing in Toronto was decidedly more active, iron and steel, in particular, showing recovery. Local transportation and road construction were also busier. Lumber mills and road construction showed seasonal curtailment in personnel in Ottawa. In Hamilton, employment in rubber declined, and construction was slacker. The largest losses in Winnipeg took place in construction, but there were declines on a smaller scale in some other industries. In Vancouver, improvement in iron and steel was more than offset by curtailment in sawmills and construction.

In the manufacturing group there were large seasonal contractions in sawmills, fish, fruit and vegetable canneries and smaller losses in petroleum product, pulp and paper factories. All other divisions of manufacturing, however, registered moderate gains; these were most

pronounced in rubber, iron and steel, leather and textiles. Logging afforded decidedly more employment and coal mining was also more active. Steam railway operation showed improvement in the Western Provinces, but this was more than offset by seasonal curtailment in shipping and stevedoring in Quebec, and there was a net decline in transportation. Construction continued to show heavy seasonal contractions in all its branches. Hotels and laundries were not so fully employed as at the beginning of October, while moderate improvement was indicated in trade.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of November, 1924.

TRADE  
UNION  
REPORTS.

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation among organized labour as reported by 1,487 trade unions with an aggregate membership of 149,292 persons was somewhat less favourable at the close of October than in either the previous month or the corresponding month of last year, the percentage out of work at the end of October being 6.8 as compared with 5.9 per cent on September 30, and with 4.8 per cent at the close of October, 1923. Improvement over September was reported by Nova Scotia, Ontario, Manitoba and Saskatchewan unions, the largest percentage gain being shown in Nova Scotia, where more employment was afforded coal miners, and increases in lesser degree were reported by building tradesmen and navigation workers. Of the decreases in the remaining provinces that of nearly 5 per cent in British Columbia was the most noticeable, and was due, to a great extent, to lessened activity among coal miners, though reductions were also shown in the manufacturing and building groups. In Alberta, also, considerable unemployment was reported by coal miners. In all provinces except Nova Scotia less favourable conditions prevailed than at the close of October, 1923, Alberta and British Columbia again showing the most noteworthy reductions. The unemployment registered in

the coal mines of Alberta and British Columbia this month was due to the fact that, though the strike which had been in progress in certain mining districts of these provinces was settled, some of the mines had not yet resumed operations. During the strike these miners were all shown in the Department's reports as "employed," as in the tabulations, union members either on strike or lockout are not considered as unemployed. In the manufacturing industries employment was on a slightly lower level at the end of October than in the preceding month, 11.0 per cent of the members being idle on October 31, as compared with 9.1 per cent on the last day of September. Textile and carpet, garment, wood and glass workers and metal polishers reported declines. Cigar and tobacco workers, paper makers, printing tradesmen and leather workers on the other hand were more fully engaged. The situation was slightly less favourable in the manufacturing industries than in October of last year, when 9.6 per cent of the members were unemployed. Coal miners in Nova Scotia were better employed during October than in the previous month, but in the Alberta and British Columbia coal fields there was considerable unemployment. Asbestos miners in Quebec reported no idle members. The building and construction trades registered an increase in unemployment over September, the percentage out of work on October 31 being 13.1, as compared with 11.9 per cent at the end of September. Bricklayers, masons and plasterers, painters, decorators and paper hangers, plumbers and steam fitters, tile layers, lathers and roofers and hod carriers were more active, but less work was afforded carpenters and joiners, granite and stone cutters and electrical workers. Bridge and structural iron workers reported no idle members, and the situation for steam shovel and dredgemen remained unchanged. In comparison with October of last year steam shovel and dredgemen, bridge and structural iron workers, granite and stone cutters, plumbers and steamfitters and tile layers, lathers and roofers were more active. The same percentage out of work was reported by electrical workers, and in the remaining trades less work was afforded. Slight improvement over September was registered in the transportation industries owing to greater activity among steam railway workers. Street and electric railway employees and navigation workers, however, were not so fully engaged. Slightly more unemployment was recorded in the transportation industries than in October of last year. Retail clerks were busier than in September. No unemployment was reported

by hotel and restaurant employees. Theatre and stage employees, barbers and stationary engineers and firemen were slightly more active. Fishermen and lumber workers and loggers reported no idleness.

#### EMPLOYMENT OFFICE REPORTS.

During the month of October, 1924, the references to employment made by the office of the Employment Service of Canada numbered 38,872, while the placements effected totalled 37,008. Of the latter the placements in regular employment were 24,420 of men and 3,309 of women, a total of 27,729, and the placements in casual work were 9,279. These placements may be compared with a total of 51,621 during the month of September, 1924, and with 56,917 during the month of October of the previous year. Last year at this time the placements in regular employment were 47,957, and those in casual work 8,960. Applications for work reported at the offices numbered 50,982, of which 39,385 were of men and 11,597 of women workers. This may be compared with a registration during the preceding month of 62,465 workers during September, while during October of last year 68,322 persons applied. Employers notified the Service of 40,310 vacancies in contrast with 56,707 during the previous period, and with 63,590 during the month of October of the previous year. The vacancies offered for men during the month under review numbered 31,846, and those for women 8,464. It will be noted that a decline is recorded in the transactions of the employment offices during this month, the reduction from the preceding period being due to the normal decrease at the end of the harvest season, and the marked decline from the period of 1923 is due to the fact that the harvest activities were completed more quickly this year than during 1923.

#### PRODUCTION REPORTS.

The Dominion Bureau of Statistics reports that the production of pig-iron during October showed an improvement of 22 per cent over the 23,202 tons produced in September, the production being 28,626 tons for October. The output was, however, lower than that reported for the same month in other years which were, 74,000 tons in 1923; 37,000 tons in 1922, and 50,000 tons in 1921. No basic pig-iron was made in October, 1924. Foundry iron rose 19 per cent to 22,909 tons. The cumulative production of pig-iron in Canada for the ten months' period ending October was 547,486 tons, an average monthly output of 55,000 tons. The number of furnaces in blast at the end of the month remained unchanged at

three, located as follows: one at Hamilton, Ontario, one at Sault Ste. Marie, Ontario, and one at Sydney, Nova Scotia.

The production of steel ingots and castings in Canada during October advanced to 19,996 tons, or 11 per cent over the 18,005 tons in September. Steel ingots rose to 19,061 tons as compared with 17,044 tons in the preceding month, while steel castings shaded slightly to 935 tons from the 961 tons in September. The gain was largely in the greater quantity of basic open hearth steel ingots produced. The output of this grade at 18,572 tons, all for the further use of the reporting firms, marked an increase of 12 per cent, and alloy steel ingots advanced 30 tons to 489 tons. Steel castings showed slight increases in the basic open hearth and electric grades, while the bessemer castings fell to 69 tons or about one-half the output reported in the previous month. The cumulative production of steel ingots and castings in Canada for the ten months period ending October was 601,707 tons, comprising 577,544 tons steel ingots and 24,163 tons steel castings. The average monthly output to date this year was 60,000 tons.

A report from the Department's correspondent at Cobalt shows that fourteen cars, containing approximately 1,100,025 pounds of silver ore, were shipped from the Cobalt Camp during the month of November, compared with 16 cars of silver ore containing 1,353,079 pounds in the previous month. The Nipissing mines shipped 88 bars, containing 100,828.37 ounces of silver, and the Mining Corporation of Canada shipped 125 bars, containing 126,086.53 ounces of silver, making a total of 213 bars, containing 226,914.90 ounces of silver, shipped during the month of November, as compared with 390 bars, containing 423,670.35 ounces, in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of October, 1924: at the Acadia Coal Company, Limited, 35,121 tons; at the Intercolonial Coal Mining Company, Limited, 10,790 tons; and at the Greenwood Coal Company, Limited, 5,255 tons.

As complete figures for the coal production in Canada are not available for the month of October, the statistics for the previous month are given at the end of this section.

A report from the British Columbia Forestry Branch shows that 225,128,966 feet of timber, board measure, was scaled in the province during October, 1924. This total includes Douglas fir, 92,597,119 feet; red cedar, 52,249,-

934 feet; spruce, 29,823,253 feet; hemlock, 27,944,483 feet; balsam, 7,697,418 feet; yellow pine, 1,951,719 feet; white pine, 1,436,868 feet; jack-pine, 3,587,865 feet; larch, 4,236,233 feet; cottonwood, 465,618 feet; other species, 42,486 feet; and species not specified, 3,095,970 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement, amounted to \$22,840,698 during the month of October, as compared with \$19,311,459 in September, and \$26,257,773 in the corresponding period of last year. The gross earnings from January 1, 1924, to October 31, 1924, were \$195,325,323 as compared with \$206,395,341 in the corresponding period of 1923.

The gross earnings of the Canadian Pacific Railway Company for October, 1924, were given in a preliminary statement as \$19,352,341 in comparison with \$15,493,984 in the previous month and \$23,769,733 in October, 1923. The gross earnings for the first ten months of 1924 were \$148,711,039, as compared with \$154,456,096 for the same period in 1923.

*Coal Statistics for September.*—During September the output of coal from Canadian mines according to estimates from the Dominion Bureau of Statistics amounted to 902,595 short tons, an increase of 28 per cent over the tonnage for the previous month. The greatest increase was one of 132,000 tons in Alberta, to a total of 265,000 tons for the month. The remaining provinces in order of their gains in output were: Nova Scotia, an increase of 66,000 tons to a total of 471,000 tons; New Brunswick, an increase of 6,000 tons to 18,000 tons in all; and Saskatchewan, an increase of 1,000 tons to 17,000 tons. British Columbia's output declined from 137,000 to 132,000 tons. It is stated that the seasonal demand in Canada for coal has a decided influence on the output. In each year since 1919, which is as far back as monthly figures are available, the output declined rapidly during the first four months of the year, to a minimum during the summer months. There was a slight rise in production each fall, culminating in a maximum in the closing months of the year. During 1919 the lowest output occurred in June; in 1920, it occurred in May; in 1921 and 1922, in April; in 1923 in July; and during the current year, because of strikes, the recovery in output was delayed until the end of August.

The total number of men employed in the coal mines of Canada during September was 21,639 of whom 16,492 worked underground and 5,147 on the surface, as compared with a total of 19,280 in August, of whom 14,682 worked underground and 4,598 on the surface.

The monthly production per man was 41.7 tons for September as against 35.4 tons per man for August. During September the production per man-day was 2.3 tons, as compared with 1.9 tons in August. The tonnage lost was largely due to lack of orders in September.

According to a report from the Dominion Bureau of Statistics, the value of the building permits issued in 56 cities during October was lower than in the preceding month but greater than in October, 1923. The figure for October, 1924, was \$11,533,111, for September, 1924, \$14,566,504, and for October, 1923, \$9,743,024.

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded during November, 1924, was \$24,614,200, compared with \$21,066,800 in October. Residential building accounted for 55.6 per cent of the November total, amounting to \$13,695,100. Business building amounted to \$4,813,600, or 19.6 per cent; industrial building to \$1,082,700, or 4.4 per cent, and public works and utilities to \$5,022,800, or 20.4 per cent. The activity was distributed among the provinces as follows: Ontario, 38.1 per cent; Quebec, 46.4 per cent; Prairie Provinces, 3.4 per cent; British Columbia, 10.6 per cent; and the Maritime Provinces, 1.5 per cent.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in October,

1924, the merchandise entered for consumption amounted to \$68,116,115 as against \$75,640,654 in October, 1923. The domestic merchandise exported amounted to \$103,292,462 in October, 1924, as compared with \$80,960,729 in September, and \$100,123,829 in October, 1923. Foreign merchandise exported amounted to \$1,023,719 in October, 1924, and \$1,176,074 in October, 1923.

The chief imports in October, 1924, were: fibres, textiles and textile products, \$13,774,538; non-metallic minerals and products, \$12,263,568; agricultural and vegetable products, mainly foods, \$10,581,389; and iron and its products, \$9,927,188.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$39,781,332; wood, wood products and paper, \$22,941,998; animals and animal products \$19,940,071; and non-ferrous metals and their products, \$6,725,192. During the seven months of the fiscal year

ended October, 1924, exports of agricultural and vegetable products, mainly foods, were valued at \$415,638,349; wood, wood products and paper at \$146,755,579; animals and animal products at \$91,274,171; and non-ferrous metals and their products at \$45,309,941.

### Strikes and Lockouts

The time loss due to industrial disputes was less in November than in either October, 1924, or November, 1923. There were in existence at some time or other during the month two disputes, involving 313 employees and a time loss of 4,808 working days, as compared with 6 disputes in October, involving 8,656 employees and resulting in a time loss of 141,448 working days. In November, 1923, there were recorded 15 disputes involving 2,237 employees and a time loss of 55,978 working days. One dispute commenced during November, 1924, and terminated during the month, and the one dispute which commenced prior to November also terminated during the month. At the end of the month, therefore, there were no strikes or lockouts on record except disputes in which employment conditions were reported to be no longer affected but which had not been formally called off.

### Prices

Retail food prices again advanced somewhat. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.46 at the beginning of November as compared with \$10.31 for October; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$16.92 for June, 1920 (the peak); \$15.32 for November, 1920; \$13.65 for November, 1918; and \$7.96 for November, 1914. The most important decline was in potatoes, though sugar, beef, pork and cheese were also somewhat lower in price. Eggs and bread showed the most important advances, while there were smaller advances in the prices of milk, butter, flour, rolled oats, tea and lard. Including the cost of fuel and rent with that of foods the total budget averaged \$20.81 for November as compared with \$20.67 for October; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.92 for July, 1920 (the peak); \$26.13 for November, 1920; \$21.61 for November, 1918; and \$14.36 for November, 1914. Fuel and rent were practically unchanged in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced slightly to 157.7 for November, as

compared with 157.0 for October; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.5 for November, 1920; 256.7 for May, 1920 (the peak); and 217.5 for November, 1919. In the grouping according to chief component material three of the main groups advanced, two declined and three were practically unchanged. Vegetables and their products advanced because of higher prices for grains, flour and other milled products and rubber, though sugar and potatoes declined. The animals and their products

group and the non-ferrous metals group each also advanced, the former because of higher prices for hogs, bacon, milk, eggs, and furs, and the latter because of advances in the prices of copper, lead, tin, zinc and antimony. The fibres, textiles and textile products group was slightly lower, increases in jute, hessian, silk and rope being more than offset by declines in cotton fabrics and yarns. The wood and wood products group was also slightly lower, while little change occurred in the iron and its products group, the non-metallic minerals group and the chemicals group.

## INDUSTRIAL CONDITIONS IN AUSTRALIA

**T**HE following data concerning industrial matters in Australia in 1923 are attributed to the Federal Bureau of Statistics:—

*Trade Union Membership.*—The number of members of trade unions in the Commonwealth at the end of 1923 was 699,743, of whom 90,923 were females.

*Unemployment.*—The number of unemployed members of trade unions reporting during the year averaged 7 per cent, as compared with 9.3 per cent during 1922.

*Cost of Living.*—The average cost of food, groceries, and house rent in the six capital cities was 6.3 per cent more in 1923 than in the preceding year, while, compared with the year 1911, the index number of the cost of living for the year 1923 shows an increase of 70 per cent.

Wholesale prices increased during the year by 10.6 per cent, and were 9.4 per cent higher than in 1911. As compared with 1911, the increase in the cost of living in 200 towns for the year 1923 was found to be 64.2 per cent for food, groceries, and the rent of five-roomed houses.

*Wages and Hours.*—The average normal rate of wage for Australia increased during 1923 from 91s. 6d. to 94s. 4d., but as a result of the increase in the cost of living the effective or real wages were lower in 1923 than in 1922, and are now only 6.2 per cent higher than in 1911.

Hours of labour increased from 46.39 per week per adult male worker in 1922 to 46.70 in 1923, and the net result of increases and decreases in rates of wages for the year was a total increase of £104,018, affecting 990,852 workpeople.

*Disputes.*—Industrial disputes to the number of 274 occurred in Australia during 1923, involving 76,321 workpeople, and entailing an estimated loss in working days of 1,145,977, with loss in wages of £1,275,506. The number of disputes was the lowest recorded for any year since 1913.

*Employers' Organizations.*—There were 480 organizations among employers, with 70,087 members.

*Co-operation.*—There were during the year 374 co-operative societies, with a total loan and share capital of £6,585,994, and with total sales of £45,935,935.

## Sunday Rest in Quebec

During November Premier Taschereau communicated with Price Brothers and Company, Limited, asking their co-operation regarding the observance of the Lord's Day Act of the province of Quebec. The Premier requested the company to dispense as much as possible with Sunday work, stating that he was daily receiving letters from various organizations protesting against the non-observance of the Sunday rest. The company replied that it would co-operate to the fullest extent, and that orders had already been issued to the heads of the mills at Kenogami to cease work on Saturday night at midnight and close the mills until midnight on Sunday from the first of January, 1925.

Later in the month the Quebec Sunday League, at its first conference at Three Rivers, congratulated the Premier on the happy results of his intervention, and suggested that similar action should be taken in connection with Sunday work in other pulp industries.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF NOVEMBER

**D**URING the month of November the Department received a report from the Board of Conciliation and Investigation established in connection with the dispute between the Canadian Press and its press telegraphers, members of Canadian Press Division No. 82, Commercial Telegraphers' Union of North America. The Board was composed as fol-

lows: Mr. Colin G. Snider, K.C., of Hamilton, chairman, Mr. E. Norman Smith of Ottawa, for the employer, and Mr. J. G. O'Donoghue, K.C., of Toronto, for the employees. The report was signed by the three members of the Board, Mr. O'Donoghue however dissenting on one point.

### Report of Board in Dispute between the Canadian Press and its Press Telegraphers

**IN THE MATTER** of the Industrial Disputes Investigation Act, 1907, and a dispute between The Canadian Press, Employer, and Its Telegraphers, Employees.

To The Hon. JAMES MURDOCK,  
Minister of Labour,  
Ottawa, Canada.

SIR,—The Board of Conciliation established by you herein has the honour to report as follows:—

Pursuant to appointment the Board consisting of Colin G. Snider, Chairman, J. G. O'Donoghue, K.C., named by the employees, E. Norman Smith, named by the employer, met at Toronto on the 6th, 11th, 27th, 28th, 29th days of October and on the 24th and 25th days of November, 1924. At various times during the proceedings the Board successfully endeavoured to bring about conferences between the parties to the dispute, and in this way a complete agreement on all the points in dispute was arrived at between the representatives of the employer and of the employees. The representatives of the employees alleging that they were not given authority to finally sign any agreement they might arrive at, but were compelled to first submit it to a vote of all the members of their union, asked time until next morning to take such vote by wire. This was agreed to, and the vote taken with the result that the proposed agreement was rejected by a considerable majority of the men.

Therefore your Board proceeded to finish hearing the parties and consideration of documents on the 24th and 25th days of November and to consider the matter and prepare this report of the Board. Mr. O'Donoghue, not agreeing to the reduction of wages of telegraphers in places of less than 50,000 population east of Winnipeg, will make a minority report on this point. The points in dispute were reduced to five, namely:—

1. Wages of Morse leased wire telegraphers in cities of 50,000 population or over by the last official Dominion census.
2. Wages of Morse leased wire telegraphers in places under 50,000 population.
3. Pay for overtime.
4. Promotions and seniority.
5. Agreement and arbitration.

Upon these disputed points your Board has been able to arrive at a unanimous agreement, except as above mentioned.

The scale of wages paid since September 1st, 1920, to the present time shall continue to be paid with exception that in places east of Winnipeg under 50,000 population by the last Dominion census shall be forty dollars per week instead of forty-five dollars.

It is also agreed by your Board that the telegraphers shall be paid time and a half for overtime as at present.

The Board recommends the adoption of the following seniority clause:—

It is agreed that vacancies in the telegraphic service of the company shall be filled by promotion and, ability and fitness being equal, length of continuous service with the company shall govern in making appointments to sending and receiving telegraphic positions. It is agreed that appointments shall be open only to telegraphers in the Traffic Manager's division in which the vacancy occurs, excepting that a telegrapher who desires to transfer from one Traffic Manager's jurisdiction to another shall first file with the Traffic Managers and District Chairmen of the two divisions concerned, statement of his desire to transfer, after which he shall be eligible for appointment as vacancies occur in the division to which he seeks admission, and shall have the same seniority rights as he held in the division from which he is transferring.

The Board also recommends the adoption of the following arbitration clause:—

It is agreed that any difference or dispute arising between the parties as to—

- (1) The interpretation of this agreement, or any part of it;
- (2) Any proposed change in the agreement, or addition to it;

(3) Any matter having to do with relations between the parties whether or not covered by this agreement;

(4) The renewal of this agreement; shall, on failure of the parties themselves to adjust it, be referred to a Board of Arbitration, which shall deal with the claims of either or both parties in the matter. Such Board, which shall be constituted within thirty days, shall consist of one representative of each of the parties and a third member, who shall be Chairman of the Board, and who shall be selected by the nominees of the parties hereto, or, if they cannot agree, by the Minister of Labour for Canada. The decision of the arbitrators (or a majority or them) shall become part of this agreement and be observed accordingly by the parties hereto.

The Board recommends that the parties enter into an agreement embodying the above terms and that such agreement should continue for a year and thereafter until such time as either party shall give to the other sixty days' notice in writing of intention to terminate the same.

All of which we, the members of the Board, have the honour to report.

(Sgd.) COLIN G. SNIDER,  
*Chairman.*

(Sgd.) E. NORMAN SMITH,  
*For the Employer.*

(Sgd.) J. G. O'DONOGHUE,  
*For the Employees.*

Dated at Toronto, this twenty-fifth day of November, A.D. 1924.

**Minority Report**

Under all the circumstances I think the wage scale under the agreement of September 1st, 1920, should continue in force. I believe harmonious relations will best be forwarded in this way, quite apart from the fairness of the matter.

(Sgd.) J. G. O'DONOGHUE.

**STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1924**

THE number of strikes and lockouts in Canada in existence at some time or other during the month of November was two, as compared with six in October. The time loss for the month was less than in November, 1923, being 4,808 working days, as compared with 55,978 working days in the previous year.

Date	Number of disputes	Number of employees involved	Time loss in working days
November, 1924.....	2	313	4,808
October, 1924.....	6	8,656	141,448
November, 1923.....	15	2,237	55,978

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

One alleged lockout, involving 275 work-people, was carried over from October. The alleged lockout, which commenced prior to November, and the one new dispute commencing during November, both terminated during the month. At the end of November, therefore, there were no strikes or lockouts on record. The record does not include minor disputes as described in the previous paragraph, nor does it include any dispute after

information has been received indicating that employment conditions are no longer affected, but which the union or organization concerned has not yet called off.

The figures printed are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received till some time after its commencement.

Information was received in the Department during November, but too late for the November issue of the LABOUR GAZETTE, of two strikes in the coal mining industry. On October 28, 145 coal miners at Drumheller, Alta., went on strike for changes in working conditions as affecting contract miners. After being on strike two days the president of the union ordered the miners back to work under conditions prevailing prior to the strike. At Sydney, N.S., on October 24, some 98 coal miners left work in protest against the discharge of four employees. This strike also lasted two days and the men resumed work when two of the discharged men were reinstated, while the other two were put on other work.

The one new dispute which commenced during November was an alleged lockout of printing compositors who had demanded increased wages and shorter hours. One of

the disputes which terminated during the month resulted in a compromise being effected, while the result of the termination of the second was indefinite.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

shorter hours. They had been receiving \$44 per week for a 48-hour week on the day staff, and \$47 per week for a 45-hour week on the night staff. They submitted a scale of wages calling for \$45 for a 45-hour week on the day staff, and \$49.50 for a 45-hour week on the night staff. The company refused to grant

### STRIKES AND LOCKOUTS DURING NOVEMBER, 1924

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
<b>(a) Strikes and lockouts commencing prior to November, 1924.</b>			
<b>MANUFACTURING—</b>			
<i>Wood products:</i>			
Match workers, Hull, Que.....	275	4,675	Alleged lockout commenced October 1, owing to proposed changes in working conditions. Settlement was brought about through the mediation of the Hull City Council and work resumed on November 20; compromise.
<i>Iron, steel and products:</i>			
Moulders, Guelph, Ont.....	5	.....	Commenced June, 2, against a reduction in wages. Information received indicates employment conditions no longer affected.
<b>(b) Strikes and lockouts commencing during November, 1924.</b>			
<b>MANUFACTURING—</b>			
<i>Printing and publishing:</i>			
Printing compositors, news, Saskatoon, Sask.	38	133	Alleged lockout commenced November 14, for increased wages and shorter hours. Terminated by mediation and work resumed November 18; Result indefinite.

**MATCH WORKERS, HULL, QUE.**—On October 1, an alleged lockout of 275 employees of a match manufacturing establishment occurred at Hull, Que. Negotiations which had been carried on proved unsuccessful in bringing about a settlement of the trouble. During November the Mayor of the city offered the services of the City Council to try and bring about a settlement, and conferences were held which resulted in a settlement on November 17. The Company stated that all the employees would be re-engaged without discrimination, as required, and that they would not be called upon to sign any engagement form, as at first proposed. On the other hand, the employees agreed to waive the signing of an agreement between the company and the union. In connection with the picketing there were some arrests for intimidation and seven were fined five dollars and costs.

**PRINTING COMPOSITORS, SASKATOON, SASK.**—An alleged lockout of 38 printing compositors at Saskatoon occurred on November 14. The employees demanded increased wages and

the increase, but offered to renew the old agreement or to arbitrate the difference between the increase the employees proposed and a reduction in wages of about ten per cent. This proposition was open till November 14, but was declined and work ceased at midnight on November 13. Negotiations were carried on and through the mediation of a prominent citizen of the city, the men decided to return to work at the old wage scale and to refer to arbitration the hourly rate for day work as between the Saskatoon rate of 91½ cents per hour and the Alberta rate of 94 cents per hour. Work was resumed November 18.

An explosion occurred recently at the Foothills Collieries mine in Alberta. The *Canadian Mining Journal* notes that this is the first occurrence of fire damp that has been encountered in the district. It is attributed to the fact that the Foothills Collieries have been developed to greater depths than the other mines along the line between Coalspur and Lovett.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING OCTOBER

THE British *Ministry of Labour Gazette* for November contains the following table which analyses the disputes in progress in October, 1924, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved in the establishments concerned, and the approximate time lost during the month in all disputes in progress.

Of the 37 disputes beginning in October, 12, directly involving 9,000 workpeople, arose out of demands for advances in wages; 13, directly involving 1,000 workpeople, on other wages questions; 6, directly involving 2,000 workpeople, on questions respecting the employment of particular classes or persons; and 6, directly involving 1,000 workpeople, on other questions. The total number of workpeople involved in these disputes (including those thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes) was approximately 17,000. In addition about 19,000 workpeople were involved, either directly or indirectly, in 37 disputes which began before October, and were still in progress at the beginning of that month. The number of new and old disputes was thus 74, involving about 36,000 workpeople, and resulting in a loss during October of about 377,000 working days. Settlements were

effected in the case of 17 new disputes, directly involving 9,000 workpeople, and 17 old disputes, directly involving 5,000 workpeople. Of these new and old disputes, 9, directly involving 10,000 workpeople, were settled in favour of the workpeople; 9, directly involving 1,000 workpeople, in favour of the employers; and 16, directly involving 3,000 workpeople, were compromised. In the case of 8 disputes, directly involving 600 workpeople, work was resumed pending negotiations.

Groups of industries	Number of disputes in progress in October			Number of workpeople involved in all disputes in progress in October	Aggregate duration in working days of all disputes in progress in October
	Started before October	Started in October	Total		
Mining and quarrying .....	10	6	16	15 000	108,000
Metal, engineering and shipbuilding .....	7	5	12	14,000	182,000
Textile .....	1	9	10	4,000	32,000
Transport .....	2	7	9	1,000	9,000
Other .....	17	10	27	2,000	46,000
<b>Total, October 1924</b>	<b>37</b>	<b>37</b>	<b>74</b>	<b>36,000</b>	<b>377,000</b>
<b>Total, Sept. 1924</b> ..	<b>34</b>	<b>41</b>	<b>75</b>	<b>28,000</b>	<b>518,000</b>
<b>Total, October 1923</b>	<b>18</b>	<b>41</b>	<b>59</b>	<b>56,000*</b>	<b>1,167,000*</b>

\*A dispute involving about 40,000 boilermakers, etc., in Federated shipyards accounted for most of the loss of time in October, 1923.

## BRITISH MINERS' WELFARE FUND

THE work of the Miners' Welfare Fund of Great Britain has been noted in former issues of the LABOUR GAZETTE (August, 1923, etc.). This fund was established under the Mining Industry Act of 1920 to be used in promoting recreation, education, and better social conditions among miners. It is raised by means of a levy of a penny on each ton produced at each mine and is administered by a committee appointed by the Board of Trade with the help of district committees. The report on the Fund for 1923, recently received, shows that over a million pounds accrued to the fund during the year. The recreational type of scheme has proved the most popular use of the Fund, with the Village Hall or

institute next in favour. Among the "Health" schemes under the Fund the committee considered the most important was that providing pit head baths for the miners. Such baths, they point out are advantageous not only from the point of view of home comfort, but from that of health as a tired miner, wet with sweat after work in a warm mine, is not suitably clothed for going home on a cold day. The outstanding feature of the past year was a convalescent home established in South Wales at a cost which was expected to reach £250,000. The committee also carries out research in the field of mine safety, promotes education in mining communities, and maintains an Industrial Welfare Society for the guidance of local societies.

## THE EMPLOYMENT SERVICE OF CANADA

### An Outline of the Dominion-Provincial Organization

THE growth of industry under modern conditions has in recent years created a public need for an employment service to bring together employers seeking workmen and workmen seeking employment. This need was met at first by agencies operated for individual gain. Private employment offices, however, were found in practice to be subject to certain abuses, and a demand accordingly arose for the establishment of a free and publicly owned service. The principle of Public Employment Services received the approval of the First International Labour Conference, held at Washington, D.C., in 1919, when a draft convention was adopted, making it incumbent on the signatory powers (including Canada) to establish such a service.

Although provincial employment offices had, in some provinces, been started prior to 1918, no Federal legislation with a view to developing public employment bureaus had been enacted. In that year, however, the "Employment Offices Co-ordination Act," an act "to aid and encourage the organization and co-ordination of employment offices," was passed. The offices which were to be organized and co-ordinated were the offices of the several provinces, and the co-ordination necessary to effect a nation-wide system was secured by the device of the Act providing for the annual appropriation of certain sums of money, to be distributed to the provinces under certain conditions, in the proportion that the expenditures of each on employment offices bore to those of all for the same purpose. The conditions under which the provinces become entitled to the receipt of subventions are contained in the annual agreement, which each of the provinces must conclude with the Minister of Labour in order to receive the financial assistance provided by the Employment Offices Co-ordination Act. Briefly, the conditions may be summed up by the statement that the provinces were to conduct free employment offices, and endeavour to place both men and women in all trades and occupations. Another condition of much importance is that the provinces undertake to issue no new licenses to private employment agencies, where the latter are subject to such legal regulation.

All the provinces except Prince Edward Island now conclude annual agreements with the Department of Labour. These eight provinces conduct free public employment offices,

in conformity with the terms of the Employment Offices Co-ordination Act, and their offices, when considered collectively, are called the "Employment Service of Canada." The Employment Service of Canada is an association, then, composed of the Federal and eight Provincial Governments. The Department provides the cohesion necessary to render eight distinct organizations a unit in the conduct of interprovincial employment matters; each provincial member of the Employment Service, while autonomous within specified limits, co-operates with the other provinces through the agency of the Department of Labour, and renders the whole institution national in its scope and outlook. To indicate the burden to which the Employment Service of Canada has fallen heir, mention might be made of the fact that private, fee-charging employment agencies are now illegal in Nova Scotia, Manitoba, Saskatchewan, Alberta and British Columbia, while in Ontario and Quebec they may operate only under license, and in these two provinces there are in all only about twenty-five commercial agencies. Consider, as well, a system of offices, free of charge to all patrons, with each office in constant communication with all other offices, and it will readily be appreciated that the greatly improved organizations of the labour market, *ipso facto*, adds to the volume of the services to be rendered.

Branches of the Service are located at sixty-six of the more important centres of population, and are so located that each and every industry, and each and every community, may be satisfactorily served. Tangible and substantial assistance is rendered in coping with such recurrent problems as those of harvest labour, logging operations, etc., as well as the day to day demand for employment or labour, where the occupations are of a more skilled and more diversified nature. The placements made have included persons of practically every occupation followed in Canada, and have embraced every county and district from Halifax to Vancouver. In addition, by co-operating with such local bodies as social service organizations, practical assistance has been rendered in dealing with local situations, and it is but fair to say that the actual figures of work accomplished by the Employment Service (published in the LABOUR GAZETTE from time to time), do not fully disclose the many useful services performed by

the employment offices, in their respective communities.

The following figures give the total number of placements made by the Employment Service of Canada, in each year since its inception:—

Year	Total Placements
1919 (10 months).....	305,905
1920.....	445,812
1921.....	355,756
1922.....	357,722
1923.....	393,522
1924 (10 months).....	462,552
	322,909

While the question of the relative merits of free public employment offices and private fee-charging agencies was a debatable and debated one in Canada in 1918, practical demonstration has done much to dissipate the view that the latter were preferable to the former. The Employment Service of Canada has successfully emerged from the experimental stage, and has demonstrated by work done its right to exist, as well as the possibilities latent in what has now become an integral portion of the Canadian industrial fabric.

### MANITOBA WORKMEN'S COMPENSATION INQUIRY

**T**HE Special Committee on Workmen's Compensation recently appointed in accordance with a resolution passed at the last session of the Legislature of Manitoba, held meetings at Winnipeg from November 3 to 22, when the views of the workers and employers were heard. The Committee failed to reach an agreement on contentious issues, and adjourned until December 15, in order to enable the Workmen's Compensation Board to prepare further evidence. The purpose of the Committee, as stated in the Legislature, is to put Workmen's Compensation on a permanent basis, and to end the annual fight in the Legislature over conflicting proposals. The names of the members of the Committee were given in the last issue of the *LABOUR GAZETTE* as follows: The Hon. R. W. Craig, Attorney General of the province, chairman; Mrs. Edith Rogers and Messrs. John Queen, W. J. Short and George Compton, members of the Legislature; Messrs. Fred Beale, H. B. Lyall, Charles F. Roland, L. J. Reycraft, K.C., and J. H. Elliott, representing the employers; Messrs. James Leslie, James Addison, F. W. Nicks, Thomas J. McMurray, K.C., and C. A. Tanner, M.L.A., representing the employees. Mr. Nicholas Fletcher, secretary of the Workmen's Compensation Board, was appointed as secretary.

One of the proposals of the labour representatives was that in cases of death the widow or foster mother should receive a lump sum of \$100 in addition to the monthly allowance, and besides the existing allowance of \$150 for funeral expenses. It was pointed out that the Ontario act makes such a special grant to meet the immediate necessities of the bereaved family. The employers' representatives opposed such an addition to the

burden already carried by industry for compensation. The Committee could not accept a suggestion that the question of making additional grants should be left to be decided by the Board on the merits of particular cases.

Differences of opinion developed in regard to the amount of compensation for permanent partial disability (this is now 66 $\frac{2}{3}$  per cent of the average earnings of the workmen before the accident); in regard to the amount of the widow's monthly allowance (now \$30), and of the allowance for each child of the deceased workman (now \$7.50 a month for each child under 16 years); in regard to the contribution of one cent a day towards the cost of medical aid now made by the employers; and in regard to the amount of maximum compensation and funeral benefit (the maximum earnings reckoned under the act are now \$2,000, and the funeral benefit is \$150).

Four proposals were rejected, one for the deletion of the words "approval of the Lieutenant Governor in Council" in connection with the fixing of the salaries of officers and employees of the Board; another to remove the exclusion of clerical workers from the benefit of the act; the third, to do away with the present system of classification and place all the workers in industry in one class; and fourth, to compel all contractors to notify the Board of the letting of sub-contracts.

In response to requests of members of the committee, Mr. Nicholas Fletcher, secretary of the Workmen's Compensation Board, furnished figures as to the assessment cost on each \$100 of pay-roll prevailing in the different provinces, these being as follows:—

Alberta.....	\$ 1 13%
Manitoba.....	1 17 $\frac{1}{2}$
Ontario.....	1 34 $\frac{1}{2}$
British Columbia.....	1 46 $\frac{1}{2}$
Nova Scotia.....	2 06 $\frac{1}{2}$

He also compared the amount of pay-roll and the premium paid for each of the past seven years, as follows:—

—	Payroll	Premium
	\$	\$
1917.....	29,861,000	374,135
1918.....	37,700,000	394,955
1919.....	44,555,000	568,029
1920.....	63,104,000	747,827
1921.....	59,679,000	776,605
1922.....	54,870,000	769,669
1923.....	57,000,000 (Estimated)	616,181

Mr. Fletcher also produced statistics showing that if the amendments desired by labour concerning widows and orphans, were incorporated in the act, the increase in the cost of administration would be 17.7 per cent over those of 1922, and 12.2 over the Ontario scale, while if the changes desired by the employers were adopted the decrease in the cost would be 9.8 per cent. To have applied a maximum of \$5,000 for each case would have effected a saving of \$81,378.41 in the 1922 costs, it was further shown.

Mr. H. G. Wilson, commissioner of the Workmen's Compensation Board, outlined the history of compensation in the province up to 1920, when the present act was passed. The present act, he stated, had proved cheaper in actual administration than previous acts.

The employers' representatives on the committee strongly opposed proposals for further increases in rates of compensation. Mr. L. J. Reycraft, K.C., counsel for the Canadian Pacific Railway, pointed out that the increases desired by labour if effective in 1922 would have amounted to \$141,000. He advocated the fixing of a maximum amount of total payments in compensation, which should be between \$4,000 and \$6,000. This would have a stabilizing effect and would create a feeling of security, he thought. He claimed that considering industrial conditions there should be decreases rather than increases in the existing rates. Mr. C. F. Roland, secretary of the Employers' Association of Manitoba, also maintained that industry in Manitoba would not bear any further burdens at present. Mr. D. B. Lyall, vice-president of the Manitoba Bridge and Iron Works, while allowing that the present rates were not the first cause of the existing depression of industry, stated that they were one of the many disadvantages under which industry was carried on, and that industry could not now stand any increase.

Mr. John Queen, leader of the Labour Party in the Provincial Legislature, argued

that legislation in regard to workmen's compensation had been introduced originally merely to ratify the principle that industry was responsible for the welfare of those who were affected by accidents. It must be remembered, he said, that this was no new expense on top of everything else, as before legislation of the kind was brought into existence the cost of maintaining those affected by accidents had to be borne by the municipality or charitable organizations, while there were court actions that involved industrial enterprises and governments in heavy costs. Before legislation of the kind was introduced the cost in regard to accidents was just as heavy a charge on industry as it is to-day. He pointed out that industry protected machinery by insurance and set aside money for depreciation. These were charges upon industry, and if machinery was a charge upon industry, surely a man should be made equal to a bit of machinery in respect of his being made a charge on industry also. He contended that the suggested increases were absolutely justified, and that the present rates of compensation showed that industry had not yet realized to the full extent its responsibility in this matter.

On a proposal by labour for a minimum of \$15 a week in the case of permanent total disability, Mr. Queen said it affected a class that most required protection under the act, while Mr. Reycraft and Mr. Roland thought the standard in effect in Ontario, of \$12.50, was adequate.

Mr. Reycraft submitted an addition to the clause dealing with permanent total disability providing for the payment of \$15 a week only when the injured man's wages averaged the amount, and where less, the amount of his earnings. This suggested amendment was tentatively accepted by the committee.

### Prevention of Accidents

At the opening of the conference Mr. E. McGrath, secretary of the Provincial Bureau of Labour referred to the urgent necessity of educative measures towards prevention of accidents. Increased use of machinery had necessitated greater care and a more vigilant system of inspection. Both, it was true, were matters of expense, but they accomplished substantial results in the way of prevention.

A sub-committee was subsequently appointed to draft a clause to be inserted in the Act to make provision for educational safety work. This committee presented majority and minority reports. The majority report strongly favoured the proposal that such work come under the direct supervision of the

Workmen's Compensation board. The minority report recommended that safety work should continue to be carried on as at present, with the Bureau of Labour submitting all plans of action to the Workmen's Compensation board, together with the estimated cost, for approval, and when approved, the bureau of labour to carry on the necessary work.

Prevention of duplication, more effective and less expensive work were given as reasons for the proposed adoption of such a plan. As an alternative, the plan of forming an Industrial Accident Prevention association, as adopted in Ontario, was advanced, direct supervision by the provincial government, however, being recommended.

## BRITISH COLUMBIA LAWS RELATING TO WOMEN AND CHILDREN

### Recent Development in Social Legislation

AT the request of the Women's Institutes of British Columbia, the Provincial Government has published a brief pamphlet outlining the provisions of the laws enacted during the years 1916-23 which are of special interest to women and children.

The extension of the franchise to women, which was granted by the Dominion and the provinces during the war, marked the beginning of a period notable for legislation of a social character. The western provinces have been foremost in this movement and the pamphlet issued in British Columbia gives a survey of what has been accomplished in the way of legislation in that province.

Women were given the franchise and the right to election as members of the legislature in 1917, and in the same year municipal offices were opened to them. In 1918, the law enabled them to act as judges of Juvenile Courts, and in 1922 women were declared eligible for service on juries.

Amendments were made in 1919 to broaden the scope of the Act providing for the support of deserted wives, and in the following year the Mothers' Pensions Act was passed to enable payment by the Province of allowances to widowed mothers or to mothers whose husbands are unable to support their families and who have a child or children under 16 years of age living with them.

Children are made liable for the support of their parents by a statute enacted in 1922, and an Act of 1920 provided that if the will of a husband or wife fails to make adequate provision for the wife or husband and children, a Judge of the Supreme Court may make an order for such provision. In 1919, the law regarding intestate estates was amended so that if there were no children, the whole estate of a deceased husband should go to his wife instead of the half to the wife and the remainder to the next-of-kin as the law provided formerly.

The Minimum Wage Act, 1918, as amended the following year, provided for the establishment of minimum rates of wages and maximum hours of labour for women employed in the industries of the province, thus preventing their employment at unduly low wages or for unreasonably long hours. The Maternity Protection Act, passed in 1921, embodies the main provisions of the draft convention of the International Labour Conference, 1919, prohibiting the employment of women for six weeks following confinement, and permitting them to leave their employment on production of a medical certificate that confinement is probable within six weeks. Another Act of 1921 is designed to prevent the employment of women at night in accordance with the draft convention of the International Labour Conference, 1919, but the operation of the law is made conditional on similar legislation being enacted by the other provinces.

The Workmen's Compensation Act, 1916, provides for payment of compensation to all workers injured in the course of employment except domestic servants, farm labourers, casual workers, office employees and travelling salesmen. The Act as amended in 1920, provides for a monthly payment of \$35 to widows, and an additional \$7.50 for each child up to a maximum of \$65.

An amendment to the Marriage Act in 1919 requires the consent of parents or legal guardian to the marriage of minors, and prohibits the marriage of persons under 16 years of age except with permission of the court. Provision is made also for the legitimation of children by the intermarriage of the parents. In 1922, the Superintendent of Neglected Children was given authority to act as guardian to an illegitimate child, and registrars of vital statistics are now required to notify him, or a municipal officer in his stead, of the birth of any child born out of wedlock. The father of such child may be

summoned before a magistrate and ordered to pay for medical and other care of the mother and to make a weekly payment for the maintenance of the child until he reaches the age of 16. An enactment of 1919 provides for compulsory notification and treatment in the case of venereal diseases, and prohibits treatment by other than qualified physicians under penalty. The Provincial Board of Health is given wide powers in the issuance of regulations designed to suppress these diseases.

A law passed in 1917 removes the disabilities of married women in the guardianship of their minor children and makes the husband and wife joint guardians. The Adoption Act, 1920, reserves to the Supreme Court the right to issue an order of adoption, the consent of child, if over 12, being necessary. The adopted minor is given the right of inheritance and succession and the right of inheritance from natural parents is preserved. The Superintendent of Neglected Children must be notified of every application for an adoption order.

By amendments to the Infants Act, children may be kept in homes of Children's Aid Societies up to 18 years of age and the maintenance grant has been increased. The

Superintendent of Neglected Children is enabled by legislation of 1918 to take action to place delinquent boys and girls in the industrial schools. A school for subnormal boys was provided for by an Act of 1920, the purpose being to establish a school for the detention of boys with a view to their improvement in mental health, education, industrial training and their moral reclamation. Juvenile Courts were provided for by an enactment of 1918 to deal with cases in connection with children under 18 years of age.

Dental inspection and treatment of children in the public schools of the province were made possible by an amendment to the Schools Act in 1920.

In 1923, the minimum age at which children might be employed in any factory in the province was fixed at 15. Formerly, boys of 14 years of age might be employed but no girls under 15 could be employed. An Act to prohibit the employment of children at night was passed in 1921 in accordance with the draft convention of the International Labour Conference, 1919, but, as in the other cases noted, its operation was made conditional on the other provinces making similar provision.

## CLAIMS FOR EXEMPTION FROM EIGHT HOUR DAY LAW OF BRITISH COLUMBIA

**T**HE Board of Adjustment under the British Columbia Hours of Work Act held meetings during the past month at various centres in the province for the purpose of considering applications for exemptions from the sections of the Act requiring an eight-hour day. The names of the members of the Board were given in the last issue of the LABOUR GAZETTE. Applications were considered from representatives of the lumber, sawmill and box industries in the interior of the province. The employers in each of these groups submitted a memorandum giving the grounds of their claim. The box manufacturers, who also operate sawmills in conjunction with the box factories, laid stress on the seasonal nature of their work:—

In the first place our market is entirely local, our customers all being the fruit and vegetable growers and packers. The fruit and vegetable industry is an entirely seasonal one, and containers for these products are marketed only in the summer and fall months. As a consequence our box plants are operated not more than five months in the year. Climatic and economic conditions require that lumber production in the interior be carried on in the winter months. It is impracticable to log in the summer months, in the first

place, owing to the heat and the difficulty of getting the logs out, and secondly, because pine lumber cut from summer felled logs, will, owing to the sap being up in the summer, readily take on a blue stain, making it unsuitable and absolutely unsaleable either as lumber or boxes. This being so, it is our opinion that we should be exempted under the Hours of Work Act, 1923, as an integral part of the horticulture industry, which is specified in the interpretative section of the act as one of the exempted industries, or, in the alternative, our industry being a strictly seasonal one in all its phases, that the board should exercise the powers conferred on it under subsection 2a of section 9 of the act, and grant us complete exemption.

As a precedent for this course, we would take the liberty of citing the policy of the federal government in connection with the sales tax, the Dominion minister of finance having the intimate relationship between the box manufacturing and fruit growing industries and to that end having exempted from all sales tax containers produced for the use of the fruit and vegetable industry.

Employees' representatives also gave evidence, denying that sufficient grounds existed for the granting of the claim for exemption, and stating that the wages and conditions of the men in the camps were unsatisfactory, and that ten hours was the usual working day in the box factories.

At a hearing at Cranbrook the Mountain Lumber Manufacturers' Association claimed to be exempted on the ground that climatic conditions for the interior mills make year-round operation impracticable and that right conditions for hauling and river driving have to be utilized when they occur; that 85 per cent of the output is low grade and markets are distant; that interior mills are laid out on a one-shift basis; and that application of an eight-hour rule to the few branches of the industry in which it does not now apply will involve such increased cost of operation as to both curtail production and increase its cost.

The lumbermen's memorandum concluded as follows:—

Even under present conditions of unrestricted hours of labour, lumbering in the interior is a very hazardous

and uncertain undertaking. The results from operations during past years have been most unsatisfactory from the operator's standpoint. Lumber produced in the interior is now, and has been for many months past, selling at less than cost of production. Needless to say, the industry is in no position to carry the additional burden which the enforcement of an eight-hour day would entail; neither are the workmen engaged in the industry in a position to stand a reduction of 20 per cent in their earning power. We submit that the business of logging and lumbering in the interior of British Columbia is not one which can be conducted according to any hard and fast rule as to hours of labour, as the work connected with same must of necessity be performed when and in the manner varied conditions surrounding the industry will permit.

The Board of Adjustment held meetings at Vancouver early in December to consider applications for exemption from salmon, fruit and vegetable canners, and from employers in certain supplementary industries such as the making of containers for canned foods.

## MINIMUM WAGES FOR FEMALE EMPLOYEES IN SASKATCHEWAN

### New Orders of Board reduce former minimum rates

THE Minimum Wage Board of Saskatchewan issued during November four new orders, to take effect on January 1, 1925. These orders supersede the existing orders governing the occupations mentioned, which were issued in 1921 (LABOUR GAZETTE, December, 1921). These occupations are as follows: (1) Shops and stores; (2) laundries and factories; (3) mail order houses; and (4) hotels, restaurants and refreshment rooms. The minimum rate of wages for experienced female employees in each of these occupations is reduced by \$1 from the rate fixed three years ago, the rates for inexperienced workers being also reduced. The sections of the new orders which relate to hours and wages are printed below:—

#### Order No. 1—Stores and Shops

##### 2. HOURS:

No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any shop or store for a greater number of hours than fifty-one (51) in any one week unless a special permit in writing has been obtained from the secretary of the board.

##### 3. WAGES:

(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a shop or store at a rate of wages less than \$14.00 per week.

(An experienced female is one who has been employed in the industry eighteen (18) months or more.)

(b) Subject to the provisions of sub-clause (c) of this clause, the rate of wages for learners may be less than the minimum rate prescribed for experienced workers: provided that learners shall be paid not less than \$7.50 per week for the first six months, not less than \$9.00 per week for the second six months and

not less than \$12.00 per week for the third six months and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) *Millinery, Dressmaking, Tailoring, Fur Sewing and Florists.*—Excepting the provisions of sub-clause (b) of this clause, these regulations shall apply to all millinery, dressmaking, tailoring, fur sewing and florist establishments, whether situated in a shop or store or elsewhere.

A probationary period of three months for which no wages are stipulated is allowed, after which period an inexperienced female employee shall be paid wages at a rate not less than \$3.00 per week for a period of six months, at a rate not less than \$7.00 per week for the next six months, and at a rate not less than \$12.00 per week for the next six months and thereafter shall be considered to be an experienced worker and shall be paid not less than the minimum rate of \$14.00 per week prescribed for experienced workers.

(d) When a female, whether experienced or inexperienced, is employed for a less number of hours than fifty-one per week, the minimum wage above set forth may be proportionally reduced.

#### Order No. 2—Laundries and Factories

##### 2. HOURS:

No female shall be employed in any laundry or factory for more than forty-eight hours in any one week; and the hours of working in any one day shall not be later than half-past six o'clock in the afternoon unless a special permit in writing has been obtained from an inspector under The Factories Act. (See The Factories Act, Section 11 (1).)

##### 3. WAGES:

(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a laundry or factory at a rate of wages less than \$13.00 per week.

(An experienced female is one who has been employed in the industry for twelve (12) months or more.)

(b) The rate of wages for learners may be less than the minimum rate prescribed for experienced workers;

provided that learners shall be paid not less than \$9.50 per week for the first six months, and not less than \$11.50 per week for the second six months and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) *Photographic Studios.*—Female apprentices in photographic studios and work-rooms connected therewith shall be paid wages at a rate not less than \$5.00 per week for a period of three months and for the twelve months following shall be paid the rates of wages as specified above for learners.

(d) When a female, whether experienced or inexperienced, is employed for a less number of hours than forty-eight per week, the minimum wages above set forth may be proportionally reduced.

### Order No. 3—Mail Order Houses

#### 2. HOURS:

No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any mail order house for a greater number of hours than forty-eight (48) in any one week unless a special permit in writing has been obtained from the secretary of the board.

#### 3. WAGES:

(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in any mail order house at a rate of wages less than \$13 per week.

(An experienced female is one who has been employed in the industry for twelve (12) months or more.)

(b) The rate of wages for learners may be less than the minimum rate prescribed for experienced workers; provided that learners shall be paid not less than \$3.00 per week for the first six months and not less than \$10.00 per week for the second six months and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) When a female, whether experienced or inexperienced, is employed for a less number of hours than forty-eight per week, the minimum wages above set forth may be proportionately reduced.

### Order No. 4—Hotels, Restaurants and Refreshment Rooms

#### 2. HOURS:

(a) No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any hotel, restaurant or refreshment room or in more than one establishment of that class for a greater number or combined number of hours than ten (10) in any one day or fifty (50) in any one week in the case of establishments open to the public only six days per week, or fifty-six (56) in any one week in the case of establishments open to the public seven days per week, unless a special permit in writing has been obtained from the secretary of the board.

(b) The hours shall be so arranged that no work period shall end between 12.30 a.m. and 7 a.m.

#### 3. WAGES:

(a) No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in any hotel, restaurant or refreshment room at a rate of wages less than \$13.00 per week of six days (\$56.35 per month) or less than \$14.00 per week of seven days (\$60.65 per month), except as a kitchen help in which case the rate of wages shall not be less than \$11.00 per week of six days (\$47.65 per month) or \$12.00 per week of seven days (\$52.00 per month). (An experienced female is one who has been employed in the industry three (3) months or more.)

(b) Except in the case of kitchen employees the rate of wages for learners may be less than the minimum rate prescribed for experienced workers; Provided that the learners shall be paid not less than \$11.00 per week of six days (\$47.65 per month) or not less than \$12.00 per week of seven days (\$52.00 per month) for the first three months of employment and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) Where a female is employed by the hour, the rate of wages shall not be less than 35 cents per hour.

(d) When a female, whether experienced or inexperienced, is employed for a less number of days than six, the minimum wages above set forth for a six day week may be proportionately reduced.

(e) No female under sixteen years of age shall be employed nor shall a female under eighteen years of age be employed after eight p.m. in any hotel, restaurant or refreshment room.

#### 4. BOARD AND LODGING:

(a) Where meals are furnished by an employer as part payment of the wages of an employee, not more than \$5.25 a week shall be deducted from her weekly wage for a full week's board of twenty-one meals; a fraction of a week's board shall be computed upon a proportional basis.

(b) Where lodging is furnished by an employer as part payment of the wages of an employee, not more than \$2.50 a week shall be deducted from her weekly wage for a full week's lodging of seven days.

## Effect of legal decisions on legislation

Professor Gutteridge of London University, in a recent article on the progress of labour legislation in Great Britain, points out that industrial diseases were first included in the British Workmen's Compensation Act in consequence of two legal decisions which gave an impetus toward the adoption of this new principle. The Act of 1897 included no express provision for compensating industrial diseases. However, the House of Lords, in the case "Brintons, Limited, versus Turvey," in order to give a worker the benefit of the Act decided that the disease anthrax was an "accident" within the meaning of the Act, which provided compensation for accidents due to and in the course of employment. But in the case of "Steel versus Cammell Laird and Company," a claim for compensation for lead poisoning was rejected on appeal, owing to the slower manner of absorption of this poison. These decisions left in doubt the question of compensation for industrial diseases, and when the Act of 1897 was repealed by the consolidating and amending Act of 1906 the position of industrial diseases was regularized by the definite provision of compensation for certain specified and well-known diseases (including both anthrax and lead poisoning) and prescribing the manner in which the Home Secretary might extend the list to such decisions.

## REPORT OF THE ONTARIO DEPARTMENT OF LABOUR

THE fourth annual report of the Ontario Department of Labour, recently issued, contains an account of the Department's work during 1923, giving information respecting the administration of the provincial offices of the Employment Service of Canada, and of The Employment Agencies' Act, the Factory, Shop and Office Building Act, The Steam Boiler Act, and The Stationary and Hoisting Engineers Act. Statistics are included of industrial disputes, fatal industrial accidents and immigration to the province during 1923, a comparison of the average cost of staple foods for 16 years in Ontario, and an account is given of wages and hours of labour in Ottawa, Toronto and Hamilton in September 1921, 1922 and 1923, these statistics being taken from reports prepared by the Department of Labour of Canada which have already been published in the *LABOUR GAZETTE*.

*Industrial Conditions.*—Industrial conditions throughout the province maintained a fairly high level during the year, an improvement being indicated from the beginning until the month of September, and a slight contraction from September to December. Compared with 1922 the improvement was considerable, but in December, 1923, it was not so good as during the similar month of the previous year. In building and construction there was a shrinkage of employment as compared with the previous year, the estimated cost of building work as indicated by building permits being \$72,204,749 for 1922 and \$67,989,864 in 1923. The usual seasonal fluctuations were experienced in many lines of manufacturing. Firms engaged in the manufacture of pulp, paper, electric current, iron, steel, mineral, non-ferrous metal, tobacco, and electric apparatus had larger working staffs, but in the leather, rubber, musical instrument and textile establishments conditions were less favourable. There was practically no change in rates of wages and hours of employment in the various trades, except in trades associated with the building industry. Trade disputes involving a stoppage of work numbered 16 during the fiscal year ended October 31, 1923, as compared with 23 in the previous year. This was the smallest number since 1916, and the time loss in working days was smaller than in any year since 1918.

*Employment Service.*—The records for the year indicate that there were 25 offices operated by the Provincial Department. The average cost of making individual placements for all the offices, considering the placement of both men and women, and including regular and casual placements, was 94.7

cents, 50 per cent of which was borne by the Federal Government under the terms of the Employment Office Co-ordination Act. For the fiscal year ended October 31, 1923, the number of persons registered for employment was 213,821, as compared with 192,266 during the previous year. The number of vacancies reported by employers totalled 209,663, and the number of placements made, 167,933\* Of the general work of the Employment Service the report states:—

The success of the Employment Service is not founded on free service alone, but on our organized methods, our clearance system, a probable knowledge of the industrial situation in other localities; courtesy to both employer and employee, and the esprit de corps so apparent throughout the offices. All this is universally recognized by employers and workers alike as being of greater value to them than the fact that they are not being charged for the facilities provided by the offices.

Some idea of the extent to which the clearance system is in operation between the various offices of the Employment Service of Canada is shown by the fact that the Ontario offices transferred during the year nearly 10,000 men to points within the province, but outside their own immediate zone and over 300 men to the province of Quebec. In addition, over 5,000 men were transferred to the Port Arthur office from points outside the province, chiefly from Winnipeg, due to the fact that Winnipeg is regarded as the labour market for the Port Arthur district. More than 300 men were transferred by that office to the province of Manitoba.

One of the biggest problems with which the Service had to contend was the handicapped worker. In the Toronto district the services of a scout was placed at the disposal of the handicap section. This section received 547 new registrations during the year, and made 627 placements, 86 per cent of which were of a permanent nature. An analysis of the registrations shows that 10.7 per cent of the cases were old people, 60 per cent were ex-service men, 28 per cent were persons born in Canada, 11 per cent were Imperial ex-service men, 52 per cent were sufferers from disease, 7.0 per cent were persons suffering from industrial accidents, 5.0 per cent were persons suffering from non-industrial accidents, 5.4 per cent were leg amputation cases, and 4.0 per cent were arm amputation cases. In the boys' section 1,151 placements were made.

In the farm section it is stated that an important factor is not only the fitness of the farm hand for the work, but his character, as the man on the farm comes into personal contact with his employer in the home as well as at work. Although farm prices were at practically pre-war prices during the year, farm wages had not decreased

\*The reports of the Employment Offices of the different provinces are summarized periodically in the *LABOUR GAZETTE*.

to the same extent. The farmers of Ontario were willing, however, the report states, to pay a fair wage for a fair day's work, and "when one takes into consideration board, washing of clothes, etc., the wages offered compare very favourably with other lines of work".

*Private Employment Agencies.*—Thirteen licensed private employment agencies were operating under the Employment Agencies Act during the year. Seven of these were in Toronto, two were in Sudbury, two were in North Bay, one was in Fort William, and one was in Ottawa. Three of the Toronto agencies limited their activities almost entirely to placement of nurses and other classes of female help, and all others made placements associated with building, construction, farming, lumber, metal, mining, factory and domestic service occupations. The number of persons placed in employment by these agencies during the year 1922-23, November to October inclusive, was 39,333, as compared with 32,286 during the previous year. About 79 per cent of these placements were construction men, general labourers, bushmen and teamsters; 16 per cent were domestic workers and the remaining 5 per cent were carpenters, mechanics and general factory workers. A considerable amount of the work was of a more or less casual nature.

*Stationary and Hoisting Engineers.*—The total number of certificates granted during the fiscal year 1923 was 14,777, an increase of 865 over the previous year. The number of persons granted certificates by examination was 1,842. The general increase in the work of this section during the year indicated that opportunities for employment for certificated engineers were better than during any former year. A large proportion of the persons obtaining certificates by examination were graded in the fourth class, but it is stated that each year there is a definite effort made by those holding the lower grades to qualify for the higher ones. Three hundred and sixty-nine persons failed to secure certificates owing to a low percentage obtained in examination.

*Boiler Inspection.*—There were 724 registered by the Steam Boiler Branch during the year, as compared with 333 in the previous year. A total of 405 new pressure vessels and 974 second-hand boiler or pressure vessels were also inspected. During the year several explosions of pressure vessels took place within the province, but none of the explosions reported occurred on steam boilers or pressure vessels that had been built and inspected according to the present requirements of the Steam Boiler Act and Regulations.

*Factory Inspection.*—The number of inspections made during the year was 18,106, of which 10,135 were first inspections and 7,971 were revisits. These inspections cover the work of accident prevention, employment of children, hours and conditions of employment, health, fire prevention, safety and sanitation, also investigations into accidents and complaints. In addition to the work under the Factory Act, the members of the inspectorate assist in the enforcement of the Adolescent School Attendance Act, the Minimum Wage Act, and the Stationary and Hoisting Engineers' Act.

Within the establishments visited 256,064 persons were employed in 1923, as against 235,486 in 1922. Of these 180,416 were males over 16 years, 763 were males between 14 and 16 years, 71,912 were females over 18 years, 2,973 were females between 14 and 18 years, and 48 were children under 14. The following table shows the number of employees, male and female, working specified hours in the week:

	Number of employees	
	Male	Female
Working 45 hours per week.....	78,129	51,027
“ 50 “ “ .....	39,542	13,491
“ 54 “ “ .....	28,371	5,293
“ 58 “ “ .....	5,508	348
“ 60 “ “ .....	19,538	2,032

Also 12,785 employees, male and female, worked approximately 50 hours.

Three hundred and forty-five permits were issued under the section of the Factory, Shop and Office Building Act which controls the practice of contracting out for the manufacture of garments, etc. One hundred and sixty-four complaints were received during the year and these were adjusted as far as possible. Prosecutions were instituted in four cases for failure to comply with orders issued, as follows: one, to keep elevator in proper working order; one, to erect fire escape; and two to provide toilet accommodation.

Accidents increased during 1923 over 1922 by 1,372, 4,781 accidents being reported during 1923, 71 of which were fatal, as compared with 3,416 reported in 1922, with 45 fatalities. There was no legislation passed during the year effecting the inspection branch, but an order was made requiring all power elevators to be equipped with mechanical locks to prevent car being taken away from any floor till gate is closed and locked. On page 1063 of this issue will be found some recommendations of the factory inspectors with regard to means of preventing factory accidents. A classification of the accidents by industries and causes is given in the following table:—

## REPORT OF SASKATCHEWAN BUREAU OF LABOUR AND INDUSTRIES FOR 1923

THE fourth annual report of the Saskatchewan Bureau of Labour and Industries covers the operations of the year ended April 30, 1924. The act establishing the Provincial Bureau assigned to it the administration of the following acts: the Factories Act, the Building Trades Protection Act, the Employment Agencies Act, the Mines Act and the Minimum Wage Act, and all these phases of the Bureau's work are covered by the report.

*Immigration.*—The immigration to Saskatchewan during 1923 was 12,147 as compared with 8,184 in the previous year. The total immigration during the eleven years 1913 to 1923 inclusive was 159,196. The number of domestics brought to Saskatchewan under the province's advanced passage scheme (LABOUR GAZETTE, December, 1923, page 1350), during the fiscal year was 74 as compared with 134 in the previous year. The number of accounts paid in full was 44, the amount of money advanced was \$6,913.26 and the amount repaid was \$5,600.85. During the year the assisted passage scheme was abandoned on account of the putting into force of "The Empire Settlement Act" of Great Britain.

*Employment Service.*—The report of the employment service shows that 85,267 applications for work were registered, 100,921 vacancies for work were reported and 88,842 placements were made. The actual cost of the Service during the year was \$58,756.52 and the cost per placement was 71 cents.

In the harvesting season 47,337 labourers were brought into Saskatchewan from other points in Canada and there were about 11,000 immigrants brought from Great Britain and Ireland to take off the crop. There were also 629 labourers brought in from other provinces to assist with the spring work. The wages paid for the seasons engagements in 1923 were from \$35 to \$45 a month; for seeding only, from \$50 to \$60 a month; and for harvesting from \$3.50 to \$6 per day.

The lumbering industry provided a large proportion of vacancies for winter work. This industry coupled with the usual demand for farmers practically took care of all the men who desired to engage in winter employment, a number of men were, however, sent from the province to help fill orders for lumber companies in Western Ontario and the Crow's-nest area.

*Disputes.*—There were only two disputes affecting 24 employees in the province during

the year, as compared with 3 disputes affecting 73 employees in the previous year.

*Accidents and Accident Prevention.*—Three hundred and fifty inspections were made of industrial establishments, and 74 recommendations were issued for the better guarding of machinery. Elevator inspections showed that many elevator accidents may be prevented if the automatic or semi-automatic safety devices are maintained in proper working order, a matter, it is pointed out, for which both the employer and employee should be responsible. The inspector of buildings drew attention to the need for guard rails on scaffolds, the placing of ladders on secure footings, and for the piling up of waste material instead of the leaving of it littered about with projecting nails.

In regard to mine inspection, the large number of mines in the province that are ventilated only by natural means, or are operated only for part time make it necessary that there should be careful supervision. The shipping mines were regularly inspected during the year, and in addition a special investigation of all the smaller mines in the southwestern part of the province was arranged for. Only one prosecution was entered under the provisions of the Mines Act.

The report on industrial accidents shows 18 fatal, 23 permanent and 942 temporary accidents, causing a time loss of 18,639 days. Six hundred and fifty-seven of the accidents occurred on the railways and 326 in the other trades, 26 being in the building trades, 67 in electrical and metal construction, 56 in lumbering, 24 in the coal mines, 75 in the preparation of foods, 2 in printing and publishing, 3 in woodworking, 38 in the civic and public services; 36 were miscellaneous. Attention is drawn to the need for care in connection with automobile repairs and service. It is recommended that when a car is raised by hoisting apparatus it should be efficiently blocked before the workman is permitted to go under the car to make adjustments. Other recommendations for the safety of automobile workers are that tools with mushroomed heads should not be permitted and the use of wrenches in faulty condition should not be allowed; that caution should be used in the repair of gasoline tanks by welding and soldering; that hoods should be placed over all grinding and polishing wheels, and that burning oil soaked rags should be placed in metal

containers so as to prevent them coming in contact with gasoline vapour.

*Minimum Wages.*—No change in the conditions of employment of women coming under the provisions of the Minimum Wage Act was experienced during the fiscal year. Shops and stores inspected showed an increase of 19 over the previous year. The number of employees increased by 49, while the number of inexperienced women employed at a lower rate of wages decreased.

The number of "laundries and factories" increased by one, as did also the total number of employees therein, this being mainly due to the employment of inexperienced workers.

The number of mail order houses employing women decreased by one, and the number of women employed decreased from 314 in the previous year to 277, while the number receiving the minimum rate increased from 29 to 51. The number receiving more than the minimum remained the same as the previous year.

The number of hotels, restaurants and refreshment rooms inspected decreased from 165 in the year 1922-23 to 143 in 1923-24. The total number of female employees was 557 in the latter year as compared with 592 in the former. The total inexperienced workers employed remained the same as in the previous year.

The total number of inspections of the establishments coming under the provisions of the Minimum Wage Act was 612, and as a result 110 recommendations were made, 42 of which were in respect to hours, 47 for wages, 8 for sanitary conditions, 6 for not keeping register and 7 for not posting regulations. Overtime permits to the number of 42 were issued during the year, affecting 33 establishments and covering 530 days. Of this number 24 were issued to shops and stores, 17 to laundries and factories and one to a mail order house. (New regulations respecting minimum wages are given elsewhere in this issue.)

## PLAN TO STABILIZE WAGES IN CANADA

### Proposal by Canadian Founders' and Metal Trades' Association

A PLAN for stabilizing industrial conditions in Canada by means of a general agreement to reduce existing wage rates to a point 50 per cent above the level of 1913 was recently prepared by Mr. C. W. Burgess of Toronto, Commissioner of the Canadian Founders' and Metal Trades Association, and submitted to 85 leaders in industrial production throughout Canada. It was stated that if the replies indicated sufficient support for the plan a conference would be called to take steps for putting it into effect. The memorandum prepared by Mr. Burgess contains the following paragraphs:—

It is recognized that the cost of production is the basis of industrial operation, and that labour costs represent the greatest factor in the cost of production. To induce prosperity and a continuity of operation in every line of activity, labour costs must harmonize according to a definite basic principle. Complete readjustment will therefore not be realized until wage rates have been established once more upon a proper balance.

All comparisons of the rise in wage rates, cost of living, commodity prices and similar statistics are based upon those conditions existing prior to the war, which conditions were reached through the natural evolution of economic law.

A complete readjustment would involve the immediate restoration of conditions corresponding to those existing in 1913, plus a percentage of increase which would naturally take place over a ten year period had the

war not thrown everything into confusion, and allowing for possible economic changes taking place during the war period which would affect the standard of living. As a basis for consideration, I suggest the adjustment of wage rates to a point fifty per cent above those obtaining in 1913.

A readjustment of production costs on such basis would logically be followed by a natural readjustment in commodity prices and cost of living. The action must be applied in every line of activity; the production of raw materials, their manufacture into finished products, the transportation of these to trade markets and their distribution to the consumer, also in federal, provincial and municipal affairs. The value and effect of this plan lies in its simultaneous inauguration and adoption by the nation at large.

Conditions to-day combine to render the psychological moment for a complete readjustment upon a definite logical basis. A large majority of the heads of industry, as well as the public, including a great majority of wage earners, are convinced of the imperative need for action which will relieve their distress, and the unemployed themselves would prefer regular, continuous employment at their accustomed trade or occupation, rather than doles, or the uncertainty of work provided at public expense to afford temporary relief.

The attitude of the wage earner, organized and unorganized, has been considered, and I believe the great majority of all labour is fair minded and reasonable, and will recognize the advantage of steady employment at fair wages, compatible with living costs, as compared with the disadvantage of uncertain trade conditions and the present degree of unemployment and part time employment due to uneconomic equalities in labour costs in various branches of industry.

## Views of Trades and Labour Congress of Canada

The executive committee of the Trades and Labour Congress of Canada has declared itself as opposed to the plan outlined by Mr. Burgess, for reasons that were stated by President Tom Moore, as follows:—

"During the past month a large number of employers and others have been circularized by the Canadian Founders' and Metal Trades' Association relative to the adoption of a plan aiming to bring about nationwide wage reductions as a means of creating prosperity in this country. A copy of this plan was sent to the Trades and Labour Congress of Canada by the Metal Founders' Association, seeking the co-operation of labour for its adoption and suggesting a conference of six employers and six representatives of labour to consider some details as to the degree of the adjustment which would be essential.

"The executive council of the Trades and Labour Congress of Canada went thoroughly into this matter at its recent meeting held in Ottawa and after a very thorough analysis of the proposals, is notifying Mr. Burgess of its belief that the proposals are not practicable and would bring no advantage either to the workers or to Canada as a whole, and for that reason had reached a decision that no good would result from the suggested conference.

"Organized labour has always held itself ready to send representatives to discuss any proposal that seemed to hold forth even the slightest hope of improving conditions generally, but the "Burgess" proposals not only failed in this respect but appeared to the congress executive as likely to create suspicion and antagonism between employer and employees if proceeded with.

"The 'Burgess' plan proposed a reduction of wages based on the 1913 standards plus an arbitrary fixed improvement for each of the subsequent eleven years. It fails to recognize that labour suffered almost as acutely from unemployment in 1913 and the summer of 1914 as at the present time and therefore there is nothing alluring to labour in the prospect of accepting those standards as normal. Mr. Burgess and the Metal Founders' Association seem to have failed also to recognize that the world of 1914 had gone forever. Not only have Canadian economic conditions changed but those of practically every other country. Old methods of government and national currencies, in many cases, have been uprooted and abolished and no mere economic change in Canada or in any one other country can restore them, even if they were desirable.

"The task to-day is not to seek a normal condition based on past years, but to seek one based on present day conditions, habits of the people, and general industrial development. This is one reason why Mr. Burgess' scheme is considered impracticable. Another important reason is that the 'Burgess' plan could only be possible of application by ignoring present agreements existing between employers and workers on our railroads, mines and innumerable other industries throughout Canada. These have been reached often after long years of experienced negotiations and the Trades and Labour Congress of Canada cannot undertake to enter into any conference which would set aside all these agreements and bring on the resulting chaotic conditions and industrial strife which would inevitably follow.

"The 'Burgess' plan again is based upon the assumption that decreased wages would bring about decreased cost of living and regularization of employment. Experience in England, and many other countries, had the opposite effect and resulted in increased unemployment.

"On the other hand, in the United States, where wage increases have generally prevailed, giving a greater purchasing power to the workers who constitute

the home market, employment has been more regular than anywhere else.

"Money is only the medium used to exchange the products of human labour. Improvement in machinery and greater human skill have resulted, during the past decade in greater productivity than at any other time. To distribute this greater volume of articles produced needs more money in circulation. Decreased wages means restricted circulation of currency, with the opposite result from increased wages and greater purchasing power of the masses.

"Labour does not believe that prosperity therefore can be established by the methods outlined in the Metal Founders' Association proposals as set forth by Mr. Burgess, and because of the fundamental difference in the beliefs held by labour on this subject, the executive council of the Trades and Labour Congress of Canada has definitely placed itself on record as opposed to the Burgess scheme."

## New York Child Welfare Board

The Board of Child Welfare of New York city, which was organized in 1915, was making allowances on September 30 to 8,963 families, the monthly payroll being \$405,374.70. The average allowance per family is \$45.23, and the average allowance per child is \$16.74. The board is at the present time taking care of 24,222 children under 16 in their homes.

Since the beginning of the board, 30,494 applications have been received from widows. Of this number 17,851 were allowed pensions, and of this number 8,888 have since been discontinued for sufficient income, no minors, etc., and there now remain 8,963 receiving pensions. These families are revisited and re-investigated every three months by the investigators. In special cases where there might be violations they are visited sometimes once a month and sometimes weekly.

The Association of Canadian Building and Construction Industries will meet in convention at Montreal from January 23 to 30. One of the subjects to be considered will be the problem of unemployment during the winter months. The Engineering Institute of Canada, which will be in session on the same date, will hold a joint session with the Association on one of the days of meeting.

The Winnipeg Trades and Labour Council has been invited to appoint representatives to serve on the executive of the Young Men's Section of the Greater Winnipeg Board of Trade, in order to assist the Board to solve questions of general interest to the city.

The British Government has announced that a conference of agricultural land-owners, farmers and farm labourers will be summoned for the purpose of discussing the possibility of increasing the area of land under cultivation and the production of food.

## NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to activities which have a direct bearing on the training of apprentices and industrial workers, and which are therefore of interest in connection with the work carried on in Canada by the secondary vocational schools in receipt of federal grants under the Dominion Technical Education Act. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

### Apprenticeship in Queensland, Australia

The following extracts from a recent speech by Hon. W. Forgan Smith, Minister of Public Works for Queensland, explain the development and purpose of the new Apprenticeship Act which regulates all forms of apprenticeship in the State:—

The first activity in this matter, so far as the Government were concerned, was manifested in Queensland in 1912-14 by the Administration then in power. They realized the necessity of giving our boys the opportunity to learn trades, and so introduced a system of trade scholarships, whereby those who gained them would be trained in handicrafts at technical colleges, instead of taking up commercial subjects, as had been the practice under the other system of scholarships. Such a scholarship was held for a period of two years, the boys being selected by examination, and during that time they received a general training, particularly in the use of tools.

It is well known to those persons who have investigated the subject that, whilst technical colleges are fairly valuable and a necessary complementary part of the training of apprentices, nobody will seriously argue that artisans can be produced by technical colleges alone. In other words, the technical colleges at best can lay down the principles on which workshop practice is based; and any system of apprenticeship to be beneficial and meet the needs of industry must provide also for training in the workshop as well as in the technical college, where such is available. The method in existence now has been a distinct success, and I am satisfied will give very good results in the future. It was begun under regulations which were drafted under the Technical Education Act and through the Arbitration Court, and set up a system of committees who controlled apprenticeship. Those committees comprised equal numbers of employers and representatives of employees' unions, and were called upon to administer the scheme laid down at that time, in accordance with the awards of the Arbitration Court. They prescribed certain entrance examinations for the boys who wished to learn trades, they interviewed the boys and allocated them to the various groups of industries. Whilst progress was made under that system, it was felt that something was wanting, and, when the amendment of the Industrial Arbitration Act was made in the last session of Parliament, power was taken to issue regulations laying down a system of control of apprenticeship throughout the State. Later

on comprehensive regulations were drafted having that object in view. Those regulations were carefully considered by a conference of educational experts, employers, and employees, and, with a few modifications and the embodiment of some of the suggestions made by that conference, were finally gazetted and have been in operation for approximately a year. They have proved to be so successful that the Government consider it desirable to embody their main principles in a statute so as to make them the permanent law of the State.

Under the Bill the Arbitration Court is vested with the power to set out the proportion of apprentices to journeymen, and to fix wages and the general conditions of labour. The Minister, through and acting on the advice of the Apprenticeship Committee, will prescribe the form of training which the boys will receive at the technical institutes and the time that they shall attend such classes. The Apprenticeship Executive is to be composed of representatives of the Trades and Labour Council, of the Employers' Federation, of the Group Apprenticeship Committees, and representatives nominated by the Minister. The various trades and callings are to have group committees to control the respective trades, so that we shall have a form of internal control by those specifically concerned in the particular industry and by those qualified to lay down the form of training that is assumed to be necessary in the training of boys. The Bill also provides that, where boys gain a certain percentage of efficiency in an annual examination, then that high standard of efficiency will be rewarded by the boys' wages being increased by 5 per cent. That is to say, the boys who attend the technical colleges and who receive 75 per cent or more in the examinations will be rewarded for their industry and skill by receiving a higher rate of wages. It is also provided that the committees will set the final examinations, and that a certificate will be granted to those boys who pass that examination, and such certificate will be regarded as the hall-mark of tradesmanship in that particular trade or calling. The scheme will be compulsory within the metropolitan area, which includes the city of Ipswich. That is done because there are greater opportunities for learning skilled trades here than in other parts of Queensland. Power is given by Order in Council to extend the whole or part of the system to any other part of the State. Applications have been approved from Toowoomba, Maryborough, Gympie, Rockhampton, Bundaberg, Mackay, Townsville, and Charters Towers, and it is anticipated that within a very short period of time the system laid down here will become general throughout the State.

There is also power in the Bill to deal with people who will not train apprentices at all. Where employers are not employing any apprentices at all, or where they have not their proper quota of apprentices, the Minister will have power to move the Arbitration Court to make an investigation into the facts of the case, and the Court may make such order as the circumstances of the case may demand.

Power is given in the Bill to see that boys receive a certain amount of training during the day. Under the regulations, in some trades and callings boys must be sent to a technical college one afternoon a fortnight.

There is also provision for the payment of members of the executive, group committees, and advisory committees, and power is given to the chairman, whenever necessary, to require any person giving evidence before the executive or any committee to give evidence on oath or affirmation. The drawing up of any regulations necessary for the better working of the Act is also provided for. The Act differs from the regulations in

that a minor is defined in the Act as a person under twenty-one years of age, instead of from fourteen to eighteen years, as defined in the regulations.

The earliest and latest age at which apprentices may enter any trade may be determined by the Court of Industrial Arbitration. The commencing age could not be made less than fourteen years, inasmuch as a minor under fourteen years of age is subject to other legislation, such as the Factories and Shops Act and the Education Act.

### Apprenticeship in Australian Printing Trades

At Sydney on July 29 the president of the New South Wales Board of Trade (Judge Beeby) announced the new regulations of the Board in regard to conditions of apprenticeship in the printing industry.

*General Conditions.*—The general conditions include the provision that the period of apprenticeship should be five years, with a period of probation of three months, provided: (1) that the period of apprenticeship of a minor under 16 years of age who enters any of the trades may, by agreement between the apprentice and his master, be six years, and the period of a minor who enters any of such trades after attending a secondary school up to the age of 17 years, or obtaining the Junior Technical Certificate issued by the Department of Education, shall be four years; (2) that any apprentice who cannot complete his full term of apprenticeship before reaching his twenty-second birthday may, by agreement between himself and his master, and by permission of the Board, serve his master as an apprentice until he reaches the age of 23 years.

*Hours of Work.*—The same hours of employment are fixed as those worked by journeymen. It is provided that the wage rates of all apprentices shall be those fixed by their agreements, but shall be subject to automatic variations proportionate to adult living wage awards. The minimum scale of wages per week of all apprentices entering the said trades in the future shall, subject to automatic variations proportionate to alterations in the adult male living wage from time to time declared by the Board, be: (1) in the case of apprenticeship for five or six years, first year 17s. 6d., second year 22s. 6d., third year 27s. 6d., fourth year 37s. 6d., fifth year 47s. 6d., sixth year 67s. 6d.; and (2) in the case of apprenticeship for four years, first year 20s., second year 25s., third year 35s., fourth year 47s. 6d.

*Proportion to be Employed.*—The proportion of apprentices that might be taken by any master in hand composition and general printing, machine operating, mechanism of machines, etc., rotary machine printing, letter press printing, printer's mechanic and book-binding trades, is fixed as under, subject to

the permission of the board: One apprentice or probationer for each establishment where one adult employee is permanently employed at full award rates; two apprentices or probationers for three such adult employees; and three apprentices for five such adult employees; and thereafter one additional apprentice for every three such additional adult employees.

The trades to be the subject of apprenticeship conditions in the metropolitan daily and weekly newspapers are composing, process engraving, and linotype attending and adjusting. The proportion of apprentices in each of these is fixed at: composing, one to six journeymen; process engraving, one to two; linotype attending and adjusting, one to two.

*Technical Instruction.*—The regulations also make provision regarding technical instruction for apprentices.

### Apprenticeship in France

Mr. de Moro-Giafferi, Under-Secretary of State for Technical Education in France, has recently drawn up a general plan for the organization of technical education and apprenticeship. In this scheme he proposes to extend throughout the country the institution of chambers of crafts, and to insist on the strictest application of the so-called "Astier Act" on technical education.

As concerns the organization of apprenticeship, the plan of Mr. de Moro-Giafferi is summed up as "joint action between employers and the proletariat, under State control, for the organization of workers' education." To accomplish this, Mr. de Moro-Giafferi intends to introduce an apprenticeship tax. Each employer will be compelled to employ a certain number of apprentices, and the percentage to be employed will be established for each employer, who will, however, have the choice of training these apprentices or of paying a tax, which will be used to cover the apprenticeship charges of an equal number of young workers.

The Bankers' Trust Company of New York has been advised by its French Information Service that the French Minister of Finance, Mr. Clementel, has provided in his budget for a tax on all salaries and commercial and industrial profits for the support of apprenticeship. The proposed tax amounts to 50 centimes per 100 francs and it is estimated that the total revenue will amount to approximately 100 million francs. Exemptions will be granted to persons who are contributing to the development of apprenticeship but all attempts at illegal evasion of the tax will be punishable by fine.

### Vocational Schools in Russia

As from 1923 the Russian vocational (technical and industrial) schools, which until then had been managed by the trade unions, passed under the jurisdiction of the Commissariat of Public Instruction. The reason for this decision, which was taken in 1922 by the All-Russian Congress of Trade Unions, was stated to be the absence of the necessary resources on the part of the trade unions. The transfer of control met with considerable opposition among trade unionists who feared that the vocational schools—which formed 7 per cent of all the elementary and secondary schools and which were among the best appointed institutions of the public education system—would meet with the same fate as other elementary schools.

In point of fact, the number of technical courses, which attained its height (1,160 with 50,000 pupils) in 1921, fell away in 1923 to 263 courses with 13,286 pupils. The position of the industrial schools is somewhat better. From 524 in 1922, the number of these schools increased to 978 (excluding the Ukraine) by January 1, 1924, and the number of pupils from 34,623 to 49,319. In the Ukraine the number of industrial schools in 1923 was 1,558 with 19,500 pupils as against 988 schools with 8,606 in 1922.

### Vocational Education in the Kingdom of the Serbs, Croats and Slovenes

A Congress of Serb-Croat-Slovene Chambers of Commerce was held in Belgrade on September 1. Among the matters considered by the Congress was a report submitted by the representative of the Ministry of Commerce and Industry on vocational education in the Kingdom.

According to this report, there are in the Kingdom 292 schools for handicrafts and commerce with 39,220 pupils. Of the schools, 112 are on the territory of Serbia and Montenegro and are attended by 16,000 pupils; 59 with 11,000 pupils are in Voivodina; 42, with 4,000 pupils, in Slovenia; 48, with 6,000 pupils, in Croatia-Slavonia; 8, with 600 pupils, in Dalmatia, and 14, with 1,500 pupils, in Bosnia-Herzegovina.

There are in addition about 60 higher vocational courses organized in the larger centres, and about 20 elementary vocational schools with 5,000 pupils. All the larger towns possess secondary vocational schools, some of which are public, others private. There are in Serbia and Montenegro 122 vocational schools for girls with 5,000 pupils.

The expenditure of the Government for vocational education purposes during the last year was 11,800,000 dinars.

### Vocational Education in Roumania

The International Labour Office is informed that 107 technical schools now come under the authority of the Minister of Labour, Co-operation and Social Insurance of Roumania. In future certificates will be granted by these schools to all pupils successfully completing their period of study. Candidates for these certificates are required:—

- (1) To have a complete primary education.
- (2) To have regularly attended classes in industrial schools for at least three successive years.
- (3) To have worked as an apprentice during all the period of attendance at classes.
- (4) To have passed their final examination before a representative of the Minister of Labour nominated from the tutorial staff of the Minister of Public Instruction.

### Bulgaria and Vocational Education

Technical education in Bulgaria is progressing as a result of the coming into force of the new law which amends that of 1921 on public education. At the present time there are in Bulgaria one high school of commerce, 21 intermediate schools of commerce, and 73 technical schools. The new law provides for two kinds of schools, practical schools and intermediate special schools, according to information received by the International Labour Office.

### International Vocational Education

The Royal National Institute of Vocational Education of Rome has drawn up a provisional plan of organization for an international office of vocational education. A draft plan of action has been established including the following questions, the International Labour Office is advised:—

- (1) Vocational Education in relation to social questions and the general organization of vocational schools.
- (2) A preparatory school of instruction preliminary to apprenticeship.
- (3) Vocational guidance and the skilled trades.
- (4) Schools of apprenticeship or probation for skilled workers.
- (5) Supervision of the work of minors and corresponding questions.
- (6) Schools for chief technicians and foremen.
- (7) Higher institutions and courses of technical specialization.
- (8) Courses for teachers, etc.

### International Conference on Vocational Guidance

An International Conference on the application of vocational guidance to the choice of a career or trade was held in Toulouse on September 4 to 6. Representatives of the French Ministry of Labour and the Department for Technical Education and of the International Labour Office were present.

*Role of the School.*—After a study of the position of the school in vocational guidance, the Conference is of opinion that, although the school has not the means to carry through a programme of vocational guidance by itself, it can at least supply valuable data to technical experts by the adoption of a scholar's record book containing information, not only on the scholastic attainments of the pupils but also on their moral character. For this reason the Conference urgently demands that scholars' record books be compulsorily introduced as soon as possible in all schools.

*Note of Warning on "Tests."*—On the subject of "tests" the Conference, while considering it highly desirable that studies and experiments conducted in psychological laboratories should be continued, is nevertheless

convinced that at the present stage the introduction of "tests" in the actual practice of vocational guidance cannot be recommended as providing methods of psychological examination for regular use.

*Training of Experts.*—The Conference arrived at the following conclusion as regards the training of vocational guidance experts:

It is essential that vocational guidance experts should have the best possible qualifications. Without necessarily being doctors, psychologists or professional men, they must nevertheless possess a wide knowledge of physiology and psychology and have some experience in industrial matters. They would be required to maintain such close contacts as are necessary to ensure good results; for example, with schools, the medical profession and the labour market.

In this connection the Conference considers it highly desirable that the training of vocational guidance experts should be assisted by national centres of information and research, to be created on the initiative of the public authorities or by groups of people, at which the experts could pursue their theoretical and practical studies.

## QUALIFICATION OF ENGINEERS IN ALBERTA

THE following regulations governing the examinations of engineers in Alberta were issued during November. These regulations show the part that is played by technical schools in the practical training of workers.

### Regulations Governing Examinations of Engineers

1. (1) A candidate for a first-class certificate may, in lieu of furnishing the proof required by Section 43 (1) of The Boilers Act,<sup>1</sup> being Chapter 191 of the Revised Statutes of Alberta, 1922, furnish proof that he has operated a battery of boilers aggregating not less than three hundred horse-power in capacity, as chief engineer for a total period of five years, of which six months must have been in Alberta; or proof that he holds at least a diploma issued after a course of at least two years by a duly recognized school of technology and in addition has operated a steam plant of the aforesaid capacity as chief engineer for a total period of four years, of which six months must have been in Alberta.

(2) "Chief Engineer" in the regulations governing the examination of engineers shall mean the engineer who has the control and direction of a steam plant in which more than one engineer is employed, and who holds a certificate under the said Act of the class required to qualify him to take sole charge thereof.

<sup>1</sup> i.e. that he has been employed as machinist or boiler maker for 24 months etc., and has had charge of a steam plant of 300 h.p. for 12 months.

2. (1) A candidate for a second-class certificate may, in lieu of the proof required by Section 43 (2) of the said Act,<sup>2</sup> furnish proof that he holds a diploma in power plant engineering issued after a course of at least two years by a duly recognized school of technology, and in addition has been an engineer in charge of, and has operated, a steam plant of at least seventy-five horse-power capacity for a period of not less than thirty-six months. Any candidate for such certificate must in any case have operated for at least six months as the holder of a full third-class certificate (two hundred horse-power).

(2) "Engineer in charge" in the regulations governing the examination of engineer shall mean a person in charge of a shift for at least eight hours per day, who is responsible for the regulations of the feed-water and the general supervision of the boilers and engines during such period.

(3) A candidate for a third-class certificate may in lieu of furnishing proof as required by Section 43 (3) of the said Act,<sup>3</sup> furnish proof that he holds a certificate in steam engineering issued by a duly recognized school of technology, and has served in charge of and operated a steam plant, and operated a boiler or boilers, and an engine or engines, for a period of six months, during which time he has held a provisional certificate or its equivalent under the Act.

(4) "Duly recognized school of technology" in the three preceding regulations shall mean a school approved by a board consisting of the chief inspectors under "The Boilers Acts of Alberta, British Columbia and Saskatchewan.

<sup>2</sup> that he has served 4 years, etc.

<sup>3</sup> i.e. that he has served 12 months, etc.

## AMERICAN FEDERATION OF LABOUR

### Synopsis of the Proceedings of the 44th Annual Convention held in El Paso, Texas

THE forty-fourth annual convention of the American Federation of Labour met in El Paso, Texas, from November 17 to 25. At the same time, the convention of the Mexican Federation of Labour was being held in Juarez, just across the border, and in addition to the usual courtesy of an inter-change of delegates, there was a further manifestation of fraternal regard when the delegate bodies of both conventions visited each other.

After the formal invocations had been offered, the convention, under the chairmanship of R. L. Riter, president of the El Paso Central Labour Union, was welcomed officially by several local and State dignitaries, including Mayor R. M. Dudley, of El Paso; Congressman Claude B. Hudspeth and Major-General R. L. Howze. These felicitations were acknowledged by Mr. Samuel Gompers, president of the American Federation of Labour.

According to the report of the Executive Council, the total membership of the organization was 2,865,979. At the convention there were present 373 delegates, representing 90 international and national unions, 4 departments, 28 state branches, 52 central bodies and 17 local trade and federal labour unions. Besides, there were in attendance six fraternal delegates, namely: A. B. Swales and C. T. Cramp, representing the British Trades Union Congress; John Colbert, representing the Trades and Labour Congress of Canada; Peter Grassman, of the German Federation of Trade Unions; Anna Fitzgerald, from the Women's International Union Label League; and Elizabeth Christman, representing the National Women's Trade Union League of America.

The financial status of the organization, as indicated by the report of the Auditing Committee, was very favourable. The statement covered a period of twelve months, beginning September 1, 1923, and ending August 31, 1924, and showed total receipts, including the balance from the previous year, of \$736,673.80; the expenditures amounted to \$500,028.33, leaving a balance of \$236,645.47, of which \$201,131.56 was in the defence fund and can only be utilized to pay benefits in cases of strikes and lockouts involving directly chartered branches. The remaining \$35,513.91 was in the general fund.

Many of the matters on the agenda came before the sessions in the report of the Execu-

tive Council, while others were presented as resolutions from the floor of the convention. All questions before the convention, whether first introduced as recommendations of the Executive Council or as resolutions, were assigned to committees, whose duty it was to enquire into the subject and make a report or recommendation thereon to the delegate body. A synopsis of the reports of these various committees, the questions delegated to them, and the subsequent action taken by the convention on the more important matters is given below.

#### Report of the Committee on Resolutions

*Non-Partizanship in Politics.*—The committee had to deal with the important question of the continuance or the abandonment of the A.F. of L.'s traditional policy of non-partizanship in politics. It came before the convention in two forms—first, by way of two resolutions urging that the A.F. of L. adopt direct political action by the establishment of a political labour party, and second, in the supplemental report of the Executive Council. In its supplemental report, the Executive Council reviewed the reception given by the old line parties in the United States to the programme of the A.F. of L. It was considered that the attitude of both the Republican and the Democratic Conventions was unsatisfactory. However, the report made it clear that the A.F. of L. did not endorse what was known as the third party movement, but "expressed preference for the election as president and vice-president of the United States of Senators LaFollette and Wheeler and their platform as more nearly representing the hopes and demands of Labour," thereby acting consistently in the pursuit of its traditional policy. In concluding its supplemental report, the Executive Council reaffirmed its position of being "partizan to principles and not to a political party," declaring that "the American Labour movement, if it is to be true to its mission to defend, advocate, promote and protect the rights, interests and welfare of America's wage earners and American people, must be as free from political party domination now as at any time in the history of our movement." The net result of the matter was that, acting on the recommendations of the committee, the convention refused concurrence with the resolutions which called for the formation of

a political labour party and declared for the continuance of the A.F. of L. non-partizan political policy.

*The Mooney Case.*—The committee recommended, and the convention adopted, a resolution calling for the unconditional pardon of Thomas J. Mooney, convicted of participation in a bomb outrage and serving a life sentence. A similar resolution was adopted by the convention last year on the ground that Mooney's innocence had been completely established. The convention also supported the committee's recommendation of a resolution which demanded a new trial for Sacco and Vanzetti (convicted of murder) "before an impartial court and by a jury uninfluenced by prejudiced or biased instructions of the court."

*Use of U.S. Forces to collect on Foreign Securities.*—A resolution on this matter was before the committee protesting against the use of the U.S. Army or Navy to make collections for citizens of that country who had invested money in foreign securities. The resolution considered that "modern wars are begun largely through pressure by, and influence of, the international bankers", and, in essence, that military might should not be employed in their aid. While the committee was in accord with the purpose of the resolution, it expressed dissent with the remedy suggested, and its report on that basis was adopted. The committee dealt with another resolution, which similarly opposed the application of force, but also sought the consummation of a commercial treaty between the governments of the United States and Soviet Russia. The debate on this resolution developed into the broader question of the recognition of Soviet Russia—a matter upon which the A.F. of L. has repeatedly registered its opposition. After a stirring address on the subject by President Gompers, the convention adopted the recommendation of the committee, unanimously rejecting the resolution.

*U.S. Passport System.*—The committee reported favourably on a resolution which aimed at restoring the freedom of international travel, and, to that end, urged an investigation into the extended passport system employed by the government of the United States. The convention approved the resolution.

*Labour and the Courts.*—The section of the Executive Council's report under this caption was referred to the Committee on Resolutions. In reviewing those judicial decisions (outlined by the Executive Council) which were considered hostile to labour, the com-

mittee agreed with the Executive Council that "there has developed an increasing assumption of power by the judiciary". In addition to endorsing the legislative and constitutional measures suggested by the Executive Council, the committee recommended "that Congress re-define the equity powers of the courts"; that "an intelligent public opinion be thoroughly aroused," and to that end that the report of the Executive Council be published in pamphlet form and widely disseminated." This recommendation was sanctioned by the convention.

*Banking and Credit.*—In dealing with this section of the Executive Council's report, the committee was in agreement with its chief features, which, while expressing gratification with the continued progress of labour in the banking field, emphasized "the need of controlling credit through a properly constituted and efficiently managed public agency," and warned "against the hasty formation of labour banks", calling attention "to the need of the most careful investigation and survey of all conditions surrounding such ventures". The convention endorsed the conclusions of the committee.

*Insurance.*—Under this heading, the Executive Council reported exhaustively on the possibilities of labour-controlled insurance. At the 1923 convention, the president was instructed to have this subject investigated, and to submit the findings and recommendations for further consideration and action by the A. F. of L. Consequently, there was a special committee appointed by President Gompers to go into the question in detail. In its report, the special committee found that "insurance is the safest and surest business in the whole world", but it made no definite recommendation "as to the form our insurance enterprise shall assume". It was further convinced that it was not only advisable and safe, but almost the duty of the unions jointly to adopt some form of proper insurance, though it was opposed to have the American Federation of Labour as such actually engage in the insurance business. The recommendation of the Resolutions Committee, which was adopted by the convention, was that there should be a voluntary conference of all national and international officers within the coming year for such action as shall appeal to the best judgment of those attending and as may be within their power to do.

*"Industry's Path of Progress"*.—Such was the caption under which the Executive Council formulated the 1924 message of American

labour to the world of industry. Acting on the recommendation of the committee, the convention accepted the council's re-affirmation of opposition to State intrusion in the field of industry as expressed in the following language: "Democracy cannot come into industry through the State. Industry must find its own way through the difficulties with which it is beset or face the alternative of State intrusion which must inevitably lead to bureaucracy and breakdown."

*Conscription and Military Training Camps.*—In connection with the first subject, the Executive Council drew attention to the "discrepancy" existing in several bills (introduced in Congress) to conscript the labour of workers whenever an emergency was proclaimed, whereas the material resources of the country could only be requisitioned in time of war. The Executive Council had opposed the proposed legislation, and was commended for such action by the Resolutions Committee, which also approved of the course taken. The committee considered that the intent of these bills indicated preferential treatment to material resources and condemned them as follows: "It is difficult to conceive of a more subtle and vicious proposal to subordinate life and liberty to the exaltation of property and material wealth". Reporting on the resolution asking the A. F. of L. to approve of the Citizens' Military Camps and the appointment of civilian aides to co-operate in recruiting for such camps, the committee stated that such a proposal intended that the American Federation of Labour shall become a recruiting arm of the Government. It further recommended (and the recommendation was approved by the convention) that the resolution be referred to the Executive Council "in order to assure ourselves that those camps are not so conducted as to inculcate the spirit of militarism or tend toward the exaltation and glorification of war".

#### Report of Committee on International Labour Relations

*World Court.*—This subject was practically the most important dealt with by the committee. When the question of the participation of the United States into an international tribunal was being investigated by a sub-committee of the Foreign Relations Committee of the United States Senate, representatives of the A.F. of L. in giving evidence before the sub-committee advocated that the nation become a participant in a permanent court of international relations. The international relations committee of the convention

concurred in that attitude as outlined in the Executive Council's report, and the delegate body approved. However, a resolution introduced by delegates from the International Seamen's Union of America opposed the United States Government "becoming entangled with either the League of Nations or the so-called World Court," charging that the League was "a form of super-government especially designed to prevent the extension of human freedom," and that the establishment of an international seamen's code, functioning under the League, would "perpetuate the serfdom of seamen wherever it now exists, and restore it where an enlightened public sentiment has made the seamen free-men." The committee refused to approve the suggestion of non-participation as contained in the resolution, but recommended that "all reference to the rights, liberty and interests of the seamen, or any other affected workers, be referred to the Executive Council to investigate the allegations set forth and do all in its power to protect the freedom of seamen against encroachment by any agency". This recommendation was adopted.

#### Report of Committee on Legislation

*Japanese Immigration.*—This important question was delegated to the committee along with the entire problem of immigration. With regard to Japanese immigration in particular, the committee concurred in, and the convention subsequently endorsed, a resolution which expressed strenuous opposition to any modification of the Japanese exclusion in the following terms:—

We are unalterably opposed to substitute "exclusion by treaty" for "exclusion by law", and we utter this protest with an earnest desire to maintain the most friendly relations with the Japanese working people and with the profound conviction that mutual respect can best be maintained if we insist that Japan recognize our right to control immigration into this country by domestic legislation, and that she abide (as do all other nations) by the general immigration laws enacted by the congress of the United States in accordance with long established national policy.

In addition, the report of this committee condemned the principle of the sales tax; called for the abolition of convict labour competition; asked for the prohibition, through Federal legislation, of the transportation of strike breakers to communities in which strikes were in progress; abolition of tax exempt securities; continuance of the support of farm relief measures; reclassification of Federal employees; and regarded as necessary the enactment of proposed legislation providing for the use of steel cars for express and baggage transportation. All these suggestions were adopted.

### Report of the Committee on Education

*Child Labour Constitutional Amendment.*—The protection of child life has been one of the chief objectives of the American Federation of Labour. It has waged a continuous campaign in this respect, and was largely responsible for the enactment of Federal legislation to prohibit the labour of children under fourteen years of age in mills, canneries, factories, manufacturing establishments, mines and quarries. In 1922, this law was declared unconstitutional by the Supreme Court of the United States, whereupon President Gompers convened a meeting of representatives of all bodies favourable to the abolition of child labour, and there was formed the Permanent Conference on the Abolition of Child Labour, with President Gompers as chairman. Proceeding on the line that a constitutional amendment would be the most effective means of achieving its aim, this body submitted a joint resolution to Congress proposing such an amendment. On June 20, 1924, Congress passed a resolution which was submitted to the States for ratification, the consent of three quarters of the States of the Union being necessary to enact this constitutional amendment, which provided that "Congress shall have power to limit, regulate and prohibit the labour of persons under eighteen years of age;" it being further provided that "the power of the several States be unimpaired by this article," unless the standards enacted in the State laws are lower than those provided in whatever legislation Congress may pass. Four State legislatures in the South refused to ratify the amendment, and action (at the time of the convention) was still to be taken by the other States. The Executive Council in its report outlined the foregoing events in connection with the situation, and urged the necessity for maintaining educational work in order to win over the State legislatures. In commending the report of the Executive Council, the Committee on Education, strongly recommended an intensive campaign by all the forces of organized labour "in order to succeed in this great humane adventure." The convention unanimously concurred. Among the other recommendations of this committee which were sanctioned by the convention were: Support of the Sterling-Reed bill to establish a Federal Department of Education, and advocacy of increased Federal appropriations for education; endorsement of the American Legion campaign for an endowment fund of \$5,000,000, for child welfare, rehabilitation and kindred subjects; endorsement of the Woodrow Wilson Memorial College and the erection by Labour of an

Educational Building upon the grounds of the Memorial; favoured a conference to determine relation of labour costs to selling prices in the textile and clothing industries; urged support of the labour press and the A. F. of L. publicity service; affirmed maintenance of labour representation in the supervision of vocational education and opposed "so-called trade schools," but urged application of trade union apprenticeship systems.

### Report of the Committee on Boycotts

The chief resolutions which this committee dealt with were two which called for the condemnation of the alleged anti-union policy of the Coal River Collieries Company and Mr. Warren S. Stone, chairman of its board of directors, the stock-holders of the company being largely members of the Brotherhood of Locomotive Engineers. The dispute involved the United Mine Workers of America whose members, it was alleged, were being discriminated against by the company. The convention adopted the recommendation of the committee, which instructed the Executive Council to exercise its good offices in effecting a settlement, and in the event of the failure of such negotiations to lay the facts of the case before the membership of the A. F. of L.

### Report of the Committee on Organization

The convention approved of the following chief recommendations of this committee: The giving of encouragement and support to the Amalgamated Association of Iron, Steel and Tin Workers to thoroughly organize the steel industry, and, similarly, to assist the Bookkeepers, Stenographers and Accountants' Union to organize the bank clerks; and the leaving of responsibility to the Executive Council (with the co-operation of the international unions) for the organization of women in industry.

### Report of the Committee on Executive Council's Report

The action taken by the convention on the feature recommendations of this committee follows:—

*Old Age Pensions.*—Endorsed the solution "that the problem of old age pensions be made a part of the larger problem of labour insurance."

*Philippine Islands.*—Approval of the resolution of the Executive Council to petition and urge the Congress of the United States to forthwith grant to the Philipinos the right to exercise in full, liberty, freedom and self-government.

*Occupational Diseases.*—Adopted the opinion of the committee that the Executive Council draft an "occupational diseases section," naming therein the various diseases for which compensation should be paid, to be a model for all state compensation laws.

#### Election of Officers for 1924-1925

The election of officers resulted as follows:—

President, Samuel Gompers.  
 First vice-president, James Duncan.  
 Second vice-president, Frank Duffy.  
 Third vice-president, Wm. Green.  
 Fourth vice-president, T. A. Rickert.

Fifth vice-president, Jacob Fischer.  
 Sixth vice-president, Matthew Woll.  
 Seventh vice-president, Martin F. Ryan.  
 Eighth vice-president, James Wilson.  
 Treasurer, Daniel T. Tobin.  
 Secretary, Frank Morrison.

Atlantic City was chosen as the city in which to hold the 1925 convention.

As noted elsewhere in this issue President Samuel Gompers died on December 13. The Executive Council has power to appoint a successor to discharge the duties of President up to the time of the next convention.

### New Industrial Arbitration Bill for Western Australia

A bill to amend the Industrial Arbitration Act so as to decentralize the work of the existing Arbitration Court, dividing its functions among a number of subsidiary tribunals, but retaining it as the chief and co-ordinating authority in the settlement of labour disputes, has recently been introduced in Western Australia by the Minister for Works and Labour. Special provisions are made for apprenticeship in the building trades, with the idea of overcoming the shortage of apprentices in that trade. An apprenticeship board will be entrusted with the supervision and training of the apprentice, having power to transfer him from employment to employment, the apprentice being apprenticed to the board instead of to the individual employer. This board will consist of representatives of the workers' union and of the employers' union, with a chairman who must be a member of the Court of Arbitration. Another provision in the bill is that all awards and agreements must provide that the working week shall consist of 44 hours.

The bill leaves the Arbitration Court as at present constituted, except that the choice of president will no longer be restricted to those holding the position of judge of the Supreme Court, but sets up, in addition, industrial boards to deal with matters referred to them by the court, special boards to deal with demarcation cases, boards of reference to deal with matters arising out of an award, industrial magistrates to decide on applications for enforcement, district conciliation committees to enquire into any industrial matter with a view to inducing the parties to come to an agreement, and commissioners who may call compulsory conferences and endeavour to settle actual or threatened disputes. It also provides that to facilitate the reference of disputes, the present necessity imposed on

trade unions of taking ballots and holding special meetings shall be abolished, each union deciding for itself the way in which disputes shall be referred to the court. The court is given the power, but not the direction, to award preference to trade unions on the ground that only by the organization of unions is compulsory arbitration made possible. The basic wage, which from time to time must be determined by the court, is to be based on a family living in five rooms and composed of a man, his wife and three dependent children.

#### Municipal Pension at Stratford, Ontario

The Public Utilities Commission at Stratford, Ontario, has adopted a scale of pensions to supplement, for the older employees, the benefits already provided from the Municipal Employees' Benefit Fund. The supplementary scale is a percentage of the employee's income in the last 10-year period of his employment, as follows:—after 10 years' service, 2½ per cent; after 15 years' service, 3 per cent; after 20 years' service, 3½ per cent, and after 25 years' service, 4 per cent, which is the maximum. Some account of various municipal superannuation schemes was given in the May issue of the *LABOUR GAZETTE*.

The education committee of the United States Conference on Street and Highway Safety, in its report to Secretary Hoover, states that thirty of every 100 persons killed in street and highway accidents are children. Nearly 6,000 children were killed last year in motor accidents alone. Conservation of the lives and limbs of the children through safety education therefore becomes a paramount issue.

## NOTES ON LABOUR UNION ACTIVITIES

### Labour Proposals in British Columbia

THE British Columbia executive of the Trades and Labour Congress of Canada brought before the provincial cabinet at Victoria during November a number of proposals for new or amended legislation. Among the subjects discussed were the following: workmen's compensation, mothers' pensions, the eight-hour day, the Barbers' Act, compensation for Police Court witnesses, old age pensions, minimum wages, the Factory Act, Infants' Act, unemployment, and a proposed bill for the protection of employees on buildings and excavations.

In the Workmen's Compensation Act they proposed, among other changes, the increase of compensation to 66% per cent, as in Ontario and Manitoba. The present rate is 62½ per cent. Dissatisfaction was stated to be general among employees against alleged abuse of the discretionary power conferred on the Board. It is urged that casual workers be brought within the scope of the Board.

In regard to mothers' pensions it was proposed that widows with or without children be brought within the scope of the Act and that it be extended to all cases where there is no adequate means of support.

The government was congratulated on giving fire fighters one day's rest in seven. The delegation recommended that boys should be included in the Minimum Wage Act. Changes in the Factory Act were proposed in relation to employment of children, setting the age limit at 15 years.

The proposed Building Trades Protection Act was drawn up for the purpose of protecting workmen on such undertakings, and hoists, ladders, rigging, steel framing, excavations.

The members of the Government were stated to be favourably disposed to many of the proposals laid before them.

### Labour Programme in Saskatchewan

The Saskatchewan Executive of the Trades and Labour Congress of Canada asked the Provincial government in November to co-operate with the Federal government and other provincial governments in framing an old age pension scheme for Canada on the lines suggested by the Parliamentary Committee on Old Age Pensions (LABOUR GAZETTE, July, 1924). The labour representatives also asked for amendments to the School Act to provide free medical inspection, free standardized text books, and the raising of

the age for compulsory school attendance from 15 to 16 years; and for amendments to the Steam Boilers Act which would effect a reduction in the number of temporary permits issued to persons not fully qualified to operate steam boilers. They further suggested that the existing law on garnishee of wages should be amended so as to prevent abuses whereby the wages of workers are tied up when proceedings are instituted, even though the alleged debt is not acknowledged by the worker, it being further claimed that some employers dismiss workers against whose wages claims have been made on the affidavit of alleged creditors. The present law on this subject is contained in Chapter 59 of the Revised Statutes of Saskatchewan, as follows:—

(1) Subject to the other provisions contained in this section, no debt due or accruing due to a mechanic, workman, labourer, servant, clerk or employee, for or in respect of his wages or salary shall be liable to attachment unless such debt exceeds the sum of \$75 and then only to the extent of the excess.

(2) Where the debt due or accruing due is wages or salary for a period of less than one month the part thereof exempt from attachment shall be that sum which bears the same proportion to \$75 as the period for which the wage or salary is due or accruing due bears to one month of four weeks.

(3) Nothing in this section contained shall apply where the debt sued for, or in respect of which the judgment was recovered, has been contracted for board and lodging.

(4) If the said amount of \$75 or any portion thereof is paid into court it shall not be necessary for the debtor to claim the same but he shall be entitled to have it paid out to him at any time on application to the local registrar; but in the event of no such application being made until the expiration of two months after such payment, in or after judgment is recovered against the debtor whichever is later, the judgment creditor shall be entitled, on application to the court or a judge, to have the said sum or so much thereof as may be sufficient to satisfy his judgment paid out to him.

### Convention of the International Association of Machinists

The International Association of Machinists held its seventeenth convention at Detroit, Michigan, from September 15 to 27, under the presidency of William H. Johnston. There were present 241 delegates, representing a membership of 126,142 of whom 9,382 were in 86 locals in Canada. As this was the first convention since the gathering at Rochester in 1920, considerable business had accumulated. Fifteen hundred amendments to the constitution alone were proposed, some suggesting additions to existing laws, while the balance sought changes in practically every article of the constitution.

The president's report dealt with such subjects as the open shop, the railroad shopmen's strike, the Daugherty injunction, the movement of railroad labour organizations to abolish the Railroad Labour Board by enactment of the Howell-Barkley Bill, and the successful inauguration of the co-operative plan in forty-four shops of the Baltimore and Ohio Railroad. The four years intervening since the last convention were stated to have been the most crucial in the Association's history, but it had come through the test with a creditable record.

The general secretary-treasurer, E. C. Davison, reported that the Association was in a strong financial position. He claimed that its connection with banking institutions had been a large contributing factor in the successful handling of the financial problems of the four years, and this had on many occasions saved it from serious embarrassment. The Mount Vernon Saving Bank at Washington, which was instituted by the Association on May 20, 1920, and was the first labour bank in the United States, was reported to have resources beyond the \$3,000,000 mark. The secretary referred to the loss of membership on account of strikes, claiming that this could be largely minimized by co-operation, and that the money expended on strikes, if invested in machinery and plants, "would establish high standards with less loss than the present method of handling strikes". The report showed that contract shop strikes of the machinists during the four years had cost a total of \$1,814,305, and the railroad shopmen's strike of 1922 had cost the organization \$1,549,903. The entire cost to the Association for developing and putting into operation the co-operative plan on the Baltimore and Ohio Railroad was \$7,388.\* The report also showed the expenditures of the Association for death benefits, the benefits paid during the first six months of 1924 totalling \$53,293. In the period from 1898 to June 30, 1924, the Association had paid \$1,589,823 in death benefits. Yearly amounts ranged from \$1,775 in 1898 to \$132,237 in 1918, which was the highest amount paid in any one year. The death benefit fund was provided for by setting aside 9 per cent of all per capita tax, initiation fees and reinstatement fees. Among other matters dealt with in the report were the operation of the Machinist Building, the building fund showing a balance on July 1, 1924, of \$80,580, and interest on the investment of the Association's funds of 7 per cent; the operation of the printing plant, which

netted the Association approximately 14 per cent; and the operations of the insurance department in which, from June 1, 1924, the policies were handled by the Grand Lodge. In a summary of the business done by the insurance department during the period covered from June 1, 1921, at which time the insurance became effective, 275 claims have been paid for death and disability.

*Insurance.*—The convention devoted considerable time to the discussion of insurance, several alternative propositions being offered: whether, for example, there should be organized a fraternal benefit association similar to that operated by the Electrical Workers, Locomotive Firemen and Enginemen, and other labour organizations, or should the insurance features be abandoned. The convention finally agreed to retain the death benefit provision, and to increase the amount set aside for payment thereof to 15 per cent of the per capita tax, declined to abandon the insurance department, and referred back to the law committee the question whether policies should be written in the sum of \$500 or \$1,000.

*Strikes.*—The convention adopted, subject to a ballot of the members, an amendment to the strike laws, eliminating all reference to strike benefits in a stated amount, and leaving the matter of financing strikes in the hands of the executive council. The new proposed provisions also provide for certain other changes in the law relating to strikes, all of which will appear on a ballot to be submitted to the members by the law committee for referendum vote.

*Seniority.*—With regard to seniority, it was recommended "that all conferences, committees and officers of our organization, and other organizations affiliated through the Railway Employees' Department, be instructed to adopt an aggressive policy with reference to the seniority question at every opportunity, and to continue their efforts at all times until the question of restoration of seniority rights, unimpaired, is satisfactorily settled on their respective systems".

*Howell-Barkley Bill.*—The convention favoured the passage of this Bill and the repeal of the Transportation Act, particularly Title 3 of that Act.

*Company Unions.*—Officers of the organization were instructed to co-operate with the officers of any System with a view to securing the overthrow of the company unions on such System, and were authorized to devote as much assistance, through the assignment of officers and expenditure of funds, as might be necessary to bring about this purpose.

\* This plan was referred to in the last issue of the LABOUR GAZETTE.

*Baltimore and Ohio Co-operative Management Plan.*—The question of the Baltimore and Ohio Plan of co-operative management came before the convention in the report of the committee on railroads, there having been some resolutions condemning the plan. The committee stated that "After a very thorough investigation of the results accomplished on the Baltimore and Ohio, the committee finds that the programme has been of great benefit both to the railroad in improving of working conditions, lessening of grievances and more prompt settlement of such grievances as do occur". It recommended that "the Union Management Co-operative Plan be extended to other railroads and in other industries whenever it develops that the employees on any railroad system or in any industry are desirous that the programme be established and it can be arranged with our respective officials, with the approval of the men employed on such railroad or industry".

*Amalgamation.*—Resolutions on the amalgamation of railroad and metal trades brought forth considerable discussion, and the following recommendations were adopted by the convention:—

(1) That we again reaffirm our readiness to amalgamate with the other Metal Trade Unions, and so instruct our officers to continue the efforts they have been making in the past, and to take advantage of any opportunity offered by any of the other Metal Trades Unions for amalgamation.

(2) To adopt and advocate a plan of co-operation with other kindred crafts, with the ultimate object of amalgamating all closely related metal trades, thereby eliminating strikes of one organization at a time, and by concerted action making it possible for all to reap the full benefit of their labour. This shall not be construed to favour the theory of industrial unionism.

*Education.*—The convention adopted the following recommendations of the committee on education: (1) the establishment of a permanent committee on education; (2) the endorsement of the Workers' Educational Bureau of America; (3) the establishment of five scholarships at Brookwood Labour College at Katomah, New York, these scholarships to cost \$450 each and to cover eight months tuition; (4) the endorsement of the work of the National Association for Child Development; (5) the establishment of a book department under the direction of the editor of the Machinists' Monthly Journal; and (6) the establishment in local lodges of permanent committees on education.

*Shipping and Shipbuilding.*—The convention approved the report of the marine committee which stated that the shipbuilding industry was practically dead both in Canada and the United States, that several shipyards had developed a line of general engineering work

foreign to the building of ships, that only six yards were now engaged in the construction of new ships; and that working conditions on new and repair work were good, wages ranging from 72 to 90 cents per hour for machinists. In dealing with this subject the committee treated the Canadian and United States situation separately, the resolution respecting the Canadian situation being as follows:—

Whereas, from information received, Canada stood third among the nations of the world in 1883 with 1,311,218 tons of shipping that she built, owned and manned with Canadians; and whereas, as a result of adverse legislation, which admitted of the unrestricted use of foreign shipping in Canadian port-to-port and coast-wise trade, Canada dropped to sixteenth place in 1916, and to a still lower place in 1924; and whereas, as a consequence of the inability of the Canadian shipping yards to compete in cost of production with shipbuilding firms in the British Isles and European countries, the shipyards in Canada are for the most part idle and much unemployment has resulted therefrom; and

Whereas, there is ample evidence that the membership of the International Association of Machinists and the people of Canada as a whole would greatly benefit from the enactment and enforcement of legislation that will tend to revive and protect the shipbuilding industry in that country; therefore, be it resolved, that the Canadian vice-presidents and other officers of our organization in that territory be instructed to direct their efforts toward the securing of the beneficial legislation above referred to and to continue to work in co-operation with the officers of the Trades and Labour Congress of Canada to that end, and be it further resolved that the work in this connection be placed under the direction of vice-president J. A. McClelland in Canada.

Attention was drawn to the fact that marine engineers have often undertaken to carry out repairs to the engines and machinery on the ships where they are employed, under less favourable conditions and wages than were obtained by members of the Association, thus diverting considerable work from the machinists. The general officers were instructed to communicate with the officers of the Marine Engineers' organization with a view to reaching an understanding as to jurisdiction over repair work on steamships.

*Shorter Work-Week.*—The following resolution contained in the report of the committee on the shorter work-week was adopted:—

Resolved, that the officers and members of the International Association of Machinists be instructed to do everything in their power to maintain an eight-hour day and resist every effort to lengthen the hours over eight per day; in order to secure a five-day week through that kind of an arrangement, and be it further resolved, that an earnest effort be made by our membership everywhere to secure a 44-hour week whenever the numerical strength of the membership and the industrial conditions appear to warrant the establishment of same.

*Appeals and Grievances.*—Seven appeals from decisions rendered by the general executive board were brought before the convention and handled by the committee on

appeals and grievances. One of these the Toledo case is of interest to the Canadian movement. In this case the convention sustained the general executive board in its declaration that the Trade Union Educational League and the Workers' Party are organizations dual to the International Association of Machinists, and that any member of the Association holding membership in these organizations, can be adjudged guilty of belonging to a dual union and accordingly suspended from membership in the Association.

*Amendments to Constitution.*—Among the amendments to the constitution recommended by the convention, all of which must be submitted to referendum for ratification before taking effect were recommendations for the abolition of the present general executive board of five members, and for the reduction of the number of vice-presidents from ten to seven. Under the arrangement the new officers of the Association will consist of a president, a general secretary-treasurer, an assistant secretary-treasurer, an editor of the *Machinists Monthly Journal*, seven vice-presidents, and an executive council composed of the president, the secretary-treasurer and the seven vice-presidents. Canada will have one vice-president instead of two, as at present, who will be elected by the membership of the organization as a whole. A resolution, seeking to have the Canadian vice-president elected by the Canadian membership only, was defeated, as was a resolution asking that the vice-president be established with offices in seven zones. Another proposed change to the constitution was one affecting the length of the term of office of the International officers. It provides for an election every two years, as was the case before the Rochester convention in 1920. The election of officers for the Association will take place in January, 1925.

#### District 26, United Mine Workers

The election of officers in District 26, United Mine Workers of America, was held on November 3, but the results of the polling on that date were not sufficiently decisive to return a complete slate since several candidates did not receive the necessary majority of the total votes cast. Consequently, a second ballot was taken on November 27 for such offices as still remained vacant. The complete results were as follows:—

President, John W. McLeod, Glace Bay; vice-president, Joseph Nearing, Reserve; secretary-treasurer, Alex. A. McKay, Caledonia; International Board Member, William

Hayes, Springhill. The following were elected sub-district board members: J. A. McDonald, Glace Bay district; James O'Rourke, Cumberland county; Thomas I. Scott, Pictou county; John McLennan, Sydney Mines; Dan. D. McNeil, Waterford; John Kennedy, Inverness.

#### Journeyman Barbers' International Union

The Journeymen Barbers' International Union at its fifteenth convention held at Indianapolis, Indiana, in September last decided to admit women hair dressers, marcel wavers and beauty parlour operators to membership in the organization; to endorse the 54-hour week as the maximum working hours; to co-operate with State Federations of Labour and local unions within the states and provinces to abolish Sunday labour; to urge the *Barbers' Journal* to print articles bearing on such phases of the profession as are of mutual benefit to employers and employees. Provision of sick benefits was also made for members of the organization who seek health in foreign countries and are unable to come back on account of health. The matter of old age pensions was discussed, and the incoming executive was empowered to work out a plan which would be submitted to a referendum vote of the locals within one year. The executive was also instructed to work out a proposition with respect to barbers' colleges which should also be submitted to the membership within one year. This action was taken following a resolution condemning privately operated trade schools, and asking for the formation of schools to be under the direction of the organization.

Mr. James C. Shanessy was re-elected president and Mr. Jacob Fischer as secretary-treasurer and Mr. H. J. Halford, secretary of the Canadian Federation of Labour as fourth vice-president.

#### International Printing Pressmen and Assistants' Union

At the recent convention of the International Printing Pressmen and Assistants' Union of North America held at the Pressmen's Home, Tennessee, it was decided that greater attention should be given to the training of apprentices. The president was authorized to prepare a law making it compulsory upon all registered apprentices in America to take a correspondence course through the trade schools of the International Union, the Union to bear the cost for a five-year apprenticeship; a penalty of \$50 for the first offence and suspension for the second offence is to be imposed upon local unions who do not comply with the law.

Approval was expressed of the International Union's action in appointing a travelling expert on printing, "whose duty it is without cost to the newspapers or to local unions to respond to calls and to initiate activities in assisting newspaper web pressmen and newspaper publishers in overcoming their mechanical and economic difficulties."

The convention approved of the action of the Union executive in purchasing stock in the Federation Bank of New York City, which is controlled by organized labour exclusively, and which is now in a strong financial position. It was felt that it was in the best interest of the organization to purchase stock in "existing, tried and true institutions, rather than to be compelled to go through the experimental stage that naturally falls to newly organized banks."

A number of changes to the constitution of the union were approved and among the amendments were in sections dealing with wage agreements and death benefits, which will now read as follows:—

All local wage agreements hereafter made shall not exceed a period of three years in duration. All local contracts or agreements shall also provide that the subordinate unions parties thereto shall hold charters from the International Printing Pressmen and Assistants' Union of North America during the term thereof, and that if, for any reason, the charter of such subordinate union is forfeited or revoked, then and in such event said contracts or agreements shall terminate and shall be null and void.

(c) The amount of death benefits shall be as follows:

After continuous membership of one year, and less than two years, \$100 death benefit; for a continuous membership of two years, and less than three years, \$150 death benefit; for a continuous membership of three years, and less than four years, \$200 death benefit; for a continuous membership of four years and less than five years, \$250 death benefit; for a continuous membership of five years, and less than six years, \$300 death benefit; for a continuous membership of six years and less than seven years, \$350 death benefit; for a continuous membership of seven years, and less than eight years, \$400 death benefit; and for a continuous membership of eight years, and less than ten years, \$450 death benefit; and for a continuous membership of ten years and less than fifteen years, \$500 death benefit; for a continuous membership of fifteen years and less than twenty years, \$600 death benefit; for a continuous membership of twenty years and over, \$700 death benefit.

A proposition to amend the old age pension section of the constitution was tabled for further consideration. It was explained that 25 cents per month of the *per capita* tax goes into the pension fund, and that the fund now amounts to slightly over \$500,000.

#### Bricklayers, Masons and Plasterers' International Union

At the ninth biennial convention of the Bricklayers, Masons and Plasterers' International Union of North America, which was

held at Saratoga Springs, New York, from September 8 to 20, a resolution was adopted protesting against the establishment of trade schools operated outside of the organization. Subordinate unions throughout the country were asked to discourage this practice "and demand that the men learning the trade come under the supervision of the subordinate union, whereby they are assured of receiving the practical knowledge of the craft."

Delegates to the conventions of the American Federation of Labour and the Building Trades Department were instructed to advocate, at these conventions, a department of publicity, which would send out, at least every three months, to each local union affiliated, statistics of the increase or decrease of the cost of living, the percentage on material, and all such information that would help and assist the local unions "to keep them posted at all times as to what the employers and our enemies are doing, so the arbitration committee of local unions and officers can be posted and combat any arguments by facts that can be obtained through that source if they desire to get it." Another resolution provided that no international union agreements be issued to contractors or builders holding membership in any contractors' or employers' association having agreements with members of the international union of the several cities of the United States and Canada. This resolution means that an international agreement signed with any international firm is not to apply in the cities and towns where the firm holds membership in a local building employers' association with which the subordinate unions of that city have an agreement.

The Convention considered a proposal that an unnamed percentage of the yearly increase in net assets be donated to State and Provincial Universities, the amount to be prorated by the executive board, and the fund administered by the board of regents or trustees of the university, with the co-operation of the subordinate unions in each state or province, as a scholarship loan fund, primary preference to be given to qualified members or sons of members of the International Union, and secondary preference to sons of members of other unions. This proposal was left over until the next convention, and each delegate was asked to take the matter to his own union and have it discussed before that time.

The Convention also decided that a committee of marble masons be appointed to draft an apprenticeship scheme, and submit it to the executive board; that the *per capita* tax for each member for the next two years

be \$1.50 per month, divided as follows: relief fund, 70 cents; mortuary fund, 30 cents; general fund, 25 cents; and defense fund, 25 cents; and that the headquarters of the union should be removed to Washington, District of Columbia.

The officers elected were as follows: President, William J. Bowen, New York; first vice-

president, George T. Thornton, Boston; secretary, John J. Gleeson, Chicago; treasurer, Harry C. Bates, Dallas. Two Canadian vice-presidents were elected—fourth vice-president, Walter Thorne, Toronto, and tenth vice-president, John McLeod, Toronto.

It was decided that the next convention should be held at Atlantic City, New Jersey.

## NOTES ON INDUSTRIAL SAFETY AND HEALTH

MR. Louis Guyon, Deputy Minister of Labour in the province of Quebec, in an address recently delivered before the provincial Safety League, appealed to all the manufacturers of the province to unite in order to give their employees the full benefit of the protection prescribed by the laws of the province. Machine tools, he pointed out, should only be in the hands of specialists who are acquainted with their working, but unfortunately it often happens that groups of workers absolutely inexperienced are found, most of them having deserted the farm to work in the cities. Through the serious negligence of an employer these people are entrusted with some mechanical work, and not being acquainted with the working of a machine are continually exposed to dangers of all kinds. He referred to the beginning made some years ago by the provincial government in establishing a museum of objects likely to instruct manufacturers and workers as to safer methods. This museum, he said, had been closed down, but every effort should be made to re-establish it. Mr. Guyon further stated that close investigation was now made of industrial accidents, and that the Government would soon be able to secure reports on all industrial accidents happening on jobs and in the streets. He said, "Many reports come to me from employers, and these invariably state the accident referred to was due to the victim's carelessness. But the human element is not considered. Before machinery was introduced men worked with their hands. Of course there were few accidents then, but this is an age of machinery, and preventive appliances should be used in every factory. Anything that can be done to prevent an accident is better than all the dollars and cents that go afterwards to the victim. The manufacturers and employers owe more to the working man than his salary."

### Factory Regulations in Ontario

The chief inspector for factories of Ontario, in the recent report of the Provincial De-

partment of Labour, outlined elsewhere in this issue, mentions that elevators in the province are now required to be equipped with mechanical locks to prevent car being taken away from any floor till gate is closed and locked. His report contains a number of recommendations for the safeguarding of factory workers, as follows:—

*Elevator Shafts.*—The interior of the walls of the shaftway should be smooth, offering no projections or depressions by which a person might be injured. All depressions in this wall should be filled in flush with the interior surface. All projections such as bolts and timbers should be cut off flush or levelled. If windows are placed in the walls of the shaft they should be flushed with walls. It is also advisable to place underneath at each entrance to car a bevelled plate to prevent a foot being crushed by the shearing action of the descending or ascending car. A substantial grating or platform should be placed at the top of the shaft directly underneath the head sheaves and a suitable cover over top of car should be provided.

*Guarding Machinery.*—Machinery should be made "fool-proof," and it is practical to do so. It is in the employer's interest and the interest of his employees to establish and maintain safe conditions. Otherwise there remains a loss of efficiency among employees, and usually loss of loyalty to duty as no employee can have confidence in an employer who does not erect barriers against maimed limbs and lost lives. Guards should be designed and substantially constructed, unsafe guards are useless in preventing accidents. When a guard is removed, a warning sign forbidding anyone to operate the machine should be hung up in a conspicuous place and no one should be allowed to use the machine until the guard has been replaced.

There are a great many varieties of safeguards for belts and pulleys, friction clutches, and other similar dangerous moving parts which are best guarded by enclosures of angle iron filled in with wire mesh, sheet metal, expanded metal or perforated metal. Hinged

lids or doors should be used where it is necessary to obtain access to moving parts in order to avoid the necessity of removing the entire guard. Wire mesh and expanded metal guards have the advantage of making moving parts of machinery visible, whereas sheet metal obscures the view. One exception is in cotton mills, where wire mesh collects a great deal of waste cotton, which is floating about the room, thus increasing the danger of fire. Perforated sheet metal can also advantageously be used for many guards. Chicken wire should not be used as it easily bulges when pressure is applied. Wooden guards should be avoided. In certain industries they prove insecure and become oil soaked, creating a fire hazard, but such guards can be used where manufacturing conditions are likely to cause metal guards to deteriorate, as in chemical industries and also around electrical apparatus.

No projecting set screws, keys, or unsafe couplings, with projecting nuts or bolt ends should be used on shafting. The operating points of all dangerous machines, such as circular saws, jointers, shapers, rolls, cutting machines, shears, punching and stamping presses, etc., should be safely guarded.

(In the report of the Saskatchewan Bureau of Labour and Industries, elsewhere in this issue, will also be found recommendations for accident prevention.)

#### Safety on Toronto Electric Railway

A safety shield is offered by the Toronto Transportation Commission to employees of the division having the lowest number of accidents per 100,000 street car miles. The employees are given a thorough training in safe operating rules, which are carefully formulated by the company. Care is also taken by the company in securing design of equipment with the idea of promoting safety. A report on accident prevention presented at the recent annual meeting of the American Electric Railway Association (an international association with headquarters in the United States and including 13 Canadian railway companies) containing figures of the number of accidents reported in 1923 by 147 street railway companies, showed that the average number of accidents per 100,000 car miles was 39.8. In Toronto, the 1923 average was 27 accidents per 100,000 car miles, or approximately one-third lower than the general average. The Toronto Transportation Commission's average cost per accident was 68 per cent lower than the general average.

#### Carelessness

In discussing the subject of carelessness in its relation to accidents, Mr. Arthur Williams,

the president of the American Museum of Safety, New York City, recently stated that "To-day we know that carelessness is as much a frame of mind as it is a bodily habit, and we are beginning to find out what causes that frame of mind and how to change it. We know, for instance, that lack of confidence in the sincerity of the employer or failure to understand the motive of the employer are often responsible for the frame of mind which is conducive to accidents."

#### Fatigue

It has been found that there is a distinct connection between fatigue and accidents. In the hours when the fatigue of the worker is still slight there are scarcely any accidents, while in the sections of the working day, as well as of the working week, when fatigue has grown to an appreciable extent, the number of accidents increase. Labour turnover has also been found to be responsible for a great number of accidents, as new employees unfamiliar with the work and surroundings are always under a greater nerve strain than older employees.

#### Railway Workers' Leisure

In an address before the American Safety Association, the president of the Union Pacific System emphasized the need for railway employees exercising care in their conduct during leisure hours. He said, "It is not practical to expect that a man who dissipates and fails to get his rest can give the same assurance of safe work as can a man whose leisure time is properly spent. To this extent all have a considerable interest in what the man is doing while off duty, as he is thereby either fitted or unfitted to be a safe worker and no one has a greater or more direct interest than his fellow employees."

#### Mine Accidents

In a pamphlet recently prepared by John B. Andrews, secretary American Association of Labour Legislation, on "Needless Coal Mine Accidents—A Program for their Prevention," there are five proposals for the prevention of mine accidents. These include:

1. The adoption of legal minimum standards of safety.
2. The use underground of no explosive that is not after scientific investigation numbered among the "permissibles;" the strict limitation of "shooting off the solid;" and the use of shale or approved rock dust to check the spread of coal dust explosions.
3. Reward careful employers and penalize the least scrupulous, by the universal adoption of schedule rating for insurance under

accident compensation laws, with a further graduated penalty for cases of wilful failure to put into effect legal safety regulations.

4. An adequate mine inspection staff selected upon a merit basis of training and experience, fairly paid for reasonably long tenure of office, and protected from partisan interference whether political or industrial.

5. Greater public authority, federal and state, to procure and disseminate information, and to establish and maintain on a uniform basis reasonable minimum standards of safety.

As the result of a study of 256 coal mine explosions which occurred during the period 1909-1924, engineers on the staff of the United States Bureau of Mines, have discovered that there are two critical times of the day when explosions are most likely to occur. There were 4,413 men killed and 570 injured by these explosions. The critical period in the morning ranges between six and nine o'clock, with a peak at 7.30 o'clock, largely due to the hazards of accumulation of gas during the night. The critical period in the afternoon ranges between 3 and 7 o'clock, with a peak at 6 o'clock, hinging upon the practice of shot firing in the evening. Between these morning and evening critical periods is the noon period between 11 a.m. and 1 p.m. associated with the practice of shot-firing at noon. With regard to the morning explosions it is stated that the period lapsing between the time of inspection and men entering workings is often too long, and although a working place may be clear when examined, a fall or other cause may result in an accumulation of gas. Another fairly frequent cause of morning explosions is claimed to be the leaving of ventilating doors ajar during the night. A number of cases in the Bureau's files describe explosions on Monday mornings. Mostly these are the result of fans being stopped over the week-end, and it is recommended that when fans are stopped for repairs or other reasons, the mine should be ventilated and tested before the men are permitted to enter. In view particularly of the number of early morning explosions, the following recommendations are made by the Bureau of Mines:—

The area assigned to each fireboss should not be too extensive.

The system of ventilation should be so planned that a minimum number of doors will be necessary. It may be cheaper in the end to build a few additional overcasts than to pay for the cost of an explosion. Permissible electric lights and flame safety lamps should be substituted for open lights in all coal mines. The practice of shooting off the solid should be eliminated and permissible explosives should be substituted for black blasting powder. No person except a regular experienced shot firer should be permitted to load and charge holes.

All electric power lines should be frequently inspected to see that they are properly installed, and that there is no danger from short circuits which might ignite a pocket of gas.

#### First Aid Work of Bell Telephone Co.

Realizing the necessity of training their employees in first aid work, the Bell Telephone Company, two years ago, formed a St. John ambulance centre within the organization. As a result, employees receive through instruction in first-aid work, and are called upon to pass examinations. About 50,000 plant men of the company have been skilled in first aid. The employees of the company also assist in the preparation of safety codes.

#### Lead Dust in Rubber Factories

It has been found that the hazard from lead dust in rubber factories caused by the use of petrolatum or similar substance for the purpose of giving the product the desired texture, can be greatly reduced if before applying the petrolatum is mixed with litharge in the proper proportions to form a salve. A separate room should be used for the mixing process.

#### Nitrate of Mercury in Hat Making

According to a statement in *The Nation's Health*, published in Chicago, the use of nitrate of mercury in the making of felt hats has long been regarded as a grave industrial hazard, the disease "hatter's shakes" being one of the major problems to be dealt with by the industrial hygienist. The mercury is employed primarily in the treatment of the fur for the purpose of making the scales on the hairs stand out from the hairs themselves in such fashion as to interlock and felt together readily. In Germany it is claimed that a mixture containing tannin and nitric acid may be substituted for nitrate of mercury with entire success, while in Russia similar claims are made for potassium hydroxid. The Russian process, it is stated, has been in use since 1903 and excellent hats made with caustic potash of felt were exhibited at the Dresden Hygienic Exhibition in 1911. Since 1922 there has been a revival of the hat industry in Moscow province and the attempt to prohibit the use of the mercury process has been made but only with the result of driving it "underground."

#### Industrial Health Service

Free examination of plants during working hours, advice and interested follow-up work are features of the organized health service of the Philadelphia Health Council and Tuberculosis Committee. The work is financed almost entirely by the sale of Christmas seals

to the public. It is the hope of the Council that many of the smaller industrial establishments in Philadelphia which are unable to obtain full-time medical service will at least give their employees the benefit of initial and periodic physical examinations.

#### Approved Safety Codes

On June 19, 1922, the American Engineering Standards Committee invited the Laundry Owners' National Association, the Association of Governmental Labour Officials, and the National Association of Mutual Casualty Companies to act as joint sponsors for a safety code for laundry machinery and operations. A code drafted under the sponsorship of these Associations and published by the United States Bureau of Labour Statistics has recently been received by the Department of Labour of Canada. Other safety codes (Bulletin No. 375, Safety Code for laundry machinery and operations) received by the Department which have met with the approval of the American Engineering Standards Committee are as follows:—

Bulletin 331, April, 1923, Code of lighting: factories, mills and other places.

Bulletin 336, April, 1923, Safety code for the protection of industrial workers in foundries.

Bulletin 338, April, 1923, Safety code for the use, care and protection of abrasive wheels.

Bulletin 350, January, 1924, Specifications of laboratory tests for approval of electric headlighting devices for motor vehicles.

Bulletin 351, October, 1923, Safety code for the construction, care and use of ladders.

Bulletin 364, Safety code for mechanical power-transmission apparatus.

These bulletins, as well as a number of other bulletins which are not included in the series "Safety Code" but which contain material relating to the subject "Safety" have been published by the Bureau of Labour Statistics of the United States Department of Labour. The Department has also received two publications of the American Bureau of Standards, namely, the American Logging and Sawmill Safety Code, 1923, Handbook No. 5, and the Electrical Safety Code.

## LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

### Summary of Reports of the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics has recently issued reports on the oiled and waterproof clothing industry, and on the button industry in Canada for the years 1921 and 1922, on the leather glove and mitt industry for the years 1921, 1922 and 1923, and on the leather industry in 1923. Previous reports in this series relating to other industries, were outlined in the LABOUR GAZETTE for August, 1924, and previous issues.

#### The Oiled and Waterproof Clothing Industry

In the report presented on the oiled and waterproof clothing industry in Canada for the calendar years 1921 and 1922, it is shown that in the former year there were 22 establishments operating, located as follows: Quebec, 13; Nova Scotia, 6, and Ontario 3, while in 1922 there were 16 establishments operating, including 9 in Quebec, 5 in Nova Scotia and 2 in Ontario. The total value of production for the year 1921 was reported at \$1,914,021, and in 1922 at \$940,331, a decrease of \$973,690. The decrease was general throughout all lines of production and

is no doubt principally due to the reduction in the number of establishments actively engaged in the industry. The total capital invested for the year 1922, was \$1,096,815 less than the amount reported for 1921, the figures being \$2,689,402 for 1921 and \$1,592,589 for 1922, of which \$1,589,563 was working capital in 1921 and \$664,350 was working capital in 1922. The number of persons employed in the industry was 401 (226 males and 175 females) in 1921 and 246 (117 males and 129 females) in 1922, whilst the total expenditure for salaries and wages was \$442,333 in 1921 and \$219,827 in 1922. Of the total employees engaged in the industry there were 275 (134 males and 141 females) wage earners in 1921 whose wages totalled \$290,619, and in 1922 there were 177 wage earners (82 males and 95 females) with wages totalling \$133,475.

#### The Button Industry

There were 20 establishments engaged in the button industry in 1921 as compared with 21 in 1922. In the latter year Ontario had 13 factories, Quebec 4, British Columbia 3,

and Alberta 1, the additional factory in operation during the year being in the province of Quebec. The total capital invested in the industry in 1921 was \$1,212,229 as compared with \$1,363,340 in 1922, while the value of the products was \$1,239,814 in 1921 and \$1,203,240 in 1922. The number of employees of both sexes rose from 541 (249 males and 292 females) in 1921 to 573 (259 males and 314 females) in 1922. There was also an increase in the payroll which was reported at \$427,384 in 1921 and \$503,445 in 1922. The largest increase in the number of persons employed was in the wage-earning class, which in 1921 averaged 198 male and 227 female workers as compared with 209 male and 247 female workers in 1922.

### The Leather Glove and Mitt Industry

A report on the leather glove and mitt industry contains statistics for the years 1921, 1922 and 1923. In 1921 there were 46 establishments making leather gloves, mittens and gauntlets, the number increasing to 47 in 1922, and to 56 in 1923. In the latter year there were 30 plants in Ontario, 18 in Quebec, 4 in Manitoba and 4 in British Columbia. The capital investment of the industry in 1923 was valued at \$3,117,241, compared with \$3,096,725 in 1922 and \$3,264,914 in 1921. The total value of all products for each of the three years was as follows: 1921, \$2,694,816; 1922, \$3,375,728; 1923, \$3,864,662.

The total number of days in operation by all plants in 1921 was 10,983, an average for each plant of 238 days; in 1922 the total number of days was 13,204, an average of 280 days per plant; and in 1923 the total number of days was 15,927, an average of 284 days for each plant.

In 1921 the industry gave employment to 1,182 persons, of whom 220 were salaried employees and 962 (335 males and 627 females) were wage earners. In 1922 there were employed 1,413 persons, of whom 208 were salaried employees and 1,205 (483 males and 722 females) were wage earners. In 1923 there were employed 1,574 persons, of whom 213 were salaried employees and 1,361 (568 males and 793 females) were wage earners. The salaries and wages paid amounted to \$938,783 in 1921; \$1,099,019 in 1922; and \$1,192,225 in 1923. Of these amounts \$562,432 was for wages in 1921, \$710,209 was for wages in 1922 and \$846,934 was for wages in 1923.

### The Leather Industry

The number of tanneries in operation in 1923 was 123, an increase of seven over the number shown for the preceding year, the additional number being chiefly customs tanneries in the western provinces. The Maritime provinces show an increase of 1, Ontario of 1, and the Western provinces of 6. In Quebec there was a decrease of 1. The distribution of tanneries by provinces in 1923 was as follows: Quebec, 64; Ontario, 40; Alberta, 5; Nova Scotia, 4; Manitoba and Saskatchewan, 3 each; and New Brunswick and British Columbia, 2 each.

The total value of production of the tanneries in 1923 was \$23,607,728, a decrease from the preceding year of \$684,156. These totals are exclusive of the value of hides and skins tanned for customers, but include the amounts received by the tanneries for custom work. The value of output of Ontario tanneries in 1923 constituted 84 per cent and of Quebec tanneries 14 per cent of the total value for the Dominion.

The capital invested in the industry in 1923 totalled \$30,348,468, a decrease from the preceding year of \$2,470,307. The largest percentage of decrease was shown in the item of cash and operating accounts.

The average number of wage-earners employed during the year was 3,449 (3,329 males and 120 females) compared with 3,537 in 1922 and 3,828 in 1921. The total number of employees in 1923 was 3,787 (3,609 males and 178 females), compared with 3,854 in 1922 and 4,208 in 1921. The total amount paid in salaries and wages during the year was \$4,302,069, a decrease from 1922 of \$849, and an increase over 1921 of \$221,007. The total amount paid for wages alone in 1923 was \$3,399,617. In Ontario there were 245 salaried employees who received \$670,253 and 2,677 wage-earners who received \$2,718,721; Quebec salaried workers numbered 75 and received in salaries \$192,330, and wage-earners numbered 665, their wages amounting to \$581,774. Nova Scotia and New Brunswick together had 7 salaried employees whose salaries amounted to \$18,954 and 51 wage-earners who received \$40,888. In the Western provinces there were 11 salaried employees with salaries totalling \$20,715, and 56 wage-earners with wages totalling \$58,234. The month of highest employment during the year was January with 3,671 wage-earners employed, and the lightest employment was in August when there were only 3,177 wage-earners.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Agenda of 1925 Session of International Labour Conference

A CIRCULAR letter has been issued by the Director of the International Labour Office under date of November 15 announcing that the Seventh Session of the International Labour Conference will open in Geneva on May 19, 1925, and that the agenda will consist of the following items:—

- I. Workmen's Compensation.
- II. Equality of treatment for national and foreign workers as regards workmen's compensation for accidents (final vote on the Draft Convention and Recommendation adopted by a preliminary vote of the Conference at its Sixth Session).
- III. Weekly suspension of work for twenty-four hours in glass-manufacturing processes where tank furnaces are used (final vote on the Draft Convention adopted by a preliminary vote of the Conference at its Sixth Session).
- IV. Night work in bakeries (final vote on the Draft Convention adopted by a preliminary vote of the Conference at its Sixth Session).

It is pointed out by the Director that items II, III and IV have only been placed on the agenda with the object of allowing the Conference to proceed to a final vote on the Draft Conventions and Recommendations which were adopted by preliminary votes at the 1924 session.

In addition to the foregoing agenda the Conference will hold a general discussion on problems of social insurance and will elect a Governing Body of the International Labour Office to hold office for a period of three years.

It is proposed that special publications will be issued in advance of the Conference on the subjects of workmen's compensation and social insurance for the information of those who will be in attendance.

### Record of the 1924 Annual Conference

Copies have been received in the Department of Labour of Canada of the Record of the Sixth Session of the International Labour Conference which was held in Geneva in the month of June last. The subjects which received attention on this occasion were as follows:—

1. Development of facilities for the utilization of workers' leisure.
2. Equality of treatment for national and foreign workers as regards workmen's compensation for accidents.
3. Weekly suspension of work for twenty-four hours in glass-manufacturing processes where tank furnaces are used.
4. Night work in bakeries.

### Australia and the Maritime Conventions

By letter of 28th August, 1924, the Prime Minister of the Commonwealth of Australia informed the Secretary General of the League of Nations that "steps had been taken to effect ratification on behalf of the Commonwealth Government," of the three Draft Conventions adopted by the Second Session of the International Labour Conference (Genoa, 1920), namely, the Conventions (1) fixing the minimum age for admission of children to employment at sea, (2) concerning unemployment indemnity in case of loss or foundering of the ship, and (3) for establishing facilities for finding employment for seamen.

The Prime Minister added that, as these Conventions referred to matters coming within the competence both of the Commonwealth and State Governments, ratification would be effected only so far as the subject matter was within the competence of the Commonwealth Parliament.

The same letter stated that no action was proposed on the four Recommendations adopted by the Second Session of the Conference, concerning respectively the limitation of hours of work in the fishing industry, the limitation of hours of work in inland navigation, the establishment of national seamen's codes, and unemployment insurance for seamen. Fishing was not yet organized as an industry and inland navigation scarcely existed. Almost all legislation affecting seamen was contained in the Navigation Act and codification therefore seemed unnecessary. The conditions of employment in Australia rendered unemployment so rare that no scheme of insurance seemed warranted.

The Genoa decisions had been referred to the State Governments for consideration and such action as they might deem desirable.

### Farm Wages in Ontario

The Ontario Department of Agriculture, in Crop Bulletin No. 160 says:—

There was no scarcity of help offering this season, but much of it was of doubtful quality. Many farmers have developed a method of helping one another out at rush times, and others are not cultivating more land than they can handle within the family. Harvest wages ranged as follows: By the day, with board, from \$2 to \$3, generally at \$2.50 for a fair worker. By the month, with board, from \$25 to \$45, usually around \$35 for men with ordinary experience.

## QUESTIONNAIRE ON WORKMEN'S COMPENSATION

### Provisions of existing provincial laws in Canada on points raised by International Labour Organization

THE subject of workmen's compensation will form the principal item in the agenda of the seventh session of the League of Nations International Labour Organization, which is to open at Geneva on May 19, 1925. Certain aspects of this subject had been considered at previous Conferences. At the session of 1921 a draft convention was adopted favouring the application of compensation laws to agricultural workers, and at the session held during the past year the Conference considered the application by each country to its alien workers of the provisions of its law relating to workmen's compensation for accidents on the same conditions as to its own nationals. The consideration of the subject in its general bearings, however, is reserved for next year's conference. In order to facilitate discussion at the coming conference, the Governing Body has proposed that the Conference might first adopt a proposed draft convention by a simple majority, and that this draft might then be submitted to the next annual session for a final vote by a two-thirds majority after having been communicated to the Governments and the most representative organizations of employers and workers in each country in the interval between the two sessions.

Further, the Governing Body in order to give direction to the discussion at the next Conference has issued a "questionnaire" to the various state members, in order to furnish a basis on which the discussion might open at the Conference. This questionnaire, which was printed in the last issue of the *LABOUR GAZETTE*, has been received by the Government of Canada, and is now in the hands of the several provincial governments. The Governing Body points out that the various governments are of course free in their replies to the questionnaire to suggest any other solution which they consider the Conference might more usefully adopt. It is hoped that the next Conference may be able to arrive at a declaration of general principles and fundamental provisions that may be embodied in a Draft Convention.

The preface to the questionnaire states that:—

The inclusion of the question of workmen's compensation in the agenda of the conference may be supported by two important considerations.

In the first place, practically all industrial countries already possess laws on workmen's compensation. Either the different classes of workers are dealt with under one and the same general system, or the general system is supplemented by special rules affecting certain occupations in which the risks of accidents are greater, e.g. miners, seamen, etc.

In the second place, the laws in the different countries have been considerably developed during the last thirty years and now have so many elements in common that it would appear possible to arrive at general principles and fundamental provisions which might be dealt with in a draft convention.

The following paragraphs contain some notes on the existing provisions of the various provincial laws in Canada on the several aspects of workmen's compensation that are considered in the Questionnaire issued by the Governing Body of the International Labour Office.

#### I. Sphere of Application

##### (a) UNDERTAKINGS AND INDUSTRIES INCLUDED

The first question asks whether workmen's compensation should apply to all undertakings or industries, or should be restricted to certain classes of undertakings.

In Canada, the various compensation acts specify the industries to which they apply, covering the workers employed throughout almost the entire industrial field. Agriculture and domestic service are excluded in all provinces except Nova Scotia and British Columbia where under amendments of 1922 the inclusion of farm labourers and domestic servants was provided for. In Alberta the men employed in the running trades of the railways are excluded. The New Brunswick and Nova Scotia acts exclude municipal firemen and policemen. The Yukon law is not applicable to establishments employing less than five workers. These provincial acts, however, make further provision that any industry not already covered may be brought in on application and with the consent of the several Boards. In British Columbia the workmen or their employers may make the application, but in Alberta, Manitoba, Ontario, Nova Scotia and New Brunswick the demand must come from the employers, and in Alberta the consent of the employees affected

is required. In Ontario an industry employing a small number of workers may be excluded by the Board, but in such a case the employer or the workmen may elect to be brought under the provisions of the Act.

The International Labour Office notes that, generally speaking, the restrictions in the compensation acts of the various countries now affect only those industrial undertakings which employ a small number of hands or do not use machinery, small commercial undertakings, and agriculture.

#### (b) BENEFICIARIES

The second question asks if the proposed draft convention should contain a clause providing that all the workers employed in the industries covered should be included, or whether certain restrictions or exceptions are advisable?

In Canada, the Saskatchewan act excludes workers whose annual income exceeds \$1,800, and that of Quebec excludes those earning over \$1,500 yearly. Travelling salesmen are excluded in the acts of British Columbia, Nova Scotia and New Brunswick, and itinerant workers from the Alberta Act. Clerical workers who are not exposed to industrial hazards are excluded in British Columbia, Manitoba and New Brunswick. Outworkers and casual workers who are employed otherwise than for the purposes of the employer's trade or business are excluded under the provisions of the acts of Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario and the Yukon. In British Columbia and Nova Scotia the members of an employer's family are not eligible for benefits, and in Manitoba and Ontario benefits are payable only if the members of the employer's family are carried on the payroll and in proportion to their wage.

#### (c) RISKS COVERED

*Definition of Accident.*—The question is in regard to the proper definition of an industrial accident under workmen's compensation. All the Provincial acts of Canada compensate those accidents which "arise out of and in the course of employment". This definition follows the British Act, and is used in the similar acts in the other British Dominions and in some foreign countries, including Spain. In some countries the accidents covered are those "arising in the course of the carrying on of an occupation, or of employment" (Japan, Brazil), or those arising out of or in the course of employment (Belgium, France, Italy). In Switzerland non-occupational as well as occupational accidents are

dealt with under the compulsory insurance system.

*Industrial Diseases.*—The question is asked, whether occupational diseases should be treated on the same basis as industrial accidents. In Canada disabilities due to disease which are incidental to employment in certain occupations are compensable under the laws of Ontario, Nova Scotia, Manitoba, British Columbia, Alberta and New Brunswick in the same manner as accident disabilities. These diseases are enumerated in schedules to the various acts, the schedule being originally identical with the list of industrial diseases contained in the British Workmen's Compensation Act of 1906, as follows: anthrax, lead poisoning, mercury poisoning, phosphorous poisoning, arsenic poisoning, and miners' ankylostomiasis. (This aspect of workmen's compensation was considered in an article in the *LABOUR GAZETTE* for March, 1920, pp. 304-310). Miners' phthisis was added subsequently in Ontario and Alberta, and in Nova Scotia miners' "beat hand," "beat knee" and "beat elbow" were also included, while British Columbia has recently placed miners' sulphur poisoning on the list of compensable diseases.

## II. Benefits

### (a) COMPENSATION PAYMENTS IN CASE OF DEATH OR SERIOUS INCAPACITY

State members are asked to state whether in their opinion, in the cases of fatal and serious accidents, compensation should take the form of a pension, except where proper guarantees may be secured for the wise use of a lump sum.

Most of the Provincial laws in Canada provide for the commutation of periodical payments to injured workers or their dependants. This may be done by the Board, at its own discretion, in Nova Scotia, New Brunswick, British Columbia, and Alberta. In Manitoba the consent of the workman or his dependant is required. In Ontario, the Board may commute payments in cases where the impairment in earning capacity of an injured worker does not exceed 10 per cent, and, in cases of death where the dependants are others than widows or children. In Quebec, the law provides that a sum equal to four times the average yearly wages when the injury was received shall be apportioned by agreement or by the court among the consort, children under sixteen years of age and parent or parents of whom the deceased was the principal support. This amount must not be less than \$1,500 and not more than \$3,000. Any payments made on account of

disability before death are deducted from the compensation payable on death. In the Yukon, the workman's dependants are entitled to receive \$2,500 on his death from accident while at work. The Saskatchewan act authorizes the court to determine within certain limits what is a reasonable amount for compensation. The workman in case of disablement or his dependants in the event of his death are to receive either a sum equal to his earnings for three years or \$1,800 whichever is the larger, but in no case may compensation exceed \$2,000.

#### (b) COMPENSATION FOR INCAPACITY

The question is asked whether the proposed draft convention should contain a clause providing that extra compensation should be granted to seriously injured workers who have very largely to depend on the assistance of another person?

The amount of compensation paid in the Canadian provinces in cases of total disability is a fixed proportion of the former earning capacity of the injured worker, while in cases of partial disability it is the estimated difference in the worker's earning capacity before and after his injury was sustained. No special provision is made in any Canadian act for personal attendance, outside of medical and hospital service. On this point the Governing Body suggests that "One question, however, might perhaps be taken into consideration by the Conference—the question of seriously injured workers who, being incapable of looking after themselves properly, are very largely dependent on another person's assistance. They are nearly always incapable of doing any work, and have to use their compensation not only to maintain themselves but to support the person on whose assistance they are dependent and who is thereby prevented from taking up any regular occupation. These cripples are in a specially unfavourable position, and it may be asked whether workmen's compensation laws should not, as is done in Austria, Czecho-Slovakia, Germany, the Netherlands and Switzerland, make provision for granting them extra compensation. It has been considered advisable to put a question to the Governments on this point."

#### (c) COMPENSATION FOR DEATH

The Governing Body points out that international standards of compensation for death, as well as for incapacity, cannot be fixed owing to the wide differences which exist in the relation between compensation and basic wage in the various countries.

#### (d) MINIMUM COMPENSATION AND THE BASIC WAGE

Under this heading, also, it is considered that "in view of the great diversity in the methods adopted in the different laws for dealing with the minimum basic wage and of the practical difficulties in the way of arriving at the minimum cost of living, the possibilities under present conditions of reaching an international agreement on the matter in question can hardly be entertained." No question is, accordingly, being put to the Governments in this connection.

#### (e) MEDICAL BENEFITS

On this subject the questions are asked (i) whether medical aid should be a necessary part of compensation, or should be undertaken by sickness or invalidity insurance institutions; (ii) whether medical benefits should include treatment by specialists when necessary, and (iii) should injured workers be gratuitously furnished with artificial limbs, where needed, or be awarded extra compensation?

In Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia and Ontario the provincial board is authorized to defray the expenses of medical aid. In the two western provinces the cost of such aid is met by a deduction from the workmen's wages at a rate fixed by the Board. The treatment generally includes medical, surgical, nursing and hospital service and transportation. The Boards of Ontario, Manitoba and British Columbia also supply artificial limbs and other necessary apparatus.

### III. Security of Payment and Insurance

This question relates to the provision of guarantees against the employers or insurers' insolvency. It is asked if the worker's priority of claim affords him sufficient security, or whether greater security should be provided by means of a security fund or in other ways.

The question of security does not arise in connection with workmen's compensation in Ontario, Nova Scotia, British Columbia, Alberta, New Brunswick and Manitoba, where the compensation funds have behind them the credit of the Province. In Quebec and Saskatchewan injured workers have a prior claim in the distribution of the assets of a defaulting employer.

### IV. Cost of Workmen's Compensation

On this subject the Governing Body says: "The cost of compensating injured workers is, as a general rule, borne wholly by the employers. The wage-earners make no con-

tribution except in a very few countries, e.g. Switzerland, where insurance covers non-industrial as well as industrial accidents. It is perhaps superfluous, however, to insert in an international draft convention a provision which could do no more than confirm a solution already adopted almost universally, and which would not be of a nature to lead to any progress in national legislation."

#### V. Administration and Settlement of Disputes

This question asks if the competent body to deal with disputes in connection with

workmen's compensation should be (i) joint councils of workers and employers; (ii) Boards composed of representatives of both parties; (iii) civil courts; (iv) joint councils, with civil courts as appellate tribunals.

In Canada the six provinces already named as having "state" systems of compensation follow the plan mentioned under heading (ii), disputes being decided by Boards composed of representatives of the workers and employers, with an independent chairman. In Quebec and Saskatchewan disputes are settled by the civil courts.

### ATTITUDE OF EMPLOYERS AND WORKERS' ORGANIZATIONS REGARDING NIGHT WORK IN BAKERIES

THE master bakers' organizations in a number of countries have defined their attitude towards the proposed Draft Convention concerning Night Work in Bakeries, both in national conferences and through their delegates to the International Master Bakers' Congress which was held at Brussels on August 12 and 13, and to a further Conference held in the same city on October 20 and 21. The Congress embodied its views, and those of the majority of the national organizations represented, in a resolution against the prohibition of night work in bakeries.

It was reported by the Chairman of the two Master Bakers' Associations of the Netherlands that the master bakers of his country agreed to the abolition of night work as laid down in the Dutch Act on the subject.

The second meeting held on October 20 and 21, at Brussels was attended by representatives of the master bakers' associations of Belgium, France, Italy, Luxemburg, the Netherlands, Spain and Switzerland. This conference adopted the constitution and rules of the International Master Bakers' Union, and also passed a resolution against the proposed Draft Convention, claiming freedom to work at all times in bakeries, and protesting against any attempt at international legislation on the question.

The attitude of workers' organizations to the proposed Draft Convention may be summarized as follows:—

The workers' organizations accept the proposed Draft Convention as a minimum settlement of their claims, and consider its adoption to be an important achievement for social justice. They state, however, that the Draft Convention does not sufficiently take account of their claims, especially as regards the

nightly rest, which should, according to their views, be a minimum of eight hours instead of seven.

Several congresses of workers' unions have expressed their views in the form of a resolution. Thus, the Congress of the Union of German Bakers and Confectioners adopted a resolution declaring the proposed Draft Convention of the International Labour Conference concerning night work in bakeries to be acceptable in principle but stating that the workers in the bakery trade would never accept a nightly rest period of less than eight hours.

The Congress of German Bakers and Confectioners, also dealt with the question of night work in bakeries in general in Germany and unanimously adopted a resolution demanding the strict application of existing legislation against night work. At the same time the Congress declared itself opposed to any derogation from the nightly or Sunday rest.

A meeting was held under the auspices of the Central Organization of Workers in the Food and Drink Trades in Belgium which resulted in the adoption of a resolution demanding that the rest period should be one of eight hours from 10 p.m. to 6 a.m., and that the bakeries should be closed during these hours.

The Congress of the French Federation of Workers in the Food and Drink Trades considered the proposed Draft Convention and stated that the rest period provided for in the Draft Convention should be eight and not seven hours and that the permanent exceptions allowed by the Draft Convention for preparatory work were not indispensable to efficient production.

The Congress of Swiss Unions at Lausanne noted the decisions of the International Labour Conference on the subject of the suppression of night work in bakeries and appealed to organized workers of the world to support the workers in the baking trades in their campaign against night work.

Almost immediately after the adoption of the Draft Convention by the International Labour Conference the organized workers in the French baking trades began an energetic campaign in favour of the complete abolition of night work, that is for the strict application of the Act of March 28, 1919. The French Minister of Labour recognized the justice of the workers' claims and assisted in the campaign.

French employer's circles have launched protests against the day work system, claiming that many establishments were losing customers because the former were distributing uneatable bread. Certain prosecution of master bakers who were not applying the Act have taken place and the courts have in several instances pronounced sentence against them.

The late British Government prepared a Factory Bill which prohibited night work in bakeries subject to exceptions. This Bill has not, however, become law as yet. The Congress of the Federation of Workers in the Baking, Confectionery and Allied Trades adopted a resolution on the subject noting the Government's proposals and strongly

urging that the proposed Act should come into force on January 1, 1926, at least.

The Labour Legislation Committee of the Chamber of Deputies of the Province of Buenos Aires of the Argentine Republic has adopted a Bill under which work in bakeries and confectioneries, and similar undertakings, would be prohibited from 8 p.m. to 4 a.m. At the same time the eight-hour day will be established for bakeries.

In Belgium complaint was made to the Minister of Labour that master bakers were failing to comply with the Act prohibiting night work in bakeries and that the courts were not taking sufficiently energetic action against them.

After a careful inquiry into the conditions of work in bakeries in Bulgaria the Factory Inspector stated that in view of the distressing state of affairs revealed by the enquiry that he would propose that night work should be entirely abolished. The proposal was adopted, and regulations were at once drawn up prohibiting night work in bakeries as from October 1.

The Chilean bakers have for a long time been engaged in a campaign for the abolition of night work. On October 1 the revolutionary power promulgated a Decree providing that work in bakeries and confectioneries and similar undertakings working for public sale should be prohibited from 9 p.m. to 5 a.m. The prohibition also applies to members of the bakers' family.

## UNEMPLOYMENT IN SWITZERLAND

THE unemployment insurance bill which was introduced in the Swiss Parliament last year has recently been passed by the Federal Chambers of that country and promulgated as "a Federal Act concerning the allocation of subsidies for the purpose of insurance against unemployment, dated October 17, 1924." The Act is intended to encourage a more complete development of unemployment insurance by autonomous action on the part of the various cantons and communes and by the employers' and workers' associations. It does not set up a compulsory system; its scope is limited to encouraging voluntary insurance by public or private unemployment funds, with the assistance of federal subsidies.

The system is not wholly new in Switzerland, although up to the present it has been of a provisional nature only, as the subsidy to the various funds has had to be specially voted each year by the Federal Chambers.

The new Act provides for a permanent and regular subsidy to these funds.

The principal modifications which the original Bill has undergone are in respect (a) of the amount of federal subsidy and (b) of the unemployment benefit payable.

The Bill laid down a uniform rate of subvention for all classes of funds, namely, 30 per cent of the total amount of relief paid out daily by the funds, in accordance with their own regulations, whereas the Act as passed provides for a subsidy equal to 40 per cent of the daily amount of benefit paid out by public funds and private mutual insurance funds, while other private funds are to receive a subsidy equal to 30 per cent only of the daily amount of benefit paid to their members. Further, the Federal Assembly is empowered to increase the amount of the subsidy temporarily to a maximum of 10 per cent.

So far as the rate of benefit is concerned, the Bill stated merely that this should not as a rule exceed 60 per cent of the loss of normal earnings. Upon this point the Act is more precise. It makes a distinction between unemployed persons living alone and those who are under a legal obligation to assist others; and provides that for the latter class the benefit is to be increased by at least 10 per cent of the amount of normal earnings lost, over and above the amount of benefit

payable to an unmarried unemployed person. The maximum amount payable is still fixed at 60 per cent of normal earnings lost.

The insurance also covers partial unemployment; and for this purpose benefit is to be calculated in such a manner that, when added to the part-time earnings of the worker, the total does not exceed 70 per cent or 80 per cent of the normal full-time earnings in the case respectively of an unmarried worker and of one who has a family to support.

## TRADE UNIONISM IN CHINA

**B**EFORE western influence penetrated China, the great social questions which now distract the industrial countries of Europe and America were unknown. It was only when large ports began to be opened to foreign trade that the modern economic system, based on capitalism, was introduced into China. Then spinning mills, corn mills, steel works, match factories and railway workshops began to be built and the whole aspect of social life changed.

Concurrently with this change, a whole series of complicated problems unknown before began to arise and to become urgent. Questions such as the cost of living, wage rates, hours of work and hygienic conditions began to be discussed. Naturally, also, the idea of the association of the workers and of trade unionism grew up, and strikes began to take place, at first at long intervals but later more and more frequently.

The trade unions found a form of organization already to hand in the old corporations and clubs. It may be noted that the tendency to associate is a very distinctive trait of the Chinese character.

### The Present Position

China may, from the point of view of trade union organization as it exists at present, be divided into three zones—the North, the Yang-tze-kiang valley and the Kwang-tung province.

In the North the movement for the organization of the workers is comparatively feeble, though the railwaymen of the Peking-Mukden and Peking-Sui-yuan lines have powerful trade unions.

In the Yang-tze-kiang valley considerable effort has been made among the workers to organize themselves and towards the end of 1922 they set up a workers' federation including 24 trade unions and about 40,000 members. About the same time the workers on the Peking-Hankow railway formed them-

selves into a trade union with 11 local sections. At Shanghai, according to a report of the Economic Information Office of the Chinese Government, 47 trade unions were created in 1922.

The greatest progress towards trade unionism has been made in the province of Kwangtung. There are 200 trade unions at Hong Kong and 300 at Canton.

### Towards National Organization

At the present moment the trade union movement is tending to overstep the bounds of districts and to constitute itself as a national organization for the whole of China.

The first step in this direction was the National Workers' Congress at Canton in May, 1922. Nearly 160 delegates were present representing 200 trade unions and 300,000 workers. The Congress adopted several resolutions, one of which demanded the eight-hour day, while another recommended the organization of trade unions in industry and the establishment of a National Workers' Federation. The railwaymen on the different Chinese lines have made similar efforts to amalgamate.

### Trade Union Rights

Among the various obstacles to the development of workers' organization in China, one of the most serious is the lack of any legislation guaranteeing trade union liberty. Chinese law does not recognize the right of workers to associate, so that it is impossible for a workers' union in its early days to conduct an open campaign against the employers without running the risk of being dissolved.

At the end of 1922 draft regulations were submitted to Parliament by the Chinese government authorizing workers to associate in trade unions and granting such unions a legal personality. No information is to hand as to any further action taken by Parliament in the matter. Certain provinces have already taken measures to apply the provisions thus

proposed without waiting for their adoption by Parliament.

The workers' associations have drawn up a bill securing certain guarantees for the wage-earning classes, among which is trade union liberty.

In order to put an end to incessant industrial disputes in the Province of Hu-pei in 1922 and 1923 the Industrial Commission of the Province announced its intention of submitting to the Provincial Assembly draft regulations for the administration of industrial undertakings and the employment of labour, and stated that as soon as they were adopted the regulations would become Hu-pei's Labour Charter.

### Views on Labour Legislation

Although, through the medium of the press the Chinese worker is beginning to understand the advantages enjoyed by workers in countries over-sea, he does not at the moment aspire to be in a position similar to theirs. Ten hours work per day and a daily wage of \$1 are the extreme limit of his claims.

Chinese employers are in general opposed to the introduction of laws favouring trade unionism. They point out that it is already

very difficult for them to meet the competition of foreign manufacturers whose resources in capital and experience of business are greater than theirs. They hold that workers' legislation is not wanted and should not be introduced into China. It meets the needs of great industrial countries, but is absolutely inappropriate to China in its present condition. It will only be possible to discuss labour regulation when foreign concessionaires are subjected to the same legislation.

The Government continues to oscillate between the two opposing points of view. On the one hand it would be glad to pursue a policy of class reconciliation, and would like to put an end to the agitation of the workers by promulgating labour regulations. On the other hand, it hesitates to come out entirely on the side of the legal protection of the workers, since it is haunted by the fear of Bolshevik elements, which have already taken an active part in the great railway strikes. While sincerely wishing to improve the condition of the workers, the Peking government shrinks before the risk of a Red revolution, which it considers always as a possibility and which it would do anything in the world to prevent.

## HOURS OF WORK IN THE UNITED STATES IRON AND STEEL INDUSTRY

IN February last the United States Department of Labour, through the Bureau of Labour Statistics, began a study into wages and hours of labour in representative mills in 10 departments of the iron and steel industry of the United States, namely, sheet mills, blast furnaces, Bessemer converters, open-hearth furnaces, tin-plate mills, bar mills, blooming mills, plate mills, puddling mills and standard rail mills.

While a survey of all establishments in the industry could not be undertaken, the statistics for each department may be accepted as fully representative, as they are based on a sufficient number of representatives plants in each district to show conditions in their locality. The period covered in the survey was the half-month pay period, 16-31 January, inclusive.

In the sheet mills, tin-plate mills and puddling mills, there was practically no change in hours of work in 1924 as compared with former years, these departments having long been on an eight hour basis.

In the other departments of the industry the movement towards reduction of hours was very marked, for in those departments the

12-hour shift and 7-day week had formerly been general.

The result of this movement was best seen in the blast-furnace department, as from the nature of its process a blast-furnace is in continuous operation 24 hours a day, 7 days a week. Not more than 20 per cent of the employees in the principal productive occupations in 1922 worked less than 72 hours a week, while approximately the same percentage worked as many as 84 hours per week, and 49 per cent worked 72 hours. In 1924, however, practically two-thirds of the employees worked 56 hours a week or less.

The reduction of working time in the open-hearth department is almost as remarkable as in the blast-furnace department.

In the Bessemer converting department, few employees worked more than 72 hours per week prior to the summer of 1923,<sup>1</sup> so the decrease in hours of work, though considerable, is not so marked as in either the blast-furnace or the open-hearth department.

<sup>1</sup> In the blooming mills, full-time hours per week declined 19 per cent in 1924 as compared with 1922. Plate mills show a 14 per cent decrease and bar mills 9 per cent.

## THE EMPLOYMENT SITUATION AT THE BEGINNING OF NOVEMBER, 1924, AS REPORTED BY EMPLOYERS

THE improvement in the employment situation indicated at the beginning of October was not maintained during the month. On November 1 there was a rather small decrease in the number of persons employed by the 5,737 firms reporting to the Dominion Bureau of Statistics, these firms having a combined payroll of 762,848 persons, as compared with 770,595 on October 1. The index number, therefore, declined from 93.9 on the latter date to 93.0 at the beginning of November, while on November 1, 1923, 1922 and 1921 it had stood at 98.8, 95.8 and 90.2, respectively. Contractions affecting approximately the same number of workers were recorded on the first of November of last year, but, as may be seen in the accompanying chart, employment then was on a somewhat higher level.

Employment in manufacturing as a whole decreased; construction, hotels and shipping also showed seasonal contractions, while logging, mining, steam railway operation and trade registered considerable improvement.

### Employment by Provinces

Employment declined in all except the Prairie Provinces, where the recovery indicated slightly exceeded the losses recorded at the beginning of October.

*Maritime Provinces.*—Seasonal curtailment in sawmills and construction mainly caused a fairly large reduction in employment, but fish canneries, rolling mills and other iron and steel works, mining and transportation were also slacker. Returns were tabulated from 502 employers, whose staffs aggregated 62,087 persons, as compared with 65,916 on October 1. The trend of employment at the beginning of November, 1923, was also unfavourable, but employment then was in considerably greater volume.

*Quebec.*—Sawmills, iron and steel factories, transportation, and highway and railroad construction reported losses in personnel that were partly offset by improvement in rubber, leather, textiles, electric current, logging, trade, communication and building construction. The net result was a decline of 957 persons, or 0.4 per cent in the payroll of the 1,257 employers from whom returns were received; these had a combined working force of 213,481 persons on November 1. Contractions on a much larger scale had been

registered on that date of last year, when conditions were better.

*Ontario.*—Employment in Ontario showed a net decline, in spite of marked seasonal expansion in logging and less pronounced improvement in abattoirs, musical instruments, textiles, electrical apparatus, non-ferrous metals and transportation. The declines were very large in sawmills, construction and fruit and vegetable canneries and somewhat less so in pulp and paper, rubber, iron and steel, petroleum products, communication and trade. An aggregate payroll of 319,447 persons was employed by the 2,632 reporting firms as compared with 323,718 at the beginning of October. Contractions affecting a very much smaller number of persons were reported on November 1, 1923, and employment in Ontario was then above its present level.

*Prairie Provinces.*—Considerable improvement was noted on the whole in manufacturing, particularly in railway car shops; sawmills and brick and cement works, however, were slacker, as is usual at this time of year. Construction, hotels, street railways and cartage afforded less employment. Marked seasonal gains, on the other hand, were reported in logging, coal mining, and steam railway operation, while railway construction also registered increased employment. The 750 firms making returns employed 99,696 workers or 2,776 more than in their last report. Important reductions in personnel had been recorded at the same period of last year, but in spite of this difference in trend, the index number then was higher than on November 1, 1924.

*British Columbia.*—There was seasonal curtailment of operations in fish and fruit canneries, sawmills and construction in British Columbia; this repeats the movement indicated on the same date in 1923, and the level of employment is practically the same as at that time. During the period under review iron and steel, logging and railway transportation registered increases that partly offset the declines enumerated above. Statements were compiled from 596 employers, whose staffs declined from 69,603 persons on October 1, to 68,137 at the beginning of November.

The following table gives the index numbers of employment in the five areas into which the country is divided in these statistics:—

(Number employed January, 1920=100)

District	Relative Weight	Nov. 1 1924	Oct. 1 1924	Nov. 1 1923	Nov. 1 1922	Nov. 1 1921
Maritime Provinces.....	8.1	83.7	88.3	95.2	91.7	91.4
Quebec.....	28.0	97.1	97.6	103.2	92.7	87.5
Ontario.....	41.9	90.4	91.6	96.0	94.9	87.0
Prairie Provinces.....	13.1	94.1	91.4	99.2	105.0	102.6
British Columbia.....	8.9	102.1	104.0	102.8	100.2	94.3
Canada.....	100.0	93.0	93.9	98.8	95.8	90.2

### Employment by Cities

A study of the returns by cities shows that five of the seven for which separate tabulations are made—Montreal, Ottawa, Hamilton, Winnipeg and Vancouver, reported reductions in employment, while in Toronto and Quebec increased activity was noted.

*Montreal.*—Employment in Montreal declined, largely on account of seasonal contractions in shipping and stevedoring, together with reductions in manufacturing. Within the latter group the losses in iron and steel were most pronounced, while offsetting gains took place in electric current, textile and some other factories. Communication, building construction and trade showed gains. A combined payroll of 104,789 persons was recorded by the 686 reporting concerns, who employed 106,300 in the preceding month.

*Quebec.*—Firms in this city reported improvement on the whole; leather and transportation, in particular, registered increased activity, while clothing works were slacker. Statements were received from 92 employers, whose staffs registered 8,879 persons or 119 more than on October 1.

*Toronto.*—Manufacturing was decidedly more active, the iron and steel, meat packing, electrical apparatus and clay, glass and stone divisions having the greatest increases in employment. Local transportation and road construction were also busier. There were additions to the staffs of the 757 employers making returns of 929 persons or about 1 per cent; on November 1 they employed 93,348 workers.

*Ottawa.*—There was a decrease of nearly 6 per cent in the employment afforded in Ottawa, occurring mainly in lumber mills and road construction. Building construction, on the other hand, showed improvement. The 120 firms reporting in Ottawa had an aggregate working force of 9,905 persons, or 614 less than on October 1.

*Hamilton.*—Employment in rubber declined, chiefly owing to a shut down for inventory in a single large factory. Construction was also slacker, but improvement was indicated in

textile and electrical appliance works. Reports were compiled from 192 employers, whose payrolls totalled 24,009 persons, as compared with 24,232 in the preceding month.

*Winnipeg.*—The trend of employment in Winnipeg was downward; construction recorded the largest losses, but moderate declines were general in a number of industries. According to returns from 282 firms, they reduced their payrolls from 24,265 persons on October 1 to 23,732 at the beginning of November.

*Vancouver.*—Employment in this city also showed a falling off; improvement in iron and steel was more than offset by curtailment in sawmills and construction. Statements were compiled from 225 employers, whose staffs, aggregating 22,614, were smaller by 202 persons or 0.9 per cent than on October 1.

The following table shows the index number of employment in these cities:—

(Number employed in January, 1920=100)

City	Relative Weight	Nov. 1 1924	Oct. 1 1924	Nov. 1 1923	Nov. 1 1922
Montreal.....	13.7	92.4	93.7	99.1	92.6
Quebec.....	1.2	100.3	98.8	.....	.....
Toronto.....	12.2	87.0	86.4	89.9	92.2
Ottawa.....	1.3	94.5	100.8	103.8	100.6
Hamilton.....	3.1	79.6	80.4	89.7	83.4
Winnipeg.....	3.1	84.2	86.1	88.6	99.5
Vancouver.....	2.9	103.4	104.0	98.6	94.9

### The Manufacturing Industries

Marked seasonal curtailment of operations in sawmills, fish, fruit and vegetable canneries, together with smaller reductions in pulp and paper and petroleum product factories, caused a decline of between one and two per cent in manufacturing. All other divisions within the group, however, recorded moderate improvement; the gains in rubber, leather, iron and steel, textiles, musical instruments, electric current and electrical apparatus were largest. Statements were received from 3,720 manufacturers, employing 412,757 operators as compared with 420,355 at the beginning of October. The trend of employment indicated on November 1, 1923, was downward, but the losses were less extensive and the general situation was more favourable at that time.

*Animal Products, Edible.*—Meat slaughtering and packing establishments were busier than at the beginning of October, but large reductions were recorded in fish canneries. The improvement in the former group took place mainly in Ontario and the Prairie Provinces, while the Maritime district and British Columbia registered the declines in the latter.

A combined working force of 14,253 was reported by the 165 firms reporting, as compared with 14,993 at the beginning of October. During the corresponding period of last year a seasonal falling off had also been shown, but employment then was on a lower level than on the date under review.

*Leather and Products.*—Boot, shoe and other leather factories afforded more employment than in the preceding month, according to returns from 193 firms, employing 16,376 persons. As they had 16,126 on their payroll at the beginning of October, this was an increase of 1.6 per cent. Establishments in Quebec showed practically all the gains. These additions to staffs are about equal to those recorded on November 1, 1923.

then was slightly higher than at the present time. A very large percentage of the losses recorded on November 1, 1924, took place in fruit and vegetable canneries, although sugar and biscuit works were also less fully employed. Chocolate and confectionery works, on the other hand, recorded improvement. Reports were compiled from 309 manufacturers in this division, whose payrolls declined from 29,304 persons on October 1 to 27,856 on the date under review. Although all except the Prairie Provinces shared in the contraction of nearly 5 per cent, the reductions in Ontario and British Columbia were most extensive.

*Pulp and Paper.*—The trend of employment in pulp and paper works was unfavourable,

*Lumber and Products.*—Seasonal reductions on a large scale took place in rough and dressed lumber mills; wooden vehicle works were also slacker, while furniture factories afforded increased employment. All provinces shared in these declines, which rather exceeded those registered at the beginning of November of last year, when the index number was higher. The payrolls of the 687 reporting firms comprised 47,111 workers as compared with 54,076 on October 1. The difference was a decline of about 13 per cent.

*Musical Instruments.*—Continued improvement was noted in musical instrument works, chiefly in Ontario. Thirty-nine manufacturers employed 3,001 persons or 137 more than in the preceding month. The gains were larger than those indicated on November 1, 1923, but employment on the two dates was practically the same.

*Plant Products, Edible.*—After six months of uninterrupted improvement, employment in this division showed a decrease, which exceeded that reported at the beginning of November of last year. The index number

while printing establishments showed very little change on the whole. Firms in Quebec and Ontario recorded the bulk of the decline. The working force of the 447 reporting employers stood at 51,277 or 461 less than on October 1. Reductions on a somewhat larger scale were indicated at the same period in 1923.

*Rubber Products.*—Manufacturers of rubber products in Quebec afforded considerably more employment than in the preceding month, but declines occurred in Ontario. The net result was an increase of 447 persons in the staffs of the 30 concerns making returns, the number employed being 9,932. Large decreases were indicated by the firms reporting for November 1 of a year ago, and the index number then was rather lower than at the present time.

*Textile Products.*—Further additions to staffs were registered in the textile industries, although they were very much less extensive than in the preceding month and also than in the same month of last year. Employment then was rather more active. Accord-

ing to reports from 521 firms, their staffs aggregated 65,989 persons as compared with 65,707 on October 1. Cotton, hosiery and knitting mills were decidedly more active, but garment and personal furnishing factories afforded less employment. The gains occurred almost wholly in Quebec and Ontario.

*Electric Current.*—There was an increase of 258 in the staffs of the 85 electric current producers reporting; their staffs aggregated 12,400 on November 1. This was considerably more than the gain reported on same date of last year, and conditions now are more favourable. Quebec and British Columbia registered most of the expansion.

*Electrical Appliances.*—Further large additions to staffs were reported in electrical apparatus factories, 33 of which employed 9,201 persons, as compared with 8,820 at the beginning of October. The improvement took place mainly in Ontario. Very little change in the situation had been shown on the first of November, 1923, when employment was in much less volume than at the present time.

*Iron and Steel.*—Varying trends in different provinces resulted in a net increase of 446 persons in the staffs of the 627 manufacturers making returns, the number employed being 102,860. In the Maritime Provinces, Quebec and Ontario curtailment of operations was registered, but in the four western provinces expansion took place. Railway car shops, agricultural implement and heating appliance works afforded more employment, while rolling mills, general plant machinery and shipbuilding works were slacker. Additions to staffs on a somewhat larger scale were reported on November 1 of last year; the index number then was much higher than on the same date in 1924.

*Mineral Products.*—Petroleum factories in Ontario were not so busy as at the beginning of October, and minor declines were recorded in other divisions coming under this heading. The 73 firms making returns had an aggregate working force of 9,861 persons, which was 236 less than at the beginning of October. Employment was in greater volume than on November 1, 1923, when less pronounced curtailment was noted.

### Logging

Further important gains were indicated in logging, 7,249 men being added since October 1 to the payrolls of the 223 reporting firms; they employed 28,562 persons. While all provinces shared to some extent in this expansion, the gains in Ontario and Quebec were much the largest. The seasonal increases, also reported at the beginning of November

of last year, affected a much smaller number of persons, and the index number then was considerably lower than at the present time.

### Mining

*Coal Mining.*—Activity in coal mines in the Prairie Provinces increased substantially, while in Nova Scotia there was a moderate decline. A combined working force of 26,829 persons was employed by the 93 operators making returns, as compared with 26,196 in the preceding month. Although the expansion registered on November 1, 1924, was greater than on that date in the year before, the index number then was above its present level.

### Transportation

*Steam Railway Operation.*—Employment on steam railways mainly in the Prairie Provinces, but to a less extent in Ontario and British Columbia, showed an upward movement that contrasted with the declines recorded on November 1, 1923. The situation then, however, was more favourable. Statements were tabulated from 99 concerns and divisional superintendents, having 76,450 persons on payroll as compared with 75,494 at the beginning of October, 1924.

*Shipping and Stevedoring.*—Fairly large shrinkage was shown in shipping and stevedoring in Quebec, and there were also moderate reductions in British Columbia. The payrolls of the 63 employers from whom reports were received declined from 14,683 at the beginning of October, to 13,358 on the date under review. Activity had increased at the first of November of last year, when the index number was higher.

### Construction and Maintenance

*Building Construction.*—There were further pronounced decreases in the employment afforded by building contractors, 288 of whom employed 24,546 persons, or 1,152 less than at the beginning of October. The largest reductions were reported in Ontario; the Western provinces also showed curtailment of operations, but in the Maritime Provinces and Quebec expansion was noted. Activity in building during 1924 has not been so great as in 1923, and the index number is lower than at the first of November of last year.

*Highway Construction.*—Contractions were reported generally in highway construction and maintenance, according to the 107 contractors making returns, who reduced their staffs from 15,680 workers early in October to 13,883 on November 1. This reduction was very much smaller than that recorded on the same date in 1923.

**Railway Construction and Maintenance.**—A substantial falling off in personnel was evidenced in reports from 33 contractors and divisional superintendents in this industry; they employed 35,554 men as compared with 39,496 in the preceding month. All districts except the Prairie Provinces and British Columbia shared in this contraction, which affected a slightly smaller number than that noted on November 1, 1923. Employment then, however, was in greater volume.

### Services

**Hotels and Restaurants.**—The number of persons employed in hotels and restaurants in Quebec and the Prairie Provinces was smaller than on October 1. Reports were compiled from 71 establishments, employing 7,126 persons or 588 less than on the latter date. This release affected approximately the same number of workers as that registered on November 1 of last year.

**Personal Services** (chiefly laundries).—Laundries recorded minor reductions in nearly

every province, causing a net decline in the staffs of the 73 reporting firms of 132 persons. They employed 4,516 workers.

### Trade

Retail establishments registered slightly increased activity in all provinces except Ontario, while wholesalers showed practically no change on the whole. On November 1 of a year ago reductions in employment in trade were noted, but the index numbers for the two periods practically coincide. The sales force of the 564 firms making returns in the trade group totalled 55,491 or 201 more persons than at the beginning of October.

The accompanying table shows the index numbers of employment by industries as at the first of November and October, 1924, as compared with November 1, 1923, 1922 and 1921. The column headed "Relative Weight" shows the proportion that the number of employees reported in the indicated industry bears to the total number of employees reported in Canada by the firms making returns on November 1, 1924.

INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES, NOV. 1, 1924, ETC.

## THE EMPLOYMENT OFFICE REPORTS FOR OCTOBER, 1924

THE reports from the offices of the Employment Service of Canada for the month of October, 1924, show a decline in business, due mainly to the seasonal reaction from the heavy demand for the harvest during the preceding months. Compared with the same period of 1923, lessened activities may be noted especially during the first half of October. During that period of last year harvest operations were still very active in the West having been delayed by wet weather during the preceding fortnight. A slight reduction from the 1923 figures is indicated during the latter part of the month under review. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half month periods, shows a steady and rapid decline in the curves of applications, vacancies and placements, during the first half of the month, followed by a slight recovery during the latter part of the period. This slight increase, however, did not approximate the marked expansion noted during the same period of 1923 or 1922.

During the first half of October, 1924, applications for employment averaged 1,850 daily, as compared with 2,658 daily during the preceding period, and with 3,126 during the corresponding period of last year. During the latter half of the month the average number of applications registered daily was 1,924 in contrast with 1,977 during the same period of 1923. Employers notified the Service of an average of 1,462 vacancies daily during the first half, and 1,522 daily during the second half of October of this year, with an average of 3,002 daily and 1,754 daily during the corresponding periods a year ago. During the latter half of September, 1924, an average of 2,723 vacancies were offered daily at the offices of the Service. Reports indicate an average placement daily of 1,362 during the first half of October as compared with 2,733 during the same period last year and in contrast with 2,238 daily during the latter half of September, 1924. The average number of placements effected daily during the latter half of the month under review was 1,379 as compared with 1,527 during the same period of 1923. Placements in regular employment averaged 1,034 and 1,020 daily and those in casual work averaged 328 and 359 daily during the first and second half of October respectively.

During the month of October, 1924, the number of persons referred to employment was 38,872; the total number of placements effected being 37,008. The placements in regular employment numbered 27,729 of which 24,420 were of men and 3,309 of women. The place-

ments effected in casual work during the month numbered 9,279. The offices received notification of 40,310 vacancies, of which 31,846 were of men and 8,464 of women. The number of persons registered at the offices during the month was 50,982, of which 39,385 were men and 11,597 were women.

The placements in regular employment by provinces were as follows:—Nova Scotia, 246 men, 76 women; New Brunswick, 365 men, 89 women; Quebec, 1,334 men, 434 women; Ontario, 6,945 men, 1,231 women; Manitoba, 3,682 men, 449 women; Saskatchewan, 4,642 men, 310 women; Alberta, 5,925 men, 433 women; British Columbia, 1,281 men, 287 women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924 (10 months).....	219,224	103,685	322,909

### MARITIME PROVINCES

Construction work was almost at a standstill, road work and building having fallen off considerably in New Brunswick, and a large number of unemployed mechanics were registered at the Nova Scotia offices. Excavation and demolition work was in progress at Sydney, and other municipalities had plans under way for the continuance of sewer work to relieve the unemployment situation. In the logging group satisfactory progress was reported in the filling of all orders for woodsmen, pulpwood cutters, choppers and general bushmen.

### QUEBEC

A decline was reported in the demand for building labourers and tradesmen, especially in Montreal and Quebec. In some districts numbers of workers were still employed on road and highway work but the opportunities offered in this group were very few. The chief business of the offices in this province during the month consisted of the placement of bushmen, tie-makers and loggers at the camps in northern Quebec and Ontario. Manufacturing industries required a very small number of workers and a general decline was noted in business in the urban districts.

### ONTARIO

A slackening though still very brisk demand for farm labour was reported from the On-

tario offices. General farm workers for fall ploughing, silo filling and beet pulling were required in Western Ontario, and apple pickers in the Niagara Peninsula. Registration of unemployed building tradesmen and labourers increased during the period, although the building under way was reported as fairly active. In some localities a larger number of workers was required to complete work already in progress before the frost set in. Completion of the work on highways, roads

MANITOBA

During the early part of the month requirements for harvest and threshing labour were very active, but later, owing to continued wet weather, a declining demand was recorded. Large numbers of men were returning to the East, some of whom were absorbed in the logging group in Northern Manitoba and Ontario, the offices at Winnipeg and Dauphin reporting a considerable increase in the requests for bushmen, tie-makers and camp

and city streets was imminent, and a few municipalities had decided to continue street and sewer work for several months to afford work to the many unemployed. In some of the northern offices the abrupt decline in construction—building, highway and railways—threw a large number of men out of work but the greater majority of these were readily absorbed at the logging camps. The orders in the latter group were very numerous and from Windsor, Peterborough, and Toronto men were sent to fill the demand at North Bay, Port Arthur, Timmins, Cobalt and Fort William. A number of mine workers were required at Cobalt and Timmins, but on the whole the offices reported an excess of applicants in this group. A slight improvement in manufacturing industries, with a few more opportunities offered, was reported from Brantford, Chatham and Guelph, but on the whole little change was shown. The orders offered for women domestics continued to be received in large numbers, difficulty being experienced in supplying trained workers to fill the demand. At the larger offices a number of workers were registered for casual employment and for institutional work.

workers. Most building projects were about completed and few opportunities for employment were available in this group. Some carpenters, plasterers and labourers, were placed at Winnipeg, while casual workers and extra gang and section men were given employment at Brandon. In addition to the usual demand for house workers there were many inquiries for farm household help.

SASKATCHEWAN

The inevitable decline from the peak demand for threshers had started, although each office continued to supply large numbers of experienced workers. Calls for men for fall ploughing were registered and readily supplied. Little activity was shown in the building group, very few vacancies for tradesmen or labourers being recorded. Several excavations and buildings were under way which employed many, but at the offices there was an over-supply of applicants registered. Teamsters, section men and graders, were needed to complete railway maintenance and construction work before the frost set in, and from Prince Albert, Regina and Saskatoon several were placed. Conditions in the min-

ing group were more favourable and, with the settlement of the strike, the situation will no doubt improve. From Prince Albert and Saskatoon a fair demand for bushmen was reported. A decrease was shown in the demands for domestic workers for farms and a slight difficulty was experienced in supplying trained workers for city homes.

#### ALBERTA

A further decline was recorded in the agricultural group, the demands being mainly for workers for fall ploughing, although in some districts threshers were still required. While building and construction had fallen off considerably the offices at Calgary, Edmonton and Lethbridge, were able to place several carpenters and other building tradesmen. A number of workers were engaged on the highways near Calgary while railway labourers were in demand at Lethbridge and Medicine Hat. A slight demand for hand pick miners was reported from Drumheller and Edmonton, and optimism prevailed in the event of an early settlement of the strike at the mines. The calls for women workers remained much the same as previously reported.

#### BRITISH COLUMBIA

Quietness characterized the employment situation, very few vacancies being offered for farm workers, but all orders were promptly filled. The number of unemployed had been augmented lately by the return to the Coast of many who had assisted with the harvest in the Prairie Provinces, and this, in addition to a decline in the volume of construction work available, has increased the applicants registered at the offices. However, work continued on street paving, grading, Government roads and dams near Fernie, Prince Rupert, Revelstoke and Vancouver. Building was at a standstill with an excess of skilled tradesmen applying. All orders for extra gang labourers were filled quickly. Little improvement was shown in the logging group with sufficient applicants available to supply the present needs. Work along shore was very quiet, a few calls for stevedores being reported at Prince Rupert and Vancouver. The supply of casual women workers and those requiring institutional positions was much greater than the work available in these sections, although difficulty was still felt in supplying trained women workers for resident household positions.

#### The Movement of Labour

During October, 1924, the offices of the Employment Service of Canada made 27,729 placements in regular employment, of which 20,690 were of persons for whom the employment found was outside the immediate locality of the offices at which they were regis-

tered. Of the latter, 4,550 were granted the Employment Service reduced rate; 3,129 going to points in the same province as the despatching office, and 1,421 to other provinces.

From the offices at Hull, Quebec, and Montreal 441 persons were transferred at the reduced rate; 56 being bushmen going to points near Quebec, and 385 were bushmen going to lumber camps near North Bay, Cobalt, Sudbury, and Sault Ste. Marie, Ontario. From the Ontario offices 1,498 workers were despatched at the special rate, 26 of whom were bushmen going to camps near Hull, Quebec, one a farm labourer going to Brandon, Manitoba, and two were farm workers destined to Regina, Saskatchewan. Of the provincial transfers, 5 were miners and muckers going from Sudbury to Cobalt, 4 were farm workers, 3 plasterers and one stonemason, going to various points in Western Ontario, the remaining 1,456 being bushmen, tie-makers, etc., going to the camps of the northern parts of the province. From the Manitoba offices 506 workers were transferred to points within the zone, the majority of whom were farm hands and tractor helpers with a few bushmen and general household help. From Winnipeg to the Port Arthur district 658 men were sent including construction labourers, saw-mill workers, cord wood cutters, pulpwood cutters, and bushmen. To Calgary and Edmonton, Alberta, 4 farm hands, 1 carpenter, 1 cement worker, and 20 structural iron workers were transferred from Winnipeg. To the offices in Saskatchewan 160 farm workers, 6 teamsters and two bricklayers and six women helpers were dispatched from Manitoba districts. The number of workers who benefited by the Employment Service reduced rate in Saskatchewan was 959, of which 143 were bushmen going to Dauphin, Manitoba; 4 were farm workers destined to Edmonton, Alberta; and 1 was a mill hand going to Timmins, Ontario. Of the provincial transfers 313 were bushmen going to Prince Albert and the northern offices; 64 were miners going from Regina and Moose Jaw to Estevan; 414 were farmers, the remaining 20 being construction labourers and waitresses going to various sections of the province. The offices at Calgary, Edmonton, and Medicine Hat, issued 191 transportation certificates during the month, 113 of which were granted to bushmen and mill labourers, 11 to miners, 33 to farm hands, 25 to labourers and teamsters, the remainder being given to carpenters, cooks, waitresses going to various points in the province. One farm hand was transferred at the reduced rate from Penticton, B.C., to Edmonton, Alberta. Of the 96 provincial transfers, 41 were carpenters, 23 were labourers and railway workers, 12 loggers and tie-makers, 5 miners, and

5 cooks, the remainder travelling at the reduced rate including bricklayers, waitresses, cooks, etc.

Of the 4,550 workers who benefited by the Employment Service reduced transportation

rate, 2,503 were carried by the Canadian National Railways; 1,993 by the Canadian Pacific Railway; 50 by the Timiskaming and Northern Ontario Railway; and 4 by the Pacific Great Eastern.

## BUILDING PERMITS ISSUED DURING OCTOBER, 1924

THE value of the building permits issued during October was lower than in the preceding month, but it was greater than in October, 1923. Building in Canada is so greatly influenced by seasonal changes that the comparison of permits issued in any month with the corresponding month of other years is necessarily more significant than is the change since the preceding month. According to statements received by the Dominion Bureau of Statistics from 56 cities, the total for October was \$11,533,111, compared with \$14,566,504 in September, 1924, and with \$9,743,024 in October of last year; the loss in the former comparison was 20.8 per cent and the gain in the latter was 18.4 per cent. The change since the preceding month is somewhat greater than the average decline in October as compared with September over a period of 14 years, but it should be noted that the total for September was unusually large for that month, being, in fact, the highest total for September of any year since 1913.

Statements in some detail were furnished by 48 cities, showing that they had issued about 1,300 permits for dwellings estimated to cost approximately \$6,500,000, and more than 3,000 permits for other buildings, valued at nearly \$4,700,000.

New Brunswick, Ontario, Manitoba and Alberta recorded increases in the value of the building permits issued as compared with September; New Brunswick, with a gain of \$119,120 or 173.1 per cent, showed the largest actual and proportional gain. Of the declines registered in the remaining provinces, those in Quebec of \$2,800,680 or 38.3 per cent, and in Nova Scotia of \$49,097 or 62.2 per cent were, respectively, the largest actual and proportional decreases.

In comparison with the returns for October, 1923, all provinces except Nova Scotia and Manitoba showed increases in the value of the building permits issued. The gain of \$1,509,310 or 50.2 per cent in Quebec was most pronounced actually, while the largest proportionate increase of \$116,620, or 78.5 per cent, was in Alberta.

The value of building authorized in Montreal was greater during October than in September, 1924, and October, 1923; Toronto showed a decrease in the former and an increase in the latter comparison, while Winnipeg and Vancouver recorded reductions in both comparisons. Fredericton, Belleville, Fort William, Galt, Kingston, Kitchener, St. Thomas, Sault Ste. Marie, Welland, Windsor, Brandon, Moose Jaw, Edmonton, Lethbridge,

Medicine Hat, Nanaimo, Prince Rupert and South Vancouver registered increases as compared with the preceding month, and also as compared with the corresponding month of last year.

	104,550,542	114,959,080	125,458,106

The value of the building permits issued during the first ten months of 1924 was lower by 9.1 per cent and 16.7 per cent than in 1923 and 1922, respectively, but it was 7.4 per cent higher than in the same period of 1921. The total for this year is \$104,550,542,

for 1923, \$114,959,080, for 1922, \$125,458,106, and for 1921, \$97,318,180.

The accompanying table shows the value of the building permits issued during October and September, 1924, and October, 1923. The 35 cities for which returns are available since 1910 are marked with asterisks.

## FAIR WAGE CONTRACTS, NOVEMBER, 1924

**D**URING November, the Department of Labour received for insertion in the *LABOUR GAZETTE* the following information relative to twenty-nine fair wage contracts awarded by the Department of Public Works. Twenty-eight of these contracts contain the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rate so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is

in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

The remaining contract which comes first in order in the following list, contains a fair wage schedule, the following clause being included in regard to labour conditions:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or fail at any time to pay to any employee or employees for any services performed or for any hours of labour wages according to the rates set forth in the schedule or fixed therefor by the Minister of Labour hereunder regarding overtime and classification, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

### DEPARTMENT OF PUBLIC WORKS

Relaying pavement, Wellington Street (Plaza), Ottawa, Ontario. Name of contractor, Standard Paving, Limited, Ottawa, Ontario. Date of contract, November 18, 1924. Amount of contract, \$4,902. The fair wage schedule inserted in the contract is as follows:

Trade or class of labour	Per hour	Hours per day
	\$ cts.

Construction of public wharf, La Motte, Pontiac County, Quebec. Name of contractors, A. Ouellet and A. Lavoie, Amos, Quebec. Date of contract, November 1, 1924. Amount of contract, unit prices. Approximate expenditure, \$3,190.17.

Protection work to the Steveston Jetty, Fraser River, B.C. Name of contractor, The Vancouver Pile Driving and Contracting Company, Limited, Vancouver, B.C. Date of contract, October 16, 1924. Amount of contract, approximate expenditure, \$17,250.

Dredging entrance channel basin and crib seats for proposed breakwater at Matane, Quebec. Name of contractors, St. John Dry Dock and Shipbuilding Company, Limited, St. John, New Brunswick. Date of contract, November 3, 1924. Amount of contract, Class "A", \$4.50 per cubic yard, place measure. Class "B" 37 cents per cubic yard, place measure. Approximate expenditure, \$95,410.05.

Dredging basin east of Government wharf at Verchères, Quebec. Name of contractors, Les Chantiers Manseau, Sorel, Quebec. Date of contract, October 27, 1924. Amount of contract, Class "B" 40 cents per cubic yard, scow measure. Approximate expenditure, \$9,600.

Dredging main channel at St. Jean des Chaillons, Quebec. Name of contractor, The National Dock and Dredging Corporation, Limited, Quebec City, Quebec. Date of contract, October 21, 1924. Amount of contract, Class "A" \$6 per cubic yard, scow measure. Class "B" 45 cents per cubic yard, scow measure. Approximate expenditure, \$15,946.65.

Dredging main channel at Honey Harbour, Ontario. Name of contractors, Théophile Light, Penetanguishene, Ontario. Date of contract, October 27, 1924. Amount of contract, Class "A", \$9 per cubic yard, place measure, Class "B" 70 cents per cubic yard, scow measure. Approximate expenditure, \$23,612.

Dredging channel from deep water toward wharf at St. Antoine de Tilly, Quebec. Name of contractor, The National Dock and Dredg-

ing Corporation, Limited, Quebec City, Quebec. Date of contract, October 7, 1924. Amount of contract, Class "A" \$10 per cubic yard, scow measure. Class "B" 65 cents per cubic yard, scow measure. Approximate expenditure, \$14,774.50.

Reconstruction part of the East Pier at Port Burwell, Ontario. Name of contractors, Bourassa, Clifford Corporation, Limited, Three Rivers, Quebec. Date of contract, October 17, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$45,609.75.

Dredging main channel at Berthierville, Quebec. Name of contractor, Les Chantiers Manseau, Sorel, Quebec. Date of contract, November 14, 1924. Amount of contract, Class "B" 45 cents per cubic yard, scow measure. Approximate expenditure, \$15,750.05.

Landing slip and extension to wharf at Miguasha, Quebec. Name of contractors, T. Lavoie and J. T. LeBlanc, St. Jean L'Evangeliste, Quebec. Date of contract, November 10, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$8,881.01.

Extension to wharf at Grondines, Quebec. Name of contractors, O. and J. Poliquin, Portneuf, Quebec. Date of contract, October 21, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$38,464.80.

Construction of bridge and road diversion at Grand Etang, Nova Scotia. Name of contractors, E. A. Cranton and C. B. McDougald, Truro, Nova Scotia. Date of contract, October 8, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$10,061.41.

Repairs to wharf, Ste. Croix, Quebec. Name of contractors, L. Lemieux and O. Roberge, Lauzon, Quebec. Date of contract, October 25, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$6,665.85.

Construction of Immigration Building at Pigeon River, Ontario. Name of contractor, R. N. Wyatt, Winnipeg, Manitoba. Date of contract, October 22, 1924. Amount of contract, \$3,087.

Dredging mooring basin at Lunenburg, Nova Scotia. Name of contractors, Acadia Contractors, Limited, Halifax, Nova Scotia. Date of contract, October 28, 1924. Amount of contract, Class "B" 58 cents per cubic yard, scow measure. Approximate expenditure, \$27,521.

Reconstruction of upstream part of Grand Trunk Railway wharf at Lachine, Quebec. Name of contractors, Leger and Charlton,

Limited, Lachine, Quebec. Date of contract, October 21, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$19,732.60.

Reconstruction of 475 feet of high level wharf at Sorel, Quebec. Name of contractors, Farley and Grant, Ottawa, Ontario. Date of contract, October 20, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$18,705.

Repairs to West Pier at Port Maitland, Ontario. Name of contractors, Bourassa, Clifford Corporation, Limited, Three Rivers, Quebec. Date of contract, October 31, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$19,254.20.

Alterations to electric light plant, pole line renewal, Quarantine Station, William Head, British Columbia. Name of contractors, Fox and Mainwaring, Victoria, British Columbia. Date of contract, November 11, 1924. Amount of contract, \$4,000.

Dredging at Blind River, Ontario. Name of contractors, A. B. McLean and Sons, Sault Ste. Marie, Ontario. Date of contract, October 9, 1924. Amount of contract, Class "B" 48 cents per cubic yard, place measure. Approximate expenditure, \$22,500.

Repairs to wharf at Denman Island, British Columbia. Name of contractor, R. Bumstead, Vancouver, British Columbia. Date of contract, October 17, 1924. Amount of contract, \$2,897.

Sewage disposal scheme, Lazaretto, Tracadie, New Brunswick. Name of contractor, Thomas I. Basque, Tracadie, New Brunswick. Date of contract, November 12, 1924. Amount of contract, \$2,900.

Extension to eastern wing of wharf at Cross Point, Quebec. Name of contractor, Arthur Nadeau, Chandler, Quebec. Date of contract, October 17, 1924. Amount of contract, cribwork in place at \$3.69 per cubic yard. Approximate expenditure, \$4,335.75.

Electric wiring, etc., Public Building, Truro, Nova Scotia. Name of contractor, W. W. Hoyt, Halifax, Nova Scotia. Date of contract, November 15, 1924. Amount of contract, \$1,085.

Replacement of wharf at Sayward, British Columbia. Name of contractors, The Vancouver Pile Driving and Contracting Company, Limited, Vancouver, British Columbia. Date of contract, October 17, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$9,447.68.

Repairs to western breakwater at Port Colborne, Ontario. Name of contractor, M.

J. Hogan, Port Colborne, Ontario. Date of contract, October 17, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$9,573.50.

Improvement to wharf at Roberval, Quebec. Name of contractors, Elz. Methot and Nap. Fournier, Montmagny, Quebec. Date of contract, November 14, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$12,692.35.

Grain conveyor galleries at Berth 16, St. John Harbour, West St. John, New Brunswick. Name of contractors, F. L. Boone and G. S. MacDonald, St. John, New Brunswick. Date of contract, November 22, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$127,633.60.

#### POST OFFICE DEPARTMENT

The following is a statement of payments made in November, 1924, for supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system, the securing of fair wages and the performance of work under sanitary conditions:

Nature of Orders	Amount of Orders
	\$
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	1,276 41
Making and repairing rubber stamps, daters, etc.....	72 36
Making up and supplying letter carriers' uniforms, etc.....	2,774 67
Stamping pads, ink, etc.....	129 89
Mail bag fittings.....	1,159 71
Scales repaired.....	242 25
Repairs to boxes, etc.....	113 00
Satchels supplied.....	913 03
Mail bagging.....	12,913 67

#### Progress of International Labour Legislation

Rapid progress continues to be made in giving effect in the national legislation of various countries to the decisions of the International Labour Conference.

Up to October 21, 1924, ratification of International Labour Conventions had taken place in 141 cases. The number of ratifications stood at 94 in June, 1924, just before the holding of the Sixth Conference.

It is interesting to note that the Conventions which have been ratified by the largest number of countries are the Unemployment Convention (17 countries), the Convention prohibiting the night work of women (13 countries), and the Convention prohibiting the night work of young persons (13 countries).

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Mining, Non-Ferrous Smelting and Quarrying

CUMBERLAND, B.C. (COMOX COAL FIELDS, VANCOUVER ISLAND.—CANADIAN COLLIERIES (DUNSMUIR) LIMITED, AND THEIR EMPLOYEES.

For summary of this agreement see article on page 1090.

### Construction: Buildings and Structures

WINDSOR, ONTARIO.—THE ELECTRICAL CONTRACTORS OF THE BORDER CITIES AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, No. 773.

Agreement to be in effect from October 1, 1924, until May 31, 1925, unless previously annulled by either party.

Both parties agree that there shall be no strikes, lockouts or stoppage of work without 48 hours notice to either party.

No electrical contractors, firm, or corporation shall be given better terms or conditions by the union than given here. The parties to this agreement shall procure all foremen, journeymen and helpers from the local union, and shall be given first call for the services of all men in the local. After forty-eight hours labour may be procured elsewhere.

There shall be no restriction of use of machinery or tools.

A conference committee is to be elected annually from each party.

Wages per hour: foremen, \$1.12½; journeymen, \$1.00; helpers, one to two years, 50 cents, two to three years, 60 cents; three to four years, 75 cents, wage schedule being effective as from August 15, 1924.

Not more than one helper is to be employed to three journeymen. Four journeymen require a foreman.

Car fares and transportation expenses shall be paid. No member may make contracts for electrical work while in the employ of the contractors.

Hours per day, eight; four on Saturdays. Overtime, double time. Certain holidays shall be observed.

### Transportation: Street and Electric Railways

MONTREAL, QUEBEC.—THE MONTREAL TRAMWAYS COMPANY AND THE MONTREAL TRAMWAYS EMPLOYEES, DIVISION 790.

Agreement to be in effect from June 30, 1924, until July 31, 1927. For conductors, motormen, hillmen, signalmen and regular employees of shops and car barn, wages, hours and overtime rate shall last until July 31, 1927; and for regular employees of the Construction Department a winter schedule will be arranged as from November 30, 1924.

The Company agrees not to discriminate against any employee for being or not being a member of the Association. Officers of the Association may be absent to attend union business if sufficient notice is given, and may retain their rank after such absence.

The business agent may visit shops, etc., to interview members, and may submit complaints.

The company agrees to meet Association officers, and discuss matters of interest to the employees' welfare.

An employee laid off or dismissed may submit case to the head of the department. An employee unjustly laid off or dismissed may be reinstated and paid for lost time.

Employees may have free transportation to and from duty.

Uniform clothing is to be furnished free to conductors and motormen in service for three years.

Employees leaving the service are to be given a recommendation.

Conductors and motormen will be entitled to one day off per week, when possible.

Employees in the power, mechanical or construction department who receive an urgent call at night outside of regular hours will be paid time and a half for the work they perform with a minimum of not less than four hours.

Wages: per hour—conductors and motormen, first year, 42½ cents; second year, 47 cents; after two years, 51 cents; work on Sundays and holidays, 5 cents over regular rates; for work on one-man cars, one man autobuses, milk or way freight cars, Youville store car, construction car, and to men switching railroad cars for suburban lines, 5 cents over regular rates. To employees training students on the cars, three cents advance on regular rates. On sweepers, ploughs and levellers, men in charge, 5 cents advance on maximum rate; men assisting, 3 cents advance on maximum rate; hillmen, 33 cents; stablemen, 29 cents.

In the construction department, all regular employees on hourly rates, after one year's service and who are to be employed throughout the year, an increase of 3 cents per hour over rate paid prior to July 1, 1924.

Men on construction work who are called out to work over 10 hours in one day shall receive time and one-quarter for overtime.

Employees on hourly rates in car barns, Youville shops, and power house department, who have been one year in the service and are to be employed throughout the year will receive a flat increase of 3 cents over rates and on classification in effect prior to July 1, 1924.

### Service—Personal

HAMILTON, ONTARIO.—LOCAL EMPLOYERS AND JOURNEMEN BARBERS' INTERNATIONAL UNION, No. 131.

Agreement in effect from May 1, 1924, until May 1, 1925.

Wages shall be a weekly guarantee of \$20 and half over \$28; 70 per cent for broken weeks.

Every journeyman to be allowed one half day off every week from noon until the following day at 8 a.m., excepting in case of a regular holiday when the holiday shall be considered the day off.

Hours of labour—from 8 a.m. to 7.30 p.m. with one hour for dinner and three-quarters of an hour for supper. Shops shall close at 7.30 p.m. excepting Saturdays and the night before a holiday, when they shall close at 10 p.m. Shops shall be closed on legal holidays without exception.

VANCOUVER, BRITISH COLUMBIA. — CERTAIN LOCAL FIRMS AND JOURNEYMEN BARBERS' INTERNATIONAL UNION OF AMERICA, LOCAL No. 120.

Working schedule in effect from May 12, 1924, to May 12, 1925.

Hours of work, from 8 a.m. to 6.30 p.m., excepting on Saturdays, when the closing hour shall be 8 p.m. One hour at noon; thirty minutes for supper on Saturdays and nights preceding holidays.

Full pay to be allowed for holidays.

Wages per week, journeymen, not less than \$25; with 60 per cent over \$39.50.

For fractions of week, \$4.20 for Monday, Tuesday, Thursday or Friday; \$2.20 for Wednesday till one p.m.; 60 per cent on all receipts exceeding a daily average of \$6.65. Wednesday to count a half day. Saturday, \$6.00, with 60 per cent over \$9.50.

Swing shift man shall not work more than six hours per day except Saturdays when he shall work all day with \$17 and 60 per cent over \$26.50. Not more than one swing shift man to a shop. Saturday man shall be paid \$6 with 60 per cent over \$9.50.

No barber may work without a permit signed by the local union secretary. This schedule is to apply in every shop displaying the union card.

## AGREEMENT BETWEEN COAL MINERS AND OPERATORS IN VANCOUVER ISLAND

### Cost of Living Bonus No Longer to be Adjusted Quarterly

IN the LABOUR GAZETTE for November, 1924, on page 938, reference was made to the renewal of the agreements between the coal miners and operators in the principal collieries in Vancouver Island. These agreements since 1918 had provided that a cost of living bonus of \$1.25 per day in 1918 should be adjusted every three months according to the changes in the cost of living. At the request of the parties concerned the Dominion Government appointed a Royal Commission (January 17, 1919, not January 31 as stated in the November issue) to make the necessary investigation quarterly. In renewing the agreements in October, 1924, between the Canadian Collieries (Dunsmuir) Limited and its employees in the Comox and in the Lady-smith-Wellington areas, for two years, it was provided that the bonus should be stationary at 91 cents during the period of the agreement, "it being mutually understood by the company and its employees that any increase or decrease in the bonus herein mentioned shall be governed by competitive conditions."

A similar provision had been made in the agreement between the Western Fuel Corporation of Canada, Limited, and its employees in October, 1922, and was renewed in October, 1924, so that the occasion for quarterly investigations by the commission has passed.

The following is a summary of the agreement recently entered into between the Canadian Collieries (Dunsmuir) Limited and their employees in the Comox mines. The agreement is to be in effect from November 1, 1924, until October 31, 1926.

The company is to give such employment as convenient, and the employees are to accept the same according to agreement.

The system of dockage inspection is to be continued, with penalties for refuse as provided, including dismissal for excess refuse after investigation, in event of which an appeal may be made to the District Superintendent, whose decision shall be final. Excess dockage imposed shall be credited to the Employees' Gas Committee Fund.

A miner taken from the face to perform day work shall be paid the regular day work wage.

The employees will elect an agreement committee consisting of two members representing the underground employees at No. 4 mine; two, number 5 mine; and two representing the surface employees designated on schedules C and D employed at Nos. 4, 5 and 6 mines. In event of the company opening a new mine there shall be two members representing it. A vacancy on the agreement committee shall be filled in seven days.

The management and the committee shall meet on or about the first Saturday in each month at the company's office at Cumberland. Special meetings may be called upon due notice being given.

Any employee having a grievance or dispute shall lay the same before his representatives on the agreement committee; the committee shall lay before the management any dispute between the employees and mine officials, or questions regarding the agreement or working conditions.

Pending hearing and adjustment, there is to be no stoppage of work. During the period of the agreement, the employees are not collectively to give up work inconsistently with the meaning of the agreement, nor individually except for valid reason.

The operation of a mine is not to be suspended in event of a fatal accident. Employees may attend the funerals of victims of such accidents in their own time.

Employees absent without permission shall be liable to suspension or dismissal.

In October, 1926, the officers of the agreement committee are to arrange for the election of two employees for each unit as representatives on the agreement committee. The new committee will negotiate with the company for a new agreement or for a continuation of the present agreement.

New employees before accepting employment shall endorse this agreement.

**Wage Schedule**

A bonus of 91 cents per day to be paid in addition to the following rates:—

**SCHEDULE "A"**

Contract or piece rates.

**SCHEDULE "B"**

*Day Rate*

Occupation	Base Rate
Company miners .. . . .	\$4.20

**International Directory of Co-operative Organizations**

The International Labour Office has just published an *International Directory of Co-operative Organizations* which gives the most precise information possible in relation to: international cooperative organizations, the organizations (federations and other bodies) representative of the different forms or tendencies of the movement in each country.

The first part contains an enumeration of international organizations followed by lists, arranged according to countries, of more than 500 national organizations. As regards each

organization, the following particulars are given as far as possible; name, address, date of foundation, chief officers, title of official, national or international affiliation, and number of members.

The second part is devoted to the presentation, in the form of tables, of supplementary figures relating to the various activities of the organizations: membership and trading activities of the central organizations, and of their affiliated societies, cooperative banking and cooperative insurance societies.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1924

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in Canada continued slightly upward. The various indexes of wholesale prices and the family budget in terms of retail prices were both somewhat higher, the increases in the latter case being mainly seasonal.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.46 at the beginning of November, as compared with \$10.31 for October; \$10.69 for November, 1923; \$10.29 for November, 1922; \$11.08 for November, 1921; \$15.32 for November, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for November, 1918; and \$7.96 for November, 1914. The most important advances were in eggs and bread, though milk, butter, flour, rolled oats and lard were also higher. The chief declines were in potatoes, beef, pork, cheese, and sugar. Including the cost of fuel and rent with that of foods the total budget averaged \$20.81 at the beginning of November, as compared with \$20.67 for October; \$21.19 for November, 1923; \$20.89 for November, 1922; \$21.60 for November, 1921; \$26.92 for July, 1920 (the peak); \$26.13 for November, 1920; and \$14.36 for November, 1914. Fuel and rent were practically unchanged. In fuel as compared with a year ago or with two years ago, wood shows little change but coal is lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, advanced to 157.7 for November as compared with 157.0 for October; 153.3 for November, 1923; 151.9 for November, 1922; 153.6 for November, 1921; 224.5 for November, 1920; 256.7 for May, 1920 (the peak); and 217.5 for November, 1919. Fifty-seven prices quotations were higher, forty-two were lower, and one hundred and thirty-seven were unchanged.

In the grouping according to chief component material three of the main groups advanced, two declined, and three were practically unchanged. Vegetables and their products advanced slightly, declines in oats, barley, sugar and vegetables being more than offset by the advances in wheat, corn, flax, flour and other milled products, and rubber. The animals and their products group and the non-ferrous metals group both advanced, the former due chiefly to increases in the prices

of bacon, milk, eggs and furs, and the latter due to higher prices for copper, lead, tin, zinc and antimony. Fibres, textiles and textile products declined slightly due to lower prices for cotton fabrics and yarns and in spite of increases in jute, hessians, silk and rope. Wood and wood products also declined slightly because of lower prices on some lines of lumber. The iron and its products group and the chemicals and allied products group were practically unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were somewhat higher. In the former group foods advanced due to higher prices for breadstuffs, milk, eggs, coffee and tea in spite of lower prices for fish, fruits, meats, sugar and vegetables. In producers' goods, building and construction materials, materials for the meat packing, textile and clothing industries declined but these were more than offset by the advances in materials for the fur, the leather, the milling and the metal working industries.

In the grouping according to origin, raw or partly manufactured goods advanced while fully or chiefly manufactured goods declined slightly. In articles of farm origin field products showed little change, but animal products advanced. Domestic farm products were substantially higher, both field and animal having advanced. Articles of marine, forest, and mineral origin declined.

The index number published by the Department since 1910 has been reconstructed back to 1913, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 236 commodities in 1913.\* Ultimately the reconstructed index will be carried back to an early date, but in the meantime the Department will continue to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels prior to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics will be used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings but the sub-groups in detail shown monthly

\* LABOUR GAZETTE, June, 1923, and September, 1924.

since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

The index number based upon prices of 271 commodities in 1890-1899 published by the Department of Labour since 1910, advanced slightly to 223.4 for November as compared with 223.0 for October; 221.7 for November, 1923, the same figures as for November, 1922; 227.3 for November, 1921; 304.2 for November, 1920; 290.9 for November, 1918; and 137.5 for November, 1914. The advance was due to higher prices for wheat, corn, veal, lard, milk, eggs, bananas, oranges, flour, coffee, molasses, woollen yarn, raw cotton, raw silk, jute, antimony, copper, lead, spelter and copper wire. Declines occurred in oats, barley, cattle, hogs, sheep, butter, cheese, lemons, turnips, onions, sugar, manufactured cottons, bar silver, pine, and in raw furs.

The special index number comprising fifty of the more important commodities selected from the 271 in the Departmental list, including twenty foods, fifteen raw materials and fifteen manufactured goods, based upon price levels in 1913 as 100, advanced to 151.5 for November, as compared with 150.5 for October; 152.0 for November, 1923; 152.1 for November, 1922; 147.2 for November, 1921; 211.9 for November, 1920; 260.5 for May, 1920 (the peak); and 210.6 for November, 1918. The advance was due mostly to higher prices for eggs, milk, raw cotton, lead and rope and in spite of lower prices for hay, hogs, sheep and sugar.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods based upon price levels in 1913 as 100, declined to 146 for September as compared with 149 for August; 147 for July and 149 for September, 1923. Producers' goods was unchanged but all other groups were lower, including raw materials, consumers' goods, and export goods.

Professor Michell's index number of forty articles with prices during 1900 to 1909 as 100 advanced to 175.1 for November as compared with 174.0 for October; 176.9 for November, 1923; 225.4 for November, 1920; and 118.4 for November, 1914. Both foods and manufacturers' goods advanced.

The Canadian Bank of Commerce index of exports rose from 150.69 to 151.56 and that for imports from 161.74 to 163.65. The combined index of both exports and imports was up from 156.21 to 157.60.

#### EXPLANATORY NOTE

The table of retail prices and rentals shows the prices at the beginning of November of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the *LABOUR GAZETTE*.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the *LABOUR GAZETTE* resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the *LABOUR GAZETTE* was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the *LABOUR GAZETTE* since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions,

nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

#### Cost of Electric Current for Householders\*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

#### Wholesale Prices

The following is a summary of a statement on price changes during the month issued by the Dominion Bureau of Statistics.

In grain prices higher levels were established for wheat, corn and flaxseed, while oats and barley were lower. No. 1 Manitoba Northern wheat at Winnipeg averaged \$1.64 per bushel in November, as compared with \$1.59½ in October. The low price of \$1.48½ per bushel was reached early in the month and the high price of \$1.70½ about the middle. Toward the end of the month prices reached somewhat lower levels. American corn at Toronto advanced from \$1.27 per bushel to \$1.31. Flax seed was up from \$2.33 per bushel to \$2.35. Oats fell from 63c. per bushel to 59c., and barley from 92½c. per bushel to 85½c. The advance in wheat prices was reflected in the prices of flour, which rose to \$9.20 per barrel at Toronto. Shorts at Toronto rose from \$31.80 per ton to \$32.35. Raw sugar at Montreal declined from \$5.58 per hundred to \$5.35, and granulated from \$7.73 to \$7.36. This was said to be due to the influence of the European beet sugar crop. Raw rubber continued to advance, averaging 34½c. per pound as compared with 31c. in the previous month. Coffee and tea prices advanced somewhat. Linseed oil went down from \$1.22 per gallon to \$1.16. Cattle prices moved to lower levels, western cattle at Winnipeg being down from \$5.15 per hundred to \$4.97 and choice steers at Toronto from \$6.25 per hundred to \$6.05.

Sheep prices dropped from \$7.60 per hundred to \$6.90. Hog prices at Toronto were slightly higher, averaging \$10.86 per hundred. Beef, dressed hindquarters, fell from \$12.80 per hundred to \$12.50. Veal was 1c. per pound lower at 23c. Bacon at Toronto advanced from 22c.-25c. per pound to 24c.-26c. Milk at Montreal showed a seasonal advance from 21c. per gallon to 25c. Creamery butter at Toronto rose from 40c. per pound to 41c., but at Montreal there was a decline of 1c. per pound to 37c. Fresh eggs at Montreal advanced from 53c.-60c. per dozen in October to 65c.-70c. in November. Raw cotton at New York showed a slight decline, averaging 24c. per pound as compared with 24.6c. in October, while some lines of manufactured cottons showed substantial declines. Flax fibre was up from 18c.-26c. per pound to 20c.-30c. Jute advanced from \$11.26 per hundred to \$11.61. Raw silk advanced slightly, Japanese averaging \$6.15 per pound. Iron and steel prices remained steady. Non-ferrous metals continued to advance, lead being up from \$8.15 per hundred to \$9.10; tin from 51½c. per pound to 56½c.; spelter from \$7.85 per hundred to \$8.45; copper from \$15 per hundred to \$15.75; antimony from 10½c. per pound to 13½c. Silver declined slightly from 71½c. per ounce in October to 70½c. in November.

#### Retail Prices

Beef prices continued the decline which has been in progress for the past five months. Sirloin steak averaged 26.9c. per pound in November as compared with 27.8c. in October; round steak 21.8c. per pound as compared with 22.4c. in October; shoulder roast 14.2c. per pound as compared with 14.6c. in October. Veal was slightly lower, averaging 17.7c. per pound. Mutton showed little change at 27.6c. per pound. Fresh pork was down in the average from 21.5c. per pound in October to 24.6c. in November, and salt pork from 23.3c. in October to 23.1c. in November. Bacon and ham showed little change. In fresh fish, cod steak, halibut, and whitefish were lower. Salt herrings declined slightly. Lard advanced from an average of 22.8c. per pound in October to 23.2c. in November. The increase was general except in the western provinces.

Both fresh and cooking eggs advanced substantially, the former averaging 54.1c. per dozen in November, as compared with 45.7c. in October, and 39.5c. in September, and the latter averaging 45.6c. per dozen in November, 39.8c. in October, and 34.6c. in September. Advances in the prices of milk were reported from Quebec, Sherbrooke, Montreal, Hamilton, Timmins, Winnipeg, Brandon and

\* LABOUR GAZETTE, December, 1923, page 1442.

Edmonton. Butter advanced, dairy averaging 38.7c. per pound in October and 39.3c. in November and creamery averaging 42.8c. in October and 43.5c. in November. Cheese was slightly lower at 28.9c. per pound.

Higher prices for bread were reported from Moncton, Sherbrooke, Montreal, Orillia, Guelph, London, St. Thomas, Port Arthur, Fort William, Winnipeg, and Saskatoon. Flour advanced in most localities, averaging 5.1c. per pound as compared with 4.9c. in the previous month. Rolled oats also advanced, averaging 6c. per pound. Rice and tapioca showed little change. Canned corn advanced slightly, but tomatoes and peas were steady. Beans were practically unchanged. Onions showed a general decline, averaging 5.1c. per pound in November as compared with 5.7c. in October. Potatoes averaged \$1.29 per ninety pounds as compared with \$1.39 in October. Prices were lower in nearly all localities except in the province of Quebec where increases were re-

ported. Evaporated apples and prunes showed little change. Raisins and currants were steady. Raspberry jam was slightly lower at 91.4c. per four-pound tin. Both granulated and yellow sugar showed a general decline, the former averaging 9.9c. per pound as compared with 10.3c. in October, and the latter averaging 9.5c. per pound as compared with 9.8c. in October. Tea advanced from 69.6c. per pound to 70.4c. Cream of tartar showed little change.

Anthracite coal averaged \$16.72 per ton in November and \$16.58 in October. Higher prices were reported from Quebec, Montreal, Brockville and Cobalt. Bituminous coal averaged \$10.43 per ton in November and \$10.50 in October. Hardwood was practically unchanged while soft wood declined slightly, averaging \$9.21 per cord in November. Coal oil averaged 30.4c. per gallon as compared with 30.8c. in October.

A decline in rent for the better class of houses was reported from Calgary.

DEPARTMENT OF LABOUR INDEX NUMBERS OF WHOLESALE PRICES BY PRINCIPAL GROUPS OF COMMODITIES FOR NOVEMBER 1924, OCTOBER 1924, NOVEMBER 1923, 1922, 1921, 1920, 1919, 1918, 1917, 1916, 1915, 1914 AND 1913.

## COMPARISON OF REAL WAGES IN CAPITAL CITIES IN VARIOUS COUNTRIES

IN July, 1924, the International Labour Office took over the maintenance of the record of the comparative real wages in various countries compiled and published by the British Ministry of Labour in the *Ministry of Labour Gazette* since 1923. Summaries of these figures were given in the LABOUR GAZETTE in August, 1923, and June, 1924. At the International Conference of official Labour Statisticians at Geneva at the end of October, 1923, it was proposed by the British Government delegate that the International Labour Office should take over this work and develop it to whatever extent was possible. This was recommended by the Conference and approved by the Governing Body of the International Labour Office in April, 1924.

The first publication of its own figures by the International Labour Office appeared in the October issue of the International Labour Review, with an article explaining the nature of the figures and the developments in the record taken over from the British Ministry

of Labour. The chief developments are that rentals, as well as food prices, are included in the calculation to some extent, and that the figures are calculated not only on the basis of the British standard of consumption of food, but on several bases designed to be appropriate to each of the other countries included. The list of cities differs from the list of the British Ministry of Labour in the following respects: Philadelphia takes the place of New York; Rome, Milan and Lisbon have been added; and Copenhagen and Sydney are not as yet represented.

As before, the purpose of the calculations is to show the comparative amounts of food which can be purchased in the various cities with the wages of forty-eight hours' work. For this purpose index numbers were calculated by taking as 100 the amount of each article of food which forty-eight hours' wages in each trade would purchase in London, and then finding what ratio of 100 would represent the corresponding amount for each article

### Index Numbers of Comparative Real Wages (or Comparative Purchasing Power of Money-Wages) in London and certain Cities Abroad at July 1, 1924.†

†Average for all occupations covered by the enquiry.

\*Although London is taken arbitrarily as base (=100), the ratios would be the same, whatever city were chosen as base.

†The figures for Lisbon, as well as those for Rome and Milan, are relatively low. This may be accounted for in part by the differences in the items of food consumption in these countries from those ordinarily consumed in most of the other countries included in the table. The budgets used in the comparisons do not make adequate allowance for the large consumption of vegetable foods in these European countries.

§Compared with those of other Central European capitals the figures for Warsaw are high. This is due in part, as explained by the Polish Government, to the fact that the wages of the groups of workers included are relatively higher than those of workers in many other industries. It is further pointed out that wages in Warsaw are very high in relation to those in other Polish towns, and consequently are not at all representative of the general level of wages in Poland. These considerations evidently apply to other countries, but their importance in the case of Poland appears to be particularly great.

of food and each trade in each other city included. These ratios or "index numbers" were then averaged for each city for all trades included. The British Ministry of Labour in arranging these index numbers produced weighted averages, allowing for the importance of each article in British working class consumption, and also produced averages without weights, that is simple arithmetical averages.

The International Labour Office has not calculated the simple averages, but in addi-

tion to calculating the averages weighted according to British standards of consumption has produced averages weighted according to standards in various groups of countries with more or less similar standards of living.

In addition by taking an average of the results according to the six standards so adopted, a general average is produced which stands as an international average by means of which the standard of living in each city can be compared to that in London.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The upward movement noted last month has continued in practically all countries from which information has been received. The only exceptions are a slight decline in both wholesale prices and the cost of living in Switzerland, and slight declines in the cost of living in Czecho-Slovakia, Spain and New Zealand.

### Great Britain

**WHOLESALE PRICES.**—The *Statist* index number (in continuation of Sauerbeck's figures) recorded an advance of 3.4 per cent over the previous month's level reaching 146.1 for October, a total rise in two successive months of 5.9 per cent. During the latter month, foods rose 3.7 per cent and materials rose 3.1 per cent.

The Board of Trade index number on the base 1913 = 100 rose 2 per cent in October to 170.2. Foods rose 5.3 per cent, all groups showing increases. Industrial materials rose 0.2 per cent, iron and steel and other metals and minerals declining while textiles and miscellaneous goods advanced.

The *Economist* index number, on the base 1901-05 = 100, was 219.7 at the end of November, as compared with 220.3 at the end of October. Cereals and meat declined 1.8 per cent, other foods rose 1.9 per cent; textiles declined 1.3 per cent; minerals rose 1.9 per cent; and the miscellaneous group declined 0.8 per cent.

### Belgium

**WHOLESALE PRICES.**—The index number of the Ministry of Industry and Labour, on the base April, 1914 = 100, was 550 in September,

as compared with 547 in August. The principal increase was one of 8 per cent in foods. Rubber rose 6 per cent; fertilizer, fats, textiles, construction materials, and hides and leather rose slightly. Tobacco declined 11 per cent; tar, metals, petrol, clay products, glass products, and chemical products also declined, while fuels, resin products and paper products showed no change.

**RETAIL PRICES AND COST OF LIVING.**—The official index number of retail prices of 56 articles at Brussels, on the base April, 1914 = 100, was 544 in October as against 529 in September. The index number for the Kingdom rose from 503 in September to 513 in October.

The official index number of cost of living of a middle class family, on the base 1921 = 100, was 134.19 for October, a rise of 4.1 per cent for the month. This increase was due to a rise of 6 per cent in foods. Rent, clothing and sundries increased slightly and heating and lighting declined.

The index of the budget for a working class family increased 4.6 per cent for the month, to 134.30. Foods rose 6.5 per cent. Rents scarcely changed, clothing and the miscellaneous group rose slightly, and heating and lighting declined slightly.

### Bulgaria

**COST OF LIVING.**—The index number of the Director-General of Statistics has been given by months in 1924 for the two groups, food and heat, light and sundries only. The base is 1901-10 = 100. For August, foods stood at 3719 as against 3686 in July, an increase of 0.9 per cent, while heat, light and sundries stood at 4039 in August as against 4028 in July, an increase of 0.3 per cent.

### France

**WHOLESALE PRICES.**—The index number compiled by *Statistique Générale* on the

base July, 1914 = 100, rose 2.2 per cent to 507 in October. Foods rose 1.1 per cent, and industrial materials rose 3.1 per cent. Of the former, only vegetable foods advanced, and of the latter, minerals and metals advanced 5.8 per cent, miscellaneous articles advanced 4.6 per cent and textiles registered a slight decline.

**COST OF LIVING.**—The official quarterly index number of the cost of living at Paris, on the base 1914=100, was 367 for the third quarter of 1924, one point above the figure for the previous quarter. Foods declined 1.1 per cent to 373; heat and light advanced 2.8 per cent to 360; clothing advanced 4.7 per cent; rent and sundries showed no change.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office of gold prices, on the base 1913=100, rose from 126.9 for September to 131.2 for October, or 3.4 per cent. The average price of foods rose 7 per cent, but the index which had risen sharply each week during September declined correspondingly throughout October, owing chiefly to falling tendencies in cereals, meat, butter and sugar. Industrial materials were 2.6 per cent lower for October. This was owing to a decline in coal and iron, as the other groups, hides and leather, textiles, metals and petroleum all showed rises. The subdivision according to "goods produced" and "goods imported" showed the former to have risen 3.6 per cent and the latter 2.0 per cent for the month under review.

**COST OF LIVING.**—The official index number on the base 1913-14=1 (gold prices) was 1.22 in October as compared with 1.16 in September, the increase having taken place in the early part of October. Foods rose 7.2 per cent; heat and light declined 2.8 per cent; rent advanced 0.4 per cent; and clothing advanced 1.4 per cent.

### Italy

**WHOLESALE PRICES.**—The index number of the Chamber of Commerce, Milan, for October, was 563.19 on the base 1913=100, 3 per cent above the previous month's level.

All groups advanced, most showing fairly marked increases. Foods rose 5.8 per cent and materials rose 1.8 per cent.

**COST OF LIVING.**—The official index number of the cost of living at Milan, on the base July, 1920=100, was 116.23 in July and 116.43 in August, as compared with 116.41 in June. During these two months, rent, heat and sundries showed practically no change, foods

fell slightly in July and rose again in August and clothing in July and August was 0.3 per cent above the June level.

### Spain

**WHOLESALE PRICES.**—The index number of the Director General of Statistics, on the base 1913=100, was 186 in October, an increase of two points or 1.1 per cent over the September level. Foods rose 1.6 per cent and materials rose 1.1 per cent. The principal change was an increase of 8.7 per cent in the price of metals.

**RETAIL PRICES.**—The index number of retail prices at Madrid, on the base 1914=100, declined 2.1 per cent in October to 185. Animal foods rose in price 2.8 per cent; vegetable foods rose 2.9 per cent, and fuel and miscellaneous articles declined 6.9 per cent.

### Sweden

**WHOLESALE PRICES.**—The index number of the Department of Commerce on the base "respective months of 1913=100," was 167 in October an increase of 2.4 per cent on the September level. Raw materials rose 4.7 per cent and manufactured goods rose 1.2 per cent. The chief increases were in vegetable foods, animal foods, feed and forage, and the largest decrease was in textile fibres and fabrics.

**COST OF LIVING.**—The quarterly index number of the Board of Social Welfare, on the base July, 1914=100, was 174 at October 1, as compared with 171 at July 1. Foods rose 4.2 per cent; fuel and light declined 1.1 per cent; clothing declined 0.6 per cent; and taxes declined 1.7 per cent. Housing and the miscellaneous group showed no change for the period.

### New Zealand

**WHOLESALE PRICES.**—The official index number of the Census and Statistics Office, on the base 1909-13=1000, rose slightly in September to 1869 as against 1863 in August. The principal increases by groups were shown by agricultural products, wool, hides, tallow, butter and cheese, and chemicals and manures. The principal decline was in general merchandise and crockery. Other groups showed only slight changes.

**COST OF LIVING.**—The official index number of cost of living, published each February and August, with base, July, 1914=1000, was 1602 in August as against 1621 in February, a decline of 1.2 per cent. Foods declined 1.5 per cent to 1463; rent advanced 3.4 per

cent to 1616; fuel and light declined 4.5 per cent, so that these three groups as a unit showed no change. Clothing declined 2.6 per cent to 1687 and the miscellaneous group declined 3.6 per cent to 1799.

### United States

**WHOLESALE PRICES.**—The index number of the Bureau of Labour Statistics (1913=100) was 151.9 for October, an increase of 2 per cent for the month. Farm products rose 4.3 per cent, foods rose 2.6 per cent, sundries rose 3.4 per cent, while cloths and clothing as well as chemicals and drugs rose slightly. Fuel and lighting declined 3.5 per cent, metals and metal products and house furnishing goods declined slightly and building materials showed no change.

The *Annalist* index number of wholesale prices of 25 foods was \$197.676 at the middle of November, 1.6 per cent above the level at the middle of October, the highest point reached since the beginning of September, 1922.

The Federal Reserve Board index number rose 1.9 per cent to the level of 159 for October (1913=100). Goods produced rose 1.3 per cent and goods imported rose 2.1 per cent. Goods exported rose 2.5 per cent. Raw materials rose 2.5 per cent, producers' goods declined 0.7 per cent and consumers' goods rose 1.3 per cent.

Dun's index number for December 1 was \$197.993, 2.2 per cent above that for November 1. This is the highest point reached since the beginning of 1921, and is 64 per cent above the pre-war basis. Most of the rises for the month were in foodstuffs as a whole, which rose 3.1 per cent. The only groups showing declines were meats and other foods. The index number for clothing rose 2.4 per cent, reaching the highest level since last February.

Gibson's index number of the average cost of 22 articles of food was 84.5 for November, an increase of 0.9 per cent over the October level. The average for 11 months of 1924 was 78.0.

Bradstreet's index number for December 1 showed another monthly rise in general price levels, reaching \$13.5289, a gain of 1.3 per cent for the month of November. Only three of the thirteen groups declined, these being textiles, building materials and naval stores. Nine groups advanced, including the four food product groups, and hides and leather, metal, coal and coke, oils and miscellaneous products. Chemicals and drugs showed no change.

**COST OF LIVING.**—The official index number of the Bureau of Labour Statistics rose in the period June 1 to September 1 from 169.1 to 170.6. Food rose 3.1 per cent and fuel and light rose 1.4 per cent. Sundries showed no change, and clothing, housing and furniture all declined slightly.

The index number of the National Industrial Conference Board, on the base July, 1914=100 rose 0.6 per cent from 162.8 in August to 163.8 in September. Foods rose by 3 points to 147, shelter declined by one point to 185; clothing fell two points to 174 and fuel and light and sundries were unchanged at 166 and 173.

The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100 was 160.3 in October, practically the same as for the preceding month. There were small reductions in the food and clothing elements of the budget, and a slight decline in the fuel and light index owing to a drop of the gas rate in one of the large cities. Shelter and sundries showed no change.

---

## Mothers' Allowances in Ontario in 1924

A report from the Mothers' Allowance Commission of Ontario shows that Government expenditures, under the Act, for the fiscal year ending October 31, 1924, amounted to \$1,707,894. Under the interlocking system provided by the Act, the sum of \$806,539.50 was refunded by the various municipalities

of the province. Toronto had the greatest number of beneficiaries, i.e., 752, the amount disbursed being \$347,791 for the relief of mothers. Ottawa came next with 289 cases of relief and a disbursement of \$137,000. Hamilton reported 172 cases with a disbursement of \$77,222, and London 89, the amount paid out being \$43,583.

## LEGAL DECISIONS AFFECTING LABOUR

### Employee may be Dismissed for Misconduct after Fair Inquiry

**I**N the Appellate Division of the Supreme Court of Alberta an appeal was heard recently in the case *Caven versus Canadian Pacific Railway Company*. The decision against which appeal was taken was outlined in the September issue of the *LABOUR GAZETTE*, page 813. Caven, formerly a conductor in the service of the Canadian Pacific Railway, was dismissed by the Company in 1923 on the ground of alleged misconduct. The trial judge held that the Company, in dismissing Caven, had not complied with the provisions governing "discipline and dismissal" contained in Article 10 of the existing agreement between the Company and its conductors, baggagemen, brakemen, and flagmen employed on its western lines, and gave judgment for the plaintiff for \$10,000 with costs. Appeal from this judgment was taken by the Company, on whose behalf it was claimed that Article 10 had been complied with in connection with Caven's dismissal.

Article 10 reads as follows:—

No trainman shall be disciplined or dismissed until his case has been investigated and he has been proven guilty of the offence against him, and decision rendered. He, however, may be held off for such investigation for a period not exceeding three days and when so held off he will be notified in writing that he is being held off for that purpose and advised of the charges against him. He may, if he desires, enjoy the privilege of the assistance of a fellow employee in stating his case at the investigation and will be given a copy of statement made by him at the investigation. All material and necessary witnesses must be notified in writing to appear. If they appear their evidence shall be taken in the presence of the accused. If they do not appear the accused shall be furnished with a copy of their written statements and their names. If accused is not satisfied with the decision he will be given an opportunity of reviewing the evidence and may appeal through his representatives to the higher officials. Should the charge not be proven the trainman will be reinstated at once and paid for all time lost at schedule rates and reasonable actual expenses.

Should the charge be proven the trainman will be paid his reasonable actual expenses for the time he may be held away from his home terminal in excess of three days, but nothing for the time lost, nor for expenses if not held longer than said three days.

*Note.*—It is understood that men will not be held off unnecessarily and caused to lose time under above rule.

When a trainman is discharged or resigns he will, within five days, be paid and given a certificate, stating the term of service and in what capacity he was employed.

The trial judge had based his decision on the fact that the employee had not been notified of the charges preferred against him until six or seven weeks after the dates of

the alleged misconduct, and that in the meantime the Company had retained him in its service, this retention, it was held, being equivalent to condonation.

The appeal court, on the other hand, found that the plaintiff having submitted to an investigation as provided in Article 10, was bound by the result, as regards the Company's power to dismiss him, subject to the right of appeal to higher authorities. The court might even require him to make his appeal first to the higher authorities mentioned in Article 10. That article, it was found, merely obliged the defendant Company to deal fairly and afford an opportunity for defence. The employee's failure to attend the investigation instituted by the Company's officials, or to take advantage of the right of appeal given him by the article did not destroy his legal right to sue. On the other hand the article did not obligate the defendant to retain any particular employee in its service permanently or indefinitely. The import of Article 10 was stated by the Court to be that it prevents the Company from dismissing an employee before an investigation has been held, and before he has been found as the result of such investigation to be guilty of misconduct. A decision honestly arrived at after such an investigation was held to be binding on the employee as a sufficient justification of dismissal, subject to the right of appeal provided in the article. The Company, however, was not bound to hold an investigation under Article 10 before dismissing an employee because of a serious criminal offence at all events, if it should be one which might in any way affect his usefulness as an employee or the propriety of placing him in a position of authority over or responsibility to the public. The fact that the Company, in an investigation under Article 10 had not procured the attendance of every one who could give material evidence did not render the investigation invalid. The delay of six or seven weeks in notifying the employee of the charges against him, did not, in the opinion of the court of appeal, amount to condonation of the alleged offence.

The appeal of the Company was allowed, and the action dismissed. Two of the five judges would allow the appeal, but would also allow a new trial.

(*Supreme Court of Alberta, Appellate Division—Caven versus Canadian Pacific Railway Company*).

### **Orders of Alberta Minimum Wage Board Declared Invalid**

In the case of an appeal by the Hudson's Bay Company against a decision delivered last July by the Chief Justice of Alberta, the Appellate Division of the Supreme Court of the Province, on December 11, at Calgary, declared invalid all orders of the Alberta Minimum Wage Board affecting wages. Under the act the orders are made applicable to six cities and six towns in the Province, these cities and towns being named. In defining the powers of the Board, however, the act states that the Board has power "to establish a minimum wage for employees with regard to any trade or occupation, and with regard to any municipality to which the act applies or any number of such municipalities." The Appeal Court held that in failing to designate the municipalities to which they apply, the orders of the Board are invalid.

The decision given by Chief Justice Simons, from which appeal was taken by the Hudson's Bay Company, was outlined in the *LABOUR GAZETTE* in the October issue. Further particulars of the decision of the Appeal Court will be given in a future issue.

### **Employer held not liable for Compensation where Accident Resulted from Fault of Workman**

A young man employed as a farm helper was engaged with two other men in erecting a building when he fell from a ladder on which he was standing, sustaining serious injury. He brought action against the farmer alleging that the ladder was defective, several of the rungs being loose. The Superior Court, in a judgment rendered at Hull, Quebec, sustained the claim, granting damages at \$6,000. This decision was reversed on appeal heard in the Court of King's Bench, at Montreal, the court holding that it was not proved that the accident was due to defects in the ladder, which in fact continued in use after the accident, but that, according to the evidence, it was due to the worker's clumsiness.

*(Quebec-D'Amour versus Renaud).*

### **Grievance of a Trade Union Member Against Union Officials**

A brakeman who had been in the service of the Canadian Northern and Canadian National Railway for seven years, having good standing and seniority rights, was suspended by the Railways in February, 1923, on the charge of having been under the influence of liquor while on duty. He was a

member of Beaver Lodge, Number 691, of the Brotherhood of Railroad Trainmen, and thinking he had been wrongfully suspended he presented his grievance to the lodge. The grievance being sustained by the lodge was referred by the lodge to the General Grievance Committee of the Brotherhood for the western lines of the C.N.R., for adjustment. It is the duty of this Committee, where any employee of the Canadian National Railways has been suspended for any reason he might consider insufficient, to make an effort to adjust the grievance by negotiating with the Railways on his behalf and by endeavouring to obtain his reinstatement. The brakeman in the present case, charged that the chairman and another member of the Committee wilfully and wrongfully caused his grievance to be held in abeyance for a number of months and did not endeavour to obtain his reinstatement.

In the meantime the brakeman caused his grievance to be investigated by the Railways, and on October 23, 1923, as a result of his own personal efforts and representations, the Railways advised him that he would be permitted to return to the service and requested him to return to duty. However, on account of the terms of an agreement between the Brotherhood and the Railways, he could not be re-employed without the sanction of the General Committee, and shortly after October 23, the two members of the Committee referred to protested against the reinstatement, and informed the Railways that they had investigated the case and had found that the brakeman had been under the influence of liquor, and was not a proper person to be employed by the Railways. In consequence the brakeman was dismissed from the service. He brought action against the two members of the Grievance Committee, claiming that they had wilfully and wrongfully and in breach of the constitution of the Brotherhood and of the terms of their employment by the lodges of the Brotherhood, and in breach of their duty to the plaintiff, caused him to lose his position and suffer damages.

The defendants made a motion in the Court of King's Bench, to strike out the plaintiff's statement of claim as "unnecessary, frivolous and vexatious," claiming further that the plaintiff had no right of relief in the court until he had exhausted all the rights of appeal provided by the Brotherhood. They stated that the brakeman's grievance had been duly investigated, and that they had reported to the lodge that "after weighing the evidence submitted to us by Brakeman

Williams, Crew Conductor Manchester and Asst. Station Master Nelson we are of the opinion that it would be useless to appeal the case any further, and recommend that the case be dropped for want of merit. But Brother Thompson should be advised that he has the right to appeal his case to the full General Committee, or to the President, W. G. Lee, if he is of the opinion that he is not having justice done him."

The motion of the defendants to have the brakeman's claim struck out was dismissed by the court with costs to the plaintiff, however the subsequent trial might result. The judge after reviewing the evidence produced in the case, said:—

It appears to me, on the above material, that the plaintiff has been very harshly dealt with. Assuming that the defendants' evidence was correct and that the plaintiff attended at the station on February 28 in a more or less intoxicated condition the railway company were quite able to supply his place, for they had been informed that he was too ill to go out on the road that afternoon. \* \* \* \* But the strangest part of this controversy, to my mind, consists in the fact that the railway company were quite willing to overlook the occurrence and take the plaintiff back but for the active intervention and opposition raised by the defendants, whose duty it was, under their own constitution, to assist a fellow-member in his effort to secure reinstatement.

*(Manitoba—Thompson versus Ryall and Cunningham)*

#### **Disease Not Compensable Under Quebec Act**

Four loggers employed by a logging company simultaneously fell sick of typhoid fever while in camp last January, one case being fatal. One of the men subsequently brought action against the company under the Workmen's Compensation Act of Quebec, alleging that the sickness was due to the drinking water supplied to the camp. The claim was heard in the Superior Court of Quebec, the Chief Justice of the Province presiding. The

Court held that, according to medical authorities, typhoid fever was caused by impure milk, preserved foods and other substances besides impure water. Moreover, in this case, the water was not proved to have been impure. If it had been proved conclusively that the cause of the disease was as claimed, the Court might have considered the application, but not under the Workmen's Compensation Act of the Province, which provided compensation only in connection with accidents. "Our courts have decided that it is only an accident, and not a disease, that confers upon the workman the right to claim under the Act."

*(Quebec—Gendron versus Brown Corporation)*

Four men were convicted by a jury at Montreal, in the Court of King's Bench, on November 26, on a charge of having intimidated workers who were employed during a strike of garment workers last January. The presiding judge imposed a fine of \$25 in each case, or in lieu thereof a term of three months in jail. He stated that the men had gone too far in their demonstration in favour of the union. The law, he maintained, provided adequate machinery for the arbitration of industrial disputes, and it must be remembered that while the workers possessed certain rights the employers also must be protected. The judgment must be designed, he declared, rather as a warning to the accused and other union men that such displays of violence could not be tolerated.

In the Police Court at Hull, Quebec, on December 2, seven young men were convicted on a charge of intimidating workers employed by the E. B. Eddy Company in connection with a dispute between the company and its employees, and were fined \$5 each.

## WAGES AND HOURS OF LABOUR IN CANADA, 1921, 1922 AND 1923

THE accompanying tables show the rates of wages and hours of labour for representative classes of labour in several industries in thirteen of the cities throughout Canada in September of each year 1921, 1922 and 1923, samples of the rates in a number of manufacturing industries and in lumbering, and also tables of the rates for representative classes in steam railway operation and in coal mining.

These tables continue for 1921, 1922 and 1923 the statistics published in a bulletin issued as a supplement to the issue of the *LABOUR GAZETTE* for March, 1921, giving figures for all the above mentioned classes for the year 1901 to 1920, except those for coal mining, while the samples for factory wages and lumbering were given for the period 1911 to 1920, only.

Subsequent bulletins gave similar figures for 1921 and 1922, covering, however, a larger number of localities and more classes of labour. Report No. 3 issued as a supplement to the *LABOUR GAZETTE* for February, 1922, gave figures for coal mining from 1900 to 1921. The figures for metal trades are chiefly for factories, shops, foundries, etc., and do not cover railway employees of these classes, these being given in the table of railway wages.

From the figures so published index numbers of wage rates were calculated using rates in 1913 as the base, that is equal to 100, in order to indicate the trend of wage changes by the various groups. For the years 1901 to 1920 the percentage changes for each rate each year were calculated and averaged for each group and for all groups. For 1921, 1922 and 1923, the average changes per cent in each group each year were calculated and the figures for the previous year adjusted accordingly. This brings approximately the same results as if the percentage change in each rate were calculated and the average taken by groups and for all groups. The accompanying table of index numbers gives the results of these calculations.

It will be seen that in each group, except in the printing trades and coal mining, the highest point was reached in 1920. In the printing trades a large number of employees were working under agreements for terms of five years or less, many of which expired in 1921 and 1922 and although these were in many cases amended to provide for cost of living bonuses the total wages received did not show, on the average, as great increases as appeared in other industries. On the other hand in 1921 and 1922 when new agreements were effected, increases in wages or shorter hours were frequently secured when in other trades reductions in wages were being made. The slight decrease in the average for 1923 was due to a number of reductions in wages in western cities.

In coal mining the peak appears to have been reached in 1921 but the wage schedules for 1921 that came into effect toward the end of 1920, were not reduced in Nova Scotia until January, 1922, and have not since been reduced in Alberta and south eastern British Columbia. In Vancouver Island in 1918, a system of adjusting a cost of living bonus every three months according to changes in the cost of living was adopted and is still in use. Under this arrangement the peak was reached in 1920 and decreases occurred during 1921, 1922 and 1923, with occasional slight increases. The slight decreases made in Vancouver Island in 1923 were offset in the index number for the group by increases in the average earnings per shift or day of contract miners in both Nova Scotia and Alberta.

In the other industries substantial reductions in wages were made in 1921 and 1922, with slight upward changes in 1923, the average for all groups in 1923 being 178.4, as compared with 176.8 for 1922, 186.1 for 1921 and 192.1 for 1920. These averages do not include the index numbers for factory labour and lumbering in which the same tendencies appeared except that common labour in factories was not up in 1923.

THE  
LABOUR GAZETTE

*The Official Journal of the Department  
of Labour of Canada*

EACH issue of THE LABOUR GAZETTE contains much statistical and other information relating to industrial conditions, cost of living, etc., including such matters as trade agreements and changes in rates of wages, particulars of trade disputes, statements of all proceedings under the Industrial Disputes Investigation Act, 1907, and special articles on current economic questions. THE LABOUR GAZETTE is sent to any address in Canada, United States or Mexico, at a nominal subscription rate of 20 cents per annum, postage prepaid; other countries, \$1.00 per year. Address subscription to Circulation Manager, THE LABOUR GAZETTE, Department of Labour, Ottawa, Ontario.

# Report of Commission

appointed under Order in Council [P.C. 1929],  
September 22, 1923

to inquire into

## The Industrial Unrest among the Steel Workers at Sydney, N.S.

Creating conditions which have occasioned the calling  
out of the Active Militia in aid of the  
Civil Power and their retention for a considerable  
period of time in the areas affected

---

*Printed as a supplement to "The Labour Gazette," February, 1924*

# REPORT OF COMMISSION

To the Right Hon. W. L. MACKENZIE KING, Prime Minister of Canada.

SIR,—The Commissioners appointed under an Order in Council, dated September 22, 1923, submit the following report, accompanied by a copy of the evidence taken.

The texts of the Order in Council and the Commission are as follows:—

(P.C. 1929)

September 22, 1923.

The Committee of the Privy Council have had before them a Report, dated 31st August, 1923, from the Right Honourable W. L. Mackenzie King, Prime Minister, submitting that there have been evidences of recurring industrial unrest among the steel workers at Sydney, N.S., creating conditions which have occasioned the calling out of the Active Militia in aid of the Civil Power and their retention for a considerable period of time in the areas affected.

The Prime Minister states that it is desirable so far as may be practicable to avoid the possibility of the recurrence of similar conditions, and that it is in the public interest that an inquiry be made into the cause of such industrial unrest and the circumstances which occasioned the calling out and the retention of the Militia in aid of the Civil Power in connection with the same.

The Prime Minister therefore recommends that the question be referred to a Commission under the provisions of Part 1 of Chapter 104 of the Revised Statutes of Canada, 1906, commonly called The Inquiries Act, the said Commission to hold and conduct such inquiry with all the powers conferred by the foregoing statute upon the Commissioners, and to be composed of James W. Robertson, C.M.G., LL.D., of the City of Ottawa; J. J. Johnston, K.C., of the City of Charlottetown, P.E.I.; Fred. Bancroft, of the City of Toronto, Esquire.

The Prime Minister further recommends that the Commissioners have the right to determine the manner of conducting the proceedings in respect of such inquiry and to make all necessary inquiries and investigation concerning the relations between the employers and employees concerned, and that the Commission shall have power and authority to treat as private any testimony, books, papers, documents or statements given or exhibited to said Commission with a view to making such recommendations as in their opinion may serve to promote amicable relations between the parties and as may be calculated to remove or lessen the unrest here in question.

The Prime Minister further recommends that the said Dr. J. W. Robertson be appointed Chairman of the said Commission and that the report of the Commissioners be presented to the Prime Minister.

The Committee concur in the foregoing and submit the same for Your Excellency's approval.

Approved by His Excellency the Governor General, on the 22nd September, 1923.

(Signed) E. J. LEMAIRE,  
*Clerk of the Privy Council*

CANADA

GEORGE THE FIFTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India.

To all to whom these presents shall come, or whom the same may in anywise concern,

GREETING:

WHEREAS, in and by an order of Our Governor General in Council bearing date the twenty-second day of September in the year of Our Lord one thousand nine hundred and twenty-three (copy of which is hereto annexed) provision has been made for an inquiry by Our Commissioners therein and hereinafter named into the cause of the industrial unrest

among the steel workers at Sydney in the Province of Nova Scotia referred to in the said Order in Council and the circumstances which occasioned the calling out and the retention of the militia in aid of the civil power in connection with the said unrest in the said order mentioned; and also into the relations between the employers and employees concerned.

Now KNOW YE, that by and with the advice of Our Privy Council for Canada, we do by these presents nominate, constitute and appoint JAMES W. ROBERTSON, Esquire, C.M.G., LL.D., of the City of Ottawa, in the Province of Ontario, JAMES J. JOHNSTON, of the City of Charlottetown, in the Province of Prince Edward Island, Esquire, one of Our Counsel learned in the law, and FRED. BANCROFT, of the City of Toronto, in the said Province of Ontario, Esquire, to be Our Commissioners to conduct such inquiry.

To HAVE, hold, exercise and enjoy the said office, place and trust unto the said James W. Robertson, James J. Johnston and Fred. Bancroft, together with the rights, powers, privileges and emoluments unto the said office, place and trust, of right and by law appertaining during pleasure.

AND We do further appoint the said James W. Robertson to be Chairman of such Commission.

AND We do hereby, under the authority of the Revised Statute respecting Inquiries concerning Public Matter, confer upon Our said Commissioners, the power of summoning before them any witnesses and of requiring them to give evidence on oath, or on solemn affirmation if they are persons entitled to affirm in civil matters, and orally or in writing, and to produce such documents and things as Our said Commissioners shall deem requisite to the full investigation of the matters into which they are hereby appointed to examine.

And Our said Commissioners are hereby authorized to engage the services of such accountants, engineers, technical advisers or other experts, clerks, reporters and assistants as they may deem necessary or advisable, and the services of Counsel to aid and assist in such inquiry, and Our said Commissioners are hereby clothed with all the other powers specified in Chapter 28, 2 George V.

AND We do hereby require and direct Our said Commissioners to report to Our Prime Minister of Canada, the result of their investigation together with the evidence taken before them and any opinion they may see fit to express thereon and any recommendations they may see fit to make.

IN TESTIMONY WHEREOF We have caused these Our Letters to be made Patent and the Great Seal of Canada to be hereunto affixed.

Witness: Our Right Trusty and Well beloved Julian Hedworth George, Baron Byng of Vimy, General on the retired List and in the reserve of Officers of Our Army, Knight Grand Cross of Our Most Honourable Order of the Bath, Knight Grand Cross of Our Most Distinguished Order of Saint Michael and Saint George, Member of Our Royal Victorian Order, Governor General and Commander-in-Chief of Our Dominion of Canada.

At Our Government House, in Our City of Ottawa, this twenty-second day of September in the year of Our Lord one thousand nine hundred and twenty-three and in the fourteenth year of Our Reign.

(Sgd.) BYNG OF VIMY.

(Sgd.) E. L. NEWCOMBE,  
*Deputy Minister of Justice,  
Canada.*

By Command,

(Sgd.) THOMAS MULVEY,  
*Under Secretary of State.*

The steel workers at Sydney, Cape Breton, are employed by the Dominion Iron and Steel Company, Limited. That Company was incorporated by an Act of the legislature of Nova Scotia, passed on March 30th, 1899. Shortly thereafter extensive iron and steel works were constructed upon lands conveyed to the Company by the town of Sydney, free from municipal taxation for a period of thirty years.

An agreement was entered into with the Dominion Coal Company, Limited, under which a supply of coal suitable for use in an iron and steel plant was secured for a period of ninety-three years.

In 1909 the Dominion Steel Corporation, Limited, was incorporated under the laws of the province of Nova Scotia. The duration of its charter is perpetual. Among other things the corporation was authorized to acquire, take over and amalgamate the undertakings of the Dominion Iron and Steel Company, Limited, and the Dominion Coal Company, Limited, with power to acquire the shares of the said companies and to assume their debts and liabilities.

In 1920 the British Empire Steel Corporation, Limited, was incorporated under the Companies Act of the Province of Nova Scotia. That corporation (The British Empire Steel Corporation, Limited) by acquisition of the shares of the common stock, controls the following constituent companies:—

I. Dominion Steel Corporation, Limited, which controls the following subsidiary companies: Dominion Iron and Steel Company, Ltd., Dominion Coal Company, Ltd., Cumberland Railway and Coal Co., Ltd., Dominion Shipping Company, Ltd., Jas. Pender & Company, Ltd., Sydney Lumber Company, Ltd.

II. Nova Scotia Steel and Coal Company, Ltd., which controls the following subsidiary companies: Eastern Car Company, Ltd., Acadia Coal Company, Ltd., Wasis Steamship Company, Ltd., Nova Scotia Land Company, Ltd.

III. Halifax Shipyards Limited.

As has been already stated, the steel workers at Sydney are employees of the Dominion Iron and Steel Company, Limited, which is controlled by the Dominion Steel Corporation which, in turn, is controlled by the British Empire Steel Corporation, Limited. The directors of the British Empire Steel Corporation, Limited, are practically the same persons who are directors of the Dominion Iron and Steel Company, Limited, and of the other constituent companies of the Corporation.

We began the taking of testimony under oath, on October 31st, 1923, in the Court House at Sydney, Cape Breton, and continued the hearings until November 28th, 1923. During that period 144 witnesses gave evidence. Eleven of them were heard at private sessions and thirteen witnesses were recalled for further examination.

At a later date, in Ottawa, three other witnesses were heard, bringing the total number to 147 witnesses.

During the inquiry at Sydney we visited the plant of the Dominion Iron and Steel Company, Limited, for the purpose of acquainting ourselves with the nature of the work the employees were engaged in and the general conditions under which they laboured. We visited various localities in Sydney where the employees lived in order to see the housing conditions of the workmen and their families.

The witnesses who gave evidence were representative of the community at Sydney. Among them were: the President of the Dominion Iron and Steel Company and other officials of the Company; superintendents of various departments of the plant; officers and members of the Amalgamated Association of Iron, Steel and Tin Workers of America; thirty-five out of the thirty-six members of the General Works Committee at the plant, some of these being union men and others non-members of the union; other employees at the plant; members of the Sydney Board of Trade; officers of the Sydney police force; the officer commanding the provincial police; the officer commanding the militia during the early part of the strike in June; a magistrate who read the Riot Act; other citizens of Sydney. The Judge who requisitioned the militia came before us as a matter of courtesy.

Besides summoning witnesses we announced that anyone who desired to offer any evidence regarding the matters under inquiry would be given an opportunity to present it. The Commissioners examined the witnesses. There was no examination by counsel, but questions from those interested in the inquiry could, on request, be put to witnesses through the chairman.

At the opening of the proceedings at Sydney, the chairman for the Commissioners made the following statement:—

As set forth in the Order in Council and in the Royal Commission issued to the Commissioners they are directed to inquire into and investigate the cause of recurring industrial unrest among the steel workers at Sydney, the circumstances which occasioned the calling out and the retention of the Militia in aid of the Civil Power and the relations between the employers and employees concerned.

The Commissioners are required to report to the Prime Minister of Canada the result of their investigation and make any recommendations which, in their opinion, may serve to promote equitable relations between the employers and employees and remove or lessen the unrest.

The Commissioners have the right to determine the manner of conducting the inquiry and have authority to treat as private any information given to them.

The Commission intends to hold public sessions to receive testimony and will also receive testimony which it may deem proper to regard as private. It regards the public interest as including the interest alike of the employers and the employees and the community generally and it invites the confidence and co-operation of all concerned. In the best interests of industrial undertakings it seems essential that team work should be understood and followed by all and that all should participate equitably in the results.

The Commissioners are hopeful that they may be able to contribute to the removal or reduction of any unwarranted distrust or suspicion which may exist and to the fostering of mutual respect, mutual understanding and co-operating goodwill.

At the conclusion of the hearings at Sydney the chairman for the Commissioners made the following statement:—

For the present the public sessions to receive testimony are ended. In Sydney the Commission has heard 144 witnesses in public and private sessions. These witnesses have been representatives of all interests concerned in our investigation. An opportunity has been given for all points of view to be presented to us and, in the first instance, in the form and manner which the witnesses themselves preferred. The Commission will give very careful consideration to all the information obtained so far and to that which may be obtained hereafter.

For my fellow members and myself, I express the hope that our service will be beneficial and beneficial only. Our hope is that there may be more of mutual understanding, co-operation and goodwill amongst all those who are engaged in carrying on this very important industry—important for this place and for Canada. Notwithstanding the world-wide and unfavourable after-war conditions we hope that this and other industries will go on in such a way that there will be an increasing feeling of stability and confidence, and the experience of cordial co-operative action. By these, no matter how brought about and fostered, the Commission believes that this whole district will accomplish the largest practicable degree of prosperity in which all should, and the Commission hopes all will, share equitably. In Sydney, personally and officially, we have had the utmost courtesy and consideration.

### **Causes of Industrial Unrest**

The evidence given by the witnesses disclosed divergent views as to what was the principal cause, or what were the principal causes, of industrial unrest, among steel workers at Sydney. Some of the causes mentioned were regarded by some individuals as relatively more important than they were by other individuals.

As general causes of unrest, not peculiar to steel workers or to Sydney, mention was made of the strain and anxieties of the war and of disappointments over the predictions and promises, of a better day with better pay and a better time for working men, which had been profusely made but which had not been fulfilled in their experiences.

In the forefront among the causes of the industrial unrest was put the desire on the part of the workmen to obtain higher wages and to have shorter hours of labour. Associated with that during recent years has been the determination of a number of the workmen to obtain recognition of the Union in order to secure what they regarded as the advantages of collective bargaining regarding wages, hours and other conditions of labour.

Since 1917, when the organization of some of the workers in the steel plant in the Amalgamated Association of Iron, Steel and Tin Workers of America was begun at Sydney, the idea had been pushed among the workers that the organization of the men in a Trades Union would be a means whereby they would be able to get from the Company higher wages and shorter hours. The fact that the Corporation refused to recognize the Union, as representing the workmen on the plant, led to a state of acute unrest among a portion of the workers on

the plant. Probably that was a small proportion of the total number of workmen. The number who were members of the Union in good standing, at the time of the strikes in February and June 1923, would be about one quarter of the workmen.

It was stated that the refusal of the Company to recognize the Union was due in part to the fact that some of their workmen had expressed a desire for the maintenance of the open shop; and the Company did not want any outside influence or persons to come into the business of making agreements between itself and its employees.

Into that situation at Sydney, with its disputed questions of wages, hours and non-recognition of the Union, there came what amounted to a campaign of agitation, supported and intensified by speakers and publications from outside, to obtain quickly and in a large measure what they wanted by threats of strikes and by actual strikes. These were all the more to be feared by the Company since it appeared likely that in the case of a strike the maintenance men would not be left on the plant to put it in safe condition to provide opportunity for future employment or to keep it undamaged in the interests of the Company who owned it.

During 1922 and early in 1923 there were visits to Cape Breton by representatives of the Worker's Party of Canada, to advocate theories, principles and methods of that party which, in general, stand for the application of extreme measures to bring about, according to their view, a betterment of the conditions of the workers. It appears that the officials and leaders of the Steel Workers' Union at Sydney, came into close association with and, to some extent, under the influence and leadership of men of extreme views. The sentiments and ideas propounded by these men, rather than any definite program of action, seemed to animate the local leaders of the Union. Marked evidence of this was shown by the part they played in subsequent strikes.

What has been said about the unrest arising from the refusal of the Company to recognize the Union and the campaign of agitation would apply to a small number of the employees but these men were sufficient to bring about the strike in February and later on the strike in June.

It was testified that more moderate and capable leaders in charge of the Union would have sought mutual understandings; and by conference and explanations on both sides would have sought to bring about relations whereby the workmen would have received satisfying treatment in respect to matters in dispute.

Among other causes of unrest the question of discrimination against workmen for being members of the Union, or being active on behalf of the Union interests, was frequently mentioned. The attitude of the Company was quite frankly not to recognize the Union as an organization with which to have negotiations. The evidence did not substantiate the claim made by Union officials that discrimination against men for belonging to the Union, or being active on its behalf, was practised in the plant. In the few cases cited where the individuals believed they had been discriminated against there was no proof that the Company departed from its avowed policy of maintaining an open shop and not discriminating against any workman because he belonged to the Union.

A feeling of distrust and suspicion on the part of the Union men led to the spread of a belief that the Company maintained a system of espionage through the employment of men who spied upon the activities of the workmen who were promoting the interests or activities of the Union. The existence of such a scheme was denied by the officials of the Company and although many statements were made of beliefs and opinions and suspicions regarding it, the Commission did not receive any evidence which successfully contradicted the state-

ment of the officials of the Company that no scheme or system of espionage was maintained in connection with the plant. It was admitted that the Company through its officers sought to keep in touch with and to be informed of the trend of feeling or activity on the part of the workmen in relation to the Company but it was asserted that no such thing as surreptitious espionage was maintained.

The high cost of commodities and the high cost of living were frequently mentioned as a cause of discontent or unrest; and it was not until after the June strike that the Company took definite steps to present to the workmen its view of the relation between the rate of wages and the cost of living. When the information was given by the Company it indicated that, while the cost of living from the pre-war figures of 1913 to the figures of May 1923 showed an increase of 49 per cent, the increase in the daily average of wages paid on the steel plant, excluding the salaried staffs, had been 108 per cent.

Among the causes of unrest was the lack of steady employment throughout a large part of 1921 and 1922. During the last few years there has been only part time work for considerable periods in some departments. During the time in 1922 when business was slack and there were few orders on the books of the Company, it employed for a period some eighteen hundred men, many of whom were engaged to do repair work of all kinds in order to give them employment and carry them over the period of depression. Stock was piled in the yards in the expectation of better business at a later date.

Before that state of affairs was passed, in September, 1922, the men asked for an increase of wages. The application was refused. If there had been a workmen's representatives' plan in existence and joint meetings of representatives of the workmen and management, through which the state of business and the reasons of the Company for its decisions could have been given to the men with clear, correct and full explanations, the unrest which took on a more acute form from that period might not have developed into the unfortunate strikes of February and June with the regrettable occurrences which accompanied them.

A minor but still contributing cause to the unrest was the representations made from time to time regarding absentee management by the Board of Directors at Montreal, whom the workmen were led to believe were out of touch with and had little sympathy with the problems of the workmen in Sydney.

The want of some means through which the representatives of the workmen and the Company could confer and exchange information and explanations on the business situation gave rise to feelings and suspicions, well-founded or ill-founded, that the Company was making large profits while, at the same time, it was representing to the men that it could not pay any higher wages because, instead of profits, there were losses in the operation of the plant for a good part of the time from 1921 to the middle of 1923.

Since the Union was not recognized and there was no other regularly constituted agency through which representatives of the men could meet representatives of the Company to discuss questions of mutual concern, there was no way of bringing grievances to the attention of the management for adjustment except by the individual action of the workmen concerned.

Now that the right of the employees to organize under a workmen's representatives' plan has been not only recognized but encouraged, these parts of the cause of unrest mentioned in the two preceding paragraphs have been greatly lessened.

Another minor cause of unrest was the circulation of reports that steel companies in the United States were paying better wages for the same class of work.

To sum up: The fundamental causes of the recurring industrial unrest among the steel workers may be stated as follows:—

- (1) The rate of wages.
- (2) The long hours of labour.
- ✓(3) Refusal by the Company to recognize the Union.
- ✓(4) Denial of collective bargaining.
- (5) Belief that there was discrimination against members of the Union.
- (6) The absence of any recognized organized means through which representatives of the men could confer with representatives of the management.
- (7) Irregular employment and the fear of unemployment.
- (8) The high cost of living.
- (9) Agitation stirring up hostile class feeling by speakers and writers who denounced those in positions of authority, including the judiciary; called capitalists and employers by such names as "slave-drivers," "labour exploiters," "common enemy," etc.; and urged workmen to seek redress for their grievances by hostile and violent action.

The order in which these causes of unrest are stated is not to be regarded as indicative of the order of their importance. Some of the causes had more effect upon the minds and acts of some workmen than other causes of unrest had.

### **Circumstances Which Occasioned the Calling Out of the Troops**

#### **The February Strike**

A walk-out of a large number of men took place during February 13, 1923. That cessation of work was followed or continued by a strike which lasted four days. The immediate occasion was the discharge of Sid. McNeil, a helper in the nail mill.

The final investigation which was made into the case showed that his conduct was insubordinate; that he wilfully and improperly disobeyed the lawful and reasonable orders of his superintendent; that he ceased work without any good and sufficient reason; that he improperly stopped his machine without any orders from his foreman or superintendent and without other sufficient excuse; and that he went about the shop advising other workmen to quit work.

The dispute between McNeil and his superintendent took place about eight o'clock in the forenoon. Shortly thereafter Mr. J. J. McIntyre, president of one of the local lodges of the Union who was employed in another part of the plant, arrived at the office of the nail mill. There he saw Mr. Bischoff, general superintendent; Mr. Wilson, superintendent of mills; and Mr. Haarbauer, assistant superintendent. Mr. Bischoff at first did not recognize Mr. McIntyre and after a few words with him passed on out.

In his evidence Mr. McIntyre says:—

I said to him (Bischoff): "The men are quitting the mills now, is there anything I can do?" He said: "What can you do?" I said: "We can investigate it and find out the trouble." He said: "Who will investigate it?" I said: "The Steel Workers' Union will investigate it." He did not talk to me any more. I took it as an insult. He said sneeringly: "The Steel Workers' Union." So I walked away and said no more.

Mr. McIntyre further said he had seen other executives of the Union humiliated on dozens of occasions in something the same kind of way. In consequence of that their own men would turn them down and accuse them of being cold-

blooded and traitors to the organization. "So when I was turned down by the Superintendent when I tried to straighten the matter out, I figured he was trying to do the same thing he had done before."

Mr. McIntyre went home and then went over to the Union office. When there he called up the plant and talked to a man on the plant. "I asked him what was happening." He said: "The men have all quit the nail machines. They are leaving the plant like sheep." I said: "That is very good." "It is all right. I think it is very good; they have fired men on dozens of occasions and nothing done about it. The men are going to take the bit in their teeth and find out if something can be done about it."

It would seem from the evidence that this workman, Sid McNeil, claimed he acted as he did in his capacity as a committee man of the Union. The evidence also indicates that McNeil felt he had a personal grievance inasmuch as he had not been promoted from the position of helper to that of operator.

The walk-out began on Tuesday, February 13, and the strike continued until Saturday, February 17. On Sunday, February 18, the day after the settlement of the strike, a mass meeting was held in the Savoy theatre, at Sydney, which was addressed by the following persons: H. M. Bartholomew, of the Workers' Party of Canada; Ernest Curtis, Canadian Vice-President of the Amalgamated Association of Iron, Steel and Tin Workers of America; Foreman Wayne, secretary of one of the local lodges of the Union; Don Curtis, a member of the executive of a local lodge; Fred Boland, secretary of the other local lodge of steel workers.

The *Maritime Labour Herald*, in its issue of February 24, 1923, reports some of the speakers as having among other matters said as follows:—

H. M. BARTHOLOMEW, in behalf of the Workers' Party and on behalf of the organized workers of Canada, thanked the steel workers for their splendid fight. They were, however, still slaves. ". . . The moral is that, just as the masters have linked up into industrial, closely knit, groups, so must the workers; and as the masters have united into a world federation of bosses, so the workers must unite into a world federation, and that federation is the Red Trade Union International with headquarters at Moscow."

FOREMAN WAYNE: Bischoff had sneered at the President of the Steel Workers' Union and that sneer had caused Besco at least \$300,000. The question arises, when is a sneer a luxury? Bischoff's sneer was a luxury. ". . . For the past three or four months a concentrated effort had been made to get the steel workers organized. Assistance had been rendered by the Miners' Executive and by the Workers' Party." ". . . "The steel workers had gone into the plant and captured two engines and pulled the scabs out of them. They had captured a carload of provisions and nearly starved the men on the plant." ". . . "It was a grand sight to see the men out on picket duty with the weather ten degrees below zero and not one deserter." ". . . "The scabs were blocked entrance on a five-mile front encircling the plant."

FRED BOLAN: "Well, the Sydney workers walked over the Company police during the strike and into the Company's boiler-house and there found a great big fellow with a big moustache and black as the devil. So they walked him out and up the main street of the Coke Oven district (Tupper street)."

The strike was not over a question of hours or wages or conditions in the plant. It was called because the officials of the union claimed that there had not been an investigation, or, at least, not a satisfactory investigation into the case of Sid. McNeil. Evidently many of the men did not know what the strike was about or what they wanted to accomplish except to show the Company definitely that they had the power to stop the work.

A prominent member of the Union testified that the men had the right of investigation long before the trouble in February. He testified as follows:—

"The whole thing looked to me (and a good many more men) as though the men simply lost their heads. I claimed that dozens of different cases had been dealt with by the Union executive previous to that time that were far more serious than the particular case in the nail mill which was the cause of the February strike."

Some witnesses expressed the opinion that the February strike was brought about for the purpose of recruiting members for the Union and that the walk-out of the men from the plant was pre-arranged. Members of the committee of the Union went through the plant and instructed the men to stop work. Men left their jobs on instructions from the steel workers' Union. Word was passed around and then the men left.

At the meeting of the Union lodge on the evening of the first day of the walk-out, a resolution approving of the action of the men who left their work was adopted. It called for a one-hundred-per-cent strike. It was arranged that pickets should be placed at all the entrances of the plant. Thereafter for a period of four days and nights all the entrances to the plant were partially blocked to the workmen and to the public; and for a part of this time portions of the company's property and of the main line of the Sydney and Louisburg Railway were overrun and controlled by a lawless mob. Acts of violence and other unlawful acts were frequent.

Among other unlawful acts were the following:—

Men who were willing to work in the Coke Oven Department to protect it were prevented from going to work.

Officials who, because of their technical training and ability, were necessary to the preservation of the blast furnaces, boilers and coke ovens were prevented from entering the plant and their homes were picketed to see that they did not get out of doors.

Locomotive engines were raided and left to freeze. The men in charge of the engines said: "We cannot afford to take a chance on our lives by exposing ourselves any more to those people. They were throwing rocks at us."

One of the officials of the Company told the raiders that he and others were protecting the plant for the sake of preserving it to give employment to the workers. The raiders said to him: "To Hell with that. If the plant burns down there will be plenty of work for us at \$8 a day in fixing it up."

On the evening of Friday five foreign women living in the coke oven district came in on the plant crying. They were not dressed for the street. They said men had driven them from their homes. The result was that their husbands left the plant and every other man of foreign nationality went home. He did not know whether his home was in danger.

The company officials were very anxious about the safety of the plant. The mob was in a menacing attitude. The Chief of Police of Sydney with his force was unable to preserve order.

The officials of the Company felt that there was no question of there being plenty of men willing to operate the plant if they were able to get in. The entrances to the plant were blocked by pickets and men were forcibly prevented from entering. On the day after the walk-out took place over one thousand men reported for work on the day-shift and over five hundred for the following night shift.

The executive of the Union, having endorsed the walk-out of the men and approved of it by calling for a one-hundred-per-cent strike, found themselves unable to control the actions of the men whose passions had been let loose. In consequence the good offices of a mediator were sought and an agreement between the Company and the men was reached. In accordance with it the strike was declared off on the evening of Saturday, February 17. The Agreement stated:—

The charge is made that not sufficient investigation was held, therefore the Company will investigate fully the circumstances of McNeil's discharge as would be done normally in the case of similar complaints of the workmen on the plant.

An investigation was held in accordance with the agreement and the dismissal of Sid. McNeil was confirmed.

The Attorney General of Nova Scotia instructed the Crown Prosecutor in Cape Breton to bring actions against thirty-five persons charged with indictable offences committed during the strike in February.

### The June Strike

From the time of the February strike until the calling of the June strike unrest among the workers was much more manifest. Immediately after the February strike it was told on the streets that another strike would take place.

A committee of the men who were members of the Union again put forward demands for an increase in wages, but their principal request was for the granting of the check-off.

On the 14th March, the President of the Company issued a statement defining the Company's position in regard to the demands made by the Union. In brief it set forth: (1) The policy of the Company is to maintain an open shop; (2) The check-off will not be accepted by the Company; (3) Prices of products do not cover cost of manufacture at the present time. Consideration will be given to an increase in wages after orders that are profitable are secured.

A letter from the Steel-workers' Union was sent to the General Superintendent of the Company, announcing an increase of ten per cent in wages

- (1) A general increase in wages of 30 per cent; retroactive to the 1st March, 1923.
- (2) Recognition of the Union including the check-off of the Union dues and the meeting with committees from time to time to adjust their differences.
- (3) An eight-hour day.

On March 27th a statement was issued by Mr. Bischoff, General Superintendent of the Company, announcing an increase of ten per cent in wages effective 16th April.

Mr. Bischoff, the general superintendent, sent a letter to Mr. J. J. McIntyre, president of the local lodge of the Union, addressed to him at the boilershop where he worked on the plant, under date of March 27th, giving the information of the increase in wages. Mr. McIntyre sent the letter back to the general superintendent informing him as follows:—

Any communications you wish to submit to the employees should be addressed to the Secretary of the Union.

On June 1st a committee of the employees representing the executive of the steel-workers' Union met the management and asked for a twenty per cent increase in wages; and the granting of the check-off. The committee stated that in the event of a strike the steel-workers had been promised the full backing of the miners. The committee also informed the General Superintendent that a vote recently taken was unanimous for a strike if their demands were not granted and asked him to refer their demands to the Vice-President of the Company.

On June 13th, the committee of the steel-workers met the Vice-President and the Assistant to the Vice-President and renewed their demands, laying the greatest emphasis upon the obtaining of the check-off. They intimated that if the check-off were granted, their other demands would not be pressed. Since the Vice-President could not grant their demands, at the request of the committee, he referred the question to the Board of Directors of the Company at Montreal.

At a meeting of the Board of Directors on June 21st, it was decided that the Company would not grant an increase in wages nor grant the check-off.

*ERRATUM*

**Report of Commission to Inquire into  
Industrial Unrest among Steel Workers at Sydney, N.S.**

In the Supplement to the LABOUR GAZETTE, February, 1924, page 12, lines 18-19 should read as follows:—

A letter from the Steel-workers' Union was sent to the General Superintendent of the plant under date of March 19, making the following demands:—

This information was communicated to the committee of the steel-workers in a letter signed by the Assistant to the Vice-President and handed to Mr. J. J. McIntyre on June 27th.

A general strike was declared by the union and began to take place between 3 o'clock and 4 o'clock in the morning of June 28th.

Of the combination of causes that culminated in the June strike the chief one was the determination of the leaders of the local Union to force recognition of the Union and the granting of the check-off. A member of the Union testified that the officials of the Union had too much desire for a strike and that he considered it was a conspiracy against Bischoff, the General Superintendent, and the community to pull off a strike at that time.

When the strike was called no provision was made for leaving maintenance men on the plant, and organized efforts were made by strikers who became raiders to forcibly remove maintenance men from the plant. In this connection the evidence discloses that Mr. Mike F. Tighe, International President of the Amalgamated Association of Iron, Steel and Tin Workers of America, visited Sydney in June and met the members of the committee appointed to negotiate with Mr. McDougall, Vice-President of the Company.

Mr. Tighe told the Union men that if they did "cease work" their action should be carried out according to the laws of the Amalgamated Association of Iron, Steel and Tin Workers of America. No sabotage of any kind or injury to the property should be done. He told them that the Company should be given due notice and warned that the men would work only long enough, after notice, to empty the open hearths and other places of steel in process and to leave the plant in good shape and undamaged so that the work could be resumed.

The strike was authorized by a vote of members of the Union whose number was not more than one-fifth of the average number of workmen employed on the plant in June.

After the strike had continued more than two weeks, a committee of 1,400 men, who were working on the plant on July 14th while the strike was still on, stated: (1) that it believed it represented the opinion of seventy-five per cent of all the employees; (2) that the strike had been improperly called; (3) that the strike had been declared by the executive committee in defiance of the rules of the International Union; and (4) that it commended the action of the Government in sending the provincial police to protect life and property and denounced the "Red" element among the strikers who were the cause of the trouble.

When the strike was called on June 28th, there were on the day shift 2,774 men and on the night shift 1,097 men. The following day there were on the day shift 1,037 men and on the night shift 1,134 men.

It was stated that intimidation and violence prevented men who desired to go to work from doing so. The number at work diminished daily until after the militia and the provincial police arrived. Thereafter more of them reported for work daily. There were 2,732 at work on August 2nd the date when the strike ended.

From the evening of June 28th gangs of strikers, masked and in many cases armed with clubs, raided the plant and forcibly removed men engaged in maintenance work. That evening serious rioting took place at No. 4 gate. Many assaults were made. Stones and bottles were thrown. The Deputy Chief of Police of Sydney was kicked when he had fallen down. The local police were entirely unable to cope with the situation and preserve law and order. Magistrate W. A. G. Hill while reading the Riot Act was struck on the head by a

stone and afterwards became unconscious. The nature of the situation was brought to the attention of His Honour Judge Finlayson, who sent a requisition for the active militia to come in aid of the civil power.

During the following day, Friday, raids were made on the coke ovens. In the evening a crowd numbering many hundreds was outside gate No. 4, throwing stones and other missiles. Policemen and others were injured. Some strikers broke through the fence and, wearing masks on their faces and having clubs and other weapons, drove maintenance men off the plant.

On Saturday morning, June 30th, two hundred and forty-six soldiers arrived from Halifax in charge of Colonel W. H. P. Elkins. During Saturday evening riotous conditions again prevailed outside No. 4 gate. There was a large crowd shouting, yelling and throwing stones. A detachment of soldiers stationed inside the plant to support the police in preventing a raid were struck by stones and had to fall back out of range. A magistrate read the Riot Act; but the riotous crowd did not fully disperse.

The following morning, July 1st, a detachment of provincial police arrived under command of Colonel Eric Macdonald. In the evening a large crowd had assembled outside gate No. 4. It was behaving in a riotous and threatening manner, throwing stones and other missiles. The provincial police dispersed the unlawful assembly and suppressed the riot.

From that time onward patrols of provincial police and militia prevented further riotous conditions.

The employees began to go back to work in increasing numbers. The following table shows the extent of that increase:—

Date	Day-shift	Night-shift
July 2.. . . . .	417	255
" 9.. . . . .	922	230
" 16.. . . . .	1,214	211
" 23.. . . . .	1,458	409
" 30.. . . . .	1,720	515
Aug. 2.. . . . .	1,978	754

The men were taken on as the opening of new departments permitted. During the last two weeks of the strike, which ended on August 2nd, there were always more men applying to be taken on than there were places for them under the reduced scale of operations.

#### The Calling Out of the Militia

His Honour Duncan Finlayson, Judge of the County Court, appeared before the Commissioners as a matter of courtesy. He stated that he signed the requisition to call the troops to Sydney because there was before him what he considered sufficient evidence to warrant him in taking that step, all in accordance with the law relating to that matter.

A detachment of the Militia under Colonel W. H. P. Elkins arrived, from Halifax, at Sydney on the morning of Saturday, June 30th. Colonel Elkins testified that he regarded his duty to be to render aid to the civil power in dealing with any riotous condition or any disturbance of the peace that occurred or was anticipated.

#### The Provincial Police

On Saturday June 30, the Sheriff of Cape Breton county, the Chief of Police of the City of Sydney, and City Magistrate Hill made representations to the provincial government that even with the detachment of troops on the spot the police at Sydney were entirely inadequate to cope with the situation, which had then developed. Accordingly under the provisions of the provincial statute a detachment of provincial police were sent to Sydney and arrived there Sunday

morning July 1. The provincial police were under the command of Colonel Eric Macdonald. He had thirty-five men, sixteen of whom were mounted and nineteen unmounted.

On Sunday evening, July 1, between eight and nine o'clock a riotous condition prevailed outside gate No. 4 and in the adjacent streets. The provincial police were called upon to suppress the riot and to disperse the unlawful assembly. They did that. After that there was no rioting.

An opinion seemed to be prevalent that the duty of the provincial police and of the militia, after the Riot Act was read, was to confine themselves to clearing the streets for traffic. Complaints were made that the provincial police exceeded their duty in compelling people to leave the sidewalks and in driving them from places where they stood, even when bottles and stones were being thrown at the police from behind their positions.

Some of these witnesses when before the Commission appeared to be greatly surprised when informed of the provisions of the Criminal Code in respect to unlawful assemblies, riots and the reading of the Riot Act. Some of the sections of the Criminal Code were read to such witnesses and sections 87 to 91 are quoted herein:—

87. An unlawful assembly is an assembly of three or more persons who, with intent to carry out any common purpose, assemble in such a manner or so conduct themselves when assembled as to cause persons in the neighbourhood of such assembly to fear, on reasonable grounds, that the persons so assembled will disturb the peace tumultuously, or will by such assembly needlessly and without any reasonable occasion provoke other persons to disturb the peace tumultuously.

2. Persons lawfully assembled may become an unlawful assembly if they conduct themselves with a common purpose in such a manner as would have made their assembling unlawful if they had assembled in that manner for that purpose.

3. An assembly of three or more persons for the purpose of protecting the house of any one of their number against persons threatening to break and enter such house in order to commit any indictable offence therein is not unlawful.

88. A riot is an unlawful assembly which has begun to disturb the peace tumultuously.

89. Every member of an unlawful assembly is guilty of an indictable offence and liable to one year's imprisonment.

90. Every rioter is guilty of an indictable offence and liable to two years' imprisonment with hard labour.

91. It is the duty of every sheriff, deputy sheriff, mayor or other head officer, and justice, of any county, city or town, who has notice that there are within his jurisdiction persons to the number of twelve or more unlawfully, riotously and tumultuously assembled together to the disturbance of the public peace, to resort to the place where such unlawful, riotous and tumultuous assembly is, and among the rioters or as near to them as he can safely come, with a loud voice to command or cause to be commanded silence, and after that openly and with a loud voice to make or cause to be made a proclamation in these words or to the like effect:

Our Sovereign Lord the King charges and commands all persons being assembled immediately to disperse and peaceably to depart to their habitations or to their lawful business upon the pain of being guilty of an offence on conviction of which they may be sentenced to imprisonment for life. **GOD SAVE THE KING.**

After hearing the evidence of witnesses who complained of harsh and unwarranted treatment by the provincial police and hearing other testimony in respect to that matter the Commissioners are of the opinion that the provincial police under Colonel Eric Macdonald performed a very difficult and distasteful duty in dispersing unlawful assemblies, in suppressing riotous conditions and in preserving law and order. After the unlawful assemblies were dispersed on the evening of July 1, unlawful acts and acts of violence almost ceased.

#### The Militia

It appeared from the evidence that the militia rendered effective aid to the civil power in the protection of life, liberty, order and property under the law.

The militia and provincial police were not at any time or in any sense used as strike breakers. They took no part and took no side in the industrial dispute.

Many witnesses who had personal knowledge of the situation and some of the occurrences, when the plant was being raided, when mob rule was prevailing, and when life and property were being endangered, declared that it was wholly necessary to call out the troops in aid of the civil power.

From the evidence received, and from the understanding of the situation which grew up from hearing the testimony of many witnesses, the Commissioners are of the opinion that the local police force was entirely inadequate to deal with the situation which had occurred, that a riotous condition of mob rule prevailed for some days and nights and that the presence of the militia was necessary and beneficial.

The Commissioners are of the opinion that the retention of the troops at Sydney was necessary as a protection against the recurrence of unlawful acts and riotous conditions while the strike continued.

In this connection it is to be remembered that as late as July 30 two water mains which furnished fresh water to the steel plant were broken by blasts from some form of explosives, completely depriving the plant of its fresh water supply and putting it in extreme jeopardy until repairs were completed. The explosions coincided with the withdrawal of a portion of the military forces from the district. The lack of water and the inability of the protective forces available to patrol the pipe-line sufficiently to ensure the plant against similar interruption prevented the enlargement of employment at the plant to a considerable extent.

The Commissioners are of the opinion that if the true facts of the situation at Sydney had been disclosed at the time when the troops were called there, it would have been manifest that their presence was necessary and that but for their presence and the presence of the provincial police there would likely have been loss of life, much more injury to persons than occurred and such damage to the plant that employment could not have been provided thereat for the normal number of employees for a long time afterwards.

A number of the men who took part in the riots or who committed assaults during the strike were tried in the Supreme Court or the County Court at Sydney from October 30 to November 10, 1923. Six of them were found guilty and sentenced to two years in the penitentiary. Five others were sentenced to forty days in jail and bonded with two sureties to keep the peace for two years.

## **Employees' Representatives Plan and Relations Between the Employers and Employees**

### **Employees' Representatives Plan**

A scheme for the formation of committees of workmen was proposed to the Company by members of the Union who were also employees of the Company in September, 1922. It was not accepted by the Company, evidently because the company was not willing to let any form of recognition or control by the Union be accepted.

In December, 1922, a plan of employees' representation, similar to that which had been in operation for some years in a number of the steel plants in the United States, was proposed to the workmen by the Company. The proposal was put to a vote and rejected by 1,562 votes against to 1,021 in favour. The Union was active against the acceptance of the proposal by the men.

After the June-August, 1923, strike was ended a committee of the workmen approached the management with a request to revive the proposal to have workmen's representatives elected to serve on committees and to meet representatives of the management to discuss matters of common interest. The Company favoured this proposal and without calling for a vote of the workmen on the question of its adoption, arranged that the men could go ahead and elect their own representatives to a General Works Committee by secret ballot. The election took place on August 30, 1923, and 2,729 workmen voted. That represented about 93 per cent of the workmen on the plant.

The general nature of the scheme is as follows:—

*Proportion of Representatives.*—One representative to be elected for about every hundred workmen; the representatives to be elected equitably from the different departments of the plant, for example a department employing about 300 men to elect three representatives and a number of the small departments to be grouped together for the purpose of electing one representative.

*Committees.*—The committee thus elected is a General Works Committee of about thirty-six members elected from among the employees.

A Central Works Committee is elected by the General Works Committee from its own members and consists of about eight members.

The Management Committee, which is appointed by the Company, has a number of members corresponding or nearly corresponding to the number of the Central Works Committee.

When the members of the Central Works Committee and the Management Committee meet in joint conference that is called the Joint Committee.

*Questions to be dealt with.*—The questions to be dealt with by these committees were not at first definitely stated. They include in a general way working conditions and working relations on the plant.

When the plan was suggested and adopted it was stated that after it was given a reasonable trial, alterations might be deemed desirable and suggestions along these lines which were mutually acceptable would be adopted.

*Qualification for Voters and Representatives.*—Any employee who is eighteen years of age or over is eligible to vote; but foremen, assistant foremen, chief clerks and others in similar or higher positions are not eligible.

Any employee who is 21 years of age or over and who has had one year's aggregate service with the company is eligible for election as a Departmental Representative but foremen, assistant foremen, chief clerks and other employees in similar or higher positions are excluded.

*Discrimination.*—Departmental Representatives shall be wholly free in the performance of their duties as such, and shall not be discriminated against on account of any action taken in good faith in their representative capacity. If any representative feels that his independence is being abridged, he has the right to appeal to the Joint Committee for the removal of the discrimination.

*Meetings.*—The General Works Committee meets once a month and special meetings are held when necessary. The other committees meet regularly and special meetings are held when necessary.

Meetings of the committees are held on the Company's premises and time and pay. For any other work done by representatives in connection with their duties no pay is allowed.

Some of the members of the Management Committee and thirty-five out of the thirty-six members of the General Works Committee appeared as witnesses. Their testimony was to the effect that they were all willing to give the plan a fair trial and were hopeful that satisfactory results would come from it.

The following is the gist of the testimony practically in the words used by witnesses:—

The Works Committee has had an educational influence towards better understanding of relationships.

Men feel they have a channel through which they can get their grievances adjusted. Men find it easier to get in touch with the management.

The Committee is working intelligently and amicably and is representative of the men. Agreeably surprised at spirit with which everybody seems to enter into discussions. It is doing a whole lot of good. Hopeful that it will help to make conditions better in the plant and also in the homes.

Some form of organized works committee is of benefit to both parties. Both parties get confidence well established in one another. Unwarranted suspicions are lessened or removed.

Committees provide a means through which the management is able to talk to the men and tell them the conditions of the business, condition of the orders, prospects, etc. Management hopes to work out many of the problems which seem to be irritating now.

None of the witnesses who were members of the committees testified that the plan was useless. Some testified that they thought alterations in the plan would improve it and make it more satisfactory to the workmen. Some of these are under consideration. It was said: committee men are more or less in the position of mendicants; they cannot enforce any demands. Some members said they would like to see a Board of Arbitration to deal with any question which the Joint Committee could not settle to the satisfaction of both sides.

Some further information on the general principles underlying the plans of employees' representatives' committees was obtained by a study of them and by conversations at steel plants in the United States with representatives of the management and representatives of the workmen who had had experience in connection with them.

We record our warm appreciation of the great courtesy with which we were received at the several steel plants visited and of the opportunities which were accorded to enable us to obtain information upon the questions into which we enquired.

The following is a summary of what was learnt, and as far as practicable, in the words of the notes made at the time.

The employees' representatives' plan was adopted in the first instance to keep the personal sympathy and human touch with the men which was being lost by the size of the business and because of absentee management by directors.

Employees' representation has brought back part of the human touch which had been lost in big organizations. Employees' representatives' committees are approved by workmen because they are now better informed as to what goes on in the plant from the employees' point of view. Committees lessen friction between the men and the management.

Joint Committee meetings representing the management and the workmen are desirable to consider problems of mutual interest. They bring about better understanding and appreciation of mutual rights, obligations and interests.

Joint Committee meetings created a new attitude by employers and employed to each other out of which co-operation has grown instead of previous hostility.

The most important feature of the plan is the spirit in which the thing is worked and not the machinery of the plan.

Employees' representatives plans have been valuable in causing employees to take an interest in increasing production and efficiency.

On one plant where labour troubles had been frequent and serious this was said: The strong arm policy had been in use and a blacklist scheme was going strong. They had had a five months' strike. Something had been wrong in the management. Then the nature of the workmen's representatives plan was explained to the superintendents and foremen. They were asked to tell the men under them the nature of the proposed plan. In that way the workmen's representatives plan was brought into operation. The plan itself is a process of education. The feeling and spirit of satisfaction and co-operation has been greatly developed. At monthly joint meetings the management gives the men's representatives information about progress and prospects and intentions in respect to the business. The superintendent who does that, by taking the men into the confidence of the Company, is thereby dignified in the esteem of the men.

The main service of representatives' committees consists in promoting and preserving friendly relations continuously, not by strong arm methods but by conference, confidence and co-operation to get the best results.

The general points stressed by the workmen as being essential to the success of the plan are: On both sides, frankness, sincerity, truthfulness, integrity, confidence and good faith. These are all more important than the machinery of the plan.

The workmen seem pleased with and proud of the representatives plan and its results. One of them said they regarded themselves as disciples with a mission accepted by themselves to preach this gospel.

The general impression from inquiries regarding the working of the men's representatives' plans (received from both the management and the workmen) was to the effect that close friendly acquaintance between the two sides was being promoted, that team work for the most efficient carrying on of the business was being developed and that confidence and good-will were being increased.

#### **Relations between the Employers and Employees**

In general the relations between the employees and the Company have been friendly, depending somewhat upon the personnel of the management which was changed frequently. From 1916 to 1921 the Company was making a good deal of money and the wages had risen from an average daily wage of \$2.32 (January to May, 1916) to an average daily wage of \$5.20 from May, 1920, to January, 1921. From that time on there was increase of unrest among industrial workers from the disappointment caused by the pressure of hard times instead of the good times which were expected. No systematic and continued effort was made by the Company to explain the changed conditions of business.

There had been a decrease from the January, 1921, rate of \$5.20 per day to \$3.58 per day in 1922. There were increases in 1922 and 1923 which brought the rate in June, 1923, to \$4.54 per day. That was the average rate for employees including all skilled and unskilled workmen under the rank of foremen, and represented an average rate of 41 cents per hour.

Since 1917 efforts had been made by officials of the Amalgamated Association of Iron, Steel and Tin Workers of America to organize the workmen on the steel plant and to secure recognition of the Union from the Company. The Company had been continuously opposed to the organization of the men in unions and no encouragement was given to the organization of workmen's representatives' committees until the autumn of 1922.

The efforts to organize the workmen in the plant and to secure recognition of the Union were not successful. The number of members of the Union in good standing was about one quarter of the workmen employed on the plant when the June strike was called.

Because there was little other opportunity of employment at Sydney except with the Company, there was a growing feeling that the men might not receive fair treatment in respect to wages unless strongly organized in a union; and while a large proportion of the workmen were not actively supporting the union movement, at the same time they were willing and ready to take advantage of any means, such as the organization or action of a union, which looked like getting for them higher wages and shorter hours.

From 1922 the leaders of the union movement grew gradually more bitter against the Company. From that time on there was an interjection into the situation at Sydney of extreme statements by outside speakers representing Bolshevistic ideas as proclaimed by the Third International. These men are reported to have openly advocated revolutionary methods.

From January 1923, when the Company refused to concur in the application for a Board of Conciliation in respect to the questions in dispute the attitude and feeling on both sides became one of more distrust.

The general feeling and attitude of the workmen towards the Company as represented by the Board of Directors was not one of confidence and friendliness. There was a growing feeling against absentee management arising from the opinion that the directors cared only for the financial interests of the corporation and its profits and dividends.

The relations between the workmen and the superintendents of departments and also between the men and the foremen were generally satisfactory and considerate on both sides. They were much disturbed in the period between the February strike and the June strike (1923) by continuous talk of an impending strike to force the Company to do what the Union wanted.

The Company has not paid enough attention in the past to the essential difference between building and machinery equipment in materials and human equipment in men as factors in production and in the efficient carrying on of the operations. There is no sentiment in machinery which affects its smooth or rough running but there is a good deal of it in men.

The workmen in the steel plant are chiefly Canadian born, most of them in Nova Scotia. A small percentage of them are from Newfoundland. Rather more than one-tenth of them are of non-English speaking races and about eight per cent of them are coloured men from Barbadoes.

There is much to learn and gain in industrial relations through studying and recognizing the motives which influence men in their work. Nothing else can obtain from workers as good a quality of productive labour as can be secured from their own willing effort sustained by feelings of satisfaction. A working force satisfied that it is getting a square deal, and therefore more or less contented, naturally tends to do better work and accomplish more and better production than one which feels it is being treated unjustly.

The employees' representatives plan with a General Works Committee and Committees is a means whereby the management and employees can get together to confer upon questions of mutual interest and obligation and seek their settlement by full, frank discussion. Such contacts and conferences are not intended to impose settlements but to promote agreements and to provide regular and recognized opportunities in which mutual understanding can be promoted, confidence developed and co-operating goodwill brought into play in the relations between the Company and the workmen.

#### Hours of Labour

A great deal of testimony was received to the effect that the men considered the hours of labour too long. In the departments in which the continuous process practice obtains, such as the blast furnaces, open hearth furnaces and coke ovens, the work is carried on on the two-shift plan. That requires the day-

shift men to work eleven hours and the night-shift men thirteen hours. Once a fortnight when the men change shifts they work for a twenty-four hour change-over period.

A good deal of the work in connection with the continuous processes in the steel industry is quite intermittent in character. But when anything goes wrong the case is different and the twelve-hour day becomes a physical strain. The twelve-hour day with the seven-day week and the twenty-four hour change-over once a fortnight make a very exhausting combination.

A twelve-hour day followed steadily by any group of men for a considerable number of years means a decrease of their efficiency and a reduction of their vigour. The question of hours of labour has to be considered from a social as well as a physical point of view. A twelve-hour day in the plant means about thirteen hours away from his home and family for all the working days. That leaves little if any time for family life, recreation, social enjoyments and leisure.

Reference was made by witnesses to the fact that many steel plants in the United States had recently adopted the three-shift plan which meant an eight-hour day for men on the continuous processes and a maximum ten-hour day for other workmen. We visited several steel plants in the United States to look into this and other matters that had been referred to by witnesses at Sydney. The following are some of the points learnt in respect to this question during these visits:—

For many years there had been considerable agitation in the United States for bringing about the three-shift plan for the continuous processes in the iron and steel making industry. It had been in operation in a few plants of considerable size for a few years, but during the last half of 1923 the adoption of it became quite general.

Public opinion formed and ripened by various agencies and finally voiced by President Harding compelled it. The eight-hour shift has undoubtedly come to stay. As to the two-shift plan—never again.

Public opinion drove the steel makers away from the twelve-hour shift. Public opinion will compel the continuation of the eight-hour shift. A twelve-hour day is entirely too long. What is there in life for a man on the two-shift plan?

Public opinion in the United States is now definitely against the two-shift plan of operation. The twelve-hour day is inhuman. The three-shift plan is good and is here for good. Had hoped for the introduction of the three-shift plan for several years but did not see how it could be adopted in the face of competition until the time was ripe for its general adoption.

When the twelve-hour men engaged on continuous processes went on eight hours they got an increase of twenty-five per cent on the rate per hour. When other twelve-hour men went to ten hours they got an increase of ten to twelve per cent on the hourly rate. This has been the general practice where the change has been made.

The change from the two-shift to a three-shift plan in a typical iron and steel making plant calls for an increase in the total men on the plant of about twenty per cent. That increase would likely be slightly reduced as experience was gained.

It is only a question of a short time before the two-shift plan—eleven hours by day and thirteen hours at night—in the departments having continuous processes will be eliminated from the steel plants everywhere. Already the change has been made in European countries and either already has been made or is in process of being made in most of the steel plants in the United States.

We recommend that, in the interests alike of the Company and the workmen, early and earnest attention be given to the elimination of the twenty-four-hour change-over period and to the abolition of the seven-day week.

We recommend that the question of adopting the three-shift plan in the departments of continuous processes and a maximum of a ten-hour-day for the other workmen be given the most careful consideration. In our opinion the change would be advantageous to the Company and beneficial to the men and should be adopted. We believe that a thorough discussion and consideration of this question with the employees concerned would bring about intelligent co-operation and lead to a satisfied state of feeling by both the men and the management in respect to this matter.

### Wages and Unemployment

A careful study of the evidence submitted to the Commissioners indicates that the employees (sometimes called Labour) want and the Commissioners believe they are entitled to:

- (1) Adequate wages,
- (2) Regular employment,
- (3) A real say, individually or collectively, on the conditions of working,
- (4) A fair share of industrial prosperity, and
- (5) A square deal from foreman and superintendents.

The Commissioners believe the investors (sometimes called Capital) deserve:—

- (1) Security of investment,
- (2) Fair returns on investment,
- (3) Capable management,
- (4) Contented well-paid employees, and
- (5) Continuous improvement in administration.

The public, which has granted several advantages to the steel industry and its allied coal industry through bounties, duties, etc., is concerned with such questions as:—

- (1) A sufficient supply of products at reasonable cost,
- (2) The maintenance of an industry through which employees will obtain wages adequate to maintain a decent Canadian standard of living,
- (3) Conditions under which the occupations of the workers will not impair health or debase life.

The Commissioners are of the opinion that the iron and steel industry at Sydney can be carried on to meet these desires and requirements. It has uncommon advantages in the easy accessibility to its plant of ore, coal and lime and in its situation at a seaport from which transportation by water is available. Workmen of excellent quality as to vigour, intelligence and general ability are available. The Commissioners believe that wise and considerate co-operation between the policy controlling directors, the operating management and the working employees can win success and satisfaction.

It is a matter of common report that the steel industry is one which has been characterized by intermittent periods of prosperity and depression. It has been regarded as good business to put part of the large profits of good years into some form of reserve fund instead of distributing all of them to shareholders. The fat years are thus made to carry lean years.

From 1916 until March 31, 1921, the Dominion Iron and Steel Company made large profits. In one year alone the Company enjoyed a net surplus of more than seven million dollars after meeting all charges and providing for depreciation, depletions, interest on bonds and dividends upon stocks. For

the period from the early part of 1921, when the first reduction in wages from their highest point was made, until June 1923, the receipts from sales of products, after meeting necessary expenditures such as those for materials and supplies purchased, wages, salaries and all other expenses, showed only a small profit from the operations of the plant before providing for sinking funds, depreciations, bond interest and dividends on preferred stock. From this it is evident that instead of making money during that period, from which if it had been made higher wages might have been paid, the Dominion Iron and Steel Company was drawing upon the surplus which had been accumulated in previous years of prosperity to pay bond interest and dividends on preferred stock.

The evidence submitted to the Commission shows that in a similar manner, but only to a comparatively small extent, the reserve fund of the company was drawn upon to provide employment and pay wages to about 700 men for a time during a period of business depression.

The Commissioners are of the opinion that while no legal right to any share in the surplus of a company, accumulated under such circumstances, belongs to the workmen of the plant it would be good business policy, in the interests alike of the shareholders and the employees, to regard the surplus to some extent as a trust fund to be used for the protection of the interests of the whole enterprise. The interests of the enterprise include, in a vital way, the interests of the employees and to a less extent the public interests of the community. The labour of the employees cannot justly be regarded as a commodity in the transactions between them and the company. The Commissioners do not suggest that the control of the surplus and the decision as to how it should be used should be withdrawn from the directors of the company; but the Commissioners do suggest that since the employees are a very important factor in the enterprise and may even be the determining factor as to its prosperity and continued success the company would do well through its representatives to discuss this question with representatives of the employees when changes in rates of wages are in contemplation and when the prospect of full and regular employment is not good.

### **Opinions and Recommendations**

The Commissioners have expressed opinions in the body of this report in connection with questions dealt with in several parts of it. In this summary they restate some of these opinions together with the recommendations which they make to promote amicable relations between the employees and the Company.

#### **Relations between the Company and the Employees**

The Commissioners are of the opinion that the absence of any recognized organized means through which representatives of the men could confer with representatives of the Company prevented the development of amicable relations; and the Commissioners are further of the opinion that the employees' representatives plan with a General Works Committee and other Committees, which is now in effect on the plant, is a means whereby the management and the employees can get together to confer upon questions of mutual interest and obligation and seek their settlement by full frank discussion. Such contacts and conferences are not intended to impose settlements but to promote agreements and to provide regular and recognized opportunities in which mutual understanding can be promoted, confidence developed and co-operating good will brought into play in the relations between the Company and the workmen.

### Hours of Labour

The Commissioners are of the opinion that the hours of labour have been excessively long in some departments of the plant under the two-shift system of operation.

The Commissioners recommend that in the interests alike of the Company and the workmen, early and earnest attention be given to the elimination of the twenty-four-hour change-over period and to the abolition of the seven-day week.

The Commissioners recommend that the question of adopting the three-shift plan (eight hours per shift) in the departments of continuous processes and a maximum of a ten-hour day for other workmen be given the most careful consideration. In our opinion the change would be advantageous to the Company and beneficial to the men, and should be adopted.

### Wages and Unemployment

The Commissioners are of the opinion that the iron and steel industry of Sydney can be carried on successfully and amicably in such a way as to meet the reasonable desires and requirements of the workmen and the Company.

Since the steel industry is one which has been characterized by intermittent periods of prosperity and depression, the Commissioners recommend that in the interests alike of the shareholders and the employees the Company should discuss with representatives of the employees the question of drawing to some extent upon the surplus accumulated during fat years to tide the workmen as well as the shareholders over lean years when changes in rates of wages are in contemplation and when the prospect of regular employment is not good.

As an alternative, the Commissioners recommend that in the public interest some competent authority be directed to investigate and report upon the use which is made of such surplus funds of the Company.

### Calling Out of the Militia

The Commissioners are of the opinion that the local police force was entirely inadequate to deal with the situation which had occurred at Sydney, that a riotous condition of mob rule prevailed for some days and nights and that the presence of the militia was necessary and beneficial.

The Commissioners are of opinion that it is desirable that the Militia Act should be amended in such a manner as to provide that a requisition requiring the active militia to be called out for active service in aid of the civil power may be made only by a judge and the Attorney-General of a province acting jointly in making the same and that the requisition should contain a statement by the Attorney-General of the province to the effect that he shall as soon as possible, and not later than one week thereafter, cause an inquiry to be made into the circumstances which occasioned the calling out of the active militia and send a report upon the same to the Minister of National Defence.

All of which is respectfully submitted.
