Cincinnati, April 24.—The tip has gone out that another crusade against druggists who illegally sell cocaine will be inaugurated soon. It is even said that police officers in plain clothes have already made purchases in certain stores without a physician's certificate, as provided by law. Last week a drug-crazed neud delibante and without cause threw a nine-year-old schoolgirl from an eighty-foot viaduct. When arrested he declared that he had received the drug from a negro living in a locality where, several months ago, four clerks were arrested and fined the maximum penalty for indiscriminately selling cocaine. At the time the Police Court judge said that if the offenders were ever brought before him again on the same charge he would commit them to the workhouse. The newspapers have started an agitation and interesting developments are anticipated.

CINCINNATI C. P.

Cincinnati, O., April 25.—The students at the Cincinnati College of Pharmacy have organized a baseball team, the first in a number of years. So far a number of games have been played, all resulting in victories.

The entertainment which the alumni has been contemplating for several months will probably be held soon. Its purpose will be to promote an increased interest in the affairs of the organization, according to President William H. Gausz. At present there are about 500 members, most of whom take an active part in its proceedings.

GLAD SLOT MACHINES ARE GONE.

Cincinnati, April 25.—The O. Val. D. A., through its monthly news bulletin, has commended Mayor Fleischmann because he ordered the removal of all penny slot machines on April 1. The consensus of opinion as gathered from members was that the machines were a nuisance, and that druggists were forced to introduce them as a means of preserving their cigar trade.

OHIO HAPPENINGS.

—During a wind and hail storm a plate glass window in Louis Heister's store, Seventh and Elm streets, Cincinnati, was shattered. The damage to the window and its contents amounted to \$400.

—The Cincinnati Fruit Refining Co. has been incorporated with \$10,000 capital by F. Sanford, H. Lichtenstader, Louis Kramer, J. E. Newman and A. O. Fish. They will locate in Cincinnati and manufacture flavoring extracts from fruits by a new process.

—The Ohio Confectioners' Association has decided to erect a chewing gum factory at Lima to fight the so-called trust. At first it was intended to build the factory at Cincinnati.

—Recent buyers in Cincinnati were J. F. Donahoe, Georgetown, O.; Newton Peters, Milan, Ind.; John Ehrlich, Aurora, Ind.; F. Riffe, Jackson, O. and Homer Sayre, Xenia, O.

O. V. D. A. OUTING.

Cincinnati, April 25.—At the recent quarterly meeting of the O. Val. R. D. A. it was decided to give an outing during the summer, following a custom in existence for a number of years. An entertainment committee, with John Linne-mann as chairman, was selected to secure a place and set the time.

ANDREW BAIN.

Cincinnati, April 25.—Prof. Andrew Bain, for seventeen years druggist at the City Hospital, died last week after two days' illness of pneumonia. He was president of the Cincinnati College of Pharmacy about seven years ago, and up

**THE LATE ANDREW BAIN.**

to a short time previous to his death was a professor there. A committee has been appointed from the College of Pharmacy to draw up suitable resolutions. A widow and two daughters survive. Angelo Doherty has been appointed druggist at the hospital.

TRADING STAMPS IN CHICAGO.

Chicago, April 22.—The drug trade of this city was considerably interested in the attachment proceedings instituted by creditors against Benedlet & McFarlane, dealers in blue trading stamps. This firm had a contract with Siegel, Cooper & Co. to furnish stamps. In a statement issued by the manager of S. C. & Co. yesterday it was asserted that the redemptions of the stamps offered by Benedlet & McFarlane was unsatisfactory and that that company had failed to fulfill their contract, the premiums offered being unsatisfactory to all concerned. The manager further stated that all stamps given out by his company would be redeemed on presentation.

The amounts involved in the attachment proceedings are said to be small, and the claim was made that they would soon be adjusted.

STEVENSON & CO. WILL MOVE.

Chicago, April 22.—Robert Stevenson & Co., wholesale druggists, who have been located at the northeast corner of Lake and Dearborn streets since 1886, have leased the building at 42 and 44 Lake street for a term of five years. The firm's old site has been occupied by a wholesale drug house for longer than fifty

years. The original tenants were Penton, Robinson & Smith, one of the city's pioneer drug houses.

REGISTRATION OF APPRENTICES.**Employes in Illinois Do Not Understand the Provisions of the Law.**

Chicago, Ill., April 15.—A recent investigation by the State Board of Pharmacy resulted in a number of employes in the State reporting approximately one hundred young men in their employ as apprentices who have never been registered as such by the Board. This has forced the members of the Board to the conclusion that notwithstanding repeated notices which have been sent by the Board to every proprietor in the State upon the subject of apprentices' registration and the campaign of education which it has conducted along this line, there are still quite a number of employes in the State who do not understand the section of the pharmacy law relating to apprentices. The investigation also brought out the fact that some employes advised the young men when entering their employ for the purpose of taking up the profession of pharmacy to disregard apprentice registration, as it was unnecessary.

Under the law, if an applicant's experience has all been in Illinois, he must first be registered as an apprentice and serve as such for three years before he is eligible to take the examination for assistant pharmacist. If, however, apprentice registration was on or before July 1, 1902, the candidate for higher registration is entitled to count all the drug store experience he has had in proving up the time required by law. The law is very plain and its provisions cannot be evaded.

The Board is now in correspondence with those who have been reported as registered apprentices, but who in fact are not registered, calling their attention to the law, and showing them wherein it is necessary that they at once send in their applications for registration.

CHICAGO NOTES.

—Isaac Platt, the druggist at 806 Ashland avenue, whose litigation with the "drug trust" brought him into the public eye, is the defendant in a suit for \$15,000 damages. He is charged with embracing the complainant, Miss Annie Malcolm, in June, 1903. At that time Miss Malcolm was employed in his drug store.

—The Board of Pharmacy has secured three verdicts, one each against Messrs. Brendecke, Dahlberg and Lemke, all working for and in the Central Pharmacy, 60 West Randolph street. "Dope" cases.

The gold nugget confidence man banded the druggist a sure enough nugget and a plausible story. "Got a lot more like it," he said. "Sell 'em cheap. Test it if you like." The druggist sized him up. Getting a two-ounce graduate full of aqua segra, he emerged from the prescription department, still holding the gold. "No objection to tests, eh?" and he dropped the metal into the acid and stirred with a glass rod. The crook groaned. "Stung again," he was heard to say as he left.

ILLINOIS BOARD OF PH.

Springfield, Ill., April 18.—At the meeting of the Illinois Board of Pharmacy, in Chicago, April 10-13, the following passed successful examinations:

Registered Pharmacists.—F. M. Bilyeu, Greenville; P. T. Blount, Chicago; H. F. Discher, Manitowoc, Wis.; S. M. Edison, Chicago; A. J. Feuerbacher, Chicago; V. C. Free, Chicago; Claude Fox, Carbondale; J. H. Gillis, Chicago; A. H. Goette, Chicago; John Cross, Chicago; F. J. Haerberle, Maricao; Edw. H. Ittner, Elmhurst; R. E. Jacobshagen, Chicago; F. F. Krueger, Chicago; M. G. Minaghan, Marseilles; Jos. F. Moell, Chicago; C. W. Moors, Chicago; L. I. Mulvey, Chicago; J. E. Myers, Danville; Thos. J. Peters, Chicago; Chas. Ruben, Chicago; H. H. Todd, Chicago; H. E. Vause, Chicago; C. A. Walters, Chicago; T. J. Wylie, Tampico; J. H. Wehrley, Chicago.

Assistant Pharmacists.—C. E. Batterton, A. E. Bennett, R. W. Chilcote, L. E. Ennie, W. C. Fosselman, L. B. Fox, Henry Getzloff, C. A. Gnutting, F. J. Hiesgen, M. G. Johnson, Wm. Kraemer, Ferdinand Ntardy, A. J. Nordling, Edw. Olaszewski, A. J. Roberts, Harry Rubenstein, J. C. Schimelfeign, H. G. Schmitz, A. H. Schwartz, F. B. Stromer, Fred Wiltner, John P. Wiltzen, J. P. Yechem, all of Chicago, and R. M. Eberly, Aurora; F. Wm. Hallowell, Paw Paw; W. G. Herlocker, Table Grove; A. E. Jacobs, Malta; R. L. Moore, Freeport; R. A. McClure, Bloomington; J. R. McKinney, Carbondale.

Registered Pharmacists, "Time Service."—L. P. H. Bjorkgran, Chicago; M. E. Blanchard, Marseilles; Edw. H. Cook, Huntley; J. F. Frierson, Chicago; H. F. Holden, Chicago; Sister M. C. Markel, Danville; Wm. Ouda, Chicago; F. R. Peterson, Calve; Lucy A. Prohaska, Chicago.

The next meeting for the examination of candidates will be held in Springfield, May 16; in Chicago, at 146 E. Thirty-ninth street, July 11, for all candidates who have not heretofore passed the preliminary test required by the Board. The examination will be held July 12. The next apprentice examination will be held on Friday, May 12. An apprentice examination will also be held on Friday, July 7.

IS NOW A CORPORATION.

Grand Rapids, Mich., April 22.—The business of the Jennings Perfumery Co., C. W. Jennings, proprietor, is now a corporation under the style of Jennings Manufacturing Co., with a capital of \$50,000. The company retains the same management, however. The officers are: President, Charles W. Jennings; vice-president, Ernest A. Stowe; secretary and treasurer, Julius J. Wagner; board of directors, C. W. Jennings, Geo. Clapperton, E. A. Stowe, Charles M. Remington and Walter W. Fox.

SELL ON PRESCRIPTION ONLY.

Louisville, Ky., April 22.—In accordance with a recently passed law, Police Superintendent Shutt, of New Albany, has ordered the night detail of police to notify all druggists not to sell to any person morphine, cocaine or opium unless such drugs are prescribed by a licensed physician.

SOME NEW PHARMACISTS.

Detroit, April 24.—The State Board of Pharmacy have given out the successful applicants for papers at the recent examination held in the Furniture City. The meeting was an important one, and the list of would-be pharmacists longer than any in months past. The successful ones were:

Registered pharmacists.—W. O. Bonnions, Detroit; C. Brandenburg, Benton Harbor; C. E. Brown, Lowell; W. B. Covey, Honor; V. L. Cory, Allen; J. C. Campbell, St. Ignace; M. J. Dauer, Saginaw; M. R. Deo, North Branch; A. Durheim, Big Rapids; F. Fredericks, Niles; J. F. Harris, Bay City; J. M. Hoffman, Jackson; F. B. Johnson, Muskegon; C. J. Kimling, Jackson; P. J. Kapp, Grand Rapids; F. N. Metcalf, Charlevoix; H. G. Mayer, Ann Arbor; R. J. Morley, Sanit Ste. Marie; A. A. Mercer, Detroit; Geo. L. Olson, Marquette; F. Perrault, Detroit; G. Paquin, Grand Marais; C. Parrshall, Howell; G. F. Reynolds, Ososso; M. C. Richmond, Bear Lake; F. S. Schoeder, Detroit; Edna F. Stickney, Gowen; F. R. Skinner, Cedar Springs.

Assistant pharmacists.—L. M. Ackert, Charlevoix; H. L. Allen, Bad Axe; G. H. Burke, Marquette; O. F. Beyer, Detroit; J. L. Bullock, Hadley; G. H. Clark, Marlette; E. W. Clark, Mayville; E. I. Chadwick, Ludington; Ned Clark, Cadillac; J. E. Cain, River Rouge; C. A. Drake, Yale; P. Forbenson, Ludington; J. L. Grafin, Escanaba; H. D. Hulson, Grand Rapids; A. F. May, Grand Rapids; A. McGeorge, Big Rapids; O. K. Neuman, Detroit; A. W. Nellist, Hastings; D. N. Surplice, Ludington; E. H. Snell, Vermontville; C. F. Shirliff, Bear Lake; A. Souder, Brown City; B. W. Tuttle, Metamora; Nina Van Horn, Marquette; H. A. Wagar, Gladwin; W. J. Walker, Midland.

FIRES.

—Tyler, Tex., Harris Bros.' Drug Store; loss, \$18,000; insurance, \$10,000.

—Anniston, Ala., Miller Drug Co.; loss on stock, over \$5,000, fully covered by insurance.

—Monroe, Ind., drug store of Shelby Ray; total loss.

—Boone, Ia., Maurice Fitzgerald; loss on building, stock and fixtures, \$5,000; insurance amounts to \$9,200.

—Colfax, Wash., fire started in D. Hopper's Drug Store and destroyed several buildings; total loss, \$10,000; insurance, \$6,000.

—Edinburg, Ill., W. M. Benton; loss, \$1,200.

—Mount Olive, Miss., Baroes Drug Store, destroyed.

—Oswego, N. Y., Vowinkel's Drug Store, loss, about \$500.

—St. Clair, Mich., T. J. Milliken, entire stock and fixtures destroyed; \$6,000 damage; \$4,000 insurance.

—Dayton, O., C. J. Krehbiel, damage, \$500, covered by insurance.

—Shellman, Ga., Shellman Drug Co., owned by Dr. H. L. Dozier; complete loss on stock, valued at \$3,000; insurance, \$2,000.

—The Dalles, Ore., A. E. Crosby; loss, \$10,000; \$7,500 insurance.

—New Haven, Conn., Samuel N. Coden; \$500 damage, covered by insurance.

TO ORGANIZE CLERKS.

Minnesota Association Through Committee Will Try District Plan.

St. Paul, Minn., April 24.—A very satisfactory meeting of the Minnesota Drug Clerks' Association was held at Drew's factory pharmaceutical school in the Century building, Minneapolis, on the night of April 19. It was decided to carry out the plan, which has long lain dormant, of organizing the clerks of the State by districts. For this purpose a membership committee, consisting of Messrs. Paulson and Sjoblom, was appointed to put the scheme through. This will be done largely through the instrumentality of traveling drug men, who will come in personal contact with the clerks all over Minnesota. A committee, comprising President Fred Klener and Mr. Paulson, was appointed to consider the feasibility of starting a small monthly paper in the interests of the association. This committee will report progress at the next meeting of the association, which will be held at the Windsor Hotel in St. Paul, May 3. It was decided to send a delegation to the annual convention of the Minnesota Ph. A. at Duluth in June. The feeling was universal that the clerks could thus effectively bring themselves in touch with the retailers, to their mutual advantage. All this means some pretty tall hustling on the part of George T. Heller, of St. Paul, secretary of the drug clerks, who, by the way, may be depended upon to "make good."

CHARGED WITH SELLING POISON.

St. Paul, Minn., April 24.—Two women clerks of the Cash Supply store at Stewartsville, this State, have been arrested on a warrant sworn out by Fred Wilson, a detective from Minneapolis, evidently in the employ of the Minnesota Ph. A. The accused are Mrs. Helen Hughes and Miss Rose Pulvitz, and the charge against them is that they sold a poison in violation of State regulations. Before Justice Gaskill the women pleaded not guilty and the case went over, the accused being released under a \$50 bond each. A jury trial was chosen by the defendants. Public opinion at Stewartsville is that this is a case of persecution, as Mrs. Hughes and Miss Pulvitz were acting under the direction of the head of the firm operating the store and who was not molested.

IN WISCONSIN.

—Elmer E. Larson, formerly in the drug business at Hayward, is now in the same business at Bismarck, N. D.

—Henry Strohmeier, of Milwaukee, will make a trip abroad for his health. His mind has been undermined by business and other responsibilities.

—A. C. McCord, son of the late James McCord, president of the McCord Drug Company, now consolidated with the T. H. Spence Company, has gone to Minneapolis to become secretary of the Kennedy, Sufell & Andrews Company. He has withdrawn all the McCord interest in the merged company.

INFUSION OF NEW BLOOD.

Milwaukee, Wis., April 25.—The reorganization of the Jerman, Pfueger & Kuehnsted Company at the time of the retirement of Charles Jerman from the company brought about several changes of general interest to the trade. A notable feature is the addition to the list of stockholders of several young hustlers, well known in the drug trade, some of whom have been with the company for a long time. H. T. Merriman, A. L. Waldsted and J. W. Maitland, all traveling men for the house, are among this number. G. A. Moehle, a buyer, has also become a stockholder. The most notable acquisition, however, was in Walter Schucht, formerly with the Yahr & Lange Drug Company. He was on the road for that company a long while, and has a well-established trade. He will now cover the same territory for the J. P. K. Company.

WISCONSIN NOTES.

—J. B. Leyer, a druggist, 43 years old, died April 21 at his home in Milwaukee.

—George Scott, traveling for a Chicago wholesale drug house, was arrested in Milwaukee a few days ago after a chase that was led to Minneapolis and Chicago. He was taken to Waukesha on a charge of obtaining money by false pretense, but escaped punishment by paying the claim against him with the cost of the chase. Scott was in Waukesha a couple of weeks ago, and, being in need of money, drew on his house. William Dunlap, a Waukesha druggist, endorsed the draft. It came back unendorsed and Dunlap had to pay it.

—R. T. Holcomb, formerly of Monticello, and later circuit clerk of Green County, was married recently to Miss Stella Hollister, of Mapleton, Ia., where Mr. Holcomb is now engaged in the drug business.

BLUE LAWS RULE.

St. Louis, April 25.—The local druggists are threatened with a rule of the "blue laws." For two Sundays now the saloons have been closed on Sunday, a very unusual proceeding for St. Louis, and the Police Commissioners are expected daily to announce that the Sunday orders will be extended to include all merchandise, except that absolutely necessary.

The president of the Board has explained that when this order is given it will mean that while drug stores can remain open, only necessary articles must be sold under pain of arrest. The druggists have had time to talk the matter over, and most of them have concluded. In case the closing order is given, the store doors will be shut rather than to keep the store open and refuse regular customers cigars and soda water all day.

The downtown stores have found some profit in the closing order so far, in that their cigar trade has materially increased Sundays. Sunday prescription trade will be handled after the manner of the night trade, answering a call bell.

MANUFACTURER ASSAULTED.

St. Louis, April 25.—T. M. Saylor, of 2112 Franklin avenue, this city, a patent medicine manufacturer, was found at the foot of an elevator shaft recently by an employee who opened the factory in the morning. Dr. Saylor reported to the po-

lice that he had been roused from sleep in his room over the factory by a burglar whom he had attempted to drive from the place. He said the burglar overpowered him and threw him down the shaft. This, he said, happened at 2 o'clock in the morning, and he lay there until the factory was opened.

ST. LOUIS NOTES.

—St. Louis druggists are giving a surprising number of subscriptions to the General Index of the A. Ph. A. Proceedings.

—C. F. Prickett, of Centralia, Ill., was recently in St. Louis, and announced that he had sold his Pioneer Drug Store, in that city, to the Richardson Drug Co., of which Dr. W. D. Richardson is the head. Mr. Prickett's store was one of the oldest in Southern Illinois, and he had controlled it for many years.

—Sol. Boehm, the veteran druggist at Elgith and Morgan streets, had the satisfaction of thinking for a week that he had been elected a member of the City Council. On the printed results he was elected by a small majority, but the official vote left him out by a narrow margin, much to the disappointment of his friends, who had dropped politics in supporting him on the Republican ticket.

—The "Blue Laws" for Sunday are the latest promise of the St. Louis police department, and drug stores will be about the only sort of mercantile establishments permitted to remain open. So far, the closing has not affected the cigar stores, but enforcement of the law to the strict letter is promised for next Sunday. Many stores are adorned with signs notifying customers to make purchases in advance of cigars and notions. Most of the drug stores will close except for "hours" in the morning and afternoon, if soda water and cigars are finally decided against.

PASSED GEORGIA BOARD.

Seventy men and women passed the recent examination of the Georgia State Board of Pharmacy, held in Atlanta, Ga. The successful candidates are as follows:

Pharmacists.—R. Barker, Jacksonville, Fla.; R. W. Batts, Hawkinsville, Ga.; C. E. Black, Prosperity, S. C.; Miss Theo Bowie, Atlanta, Ga.; C. E. Bruner, Macon, Ga.; J. E. Bush, Barnesville, Ga.; W. D. Buzzett, Apalachicola, Fla.; J. N. Drake, Atlanta, Ga.; F. M. Ellerbe, South Carolina; W. E. Fulmer, Columbia, S. C.; R. T. Franklin, Atlanta, Ga.; H. H. Hill, Atlanta, Ga.; E. C. Major, Greenwood, S. C.; J. G. Mason, Swainsboro, Ga.; G. R. McIntyre, Dublin, Ga.; D. R. Mitchner, Atlanta, Ga.; C. R. Nicholson, Quincy, Fla.; J. T. Smith (colored), Riddleburg, Ga.; C. D. Williams, Georgia.

Apothecaries.—W. A. Arnold, Atlanta, Ga.; Benjamin Bashinski, Tenuille, Ga.; M. N. Bogart, Atlanta, Ga.; R. E. Burkholder, Augusta, Ga.; B. B. Burns, Georgia; Jesse Davis, Georgia; R. W. Davis, Blakely, Ia.; W. W. Dent, Douglas, Ga.; H. C. Durden, Graymont, Ga.; W. H. Durham, Woodville, Ga.; R. A. Gunter, Atlanta, Ga.; Miss Mary Kennedy, Atlanta, Ga.; H. W. Knighton, Benevoence, Ga.; E. E. Lee, Macon, Ga.; S. W. Lowe, Lafayette, Ala.; J. C. McLaughlin, Quincy, Fla.; Bernard McLau-

rin, Hector, Ala.; N. E. Nesmith, Atlanta, Ga.; S. L. Moyre, Wrightsville, Ga.; J. A. Redding, Macon, Ga.; W. R. Reid, Acworth, Ga.; S. E. Small, Americus, Ga.; J. N. Smith, Roberts, Ga.; P. W. Smith, Augusta, Ga.; J. H. Tharpe, Macon, Ga.; P. W. Whitman, Marion, Ala.; W. C. White, Atlanta, Ga.; J. A. Winn, Bollingbroke, Ga.

Druggists.—J. C. Baldwin, Talbotton, Ga.; H. D. Bell, Swainsboro, Ga.; B. E. Blitch, Macon, Ga.; S. D. Bradford, Madison, Fla.; J. W. Brunsom, Macon, Ga.; Frank Campbell, Atlanta, Ga.; Walter Dixon, Macon, Ga.; K. K. Edmondson, West Point, Ga.; J. D. Franklin, Jr., Tenuille, Ga.; R. T. Franklin, Atlanta, Ga.; S. J. Hargrove, Macon, Ga.; J. L. Hooper, Atlanta, Ga.; B. H. Ingram, Macon, Ga.; W. C. Ervin, Concord, Ga.; L. B. Kennington, Macon, Ga.; E. C. Martin, Macon, Ga.; E. A. Martin, Atlanta, Ga.; W. M. McDonald, Commerce, Ga.; E. L. Norton, Atlanta, Ga.; J. A. Parker, Atlanta, Ga.; D. S. Porter, Atlanta, Ga.; Toke Wall, Dawson, Ga.; W. D. Wynn, Jr., Macon, Ga.

MR. PROCTOR'S ADVERTISING.

If there really is such an expression as "painting the town red," Mr. F. F. Proctor must have that distinction, so far as advertising his theatres in New York City is concerned. New York City is a very large place, and it takes a few pails of paint and quite a number of men to make any very large impression on it. One can hardly turn a corner without seeing the Proctor trade mark on walls of buildings and on roofs and sides of houses, and in every railroad leading into New York is to be seen the announcement of Mr. Proctor's enterprises. No other theatrical proposition ever presented in New York City has ever attempted to do what Mr. Proctor has done. It is estimated that there is over one million square feet of walls and sign boards taken up with the Proctor announcements, and the cost of this thing is enormous.

Another advanced idea is the reserved seat policy now in vogue at Mr. Proctor's various theatres, and it has proven so successful that the management have been obliged to greatly increase the number of these reserved seats in order to meet the many calls for them, which attests their great favor with the patrons. Those who wish to avoid the annoyance and delay of standing in line at the box office, may have these seats reserved two weeks in advance by telephoning the individual theatres.

ENGLISH SODA.

A young American girl who was traveling in England last summer had been seeking vainly for the ice cream soda legends that appear on every corner in New York. At last she ran across a place where this sign was displayed: "American iced drinks, 4 pence."

She hurried in, and although the poor imitation made her homesick, drank two glasses of the mixture to the health of her countrywomen. The surprise came when she came to pay. The shopkeeper handed back all but fourpence, saying:

"We always give one when you buy two, and we don't sell very many as it is, Miss."—New York Sun.

**AMONG
THE COLLEGES**

NORTHWESTERN UNIVERSITY.

Chicago, April 22.—A new departure of the School of Pharmacy of Northwestern University is the establishment of ten scholarships, five to be awarded each year, the award to continue for two consecutive years and to yield the holder \$100 a year, to apply on his tuition in the Ph.C. course. Applicants for the scholarships must comply with the requirements for admission and must be regular candidates for the degree. All applications and testimonials must be filed with the dean before the opening of the school year in September. Two of the scholarships will be awarded each year to candidates from Chicago and Cook County; two to candidates from Illinois outside of Cook County, and one to a candidate outside of Illinois. The right to discontinue the scholarship is reserved. The equipment of the school (furniture, instruments, specimens, books, etc.) in February last was valued at \$26,400. The value of the books alone is about \$3,400. The annual expenditures, including salaries, current expenses, etc., but not rent, are about \$29,000.

The statistics compiled by this school are not without interest. For nineteen years, or from 1886 to 1905 inclusive, the average attendance has been 219, the students being drawn from all parts of the Union, the only States not represented being Nevada and Delaware. The total number of graduates is 1,514.

The Summer School offered to special students opens this year on June 12 and continues for seven weeks. The course covers laboratory work only.

In a bulletin recently issued by the school a feeling of reference is made to the life and services of the late Prof. A. B. Prescott of the University of Michigan, who was an honorary alumnus of Northwestern University, which, in 1903, conferred upon him the degree of LL.D.

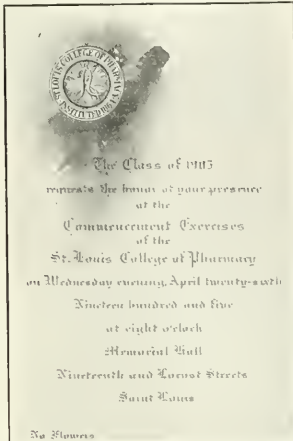

CHICAGO COLLEGE OF PHARMACY.

Chicago, April 24.—Elaborate arrangements have been made for the annual commencement exercises of the Chicago College of Pharmacy, to be held in Steinway Hall, 17 Van Buren street, next Thursday afternoon. The program includes an address by Dr. Charles Davison, a member of the Board of Trustees of the University of Illinois. Following is the class roll: Carl M. Aaseth, Benjamin R. Abrams, Carl G. Anderson, Fred L. G. Berthlein, Charles W. Boyce, James F. Brown, Arthur E. Curtis, Leo G. Detrick, Lawrence A. Dickhut, Guy G. Dillow, William V. Dufner, August E. Gerhardt, George J. J. Guerten, John R. Hall, William M. Honsick, Michael Indovina, Herman F. Jacob, Milton G. Johnson, Thure W. Johnson, John E. Laatz, Thomas L. Larson, John V. Lee, Justin A. Levin, William H. Lonshore, Edward A. Lukasek, Ebner McGinley, R. Frank Mayfield, Walter H. Moreland, Garrett J. O'Neill, Leonard J. Ostrowski, John K. Parker, James Patejdl, Louis W. Plummer, Charles J. Powell, Theodor I. Scheips, Bernard H.

SchulteJann, Martin J. Siehrant, Harry E. Slauson, Hugo F. Staack, John H. Wehrley, Frances E. Weiss, Thomas H. Wile, Milton G. Wilson.

ST. LOUIS C. P.

St. Louis, April 24, 1905.—On next Wednesday evening 72 young men will leave the St. Louis College of Pharmacy as graduates. The commencement exercises are to be held in Memorial Hall, and it is expected that Father W. Banks Rogers, of the St. Louis University, will deliver the address. Among the prizes offered to the graduates are two gold medals, one by the Alumni Association, and the other by the college. The class roll follows: Rae W. Ashton, Daniel J.

Atkinson, Claude C. Bacon, Frederick W. Barking, Benjamin W. Barth, Samuel G. Becker, Frank E. Biesterfeldt, Albert F. Ping, Benjamin T. Bundy, Paul T. Capps, Archie W. Chaubertlain, Charles J. Chapman, Jr., Vivian B. Collins, Charles M. Davis, William J. Delany, Walter L. Duby, Theodore H. Ellermann, Arthur H. Enig, August P. Feidder, Alfred Felber, Samuel R. Flowers, Seth H. Garrison, George A. Grix, Samuel L. Grother, Eddie P. Hardin, Verde Harrison, Charles J. Harvey, Edgar J. Hellwig, Francis J. Hemm, Christopher J. Hennemann, Walter C. Kern, Edwin C. J. Kienzle, Edward F. Killeary, Gerhard Knewitz, Albert T. Knott, Arthur F. Kolkman, Eugene H. Kurtz, Abraham J. Lasersohn, Frank E. Lantz, Roy Longino, John B. Lorton, Max Mansfield, Charles M. Margraff, Oliver M. Matthews, Lendon L. McGuire, James C. Magee, Alexander R. McIntyre, John Morgan, Thomas Morgan, Daniel M. Moseley, Herbert G. C. Mueller, Charles E. Musick, John F. M. Oldakowski, Robert J. Pfeffer, William J. Pfeiffer, Walzie N. Pugh, Emerment M. Reinhardt, Henry Rubin, Frederick P. Schaum, Edward F. A. Scholle, Samuel E. Shaffner, Dean B. Skinner, Frederick W. Spreen, Herbert A. Spreckelmeyer, Charles A. A. Stelmeyer, William Thaler, William H. A. Titsworth, Louis A. Walitke, George F. Wolfer, Thomas L. Woodruff, Richard O. Ward, Leonard E. Eberhart.

MEDICO-CHIRURGICAL COLLEGE.

Philadelphia, April 15.—Under the direction of Prof. H. E. Kendig, the members of the senior class on Friday began their final laboratory examinations.

The following members of the faculty will be the guests of the Meeker Analytical Chemical Society at a box-party on Thursday evening, at the Chestnut Street Theatre: Dean Harvey H. Mentzer and Professors Fisher, Meeker, Ott, Egbert, Shaw, Baerwood, Kendig and Minehart.

Commencement exercises will be held on May 27, at the Academy of Music. Class day will be observed in the Garrick Theatre and the annual meeting of the Alumni association will take place in the Auditorium, both on May 26.

On Saturday last, the Freshmen were taken out along the banks of the Wissahickon by Prof. C. H. Shaw in search of early Spring flowers.

The friendly feeling between the Neff College of Oratory and the College was clearly in evidence on Friday evening when students of the former institution gave an entertainment.

THE SOUTHERN C. P.

Atlanta, Ga., April 15.—The Southern College of Pharmacy has changed its requirements from two six-month courses in separate years to two courses, consecutively, if desired, and two years' additional experience.

Graduation exercises were held in the lecture hall of the College on April 8. The class numbered twenty, and all successfully passed examinations before the Georgia State Board of Pharmacy on April 10. This is considered a very good showing, as the examination was very rigid.

The summer session opens to-day.

ALBANY C. P.

Albany, April 1.—The commencement exercises of the Albany College of Pharmacy were held here last Tuesday evening. The following received the degree of Ph.G.: H. T. Avery, Hunter; H. P. Banta, Haganan; C. W. Burdick, Saratoga Springs; A. J. Curtis, Waterville; G. A. Elliott, Holyoke, Mass.; C. A. Gallagher, Schenectady; C. E. Gramp, Hudson; F. K. Haley, Hoosick Falls; R. R. Higgins, North Creek; H. Heinmiller, Albany; F. A. Johnson, North Creek; F. G. Killgrew, Holyoke, Mass.; H. R. Liddle, Johnstown; H. J. Lovesy, Johnstown; G. W. Mather, Cohoes; P. A. Matteson, Shaftsbury, Vt.; J. H. McKeon, Bennington, Vt.; W. F. Nagle, Chilcope, Mass.; A. L. Neher, Schenectady; Agnes Josephine Quinlan, Bennington, Vt.; H. C. W. Retallick, Canajoharie; E. D. Shoor, Albany; R. B. Smith, Plattsburg; H. M. Tice, Cincinnatus; E. L. Walker, Jr., Moriah; J. Phenix, Lewiston, Me.; B. R. Jones, Syracuse, N. Y.

CLEVELAND C. P.

Cleveland, April 22.—Invitations have been issued for the 23rd annual commencement of the School of Pharmacy, to be held in the Hollendon on Thursday evening, May 4. Following the commencement exercises a banquet will be given to the graduating class. John Krause is chairman of the committee on arrangements.

What Can Be Done With Small Fountains

Large Trades Built Up in Indianapolis and St. Louis

H. J. Huder in the Former and W. G. Graul in the Latter City Overcome Difficulties—Value of System in a Soda Business Hampered by Small Space—Please the Children and Make Sanitation a Hobby

It is the general belief that Henry J. Huder, in Indianapolis, at the northeast corner of Washington and Pennsylvania streets, has the greatest retail drug store in that city, and sells more drinks from his soda and mineral water fountain than are sold by any other house in the whole of Indiana. Indeed, it may well be doubted whether any other dealer sells half as much of these beverages as are sold in this one room, where he is so cramped for space. It has only been by the most orderly business system that he has been able to handle such a large volume of business.

The drinks dispensed vary in price from five cents to fifteen cents. There are twelve straight mineral waters, nine fruit ices and sundries, nine fancy egg drinks, six fancy mixed drinks, seven frappes, nine lemonades, four fizzes, four punches, twenty miscellaneous, sixteen hot drinks, twelve sour drinks, hot or cold. Others will be added to this carte as the season advances and occasion requires. His present accommodation for a trade that continues through every hour in the day and night, every day in the year, is but 44 by 115 feet. He has, however, a lease on an adjoining room and will soon increase his space so that he will have 67 by 115 feet.

IN SPITE OF SMALL SPACE AND OLD FOUNTAINS.
The fountain with which he has been doing this great soda trade is a Zweitusch,

which has been in use thirteen years. It fills a space that is wholly inadequate to present needs and Mr. Huder is now negotiating for a new fountain to cost from \$12,500 to \$15,000. The general trade done by this house is due to the fact that it is on the best known corner in Indiana, a waiting place all through the day and night for passengers on city and interurban electric lines, a transfer station in the fullest sense of the term.

Mr. Huder, who is now forty-two years old, has been in the retail drug trade since he was a boy ten years old. His education has been acquired in night schools, after business hours. He has been in business for himself for eighteen years.

The corner in which this live, up-to-date, store is doing the greatest retail drug trade in the State has been the most prominent place in Indianapolis since 1850. Even in that early time, it was occupied by a drug store and an old-fashioned goose-neck fountain, with the syrups dispensed from bottles, was a money-making part of the business. It was from this old-fashioned fountain that the first "cream soda" ever sold in Indianapolis was served, long before "ice cream with a spoon" had been thought of. The cream thickened with sugar, with eggs added to make color and hold the foam, simple syrups added to make more bulk, caught on in the then little city, and

a harvest was reaped for a season or two before the other soda water men fell in line.

SODA FOR WORKING PEOPLE.

St. Louis Druggist Who Has Made a Success of Catering to Them.

W. G. Graul, who has a drug store at Cherokee street and Nebraska avenue, St. Louis, has a limited field for the sale of soda water. The limit is two-fold, first because the finances of his patrons are small, and second, because, to a great extent, the older persons of that immediate vicinity prefer to drink beer, on account of their nationality and habit. The soda trade developed in this unpromising field by Mr. Graul, is surprisingly profitable. His people are not poor, but they are thrifty working people, who would rather spend their nickels elsewhere, and who are used to only patronize a drug store when ill. Mr. Graul was asked how he had developed the trade he enjoys.

"My general propositions are cleanliness, good service and first class materials in the making. As a specialty, I try to serve the very best chocolate I can. About one-half of the drinks I serve are chocolate, and I make that my leader.

"I have found, through personal experience while clerking and since I have been in business here, that for this fountain, with the trade I have developed and can see for the coming season, it is best to buy most of my materials, rather than try to make syrups and crushed fruits from the crude material. I have not the time to give to such work and cannot afford to hire the necessary help as yet.

PREPARED SYRUPS AND FRUITS.

"In the matter of prepared syrups and crushed fruits, I have experimented. My conclusions are that a combined selection of Liquid Carbonic and Hance Brothers & White's goods meet my requirements. Since arriving at my conclusions, I keep a list of the fruit juices and crushed fruits and insist on getting my kind.

"I do not try to keep all crushed fruits, but have found that cherries, pineapples and strawberries meet the general requirements. Sometimes I vary these for a specialty, but I find it profitable only for a short time.

"For my chocolate, I use Baker's powdered, bitter, and make six ounces into a paste, with cold water, and then bring it to a boiling point and enough syrup to make a gallon to the same temperature. After stirring in the chocolate paste, I boil it again and then stir as it cools. Once made, I keep the syrup in a can that fits the ice cream cabinet, and make room for it there. I serve it from the regular syrup divisions of my fountain, to avoid sloppy jars, and have no trouble drawing it. While I talk little to my customers about the making of the syrup, and have never sought to call it to their minds, I have learned from conversations over heard at the fountain, that my trade comes from far beyond my ordinary trade territory."

INDIANA'S BEST KNOWN FOUNTAIN.

In the Store of Henry J. Huder, Northeast Corner Washington and Pennsylvania Streets, Indianapolis. An Old Zweitusch Fountain, in Use Thirteen Years.

INTERIOR W. S. GRAUL'S DRUG STORE, ST. LOUIS.

PLEASES THE CHILDREN.

"But how about the cleanliness as a feature for the children's trade, which forms the big proportion of your receipts?" was asked.

"The children like it in the first place," Mr. Graul replied. "Clean glasses appeal to them. Principally because the clear whites and colors of the soda show better in thin, polished glasses. I use colorings liberally. Then the parents send the children here. Some of them tell me, 'Mamma said to go to Mr. Graul's, because it is so clean.'"

"The service especially appeals to the children. They are always impatient to spend their nickels. Then, they like to think I wait on them myself, and I try to do so and to joke with them.

"It all brings business and the fountain is profitable, and has been the means of extending my trade on other things.

CAUTION AND CARE.

John Morley, in an address at Pittsburg, urged the American people to use caution and care in their busy lives—to do strenuous things, but to do them with forethought.

"The Scot," said Mr. Morley, "is noted for his forethought.

"A bald Scot, on a visit to London, paused to look at a display of hair tonic in a chemist's window. The chemist, himself a bald man, came out and tapped the Scot upon the shoulder.

"The very thing for you, my man," he said. "Let me sell you a bottle of this tonic. It is the greatest medical discovery of the age."

"'Tis guld, eh?" said the Caledonian. "Good? It's marvellous. I guarantee it to produce hair on a bald head in twenty-four hours."

"'Awel," said the Scot, in his dry, cautious way. "'Awel, ye can gie the top o' yer head a rub wi' it, and I'll look back the morn and see if ye're tellin' the truth."—New York Tribune.

THE ENFLEURAGE PROCESS.

The Board of Appraisers Throws Light On Modern Methods.

The enfleurage process of extracting perfumes was recently the subject of an interesting and carefully considered decision by the Board of General Appraisers, the general application of which may be summarized as, that while the products of the volatile solvent process for the extraction of odors from flowers are free of duty as "enfleurage grease," the latter term does not embrace similar products derived from odor-bearing bodies other than flowers.

The special case in point was occasioned by the importation by E. H. Burr, at New York, of merchandise called "concrete Iris de Florence extra," derived from orris root, in whole or in part by distillation. The Board decided this was dutiable at 25 per cent. ad valorem as essential oil of orris.

OPINION BY THE BOARD.

In weighing testimony the Board delivered the following opinions:

"There is much of conflict in the evidence before us, not only as to how the article represented by Exhibit 1 was produced, but also as to what is the significance of the term 'concrete essence' as applied to it; and we are inclined to the belief that there was a great deal of speculation, or, to speak plainly, guessing, on the part of the witnesses, as to the particular processes of which the merchandise, in the condition imported, was the result. It is therefore fortunate, we think, that the real question involved is not to be determined by the processes of production or the significance of the term 'concrete essence' as applied in France to flower essences.

"One fact appears to be clear regarding the enfleurage process, viz., that when it was introduced and became known as a medium for conveying the odor of flowers from the place where they are grown to the place where the perfumery is made, it had a

meaning much more limited than that which in recent years it has been sought to extend to it. The term 'enfleurage' is defined by the Standard Dictionary as 'The extraction of perfumes by treating flowers with odorless fats,' and by the United States Dispensatory (18th ed.) as follows:

This term is applied by the French to the impregnation of fixed oils and fatty matters with the odor of certain sweet-scented plants, such as jasmine, tuberose, and mignonette, the oils of which are so delicate and fugitive that they cannot well be separated by distillation. The process consists of exposing the fatty matter placed in layers, in suitable frames, to the exhalations from the flowers, which are absorbed, and give their characteristic odor to the fat. Another plan is to expose alternate layers of the flowers, and of cotton impregnated with bland fixed oil, to the sun, and afterwards to express the oil from the cotton. The French some times give to the spirituous solutions made by extracting the odors from fats and oils with alcohol the name of essences.

A FORMER DECISION.

In *United States v. Dodge & Olcott* the court defines the object of the enfleurage process to be:

To carry the odor of flowers from the place where they grow to the place where the perfume is made. Among the various enfleurage processes is one whereby the flowers are either brought in contact with, or close proximity to, some fatty or greasy matter, such as animal fats, vegetable oils, and certain preparations of petroleum, including vasoline. The fatty substance absorbs the odor from the flowers, and the absorbent or solvent may or may not be then removed by heat, leaving the body of the perfume. This product is not then a completed product in the sense that it is ready to be used by the ordinary consumer, but when subjected by the perfumer to the influence of alcohol the alcohol leaches out the perfume. The article in question is a highly concentrated essence or extract, produced by the enfleurage process, in which some variety of petroleum was used as the original solvent. After being subjected to heat a mere undefined vestige of the petroleum remains, and the resultant product is described as the *rose of the flower* or a *concentrated essence*.

"It is evident that since the enfleurage process was first introduced there have been radical changes in the methods used to extract the flower odor and convey it to the manufacturer of perfumery, and at least some of the products of these changed methods have been recognized by the court in the *Dodge & Olcott* case as being enfleurage greases within the meaning of the term 'enfleurage grease' as used in said paragraph 626. It appears that the old or original method of spreading the fatty substances in layers and placing thereon the petals of the flowers has not been abandoned, but the method of extraction by the volatile solvent process is the one more generally used, and the advantage of the latter over the former is stated to be that one ounce of the concentrated product by the new process equals in substance three pounds of the product of the old method. As an original proposition, in view of the evidence before us, we might have been inclined to hold that the concentrated product of the volatile solvent process was not the enfleurage grease provided for in paragraph 626, but we think the court has determined in favor of the contrary view. One fact seems to us, however, not to be open to dispute, viz., that from the court's own expression and authoritative definitions, the enfleurage process is confined to the extraction of the odors of flowers, and 'enfleurage grease' denotes a vehicle for carrying such odors only.

POINTS OF DIFFERENCE.

"The merchandise here involved is concededly not the concentrated essence of a flower, no matter what may have been the process by which it was produced. It is the extracted odor of the root of the orris plant, and to this extent at least there is no disagreement. It was the evident purpose of importer's counsel to show that concrete essences had been produced from other odor-bearing vegetable bodies than flowers, and in this we think he was successful, but it does not follow from that fact alone that essences so produced are effluence grease. The most that may be said in this respect is that odors other than the odors of flowers are extracted by the same means used in the extraction of flower odors.

"Another marked distinction between effluence grease and the merchandise in question which, we think, is established by the record, is that the former, when mixed with alcohol, is only partially soluble, there remaining a residue of the wax of the flower, while the latter is wholly soluble in alcohol.

"The appraiser, in his special report accompanying the protest, states the merchandise to be oil of orris, obtained from orris root by steam distillation, or by extracting the root with ether, and steam distilling the residue left on evaporation, neither process being that of effluence." This report is supported by the evidence of the witness, Moore, the government's chief chemist at the port of New York, in his testimony, where he states that:

"To obtain concrete oil of orris such as this (referring to Exhibit 1) the extraction process is carried out the same as described in the Dodge & Olcott case, but subsequently the product, which is not of this description, has to be either distilled or manipulated possibly in some new way to obtain a white product. The first product of extraction is the oleo-resin, so called, of orris, and that is separated into a product of this kind and a resinous residue.

"The said report of the appraiser that the merchandise (oil of orris) is the result of a process of distillation, thus supported, has not been overcome by the evidence submitted on behalf of the protestant, and it must therefore be controlling.

"Upon the record before us we find (1) that the merchandise in question is not effluence grease, and (2) that it is oil of orris, an essential oil, the result in whole or in part of a process of distillation.

"We therefore hold that duty was properly assessed and overrule the protest, affirming the decision of the collector."

An exchange relates a story of a Japanese, employed in a large business house. The proprietor called the young Oriental to him and handing over a delinquent debtor's account, instructed that a letter be sent, polite, yet firm, demanding payment at once. Three days later a check in full was received and wondering at the prompt response, the merchant sent for the letter file and obtained a copy of the magical dunning epistle. It read: "Gentlemen: Respectfully, we do call attention to your debt long past the due. Should you not pay at once we will take steps that will cause you the utmost astonishment."

WISCONSIN.

Appleton.—J. E. Voigt, succeeds W. F. Montgomery, 757 College Ave.

GETTING EVEN.

It was in a city dispensary. The druggist was very busy, but not too busy to see a fat policeman in the line for free medicine. The little pharmacist saw his duty and did it. "Hats off," he yelled, sharply. All eyes turned to the "cop," who sat helmeted and stoical. "That means you, too," said the druggist, as he eyed the officer. Several hoboes in the rear grinned appreciatively as the "cop" bared his head; authority humbled for once at least.

The druggist was a "sport." He was "hucking" the races successfully. Entering his store unobserved, he found the manager dividing the receipts into two piles. Muttering "heads for me, tails for the 'hoss,'" he tossed the coin, when it came to the last half dollar. The "hoss" lost. Emerging, he said to the manager: "I'm going to discharge you. Not for stealing, understand. But I'm entitled to another flip on that last half."

MARKET REPORT

CAMPHOR OFF AGAIN.

Hypophosphites, Phosphoric Acid, Potassium Acetate Advanced.

A FEW OTHER UNIMPORTANT CHANGES.—BUT GENERAL TONE IS STEADY AND ROUTINE.—LITTLE SPECULATIVE INTEREST.—BUYERS OPERATING ONLY FOR ACTUAL NEEDS.—ERRATIC MENTHOL AGAIN DECLINES.—CODLIVER OIL PROSPECTS.

New York, April 24.—With one exception the week has passed without any important change. This major alteration was a decline of five cents in camphor, announced Saturday by domestic refiners. Coming as it does on the heels of the recent four cent reduction, it is unexpected and rather surprising, especially as the London market has just experienced a rise equivalent to two cents, with large sales at the higher figures. Undoubtedly these cuts have been caused by the competition of the refined Japanese camphor, which has been selling a trifle below domestic in this market.

Outside of this the situation presents little feature, being generally steady and routine. The volume of transactions and the demand on jobbers are, however, increasing, and conditions continue satisfactory with promise of maintaining commercial health. The call for any one commodity is not, however, especially large, and the rather recent reductions in opium and quinine have not stimulated buyers to the extent naturally to be expected. Menthol continues its erratic course of sudden fluctuation, influenced to a great extent by speculative manipulation. Several of the essential oils are easier, while the hypophosphites show firmness. A few unimportant advances have occurred. The general situation appears favorable for buying for legitimate needs, offering a fair guarantee against any immediate sudden upheavals.

OPPIUM.—Influences continue contradictory and of about equal power. Further reports of damage by severe frost in Turkey to the crop are coming in, confirming the statements that spring sowings are prevented and that the harvest will probably yield but 3,500 cases. On the other hand, stocks at primary centers are heavy and competition between local holders is evident. The demand from consumers holds about normal, but is rather disappointing. Jobbing prices continue \$3.00@3.20 for nine per cent., and \$3.10@3.30 for eleven and thirteen per cent.; powdered remains unchanged at \$3.85@4.10 for thirteen per cent. and \$4.00@4.85 for sixteen per cent.

MORPHINE SULPHATE.—Consumers are steadily ordering for actual needs, but the aggregate of transactions is only of moderate proportions. Prices of leading jobbers hold unchanged at \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-

oz. boxes, \$2.25@2.25 in ounce vials, and \$2.25@2.35 in 5-oz. tins, according to brand or quality.

QUININE SULPHATE.—Things are quiet. Recent reductions have not galvanized demand into marked activity, but routine business is in progress. At the London bark auction on April 18 the average unit realized was 1 3/16d. against 1½d. at the sale there in March, netting a decline of 1/16d., which exerts hardly any influence. Jobbers' quotations remain the same: 21 @21½c. for bulk in 100-oz. tins, 21½ @22c. in 50-oz. tins, 22@22½c. in 25-oz. tins, 23@23½c. in 15 or 10-oz. tins, and 28@29½c. in ounce vials, according to brand and amount.

CAMPHOR.—Another decline in this important staple is the feature of the week. Domestic refiners have rather unexpectedly cut prices 5 cents. Although it was known that the competition of the Japanese refined article had been considerable at a slightly lower figure, it has been thought that the rise in London equivalent to about 2 cents would counterbalance this and perhaps firm the situation here. At any rate, values are down further than ever, and jobbers have promptly reduced their schedule of prices proportionately to the following: Barrels, 71@71½c. per pound, and less, 77@82c.; 4-oz. blocks in cases, 71½@72c., and less, 77@72c. per pound; ounce cakes in cases, 73@73½c., and less, 79@85c. per pound; 24s in cases, 75@75½c., and less, 81@85c. per pound. Ounce cakes and 24s in 1-lb. boxes, 1c. per pound additional.

MENTHOL.—The wholesale market is in an extraordinary condition. It cannot find its own level according to legitimate influences and economic laws because of speculative manipulation. Certain local holders have undoubtedly attempted to corner the market and have been literally caught with the goods, but are obstinately resolved to maintain a fictitious level of values. On the other hand, persistent bears are continually hammering and supplies are accumulating. Each dealer is cautious and watchful of others. Which way the cat will jump next cannot be surmised. Prices have already fluctuated considerably, and this week sees a further decline. Jobbers have lowered their prices to \$2.70@2.90 for crystals per pounds and 25@30c. per ounce.

CODLIVER OIL.—The consuming season is practically over and little interest is evident. The tendency of values is easier. It is rumored that one house has offered Norwegian oil in the South at \$26.00, but this cannot be confirmed. Prices here are nominally unchanged by jobbers. Reports from the regions of production continue bearish, assuring a good catch of cod and a satisfactory quality of oil. In this connection a correspondent of the London Chemist and Druggist, writing from Bergen, Norway, says: "The total catch of cod for the whole of Norway since the beginning of the season now amounts to 24,314,000, against 18,677,000 at the corresponding period of last year. The yield of steam-refined oil is now 17,530 barrels (an increase of 4,322 barrels for the week), against 6,230 barrels in the same week of 1904. The fishing has been favored by fine weather, but Lofoten shows signs of declining, while Finmarken gives uneven results. Market appears to be

settling down and 55s. f. o. b. Bergen will readily buy finest Lofoten oil." Local jobbers continue to openly quote Norwegian \$38.00@40.00 per barrel, \$1.50@1.60 per gallon in 5-gal. tins, and \$1.50@1.75 for less, per gallon.

GOLDEN SEAL ROOT.—Offerings and reports of offerings of spring-dug root are unsettling the market and a slight decline has already occurred from the recent high level. Jobbers are now asking \$1.90@2.15 for the whole and \$2.00@2.25 for the powdered per pound.

COCAINE.—While no price alterations have developed the situation presents features of interest through recent foreign advices. Local demand is satisfactory and jobbers still quote \$4.00@4.25 per ounce for hydrochloride. It is reported from London that another important maker has joined the syndicate of manufacturers, whose importance as a competitor warranted his inclusion. This ring now numbers five makers, and it is thought values will be forced higher, more especially as it is said that the present cost of crude cocaine and coca leaves warrants an advance in refined.

GUM CHICLE.—Although demand is good, supplies of Mexican have increased so rapidly that a decline has resulted. Jobbers have reduced their quotations to 57@64c. per pound.

HYPHOPHOSPHITES.—An advance has resulted in several of these, because of the increased cost of raw materials. Jobbers now quote calcium, potassium, and sodium 80@90c. per pound.

CANTHARIDES.—The Chinese files are in rather heavier supply, 26 cases having arrived in this market last week, and competition being keen, prices have eased. Jobbers quote Chinese 79@89c. for the whole and 89@99c. for powdered per pound. Russian unchanged.

COCA LEAVES, TRUXILLO.—The prime are very scarce here and are also higher abroad. There is a good demand and prices are up, with good prospects of going still higher. New jobbing prices are 36@46c. per pound for the whole, and 41 @51c. for the powdered per pound.

LADIES' SLIPPER.—This has been very scarce for a long time, resulting in an advance this week to 57@62c. for the whole and 62@67c. for powdered per pound from jobbers.

CAJEPUT OIL.—Values are a trifle easier and jobbers' quotations have reacted to 84@99c. per pound.

CASSIA OIL.—This essential oil is also lower, demand being unsatisfactory, and jobbers have reduced prices to 97c.@\$1.12 per pound.

WORMSEED.—Levant has risen because of diminishing stocks and new jobbing values are: Whole, 23@28c., and powdered, 26@31c. per pound.

LICORICIUM.—A moderate decline has occurred at wholesale, as cable advices report a lower importing cost, but as this is thought by many dealers to be put a temporary fluctuation, jobbers make no change and still quote \$1.05@1.20 per pound.

PHOSPHORIC ACID.—Manufacturers have advanced prices of the syrup 1 cent per pound because of increased costs, and jobbers now quote 36@41c. per pound.

POTASSIUM ACETATE.—A rise of 5 cents has been declared by manufacturers and jobbers follow, listing 40@42c. per pound.

VOL. XXXIII,

NEW YORK, APRIL 27, 1905.

Number 17.

OUR SEMI-ANNUAL PRICE-LISTS.

To old friends the character of the price-lists which we present in this section of the Era is well known. A casual examination by a new reader will quickly show their value. To the former we say that all the good old features have been retained, while each item has been carefully revised to date with the inclusion of many new details. To the latter we extend a hearty introduction to the lists, which will soon win their confidence and approval.

This completion is the most complete and accurate of its kind, as it is the latest. Its revisers have spared no pains to achieve this end, and are now content to await their readers' approval. Over 45,000 items are here embodied, many new ones having been added since our last price-list in October.

During the last six months the market for drugs and chemicals has held fairly steady. No very violent upheavals have occurred to upset the smooth course of commercial activity, and this is a source of general congratulation, for sharp, radical changes are not conducive to the consummation of a large volume of transactions at either wholesale or retail.

Consequently, the trade is in a fairly prosperous condition. The first half of the year gives promise that the last half will fulfil, and 1905 should go out with a legacy of satisfaction to the trade at large.

Of course, there have been many alterations. The majority of these have been of an upward trend in values. Several prime causes created this situation, among which were the drought general throughout Europe two years ago and the widespread scarcity of indigenous drugs in this country.

Some of the leading commodities now on a higher plane than at the date of our last price-list issue are opium, iodine, cocaine, the citrates and wood alcohol, while the declines include quinine, the bromides, codliver oil, cottonseed oil, chloroform, and a few essential oils. A few of the changes were caused by arbitrary trade influences not of a natural origin, but the majority trace back to climatic reasons. The Far Eastern war has, of course, influenced values somewhat, but not to the extent which had been expected.

Conditions are therefore satisfactory on the whole and give promise of continuing. All these changes just mentioned, besides the hundreds of others of

minor importance, will be found noticed, and all the list prices are right down to date.

It is with confidence, therefore, that the Era introduces its latest price list, assured that it will prove highly useful until the appearance of its successor six months from now.

Recognizing the permanent features of this issue as compared with the routine ones fifty times a year, many leading firms who supply the drug trade have caused the insertion of notices of their offerings, and these we recommend to our readers.

THE TREASURY'S PART.

Details of Its Duties Under the New Trade Mark Law.

The Treasury Department has issued a notice regarding its share in the workings of the new trade mark law to manufacturers. The paragraph most concerning the Department is section 27. The provisions of this section give to manufacturers and traders located in foreign countries, which, by treaty stipulations, give similar privileges to the United States, the same advantages as are given to domestic manufacturers and traders. The act does not affect names or trade marks heretofore recorded in the Treasury Department, and as to them the protection granted so far as concerns prohibition of importation will continue. Nor does the act appear to make it compulsory on the part of domestic manufacturers or traders, or foreign manufacturers or traders, to register names (not trade marks) with the Commissioner of Patents, in order to prevent illegal importations.

Domestic manufacturers and traders, and foreign manufacturers and traders, to avail themselves of the privilege of the act, so far as concerns trade marks, are required to register their trade marks with the Commissioner of Patents before the Treasury Department can act.

TO OBTAIN RECORD WITH TREASURY.

Applications for recording the names and trade marks in the Treasury Department, under section 37, will state the name of the owner, his residence, and the locality in which his goods are manufactured, and in the case of trade marks, should be accompanied with a certified copy of the certificate of registration of his trade mark, issued in accordance with the provisions of the act, and the names of the ports to which facsimiles should be sent.

In the case of the name of a domestic manufacture, manufacturer or trader (not registered as a trade mark in the Patent Office), the application must be accompanied by the proper proof of ownership and proof as to the country or locality in which his goods are manufactured, which must consist of the affidavit of the owner, or one of the owners, certified by an officer entitled to administer oaths and having a seal.

On the receipt by a customs officer of any such facsimiles, with information from the Department that they have been recorded therein, he will properly record and file them, and will exercise care to prevent the entry at the custom-house of any article of foreign manufacture copying or simulating such mark.

No fees are charged for recording trade marks in the Treasury Department and custom-house.

OTHER PARTICULARS.

A sufficient number of facsimiles should be forwarded to enable the Department to send one copy to each port named in the application, with ten additional copies for the files of the Department.

Especial attention is invited to the provision in said section prohibiting the entry of articles "which shall bear a name or mark calculated to induce the public to believe that the article is manufactured in the United States, or that it is manufactured in any foreign country or locality other than the country or locality in which it is in fact manufactured," and collectors and other officers of the customs are instructed to use due diligence to prevent violations of this provision.

FORMALDEHYDE SOAP.

Nearly all medical authorities unite in the statement that formaldehyde is one of the most powerful germicides, equal, if not superior to corrosive sublimate and practically non-toxic in the strength employed. Houghton's 5 per cent. Formaldehyde Soap (liquid), manufactured by Gibbs & Co., 102-104 Fulton street, New York, has many claims for favor. It possesses all of the germicidal properties of formaldehyde and is so diffusive when used that it reaches and destroys pathogenic germs in the folds of the skin and under the nails of the hands where a bichloride soap would only penetrate with difficulty, if at all. It is especially recommended in cases of lvy poisoning, insect bites, prickly heat, eczema and affections of the feet where there is excessive perspiration and odor. See Gibbs & Co.'s advertisement for particulars.

SPERMACETI REFINING.

How It Is Obtained and Process of Manufacture.

ITS CHIEF USE HAS BEEN IN THE MAKING OF CANDLES, BUT ITS SERVICES IN PHARMACY HAVE BEEN CONSIDERABLE.—NOT AS MUCH IN DEMAND NOW AS FORMERLY.

While the importance of spermaceti in pharmacy is not as great as it is in some other lines, still its use is extensive enough to make any information about it timely. At one time spermaceti was extensively used for internal treatment of irritation of mucous membranes. A useful emulsion for children and infants is still frequently compounded from it, the other ingredients being half the same weight of olive oil and powdered gum arabic. The spermaceti and oil should first be mixed and then the gum arabic added, and finally some water should be worked in. Spermaceti also forms a useful ingredient of several cerates and ointments.

In view of this well-known service in pharmacy, a recent report of the United States Commission of Fish and Fisheries, treating of the refining of spermaceti and its manufacture is particularly interesting.

WHAT IT IS AND HOW OBTAINED.

Spermaceti is the solid portion of the crude oil of sperm whales and of certain other cetaceans. It occurs in a state of solution in special cavities of the skull and to a much less extent in various parts of the body, especially in the core of the dorsal hump.

The two varieties of oil obtained from sperm whales, namely, body oil and head matter, differ greatly in appearance. The former is of a light straw color, while the latter, which is spermaceti, when first taken from the head of the whale is as clear and limpid as water, but after a short time thickens and hardens into a white mass. Every animal is supposed to yield about two-thirds body oil and one-third head matter. These are kept separate on shipboard, but when received at the refinery they are generally mixed in natural proportions and together submitted to a process to separate the oil and spermaceti. This mixture of oils is subjected to three processes, producing from the first, what is called "winter sperm oil," from the second, "spring sperm oil," and from the third process, "taut pressed oil." The residue in the bags, after the extraction of the "taut pressed oil," is crude spermaceti of a brown color, which will melt at a temperature of 110° to 115° F. The methods of dealing with the three first mentioned products, we shall not consider at present, but shall proceed to examine the process to which the crude spermaceti is subjected.

It may, however, be interesting to note first, a few figures. A barrel of crude sperm oil of 31½ gallons, weighing 251 pounds, yields 25 pounds of refined spermaceti, which usually sells from 23 to 24 cents a pound.

After the extraction of the "taut pressed-oil," the crude spermaceti is beat in vats or tanks, refined and "whitened" by the introduction of some alkali, as a weak solution of caustic soda or caustic

potash, to saponify any adhering oil. Care must be taken during this process that the spermaceti does not saponify, any tendency to do so being overcome by the addition of brine. The refined product is then molded into suitable shapes for marketing. Most of it is formed into blocks measuring 10 by 12 by 14 inches, and weighing about 62 pounds each. It is also molded into cakes weighing one pound, half-pound, quarter-pound, or of any desired weight.

PHYSICAL CHARACTERISTICS.

Spermaceti is white, semi-transparent, unctuous or talcose to the touch, of a slight fatty taste and odor. A fracture of a cake reveals broadly foliated, crystallized pieces resembling quartz. According to

it became better known, however, it occupied a minor position. In materia medica, chiefly in the preparation of ointments, and its principal use was in candle-making.

GROWTH OF CANDLE INDUSTRY.

The beginning of candle-making in America dated from about 1750. The number of factories increased rapidly, and in 1761 there was a total of eight in New England and one in Philadelphia. In 1772 the first candle factory was established at Nantucket, then the headquarters of the whale fishery, and the number increased until there were ten in existence on the island in 1792, and an equal number then existed at New Bedford. The business of preparing spermaceti was then separate

VAT FOR BOILING AND REMOVING SEDIMENT.

Brant, its specific gravity is 0.943 at 59° F. It yields nothing to water, and very little to cold alcohol, but is readily soluble in ether, chloroform and bisulphide of carbon. It melts at about 125° F., and congeals immediately below the melting point. Its component parts, according to the same chemist, are carbon, 80.03 per cent.; hydrogen, 13.25 per cent., and oxygen, 6.72 per cent.

It is not easy to adulterate spermaceti without detection, since its characteristic properties are readily diminished, the compound being harder, with decreased nacreous luster and smaller foliated crystals. Tallow is readily detected by the odor given off in melting, and also by the compound making fat stains on paper, which is not the case with pure spermaceti. Stearin renders it harder and smaller foliated, and its presence is readily detected by boiling the sample in a soda solution, effervescence occurring in the adulterated article. If exposed to the air for a long time, spermaceti becomes yellowish and somewhat rancid, but when remelted and treated with diluted caustic soda or potash it regains its original condition.

In the early history of the sperm-whale fishery, spermaceti was considered of great value for medicinal purposes, and was recommended for many ills of the body, but was employed principally for internal applications, especially in cases of inflammation. It was so much in demand before the full development of the fishery, as to sell at times for its weight in silver. As

from the general whale-oil refining industry, the candle-makers purchasing the crude head-matter only. But gradually the two industries were combined to their mutual advantage. When the sperm-whale fishery developed to its full capacity, the production of spermaceti was very large, averaging more than 3,000,000 pounds annually from 1835 to 1845. With the decrease in extent of the fishery, there was a corresponding decrease in the yield of spermaceti, reaching its lowest product in 1890, when less than 200,000 pounds were prepared.

Spermaceti is among the very best materials for candle-making, the product being beautifully semi-transparent and nacreous, burning with great regularity and with white light of high illuminating power; yet owing to the cheapness of other materials, especially paraffin, only a small percentage of the candles used at present are made of this material. To reduce the tendency of spermaceti to crystallize in molding and consequently lower its friability, it is customary to add a little paraffin wax, tallow, stearin, bees-wax or cerasin. The clear, natural color of the refined spermaceti is usually preferred in candles, but sometimes coloring material is introduced, in so small a quantity, however, as not to destroy the transparency of the spermaceti. A yellow tint is imparted by adding gamboge, a red by carmine and a blue by prussian blue. Owing to the cheapness and excellence of paraffin candles, the consumption of sper-

mactel in candle making has been greatly reduced. The quantity thus used at the present time bears no relation to the extensive use of petroleum wax for that purpose, the consumption of which in Great Britain alone amounts to upwards of 50,000 tons annually.

PRESENT DAY USES.

Sperm candles are at present the standard used by the principal gas-examiners for photometric measurements. The rules for the preparation of standard sperm candles for photometric purposes, published by the Metropolitan Gas Referees, of London, prescribe that, for the purpose of rendering the spermaceti less brittle, best air-bleached beeswax, melting at about 144° F., shall be used exclusively, and the proportion of beeswax to spermaceti shall not be less than 3 per cent. nor more than

or 31½ gallons, of sperm oil. It should be noted, however, that considerable crude sperm oil is exported and the spermaceti extracted abroad.

On this basis the total yield of spermaceti from oil refined in the United States was about 550,000 lbs. in 1902, the production of sperm oil being 21,970 barrels.

SEND FOR A BOTTLE.

The Thompson Mfg. Co., of 22 and 24 River street, Chicago, Ill., is extending an invitation to all druggists, whether they have a fountain or not, to send in a request for a bottle of Phosferine, which will be sent to them by prepaid express, free of charge. They are anxious to demonstrate to each druggist that Phosferine has a certain distinct quality of its own that is

show that we appreciate the stand taken by the proprietors of Lactated Food, in the way of increased sales, will be able to demonstrate to other proprietors of infants' foods that it is "up to them" to get in line and place their foods on the \$2.00, \$4.00 and \$8.00 schedule, and the direct contract and serial numbering price protective plan.

By pushing Lactated Food we certainly give the proprietors an object lesson which cannot fail to interest them in our work.—N. A. R. D. Notes.

APPRAISERS' DECISIONS.

Dill and Parsley Seeds.

The Board of General Appraisers has decided in the case of an importation at Galveston, by Harry Hawley, that dill and parsley seed are dutiable as aromatic seeds which are drugs.

Cut-Glass Bottle Stoppers.

Stoppers of cut-glass, imported by the Carr-Lowrey Glass Company, of Baltimore, were held to be properly classified as articles of cut-glass.

Needle Depilators.

M. B. Carlin, of Baltimore, recently protested against an assessment of duty. The articles in question consisted of slender needle-like implements without an eye or other opening, pointed at one end, in which end there is a slight curvature, being used in connection with an electric battery in depilatory processes. They were classified as manufactures of metal, and were claimed to be surgical needles and dutiable under the paragraph relating to needles. The Board overruled the protest.

Toilet Articles.

Certain articles, such as nail sets, baby sets, comb sets, shaving sets and brush sets, imported by R. H. Macy & Co., at New York, and invoiced as entreties, were classified under the provision in paragraph 70, act of 1897, for "other toilet articles." The Board was of the opinion that they are not included within said paragraph, because not *ejusdem generis* with the other articles enumerated, and held that they should have been classified as manufactures in chief value of celluloid, under paragraph 17. As the importers did not make this contention, their protest was overruled.

Cocaine-Salts of Opium.

Cocaine imported by Emil Levi, at New York, was assessed as an alkalioid, or salt of opium. The importer protested, claiming it dutiable at a lower figure, as a drug, or as an unenumerated article, or as a medicinal preparation. These protests were overruled, the Board summing up as follows: The merchandise is correctly invoiced as cocaine pure, cocaine sulphate, and cocaine phosphate. Cocaine pure is an alkalioid of opium. It is in the opium supposed to be in combination with meconic acid, with which upon extraction it is found combined and afterwards isolated by treatment with an alkali, or it is also produced by extracting the alkalioid morphine from opium and methylating the morphine, and the cocaine so obtained. Is identical with

PACKAGES OF BLOCKS, CAKES AND CANDLES OF SPERMACEITI.

4½ per cent.; the spermaceti itself to be so refined as to have a melting point lying between 112° and 115° F.

The production of spermaceti in 1901 in the United States was about 100,000 pounds, worth \$100,000. Of this amount probably 70 per cent. was exported to Germany, England and other foreign countries. Its principal foreign use is in the making of candles, large quantities being made in England and Germany for ecclesiastical use, especially in southern Europe. Minor uses are as an ointment for medicinal purposes, in laundries for producing a polish on linens, and for self-lubricating cartridges. Of the domestic consumption, probably 5,000 pounds are used in candle-making and the rest for medicinal and industrial purposes.

During the year 1901 the value of spermaceti greatly decreased, sales during November being made at twenty-two cents per pound, the lowest price reached in the last ten years.

No exact figures are available to show the product of spermaceti during a period of years, but the approximate yield may be determined from the yield of sperm oil, remembering that about twenty-five pounds of spermaceti is obtained from a barrel,

bound to make it even a greater success than the original Thompson's Wild Cherry Phosphate up to the time Mr. Thompson withdrew from the business. Their advertisement appears on another page.

WORK FOR LACTATED FOOD.

The attention of the members of the N. A. R. D. and all other retail druggists who are interested in securing price protection, is again called to the fact that Lactated Food, one of the oldest (having been on the market for over twenty years) and most highly thought of infant foods on the market, is now upon the \$2.00, \$4.00 and \$8.00 schedule. Lactated Food is also upon the direct contract and serial numbering price protective basis. No other proprietor of infant foods has yet seen fit to give us the degree of protection and price combined that the Wells & Richardson Co. have given us on Lactated Food.

There is more clear money to-day in selling Lactated Food than in selling any other standard and well-known infant and invalid's food. Purely as a matter of business, retailers should realize this fact. Also every N. A. R. D. member should realize that it is only by making every effort to

the codain obtained directly but in smaller quantities from the opium. Codain as an alkaloid of opium is also a base, and when treated with sulphuric acid or ortho-phosphoric acid, gives, respectively, the alkaloidal salts of opium known as codain sulphate and codain phosphate, which are covered by these protests.

Arrowroot Starch.

The starch extracted from the tubers or roots of the arrowroot plant, and which is commercially known as arrowroot, but is chemically a starch, and could be used as such, though most largely used for infants' food, and to some extent for making medicinal preparations, is dutiable by similitude at the rate applied to "starch," including all preparations, from whatever substance produced, fit for use as starch," by paragraph 285, tariff act of 1897, and is not dutiable as a non-enumerated unmanufactured article, under section 6, or free as "arrowroot in its natural state and not manufactured," under paragraph 478.

This decision was reached by the Board of General Appraisers in considering the protests of Middleton & Co., against the assessment of duty on an importation at New York, at the rate of 1½ cents per pound, as starch. One appraiser dissented from the decision.

Dried Lizards.

The Board has decided that dried lizards are not dutiable as medicinal preparations, but as unenumerated, unmanufactured articles at 10 per cent. ad valorem. The case arose through the protest of Song Chong, who had imported these lizards at New York, where they had been assessed at 25 per cent. ad valorem as medicinal preparations. The merchandise consisted of lizards, dressed and dried, while stretched on pieces of bamboo. They are so imported in pairs, supposed to be a male and female, bound together. They are prescribed, together with herbs, by Chinese physicians, and the lizards and herbs are cooked together and the broth administered to the patient as a tonic. These articles have for many years been classified for duty as Chinese medicine. After consideration, the Board was of the opinion that said lizards are not used as medicine, but as one of the ingredients to be cooked with herbs to make a medicine.

Manicure Sets.

Importations of these by Deltch Brothers, at New York, were the subject of two recent decisions. In the first case the manicure sets were contained in fancy pasteboard boxes and consisted of a polisher made of wood and leather, a brush of bone and bristles with a small metal file attached, a small piece of sandpaper board, a small wooden box, containing a nail-polishing powder, or a very small bottle in lieu of the box. Duty was assessed under paragraph 70, which relates to various applications for the hair, mouth, teeth, or skin and "other toilet articles." The importers contended that the goods should have been classified as manufactures in chief value of bone, under paragraph 149. In the second instance, the several articles comprising these sets were classified separately under the provisions found applicable thereto. The importers contended that they should have been classified as entireties, according to the component material of chief value, but their protest was overruled.

AN IMPORTANT INVENTION.

The Thermalite Bag Stores and Gives Out Latent Heat.

FAR SUPERIOR TO A HOT WATER BAG.

—CAN BE USED WEEKS AFTER ORIGINAL PREPARATION WITHOUT ANY FURTHER CARE.—CLAIMED TO GIVE A HEAT BETTER THAN HOT WATER UNIFORMLY AT 135 DEGREES FAHREHEIT.—EXTERIOR A RUBBER BAG.—CONTENTS A GRANULAR CRYSTAL COMPOUND WHICH IS PATENTED.

An invention has just been put on the market that is really wonderful. It is a substitute for, or rather improvement on, the hot water bag. It is the Thermalite bag, made by the Thermalite Company, 161-165 Elm street, New York.

This discovery is so remarkable and practically useful that it will in all probability eventually be in every household. There can absolutely be no doubt but that the demand for it, as soon as it becomes known, will be very large, especially as it sells for a reasonable price.

USEFUL, NOVEL AND REASONABLE

Every druggist should, therefore, investigate it at once. We feel sure that he will then stock it immediately. The druggist in any town who is first to feature it should reap a rich harvest. For it is not only a decided novelty, but of surprising utility. Those who have tested its merits are enthusiastic.

The bag has been on the market but a few weeks. You will find the manufacturer's advertisement in another part of the paper, and when you write, please mention The Era is suggesting it to you.

A SCIENTIFIC DISCOVERY.

What is the Thermalite Bag? It is of rubber, closely resembling an ordinary hot water bag externally, except that the stopper is on the corner. But no hot water is ever put in it at all. It is filled with a composition called Thermalite. The ingredients of this are patented under United States patent numbers 683,851 and 723,204. The basis was discovered in France some years ago, but it was only recently perfected in Germany by two chemists who were experimenting for another object, and it was patented by them. The German Thermaphore Company was then organized to exploit it, but the present Thermalite Company is strictly American and has bought the patent rights for this country. R. D. Silliman, who hails from a western State, is president. This company has improved on the German device considerably.

HOW IT WAS EVOLVED.

While we cannot give the ingredients of Thermalite, we can name the principle of its action—it is latent heat; and can say that Thermalite is a granular crystal—a heat-imparting salt, a heat-accumulating compound of great capacity.

When the bag is to be used it is first boiled entire, contents and bag at once. The contained Thermalite should never be taken out. When boiled the Thermalite melts and becomes a liquid. It is the slow re-crystallization of this liquid—that is, the gradual passing back from the liquid to the solid state—that causes the bag to give off even heat for a very long time.

Whether this passing back from the solid to the liquid state takes place immediately or whether it takes place at some future time (perhaps weeks afterwards) depends upon the length of time the bag has been boiled.

When a bag has been boiled for, say, ten minutes, the liquid commences very soon to pass automatically back into the solid state; and throughout this entire change the heat of crystallization—the characteristic heat of Thermalite—is given off at an even temperature.

LATENT HEAT.

This change being of a purely physical (as distinguished from a chemical) nature, does not exhaust or impair the contents of the bag and accounts for the unvarying temperature maintained for so long a time. The hot water bottle, it will be remembered, loses heat constantly and rapidly.

Now, if the bag is boiled twice as long as is necessary to prepare it for immediate use—then, the liquid remains liquid. It does not crystallize, but cools off just as water would and in the same length of time—no faster, no slower.

This heat that is imparted by the hot liquid while cooling off may be used without starting the crystallization, or the bag may be set aside until the "stored up" heat is wanted. After it has cooled off, however, it may remain in a cold liquid state, retaining its "stored up" heat for a long time (even weeks if desired). But suppose that the "stored up" heat is wanted and is "turned on" as directed—where by the process of crystallization is started—then the "stored up" heat is at once released and the ideal, even temperature of the Thermalite is imparted.

Should the contents harden at any time, it simply indicates that the bag has imparted all of its heat and needs reboiling. Kneading the bag a little, while in use, will keep it soft and pliable.

If used with reasonable care the bag will last for years. The contents do not become impaired or exhausted through use.

CAN BE USED INSTANTLY.

The results are the best when the bag is prepared for immediate use. It then imparts its whole heat, automatically, at an ideal, even temperature, from three to four times as long as the same weight of hot water.

People living in hotels and apartment houses can prepare the bag by placing it in slowly running hot water from a faucet until the contents of the bag become liquid. It is advisable not to boil it in tin or other thin metal if anything better is available.

A HARMLESS COMPOUND.

There is absolutely no danger in using the bag. It contains no explosive chemicals, no gas, nor is there any danger of scalding by breaking of the seams, as is the case of the hot water bag. It is lighter than a hot water bag of the same size. Boiling the bag sterilizes it—invaluable from an antiseptic point of view.

But perhaps the best feature is the uniformity of temperature imparted, maintaining 135° Fahrenheit, from three to nine hours, according to the size of bag used.

METHOD OF FUTURE USE.

To turn on the latent heat, presupposing the bag has been boiled for at least twenty minutes at some previous time and that the contents is in a liquid state, but cold, take out the stopper for a short time and knead the bag a little with the hands. This starts the crystallization. Return the stopper firmly to its place. In about one minute the bag will be hot.

The manufacturers guarantee that the bag will do what is claimed, and will refund purchase money if the buyer is not satisfied, after a month's trial. The Thermoite bag is the only article on the market which stores heat for future use, which heat may be turned on instantly, when wanted.

Retail prices are very reasonable. A small face bag sells for \$1.25; a one quart bag for \$1.50; two quarts, \$2.00; three quarts, \$2.50, and four quarts, \$3.00.

Prices to the trade are 25 per cent. off on the first three sizes and thirty off on the last two.

When writing to the manufacturers, the Thermoite Company, 161-165 Elm street, New York, please mention The Era.

COUNTING AND FILLING MACHINES.

Mathematicians have made many arithmetical operations comparatively easy by the use of logarithms, a series of numbers having a certain relation to the series of natural numbers. So also the invention of the Automatic Counting and Filling Machines, by John W. Ayers & Son, 144 Centre street, New York, has made comparatively easy the solution of the labor question by the manufacturer who has pills or tablets to be counted and packed into receptacles, whether box, bottle or carton. The Ayers Counting and Filling Machine is claimed to be the only accurate counter now on the market. By the insertion of interchangeable counting tubes the production of the machine is practically limitless, and it is guaranteed to be accurate in count and not to break or mar tablets. Save your time and get a machine that is as accurate as a cash register. See advertisement for further information.

THE OLD AND NEW WAY.

The druggist who pastes his prescriptions in a book, or files them on a string or wire, and in other old-fashioned ways, could save himself and his clerks much time and trouble, by investing a small amount of money in a Reliance Prescription File. These files, made by the Reliance Cabinet File Co., 208 Post Square, Cincinnati, Ohio, are quick and handy, and save time and labor. They have a capacity of 1,000 prescriptions and when full, the prescriptions can be quickly and easily transferred to the transfer case which accompanies them. One of these devices should prove to be a profitable adjunct to any drug store. If you are interested, drop a postal to the manufacturers and ask for their catalogue, which shows a full line of druggists' filing devices and specialties. It will cost you but one penny and may save you dollars.

SHOW WINDOWS AND FEATURES.

Easter Reigns Supreme With Gardens of Flowers and Palms.

A FOUNTAIN ILLUMINATED AT NIGHT BY ELECTRIC LIGHTS.—A CUPID CLIMBING A LADDER OF BEAUTY.—LIVE CHICKENS FROM AN INCUBATOR.—A LOTTERY SCHEME.—A PICTURE OF A STEAMER FEATURING A CURE FOR SEA SICKNESS.

The Wm. B. Riker Sons & Company's new Brooklyn store, at the corner of Flatbush and St. Marks avenues, was formally opened on April 14, and the inaugural celebration was carried on throughout the following day. Souvenir bottles of a perfume put up by the firm were presented to each customer. The interior was decorated with azaleas, lilies in bloom, and large natural palms, while the columns, the cashier's desk, and the fixtures of the soda fountain were twined with artificial red poppies, suggestive of the Easter season. The whole store is light and the sunshine pours into the prescription department, a rather unusual feature in New York drug stores.

All the show windows are lined with mirrors at sides and back, thus reflecting the goods exhibited as well as the attractions of the ladies who gaze therein.

CUPID WORKING HARD.

The window occupying the junction of the two avenues was designed as a reproduction of the firm's "Beauty Book," featuring their own make violet cerate. In the center of the window was a large square, the face of which was a reproduction of the lithograph of the label on the cerate packages. On the top of the square stood a wax bust of a woman. Leaning against this shrine of beauty was a ladder, upon the top rung of which stood a little cupid, who, according to the announcement of a card hanging from the ladder, was a "Beauty Builder" hard at his specialty.

At the base stood a large card, which stated: "Worry makes wrinkles; if you must worry, use Riker's Violet Cerate. It smooths wrinkles away."

The window was hung with smilax and bunches of artificial violets. Dainty packages of the cerate were artistically arranged around the central figure and among them were attractive signs bearing a lithographed and illuminated border of violets, and carrying the sentence, "There is beauty in every jar of violet cerate." Hanging from the ceiling, in each corner, were combination show jars, while in each rear corner stood a bronze statue of an historical beauty.

The long show windows are divided into sections by mirrors, and each section featured some special "own make" goods.

OF RURAL TONE.

The first section near the door on Flatbush avenue was devoted to Riker's antiseptics, which was featured by the stump and wedge device previously described in The Era. The corners of the window were filled in with semi-circular steps, covered with cloth, painted in imitation of stone.

The drapery ended in the front corner with the effect of a boulder, the side of which had been chiseled with the inscription, "Go to Rikers." The floor of the window was covered with crepe grass. Everywhere were sprays of apple blossoms.

The third section featured an "own make" shampoo, a liquid green soap, to set off which a white Bedford cord dress goods was used as drapery. Another section of the windows contained "Saturday candy," in white boxes, harmonized with green drapery.

HATCHING EASTER EGGS.

J. G. Wischerth, 107 Bedford avenue, Brooklyn, made an attractive and profitable Easter window, by exhibiting some three hundred chickens, two to five days old. Live animals in a window never fail to attract attention. The larger of these chicks were continually running up and down the length of the window, scratching in the broken straw for little seeds scattered therein. The younger ones gathered closely around a substitute for a mother hen, which was a glass brooder, heated beneath by a gas stove. The whole of this contrivance was covered with folds of cloth. Any of the little fowls were for sale at twenty-five cents, and even allowing some loss through usual mortality, a good profit was assured.

Wilson's, Broadway and Wall street, while retaining the window display of cigars described in The Era for April 13, have ingeniously varied it by removing the central sign from the frame and inserting therein a gigantic fire cracker. A card states, "This will not burn, but our cigars will burn and smoke to the end."

PREMIUMS AGAIN.

The Knickerbocker Drug Co., 648 Broadway, is tempting the wrath of the district attorney by an appeal to the love of chance inherent in most New Yorkers. Jestingly aside; they are using the old lottery device to feature a throat lozenge, each box of which contains a coupon calling for some special article in stock. Announcements state that the value of the premiums ranges from fifteen cents to two dollars and that there are no blanks. A customer may draw most anything, from a box of talcum powder to a razor, or even, supreme bliss, a silk umbrella.

Alper's, Broadway and Thirty first street, New York, have brought to the front their antidote for seasickness, and report a heavy sale, due to so many travelers booking for Europe for May and June. It was featured by a framed picture of the Kaiser Wilhelm der Grosse coming into dock from down the bay, with a little tugboat lying off the port side. A card announced that a bottle would only cost \$1. Alper's also featured a new shampoo and hair food. It is made of herbs and put up in little white muslin bags, labeled with directions.

A FAMILIAR TABLEAU.

The well-known device of the Douglas Manufacturing Co., advertising their New-Skin, is constantly appearing in drug store windows. It makes a very effective display and draws trade satisfactorily. Recently, there have been a great many of these tableau designs in evidence, more than usual. Both the cat on the stump and the fox terrier baying at the bottom are very lifelike, and the whole scene never fails to call up a smile of recollection on

the passer's face. On the cat hangs a sign reading, "Good for scratches; so is New Skin." On the dog's collar dangles another, running, "Good for harks and bites," while on the hatchet sunk in the stump is the assurance, "Good for cuts." Even the stump bark gets in the conversation with the observation, "If you bark your skin, etc.," while a stone caps off with, "Good for bruises; so is New Skin."

Riker's store at 456 Fulton street, Brooklyn, hailed Easter, in its windows, with a display of an "own make" toilet water. Indeed, all of the stores of this concern in New York and Brooklyn have been pushing this with a color scheme of white and green. The white has been supplied by genuine Easter lilies and arbutus, the green by the color of the preparation itself. The usual background of mirrors, with oak trimmings, was struck with smilax in a perpendicular arrangement, corresponding with the lines of the tall Bermuda lilies which were lined up, but not too closely, all around the rear and sides. On the floor was an artificial grass carpeting, upon which stood the bottles of the toilet water. In each rear corner was placed an oak pedestal supporting a potted lily in full bloom. Wound round these pots was white ribbon, about six inches wide, the streaming ends of which, escaping from the bows, trailed gracefully down nearly to the floor.

FLOWERS AND LIGHTS.

In the corners of the foreground were massed platforms of the bottled water bearing sheets of plate glass and on these stood other containers. Show cards were distributed with discrimination, stating prices and suggesting that this lily toilet water was a very appropriate gift for Easter.

But the crowning charm of all held the center, in the shape of a three-decked iron fountain, painted white. All the basins were filled with moss, the two lower also containing bottles of the water, while from the highest rose little potted palms. Round the rims of all three basins ran small electric light bulbs, alternating green and white, adorned with arbutus. During the day this display was charming, but at night, when the electric lights gleamed through the flowers, it was truly beautiful.

A TYPEWRITER FOR DRUGGISTS.

The attention of our readers is called to the large advertisement of the American Typewriter Co. on the cover section of this edition. The American machine is particularly adapted for druggists' use. It is simple in construction, does perfect work and the manufacturers claim that it will last longer than any high priced typewriter.

Many druggists find that it is to their advantage to have a typewriter, not only for their correspondence, but for the writing of labels; still others use it for making out their invoices and statements. It gives an air of prosperity and business which is to the druggist's advantage. You can make no mistake in sending to the American Typewriter Co. for full descriptive circulars in regard to their new one-piece type bar machine. Their address is 271 Broadway, New York.

A DRUG STORE IN THE WALDORF.

Details of the Plans for Fitting the Departments.

GROWTH OF DAGGETT & RAMSDELL. SOME NOVEL IDEAS EMBODIED IN THE DECORATIONS AND ARRANGEMENTS.—PORTRAITS OF THE TWO MEMBERS OF THE CORPORATION.

Work on their two new departments in the Waldorf-Astoria hotel is being pushed rapidly by Daggett & Ramsdell. It was the original intention to have these branches in full working order by the first of May, but the amount to be done and the number of obstacles to be overcome will probably prove too great to permit the realization of this intention within the short period between the date of the original conception and the first of next month.

The firm's intention is to establish a booth for the sale of toilet articles, perfumery and sundries of a high grade, in the Astor Court end of the northern corridor of the Astoria, at the spot where the

V. CHAPIN DAGGETT,
of Daggett & Ramsdell.

package room is now located, and, on the floor above, to open a prescription department. Between these two there will be installed a pneumatic tube service and connecting both of these with the main parent store on Thirty-fourth street will be private wire telephones. A corps of uniform messengers employed by Daggett & Ramsdell will deliver all purchases to the guests of the hotel and to patrons in the vicinity. This will do away with the present evil of tipping, which was a necessity whenever regular employes of the hotel were employed to call for orders at the main store, so that the cost of prescriptions to customers will be greatly reduced.

GROWTH OF THE BUSINESS.

The growth of the corporation of Daggett & Ramsdell has been rapid. The first enterprise was started by Messrs. Daggett

and Ramsdell at 325 Fifth avenue, in 1890. Following the growth of the business, the present main store on West Thirty-fourth street was opened in 1897, and the concern was incorporated in the following year. The business was started with two men and a porter; now it employs close to forty men. Other items illustrating the growth of the enterprise are the fact that very recently, in one lot, one million labels were ordered by the firm, and only last year one quarter million of samples of their cold cream were put out by various druggists throughout the country.

The booth for the sale of toilet articles and sundries has been conceived in a design appropriate to the surroundings of its location in the Waldorf. The materials will be mahogany, nickel, plate-glass and leaded art-glass, with gold touches here and there in the wood work. Its dimensions will be: Height, 14 feet; depth, 11½ feet; length, 16 feet. The ornamental top will be composed of colored plate-glass, and will be lighted in an ingenious manner, the main steel beam of the front concealing the electric lights from the direct vision of the customer, so that the whole compartment will be suffused with a mellow radiation pleasing to the senses. The entire back of the pavilion will be composed of French plate mirrors, the ornamental and decorative effect of these being easily realized. The show cases will be composed of plate-glass set in mahogany frames, standing on a marble base, which will match the marble used throughout the trimmings of the hotel. The ceiling will be paneled in birds'-eye maple, touched here and there with gold. All around will run shelves of very thick plate-glass, mounted in old brass, which will blend charmingly with the gold touches previously referred to. The whole intention is to make the effect rather fairy-like and in harmony with the lines of goods there carried and the quality of trade to be catered to. These fixtures, as well as those of the prescription department, are to be made by Fischer Bros.

THE PRESCRIPTION DEPARTMENT.

The prescription department, on the floor below, adjoins, on one hand, the ladies' and gentlemen's hair dressing parlor of the hotel, and the sales rooms of the Waldorf-Astoria Importation Company, on the other. Across the whole front will run plate-glass, leaving, of course, an adequate entrance, which will portray to the passers at a glance the whole interior and everything displayed therein. The dimensions of this department are about 15 feet by 18 feet, while the height is nearly 16 feet. The floor is tiled and so are the walls, and the whole is brilliantly illuminated with electricity. The necessary compartments and closets for pills, tablets and fluid extracts are designed in an ingenious way, a system which may be described as three swinging, interlocking, shelved sections being employed, which will produce a result of five shelves, where ordinarily there would be one in the similar amount of space. These fixtures run right up to the top of the ceiling and are rendered accessible by traveling ladders. Their base will be dead, or wax finished mahogany, while the superstructure will be white enamel, trimmed with a light green. The counters for sales purposes of the usual play will carry glass shelves of the usual type, which rise on a marble base-board

harmonizing with the trimmings of the hotel corridor.

Mr. V. Chapin Daggett and Mr. Henry M. O'Neil are the two members of the firm, the former being secretary and treasurer of the corporation, and the latter its president. Mr. Daggett was born at South Weymouth, Massachusetts, served an apprenticeship in the drug trade at Rockland, of that State, was graduated from the Massachusetts College of Pharmacy, in the class of 1883, with honors, being its valedictorian. He came to New York in 1885, and subsequently became manager of the pharmacy then located at Thirty-fourth street and Broadway, leaving it eventually to found his present firm. In 1890. He is well-known to the drug trade, both of New York and the country at large, and is a member of the American Pharmaceutical Association and the New York College of Pharmacy.

SOME RECOLLECTIONS.

Mr. O'Neil hails from New Jersey, being born at Fort Lee in 1850. He entered his first drug store in New York, in 1872, was graduated from the New York College of Pharmacy in the class of 1875, and immediately went into business for himself. His first store was located in Old Greenwich Village, at the corner of Greenwich and Barrow streets. Later he moved to one at the intersection of Greenwich and Hudson streets, and this he occupied for the long period of twenty-one years. After that, Mr. O'Neil became interested in rather rapid succession in a number of different stores, one in Newark and several in New York, but has now given up all other interests save his connection with the corporation of Daggett & Ramsdell.

The enterprise of the firm in assuming the necessarily heavy obligations of an entrance into the Waldorf will undoubtedly meet with an adequate reward, and they deserve credit for their determination to make the quality and details of their service in that hostelry correspond to the tone of their clientele.

DRUG TRADE JOTTINGS.

Mr. William J. Baird, now retired, for forty years the representative of Powers & Weightman in this city, is about to make a trip to Europe, on the 18th proximo. His friends, and they are legion, wish him godspeed and a safe return. No one in the trade, we venture to say, has so many close personal friends as Mr. Baird.

The report still continues that Ehrich Bros., the large department store at Twenty-second street and Sixth avenue, are trying to rent out part of their building to a druggist. However, Ehrich Bros.,

HENRY M. O'NEIL,
of Daggett & Ramsdell.

through their superintendent, Mr. Parry, definitely denied to an Era representative any such plan, and claimed that the idea had never occurred to them. Mr. A. H. Cosden, secretary and manager of the Wm. B. Riker & Son Company, whose store adjoins that of Ehrich Bros., stated that he had heard nothing of such a movement, and did not feel particularly concerned if it should develop practically.

Tripp & Braswell, 139 Broadway, Brooklyn, have recently reopened the pharmacy at that address, after making extensive alterations and improvements. They purchased this drug store from M. C. Vincent, who had successfully managed it for many years. The scheme of decoration in the newly designed interior is very striking and original. A gallery runs the entire length of the store on each side and all the fittings are white. On the opening day the new firm gave a souvenir with each fifty cent purchase.

In spite of the generally conceded scarcity of golden seal, there are reports from time to time of offerings from the West which cause some slight temporary easiness in the market. One of these recently came to The Era, in the shape of an announcement from an Illinois druggist that he has over 200 pounds of golden seal root, crop 1904, nice and dry, which is offered at \$1.50 per pound, f. o. b. at his place of business.

The Treasury Department has issued instructions that a drawback will be allowed on the exportation of licor diastos de Mulford, manufactured by the N. K. Mulford Company, of Philadelphia, Pa., in part with the use of imported alcohol, equal to the duties paid on imported alcohol so used, less the legal deduction of 1 per cent.

A show window display at the store of F. K. James, 700 Eighth avenue, New York, recently featured Welch's Grape Juice in a very striking way. An arbor was arranged, trimmed with artificial vines and bunches of grapes. A lithographed trellis and lithographed grape bunches formed a border pasted on the window pane. The various sized bottles of the grape juice held the center of the stage. Results in sales were gratifying.

Peter Van Schaack & Sons have just issued their annual catalogue of "Soda Subjects" for the season of 1905. It is gotten up in their accustomed attractive style with a cover design of much artistic merit representing three ladies and a small boy being served at a soda fountain counter. The range of articles and supplies listed in the contents is exceedingly comprehensive and among them are several decided novelties which should prove useful as trade

SHOULD AROUSE YOUR INTEREST.

The name of Liebig is familiar to all druggists and they will find something very interesting in Liebig's Preparation, advertised on the back cover of this issue of The Era, if they will write before May 31, to the New York Drug & Perfume Co., 46-48 Marion street, this city.

bringers and helps to the druggist. Throughout, the booklet is profusely illustrated. The quality of these illustrations is excellent. Progress in illustration in all lines has been great during the last ten years, but these are right up in the front rank.

RADIUMITE RAZOR STROPS.

The Radiumite Razor Strop, manufactured by The Peter L. Frost Co., 97-99-101 South Clinton street, Chicago, Ill., is claimed to be the only perfect self-honing strop in the world and as such, the manufacturers say, it is the only one that can be successfully sold with the understanding that it is guaranteed to give satisfaction. These claims, they assure us, are attested by leading dealers in hundreds of towns and cities throughout the United States. The manufacturers have as their motto, "A Square Deal for the Dealer and the Consumer," and this method of doing business and co-operating with the dealer has been most effective in creating an enormous demand for the Radiumite Strop. They want druggists who are live, up-to-date dealers, centrally located, and who have attractive windows, to become their agents and put in a stock of these strops. The dealer handling the Radiumite line has the benefit of their handsome Radiumite Display Stands, a most excellent razor free with each dollar strop, illustrated electroos for advertising the Radiumite line in his local newspaper, prompt shipments and uniformly satisfactory goods, which all result in increased patronage and prestige for his store. The manufacturers do not require a large investment, nor is there a contract to be signed by the dealer. Their proposition is certainly an attractive one and druggists should write to them for information regarding their special assortments. Address The Peter L. Frost Co., 97-99-101 South Clinton street, Chicago, Ill., and read their advertisement on another page.

SCOTT'S ELECTRIC BRUSHES.

Dr. Scott's Electric Hair Brushes are known the world over and they are extensively advertised. Many people will use no other brush. It will, therefore, repay every enterprising druggist to read and profit by the offer made in the advertisement of Mr. George A. Scott, 870 Broadway, New York, in the advertising pages of this week's Era. A positive guarantee accompanies each brush.

HIRES' ROOTBEER AT THE SODA FOUNTAIN.

It will interest our readers to learn that through the change made in the Hires' Rootbeer preparation for fountain use the demand for that beverage has enormously increased, exceeding the most sanguine expectations of the manufacturers. They tell us that the preparation as now made is so far superior to the old method that the trade have taken instantly to the change. It is the most profitable beverage that can be dispensed

at the fountain, and this, coupled with its healthfulness and popularity, should make it a favorite with all dispensers. The tickets the manufacturers are giving out together with the steins and advertising matter show a degree of co-operation which certainly commends them to the earnest consideration of all the fountain trade.

THE BEST DRUG MILL.

Other things being equal, that drug mill is the best, that will answer the requirements of simplicity of construction, ease of operation, durability and capability of easy regulation. These requirements are all exemplified in the drug mill manufactured by the A. W. Straub Co., 37-41 Filbert street, Philadelphia, and 30 West Randolph street, Chicago, Ill., and advertised in another column of this issue of The Era. The manufacturers claim that this mill is thoroughly practical, durable and simple, and that it will grind substances like vanilla beans, gentian, cinchona, arnica flowers, and all gummy, oleaginous and

hard drugs. Any druggist can afford to own one of these mills, as the cost is only nominal.

HARTMANN'S WOOD-WOOL.

Wood-wool, as a dressing material, is claimed to possess many advantages independent of its very low price. It is absolutely pure and of a sufficient whitish color to enable the immediate recognition of the presence of discharge. Its great power of absorption and its antiseptic properties due to the ethereal oil and resinous matter inherent in the wood fibre are qualities which especially commend its use in all cases where any kind of a dressing is needed. To facilitate its application, Hartmann's Wood Wool is made up into a number of special preparations as Sublimite Wood Wool, Wadding, Tissue, Sheets for Accouchers, Pads, Diapers, etc. Druggists should read on another page the advertisement of the Hygienic Wood Wool Co., 177 Pearl street, this city, and write to them for price lists, etc. Physicians are sure to be interested in these specialties.

C. H. LANDELL'S CAT EXCITED.

The large white and yellow tom cat owned by Mr. C. H. Landell, well known in the drug trade as the proprietor of the drug store at Avenue D and Thirty-second street, Bayonne, N. J., stuck its head into a discarded condensed milk can and was unable to withdraw it. Naturally frightened, puss ran blindly, for blocks, with the can completely belmeting his head, jumped to the top of a fence, slipped, and in falling caught his neck between two pickets. The cat was rescued and the can cut off in the store, whereupon he leaped to the patent medicine shelves and knocked over many bottles. It was an exciting moment for Mr. Landell, even more exciting than those he has experienced on the diamond as captain of the Druggists' Baseball Club of Bayonne.

The druggist had advertised as follows: "Wanted, bright boy, experienced in drug store. One able to clean windows with a reference." A youth answered. "I guess you'll do," said the druggist. "How about a reference?" The boy produced a large square of chamois. "Jones kicked some about putting it on chamois, but that's the only thing I can clean a window with," said the youth, who had studied punctuation.

Price List of Proprietary Medicines.

INCLUDING PHARMACEUTICAL PREPARATIONS AND SPECIALTIES OF A SEMI-PROPRIETARY CHARACTER

The prices per "dozen" are the usual jobbing rates for single dozen lots. On some articles there is an advance for fractions of a dozen; upon the other hand there is a reduction when purchased in "quantity" lots.

The retail prices are the full retail rates druggists are supposed to obtain.

NOTICE.—The contents and the arrangement of this list of Proprietary Medicines with reference figures are original with us and are protected by Copyright.

The key number in parenthesis, after the name of a preparation refers to the corresponding number in the List of Manufacturers of Proprietary Medicines (See Yellow List).

The letter "R" before the price indicates that the article is on the Rebate List of the National Wholesale Druggists' Association.

Save Your ERAS

A good journal is worth saving, if it's worth reading.

Each volume of the ERA is an encyclopædia of information about Newer Remedies, Formulas, etc., that you cannot find in any text-book.

With each volume we supply a complete INDEX, for the special convenience of those subscribers who save their ERAS.

An **ERA BINDER** best serves the purpose for keeping your ERAS clean and in compact form for quick and ready reference—price, **75 cents**, postpaid.

D. O. HAYNES & CO., 90 William St., New York.

Manufacturers of Proprietary Medicines.

Whose Proprietary Remedies and Specialties are in the Price List of Proprietary Goods.

The numbers in front of the names correspond with the numbers in parenthesis in the list of Proprietary Medicines (Pages 73 to 168).

EDITORIAL AND PHARMACEUTICAL.

Read Before You Sign.—Legitimate Trade Getting.—A Harmonious Election.—Formula Bill in Wisconsin.—Pennsylvania Druggists Secure Law.—Advice and Action.—Photographic Slide Lines.—Be a Pharmacist.—Proprietors Should Protect Prices.—Another Phase of Higher Education.—Theory and Practice.—Question Box.

NEWS.—Proprietary Association of American.—New York Retail Druggists Not in the Field.—Lower 'Phone Rates.—Vaudeville in Plenty.—Jewelry Case in Court.—Substitute Pharmacy Bill.—Importance of Insurance.—Prices Must Go Up.—St. Louis Druggists Dine.—Wisconsin Druggists Split on Formula Bill.—Minnesota Prosecution Pronounced an Egregious Farce.—News of the Colleges.

TRADE.—Achieving Success in the Drug Business; How One Druggist Utilized Little Things.—Growing Sponges From Cuttings in Florida Waters.—The Ammonia Refrigeration System Used at the Kneuper Fountain.—The Manager of Hagenow's St. Louis Fountain Advocates Preparing Own Fruits.—Show Windows and Features.—Appraisers' Decisions.—Business Record.—Patents.—Drug Trade Jottings.—Market Report; Chloroform Lower.

EDITORIAL COMMENT

Read Before You Sign.

"Get-rich-quick" schemes and fraudulent concerns of every description have been flourishing so abundantly in recent months that any regulation which will hamper their operation in the slightest degree is thoroughly to be commended. For this reason Postmaster General Cortelyou's order, that in future the Post Office Inspector shall not wait for complaints from victims before barring these concerns from the mails, is likely to be watched with considerable interest and approval. The position of the Postmaster General is stated as follows:—

"The Postmaster General believes it is the duty of the department to prevent the mails being used to deceive and swindle the public, and that its officers should not wait until those who have been made the victims shall furnish evidence that the mails are being used to further fraud. He has directed that the Post Office Inspectors shall in future make investigation into any business that is being advertised under such inducements as to lead to the suspicion that the public is to be defrauded."

Of course, the inspectors will have a hard nut to crack in deciding cases on "suspicion," but still the new regulation is a step in the right direction. Druggists particularly have fallen easy victims to glib strangers with attractive "propositions," or gilt-edged circulars promising 1,000 per cent. profit. To pharmacists as well as to the public the order will be a boon, but they should not be lulled into fancied security. "Read before you sign," is a good motto for all times.

Formula Bill in Wisconsin.

The formula bill in the Wisconsin legislature will not down. In its new form, as related in our news columns, the members of the drug trade themselves are not agreed as to its desirability. The opposition contends, as heretofore, that the passage of such a law would result in driving out of the State many articles of commerce, and,

consequently, would deprive the consuming public of the articles it has been accustomed to. Upon the other hand, Mr. Menges, representing a druggists' co-operative manufacturing company, claims that the publication of formulas on the labels has not interfered in any way with the sale of articles of his company's manufacture. This view is in common with the belief of many, that the mere publication of the formula would not seriously affect the sales of any meritorious preparations. Neither would such publication necessarily set the standard for the particular preparation and it certainly would entail no hardship on reputable manufacturers. The agitation is sure to give the members of the Proprietary Association, in session this week, something to talk about.

The Season of State Meetings.

Next month will witness the beginning of the annual round of State association meetings. From Maine to California, all through the months of May, June and July, druggists will assemble for their yearly conclave, to meet once more in social intercourse and discuss the questions of the hour. Of these, there is no doubt that legislation will receive, or rather claim, its just share. Legislative activity among the law-making bodies of all the States has been so marked and of so disturbing a nature that our various committees have been kept "on the jump" in their efforts to sidetrack measures inimical to the pharmaceutical profession.

But the fighting of bad measures is only one-half the work. Good laws must be framed and pushed. And in this respect some excellent results have been accomplished in the direction of pre-requisite education for pharmacists. Following the lead of New York, Pennsylvania has obtained a pre-requisite law, while Minnesota missed a similar good fortune by the narrow margin of two votes—not a bad record for one year, considering that the New York law, which did not go into effect until January 1, 1905, is still being watched in some quarters as an experiment.

Of "pure drug" legislation, ostensibly intended to back up the health laws, there has been a surfeit in all States. Pharmaceutical associations might discuss with considerable profit

ways and means of exposing the sources of these frequently pernicious bills—pernicious because they seek to do grave injustice to pharmacists under the guise of the protection of public health.

Legitimate Trade-Getting.

There is not much likelihood that the trading stamp nuisance will be abated to any appreciable extent by the failure of one concern, an account of which appeared in our news columns last week. No doubt the faith of a great many people in the little colored pests received a rude shock, but the desire to get "something for nothing" springs eternal in the human breast. Most of the disappointed stamp holders will simply switch off to some other color.

Trading stamps have no legitimate place as trade magnets in any establishment conducted on strictly business principles. Low prices, bearing a distinct relation to quick sales and cash profits, have always been considered the best means of drawing custom, from both points of view—the merchant, whose business ingenuity is constantly in play, and the public, which seeks to secure the biggest value for the least money.

From this standpoint the trading stamp is merely an extra inducement for the customer to make purchases, regardless of whether they are needed or not. Of course, the dealer's business is to sell as much as he can. But the implied promise of the trading stamp, that a part of the purchase money will be redeemed at some future time, is at best insincere and in the end is pernicious and demoralizing to both buyer and seller. In the drug store, least of all, should trading stamps be found.

Real Estate and Druggists.

The opening of the subway was expected to affect real estate values in the upper part of Manhattan but it is doubtful if many druggists took the application to themselves.

It would seem that such a surmise would not have been groundless, for the last few weeks have seen many transfers or sales of pharmacies in Harlem and the Washington Heights section.

Indeed there is no reason why drug stores should not be affected as much as any other class of property in this appreciation and the boom at the north of the city is undoubtedly bringing many a dollar of profit to their owners. But as far as sales go, it is not likely that such druggists have reaped the harvest. It is rather unusual for pharmacists to own their own stores in this city. So, although there may be many changes, they are probably not usually voluntary. The druggist's reward will come in increasing trade from a growing neighborhood, and in-

deed it is probable that the number of pharmacies will itself increase in that locality.

Advice and Action.

Congressman Bennett gave some advice to the graduates of the New York College of Pharmacy the other night when he told them "not to be fools, nor associate with fools, nor to marry fools." It was Charles Lamb who remarked that "Man who hath not a dram of folly in his mixture hath pounds of much worse composition." Still another of the world's great men said that it might be no bad policy for men of uncommon excellencies to intermix with their actions a few absurdities that might be committed without vice, in order to reserve a liberty and confound the observation of little defects. So, after all, it depends upon the point of view. There is no uniform standard or premises upon which to base advice. It is easy to say: "Know one thing well, but know how to find out about other things." But action and practice! Ah! there is the rub.

Notoriety at the Druggist's Expense.

A citizen of New York, who has managed to keep himself fairly well advertised for a number of years at the expense of somebody, has at last turned his attention to the retail druggist and has made him pay for a good deal of newspaper space by personal inconvenience and loss. Perhaps this individual of such untiring efforts in keeping himself to the front found things rather dull in his usual lines. Perhaps there are not as many little boys playing marbles this spring as usual (indeed it has been unseasonably cold), or perhaps the supply of inoffensive, old men, dealing in second-hand books is smaller than hitherto, while small picture dealers have all been driven out of business.

At any rate this mighty hunter must have found the supply of small game scarce. For he hunts only small, peaceful creatures. The large, powerful, really dangerous, wild beasts in the forests of vice he does not care for. He might meet some opposition and perhaps be hurt. Besides what is the use of ridding the world of really dangerously evil things of which there are so many to be easily found everywhere, when it requires genius to feature one's exploits over small, usually unnoticed things?

At any rate this vigilant seeker after evil, bound to discover it, if necessary with a microscope, where no one else can see it, obtained a warrant last week against a drug store on the charge of running a lottery, and descended on it.

The facts seem to be these. To every purchaser of certain goods in

the store was given a premium numbered check. At a certain date one of these was drawn from its fellows and its holder received a prize in the form of a phonograph.

It would be difficult to imagine a more innocent or harmless trade-bringing scheme. Indeed similar plans have been frequently used for years in many stores.

But our valiant hunter arrived with a warrant, boldly entered this peaceful scene, caused the arrest of several harmless people, who were earning their daily bread, and triumphantly bore off the phonograph.

This was unpleasant notoriety forced upon a legitimate business. When will we be rid of this thorn in the flesh? And what has become of the phonograph?

Results From Old Fountains.

A small business can be just as profitable, in proportion to the capital invested, as a large enterprise. So may a small fountain be made to yield remarkable returns on its cost. In another column will be found a brief description of two moderate sized soda fountains, one of them quite antiquated too, which are yielding amazing results, distancing all local competitors.

Those among us who are weighed down by the knowledge that the accessories of their business are old fashioned but have not the wherewithal to discard them for modern, should take heart from a reading of this story. Others are succeeding with such a handicap, so can they.

Indeed the bulk of the soda trade of the country, annually swelling, is done by small old-fashioned fountains. There are many druggists who stick to them in preference, claiming that it is unwise to lock up too much capital in one fixture even if the money is available. Still others frown upon the growing importance of soda in a pharmacy.

After all it seems clear enough that success in the management of a soda water trade does not depend upon the size or style of the fountain. It is the man behind the fountain and the quality of the soda he dispenses that does the business.

A New Yorker, aged 81, offers to give Dr. Osler a black eye in the literal sense, the combat to be of the regulation Queensbury type, and Mr. Jerome to act as referee. If the learned doctor wishes to escape from this country unscathed, he will do well to stand not upon the order of his going. In the meantime, the old men are still holding on like grim death to the best jobs, and the young fellows are still looking for a chance to do wonderful things.

Rather Cool.

A daily publication in this city recently decided to boom its circulation, and after some consideration singled the druggist as its agent to this end. This was particularly fitting as the same paper has frequently assailed the drug trade with all sorts of unwarranted attacks, holding it up to the people as an aggregation of scoundrels of deep dye.

To make the affair thoroughly characteristic, the druggists themselves were not consulted. Indeed only a few were notified that the honor was to be conferred upon them.

The plan was simplicity itself. In the paper was printed a coupon. The reader was to cut that out. Upon presenting it at any drug store it was to be redeemed with a cake of soap. The druggist was magnanimously allowed to collect value later by turning in the coupons he had honored to the paper.

The result was perhaps satisfactory to the paper. Certainly some good was wrought in the community for in many cases the holders of the coupons were visibly in sad need of the soap. The great unwashed are a little less. But to the druggist the scheme was usually a great nuisance. It brought him much labor in waiting on such customers with no pay. If he turned them away, however, he was likely to offend someone worth keeping as a future patron.

A few druggists were benefited, for it allowed them to dispose of many unsalable, shop-worn, fly-specked goods, but most found themselves confronted with a sudden demand for something they seldom sold. Consequently they were unable to supply it.

Druggists have rather grown hopelessly used to being considered public conveniences free of charge, but this was going a little too far.

If there is a next time, and we all hope not, let us trust that some advance notice is given.

A Harmonious Election.

It should be extremely gratifying to drug men in New York City that the Board of Pharmacy election this year promises to be thoroughly harmonious. A greater contrast could not be imagined between the present situation and last year's campaign. During that memorable period the air was filled with flying fragments of mandamuses, injunctions and what-nots, while the citizenship question hung like an angry cloud, threatening to sweep the very board itself out of existence.

To-day the situation is so serene as to make half the pharmacists rub their eyes in wonder; the other half do not seem particularly interested. Both

sides seem to have arrived at the conclusion that Dr. Diekman is the right man in the right place. This harmony of interests should serve to emphasize strongly the fact that New Yorkers can, occasionally sink their factional differences and join forces to a common end.

Now a Law.

Never has the power of organization been shown to better advantage than during the past three or four months in Pennsylvania, where the druggists have been working to secure the passage of a bill which should allow them to use a minimum quantity of sodium benzoate as a preservative for fruit syrups. A first effort by the druggists was unsuccessful, for although the measure was passed by the legislature, it was vetoed by the Governor. Their second attempt was successful, however, the bill being passed by a goodly majority in both houses, receiving the signature of the Governor on Wednesday of last week; the law, for such it now is, became effective at once.

The provisions of the measure have been repeatedly stated in our news columns, and, besides permitting the use of sodium benzoate as a preservative, they allow the addition of harmless vegetable substances as coloring agents. The benefits of the measure need not here be enumerated, except to state that the law will do away with the intolerable conditions which former provisions imposed. A definite standard is now provided, and pharmacists and manufacturers may use for their fruit syrups what distinguished physiologists have designated as a harmless preservative, without running the risk of being railroaded into court at the instigation of over zealous inspectors, whose business it is to make as good a show of earning their salaries as possible. In the opinion of Mr. Pritchard, the secretary of the Western Pennsylvania Retail Druggists' Association, who has worked indefatigably for the measure, the passage of this law marks the beginning of similar legislation in other states.

Wonder how many Ph. G.'s will be turned out this year? Seems as though colleges of pharmacy were trying their best to show larger classes. Is legislation to secure pre-requisite laws responsible for the increase in attendance?

Andrew Carnegie has established a trust fund of \$10,000,000 with which to pension disabled college professors. Wonder whether colleges of pharmacy will get anything out of it? The teaching of pharmacy certainly is at least as useful to human kind as the teaching of Greek.

The Chicago R. D. A.

In our news report of the annual meeting of the Chicago R. D. A. in a recent issue it was stated that the organization now numbers 229 members. President Charles H. Avery informs us that this number represents only the new members added during the year. The Association's membership is between six and seven hundred who pay annual dues. What city can boast of a stronger local organization?

FIREPROOFING WOOD.

"Technologie Sanitaire" publishes in a study of the incombustibility of wood various formulas for solutions and coating or glazing after the work of Mr. Ch. Girard, director of the municipal chemical laboratory in Paris.

According to Mr. Girard, the method to be most recommended is the immersion of the wood in a saline solution, made up as follows:

Ammonium phosphate.....	100 kilogr.
Boric acid	10 kilogr.
Water	1000 litres

The following formula gives results not quite so good:

Ammonium sulphate	135 kilogr.
Sodium borate	15 kilogr.
Boric acid	5 kilogr.
Water	1000 litres

To give an appreciable effect the fireproofing paint should be applied in several successive coats.

Sol. of sodium silicate.....	1000 grams
Mendon white (chalk).....	500 grams
Isinglass	1000 grams

(2.)

This is applied in two distinct coats, and its efficacy seems, by its composition, to be superior to the preceding one.

First application:

Alumina sulphate	20 grams
Water	1 litre

Second application:

Solution of sodium silicate.	50 grams
Water	1 litre

(3.)

Solid sodium silicate.....	350 grams
Powdered asbestos	350 grams
Water	1 litre

(4.)

Powdered asbestos	35 grams
Water	100 cc.
Sodium borate	20 grams
Shellac	10 to 15 grams

Dissolve the borax in the warm water, and add the shellac in small portions until the solution is complete; then incorporate the powdered asbestos.

These last two formulas give a superficial protection which lasts as long as the coating remains in good condition.

Peppermint Oil from Java.

The essential oil of Java peppermint (*Mentha javanica*) has an odor somewhat different from that of ordinary peppermint, a faintly bitter taste and a bright green color. According to P. Van der Wielen (*Pharm. Weekbl.*) it has a specific gravity of .9214 at 15° C., and is soluble in 1½ parts of 70 per cent. alcohol. The oil contains a considerable quantity of pulegone, but little or no menthol and menthone.

OUR
LETTER BOX

HIGHER EDUCATION.

Poughkeepsie, N. Y., April 24, 1905.

Editor The Pharmaceutical Era:

Few pharmacies have a positive use for a highly educated man, or can afford to pay the salary such a man is entitled to receive. The pharmacy has its use for the man who is capable of making analyses and who can do laboratory work, but one man with these qualifications is all that is required in 75 per cent. of the stores. The educational feature cuts out the ignorant class and is intended to protect the public, which is quite right; but the average store cannot pay the wages, and no law will make this part of the business any easier.

To make use of the highly educated man the pharmacist must become a manufacturer and employ to some good profit the brains he is compelled to pay for in making up the galenicals and other preparations he now buys already made. The proprietor seems to think that all that is necessary is for him to have the goods, no matter who made them or the price paid for them; he can sell them through the efforts of a good clerk. For the skillful man the pharmacist has no use, for the reason "we can buy it already made and save our time to wait on customers."

But notwithstanding all of this opposition I favor higher education. I graduated from a high school, and soon found on entering the drug store that the knowledge imparted to me in school applied but in a small way to the requirements of the business. Not that my knowledge was so meager, but very much of it was theoretical. Nevertheless, a high school education is a good thing, for it trains the young brain how to study and how to acquire knowledge.

The man of higher education is in a position to demand higher wages, but if the pharmacist purchases from the wholesale manufacturer instead of manufacturing himself, and if there is no analytical work to be done, what opportunity or inducement can the drug store offer to a man who has these qualifications? Then, too, the man of higher education looking for a favorable opening in this busy world is apt to be somewhat particular as to the number of hours he shall work, and he is aware that the tendency is to shorten hours. From this viewpoint the pharmacy does not show itself to be a very desirable place in which to begin business life. The young man of to-day who can afford to pay for a college education is not the one to go into the store after graduation "to learn the business." His education has fitted him for a position somewhere above that which would have been his lot had he simply started in to learn the commercial side of pharmacy. Of course, I am assuming that he has already learned the theoretical side of the business.

There is now much trouble to get clerks for a certain kind of work in the drug store, viz., that which can be done by persons with less than four years' experience. The boys want work, not hours. After these have had a few years of experience and, as is the rule, find out that

money is needed before they can learn more of the teachings of pharmacy, they frequently become discouraged, lose heart and make a poor list of lingering along in the business. Such individuals are neither ornamental nor useful adjuncts to the calling.

By spending less money and energy in many other directions the business man to-day can make more money than is commonly made in the average drug store. Business qualifications must be coupled with pharmaceutical knowledge in order to make a pharmacy a successful business, and it quite frequently happens that the good business man is a poor pharmacist and vice versa.

Laws cannot change everything. You can have laws for higher education if you want them, but that won't make business better. If business is not bettered by the presence of the higher educated man the pharmacy cannot afford to hire him and he is a failure for average business purposes. Higher wages make the proprietor say, "Go slow with your compulsory education." It may freeze out the smaller to the advantage of the larger. So it appears as if it will be hard work to please everybody.

FRANK B. STYLES.

PROPRIETORS SHOULD PROTECT PRICES.

New York, April 29, 1905.

Editor The Pharmaceutical Era:

I enclose a copy of a letter which I have sent to Mr. Talbot, of the Proprietary Association of America. If you care to make any use of it you may do so.

Very truly yours,

A. MAJOR.

Following is the letter referred to:
Mr. W. A. Talbot, Warren, Pa.

Dear Sir: I notice in the drug papers that the Proprietary Association of America will hold a convention, so I address you. At one time I was a member of your association, but left it because, in my judgment, the members took very little interest in abating the evil of price cutting. Substitution is also a great evil, but as it comes almost directly from the price cutting, when the latter is done away with, the former will also be abolished.

Your association should try to make an arrangement with the wholesale drug houses, whereby the latter will refuse to sell to firms that cut prices. They should not only be refused proprietary or patented articles, but all goods. The Supreme Court recently decided that wholesale houses were acting strictly within their rights when they refused to do business with certain individuals or firms. If these price cutters were cut off from the proprietary articles alone, they would not be seriously handicapped, for they can obtain their supplies through a broker or by other means, but if they were refused all goods by the wholesale houses, it would make it very difficult for them to continue in business.

Congress should be asked for additional legislation relating to patents and trade marks. To successfully market a commodity nowadays, it is necessary to guarantee a certain margin to the retail dealer before he will take any active interest; but under the present system of price cutting, such a guarantee is almost impossible. The result is that it requires the expendi-

ture of an enormous amount of money to successfully place any article on the market. We should have a law prohibiting any dealer from selling a proprietary or patent article for less than the marked price without the consent of the proprietor. Such a law would benefit the manufacturer without causing hardship to anyone.

A firm can take hold of a proprietary or patent article, and by cutting the price, draw enormous crowds into their store. The price of these articles is almost as well known as the article itself, and the impression is created that everything is being sold at a proportionately low price; the dealer is profiting at the expense of the proprietary or patented article. This is like a man, who in his effort to get out of a crowd, walks upon the heads of the people. This price-cutting is done, not to benefit the public, but solely to draw trade, for those who do it find that this method of advertising is much cheaper than to advertise in ordinary channels. A law such as described above, would enable a man to get some returns for his time and money. Laws are intended to protect the weak, and a man who is trying to put a new article upon the market should not be trampled upon.

Nothing is more discouraging to the retail dealer than not to know the price for which to sell an article. No dealer likes to be undersold; he would rather not handle the article at all. If a customer tells him that a competitor is selling for much less, he has no way of knowing whether he has been told the truth or not, and he is worried from morning until night. This practice of cutting prices is a great hardship to the retail dealer. We should have the necessary laws to protect a man in business. Otherwise, people will not put their savings of years in jeopardy by attempting to market any article, however meritorious.

Very truly yours,

A. MAJOR.

Manganese Albuminate.

Manganese albuminates, according to Prof. Vitall, is prepared by mixing the whites of three eggs with water and after straining, adding with constant stirring, 20 cc. of a 5 per cent. potassium permanganate solution. The mixture, which assumes a brown color, is evaporated at a temperature not exceeding 30° C. A water-soluble albuminate, in translucent brown scales, is formed. This salt is almost tasteless, slowly soluble in water and gives all protein reactions. The addition of acetic acid to the solution produces a precipitate soluble in an excess of the acid, while potassium hydroxide produces no reaction. Alcohol added to the aqueous solution causes turbidity which is followed by the production of a brown precipitate upon the further addition of ether. Manganese is demonstrated to be present as a hydrated superoxide, by alcoholic guaiac solution, potassium iodide starch paste, alon solution, and other reagents which react with hydrated peroxides. Manganese albuminate contains 3.3 per cent. of Mn_2O_3 , its solutions are stable for longer periods, and because of its tasteless and ready digestibility it is said to serve as an excellent preparation in anemic conditions. *Phar. Centr.*

PHOTOGRAPHIC SIDE LINES.

"Practical Help" for Those Starting a Photographic Department.

BY J. O. H. WALLSGROVE.

The season of photographs is now upon us, and possibly there may be some in the "trade" who contemplate taking up the photographic side-line, and there may be others who would feel inclined to do so if they could only get an idea how to shape for the business.

In this and a few following articles it is proposed to put such information before those so placed in a simple, practical manner; also to give a short description of apparatus, materials, etc., for their guidance, because no doubt the man who has a practical knowledge of such things is in a better position to converse with his customers and to offer help in times of difficulty. It gives greater confidence.

Locality is a factor which largely governs operations. It would be unwise for a man in a fashionable centre to start on the same lines as one in a manufacturing district or one in a small country place, as one in a city with its constantly moving population. The early operations must be more or less tentative or experimental, and gradually developing as a grip on the situation is obtained.

Handling of the customers requires a little tact. The average beginner is a more or less tractable individual, unless he or she has been prejudiced in favor of some pet idea of a friend who photographs. In such cases it is necessary to have some very definite reasons to put forward as to the standard of merit of the article under consideration—to upset this rooted idea. The amateur practitioner who has had some experience, and to an extent earnest in the work, is fairly easy to get on with. The dealer must bear in mind that one of the features much written about in the photographic press is "Individuality." Now, the customer we have under consideration no doubt has acquired a certain amount of this commodity; therefore, humor him, it will pay the best. He knows what he wants, let him have it; if not in stock, as soon as procurable.

The most ticklish customer to handle is the irresponsible button presser. In many instances his personal estimation of his own capabilities is profound; but it frequently turns out, when once beneath the veneer of this supposed knowledge, matters are found to be quite superficial. Nevertheless, when once his gauge is obtained and catered for, he may turn out a good paying customer, as he may prove to be a prolific spoiler. The terse explanation of the mustard maker should be remembered: "It is not the mustard eaten, but that which is left on the plate, that makes the profit." This class of worker constantly blames his materials for his non-success; but the dealer must be case-hardened against this, and to be ready with a gentle hint as to improved methods of working.

Getting publicity is the next item for consideration. This may be done in various ways. The window is worth attention as a business bringer, but it must be borne in mind that none of the sensitive materials must be exposed to the heat of

the sun's rays, nor is it wise to display cameras in a window upon which the sun shines much, as the heat may perhaps cause the joints to give.

Such photographic paraphernalia as porcelain dishes, metal washing racks, lamps, etc., are useful for the purpose of window display. Then again there are the beautifully got-up showcards of the photo-materials manufacturer to fall back upon, and there is nothing like a good picture to get the public eye. If the dealer can produce one of some interesting local view, he will be paid for his trouble by the interest it will create. The result may not be immediate, but it may cause the people to talk about it, and where can one get a better advertisement than this? Where practicable the following method is a good one to secure business, at least such was the experience of the writer some years ago when opening up the trade. Select a good type of camera retailing at about a guinea, then make a point of giving two free lessons to the purchaser. These lessons need not be of long duration. The first might consist of a general description of apparatus, requirements of dark room, filling the dark slide, making an exposure, developing and fixing the plate and explaining the washing, all of which may be done in the immediate neighborhood of the business premises. The pupil can then be started off—fully equipped with the necessary materials—to reflect upon what has been told him, and to try his apprentice hand. He should return in the course of a few days for the second lesson, which will consist of a demonstration of printing, toning, and fixing—for which a few prints should be prepared for the purpose during the interview between the two lessons—and washing. A finished print should be trimmed and mounted to show how it is done. The printing frame should be filled and allowed to print while the toning is being carried out.

This, of course, would be a "tall order" for a quick business, but, as before stated, "where practicable," it is worth the doing, because it creates a good feeling with the beginner, who naturally when in a dilemma comes to ask further advice, and chances are he may make a purchase, or bring a friend who may at some time be induced to go in for a camera.

To the observant dealer the tuition process is not only helpful to the business, but also gives a good idea of the resourcefulness, or the weakness of beginners in general; he is then able to cater for them accordingly, and build up his own general knowledge at the same time.

The selection of stock requires careful consideration, and here the tentative treatment of the start comes in the strongest. Unless the dealer wishes to get a lot of idle stock by him.

One of the first things to do is apply to one of the photo-sundries firms for a catalogue, and in due course a "library between lids" will arrive. He will naturally ask himself "from all this accumulated mass of information what am I to select that will be serviceable." The following, we hope will help him:

Sensitive materials (plates, papers, etc.).—There are various brands of plates on the market; it would be a little difficult, and perhaps unfair, to select any one of them for special recommendation. A safe guide will be to refer to the ad-

vertisement pages of one or two popular photographic papers, because the advertised brands are sure to be the ones most asked for, and following this plan we find prominently mentioned the names of Ilford, Paget, Imperial, Barnet and Wellington. The print-out-papers (popularly called P. O. P.) are also made by the same firms; these and the self-toning papers are in most general demand through the summer. During the winter the bromides and gas-light papers are most in vogue.

The size most frequently required is the $\frac{1}{4}$ plate ($4\frac{1}{4}$ by $3\frac{1}{4}$ ins.); next to this the $\frac{1}{2}$ -plate ($6\frac{1}{2}$ by $4\frac{3}{4}$ ins.). There has during the last few years, since the arrival of the small cheap hand camera, been a demand for a size smaller than the $\frac{1}{4}$ -plate, namely, $3\frac{1}{2}$ by $2\frac{1}{2}$. The speeds in most common demand are the slow, medium and special rapid.

Locality does not affect the handling of sensitive materials to any appreciable extent, except that in fashionable centres there may be more demand for roll films than in others.

As a first order the dealer would do well to have of $\frac{1}{4}$ -plate size two packets of each brand of slow (ordinary) plates and one packet each of the medium and special rapid, this will give him a stock of 20 packets to start with. As regards the $\frac{1}{2}$ -plate size he might get one packet of each of the three speeds of two or three of the makers.

The print-out-papers are prepared in three tints—white, mauve and pink; the first two are most asked for by the amateur. They are also glossy and matt, the first is most used. Saleable sizes are $\frac{1}{4}$ -plate; cabinet, 6 by $4\frac{1}{4}$; and $\frac{1}{2}$ -plate. These are at present chiefly put up in 1s. packets of 36, 24 and 16 pieces, respectively.

A safe investment would be three packets of each of the brands $\frac{1}{2}$ -plate size, having white of one make, mauve of another, and two packets each of the cabinet and $\frac{1}{2}$ -plate sizes.

This will give a fair range of this class of goods. The dealer will soon find out on which brand will be the greatest demand, and can then shape his orders in larger quantities accordingly. In one district one brand may be popular, while in another it will be a different one.

The P.-O.-P. postcards are already on the market in 6d. packets. A few packets of two or three of the makes should be stocked. Three packets of $\frac{1}{4}$ -plates, and two each of cabinet and $\frac{1}{2}$ -plate self-toning paper of two or three makes will be sufficient to start with.

Sensitive materials must be carefully stored in a dry place, and low down so as not to be exposed to any fumes of gas or chemicals. Each packet has a batch number upon it. Make it imperative that they are kept in rotation, in order that old stock is cleared first. The sales of such materials are regulated by the "Plate and Paper Makers' Association." They must not be sold below face price, hence a fair and protected profit to the dealer is assured.—British and Colonial Druggist.

THE WHITE HOUSE OFFICIAL.

President Roosevelt has issued instructions that hereafter any official reference to the Executive Mansion be made by the term "The White House."

BE A PHARMACIST.*

BY C. H. BOWERSON,
Toledo, Ohio.

During a conversation with an ex-member of a board of pharmacy some time ago, he touched upon his past experience as an examiner. He made mention of the surprisingly large number of poorly educated candidates that present themselves for examination.

He declared that many of them lack an ordinary common school education, and that he has met more than one young man who was unable to figure out the quantity of chloral hydrate represented in each teaspoonful of a two-ounce mixture containing eight scruples of the drug.

I have no reason to doubt the truthfulness of his statement, since I am aware that there are a few such individuals as he describes engaged in pharmacy at the present time.

The reader may think this does not speak well for the pharmacy boards and the pharmaceutical institutions of learning. To such let me say: I presume there are very few if any college professors who claim that theirs is a perfect institution. They do, however, supply certain advantages, and it depends upon the student whether or not he will avail himself of the advantages offered.

No board of pharmacy will grant a certificate to a person whom they know would be unsafe behind a drug counter, but I believe if every person who has passed the examination of a board of pharmacy would be what he should be, we would have a greater number of better informed pharmacists.

The unqualified druggist who happens to be lucky enough to fall into possession of a certificate permitting him to vend drugs and medicines, is reaping a certain amount of revenue that rightly belongs to some skilled member of the profession.

It is regretted that such persons should find their way into the ranks of pharmacy, since there is more than one capable and worthy dispenser who fails to thrive or meet with the financial success that he is entitled to, just because of the presence of these avaricious incompetents, who may be found among proprietors as well as managers and clerks.

There are not a few individuals conducting drug stores who have about as much right to manage a pharmacy as a hodge-carrier has to run a locomotive, and some of them do quite a prosperous business.

Ill luck should befall no person who is worthy of the office that affords him his subsistence, but it is far from being right that such incompetent and undeserving pharmacists should succeed financially in a calling which they cannot possibly fill with credit to themselves or with justice to their patrons. The major portion of the readers who have shared the advantage of a change in situations, have probably met this same style of pharmacists.

I have on more than one occasion found myself in the company of this sort of dealers in drugs and medicine. Some years ago I secured a position with a pharmacist (?) of this kind; I marveled at his stupidity, and have often had a desire to know whether or not there is another just

like him. He had evidently conceived the idea that the drug business is a "gold mine," took a few peeps at a dispensary and forced himself to believe that he had as good a legal and moral right to dispense drugs and medicines as anybody—the laws affecting pharmacy being very lax at that time.

He conducted a pharmacy in a large and flourishing town, well supplied with drug stores, most of them being first-class establishments, and better than usually found in towns of its size.

His was an undesirable and dingy room; he carried a meagre stock, and the store was not one of the kind that would attract the attention of the passerby. To say that he was an incompetent pharmacist and a shallow business man would be expressing it mildly—indeed, he was decidedly crude; yet he had quite a large trade and he did a lucrative business—in fact, he met with phenomenal success financially.

For the amusement of the reader I will mention some of his peculiarities, vague business methods and pharmaceutical blunders.

There was no regular method or order connected with his business, as he had never given system any consideration; he treated business matters just the opposite from the trained business man's way. He experienced great difficulty in retaining assistants; a thorough and experienced clerk would seldom remain with him longer than a few months, as he had a fashion of covering his blunders, and "squaring" himself with patrons, traveling salesmen, and the general public at the expense of his clerks.

Apprentices would leave him as soon as they discovered his shallowness and inability to teach them anything, their stay being, as a rule, of about the same duration as the experienced clerk.

He was a very avaricious person. It did not make any particular difference to him whether or not purchasers at his store would receive full value for their money. In scheming how to save a dollar through a certain act, he would frequently go to an expense of double that amount; he was so covetous that he saved the expense of keeping abreast of the times.

While he was greedy for gain to an extent that he was considered by some as being a bit "hoggish," it may seem strange, but it is nevertheless true, that he never took advantage of the discounts on his bills; neither did he avail himself of the lower prices offered by manufacturers and jobbers on "quantity" orders, by purchasing staple and quick selling merchandise in large amounts.

He would rarely pay attention to a statement of account, neither did he make any attempt to pay his bills with promptness, and thereby save his creditors the time and expense of making a draft on him; and when a draft was presented to him for payment he would set up an argument and refuse to pay the "exchange" thereon.

He did not consider substitution a wrong act, and he would "counter" prescribe at every opportunity. It did not occur to him that he had no legal or moral right to do so, or that he was by such action giving the apprentice his first lesson in dishonesty.

If a clerk would fail to make a sale after having presented an intelligent and a just argument for all concerned, he would show his anger, and tell the clerk that a good salesman will never miss a sale, even though he be compelled to misrepresent an article in order to get the public's money.

He disregarded the law by selling to anyone that had the price, such goods and articles of merchandise that law-abiding druggists would refuse to dispense without a permit.

He made no discrimination in the selling of poisons; children could procure from him poisonous substances with little or no difficulty.

He was of a peculiar disposition, and possessed an uncontrollable temper; it would sometimes happen that a day's business would fall a little below the average, or not quite up to his expectations; he would, on such occasions, become enraged and make himself very disagreeable, and be almost without reason; during his fit of anger he would forget to treat his patrons with due courtesy.

Although he enjoyed an extensive prescription business, he was, as may be imagined, unsafe as a compounder. Prescriptions falling into his hands to be compounded were seldom if ever prepared strictly secundum artem. He blundered so frequently and his methods of manipulation was such that deserved to be ridiculed.

As a pill-maker he was a decided failure; he did not seem to understand how to properly prepare the "mass," consequently, pills made by him would frequently run together or crumble after leaving his hands.

He lacked the necessary knowledge for the preparation of a perfect emulsion, and, as a result, this class of preparations, as prepared by him, would invariably separate after a few hours.

Ointments and salves compounded by him were usually rough in appearance and gritty to the touch.

He was unable to form nice-appearing suppositories and pastilles, as he did not possess the dexterity needed in the making of an elegant product.

Mixtures and liquid preparations were prepared by him by simply dumping the several ingredients or components into the bottle without any method whatever. He would frequently err in copying the directions for the patient. I recall an occurrence where he wrote "tablespoonful doses" on the label, instead of "teaspoonful doses," as ordered by the physician; fortunately for both the patient and himself, the excessive dose did not prove fatal. On another occasion he prepared some suppositories on prescription, for a patient suffering from hemorrhoids; instead of copying the directions for use as written by the prescriber, which was as follows: "Use a cone every three hours," he miscopied to read thus: "Take a cone every three hours." It would sometimes happen that a customer curious to know the source of some particular drug, the habitat of a plant, or the composition and process of manufacture of a certain compound would apply to him to be enlightened; but, owing to his limited knowledge of drugs, he was unable to talk intelligently or furnish correct information; yet, rather than acknow-

*Western Druggist.

ledge his ignorance, he would assume a wise look and misinform his querist.

I call to mind a conversation that took place between himself and an old lady, and which I happened to overhear. The old lady in question was making a purchase of a quantity of roots, herbs, barks, berries, etc. She was inclined to be somewhat inquisitive, and she wanted to know the origin, use, action and dose of every drug she purchased (and she had a perfect right to know).

The answers and explanations offered by the druggist were amusing to say the least, for he failed to impart to her, correct information concerning a single drug.

On another occasion he was heard to tell a customer that nutgall comes from the Aleppo Islands.

This same druggist was observed searching in the patent medicine department for "Hellmund's Ointment." His blunders were so numerous and uncalculated for that on more than one occasion did his assistants put their heads together and ask each other the question: Shall we laugh or shall we cry?

The above portrayal may seem to some readers as being somewhat of an exaggeration, but I could add much more (were it not for becoming monotonous) and still keep within the boundaries of the truth.

It may be fair to presume that his success was entirely due to misplaced confidence on the part of the public, as he possessed an intelligent and dignified appearance, and he was a nice man to look upon, although he deceived his looks most wonderfully.

To how many pharmacists will this not altogether fanciful description apply.

I do not know what the reader may think concerning a remedy for this lamentable state of affairs; but, I believe there should be a law passed to the effect that no person should be permitted to own or manage a pharmacy without having had at least five years' practical experience previous to registration. Furthermore, if pharmacists would exercise a little better judgment in selecting material, and then devote a little time to instructing the apprentices, we would, no doubt, see a marked improvement in the quality of the persons handling drugs and medicines, and eventually the incompetents would be completely rooted out of the ranks of pharmacy.

In conclusion, I will add just a few remarks for those readers who are about to enter pharmacy for a livelihood. Do not imitate the methods and business ideas adopted by the individual herein described. If you do not possess the necessary ambition to become a thorough pharmacist, keep out of the business entirely and give someone else a chance, for you will only be in some worthy brother pharmacist's way.

Do not cease seeking knowledge, or get it into your head that you know it all, just because you have been successful enough to secure a college diploma, or a State Board certificate.

No man ever became so wise that he could learn no more. Pharmacy furnishes an abundance of material to work upon, and the oldest living pharmacist can learn something new relative to his business; indeed, no pharmacist can in this progressive age keep abreast of the times and be

thoroughly posted in his business, unless he be studiously inclined.

He should acquaint himself with current pharmaceutical literature, and be a subscriber to not less than two good drug journals. If he is serving in the capacity of clerk, he should try to get ahead of the best informed clerks that he knows, be a credit to the profession, make himself valuable and not be afraid to demand the compensation that a person of his ability should receive.

Be a pharmacist worthy of the name or retire from the ranks.

THEORY AND PRACTICE

Formaldehyde Disinfection.

The value of formaldehyde as disinfecting agent is too well known to require comment, but the difficulty in effectually liberating the gas without the aid of more or less complex and expensive apparatus has, in many instances, been a hindrance to its employment. (Am. Med.) The Maine State Board of Health has recently promulgated a simple and safe method in which no special apparatus is needed, and by a long series of experiments has demonstrated the efficiency of the process; these findings have also been corroborated by health officers in New Hampshire and Vermont. Potassium permanganate 200 gm. to each 500 cc. of formaldehyde, is placed in a vessel of considerable size, a 10 quart pail suffices, in the room to be disinfected, which is preferably quite warm. The formaldehyde, 1,000 cc. to each 1,000 cubic feet of space, is then poured over the permanganate, and the operator beats a hasty retreat. The room is kept closed for four hours, when disinfection is said to be complete. The advantages of this simple method are evident, no apparatus to transport, absence of danger of fire from lamps, and the liberation of all the available gas in a few moments. These more than counterbalance the considerably larger quantity of formaldehyde than is usually employed by other methods.

Artificial Anti-Toxins.

By acting upon strychnine at 37° C. with a 5 per cent. solution of calcium permanganate added in small portions at a time until the mixture ceases to give a reaction with ammonium sulpho-vanadate or with phosphotungstic acid—about 10 days are required—a solution is obtained which is said to act as an anti-toxin towards strychnine itself; evaporated in vacuo the solution from 1 gram of strychnine hydrochloride yields 0.3 gram of the oxidation product in the form of a yellow substance containing some manganese; it is soluble in water and alcohol, and reacts like an oxydase towards galuacum. During the evaporation at low temperature an odor resembling benzole ether is perceptible. 1 cc. of a solution containing the equivalent of 20 mg. pure strychnine were found to annul the effect of 2½ mg. of the alkaloid. The oxidation product loses its efficiency upon heating to 100° C. Similar results were obtained with crystalline acouitine, but with morphine

the experiments were not invariably successful. In the case of strychnine, as with acouitine, attempts to protect an animal against more than one mortal dose by aid of an increased quantity of the "anti-toxin" failed.—Br. and Col. Drug.

Fluorine in Wine.

Fluorides are now largely used for the purpose of preserving wines of weak alcoholic strength. A delicate method for their detection is proposed by Blarez (Bull. Soc. Pharm. de Bordeaux, Pharm. Journ.), as follows: Take 150 cc. of wine, add a few drops of sodium sulphate, and then 10 cc. of a 10 per cent. barium acetate solution and stand for 15 minutes. Filter through a small paper; the precipitate contains all the fluorine together with barium sulphate and tartrate, coloring matter, etc. Wash and dry rapidly, and incinerate in a small platinum dish; moisten the ash with concentrated sulphuric acid, and cover the dish with a waxed glass plate on which some characters have been scratched. White carnauba wax is recommended for covering the glass. The dish is then heated for an hour over a burner. It is most important to keep the glass quite cool during the heating; this is best done by passing a stream of cold water through a cylinder of the same diameter as the dish and 8 or 10 centimeters high, the bottom of which is closed with parchment. The latter fits tightly to the glass, and keeps it quite cold. On cleaning off the wax the engraving can be seen with the naked eye if a fluorine has been used as a preservative. Forty or fifty milligrammes of fluorine to the litre is the usual amount present.

Detection of Blood with Hydrogen Peroxide.

Schilling calls attention to the value of the information afforded by addition of a few drops of solution of hydrogen peroxide to any substance in which the presence of blood is suspected. Tiny bubbles form in the presence of blood, and rise up in foam. These bubbles are always clear as water, the substance being tested becomes decolorized in the bubbles. He uses a 20 per cent. solution of H₂O₂. Tests have shown that the bubbles still form at a dilution of the blood long past the point of visibility, even at 1 to 1,600. Clinical tests with stomach content, feces, etc., demonstrated that this simple test for "occult hemorrhage" deserves to rank with the galuac or loin-turpentine test.—Ther. Monats. through Jour. A. M. A.

Mesotan.

Mesotan, one of the newer synthetic compounds introduced for the local treatment of rheumatism, is the methyl-oxymethyl-ester of salicylic acid. It is formed by the action of formaldehyde, methyl alcohol and hydrochloric acid or sodium salicylate, containing approximately 71 per cent. of salicylic acid. It is a clear, yellowish, oily liquid with a pronounced ethereal but not unpleasant odor, and is sparingly soluble in water. It is freely soluble in oil. It is said to have none of the toxic effects of the salicylates administered internally (Ther. Gaz.)

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of The Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Paraffin and Picric Acid.

(L. K. H.)—We are unable to give you a practical method for melting paraffin with picric acid. Paraffin melts at from 113° to 140° F., while the melting-point of picric acid is generally given as 252° F., but the latter sublimes however carefully it may be heated, and on strongly heating it decomposes with detonation. Some little care is therefore necessary in experimenting. It is possible that a work on the manufacture of matches or of explosives might give you the desired information.

Sodium Boro-benzoate.

(H. S. W.)—You will find a formula for sodium boro-benzoate in the National Formulary. It is made by simply mixing 3 parts of sodium borate with 4 parts of sodium benzoate. Another process directs a hot solution of borax, to which is added benzoic acid to saturation, the solution being then evaporated to dryness. For the sake of uniformity, however, the N. F. formula should be employed. The dose is from 15 to 60 grains, and is said to possess antiseptic, antilithic and diuretic properties.

Photographic Developer.

(Amateur)—"Velox paper" is stated to be a chloro-bromide of silver emulsion paper, and the claim is made that it can be manipulated in candle or gas-light without a ruby lamp. The special developer recommended for it is:

Water	1000 cc.
Metol	1.5 grams
Sodium sulphite	50 grams
Sodium carbonate, anhy-		
drous	60 grams
Potassium bromide	0.5 grams

This developer should be applied with a brush the exposed paper being held face upwards on a sheet of glass. The best fixing bath is an acid one, made as follows:

Citric acid	10 grams
Sodium sulphite	50 grams
Water	200 cc.

Dissolve and add to:

Sodium hyposulphite	250 grams
Water	1000 cc.

Laundry Gloss.

(E. M. F.)—The following is the formula to which you refer: Melt two and one-half pounds of best grade of paraffin wax over a slow fire. When liquefied,

remove from the fire and stir in 100 drops of oil of citronell; pour the mixture into shallow tin trays (pie-tins) and allow to cool. When cold cut the mass into cakes about the size of a lozenge. Two of these cakes added to each pint of starch will cause the soothing iron to impart a fine finish to muslin or linen, besides perfuming the clothes.

The Era Formulary is authority for this formula: Melt 5 parts of stearic acid, add 5 parts of absolute alcohol, and triturate the mixture with 95 parts of wheat starch. Starch prepared in this way easily takes a fine polish. A similar effect may be produced by adding a piece of stearin to the starch before the boiling water is poured upon it.

Removing Writing from the Hectograph.

(F. M. F.)—Crude commercial chlorochloric acid has been recommended for removing writing from the hectograph pad. This is poured over the surface of the mass and then wiped off with a bit of cotton batting. The pad is then held for a moment under a stream of cold water, washed and dried off with a soft cloth. In this manner the surface is quickly rendered perfectly clean, with little loss of substance and a minimum of labor. The pad is said to last much longer when thus treated than when treated in the ordinary manner with warm water.

Violet Ink is the most satisfactory for hectograph reproduction. Try the following formula: Violet aniline, $\frac{1}{2}$ ounce; alcohol, $\frac{1}{2}$ fl. ounce; white sugar, $\frac{1}{4}$ ounce; glycerin, 1 ounce; water, 6 fl. ounces. Dissolve the aniline in the alcohol; dissolve the sugar in the water, add the glycerin, and mix the solutions.

Fuller's Leg Wash.

(T. L. E.)—A formula under the above title, published more than twenty years ago, contains the following ingredients:

Acetic acid	1 fl. ounce
Ammonium chloride	$\frac{1}{2}$ ounce
Tincture of aconite root	2 fl. ounces
Tincture of asafetida	$\frac{1}{2}$ fl. ounce

Mix and dissolve. For a wash, use from a teaspoonful to a tablespoonful of the solution in a pint of water. It is used for washing horses' legs before or after racing.

Formulas of this character are numerous and almost any stimulating embrocation may be employed with satisfactory results. Here is one from our files:

Tincture of capsicum	3 fl. ounces
Alcohol	4 fl. ounces
Spirit of camphor	2 fl. ounces
Spirit of ether	2 fl. ounces
Oil of turpentine	$1\frac{1}{2}$ fl. drams
Ammonia water	3 fl. drams
Ammonium chloride	1 ounce
Sodium chloride	180 grains
Water	7 fl. ounces

Dissolve the salts in the water and add the remaining ingredients. Shake well. For use, dilute half a pint of the fluid with a pint and a half of water and with this wash the entire length of the leg and then wrap it up in a woolen bandage.

A Problem in Horology.

(Clerk)—"Will you please answer this question for us? How many times in twelve hours do the hands of a clock meet?

A fellow-clerk contends that they meet twelve times. I contend that they meet only eleven times. Will you please decide the question for us? I know the problem is not exactly pharmaceutical, but it does interest two drug clerks."

In reality the hands of the clock meet but eleven times and any good grammar school arithmetic should give you this information. However, the explanation is quite simple. Commencing with the figure 12, one hand is exactly over the other; 60 minutes afterward the long hand is at the same point, but the short hand has advanced to the fifth minute mark. The first must, therefore, run over these 5 minutes to overtake the other; but by that time the short hand has gone on a little further. The first meeting will occur at 5 minutes and some seconds after 1 o'clock, the eleventh at exactly the noon mark. The intervals will be precisely equal, and since there are eleven of them in the twelve hours, a single interval will be an eleventh part, that is 1h. 5m. 27 3-11 sec. The consecutive times of meeting will be shown on the dial of the clock as follows: (1)—1h. 5m. 27 3-11sec.; (2)—2h. 10m. 54 6-11sec.; (3)—3h. 16m. 21 9-11sec.; (4)—4h. 21m. 49 1-11sec.; (5)—5h. 27m. 16 4-11sec.; (6)—6h. 32m. 43 7-11sec.; (7)—7h. 38m. 10 10-11sec.; (8)—8h. 43m. 38 2-11 sec.; (9)—9h. 49m. 5 5-11sec.; (10)—10h. 54m. 38 8-11sec.; (11)—11h. 60m. or 12 o'clock.

Terpin Hydrate with Wild Cherry.

Francis Hemm, of St. Louis, recently contributed the following formulas to the Missouri Pharmaceutical Association:

Terpin hydrate, powd.	256 grains
Alcohol, deodorized	12 fl. ounces
Fluid extract of wild		
cherry, U. S. P.	2 fl. ounces
Glycerin	2 fl. ounces
Tincture of vanilla, U.		
S. P.	2 fl. drams

Dissolve the terpin hydrate in the alcohol, add the glycerine, fluid extract of wild cherry and tincture of vanilla. Mix thoroughly and incorporate 2 drams of powdered pumice and filter through a well-wetted filter, re-filtering if necessary until brilliantly clear. Each fluid dram contains two grains of terpin hydrate and $7\frac{1}{2}$ minims of fluid extract of wild cherry bark, U. S. P.

TERPIN HYDRATE, WILD CHERRY AND HEROIN.

Heroin hydrochlorate	5 grains
Distilled water	2 fl. drams
Elixir of terpin hydrate		
with wild cherry, q. s.		1 pint.

TERPIN HYDRATE, WILD CHERRY AND CODEINE.

Codeine phosphate	16 grains
Distilled water	$\frac{1}{2}$ fl. ounce
Elixir of terpin hydrate		
with wild cherry, q. s.		1 pint.

Dissolve the codeine phosphate in the water and mix with the elixir. Filter if necessary.

Here is a doctor's rule for making camphorated oil: Break rock camphor into small pieces; put it into a bottle and fill with olive oil. Half of threepennyworth of rock camphor will be enough for a four-ounce bottle of oil. Shake well.—The Globe.

SOLE AGENTS

The first thing a druggist wants is a *pure* article. Next he wants a pure article that *SELLS*.

20 = Mule = Team Borax

is it. Folks are beginning to wake up to the fact that BORAX is about the most necessary thing to have in the house. It's being extensively advertised everywhere.

PACIFIC COAST BORAX COMPANY,

New York

Chicago

San Francisco

Notice—We have acquired the American patents for the "Thermophore" heat retaining Compositions and devices. We have adapted the same to the American Market and now offer them to the trade with every confidence that they will be as well received by our people as they have throughout Europe.

THE THERMALITE COMPANY,
161-165 Elm St., New York.

The Thermalite Bag

Better than a Hot Water Bag

The Thermalite Bag gives a uniform heat at an even, ideal temperature. (Larger sizes maintain heat all night.) Weighs but one-third as much as a filled water bag of equal capacity. Has a heat absorbing and imparting capacity three or four times that of water. Will not leak, scald or irritate. Plastic and agreeable. Soothing to sensitive persons.

Stores heat for future instant use. May be placed by the bedside and heat turned on at any hour of the night.

Substitutes a refining fragrance for the unpleasant odor of rubber. Thermalite itself is odorless. (Bags may be obtained unscented if desired.) Is always pleasant to the touch—not cold, moist and clammy like the hot water bag.

Thermalite contains nothing dangerous or injurious, and the Thermalite Bag is guaranteed to be all that we claim or money refunded. Requires no refilling or renewal of contents.

Prepared for use by placing for a few minutes in boiling water or running hot water from faucet.

Heat is renewed by boiling bag.

a few minutes, after which it may be used at once or put away for future use. Wherever there is a hot water bag there is a customer for the Thermalite Bag. Retailers as follows:

No. 1—one quart capacity—gives heat 3 hours	\$1.50
No. 2—two quarts capacity—gives heat 5 hours	2.00
No. 3—three quarts capacity—gives heat 7 hours	2.50
No. 4—four quarts capacity—gives heat 9 hours	3.00
No. 0—Face Compress	1.25

Let us have your sample order by return mail.

Be the first to introduce this splendid article to your customers.

We are advertising the Thermalite Bag in publications of the widest circulation, as well as by direct effort with the medical profession. There is bound to come to you a volume of demand. Why not be prepared? You know the American people are quick to realize merit and just as quick to utilize it, so that the successful sale of the Thermalite Bag is an assured fact.

Write us for terms and descriptive illustrated literature. Don't wait for the other fellow to get the benefit of introducing these goods in your locality. They will be the talk of the town. Why not enjoy the trade that will come from this universal town talk?

The Thermalite Company,

161-165 Elm Street, New York, U. S. A.

"Thermalite" is a heat accumulating compound of great capacity. Its basis was discovered in France some time ago, but it has been perfected only recently in Germany, where, after a great deal of time spent in experimental study, it has been brought to a high degree of perfection, and has been successfully introduced all over Europe.

THE THERMALITE COMPANY, 161-165 Elm St., New York, U. S. A.

**HEATS
WITHOUT
FIRE**

for the same reason. Like you, we are a power in the land, not because of wealth, or knowledge, or influential friends, but because we are a blessing to humanity, because we supply a legitimate and imperative want. Your power is great, yet you cannot eliminate us. When our formulas are published, your prescriptions will be written in English and will appear on every bottle or package dispensed. Take away the mystery which surrounds your profession and you will lose your most important asset."

Fellow proprietors, this is the way we might talk, but we don't even whisper. We know when we say the most *ex ungue unguine*, that it will do the business for us. As a matter of fact, our union is weakness instead of strength, unless we are united by the determination to demand the right to do business without persecution. Let everybody come out into the open, friends and foes, and have these questions settled in accordance with common sense and justice.

Any proprietor who has had to contend with that most pestiferous and peculiarly low class of criminals, the infringers of trade marks and the counterfeiters, will welcome with joy the new trade mark law lately enacted by Congress. The punishment it provides on conviction is not adequate, as the penalty is only monetary, while imprisonment should be added to it. I would recommend that the association give this question considerable attention.

128 NEW MEMBERS.

F. J. Cheney, chairman of the Membership Committee, reported that a total of 128 members had been added and that the total revenue from dues, etc., was \$4,950. On motion of John W. Kennedy, Mr. Cheney was given a vote of thanks for his good work. Treasurer Harry H. Good reported that the receipts for the year were \$21,135.09 and disbursements \$14,831.01, leaving a balance of \$6,304.08. The heaviest expenses were incurred in legislative work. The report of the Legislative Committee was made a special order of business for the afternoon.

On motion of Dr. Pierce, a committee to nominate officers was appointed, as follows: Messrs. Chamberlain, Pinckney, Cheney, Good and Pierce. Messrs. Stowell, Gore and Cheney were appointed a committee to consider the treasurer's report. Dr. Pierce moved that the privilege of the floor be granted to the N. A. R. D. and N. W. D. A. delegates. This was carried and the meeting adjourned at 12:15.

REPORT OF LEGISLATIVE COMMITTEE.

The afternoon meeting was called to order at 3 p. m., one hour late. The association immediately went into executive session to consider the report of the Legislative Committee, prepared by John W. Kennedy. It was in part as follows:

There is one tendency in pure food and drug legislation which should suppose would arouse the opposition: the retention of druggists, and that is the constant tendency of the State Agricultural Departments to extend their jurisdiction over the subject of drugs, not merely the marketing. The practice of pharmacy is a learned profession and if the pharmacists chose to assert themselves aggressively, they could exercise very great influence; but if they come to political work the average "agriculturalist" will usually get away with the average pharmacist. By the word agriculturalist do not mean the hardworking farmer who is looking after his crops, but the political farmer who poses as a friend of the people and is found in full force at the State capitals. As a result of the activity of this class of men, the agricultural bureaus in the different States are gradually getting power to supervise and regulate the drug business and the exclusion of able and skilled men in the drug trade.

This association must never assume a passive attitude in the matter of legislation. Your committee last year urged affirmative action in the matter of legislation to protect the public against the wide-

spread sale and use of cocaine; and we stand ready to join with any and all other organizations to promote by every proper means the enactment of good laws intended to furnish protection to the public from the sale of every sort of dangerous, disreputable or injurious preparations. Wherever a bona fide and carefully drawn measure having this end in view makes its appearance this committee is in favor of it and never throws the slightest obstacle in its way. But we should do more than this. We should encourage and protect action by the four national drug organizations, for the purpose of more effectively to weaken the force of the vicious and malicious agitation now being carried on and which, as matters now stand, is more likely to increase than diminish in the next years.

PURE FOOD AND DRUG BILL.

The Pure Food and Drug bill pending in Congress, after attracting much public attention and having passed the House, is now such a vote in the Senate. The Proprietary Association at its last annual meeting, strongly endorsed the House bill; but it opposed, as all reasonable men are, the Senate bill. It is desirable to infract certain features upon it by the Senate Committee on Manufactures. All right-thinking men favor a reasonable bill, and it is essential that we be able to prepare a bill which would meet with the approval of fair and reasonable men everywhere. The trouble now is that the promoters of a national pure food law are trying to make it a drag net intended to cover many special fads and notions, to say nothing of sundry schemes to further special interests. A leading New York paper recently published an editorial attributing the failure to pass this bill mainly to the "blended whiskey" interest and to the manufacturers of proprietary medicines. I think the opposition to the Senate bill was very much broader than this; but it is interesting to note the special interests which give the opposition of the manufacturers of proprietary medicines, for they illustrate the fanciful ideas of the proper functions of government which are entertained by the chief promoters of the Senate bill.

The opposition of the proprietary manufacturers was not based upon any objection to the bill so far as it related to secure the purity of drugs, but solely upon certain other provisions sought to be added in the Senate, the purpose of which is chiefly interpreted by the chairman of the Senate (Committee) was to make it the duty of the Federal Government to pass upon the therapeutic properties of proprietary medicines as a condition precedent to the right of the manufacturer to ship them from one State to another. By a majority of one, the Senate Committee voted to amend the bill with reference brought about, the object being to exclude foreign Inter-State commerce every article of medicine which might be determined by the Federal authorities not to possess the therapeutic value claimed for it by the manufacturers.

INTER-STATE MEDICINES.

In other words, if the label or other printed matter accompanying a certain homeopathic medicine, for instance, states that "it will cure the grip" and some allopathic physician prescribes some of this sort of curative medicine, some allopathic physician comes along and denies that it will cure grip, the question whether the claim made for this medicine is correct or not would immediately become an issue for the Federal Government to settle under the guise of regulating Inter-State commerce; and if some court of law, or the advisory board of medical experts should determine that this medicine will not cure grip, the medicine would immediately become "a contraband article" and its shipment excluded from Inter-State commerce. Carried to its logical conclusions, such a theory would make the Agricultural Department a colossal medical bureau, with advisory powers over the pharmacy and a comparison of one part of the bill with another, in its application to medicines, shows what the majority of the

Senate Committee intended; and the official interpretation of the chairman left no room for doubt. It was simply a bold proposition that the Federal Government should not only stir up countless controversies and disputes over the medical questions in forty-eight States and territories and the District of Columbia; but that it should also undertake to settle those disputes by the testimony of experts. Of course, such a law would make business for the trials of professional experts brisk and profitable; but when the matter was made clear, all reasonable men recognized that the scheme was absurd; and it is undoubtedly true that this was one of the circumstances which increased the opposition to the Senate bill.

If the Federal Government should regulate Inter-State traffic in drugs on the basis of their therapeutic value, why not regulate the traffic in theology by excluding from transportation all theological books which Dr. Wiley and his assistants upon examination should find to be "misleading in any particular?"

If the promoters of this bill would drop their fads and abandon the idea that they have got to regulate everything in sight, simply for the pleasure of doing it, they could undoubtedly secure the passage of a bill which would serve a great and useful purpose.

The committee also emphasized strongly the importance of retail druggists' organizations in the various States, as being for the benefit and in the interest of all branches of the trade.

About two hours were spent in receiving and discussing this report, but at the conclusion of the meeting it was announced that definite action had been postponed until the following day.

PROPRIETOR CAUSES TALK.

St. Paul, Minn., April 29.—Fred Schiffman, born vivax and liked by everybody, is just now the most widely talked about man in St. Paul, because of a peculiar matrimonial entanglement which has embarrassed him. Fred is the son of Dr. Rudolph Schiffmann, the wealthy head of the Schiffmann Medicine Company, president of the upper branch of the St. Paul City Council, and one of the Democratic pillars of the capital city. Fred, who is a Republican, and differs from the "old man" not only in politics, but in the spelling of his name, has long been associated with his father in the medicine-making business and a few years ago was State oil inspector.

Among the packers in the employ of the Schiffmann Medicine Company was Miss Clara L. Haas, an attractive girl of nineteen, who was once on the stage. Two weeks ago the friends of Fred and Miss Haas were astonished on reading the announcement that they had been married at Joliet, Ill. Within two days a woman, calling herself Helen Laura Sebastian Schiffman, of this city, came to the front with the claim that she was the wife of Fred, and had lived with him fifteen years.

According to the family of Miss Haas, Fred Schiffman and his young bride returned from Joliet, immediately went to Minneapolis, and nothing has been heard of them since. The Haas family thinks the couple are in the East. The woman who asserts Fred married her in 1890 says:

"Whatever he has done, I do not believe he has been himself for the last few months. I am his lawful wife and will prove it to protect my name, although I do not want him to come back to me. I shall seek a divorce."

ARE NOW GRADUATES.

New York College of Pharmacy Commencement a Brilliant Affair.

"Don't spend money foolishly, don't do business with fools, don't marry fools, and above all, don't be fools yourselves," said Congressman William S. Bennett, to the graduates of the New York College of Pharmacy, at the seventy-fifth annual commencement of that institution, held in Carnegie Music Hall, last Thursday evening. These remarks followed his quotation of the Scripture text, "though thou shouldst bray a fool in a mortar among wheat with a pestle, yet will not his foolishness depart from him," and they set everybody to laughing. The congressman made many other good hits and his witticisms were to the point in every instance. He congratulated the members of the class upon their choice of a profession and enjoined them to know and observe the special laws which circumscribed their calling and to be good citizens. The practice of pharmacy not only demanded professional knowledge, but pharmacists must be good business men to be successful.

As outlined in The Era last week, the commencement began promptly with the entrance of the faculty of the college, followed in order by the graduating class, 104 strong, conducted by A. C. Searles, and the post-graduate class, thirteen members, conducted by W. H. Ebbitt, to the march "Entrance of the Gladiators," by the Seventh Regiment Band.

Vice-President Wm. Jay Schieffelin, in his doctor's gown, then proceeded to deliver his address, in which he referred to the affiliation of the college with Columbia University and the effort of the Alumni Association, headed by the veteran honorary president, Ewen McIntyre and Treasurer C. O. Bigelow, to reduce the college debt. Dr. Schieffelin also spoke of the work of the American Pharmaceutical Association and other national organizations and urged the graduates to identify themselves with these societies.

The roll of graduates was read by Secretary Thomas F. Main, and in the absence of President Chandler, the degrees were conferred by the vice-president Dr. Schieffelin. Then came the awarding of alumni prizes, the presentation in each case being made by the president of the Alumni Association, Mr. F. Borggreve. The prizes were three in number, and were awarded as follows: Gold medal, Hasson O. von Wedell, Dobbs Ferry, N. Y.; silver medal, Carl W. Poetz, Jersey City, N. J.; bronze medal, Samuel Kutscher, Stapleton, Staten Island. The trustees' prizes of \$100 each (three in number) were awarded to Samuel Kutscher, Stapleton, Staten Island (materia medica); Martin I. Marshak, Bayoune, N. J. (pharmacy), and Nathan Siegel, New York (chemistry).

The list of "honor" men, ten in number, appeared in The Era of last week. The valedictorian was George Martin Broemmel, of San Francisco. An incident not down on the programme was a short address read by Miguel Alvarez y Figueroa, of Havana, Cuba. Vice-President Schieffelin, in introducing him, referred to the Cuban being the fourth of his generation to be engaged in the drug business. While he (Dr. Schieffelin) was of the fifth generation of druggists. The family of Senor

Figueroa were present to see him graduate.

The exercises of this commencement differed but little from those of recent years. With the exception of Prof. Chandler, whose absence was noted by more than one present, the familiar forms of the other members of the faculty were to be seen in the same seats they had often occupied before; the address of Congressman Bennett was pithy and out of the line of the ordinary, while the music was first-class, the cornet solo of Mr. Chester Smith capturing the big audience.

JOSEPH S. GOSS.

Des Moines, Iowa, April 28.—Joseph S. Goss, of Atlantic, Iowa, on Monday took his position as the regularly appointed Democratic member of the State Board of Pharmacy. The Board will meet in a few days and organize, though it is always understood that the retiring member, or

JOSEPH S. GOSS.

the member serving on his last year, shall be the chairman. Fred Russell, of Rockwell City, is thus entitled to the position. Charles W. Phillips will be re-elected as secretary. Mr. Goss succeeds the late Fletcher Howard.

Mr. Goss was born in New York City, August 27, 1857, and when he was a year old his parents moved to Chicago, where they resided till 1871. He clerked for four years in a drug store at Seneca, Ill. With Dr. J. M. Emmert, he bought out the Jones Drug Store, in Atlantic, and four years later bought out his partner. Since then Mr. Goss has devoted his attention entirely to the drug business, and has made a success of it.

Mr. Goss is a prominent Knight of Pythias and Elk and is also prominent in the Modern Woodmen. For ten years he was secretary of the Atlantic Lodge of Woodmen. His family consists of his wife, a daughter and a son. Mr. Goss is a brother of the Goss Bros., of Chicago, the big printing press manufacturers.

—Plans have been prepared for a new store for Frank Ross, at Fifty-second street and Chester avenue, Philadelphia. Mr. Ross will continue to conduct his present store at Fifty-second street and Haverford avenue.

AN EGREGIOUS FARCE.

Woman Charged With Selling Poison Speedily Vindicated.

St. Paul, Minn., May 1.—Mrs. Helen Hughes, clerk in a store at Stewartville, whose arrest on the charge of having sold a package of poison in violation of the State pharmacy laws has been noted by The Era, was speedily vindicated on her trial before Judge Gaskill and a jury. Attorney R. G. O'Malley, of St. Paul, opened the prosecution by calling Fred Wilson, inspector for the State Board of Pharmacy, who was the sole witness on either side. Mr. Wilson testified he had purchased a bottle of strychnine from Mrs. Hughes, contrary to law. He had kept the bottle, package and all, ever since, and produced it in court. Attorney Hammer, for the defense, brought out the fact that the seal of the package had not been broken. He contended that the State had not proved by analysis that the package contained a poison. Therefore the evidence was not good and should be thrown out. Mr. Hammer said all lines inured to the State Board of Pharmacy, and evidently all the Board wanted was the fine. The prosecution, he pointed out, did not want to harm Mrs. Hughes, but was really after the firm that employed her.

Then the jury went out and in one minute voted unanimously for acquittal. The other woman clerk in the same store, Miss Rose Prelwitz, who was also arrested, was to have been tried the next day, but the prosecution dropped the case against her, thus ending one of the most egregious farces ever played in that section of Minnesota. It is rumored that the proprietors of the Cash Supply Store, employers of the accused woman, will soon be arrested on the same charge.

BILLS LIKELY TO PASS.

The pharmaceutical organizations have reason to feel proud of their success with legislative work in this State this year, for so far as known only two bills of direct interest to the trade are likely to be placed upon the statute books. These are the Hill bill (penal code amendments), engineered by the Legislative Committee of the State Association, and the bill exempting from taxation the Brooklyn College of Pharmacy, which was backed by the Kings County Pharmaceutical Society. And if these organizations have been successful in getting the laws they have wanted, they have been none the less successful in putting into a state of quiescence a number of other bills of doubtful value.

Both the Hill bill and the taxation bill of the Brooklyn C. P. have passed the Legislature, and now await the Governor's signature, which it is believed both will receive. All other bills are practically dead. The amendment to the liquor law reducing the quantity a druggist may sell from one pint to eight ounces, will probably die along with the other proposed amendments and the law, so far as it relates to druggists, will remain as heretofore.

OHIO HAPPENINGS.

The Stein Gray Co. has secured a long lease on the premises at 228 East Fourth street, Cincinnati, at an annual rental of \$2,500 per year.

SPLIT ON FORMULA BILL.

State Board of Pharmacy in Favor.
Wisconsin Druggists Opposed.

RETAILERS FEAR THE BILL WILL DO TOO MUCH.—FORMER SECRETARY MENGES BLAMES THE DRUGGISTS' FOR ALLOWING THE MANUFACTURER TO DOMINATE THEM.—VIEWS OF MR. HUGHES.

Milwaukee, Wis., April 29.—There is a strange difference of opinion among the druggists of Wisconsin regarding the latest formula bill now before the Legislature. While the Wisconsin Pharmaceutical Association is opposing the bill and has defrayed the expense of sending a committee to Madison to endeavor to defeat it, the members of the State Board of Pharmacy are unanimously in favor of its passage. The trouble seems to be that the effect of the bill is not generally understood. It is more or less of an experiment, and retailers are inclined to believe that it will do more than appears on its face. Members of the Board of Pharmacy believe they understand the measure and that it will have a good effect.

A. F. Menges, of Madison, who recently retired as a member and as secretary of the State board, is one of the champions of the measure. To the Era correspondent he made the following statement:

"I am surprised at the attitude of some druggists regarding the so-called Noble bill, for it appears to me that this is a measure that all enlightened and progressive druggists ought to advocate. The bill only requires that if a patent medicine contain narcotics, sedatives or poisons of any nature the label shall indicate its contents. It also requires that if the medicine contain over 20 per cent. of alcohol the label shall indicate it. Drugs and medicines of a harmless nature need not be published on the label, nor does the law require the full formula of the medicine. It is not as stringent a law as has been passed by some other States.

"It is similar to the law in England. In England Winslow's soothing syrup contains a label bearing these words: 'This preparation contains morphine.' In this country the label contains no such fair warning. The object of the Noble bill is to let the people know when they are feeding their infants or themselves poisons.

"Every preparation made by the Wisconsin Pharmaceutical Company contains its full formula, and yet these goods are good sellers, and the six or seven hundred druggists in the State who are stockholders in the company are satisfied with the returns on their investment.

"The trouble is that the druggists have allowed the manufacturer of patent medicines continually to hold a club over them because he has made some concessions to the retail druggist in maintaining prices. It is a sorry condition for the druggists of this country when they place themselves in such a position. Are we mere vendors of patent nostrums?

"It is an expensive tribute that the manufacturer of patent medicines exacts when he requires us to defend the sale of

his remedies, when the enlightened members of the medical and pharmaceutical professions endeavor to enact laws for the welfare of the general public that Mr. Proprietor calls upon the retail druggist to defeat this proposed meritorious legislation."

On the other hand, John F. Hughes, of Reeseville, chairman of the legislative committee of the Wisconsin Ph. A., is entitled to speak for the majority, having been sent to Madison by the association to oppose the Noble bill.

"The objectionable bill was introduced and fathered by Dr. Noble," said Mr. Hughes. "Dr. Noble is a physician actively practicing at Eau Claire. I cannot believe that he was inspired entirely by philanthropy and a desire to safeguard the health of the people of Wisconsin. The bill has the endorsement of many physicians, and I believe the medical profession favors it purely for selfish commercial reasons. I do not believe the members of the State board represent the retail druggists of the State when they advocate this bill. Its passage would mean that the retail drug trade would be cut 60 per cent. and will drive 60 per cent. of the small stores out of business, unless the doctors will come to the rescue and give them more prescriptions to fill.

"There is another point that has been generally overlooked. The bill cannot prevent patent medicines being shipped into the State to the consumer in the original package. There are many patent medicines that the people have grown to consider as household necessities. They will have them, and if they cannot get them from their druggist they will get them elsewhere. This will mean that the mail-order houses in adjoining States will get the profit that this little bill takes out of the pockets of the Wisconsin druggists."

DRUG STORE IS RAIDED.

Anthony Comstock Charges Knickerbocker Drug Co. With Lottery.

On a warrant charging that a lottery was being carried on in the Knickerbocker Drug Company's store at 648 Broadway, Anthony Comstock, head of the Society for the Suppression of Vice, raided the place, last Friday, and confiscated a graphophone, 4,800 tickets and several boxes of throat tablets containing coupons calling for various specified prizes. Two clerks, Rudolph Lefkowitz and George Blottman, were arrested.

What Mr. Comstock calls a lottery was in the form of numbered tickets, one being issued to every purchaser of a glass of soda. The prize for this month was a graphophone, and the drawing was to have taken place on April 30. The president of the company, Ashton M. Boney, was not arrested. He expressed considerable astonishment at the action of Mr. Comstock, declaring that other drug and cigar stores were doing the same thing right along. The tickets, he said, were used chiefly to keep tab on the number of customers.

Mr. Boney was the foreman of the jury that convicted "Al" Adams, the policy king. Both clerks were held in \$500 bail each, for trial in Special Sessions.

PRICES MUST GO UP.

N. A. R. D. Notifies Druggists that Penalties Will Be Enforced.

SCHEDULE OF RETAIL PRICES—EVERYTHING NOW UP TO THE DRUGGISTS, SAYS PRESIDENT ANDERSON.—WORK OF ORGANIZATION GOING ON VERY SLOWLY.

To every retailer in the city the following notice has been sent, signed by William C. Anderson and S. V. B. Swann, president and secretary of the Metropolitan Association of Retail Druggists:

"All contracts between the retailer and proprietor of medicines marketed under the direct contract and serial numbering plan were in force as soon as signed by the retailer. But owing to local conditions and the time required for the proprietors to get their new system in proper working order no prosecutions for the violation of the contract retail price have occurred, but we are in possession of information that leads us to notify you that on and after May 1, 1905, the penalty clause for violating the contract retail price on all goods marketed on the direct contract and serial numbering plan will be rigidly enforced by the manufacturers. The retail prices, as specified in the various contracts, are as follows:

"Miles Medical Co. preparations,	full price.
Peruna	\$.83
Bromo Laxative Quinine25
Piso's Consumption Cure25
Piso's Catarrh Remedy25
Piso's Tablets25
Paine's Celery Compound90
Lactated Food	2.50
Lactated Food90
Lactated Food45
Lactated Food25
Diamond Dyes10
Wills' English Pills25
Kidney-Wort45

"A meeting of the Metropolitan Association of Retail Druggists will be held in the College of Pharmacy, 115 West Sixty-eighth street, New York, Wednesday, May 3, 1905, at 9 P. M. sharp."

"From now on," said President Anderson, in commenting on the above, "everything will depend on the retailers themselves. Of course, the association will do its part, but we cannot have men all over the city looking for violations, and neither can the proprietors. If there is cutting on contract goods in the neighborhood of a druggist, let him report the fact at once to the association."

The work of organization is going on very slowly, only a few districts having been organized. It is believed that unless more rapid progress is made through the efforts of the N. A. R. D. organizers stronger measures will have to be employed to carry out the work of districting the city.

RETAIL DRUGGISTS' OFFICERS.

Newark, N. Y., May 1.—The Wayne County Retail Druggists' Association has elected officers as follows, for the ensuing year: President, Frank A. Kelley, of Newark; vice-president, B. T. Moore, of Wolcott; treasurer, C. A. Moore, of Lyons, and secretary, C. S. Hanks, of Newark.

JEWELRY CASE THROWN OUT.

New York Druggist Gets Verdict of "No Case" and Costs.

A VICTORY ALSO WON BY A CONNECTICUT DRUGGIST.—TRIAL SHOWS THAT PURITAN MANUFACTURING CO. AND FEDERAL COLLECTION AGENCY ARE ONE AND THE SAME.

George F. Phillips, a druggist of 846 Eighth avenue, has won a victory against the Johnson County Savings Bank, which attempted to collect on a note given by Mr. Phillips to the Puritan Manufacturing Co., of Iowa City, Iowa. The case came up for trial in the West Side Court. Last week a referee was appointed by the judge to take testimony, and on this testimony the case was thrown out of court Monday morning.

This case is typical of the many which have annoyed druggists recently, and with the circumstances of which they are all familiar. Several druggists were on hand Monday morning to relate their experiences with the jewelry company, but their services were not required. In addition to having the case thrown out of court, Mr. Phillips was awarded the costs of the action. He is jubilant over his victory.

Waterbury, Conn., April 26.—The case of the Johnson County Savings Bank vs. the Waterbury Drug Co., to collect for a consignment of jewelry bought in July, 1904, from the Puritan Manufacturing Co., Iowa City, Ia., was heard last week, in the City Court. Judgment was rendered for the defendant to recover costs.

Three druggists, Robert Walker, John Moore and J. A. Sunda, of the Waterbury Drug Co., entered into agreements last summer for consignment of jewelry, under the terms already known to druggists throughout the country. They signed "acceptances" which were really promissory notes, after they had tried to get out of their contracts and had been threatened with law suits by the Federal Collection Agency. When the first "acceptance" came due it was presented by the Johnson County Savings Bank, which had purchased the paper in the meantime.

It developed during the trial that the Puritan Manufacturing Co. and the Federal Collection Agency were one and the same thing, and that the Johnson County Savings Bank secured the "acceptances" from the Puritan Manufacturing Co. at a discount of twenty per cent. on their face value. Another significant fact appeared when letters were introduced showing that the Federal Collection Agency acted as collector for the Johnson County Savings Bank, as well as for the Puritan Manufacturing Co.

The jewelry, which was received by the local druggists, has already tarnished and such of the jewelry as has been sold has been returned. In some cases the druggists claim to have lost valuable customers through the sale of this jewelry.

DIED OF MENINGITIS.

East Aurora, May 1.—Frederick Welch Gardener, who had conducted a drug store here for twenty years, died last week, of spinal meningitis. He was forty-six years old and leaves a wife and two daughters.

THIEF RESUMES WORK.

Heupschmann, Who Spent Term in Jail, Captured, but Went Free.

Thirty days in jail has lost its effect on John Heupschmann, alias "Dr. Adler," who was arrested last fall for stealing goods from the counters of druggists, and spent a period of repose behind the bars. He is abroad again, but the two Harlem druggists whom he visited one day last week, got back the goods that he stole. Unfortunately they were too excited to have him arrested. It happened this way:

J. R. Romlein, of Romlein & Fuchs, One Hundred and Tenth street and Third avenue, was alone in his store about 1 p. m., when a man whom he describes as of medium size, heavily built and with a blond mustache, entered and asked for nut-gall ointment. He wanted the druggist to make up a fresh quantity for him, but Mr. Romlein said his was always fresh and went to the back of the store to get it. Meanwhile the stranger leaned against the counter, and when Mr. Romlein returned, he thought he saw a bulging pocket. But he had not seen the theft and was unable to leave the store, so the stranger walked out unmolested.

Walking down Third avenue to One Hundred and Sixth street, the thief entered J. Weidenfeld's drug store and asked for nut-gall ointment—fresh. His clerk, William D. Brown, was apparently busy at the front of the store, but was watching the suspicious movements of the stranger. The latter when he thought that no one was looking, tucked three dozen Bromo Seltzer into his pocket, called out, "I'll be back," and made for the door.

Then it flashed on Mr. Brown that this was the "Dr. Adler" who had written a prescription a year ago and never came back for it. The clerk rushed after the man, who, when he felt an arm on his shoulder, cried out, "I didn't steal anything!" Brown didn't act as if he was convinced, however, so the thief invited him into the corner saloon. Here he aimed a blow at the clerk, but the latter dodged, and in return "caught him a good one," as he afterwards said. The thief's coat flew open and disclosed one dozen Bromo and a package of Pepto-Mangan with the Romlein & Fuchs label. Brown started back with these, but a small boy said, "Hey, mister, he's got more." So again Brown gave chase, caught his man and recovered the rest of the goods.

There was no policeman in sight and the clerk was excited over getting the goods back, so this time "Adler" or "Heupschmann" escaped. Mr. Romlein got his Pepto-Mangan again. It is safe to say that the next time "Heupschmann" is caught his sentence will be something more than thirty days.

COLUMBIA COUNTY DRUGGISTS.

Indson, N. Y., May 1.—The Columbia County Retail Druggists' Association has elected the following officers: George McKinstry, of Indson, president; R. W. Seymour, of Chatham, vice president; H. A. Branion, of Chatham, secretary; R. L. Waltemire, of Philmont, treasurer; A. W. Rice and J. Harold Wardle, of Indson, trustees.

N. Y. R. D. A. NOT IN THE FIELD.

Will Not Run Candidate for Board of Pharmacy This Year.

Sitting in executive session, the New York Retail Druggists' Association decided last Wednesday night not to put forward any candidate of its own for election to the Board of Pharmacy. A strong sentiment developed in favor of supporting Dr. Diekman, who will probably get the votes of many members of the Association, regardless of any other candidates that may come up. This will restrict the field considerably and increases the probability of a unanimous election.

Some discussion followed the report of Joseph Weinstein that all proprietary medicine contracts were going into effect on May 1. The question was asked whether the \$50 penalty would be strictly enforced and whether there would be any redress against druggists who cut prices on contract goods? To this President Diamond replied that everything rested with the manufacturers, who were each responsible for the enforcement of their individual contracts.

"If your neighbor continues to cut," said Mr. Diamond, "it will be your duty immediately to inform the Executive Committee, who will see to it that his stock is soon exhausted."

Mr. Diamond stated that the department stores were apparently willing to come into line, but they want a more extended number of contracts. Five contracts, they claim, are not enough. As for the big cutters, the N. A. R. D. had promised to take care of them, and Mr. Diamond considered that it was up to the N. A. R. D. officials to keep their promise.

Reports on the progress made against souvenir giving were postponed until the next meeting. After some discussion on financial matters, the meeting adjourned at 2 a. m.

AMERICAN CHEMICAL SOCIETY.

The eighth regular meeting of the New York Section of the American Chemical Society will be held to-morrow evening, May 5, at 8:15 p. m., in the Assembly Hall of the Chemists' Club, 108 West 57th street. The program for the evening is as follows: Daniel D. Jackson, "An Improved Form of Viscosimeter for the Testing of Oils"; A. W. Dox and M. T. Bogert, "Condensation of Succinylsuccinester with Guanidine"; H. A. Seil and M. T. Bogert, "Synthesis of Quinazolines from 6 Nitro-acetantranil"; A. H. Peterson, "Influence of Organic Acids on the Precipitation of Antimony Sulphide"; Morris Loeb, "The Crystallization of Sodium to Hide from Alcohols."

PATENT MEDICINE CRUSADE.

Hartford, Conn., May 1.—A crusade against patent medicines has been started in this city by attorneys for the Excise Board. The charge is made that some of the medicines consist principally of whiskey and that they are sold without a license, in violation of the excise laws. A dozen druggists, from whom samples were purchased, have been summoned to court.

VAUDEVILLE IN PLENTY.

Juniors Help Out Performers at N. Y. C. P. Class Day Exercises.

What with comedians, dancers, singers and Parisian fire-eaters, the audience at the junior Class Day exercises last Wednesday evening got sufficient vaudeville and variety show to last them in definitely. The crowd that filled the lecture room of the New York College of Pharmacy to overflowing was quick to show its appreciation of the good "acts" and joined in occasionally to help out the performers, whenever noise was required. The program was as follows:

1. Overture, "Popular Airs." Alumni; 2. Joseph J. Edmonds, monologue and singing comedian; 3. Lydia Hall, coon songs; 4. Dr. George C. Diekmann, reading Roll of Honor; 5. Fauveta Sisters, singing and dancing acrobats; 6. Tom Balauntine, humorist; 7. Mr. Fred Borggreve, President Alumni Association, awarding Junior prizes; 8. George W. Hussey, ventriloquist; 9. Mme. Satahalla, Original and Only Queen of Fire; 10. T. Kelly, famous Edison Projectoscope.

One number not on the program was the presentation of a handsome blue and gold banner to the Alumni Association, the handiwork and gift of Mrs. Henry J. Binder, Jr. Mr. Binder made the presentation and President Borggreve accepted the banner and cordially thanked Mrs. Binder in behalf of the association. The honor roll, read by Dr. Diekmann, was published in last week's Era.

After the entertainment dancing was begun in the pharmacognosy room. Those in charge of the affair were: Floor manager, F. A. Gundlach; assistant floor manager, Thomas M. Davies; reception committee, P. Fitz (chairman); R. Heuning, George Dürr, R. Gies, N. Cohn; Junior Class Day committee, H. J. Binder, Jr. (chairman), G. W. Morse, T. M. Davies, William A. Hohweg, W. H. Ward.

PRIZE WINDOW DISPLAYS.

The prizes offered by Dr. V. Mott Pierce, of the World's Medical Dispensary Association, Buffalo, for the best windows in this company's March contest, have been awarded to the following druggists, the judges in the contest and to whom the photographs of the displays were submitted being Messrs. Frank E. Falkenberg, Walter H. Gale and Charles H. Avery, well-known druggists of Chicago; John P. Bates, Mansfield, Pa.; Moore & Moore, Lyons, N. Y.; Watson Bros., Warsaw, Ind.; Benjamin F. Zenk, St. Louis, Mo.; S. C. Dougherty, Jeanette, Pa.; A. H. Lyman Co., Manistee, Mich.; Grimm's, Parkersburg, W. Va.; C. W. Vincent, Polo, Mo.; Benj. Rosenzweig, Brooklyn, N. Y.; Will S. Sanderson, Mound City, Ill.

A NEW COPARTNERSHIP.

Clifford E. Dunn and Henry M. Turk, each of whom have been engaged in the practice of patent and trade-mark law in this country for many years, have formed a copartnership for the practice of their speciality—patents, trade-marks, copyrighting, etc. Both members of the new firm have acquired much experience and established their reputations in this particular field of legal practice.

NEW YORK NOTES.

—Frank S. Hereth, former president of Searle & Hereth, Chicago, and president of the Chicago Drug Trade Club, spent a few days in the East, last week.

—Mr. and Mrs. Howard McK. Kirkland, who were married last Tuesday, sailed on the following day on the steamer Baltic, for a tour of Europe. They will return about August 1.

—The Alumni Association of Columbia University, at its annual meeting, last Wednesday evening, presented the university with a portrait of Prof. Charles F. Chandler. This, it is understood, was the reason for Prof. Chandler's absence from the College of Pharmacy commencement on that night.

LOWER 'PHONE RATES.

Boston Company Announces Reduction in Certain Classes of Service.

Boston, April 29.—Substantial reductions in telephone rates for certain classes of service were announced Wednesday by the New England Telephone Company, in effect May 1. The Boston, Metropolitan and suburban exchanges are affected by these reductions, which, it is expected, will benefit a large number of the company's patrons and so enhance the value of the exchanges.

The suburban measured service exchange rates, including exchange service with subscribers connected with the Main, Back Bay, Haymarket, Oxford, Richmond and Tremont exchanges, show the following reductions:

SPECIAL CIRCUIT.

	New rate.	Additional calls.	Old rate.	Additional calls.
600 calls	\$60.00	5c. each.	None.	
700 calls	65.00	5c. each.	\$70.00	6c. ea.
800 calls	70.00	5c. each.	75.00	6c. ea.
900 calls	75.00	3c. each.	80.00	6c. ea.
1000 calls	78.00	3c. each.	85.00	4c. ea.

TWO-PARTY CIRCUIT.

500 calls	\$45.00	5c. each.	\$50.00	6c. ea.
600 calls	50.00	5c. each.	55.00	6c. ea.
700 calls	55.00	3c. each.	60.00	6c. ea.
800 calls	58.00	3c. each.	65.00	4c. ea.
900 calls	61.00	3c. each.	68.00	4c. ea.

For the suburban measured service, exchange rates allowing communication only between subscribers to the suburban exchanges on special circuit have been cut from 4 to 3 cents for additional calls, the rate for 600 calls, \$48, remaining the same. On the two-party circuit the rate also remains the same, with a cut from 4 to 3 cents for additional calls.

On the unlimited suburban exchange rates for residence stations for the special line have been cut from \$66 to \$54. On the two-party circuit from \$51 to \$42, while for four parties on one circuit there will be a new rate of \$30.

BAY STATE NOTES.

—Henry Bronthers, the Glendale druggist, died suddenly at his home, last week, at the age of fifty-five.

—John T. Lang, proprietor of the Pioneer Pharmacy, Brockton, has been fined \$75 for keeping and exposing liquor for sale. He appealed the case.

IMPORTANCE OF INSURANCE.

Protection it Affords Should Appeal to the Man of Limited Means.

Philadelphia, April 29.—In view of the fact that there have been so many fires in drug stores in this city, recently, the paper by J. B. Moore on the "Importance of Insurance to Pharmacists," read before the pharmaceutical meeting held in the Philadelphia C. P., last week, was of particular interest. Mr. Moore is a retired pharmacist of this city and his paper was based on his own experience, covering many years. He is also a member of the college and although retired, has been active in all the movements that had at heart the interest of the drug trade. He said in part:

"Every pharmacist who possesses property of any value should have it insured in some good, reliable company. If not for all, then for as much as he can. Dictates of common sense, prudence and good business judgment, as well as the peace of mind and sense of security it affords, should show the value of this course. In taking out a policy, do not make the mistake of over-estimating the value of your property, but rather take the exact cost with an allowance for such increase in the value of the stock as you would reasonably expect from the growth of the business, during the year or the period for which you are insured.

"You may have a stock which at a liberal valuation is worth \$3,000, and you have it insured for \$5,000 or \$6,000, thus encumbering yourself with a premium nearly double, which you will have to pay every year and from the half of which you will never derive any benefit in case of loss by fire. All first-class companies ignore all claims for imaginary losses. It is not so much to the rich property-holders that the fire insurance appeals, but to the man of limited means who has only his stock and fixtures and perhaps the property he occupies. If he should lose it by fire, it would deprive him of the means of making a livelihood and leave him in dire distress. Yet it is just this class of citizens who, on account of scarcity of means and consequent difficulty in paying the premiums that are most likely to neglect to protect themselves by fire insurance."

Mr. Moore advised clerks and young men generally who were just starting out in life, to take up life insurance or building and loan association. He said: "When a young man, whose savings are like his wages, small, makes an investment and takes upon himself the responsibility of making monthly, quarterly or yearly payments, it is apt to have a very steady and salutary effect upon him and it may change the current of his whole life. It has a tendency to arouse in him ambition, awaken a spirit of enthusiasm and inspire him with hopeful visions of success. The baseball, football and other games; the theatres and other places of amusement are less frequently, if at all, attended; the habitue of the saloon, the race track, or gambling resort, if he has been a patron, will wonder at his absence. So he settles down and determines to become an earnest pharmacist and a good business man. He goes to work with energy and renewed ef-

fort, attends strictly to business and becomes frugal and economical."

The other speakers were Joseph L. Lemberger, Ph.M., who talked on "The Cultivation of Saffron in Lebanon Co., Pa.," and Martin L. Wilbert, Ph.M., apothecary at the Gorman Hospital, this city, who had for his subject "The Past, Present and Future of Pharmaceutical Titles in America."

WATER CAUSES LOSS.

Philadelphia, May 1. Damage to the extent of \$200 was done the laboratories of H. K. Wampole & Co., manufacturing chemists at 426 Fairmount avenue, on Thursday evening, by the starting of the automatic fire extinguishers. A steam pipe in the drying-room on the third floor burst, and, as the temperature rose to the point to which the extinguishers had been adjusted, the soft metal was melted and the water commenced to pour into the room. Luckily, a watchman was close by and the water was soon turned off. The damage was caused entirely by water, as there was no fire.

PHILADELPHIA NOTES.

—Owing to the increase in his practice, Dr. Hugh P. McAniff has sold out his drug store at the corner of Fifth and York streets to his manager, William Morris, who has been with Dr. McAniff for three years. Mr. Morris graduated from the Philadelphia C. P. in 1900, and is an active member of the Alumni Association.

—Since the death of Dr. Charles M. Schumacker, the business at Clearfield and Thompson streets has been ably conducted by his former manager, Howard Jackson. Dr. Schumacker was thirty-six years of age and was a member of the class of '92, P. C. P. Death was due to a complication of diseases.

GIFT FOR PROFESSOR CASPARI.

Baltimore, April 29.—A movement is on foot to give Prof. Charles Caspari, Jr., substantial recognition for his services in behalf of pharmacy. A committee of Baltimore druggists has entered upon a campaign of soliciting subscriptions for a testimonial, probably in the shape of a silver loving cup, and letters have been sent out inviting all pharmacists to contribute. The occasion will be Professor Caspari's twenty-sixth anniversary in the work which now engages his attention. The committee is composed of John A. Davis and Henry Schmidt, and the efforts made are meeting with a liberal response.

ON SUNDAY CLOSING.

Baltimore, April 28.—At the monthly meeting of the Pharmaceutical Journal Club, last Thursday evening, John A. Davis read a paper on Sunday closing, based upon his own experience. Mr. Davis, who conducts a pharmacy at Carey street and Harlem avenue, and stands high in the profession, stated that he does not sell cigars, toilet soaps or any of the other articles that do not come within the strict realm of medicines on Sunday. Not even soda water is dispensed, and the experiment has been entirely satisfactory. None of his customers have left him on that account; he seems, on the contrary, to have gained in patronage. Persons who go elsewhere for soda water and similar things

on Sunday are sure to come back to him Monday, and his firm stand for a principle has won him the support of many who might otherwise have not been attracted. Of course, the primary claim to consideration—an excellent stock of goods of the best quality—is always kept uppermost in his mind.

WEDGEWOOD CLUB DINES.

Baltimore, April 19.—The Wedgewood Club gave its monthly dinner and social session last Thursday evening, at Mount Holly Inn, by way of a change, and the members are unanimous in saying they had perhaps the most enjoyable time in the history of the organization. The menu was appetizing and the good humor of the diners waxed high. John S. Muth presided and acted as toastmaster, discharging this duty with much skill. Another diversion of the evening was a bowling contest, from which W. R. Landis, local representative of Hance Bros. & White, emerged in first place, while John G. Beck, manager of the Calvert Drug Company, was second, Charles Morgan third, and Leroy Oldham, of Gilpin, Langdon & Co., fourth. Only four of the members were absent.

In all probability the next event arranged by the club will take the form of an excursion down the bay.

CUPID AMONG DRUGGISTS.

Baltimore, May 1.—The little god, Cupid, seems to have made the eligible bachelors or widowers among the druggists here his special target. Last week it fell to the lot of The Era's correspondent to chronicle the engagement of George H. Stuart, northeast corner of Carrollton avenue and Fayette street, to Miss Katie C. Koch, and this week another engagement is to be reported, that of Leroy Oldham, with Gilpin, Langdon & Co. Mr. Oldham is well known for his business ability and his skill as a humorous entertainer, his impersonations being much enjoyed. The wedding is to take place some time in June.

An event which falls in the same class was the marriage last Tuesday evening, of Edward Quandt, a retail druggist at 200 North Gilmor street, and Miss Mary C. Schroeder, daughter of Mrs. George Ruppel. The wedding took place at the First English Lutheran Church, the knot being tied by the pastor, Rev. Ezra K. Bell. Mr. and Mrs. Quandt went on a tour north, and on their return they will take up their residence at the pharmacy. A number of out-of-town guests were present at the wedding.

THE KLINGEL SUIT.

Baltimore, May 1.—The suit for damages entered against a manufacturing drug-house, as well as the Calvert Drug Company and a number of individuals, by Klingel's Pharmacy, a cut-price establishment, on the ground of conspiracy, has not made any headway so far. As the court is not in session, nothing can be done for the present. The attorney for the defendant, however, has entered his appearance and a declaration will be filed as soon as possible. The outcome will be watched with interest by the entire drug trade, and will have an important bearing on the future attitude of the druggists who are endeavoring to keep up prices.

SUBSTITUTE PHARMACY BILL.

Grand Rapids, Mich., April 29.—Druggists from different parts of the State met at Lansing, recently, to formulate a bill, which will soon be offered to the Legislature for passage. Already five bills, regulating more particularly the sale of liquor by druggists, have been introduced in the House, but none of them is entirely satisfactory. Educational features are lacking, also some of the best points in the laws of other States. The new bill is strict in its measures and the secretary of the State Board of Pharmacy is empowered to investigate alleged violations of the liquor laws and to order prosecutions. The secretary is given power to revoke the license of any druggist.

The Beal bill was drawn up by drug store proprietors and the Jerome bill by drug clerks, and naturally there are places in each that rub. "Both legislate for conditions in Detroit," says Sid A. Erwin, of Battle Creek, a member of the Board of Pharmacy. Mr. Erwin has drawn up a substitute bill, and Mayor Todd, of Jackson, owner of a drug store there, appeared with Erwin before the House Committee, recently, to have the same reported out. It is claimed that three of the five members of the Michigan Board of Pharmacy favor the Erwin bill.

ANOTHER FLIM-FLAM GAME.

Grand Rapids, Mich., April 29.—Here is a flim-flam game that is rather clever, though crude and savoring of sawmill districts. A lumberjack entered a drug store of Gaylord, Mich., with a gallon jug, and asked for half a gallon of alcohol. The woodsman explained to the clerk that he had been in another drug store and got all the spirits they had in stock, a half a gallon, while he wanted a gallon. The clerk proceeded to fill up the vacant space in the jug and returned it to the customer, who now asked to be "trusted." When he was informed that he was in a "cash" store he told the dealer to take out his half of the goods, which was done, only to find that the first half of the jug had been filled with water.

MICHIGAN NOTES.

—A. F. Meloche, of Detroit, has bought of Miller Bros. the store he formerly owned at Monroe, Mich.

—E. W. Lee, of Morenci, has sold his drug and grocery business to B. M. Warner. Mr. Warner has traveled for the Waiding, Keenan & Marvin Co., of Toledo, for the past eight years. Mr. Lee retires from business on account of poor health.

The lid of investigation appears to be off at Flint and city officials are cleaning out liquor and gambling joints. Another bad condition there is alleged liquor selling by certain drug stores, and the chief of police, it is understood, will notify druggists that the law in this regard is to be strictly enforced.

—A recent conflagration at Lowell Village included in its sweep the drug store of A. D. Sturgis, his loss reaching \$5,000, with only \$1,000 insurance. Mr. Sturgis was formerly in business at Grand Rapids and removed to Lowell about a year ago. Only a short time ago he was burned out and suffered a heavy loss. Misfortunes seem to huddle on his back.

DRUGGISTS DINE.

Members of St. Louis R. D. A. Enthusiastic.—Adopt New Schedule.—Election Prospects.

St. Louis, May 2.—Officers of the St. Louis R. D. A. were more than pleased with the results of the April meeting of the association, when 104 druggists sat down to dinner at the Southern Hotel, and several had retired after the business meeting, because of urgent engagements. The dues collected at the meeting amounted to \$628. The enthusiasm over the new organization was greater than expected.

In the new schedule announced all 25 cent preparations are advanced to 22 cents, the price having been 20 cents.

It is said among the members that President Johnson will be re-elected without consulting his desires. Secretary Koch, who, since official duties have been lessened and salary and other changes have been made to make the office more desirable, has almost been persuaded to withdraw his refusal to consider re-election, will probably be given a third term. His refusal to be a candidate was given more weight than usual because of the laborious duties he had performed so acceptably during the last year, but with the changes he will likely receive little consideration as to his personal wishes.

DRUGGISTS IN VAUDEVILLE.

St. Louis, Mo., May 2.—The St. Louis Dramatic Drug Club made its debut in its own entertainment Thursday night to a good house at Liederkraus Hall. The entertainment, vaudeville and minstrel, will long be remembered by those lucky enough to attend and every seat in the house was taken. Heretofore the club has given entertainments under the name of other organizations.

W. H. Lamont, general manager, was interlocutor and the end men were: Bones, Chas. Wagner, Paul Schneider, Mr. Staudé and Harry Koneczak; rambos, Charles Lewis, Mo. Novi, L. A. Seitz and E. A. Voelpe. They were assisted in the line by the clever work of Mrs. Lamont, Miss Lydia and Miss Mildred Veuniga and Miss Eagan.

Mr. Voelpe was the star in the "German Violin Teacher" act and Mr. Novi was his pupil. Mr. Lamont did the Irish part and Staudé and Koneczak were the piano movers who bore the brunt of the fun. The quartette music was furnished by professionals.

BURNED BY EXPLOSION.

Kansas City, April 23.—A barrel containing about forty gallons of wood alcohol exploded to-day, in the basement of Hardacre's drug store, Thirty-third street and Troost avenue, while John Sams, a clerk, was preparing to draw some of the liquid by means of a siphon. As Sams was putting the tube to his mouth, the explosion occurred. His clothing was torn from his body in places, his hands severely burned and his hair singed. The cask was blown to pieces, the building shaken and considerable glassware broken. A lighted candle near the barrel caused the trouble.

AMONG THE COLLEGES

CHICAGO C. P.

Chicago, April 29.—The Chicago College of Pharmacy held its forty-fifth annual commencement exercises at Steinway Hall, Chicago, on the afternoon of April 27. Dean F. M. Goodman presided. Guy Garland Dillow, speaking for the class, welcomed the large audience of appreciative friends who had assembled. Dr. Charles Davidson, trustee of the university, delivered the principal address, following which, President James conferred the degree of Graduate in Pharmacy upon thirty-eight young men and gave certificates of having finished the course successfully to thirteen young men and one young woman.

The gold medal, offered by the alumni association for the highest scholarship, was awarded to Hugo F. Staack, who also received the analytical balance given by the Seale & Hereth Company, for the best work in chemistry. President Gathcoald of the Alumni Association, presented the gold medal and Treasurer O. T. Eastman, the S. & H. prize. The microscope offered by Henry Birath for the best work in histology and materia medica, was awarded to James F. Brown, and the chemical cabinet, given by the L. A. Becker Company, went to William V. Dufner. Honorable mention for excellence in scholarship was given to Lawrence A. Diekhut, William V. Dufner, Thomas L. Larson, William H. Longshore, Louis W. Plummer, Hugo F. Staack, Charles W. Boyce, Frank R. Mayfield and James Patcjid.

Mr. Thomas Lewis Larson closed the exercises with an excellent valedictory. The list of graduates was printed in The Era of last week.

In the evening, the Alumni Association gave a banquet at the Hamilton Club, in honor of the graduating class: one hundred and fifty of the alumni and ladies were present. After the banquet, Toastmaster Thorburn called upon President James to respond to the toast, "The University of Illinois." Dr. James emphasized the fact that the school of pharmacy is an integral part of the university, just as are the schools and colleges located at Champaign and Urbana. He declared his intention of the university to make this the best school of pharmacy in the country, and that to aid in this project an appropriation of \$10,000 for the school of pharmacy had been included in the general university appropriation, which had just passed the House of Representatives of the State Legislature. After the applause had subsided, Mr. Abbott, trustee of the university, spoke along the same lines. Dr. D. A. K. Steele responded for the college of medicine; Mrs. Alexander, trustee of the university, to the toast of "I will"; President E. N. Gathcoald spoke for the Alumni Association; Dr. Charles B. Gibson for the Illinois Club; Professors Goodman and Hallberg for the faculty and Mr. Louis W. Plummer for the class of '05. The affair was one of the most largely attended and most enjoyable that the Alumni Association has ever given.

COMMENCEMENT.

Fifty-seven Graduates Receive Diplomas.—Prof. Good to Receive Testimonial.

St. Louis, May 2.—The fifty-seven young men whose names were printed in The Era of last week, and who were given diplomas from the St. Louis College of Pharmacy, Wednesday night, must have been exceedingly popular, as well as the "best average class of years," as Prof. J. M. Good designated them. Memorial Hall, at Nineteenth and Locust streets, where the exercises were held, was filled until standing room was at a premium and it seemed that half of that audience were bright-faced, fashionably-clad young women. That these people came to see the "boys" graduate was indicated by the rounds of applause that greeted the entrance of the capped and gown'd ranks.

The exercises were pleasant. Father W. Banks Rogers, president of St. Louis University, delivered an impressive address, in which he placed before the graduates the responsibility they were to assume, the mystery that surrounds their work in the eyes of the laymen and the necessity for carefulness in all things pertaining to health. He pleaded with them that when the time came to choose between "money and morals" that they would choose wisely, that they might be a "credit to themselves, their alma mater, their country and their God."

Dr. Otto F. Claus, president of the college, delivered the diplomas as the sedately-clad young men confronted the audience in four sections. Dean Whelpley, of the college, introduced the Ph.B. and Ph.G. classes, and Prof. Charles E. Caspari introduced the candidates for the Ph.C. degree.

C. W. Q. H. Hahn conferred the alumni gold medal for general scholarship on Thomas Morgao, of Vandalia, Mo., of the senior class, and awarded the alumni prize, for pharmaceutical work, to Lottie Hall Cleeton, of Higbee, Mo., of the junior class. Dr. Otto A. Walk, Jr., of the faculty, conferred the second prize, a silver medal given by the college, upon Henry Rubin, of St. Louis, of the senior class, and named Frank Lloyd Skillern, of Dallas, Tex., as winner of the senior class lecture tickets, by making the best scholarship record among the juniors. He also read the list of the honor men, as follows: Claude C. Bacon, Marysville, Mo.; Samuel G. Becker, St. Jacob, Ill.; Alfred Felber, Laurel, Neb.; Oliver M. Matthews, Marysville, Mont.; John Morgan, Vandalia, Mo.; Dean B. Skinner, Superior, Neb.; William Thaler, St. Louis, Mo.; Richard O. Ward, Granite City, Ill.

The honor men in the junior class, aside from those who were granted prizes were: Clyde G. Cowell, John W. Fulenwider, Henry B. Anderson, Otto Eisenstein, Albert J. Bohman, W. L. Applegate, Shanklin Gilkeson, Austin A. Walker.

An honorary degree of Ph.G. was conferred upon Henry Fisher, vice president of the college, who has for many years been a druggist at 1948 Gravois avenue, this city, and who has always taken an active interest in things educational.

The night preceding commencement the members of the graduating class were guests of honor at an elaborate banquet tendered to them by the college at the

GROUP OF STUDENTS IN FRONT OF THE COLLEGE HOUSE, PHILADELPHIA C. OF P.

Hotel Jefferson. The banquet was notable for several announcements made and for the fact that seven members of the class of '75 were present. Members of this class announced that at their annual reunion held recently, it was decided to entertain Prof. James M. Good at a banquet, May 18, the thirtieth anniversary of his election as instructor in theory and principles of pharmacy for the college, and to give him at that time a fitting memorial souvenir. Also that the class was back of a movement to make Charles A. Gettner, of St. Louis, a member of the State Board of Pharmacy, in July. Mr. Gettner is chairman of the board of trustees of the college.

Dr. H. E. A. Spilker, a former president of the college, was toastmaster, and the speakers were: Walter C. Kern, Leaven worth, Kas., class valedictorian; Lorenz A. Seitz, member of the board of trustees; Samuel E. Schaffner, of the Ph.G. class; Prof. Otto A. Wall, of the faculty; Verde Harrison, Mexico, Mo., a member of the Ph.B. class; James A. Watkins, president of the class of '75; Dr. Oscar Elbrecht, a member of the faculty who spoke for the alumni association and denied that the class of '75 was the originator of all things good in this country or connected with the college; Daniel Jefferson Atkinson, Doni phan, Mo., a member of the class; Dr. Frerichs, of the Herff & Frerichs Chemical Co.; F. V. Johnson, president of the St. Louis R. D. A., who spoke on "organization"; Prof. J. M. Good, of the faculty, who had just learned of the proposed testimonial; Dean Bell Skinner, president of the class, and C. P. Wallbridge, of the J. S. Merrell Drug Co.

Following are the class officers: Dean Bell Skinner, president; Albert Thomas

Knott, vice-president; James Clyde McGee, treasurer; Edgar Jacob Hellwig, secretary; Vivian Bramble Collins, sergeant-at-arms; Walter Charles Kern, valedictorian. Council, Frank Edward Lantz (chairman), Samuel George Becker, Charles Judson Chapman, Jr., George Andrew Grix, John Morgan, Francis John Hemm.

NORTHWESTERN UNIVERSITY.

Chicago, April 24.—The school of pharmacy of Northwestern University last Wednesday graduated forty-four students, six of whom received the degree of pharmaceutical chemist, and the remainder that of graduate in pharmacy. Instead of a formal commencement, the faculty gave a reception to the graduates and invited all the students to attend. A very pleasant two hours were spent in a social way, the school glee club furnishing music, alternating extemporaneous speeches by members of the faculty. Refreshments were served early, to allow a party of fifty-eight to leave in time for Detroit, in response to an invitation from Parke, Davis & Co. to visit their extensive pharmaceutical and biological plant. On the following day this party enjoyed very instructive and pleasant trips through the various laboratories and were the guests of the firm at a banquet in the evening. Those receiving degrees were:

Pharmaceutical Chemist—Walter T. Brian, George A. McCullen, Harmon K. Morgan, Claude J. Musselmann, Samuel Robin, Henley L. Thorp.

Graduate in Pharmacy.—John S. Barbee, Thos. A. Beans, Harry E. Chawgo, Ralph C. Crosby, Geo. M. Dayton, Thos. C. Hedman, Mrs. J. B. Dougherty, Lee E. Ennis, A. J. F. Feuerbacher, Roy C. Fritts,

Jas. T. Fullerton, Max M. Gordon, Chas. A. Gunning, Chas. H. Hallett, Ernest Jericho, Ever Johnson, Eric P. Leischner, Arthur H. Lewis, Wayne F. Locke, John D. Lyons, Edmund Mauro, John A. Mayer, Miss Mary O'Connor, Chas. E. Palmer, Chas. S. Phalen, Adolph A. Publ, John L. Pyles, James W. Redmond, Edwin G. Reisl, Clarence E. Riester, Arthur J. Roberts, Roger F. Rugg, Walter H. Thompson, Jas. H. Toynton, Carl G. Wailbaum, Chas. A. Walz, Virgil D. L. Weisenburger, Donald E. Wright.

N. D. AGRICULTURAL COLLEGE.

Fargo, N. D., April 25.—The next examination of the North Dakota Board of Pharmacy will be held May 23, in one of the large recitation rooms. Many of the students who were here during the winter will return for this examination and with those now in school it is expected that the class will make a very creditable showing.

A short time ago the junior members of the faculty got it into their heads that they could play baseball and accordingly organized a team and challenged the "pill twisters" to a game. The pharmacists put up a bunch of players and the game was played on Saturday. The faculty suffered defeat by a score of 7 to 11.

Our campus has been the scene of great activity during the past week. The foundations for the new chemical building and the Carnegie Library are completed and the contractors are now waiting for material to finish the structures.

Special bulletin No. 3, relating to the pure food and drug laws and the laws governing the sale of poisons, passed by the last Legislature is now ready for distribution.

SEVEN NEW PHARMACISTS.

Six Men and One Woman Get Diplomas From New Jersey College of Pharmacy.

Newark, N. J., May 1.—After having satisfactorily completed a two years' course in the New Jersey College of Pharmacy, six men and one woman received their diplomas at the graduation exercises of the college on Tuesday evening, April 25. The exercises were held in Wallace Hall, which was crowded when the graduates and the junior class, preceded by the trustees and the faculty of the institution, marched in and took their seats upon the stage.

The graduates are Miss Sophie Bernstejn, David Bergman, William N. Frankel, Nathaniel Kessler and David Samuel, of Newark; Ernest L. Magle, of Orange, and Benjamin H. Williams, of Jersey City.

The auditorium was decorated with palms, and along the front of the stage the flowers, which were later presented to the graduates, were banked. There was an outburst of applause when President William Kuehler led the board of trustees, the faculty and other officers and the graduates across the stage. The exercises were opened with prayer by the Rev. Alonzo C. Stewart, of St. Alban's Episcopal Church. A congratulatory address was made by Prof. Philemon E. Hommel, dean of the

faculty, who said pharmacy was no longer thought of as a business, but had come to be recognized as a profession. He also gave the students a few words of advice. It was their duty to enter conscientiously to the wants of a confiding and consuming public. Life or death often depended upon the careful compounding of a prescription. The professor admonished the new pharmacists to strive in every way to elevate their profession.

The address to the graduates was made by former Judge Thomas S. Henry, who complimented the students and outlined the difficulties to be met in the battles of life. He maintained that the principles underlying success in pharmacy were the same as in all professions. In order to supply the necessities of human life, the lawyer said, there had to be a diversity of labor. Students of pharmacy, he added, entered upon a field just as important and as full of complexities as that of the law or medicine.

"Success in your chosen calling," said Mr. Henry, "depends upon integrity and labor. A man is great because the fruits of his labor are great. Genius without a capability for work seldom brings success to anyone."

The exercises concluded with the awarding of the prizes, which were as follows: New Jersey College of Pharmacy gold medal for the highest general average, Mr. Kessler's average, 92.81 per cent.; materia medica prize, Mr. Kessler; pharmacy

prize, Mr. Bergmann; chemistry prize, Mr. Magle; analytical prize, Frank H. Schulz, class of 1906; senior alumni prize, Mr. Bergman; junior alumni prize, Frederick L. Smith.

After the graduating exercises the alumni association had its annual banquet at Achtel-Stetter's. Speeches were dispensed with, and after the dinner, there was dancing.

The college is in a very prosperous condition. There are now twenty-six scholars in the junior class. Negotiations are still pending for property on which a new college building will be erected. The option has not yet expired on the piece of real estate at High street and Springfield avenue, which is thought to be suitable for the purpose. The building committee, with an architect, will inspect several other colleges of pharmacy, notably the new one in Brooklyn, for the purposes of ascertaining whether it will be possible to build advantageously on the High street property, which is triangular in shape.

LICENSED IN UTAH.

Salt Lake City, Utah, May 1.—The State Board of Pharmacy examined sixteen candidates and licenses were granted to seven to practice in the State. They are A. A. Thomas, J. C. Reher, Fred. Anstee, W. H. Miller, L. N. Barr and J. B. Jeffrey, of Salt Lake, and B. E. Tewey, of Ogden.

SUCCESS IN DRUG BUSINESS.

The Little Things That Count Toward It.

"THE MAN WHO DOES THINGS."—ONE DRUGGIST WHO EARNED THAT TITLE.—HE MADE GOOD HORSEBALLS.—READ DRUG JOURNALS AND UTILIZED THEM. AN ANSWERED "QUERY" PLAYED AN IMPORTANT PART IN HIS "SUCCESS."

"There goes a successful man."

The pharmacist, debt free, begins to realize the possibilities in the drug field.

"Alias," he will say, "had I chosen a better location, the money I could make," or, "If I had a little more capital, I would make this location pay by advertising." He forgets the opportunities he has open.

Occasionally, there is a druggist who makes his opportunities, or rather sees what would escape many.

"THE MAN WHO DOES THINGS."

In the business world, he is at a premium. In his treatment of the world he is not a sycophant nor is he too self-assertive. He is a type. Yet there are many who approach this ideal.

One such druggist has achieved wonderful success in New York. His rule has always been, "We are taught by experience." Let us profit by his experience.

When, at the expense of great personal privation, he became the possessor of a small store, he bulidied better than the average man.

He had selected a corner location. On one side was a butcher shop. On the other a bakery and several doors away was a large grocery. He discovered that the baker had a lease, with four years yet to run, and the other food stuff merchants were likewise permanently inclined. Here then, was his opportunity. He was on a line with traffic in food stuffs. True, there was a competitor a block away.

HOW HE BEGAN.

There was in the neighborhood, a brewery. Mingled with the odor of brewing beer was the scent of the brewery stables. Fortunately the latter interested the druggist most. Inquiring, he found that from fifty to seventy-five horses were stabled near him.

This man who did things lost no time. Seeking out the veterinary surgeon employed on contract the druggist asked his trade. The veterinary was very promising, but there was no trade. He was attached to the competitor's procession. Why?

At another interview the druggist queried, point blank, "what's it worth to give me a chance?"

The veterinary waived the druggist aside and became his enemy.

SOME LETTER WRITING.

Then the druggist did things. He wrote to the head of the brewing com-

pany. Said he: "I should like an opportunity to bid upon medical supplies for your stables, etc.," and he quoted prices on Tr. Iodine, per pint; Stokes' Liniment, per gallon, and 7½ dram horseballs, per hundred.

Originally, the pharmacist could have told the difference between a horseball and extract of licorice only on close inspection. Before he bid, he sought out a veterinary, an old friend, to learn a thing or two about horseballs.

"Experience teaches," he muttered, as he watched aloe, ginger and carbonate of potash simmer together, and he made a fair horseball. After much practice he succeeded in wrapping the articles after the art. The competitor up the street used ordinary yellow toilet paper as a capsule. The novice tried a fine white paper. Along with the bid went a sample ball and a sample blister ointment.

The brewer was a business man. The prices on Tr. Iodine and the liniment interested him. The horseball interested the stable foreman, himself an amateur veterinary. The veterinary, perforce became interested, for the brewer asked pertinent questions.

Finally a list of articles was submitted the druggist and the competitor. Needless to say the new man received the award. He could afford to be low, for he intended to stop grafting by the veterinary, if that had held the business for the competitor. The business of the brewery nearly paid the druggists' rent after a time. He had done something.

THE "HORSEBALL MAN."

Figuring that it was as easy to make blisters and horseballs for five as for one, the druggist had circular letters prepared. He addressed them to veterinaries, without as well as within his territory. Today that druggist is known as the "horseball man" by veterinaries.

But in pursuing this idea he did not lose sight of other things. He found time to read at least two drug journals. He also read a medical journal or two; not the theses, but the advertising pages and the queries.

A new preparation, with hygroscopic properties, for use in pneumonia and in inflammation had been marketed. The medical journals spoke briefly of it. The druggist saw it advertised in his pharmaceutical papers. He noted that a five pound sample would be sent for hospitals, and to experimentalists.

He ordered some, paid for that, and got a large sample. Result, the brewer's veterinary tried it and exclaimed it marvelous.

KEEP WHAT DOCTORS WANTED.

Likewise the physicians to humans, who wanted some of the same article then, not to-morrow, tried it. They wondered why that new chap had it. Later they wondered why he had so many things on hand that they didn't know about.

Young Doctor Blank, a former hospital interne, called the druggist hurriedly, late one night. He wanted two splints for a broken arm. "Would the druggist procure?" The druggist meditated. He assured the doctor he could, and he did. A store hanger-on looted a lumber yard of a half dozen shingles, and the doctor had his splints, also some respect for the druggist.

The young doctor, calling on the druggist one day, laughed about the splints. The druggist didn't. He showed the medic the manufactured article, the same as that used in the army. Then the doctor mentioned a plastic gelatin, zinc oxide, cast or coating, in use in his interne days, for varicose veins and as a protector to indolent ulcers. The pharmacist became interested and avowed that he would "find out about it."

The doctor promptly forgot all about it. Not so the man who did things. He wrote a postal card then and there to his favorite journal, for he reasoned, "they ought to know." Now the query editor of that paper did not know. He was also a man who does things. He hunted and hunted for that formula. He spent much valuable time. He did some telephoning, and after a while he obtained the formula from a hospital where plastic surgery is a feature.

A "QUERY" THAT PAID.

It was a simple thing. Only gelatine water, glycerine and zinc oxide, to be melted together and applied hot to the body, leaving drainage tubes to prevent sepsis from the ulcer or wound. This information, came to the druggist, together with the suggestion to combine ichthyol, bone acid, Peru balsam, or other things, according to the needs of a case. The druggist had some made, for he had clerks then, and a manager. The manager called on the M.D., showed a sample, and the doctor did the rest.

After a year or two, the former hospital interne became a visiting surgeon to a vicinity hospital. The druggist who does things shortly acquired a monopoly of the hospital's business. All but the surgical dressings, those were bought direct.

The druggist pondered. He consulted; found the hospital bought from his surgical dressing house. Also found that he could make money by acting as a middleman. He was then on the preferred list of the bandage concern and they were amenable to reason. In plain language of the street, "He copped everything in sight" that he had a legitimate right to.

About this time the druggist decided to branch out. He bought another store. Finally he had four stores, which were on the boundary lines of his selected territory. He threw away the keys of the original store, and kept it open all night, not because it paid, but as an advertisement.

As much as this and more can any man do who makes up his mind to be a "doer and not a sayer."

REFRIGERATION WITHOUT ICE

Novel Method of Cooling Soda in The Kneuper Fountain

Compression of Anhydrous Ammonia the Means Employed
— Big Saving of Money — Installing a New Plant,
which will be Open to the Public — Mr. Kneuper his
Own Engineer

Opposite the City Hall in New York, on Broadway, is located one of the leading downtown soda fountains in Kneuper's Pharmacy. Not only does it enjoy a good sized trade, but it is also remarkable for its great length, and especially for its refrigeration system, which is undoubtedly unique.

As one enters the door the fountain stretches out on his left. It is a Polar, manufactured by Robert M. Green & Sons, of Philadelphia. It is of marble and onyx, with the usual attractive decorations, but it is of a long, low type, as will be seen by the illustration. Indeed, its length is some forty odd feet. It is divided into four sections, the usual system in large fountains, so that four or more dispensers may be drawing soda simultaneously.

In the Green system there are a number of interesting points. The syrups are held in containers shaped like drawers, of hygienic German silver, which may be easily slipped in or out. The draught arms are of a special construction, which allows an easy flowing stream, and inquiry shows that dispensers are well pleased with them.

In each section of the fountain there are ten syrup jars or drawers and four draught arms, two for soda and two for mineral water. At each end are two large

compartments for the storing of bottled goods and various sundries, while underneath the fountain proper are the usual receptacles, holding bottles of mineral water and various special drinks, ranged in rows on shelves. Above the whole apparatus runs a large plate-glass mirror, at a slight angle, in which the customer can easily see himself reflected. It adds a touch of brightness to the general effect and, at the same time, is thoroughly pleasing, without the too ornate decorations of some fountains one often sees.

NOVEL MODE OF REFRIGERATION.

One of the great points made by Mr. George Kneuper, Jr., for this Green apparatus is that the refrigeration is run over the top of the syrup drawers and not beneath, as is the usual custom. This allows the cooling force to absorb the heat from the syrups and fountain in general more readily, inasmuch as heat naturally ascends and, at the same time, it produces a greater degree of refrigeration throughout the fountain at large.

As far as the conduct of the regular dispensing business is concerned, this is run in the same approved manner as hundreds of other first-class fountains. All the usual syrups, egg and fancy drinks,

patent waters and varieties of sodas are served here, as in any other similar business. Indeed, the dispensing force makes a specialty of many ideas of its own which have proved good drawing cards with the consuming public. But the real feature of the whole system as operated by Mr. Kneuper is the refrigeration plant in the basement.

When one goes down stairs to examine this apparatus he is pleasantly surprised to find himself in a well-lighted room, clean, neat and orderly, with well oiled and well polished machinery, running swiftly, harmoniously in its appointed place and with a pleasant gleam of brass-work sending a lustre to the boundaries. Mr. George Kneuper, Jr., after experimenting for many years, and having tried many and various schemes, has at last settled to his satisfaction on a system of refrigeration by the compression of anhydrous ammonia. This does away with all ice, except on rare occasions as an auxiliary, which it undoubtedly supplants with far better results and at less cost.

UNIQUE FEATURES ARE MANY.

It is safe to say that Mr. Kneuper's refrigeration plant is, however, unique in many particulars. While the system of refrigeration by ammonia is a well-known one, it is doubtful if it has ever been so thoroughly applied and adapted to the needs of the soda business as it has been by him after repeated experiments. For the coming summer trade he has decided to operate and has already installed a very much larger compressor than he has ever employed. The new one will be a three-ton machine, while the old one, which is doing the work at present, is a one-ton machine.

"I am my own engineer," said Mr. Kneuper, "and, indeed, I have been my own constructing engineer and to a great extent I have also designed, not only the general plans, but some of the details for the machinery that we have installed in this plant. As I have remarked, the whole appearance is far more that of a large engine room than that of the accessories of a soda fountain found in an ordinary basement of a drug store. This is carrying out a theory of mine that it is most satisfactory to have the very best in any line which is thought worth while. So I did not rest until I had perfected to my satisfaction the refrigerating system. The operation of the system depends, like other refrigerating machines, on the low boiling point of the particular liquid handled; in this case the refrigerating fluid is anhydrous ammonia. This is a gas at ordinary temperature and at atmospheric pressure, but when condensed by cooling it liquefies in the shape of a clear, colorless liquid, and at a temperature of from 60° to 80° F. has to be held under a pressure of from 95 to 100 pounds. When the pressure is removed from the liquid, it rapidly boils even at a very low temperature. The boiling point is 29° F. below zero.

SAVES MUCH MONEY.

"For refrigerating purposes the liquid is conducted from the machine through pipes under pressure to the place it is desired to refrigerate. Within the refrigeration pipes, known as expansion piping, are placed: this expansion piping is connected

COOLED BY AMMONIA REFRIGERATION.

The Fountain of Kneuper's City Hall Pharmacy, New York. A "Polar." Manufactured by Robert M. Green & Sons. Length, 40 Feet. Marble, Onyx and Silver Trimmings.

with the machine which receives the gas and re-compresses it into its liquid form. A valve between the pipes and the "liquid" piping is slightly opened, allowing the liquid to flow slowly to the expansion pipes. The machine keeps a constant suction in these pipes, clearing them of gas as fast as it forms. Hence the pressure is kept down to merely that of the atmosphere, and, consequently, the liquid boils as it runs along the expansion piping, at or near the temperature of 29° below zero. As the machine does not clear the expansion pipes of gas quite so rapidly, the pressure will be higher, and consequently the boiling point will be less; but as the boiling point at 27 pounds pressure is only 15° F. above zero, considerable pressure in the expansion piping is allowable.

"As to the cost, we find that our saving is very great as compared with our outlay necessitated by the old system of refrigeration by ice. Our ice bills used to run over \$90 a month sometimes, while we can operate this new system at a total cost of not more than \$17 or \$18 a month. The saving is obviously very considerable. But, like other good things, we had to pay a price for it—in this case in the form of much labor, anxiety and outlay of a very considerable sum of money in experiments and in the installation of the machinery.

ENGINE ROOM A SHOW PLACE.

"When we complete our present plans, have our new three-ton machine coupled up, and are running our fountain at full summer blast, we intend to make a feature of this engine room of ours by erecting a permanent brass railing and by inviting any of our customers who care to do so to come down stairs and see how the soda is actually made so refreshingly cold. Almost any one likes to look at swiftly moving machinery, its power and its rhythmical motion being universally fascinating.

"As to our carbonating plant, it does not differ from the regulation first-class plant in many particulars, although we have ourselves designed and perfected a number of the details which we find usually in its operation. We use a Buhring's filter and the usual electric, self-acting, automatic carbonator. You will observe, however, that we have devised an unusual rack (or rather framework) of steel for the support of the steel cylinders which contain the thoroughly carbonated soda before it is pumped up to the fountain proper. We find this very convenient, inasmuch as we can readily get at any one of our five tanks without being bothered by the close proximity of the others, while at the same time we are thus saving a great deal of valuable space and our contrivances look much more ship-shape."

MYSTICO LINIMENT.

Mystico Liniment is put up in three sizes and is sold to the trade as follows: 25 cent size, \$1.80 per dozen; 50 cent size, \$3.60 per dozen; \$1 size, \$7.20 per dozen. It is manufactured by the American Selling Co., Maiden Lane and William street, this city, and their complete price list may be found on page 187, April 27, 1905, Era. This company invites druggists to write for full particulars about its double profit and coupon plan.

HOW A ST. LOUIS FOUNTAIN DRAWS.

"Own Crushed Fruits and Tell Your Customers About It."

THE HAGENOW SODA TRADE AS MANAGED BY E. H. VOEPEL.—USE ONLY A FEW FRUITS AT ONE TIME.—A PRACTICAL CHOCOLATE FOR RUSH HOURS.—NO USE FOR PREPARED DRINKS.—ADVERTISING "WE ARE NOT IN BUSINESS FOR OUR HEALTH, BUT YOURS."

"What is the best business-getter for a fountain in a residence district?" was a question The Era put to E. H. Voepel, manager of Hagenow's store, at Shenandoah and South Jefferson avenues, St. Louis.

Mr. Voepel's fountain has more than a neighborhood reputation for serving good

E. H. VOEPEL.

soda water. The fountain in this store long since ceased to be a side-issue or an advertisement for the drug business.

"Make your own crushed fruits and tell your people about it," came the quick response. "It is not necessary to tell those who buy soda water promiscuously that your soda water is better than others if you make your own crushed fruits and make them good, but it is a good thing to get people to talking about and to tell those who do not trade with you through your advertisements. They talk about your crushed fruits and they will tell their friends, 'Let's go to Hagenow's. They make their own pineapple there, and you know it's pineapple.'"

"It's the easiest thing in the world to make your own fruits. You buy your fruits when they are cheapest and best in the local markets. I know of no exception to the biggest and best fruits being the cheapest in the end.

PREPARING FRUITS.

"Take pineapple, for instance. Buy a case of the biggest and best pineapples.

There is less refuse and less work and the meat is finest if it is properly ripened. After they are cut up, run them through a meat cutter, and sugar to suit your own and your customers' taste. Don't be economical. It is no saving. Sometimes add a little benzoate of soda, if you want to. At market prices here last summer, we made a crushed pineapple that could not be excelled for eighty-five cents a gallon. You pay manufacturers for the nearest equal preparation, \$2.30.

"As to keeping crushed fruit, it is easy. A good ice chest is needed and plenty of ice. They must not be too cold, or rather, they should not be. We never cork ours, but use large-mouthed jars and cover the fruit with paraffin. To show you how well they can be kept, we now have crushed raspberries in the cellar that we made in the season last year and they are as good as ever.

"We do not try to carry the same line of crushed fruits on the counters they do down town. Pineapple is a favorite with us and a stock seller. Others we push while the jar is open. We will run two, or perhaps three at a time. Raspberry, strawberry, orange, apricots, or anything that will crush nicely and be sweet and tickle the public palate, we crush and sell. The variety is remarkable.

BELIEVES IN HOME-MADES.

"Chocolate, the worry of so many druggists, is not one of my worries, except as to the time it takes. We always sell good sweet chocolate. I use but four ounces. After rubbing the chocolate in the syrup as smooth as possible, I bring it to the boiling point. We sell lots of it and it gives satisfaction. During the rush season, when the demand is greater than the capacity of my cooking facilities and my time, I make a concentrated syrup that can be thinned with three parts simple syrup to one of the chocolate. I only make one day's supply, however. It is best fresh.

"These things should all be told the public in dodgers. We have little trade on prepared drinks that we are forced to buy, and while we make them up as good as we can and serve them in the best style and are many times complimented on them by customers of the downtown fountains, we do not encourage their use. We never introduce them.

"The only thing we buy prepared that we have a run on is Marischko cherries. The only reason I don't make them, is I cannot get hold of a cherry seeder at a reasonable price that does not tear up the cherries.

"As to keeping things clean and sanitary. That is a foregone conclusion."

It was the Hagenow store that Mr. Voepel resides over that recently started the neighborhood talking on the advertising phrase: "We are not in business for our health, but yours."

The druggist was plainly annoyed. "I'll send it," he announced, and as the party left he called up the doctor.

"Got a prescription. It's plain enough, all but the last. What in thunder is 'Ne una dollara s. mmo'?"

"Without one dollar do not deliver," translated the doctor who had an eye to business.

SHOW WINDOWS & FEATURES.

Comparatively Few Easter Windows This Year.

MINER'S ON THE BOWERY TAKES THE PALM ON EASTER DISPLAYS.—VIOLETS, ROSES, AND LIGHTS.—A MINIATURE PRESCRIPTION DEPARTMENT.—MANY HANDSOME GRAPE JUICE DISPLAYS.—EASTER EGGS AND STUFFED RABBITS.

Miner's, 203 Bowery, greeted Easter with displays in their two windows of great beauty and drawing power. That on the right was violet in theme; the left rose. The effect was doubly pleasing at night, when the electric lights had full sway and shown through the decorative foliage and blooms with charming brilliance.

The center of one window was held by a huge circular wreath of artificial violets, built up by wiring upon a wooden frame. This was suspended by two line wires on each side, which ran from the ceiling obliquely. Set in this wreath were ten electric lights, burning both day and night. This illumination was augmented by the permanent rows of lights at each front corner of the windows, five on a side.

The background was a drop and two draped portieres of crepe paper stamped all over with violets, but the central background was not covered at all. The ceiling and floor were also covered with the same paper. Fine wires ran a few inches apart across the ceiling, parallel to the front of the store and each other. From these, at right angles, fell a great many other wires perpendicularly, and on these were closely fastened single artificial violets. Alternating with the flowers were small vials holding an extract of violet, the bluish green of the contained liquid enhancing the general effect. There must have been many hundreds of these throughout the window. The result was that the whole space was filled, but not crowded with these hanging rows of flowers and vials through which the lights from the wreath shone, causing them to look like vines in a fairy forest.

LIGHTS AND FLOWERS.

Leaning against the lower portion of the wreath was a green show card reading, "Easter Violet Extract, 10 Cents a Bottle." A big bunch of violets ornamented a corner of the card itself, making it a homogeneous part of the whole scheme.

On the floor, closely carpeting, were mingled bouquets of violets and vials lying prone. A clever touch was shown in the arrangement of the first hanging veil of flowers and vials next the window pane, for these were graduated from one at the lower corners until they met in an apex at the top of the window, outlining a slanting line, and forming practically an equilateral triangle with the bottom line of the window as the base. This left a better view of the interior of the window, and gave a sort of camera effect, enhancing the perspective values tremendously.

The other window, on the left of the entrance, was treated in precisely the same way, save that the flowers this time were small roses, and the goods featured were

cold cream. The central wreath with the lights was in its place and against it stood a card running, "Miner's Supeeb Cold Cream, An Elegant and Highly Perfumed Toilet Necessity for Softening, Preserving, and Beautifying the Skin. Trial size, 5 and 10 Cents. 1/4-lb., 15 Cents., 1/2-lb., 25 Cents." Mr. H. F. Hackenberger designed these displays.

A MINIATURE PRESCRIPTION.

Riker's 468 Fulton Street, Brooklyn, featured the prescription department by a diminutive prescription counter in the window, upon which were the apothecary's scales, graduates, and a large prescription file, bulging with its pasted-in contents. Over this presides a wax man, whose smile of inanity would not inspire a belief in his accuracy. The general effect, however, is good.

Kline's Pharmacy, corner Nostrand and Bedford Avenues, Brooklyn, feature a salve which has been on the market but a few weeks. The principal decorative feature is the use of small balsam trees in flower pots and quaint picture signs with rhymes telling its virtues. Several other drug stores have similar displays.

Many of the East New York druggists departed from the candy Easter eggs, etc., and had the old German natural nests, with "own colored" real eggs and, of course, the bunny, which necessarily was "stuffed."

A GRAPE VINE WINDOW.

Adrian Paradis, 191 Fulton Street, Brooklyn, has one of the finest display windows of the many pharmacies that are featuring Welch Grape Juice. The window is bordered with a fine lithograph design of a latticed arbor in and out of which the grape vine winds. This gives the effect of looking out of instead of into a window. The unwrapped bottles of goods are solidly arranged in tiers until the interior view of the store is cut off. Winding out and in among these are artificial vines from which hang natural-looking bunches of grapes—so realistic is the view that one feels tempted to step outside (inside) the window and pick a bunch to eat. The only fault of this display, Mr. Paradis states, is the excluding of all light from the interior.

Kramer & Co., 543 Second avenue, New York, have a red window. It is to feature and push the sale of a roach food, which comes in scarlet colored cans. The hangings at the back are red. The floor is covered with a pale green crepe paper upon which appears a design of small bunches of cherries. One show bottle is red with a green top and the other green with a straw colored stopper. There is a border formed of the goods. Each corner in the rear of the show bottles is filled in with rows of the red containers, standing diagonally. The center is occupied by a long three-stepped rectangle. Each step is filled in solid with the red cans. There is a red show card with lettering.

FEATURING TOOTH BRUSHES.

Walter S. Rockey, 481 Eighth avenue, New York, is having a heavy run on tooth brushes due to his window display, which consisted of tooth brushes, tooth paste and tooth powder. The tooth paste comes in a yellow-covered box. On the floor of the window, close to the pane, were nine boxes placed in a line, but on a slight incline,

towards the street. The first box was open, showing the white tooth tubes of the tooth paste. The next was closed; the third open, and so alternately across the full length of the window. The next row back was composed of the closed boxes in their yellow covers piled solidly one upon the other.

These were carried about two inches above the first row, and on the top of each yellow column was a tower, built log cabin style, and placed at an angle to the square upon which it stood. These seven towers were topped off with a round carton of tooth powder. Rising slowly from the base of the towers was an inclined plane about 40 inches square, upon which is displayed solidly boxes and boxes of tooth brushes, six in a box. A yellow sign with black lettering lay on the center of this brush display.

Rockey's second window featured "Rockey's" writing paper. Boxes of writing paper and writing tablets were in seemingly carelessly arranged columns. A sign in one corner said, "Don't always blame the pen, sometimes it is the paper." In the opposite corner, "To write well use good paper. We select our stationery for a select trade."

Schoonmaker's, East Forty-second street, opposite the Grand Central, New York, devoted their window to featuring Saturday candy. A large square tray was placed in the center in which the bonbons were arranged in rows, each row of chocolate having a different colored top. First, plain brown; next those with walnuts; then a row with a pink crest; then a row with a white one until the pan was filled. This was flanked on both sides by the white boxes which were to contain the candies. The triangular corners were filled in with the left-over Easter toy confectionery. The central window was filled with the boxes of assorted candies of another well-known maker. Every box was tied with cherry baby ribbon in large bows.

TEN CENT ICE CREAM SODA.

Terre Haute Druggists and Confectioners to Retail Prices.

Forty-one retailers of soda in Terre Haute, Ind., have organized to raise the prices for soda drinks to a paying basis. They have bound themselves to observe the following schedule of prices:

- Plain soda, five cents.
- Ice cream soda, ten cents.
- Sundaes and similar dishes, ten cents.
- All egg drinks, not less than ten cents.
- Lemonade, ten cents.

The dealers have also agreed to use measures in the dispensation of ice cream to the thirsty, which will not exceed ten portions per quart for ice cream sodas, and not to exceed six portions per quart for sundaes and like dishes. This agreement will take effect at the beginning of the soda season, about March 15.

For some time the soda fountain men have claimed that they were merely accommodating the ice cream manufacturers in disposing of their product and the dealers owe intent to make a profit themselves.

The new schedule is expected to work satisfactorily without lessening the volume of trade. The movement for more profitable prices is extending to other centres in Indiana.

BEAUTIFUL EASTER DISPLAY

Shown in Miner's Pharmacy, 203 Bowery, New York. Right Window, Violet; Left, Rose.

A HUNDRED USES.

In the spring of the year there is always a time when the nights are cool and the days quite warm. That time is with us now. The fires in the furnace are out and the janitor is frugally saving coal for the landlord. Indeed, the householder himself hails the emancipation from the furnace. But is it not cold in the early morning when one first wakes and lies shivering in bed, unable to sleep again? Would it not be fine to have something warm on one's feet without having to rise to get it?

Very simple. Take your Thernalite bag off the chair beside your bed and turn on the latent heat in one minute without exertion.

The druggist who stocks the Thernalite bag will do well to feature this, for he will reap a harvest. It is but one little feature of its great usefulness. Its best point is the steady, dry quality of the heat it imparts for so many hours. It is useful to the healthy and invaluable to the sick. If you do not know it (and it has been on the market but a short time), write to the Thernalite Company, 145 Elm street, New York, and say that the Era suggested your inquiry. Then you will receive prompt attention. It will pay you, for prices to the trade are reasonable and the profit good. The demand is sure to be large.

YIELDS A LARGE PROFIT.

The George W. Pitkin Co. offer dealers the large profit of 75 per cent. on their Barn Paint, which they guarantee to stand

five years' wear and the guarantee is "without strings." George W. Pitkin Co. claim to be the only house that advertises its products and at the same time gives a large profit to the dealer. Its methods of advertising with window displays are unique and attractive, and Barn Paint is sold with little or no trouble, and in large quantities. Druggists who have ceased to handle paints are only giving the hardware or lumber dealer an opportunity to acquire from them a very profitable line, which is quickly turned over at a large profit.

The G. W. Pitkin Co. also manufactures a full line of other paints of high grade and quality, and these products are guaranteed by the company which has been in business for more than forty years, the founder, George W. Pitkin, having started in the paint business in Chicago, in 1868. The company's chemical laboratory is in the immediate charge of a trained analyst and a chemist of national reputation. It costs no more to deal with a good, substantial house than a poor one. Give the George W. Pitkin Co. a trial.

CHURCHILL-WANGLER CONSOLIDATION.

As previously narrated by us, the Churchill Drug Co., of Cedar Rapids and Burlington, Iowa, has absorbed the Wangler Drug Co., of Waterloo, that State. The consolidated concern now announces that it has decided to abandon the business at Waterloo, moving all stocks from that center to Cedar Rapids. Indeed, distribu-

tion of goods from Waterloo ceased March 18.

The Churchill Drug Co. also states that C. P. Kinyon, manager of the Wangler Drug Co., and the three salesmen of that concern—H. L. Shotts, A. B. Welton and J. W. Wray—have joined the force of the Churchill Company. With such a combination of interests, business should expand and the two firms' customers enjoy even better service than hitherto.

SUNBRIGHTS' NEW OFFICES.

Mr. L. C. Gates, of Los Angeles, Cal., the president of Sunbrights' California Food Company, has recently completed arrangements by which the company has established a permanent office in Chicago. Mr. Gates says the company is especially encouraged by the volume of business in that city, having only entered the field nine months ago. The Sunbrights Company is moving along deliberately, and its next step will be to establish permanent offices in Philadelphia. This will be accomplished in October.

"What in the world is this," asked the druggist's friend, as he unearched a peculiar prescription. It read: "Tictetoril Theatril No. 11. Use as directed. Dr. Jones." "Well," confided the druggist, "Old Man Wealthy is so blamed stingy that he won't 'cough' up for theatres. Wife and daughter get medicine here, charge account, you know. I put the tickets in a drug envelope, number and label regularly and charge and advance. Great scheme, eh?"

Growing Sponges from Cuttings

Progress of Government Experimental Work in Florida

Commission of Fish and Fisheries Controls Work—Report of Dr. H. F. Moore—Cuttings Planted on Wires of Insulated Copper—Sponge Grounds Thoroughly Surveyed and Mapped—Lack of Salt In Water Quickly Kills Plantings

The experiments in sponge-culture, begun in Florida under the direction of Dr. H. F. Moore, of the United States Commission of Fish and Fisheries, indicate that considerable progress has been made toward the development of a practical commercial system of sponge-culture. The constant aim has been to reduce as far as possible the niceties of experimental work to a basis adapted to the requirements of the practical sponger.

Details of the work have recently been published by the Commission, and we give a portion of the report. Several thousand sponges were planted in January and February, 1901, and at the end of six weeks these were found to be growing well. Examination in November, 1901, however, showed that most of the cuttings had died, and that some of them had been stolen for the value of the wire to which they were attached. Most of these plants were made upon copper wire, which, while it has the power of resisting to some extent the action of salt water, is in some localities, more or less subject to corrosion, and the salts produced are inimical to the sponge, causing it to die near the point of attachment and fall from its support. During the present year it has been sought to overcome this difficulty by using insulated copper wires, so that the cuttings would not be brought into contact with the bare metal. Further improvement was made in slitting the sponge cuttings and placing them astride the wire or other support to which they were attached, and then binding the surfaces of the flap in close apposition by means of a wire. In the course of a few days the two flaps grew together and the cutting became permanently attached, independently of any artificial binding. Temporary tie wires of aluminum wire were used, which, while slowly acted upon by salt water, lasted a sufficient length of time to permit the sponge to permanently heal.

SIX THOUSAND CUTTINGS USED

During the winter months the growth of the cuttings was rather slow, so far as increase in bulk was concerned, although eyes, or oscula, were promptly put out and the circulatory system quickly reorganized and completed. During the spring, when the water, especially in the more southern part of the State, was becoming warmer, there were indications of a more rapid growth. About six thousand cuttings were planted in Biscayne Bay, Sugar Loaf Key, and in the vicinity of Anclote Keys,

and in the latter part of April, after they had been planted for periods varying from two to five months, most of them were growing and in an apparently healthy condition.

Between the lower end of Biscayne Bay and Matecumbe Key there is a long stretch of water where sponges do not grow naturally. An investigation of this region was made to determine the reason for their absence, and an experimental plant of about a thousand cuttings was made in a small sound back of Key Largo, with a view to determining whether they could be artificially introduced there. At the end of six weeks practically all of these cuttings were dead, although others planted at about the same time in more favorable localities were alive and growing. A series of observations developed the fact that the water in this region is of a much lower salinity than in places where the sponge grows naturally, and it is probable that this is the cause of their absence naturally and of the mortality of the cuttings.

Practically nothing is known of the rate of growth of sponges under natural conditions, or of the rapidity with which they will develop from fragments and cuttings, and it will probably require several years'

investigation to determine these points and to develop, if it can be developed, a system of sponge-culture which will be of value to the State of Florida. At the present time the production of sponges in this State, which is the only one in the country producing them, is about \$500,000 per annum. An equal or perhaps greater value of sponges is imported from abroad, and it is hoped eventually to supply this excess of demand over production by sponges raised artificially. Many of the sponge-dealers are showing considerable interest in the experiments, and it is believed that they will promptly undertake sponge-culture if a reasonably practical method can be developed.

SURVEY OF THE FLORIDA SPONGE GROUNDS.

The steamer Fish Hawk, working under the direction of this division, in October, 1901, resumed the survey of the sponge-grounds of the western coast of Florida, and in March, 1902, completed the examination of the waters lying north of Tampa Bay, comprising all those grounds designated under the names "Gulf," "Bay," "Rock Island," and "Anclote." The location of the sponge-grounds has been plotted on charts, and, for the first time, the extent, position, and relations of the grounds have been determined.

The sponge-bearing bottom stretches in a continuous but irregular band or zone, 5 to 25 miles wide, from Apalachee Bay nearly to Tampa Bay, the length, following the curvature of the coast, being about 175 miles. The grounds are widest off Withlacoochee Bay, Deadman's Bay and Rock Island, and narrowest off Cedar Keys. Three large disconnected areas, between the shore and the sheepswood grounds, on which grass sponges grow rankly to the exclusion of most other kinds, are in or near St. Martin's Bay, Deadman's Bay and Apalachee Bay.

It is intended to continue this work by detailing the Fish Hawk to survey and plot the remaining sponge-grounds, or those about the Florida keys which are the most important.

SPONGE YARD AT KEY WEST SHOWING SPONGES DRYING.

BRINGING SPONGES FROM THE VESSEL TO SPONGE WHARF AT KEY WEST.

DRUG TRADE JOTTINGS.

Vogel Bros., Minneapolis, are putting handsome American "Innovation" soda fountains in their two stores, which will be twenty-six feet long, of Sienna Marble, onyx and mahogany. Many other improvements will also be made. The store at Nicollet and Seventh streets, is to be extended back to the alley, giving 540 square feet additional space. The wall will be replaced with plate-glass windows.

A lady came into a New York drug store hurriedly and asked for a proprietary article. Upon being informed that it was 50 cents, she exclaimed, "Why, I only pay 48 cents at Macy's. I guess I will go down there to get it." The druggist with a smile returned the article to its place. He did not cut prices or argue. As for the lady, she went frowning on her way to spend ten cents carfare in order to save two cents on price.

A clever little counter advertising scheme consists of a folder. On the cover it states "Points on How to Keep in Good Health," and on the inside are attached a row of pins. As all women consider picking up a pin brings good luck, they will certainly pick up 20 pins and save them on the folder until used. Each time one is taken off, the eye cannot help but read the virtues of the pills advertised.

Mrs. Dorn has disposed of her 96th St. and Columbus avenue store, New York, and confines her attention to the 93d St. and Columbus avenue store.

It has come to our knowledge that a thoroughly competent and experienced dispenser and soda fountain manager is open to engagements. His address may be obtained on inquiry.

A Seventh avenue druggist thinks the trusts certainly have designing eyes on his modest little business. First came the Pennsylvania R. R. and razed the buildings from which his trade mostly came, and next along came the landlord and razed the rent.

Andrew Grinnig, corner Harrison avenue and Hooper street, Brooklyn, has opened a new pharmacy. A large sign states "Prices Lower than Riker's or Hegeman's."

One Brooklyn druggist who was annoyed by the recent remarkable coupon scheme of The Journal, to boom itself and a certain soap, managed, however, to boost his own business by it. He redeemed the soap coupons by issuing his own tickets, thus, being able to send the coupons in on time and yet secure the amount of soap he needed. He turned no one away, and, moreover, insured their return to his store to cash in his tickets.

J. M. Kerrigan, 25 Putnam avenue, Brooklyn, N. Y., has sold his business to Vincent & Seymour, who took possession April 5th.

F. L. Chambers, 782 Fulton street, Brooklyn, N. Y., will move May 1 to 831 Fulton street, where he will have the advantage of more floor space.

The signs of the Bolton Drug Co. have come down from the Brooklyn stores and those of the Wm. B. Riker & Son Company have replaced them.

St. Paul is to have an up-to-date drug store in the downtown section of the city, Robert Hansur, a former partner in the Billing Drug Co., of Minneapolis, who, having severed his connections, was casting about for a new location, has organized the Mansur Drug Co., and has leased the store at the corner of Robert and Seventh streets. The fittings will be mahogany, marble, and glass, with tile floors, and a feature will be a first-class fountain in the center of the room, with seats all around it. There will also be an extensive cigar department.

Mr. Alphonse Major, the well-known manufacturer of Major's Cement, is visiting Washington, with Mrs. Major, for a few weeks. They are staying at the Regent Hotel. The National Capital is at its best at this time of year.

Cable advices from Zanzibar stated that the good grades of cloves are in limited supply, but that the inferior grades are abundant, the bulk of the new crop being of the latter description.

E. Brunner, 136th street and Eighth avenue, New York, is distributing advertising literature in the form of a folder, which when presented at his soda fountain entitles one to a glass of ice cream soda. Two birds are aimed at by this one stone.

A firm which made a success of the grocery business in Buffalo, and is one of the leaders in that line in that city, also operates a retail drug department, with two large pharmacies in Buffalo. It is not generally known, however, that the same Faxon, Williams & Faxon also have a retail drug store in New York, located at the corner of 23d street and Eighth avenue.

Judge & Dolph, 515 Olive street, St. Louis, are advertising their store as the largest retail drug store in America. In these advertisements they are featuring that their business occupies five floors and are particularizing the specialties on each. Since the talk of the "blue laws" for St. Louis, the firm has been making a specialty of "small packages" of cigars for "over Sunday" trade.

The Lindell Hotel Pharmacy, Sixth street and Washington avenue, St. Louis, one of the noted stores of the city, is closing its existence with a "grand forced out" sale. Prices on sundries are named at remarkably low figures. The hotel building was recently sold and will be torn down to make room for a department store, so the store must be vacated by July 1.

J. D. McCreery, now at 2737 Eighth avenue, New York, will move his drug store on May 1 to 2819 Eighth avenue, two blocks further up, having secured a larger store.

An ingenious pharmacist has placed this catchy sign in his window: "Elevated Qualities, Subway Prices."

The cigar stands on the subway stations will be removed unless a decision rendered recently by Supreme Court Justice Trux is reversed on appeal. Ward & Gow obtained a temporary injunction some time ago, restraining the Interborough Rapid Transit Company from removing the cigar stands or interfering in any way with the sale of tobacco, in the stations. In vacating the injunction, Justice Trux says that the contract between the company and Ward & Gow was evidently intended to limit the selling privileges to newspapers, magazines, books and such articles as are generally sold on the elevated station stands. Tobacco is not sold on the elevated.

The rumor that Caswell, Massey & Company intend closing their Columbus avenue store, New York, is denied by the firm.

Hudson's, 925 Broadway, New York, celebrated Easter by an elopement. The night manager, Mr. John Bartholomew, is reported to have eloped with an estimable young lady.

BUSINESS RECORD.

John M. Tobin, buyer for Hudnut's retail store, left May 1st, to open his Narragansett Pier store for the summer. This will be his twenty-second season.

From Wilmington, N. C., it is reported that a full carload of Jerusalem oak seed, "Jimson weed," or stramonium, has been shipped north for consumption in the manufacture of oil.

A. J. Hornby, 20 Hicks street, Brooklyn, has closed his store, and entered the service of John Worthington's Sons, 163 Fulton street, Brooklyn.

A. E. Marsland, 220 S. Fulton street, Brooklyn, has sold his business to Mr. Cabel, his business manager.

William H. Rogers, graduates as a physician soon and will move his drug business from 564 State street, corner of Flat-bush avenue, Brooklyn, to the store at the corner of 49th street and Fourth avenue, where he will still conduct it personally, although also practicing as a physician.

Otto Koehler, 8 Struyvants street, near Third avenue and Ninth street, New York, finds the sale of an express company's money order a profitable side line. He issues an attractive leaflet featuring this, and his general drug business as well.

Both east and west side, New York, report a scarcity of reliable drug clerks. The same old trouble.

The Knickerbocker Drug Company, as mentioned before, has leased the store, basement and sub-basement at 640 Broadway, New York, at the southeast corner of Bleeker street. This building covers the entire block front to Crosby street. It now develops that the lease is for a term of eleven years, from the estate of Benjamin Lichtenstein.

Otto Raubenheimer, 1341 Fulton street, Brooklyn, is pushing the sale of his "own make" moth destroyers and insect exterminators by neat reprints of his articles on these subjects, which were published in The Bedford Record, and using them either as wrappers or folding them inside of wrapped parcels.

Diamond's Pharmacy, 83 Lenox avenue, New York, is being moved back to its old stand, 77 Lenox avenue, corner 114th Street, which is more desirable on account of being a corner store.

R. B. Robbins, 559 Lenox avenue, N. Y., is redecorating his store for the summer trade.

DIAMOND DYES.

How is your stock of Diamond Dyes? Do you know that Diamond Dyes are the only dyes sold on the Price Protective Basis, which absolutely protects you in your profit and assures you that no other dealer can sell the goods at a better price?

Diamond Dyes have been on the market for twenty years and are the recognized standard of the world. Every retail drug gist should have a well-stocked D. D. cabinet. If you are not fully posted as to assortment and prices, write to Wells-Richardson Co., Burlington, Vt., and they will promptly send you fully descriptive circular.

CONNECTICUT.

Meriden—Thos. E. Collins, new store.
 Hamilton—A. T. Chandler, succeeds Jas. L. Blackman.
 Statesboro—Karl Watson & Co., succeed S. J. Crouch.

IDAHO.

Juliaetta—C. G. Marsh, out of business.
 ELINOIS.
 Elgin—J. A. Zabriski, succeeds Zabriski & Akin.
 Gilman—K. C. Roberts, out of business.
 Lincoln—Geo. Monoch, new store.
 Millington—C. V. Dunaran, succeeds S. E. Foster.
 Monmouth—August E. Johnson, new store.
 Orion—R. J. Fullerton, succeeds Wright & Fullerton.
 Pawpaw—Moore & Headland, new firm.

ILLINOIS.

Enlora—Yazel & Co., burned out.
 Kokomo—Martin & Groff, succeed Harvey Bates.
 Richmond—Quigley & Babylon, succeed Moore Drug Co.
 IOWA.
 Akron—March Bros., burned out; March Bros., succeed M. Mead.
 Boone—H. J. Brink, succeeds M. A. Gurney.
 Eldora—C. S. Swayne, succeeds Coveny & Lagerquist.
 Janesville—R. W. Kendall, succeeds Wm. F. Stauffer.
 Persia—C. C. McCoin, burned out.
 West Union—W. H. Tisdale, succeeds McMartin & Stiles.

KANSAS.

Coldwater—L. M. Idch & Co., new firm.
 Dexter—D. E. Haworth, succeeds Haworth Bros.
 Leon—J. E. Nygren, succeeds Geo. Westcott.
 Toronto—Campbell Bros., succeed Frank Jackson.

KENTUCKY.

Princeton—Kevil & Wylie, damaged by fire.
 LOUISIANA.
 New Orleans—E. A. Kerney, damaged by fire.

MAINE.

Old Town—H. M. Burnham, succeeds C. A. Lowe Drug Co., combines two stores.
 MARYLAND.
 Baltimore—John C. Eichner Co., Fort Ave. and Towson St., new store.
 Jesse H. B. Hurst, succeeds H. G. Wilson, Montford Ave. Phcy., s. e. cor. Montford Ave. and Federal St., new store.
 Petroski Phcy., 831 E. Fayette St., new store.

MASSACHUSETTS.

So. Framingham—Edwin J. Robbins, succeeds Robbins & Mahern.
 Taunton—Webber & Walsh, succeed Sprout Drug Co.
 Turners Falls—P. N. Hall, new store.
 MICHIGAN.
 Clifford—M. J. Ryan, succeeds Edw. J. Van Sickle.
 Detroit—Standard Drug Store, 27 Monroe Ave.
 Frankenmuth—Dr. E. A. Pillsbury, succeeds A. O. Speckhard.
 Union City—Coleman Drug Co., new firm.

MINNESOTA.

St. Peter—C. H. Clark, succeeds Clark & Murphy.
 MISSOURI.
 Gerald—O. N. Schudde, new store.
 Hopkins—Owl Pharmacy, succeeds C. W. Frye & Co.
 Memphis—J. C. Smith, succeeds Bertram Bros.
 St. Louis—C. D. Merrem, 5663 Delmar Ave., closed; no successor.
 Williamstown—W. A. Felker, new store.

NEW YORK.

Buffalo—Henry Mannel, 985 Genesee St., new store.
 Newburgh—Eugene W. Smiley, succeeds Clarence Miller.
 New York City—Cody & Berger, succeeds F. W. Brown, 470 Lenox Ave.
 M. Halpern, succeeds L. Horowitz, 1968 2d Ave.
 G. Wilely Holmes, 64th St. and Broadway, new store.

C. Koehler, succeeds T. Hurwitz, 776 Melrose Ave.
 A. H. Lubs, succeeds C. H. Ludgewig, 994 Tremont St.
 B. Mishkin, succeeds Julius Levine, 231 St. Ann's Avenue, 8th Ave.
 Geo. J. Phillips, moved to 846 6th Ave., from 838 8th Ave.
 Henry F. Schmidt, succeeds Karl Aschenbrand, 3021 3d Ave.
 Wm. Wilson, moved to Liberty and Broadway, from Wall and Broadway.
 Chas. F. Zorn, succeeds Chas. Muehling, Jr., 610 W. 181st St.
 Brooklyn—Chas. F. Antz, succeeds S. V. Hude, 4601 4th Ave.
 Eichwort & Durrett, succeed Henry Budenborn, 601 Flatbush Ave.
 Wm. G. Turner, succeeds C. F. Streichert, 355 Knickerbocker Ave.
 Rochester—Monroe Pharmaceutical Co., damaged by fire.
 Sheburne—Dr. D. B. Payne, new store.
 Utica, II. E. Barnes, succeeds Wm. B. Bunker.
 Edw. Rust, succeeds Mrs. Anna Maine, 352 Whiteboro St.
 West Seneca—Miller & Hannah, new store.

NORTH CAROLINA.

Grand Forks—Briedenbach Bros., succeeds W. E. Patten.
 Leonard—A. M. Hathaway & Co., new firm.

OHIO.

Aberdeen—D. P. Argo, new store.
 Chardon—A. J. Cromwell, succeeds Cromwell & Quirk.
 Newark—Ergas & Son, succeed Witeserman Drug Co.

OREGON.

Lostine—S. L. McKenzie & Co., burned out by fire.

PENNSYLVANIA.

Altoona—C. B. Baumgardner, succeeds J. A. McCleary, 1600 5th Ave.
 Canton—G. E. Newman, succeeds Newman, Hull & Mitchell.
 Pittsburgh—Carl Hartwig, damaged by fire.
 Reading—Edw. J. Harbach, new store.
 Saltsburg—Elmer E. Goodlin, succeeds J. McFarland & Son.

SOUTH CAROLINA.

Johnston—L. B. Asbell & Co., burned out.
 S. G. Moble, damaged by fire.
 TENNESSEE.
 Kenton—E. Cantrell, succeeds Montgomery & Bogie.
 Knoxville—Lowe's Phcy., succeeds J. M. Lowe.

TEXAS.

Houston Heights—Houston Heights Drug Store, new firm.
 Nineteenth Ave. Drug Co., new firm.
 WEST VIRGINIA.
 Wheeling—Quinn's Phcy., succeeds Schmidt & Quinn, 16th and Jacot Sts.
 WISCONSIN.
 Lake Nebagamon—Angus & Rolfe Co., succeed Smith Bros.
 Milwaukee—Martin Drug Co., succeed II. D. Sykes, Wisconsin and Van Buren Sts.

A GOOD SELLER.

The attention of druggists is called to the advertisement elsewhere in this issue of the Harris Chemical Co., Washington, D. C. This company is the manufacturer of the Harris New Blood Tonic, the sales of which, with very little advertising, have been remarkably large in all localities where the remedy has been introduced. Harris' New Blood Tonic retails at 50 cents, and costs \$4 per dozen, thus affording the druggist good profit. The manufacturers guarantee satisfaction. Put a small quantity in stock.

AN ULTIMATUM.

"See here," said the boy to the boss. "Things have got to be different, or you'll have to quit. I find that the long hours and exacting service in your establishment conflict considerably with my other interests. Spring is coming. With the closing of the Debating Society I shall have to get in training for the regular baseball season and—" well, the boss quit.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued April 25, 1905.

- 787,920—Frederick Hofmann, New York, N. Y. Medical apparatus.
- 788,059—Patrick J. McElroy, Cambridge, Mass. Syringe.
- 788,074—Christian H. Stoelting, Chicago, Ill. Laboratory-weights.
- 788,115—Frederick A. Muller, Oakland, Cal. Non-refillable bottle.
- 788,128—Jons Andersson, Brunsbog, near Lund, Sweden. Bottle or other vessel with ground stopper.
- 788,145—Frederic W. Pendergast, Waltham, Mass. Filler.
- 788,153—Mathias A. Lazareff, New York, N. Y., assignor to the Royal Glass Jar and Bottle Company, New York, N. Y., a corporation of the District of Columbia. Fastening means for bottles or similar things.
- 788,176—Webster F. Traves, Cleveland, Ohio, assignor to the Duplex Rubber Co., Cleveland, Ohio, a corporation of Ohio. Syringe.
- 788,256—Hans Foersterling and Herbert Philipp, Perth Amboy, N. J., assignors to the Roessler & Hasslacher Chemical Co., New York, N. Y., a corporation. Process of obtaining oxygen from alkali peroxid.
- 788,273—Ellise Marosi, New York, N. Y. Hair-tonic.
- 788,294—Arthur Q. Walsh, New York, N. Y. Cover for receptacles.
- 788,310—Sidney S. Fleming, Brunswick, Ga. Apparatus for distilling turpentine.
- 788,345—Godfrey Beaumont, Dallas, Tex. Vaporizer.
- 788,369—John J. O'Neill, Boston, Mass., assignor of two-thirds to Annie O'Neill, Boston, Mass. Retaining device for bottle-stoppers.

788,418—Edward J. Milligan, Salt Lake City, Utah, assignor of one-half to Herbert J. Cook, Salt Lake City, Utah. Toilet-case.

788,451—Umberto Cianfar and Frederick W. F. Ross, London, England. Process of making meat extracts.

DESIGNS.

Registered April 25, 1905.

37,417—Cork-extractor case. Raymond Beardsley Gilchrist, Newark, N. J.

of rubber tubing, turned the bottle upside down and the ball being thus removed from the cup in the neck, the siphon soon pushed water up into the bottle until it was full.

"There you are," said the bartender. "A friend of mine was in here a few weeks ago with this same scheme and I showed him how the bottle could be refilled."

"Who was your friend? What was his name?"

"Jones," said the bartender.

DRAWBACK ON SACCHARIN.

A SUBSTITUTOR IN PORTO RICO.

The Lambert Pharmaceutical Co., of St. Louis, secured on April 10 an order from Judge McKenna, of the District Court of the United States for Porto Rico, enjoining Druggist Alfonso G. Zerbi, of San Juan, from infringing and violating their trade-mark rights in the word-symbol Listerine, and further decreed "that the complainant, the Lambert Pharmaceutical Co., have and recover of and from the defendant, Alfonso G. Zerbi, the sum of fifty dollars, as damages in this behalf, for which amount execution may issue."

The Treasury Department has issued instructions allowing a drawback on the exportation of benzoisulfonic imide, anhydrous sodium salt of benzoisulfonic imide, sodium salt of benzoisulfonic imide, and the by-product, manganese dioxide, manufactured wholly from imported orthohol-sulfamid and potassium permanganate. The drawback is to be equal in amount to the duties paid on the foreign materials represented in the exported products, less the legal deduction of 1 per cent., such drawback of duties paid on the imported potassium permanganate to be divided between said product and by-product prorate, in proportion to the value of each at the time and place of manufacture.

ONE NON-REFILLABLE BOTTLE.

A persistent and habitual inventor named Jones recently devised a non-refillable bottle and persuaded a friend to guarantee the cost of a working model and obtaining a patent. The financial backer took the model to a bartender whom he knew and asked what the liquor man thought of it. What happened is thus described by a daily paper:

To the bartender he described how the bottle, being filled, then had the neck and top melted on. In this neck was a glass ball, which, when the bottle was right side up, fell into a cup and utterly closed the neck, the opening of which was zigzagged so that a wire could not be introduced to raise the ball and permit the filling of the bottle.

The bartender calmly poured the contents out, then, making a siphon of a piece

The United States Circuit Court has decided that square glass plates, less than eight inches across, which had been polished on opposite edges, the polish being only to show the character of the glass, and being subsequently removed in manufacture, are free of duty, as "glass plates or discs, rough cut or unwrought," suitable only for use in optical instruments, etc. The proviso prescribing that "such discs exceeding eight inches in diameter, may be polished sufficiently to enable the character of the glass to be determined," does not exclude such articles. The specific case was an importation by Hensel, Bruckmann & Lorbacher. The glass discs had been ground on the opposite ends, in order to detect air bubbles.

MARKET REPORT

CHLOROFORM LOWER.

German Syndicate Raises Sodium Bromide to Twenty Cents.

CANNOT SUPPLY THE DEMAND.—DOMESTIC PRODUCERS FOLLOW.—MENTHOL OFF AGAIN.—THE HYPOPHOSPHITES STILL HIGHER.—ESERINE AND ATROPINE UP.—A NUMBER OF OTHER SMALL CHANGES.—MARKET GENERALLY STEADY AND DEMAND MODERATE.

New York, May 1.—Several interesting events have occurred this week. On April 25 the Roessler & Hasslacher Chemical Co. announced, in their capacity as agents in this country for the German Bromine Syndicate, an advance in bromide of sodium to 20 cents per pound. They gave the following explanation: "The unusual large demand for bromide of sodium has forced an advance in this article. We are advised by a cable from the German Bromine Syndicate to raise the price for bromide of sodium, U. S. P., to 20 cents per pound. The prices for the other bromide salts remain unchanged, viz.: Bromide of potassium, U. S. P., at 15 cents and bromide of ammonium, U. S. P., at 22 cents per pound. We are taking orders for legitimate wants only, not for speculation, and under the condition that none of the salts are directly or indirectly exported."

The domestic producers immediately announced the same price schedule. It would seem that the German Syndicate has given up its attempt to undersell the home producers at the former low level merely because the demand at that ruinously low figure was too great to be handled. There have been rumors, however, that negotiations have been under way for some time looking to a peaceable settlement of the price war and an amicable division of the world's markets. It is possible that this move is merely a preliminary step in that direction. Developments will be watched with interest, but at present nothing definite can be ascertained.

Another movement of importance is a decline in chloroform, manufacturers reducing prices. It is said that the cause is the near approach of the date when certain of the patents under which this important product is made will expire.

Otherwise the market has been generally quiet and steady. Demand is somewhat more active than a short time ago, but it is hardly more than routine. The leading commodities have shown no feature, but there have been some other price changes in less important quarters. Some of these are declines in menthol, guarana and American saffron, while the hypophosphites are stronger.

OPHIUM.—The market is slow. Conditions abroad are even worse, the London situation being described as "stagnant." On the other hand, reports from producing regions, especially Smyrna, are continually more unfavorable. Were the demand better prices would undoubtedly rise. Local

jobbers quote the unchanged values of \$3.00@3.20 for nine per cent., and \$3.10@3.30 for eleven and thirteen per cent.; powdered remains unchanged at \$3.85@4.10 for thirteen per cent. and \$4.60@4.85 for sixteen per cent.

MORPHINE SULPHATE.—The demand from consumers is but moderate, although steady. Jobbing prices show no changes. They are \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 to ounce vials, and \$2.25½@2.35 in 5-oz. tins, according to brand or quality.

QUININE SULPHATE.—Conditions remain unaltered. The trade is taking normal amounts for actual needs, but that is all. Statistics continue rather bullish. At the next Amsterdam bark auction, on May 4, the offerings for sale will be 8,288 packages. The total shipments for April were 1,320,000 pounds, against 1,495,000 pounds for the same period last year. Since the first of the year the total shipments have been 4,267,000 pounds, against 3,918,900 pounds last year, an increase of 349,000 pounds. Local jobbing prices are unaltered at 21@21½c. for bulk in 100-oz. tins, 21½@22c. in 50-oz. tins, 22@22½c. in 25-oz. tins, 23@23½c. in 15 or 10-oz. tins, and 28@29½c. in ounce vials, according to brand and amount.

CHLOROFORM.—Manufacturers have announced a decline. The reason for this is variously surmised, but the most probable explanation is that certain patent rights will soon expire and prices are coming down gradually instead of with a crash. Jobbers have lowered their quotations to 35@40c. as stated.

THE BROMIDES.—As stated above, the price of bromide of sodium has been raised to 20 cents by the German Syndicate and domestic producers have duplicated this advance. Potassium and ammonium remain unaltered at wholesale at 15 and 22 cents, respectively. The war between the German and American combination still continues, although there are rumors of peace negotiations. Jobbers have readjusted their prices, but not in quite the same way, for they were relatively too high on potassium and ammonium. Their new quotations are: Potassium, 30@35c.; sodium, 40@45c., and ammonium, 43@48c. per pound.

MENTHOL.—The market is weak, and the bull interest among speculative holders does not appear able to successfully combat larger stocks and freer offerings. Prices have again broken and jobbers have lowered their quotations to \$2.50@2.75 per pound or 23@28c. per ounce.

THE HYPOPHOSPHITES.—Further advances in sodium and potassium have been announced by manufacturers, and manganese and iron are also higher. The increased cost of raw material is stated to be the cause. Jobbers have raised their figures to cover this increased cost and now quote calcium, 75@80c.; potassium, 75@80c.; sodium, 80@85c.; manganese, \$1.40@1.55, and iron, \$1.40@1.55—all per pound.

ESERINE.—Manufacturers report a distinct advance in the prices of the sulphate, salicylate and the alkaloid.

CAMPOR.—The two recent declines have left the market unsettled and buyers are wholly cautious, but as foreign statistics are bullish, the situation showed firm, especially as London is higher. Jobbing quotations unchanged.

ATROPINE.—Manufacturers have advanced prices and are listing at wholesale sulphate at \$4.25@4.50 per ounce and alkaloid at \$5.10@5.35. As their new lists to the jobbing trade have not yet been generally received, jobbers have not announced new prices.

CODLIVER OIL.—As is usual at this season, the market is dull. While prices are easy in undertone, there is no further change announced. The latest reports from Norway are summed by the London Chemist and Druggist as follows: "The catch of cod since the beginning of the season for the whole of Norway up to April 10 amounts to 29,297,000, compared with 25,068,000 at this time last year. The total yield of steam-refined oil is now 21,616 barrels, against a total of 7,790 barrels in the same week of 1904. The Lofoten fishing is closing, and the Finmarken results up to date are poor, owing partly to bad weather." Cables from Aalesund announce that the Lofoten fishing has actually ended. The results to date are given as 11,500 hectoliters of oil at that center and 29,300 hectoliters for the whole of Norway, against 3,300 and 13,000 hectoliters, respectively, in 1904.

LAUREL LEAVES.—Are reported scarce abroad, and the wholesale price here has risen 1 cent, but as yet jobbers have made no change, quoting 10@15c. per pound.

SAFFRON.—The American is weak and demand is slow. Primary markets are lower and there have been unexpected offers of large lots for early shipment from Mexico. Local jobbers have reduced prices to \$1.45@1.55 per pound.

CARDAMOMS.—Overproduction and poor demand continue influential. The latest jobbing list is as follows: Aleppo, 60@70c.; bleached extra, 95c.@1.05; bleached No. 1, 80@90c.; Malabar, 70@80c.; de-corticated, 70@80c., and powdered, 80@90c., all per pound.

PENTYROL OIL.—The demand is improving, as is usual at this season. Jobbing prices are \$1.40@1.50 per pound.

NEROLI OIL.—Prices at wholesale show an upward tendency, owing to confirmation of reports from Southern France of damage to the various flower crops. Higher values are likely. This also applies to orange, which has fared worst. No jobbing changes.

SEEDS.—Latest jobbing prices on several seeds show but trifling variations. They are: Hemp seed, bag, 3¼@3¼c., and less, 4@6c. per pound; canary seed, Sicily, bag, 5½@5½c., and less, 7@9c.; Smyrna, bag, 5½@5½c., and less, 7@8c. per pound; millet seed, bag, 2½@2½c., and less, 4@6c. per pound; rape seed, German, bag, 3¼@3¼c., and less, 6@7c.; sunflower seed, 7@10c. per pound.

GUARANA.—As demand has not been active jobbers have lowered prices slightly to 65@75c., and powdered, 75@85c.

BALSAM COPAIBA.—Supplies are not heavy and demand is good. Nevertheless, jobbing prices are lower, in sympathy with recent wholesale weakness. New figures are: Angostura, 55@60c.; Central America, 45@50c.; Para, 50@55c.; solid, 85@95c., and solidifiable, 75@85c., all per pound.

SPIRITS TURPENTINE.—The latest jobbing change is a decline, although primary markets are firm. New quotation are 64½@65c. per gallon in barrels and 74@76c. per gallon in smaller quantities.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII,

NEW YORK, MAY 11, 1905.

Number 19.

Entered at the New York Post Office as
Second Class Matter.

EDITORIAL COMMENT

The Proprietors' Meeting.

After reading the reports of the meeting of the Proprietary Association, held in this city, last week, one cannot be but impressed with the attention given to the serial numbering plan, which is evidence, if any evidence be needed, that proprietors are beginning to view this plan as a satisfactory method of marketing their goods. The jobbers also are beginning to realize its value, and their present attitude is quite in contrast to that exhibited at former meetings. To be sure, the serial numbering plan throws considerable extra work and expense upon the jobber, but it is hoped that some important system will be introduced for handling these details that will reduce the expense and facilitate the work.

The plan, as such, has shown its ability to accomplish the purpose for which it was designated, i. e., the prevention of price demoralization.

Another excellent sign of harmony is the evidence of co-operation now coming forward from the jobbers, who seem to be realizing that it is to their advantage to fall into line in accordance with the endorsement given to the plan of the N. W. D. A. at the meeting in New Orleans last Fall. Indeed, more than one proprietor spoke of the assistance he had received from the jobbers, many of whom were offering to secure from the retailers signatures to contracts, and there seems to be a tendency on the part of the proprietors to permit the jobbers to secure these contracts and perhaps to allow them some extra percentage to cover the expense.

On the whole, the plan seems to be working out with great satisfaction to all concerned. There is one thing sure, that the more of these proprietary goods that are placed upon the market with the restrictions embodied in the plan, the better it will be for the retailers, for they are thereby assured of a profit on their sales, and consequently all branches of the trade are benefited.

Better Times for the Retailer.

Another noticeable thing about the meeting is the entire change of front towards the retail trade. The fact that the delegates from the National Association of Retail Druggists were admitted to all the sessions, executive or otherwise, is in itself sufficiently noteworthy to receive careful attention, since it is the first time that any such privilege has been granted by the proprietors.

Add to this, the statement of the delegates that they received the best of treatment, and the conclusion seems inevitable that a new era is dawning for the retail trade. The proprietors, indeed, seem at last to have awakened to the fact that the natural, legitimate, and therefore the most profitable outlet for their goods is through the hands of the retail druggist.

In no other way can this friendly feeling be explained; for it is reasonable to suppose that in common with other business men, the hearts and the pockets of the proprietors are apt to be affected in a certain close relationship to one another. Let the retailer pluck up hope once more. Better times are coming.

More Pre-requisite Requirements.

It is only a few weeks ago that announcement was made in this journal that the druggists of Pennsylvania had secured a pre-requisite law, which will become operative on January 1, next. In this work, the druggists of that State were only following the example of their brethren in New York, for a similar law was enacted last year and has been in force since the beginning of the present year. Now, without any additional legislation Wisconsin druggists through their Board of Pharmacy have stepped forward and passed resolutions which will ultimately place their State in the pre-requisite column.

The resolutions of the Wisconsin Board will materially affect the apprentices now employed in drug stores in the State and they are required to register with the secretary of the Board before July 1 if they would preserve their present status. After July 1 only applicants will be admitted to examination who can show that they have qualifications equivalent to one year's instruction in an accredited high school. Next year instruction equiva-

lent to one year (32 weeks) in a college of pharmacy recognized by the Board will be exacted of the applicant before he can take the examination for registration, and after July 1, 1906, only applicants will be admitted to examination who have successfully completed two years' work in a recognized college of pharmacy.

It will be noticed that these arrangements provide for a gradual raising of the standard, and that they also afford sufficient time for prospective applicants to prepare for the duties expected of them. It is not every State whose pharmacy laws provide for such an advance, nor is it every Board of Pharmacy which would undertake this forward step in the absence of a specific command from the legislature.

Care for Show Windows.

A show window is a valuable asset. Most druggists will readily enough agree with any one who advances this theory, but their agreement is likely to be merely mechanical, a matter of course, and it is doubtful if they ever really give the subject the serious thought it deserves. They have been told so often that a show window is of value that they take it as an axiom, and do not endeavor to remember that only by utilization with the best methods will they develop that value. If any doubt this, let him but pass along the main thoroughfare of any large city, count the number of pharmacies with good displays and the number that have merely a conglomeration of fly-specked odds and ends filling the space perfunctorily or which are littered with an unharmonious collection of show cards and glaring proprietary remedies, advertising literature of the display variety. True, at certain seasons of the year almost everyone makes a special effort; at Christmas, the Fourth of July, and, to a less extent, Easter, the druggist clears out his window and launches an ambitious exhibition, but for the other forty-nine weeks in the year he almost forgets the space entirely, or if he thinks of it, it is with the mental reservation that tomorrow will be the day when he will take up its disposition. This is all wrong. A show window should receive as careful attention as almost any other feature of the business. It should be changed at least once a week without fail. The proprietor, if he is his own window decorator, should continually study methods which he may employ to produce attractive results, should read extensively concerning the achievements of others in the same line, and should keep his eyes open in his peregrination to obtain hints from displays in the windows of tradesmen in other pursuits.

A few other points appear to recommend themselves. They are the result

of the experience of many druggists. Never feature anything in your window for nothing. That is, do not feature the goods of any manufacture without a special consideration in return from them. At all times give preference to your own make preparations, and be very chary about a display of any article which you cannot really recommend. If you do not care for this latter point, the results will react on your own reputation. As a rule, unless the price received is considerable, it is not advisable to encourage window demonstrations of the specialties of some large concern. An intelligent use of the windows should bring in cash returns in good volume to a druggist. Indeed, one pharmacist in a large city calculates that his show window space is worth fully \$25 a week, and that he gets it. If he does this, why should not every other pharmacist do likewise?

Uses Of a Telephone Booth.

One of the ways to make a drug store attractive, a way which is very frequently utilized, but which a surprisingly large number of druggists fail to consider, is the addition of a modern sound-proof telephone booth in some convenient corner of the store. While the outlay for this may seem considerable, it should prove a judicious investment, as has been shown by the experience of those pharmacists who have already tried the plan. This applies, of course, especially to those in large cities, for in the country districts the necessity for a telephone in a drug store is often merely a matter of personal convenience to the owner himself. But in large centers of population the drug store telephone is a recognized convenience of modern life which is called into use every half hour in the day. The proper transmission of a message over the wire is greatly hampered by confusing noises, such as occur continuously from the presence of other customers in the store, and from the commotion of street traffic. A telephone booth does away with this. Its presence will soon be known by hundreds of people within a wide radius of the store and they will take pains to go there from considerable distances, in order to avail themselves of this convenience, passing by other establishments which have telephones but no booth. An influx of people for any cause is reasonably sure to increase sales on general lines, and, besides, the profits on the fees collected for the transmission of telephone messages is in itself an item worth some consideration.

Having once achieved a booth, other possibilities of its usefulness present themselves. Many druggists have taken up the plan of hanging neat signs inside the booth at a point on its wall

where they are sure to catch the eye of anyone sending or receiving a call. In the use of a telephone, there is always an interval of waiting, while the party one desires to converse with is being secured at the other end. In this interval the eye of the customer is sure to travel round the small compartment in which he finds himself and he is, therefore, likely to thoroughly read and digest any advertising confronting him. In fact, he will give it greater attention than usual, as his mind is not distracted by any outside influence for the moment. The results from this plan should alone speedily recoup the proprietor for any outlay on the booth.

A Call for Volunteers.

It is very gratifying to notice the willingness of the strong men in New York City to help out the less aggressive who are slow in organizing their districts. These volunteers are making a big sacrifice, for they will have to absent themselves from their business to do work which will not directly benefit them and in which they are not immediately interested. Such unselfishness should be fully appreciated.

But our first feeling of pride in these men gives way to one of curiosity as to why their services should be required at all. Every member of the M. A. R. D. is paying two dollars and a half to the national association to defray the expenses of organization.

What is the trouble with the organization department? Mr. Duble confessed that for reasons which he could not explain, his force had been reduced to two men. When we recall the early promises that twelve men would be sent here if necessary, the present array does not make a very brave showing.

The druggists of this city are certainly entitled to know what has become of their organization fee. They paid money to have the national association do a certain amount of work, which they are now compelled to do themselves. Why? If the getting of signatures to the contracts has engaged the entire attention of Mr. Duble's staff, then sufficient men should have been sent here to carry on both branches of the work at the same time.

Prof. Charles Caspari, Jr., completes his twenty-sixth year of usefulness in the profession of pharmacy next week, and his friends in Baltimore will celebrate the occasion by presenting him with a silver service. This is a certainly fitting tribute to Prof. Caspari's work along educational lines, and in the A. Ph. A. It shows that earnest endeavor does not always go unrewarded.

WHO SUPPORTS THE N. A. R. D.

The following table is compiled from the report, printed in "N. A. R. D. Notes," issued on April 22 and April 29. Instead, however, of reprinting the name of each association which has made contribution, we have included this information relating to each State under one table, indicating in the first column, the number of associations reported.

Additional to the figures given in "Notes," we have added in the last column the total number of druggists in each State, as given in the last edition of the "Era Druggists Directory."

According to "Notes" the list shows the remittances made by the Associations named during the period of six months from October 1, 1904, to March 31, 1905, both inclusive, as taken from the books of the N. A. R. D. treasurer.

States.	No. of associations.	1902.	1903.	1904.	1905.	1906.	Organiza- tion fees.	Dona- tions.	State Dues.	Total.	Druggists in state.
Alabama	15	\$3.50	\$66.00	\$124.00	\$352.00	\$152.50	\$1.00	\$489.00	695
Arkansas	3	12.00	5.00	25.00	42.00	822
California	13	306.00	280.00	180.00	\$70.00	835.00	965
Colorado	7	126.00	158.00	62.00	346.00	458
Connecticut	7	50	2.00	234.50	316.00	71.50	624.50	530
Delaware	3	172.00	42.50	214.50	118
District of Columbia	1	250.00	250.00	196
Florida	1	250.00	250.00	337
Georgia	6	4.00	50.00	124.00	17.50	4.00	195.50	746
Illinois	55	1.00	209.00	536.00	826.00	1.00	2,356.00	2,778
Indiana	36	18.50	180.00	408.00	894.00	173.30	50.00	64.00	1,767.80	1,824
Iowa	38	11.50	174.00	416.00	232.00	5.00	1,332.50	1,813
Kansas	38	36.00	341.00	174.00	4.00	555.00	1,130
Kentucky	14	124.00	144.00	446.00	122.50	836.50	928
Louisiana	2	112.00	112.00	537
Maine	1	250.00	\$4.00	134.00	58.25	397.25	413
Maryland	3	136.00	2.50	138.50	572
Massachusetts	22	4.00	542.00	1,304.00	155.00	2,005.00	1,365
Michigan	33	21.50	124.00	562.00	550.00	103.00	1,360.50	1,376
Minnesota	12	2.50	48.00	86.00	263.00	7.50	406.00	873
Missouri	18	18.00	414.00	302.00	237.00	1.00	970.00	2,463
Nebraska	3	72.00	60.00	132.00	828
Nevada	1	5.00	5.00	30
New Hampshire	4	10.00	48.00	25.00	36.75	139.75	245
New Jersey	9	63.50	244.00	32.96	1.00	393.46	920
New Mexico	1	12.00	12.00	78
New York	34	20.00	100.00	392.00	2,444.00	1,366.00	55.00	4,577.00	3,774
North Carolina	15	16.00	640.00	335.90	37.75	1,028.75	481
Ohio	34	6.00	38.00	328.00	908.00	95.00	5.00	1,380.00	1,740
Oregon	2	26.00	10.00	36.00	380
Pennsylvania	34	128.00	1,154.00	1,298.00	568.50	4.00	3,132.50	3,371
Rhode Island	2	42.00	236.00	70.00	19.50	367.50	274
South Carolina	2	16.00	84.00	100.00	378
South Dakota	8	140.00	244.00	300.00	684.00	342
Tennessee	8	22.00	147.00	12.00	8.25	189.25	611
Texas	7	88.00	39.00	127.00	2,284
Vermont	1	16.00	33.75	375
Virginia	2	20.00	84.00	36.75	140.75	520
Washington	1	28.00	1.00	29.00	413
West Virginia	1	18.00	8.00	2.50	28.50	325
Wisconsin	34	1.00	4.00	544.00	1,025.00	30.00	1,604.00	965
Wyoming	1	12.50	12.50	50
Canada	1
Total	516	\$86.00	\$1,349.00	\$7,786.50	\$14,858.00	\$4.00	\$5,390.76	\$245.50	\$319.50	\$30,629.26	39,915

The above figures are extremely interesting, and are sure to attract the attention of all members of the N. A. R. D., and of many druggists who are not members of that organization.

Eight States are not represented in the list, i. e., Arizona with 59 druggists, Idaho with 171, Indian Territory with 596, Mississippi with 522, Montana with 144, Oklahoma with 405, Utah with 112, and Wyoming with 65 druggists.

In the States included in the list there are practically 40,000 druggists, and their total contributions in round numbers amount to \$30,000, making an average of 75c. for each druggist. It will be noticed that New York State heads the list with a total payment of \$4,577; Pennsylvania comes second, Illinois third, Massachusetts fourth, Indiana fifth, Wisconsin sixth, Ohio seventh, Michigan eighth, Iowa ninth, and North Carolina tenth, these being the only States that have contributed more than \$1,000 each.

As compared with the average *per capita* of 75c. for each druggist, South Dakota takes the lead with a total of

\$2 for each druggist, and Arkansas is at the foot of the list with 6c. for each druggist.

While \$30,000 is a goodly sum, it is much less than one would expect from an association claiming a membership of more than 20,000. If we remember correctly, the annual dues in the N. A. R. D. for each member is \$4, and, according to this basis the \$14,858 paid for dues for 1905 would show that only 3,715 members have paid their full dues for the current year. The organization fee, as we understand it, is \$2.50 for each member. The amount of money collected from this source—\$5,390—would indicate that only 2,156 new members have paid their organization fees during the past six months.

As a whole the total amount secured from the druggists must be something of a disappointment to the managers of the N. A. R. D. Their extensive organization surely cannot exist on this amount of income. It would be interesting to know how much income has been received from other sources, and what are the total expenses of the organization? These figures will no doubt

be made public at the next annual meeting, if not previously printed in the "N. A. R. D. Notes."

ERA COURSE IN PHARMACY.

Graduates for April, 1905, Whose Grades are Above 90 Per Cent.

Number.	Name.	Per Cent.
4124	R. B. Winkelt, Brockwayville, Pa.	96
4166	R. Lamar Fretz, Quakertown, Pa.	96
4068	Clifford A. Moses, Portland, Maine	96
4173	Miles A. Cole, Grand Rapids, Mich.	96

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name embossed, especially suited for framing, will be furnished to all who request it, for the sum of \$2. Those who desire the latter should forward the necessary fee at once to The Pharmaceutical Era.

Notice to Students.

Please remember that repletions are not returned to students until the Part has been completed.

LETTER BOX

DRUMMING UP TRADE.

New York, May 8, '05.

Editor The Pharmaceutical Era:

If one may place credence in what is printed in the daily press, doctors now have "touts," whose business it is to drum up trade for the medical men. Really, this is not so improbable as it might seem at first glance. A bit unprofessional, perhaps—hardly in keeping with the ethics of those medical men who decry all forms of advertising and abhor publicity but there is "nothing new under the sun," and as enterprise shows her head in devious ways, this may be one of the many and strange paths in which she walks.

"In the nature of things, people will get sick," says one of these enterprising citizens, who works in the interest of a doctor, "and since all New York doctors look alike to them, they don't know which one to consult, and, then—well, Dr. Blank's name is suggested.

"You seem a little tuckered out," says the drummer. "Have you seen a doctor?" "No. I haven't much faith in medical men. I have learned to fight shy of the doctors," says the sick man.

Then the man who is boosting the doctor's trade uses his powers of persuasion. How simple it seems.

And in all of this may there not be a hint to the proprietary manufacturer, who is ever on the alert for new and striking methods for bringing his wares before a long-suffering public? With the aid of an old photograph, the medical boomer could be a living example of "before and after taking," presenting a most effective argument on behalf of the beneficial effects of the remedy in which he was interested. A sort of personally conducted boost, as it were, of the merits of medicine, instead of seeking for trade by telling on the blank walls and at the breakfast table of what is good for that tired feeling or that one hundred doses may be had for one dollar.

This would be publicity run riot, it is true, but as variety is said to be the spice of life, the boomer of proprietary remedies might eventually come to be looked upon as a Samaritan by recommending that which is good for the ills of which so many folks complain.

MEDICO.

HELPING THE GRADUATE.

New York, May 5, '05.

Editor The Pharmaceutical Era:

Highly commendable was your editorial "Dreams of Conquest," in which you speak so encouragingly to the graduates who are helping to swell the ranks to take up the great and permanent interests of society." But isn't there a shade of condescension when you ask: "Who would banish these dreams of conquest? Not one. Upon the contrary, it is for us to encourage and hasten the enterprise of what the valedictorian has called the building of the Pharmaceutical Empire of the Future." Who, indeed, could banish

these dreams of conquest. They date away beyond the time, Mr. Editor, when perhaps you had the same dreams, and after you and the writer have made the last, long journey, these dreams will be the inspiration which will lead the graduate onward and upward. Woe unto the man who would seek to tear down this fabric of bright visions which has been woven in the imagination of the graduate. Verily, the useless age, which Dr. Osier disclaims having fixed, would be his. He who has grown so old, or hardened in the ways of the world that he cannot look back through the vista of years and recall a graduation day which was bright with promise and hope, has truly reached the chloroforming age.

Where is the man who cannot remember that in the fulness of youth, there was a time when he felt that he could point out the new and better way, even to men of experience? There was due respect for gray beards, but it was perhaps temporarily overshadowed by an ambition to be up and doing. It was the push and enterprise of youth, and the impatience came from the impression that the old-fashioned ways were slow and could be pushed aside without providing other and better ones to take their place.

This is the feeling that prompts the graduate to think that he is just a little ahead of the times, and that he will look out on life with more intelligent eyes than those who have preceded him. This is but natural. Let him cherish this delightful delusion as long as he may. The hard knocks of life and the awakening to the stern realities of the bitter struggle engendered by fierce competition, will come all too soon, and then the graduate may need the sympathy and the helping hand of the older and wiser men. But until that time comes, remember that we were once as he is, and were prone to see only the rosy side of life, overlooking the wrinkles which strew the path to success.

Let us hope the fulness of his ambitions may be realized. May his labors carry him into new fields, and his enterprise guide his mind to the accomplishment of much that has been attempted by others, and in the end we will come to regard his oratory as acts, instead of words, words, words. But whether he meet with success or failure, if he is energetic and honest, he can always be sure of the aid and encouragement of those who have trod the path before him.

OLD GRAD.

NEW WISCONSIN REQUIREMENTS.

Milwaukee, May 3, 1905.

Editor The Pharmaceutical Era:

Herewith please find enclosed a copy of a circular letter and a new resolution of the Wisconsin Board of Pharmacy, both of which I wish you would kindly publish in your next issue. Thanking you in advance for the courtesy, I am, respectfully yours,

H. G. RÜENZEL,
Secretary.

(CIRCULAR LETTER.)

Milwaukee, Wis., May 1st, 1905.

Dear Sir:—Enclosed find a copy of the prerequisite resolution, adopted by the Board of Pharmacy at its last session. As it materially affects those apprentices now employed in drug stores in this state, the Board has made the following provisions: All apprentices now engaged in drug

stores must register with the Secretary of the Board. Affidavits are herewith enclosed which are to be filled out by the proprietor of the drug store or by the Registered Pharmacist in charge, and are to be forwarded to the Secretary at the earliest possible moment, not later than July 1, 1905.

After July 1, 1905, all apprentices engaged in drug stores must conform with the *Prerequisite Resolution*.

Proprietors and managers of drug stores should have all future apprentices furnish a statement from principals of High Schools or the equivalent, showing the completion of a satisfactory one year's course. The certificate from High Schools must accompany all applications for examination of those who engage in the drug business after July 1, 1905.

Read this very carefully, as it is an important requirement of the Board.

Respectfully yours,
H. G. RÜENZEL, Secretary.

PREREQUISITE RESOLUTION.

WHEREAS, All professional callings, closely allied to the practice of pharmacy, are demanding a better preliminary education and more thorough course for graduation; and

WHEREAS, The trend of the times, the rapid advance of science, the discovery of new remedies and the application of new methods warrant such additional requirements in the practice of our profession, eventually resulting in the betterment of the status of pharmacists; and

WHEREAS, It is the sense of this Board that such changes must be brought about gradually, thus affording the pharmacists an opportunity of meeting these requirements; Therefore, be it

Resolved, That after July 1, 1905, only such applicants will be admitted to examination who accompany their applications with a certificate of having finished a satisfactory course of one year in a High School, accredited by the University of Wisconsin, or its equivalent, and, be it further

Resolved, That after July 1, 1906, only such applicants will be admitted to examination who shall present a certificate of having successfully completed one year of at least thirty-two weeks in a school or college of pharmacy (recognized by this Board); and, be it further

Resolved, That after July 1, 1907, only such applicants will be admitted to examination who shall present a certificate of having successfully completed two years of at least thirty-two weeks each in such school or college of pharmacy.

H. G. RÜENZEL, Secretary.

SHOULD PRINT MORE DON'T'S.

Edmonton, N. W. T., Can., April 30, 1905.
Editor The Pharmaceutical Era:

In your issue of April 6 (page 307), under the heading of "Some Criticisms of the Journals," the author says in paragraph five, "and not one of you would be guilty of pasting one label over another." I will illustrate by relating what came under my notice some weeks ago. A bottle was brought in to be filled with methylated spirit. On soaking the bottle I found it to bear the following labels: St. Catharines, Ont.; Collingwood, Ont.; Port Arthur, Ont.; Portage la Prairie, Man.; Brandon, Man., and Strathcona, Alberta, N. W. T. I think the journals still need to print the "Don't's"

Geo. H. Graydon.

Antidote to Nicotine.

The juice of *Nasturtium officinale* is a definite antidote for nicotine poisoning. This juice is very rich in iodine and iron, especially when the plant is grown near sources of these elements, and the action of the antidote may be ascribed to the re-juvenation of the blood corpuscles by these constituents. (Journ. Soc. of Chem. Ind.)

COATING COMPRESSED TABLETS.

BY L. D. TURNER,
Brooklyn, N. Y.

Compressed tablets are coated to make them palatable, to conceal the bitter taste and odor that many drugs possess, and to improve the finished appearance of the tablet. The coating also prevents chemical changes by excluding air, renders the tablet more slowly soluble, or even insoluble in the stomach, so that it may pass on to the intestines, where it is dissolved by the alkaline juices. After the tablets are compressed they should be placed in a coarse mesh sieve over a suction blower or cold air blast. This removes any adhering powder and particles or dust from their surface. This is necessary, particularly if a transparent coating is to be applied. If, after compressing, the tablet has a mottled or variegated appearance, cover it with a little moist lamplack so that the color will be uniform when coated.

Before a tablet can be successfully coated it must be in perfect condition. Not too soft nor too hard, but firm and tenacious, with regular and well formed edges. Hard tablets are often insoluble and give rise to capping when the coating solution is applied. They must have the proper shape and be perfectly dry, and the excipients used in the granulation of the ingredients must not be of a hygroscopic nature, as they are apt to attract moisture from the coating and cause the tablet to swell, crack or burst open on standing any length of time. They must be dry enough so that moisture will not exude and cause the coating to become softened or dissolved. All tablets intended to be coated should be placed in fine wire or cloth trays and dried at 70° F. for at least 24 hours.

Again, the ingredients should have a fairly good amount of cohesion, to enable them to stand the rough motion of the tablets in the coating drums. Syrup, being adhesive, will cause the surface of the tablet to adhere to the thin layer of coating, the adherence increasing as the syrup dries, and if this adhesiveness of the drying syrup is greater than the cohesiveness of the granules, the structure of the tablet becomes strained and the coating cracks. Proper shape is another essential feature for good coating. Too flat tablets offer a greater surface and increase the danger of the tablets sticking to one another. Thick edges should be avoided, as they require a long time to build up and round over the coating.

SUGAR COATING.

The tablets are placed in a revolving copper drum, and a small amount of syrup is added, only enough to slightly moisten the surfaces. Into each drum a current of warm or cold air is introduced which dries the syrup on the tablet, this process of wetting with syrup and drying being repeated until the coating reaches the desired shape, thickness and smoothness. The rolling motion of the coating drums distributes the syrup evenly over the tablets, and prevents them from adhering to each other. After the required number of applications of syrup are added, another solution is applied, to which is added the coloring and flavoring material desired. After drying, the tablets are

placed in a second drum lined with thick felt, the friction of the felt and the previous layer of coating imparting to the surface a dull polish. From the felt-lined drums the tablets are conveyed through pans lined with melted paraffin wax, which gives them a highly polished and bright appearing surface. The hot air blast is preferable to the cold air process for it dries the syrup, the more rapid evaporation of the moisture rendering the drying of the coating more uniform and less liable to crack and shrink away from the surface of the tablet when it becomes dry.

GOLD AND SILVER COATING.

This form of coating is more often applied to Italian mints, cachous and dragees than to tablets in general. The tablets or other material should first be covered with a little weak maclage and then shaken with the gold or silver leaf. The leaf may be dropped inside the revolving pan, and it at once adheres to the surface of the tablets. This operation must be continued for some time, and a second coating is often necessary to give the tablet a bright and smooth appearance and to conceal the color of the tablet or coating applied thereon. Aluminum leaf may be used for the first coating, being afterwards covered with silver leaf. The pills or tablets thus coated are just as bright, and the cost of material is reduced. To give the silver coating a bright, metallic polish the tablets are placed in a pan or drum lined with chamois skin and revolved for about one-half hour. If the tablets contain any sulphides they must first be coated with tannin and sandarac to prevent the formation of silver sulphide, which causes a black discoloration.

PEARL COATING.

This is similar to sugar coating, but the coating contains a large proportion of powdered soapstone or talcum, which gives the tablets a pearly appearance.

CHOCOLATE COATING.

To flavor chocolate coated tablets, place ten pounds of cocoa hulls in a cotton bag and boil for five minutes in four gallons of water. Strain through two layers of cheese cloth and add twenty-five pounds of lump sugar. To this mixture add two pounds powdered cocoa and mix well.

Colors for Coating Tablets.

PURPLE.

- Germania blue, Atlas brand 2 drams
- Kalina red, Atlas brand..... 2 drams
- Brilliant rose, Atlas brand... 1 ounce
- Alcohol, 25 per cent..... 8 ounces

BLACK.

- Sulphate of iron..... 4 pounds
- Fluid extract of logwood... 1 gallon
- Fluid extract of nutgalls... 1 gallon

YELLOW.

- Amberine yellow 4 ounces
- Boric acid 1 1/2 ounces
- Alcohol 16 ounces
- Water 48 ounces

ROSE PINK.

- Red saffron, powdered... 2 ounces
- Alcohol 4 ounces
- Water 16 ounces
- Boric acid 1 1/2 ounce

CARMINE ROSE.

- Alcohol 8 ounces
- Carmine rose 2 ounces
- Hot water 8 ounces

PHARMACEUTICAL DEGREES.*

Their Past, Present and Future Status in America.

BY M. L. WILBERT.

Apothecary at the German Hospital,
Philadelphia.

At no period during the thirty or more years that the question has been actively under discussion has the subject of pharmaceutical titles attracted, or received, greater attention than is being given it at the present time.

The direct cause for this unusual interest is no doubt to be found in the great attention that is being devoted to the subject of pharmaceutical education, its shortcomings and its ultimate possibilities; and also to a more thorough understanding of the very great differences that exist, in the entrance requirements that are asked, the instruction that is given and the degrees that are conferred by the various pharmaceutical schools now existing.

Appreciating the fact that the history of any given subject may have an important bearing on the probable solution of questions arising in connection with the same, and believing, furthermore, that the history of the origin and uses of pharmaceutical titles in America might have a peculiar and timely interest for all concerned, this contribution is offered with the hope that it may prove interesting, and that the ideas and opinions of some of the earlier leaders of our profession may serve to indicate a rational and generally acceptable solution of the present controversy.

FIRST DEGREES IN AMERICA.

Dr. John Morgan, who is properly recognized as the originator of pharmacy in this country, returned to Philadelphia in 1765, where he was the first to institute the European practice of writing prescriptions and of having them compounded by competent apothecaries. This practice even in Philadelphia, spread slowly, and it was more than fifty years later, in 1816, before any attempt was made to teach pharmacy by means of a regular course of lectures. Five years later, on Feb. 31, 1821, the Board of Trustees of the University of Pennsylvania, acting on a recommendation from the Professors of the Medical Faculty, adopted a resolution instituting the degree of Master of Pharmacy, to be conferred by the Board of Trustees on such persons exercising, or intending to exercise, the profession of an apothecary as are or shall be duly qualified to receive the same. Provisions were also made for instituting a course of lectures on chemistry, materia medica and pharmacy in the University, and all future candidates for the degree, in addition to serving three years' apprenticeship with a respectable apothecary, or a master of pharmacy, were to be required to attend at least two courses of lectures in the new school.

At the ensuing medical commencement, in April, 1821, sixteen gentlemen, apothecaries, the majority of them resident in the then City of Philadelphia, received the degree of Master of Pharmacy.

This attempt on the part of the Trustees of the University to improve and to elevate the practice of pharmacy aroused the

*American Journal of Pharmacy.

enterprising spirit of the druggists and apothecaries of Philadelphia, and led them to found a college of their own, "for the two-fold purpose of providing them a system of instruction in pharmacy, and subjecting themselves to regulations in their business."

DISTINCTION OR AWARD.

One of the most frequently quoted objections to the proposed course on pharmacy in the University was the fact that the trustees and professors proposed to bestow distinguishing titles on the graduates. So deeply was this objection to distinctive titles rooted in the minds of the new school of pharmacy that they positively refused to include testimonials, degrees or awards in the provisions of their school. It was not until some years after Dr. George B. Wood had been elected to fill the chair of chemistry in the college that any concerted attempt was made to introduce some form of distinction or award to such of the students as had completed the prescribed course and had undergone a satisfactory examination.

So far as known, this subject was first brought to the attention of the college in an address to the members of the Philadelphia College of Pharmacy, by Dr. George B. Wood, delivered Nov. 16, 1824. In the course of this address, while speaking of the requirements of the institution, Dr. Wood said: "In all great seminaries of learning and science it is a practice sanctioned by the experience of centuries to reward by some public testimonial or approbation those students whose industrious application and correct deportment have given satisfaction to their instructors. The hope of distinction is perhaps the strongest passion of the youthful mind; and even that honor, which an ordinary degree in the arts confers, is sought after with an ardor and perseverance which they who have forgotten the feelings of their earlier years can seldom fully appreciate.

"The power of conferring degrees, attached to all collegiate institutions, may be considered almost an essential part of their constitution, and the practice is certainly essential, as a general rule, to their successful operation. The school of pharmacy cannot be regarded as an exception. I do not think I am going too far when I say that it will never flourish until this practice is adopted.

"To the young apothecary, a degree from the college would be desirable, not only as an honor, but also as an effective instrument for the promotion of his success in business. When the public are generally informed, as they some time undoubtedly will be, of the nature and designs of the institution, it cannot but happen that a preference will be shown for those whose knowledge and skill its testimonial can be advanced; and at some future period a degree in pharmacy may be as indispensable to the apothecary as that in medicine now is to the physician. In order, however, that the degree may have the greatest possible weight in the opinions of men it should never be conferred on the student till he has passed through a certain course of study and practice united, and, by an examination before competent judges, shall have shown himself worthy of the honor. It should, moreover, be confined to those whose character is unexceptionable."

The suggestions made in this address were acted on but slowly. It was more than a year later, on Jan. 31, 1826, before the members of the college, recognizing the necessity of such a move, finally adopted a resolution that in future all students who had completed the attendance on two courses of lectures, had passed a satisfactory examination in the branches taught and were able to furnish satisfactory evidence that they had been engaged in the business of an apothecary, were to be adjudged "Graduates in the Philadelphia College of Pharmacy." It was fully half a century later, however, before the time of such a certificate of proficiency, to generally promote the business of a pharmacist, was considered legitimate, and we of to-day, more than eighty years after the address was delivered, are only now beginning to appreciate the necessity of some such evidence of systematic instruction in the sciences relating to pharmacy before an applicant be admitted to the practice of our profession.

FIRST AWARD OF PH.G.

It was on Aug. 23, 1826, that the then president, Mr. Daniel B. Smith, conferred the degree of Graduate in Pharmacy, or "Graduate in the Philadelphia College of Pharmacy," on the first successful candidates, comprised of a class of three young men.

On this occasion the president delivered an interesting, and more extremely valuable address, dealing largely with the conditions as they then existed, and outlining to some extent the objects of the college, and its ambitions for future improvements. As much of the material contained in this address has a direct bearing on the subject under discussion, it may be well to quote from it quite extensively. In speaking of the objects of the college Mr. Smith said: "The mark at which we are aiming is, however, much above the standard of any present attainments. Before we can assume to compete with the kindred institutions of the Old World our system of scientific instruction must be extended to other branches of natural history and rendered more thorough and minute in those which are already taught."

"Our diploma is, of course, but an honorary distinction, that confers no privilege or advantages beyond those which public opinion accords to the well instructed and intelligent. It bestows no title for it was the design of the college to avoid any name which may hereafter acquire a peculiar meaning, and become the designation of a new class analogous to the English apothecary. In attempting to avoid this danger, it has committed what may perhaps be esteemed a blunder by establishing a distinction without giving to it a specific name, and simply declaring that the successful candidate is a graduate in the college."

The example set by the Philadelphia College of Pharmacy was closely followed by the other schools as founded, and it was not until about 1873 that any concerted attempt was made to confer what might be termed a collegiate degree for a course in pharmacy.

DEGREE OF PHAR. D.

In the early seventies no less than three, then newly founded, schools of pharmacy began to confer the title Phar. D. on their graduates. As was to be expected, this

rather startling innovation met with considerable opposition from the officers and representatives of the older and more conservative colleges of pharmacy. The meetings of the American Pharmaceutical Association, and the accompanying conferences of the representatives of teaching colleges of pharmacy were frequently burdened with lengthy and at times caustic discussions relating to this, at that time, unpopular innovation.

In this connection it may be of interest to refer to the discussion on the admission of the delegate from the Georgetown College of Pharmacy, in the proceedings of the American Pharmaceutical Association, for 1872, the report of the meetings of the special committee appointed by the Philadelphia College of Pharmacy in 1874, to inquire into the subject of granting the title of Doctor in Pharmacy, published in the American Journal of Pharmacy, and the discussion on reputed irregularities in granting the title of Doctor in Pharmacy, with report of special committee to inquire into and report on the facts in the case, published in the Proceedings of the American Pharmaceutical Association for 1875 and 1876.

PROFESSOR PROCTER'S VIEW.

How deeply the leading pharmacists of that period felt on the subject of pharmaceutical titles is evidenced by the opinions, expressed by Prof. Wm. Procter, Jr., in one of his last editorials in which, in answer to an inquiry on the subject, he said: "The value set upon titles varies much with individuals; so much so, indeed, that many will work more earnestly for a title than for more important things. If their possession carried with it the knowledge and dignity which sometimes it is presumed to represent, then titles might well be sought for as desirable evidence of accomplished work.

"Pharmacy is to a large extent an art which few well-qualified apothecary masters. Its pursuit involves so much scientific knowledge that it may very properly be called a profession, and he who properly practices the art is a master in pharmacy."

Professor Procter further suggested that the young men be moderate in their desire for titles, and that they be satisfied with Graduate or Bachelor of Pharmacy, and that they, after a due probationary period, aspire to the more elevated and more dignified degree of Master of Pharmacy.

THE TITLE OF DOCTOR.

The title of Doctor of Pharmacy, as a purely honorary distinction, was first conferred by the Maryland College of Pharmacy some time before 1870. Prof. Edward Parrish, in referring to this distinction in 1871, said: "A degree of Doctor of Pharmacy seems appropriate to place our profession on a par with those of medicine and dentistry.

"This has already been granted to a few distinguished pharmacists by the Maryland College of Pharmacy, but would seem well suited to designate all graduates in pharmacy who have devoted themselves creditably to the legitimate practice of their profession for a term of years. A title of this kind would hardly seem pretentious if held in reserve by the college until their graduates had attained a well-recognized professional standing and the

prospect of attaining it would be an honorable incentive to professional effort."

THE TITLE OF MASTER.

The special committee appointed by the Board of Trustees of the Philadelphia College of Pharmacy in 1874 to consider the subject of conferring the degree of Doctor of Pharmacy on the graduates of the college, in their report, deprecated the adoption of the proposed title, and enumerated, among other reasons, the fact that pharmacy and the practice of medicine being so closely connected, the title would tend to confusion. The committee recommended that the college adhere to the time-honored practice of conferring the title of Graduate in Pharmacy, but also recommended the conferring of an additional degree, not designated, on graduates of the college who, by pursuing some original investigations, had demonstrated their fitness for the same. This latter recommendation was acted on the following year, when the degree of Master in Pharmacy, in course, was provided for. Eleven years later, on May 4, 1886, the degree of Master in Pharmacy "Honoris Causa" was instituted, and in the following year, Feb. 1, 1887, the Philadelphia College of Pharmacy conferred its first honorary degree.

Recurring for a few minutes to the now generally accepted propriety of exhibiting the evidence of having attended a college of pharmacy, it may be interesting to note that as late as 1874 this practice was deprecated by a writer in, and also the editor of, the "Chicago Pharmacist," one of the predecessors of the "Western Druggist."

Prof. John M. Maisch, the editor of the "American Journal of Pharmacy," contended, in opposition, that the number of graduates from colleges of pharmacy had increased to such an extent, and the opportunities for attending schools of this kind had become so numerous that there was little or no reason why graduates from pharmaceutical schools should not display their calling of their superior interest in their calling.

PRESENT STATUS OF DEGREES.

Of the present status of Pharmaceutical degrees little need be said in addition to what has already been pointed out by Prof. J. T. McGill in his paper on "What Degrees Should be Conferred by Schools of Pharmacy?" read before the section on Education and Legislation of the American Pharmaceutical Association, at Kansas City, in 1904.

Of the origin of the several titles it may be said that Graduates in Pharmacy was undoubtedly suggested by the title "Pharmacien" conferred by the French schools of pharmacy. This will appear all the more probable when we remember the close relations that existed between the founders of the Philadelphia College of Pharmacy and the products and writings of the French pharmacists of their time. The title Pharmaceutical Chemist is generally used in England, and is awarded by the Pharmaceutical Society on all that successfully pass the major examinations. Master of Pharmacy has been used for many years in several of the larger countries of Europe, particularly in Russia and in Austria, and its more recent use in this country was probably suggested by the communications of Professor Dragendorff on the subject of pharmaceutical titles.

The titles Bachelor and Doctor are generally considered to be of academic origin, and for academic use, and for this reason there has been much and varied opposition to their use in purely technical schools.

The rather promiscuous use of the title Doctor, by colleges of pharmacy, is particularly to be deplored, and despite what Professor Remington, and more recently, Professor Hynson, have had to say in favor of conferring the degree of Doctor on graduates of colleges of pharmacy, there appears to be a peculiar unfitness about this particular title that makes its use for graduates in pharmacy especially undesirable.

OBJECTIONABLE FEATURES OF PHAR. D.

The objectionable features connected with the title Phar. D. are more particularly evidenced if we review the dictionary definitions for the use of the word Doctor. Lexicographers tell us that a doctor is a teacher, an instructor, a learned man, a person endowed by a university with a diploma certifying to his proficiency in the sciences or recognizing his position as a teacher. The evident derivation of the word, in this connection at least, is such that it can hardly be made applicable to the requirements and practices of the retail pharmacist.

There are, it is true, other definitions for the word. The same lexicographers tell us that a doctor is a person duly licensed to practice medicine or surgery, or a person duly qualified and experienced in the treatment of diseases. Under this somewhat popularized definition we may very properly include the M. D., or doctor of medicine; the D. D. S., vulgarly speaking, the tooth doctor; and the D. V. S., or horse doctor, for the definition does not confine or limit the definition of diseases to diseases of human beings. The P. D., on the other hand, would necessarily be restricted under this definition to the treatment of drugs, and under this interpretation we might possibly apply the corresponding definition of the verb to doctor; that is, to disguise by mixture or manipulation, to alter for the purpose of deception, to cook up, to temper with, to adulterate.

Surely no one having the interests of pharmacy at heart can or will countenance such an interpretation of the objects of our vocation. If pharmacy is to be our occupation, and if the occupation has been and is a legitimate and honorable one, why should we object to being called pharmacists, and why should we attempt to appropriate titles that are not in harmony with the requirements and objects of our occupation? Despite the fact that the title Phar. D. has been conferred in this country for upwards of thirty years on the graduating classes in colleges of pharmacy, and during that time has probably been conferred on thousands of graduates, it certainly has signally failed to be recognized or appreciated by the mass of people who have come in contact with, or have required the services of, these men.

THE TITLE PHARMACIST.

The title Pharmacist, on the other hand, has become recognized as a proper and honorable one. The occupation of the pharmacist, as an occupation, is much more in keeping with that of the chemist,

having bred and fostered the latter, it would be quite appropriate, therefore, to adopt or to continue the use of the pharmaceutical chemist, providing we were not quite content with the now time-honored Graduate in Pharmacy. In this connection we should always remember that we cannot expect to raise our own individual standing, or the standing of those dependent on us, by attempting to bring the conditions of our surroundings down to our particular level; we must, on the other hand, attempt by all the means at our command, to raise ourselves and others in our particular line, up to or even above the standards of requirement for the classes with which we wish to come in competition, or with whom we wish to associate.

WHAT OF THE FUTURE?

The question then naturally arises: What of the Future? Are we to be content with present educational requirements and are our successors in the same field to be satisfied with the degree of Ph.G., or Ph.C.? Certainly not. The future American pharmacist will be, must be, a truly educated and highly scientific man. With the ever-increasing demand for specialization there will be a corresponding demand for more specialized education along chemical and pharmaceutical lines; fully in harmony with that given in all other lines, requiring specialized instruction or education. With this tendency to specialization there is a corresponding tendency toward concentration, particularly along educational lines. This tendency having once been fully appreciated, it will rapidly develop, and the time will not be far distant when by a proper selection of scientific courses at any of our larger universities the B. A., or perhaps only the M. A., may gain for himself an honorable and fitting title and sufficient technical knowledge to properly conduct a dispensing pharmacy, and, in addition, make such contributions to the advancement of his own particular branch or branches of science as will enable him to do honor to the degree of Doctor of Philosophy, that he may rightfully claim to be his.

Camphor Snow.

Agar-agar	3 grams
Water	150 grams
Stearic acid	15 grams
Sodium carbonate	10 grams
Oil of theobroma	15 grams
Water	100 grams
Alcohol	10 grams
Camphor	5 grams

The necessary apparatus consists of a so-called farina boiler, or a suitable water-bath, and an egg-beater. The process of mixing is simple, though the following directions may appear to be somewhat complicated: Dissolve the agar-agar in 150 cc. of water and strain. To 100 cc. of water in a farina boiler, or any suitable dish on a water-bath, add the stearic acid and the sodium carbonate; after the carbon dioxide has been driven off, add the oil of theobroma and the solution of nigar-agar; mix thoroughly by means of the egg-beater; then remove the container from the water-bath, or source of heat, and continue beating or agitating the mixture until a uniformly smooth lather, measuring about three times the volume of the contained liquids, results.—M. I. Wilbert in Am. Journ. Pharm.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of The Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Blue Black Ink.

(F. C.)—It is said by an English exchange that writing done with ink made according to the following formula, "is black and permanent":

Blue Aleppo galls (free from insect perforation)	4½ ounces
Bruised cloves	1 dram
Cold water	2 pints
Purified sulphate of iron	¼ ounces
Pure sulphuric acid	35 minims
Indigo-paste (neutral or nearly so)	1 ounce

Place the galls, when bruised, with the cloves in a 50-ounce bottle, pour upon them the water, and digest, with daily stirring, for a fortnight. Then filter through paper into another 50-ounce bottle. Get out, also, the refuse of the galls and wring out of it the remaining liquor through a strong, clean linen or cotton cloth into the filter, in order that as little as possible be lost. Next put in the iron, dissolve completely, and filter through paper, then the acid, and agitate briskly; lastly, the indigo, and thoroughly mix by shaking. Pass the whole through paper. Filter out of one bottle into the other till the operation has been completed. On a large scale this fine ink may be made by percolation. No gum or sugar is required, except when intended for copying; then 5½ ounce galls should be used and 3 drams of sugar.

Another formula for "pharmacists' ink," is one by Prof. Wilbur L. Scoville, who recommends the following to give the best satisfaction after a trial of some twenty-five different ink formulas, including the Massachusetts standard formula: Dissolve 80 grains of tannic acid, 14 grains of gallic acid and 1 grain of salicylic acid in 8 fluid ounces of water; then 102 grains of ferrous sulphate (granulated) and 90 grains of indigotin, each separately, in 4 fluid ounces of water; then mix the solutions. An almost fadeless, green black ink is produced, changing to jet-black on standing. It has kept well during the period covering the experiment. If about one-half ounce of sugar is added it is of service as a copying ink.

GOOD BLACK INK.

Extract of logwood	15 parts
Carbonate of sodium, crystallized	4 parts
Neutral chromate of potassium	1 part
Water	1,000 parts
Dissolve the extract in 900 parts of the	

water, allow it to deposit, decant, heat to boiling, and add the carbonate of sodium; lastly, dissolve the chromate of potassium in the remainder of the water, and add to the logwood solution drop by drop, with constant stirring.

Removing Paint.

(F. E. S.)—We are not familiar with the preparation you name. As good a solvent as we know of for removing paint stains on fabrics is oil of turpentine. The preparation generally used by painters for removing dried paint or varnish from woodwork is a mixture of washing soda and quicklime. Here is a formula:

Washing soda	2 pounds
Quicklime	1 pound
Water	1 gallon

Slake the lime with part of the water, dissolve the soda in the remainder, and mix. Allow to stand for 24 hours and decant the clear liquid. For the removal of paints and varnishes which resist the action of strong lye, a mixture of ammonia water, 2 parts, and oil of turpentine, 1 part, has been recommended, and it is claimed that when applied for a few minutes' action to the surface to be cleaned, the paint may be easily removed by means of cotton waste or similar material.

The specifications of an English patented composition for cleaning painted or varnished surfaces call for lemons, or other acid fruit, 2 pounds, hydrochloric acid, 1 pound, and water, 4 pounds. These are mixed, boiled to a thick paste and incorporated with oxalic acid, 2 pounds, and black treacle, 3 pounds. When cold, butyric acid, 1 fl. ounce, or other grease-dissolving acid is stirred in, and the whole made up to 1 gallon with water. The composition is applied to the painted, varnished, or polished surface, left for a sufficient time, and then washed off.

Massage Cream.

(E. K. S.)—Formulas for preparations of the above character were printed in the November 17 and December 29 issues of The Era, last year, pages 500 and 662, respectively. A "muclaginous face cream" may be made according to a formula recommended by A. E. Hiss, in Merck's Report, as follows:

Tragacanth, whole pieces	240 grains
Boric acid	1½ ounces
Water	3 pints
Glycerin	8 fl. ounces
Alcohol	8 fl. ounces

Dissolve the boric acid in the water by the aid of heat; to the hot liquid add the tragacanth, and stir occasionally with a spatula or broad paddle of some kind, until the gum is thoroughly softened. Then add the alcohol and glycerin, strain the mixture forcibly through cheese cloth, and pass enough water through the cloth so that the liquid will measure 64 fl. ounces. If somewhat too thick, it may be diluted with more water.

If this mixture be perfumed with essence of bitter almond, it may be called "almond cream"; if perfumed with some rose extract, it is usually known as "favorite cream"; if in addition to being perfumed with rose it is also colored pink, it is usually called "rose cream"; if perfumed with violet extract and colored purplish, it may be called "violet cream" or "cream of vio-

lets," etc. A nice "beuzon cream" may be made by the addition of 1 ounce each of borax and coarsely powdered benzoin to the above ingredients. Boil the benzoin with the borax, acid, and water for about 5 minutes, strain, and add water through the strainer to make 3 pints. In this liquid macerate the tragacanth and proceed as in the preceding formula.

Liquid Dressing for Shoes.

(H. F. L.)—Try one of the following formulas: Gum arabic, 4 ounces; molasses, 1½ ounces; good black ink, ½ pint; strong vinegar, 2 ounces; alcohol, 1 ounce; sweet oil, 1 ounce. Dissolve the gum arabic in the ink, add the oil and rub the whole in a mortar until thoroughly united; then add the vinegar, and lastly the alcohol.

(2.) Extract of logwood, 3 ounces; dissolve in water, two quarts; borax, 3 ounces, dissolve in water, 2 quarts; add ¾ ounce of shellac and boil to dissolve; potassium bichromate, ¼ ounce, dissolve in soft water, ¼ pint, and add 3 ounces of ammonia water. Mix all solutions together.

(3.) Dissolve 3½ ounces of shellac in ½ pint of alcohol. Rub smooth 25 grains of lampblack with 6 drams of cod liver oil and mix. A few drops are to be applied to the leather with a sponge.

(4.) Sandarac, 2 drams; gum thus, ½ ounce; shellac, 1½ ounces; spirit of turpentine, ½ ounce; lampblack, 1 ounce; spirit, 6 ounces. Dissolve the resins in the spirit and add the turpentine and lampblack. Nigrosin, 1 dram, may be used instead of lampblack.

Foam for Soda Water.

(J. H. S.)—Some reliable formulas for soda water foam were published in The Era of March 16, 1905, page 328. Here is one other:

Soap bark	5 ounces
Alcohol	10 ounces
Water, to make	1 quart

Boil the soap bark in about 1 quart of water for 15 minutes, strain, evaporate to twenty ounces and when cold add the alcohol, filter after standing several days. Solution of Saponin may be used instead.

Paraphenylenediamine Hair Dyes.

Erdmann, Sendtner, and others have long since pointed out that paraphenylenediamine is an objectionable ingredient in hair dyes, since it occasions a troublesome eczema of the scalp. It may be removed by shaking out with ether, but is then contaminated by oxidation products. This may be avoided by the addition of ammonium sulphhydrate. The product then obtained is readily sublimable in colorless crystals, which melt a little above 143° C. It may be identified by the following reactions: The solution of the hydrochloride, heated with an excess of sodium hypochlorite, gives a white precipitate, which, when dissolved in diluted alcohol and crystallized, forms long needles, m. pt. 124° C. When heated with solution of hydrogen sulphide and ferric chloride, a violet color is produced. A very dilute faintly acid solution, treated with aniline and ferric chloride, gives a blue color.—Schweiz, Woch., Pharm. Jour.

NEWS SECTION

FRIENDS OF THE RETAILER

Proprietors Show A Marked Change of Sentiment

For the First Time in its History, P. A. of A. Grants Privilege of the Floor to N. A. R. D. Delegates—Reports of Committees Received in Executive Session—New York Jobbers Complain of Demoralization—Formula Bill Opposed.

A more friendly feeling toward the retailers than ever before was manifested this year by the proprietors, who closed their twenty-third annual convention last Wednesday at Hotel Astor. This spirit was shown in various ways, the most pronounced being the extension of the privilege of the floor to the N. A. R. D. delegates at all the sessions of the association—the first time such a concession has ever been granted. The N. A. R. D. delegates stated after the meeting that they had received excellent treatment, and had no complaint whatever to make.

All the business on hand was finished on Wednesday afternoon, thus crowding three days' work into two. Two secret sessions were held by the Executive Committee, one on Tuesday evening and the other on Wednesday afternoon.

The session on Wednesday morning was executive. Reports were received as follows: Committee on Trade Marks, by George A. Newman, Louisville, Ky.; Committee on Trade Interests, by C. H. Stowell, Lowell, Mass.; Committee on President's Address, C. H. Camp; Proprietary Articles Trade Association of Canada, Thomas Leeming; Committee to attend N. A. R. D. meeting, Dr. V. Mott Pierce; delegate to various pharmaceutical associations, H. A. Florick.

COMMITTEE ON TRADE INTERESTS.

Price cutting and substitution were the main points treated in Dr. Stowell's report. Several plans to remedy these evils have already been tried, but have failed. Substitution is therefore a serious menace to proprietary articles. One member of the committee believed that trade interests would be advanced by having the customer frankly told just what he is getting for his money.

"We believe we are justified in saying that the proprietary medicine business is the only one where people deliberately engage in a game of blind man's bluff, hoping thereby to catch something which shall prevent a possible break in the family circle."

Cheap postage, rural delivery, newspapers, books and common schools have also largely altered trade conditions and changed the outlook of affairs. The advisability of publishing the formula on

the bottle was considered questionable.

The report of the Committee on Trade Marks was as follows:

COMMITTEE ON TRADE MARKS.

Your committee begs to report that the year just passed has been most satisfactory in the adjudications of the

F. L. SEELY.

Paris Medicine Co., St. Louis, Mo.

American courts relative to trade marks, and that thereby greater and more comprehensive protection will be had by meritorious industry and effort against infringement of trade mark and unfair competition in trade.

After citing a number of cases of trade mark infringement, the report continues:

What are probably, however, the most interesting cases to this meeting are the cases of Dr. Allen's Medical Company against Goldthwaite, 133 Federal 794, and Garst against Charles, 72 Northwestern, 839. These treat directly with the rebate plan of this Association and sustain in toto our system.

In the former case the Court said: "Complainant is a manufacturer of proprietary medicines put up in distinctive packages and sold only through wholesale and retail dealers in drugs, with

whom complainant has contracts providing that the medicines shall be sold only at certain uniform prices and to no other dealers than such as become parties to the contract, a list of whom is furnished by complainant. Defendant, a retail druggist who was not on the list, procured the medicines through another who in selling them, violated his contract, and in selling the same defendant mutilated the packages so as to prevent identification, and in some cases emptied the original package into a plain package. He also sold the medicines at prices below those fixed by the contract. Held, that such contracts were legal and enforceable, and that complainant was entitled to an injunction restraining defendant from interfering with the contracts by inducing their violation by parties thereto, and also from selling the medicines as complainant's in other than the original packages and at the contract price, to the injury of the complainant's business and good will."

In the latter case the Court used the following language: "The plaintiff, being the owner and manufacturer of a proprietary medicine known as Phenocaffin, sold it to purchasers only under contracts in which they agreed not to sell it at retail at less than a specified price, and he undertook to stipulate that purchasers from his purchasers should obtain and sell it only under such an agreement. His right to secure such advantages to himself, so far as possible, by contracts in proper form is not now questioned. The defendant is a retail druggist, who knew that all phenocaffin was sold by the plaintiff under the contracts referred to and with notices affixed to the small boxes and to the larger packages showing the understanding to the plaintiff and of the purchasers as to the price at which it might be sold. After buying a quantity of medicine from the plaintiff he returned it in accordance with the terms of his contract, under which he had a right to return it if he wished to discontinue the business of selling it, and he notified the plaintiff's agents that he should not keep the medicine. He then procured one Bickford, who was a retail druggist, to buy a large quantity of the medicine from the plaintiff's agents, and Bickford entered into a contract such as has been referred to and agreed that he would fulfil all the terms of the contracts and notices affixed to the boxes and packages, one of which was that he would act as agent for the plaintiff, and would not sell the medicine at less than the specified price. He purchased the goods at much less price, which was the amount rate made by the manufacturer to the retail trade, as stated in the contract. He then turned it over to the defendant at the purchase price, and the defendant had no objection in offering it for sale at retail at less than the specified price.

"All this was in pursuance of a conspiracy between the defendant and Bickford to break this contract and should break it, to the injury of the plaintiff for the benefit of the defendant. A conspiracy to deprive one of the benefit of a contract with another is unlawful. The defendant's arrangement with Bickford that he should break the contract was a wrong upon the plaintiff, intended for the benefit of another. The scheme was fraudulent. The purpose of the defendant was to induce the plaintiff to part with his property at a comparatively low price, to sell it at less than the regular retail price, when in fact he was obtaining it under an arrangement to turn it over to the defendant at the regular price, to be sold by him at retail at less than the regular

ORIENT C. PINCKNEY,
New York, Member of Executive Committee P. A. of A.

price. The defendant was party to this scheme of fraud, and presumably was the author of it. He should be held liable for the wrong. The suit is one which calls for relief in equity. The damages are of a kind that cannot be accurately computed or easily estimated. The remedy at law is not complete and adequate, and an injunction with damages for the injury already suffered gives the only proper relief. Decree affirmed.

Your committee begs to report in conclusion, Mr. Chairman, that the courts in the year just gone seem to have turned with one accord against the swindler and the cheat. They have with rare ability and keenness detected the slightest attempt at fraud and misrepresentation, thereby giving in their decisions a new impetus to conscientious endeavor and placing a premium on honest industry and invention.

The Memorial Committee brought in a notice of the death of Dr. M. M. Fenner, with a sketch and appreciation of his career; also the death of Atherton Thayer Brown, of John Y. Brown & Sons, Boston.

GROWING INTEREST OF PROPRIETORS.

A striking feature of the A. Ph. A., N. W. D. A., and N. A. R. D. meetings, reported by the delegates to those associations, is the growing interest of the proprietors in them. This is shown by the large number of proprietors present at those meetings. The delegates to the state associations reported that owing to short notice they had been unable to attend any but the Wisconsin meeting.

Following was the report of the Committee on the President's Address:

CLUB VS. OLIVE BRANCH.

The spirit of conciliation and kindness which prompted the president in his address to suggest that we shake into the face of our enemies not a club, but an olive branch, is one which, if carried out firmly and with a due regard to our rights and the rights of our friends, will undoubtedly do much to strengthen the bonds which are constantly bringing into closer affiliation the three branches of the drug trade.

His summary of the existing conditions is commended to the careful consideration of the members as well worth thorough study. His commendation of the new trade mark law is well deserved, and his suggestion that imprisonment should have been included among the penalties will undoubtedly meet with the

approval of all who have suffered, as most of the members here, from invasion of their trade mark rights by pirates of trade.

Unfortunately, however, the act is an act of Congress, the highest legislative body in the land, and it is highly improbable that any further change in the trade mark law could possibly be brought about in the near future or until the working of the new law had been thoroughly tried. In the opinion of the committee it would be inexpedient therefore to endeavor to undertake any further steps looking toward the amendment of the trade mark law at the present time.

It will be a source of much gratification to our members to know that it is not necessary for them to depend alone upon their registered trade mark rights either under the registration of the law of 1881, or under the new law which went into effect on the first of April. Our courts have shown an increasing tendency toward the recognition of the rights of owners of trade marks, under the common law, and the proprietor who finds that his rights are being infringed upon can now take his case into court with perfect assurance that such invasion of his rights will be enjoined, whether his trade marks are registered or not, provided of course, that he has not closed the doors of the court's equity against himself by some unwarranted representation either intentionally or otherwise.

In recent cases where the complaining parties were not protected by registered trade marks, and relied wholly upon their common law rights, the courts have

HARRY H. GOOD,
New York, Treasurer P. A. of A.

been found willing, and even alert to strip the claims of the infringer of all specious pretences and disguises, and are constantly adhering to the doctrine that wherever it is really true that parties are attempting to appropriate the good will of others by unfair competition calculated to deceive the public, it is the duty of the court to intervene and protect this important class of property rights. In many of these cases the courts have held that it is not necessary to show the intent of the infringer, holding that care should be taken to have intended that which is the natural and reasonable consequences of his act.

In this connection the committee desires to impress upon the members that it is their duty to act promptly in the protection of the trade marks if they wish to obtain the full measure of relief from infringers, for if proprietors could make it a rule to vigorously combat all attempts of infringers, the effect would be

salutary in discouraging those who might otherwise engage in such practices. The pirates who seek profit in this illegitimate way are not likely to choose for their victims concerns who show a disposition to vigorously protect their rights in the high courts.

Henry Miles, of Montreal, president of the Proprietary Articles Trade Association of Canada, sent the following communication:

I transmit to you a report of the annual meeting of the Proprietary Articles Trade Association of Canada, held at Toronto, November 22 and 23, 1904. The following matters of general interest have occupied the attention of the executive officers of the association during the past year or more:

THE CANADIAN SITUATION.

First.—The Druggists' agreement. The wholesale druggists of Canada formed in an association and, the Retail Merchants Association of Toronto issued an agreement seeking the signatures of the retail druggists of Canada. This agreement sought to confine the trade in proprietary medicines exclusively to the wholesale and retail drug trade, and also to fix the prices at which such goods should be handled between the manufacturer and wholesale druggist and the retail druggist. The object set forth was the prevention of cut rates. The manufacturers were not made a party to the agreement and the Proprietary Association finally declined to participate in any way. Competent lawyers declare the agreement in question contrary to law, and rendering those participating liable to penalty. Eleven hundred out of eighteen hundred druggists appear to have signed the agreement in question. Up to the present time it has not been made effective, and I believe now that it is conceded that it cannot be carried into effect by the wholesale trade under present conditions.

Second.—Federal Parliament Legislation.—The tariff amendment of the last session of the Canadian Parliament at Ottawa included a special duty clause usually referred to as the Dumping Clause. In operation this has been found to affect a number of our members adversely. A committee was named by the association who have taken the matter up with the Minister of Customs. The effect of the law is to prevent really the selling of foreign goods to a Canadian buyer at a lesser figure than said goods are sold in the country of manufacture for home consumption. It also prevents

WM. S. DOUGLAS,
New York, Member Executive Committee,
P. A. of A.

The allowance of payment of duty by the exporter of the goods. It provides that in the case of any special concession differing from ordinary conditions either in the payment or allowance of duty or giving of a special discount or rebate, that such allowance or discount or rebate will go to the Canadian Government as a special duty, etc., etc. This matter is still in the hands of the executive committee of this association.

Third.—The move of the Ontario Medical Council in the direction of securing laws from the Dominion Parliament obliging, first, the printing of the formula on every bottle or box; second, that no medicine shall be manufactured or sold in Canada unless having secured the approval of medical experts to be named by the Government. This is probably the full extent of what the Canadian doctors desire. There will be no legislation this session. This matter is in the hands of the executive committee of the association.

The annual report which I have the honor to transmit, will give further particulars in detail. Our association is on a good sound footing. The various Parliaments of Canada (Provincial as well as Federal Houses)—give at times some anxiety. Our association has taken means to watch all legislation in these directions carefully, with the view of making aware all interested of objectionable legislation that may arise, and at the same time, to enable the adoption of precautionary measures towards protecting the rights of those interested.

The next meeting of the Canadian Association will take place in the city of Montreal, but the date has not yet been fixed by the executive committee.

NEW YORK JOBBERS COMPLAIN.

The New York jobbers brought in a set of resolutions regarding the demoralized situation in this city as regards the trade in proprietary medicines. The direct selling to retailers by proprietors was the chief evil complained of by the jobbers, who claimed that this condition prevailed in New York to a greater extent than in any other part of the country. Another complaint made was on the score of breakage. The profits of the jobbers is small, anyway, they said, and they should not be compelled to shoulder this additional burden.

The question of bonuses for window displays, the intermediate quantity, and the discounts and terms on proprietaries were also brought up. All these questions were referred to the executive committee, which brought in a resolution recommending the individual members to co-operate with the jobbers as far as possible.

MR. SEELY ON ADVERTISING.

The feature of the afternoon session was the lecture of F. L. Seely on the advertising system and the serial numbering plan as perfected by the Paris Medicine Co. He called it a "resumé of things that have saved us money," the principal idea being to check and take care of the advertising. Mr. Seely illustrated his lecture with lantern slides, showing the various forms of contract employed by his company, the cards used in the serial numbering plan, and different parts of the vast filing system required to keep all the records in such shape that any one desired can be found at a moment's notice. He exhibited views of the laboratory, printing department, fire-proof store-room, etc. Thirty-thousand dollars a year, said Mr. Seely, have been saved since the system was put into effect. A rising vote of thanks was tendered to Mr. Seely at the conclusion of his interesting lecture.

Business matters were then resumed,

and the following resolutions were adopted:

AGAINST CUBAN REGULATIONS.

Whereas, the regulations promulgated by the Cuban Government on November 12, 1904, governing the admission of proprietary medicines into Cuba and their sale, are so severe and so exacting that their enforcement will mean the practical prohibition of the introduction and sale of proprietary medicines in that island; and

Whereas, the enforcement of the said regulations will entail great loss upon many manufacturers of proprietary medicines in the United States who have already expended large sums in the introduction of their goods into the Cuban market; and

Whereas, the said regulations are based upon a decree dated 1844, which has never been enforced, and for the enforcement of which there is no general opinion.

W. A. TALBOTT,

Warren, Pa., Retiring President of P. A. of A.

ular demand, either on the part of citizens of Cuba, or of the health authorities; therefore, be it

Resolved, that the Proprietary Association of America respectfully urge the Cuban Government to rescind this regulation as tending to interrupt the cordial and mutually profitable commercial relations between the citizens of Cuba and of the United States; and be it further

Resolved, that the Department of State of the United States be, and hereby is, urged by the Proprietary Association of America to use its good offices with the Cuban Government to secure the total abolition of the objectionable regulations; and be it further

Resolved, That the Secretary of the Association be instructed to take proper steps to bring these resolutions to the notice of the Cuban Government, and of the Department of State; and be it further

Resolved that the individual members are requested to bring such influence as they can to bear on their respective Senators and Congressmen with a view to enforcing the good offices of the United States Department of State in this matter.

The nominating committee then brought in its report, and the secretary was directed to cast one ballot for all the officers, who were thereby unanimously elected. They are:

OFFICERS ELECTED.

President, Frank J. Cheney, Toledo, O.; vice-president, John W. Kennedy, Chicago, Ill.; second vice-president, George M. Beckett, Burlington, Vt.; secretary, Clarence G. Stone, New York; treasurer, Harry H. Good, New York; executive committee, Orient C. Pinckney, New York; Dr. V. Mott Pierce, Buffalo, N. Y.; Charles H. Stowell, Lowell, Mass.; W. A. Talbot, Warren, Pa.; H. B. Foley, Chicago, Ill.; William S. Douglas, New York.

The special committee on North Dakota legislation, reporting on the pure food and drug bills recently enacted in that State, and which was adverse to the interests of the proprietors, recommended that the members of the association do not enter their goods for sale under the said law.

Officers were then installed. In taking the chair, President Cheney declared that the association "must not have in legislative work such a thing as failure. The only enemy we face to-day is vicious legislation."

Harry H. Good, on being installed as treasurer, offered a resolution that the secretary be instructed to send to Joseph Leeming, ex-secretary of the association, the thanks of the proprietors for his past services and best wishes for his speedy recovery. This was adopted. Mr. Good then swung into parable, in verse, of how Mr. Cheney, as chairman of the membership committee, had induced many new members to come into the "dingle-dongle-dell" of the association. Mr. Good was heartily applauded.

FORMULA BILLS OPPOSED.

At one of the sessions there was strong opposition to all legislation requiring the publication of the formulas of proprietary medicines. A number of members favored the publication of the formula, but they have agreed to work in harmony with the majority of the members, and any measure of this kind will be vigorously opposed.

In the evening about forty members were the guests of Adolph Ochs, publisher of the New York Times, who personally conducted the party from the top to the bottom of the new Times Building. Luncheon was served shortly before 1 A. M., and was concluded in time to enable the party to go down to the pressroom and watch the first copies of the paper being printed.

There was no official entertainment, but the members managed to get up theatre parties, and enjoyed themselves thoroughly. The attendance was the largest in years. Besides those already mentioned, the following proprietors and representatives were present:

E. S. Rich, Rumford Chemical Works, Providence, R. I.; H. R. Planten, New York; H. R. Lindsey, The E. S. Sutherland Co., Paducah, Ky.; E. N. Searies, The Athloporos Co., New Haven, Conn.; J. A. Patton, Chattanooga Medicine Co.; T. W. Kenyon, Kondon Mfg. Co., Minneapolis, Minn.; W. V. Baker, Peruna Mfg. Co., Columbus, O.; H. H. Hershey, Peruna Mfg. Co.; W. S. Douglas, Douglas Mfg. A. W. Drake, R. T. Booth & Co., Ithaca, N. Y.; D. S. Chamberlain, Chamberlain Medicine Co., Des Moines; John C. Gallagher, Jersey City, N. A. R. D.; Charles Rehfus, Philadelphia, N. A. R. D.; E. H. Parker, Foley & Co., Chicago; H. C. Lovis, Seabury & Johnson, New York; B. R. Lauer, Philadelphia; Wm. R. Warner & Co., R. C. Meyer, Baltimore; A. C. Meyer & Co.; J. G. Patton, Annbeuser-Busch Brewing Association, St. Louis; W. D. Carpenter, Chicago; D. T. Mathers, G. G. Green, Woodbury, N. J.; Almon C. Kellogg, Garfield Tea Co., New York; S. C. Dobb, Coca-Cola Co., Atlanta, Ga.; R. V. Pierce, World's Dispensary Medical Association, Buffalo, N. Y.

NEW JERSEY PH. A. TO MEET.

The New Jersey Pharmaceutical Association will hold its thirty-fifth annual meeting at Hotel Islesworth, Atlantic City, June 14 and 15. An elaborate program is promised by the local committee, consisting of Mr. F. Ridgway, M.D.; A. D. Guskind, M.D.; H. H. Deakney, M.D.; C. M. H. Deemer, and W. C. Westcott. They have secured a special rate of 38 per day at the hotel.

The opening session, at 10 a. m., on Wednesday, June 14, will be devoted to the president's address, reception of delegates and reports of officers and committees. Further reports of committees will be received and papers will be read and discussed at 9 a. m. on Thursday. Officers will be elected at the afternoon session and installed in the evening.

WHERE TO SEND COMPLAINTS.

Secretary S. V. B. Swann, of the M. A. R. D., announces that all complaints regarding the cutting of prices on goods protected by the direct contract plan, should be sent to him at 918 Sixth avenue, for attention.

DISTRICT WORK IS SLOW.

M. A. R. D. Hears That Only Six Districts Are Organized.

CALL FOR VOLUNTEERS BRINGS OUT EIGHT MEN.—GOOD WORK BEING DONE BY KINGS COUNTY SOCIETY'S SPECIAL CANVASSERS.—HOW DO UNAUTHORIZED DEALERS GET NUMBERED GOODS?

That the work of districting New York City has not made very rapid progress thus far was brought out at the meeting of the Metropolitan Association of Retail Druggists last Wednesday evening, when this work was practically the only subject under discussion. After dozens of suggestions had been made, several men who had already organized their own districts volunteered to go out and help their weaker brethren in other parts of the city.

When President Anderson opened the meeting at 9:25 p. m. there were only forty members present, but as many more wandered in later on. Treasurer Rosenzweig said he was unable to make any report, as Mr. Doble had not yet given him an accounting. The minutes of the Executive Board, which were then read, showed that Messrs. Anderson and Rosenzweig had been delegated to go over the books with Mr. Doble and receive from him all the money which had been collected since March 28, the date when the M. A. R. D. was organized. In future all money is to be turned over to the association.

For the districting committee, Mr. Lauer stated that Kings County had been left to itself, and that Queens County and Staten Island were fully organized, each as one district. Mr. Swann, for the special committee on Prof. Chauller, reported that in a short interview Prof. Chauller had stated that his remarks as printed in the pharmaceutical journals were correct. He promised another interview with the committee, but had not notified them up to the present time. The committee was confined, although some members wanted the matter dropped.

DISTRICTS ORGANIZED.

As the General Committee was not yet properly formed, Chairman Anderson called for reports of delegates from the districts already organized. The following reported: Adolph A. Edlich, No. 13 (Murray Hill R. D. A.); John H. Morey, No. 16; Albert B. Baltzy, No. 22; 8. Reinhart, No. 18; Otto Lowe, No. 14; Reuben R. Smith, No. 12. The last was not yet canvassed, having only been organized the day before. All the other districts reported good progress.

An interesting account of the work being done by the special canvassers employed by the Kings County Society was given by Oscar C. Klein. The total number of stores visited was 492, out of which 327 signatures were obtained. The contracts signed were: Piso Co., 76; Paris Medicine Co., 121; Miles Co., 74; Wells & Richardson Co., 73; Peruna, 52. One man refused to sign anything and invited the canvasser to take the numbers of his goods, which was done. Another man had never heard of the N. A. R. D., the M. A. R. D. or the contract plan.

MORE IMPORTANT THAN DUES.

President Anderson, commenting on these reports, said that to get signatures to the contracts was more important than the collection of dues.

"One of the proprietors told me yesterday," he said, "that if the contract plan succeeds in New York it will be impossible for any proprietor to refuse to stand in line."

The district work was then taken up in earnest. Secretary Swann read a list of districts and the men assigned to organize each. Most of them were marked "Not heard from." During the discussion which followed Peter Diamond suggested that paid organizers be engaged to accelerate the work. To this Jacob Diner urged:

"We have N. A. R. D. organizers in plenty, some say to spare. Let us give them time and not expect the impossible." He told how his district was organized and suggested a call for volunteers. Mr. Doble was called on and told the members not to be discouraged. His force was now reduced to two men, who were devoting almost their entire attention to getting contract signatures. He promised to have two more men on the ground inside of a week.

Mr. Doble jumped at the suggestion to employ volunteers. Things were going at a splendid pace, he said, but he intimated once more the warning that the small fry, not the giant druggists, are the ones from whom bad faith is to be expected.

CALL FOR VOLUNTEERS.

Eight men responded to the call for volunteers. Incidentally President Anderson remarked that as all the men had paid \$2.50 organization fee to the N. A. R. D. they ought to get some return for their money.

A statement by Mr. Diner that he had furnished the secretary with serial numbers taken from contract goods at cut rates prompted Mr. Doble to say that "One of the largest jobbing houses in this city is making a systematic attempt to induce certain classes of dealers to combine against the present movement."

President Anderson gave a short report on his attendance at the P. A. of A. meeting, saying he had no doubt that the contract plan was under consideration by many proprietors. Jacob Weil, of Leifler & Weil, was given the privilege of the floor and laid most of the blame on the small dealers.

"It's a puzzle to the jobber," he said, "where and how they get the goods."

FREIGHT RATE DISCRIMINATION.

In accordance with the resolution against freight rate discrimination passed by the Manufacturing Perfumers' Association at their recent convention, the committee on freight and transportation has issued an appeal to the members urging them to send individual petitions to the Trans-Continental Freight Bureau. The petition sets forth various reasons for the removal of the "excessive rate of freight and arbitrary classification that now exists upon perfumes, as opposed to Florida waters and toilet waters shipped to Pacific coast terminal points."

DR. DIEKMAN IS CHOSEN.

**WILL BE CANDIDATE OF G. A. S.
FOR ELECTION TO BOARD.**

**GALA NIGHT FOR GERMAN APOTHECARI-
ES.—LECTURE ON TUBERCU-
LOSIS BY DR. ABRAHAM JACOBI.—
ALL ARRANGEMENTS MADE FOR
OUTING JUNE 8 ON LONG ISLAND
SOUND.**

Dr. George C. Diekman is to be the candidate of the German Apothecaries' Society for re-election to the Board of Pharmacy. This was decided at the meeting last Thursday, when the special committee brought in a unanimous report in his favor, thus making it almost a certainty that Dr. Diekman will be unanimously elected.

Thursday was a gala night for the G. A. S., as the announcement that Dr. Abraham Jacobi was to lecture on tuberculosis drew an unusually large attendance of members and guests, among whom were many physicians. In order that the distinguished guest might begin his address early, the routine business was quickly disposed of. The minutes of Secretary Leister were humorous, as usual. Treasurer Hirsman was absent, owing to the fact that his wife was about to undergo an operation. Jacob Diner was elected to membership.

R. S. Lehman, for the entertainment committee, reported that all necessary arrangements for the outing on June 8 had been made. The steamer Isabel, capacity 800 persons, has been chartered and leaves foot of Thirty-first street and East river at 9.30 A. M., and foot of Ninety-first street half an hour later. Arrival at Karasonyi & Kmetz's will be about 11 a. m., when luncheon will be served. There will be prize bowling for ladies and gentlemen, as well as children's games. Music will be furnished by Lederhaus' Band. Banquet at 6 p. m., and return trip by moonlight at 9 p. m. Mr. Lehman stated that there would be another entertainment in October, details to be given later.

George Kleinan reported that the amendments to the Penal Code are now in the hands of the Governor, and were expected to become law within a week. At the suggestion of President Imhof, resolutions of sympathy were adopted in reference to Karl A. Kessler and Felix Hirsman, the former having just passed through a serious operation, while the latter's wife is about to be operated on for a similar trouble.

President Imhof then introduced the distinguished specialist on tuberculosis, Dr. Jacobi, who was received with enormous applause. He reviewed the history of the disease and the best methods of checking and preventing it, scientifically elaborated by means of statistics. It is cruel of physicians, the lecturer claimed, to advise poor patients to seek other climates when they have barely the money needed for transportation. Dr. Jacobi stated that pharmacists could be of service by sending to the Charly Organization Society, No. 105 East Twenty-second street, for free booklets relating to the prevention of tuberculosis.

At the conclusion of the lecture, which

lasted an hour and a quarter, President Imhof conveyed the thanks of the society to the guest and assured him that his lecture would leave a deep impression. The society has arranged a cycle of lectures during the year, said the president, but this one should be entered in letters of gold in the annals of the society.

Dr. Jacobi replied gracefully, saying that he was pleased to come, and would probably appear again some day. A fine lunch was served, and the meeting adjourned at midnight.

A. B. C.'S EVENTFUL RUN.

**One Cyclist Sees Snakes.—Another
Wrecks Wheel and Dignity.**

The Apothecaries' Bicycle Club's run through Newfoundland, Warwick, and Goshen on May 4 was quite an eventful affair for the participants, Messrs. Leinecker, H. G. Ramsperger, Leon Werner, Dr. Michaels, G. P. Stolzenburg and wife, and W. E. and S. Faber. The hotel in New Foundland had not been opened for the season, so Mr. Werner acted as commissary general, and purchased bread, cheese, sardines, crackers and ham in a country store, and this lunch was eaten at Clifton Furnace, in the Glen of the Pequanoek. Mr. Leinecker took a drink of spirits of frument, and no sooner was the bottle removed from his lips when a ten foot snake crawled over his feet and was promptly despatched by Mr. Werner.

Near Warwick Mr. Ramsperger's wheel was put hors de combat by a tremendous gash in the rear tire. He had to get a farmer to tote him to Warwick. A little further on Dr. Michaels took a graceful header while coasting down a long hill with a turn at the bottom, raising a cloud of dust like a dynamite explosion. Here also a fifteen pound turtle was captured, which the funder tied on his wheel to take home, but it regained its liberty near Goshen. W. E. Faber took a bad cropper while coasting down a steep hill near Florida, wrecking the rear wheel and removing some cuticle from the arms, wrist and dignity. A buggy was put into requisition as an ambulance, and the party proceeded without further accident to Goshen, where they were rewarded by an excellent dinner at the Occidental Hotel.

The botanical booty found: Trailing arbutus in full bloom, Chimaphila umbellata, Prunus Virginiana, Symlocopus Fostidus, Corinus Florida. Despite the drawbacks marring the run, the members enjoyed it immensely, and all felt like riding. They reached the city about 11 p. m.

MR. MITTENZWEIG WEDS.

Karl Mittenzweig, president of the Bushwick Pharmaceutical Society, was married recently to Miss Bertha Freitag at the home of the bride's parents in Brooklyn. The Bushwickers held a meeting on the night of the wedding, but adjourned early to give their president a surprise and a jolly time. The wedding tour will last about four months, and will be through Germany, Switzerland and the new Stuplon Tunnel to Italy.

32D GENERAL MEETING.

**American Chemical Society Con-
venes at Buffalo June 22 to 24.**

The thirty-second general meeting of the American Chemical Society will be held at Buffalo June 22 to 24, in the rooms of the Buffalo Society of Natural Sciences. The preliminary program is as follows:

Thursday, June 22.—Forenoon, 10 a. m.—After a brief address of welcome by Mr. Herbert P. Bessel, on behalf of the Buffalo Society of Natural Sciences, and a response by President Francis P. Venables for the society, the following addresses will be given: "The Classification of Carbon Compounds," by Marston T. Bogert; "Some Recent Advances in Physiological Chemistry," by John H. Long. These addresses will be followed by selected papers of general interest. Afternoon, 2 p. m.—There will be meetings of the Section of Agriculture, Sanitary and Biological Chemistry, with John H. Long as chairman, of Physical Chemistry, with W. R. Whitney as chairman, and of Organic Chemistry, with Marston T. Bogert as chairman. Afternoon, 4 p. m.—The members of the society will visit the Gratick Laboratory. Evening, 8 p. m.—There will be an address by Francis A. J. Fitzgerald on "The Electro-chemical Industries of Niagara Falls." Immediately after the address there will be a meeting of the council of the society. Friday, June 23.—Forenoon, 9 a. m.—There will be an address by Victor Lenher. Subject, "Tellurium." This will be followed by brief reports from colleges and universities of the researches carried on during the past year. The Section of Inorganic Chemistry, with Victor Lenher as chairman, will then meet, and the Section of Industrial Chemistry, with F. A. Fitzgerald as chairman. Afternoon, 2 p. m.—Excursions will be arranged to visit industrial establishments in Buffalo. Evening, 8 p. m.—There will be a subscription dinner at Hotel Iroquois, \$2 per plate. Saturday, June 24.—Forenoon, 9 a. m.—There will be brief, adjourned sessions of the sections or a general session according to the exigencies of the program. This will be followed by an excursion to Niagara Falls.

Headquarters will be at the Hotel Iroquois. The rates are \$1.50 per day and upward, European plan.

An attempt is being made to secure co-operation between the American Chemical Society, the London Chemical Society and the Society of Chemical Industry in the publication of an abstract journal which shall cover all fields of pure and applied chemistry, and which shall be sent to all members of each society. It is hoped that if co-operation is secured an abstract journal of between 3,000 and 4,000 pages per year, combining the best features of the abstracts now published in three journals, can be secured. Such a publication can not be undertaken without an increase in the dues, and on this question the members will vote at the meeting.

FIRE IN DRUG STORE.

Rome, N. Y., May 8.—A fire which destroyed the stock of F. J. Hage Sons, druggists, to the extent of \$3,000, recently, is believed to have originated from spontaneous combustion. A boy had spilled oil on the floor, and to clean up the oil he threw sawdust on it and swept it up, placing it in a basket which was used for paper and other waste. The oil is believed to have heated and set fire to the sawdust. The odor of burning pine was detected before the store was closed, but a search failed to reveal the smoldering fire.

PENNSYLVANIA FOOD LAW.

**Satisfactory, Says President Anderson, of the N. A. S. F. S.—
Praises Retail Druggists.**

Rochester, N. Y., May 9.—Relative to the new Pure Food law, recently passed in Pennsylvania, W. P. Anderson, of Rochester, president of the National Association of Soda Fountain Suppliers, said to an Era correspondent last week:

"I think the Pennsylvania Pure Food law is the most satisfactory one which could be obtained under the circumstances. The provisions of the new law are entirely satisfactory to the members of the N. A. S. F. S., and no particular fault can be found."

Mr. Anderson believes that the new statute will be better for all concerned, and that it will do away with much of the wrangling which took place under the old law. He said that the old pure food measure was defective in that it was indefinite.

"Many of the manufacturers would put up goods in strict compliance with the law, as they thought, but when these same goods were passed upon by the pure food commissioners they were rejected as not coming up to the requirements of the law. The new statute does away with this in that it is clearer and broader in scope as to what can and what cannot be used in preparing and preserving goods.

Comparing the Pennsylvania law with that of New York State, Mr. Anderson gives his opinion as favoring the New York State law. His principal reason is that the New York State law prohibits injurious colors and preservatives as a class, while the Pennsylvania law specifically mentions the several things which are prohibited. This makes it open to the fault that there may be some injurious materials used, providing that they are not mentioned in the law.

Further, Mr. Anderson said: "Credit should be given to the retail druggists for their staunch stand in backing the measure, as it was in a large degree due to their firm support that the law was passed, and a word of commendation is also due the Dairy and Food Department of Pennsylvania for their stand in endorsing the matter."

STATEN ISLAND IN LINE.

The Staten Island Branch of the N. A. R. D. has been organized with the following officers: President, James Peeny; vice-president, Gustav Schwab; secretary, Leon S. Lord; financial secretary, Louis Axt; treasurer, Wm. T. Band. Committee on Schedule, George H. Roberts, Lonis Grindel, Gustav Schwab, Ulrich W. Becker and Wm. T. Brand. Auditing Committee, Wm. C. Smith, Geo. Flowein and Gray B. Sullivan.

McKESSON & ROBBINS CUT OFF.

McKesson & Robbins, of this city, will hereafter not be supplied with Swamp Root, owing to alleged violation of contract with Dr. Kilmer & Co. The latter claim that goods sold by that house have been traced to unauthorized retail dealers. The Kilmer people have, therefore, notified the jobbing trade not to furnish McKesson & Robbins with any goods of their manufacture.

NEW OFFICERS AND ICE.

Rochester, N. Y., May 9.—The regular monthly meeting of the Rochester Ph.A. was held on Friday of last week. The principal business transacted was the nominating of officers to be elected at the June meeting of the society. The greater part of the afternoon was devoted to making up a slate to be voted for at the June meeting. The following ticket was decided on: President, Howard Moore; vice-president, William Esterheld; secretary, William T. McBay; treasurer, William H. Hall. The standing committees for the year will be announced by the new president a few days after election.

Relative to the increased prices of ice demanded by the local ice companies, the committee appointed to investigate the matter reported that the ice men had agreed to give the pharmacists a conference upon the subject.

PASSED WESTERN BRANCH.

Buffalo, May 4.—At a meeting of the Western Branch of the New York State Board of Pharmacy, held April 26, the following licenses were granted upon examination held April 19: Pharmacists:—L. E. Bailey, Olean; C. T. Bargar, Buffalo; F. A. Dorsett, Fredonia; W. P. Maddock, Jr., Buffalo; G. M. Minckler, Buffalo; Edward W. Shimmers, Buffalo; E. O. Tannhauser, Buffalo; R. A. Ward, Lockport. Druggists:—P. R. Buettner, Buffalo; Bert H. Gifford, Buffalo; J. W. Gregory, Lockport; C. G. Heise, Dunkirk; Joseph J. Ross, Buffalo. On account of the renting of its former quarters for mercantile purposes, the Board has secured rooms at 650 Main street, where the next examination will be held on Wednesday, May 17.

NEW YORK NOTES.

—Drs. A. G. Pfenniger and H. Burgin have been admitted to the Chemische Fabrik Brugg, A. G., succeeding Willy Homberger, who has retired.

—The Druggists' Exchange, conducted by Peter Diamond and Joseph Weinstein, now occupies enlarged quarters on the ninth floor of the Bennett Building.

—S. M. Moneypenny, manager of the drug department of the Schoelkopf, Hartford, and Hanna Co., is reported to be convalescing after his recent illness, and will leave soon for a short stay in Atlantic City.

—William H. Hall, a druggist, living at 45 Riverside Drive, was arrested last Sunday evening charged with operating a ponderous white touring car north on Fifth avenue at the rate of twenty-two miles an hour.

—Karl Fritzsche, junior partner of Shimmler & Co., of Miltitz, Germany, is expected here this week on the Kaiser Wilhelm II. He will remain until the end of June. This is his first visit here in seven years.

—Three separate notices, one for each of his clients, Charles A. Kalish, counsel for the Manhattan Ph. A., the German Apothecaries Society and the New York Consolidated Drug Co., announces his removal from 31 Nassau to 60 Wall street, where he will continue his legal practice.

—The hearing before Referee in Bankruptcy, Seaman Miller, at No. 346 Broadway, last Thursday, for the appointment of a trustee to take charge of the affairs

of the American Witch Hazel Company, which went into insolvency last January, was further adjourned until Tuesday, May 16, owing to the illness of counsel.

INDECENT "ADS." FORBIDDEN.

Boston, May 6.—The Senate this week passed a bill prohibiting indecent publications, aimed chiefly at advertisements of remedies for the cure of venereal diseases. The bill reads as follows:

"Whosoever publishes, delivers, distributes or causes to be distributed, an advertisement or notice describing the symptoms or details of a venereal disease or of a disease, infirmity or condition of the sexual organs, or an advertisement or notice calling attention to a person, or persons, office or place where such diseases, infirmities or conditions may be treated, or where advice relating thereto is or may be given, shall be punished by imprisonment for not more than six months or by fine of not less than \$50 nor more than \$500 or by both such fine and imprisonment; provided, however, that this statute shall not be construed to apply to didactic or scientific treatises upon the diseases, infirmities or conditions herein before mentioned, which treatises do not advertise or call attention to a person or persons, office or place where such diseases or conditions are or may be treated, or where advice is or may be given relating thereto; and, provided, further, that the prohibitions of this statute shall not be deemed to apply to labels securely attached and adhering to bottles or packages of medicine, nor to the printing and delivering in sealed packages outside of this commonwealth of books, pamphlets or circulars containing such advertisements.

CARLOADS OF SOUVENIRS.

Iteld, Yeomans & Cobit, of No. 140 Nassau street, celebrated their fifth anniversary last Saturday in their usual elaborate style. From 10 a. m. to 6 p. m. the store was one mass of people, several thousand of whom made the rounds with open hands and pockets, ready to receive the carloads of souvenirs, which were handed out. Music was furnished by two string bands. The store was tastefully decorated, and in the rear was an imposing array of refreshments. Here the proprietors received the congratulations of their friends. A thriving trade was done at the soda fountain, owing to the shouted warnings of the clerks that there would be "no souvenirs without soda checks!"—an innocent bit of blarney that brought many an extra nickel.

ROCHESTER, N. Y., NOTES.

Much interest is being displayed by the Rochester pharmacists in their coming trip to Buffalo on next Friday, when a bowling match will be played by teams from the Rochester and Windy City Pharmacies.

—Papers of incorporation were filed last week with the County Clerk by the Krenser Drug Co. The company is incorporated for \$2,500 for the purpose of manufacturing and dealing in drugs and medicines. The five directors named are: Edward H. Burke, Joseph Goddard, Minnie S. Burke, Scott Cummings, and Peter J. Lutz.

STAMPS WILL BE REFUSED.**P. A. R. D. Protests Against This Method of Receiving Payment.**

DRUGGISTS, ASKED BY NEWSPAPERS TO RECOGNIZE STAMPS ISSUED TO PROSPECTIVE ADVERTISERS, UNANIMOUSLY REJECTED THE PROPOSITION—AN OLD SORE REOPENED.

Philadelphia, May 8.—At the May meeting of the P. A. R. D., in the Philadelphia College of Pharmacy Friday afternoon, the question of receiving newspaper advertisements was brought up by the reading of a communication by Secretary Cozens from one of the members, calling attention to an enclosed circular letter from one of the city's largest dailies. This announced that in the future the druggists would kindly recognize stamps which the paper will issue to prospective advertisers, and which may be used by them instead of cash. With this letter were instructions showing that it was necessary for the druggist or his clerk to do more or less writing with red ink, showing the character of the advertisement received.

This was like opening an old sore. One of the matters that has been receiving the attention of the press and telephone committee is the securing of more liberal rates from the newspapers and the telephone companies. Some of the proprietors have refused to take advertisements because of the bother for the trifling returns. Hence the resolution that the members of the association refuse to receive any kind of stamps in payment for newspaper advertising was unanimously adopted.

No report was received from the press and telephone committee, but it was announced unofficially that one of the telephone companies was making a list of the drug stores that are acting as pay stations as well as the amount received for a year from each, with a view to answering the proposition of the association's committee. An effort had been made to get a uniform rate of 25 per cent. on all automatic phones.

As it has repeatedly been brought to the attention of the officers of the association that the prices put out by the St. Louis Club are lower in this city than elsewhere, on motion, Secretary Cozens was instructed to communicate with Chairman Pierce, of the St. Louis Club, with a view to having a conference at which the feasibility of advancing the prices on their preparations will be discussed. An early date for this conference will be requested.

Most gratifying was the report of organizer E. C. Bottom. He turned into the treasury more than \$300 dues, collected during the past eighteen days, and submitted the names of ten prospective members, who were elected. Another item of business transacted by the association was the issuing of an order for \$500 in payment of the N. A. R. D. per capita tax. Owing to the fact that not enough members had sent their names to the committee on entertainment to insure the success of the proposed planked shad dinner at Washington Park, that event was dropped for the time being.

SCHEDULE IN CAMDEN, N. J.

Camden, N. J., May 9.—By a unanimous vote, the Camden County Association of Retail Druggists on Thursday evening adopted a price schedule, which, it is believed, will obviate all the misunderstandings which cropped up during the career of the previous organization. Chairman Howard Taylor presented the schedule on behalf of the Executive Committee, and, after lengthy discussion and a few minor changes, it was adopted. The new schedule will become operative just as soon as it can be printed and sent out to the members, which will be about the first of June. With the exception of certain patent medicines sold by the serial numbering plan, it is said that the prices on this class of goods will be lower than those asked by the Philadelphia druggists.

After the business session refreshments were served and good fellowship prevailed. The meeting was held at the City Hotel, and while really a special one for the purpose of agreeing on a schedule, it was attended by a majority of the members, and the interest shown indicated the continued success of the association. President William F. Weiser presided, and Secretary Charles L. Barrett, as well as all of the other officers were present and were active in discussing the many items of the schedule.

DRUG HABIT RUINS DRUGGIST.

Philadelphia, May 8.—His health, friends and money gone, John Calvin, once a prosperous druggist, was taken to the Philadelphia Hospital on Thursday in a patrol wagon. It is said he cannot recover. His fall was due to the drug habit.

According to his own story, John Calvin came to this city fifteen years ago from Virginia. At that time his check was good for fifteen or twenty thousand dollars, and he immediately opened a drug store in the central part of this city. He commenced using drugs during a long period of illness, and when he recovered it was only to find that he had contracted a more serious disease.

In vain he tried to break off the habit. He lost interest in his business and in less than a year sold out. Much of his money had been sacrificed in the meantime, and five years ago he was practically penniless. He lived in cheap lodging houses and managed to live and supply his wants by acting as clerk in these houses. Little more than a skeleton, he was found sick on the street by a policeman Thursday, and after an examination, was taken to the hospital. As the wagon crossed the river on the trip, the wretched man begged to be allowed to end his troubles by jumping into the stream.

MUST GET NEW BONDSMEN.

Detroit, May 9. State Attorney General Bird has handed down a decision declaring that surety companies cannot be accepted as bondsmen for druggists. This decision will affect quite a number, especially in local option counties, and there is likely to be some lively scurrying for bondsmen during the next two weeks.

DRUG CLERKS SAY GOOD BYE.**Philadelphia Association Will Plan to Better Conditions in That City.**

Philadelphia, May 5.—There was an unusually large attendance on Monday evening when President G. W. Geasey called the May meeting of the Drug Clerks' Association to order. Many of the clerks had made an extra effort to be present to say good bye to Secretary Robert J. Hunt, who goes to his home at O'Neill, Neb., this month, and later to a point further West, where he will engage in business. He received a vote of thanks and an informal leave-taking was accorded the popular drug clerk. He is a graduate of the Pharmaceutical Department of the Medico-Chirurgical College, and will graduate this month from the Philadelphia C. P.

A communication was received from the St. Louis Drug Clerks' Association, in which it was stated that a law had just been passed in Missouri making it illegal for drug clerks to work more than ten hours a day. The Western Association wished the young Eastern Association success in its efforts to secure better hours for its members. In this connection, President Geasey instructed the Membership Committee to get up some plan to better the condition of the drug clerk in this city. The proposition to have a lunch served at every alternate monthly meeting of the association was unanimously carried. The plan becomes operative at the June meeting. Another social feature was the instructing of the Executive Committee to arrange for a reception to Leonard G. R. Botfield, a member of the Executive Committee, upon the occasion of his marriage early next month. Seven new members were elected, and all bills paid, while the treasury was correspondingly replenished by the monthly dues. Messrs. Post, Lupin, and Chalfant were appointed a committee to audit the books. Owing to illness Treasurer George H. Grubb has been unable to attend to his duties for the past week.

PHILADELPHIA NOTES.

—Frank Rieker has opened a new store at 7201 Germantown avenue.

—Reffous Brothers have installed a new fountain in their store at Thirteenth street and Columbia avenue.

—The annual banquet of the Alumni Association of the Philadelphia C. P., will be held on Tuesday evening, May 16.

—Frank H. Eberly has installed a new fountain in his drug store at Twenty-fifth and Oxford street, adding fourteen feet to his dispensing counter.

—The building at 4400 Germantown avenue, occupied by Sweeney's Pharmacy, has been extensively improved and enlarged and a new soda fountain installed.

—It is expected that there will be a large number of pharmacists from this city at the annual meeting of the Pennsylvania Ph. A., at Bedford Springs, on June 20, 21 and 22.

—William G. Toplis has remodelled and enlarged his drug store at 4939 Germantown avenue, and has at the same time put in a larger soda fountain to accommodate a rapidly-increasing trade.

—A. R. Laughlin, who conducts the pharmacy at Lansdowne, has purchased the property at Fifty-second and Spruce streets and will open a second store there, as soon as alterations are completed.

—Green & Sons have just installed in the pharmacy of Nelson Fry, at Nineteenth and Arch streets, an all-marble fountain, which is one of the handsomest in the city. The store is being refitted throughout with oak fixtures.

—J. C. Chisholm, of the class of '04, Philadelphia C. P., has been appointed director of the chemical and pharmaceutical laboratories, and lecturer on organic chemistry in the department of pharmacy of Baylor University, Dallas, Texas.

—Fire on Friday evening threatened to destroy the plant of the Harrison Chemical Co., at Thirty-sixth street and Gray's Ferry road. It was discovered in the alum house, and the firemen succeeded in smothering the flames. The damage will not exceed \$500.

—Thomas J. Thomsin has purchased the store of the late Dr. C. Z. Bahl at Nineteenth and Dauphin streets. Thomas Bright has purchased the store of D. M. Harris at Fortieth street and Girard avenue. The Smith Pharmacy at the corner of Nineteenth and Diamond streets has been purchased by B. Frank Davis.

—Among the representatives of out-of-town houses in this city, this week, were: George Weiss, of the Woodside Sterling Co., of New York; M. Pryor, of the Pryor Silver Co., of Newark, N. J.; Mr. Hall, of the Deane Plaster Co., of Yonkers, N. Y.; Mr. Rush, of the Faultless Rubber Co., of Akron, O.; George Worth, representing Fougere, of New York, and Fred Upton, of the Sloan Liniment Co., of Boston.

—Owing to the unfavorable weather conditions, the baseball game between members of the Philadelphia Drug Athletic Association, and which marks the commencement of out-door work of the association, will be played on the afternoon of Tuesday, May 2. The grounds of the Stenton Athletic Club have been secured for the season and the social feature of these weekly meetings, it is believed, will do much in bringing into closer relation those interested in any way in the drug trade.

—While a clerk in the pharmacy of George Y. Wood, at the northeast corner of Tenth and Spruce streets, was behind the prescription counter on Saturday, he noticed one of two little girls in the store, pick up several pieces of soap and pass it to her companion. The latter dropped them into a big market basket she carried. The police were notified and when the basket was searched, it was found to contain about ten dollars' worth of candy, toys, toilet articles, pocket books, stockings and other articles. The children were given into the care of the Society to Protect Children from Cruelty.

—Elmer E. Goodlin, who has been managing the drug store of Dr. J. McFarland & Son, in Saltzberg, Pa., since the death of J. R. McFarland, a year ago, has purchased the entire store. The firm name will be Elmer E. Goodlin, Ph.G.

ANOTHER SUIT FILED.

Cutter Wants Court to Compel N. A. R. D. Not to Interfere.

RETAIL DRUGGISTS ANXIOUS TO HAVE QUESTION DETERMINED UPON ITS MERITS, AND ARE NOT AVOIDING ISSUE.—SHELDON OF ST. LOUIS CLUB AND BECK OTHER DEFENDANTS.

Baltimore, May 6.—The fight of the retail druggists of this city against price demoralization had another development this week in the hope of a suit for damages directed against certain supposed leaders in the movement against the cutters. There was filed in Circuit Court No. 2 to-day by August Kach, a South Baltimore druggist, who is known as an aggressive cutter, a suit against the National Association of Retail Druggists, to compel the organization to carry out an alleged agreement not to interfere with him in the purchase of proprietary medicines, which he disposes of at cut rates.

The agreement was made July 22, 1904, in consideration of Mr. Kach waiving all right of suit because of certain action taken by the association. This, at least, is the statement contained in the bill of complaint. The bill further states that prior to the agreement, by reason of a tripartite compact between wholesale and retail druggists and the manufacturers and wholesale vendors of proprietary medicines for the purpose of controlling the retail price of the medicines, Mr. Kach had been prevented from obtaining them.

The defendants in the suit, besides the association, are Francis E. Sheldon and John G. Beck, respectively the agent and chairman of the defendants. The attorneys of the plaintiff are Thomas C. Weeks and Harry B. Wolf. Mr. Weeks, it appears, has been active for several weeks getting up alleged evidence of a combination to prevent Mr. Kach from getting goods. He is said to have sent an order to one of the distributing agencies here asking for one dozen each of various proprietary remedies, intending, apparently to use the refusal as the basis of a complaint.

As stated some time ago in The Era, the Baltimore Retail Druggists' Association and other defendants in the suits brought, profess to be anxious to have the question determined on its merits, and are not avoiding the issue. They rather welcome it as affording a chance to have decided the question whether the plaintiffs have any standing in court or whether the existing arrangements to withhold goods from price-cutters is unlawful.

PASSED PHARMACY EXAMINATION.

Baltimore, May 8. The Maryland Board of Pharmacy met on May 4 at the Hotel Rennett to pass upon the papers submitted by candidates for registration as pharmacists and assistants filed at the examination held April 6, and announced that the following out of a class of thirty-nine stood the test:

Assistant Pharmacists—Mary E. Bufington, Thomas Armstrong, George Alvin Strauss, William H. Clarke, E. Reynolds

Thome, Benjamin Davis Benfer, and Alfred Williams.

Pharmacists.—Alfred E. Kemp, William E. Jordan, Alfred C. Trull, Herbert E. Waterman, Henry M. Harper, Frank P. Firey, Jacob A. Shulman, and Robert Cecil Todd.

Previous to passing on the examination papers the Board reorganized preliminary to the beginning of another year. William C. Powell, of Snow Hill, was elected president; Ephraim Bacon, of Roland Park, treasurer, and David R. Millard, secretary. Mr. Millard has just been reappointed for a full term of five years.

SILVER SERVICE FOR CASPARI.

Baltimore, May 8.—The gift by Baltimore pharmacists to Prof. Charles Caspary, Jr., in recognition of his services to the profession and the completion of his twenty-sixth year in the profession, will take the form of a silver service. The call for contributions has met with a very liberal response, and a large sum has been secured. The presentation will take place next Friday evening at the annual banquet of the Maryland College of Pharmacy Alumni Association in the Eutaw House, and will be made an occasion for appreciations to the honored guest.

BALTIMORE NOTES.

—W. J. Evans, of Evans Bros., druggists at Delair, Md., is reported to be very ill with pneumonia.

—The retail drug store of the late Charles M. Puc, at the northeast corner of Baltimore and Stricker streets, has been sold to H. L. Thornton.

—Mrs. E. W. Council has sold the pharmacy long conducted by her husband and afterward by her, on the southeast corner of Fulton and Lafayette streets, to William M. Meddill, her clerk.

—De Witt Swarigen, who took a special course in pharmacy at the Maryland University, has returned home to China Grove, N. C. His wife and child were with him while he pursued his studies.

—Mr. Turlington, for years a member of the retail drug firm of Morrison & Turlington, this city, and who recently retired from the firm, has opened the Turlington Pharmacy at Wilson, N. C.

—J. Gilbert Lieber, a traveling representative of Muth Bros. & Co., who was very ill for a time with blood poisoning, and whose recovery seemed very doubtful, is out again, and is being congratulated by his many friends. Mr. Lieber lives at York, Pa.

—The committee of the Maryland Pharmaceutical Association, which has charge of the arrangements for the annual meeting at Bertterton, will go there this week to look over the ground and determine on some of the details. The committee includes in its membership J. Emory Bond, James Hancock, G. G. Muth, William P. Sohl, Charles Morgan, and J. Edwin Hongst.

EXPLOSION IN DRUG STORE.

Youngstown, O., May 1.—An explosion in the drug store of J. A. White caused a disastrous fire and slightly burned Louis Ritzl, a clerk. Ritzl was drawing wood alcohol. He struck a match and the explosion followed. Windows were broken and much other damage done.

BODEMANN ON LEGISLATION.**Urges Druggists to do Nothing Unless They are United and Determined.**

Chicago, April 29.—At the recent meeting of the Chicago Retail Druggists' Association, held in this city, legislative matters came up for discussion, Senator Clark's Anti-Narcotic bill receiving much attention. The druggists have promised to submit an adequate measure for the regulation of the sale of narcotic drugs at the next session of the legislature.

W. Bodemann submitted a report on legislative affairs. It follows:
To the Chicago Retail Druggists' Association:

When I came back from a ten days' trip, on account of illness in my family, and found that a committee of your association had been in conference with Senator Clarke regarding pending legislation, I was informed that the committee had left the Senator with the understanding that I was to cast the decisive vote. I do not intend to accept this responsibility, much as the honor of the offer might tempt most any man. But I do not shrink from giving you my frank and honest opinion, and then it is up to you.

If Senator Clarke and other legislators are willing to postpone action, and you don't know just what you want, then I would say, wait—have no legislation until you do know just exactly what you want. That the public welfare and the public itself are entitled to and demand more stringent anti-narcotic legislation, no one can deny. You run this risk that the demand for such legislation will be so urgent that even the City Council will attempt to legislate, if we do not enact suitable laws, and then—God help us!

I expect very little from the Illinois Pharmaceutical Association, and will give you my reasons. The presidents of the I. P. A. in 1901, 1902 and 1903, have repeatedly urged most specifically that such legislation be enacted. Walter Gale in 1901 and 1902 singled out the Pennsylvania law, regulating the sale of cocaine, opium, morphine and chloral; his recommendations were endorsed. What was done? The legislation we did not enact was brought about by a conference between your president of 1903, Mr. Engelhard, and your humble servant, in connection with Assistant State's Attorney Frank Blair. The act we obtained was an experiment; it is not broad and efficient enough to meet the situation, still we did the best we could, and it is better than nothing.

Last fall, a year ago, the Legislative Committee of the I. P. A. was specifically instructed to draft an amendment to the pharmacy act and to have such draft presented before the I. P. A. convention. Nothing was presented, not even a verbal report. Unless the C. R. D. A. puts its shoulder to the wheel and demands that the I. P. A. does act, very little can be expected, and I make this suggestion: That we request the officers of the I. P. A. to set aside a day for the discussion of this important question at the coming convention, and then insist on the discussion. Last year the Committee on Trade Interests submitted some twenty-four questions and begged and plead with the convention

not to accept the report in silence, but to discuss the same. Not one of the twenty-four questions were discussed with one word!

And you should remember that after we know and make up our mind what we want, then we encounter the real difficulties. I requested the Washington, D. C. Board of Pharmacy to inform me how they fared with their much-praised law, and was informed that their law was drafted after the excellent Beal draft, approved and endorsed by the A. Ph. A., the guardian of American Pharmacy. Who harked this excellent Washington draft? J. C. Ayer Co., because their Cherry Pectoral contains more morphine than that draft permitted, and you will find the same condition here and elsewhere. The patent medicine men send their best lobbyists to defeat any law that curtails their traffic. Mr. Cheney, of Hall's Catarrh Cure fame, stated in the session of the Proprietors, etc., at Delmonico's, a few years ago, that his firm had contracts with about 15,000 papers, and this clause was inserted in all contracts:

It is hereby agreed that should your state or the U. S. Government pass any law that would interfere with or restrict the sale of proprietary medicines, this contract ceases.

The patent medicine men are as enterprising as the patent law magates, and have a keen eye for suitable lobbyists. When the Mann bill was before the Senate Committee, Prof. Chandler, a man who was kept in his position as teacher in the New York College of Pharmacy for forty years, appeared before the Senate and denounced the pharmacists the very men who gave him the job he held for forty years—denounced these men as robbers, for attempting to carry out the mandate of the N. A. R. D. to correct the patent law abuses.

I call attention to these things for the purpose of urging you to do nothing unless you have a solid front, and go at it with determination and prepared to meet opposition of the most aggressive syndicate that human forces ever have to deal with. Traffic in narcotic is a big thing for some proprietors. Take it away, and they will do their utmost to defeat your labors to correct the outrageous abuses that have crept into a modern pharmacy and unless crushed out by yourself will be a constant source of menace and annoyance to our profession.

W. BODEMANN.

OLD FIRM OUT OF BUSINESS.

Racine, Wis., May 1.—Much surprise has been caused here by the announcement that the old drug firm of H. S. Stone & Son will retire from business. Since 1854 Horace Stone has been engaged in the drug business in this city. He is probably the oldest druggist in the State.

For years his two sons, Walter and Horace, were engaged in business with him. Walter died some time ago. Because of ill-health the father and son have been unable to attend to the business and have concluded to retire. The elder Stone is now nearly ninety-one years old. The store has been sold to the Krudell Drug Company.

—The Iowa Society of the American Chemical Society was recently organized at Grinnell, Ia. The new society has a membership of twelve.

ANTI-COCAINE LAW.**Druggists Cannot Refill Prescription for Cocaine.—Crop of Fiends to Grow Less.**

St. Paul, Minn., May 5.—The anti-cocaine law, which took effect on the 1st inst., is a source of genuine pleasure to reputable druggists, although they expect to have difficulty with the physicians until the act is understood thoroughly. Until now druggists have either sold cocaine freely or have refused entirely to vend it, thus losing much revenue. Now they cannot give the drug away or sell it except upon the prescription of a licensed physician or dentist. The anticipated misunderstanding with the doctors is because the law prohibits the druggist from refilling prescriptions containing cocaine. The druggist is not allowed to give a copy of the prescription to a customer, and before filling it must write thereon the name and address of the patient. A heavy penalty is attached for giving away or prescribing cocaine, or preparation containing it, to any one addicted to the habitual use of the drug in any form.

Those druggists who do not wish to profit by the sale of the tabooed article at the moral expense of mankind expect to see the crop of cocaine fiends greatly reduced through the rigorous enforcement of the new law. As a class they are besieged and importuned by the habituals to supply them with the desired drug, and it is often hard to refuse them. With the new act behind them, it will be an easy matter to dispose of those who are slaves to the habit and who generally are praying for help to obtain emancipation from the dreadful thralldom, while imploering the dispenser to give them just a little of the narcotic.

PHI GAMMA DINES.

Chicago, May 4.—The third annual banquet of the Alpha Chapter of the Phi Gamma Fraternity, School of Pharmacy, Northwestern University, occurred upon the evening of April 15 at the Sherman House. The banquet was tendered to the graduating members, and proved a very successful and enjoyable affair. Mr. Ever Johnson presided as toast-master; the other speakers of the evening being: Theodore Whitelsey, Ph.D.; Gustave E. F. Lundell, Sc.B.; Lee R. Girtton, Ph.C.; Orville Cissell, Ph.G.; Roger Rugg, Don F. Wright, R. H. Brice.

ENTERTAIN STUDENT GUESTS.

Kansas City, April 23.—The students of the school of pharmacy of the University of Kansas, at Lawrence, fifty-eight in number, visited this city, Friday, as the guests of the wholesale druggists, manufacturing chemists and druggists' supply houses. The party was in charge of Professor L. E. Sarje, dean of the pharmacy school; Eli S. Bailey, professor of chemistry, and L. D. Haverhill and Amos Emerson, assistants in pharmacy. The wholesale houses were visited and there was a luncheon at the establishment of Parke, Davis & Co.

VOEGELIS EXPAND.

Have Formed New Incorporation to Do Increased Business.

Minneapolis, Minn., May 2.—Voegel Bros., the well known retail druggists, have realized an ambitious plan in incorporating the Voegel Brothers Drug Co. For many years the firm—whose head, Thomas Voegel, is president of the N. A. R. D. has operated one of the largest and most popular stores in the city at Hennepin and Washington avenues. Last year the Voegels bought the Leigh drug store at Seventh street and Nicollet avenue. The expansion policy having proved successful through this experiment, the new incorporation is the result, and still greater expansion is announced. Additional store rooms have been rented at Fourth avenue S and Twenty-second street, and at Twentieth avenue N, and Lyndale, and these will be opened about June 1. They will be handsomely equipped and operated under the same progressive methods which have won the Voegels such notable success in this city.

PIONEER DRUGGIST DEAD.

St. Louis, May 2.—Augustus H. Weber, known in St. Louis as the oldest druggist in the city, died Monday afternoon, at his home, 1379 Temple place, of heart disease. He was born in Hanover, Germany, in 1835, and came to St. Louis when eleven years old. While a boy he became connected with the drug firm of Charles Blow & Co., later Peter Blow & Co., and eventually became a partner. Afterward he was the founder of the firm of Brown, Weber & Graham, and was burned out in 1873, when the firm retired from business. Mr. Weber became the western representative of The Tilden Company, and in 1895 founded the Weber Chemical Co., of 126 Olive street, this city, and retained the presidency until his death. He was quite active in church work.

He was hospital steward for Gen. Gray's regiment, the Thirteenth Missouri Volunteers, during the Civil War. He was the first secretary of the Western Commercial Travelers' Association, and a member of the Knights of Honor, and the Legion of Honor. A widow, two sons, A. H. Weber, Jr., of Portland, Ore., and W. S. B. Weber, of this city, and three daughters survive him.

BOWLERS GET PRIZES.

St. Louis, May 2.—Following the close of the bowling season, the Retail Druggists' Bowling League has made up its records, awarded the personal prizes, and elected officers. Aside from the cash prizes, there was enough merchandise to give each man two picks, in the order of his personal score. A. F. Aszmann won the big prize (\$10), the "high five" with 324 to his credit. He also fared the best in the distribution of prizes. F. W. Neu took the second "high five," \$7.50. A. Woerlin and H. D. Delkeskamp split the "single" money. The high scores were won by A. Enderle, A. F. Aszmann, F. W. Neu, A. Woerlin, William Schildmann and William Brenner. They will captain the next year's teams. Brenner was elected president of the league, and William Agermiller, secretary.

AMONG THE COLLEGES

WILL GRADUATE TO-NIGHT.

Brooklyn C. P. Closes Successful Year—Some Real Sheepskin.

Elaborate arrangements have been planned for the commencement exercises of the Brooklyn College of Pharmacy, to be held in the Baptist Temple, Third avenue and Schermerhorn street this (Thursday) evening. The speakers include Hon. William J. Gaynor, who will deliver the address to the graduates; Henry T. Sturz, the valedictorian; John F. Dillon, humorist, and others. Conterno's Fourteenth

THE ALCHEMIST.

From Brooklyn C. of P. Invitation.

Regiment Band will furnish the music and vocal selections will be given by Miss Madeline Burdette and the Cecilia Male Quartette.

The graduating class is a large one, and its members will receive their degrees and certificates from the hand of the dean of the faculty, Prof. Wm. C. Anderson. The presidents of the college and of the alumni associations Adrian Paradis and Edward Klein, will award the various prizes, and the senior and junior rolls will be announced by Professor A. Percival Lohness, secretary of the faculty.

The officers of the class of 1905 are Augustus A. Reynolds, president; Henry T. Sturz, vice-president; Alice J. Kunkel, secretary; Jacob Shoben, treasurer, and Joseph P. Farrell, sergeant-at-arms.

The invitation to the commencement issued by the class is unique, the various pages being laced together with "real" sheepskin. One of the pages bears an illustration of Hermes Trismegistus or some other unnamed alchemist worthy, apparently engaged in the traditional search for the philosopher's stone or the so-called elixir of life. He certainly does not represent the average "grad." of 1905.

KEOKUK C. P.

Keokuk, Ia., April 26.—The Keokuk College of Pharmacy, in conjunction with the Keokuk Medical College, held its fourth annual graduating exercises in the Opera House, last Tuesday evening. The names of the pharmacy graduates were read by the secretary of the pharmacy department, Prof. G. Arthur Kiedaisch, the president of the college, Prof. George F. Jenkins conferring the pharmacy degree. The Doctorate address to the graduates was delivered by Henry E. W. Barnes. A list of the graduates follows: Henry Blender, Dallas City, Ill.; Peder J. Bursheim, Brookings, S. D.; Bernard E. Gridley, Hamilton, Ill.; Ernest C. Gwinn, Oakland, Ill.; Oscar E. Grua, Roswell, S. D.; Ira B. Hough, Mt. Hamill, Ia.; James R. Irwin, Salisbury, Ill.; Oliver P. Jamison, Weldon, Ia.; Carolyn A. Loomis, Revere, Mo.; William B. Miller, Mt. Ayre, Mo.; Delbert G. Mendenhall, Des Moines, Ia.; William F. Schlicht, Stoutland, Mo.; David A. Walker, Pownell, Ill.

The Keokuk C. P. was organized five years ago, by Dr. George F. Jenkins, who placed Prof. G. Arthur Kiedaisch, a graduate of the Chicago College of Pharmacy, in charge, and he has conducted the department ever since.

MEDICO-CHIRURGICAL COLLEGE.

Philadelphia, April 29.—Final examinations were finished this week and the announcement of the results are awaited with interest. They will be made about Monday next.

Commencement exercises will be held on the evening of May 27, and on the preceding evening the annual meeting of the Alumni Association will be held. Members of the senior class will probably give a banquet at the Bellevue-Stratford Hotel, on the evening of May 24, at which the guests of honor will be the members of the faculty.

On Monday next, books will be opened for the registration of students for the term of '05 and '06.

The cabinet of the College Y. M. C. A. will hold the final meeting of the term on Monday evening next. Plans for the continuance of the work along similar lines will be discussed. The closing year has been the most successful in every way that this department of college work has ever known.

MANY UNSUCCESSFUL CANDIDATES.

Des Moines, Ia., May 8.—Only fifteen of the seventy-seven candidates who took the recent examination of the State Pharmaceutical Board succeeded in passing. The successful fifteen are: Henry H. Long, Hawkeye; Peter Sievers, West Side; Felix J. Schaal, Le Mars; Harry A. Robertson, Columbus Junction; Jesse W. McCarthy, Lewis; C. H. Morgan, Iowa City; C. P. Lorenzen, Denison; W. Klub, Early; Mart Kuhn, Algona; Frank E. Diddy, Redfield; G. G. Care, Ralfe; Elmer Greenleaf, Akron; John C. Flaherty, Fort Dodge; Jesse G. Faval, Albert City, and E. M. Bhenlman, Ackley.

TRADE SECTION

WEST AFRICA NEEDS DRUGGISTS.

Chance for Americans Says U. S. Consul Williams.

West Africa is not as yet a great market for the sale of pharmaceutical and medical preparations, but it is an excellent field of opportunities for American capital and enterprise in the drug trade, by reason of the absence of branch wholesale competition on the part of European dealers. There is not a branch wholesale drug establishment in this colony or on the coast, notwithstanding the need and opportunity for such is very evident. There are, however, numerous public and private dispensaries, besides other small dealers, along the seaboard. The retail drug business here is limited and its influence is circumscribed, which is largely due to the fact that it is not organized and because there is little or no effort made to advance in unison with the progressive thought and methods of the times. Such advancement, however, is hardly possible on the part of small retail druggists in the absence of wholesale depots of supplies close at hand. There are relatively few dispensing pharmacists here as compared with the general population, but each does a limited amount of prescription work.

As regards the general drug trade, it is quite clear to anyone familiar with the business that this field has not been seriously considered in commercial calculations. Regardless of the reputed unhealthfulness of the climate of West Africa, European firms engaged elsewhere in this important branch of trade, whether intentionally or otherwise, have failed to take advantage of the situation. This may have been due to the fact that other branches of trade in this country require of agents, clerks, etc., business experience only, while the drug business requires both business experience and professional training. It would be difficult under the circumstances to secure men of adequate training and experience to manage such establishments as compared with the ease and facility with which proper persons could be procured for other business concerns.

A REAL LACK OF MEDICINES.

Drugs having received less attention than the other branches of trade the people have tended more toward indigenous herbs and native remedial agents in which the country is abundantly rich. In view of this preference and these tendencies some have said that the drug business can hardly be developed in this country to a large extent. This is not true, for there is nothing in the present or prospective conditions to substantiate such conclusions.

American pharmacists and chemists of

sober habits and character, with capital, could do well in this country. In this connection our large business establishments in the United States might train and utilize educated Afro-American young men for commercial service in this country with profit and advantage. American pharmaceutical preparations are dispensed to some extent, and so far as they have been introduced are popular. The difficulty of procuring them direct is the chief drawback to their general use. The imports of drugs and medicines into Sierra Leone for the year 1903 were valued at \$27,308, coming principally from England, the United States, Germany and France, in the order mentioned. Those from the United States are valued at \$1,351, consisting mainly of pharmaceutical preparations and patent medicines, in the solid, semi-solid and liquid forms, e. g., plasters, pills, pellets, powders, extracts, tinctures, tonics, syrups, emulsions, ointments and ceptates. The duty upon all drugs and medicines imported into Sierra Leone is 10 per cent. ad valorem.

FEES AND PRICES.

In 1896 an ordinance regulating the practice of pharmacy was passed by the legislative council which restricts this privilege to qualified druggists. Candidates for examination as pharmacists are required to pay \$1.21 on application and \$2.43 for issuance of certificate of qualification. Besides these, a license tax of \$10.21 must be paid annually to carry on business.

There is practically no uniformity of prices in the retail trade; every dealer is largely a law unto himself, charging that which seems right in his own eyes. The average price of all drugs is generally much higher than in the United States, e. g., an 8-ounce bottle of the extract of malt or maltine, known as the "trial size" in the United States, sells here for 85 cents. This is illustrative of the prices of other similar preparations.

The following are the names of retail druggists located in Freetown. Sierra Leone: N. E. Browne, W. J. McLeod, P. G. V. Manley, J. S. Labor, Rowland May and S. St. B. Williams.

American merchants should pay close attention to the acquisition of the trade of populous tropical countries. The mercantile pioneering spirit should be encouraged and American branch business houses established in West Africa. These would give trading bases and ultimate commercial and banking influence, which we do not now possess, but which the English, German and French enjoy, and are extending to all parts of Africa. Not only the drug business, per se, but every other line of trade on this coast offers exceptional advantages for investments in branch establishments, which, if made now, in the formative period of the country, will lay an impregnable foundation for our future commerce with this country.

ONLY TWENTY YEARS MORE.

Chilian Nitrate Production Will Have Then Exhausted Deposits.

A recent number of the American Fertilizer quotes from the report of Francisco Valdes Vergara, collector of customs at the port of Valparaiso, Chile, who is said to be one of the most competent statisticians in the Republic, in which he makes an estimate of the probable life of the nitrate product in Chile. Senor Vergara's calculation is based upon the original estimate of the supply and the production and exportation since 1840.

The nitrate producers fixed the quota for exportation for the year ended March 31, 1904, at 32,500,000 Spanish quintals (1,529,311 tons). It is calculated that the shipments to December 31, 1903, were, in the aggregate, 31,000,000 quintals (1,426,000 tons).

Senor Vergara makes a somewhat extended statement, tending to show the probable rate of production in future years, and concludes somewhat as follows:

"At the end of twenty years, when 35,000,000 tons have been extracted, it will be seen that the exhaustion of the nitrate deposits will be near at hand. The nitrate industry contributes to-day 76.4 per cent. of our exports and its operation involves the expenditure of nearly 30,000,000 pesos (\$10,550,000) for agricultural products and merchandise. It pays the government directly 48,500,000 pesos (\$17,762,500) for export duties, and no less than 10,000,000 pesos (\$3,560,000) indirectly in import duties. It would be useless to make any comments on the grave consequences which would result from anything that would compromise the prosperity of the nitrate industry in Chile."

FRENCH WINE AND CIDER

The French wine crop amounted to 1,750,390,484 gallons, an increase of 819,446,853 gallons over the production of 1903, according to the French Ministry of Agriculture. This crop has been surpassed only once within the past ten years. The cider crop of 1904 reached the enormous figure of 960,413,366 gallons, according to the estimate of the Ministry of Agriculture. The Department of Indirect Taxation puts the crop even higher, its estimate being 1,081,861,807 gallons. This is said to be the largest cider crop made in France since 1830.

The average yearly consumption of wines and ciders in France is stated at 1,189,000,000 gallons and 370,000,000 gallons, respectively, so there will be a large surplus of both products available for export.

Michigan's Biggest Soda Water Business

In the Shopping Center of Detroit on Woodward Avenue

The Fountain of the Central Drug Co.—A Talk by N. A. Tabor, Treasurer of the Big Four Store Combination—Tendency Toward "Plain Sight Service"—Consideration for Customer.

"To what do I attribute the soda water success of the four Central Drug Co. stores and the unparalleled success of our main establishment, doing the biggest soda water business in Michigan? First, I place the quality of our product, the best that can be bought. It is an axiom with us that people will readily pay ten cents for a ten-cent cup of coffee; far more readily, in fact, than they will pay five cents for a poorer cup. Of course, we are located in the very heart of the shopping district, nearly every car line passes the store, and certainly every car line is in easy distance. Then we make a study of the people's wants. We have what they most prefer, we serve it neatly, quickly, artistically, and when he or she goes away they are so satisfied that they call again. We have a most conveniently arranged fountain, with seats taking in the entire side of the store, and everything done that will add to the comfort of the patron."

Thus spoke N. A. Tabor, treasurer of the Central Drug Co. Continuing, he said:

HANDLING THE CUSTOMER.

"Given the best ingredients, the most skillful help, and the most luxurious mixtures, our great thought is for the customer, for, after all, it is the customer that makes the soda water business. We have no question that the 'check after service' is the best and most agreeable method of payment. Our patrons, often two ladies, or maybe two couples, come in, look over our tempting signs, discuss the merits of 'egg phosphate,' 'Central Sundae,' 'Claret Punch,' 'Detroit Special' and the many others, and finally take the most pleasing. After they are served (and very often the customers 'have another'), the person or persons are given a check for the entire amount. We give only one check to a party, no matter how many people may be together—it saves

confusion. And the payment is made as they go out. Take the other way—purchasing checks before they sit down at the fountain. They must buy to the value of the check or else get up and get a new check, losing their seat very likely. It is inconvenient, disagreeable, and the dealer loses by it in the long run, for with a five-cent check bought a customer isn't going to bother to go get another check,

N. A. TABOR,
Treasurer Central Drug Co.

no matter how tempting the ten-cent egg drink may look to him. Of course, modern methods are all against the old way of paying over the drink counter. Time is too short.

"At our main store, 187 Woodward avenue, we serve on the average 2,500 drinks a day. We are open winter and summer, day and night, never closed. Six men are employed at the fountain all the year

A LEADING MICHIGAN FOUNTAIN.

Soda Apparatus of the Central Drug Co., Detroit, in Their Woodward Avenue Store. A Bottle System Combined With the Wall Style. Said to Enjoy the Biggest Soda Business in the State.

round, and in the busy summer season we have eight. We believe it pays to hire the best men to be had. They are faster and more satisfactory in every way. They give the best returns.

SYSTEM AT THE FOUNTAIN.

"All the trend of the times is toward the 'front service' system, with all the drinks made in plain sight of the customer on the counter. In the old way the clerk turned his back on the patron to draw his syrup, dish out the ice cream and draw the carbonated water. Now the preference is for doing everything between the customer and the clerk. It is more artistic.

"We have the best of the old system and the best of the new. Our fountain is now of the latest sort; we have been improving on a number of different lines and have converted what is really an old-time fountain into one of the completest of up-to-date soda-water bars. The modern soda water being mixed as much as possible in plain sight, there is less and less use for the complicated fountain of the past with its multitude of flavor compartments, faucets, tubes and all the rest. The fountain of the day is more like the perfectly equipped hotel bar, with mirrors, decorations, shelves for showing fruits, preserves, branded cherries and other tempting adjuncts of the trade.

"Our fountain system, then, is the so-called 'bottle system,' combined with all the best qualities that the old style fountain possessed. Cleanliness and neatness are our aims. No one ever sees a box of squeezed lemons, a pail of eggshells or a pail of used straws being carried out from the counter. We have an innovation of some years' standing—two chutes through the floor leading to big galvanized iron cans in the basement, to which all refuse, including rubbish of all kinds, is dropped at once, leaving no litter about the fountain or under the counter. Considering our immense patronage and the speed with which the large force of men must work, our percentage of breakage is low.

"Our refrigeration is the most convenient possible—a big ice chest in the basement for reserve ice cream, preserves and fruits in syrup and so on. Alongside is an ice crusher and an ice shaver. Directly under the fountain in the basement is our own carbonator, working automatically and requiring practically no attention at all. Our fountain refrigeration combines the best qualities of compactness with efficiency, flavors, fruits, ice creams and carbonated water, mineral and aperient waters, ginger ale and all the other lines being ice cold, right at the clerks' hands.

"We make our own flavors, putting up fresh fruits in season in syrup, and making a practice of using as few flavors from the old fountain taps as possible. About the only old-time syrups we use are lemon, vanilla and orange.

THE FAVORITE DRINKS.

"The popular taste is a fickle one. Among our leaders is Burke's ginger ale, put up by ourselves. Our record for a single day is 2,000 pint bottles. Claret punch, mint freeze, egg lemonade, egg phosphate and other egg mixtures all have a great sale. Strange to say, the straight lemonade is one of the biggest sellers at all times. In summer we use as high as

300 lemons a day. One of our largest sellers is the egg chocolate, in which we use the powdered chocolate, though, personally, in chocolate drinks I prefer the chocolate syrup, believing that it lends itself to more delicate mixing than the powdered variety.

"One favorite, now in use the country over, was originated by us and is still a great seller 'Central Sundae.' This is a dish of ice cream with a syrup poured over, consisting of equal portions of ground English walnuts and pecans put up in syrup. It is one of the most delicious and refreshing compounds we have.

"Another popular one is 'Boston Deception'—a mixture of lemon juice, claret, the white of an egg and soda. Malted milk has a big sale, and the general complaint against its insolubility finds no echo among our men. They mix it readily and quickly by adding just the right amount of liquid to make a mixable paste. We have about a hundred cold drinks and some forty hot ones, many original with

W. H. BURKE.
President Central Drug Co.

ourselves. The cold weather leaders are hot lemonade, chocolate, bouillon, hot malted milk and egg noggs. The purest of everything and the best to be had are our never-failing mottoes.

"Our four stores are located as follows: Main store, 187 Woodward avenue; and at 291 Woodward avenue, 95-97 Woodward avenue, and 153-157 Grand River avenue."

W. H. Burke is president, R. L. Bailie secretary and N. A. Tabor treasurer of the Central Drug Co. We call attention to the portraits of two of them.

M. Canter, Fifth avenue and One Hundred and Thirty-third street, New York, has purchased the good will and interests of J. Liebman, who formerly conducted the store.

CALLING FOR ORDERS.

Details of a Route Signal System Inaugurated by S. V. B. Swann.

An ingenious trade-gaining plan has been put in operation by S. V. B. Swann, in connection with his pharmacy, 918 Sixth avenue, Manhattan. Its essential points are the regular rounds of a special messenger over a prescribed route in his district, twice a day. He watches for a prearranged signal that he is wanted and when he sees it, calls at the house to take the order. If a prescription is needed he immediately returns to the store. A special messenger then delivers the filled prescription as soon as possible, while the first returns to his route.

The signal itself is a card on which is printed a swan (the emblem of Swann's Pharmacy). It is to be placed in the window when there is a need for the messenger to obtain anything in the lines carried in the pharmacy. This card is therefore inconspicuous, although filling its purpose, and there is nothing on it to attract the undesired attention of a passing stranger, making the house an object of idle curiosity. The plan is designed especially for the benefit of servants who are often unable to leave the house, even to secure a needed article.

Mr. Swann does not claim the authorship of this scheme. He has simply adapted the idea of a western brother pharmacist to the needs of his own business.

GOOD PRACTICAL RESULTS.

So far the results have been moderately satisfactory. It is thought that as the workings of the system are better understood, those for whose benefit it is designed will more frequently use it.

To overcome the levity of some of the desired patrons, Mr. Swann issued a second circular letter, which we reproduce.

To the Maids and Butler of the House:
Last Monday we started a plan for your special benefit.

Some of you destroyed the cards, and others took the whole plan as a good joke and placing the cards in the lower window of the house, were very much surprised when our messenger called in answer, harshly believing that we meant what we said in reference to this plan being for your special benefit.

To those who have an idea that this plan was a joke, rid yourself of that idea at once—we mean business and when you become accustomed to this plan, you will be more than pleased at its working, and will quickly take advantage of it to secure many little things that you need from a drug store, even to a postage stamp.

Do you want a bottle of magnesia? Do you want a tooth brush? Do you want 5 two cent stamps? Do you want a bottle of patent medicine? Do you want a prescription compounded and cannot come out to have it compounded?

Well, you place the card in the window and see how quickly you will be served and with the same care and attention as if you were in the store yourself.

Remember that the messenger makes two (2) trips a day, leaving the store at 9:00 a. m. and 2 p. m., so if you place the card in the window after that time, the messenger will miss seeing it when passing through your street, and you will be disappointed.

SPONGE BUYING A SPECIALTY.

John N. Cobb, Agent of U. S. Fish Commission, on the Subject.

MOST BUYERS REPRESENTATIVES OF WHOLESALE HOUSES.—SOME INDEPENDENT BROKERS.—PROCESS OF CLEANING, BLEACHING, BALING AND SHIPPING SPONGES.—EVILS OF ADULTERATION QUITE GENERAL.—MOVEMENTS AGAINST THE PRACTICE.

The buying of sponges gathered by the Florida fishermen has developed into a business of considerable magnitude and one quite distinct from that of the gathering of sponges.

When the sponges are landed by the fishermen they have merely been roughly cleaned of the mud and dirt adhering to them, and it is necessary, before they can be placed on the market to thoroughly clean them of the remaining dirt, see that no foreign substances are inside the sponge and trim off the rough edges to give a symmetrical appearance. This work is done by the buyers, who have large warehouses at convenient places on the coast.

For many years Key West had almost a monopoly of this business, but in 1891 serious competition began at Tarpon Springs. Owing to the favorable situation of this latter place, the business here rapidly expanded until in 1900 it amounted to almost as much as Key West. The Spanish American war was a great help to Tarpon Springs, as the Key West vessels' captains avoided going to Key West with their cargoes, for fear of being captured by Spanish war vessels, and so were constrained to sell at Tarpon Springs. During 1899 and 1900 a few sponges were sold at Lemon City, on the east coast. Some of the "key" boats from the upper part of Biscayne Bay found it more convenient to sell to the one buyer there than

to make the long trip to Key West. The business did not thrive, however, as the spongers do not like to sell at a place where there is but one buyer, as they claim the lack of competition keeps the price down. None was sold at Lemon City after the spring of 1900.

REPRESENTATIVES AND INDEPENDENT BUYERS.

At Key West and Tarpon Springs all of the buyers except two—one at each place—represent New York, Philadelphia and St. Louis wholesale houses. The two independent buyers market their own catch. Each buyer has a warehouse where the sponges are dried, cleaned and baled ready for market. Some of these buildings are elaborate and costly structures, and a number of persons are employed at each in preparing the product. In 1900 the Key West establishments, which were valued at \$90,400, employed sixty-seven persons, whose wages amounted to \$25,973. At Tarpon Springs, in the same year, the sponge establishments were valued at \$9,332, and gave employment to fifty-seven persons, whose combined wages amounted to \$17,969. Property is much less valuable at Tarpon Springs than at Key West, which explains the great difference between the two places. The employees came under three classes, viz., "Clippers," who clip the sponges and sort them; the "pressmen," who bale the sponges, and the draymen and common laborers. The "clippers" are paid about \$1.50 per day, the "pressmen" about \$3 per day, and the draymen and laborers about \$1 per day. At Key West very few buyers own drays, preferring to hire them when needed.

Burlap, which costs about 10 cents per yard, delivered, and jute rope, with diameters of one fourth and three-eighths inch, worth about 7½ cents, delivered, are used in baling the sponges. Formerly sisal rope was employed, but as it was found that jute rope could be secured at a much lower price, and would answer the purpose, the latter is now used almost exclusively.

In baling, each kind is kept by itself.

For the general trade sheepswool sponges are packed in 15, 30 and 50-pound bales. The medium-size sponges are placed in the 15 and 30 pound bales and the large ones in the 50-pound bales. The yellow sponges are packed in 30, 40 and 50-pound bales; the medium size in the 30-pound bales, and the larger sizes in the 40 and 50-pound bales. The grass sponges are generally packed in 50-pound bales, while the velvet and glove sponges are packed in 30 and 50-pound bales. The above weights represent the net weight of the sponges in each bale. The burlaps, rope and twine usually add about 2 pounds to the net weight of each bale. Bales weighing differently from the above are also put up, but only for special orders. In baling the sponges, presses very much resembling cotton presses, are used. The screw is purchased, but the framework is erected and the screw adjusted at the warehouse.

"LOADING" SPONGES GENERAL.

The great evil in the sponge business at the present time is the loading of sponges. Sheepswool sponges are nearly all loaded, while occasionally lots of yellow and grass sponges are also adulterated in this way. The loading is done for the purpose of increasing the weight of the sponge. Rock salt, glucose, molasses, lead, gravel, sand and stones are the substances generally used. Most of the warehouses have water-tight bins, in which glucose or molasses, sand and rock salt are mixed together in water. According as more or less weight is desired, the quantity of certain of the ingredients is increased or decreased. The sponges are thoroughly soaked in this preparation and are then run through an ordinary clothes wringer, or laid on an inclined rack and allowed to drain into the bin. Some years ago the loading of sponges was quite common, and became such an evil in the trade that an agreement was made by the dealers that loading would be abandoned. This agreement was lived up to until within the last two or three years, when certain dealers resumed the practice. As the loading enabled the buyers to pay more for their sponges and still not increase the price to their customers, the buyers who had not taken it up were compelled to do so in self-defense. Most buyers would gladly abandon the loading if the agreement was made unanimous.

No sponges are bleached at the warehouses in Florida, this part of the business being done at the wholesale houses or by the jobbers in the trade. Small sheepswool sponges are quite generally bleached, as it gives them a better color. The bleaching of the yellow sponge, and the consequent great improvement in its hitherto poor color, has made it more attractive, and the increase in its value during the past year has been quite remarkable. Owing to the prevailing high prices for sheepswool, it is supplanting the latter for many purposes. In bleaching, lime and acids are used. This bleaching undoubtedly injures the sponges, and it weakens the fiber and considerably shortens the period of its usefulness. The spongers bleach a few sheepswool. They are usually washed in soapy water, and, after being covered with soapsuds, are hung up on poles on shore or on the mast of the boats. The action of the nightly dews and the sunlight in connection with the soapsuds bleaches them to a beautiful white or golden color, in one or

A SPONGE AUCTION AT ANCLOTE.

SPONGE AUCTION WHARF AT KEY WEST.

two weeks. This manner of bleaching preserves the fiber of the sponge intact, and it is as durable when bleached as before. These sponges are either given away by the spongers, or sold to the merchants in Key West, who sell them to tourists.

SOME STATISTICS.

The following figures show the condition of the sponge-buying business during 1900, and the rapid increase in the quantity of sponges bought at Tarpon Springs. In 1895 there were three buyers at this place and the total value of the sponges purchased amounted to \$60,000. In 1900 there were six buyers and their combined purchases amounted to \$278,550, an increase of three buyers and \$218,550 in value. In 1895 Key West had nine buyers, who purchased \$312,020 worth of sponges, while in 1900 there were eleven buyers, an increase of two, and the combined purchases amounted to \$289,135 in value, a decrease of \$31,869 in value. The decrease at Key West would undoubtedly have been greater had it not been for the exceptionally good catches on the "key grounds" during 1900. All the "key" sponges are sold at Key West and will likely continue so to be sold, as Tarpon Springs is too inaccessible for the "key" boats, but it is probable that in time, most, if not all, of the sponges from the "bay grounds" will be marketed at Tarpon Springs. Over two-thirds of them were so disposed in 1900.

The Treasury Department has granted a drawback on refined cod oil manufactured from imported crude oil, and on manufactures of cod oil manufactured from refined imported cod oil and domestic fish oil, by George H. Leonard & Co., of Boston.

NO DANGER, GOOD PROFIT.

A druggist writing to a contemporary journal, recently said:

"Never guarantee a hot-water bottle, however good. A druggist was practically ruined because a water bottle burst without any apparent cause and scalded a patient. Heavy damages were given in favor of the patient."

This is good food for thought, and is true. The best of hot-water bags are uncertain. But the difficulty and danger to customer and druggist can be avoided by handling something that will not burst in the first place, and could do not harm even if it did. Such an article is the Thermalite bag. It will not part at the seams, but if it did there would be no cause for alarm, as the contents is not hot water, but a harmless salt compound, imparting heat by the chemical process of crystallization, according to the well-known physical law of latent heat.

But the really wonderful thing about the Thermalite bag is the fact that it can be prepared for future use. Just boil it twenty minutes, let it cool, and then you can turn on the process of recrystallization of the liquid contents by merely removing the stopper and allowing air to come in contact with the liquid for a moment. In a couple of minutes the bag will give off heat at 136 degrees Fahrenheit and will maintain this temperature for many hours.

It is far ahead of the hot-water bag in the length of duration of the heat and in the quality of that heat, which is dryer, being of a chemical nature.

All druggists can sell the bag rapidly and can make a handsome profit, as the discounts allowed to the trade by the manufacturers from the reasonable retail prices is good. When writing to the

makers, the Thermalite Company, 161-165 Elm street, New York, please mention The Era. A formal notice from this firm will be found on another page.

MAYOR PARKILL'S JOKE.

A Sunday matinee performance of "Hooigan's Troubles" was billed at the Owosso Opera House recently, and Mayor Parkill, a prominent druggist of the town, ordered warrants issued for the members of the company should they appear on the stage. Shortly before the time for opening the house the members of the company concluded that they would not go on and the Mayor and police saw an opportunity for a good joke. They let it become noised about that a free performance would be given, and the result was a house crowded to the doors within 15 minutes. When the curtain went up the crowd was amazed to see the members of the Salvation Army Corps occupying the center of the stage, and when they began to sing a grand rush was made for the exits. The officers, however, blocked the way and insisted that as they had come to see a free show they should be courteous enough to remain. So the people remained through the services, and at the close contributions reaching a total of \$50 were made.

THEY ALL LOOKED ALIKE.

P. McCann—I didn't take yer medicine, docther.

Dr. Doseham—And why not?

P. McCann—Th' d'rections said, "Wan pill t'ree tolmes a day." I've been waitin' to ask yer whim pill? They all luk alike sure—an' how'll I take ut t'ree tolmes? —Cleveland Leader.

MEDICINAL PLANTS.

Professor Albert Schneider Writes
On Their Cultivation.*

RESULTS OF EXPERIENCE IN THIS WORK IN CALIFORNIA—CLIMATE OF THAT STATE ESPECIALLY SUITABLE FOR THE PURPOSE.—WHAT DRUGS MAY BE COLLECTED PROFITABLY.—GROWERS SHOULD GIVE ALL THEIR TIME TO THIS BUSINESS ALONE TO MAKE IT PROFITABLE.

INTRODUCTION.

The United States pays out about eighteen million dollars annually for imported drugs. Some of these are from tropical countries and cannot be grown within the bounds of our native country, but the majority of plants used in medicine which have been imported heretofore may be cultivated without any difficulty whatever. Furthermore, there is a steadily increasing shortage of such wild-growing native medicinal plants as are collected at home. Sooner or later these must be cultivated to prevent extermination or stringent penalty.

That medicinal plants may be grown profitably has been proven by the several isolated attempts in widely separate areas of the United States. The following suggestions are intended to serve as a stim ulus as well as a guide to those interested in the cultivation of medicinal plants, primarily in California, also in other States.

Within recent time the pharmaceutical press has had much to say regarding the scarcity of certain native drugs, as hydragristis, senega and others. Some anxiety begins to arise concerning the future supply of cascara bark. These facts coupled with inquiries received regarding suggestions on the cultivation of medicinal plants in California have prompted these papers.

PREFATORY.

The present tendency in medical and pharmaceutical botany is toward greater simplification. The variety of plants now used medicinally is but a small percentage of those which have been used in the past, and the process of "weeding out" is still going on, as is shown by the fact that in the forthcoming United States Pharmacopœia about forty crude vegetable drugs will be excluded while only three or four new ones are to be admitted. This process of reducing the number of vegetable drugs does, however, not imply that the work of studying new and old medicinal plants is correspondingly lessened or simplified. Rather the reverse is true. Botanists, chemists, physiologists and pharmacologists must extend their investigations into fields still unknown or imperfectly understood. There is, for example, much uncertainty as to the identity, origin and physiologic action of many long-used vegetable drugs, as the sarsaparillas, the cinnamons, the rhubarbs, cacti, the cinchonas, coto barks and others. Many of the newer medicinal

plants require further study, and many of the so-called poisonous plants will no doubt prove very efficacious medicinally. There are undoubtedly in existence many new and therapeutically unknown plants which future investigators will place to the use of medical practice. The medicinal use of drugs, vegetables and others is based largely upon empiricism, and no one can state definitely what the future scientific progress in medicine may develop. Recent bacteriological research has completely revolutionized certain phases in the treatment of diseases, and it is highly probable that the present use of drugs will be changed completely or even discontinued in the future. But in accordance with our knowledge of things it is an obligatory duty to study vegetable drugs as thoroughly as possible, in order that the best results may follow their use in disease. The study of known and unknown medicinal plants would be greatly advanced by the establishment of experimental gardens of medicinal plants scientifically conducted. Such gardens have been in active operation for centuries in Europe, and effective efforts in this direction are now being made in various parts of the United States. The United States Department of Agriculture is now maturing plans to establish a large experimental seed garden at Chico, California, in which are to be grown economic plants (including medicinal plants) of all kinds, and the seeds of these plants will be sent to all parts of the United States with a view to finding localities suitable for their profitable cultivation. A garden of medicinal plants has been established at Golden Gate Park, San Francisco, in which about five hundred species are now under cultivation, and further additions are to be made each year. Many medicinal plants are also grown in the University gardens at Berkeley, California. Many foreign medicinal plants have been introduced into California by private individuals, and a number of private economic and pleasure gardens are still in existence in various parts of the State. Gardens of medicinal plants are to be established at New York (New York Botanical Garden), Philadelphia and at the Indiana State University. In addition there are gardens of medicinal plants operated in connection with the following colleges of pharmacy: Scio College, Department of Pharmacy; University of Michigan, School of Pharmacy; Purdue University, School of Pharmacy; Brooklyn College of Pharmacy; St. Louis College of Pharmacy, and perhaps several others of whose existence the writer is not aware. All of these beginnings when more fully developed and in full operation, will be important factors in perfecting our knowledge of the cultivation, constituent properties and uses of the medicinal plants, native and introduced, of the United States.

FLORA AND CLIMATIC CONDITIONS OF CALIFORNIA.

California is a large, mountainous State, and has a wide latitudinal and altitudinal range. Along the entire coast the temperature is kept quite uniformly mild by the Gulf Stream. Thunder-storms and cyclones are unknown. The trade winds blow in one direction for about eight months of the year. Snow is formed on top of the mountains. There are two sharply contrasted wet and dry seasons.

In and about San Francisco there are about three months of heavy rains, namely, January, February and March, with a few rains in December and April. From about the 1st of May to the close of November there is no rainfall worthy of mention. Toward the north from San Francisco the period of rainfall is increased; toward the south it is decreased. At Los Angeles and south the rainfall is much less and irrigation is necessary to insure crops. The persistent "high fogs" during the months of July and August are a peculiar feature. These fogs come in from the Pacific Ocean and cause the temperature to fall considerably, so that it is unpleasantly raw and chilly, demanding the use of a light overcoat for outdoor wear and a fire in the grate to make the interior comfortable. Some natives declare that July and August are the coldest months of the year. This is, however, not true. In January and February there are several white frosts, occasionally forming very thin ice over mud puddles and very small pools.

The climate of the interior of the State is very variable, according to locality, differing from the immediate coast belt of approximately the same latitude and altitude in that the winters are colder and the summers hotter. The rainfall is variable. There may be snow in the winter, and in many localities there are thunder-storms and electrical displays. The trade winds are not so appreciable.

Local variations in meteorological conditions are remarkable, a distance of from ten to thirty miles showing great differences in temperature, number of foggy, cloudy and cold days, annual rainfall, daily and nightly variations in temperature, etc. There may be a dense, cold fog in a given limited area while a locality half a mile distant may be very warm with the brightest sunshine. This is to be expected in consideration of the altitudinal variations, alternation of hill ranges and valleys, intercession of higher peaks, river valleys, etc. The new arrival in the State is forcibly impressed by the browned hillsides during the summer months and the emerald verdure during the winter. Grasses and annuals generally die as soon as the dry season sets in.

Even more impressive will be expected from such a peculiar climate. In the middle and even in the northern portions of the State along the coast, and in the valley interior the vegetation has a tropical aspect, due to the palms, cycads, yuccas, aloes, century plants, magnolias, figs, banana plants, lemons, oranges, olives, oranges, paw paw (papaya) and other plants which are not found in the open in the central, eastern and northern United States. This is surprising because of the prevailing coolness (not coldness) of the atmosphere. Wild oats, wild rye and other grasses are common and cause the prompt green coloration of hillsides within a few weeks after the first rains fall in the autumn. Among the native trees are the incomparable giant sequoias, the tall pines and the enormous gnarled oaks. The multitude of varieties of introduced eucalypti and acacias form the striking feature of the California flora. Many remarkable foreign plants have become well established, as the ginkgos, casuarinas, tree ferns, araucarias, palms,

*Reprinted from the San Francisco and Pacific Druggist.

cycads, pepper trees and others. Plants which in the East are known only as small herbs assume tree-like proportions, as the hydrangeas, fuchias, geraniums, the lemon verbenas and others. Evergreen trees predominate, though such deciduous trees as the cherry, apple, plum, poplar, maple, walnut, hickory and many others do well and are extensively cultivated. Most of the subtropical plants are from Australia, southern Europe and Mexico; many are now being introduced from the Philippines. Some are from South America, the West Indies, Italy and Spain, with stragglers from other tropical and subtropical countries. Under cultivation, with suitable soil and drainage, the vegetation grows with remarkable rapidity and luxuriance. Some plants will not thrive well because of the prevailing cool nights, as Indian corn, cotton and sugar cane.

With a flora so remarkable and varied it is reasonable to expect the presence of a comparatively large number of plants which have or may have medicinal value. This will be borne out by the list of medicinal plants reported from the State. Many of these require further careful study with regard to active constituents and physiological activity. Aromatic, fragrant and spicy fruits, trees, grasses and herbs are abundant. The medicinal uses of many have been learned through the Indians, early Spanish missionaries and settlers. Sooner or later it will become necessary to establish plantations and cultivate the more common and useful medicinal plants, as, for example, the rhama, in order to prevent their extermination by the collectors.

CALIFORNIA DEALERS IN VEGETABLE DRUGS.

In order to ascertain certain facts with regard to the commerce in California vegetable drugs, a letter was addressed to the leading wholesale drug houses in San Francisco, asking for a list of vegetable drugs which were obtained from the State. Prompt replies were received, and with one exception the following are the drugs secured from the State and which were offered for sale at regular market value: *Cascara sagrada*, *Yerba santa*, *Yerba buena*, *Berberis aquifolium*, *Grindelia robusta*, *Angelica root*, *Absinthium*, *Marrubium* and *Eucalyptus* leaves. The one exception was the F. A. Weck Co., who gave a much longer list.

The information gained was somewhat surprising: on the one hand, because not more drugs were secured from the State, and, secondly, because the Weck Co. supplied comparatively such a large number from the State. From several interviews with Mr. F. A. Weck it was ascertained that the maintenance of such a list was uncertain for several reasons. The principal one was high American labor versus cheap European labor. A crude vegetable drug (with exceptions) can be imported at less cost than it can be secured at home. Mr. Weck is a very keen observer and has made a special study of the vegetable drug resources of the State and what vegetable drugs may be secured and collected with profit. His usual plan was first to find out what crude drug or drugs were wanted and then to find men who would sign a contract to collect, cure and deliver to him the desired quantity of the

drug at a stipulated price. In many instances these contracts were signed with parties living in the region where the drug-yielding plants were abundant. Thus carload lots of cascara bark have been supplied through him to Eastern and foreign manufacturing houses. He encountered many difficulties with collectors. For example, one collector, in whom the commercial instinct was evidently highly developed, signed a contract to supply a certain amount of crude California vegetable at a stipulated price. Mr. Weck found out afterwards that the man had simply secured the drug (procured from Europe) from another wholesale drug house a few blocks away and made a fair profit in the remarkable transaction.

The general conclusions which may be deduced from these conversations with Mr. Weck are as follows: The wholesale dealers as well as wholesale manufacturers give little attention to the source of the drug, manner of collecting, drying, etc. They desire a clean, neat-looking article at the very lowest figure. If an English house can supply digitalis leaves, hoarhound, and mint more cheaply than a California house, then these articles will be imported, even though they may have been rendered comparatively inert through careless packing, storing, age, etc. A San Francisco house will import hoarhound from England, though oat commodity is a common weed throughout the State. It appears that in order that a drug may be profitably procured in the United States there must first be a large and reliably constant demand and the drug must be collected on a large scale with the aid of suitable mechanical appliances and machinery. Collecting on a small scale is not profitable. Drying must be done in the open and the drug shipped in bulk, in boxes or barrels. To illustrate: In order to make the marketing of black and white mustard profitable, it must be grown in extensive fields, cut by means of a mowing machine before the pods are fully ripe, allowed to dry partially, like hay, raked in heaps by means of a horse and rake, and then the seeds falled out by means of a flail or threshed out by machinery. *Eridictyon californicum* plants are cut down, dried, and the leaves removed by flailing, which accounts for their broken condition.

(To be Continued)

The Board of General Appraisers has decided that nitro-oaphthalin imported at New York by Hensel Bruckmann & Lorbacher, should be classified as a coal-tar preparation, not a color dye and not medicinal. Another decision was that "concrete Iris de Florence extra" and "resinoide d'Iris," imported by E. H. Burr, at New York, were dutiable as essential oils and were not free as emulsiage grease.

Empty cigar boxes on which the stamp has been destroyed, in the hands of dealers, may be used for display purposes, but the factory brand and caution notice must also be destroyed if the dealer wishes to sell or give such boxes away. This is the most recent announcement of the Treasury Department.

APPRAISERS' DECISIONS.

Amyl Acetate.

Eimer & Amend invoiced an importation as "fluid for Hefner-Alteneck lamp." The Board found it consisted of pure amyl acetate, and so held it dutiable as a fruit ether.

Maitrank Essence.

Maitrank essence, a fluid containing no alcohol and used as a wine flavor, and so-called "bielefelder tropfen," an alcoholic medicinal preparation, were imported by Wakem & McLaughlin, at Chicago. They were claimed to fall under the provisions for spirituous articles and the reciprocal agreement with Germany, but the Board denied the claim.

Sandalwood Chips Crude Drugs.

The Board of General Appraisers has decided that sandalwood chips, the waste product in felling the tree, which are chiefly used in the distillation of oil of sandalwood, are free of duty as a crude nonedible drug. Thirty bales of these chips had been imported by J. L. Hopkins & Co., and had been assessed at 20 per cent. ad valorem as unmanufactured wood.

Toilet Sets.

Boxes containing toilet sets composed of hair brush, powder puff, powder box, etc., which were imported by W. L. Strauss & Co., were claimed by them to be dutiable under the provision for brushes but they were overruled by the Board.

Resorcin Medicinal Preparation.

The Board has again decided that resorcin is a medicinal preparation. This time the importers were Sykes & Street, of New York.

Salts of Cinchona Bark Free.

The following articles, imported by G. W. Sheldon & Co. at New York, were held to be free of duty as salts of cinchona bark: valerianate of quinine, bromide of quinine, salicylate of quinine, quinine hypophosphoric, sulphate of quiniadimuriate of quinine, tartrate of quinine, and quinine hypophosphite.

Baryta-Coated Paper.

Baryta-coated paper for photographic purposes, imported by Paul Puttmann, at New York, was held dutiable under paragraph 398 relating to paper surface coated for photographic purposes.

Surgeons' Silk, Twisted.

The Board sustained the protest of the Kny Scheerer Company that certain twisted surgeons' silk which they had imported should be assessed for duty as "silk threads of every description."

Beveled Microscope Slides.

Some of these imported by Eimer & Amend at New York, were held by the Board to have been properly subjected to an additional duty as beveled glass.

Thermometers.

Thermometers imported at New York by Geo. Borgfeldt & Co., and claimed by them to be dutiable as manufactures of wood, glass, or metal, were held dutiable as decorated glassware.

Surgical Needles.

The Board has again decided, this time in the case of an importation by Truax, Greene & Co., at Chicago, that surgical needles are dutiable at 25 per cent. ad valorem, and are not free as hand sewing needles.

Enfleurage Grease.

In the case of the lily of the valley pomade, or mugnet pomade, imported by George Lueders & Co., at New York, the Board decided that it is a combination of essential oils and is dutiable at 25 per cent. The importers claimed it free under paragraph 626, or dutiable at only 10 or 20 per cent., under section 6. From testimony the Board decided that enfleurage pomade mugnet is not the floral product of the lily of the valley, as its name would indicate, but a combination of six different floral products with an essential oil. Indeed, a member of the protesting firm stated, "Mugnet pomade is made by a combination of four or five different odors of the different pomades, such as rose, jasmine, etc., in addition to two or three essential oils, to fortify and combine the odor." It further appears that "mugnet" is the French name for lily of the valley, and that this flower is not grown in sufficient quantities to manufacture an enfleurage pomade directly therefrom.

Pumice Stone.

The Board held certain powdered pumice stone and some in lumps, imported by Amerman & Patterson, at New York, to have been properly classified as manufactured pumice stone.

Coumarin Synthetic.

An importation of George Lueder & Co., at New York, of coumarin synthetic, was held dutiable as a coal-tar preparation, not a color or dye, and not medicinal as claimed by the importers.

Karl Schnackenberg, of 437 Amsterdam avenue, New York, has been so annoyed at the loss of small articles from the top of his show cases that he has erected a glass fence on their outer edges. It has the same oak trimmings and appears to be an integral part of the show case proper. Through it one has a clear view into the cases and of all articles exposed for sale on the top, but it is too high to admit of anyone reaching over it. Another feature in his pharmacy is the use of two small notices in picture frames hung in the telephone booth. These are short typewritten letters calling attention to special goods offered or changes of price, etc. The party awaiting the call naturally reads these.

A WELCH GRAPE JUICE WINDOW.

It requires considerable skill to trim a window, and especially a drug store window. When a window is dressed so that it attracts extraordinary attention, then there is no harm in speaking about it; at least that is what David Neer, manager of Neer's drug store at the corner of Broadway and Bridge street, Paterson, N. J., says. Welch's grape juice is the subject matter, and lovers of the art of window dressing should view Neer's big Broadway window.

BUSINESS RECORD.

ALABAMA.
Birmingham.—Fifth Ave. Pharmacy, 2531 5th Ave., new store.
Dothan.—Brown & Hawk, succeed W. L. Brown.

ARKANSAS.
Horatio.—Frank Cooksey, succeeds N. J. Strange.

WEST VIRGINIA.
Wheeling.—McLain's Drug Store, succeeds McLain & Yahn.

WISCONSIN.
Barron.—N. J. Gillette, succeeds F. S. Noble.

A PURE ALE.

For many years the standard which has made Evans' Ale popular, not only for use in medical cases, but also for general consumption, is its purity. Its reputation in this respect has earned for it commendation from ale sellers and consumers everywhere. In the sick room it is a recognized strength giver, and one of incalculable benefit to the convalescent. The further claim is made that Evans' Ale never gets cloudy, which is in itself the strongest proof of its purity and of the care with which it is brewed. Evans' Ale and Stout have been used by the United States Public Health and Marine Hospital service for years. Elsewhere in The Era attention is called to the merits of this ale.

Ernest A. Denicke, pharmacist, corner Tenth street and Second avenue, New York, has sailed for Europe, where he expects to remain for some time. The pharmacy is left in the hands of the senior prescription clerk.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued May 2, 1905.

- 788,527—Homer A. Everest, Mattapoisett, Mass. Non-refillable bottle.
- 788,557—Carl A. Shalstrom, Ottawa, Canada. Electrical ozonizer.
- 788,588—John E. Miranda, Cincinnati, O. Ice-cream mold.
- 788,631—Marcel Couleru, Geneva, Switzerland. Manufacture of chlorates and perchlorates.
- 788,639—Moritz Forst and Jacob Armand, New York, N. Y. Non-refillable bottle.
- 788,644—John G. Hayes, Argenta, Ark. Non-refillable bottle.
- 788,681—Frank C. H. Strasburger, Chicago, Ill., assignor to the Bottlers' Special Machinery Co., Chicago, Ill., a corporation of Illinois. Filling-machine.

DON'T BE CAUGHT NAPPING.

The demand among retail druggists for Abbott's Saline Laxative and Abbott's Salithia is growing rapidly in every part of the United States. This increase is due not only to the persistence of the manufacturers in bringing their products before the medical press, but also to the well known merit of the goods which has so widely popularized them among the doctors. The demand for both Saline Laxative and Salithia is greatest during the summer months, as they are ideal summer remedies. No retail druggist should be without a stock, as there will surely be a large call this season.

The Abbott Alkaloidal Co., of Chicago, have recently enlarged their manufacturing facilities so that all orders may be fully and promptly supplied. Retail druggists may obtain Saline Laxative or Salithia from their jobbers.

GRISERIN.

Griserin is a new remedy imported from Germany, where it has been successfully employed in the treatment of germ diseases, notably tuberculosis, cancer and syphilis. It is claimed to be absolutely non-toxic when introduced into the human economy, and is a powerful germicide and bacillicide. It is a specific for the diseases named, and is used for internal administration or local application. The proprietors of the Americau rights, whose advertisement appears on another page, have great faith in the virtues of Griserin, and they express the belief that 90 per cent. of the physicians of the country will be prescribing it within a year. Griserin is being widely advertised to physicians, and retail druggists should be prepared for the demand by putting it in stock. See the advertisement of the American Griserin Works on another page for particulars.

S. Elk, 1435 Fifth avenue, New York, has sold his business to B. Block, who will continue at the same stand.

MARKET REPORT

MANY SMALL CHANGES.

**BAY RUM AND MAGNESIA UP;
COD LIVER OIL LOWER.**

FEW FEATURES OF INTEREST.—AT FIRST OF WEEK DEMAND WAS GOOD, BUT HAS NOW BECOME ONLY MODERATE AGAIN.—STAPLES HOLD, BUT ARE QUIET.—SOME EASINESS FEARED IN QUININE, BUT NO DECLINE REALLY EXPECTED.

New York, May 8.—At first hands the week has been quiet and rather featureless, the only occurrences of much interest being advances in magnesia and bay rum, and a decline in bergamot oil. But jobbing prices have undergone an unusually large number of changes, mostly readjustments to meet altered wholesale conditions previously mentioned in these reports. By far the greater number of these alterations are declines, but neither they nor the few advances registered are radical or indeed very important. These alterations are most frequent at the commencement of a month. At such a period, too, the buying of consumers is of greater volume, owing to the tendency of retailers to curtail orders toward the close of any month. Therefore, the demand was pretty good the first part of the past seven days, but has now dwindled to moderate proportions, as this accumulation of needs spent its force.

Conditions are generally healthy. No new features have developed in the bromine situation, while all the leading staples remain steady but quiet, with an easier tendency noticeable in quinine.

OPUM.—Dullness continues in this market, and the wholesale price for cases has eased to \$2.87½, because of competition and lack of demand. Foreign influences continue bullish, it being estimated in Smyrna that the crop of that region will not exceed 4,000 cases. With jobbers the situation is unaltered, a moderate movement of goods into consumption continuing. Their prices are unchanged at \$3.00@3.20 for nine per cent., and \$3.10@3.30 for eleven and thirteen per cent.; powdered remains unchanged at \$3.85@4.10 for thirteen per cent. and \$4.00@4.85 for sixteen per cent.

MORPHINE SULPHATE.—Nothing new to report. A moderate demand and unchanged jobbing prices of \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 in ounce vials, and \$2.25½@2.35 in 5-oz. tins, according to brand or quality.

QUININE SULPHATE.—The result of the Amsterdam auction on May 4 was a decline to a unit below the level of 6 Dutch cents for the first time in several years. The actual figure was 5.95 Dutch cents, against 6.30 realized at the previous sale. The cause was large offerings and a lack of interest on the part of buyers. Cables from

London report that manufacturers have reduced prices to 11d., but as second hands there had been underselling this figure for some time the effect generally was small. Some have looked for a decline here as the result of these influences, but both wholesale and jobbing prices remain unchanged, the latter being 2½@2½¢ for bulk in 100-oz. tins, 2½@2½¢ in 50-oz. tins, 2½@2½¢ in 25-oz. tins, 2½@2½¢ in 15 or 10-oz. tins, and 2½@2½¢ in ounce vials, according to brand and amount.

BAY RUM.—Prices have risen. The recent strikes in Porto Rico have interfered with production to such an extent that real scarcity has been evident. The Porto Rican market has advanced and ours follows. New jobbing prices for Porto Rican are: Barrels, gal., \$2.25@2.30; less gal., \$2.50@2.75.

MAGNESIA.—Manufacturers have advanced prices sharply, and jobbing prices have risen in unison. They are as follows: Calcined, light, 55@60c.; heavy, 55@60c.; carbonate, in ounces, 22@25c. in 2-oz. squares, 20@23c., 4-oz. squares 19@22c., small squares 18@20c.; powdered in barrels, 15@15½c., in kegs 16@16½c., and in 1-lb. cartons 20@25c., all per pound.

ESERINE.—Following the advance announced last week by manufacturers, jobbers have raised their quotations to the following: Pure crystals in 5-gr. vials, 13@14c. per grain; sulphate in 5-gr. vials, 13@14c., and salicylate in 5-gr. vials, 15@16c. per grain.

ANTROPINE.—Last week's advance of manufacturers' prices has now passed on to jobbers, whose quotations have risen to this schedule: \$6.00@6.25 per ounce, \$6.20@6.45 per ounce in ½-oz. vials; sulphate, \$5.15@5.40 per ounce, and \$5.35@5.50 in ½-oz. vials, per ounce.

OIL PEPPERMINT.—Further weakness has developed owing to the pressure of supplies offered by producers. Latest jobbing prices are down to \$4.00@4.25 for distilled and H. G. H.; \$3.75@4.00 for Wayne Co., and \$3.65@3.90 for western.

COD LIVER OIL.—This article is quite neglected by buyers, and as the prospects for a large new production are bright, holders are willing to cut prices to move stocks. Jobbers have followed, reducing their quotations to the following for Norwegian: \$33.00@34.00 per barrel, \$1.50@1.60 per gallon in 5-gal. tins (containers inclusive), and \$1.50@1.75 per gallon for smaller quantities (containers extra).

CALCIUM CHLORIDE.—The increased cost of production caused an advance some time ago at wholesale, and jobbing prices now also rise, the new figures being 2¼@2½c. per pound in barrels, and 4@6c. per pound in smaller quantities.

ACTONE.—This is very firm, the recent advance in acetate of lime making manufacturers indifferent sellers. Jobbing prices have risen to 30@35c. per pound.

CRAMP BARK.—As demand has been only moderate, jobbers have reduced prices to 25@30c. per pound.

SANTONINE.—Wholesalers have reduced the margin between crystals and powdered to 20c. instead of 40c., as formerly. The general tone of the market is, however, firm, and the effect of the recent upward movement at first hands has just affected jobbing values, which have risen to \$10.00@10.25 per pound, and 75@80c. per

ounce; powdered, \$10.40@10.65 per pound, and 80@85c. per ounce.

BERGAMOT OIL.—A sharp decline has occurred because of lower foreign markets. Jobbers now quote \$2.30@2.55 per pound; second grade, \$2.10@2.30 per pound.

AMERICAN SAFFRON.—Owing to the approach of the new crop and lack of demand, values are weakening all along the line. Lower jobbing quotations are, however, unchanged.

OIL OF CLOVES.—The value of the spice in primary markets still moving upward. Jobbing prices are also up, being 88@95c. per pound.

PRICKLY ASH BARK.—Lack of demand lowers jobbing figures to 28@33c. for the whole per pound, and 33@38c. for powdered.

GINGER.—The East Indian has been raised by jobbers to 10@13c. per pound because of good demand.

GOLDEN SEAL ROOT.—The advent of the spring-dug continues to weaken values, and under more liberal offerings prices have declined, jobbers quoting \$1.85@2.00 for the whole, \$1.90@2.10 for ground, and \$1.95@2.10 for powdered, all per pound.

SPIRITS TURPENTINE.—Following the course of the wholesale market jobbing values have dropped to 64@65c. per gallon in barrels, and 70@75c. per gallon in smaller lots.

LINSEED OIL.—Owing to the increased cost of raw material the market is higher, and jobbers now ask 51@52c. per gallon in barrels, and 60@65c. in smaller lots; boiled, 53@54c. in barrels, and 65@70c. per gallon in smaller quantity.

PENTROYAL OIL.—Recent jobbing prices were rather too high, and so have been lowered to \$1.40@1.50 per pound.

THE HYPOPHOSPHITES.—Latest jobbing quotations are as follows: Iron and manganese, \$1.35@1.50, and sodium and potassium 75@80c. per pound.

SERPENTARIA ROOT.—Values have risen because of light stocks. Jobbers now quote whole, 55@60c., ground 58@62c., powdered 60@65c. per pound.

SEEDS.—Slight revisions leave jobbing prices of maw and millet 8@10c. and 2¼@2½c. per pound, the latter in bag lots; for less quantities it is 5@7c. per pound.

JAPAN WAX.—Heavy arrivals from abroad are not rapidly absorbed. Jobbers have lowered prices to 14@15c. per pound.

ESSENTIAL OILS.—Anise and lemon, have declined. The former is \$1.50@1.65 per pound. Lemon is quoted by jobbers 95c.@81.05 in 1-lb. bottles, \$1.05@1.15 in 1-lb. coppers, and 95c.@81.05 in 5-lb. coppers, all per pound. Spearmint is now up to \$5.50@5.75; wormwood has advanced to \$4.25@4.50 for pure, and \$4.00@4.25 for ordinary, per pound.

CONCENTRATED SPIRIT OF NITRE.—Jobbers have reduced their prices to 80c. per pound, 90c. in halves, and \$1.00 in quarters, all per pound.

Five business men of Ramona, Cal., have filed claims to a large deposit of sulphur in the old crater of an extinct volcano located in the desert near the line of the San Diego Eastern survey. Samples of the product are reported to assay 55 to 60 per cent. sulphur, which is so impregnated that it will take fire readily.

EDITORIAL COMMENT

Dr. Rusby's Remarks.

The remarks of Dr. Rusby, before the Chemists' Club, of this city, printed in this issue of The Era, bring out forcefully some of the phases presented in the discussion of the pharmacist's responsibility for the materials he may sell. Legal enactments hold the latter responsible, but Dr. Rusby would have the producer or manufacturer assume his share in this responsibility. In such a case the common law doctrine of "*caveat emptor*" would become "*caveat venditor*" a reversal of the legal maxim, so far as the manufacturer is concerned. If it be a physical impossibility for the retail druggist to test all of the commodities supplied over his counter, then he must of necessity rely upon the manufacturer to furnish him preparations which conform to official standards. Carrying this analysis to its logical conclusion, the State, in the exercise of its police power to preserve the health of its citizens, has the right to demand of the manufacturer, as of the pharmacist, qualifications that will enable him "to warrant that he will deliver the drugs called for and purchased by his customer." Further, there are the responsibilities to be considered, and the manufacturer should not escape them. Shall he be held responsible to the pharmacist and be compelled to qualify himself or to employ those who are so qualified to attend to his business for him?

Higher Education.

In looking over college catalogues, one cannot fail to note the tendency of the times towards higher education in pharmacy. Twenty-five years ago there was almost no post-graduate study carried on in this country. To-day, it is a marked feature in a majority of the colleges, particularly in the university schools. This advancement has been gradual and the end is not yet. Pharmacists are not necessarily required to become erudite scholars, but they must be men of scientific training and men-

tal equipment sufficient to hold their own in the race for either professional or commercial success. The advanced student need not go abroad to round out his college work in these days.

The Idaho Pharmacy Law.

The pharmacists of Idaho are to be congratulated, for they have at last succeeded in obtaining a new pharmacy law which does away with the former county commissioners, the enforcement of the law and the examination of applicants for registration being placed in the hands of an all-State board of pharmacy.

The new law became operative on the 7th inst., and, in the words of the secretary of the new board, Mr. L. W. Smith, "it is very mild in form to meet the requirements of a new State with so much mountainous country to cover." Its provisions are very liberal with those who would sell drugs in rural districts, for there are many places in the State that are from fifty to one hundred miles from a well-conducted pharmacy. Without this liberality, it is doubtful whether the pharmacists of Idaho could have secured any legislation whatsoever. But with the passage of the act a distinct advance has been made and its enforcement will be sure to bring to the surface its weak spots and also will give those back of the law an opportunity to secure further amendments such as experience shall prove are needed.

As under the former law, two grades of licentiates are provided for—pharmacists and assistant pharmacists. The former, besides possessing the necessary educational qualifications, to be determined by examination, must be not less than twenty-one years of age, and must have had four years' practical experience in pharmacy, under a licensed pharmacist. Assistants must be not less than eighteen years of age, and besides passing the required examinations, are required to have had two years' practical experience. Actual attendance at colleges up to two years is credited to the requirements for practical experience. The board is also given power to register applicants without examinations, who are registered in other States or who are graduates of reputable schools requiring not less than a three years' course. Those now

in business are permitted to register without examination and annual re-registration is made compulsory.

Proprietaries in Idaho.

One provision of the Idaho Pharmacy law which stands out rather prominently is the permission given to anyone to "sell patent or proprietary preparations which do not contain poisonous ingredients." What constitutes a "poisonous ingredient" is not specifically defined, but there are those who hold that the provisions will cover those drugs named as poisons in another part of the act, viz., arsenic, corrosive sublimate, hydrocyanic acid, opium, morphine, strychnine, cocaine, aconite or any preparations thereof. On the other hand there will be those who claim that poisons *per se* are not poisonous when administered in medicinal doses as they usually are in proprietary preparations.

These considerations are further accentuated by another paragraph in the law which states that "the Board shall have the power to examine any patent or proprietary medicine and condemn same, in case it is found to contain deleterious matter, which might produce an effect other than that claimed for such patent or proprietary medicine." To carry out fully an investigation of this sort, would require talent of a high order, and such as could be only rendered jointly by the professional chemist and physician. It is probable that the pharmacists of Idaho have no intention of starting out on an investigation of this character, but the enforcement of this part of their law will be watched with interest, not only by the pharmacists of other States, but by proprietary manufacturers generally. And who knows but that this provision of the law may help to restrict the sale of proprietary remedies to their legitimate distributor, the retail druggist.

Two Kinds of Enemies.

Dr. Wm. C. Alpers, in trying to signalize his election to the presidency of the Manhattan Pharmaceutical Association by a strong effort to drum up better attendance at meetings, makes use of a simile that may well furnish food for thought. In a circular letter to all the members, he makes this statement:

"Let me draw a comparison. In trying to reach a certain point at a given time, you are compelled to walk fast on a crowded street. You can easily dodge those that face you, you see where they go and they see you coming. But those that walk leisurely in the same direction without interest and aim, are a hindrance; they shift from one side of the walk to the other, you cannot dodge them, they are con-

stantly in your way, they impede your progress. Thus it is in the fight for the advancement of our profession. Those that openly oppose us, we can fight or dodge. But the dull, indifferent ones, who profess to be with us, but who are by their wavering and indecision, always in our way, are the ones that hamper our progress."

Dr. Alpers might have added another class who impede progress—those who hold on to the coat tails of others and allow themselves to be dragged along, doing absolutely nothing to help themselves. If Dr. Alpers' appeal cannot stir the members of the Manhattan Association to a sense of their duty, then they are indeed in a sad condition.

The Scarcity of Good Clerks.

There has been much complaint of late concerning the scarcity of good drug clerks. Alas, like the poor, this scarcity is always with us. And under present conditions, there seems little possibility of its lessening.

Few will deny that when it comes right down to the real reason why less young men are entering clerical positions in the drug business, the reason is found to be poor pay. There are so many other lines of commercial activity open to a young man which carry larger financial rewards, that it is not very remarkable he prefers them to pharmacy, with its long apprenticeship and ever-enduring long hours. These latter features, however, would be forgotten were the dollars in his pocket Saturday night more numerous.

There seems no immediate remedy for such evils. They are the unfortunate results of the natural peculiarities of the business itself. Most pharmacists are willing to pay a good clerk just as much as they can afford. But the profits of the business do not permit large salaries. The remedy will undoubtedly be developed in the course of time along the lines of greater educational requirements, lessening competition, modern methods, and the raising of prices to a fair level of profit.

In another column a drug clerk offers some reflections on his experiences. One of his main points is that good clerks are scarce because good clerks soon become proprietors, and by so doing, not only lessen the number of good clerks, but also increase the demand for them, as they themselves at once need employes.

One Formula Bill Gone.

The bill until recently before the Wisconsin Legislature, to compel the publication of formulas on the labels of proprietaries, has departed. Word comes from that State that the bill is dead, and that there is no possibility of further attempts at similar legisla-

tion this session. While there were many druggists and manufacturers who held that the publication of the formulas could not interfere with the sale of a remedy of merit, the majority were opposed to the passage of the bill, so that its death may be generally hailed with satisfaction. It appears that one of the most effectual clubs used on the measure by the trade was the argument that there was already on the statute books of Wisconsin, a bill fallen into disuse, the provisions of which, if enforced, were ample to cover and punish prohibitively the sale of preparations which contained a dangerous amount of possibly harmful ingredients without a due notice of warning to the consumer as to their real nature.

More Newlight Threatened.

The news that another inquiry into the drug trade is threatened, this time by the United States authorities, will not cause very much alarm. Of course, the implied purpose of the investigation is to prove the existence of a "trust," similar to that shown in the case of the beef packers. But the drug trade has become so accustomed to this sort of thing that we doubt whether the latest inquisition will be taken seriously by anybody familiar with trade conditions.

As a means of securing cheap newspaper notoriety, a searching inquiry into the methods of a "drug trust," which compels the poor man to pay full prices for his medicine, will have strong attractions for rising young lawyers, looking for a "reputation." But if this latest investigation is no more successful than the recent \$40,000,000 fiasco, the advocate of legitimate price-protection for the struggling retailer will have little to fear.

Good Policy.

The State Board of Pharmacy of Pennsylvania shows a commendable disposition to give ample opportunity to young men who desire to take the examination for licensed pharmacist before the new law goes into effect on January 1, 1906. When the pre-requisite law was passed in New York State, last year, the Board of Pharmacy held additional examinations, so as to work no hardship on those who might desire to come in under the old requirements.

Such a policy does no harm, as the extra number of pharmacists so licensed will be more than offset by the reduced number which is to be expected for the first two or three years. The Board of Pharmacy, in fact, is likely to be regarded with greater favor by a class of men, who, as a usual thing, consider it their sworn enemy.

Your Customer's Convenience.

There are two chords in every human make-up that can be legitimately pulled in building up a commercial enterprise, which too few Americans remember. They are the natural desire for deferential treatment and an appreciation of delicate attentions bordering on flattery. If more druggists took heed to strive to please in these seemingly trivial matters their cash returns would show increase.

In last week's Era the remarks of the head of a large retail drug business show how thoroughly he has realized the importance of such knowledge of human nature with a practical application. The particular instance in point is the manner of presenting checks for purchases at the fountain. This is part of what he says:

"After our customers are served they are very likely to have another and the person or persons are given a check for the entire amount. We give only one check to a party, no matter how many purchases may be made, it saves confusion and the payment is made after they go out. Take the other way, purchasing a check before they sit down to the fountain, they must buy to the value of the check or else get up and get a new check, losing their seat very likely. It is inconvenient, disagreeable and the dealer loses by it in the long run, for with a five-cent check bought a customer isn't going to bother to get another check, no matter how tempting a ten-cent egg drink may look to him. Of course, modern methods are all against the old way of paying over the drink counter. Time is too short."

These observations appear sensible and are worthy of consideration. Is not the system of buying checks in advance something of a reflection on the customer's honesty?

Synthetic Adrenalin.

The report that an English physician, Dr. Dakin, has discovered a mechanical process for making adrenalin from coal tar products is of great interest. This interest is not lessened by the reasonable doubt expressed by some chemists who recall other reports of previous discoveries of such a process, which turned out, on investigation, to be disappointing. Indeed, it enhances the attention with which the scientific world will await the text of Dr. Dakin's paper announcing officially and explaining his discovery.

The importance of adrenalin is well known, for in the short time since Dr. Takamine succeeded in extracting its active principle in 1901, it has come into general use in surgery, and is now recognized as one of the important discoveries in surgical chemistry of recent years. Its power of driving away blood from any living tissue to which it is

applied, has simplified and perfected the surgery of the nose and throat, while it is of great service to oculists in relieving congestion of the eyes, and the general medical profession utilize it as the most powerful heart stimulant known.

If a synthetic has been extracted, it will probably materially lower the cost of production. Both medicine and pharmacy will watch with interest the confirmation or denial resulting from the report.

Buy on the Breaks.

It is an old, old principle of successful operators in speculative markets to buy at the lowest and sell at the highest. In fact, the effort to attain this consummation of bliss is responsible for most of the little marks on the tapes running tirelessly from the tickers which record the struggles in our large exchanges. It is also well known that the man who has nerve enough to buy on a declining market has a far better chance of ultimate profit than he who loads up when everyone else is doing so and prices are climbing. There is no difference between the principle of the thing in the stock market or the drug market. The retailer who watches the course of prices closely and studies governing conditions and influences should be able to so regulate his purchases of staple drugs that his books will show a sizable additional profit in consequence at the end of the year. Too few druggists realize the possibilities of their own business in this direction. It is worth study. Learn to buy when a commodity is cheap, buy in the largest possible quantities of use in your business, and do not wait until the last ounce is all but gone before you order.

Cigarettes and Druggists.

Cigarette smokers are not the only persons who are inconvenienced in Indiana by the passage of the law in that State prohibiting the sale or use of "coffin-nails." It appears that a large share of the trade in these articles was held by druggists, whose loss in this direction is not balanced by any corresponding increase in the sale of cigars, smoking tobacco and pipes.

Of course, the druggist is always one of the chief sufferers whenever an ill-wind happens along. If the widespread dissatisfaction at the new law persists, the matter will have to be tested in the courts and it is not at all certain that the objectionable measure will be upheld.

The Greater New York idea as exemplified in the M. A. R. D., is bound to succeed. It is not necessary that the various local associations in existence for years shall give up their indi-

viduality, but for commercial purposes the individual druggist will find that in the greater association's plan is embodied financial progress and growth, and the best phases of pharmaceutical development.

President Beal, of the A. Ph. A., has appointed a dozen pharmaceutical journalists members of a Committee on Publicity. They can hardly hope to follow the pace he has set in getting new members into the association. This record not only shows that the association is getting publicity, but that it is getting something quite as substantial.

Valuation of Iodoform Gauze.

A measured quantity or 5 grams of the gauze are extracted with 100 cc. of ethereal spirit. 20 cc. of this solution (representing 1 gram) being taken for the assay. The latter solution is acidulated with a few drops of fuming nitric acid and 10 cc. of N-10 silver nitrate V. S. are added, the whole being heated on the waterbath until free from ether and nitrous acid. Silver iodide is precipitated and as soon as the supernatant fluid becomes clear and cool, 100 cc. of water are added together with 1 cc. of ammonio-ferrous alum, the excess of silver nitrate solution being titrated back with N-10 ammonium sulphocyanate V. S. The number of ccs. of the latter consumed are deducted from 10 and the remainder multiplied by 0.0131 which equals the amount of iodoform present. Each cc. of standardized silver nitrate solution consumed is equivalent to 0.0131 gram of iodoform.

Granulated Kola.

Granulated Kola, according to Gemayel (Apoth. Ztg.), may be made by the following process: Warm 75 parts of glycerin-free extract of kola in an enameled dish with a little 60 per cent. alcohol, until perfectly fluid; transfer the latter to a mortar, and rinse out the dish twice with a little warm alcohol. Now rapidly add 1,000 parts of finely powdered sugar, but in small quantities at a time, and mix until a perfectly homogeneous mass is obtained, which is then passed through a medium coarse wire sieve. The granular mass is then exposed in layers of 2 to 3 Cm. on paper at 60° C. in a drying closet, again passed through the sieve, then completely dried, and when cold, once more sifted. The powder is to be preserved in well-closed glass bottles. In a similar manner, granular preparations of extracts of coca, gallsaya, calumba, condurango, etc., may be prepared.

Light Phenomena.

A writer in Deutsche Med. Woch., gives some interesting information relating to the phenomena of light. Thus, when a new incandescent lamp, with the current turned off, is rubbed on the skin, or on wool or fur, light is generated. The light is sufficient to take the outline photograph of solid objects. The amount of light generated varies with different parts of the body and with different persons.

✕ & OUR & ✕
LETTER BOX

THE OLD AND THE NEW.

Newark, N. J., May 15.

Editor The Pharmaceutical Era:

"Do not forsake the old friends for the new" is a good old adage, but is one which seldom applies in business. Latter day conditions are such that it behooves the man who would keep the sheriff at a distance, to make every penny go as far as it will, and hence he must buy where he can get the most for his money. This often means the breaking down of business connections and friendships which have been many years in forming. The brushing aside of the old and the taking up of the new.

The man who fails to adopt modern ideas cannot hope to remain at the head of the business procession. However strong his connections through friendships which have been built up as a result of years of square dealing, he will not find these enough to enable him to maintain his position, unless he is everlastingly and persistently abreast of, if not ahead of the times. He will find his rivals in business ever ready to meet the wants of customers and to slash prices, where it means the gaining of a new patron.

The new generation comes up, caring nothing about the traditions of the old, and the long-established house soon feels the effect of the competition, which can only be met in one way, and that is by always having the latest and best in stock and selling at prices which will prove an inducement to old customers to stay and new ones to come. This means an infusion of new blood and the adoption of new ideas, which seem so radical to the old timer that the change is often delayed until it is too late to accomplish any good.

This somewhat pessimistic vein of reflection was brought about by a conversation with an old pharmacist in this city. He was in his big, old-fashioned store, and there was an oppressive feeling of emptiness, a hollow, mocking reminder of the days when this was the leading drug store and many clerks were kept busy waiting on impatient customers. On the shelves were rows upon rows of neatly arranged bottles, the show cases were well-filled and the whole place was neat and clean. Perhaps there was too much precision shown in the arrangement of the bottles or the articles in the show case, a suggestion of bygone days, which made the drug store seem quaint and a bit out of place on a busy thoroughfare. But withal there was an air of respectability, and something so substantial about the place that you found it a real pleasure to buy there. Still, the place was empty, save for the white-headed pharmacist and yourself. It was not difficult to guess where the trade had gone which had once come to this store. Across the street there was a modern store, with a great display of plate-glass front, up-to-date show cases, and an attractive window display. Busy clerks were serving a big Saturday night crowd. The contrast left little for the imagination. The tale was so plain that the reading of it became easy. It was the survival of the

fittest. The modern against the ancient. The new against the old.

"Once I had all that trade," said the old pharmacist, who was in a reminiscent mood. "I knew everybody in the neighborhood. They were all of the good old stock, and mine was the only drug store for blocks around. Geyer's was the place where they bought their drugs, their toilet articles and their cigars. Now it is all changed. The children of my old friends do not know me. The young fellow across the street has come with all his new-fangled notions. He handles articles that I wouldn't have in my place. I have no rent to pay, and he does, but still he sells cheaper than I do, because I believe in a fair profit. He belongs to lodges and organizations of all kinds. He meets the young people in the neighborhood and they go to his store. I don't blame him. I am too old to change my ways now, and if I could, I wouldn't. It's only a case of history repeating itself. When this store was opened, it was modern, up-to-date, and I got the trade of an old-established house, just as the young fellow across the way has taken my trade away from me. It is only one of the natural evolutions of business life. Happily, I am so situated that I can afford the loss of trade and still keep the old store open for the sake of the days when it was the new store and my rival's place was the old store."

This is only a little pen-picture of what is happening every day in the year in many places in every city in the country. The antiquated pharmacy, however attractive its quaintness may prove to the lover of the old, is being crowded to the wall by the more utilitarian modern drug store. Unhappily, all of the old pharmacists are not so fortunately situated that they can take the philosophical view of the old fellow quoted above.

OBSERVER.

ANOTHER JEWELRY CASE.

Gladstone, Mich., May 11, 1905.

Editor The Pharmaceutical Era:

My attention was called to an article in your February number, on page 184, "Fired of Their Bargain." I have just completed the trial of case in which the Lyon-Taylor Co. were plaintiffs, and sued my client for \$324 for an assortment of jewelry. I presume, on similar contracts your druggist friends have signed. My client refused to sign the notes. I defended the action on the ground of fraud, and was sustained by the court, the jury rendering a verdict for the defendant.

Yours truly,

G. R. EMPSON, Attorney at Law.

Cephalopin.

Cephalopin is an oily extract of nerve substance, containing myelin, lecithin and other oil-soluble principles of lecithin. It is administered by hypodermic injection and recommended as an antidote in strychnine poisoning and in the treatment of nervous diseases.—Rep. de Pharm.

Novorgan.

A preparation containing 10 per cent. of solvent easily soluble in water is called Novorgan. It is employed instead of protargol in all cases in which that remedy is indicated. It may be dispensed in solutions of highly varying strength.

ADULTERATED DRUGS.*

BY PROFESSOR H. H. RUSBY, M. D.

I have been invited this evening to speak on the subject of adulterated drugs. To the newspaper reader, the mention of adulterated drugs suggests a picture of some fiendish creature with the body of a ghou and the face of a demon, but disguised as a retail pharmacist, concocting some deadly mixture intended for the slaughter of innocent women and children.

I fancy, however, that even in the newspaper, such suggestions will occur less frequently in the future, since their editors have recently advanced several degrees along this line, and are no longer to be taken in with fictitious or grossly exaggerated stories of adulteration by the retail pharmacist.

TRUSTING MANUFACTURERS.

It is a difficult thing for one to determine, from what he hears, to what extent adulteration is practised. One of my most esteemed and trustworthy friends, engaged in the alkaloid business, assures me that there is not the slightest difficulty in getting pure alkaloids; that if one will pay a fair price, he may accept the article on trust. At the same time a member of the United States Pharmacopoeia Revision Committee, at the head of the scientific department of one of our largest houses of manufacturing chemists, writes to his committee that his experiences have convinced him that there are only two manufacturers of quinine in this country who can be trusted at all, and that one of these ought to be watched. At the same association meeting, one man reads a paper to show that there is now very little adulteration of drugs, while another reads a long list of the cases which he has encountered during the preceding year.

It is evident that one must make some endeavor to decide this question from personal experience, and I shall this evening relate my own. I shall not employ the term "adulteration" in the strict sense of an intentional, fraudulent act, but in the broad sense of anything which results in the purchaser receiving something different from that which he desires, and supposes himself to be receiving.

All questions of intentional right and wrong are excluded, and I shall merely try to answer the question, "Are drugs commonly adulterated, in the sense that people do not get what they pay for?" The question will include the substitution of a different article, or a different variety of the same article, of a mixture, or of an inferior quality, due to any cause.

ADULTERATION DOES EXIST.

In this sense I have no hesitation in saying that drug adulteration exists to an extent that is quite disgraceful to this city, and to the country. I have quite a large collection of drugs which have been offered to me, and which are not what they purported to be. A few years ago I wrote an article on "The Present Drug Supply of the City of New York," stating only what I knew to be true. On re-reading the article, I found that it bore so heavily upon those who were reprehensible, that I had not the heart to publish it, and it still lies pigeonholed. It stated a deplora-

* Address before Chemists' Club of New York. Reprinted from Druggists' Circular.

ble condition, and one, I am happy to say, that has since improved.

I wish to divide my cases of adulteration into classes, with some refinement as to detail, which you, as chemists, will appreciate.

A large number of drugs are apparently adulterated through a common belief that such adulteration makes no practical difference in the result. In some cases this opinion is correct; in others, erroneous. Is the adulteration justified in either case? Certainly not, if for no other reason than that the habit of strict accuracy should be cultivated for its own sake, no consideration of results entering in; and this view must meet the approval of chemists who know the importance of little things. But again, what right has the dealer to decide, even in plain cases, whether adulteration will make a difference in the result? There must be an authority. Should it be the man who pays the money, through his official advisers, or he from whom the purchase is made and who may be guided by self-interest?

BOTH FROM THE SAME BALE.

One day I asked for some *Grindelia squarrosa*, and approved the sample, which was the entire herb, two or three feet long. I then asked for *G. robusta*, which was shown to me cut up into inch or half-inch pieces. As I was scrutinizing it critically, the salesman said, with a wink: "We have to cut one of them up, or it will be seen that they both came out of the same bale." On another occasion, I went to one of our largest distributors for some *Honduras sarsaparilla*. I told the salesman not to wrap it up until I had seen it. He objected to showing it, but I insisted, and at once pronounced it Jamaican, which he hotly denied. When he at length discovered that he was "up against it," he declared petulantly that it was just exactly as good as the Honduras, and that I ought to know it, whereupon he learned a few things he never knew before. In both these cases, the substitute was doubtless just as good.

CASES OF SUBSTITUTION.

Of other such cases of substitution which I frequently encounter, I may mention the following: Larkspur seed for stavesacre; other species of *Rhus* for *R. glabra*; one *angelica* for another; one *rumex* for another; one *berberis* for another; spurious *horhound* for the genuine; laurel leaves for *myrica*; one skull-cap for another; *scopolia* leaves mixed with *belladonna* leaves, or *scopolia* rhizome with *belladonna* root; walnut for *butternut*, or the stem-bark for the root-bark; adulterated saffron, dried, for fresh, sweet-orange peel.

In the next class of cases, the common opinion that the substitution is of no practical importance, is almost certainly an error. Regarding the relative values of the bark of the stem and the bark of the root of the pomegranate, widely varying statements are published, but according to the best information the bark of the root is twice as active, and I would use no other; yet, so common was substitution or admixture that the *Pharmacopœia* abandoned its requirements, and now defines *granatum* as "the bark of the stem or root." *Apocynum* is a drug which has been very poorly understood, and so the

roots of several species have been used almost indiscriminately, with the result that the drug has become discredited, and has so fallen into disuse that there was a strong demand to drop it from the official list. If an active article is employed, it is in reality little inferior to *straphanthus* and is a standby with any physician who has once learned to use it.

MIXTURE OF DIFFERENT SPECIES.

Because the different species of *arnica* resemble one another very closely, collectors hold them to be of special value, and a number of species are mixed in the commercial root, apparently with bad results. Because two or three totally different plants are called "pink-root" in our Southern States, our official *spigelia* is spurious or adulterated, probably to the extent of seventy-five per cent. of all sold, and the adulterant is entirely worthless. I have known the common hazel nut to be mistaken by a collector for witch hazel, merely because the names are similar. Under the name of "male-fern," quite a number of species are apparently collected instead of the two for which the *Pharmacopœia* calls. I believe that much less than half of the male fern sold is really genuine and this may easily account for the lack of uniformity in its action that is so loudly complained of by physicians.

EIRONEOUS IDEAS.

Other cases in which there is a frequent, but erroneous idea that substitution does not matter are the following: One species of *krameria* for another; peeled for unpeeled *calamus*; one variety of *aloes* for another; one *kino* for another; the inner portions of the bulb of *scuill*, instead of the outer; one kind of *cinchona* bark for another; *Persian* for *Dalmatian* insect-powder; spurious *quebracho* bark, or this bark with the rich inner portions lacked off by the alkaloid manufacturer and the trashy residue turned back into the drug market; one *coco* leaf for another, the two acting markedly differently; the sale of various *capsicums*, especially in the ground state, instead of the genuine; false *chiretta* ignorantly supplied, because several drugs are known by that name in the Himalayas; the use of stem bark instead of root bark, of cotton, as well as of *cornus* and *onyonimus*.

Reference has already been made to the falling of a drug into disrepute, because a spurious article has been commonly supplied. This is notoriously true of *matlo* leaves, and of *winters bark*, one of the most valuable of drugs, if genuine.

SERIOUS AND FATAL RESULTS.

I will finally consider a few drugs of great importance, where the results of adulteration are serious and often fatal. Some years ago I received from one of our importers a sample of so-called "French cultivated *stramonium*," which was claimed to be of superior quality. It proved to be in no way related to *stramonium* and devoid of mydriatic power. I have seen a very large importation of *belladonna* root distributed from this city, of which at least a quarter consisted of some inert root, apparently wild *althæa*, or a relative of that plant. Almost never does one see in this city a specimen of first-class *hebane*. It is nearly always the leaves taken from the plant in the first year of its growth. *Digitalis* often shows the same defect, which is in both

cases, and with the best of reasons directly in opposition to the official requirement.

OTHER EXAMPLES.

In preparations, *aconite* leaves or herbs are frequently used instead of the required root. The same thing is true of *conium* leaves instead of the fruit, and all retail pharmacists know how unreliable *conium* preparations are considered by physicians to be. *Coussou* is also regarded as very uncertain in its action, and this is probably due to the substitution of the male for the female flowers. *Cannabis indica* is notoriously irregular in its action. So many conditions can adversely affect the value of this drug, and its selection, in which chemistry cannot assist, is so delicate a matter, that criticism should not be too severe; yet it is to be considered as a case of first-class importance.

Asafoetida of good quality should yield 75 per cent. of alcohol-soluble matter, yet this often falls to a fifth or a fourth of the amount, and so low is the average that the *Pharmacopœia* Revision Committee has been urged to reduce its requirement to 25 per cent. No drug is more certain or prompt in its action, or used in more urgently vital cases than *straphanthus*, yet more than seventy-five per cent. of that used probably is spurious. One spurious variety is nearly inert, and I could cite a number of fatal cases resulting from failure to get its action. Another variety appears to exert a toxic action out of proportion to its therapeutic effect. *Jaborandi* is another drug of great power, yet a majority of the drug sold is nearly inert. In each of these two last cases, I learned by accident that a large manufacturing house was habitually using the spurious article.

THE RESPONSIBILITY AND THE REMEDY.

Enough has been said of the adulteration; where rests the responsibility, and what is the remedy? Probably in the majority of cases, the fraud or error, whichever it be, begins with the collector.

Almost without exception our drugs are collected by the most ignorant class of people, frequently by savages. The collectors are then bought up by general merchants, who take them in exchange, and who have no special knowledge of drugs. The importer sells them through brokers, and they at length come into the hands of wholesale drug dealers, the first place which they have reached where we are justified in looking for that expert knowledge which is required for their intelligent estimation. By these dealers, they are distributed either to the large manufacturers or to the retail pharmacists.

THE PHARMACIST'S RESPONSIBILITY.

It is supposed that the manufacturer will employ an expert, qualified to detect errors and imperfections, but neither he nor the wholesale dealer is required to do so, and in very many cases they do not. This requirement does not make its appearance until the retail pharmacist is reached. He must be licensed, and theoretically, his license guarantees his ability to detect errors in the crude or powdered drugs coming from the wholesaler, or in the preparations coming from the manufacturer. Practically, it does so in a comparatively few cases, and there is no guarantee that the ability will be used, even if it is possessed.

SYSTEM ENTIRELY WRONG.

Finally, it is positively certain that it will not be employed, no matter how able and honest the pharmacist may be, because it is physically impossible for him to examine all the materials which come into his store. Recently there was a general discussion in the pharmaceutical press of the responsibility for the quality of pharmaceuticals. One of our leading journals, in summing up the arguments, declared that it was manifestly impossible for the retail pharmacist to meet such a responsibility, but as there was no other way of placing it, it seemed best to impose it upon him! How unreasonable and foolish this would be, even if the retailer could rise to the occasion. The entire system is wrong, since it begins at the wrong end. SHOULD BEGIN WITH DISTRIBUTER.

The restrictions should be applied at the beginning, once for the entire bulk, and the effect would be continued to the final distribution. If the law requires the retail handler of a single pound to possess a professional knowledge, should it not require the wholesale distributor to employ a first-class expert, to avoid a huge multiplication of the same error that the retailer is liable to?

Each year our colleges are turning out graduates better trained than their predecessors for doing this expert work, but our wholesale houses reject them in favor of uneducated boys, who are placed, at boy's wages, in the most responsible positions relating to these drugs.

In my opinion the responsibility for this state of affairs rests upon associations like this, the Society of Chemical Industry, the American Pharmaceutical Association, and the State Pharmaceutical Association, in that they do not get together and devise a system by which this work can be done. We should strongly insist that no drugs be sold under any other than their legitimate and proper names.

I think it should also be required that every wholesale dealer shall be licensed, not as a retail pharmacist, but some special license showing that he is competent to pass on these questions. I believe that such a man should have a degree, showing that he is an expert chemist or pharmacist, qualified to detect these errors and to see that this practice of adulteration is reduced to a minimum.

Eserine Oil.

Eserine salicylate (and other eserine salts) are not only unstable, but produce much pain when their solutions are dropped into the eye. A solution of eserine salicylate in olive oil that produces a prompt and painless action has now been prepared. The solution is made as follows: Dry 0.2 grams of finely powdered eserine salicylate at 100° C.; transfer it to a small glass flask containing 40 grams of olive oil; heat to 150° C. to 158° C. (but not higher) until dissolved (about twenty minutes); cool to 80° C., during which the liquid becomes opalescent; and then rapidly to 10° C., at which a small portion of the salt is deposited in minute crystals. The opalescent oily solution is absolutely sterile, will keep indefinitely, and produces immediate and painless action upon the eye.—Pharm. Ztg., through Pharm. Jour.

(Concluded from Era, May 11, page 541.)

MEDICINAL PLANTS.

BY PROFESSOR ALBERT SCHNEIDER,
California College of Pharmacy.

From what has been said it is evident that even though a medicinal plant is very common in the United States, marketing the drug is not profitable because of expensive labor and other conditions. This condition of affairs is made clear in a circular issued by the United States Department of Agriculture on the common medicinal weeds of the United States. (Alice Henkel: Weeds Used in Medicine, Farmer's Bulletin No. 188, U. S. Dept. Agr., 1904.) In this paper the suggestion is made that the medicinal weeds mentioned might be collected by the farmer and placed on the drug market. To this end the necessary directions are given as to the time of collecting, part of plant used, curing, garbling, etc. This plan, it is hoped, would not only rid the farm of the objectionable weeds, but would at the same time be a source of revenue, slight though it might be. It does not seem a wise act to give these suggestions, for several reasons: The farmer is chiefly interested in his crops and other farm products, knows little or nothing about drugs, cannot always take the time to collect the drug at the right time, and cannot take the time to collect, garble and cure it properly. The attempt would simply result in a poor quality of drug being placed on the market. Drug marketing should be done by those who understand it and are ready to make a business of it. On studying the market value of the medicinal weeds mentioned it will be found that the average price per pound of roots and leaves is from five to seven cents, a sum entirely too small to make it worth while to collect comparatively small quantities, which would be the case on all well cared for farms. No farmer would care to permit his farm to go to weeds in order that he might sell these to a druggist.

A large number of drug-yielding plants can no doubt be grown profitably in the United States, but, as indicated, this is possible only when done on a large scale. The climate of California is peculiarly adapted to the cultivation of medicinal plants, as has been proven experimentally, and it is to be hoped that some enterprising individuals may make a beginning in establishing plantations of medicinal plants like those of England and other European countries. Attempts have been made with the poppy, and it was found that the opium obtained was of excellent quality, but on account of high labor it was impossible to compete with the Oriental market. It might be a wise plan to decide upon some other method of securing the opium. One method which has been tried was to cut the entire plants at the proper time, express the juice from the entire plant by means of a sugar-cane mill, and evaporate to the proper consistency. It was however found that the alkaloidal yield of this gum opium was very low. The statements made with regard to poppy cultivation apply also in a general way to the cultivation of the camphor tree in California.

SUGGESTIONS ON THE CULTIVATION OF MEDICINAL PLANTS IN THE STATE OF CALIFORNIA.

The plants to be cited in the second installment of this paper are, with a few exceptions, found growing within the boundaries of the State. Many more may readily be introduced. It is, however, not intended to imply that even all of this limited number of medicinal plants may be grown profitably. Some of the difficulties in the way have already been referred to, the chief one being high-priced American labor versus the cheaper foreign labor. While we cannot at present adjust this difference, we may nevertheless put into operation ways and means which will make the cultivation of drug-yielding plants profitable. First of all, it will be necessary to create an interest in that kind of plant-culture. Such an interest has been created in other countries, notably in England and Germany, where certain medicinal plants are grown on an enormous scale, sufficient to supply the market of the world. Just as we compete successfully or excel in certain branches of horticulture, agriculture, arboriculture, etc., just so may we compete successfully or excel in the growing of medicinal plants. All that is necessary is for enterprising and intelligent individuals to establish the plantations in suitable localities of suitable medicinal plants, growing them on an enormous scale, and put into operation the appropriate methods of cultivating, collecting, drying, marketing, etc. Beginnings should be made with those drugs which will find a ready market. It being once demonstrated that the enterprise is financially profitable as well as otherwise successful, no difficulty will be found in successfully growing any medicinal plant adapted to soil and climate. Not only is it necessary to compete with the foreign market, but the enterprise must yield a profit equal to that from other soil-culture pursuits. There is no plausibly apparent reason why this should not be possible. If, as the Department of Agriculture suggests, the farmer of the United States may hope to collect medicinal weeds profitably, he will find it certainly even more profitable to devote his entire time and energy to the intelligent culture of medicinal plants, whether weeds or not. All that seems to be required is for some one to take the initiative to prove to others the feasibility of the scheme. Interest is being awakened in the matter, as is shown by letters of inquiry as to what plants might be cultivated successfully. A few medicinal plants are being cultivated in the United States, as the mints in Michigan and Wisconsin. It is affirmed that African senna (*cassia acutifolia*) has been successfully grown at Corpus Christi, Texas, and at Washington, D. C.

As has been indicated elsewhere, most medicinal plants may be grown in the State of California, though it does not follow that these may all be grown profitably. The following suggestions may prove useful to those who contemplate entering upon the suggested enterprise. The familiar garden herbs and pot herbs used medicinally and for culinary purposes can certainly be grown profitably. These would include the mints, pennyroyal, sage, lettuce, yerba santa, thyme, craway, fennel, coriander, camomile and many

others. There are numerous introduced medicinal trees, shrubs and herbs in cultivation and escaped from cultivation which might, no doubt, be grown profitably. It would seem desirable, however, to begin with a few of the more important, less common, vegetable drugs, as, for example, aconite, digitalis, rhubarb, belladonna, scopolia, hyoscyamus and others. There is, however, no plausible reason why such common but nevertheless very desirable drugs as taraxacum, chicory, mallow, burdock, horshoed, mustard, milk-weed, sambucus, stramonium, mullen, absinthium, rosemary and many others should not be very profitably cultivated on a large scale. Insect flowers, lavender, hops and others are being grown very successfully in the State.

While the matter is in the experimental stage it would be desirable to begin with perhaps five or six different species of medicinal plants. In the course of a year and after careful consideration it will be found which plants are best suited to the particular soil, climatic condition and temperature, and finally the individual grower will in all probability limit himself to one or two or perhaps three species. It will be necessary to develop and adopt methods of cultivation, fertilization of soil, rotation of crops, collecting, garbling, drying and marketing the drugs. Each species of medicinal plant will require its special attention, just as with the different field, orchard and garden plants. For detailed and specific instructions the available literature should be consulted, and for the rest experience must be the guide.

It is advised that earnest and repeated efforts be made to introduce into the State certain medicinal plants, particularly the more hardy cinchonas. It is highly probable that African senna will prove successful. Licorice (*Glycyrrhiza glabra* and varieties) can no doubt be grown successfully. At this time the most that can be done is to offer suggestions, hoping that they may serve as a stimulus to a fuller investigation of the matter, leading to carefully planned attempts at the cultivation of medicinal plants within the State of California and in other States.

Benzoinform.

This is a carbon tetrachloride, pure, and appears as a colorless fluid, clear as water, having a peculiar odor, somewhat similar to that of chloroform (Nat. Dr.). Its specific gravity is 1.60, while its boiling point is 77° C. (170.6° F.). It easily mixes with alcohol and ether, forming a homogeneous liquid, but will not mingle with water, being absolutely insoluble therein—a property that is taken advantage of to prevent its evaporation. When pure benzoinform should evaporate without a residue, or even an odor; it should have a neutral reaction and be free from a trace of hydrochloric acid. Its principal use is as a solvent for fats, greases, resins, oils, colors, varnishes, etc. It does not possess that bad quality of so many other solvents, of leaving borders or rings in evaporating, nor does it, if properly used, attack the fabrics on which it is used. Its greatest advantage seems to lie in its undimmiability and inexpensiveness. Its greatest use thus far has been in clothes-cleaning establishments, etc.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Artificial Orange Cider.

(H. C. X.)—We do not know of any formula for "artificial orange cider." The laws regulating the sale of pure foods and drugs would certainly rule out such products, even should the manufacturer have the courage to make them. However, many of the preparations sold under the name of "orange cider" are not really orange cider, but are varying mixtures of uncertain composition, possibly flavored with orange. The following are made by the use of oranges:

(1.)

Sugar	8 pounds
Water	2½ gallons
Oranges	15

Dissolve the sugar in the water by the aid of a gentle heat, express the oranges, add the juice and rinds to the syrup, put the mixture into a cask, keep the whole in a warm place for three or four days, stirring frequently, then close the cask, set aside in a cool cellar and draw off the clear liquid.

(2.)

Express the juice from sweet oranges, add water equal to the volume of juice obtained, and macerate the expressed oranges with the juice and water for about twelve hours. For each gallon of juice add one pound of granulated sugar, grape sugar or glucose, put the whole into a suitable vessel, covering to exclude the dust, place in a warm location until fermentation is completed, draw off the clear liquid, and preserve in well stoppered stout bottles in a cool place.

(3.)

Orange wine suitable for "soda purposes" may be prepared by mixing 3 fluid ounces of orange essence with 13 fluid ounces of sweet catabwa or other mild wine. Some syrup may be added to this if desired.

Coataginis Oxy.; Crataeginis Oxy-cantha.

(W. A. S.)—"Kindly inform me of the origin of 'Coataginis oxy,' and its English name, if it has one."

By "Coataginis oxy." we think is meant *Crataegus oxyacantha*, or hawthorn, a member of the apple family. Britton & Brown ("Illustrated Flora") state that it is also called hawthorne, hedge-thorn, May bush, May and quince, and is found as a shrub or tree, sometimes attaining a

height of forty feet and trunk diameter of one foot or more, along roadsides and in thickets, sparingly escaped from cultivation. It was introduced from Europe and is a native of Asia.

According to the American Dispensatory, the fruit and bark of this shrub, or small tree have been introduced into medicine as a heart remedy. The shrub grows abundantly in woods and thickets throughout Europe, central and northern Asia. In England it is cultivated for hedging purposes, and is familiarly known as "hawthorn." The fresh bark of the young branches contains a bitter crystallizable principle, soluble in water, insoluble in ether, little soluble in alcohol. Claims are made for this drug as a curative remedy for organic and functional heart disorders, including cardiac hypertrophy, angina pectoris, etc.

Clearing Oil of Birch.

(J. P.)—Three methods are said to be employed for "clearing" crude oil of birch, viz., by decolorization, filtration and redistillation. The easiest method is that of decolorization, which is usually accomplished by adding a few crystals of citric acid.

Another popular and cheap method of clarifying the oil is as follows: The oil in its crude state is poured upon a woolen blanket, which is then laid upon the top of the brush in a tank. The covers are "plastered" down and the water set a boiling. The steam passes through the blanket, which absorbs the particles of copper and iron the oil may contain, and the oil drops into the receptacle at the bottom of the worm of a shade that is a very light green or like the essence of lemon.

No single book will give you complete information of this sort. Matters regarding the details of the manufacture of oil of birch are somewhat in the nature of trade secrets and manufacturers are reticent about giving them out. We think, however, that the hints given are enough to suggest a little experimenting on your own account.

Cider Preservative.

(H. C. X.)—The quantity of salicylic acid usually recommended for preserving cider is one ounce for each barrel of thirty-two gallons. The preservative is added as follows: Place the acid in some suitable container and pour upon it a sufficient quantity of cider and thoroughly mix before adding it to the contents of the barrel. If the acid be added directly to the cider in the barrel, it is very likely to float upon the top and not be dissolved. It should be dissolved in a little alcohol and added to the barrel. The time when this addition should be made depends on individual taste and circumstances, generally when the first fermentation is completed. As the cider runs from the press, pass it through a hair sieve into a large open vessel. In a day or less, the pomace will rise to the top, and in a short time will become very thick. When little white bubbles break through it, draw off the cider through a spigot placed about three inches from the bottom. At this stage the acid may be added.

The addition of bismuth subnitrate has been recommended to retard the formation

of free acid (souring) in cider. Some interesting details of experiments along this line are given in this journal of February 3, 1898, page 173.

Artificial Essences.

(H. C. N.)—

CIDER ESSENCE.

Chloroform 1 fl. dram
Acetic aldehyde 2 fl. drams
Acetic ether 2 fl. drams
Amyl valerianate 10 fl. drams
Alcohol, deodorized,
 enough to make 16 fl. ounces
Add this to a mixture of sugar and water, acidify with tartaric acid, and color with caramel.

CHAMPAGNE CIDER EXTRACT.

Apple essence 5 fl. ounces
Pear essence 5 fl. ounces
Lemon essence 5 fl. ounces
Solution of citric acid 1 fl. ounce
As is sometimes prepared, other extracts, such as vanilla, strawberry, tonka, etc., may enter into the composition.

APPLE ESSENCE.

Amyl acetate 1 ounce
Ammonium valerianate 60 grains
Diluted alcohol 16 fl. ounces

Recognition of New York License.

(B. S.)—So far as we know no State board of pharmacy will grant registration without examination to an applicant who submits a certificate of registration or license of the New York State Board of Pharmacy as evidence of his qualifications to practice pharmacy. The matter is wholly one of reciprocity, and as the New York Board does not accord this privilege to licensees of other boards, the members of other boards can hardly be expected to favor licenses of the New York Board. Of course, the pharmacy laws in many States do not allow the boards to grant such recognition, no matter how willing the individual members of the boards may be in favor of it. You are one of those who should work for interstate registration on the basis of the plan proposed by the Nation Association of Boards of Pharmacy. See The Era of April 27, 1905, page 174, for particulars.

Tincture of Avena Sativa.

(H. L. S.)—Tincture of *avena sativa* may be made by percolating 4 troy ounces of ground oatmeal with 1 pint of diluted alcohol, reserving the first 5½ fl. ounces, and evaporating the remainder down to half a fluid ounce and adding to the reserved portion.

A formula credited to a homeopathic author directs:

Oats, unhusked 8 ounces
Potassium carbonate q. s.
Water q. s.
Alcohol q. s.
Grind the oats to a moderately fine powder, moisten with a 5 per cent. aqueous solution of potassium carbonate, first warmed to 113° F., macerate for three hours, pack in a percolator and add alcohol until 16 fl. ounces of product are obtained.

Mineral Water.

(J. C. B.)—Hiss ("Manual of Beverages") is authority for the following formula for "artificial deep rock water":

Sodium chloride 8¾ ounces
Sodium bicarbonate 5½ ounces
Potassium chloride 4½ ounces
Calcium chloride 140 grains
Magnesium chloride 15 grains
Water, enough to make 10 gallons
Mix and charge in the usual manner.

A formula from another authority calls for: Sodium chloride, 1,504.8 grains; potassium chloride, 1,490.8 grains; sodium silicate, 1,458 grains; sodium carbonate, 521.1 grains; magnesium chloride, 102.5 grains; calcium chloride, 202 grains; hydrochloric acid, 257.4 grains. The quantities given are sufficient for ten gallons of water.

Moxocolo Syrup.

(H. L. S.)—Bonham gives this formula for the employment of moxocolo extract, the formula for which was published in the Era, April 27, 1905, page 474:

Moxocolo extract 12 ounces
Foam extract 2 ounces
Simple syrup 1 gallon

Another formula in which moxocolo syrup enters is also given by the same author. It is:

Moxocolo syrup 1 pint
Kola wine 6 ounces
Olea wine 6 ounces
Foam extract 1 ounce
Caramel 1 dram
Simple syrup 1 gallon

Violet Color.

(H. L. S.)—You can use one of several pigments to give violet water a violet tint. Any of the more common anilin violet dyes will answer, as methyl violet, or pyoktanin blue, Hofmann's violet, etc. A tincture of litmus, made as follows, may also be used:

Litmus powder 2½ ounces
Boiling water 16 fl. ounces
Alcohol 3 fl. ounces

Pour the water upon the litmus, stir well, allow to stand for about an hour, stirring occasionally, filter, and to the filtrate add the alcohol.

THEORY AND PRACTICE

Bactericidal Property of Serums.

There are two theories which concern the ability of the body to destroy bacteria (Journ. A. M. A.). One of these is the phagocytic theory of Metchnikoff, according to which micro-organisms cannot be destroyed without the direct or indirect participation of the phagocytic cells; this is the cellular theory. The second, the humoral theory, supposes that the power resides in the fluids of the body alone; in its improved form it now holds that antibacterial immunity should be considered cellulo-humoral, and that whatever bactericidal power the body fluids have is derived primarily from the body cells. Many who appreciate the action of the serum, however, also believe that phagocytic cells may take up, and in certain instances, destroy micro-organisms; this combined view seems best to fit the facts as known at present.

Glycerophosphates of Piperazine.

Acid glycerophosphate of piperazine is prepared by evaporating a solution of 2 mols. of glycerophosphoric acid and 1 mol. of piperazine. It is an uncrystallizable viscous mass soluble in water in all proportions; the solutions are precipitated by lead acetate, picric acid, etc., but not by barium chloride, silver nitrate and other precipitants of phosphates. This body has a composition corresponding to the formula $(H_2PO_3OC_2H_4(OH))_{22}.C_4H_{10}N_2.H_2O$. It is neutral to methyl orange, but acid to phenolphthalein. In presence of the latter, it is neutralized by three equivalents of alkali, and is split up into $NaHPO_3.OC_2H_4(OH)_2.C_4H_{10}N_2$ and sodium glycerophosphate.

Piperazine glycerophosphate $H_2PO_3OC_2H_4(OH)_2.C_4H_{10}N_2$ is prepared from a mixture of equimolecular proportion of glycerophosphoric acid and piperazine, preferably in alcoholic solutions, from which it separates in crystalline form, melting about 155° C. with decomposition. It is acid to phenolphthalein and alkaline to methyl orange, being neutralized by one equivalent of alkali or acid, respectively. (Journ. Soc. Chem. Ind.)

Placing the Ointment Slab.

There is one disadvantage about imbedding an ointment slab permanently in a slide in the prescription bench; when the operator draws out the slide to use the tile, finding it convenient to stand with the tile directly in front of him, he is likely to more or less inconvenience those who must more about him; especially is this the case if the prescription department be shaped like a narrow hall. The objection to the tile being imbedded in a slide might easily be obviated, however; let the slide pull entirely out; along the outer edge nail a narrow strip of wood, projecting one-half inch below the slide, which will rest against the edge of the prescription bench when the slide is laid on it, keeping the slide from slipping back, in the same manner as the cleat on the front of a pill machine; a wire nail driven through the cleat from the front to project about three-eighths inch in back might engage with a hole in the edge of the prescription bench and prevent lateral slipping of the tile.—West. Dr.

Formaldehyde in Alcohol.

The most certain method for the detection of formaldehyde in denatured spirit is that of Trillet, but as a preliminary test, Indet (Bul. Assoc. Chim. Sucri. et Dist.) prefers the following modifications: 10 cc. of the spirits are placed in a test glass and a pinch of dry casein is introduced. A few drops of a dilute solution of ferric chloride are added; then 10 cc. of syrupy phosphoric acid and finally 10 to 15 cc. of sulphuric acid. If formaldehyde is present, a violet color appears at once, while in the absence of formaldehyde, the coloration is brown. The test is said to be capable of showing one part of formaldehyde in .03 parts of spirit. Acetaldehyde gives no coloration, but if the proportion be large, the mixture turns black. Certain higher aldehydes, such as butyric and valeric, appear to yield the violet color, but these are never present in the substances used for denaturing.

THE PURE-FOOD LAW

makes it prohibitory to sell any but
STRICTLY PURE

Extract of Vanilla

Wyeth's Extract Vanilla is prepared from the choicest variety of carefully selected and properly cured Vanilla Beans, and contains no coloring matter nor any of the artificial or synthetic principles so frequently employed.

LAXATIVE BROMO QUININE

ON THE

DIRECT CONTRACT, SERIAL NUMBERING PLAN.

Among the universally sold articles — the staples in the Drug line during the past ten years, none has received greater support of the entire Retail Drug Trade than **LAXATIVE BROMO QUININE**.

The manufacturers fully appreciate this, and in keeping with the policy of allowing from the beginning a profit of one hundred to one hundred and thirty per Cent, **LAXATIVE BROMO QUININE** has been placed on the **DIRECT CONTRACT SERIAL NUMBERING PLAN**, as the best discovered means of assisting every legitimate Retail Druggist to maintain this profit under the conditions which he now has to face.

At great expense, not only of money but most complicated labor, the manufacturers have been proceeding quietly for some months to put this plan in operation. A majority of the druggists throughout the country already have signed and returned the contract and the names of hundreds of other druggists who sign and return the contract, are being added to the list every week. The results obtained up to this time insure success to the effort, and in order to make the Plan effective to the greatest possible degree, it simply remains for every Retail Druggist to realize that his individual co-operation is essential. Every Druggist who has not signed and forwarded the contract on **LAXATIVE BROMO QUININE** should take such action immediately.

If a supply of **LAXATIVE BROMO QUININE** is needed or if the stock on hand will permit it, the extraordinary **DATING OFFER** now in force enables the Druggist to purchase a quantity of **LAXATIVE BROMO QUININE**, obtaining the regular free goods, to be delivered at once and invoice dated November 1st, 1905, for cash discount.

LAXATIVE BROMO QUININE

Price \$1.75 per dozen.

6 dozen lots,	1 dozen free,	Cost	\$10.50	or	\$1.50	per dozen
12 dozen lots,	2 dozen free,	5% trade discount,	"	\$19.95	or	\$1.43	" "
36 dozen lots,	6 dozen free,	8% trade discount,	"	\$57.96	or	\$1.38	" "
60 dozen lots,	10 dozen free,	10% trade discount,	"	\$94.50	or	\$1.35	" "

All Wholesale Druggists will accept orders under this **DATING OFFER**.

PARIS MEDICINE COMPANY,

Saint Louis and London.

NEWS SECTION

A PROSPEROUS YEAR.

Kings County Society Finds Itself in Excellent Condition.

HARMONY AT ANNUAL MEETING.—OFFICERS ELECTED UNANIMOUSLY.—THE SOCIETY PRESENTED WITH A PORTRAIT OF THE LATE LITHGOW T. PERKINS, TO WHOSE MEMORY DR. ANDERSON PAYS A GLOWING TRIBUTE.

Perfect harmony prevailed at the annual meeting of the Kings County Pharmaceutical Society, last Tuesday afternoon, attended by over fifty members. Officers were elected unanimously and without the slightest friction. The reports of the officers and committees showed the society to be in a flourishing condition.

In his annual report, President Adrian Paradis commented on the generous balance in the treasury and the fact that the past year had been one of prosperity from both a scientific and commercial standpoint. The leading movement was in regard to the direct contract and serial numbering plan. "This is now on trial," said President Paradis, "and let us hope it will prove the true remedy for price demoralization."

Next in importance was the establishment of prizes for scientific papers to be read at the meetings. While only three such papers had been secured thus far, the results were already apparent in the increased attendance and in the healthy discussion produced. In commending the work of the Legislative Committee, the president said that in Dr. Muir the society had "the right man in the right place, who was always there at the right time." Vociferous applause.

The efficient work of the Trade Matters Committee was touched on by President Paradis, especially as regards the pushing of national Formulary preparations among physicians. He hoped that physicians would soon "return to scientific materia medica and give high-priced nostrums the cold shoulder." He congratulated the society on the success of its college, which this year had the largest classes in its history—80 seniors, 130 juniors. A debt of \$7,000 was paid off, only \$17,000 now remaining.

The report was heartily applauded and accepted, with the thanks and appreciation of the society.

Treasurer Ray reported annual receipts of \$10,512, disbursements, \$9,734.10, leaving a balance of \$777.90. The balance in the college is \$2,365.98. Secretary Hegeman reported a present membership of 468.

Dr. Muir gave a brief outline of the legislative work during the year. The Cotton bill, providing for the exemption of the college property from taxation, has passed the Legislature and is now in the hands of the Governor. Similar success has attended the Hill bill, to reconcile the differences between the Pharmacy Law and

Penal Code in relation to the sale of poisons. The Matthews bill, prohibiting the use of methyl alcohol in adulterating beverages, is now a law.

Probably the bill which created the most interest was that introduced by Assemblyman Whitney, at the suggestion of the Department of Excise. This bill repeals the special stamp privilege that druggists have enjoyed for the past two years. As the bill was originally introduced the penalty for its violation was not only the absolute revocation and cancellation of the liquor tax certificate issued to a licensed pharmacist or druggist, but also included the revocation and forfeiture of his license as a pharmacist or druggist. This drastic proposition the Committee was instrumental in having modified so that the law as passed provides that a licensed druggist or pharmacist who is found guilty of a violation of the Liquor Tax Law under the \$7.50 license shall be suspended from all rights and privileges as a pharmacist for a period of one year.

The Grady bill, against the "adulteration or misbranding of drugs," was killed in committee. A similar fate, after a hard fight, befell the Platt formula bill and the Yale wood-alcohol bill. The anti-cocaine measure was not reached in the Assembly. The committee commended the loyalty of Senators Hill and Cooper and Assemblymen Cotton and Cox.

John G. Wischerth, chairman of the Trade Interests Committee, reported that slot 'phones on a 10 per cent. basis had been secured from the telephone company, and that in addition one other 'phone may be placed anywhere in the store, on a 20 per cent. basis.

Oscar C. Kleine reported on the district work carried on in Brooklyn by the society and at the suggestion of Dr. Anderson, the committee was continued until a complete canvass is made. Dr. Muir asked whether the society wished to oppose the repeal of the stamp tax. He was instructed to ask the Governor for a hearing on the bill. Other local associations are invited to join.

A feature of the afternoon was the presentation to the society by Wm. L. Perkins, of a handsomely-framed portrait of his father, Lithgow T. Perkins, a founder of the society, and one of its first presidents. The society asked for this portrait some time ago.

Dr. Anderson, being requested by President Paradis to reply to Mr. Perkins, paid an eloquent and touching tribute to his former friend and preceptor. In a voice trembling with emotion, he told of the assistance given him as a boy by the late Mr. Perkins, whose advice he had always cherished, to seek "honesty, sobriety and fraternity with his fellow-men."

All of the following officers were elected unanimously: President, Adrian Paradis; first vice-president, Joseph H. Rehbus; second vice-president, Clarence O. Douden; third vice-president, William F. Mass; secretary, Andrew E. Hegeman; treasurer,

Peter W. Ray; trustees to serve three years, William Muir, Benjamin Rosenzweig, William H. Bussenschutt; censors, William P. Wuest (chairman); E. J. Huelis, John G. Wischerth; librarians, Joseph L. Mayer; counsel, William L. Perkins.

Delegates were elected as follows: To American Pharmaceutical Association, William C. Anderson, Walter Bryan, F. P. Tutbill, T. J. Keenan, H. W. Schlumpf; New York State Ph. A., Adrian Paradis, J. H. Droge, Charles Gesell; New Jersey Ph. A., A. E. Marsland, F. P. Tutbill, Joseph Kahn. At the suggestion of Dr. Muir, the society elected three delegates to the N. A. R. D. They were: Messrs. Anderson, Muir and Rosenzweig. These are entitled to select additional delegates should the society become entitled to them.

W. F. MUCHMORE DEAD.

East Hampton, N. Y., May 13.—After a long illness, W. F. Muchmore, a prominent resident and pharmacist of this place, died last week. Mr. Muchmore was not only a good druggist, but he was also an excellent citizen. He had been in the drug business for forty-six years, having established the first drug store in Madison, N. J. He was a member of the New York and New Jersey Pharmaceutical Associations and of the Empire State Drug Association. Mr. Muchmore had been in business in East Hampton since 1891, and had one of the largest and best drug stores on Long Island.

Mr. Muchmore was a Mason of high degree. He was raised to the degree of Master Mason in 1868, and was exalted in Bounton Chapter, No. 21, in 1871. He received his Templar degrees in 1871. He became eminent commander of Odo de St. Amaud Commandery, of Morristown, N. J., in 1855, and grand warden in 1886. He was also grand commander of the State of New Jersey. He was a Thirty-third degree Mason and a member of the Mecca Temple, Noble Order of the Mystic Shrine. He was also a member of the Royal Arcanum.

Mr. Muchmore is survived by a widow and three sons. Funeral services were held in the Presbyterian Church, and the body was buried at Morristown, with Masonic rites.

HOWARTH-BALLARD LOSS.

Union, May 11.—Among the sufferers by the fire which destroyed the Carton Block and other buildings in this city, are the Howarth-Ballard Drug Co. Their loss is now estimated at \$12,000. They carried on their entire stock an insurance of about \$18,000. There is no explanation of the origin of the fire, although many improbable suggestions have been made. The fire spread so rapidly that many shoppers and clerks had to be rescued by the firemen. The Howarth-Ballard Co. is preparing to resume business without delay in temporary quarters.

BROOKLYN'S GALA NIGHT.

Successful Commencement of the College of Pharmacy.

BANQUET TENDERED TO THE GRADUATES BY THE ALUMNI ASSOCIATION.—CROWDS FILL BAPTIST TEMPLE.—STAGE BANKED HIGH WITH FLOWERS.—JUDGE GAYNOR GIVES GRADUATES A PLAIN TALK.

By common consent, the fourteenth annual commencement of the Brooklyn College of Pharmacy, held last Thursday night, in the Baptist Temple, was adjudged the most successful in its history. After the exercises the members of the graduating class were the guests of the Alumni Association at a banquet, given at the Imperial. This was the first occasion of its kind, and it served as a suitable climax to a brilliant evening.

Seventy-five young men and women were graduated. After prayer by the Rev. Edward Niles, the following degrees were conferred by Prof. Wm. C. Anderson, dean of the faculty:

Graduates in Pharmacy—Peter V. Ahlborn, Harris S. Bloome, David Bluvstein, Tobias Bretzler, Abraham Brodsky, William Burkard, John J. Ciznowski, Frank Cohn, Michael Condello, Joseph Cooperstone, Elizabeth Croll, David Dolinsky, Charles P. A. Dowling, Gustav H. O. Fabian, Joseph P. Farrell, Clark H. Fitch, Alexander Friedenber, Charles H. A. Gassaway, Berthold Gerson, Conrad G. Gmelch, Edward Gorodetsky, Frances Grant, Frederick H. Haubenreich, Edwin Hesse, Morris Hessel, August C. Hillmann, Isidore Hirsch, Albert Huels, John B. Hueser, Isidore Juliber, Bella Junger, Isaac Kassel, Joseph Katz, Charles Lehmann, Charles Liss, Max Martin, Joseph A. McGarr, James E. McNamara, Solomon Miller, Jacob Mirsky, Julius Muller, Abraham Parodney, May J. Pignol, Clifford Sadler, Fred A. Sandmann, Morris Schwarz, Isidore Sender, Jacob Shoben, Frank Smith, Gustav H. Tafel, Antonio Virdone, Abraham Weisenthal, Maximilian Wohlgenuth, Irvin S. Zelnuff.

The following graduates, who have not fulfilled the requirements of age or experience were granted certificates of proficiency, to be exchanged later for diplomas:—John B. Adatte, Edwin Densen, Morris E. Berkowitz, Simon Berkowitz, Isidore Broadman, William H. Clinton, Aaron Cohen, Raymond D. Cullen, Viva Dahlgren, John H. Gerken, Samuel Goodman, Morris I. Horney, Isaac Kaufman, Alice J. Kunkel, Henry G. Lammers, Charles Mincarcik, Jr., Edward Roesch, George F. Ruffrage, Abraham Schwartz, Henry T. Sturz, William R. Wilkens.

The degree of Doctor of Pharmacy was conferred on Walter J. N. Brandenberg, Frances Grant, James E. McNamara, James I. Maggio, Thomas F. Raymond, with a certificate of qualification to William Levine.

Henry T. Sturz was the valedictorian. Music was furnished by Contorno's Fourteenth Regiment Band and by the Cecilia Male Quartette, who were encored so frequently that Dr. Anderson threatened to raise the price of admission. Miss Madeline Burdette sang soprano solos and John

F. Dillon, humorist, furnished entertainment.

Hon. William J. Gaynor gave the graduates a plain talk about their duty to themselves and to the community, urging them not to rest content with the technical knowledge they had acquired. He said: "Your success, my friends, depends not on what you know; it depends on character, honesty, high motives and a true loyalty to the principles instilled into you by your college life and your home. Without these, no matter how much technical knowledge you may have, you will never attain success."

Judge Gaynor said that pharmacy was now a learned profession.

"Not so long ago, anybody could set up an apothecary's shop. But now it is necessary that a man be an educated gentleman from the schools; he must have four years' practical experience and must be a graduate of a college of pharmacy, certainly the public is to be congratulated on these safeguards.

"Read good books," concluded Judge Gaynor. "Read the Bible, the history of peoples and the progress of the human race. Read Shakespeare and all good literature and philosophy. Get the habit of philosophical thought. It will make of you good citizens and a benefit to the community." Judge Gaynor's address made a profound impression and he was enthusiastically applauded.

In awarding the trustees' prizes, President Paradis announced the unusual event of a tie between two students for the gold medal. Being unable to arrive at a satisfactory decision, the trustees decided to award a gold medal to each of the students, H. P. Sturz and Charles Mincarcik, Jr. The silver medal went to Bella Junger, and the bronze medal to Albert Huels; the junior silver medal to Benjamin Evisowitz. The special prize offered annually by Dr. Anderson was awarded to Edward Roesch. Edward Kleine, acting president of the Alumni Association, announced the award of the alumni prize, a microscope, to Morris Hessel.

Prof. A. Percival Lohness, secretary of the faculty, announced the following honor rolls:

Senior—Joseph P. Farrell, Clark H. Fitch, John H. Gerken, Edward Gorodetzky, Morris Hessel, Albert Huels, Bella Junger, Joseph Katz, Alice J. Kunkel, Jacob Mirsky, Charles Mincarcik, Jr., May W. Pignol, Edward Roesch, Jacob Shoben, Henry T. Sturz, Gustave H. Tafel.

Junior—Morris Behm, Max Brandes, David Cohen, Max Corp, James Dawson, Benj. Elyswitz, Hyman Felder, Isaac Feldberg, Solomon Gaer, Mandel Greenberg, Joseph Grubman, Charles Hecht, Joseph Ingoglia, Samuel Katz, Louis Bailey, Barnet Laudon, Robert Levine, Theodore Margulis, Frank Martin, Frank Meyer, John Neumann, Matthew Newstead, Adrian F. Paradis, Perry Pick, Leopold Rein, Max M. Rosenber, Joseph Rosenthal, Jacob Saltman, Israel Sasmorsky, Frank Saxton, Arthur Schwenke, Morris Schubert, Abraham Silverman, Rose Sookne, Bertha Squire, Millie Toscano.

Following the exercises, over 200 persons, graduates, alumni and friends, journeyed to the Imperial. After an excellent menu had been discussed, William Weygandt, the toastmaster, called on Edward

CLASS SECRETARY.

Miss Alice J. Kunkel, secretary of the graduating class of the Brooklyn College of Pharmacy, is the daughter of Charles A. Kunkel, a prominent Brooklyn pharmacist, and a former president of the Rushwick Ph. A. Miss Kunkel is an excellent singer, and besides being a good pharmacist, is otherwise accomplished.

Kleine to respond to "Our Alumni Association." Toasts were made by Jacob Shoben, for the class of 1905, and Adria Paradis, Jr., for the class of 1906. Dr. Anderson, being called on, was cheered for several minutes. He urged the graduates to remember the counsel of Judge Gaynor and to strive for nobility in character, honor and conscience.

TO GET TO SARATOGA.

For the special benefit of New Yorkers, S. V. B. Swann, secretary of the New York State Ph. A., announces the details of transportation to Saratoga for the meeting June 27, 28, 29, 30. The first route available is by boat, from New York to Albany, thence by train to Saratoga. People's Line steamers leave pier 32, North river, at 6 p. m., due in Albany at 6 a. m.; excursion ticket, \$3, berths from \$1 to \$2. Train from Albany to Saratoga at 7 a. m.; fare one way, \$1.17. Day Line steamers leave Desbrosses street at 8.40 a. m.; West Forty-second street at 9 a. m.; West One Hundred and Twenty-ninth street at 9.20 a. m.; due in Albany at 6 p. m.; train to Saratoga at 7.05 p. m., due in Saratoga at 8.20 p. m. Fare on boat, one way, \$2; excursion, \$3; to Saratoga, \$1.17.

The all-rail route is via the New York Central and Hudson River Railroad, trains leaving at 12.10 (night); 8.45, 10.10 a. m.; 3.50 and 7 p. m. Round trip tickets at trunk line rates, \$5.60. Sleeper \$1.50 extra, parlor car \$1 extra.

In every case where a train is taken, members are urged to make certain that a certificate (not a receipt) is secured, so as to get the trunk line rate, which is a fare and one-third. It is absolutely necessary, in order to have this rate granted to the members of the N. Y. S. P. A., to have on the day of cancellation (Thursday, June 29) not less than one hundred certificates.

GEORGE N. WILLIAMSON DEAD.

George Norman Williamson, of the firm of D. D. Williamson & Co., manufacturing chemists, of New York, died in Rome, Italy, recently. His home was in Englewood, N. J. Mr. Williamson was born in Bound Brook, N. J., in 1853. He was a graduate of Columbia College, class of '73, and of Columbia Law School. He had also studied in Scotland, France and Germany. He was a member of the New York bar. He was interested in silver mining, and in 1880 he erected crushing mills in Colorado. Later he returned to New York and became interested in the chemical works of his father.

CAMPAIGN FOR PURE DRUGS.

New Jersey Board of Health Already Has \$5,500 in Fines.

Considerable progress has been made in New Jersey regarding the enforcement of the pure food and drug law, which was passed in 1901. The Board of Health has been active in running down offenders, and \$5,500 in fines has been turned over to the State.

The work is in charge of a separate department, with a chief inspector and four assistants. The work of testing is done by the State, and a few years ago an analytical laboratory was fitted up in Trenton. According to the last printed report of the State Board of Health the number of specimens examined in the laboratory for the year was 3,526, and the percentage of adulteration was found to be, in the case of foods, other than milk and its products, 36.9, and in the case of drugs, the percentage of adulteration was 43.7. The articles selected for examination were those most frequently adulterated.

Regarding the use of adulterants, which in the majority of cases are said to be harmless, R. B. Fitz-Randolph, director of the State laboratory, says:

"There are some important exceptions to this statement. Chemists and physiologists are not yet all of one mind regarding the use of preservatives to prevent decomposition, although the weight of authority seems to incline toward the view that, inasmuch as modern methods of sterilization have become so efficient and economical, that manufacturers have no difficulty in putting up goods which will keep in closed containers without the addition of any preservative, the use of these substances should either be prohibited altogether or permitted only in certain substances and with careful restrictions as to quantity."

The following table gives the number and kind of samples of drugs examined during the year:

	Above standard.	Below standard.	Total.
Acetanilid	1	—	7
Acid, boric	7	—	8
Acid, salicylic	8	—	9
Acid, tannic	9	1	10
Borax	7	—	7
Camph. Tr. Opium	4	4	8
Cold Cream	1	1	2
Comp. spts, ether	1	1	1
Cresote	6	1	7
Ether, sulphuric	3	—	3
Glycerin	4	3	7
Powdered opium	1	—	1
Oil of sweet almonds. 21	8	29	11
Castor oil	11	—	11
Linsed oil	1	—	1
Pepsin, scale	7	—	7
Potassium chlorate	16	—	16
Sodium phosphate	5	2	7
Spt. camphor	11	2	13
Sweet spts. nitre	—	1	1
Tincture ginger	8	4	12
Tincture iodine	30	56	83
Tincture nux vomica. 2	4	6	12
Tincture opium	12	48	56
Distilled water	1	—	1
Sodium chloride	2	—	2
Whisky	—	3	3
Totals	179	139	318
Percentage of adulteration, 43.7.			

WILL PAY ORGANIZERS.

M. A. R. D. Executive Committee Decides to Hire Its Own Men.

ALL MONEY WILL HEREAFTER BE TURNED IN TO THE TREASURER OF THE ASSOCIATION—N. A. R. D. NOT TO GET DUES UNTIL M. A. R. D. DUES ARE PAID IN FULL—THE BRONX ORGANIZED.

At a meeting of the Executive Committee of the M. A. R. D., last Friday evening, the following important resolution was adopted:

"Resolved, That we engage four men to organize the districts, to collect the dues from the members at \$8, and to remit this amount to the treasurer of the Metropolitan Association; that the secretary be hereby authorized to engage men to canvass and complete the formation of district organizations and that the compensation for such men be \$2.50 per member, providing that the \$8 dues are paid in full; that the work of organizing Greater New York by the Executive Committee be done in conjunction with the organizers of the N. A. R. D."

This action was taken after J. B. Duble, who was present by invitation, had stated that the twenty-four organizers employed by the N. A. R. D. were so distributed over the country that it would be impossible to send any additional men to New York.

The committee delegated to go over the books with Mr. Duble, among other things made the following recommendation, which was adopted:

"We also recommend that all sums collected after this date, May 12, 1905, be placed in the hands of our treasurer, and all persons making such collection shall report same with the name and address of the party from whom collection is made, at least once a week, and in case any person makes part payment to an N. A. R. D. organizer, in a sum sufficient to pay the \$1 for the treasury of the Metropolitan Association and the \$2.50 organization fee of the N. A. R. D., the said \$2.50 shall be forwarded to the N. A. R. D. and the dues of such applicant to the N. A. R. D. be paid when he has paid his dues in full to the Metropolitan Association."

The Bronx was organized, last Tuesday, with the following officers: President, A. H. Bischoff; vice-president, B. McKane; secretary, Mr. Minckler; treasurer, A. J. Silverman; trustees, John Goldwater, T. J. Schaaf, A. A. Jackson. About seventy-five members joined and paid up their dues.

CHEMISTS' LAST MEETING.

The last meeting of the session of the Society of Chemical Industry, New York Section, will be held at Chemists' Club, 108 West Fifty-fifth street, to-morrow evening, May 19. The following papers will be read: D. Wesson and N. J. Lane, "The Quantitative Analysis of Lard"; J. Merritt Matthews, "Influences of Various Securing Processes on the Strength and Elasticity of Wool"; Walter S. Williams, "Valuation of Tannic Acid from the Point of the Dyer and Calico Printer"; Martin Schwitzer, "Tin in Alaska."

CHEMISTS' BIG MEETING.

Annual Convention in London Will be a Brilliant One.

The provisional programme for the annual general meeting of the Society of Chemical Industry in London, July 10-16, inclusive, has been announced by the special committee of arrangements, and promises a convention of unusual brilliancy. The hospitality of the city of London will be offered by the Lord Mayor of London, in a special reception.

An exceptional event and rare privilege will be the holding of the annual dinner in the ancient Goldsmith's Hall, which takes place on July 12. There will be dining accommodations for only 170, but American visitors will receive first choice. An overflow dinner will be held at the historic hall of the Merchant Tailors' Company.

Among the places to be visited are the Royal Arsenal, Westminster Abbey, St. Paul's Cathedral, Tower of London, the Royal Mint, Warwick Castle, etc. The mayors of all the cities will offer their hospitality to the guests. Headquarters of the convention will be at Hotel Russell, and the business meeting will be held at the University College, London.

A. B. C. IN THE PALISADES.

The May 11th run of the Apothecaries' Bicycle Club was from Edgewater along the Palisades on the Alpine road to Palisades and to Sparkill where dinner was served. From there to Blauvelt, Orangeburgh to West Nyack, returning by way of Nyack and Piermont. The side of the road along the Palisades was completely lined with spring blossoms, violets in profusion, strawberry blossoms, Jack in the Pulpit, etc., while gardens along the Piermont-Nyack boulevard fairly teemed with white and pink lilacs and magnolias. The scenery was grand and thoroughly enjoyed, despite the drawbacks caused by several punctures, which minor accidents only served to lend additional zest. The members who participated in the run were Mr. and Mrs. G. Stolzenberg, Messrs. Geo. Lenecker, H. G. Ramsperger, Leon Werner, W. F. Traeger, S. Faber and H. C. Jenkins.

The next outing will be May 18, to City Island. May 25, 26, 27 and 28 the club will make a four days' tour through eastern Pennsylvania; the route will be from Elizabeth to Easton, Allentown, Hamburg, Reading, Pottstown, Phoenixville, Valley Forge and Norristown, entering Philadelphia via the beautiful Wissahickon drive from the Andorra nurseries. June 15, 16 and 17 will be devoted to a tour to Lakes Mohonk and Minnevaska.

GASOLINE AFIRE IN STORE.

Syracuse, N. Y., May 16.—A clerk in the drug store of Cummings & Perles, in James street, discovered a two-quart can of gasoline shooting flames in the basement. Mr. Cummings dashed several pails of water without putting out the fire. The alarm was turned in and when the firemen arrived, the cellar was so filled with smoke that the work was difficult. A gas jet nearby was turned on and also helped the flames. It is thought that the loss to the stock will be about \$1,000 and to the building, about \$50.

OPPOSE LIQUOR SELLING.

Manhattan Ph. A. is Satisfied to Have Stamp Tax Repealed.

BUT REVOCATION OF PHARMACISTS' LICENSE IS CONDEMNED ON PRINCIPLE.—PRESIDENT ALPERS HAS STRONG VIEWS ON BOARDS OF PHARMACY AND HEALTH.—ANOTHER "HONOR ROLL" FOR DRUGGISTS.

Liquor-selling is not considered "clean pharmacy" by the Manhattan Pharmaceutical Association. Its members failed to join with the Kings County Society in asking the Governor to veto the Raines bill taking away the stamp privilege. This was after the association had already voted its support under a misapprehension as to the nature of the bill.

Secretary Swann brought up the matter, placing the blame for the repeal of the tax on the Central New York druggists. He said that the bill now before Governor Higgins not only does away with the stamp tax, but also provides that violation of the law shall be punished by forfeiture of the liquor license and revocation of the pharmacist's license for one year.

Discussion showed all the members to be opposed to liquor-selling and in favor of the bill. But the provision revoking the pharmacist's license was strongly condemned. On this objectionable feature alone it was thought advisable to oppose the bill. Felix Hirschman moved that the legislative committee be instructed to cooperate with the Kings County Society to defeat the bill. Another motion passed requesting the Eastern Branch of the Board of Pharmacy to ask the Governor not to sign the bill.

As the Board was then in session in the building, a recess of five minutes was declared. At the end of this time Secretary Swann returned from the Board room with the news that the bill before the Governor provided only for the repeal of the stamp tax, the objectionable provision as to revocation of license being part of another bill. The members looked blankly at each other, then solemnly reconsidered the motions, withdrew them and passed on to other business.

There was a fairly good attendance when President Alpers called the meeting to order. He announced the following committees: Legislative—A. C. Searles, Joseph Weinstein, C. V. Daggett; Finance—E. J. Emelin, A. Bakst, A. Baltzy; Trade Interests—H. H. Blomeier, C. H. Lowe, F. J. Congleton; Grievances—Chas. S. Erb, Chas. Grube, J. M. Pringle, Jr.; Membership—W. Falkiner, F. Wichelns, H. Avignone; Press—Thos. Latham, H. Spriggs, C. L. Nason; Entertainment—Fred Borggreve, R. Timmerman, W. H. Ebbitt.

Dr. Alpers then proceeded to read an interesting address on the conditions and requirements of the association. Touching on the formation of the M. A. R. D., he commended the greater activity of the N. A. R. D. in questions of national character. He said:

It is my firm belief that before many years have passed, the legislation regulating medicine and pharmacy will be vested in a national body, be it that a national

department of health will be created, or that one of the existing departments will take charge of it. For this reason I believe that national associations should look ahead and be ready for action when this time arrives. The interest that the national associations took in the "Mann Bill" was one of the most hopeful signs of this foresight, and although our efforts were not crowned with success, we may be gratified at the fact that work of this magnitude and broadness was undertaken.

On the recent treatment that the druggists have received at the hands of the New York press, Dr. Alpers said: "It should be known to the press and to the public that our association upholds in the strictest way the purity of drugs and chemicals and that we are ready to do everything in our power to eradicate adulteration and substitution." On two important questions President Alpers spoke in part as follows:

It has long been the opinion of careful observers that the present Board of Pharmacy, created in an anomalous way and by different methods in different parts of the state, cannot fully serve its purpose, and however interested and devoted its members may be elements of dissension must inevitably arise. What we want in our Board are men of broad ideas, thorough knowledge, good practical experience, sound common sense, and above all, warm hearts and clean interests in the advancement of our profession. The election and nomination of these men should be uniform throughout the state. It should be in the hands of an organized central body, the New York State Pharmaceutical Association, and none but members of this association should have the right to elect. Every registered pharmacist in good standing should, by simply paying his dues, be entitled to membership in this organization, and none but registered pharmacists should form its membership.

The ideal organization thus constituted is much more apt to select the right man for the Board than local organizations or an unorganized crowd. Members of the Board thus selected should be men who are in active business, and none but such, and it would matter little from what part of the state they came. In thus delimiting the method of electing members of the Board from a central organization, I do not wish to criticize in the least the existing conditions or the present members of our Board, who, I think, are all men of high character. The object is rather to put before you a definite programme, so that when the time for action arrives our minds are clear on this important subject.

The second question is that of representation on the Board of Health in the City of New York. It is the custom, as far as I remember, to appoint a Doctor of Medicine as the Commissioner of Health, and I believe this is done justly. But it is equally true that the health of this community is to a great extent dependent on the faithful service of the pharmacists. It almost appears to me like an imperative duty that the authorities in power should ask to a prominent pharmacist as one of the members of this Board. We should ask this recognition from the authorities not as a privilege or favor, but as a right that they must give us by merit of our education and our position in the community. Let us therefore never lose sight of this one fact, that to gain recognition generally, to raise our profession, to elevate pharmacy, we must make education and knowledge the basis of all arguments.

Dr. Alpers was enthusiastically applauded. Treasurer Hittcheck reported a balance on hand of \$45.85. An important matter brought up by Mr. Swann was the scheme of a certain company to print a list of druggists dealing in pure drugs in a forthcoming business telephone directory. For such a card a "nominal sum" is charged, which Mr. Swann said is \$12. This was denounced as a hold-up scheme similar to that of a daily newspaper last fall. On motion of Mr. Diner the association decided "to put its foot down hard," and instructed its Trade Interests Com-

mittee to show the company the error of its ways.

The question of having lectures by prominent men at the monthly meetings came up and was favorably received. On motion of A. Bakst, Dr. Geo. C. Diekmann was unanimously endorsed as candidate for the Board of Pharmacy.

DRUGGISTS ORGANIZE.

Wheeling, W. Va., May 15.—The Wheeling Druggists' Association has been formed in this city. A board of directors has been elected, and the charter recently granted has been formally accepted. The association is capitalized at \$10,000, and has a charter membership of forty. Following is the board of directors: John Coleman, Chatham Sinclair, W. C. Gordon, John Klariand, C. Bruce Dawson.

The directors will hold a meeting at an early date for the election of officers. The directorate includes the oldest and most experienced druggists of the city. The druggists here have been organized for many years, but the new association is far more reaching and influential.

FIRE DESTROYS DRUGS.

Boston, Mass., May 10.—About 10,000 worth of drugs went up in smoke early this morning in the wholesale drug establishment of Hoagland & Mansfield, 98 Canal street, which was destroyed by fire resulting from spontaneous combustion.

Jersey City, N. J., May 12.—The Bergen Point Sulphur Works, at Constable Hook Bayonne, were damaged \$1,000 by fire. The blaze started in the millroom, and was due to the leak in one of the chambers of a sulphur vat.

Cambridge, Mass., May 15.—There was a slight fire in the castor oil works of C. F. Snitzer, S Thorndyke street, caused by an explosion.

NEW YORK NOTES.

—Henry Merz, of the Heller & Merz Co., New York, is dead at his home in Newark, N. J. He was formerly active in the chemical trade.

—Wm. L. Simmons has sold his drug store at 1102 First avenue, to A. Ackerman, formerly a clerk for Mr. Weber at Lexington avenue and Sixty-fifth street.

—George W. James, druggist, at One Hundred and Fifty-ninth street and Amsterdam avenue, has filed a petition in bankruptcy, with liabilities of \$5,171, and assets of \$4,677.

—James Van Antwerp, son of Garrett Van Antwerp, of the firm of G. Van Antwerp & Sons, Mobile, was in town last week with his two sisters and an elder brother. James has just graduated from the Philadelphia C. P., and will soon enter the firm. —In the Schiller "Kommers," the centenary of the great German poet's death which was observed by the Association of Old German Students in America at Arion Hall on May 6, one of the greatest tributes was paid by Dr. Wm. C. Alpers. He gave interesting personal reminiscences of the centenary of the poet's birth in 1859, which was celebrated throughout Germany. During the Franco-Prussian war his companions on the battlefield would cheer their spirits by reciting Schiller's ballads.

GEO. E. THORPE RETIRES.**Has Served Syracuse R. D. A. For Five Years.**

Syracuse, N. Y., May 15.—At a large and enthusiastic meeting of the Syracuse Druggists' Association, held Friday afternoon, Wayne B. Bissell was elected president. E. S. Dawson, Jr., vice-president, and Mrs. Marletta Harmon Greenland, secretary-treasurer. The Executive Committee will consist of L. F. Barker, George E. Thorpe and a third, to be chosen. The meeting marked the retirement of George E. Thorpe, who has been president of the association for the past five years. Mr. Thorpe last year accepted the office again only on condition that a new president be elected this year.

Mr. Bissell, who has served as vice-president of the association for several years, said:

"I am in favor of anything that will raise the profession in the eyes of the public and emphasize the fact that it is a profession. In this day of commercialism the professional side is too often lost sight of. We should remember that pharmacy is a profession."

During the five years of Mr. Thorpe's administration, the price of proprietaries has advanced, the department stores have fallen in line and everything they sell in the line of medicines or toilet articles brings the same price as that obtained by the druggists. It took a strong fight before they would live up to the schedule, but they finally came to time. It was during the presidency of Mr. Thorpe that the famous cut-rate war was waged, in which the Syracuse druggists were successful. Another important accomplishment was the organization of the drug and general stores in the surrounding country. All have finally joined the procession and jealousies have practically disappeared.

At the meeting Friday, Dr. Curtis, of Kirkville, and Mr. Culver, of Warners, were present, and urged the association to continue the work of interesting the country druggists and storekeepers.

A hard problem to solve is being considered by the association. A prominent manufacturer in the city has been sending out cards stating that the recipient, by taking the card to one of the stores in town, can get a bottle of the medicine at 48 cents. The regular price of the medicine is 90 cents. While the cut is made temporarily, for advertising purposes, the other druggists think it is unfair to them to have one druggist sell for 48 cents what they are obliged to ask 90 cents for. A committee will investigate and look into the situation.

SYRACUSE NOTES.

—John Binning, the Syracuse druggist who recently went into bankruptcy, has taken a position at Watertown.

—Stolz Bros. have redecorated and refitted their new drug store in the Bastable block. A door has been cut through, leading into the Bastable Theatre.

—George E. Thorpe, former president of the Syracuse R. D. A., has sent out letters to the druggists in central New York, urging them to join the State Pharmaceutical Association.

—The Syracuse Chemical Society has elected the following officers: President, J. D. Pennock; vice-president, Prof. E. N. Patten; secretary, Prof. H. Monmouth Smith; treasurer, Dr. John A. Matthews; counsellor, W. M. Booth.

—Asked about the proposed investigation by the State, of syrups used in the making of soda water, Geo. E. Thorpe, former president of the Syracuse Druggists Association, said that nothing but genuine fruit juice has been used by Syracuse druggists for many years and no chemicals are used.

—Harry L. May, of this city, has brought suit against William A. Goodin, a well-known druggist, to recover \$1,000. He alleges that he asked for spirits of nitre for his wife, and what was given him turned out to be nitric acid. He says her throat was severely burned and he was put to great expense for medical treatment.

OUT AFTER DOCTORS.**Italian Ph. A. Would Stop Illegal Prescription Compounding.**

The Italian Pharmaceutical Association decided at its meeting, Friday night, to push vigorously the campaign against physicians who have prescriptions compounded by unregistered pharmacists and without a drug store license. To this end additional letters of protest were sent to the Board of Pharmacy and the County Medical Society and letters were also sent to the local associations, asking for their cooperation.

"The state of affairs to-day is simply outrageous," said President Frank Avignone to an Era reporter, and our association has the evidence to put a stop to it. If the Board will help us. Not only do these doctors put up prescriptions without a license, but they charge extortionate prices. Frequently the bottles are not labeled, not even when they contain poison. These swindlers will charge a woman 75 cents for an eye-medicine and send her to a druggist to buy the dropper! It is intolerable. We can do much if the other local associations will co-operate."

The association endorsed the candidacy of Dr. Diekman for the State Board of Pharmacy.

DEATH OF DR. HENOTTE.

Lowell, Mass., May 15.—Dr. Constant Henotte, a well-known physician and druggist of this city, died here last week. He had been ill for several years. Dr. Henotte came to this city from Canada, thirty-seven years ago, and had made his home here ever since. He opened a drug store at Merrimack and Cabot streets, twenty-two years ago. He built up a prosperous business and some of the best known French pharmacists in the State have been in his employ during the past twenty years. During the first ten years of his residence in this city, Dr. Henotte was in active practice. His charity was wide. He never refused his services to the poor.

Dr. Henotte was born in 1844 in Cesaire, Que. He was educated at the College of St. Marie de Monroir and at the Montreal School of Surgery. Dr. Henotte was a member of many well-known French societies. The funeral was held last Monday, from the St. Jean Baptist Church.

MEDICO-CHIRURGICAL COLLEGE.

Philadelphia, May 15.—Examinations have been finished in every department of the college, and the graduates will next assemble at the meeting of the Alumni Association, on May 25. On the following day there will be a rehearsal of the graduates at the Academy of Music, in the morning, followed by Class Day exercises in the afternoon and the alumni banquet in the evening. Commencement will be held on May 27, at noon.

Samuel R. Ewing, of the class of '04, has been appointed an apothecary for the government at Panama, and has started for Colon to commence his duties.

The last action of the College Branch of the Y. M. C. A., will be to appoint delegates to the student conference at Northfield, Mass., in July next.

Harvey E. Kendig, adjunct professor of theory and practice of pharmacy, graduated with honors in the department of medicine, this year.

AIDS YOUNG PHARMACISTS.

Harrisburg, Pa., May 15.—The Pennsylvania State Board of Pharmacy announces three additional dates for examination for the certificate of licensed pharmacist. This is on account of the new pre-requisite law which goes into effect January 1, 1906. The Board wishes to make it possible and convenient for all persons who will be affected by this law to have an opportunity for examination and registration. The dates chosen are: At Williamsport, Wednesday, July 12; at Philadelphia, Saturday, October 14 and Saturday, December 30. Applications should be made to Charles T. George, secretary, at least ten days before the date of examination.

DELAWARE CO. DRUGGISTS' SCHEDULE.

Chester, Pa., May 12.—Believing that they were getting prices far below those asked by druggists in other cities and towns, the druggists of Delaware county have just adopted a revised price schedule, which covers the prices of prescriptions as well as patent medicines.

PENNSYLVANIA NOTES.

—H. L. Taylor & Co., who recently sold out their pharmacy at Scalp Level, have purchased a new store at Windber.

—A. A. Gartland, of Steelton, has removed his pharmacy to larger quarters across the street from the old stand.

—Owing to the increase in their soda business, Harvey & McDonald, of Kennett Square, have found it necessary to install a new Green polar system fountain.

—The handsome new store of W. S. Young, at Costeville, will be ready for occupancy by the latter part of May. He has been located in temporary quarters for several months.

—L. I. Peiffer has purchased the drug store of Addison Bower, one of the oldest in Myerstown or vicinity, and has made many improvements in the establishment. Mr. Bower will retire from active business.

—W. J. Sturgeon, Kittingan, Pa., has just moved into a new room and has put in a complete set of new mahogany fixtures and a new soda fountain, making one of the handsomest stores in western Pennsylvania.

MARYLAND C. P. ALUMNI.

Hold Annual Banquet, Listen to Addresses and Elect Officers.

Baltimore, May 13.—In accordance with established custom, the Maryland College of Pharmacy Alumni Association held its annual banquet and election of officers, last evening, the day before the annual commencement. One of the dining rooms of the Putaw House had been handsomely decorated for the occasion and an elegant menu was served. John A. Davis, a druggist of this city, presided, and J. Emory Bond, connected with the Baltimore branch of Parke, Davis & Co., acted as toastmaster. Acting Mayor George R. Gaither, president of the Second Branch of the City Council; Councilman George Stewart Brown, and Prof. H. M. Whelpley, of the St. Louis College of Pharmacy, were the guests of honor, and delivered brief addresses, which were happily introduced by Toastmaster Bond. Among the diners were the following:

Profs. Charles Caspari, Jr., Henry P. Hynson, R. Borsey Coale, D. M. R. Culbreth, William Simon and Daniel Base; Dr. A. R. L. Dohme, John A. Davis, Ernest E. Quandt, C. C. Neal, Fuller Nance, Franz Naylor, Joel J. Barnett, C. H. Wolf, Ephraim Bacon, Louis Schulze, Dr. A. F. Riles, Dr. Charles A. Brack, W. E. Brown, H. A. Brown Dunning, G. Wolterreck, Dr. A. J. Corning, Dr. John Neff, David R. Millard, Leroy Oldham, Eugene DeReeves, C. L. Wich, Dr. H. McGlannan, M. F. Wolf, John F. Hancock, J. W. Westcott, F. C. McCartney, Dr. W. F. Rehberger, H. H. Troxell, C. V. Emieh, John C. Muth, John S. Muth, Charles H. Ware, W. C. Parkhurst, Dr. John T. King, J. H. Farrow, Dr. Mercer Brown.

A feature of the proceedings at the banquet was the humorous recitations of Leroy Oldham, who is connected with the H. B. Gilpin Company. At the business meeting, the following officers were elected: President, Franz Naylor; vice-presidents, Ephraim Bacon, C. M. Hornbrook; secretary, H. L. Troxell; treasurer, J. W. Westcott.

THOMAS & THOMPSON MOVE.

Baltimore, May 11.—Thomas & Thompson, the retail druggists, who since the great fire have been at the southwest corner of Charles and Mulberry streets, the old stand occupied by the late Adam Gosman, last Monday resumed business at their old place on the southeast corner of Baltimore and Light streets, in the magnificent six-story building erected for them. As stated in The Era, the furniture and fixtures are all of mahogany, with brass trimmings, in the Empire style, while the shelves and show cases are of plate glass. To the left of the entrance is the beautiful large soda water fountain of onyx, with its silver-plated trimmings and other features that appeal to the eye. The fountain is one of the largest in the city and highly artistic. The members of the firm received numerous congratulations and various floral tributes, among them a big horseshoe, on getting back to the burnt district. Baltimore street is rapidly resuming its old-time appearance of activity.

BALTIMORE NOTES.

—George Way is to open a retail drug store at North avenue and Washington street.

—John J. Rose, of Westminster, Md., and John Donald, of Sykesville, were among the out-of-town druggists on a visit here last week.

—Druggist Fred Homan, of Druid Hill avenue and Biddle street, has gone on a visit to his old home in Salisbury, Md., and will be absent about one week.

—The pharmacy of J. L. Mayer, Pennsylvania avenue and Wilson street, was disposed of at auction, last week, the stock and fixtures being sold in lots.

—Among the visiting druggists here last week was D. L. Miller, of Waynesboro, Pa., who is enlarging his pharmacy by building an addition 20 by 80 feet, which will make the establishment one of the most spacious, as well as attractive, in the town.

—A. M. Hance, of Hance Bros. & White, Philadelphia, last Saturday reopened his country place, near Centreville, on the eastern shore of Maryland. From now on until the fall he will pay frequent visits to the farm, enjoying there fishing and other diversions.

—Thomas & Thompson expect to move into their spacious, handsome new store at the southeast corner of Light and Baltimore streets, on Saturday of this week. All the fixtures and furniture have been installed. The firm will be ready for business in the new location on the following Monday morning.

—Among the visiting druggists last week were: Mr. Smith, of the Union Drug Company, of Union, S. C.; C. S. Henry, Cambridge, Md.; Mr. Nalle, of Raccoon Ford, Va.; C. P. Kemp, of Stevensville, Md.; Frank Henry, of the Williams Manufacturing Company, Cleveland, O., and E. A. Zeitler, Havre De Grace.

—Baltimore will be represented in the contests of the National Drug Trade League in New York, by Messrs. L. W. Davis, George Armon, G. R. Coulston, W. Smuck, H. Smuck, George Wickham, Henry Brauer, Mr. Jahries and Henry Korumann. Among this delegation are the best bowlers in the local organization, and they are confidently expected to give a good account of themselves.

—George L. Muth, senior member of the wholesale drug firm of Muth Bros. & Co., who was taken suddenly ill at the firm's establishment, last Saturday, one week ago, has almost entirely recovered. The attack, however, kept him away from business all the week, and he is still prevented from being at his desk regularly and continuously. It is probable that he will take a short trip to hurry entire convalescence.

DRUGGIST SHOT AT BURGLAR.

Boston, Mass., May 10.—William H. Weed, proprietor of the Gibson Pharmacy, at the corner of Parkman street and Dorchester avenue, discovered a burglar trying to enter his premises early to-day, and fired a revolver shot at him. The intruder fled, and as he did not leave any trace of blood, the inference is that the druggist's aim was bad. The burglar was evidently a professional, as he left behind an extensive outfit of tools.

NOW A DOCTOR.

Prof. Caspari Receives Silver Service and an Honorary Degree.

Baltimore, May 13.—Honors were showered upon Prof. Chas. Caspari, Jr., dean of the faculty of pharmacy and for twenty-five years connected with the Maryland College of Pharmacy, this week. Last evening his friends and well-wishers took occasion, at the annual banquet of the Maryland College of Pharmacy Alumni Association, to present to him, in commemoration of his twenty-sixth anniversary, a handsome silver service of eight pieces. The presentation and banquet took place at the Putaw House, where the college alumni had gathered to the number of about seventy-five, and the recipient was taken completely by surprise, which feeling was heightened by the unexpected presence of his son, Prof. Charles E. Caspari, who occupies the chair of chemistry at the St. Louis College of Pharmacy. The son's coming had been kept from the father, so that he did not know of the young man's arrival until he was escorted into the banquet hall and assigned to a seat at the head of the table. Not until then did he begin to suspect that something unusual was contemplated, and he plainly showed the emotion he felt. Prof. William Simon made the presentation address, congratulating his former colleague on the college faculty warmly on his long service to the institution. Professor Caspari replied briefly. On the tray of the service is the inscription: "Presented to Professor Charles A. Caspari, by the Alumni and Members of the Maryland College of Pharmacy, May 12, 1905."

At the commencement of the University of Maryland, Department of Pharmacy, and the Medical School, this evening, in the Lyceum Theatre, the honorary degree of doctor of pharmacy was conferred upon Professor Caspari, by the provost of the university, Bernard Carter, in the name of the regents. Mr. Carter, who is one of the foremost lawyers of the city, said: "It is not the custom of the Maryland University to confer degrees honoris causa, but owing to the eminence which Dr. Caspari has achieved in his profession, the regents have deemed it wise to confer upon him, honoris causa, the degree of doctor of pharmacy."

TENNESSEE PH. A. TO MEET.

Nashville, Tenn., May 15.—The twentieth annual meeting of the Tennessee Pharmaceutical Association, will be held at Bon Aqua Springs, July 19, 20 and 21. The rate of \$1.50 per day each, for two persons in a room, has been granted by the hotel management. The Entertainment Committee has outlined an elaborate programme and it is expected that this will be the biggest and best meeting in the history of the association. It is expected that the usual railroad rate of one and a third on the certificate plan will be granted.

KILLED BY MORPHINE.

Clarksburg, W. Va., May 12.—George Jackson Criss, a Pike street druggist, died in the Kessler Hospital here, from an overdose of morphine.

"99" IS ONLY 33 SODA.**So Saloonkeepers Want Liquor Laws Enforced Against Druggists.**

Indianapolis, May 15.—Saloonkeepers at Muncie, Indiana, have effected an organization, the purpose of which is to see to it that the liquor laws which operate against them shall be made effective against certain druggists of that city, whom they charge with selling intoxicating liquors at soda fountains at all hours, and having a particularly large sale on Sunday, the day when saloons are kept fast closed. The saloonkeepers say that a drink which bears the local name of "99" has become so popular in one of the leading drug stores of the place, that for the past three or four Sundays thirsty crowds fought for places at the soda fountain. This drink is said to be nothing more than a high-ball with soda water as the "fizz." Veteran drinkers have discovered that it is a great improvement over the ordinary commercial high-ball dispensed at the saloons. Saloonkeepers say that under the present strict enforcement of the law, and the popularity of the soda fountain high-balls, their receipts have fallen off at least 20 per cent.

HIT BY CIGARETTE LAW.**Druggists Lose Trade on Restricted Sale of "Coffin Nails."**

Indianapolis, May 15.—The Indiana anti-cigarette law has practically stopped the sale of "coffin nails" in this State. In towns and villages and in most of the cities this trade was in the hands of druggists, and the loss of these sales under this law has in many cases been considerable, nor has this loss been made up by any corresponding increase in the sales of cigars, smoking tobaccos and pipes. Strenuous efforts are being made in Indianapolis and other cities to bring test cases before the courts. It is believed that the final court will decide the law unconstitutional.

INDIANA NOTES.

—Harry Maddox, a well-known druggist at Hartford City, Indiana, was terribly burned while dissolving a quantity of carbolic acid in a can, and may lose his sight. The lid came off and the fiery liquid was thrown over his face. His neck, shoulders and arms were also burned.

—Footpads have been unusually active in Indianapolis during the past three weeks and the latest victim is Clyde Bowers, a drug clerk in Schaller's Pharmacy, in Brightwood, an Indianapolis suburb. He gave up \$6.75 in cash, but saved a valuable diamond ring by vigorous yelling, while the footpads were trying to pull it off his finger.

CANCER KILLS DRUGGIST.

Homer, Ill., May 14.—F. M. Smith, a well-known druggist of this city, is dead of cancer of the stomach. He is survived by a son and daughter.

Mr. Smith was one of the oldest residents of Homer. After living here for several years, he went to Danville in 1863, but returned in 1877 and bought the drug store run by H. C. Shaw and W. Miller.

AFTER THE "DRUG TRUST."**Another Inquiry to be Set on Foot by Federal Authorities.**

Chicago, May 15.—It is reported here that the Federal authorities have determined on an investigation of the drug trade, after the completion of the present inquiry into the packing industry. Attorney-General Moody, it is asserted, has practically outlined the course of the prosecution and secret service men are getting evidence.

ALLAIRE, WOODWARD & CO.'S FIRE.

Chicago, Ill., May 12.—Fire completely gutted a four-story warehouse belonging to Allaire, Woodward & Co., manufacturing chemists, of Peoria. It is estimated that the loss on building and stock is about \$25,000, and is fully covered by insurance. The contents of the warehouse were crude drugs and finished products, many of the packages burned being rare drugs from the Philippines and other far-Eastern islands.

H. J. Woodward, vice-president of the company, said that he had no idea how the fire originated, and that he did not anticipate any delay in the company's ability to fill orders. New supplies of stock were ordered by telegraph while the fire was still raging.

SOCIAL DRUG CLUB BOUTS.

Chicago, May 10.—The Social Drug Club was presented, at its last meeting, with a gravel made from a pestle and mortar and emblematic of the profession, by William Bodemann, acting as spokesman for the Veteran Druggists' Association. On May 5, the club held a smoker in the club rooms of the Sherman House, nearly two hundred guests being present. The programme included a vaudeville entertainment and two boxing bouts, the first of which, according to Secretary Schaper, was described as an "opener." The other bout closed the "affair." One of the participants in the latter was John Krone, a retail druggist, who weighs about three hundred pounds. The contest was not decided. An outing is being planned to take place some time in June.

The officers of the club are Iver L. Qualen, president; W. W. Klone, F. E. Falkenberg and George W. Mathison, vice-presidents; Jos. F. Macdonald, treasurer, and Henry F. Schaper, secretary.

CHICAGO NOTES.

—The druggists' association known as the Hyde Park Club, is for a schedule of prices. The officers of the club are W. Bodemann, president; F. J. Schulte, secretary, and Jos. Grubb, treasurer.

—Frank L. E. Gauss, formerly secretary and sales manager of Searle & Hereth Co., manufacturing pharmacists of this city, has been appointed manager of the western sales department for Eli Lilly & Co., Indianapolis. He entered upon his new duties May 1.

—S. B. Hartman, of the Peruua Drug Mfg. Co., has filed a bill in the United States Circuit Court, in which he seeks to restrain the Public Drug Co. from selling his goods or mutilating the wrappers or labels on the bottles. He claims the company

violates a contract and sells goods at reduced prices.

John Parsons, for many years a druggist at 194 Tuilty-first street, this city, is dead from heart failure, aged seventy-five years. Mr. Parsons was one of the druggists who was burned out in the great fire of 1871. He was a member of the Ellsworth Zouaves and of the first Chicago Board of Trade. His remains were taken East for burial. The store he owned for so many years has been purchased by W. K. Forsyth.

FORMULA BILL KILLED.**Retail Trade Wins Its Fight Against So-Called Noble Bill.**

Madison, Wis., May 13.—Wisconsin has escaped a formula law for at least two years. This is the result of the action of the State Senate in finally killing the so-called Noble bill, which provided that the formula of all patent and proprietary medicines, containing certain specified ingredients, should be printed on the outside wrapper. The bill was fathered by a physician, and had the support of the physicians of the State, as well as that of the State Board of Pharmacy. Some members of the Board, however, are interested in a manufacturing concern that puts the formula on all its preparations by choice. The retail trade was unanimously against the bill and was heartily supported by the large manufacturers and the newspapers. When the bill came up in the Senate the opposition was so strong that it was not allowed to go to a third reading.

SPENCE-M'CORD CO.'S FIRE.

La Crosse, Wis., May 10.—The Spence-McCord Drug Co. lost its stock by fire May 4. The stock was \$140,000, and there will be little salvage. The company carried insurance of \$67,000, and will continue in business, and probably on the same site as soon as the building can be restored. The building was owned by the Hixon estate, and was worth \$17,000. The fire was caused by the sparking of imperfectly insulated electric wires. An electrical storm is believed to have been the primary cause.

The Spence-McCord Co. was recently formed by the combining of the McCord Drug Co. with T. C. Spence Drug Co. The McCord Co. was one of the oldest wholesale houses in the Northwest, and the consolidation made the house one of the strongest.

DRUGGIST'S SWIFT CAREER.

Grand Rapids, Mich., May 13.—Wm. J. Remus, formerly in the drug business at South Haven, is now in jail at Paw Paw, awaiting trial. His career runs as follows: Once convicted of violation of local option law, again arrested on charge of two similar violations of law, arraigned in Circuit Court, plead "not guilty," bonds furnished, jumped his bail, bondsman proved worthless, apprehended in Chicago and brought back for trial.

OLD DRUGGIST DEAD.

Streator, Ill., May 14.—Robert S. Grier, for many years a druggist in this city, is dead. He died at Red Bluff, Cal., where he had gone to recuperate. He came here from Lexington, Ill.

NO CONVICTION.**Case Tried Three Times at Instigation of Board of Pharmacy.**

St. Paul, Minn., May 15.—B. W. Moore, of the Cash Supply store at Stewartsville, was arrested as the man responsible for the illegal sale of two bottles of strychnine by his two women clerks, and for which one of the latter was tried and acquitted, while the case against the other was dismissed. The trial of Moore took place before the City Justice at Rochester, the county seat of Olmsted County, in which Stewartsville is located. The jury took the case at 9:45 p. m., was out sixteen hours and disagreed. They came another trial with a new jury, the State getting five more witnesses. In less than two hours a verdict of acquittal was reached. The jury's conclusion was that Mr. Moore was not the head of the firm, and as he did not make the sales or order them made, he was not responsible. This is the third blackeye (not meaning to imply that it is Argus-eyed) the State Board of Pharmacy has received in the Stewartsville case.

CLERKS DISCUSS JOURNAL.

St. Paul, Minn., May 12.—The Minnesota Drug Clerks' Association held a meeting at the Windsor Hotel, this city, recently. The principle business disposed of was the matter of the annual picnic and the question of establishing a monthly paper. A committee was appointed to arrange for the picnic, which will be an elaborate affair, and take place in June or July. It was decided to publish a monthly devoted to the interests of the association. The first number will appear Sept. 1. The choice of an editor has not yet been made, nor has the printing yet been arranged for.

MINNESOTA MENTION.

—Milton Larson has left E. Peterson and has bought the J. Hanson drug stock, of Superior, Wis., which he will remove to Duluth.

—Frank Yost has become night man for the Billin Drug Co., Minneapolis. He was formerly in business at Twenty-second street and Hennepin avenue.

—John P. Davidson, George W. Bruner and Katharine Davidson, of Minneapolis, have incorporated the Red Cross Chemical Co., the capital stock being \$50,000.

—The St. Paul R. D. A., at its April meeting, considered the matter of imposing a minimum charge of ten cents for ice-cream sodas this season. Most of the members favor the increase and the change will take effect immediately, if the trade generally favors it.

—Julian Noyes Kirby, member of the wholesale drug house of Noyes Bros. and Cutler, St. Paul, was thrown from a horse at Western and Dayton avenues, a few evenings ago. The steed became unmanageable at Chatsworth street shortly after Mr. Kirby had left the Town and Country Club grounds, and after running over a mile, threw his rider off. Mr. Kirby received a scalp wound and was taken home after his injury had been dressed. He was not seriously hurt.

—The Mansur Drug Co. has at last opened

its new store at Seventh and Robert streets, St. Paul, and the claim that it would beat anything of the kind in the Northwest, is borne out by the event. The store has the advantage, too, of occupying one of the busiest corners in the city. Robert Mansur, the proprietor, has hitherto been in business in Minneapolis, but has now centered all his interests in St. Paul. He offered prizes for the first customers, for the first gentleman, a \$5 box of cigars, and for the first lady, a \$10 bottle of perfume.

—Thomas Voegell, president of the N. A. R. D., is a victim of labor differences. The remodeling work of the Nicollet avenue store of Voegell Bros. Drug Co., in Minneapolis, has been delayed by the hanging up of plumbing work through friction between plumbers and their employers. The new fixtures for the store are being manufactured, and it is hoped to have things in shape for their prompt installment by the time they are finished. The Washington avenue store of this company is also being transformed. Like the other store, it will have a new fountain of elaborate design and an entire new complement of fixtures. There will be an individual department devoted to candies.

TO HONOR PROF. GOOD.

St. Louis, May 15.—The preparations for the testimonial for Prof. Q. M. Good, May 18, the thirtieth anniversary of his election as a member of the St. Louis C. P., are about completed. Many former students of the college will gather for the event, which is under the management of the A. A. Appropriate presents will be given Prof. Good, and a memorial in the form of a portrait will be presented the college. The plan originated with the members of the class of '75.

WANT CHEAPER LIQUOR BLANKS.

Winfield, Kas., May 15.—The Cowley County Commissioners have been asked by the local representatives of the National Association of Retail Druggists to have the price of the application books for selling liquor reduced. It was until recently \$1, but a change was made to seventy-five cents, after a committee waited on the county clerk. The law fixes the cost at just what the book costs the clerk with a fee for his affidavit.

GOT THE GOODS ANYHOW.

Kansas City, May 12.—A man went to Edward W. Shepherd's pharmacy, No. 405 Montgall avenue, yesterday and asked the clerk to sell him a bottle of whiskey. The clerk refused.

"Well, I'll get it, anyway," said the man, as he left the store.

This morning the police were notified that a window in the rear of the store had been broken, and that three bottles of whiskey had been stolen.

COCAINE VENDOR FINED.

Kansas City, May 13.—Dr. E. K. Fort, a druggist at Fifth avenue and Central street, was fined \$50 in Police Court for selling cocaine without a prescription. A witness testified that he had purchased the drug regularly at his store.

BIG MEETING EXPECTED.**Annual Dues Pouring in on St. Louis R. D. A.—Sunday Closing Question.**

St. Louis, May 15.—Officers of the St. Louis R. D. A., are expecting the meeting to be held this week to be the best in the history of the association. It is the end of the fiscal year, and the annual reports will be read, the Sunday closing situation discussed, and several other matters of local interest taken up. The manner in which annual dues for next year have been coming in, has been a surprise to even the warmest advocates of the \$12 a year proposition, and it seems that the dinner proposition is going to be a winner.

The threat of the police commissioners to close the drug stores has worried many of the merchants, since they have seen how completely the saloons have been closed, but those who are close to the throne believe the threat will never be carried into execution.

Secretary Koehl's annual report will include mention of the two schedules, the increased collection of dues under the new organization plan and will show the association to have paid \$200 on its current year dues to the N. A. R. D., and to have nearly \$400 in the treasury.

MISSOURI PH. A. MEETING.

St. Louis, May 12.—The Missouri Pharmaceutical Association will hold its twenty-seventh annual meeting at Perte Springs (Warrensburg), beginning Tuesday, June 13, and closing Friday, June 16. The Missouri Pacific Railway, on which the meeting place is located, has made a rate of one fare to Warrensburg, plus fifty cents for the round trip to Perte Springs. Tickets are on sale beginning Monday, and are good returning as late as Saturday. The fare for the round trip from St. Louis will be \$7.01. The rate at the hotel is \$2 per day. J. V. Murray is local secretary.

L. A. Seitz, chairman of the Committee on Entertainment, promises that the programme will be "the best yet." The Missouri Pharmaceutical Travelers' Association will meet on Thursday, and the chairman of their Entertainment Committee, H. J. Stolle, is working with the M. Ph. A. chairman.

Ex-President Charles L. Wright will bring up the problem of pharmacy legislation in Missouri and candidates will be nominated for the Missouri Board of Pharmacy. Monday, at 9 a. m., the Board will hold an examination at Perte Springs. The secretary is G. W. Carmack, of Plattsburg.

Griserin Price List.

In the advertisement of the American Griserin Works, on another page, is given a complete price list, of Griserin cachets, Griserin cum Tannablin cachets and Griserin powder. The American Griserin Works, 108 Fulton street, this city, are the sole agents for America, and they say that druggists will have many prescriptions for Griserin, as it is being brought to the attention of the medical profession all over the country. They want every druggist to become familiar with Griserin and ask you to write to them for booklet.

AMONG THE COLLEGES

BUFFALO'S DAY.

Graduates Received Diplomas and Advice, and are Banquetted.

Buffalo, May 10.—Thirty-six graduates of the Buffalo College of Pharmacy received the degree of bachelor in pharmacy at the commencement exercises held in the Teck Theatre last Thursday morning. Degrees were also conferred upon the graduates in medicine and dentistry, of the University of Buffalo, of which the College of Pharmacy is a department.

The candidates were presented by Dr. John R. Gray, secretary of the school, to the Vice-Chancellor, Prof. Charles P. Norton, who conferred the degrees. Dean W. G. Gregory announced that Ray V. Agrelins, an honor man, had won the W. H. Peabody prize of \$50. The other names on the senior honor roll were: M. Frank, H. Kenny, Edgar H. Lincoln, William G. Overoker and Wm. D. Hulse. Junior honor roll: L. R. Dunfee, Hattie M. Seeley, Roselle W. Blackney, Moses H. Goodwin and Pierre B. Merrill. Following is a list of the graduates: Ray Vincent Agrelins, William Adsit Bryant, John Burnett, Joseph Henry Callaban, Joseph T. Wesley Coble, Wilber Ray Davis, Arthur G. Drake, Bert Henry Gifford, James Bernard Harrington, Max Himelfarb, George Daniel Hull, William Dikeman Hulse, Charles William Janke, Mary Evangeline Kelly, M. Frank H. Kenny, Ernest Lambert, John Leffler, Edgar Howard Lincoln, Charles Theodore Mann, Hubbard J. Meyers, Benjamin Francis Miles, Gates Markham Minckler, William G. Overoker, Eugene Ashley Putney, Walter Scott Redfield, Harold F. Rising, William Andrew Robison, Edward P. Ryan, Frank Whitney Shaw, J. Lee Sherlock, Edward W. Shiners, Howard A. Stover, Otto Ernest Tannhauser, Thomas Elba Tefft, Theodore Floyd Young, Elmer E. Zacher.

The diplomas of Messrs. Agrelins, Buettner, Janke, Miles, Hulse and Redfield, were withheld on account of the candidates being under age. The degree of Pharm. M. was conferred upon Homer E. Dyke, of Port Angeles, Wash. The address to the classes was made by Rev. Richard Earle Locke, of this city.

In the afternoon the Alumni Association held its seventeenth annual meeting. Dr. Henry G. Benz presided and welcomed the graduating class to membership. Albert P. Sy, an inspector of ammunition in the U. S. Army, gave a short lecture on smokeless powder, illustrated by several interesting experiments. He was followed by Prof. Herbert M. Hill, who addressed the meeting on the "Adulteration of Food and Drugs." The result of the election of officers was: President, E. B. Walker, '92; Vice-Presidents, R. C. Miller, '01; J. T. W. Coble, '05; Miss Mary E. Kelly, '05; Secretary, William E. Lemon, '99; Treasurer, Charles H. Ganger, '90; Historian, M. L. Allright, '90; Executive Committee—William C. Achilles, '01; John C. Peterson, '99, and H. J. Meyers, '05.

In the evening a banquet was held in the Niagara. The program included the

following toasts (Dr. Henry G. Benz acting as toastmaster): "The University," John B. Olmsted; "The Value of Preliminary Education," Arthur Detmers; reading, Mrs. Burton S. Fletcher; "The Lost Art of Prescribing," Dr. Wm. C. Krauss; "An Outside's View of Pharmacy," (response in verse), Frank Hyatt Smith; reading, Mrs. Burton S. Fletcher; "Class of '05," Edgar H. Lincoln, and "Following the Gleam," Rev. Richard E. Locke.

CLEVELAND'S COMMENCEMENT.

Cleveland, O., May 12.—In conferring degrees at the graduation exercises of the Cleveland School of Pharmacy, last Friday evening, President L. C. Hopp, for the board of trustees and faculty, bestowed upon Eugene R. Selzer, the honorary degree of pharmaceutical chemist. Mr. Selzer, now vice-president of the school, was the first student to be enrolled at its organization, twenty-three years ago, and on graduation he was awarded a certificate of proficiency, which was then given instead of a diploma.

The exercises took place in the Assembly Hall of the Hollenden Hotel. The programme included an address of welcome by President L. C. Hopp, presentation of graduates by Joseph Feil, conferring the degrees by president, awarding of prizes, and the graduation address by Rev. Dr. Harris R. Cooley, director of charities of Cleveland. Six students out of a class of twenty-one who entered three years ago, received the degree of Ph. C. These were George L. Bader, N. F. Dwyer, B. E. Hunt, E. M. Mandel, N. D. McDonald and Otto E. Muhlhan.

The prizes awarded were two membership privileges in the A. Ph. A., Otto Muhlhan receiving one for the best record in practical pharmacy, and N. D. McDonald the other, for the best final examination in materia medica. Mr. Muhlhan was also awarded the prize membership in the Cleveland School of Pharmacy for the best record in materia medica specimens, and Mr. McDonald the Eugene R. Selzer microscope for the best general average in materia medica and microscopy.

At the close of the commencement exercises, a banquet was tendered to the graduates by the board of trustees, members of the faculty, and alumni.

UNIVERSITY OF MICHIGAN.

Ann Arbor, Mich., May 10. Benjamin L. Murray, B. S., '97, accompanied the remains of his mother, who died in Florida, to Ypsilanti, Mich., where interment took place. On his return to New York, he called upon his former teachers and other friends at Ann Arbor. Mr. Murray is chemist and bacteriologist for Merck & Co. Fred J. Frael, Ph. C., '03, is chemist with Walter K. Schmidt Co., analytical chemists, Grand Rapids, Mich.

Dr. J. O. Schlotterbeck has promised the student making the best record in pharmacognosy a membership in the A. Ph. A.

F. I. Haard, Ph. C., '02, is a member of the firm of B. O. Randall & Co., Clinton, Mich.

F. J. Kloeck, Ph. C., '03, is senior prescriptionist with A. B. Collins & Co., Charlotte, Mich.

Rafael del Valle, Ph. C., '01, of San Juan, Porto Rico, is the author of an article on

"The Preliminary Comparative Study of the Chemical Composition of Milk." The article appears as Bulletin No. 5, and is issued by the Office of Health, Charities and Corrections of Porto Rico.

R. J. Nisbet, '96, formerly manager for the R. A. Shaw Drug Co., San Marcial, New Mexico, is now manager of the sick-room and medical supplies department of the Central Drug Co., Detroit.

K. J. Colgrove, B. S., '03, is division superintendent of the International Correspondence School, of Scranton, Pa. His permanent address is London, Ont.

A very practical lecture was given on May 3, upon "Organization," by Charles F. Mann, of Detroit. Mr. Mann is an experienced of the Michigan State Ph. A., and served as secretary for the same body for several years. He is at present treasurer of the N. A. R. D.

Walter H. Blome, Ph. C., '98, B. S., '02, who is supplying the place of Prof. A. B. Stevens during the latter's absence in Europe, will receive his Master's degree, at the annual commencement in June.

NINETEEN GRADUATES.

Maryland C. P.'s Fifty-Third Annual Commencement.—The Prize Winners.

Baltimore, May 13.—At the commencement of the Maryland College of Pharmacy, which was a dual event participated in by the departments of Medicine and Pharmacy, at the Lyceum Theatre, nineteen young men graduates received their diplomas. The exercises, which were largely attended, marked the ninety-eighth commencement of the School of Medicine, and the fifty-third of the School of Pharmacy. The address to the graduates was delivered by Rev. Dr. DeWitt M. Benham, of Central Presbyterian Church. Rev. Henry Nice, of the Methodist Episcopal Church, offered prayer and gave the benediction. The mandate for the awarding of the degrees was read by the dean of the School of Medicine, Dr. R. Dorsey Coale. The list of pharmacy graduates was as follows:

Maryland—Frank Oliver Barrett, James Aiken Black, J. Howard Cassell, William H. Clarke, Frank Paul Firey, Stephen C. Hless, Alfred Eccleston Kemp, James Carlton Wolf.

South Carolina—William Everett Jordan, John Rayford Power, Robert Cecil Todd.

West Virginia—Clay Carlisle Chidester, Charles Maitland Hornbrook, Charles Edgar Phipps.

Russia—Ichel Folick, Harry Lewission. North Carolina—Robert Franklin Moody. Texas—Herbert Edwin Waterman. Porto Rico—Rafael Janer.

The prize-winners in the department of pharmacy included the following: First general prize and special practical pharmacy prize, Charles Maitland Hornbrook, of West Virginia; second general prize and special alumni prize in plant histology, James Carlton Wolf, of Maryland; third general prize and special Simon prize in practical chemistry, Frank Paul Firey, of Maryland; honorable mention, Robert Cecil Todd, of South Carolina; J. Rayford Power, of South Carolina; William H. Clarke, of Maryland; A. Eccleston Kemp, of Maryland, and Rafael Janer, of Porto Rico.

BOOK REVIEWS

CLINICAL TREATISE ON THE PATHOLOGY AND THERAPY OF DISORDERS OF METABOLISM AND NUTRITION. By Prof. Carl von Noorden, Physician-in-Chief to the City Hospital, Frankfurt-a-M., Authorized American edition. Translated under the direction of Seaman Reed, M.D., Professor of Diseases of the Gastro-Intestinal Tract, Hygiene and Climatology, Department of Medicine, Temple College; Physician to the Samaritan Hospital, Philadelphia. Part IV., by Prof. von Noorden and Dr. Mohr, the Acid Autointoxications. Part V., by Prof. von Noorden and Dr. Carl Dapper, Concerning the effects of saline waters (Kissingen, Homburg) on metabolism. 12mo., cloth. Part IV., 80 pages, 50 cts. Part V., 92 pages, 70 cts. New York: E. B. Treat & Co.

These two books are a continuation of the series reviewed by us a year ago. Part IV deals with autointoxication with acid products of metabolism, how autointoxication occurs and acetouria, a subdivision of acid autointoxication; the sources of the acetone bodies; pathological non-diabetic acetourias and diabetic acidosis, and while these are more of interest to the physician, the pharmacist will find a chapter of interest in the remedies suggested and open up ideas which the American editor says "are in a field which has hitherto been little explored." Part V deals principally with the influence of saline waters on (1) gastric secretion (with cases), (2) on the metabolism of proteins, (3) the excretion of uric acid, and the effect of saline mineral waters on the absorption of food and digestion of fats. The decided opinions expressed by the author on mooted questions regarding the influence of the sodium chloride waters on the digestion in conditions of disturbed gastric secretion and diseases of nutrition are certainly interesting, and the numerous experiments mentioned upon which the author's conclusions are based will possibly suggest new ideas to the enterprising pharmacist.

THE DETECTION OF POISONS AND STRONG DRUGS. Including the Quantitative Estimation of Medicinal Principles in certain Crude Materials. By Dr. William Auernth, Professor in the University of Freiburg. Authorized translation from the third enlarged German edition by William H. Warren, Ph.D., Professor of Chemistry, Medical Department of Washington University, St. Louis, Mo., 8vo., 228 pages, cloth. Price, \$1.50 net. Philadelphia: P. Blakiston's Son & Co.

The high standing of the author of this work in the scientific world is well known. There are five chapters in his book, the first of which deals with volatile poisons, with a synopsis of the group; the second with non-volatile, organic substances, with subdivisions and appendix as well as a synopsis of the group; the third with metallic poisons with a synopsis of the group, biological detection of arsenic, and fate, distribution, and elimination of metals; the fourth with poisons not in the three main groups, as well as carbon monoxide in blood, blood stains and the biological detection of human blood; and the fifth with a quantitative estimation of alkaloids and other drugs in crude matters, while there is an appendix dealing with the preparation of reagents.

The book is intended "to provide stu-

cents of medicine and pharmacy with a concise guide to toxicological analysis," as well as to familiarize students of medicine and pharmacy with other common organic drugs which are strong therapeutic agents rather than poisons, substances like quinine, phenacetine, salicylic acid, sulphonal, etc. The translator, who has done his work clearly, was in doubt whether to mention the methods based upon the German Pharmacopœia, as given in the book, or to make these conform to the U. S. Pharmacopœia, but thought readers would wish to compare both methods, so that the passages dealing with them remain unchanged. The book is cleverly written and adds considerably to the literature of a very interesting subject. It is well fitted, not only to be the companion of the student of pharmacy, but to aid the practicing physician, pharmacist and lawyer, who will find not only new tests for poisons, but an able chapter on the detection of human blood.

THE INTERNATIONAL MEDICAL ANNUAL—A Year-Book of Treatment and Practitioners' Index. 1905. 8vo, 644 pages, cloth. \$3. New York: E. B. Treat & Co.

Another volume of this interesting annual has been issued, and its editors "have found it necessary to bow to the inevitable and adopt a larger page, in order that height and width should be more proportionate." It treats largely of therapeutics, medicine, surgery, and sanitary science in 1904, and while, as one editor pertinently observes, that "Medicine, like Nature, rarely makes leaps," and hence "it is difficult from year to year to point to any definite step forward, even, although, steady progress may continue to be made all along the line. The past year has been no exception to the rule, in that it furnishes no striking example of the triumph of science over disease," but the well-written articles on new matters and well-nigh 500 pages of new treatment are somewhat at variance with his modest statement. Among a series of thoroughly interesting facts that will appeal to the physician are those on tropical diseases, plasmosis, hominis, massage of the heart in cases of chloroform poisoning, nasal accessory sinuses, phthisis, traumatic asphyxia, and pneumonia, as well as the numerous stereograms used in illustrating the diseases of the eye. The pharmacist will derive much practical benefit from the "Dictionary of Materia Medica and Therapeutics" incorporated in the "Annual," nearly one hundred pages being devoted to the subject of the new remedies introduced during the period under review. We congratulate the editors on producing a book in which there is not a dull page and which will be invaluable in every branch of the profession.

PROCEEDINGS OF THE AMERICAN PHARMACEUTICAL ASSOCIATION AT THE FIFTY-SECOND ANNUAL MEETING HELD AT KANSAS CITY, MO., SEPTEMBER, 1904. 8vo, 1024 pages, cloth. Baltimore: The American Pharmaceutical Association.

The Proceedings of the American Pharmaceutical Association for the year 1904, which constitutes volume 52 of the series, has been issued. The first thing that will strike an observer is the omission, in an effort to keep down the bulk of the volume, of the table of contents and the inclusion of the names of all the members into one list, instead of two, as heretofore. The volume contains as frontispiece a portrait of Ezekiel Herbert Sargent,

who died at Chicago, Ill., April 24, 1904, and who was president of the Association in 1869-1870. Besides the minutes of the meeting, there are the papers of the section on practical pharmacy and dispensing, and the section on scientific papers, and nearly 600 pages under the title "Report on the Progress of Pharmacy." This part of the volume, contributed by Professor C. Lewis Diehl, for many years official reporter of the Association, is, as has often been remarked, the most valuable portion of the book to the pharmacist, because it represents the advances made in pharmacy and allied sciences for the period under review, and also contains much useful and practical information.

Even if members did not attend a single meeting, the possession of this volume would more than repay them the cost of their membership subscription.

A TREATISE ON PHARMACAL JURISPRUDENCE, with a Thesis on the Law in General. By Harley K. Wiley, A.B., LL.B., Lecturer on "Pharmaceutical Jurisprudence," University of California. 8vo, 256 pages, buckram. \$2.50. San Francisco, Cal.: The Hicks-Judd Company.

While quite a third of this admirable little book is taken up with the thesis mentioned, the author may be pardoned on account of his clear and intelligent style, and it will do the reader no harm to know the history of English and Roman law which is given so correctly, and from which most of our common law is derived, even if the writer's purpose may have been to get down to the exact definition of "Pharmaceutical Jurisprudence." It might have been better if he had given more detail to legal questions of interest than to too long quotations of judges' opinions, i. e., problems which puzzle, such as: Would a man who handed over a doctor's prescription to a friend suffering from the same complaint be prescribing or violating the law? While the book is not the first of its kind, it should prove of value to every pharmacist, proprietary, wholesale or retail, both on account of its lucidity and its quotations of case law. With regard to the latter point, however, the author may lay some claim in pharmacy to being "a pioneer in its peculiar field." We would recommend Mr. Wiley to try another venture by giving us clearly the different laws, both case and statute, of the different States.

PHARMACOLOGY OF THE FLUID EXTRACTS IN COMMON USE: A Brief Account of the Derivation, the Most Important Constituents and the Chief Physiological Effects Produced by the Drugs Employed in Their Preparation, with Incidental Mention of Their Therapeutic Uses. By John S. Wright. 223 pages, leather. Price, 50 cents. Indianapolis, Ind.: Eli Lilly & Company.

This well written and concise pocket-book is worthy of the close and careful attention of all pharmacists, coming, as it does, from a man of high scientific attainments in the botanical field. It is, as the author claims, "a concise account of the latest and most authoritative statements concerning the origin, the active principles, and the physiological effects of the drugs commonly administered as fluid extracts." Where drugs have not been investigated thoroughly their empirical uses are indicated, and even if the writer had not touched upon the subject of new remedies, his research and opinion regarding other remedies would alone entitle the book to the consideration of the pharmacist.

TRADE SECTION

A CLERK'S SIDE OF THE CASE.

He Writes That the Proprietors are Frequently to Blame.

GOOD CLERKS SCARCE BECAUSE THEY SOON BECOME PROPRIETORS.—THEIR AMBITION LAUDABLE AND SHOULD NOT BE DISCOURAGED.—SOME "DON'TS" FOR PROPRIETORS.—HOW THEY MAY OBTAIN THE RESPECT OF THEIR MEN.—THEY SHOULD ENCOURAGE ORIGINALITY.

Just now there is a good deal of complaint of the scarcity of good drug clerks, and there is much discussion of the causes and remedies of this ever-present evil. It has occurred to me that a presentation of a clerk's side of the question may be of interest and that a few "don'ts" for proprietors, with examples of some common faults of bosses might throw some light on the situation.

Some professional pharmacists seem to think a remedy can be found by Germanizing our American ways in the drug business; that is, to legislate clerks into a class distinct from pharmacists-proprietors. But this strikes me as simply amusing. As sensible would be the suggestion to create an automaton clerk with just enough ambition to serve well and not enough to try to become a proprietor.

What incentive is there for a clerk to strive to do his work well unless it is the desire to gain experience and knowledge enough to help make him a successful proprietor some day? Certainly the very best positions financially, open to clerks, do not bring a large enough monetary return to make them contented to remain clerks all their days. It is only because they regard it as a stepping stone to better things that they are willing to go through the apprentice stage.

GOOD CLERKS SOON PROPRIETORS.

A man who is considered competent to dispense prescriptions and virtually run another man's drug store, ought to be able to run one for himself. Good clerks are scarce because good clerks soon become proprietors themselves.

I was employed for three years in a store, which, in that time, had by actual count, forty-two clerks, and disregarding the personal equation, it seems to me that the clerks were not always in fault. The rule in that store was to have two good men in charge, one in the prescription department, the other outside, and then hire jetsam and flotsam as fillers-in. Clerks who have stood alongside of me at the prescription counter have admitted, when taxed with it, that they had absolutely no past experience, being certified by a friend or relative.

We have read much about the good clerk and "don'ts" for him. Now let us rub up the proprietor a little in the mortar of criticism. The pestle will be used discreetly, as otherwise it might rebound

when the writer himself becomes a proprietor, as he hopes to do.

KNOWLEDGE BRINGS RESPECT.

In the first place, the boss should know his business, and he should respect his employees, and he should always be able to decide questions bearing on the professional side of the business with understanding and dispatch.

To be sure, there are many examples of men with only a smattering of the broad science of pharmacy, who have made wonderful successes of their business, but not because of their lack of knowledge, but in spite of it. Every one of these men had some really competent man as a manager or head clerk, and many absolutely avoided the prescription department; at least the dispensing part of it. One proprietor, who has several stores, would not dispense a prescription himself, except when a great rush is on. He reasons: "With discounts and credits and the management of my business I am not competent to exercise the dispenser's cool judgment." Yet this man was an AI prescription clerk in his time. Now, for twenty dollars a week he has a man in each store, able and willing to take responsibilities and whose word is law. This proprietor says: "The man on the dispensing counter must be accurate, but he must also be quick, not only in dispensing himself, but in deciding the hundred and one questions bound to arise weekly in a prescription business. I dislike the holding of prescriptions for judgment and decision, when the writer is obscure or in error, and cannot be reached, and I allow my men to make 'snap' judgments, and I stand by them afterwards."

IMPROVEMENTS TO BE WELCOMED.

A clerk of long experience once remarked that pharmacy is the application of horse-sense to a serious proposition which even the best men know little about. I have thought about that definition a lot, especially after an experience with a head dispenser who insisted upon my filtering the familiar zinc sulphate, sugar of lead and tincture of opium injection. In that case I protested, but the boss O. K'd the "snap" judgment, deciding against me.

I suggest some "don'ts" for bosses. Don't forget that to love your men respect you, you must respect them. Don't crush originality in the manufacturing department. Too many proprietors cut short with: "That's not my way of doing it." I have in mind a man, who, when a manufacturing chemist, as a subordinate, thought out a simple expedient for saving time and labor and turning out a better finished product, but he was waived aside, and the result was that he found people who were not prejudiced and who were appreciative. To-day that man is one of the largest manufacturers of an improved cold cream on the market. Another, and a necessary injunction for some bosses, is: Be dignified and orderly; don't storm around the store, always looking for trouble; and don't "holler" at your men.

THE GOLDEN RULE.

Don't sizo your employes up as thieves and liars until you have had proof that such is the case; give them their constitutional rights. I have known several at first absolutely straight men, but of weak moral fiber, who have become tired of a too severe espionage and have eventually stolen, because, as they said, "they might as well have the game as the name."

Don't forget above all that the Golden Rule should apply in your treatment of clerks. Don't play favorites, for it awakens jealousy, but don't be afraid to commend good work publicly. It is a good incentive for a large force and you are commending the results, not the man. "I like the way this is put up" carries more weight with a man, than "I like the way you put things up," provided always that you let your men know that you know what is going on, and who does the work.

Don't put a clerk down as a loafer because you see him apparently idle when you come in suddenly, and who continues so after your arrival. He is less to be distrusted than he who under similar circumstances makes a sudden burst of speed. The first may have finished an arduous piece of work; the second may be bluffing.

BETWEEN CUSTOMERS AND CLERKS.

Don't always prejudice a clerk wrong if a customer complains about him. Of course, on kicks between customers and clerks, it is always well to seemingly side with the former, but do it tactfully and without loss of prestige to the clerk. If you have to settle many disputes between customers and any particular clerk, fire him, and keep your customers, by all means. But never listen to but one side of the story. The best plan I ever saw in operation was one where the proprietor, after listening to a complaint, would say: "I thank you for reporting this to me, and I will look into the matter at once, and advise you, later." Then he would have a heart to heart talk with the alleged offender. If the man was actually in the wrong, he received a quiet dressing down. This proprietor owns several stores and his mail is frequently heavy with anonymous complaints, ranging from a kick about a fly in a soda glass, to the use of profane language. These are all consigned to the waste basket. One signed complaint which amused and yet pricked, was from a woman who had been refused change for a twenty dollar bill and her description of the man "who was positively insulting," just fitted the boss. His remembrance of the circumstances was perfect, and the evident unjust fault-finding customers, who are not patrons was brought home to him. It served to show clearly one instance where claims that a man was not a good clerk were groundless.

In another column will be found a picture of a pharmacy 110 years old. Such a veteran is worth notice.

Soda Business North and South

The New Fountain Installed by C. H. Cirkler, Minneapolis

A Fountain in North Carolina—The Former is a Large Apparatus, Notable for Its Beauty of Decoration—Space Over the Fountain Utilized by a Balcony—Mr. Cirkler Believes a Fountain Should be Its Own Best Advertisement.

As in every other line, the great Northwest is right up to the times in the soda business. A number of leading drug stores in the large cities of that region have recently been equipped with beautiful and expensive fountains, possessing the latest improvements. Among these is the establishment of C. H. Cirkler, in Minneapolis, at Sixth and Nicollet avenues, which has installed a new Twentieth Century fountain, manufactured by the L. A. Becker Company, of Chicago. In view of the short summer season in Minneapolis,

which is only three or four months, Mr. Cirkler at first doubted the wisdom of purchasing a large fountain, but since the new apparatus has been at work, he states that his only regret is that the fountain is not twice as big.

This is because soda consumption has to a great extent already become independent of climatical conditions. Nowadays, people drink cold soda to winter almost as much as they do in summer, and indeed the beverage is fast becoming our national drink all over the country.

A BALCONY OVER THE FOUNTAIN.

The Cirkler fountain possesses several unusual features, as may be seen by examining the illustration. Its ensemble was designed for especial adaptation to its location, the amount of space, and general utility. It is thirty feet in length and is surmounted by a balcony over its entire extent, the space above the fountain being utilized for glass-covered shelves which contain proprietary medicines and other stocks. Thus, no room is lost. At the same time this arrangement greatly enhances the decorative effect, the base of the balcony slanting back to the wall at an angle of about forty-five degrees. This is inset with panels of Tiffany illuminated art glass, which is very rich and effective. Then there are three art glass cabinets for storage purposes, one at either end of the apparatus and one in the middle. These are supported by gold capped Predrara onyx columns, which constitute a highly ornamental feature of the design. The two drancht boxes at the back of the fountain are likewise of delicately-veined Predrara onyx, inlaid in artistically contrasting colors.

ATTRACTIVE PICTURES.

The counter, which runs a full thirty feet, is of crotch-cut mahogany, highly-finished and surmounted by a white marble

A NEW MINNEAPOLIS FOUNTAIN IN C. H. CIRKLER'S ESTABLISHMENT, SIXTH AND NICOLLET AVENUES.—A BECKER TWENTIETH CENTURY.—AN UNUSUAL FEATURE IS THE BALCONY OVER THE APPARATUS.

top, provided with a silver-plated guard-rail. There are ten draught arms on the boxes in the rear, and all the usual modern devices are in place in conjunction with the German silver work-board, which runs the whole length of the counter. Mr. Cirkler provides neat soda stools for his patrons and these may be seen in a long row in the illustration.

The lighting scheme is very complete, producing a brilliant effect at night. There are eight large ground glass electric globes on the fountain proper with numerous other smaller lights around the mirrors and the Tiffany glass base of the gallery. Mr. Cirkler believes in display advertising and regards his fountain as its own best advertisement, and for this reason much thought was expended on the illuminations.

As to the bottle-counter system of dispensing, Mr. Cirkler expresses himself as highly pleased, holding that the syrup-in-sight idea is a great drawing card with the public, and that the system, besides its other advantages, is more expeditious in use than other methods.

FINANCIAL RETURNS.

"My fountain," says he, "is thoroughly practical, economical, and easy to operate. It has frequently been said that the crucial test of a soda fountain is its earning capacity. It will interest you to know that my soda business has increased from \$17,000 a year, with my old fountain, to \$28,000 a year with the new, and that my drug and general business has also been benefited. This increase all around is handed without a penny of extra cost."

The whole process of installation was so important and delicate that Mr. L. A. Becker himself gave much of the work his personal supervision.

In the basement are the usual appliances, an automatic carbonator and steel tanks, and a well-appointed department for the preparation of syrups and crushed fruits.

YOUR ATTENTION CALLED TO MERIT.

Those druggists who have not taken up as yet the Theralite bag, would do well to investigate its merits and to stock it. They certainly will do the latter, if they do the former. The Theralite Company is to be commended on its intention of marketing the bag through the regular channels of the retail drug trade and druggists should support them in this method. Extensive advertising to the public is rapidly creating a large demand, so druggists should prepare themselves to meet it. In every case the consumer is told to get the bag from his local druggist. Moreover, the reasonable retail price insures a ready sale and the liberal discounts allowed the trade give a good profit. The bag is a really good article and has the added charm of novelty. Many dealers are advertising it extensively at their own expense, as a leading drawing card. Better get in line and reap some of the harvest yours—M. When writing to the Theralite Company, 161 165 Elm street, New York, please mention The Era. Their advertisement will be found on another page.

SODA IN DIXIE.

The Fine Business Built Up By Cornellison & Cook.

LOCATED IN SALISBURY, NORTH CAROLINA.—PART OF THE TRADE COMES FROM SURROUNDING COUNTRY IN A RADIUS OF TWENTY-FIVE MILES.—RIGHT DOWN-TO-DATE.—SODA TRADE IN THE SOUTH GROWING.

While perhaps not as well established in the South as in the North, the soda water business as a feature of the up-to-date drug store, below the Mason-Dixon line has recently been advancing with such rapidity that everywhere pharmacists are doing away with the old fountains that had been doing service as long as twenty years, and replacing them with the modern apparatus that the business demands.

Perhaps no better illustration of the wisdom of keeping abreast of the times is shown than in the store of Cornellison & Cook, in Salisbury, N. C. While not the oldest drug store firm in this section, in the three years that the firm has been located here, it has built up for itself a most enviable reputation, particularly in the soda business. It is conceded by members of the firm that the popularity of the beverages dispensed over the counters there, both in summer and in winter, has not only made the store most popular with residents of Salisbury, but also with the country people for a radius of twenty-five miles. The visit to town is not complete until it has included a call at the well-known pharmacy for a glass of soda.

The management of the soda business has developed entirely upon Mr. W. M. Cook, and by a combination of energy, tact and perception, with development of idea

and experience acquired in the North, he has surpassed many of those who have had the same opportunities, but failed to grasp them.

The fountain itself is one of the handsomest in the South, and was made by Robert M. Green & Sons, of Philadelphia. It is of their "Polar" construction of syrup tanks, which slide out like a drawer, for replenishing with syrups. Beside the chairs along the fountain, Mr. Cook has made his store popular among the ladies by placing numerous small tables along the side of the store, opposite the fountain, where congenial groups or couples may be seen. Then, too, there are special tables for the children and young people and after school hours it is quite the thing for the youngsters to hurry in for a glass of Coca-Cola.

This is one of the popular drinks at present. Another is grape juice, while the "sundae" so popular in the biggest drug stores in the North, has just as many patrons, in proportion, in Salisbury. Crushed fruit flavors are also popular, while many fancy the "Madeira cream," which, as the hot weather approaches, is becoming more and more in demand. Ice cream is the popular ingredient in this, while the addition of various juices and flavors makes it as pleasing to the eye as to the palate. Another favorite is "Pepsi-Cola." There are very few calls for ginger ale and similar beverages, either imported or domestic. It is the same in regard to mineral waters, and vichy is practically the only one sold.

Mr. Cook, as might be expected, is a strong advocate of neatness and cleanliness in the appointments of his fountain and the attendants. The glasses used, as well as the linen and silverware, are all of the best quality, while equal attention is paid the decorations, which are generally fruits and flowers.

A POPULAR NORTH CAROLINA FOUNTAIN.

In the Store of Cornellison & Cook, Salisbury, N. C. A Polar, manufactured by Robert M. Green & Sons, Philadelphia. Its Patronage Comes From Many Miles Around the Town. Mr. W. M. Cook Is Seen Behind the Counter.

SODA IN MILWAUKEE.

Soda water and mineral waters never were in such demand in Milwaukee as at present. There is a famine in table waters that have heretofore been more or less neglected by the average citizen. There has been a rush to the soda water fountains that is unprecedented. Downtown drug stores have had to add to their forces of employes. In fact, there is a midsummer rush while the temperature is still down below the woolen underwear line. All of this because of a little bug that scientists say has got into the good old water of Lake Michigan, on which the denizens of this town are wont to feed at such odd times as they are surfeited of beer.

In brief, there is an epidemic of typhoid fever in Milwaukee. Health officers said it was the water and advised that it be boiled. An expert made an investigation and reported that a leak in a sewer contaminated the city's drinking water. Then bacteriologists made tests and failed to find enough organic matter in the water to account for the 110 cases of known typhoid fever and a score of deaths within a week or so.

But that report did not make the water any more inviting than it had been when the expert had found the sewer leak. The people refused to drink it. Unanimously they so decided. There was a stampede to the offices of the spring water dealers. Bottlers rushed in the product of their famous springs by the car load, and still the people's tongues hung out.

And still they are hanging out, without much chance of relief. Downtown drug stores and department stores that have soda fountains are reaping the reward. The wholesale houses, however, have exhausted their supply of fancy waters and unless the freights move faster, the city will be compelled to rely almost wholly on the stuff that made it famous.

NEW COLORADO FOUNTAIN.

The Robinson Drug Company has installed a \$5,000 Lippincott soda fountain in its drug store on the corner of Tejon street and Pike's Peak avenue, Colorado Springs, Colo., which ranks among the most elaborate fountains in the West. The fountain is of Italian marble, with bases of Mexican onyx and a hand-carved, solid mahogany top and base, with triple plate mirrors and a silver work-board. The carbonator is run automatically by city water power, charged to 175 pounds.

RIDGEFIELD PHARMACY OPENS.

Invitations are out for the opening of the Ridgefield Pharmacy. They run: "The honor of your presence is desired, May 13 and 15, at the opening of the Ridgefield Pharmacy, under the management of Howard D. Smith, Ridgefield, Conn." The simplicity and good taste of this is pleasing and far more creative of attention than an elaborate production. Much of its strength lies in its brevity. The mechanical work is of the same high order, the type being of a gothic description, well chosen and arranged, while the material is a heavy linen paper of a delicate mauve tint. This folds across in the middle, permitting mailing in a medium-sized mauve envelope. Even the printer's ink is mauve. The whole idea is effective.

A PHARMACY 110 YEARS OLD.

The drug store of William L. DuBois, at Catskill, Greene Co., New York, has been continuously in use as a pharmacy since 1795, making it 110 years old. It stands on the main street of the town, which is in the heart of a region rich in historic associations. The village is the traditional home of Rip Van Winkle and has been immortalized by Washington Irving as the Village of Falling Waters.

The store was established by Dr. Thomas O. Crosswell, in 1795. The present proprietor, Mr. DuBois, purchased the business in 1863, and has continuously managed it ever since. Before that time he

had been in the employ of Schieffelin & Co., for a number of years. Mr. DuBois has been a familiar figure at State pharmaceutical meetings for a long time.

One of the unique features of the store which, unfortunately, the photograph does not bring out, is the deeply worn top step of sandstone. The feet of generations have cut a deep depression in it, until now it is both of historical interest and a powerful advertisement. Notice, too, the old weather-beaten sign, with its consequent message of permanency and reliability. The middle figure in the picture is Mr. DuBois himself, while his son, Mr. Mortimer DuBois, also a pharmacist and associate in the business, stands on the right.

PACKAGE TOBACCO WARNING.

The Bureau of Internal Revenue has issued the following warning: The present law and regulations require that all smoking tobacco shall be put up in packages containing 1, 1½, 2, 2½, 3, 3½, 4, 8 and 16 ounces, and in no other manner, and that each such package shall be properly labeled and stamped before removal from the factory. Such statutory packages cannot legally be subdivided into parcels of tobacco inclosed in envelopes or other wrappers to be distributed gratuitously as samples, nor can the tobacco be taken from such statutory packages after removal from the factory and be repacked in envelopes or other inclosures and then be sold or given away.

FITTINGS OF BOTTLES.

Assessed for Duty as Part of Their Value.

An interesting case has just been decided adversely to Francis H. Leggett & Co., of New York, in the United States Circuit Court. The firm has now appealed to the Circuit Court of Appeals.

The controversy between the firm and the government arose over the importation of bottles containing olive oil. The oil was assessed with duty at the specific rate provided for olive oil in bottles, and the bottles at the rate of 40 per cent. ad valorem, under paragraph 99, relating to "bottles filled or unfilled, not otherwise specially provided for, and whether their contents be dutiable or free." The bottles were fitted with corks, caps, tin-foil capsules covering the top, and labels pasted on the side. They were also wired, the wiring being of a very light character, running over the cork, down the sides and across the bottom, the last knot in the wire being officially sealed. The office of this wiring and sealing is to prevent opening of the bottles and substitution of inferior contents before the consumer is reached.

The collector treated the corks, caps, capsules, labels and wire as parts of the bottles, and included their cost as part of the value of the bottles on which the duty of 40 per cent. ad valorem should be assessed. He also distributed between the bottles and their contents, according to the value of each, the invoice charges for the wooden cases containing the merchandise, and took for this purpose the dutiable value of the bottles found as stated above, and not their value without the fittings.

The importers contend that these invoice items for the fittings and cases "properly and legally pertain to the value of the imported merchandise which was the contents of the bottles"; that "the bottles, like the corks, labels and all other charges, were mere adjuncts of said contents, and had no value, save as a means to the importation of the latter"; and that "53 per cent. as the contents were dutiable at other than ad valorem rates, the value of all the adjunct items referred to save only the bottles was duty free."

WILL RAISE INDIGENOUS DRUGS.

From Springfield, Ill., comes the news that a resident of that town intends to systematically cultivate medicinal plants for the market. He intends to raise ginseng, golden seal, sanicula, boneset and burdock. After much study of the question, he has decided that he can make the business pay, and so has bought a small farm, intends to dam up a small stream and thus secure water for irrigation. He says that he does not expect to make much profit at first and that he would not advise anyone to take up the business who had to pay for high-priced labor.

The Italian wine crop of 1904 is roughly estimated at 43,000,000 hectoliters (1,135,931,000 gallons), against 35,100,000 hectoliters (927,236,700 gallons) in 1903.

Novel Ideas in Drug Store Fittings

How An Old Brooklyn Pharmacy Was Remodelled

Everything White Except Show Cases—A Gallery on Each Side—A Double-Decked Arrangement in Rear; Lower Portion, Prescription Department; Upper, Office—These Fronted with Glass and Open to View—Fireproof Floor and Ceiling—Many Powerful Lights.

A firm of enterprising Brooklyn pharmacists have recently remodeled an old drug store so thoroughly that it is now practically new. Their efforts were considerable, but the result fully justified them. Indeed, there are so many new and useful features embodied in their plans that they are of general interest and a description may furnish others with useful suggestions.

The firm is Tripp & Braswell, 139 Broadway, Brooklyn. They succeeded the Vincent Pharmacy, of the same address, which had been under a continuously successful management for thirty-five years, never having changed ownership or location in all that time. The new concern, after completing the extensive alterations, began business on February 17, last, and on April 6 and 7, held a formal opening, at which every visitor received a present and every purchaser of goods to the amount of fifty cents or upwards was given a useful souvenir.

Our photograph gives a very good idea

of the refitted store and a casual glance will at once show several striking features.

BEAUTIFULLY WHITE EVERYWHERE.

First of all, everything except the show-cases is white, the shelves and other fittings, the gallery, the prescription booth, the soda counter and the ceiling. The balcony runs down each side and through the double-decked prescription department, which can be seen at the end of the store, the upper portion really being part of the balcony. This arrangement possesses a great decorative value and is also exceedingly practical, allowing easy access to the stock shelves at the top all 'round the store.

The prescription department is five-sided, with the back, of course, open. It is mostly glass, which permits a complete view of the compounding of prescriptions and thus guarantees perfect cleanliness and order in plain sight in this important branch of the business. All this work is done in the section on the ground floor.

That above, similar in appearance, is used as an office and from it the proprietor can secure a complete view of the whole store and all that is going on, at the same time being sufficiently removed from routine calls to quietly handle the usual office work. Taken together, these two floors remind one strongly in appearance of a pilot house on some large river steamer.

FIREPROOF AND CLEANLY.

The ceiling is metal, painted white, and the floor mosaic, set in concrete cement, thus insuring that they are fireproof. Moreover, the white everywhere is pleasing to the eye and makes the store remarkably light and cheerful.

The show cases are the modern glass, symmetrical type, of the silent salesman style. There are a great many of them running over thirty feet in length, altogether. Glass doors screen the shelves on the right of the store, as may be seen in the illustration, which are used for patent and proprietary medicines. On the other side are the regulation stock bottles on open shelves. The soda fountain is at the right front, as is usual, and is of the wall type. A new marble dispensing counter has been put in.

The lighting scheme is singularly complete, there being a great many electric globes, some of unusual candle power. At night this produces a brilliant illumination, attractive in itself, but in conjunction with the white background everywhere, it is a decided feature. There are four groups of ceiling lights of three lamps each, which are of twenty-five-candle power. On each side of the store are twenty-eight lights projecting from the base of the balcony. Besides these, there are two twenty-five-candle power lights in the prescription department. In the two

A WELL-DESIGNED DRUG STORE. THAT OF TRIPP & BRASWELL, BROOKLYN.

fine show windows are twelve lights at the top with four lights on each side.

CLOCK, MIRROR, TELEPHONE.

In the front of the store, near the door, are a mirror and a clock. These touches show real genius. Every woman customer is glad of a mirror to see about her hat, hair and veil, and most men want to know the time without taking out their watches.

In the left rear is the sound-proof telephone booth. Its location shows thought. Its users must pass through the whole length of the store and are just as much the more likely to see and buy goods.

Those salts and other substances which should be kept from the light, are ranged in the prescription department, symmetrically in black cardboard boxes, numbered and indexed. It is a good and practical idea.

The dimensions of the store are 56 by 18 feet, and the view from the door gives the impression of even greater length, because of the perspective and the white decorations.

The members of this new enterprising firm are Edwin F. Tripp and LeRoy Braswell. In the photograph the latter is seen in the center and the former on the right. Mr. Braswell holds originally from Mississippi, but since being graduated from the New York College of Pharmacy in 1902, has been three years in business at the store of Morris D. Cadman, in Brooklyn.

THE INDIGO CROP OF INDIA.

From the Final General Memorandum on the indigo crop for the season 1904, prepared in the Statistical Department of the Government of India, the following information is obtained:

The area sown this year in Bengal is estimated at 223,400 acres, against 249,700 acres sown last year. The yield for the province is estimated at about 33,040 maunds. Last year the official estimate was 41,560 factory maunds, while the actual production was found to be 47,630 factory maunds. [A factory maund is two-thirds of a hundred weight.]

In the United Provinces the total indigo area this year amounts to 74,200 acres, compared with 140,800 acres, the ascertained area of 1903, and is the lowest since the decline of this crop began. The total output of indigo is estimated at 12,000 factory maunds—37 per cent. below the last year's estimate.

In the Punjab the area under indigo continues to decline, and has fallen from 74,200 to 53,000 acres. The output of seed is estimated at 1,673,800 sets (28,921 hundred-weight), and of dye at 589,700 sets (9,872 hundred-weight).

In Madras the total area sown in indigo in the talwatyari villages up to the end of November, 1904, is given at 99,800 acres, less than the area of the corresponding period of the preceding year by 49 per cent. Including a forecast of the late sowings, the total area in Madras is estimated at 123,500 acres, and the yield 16,260 hundred-weight.

Paradis Pharmacy, Myrtle and Washington avenues, Brooklyn, pushed the sale of seasonable sulphur candles by having a straight line of them on the outer edge, the whole length of the long show cases.

SHOW WINDOWS AND FEATURES.

Many Druggists Do Not Realize Value of Window Displays.

SURPRISING DEARTH OF GOOD DESIGNS PROVES THIS.—A GOOD WINDOW SHOWING HOW SPONGES GROW AND EDUCATING THE LADY ON THEIR NATURE.—A DOG WINDOW OF GOOD VALUE.—NOVEL MOTH BALL DISPLAY.—CANDIES, WRITING PAPER, INSECT EXTERMINATORS AND GRAPE JUICE DISPLAYS VERY FREQUENT.

The lack of really good, artistic, or original windows this week is quite noticeable. Those pharmacies which have made special efforts devote most of their window space to toilet soaps, sponges and insect exterminators. Reed, Yeomans & Cubit, Nassau street, are quoting lower prices than even they usually do, and are thus attracting attention to a large miscellaneous assortment of goods in their window. The occasion is their annual anniversary sale and celebration.

Kalish Pharmacy, Twenty-third street and Fourth avenue, New York, are pushing the sale of sponges by a nature study. A large aquarium occupies nearly the whole window. In it are displayed unbleached sponges, simulating their natural state of growing to the ocean bottom or to coral. Various shells from tropical waters enhance this display, while gold and silver fish sport themselves in and out and around these animal plants. The rear of the window is hung with immense red and tan Turkish towels. A neatly hand lettered card lying nearly in the front of this large tank tells the laity this story:

A LESSON IN NATURAL HISTORY.

"Sponges inhabit the bottom of the sea, where they are affixed to the rocks or other solid bodies and are most abundant within the tropics. They are collected chiefly in the Mediterranean and Red seas, and also in the East and West Indies."

Each side next to the tank stand cards reading: "Bath sponges, 15c" and "Bath mitts, 15c." Filling in the unused ends of the window are boxes of large sponges, while in front of these are heaped very small ones bearing cards, stating, "3c. ea." Between the story of the sponge and the window pane are displayed bath straps at 29c.

Emil Agratston, One Hundred and Sixteenth street and Fifth avenue, New York, besides his large show windows, has one small one, about six by nine, in which he features a well-known brand of cocoa lates. This window has a depth of about two feet. The sides are hung with deep purple crepe paper. A show bottle occupies each corner, and thus leaves but little room for the daintily piled packages which occupy the center, but the strong attraction, especially to the little children, is a large paper lady, who, with a raised crepe parasol over her head, stands guard over the "sweets." Upon the top of the pile of candies is an uncovered cake. A card in the corner states: "High as the Alps in quality."

A DOG WINDOW.

B. Block, 1439 Fifth avenue, is featuring a soap. A large frame holds the cen-

ter of the stage. This frame is pure white, upon which are fastened enlarged facsimiles of the labels of the different brands, all manufactured by the same company. There are seven labels to each side of the firm and one in the middle. This features a dog snap with a picture of a doghouse, in the door of which stands the animal himself. In one case it is a collie and in another a water-spaniel. At the top of the frame is a view of a canine family group "a la natural." On the bottom of the frame is a picture of a large porcelain bathtub, over the top of which appear the heads of the same dogs. Before and after, obviously, a card says the soap disposes of fleas. All along the base of the window are photographs of handsome dogs of different breeds.

Charles E. Froatz, Fifth avenue, corner One Hundred and Thirty-fourth street, is featuring moth balls in two ways. The floor of the window is heaped high with these snow-white globes, but the uniquely attractive idea is the covering of the large front glass pane with chalk-drawn balls. The center of this shower of balls contains a circular yellow price card, upon which a very large "five" is printed in black, followed by a smaller "cents per lb." It is a curious fact that some of the children in Harlem are assisting the sale of moth balls, by using them for marbles.

All the windows on Sixth avenue, with two exceptions, are displaying sponges. One of the best is that of H. T. Galpin, 1014 Sixth avenue, which attracts attention especially because of a large, curious sponge, which is suspended in the center of the window. A card announces a special sponge sale for the week.

AN ATTRACTIVE WINDOW.

Wm. Wynn & Company, of 44 Flatbush avenue, Brooklyn, are pushing the sale of Schieffelin & Company's Insect Powder by a neat window display. This very large show window has circular ends; thus the main part of the window extends into the street. One end contains sulphur candles in bulk, with the cover off the case. In front of this, strewn carelessly, but resting one slightly upon the other, are some six or seven of the single candles. The other half-circle contains large bottles of "Lightning Annihilator" lying on their sides. At the base of the span of each curve, a red show-bottle stands. The center of the main part of the window holds a curved stand made of six cans of Insect powder, enough apart to allow four cans to bridge the openings. On the top edge of this row is a card, worded: "Spring Necessities." To the front, on the floor of the window, which is covered with white crepe paper, are grouped more of the goods. All are wrapped in white labels with red lettering. Flanking the main and central column are two immense cartons of red with black lettering, reading: "Schieffelin & Company, Pure Insect Powder."

Here and there is the small bellows for blowing the powder into the smallest crevices. An attractive and forcible window.

PRODUCING BROMINE.

The Saginaw Salt Co.'s plant, at St. Charles, Mich., is turning out about 250 pounds of bromine per day, in connection with its output of salt.

APPRAISERS' DECISIONS.

Oil of Orris an Essential Oil.

The Board of General Appraisers held oil of orris, imported by Ungerer & Co., at New York, to be properly classified as an essential oil.

Enflourage Grease.

The protest of F. Patrel & Co. has been sustained by the Board and merchandise imported by them at New York has been declared free of duty as enflourage grease.

Oxide of Iron—Paint.

The Prince Manufacturing Company imported merchandise at Plattsburg, which they invoiced as crude sienna earth, unground. This was classified by the customs collector as dutiable as paint. The importers protested it was really dutiable at a lower rate as either crude sienna earth or hematite iron ore. On consideration, the Board of General Appraisers brought out the following facts, overruling the protest.

On behalf of the protesting company, the agent of the shippers, who has sold all of the product in the United States and Canada, testified, and from his testimony it appears that the merchandise in question is procured originally in the Champlain district below Three Rivers, Quebec, Canada; that it is obtained at depths ranging from a few inches to 20 feet below the surface, and that in its crude state it is of a "dirty yellowish color." After being removed from the earth it is exposed so that as much as possible of the water contained in it may run off, and then it is placed in furnaces and all impurities burnt out of it. One of the results of the burning process is to change the color to a brownish red, and it is to this latter condition that the merchandise comes before us.

It was shown that about nine-tenths of the importations of this merchandise into the United States was sold to the protestant, and in his testimony the secretary of that company states that the merchandise is an iron ore or crude sienna, but his experience was not shown to be such as to entitle an expression of his opinion as to whether or not the merchandise is iron ore to much weight.

There was offered in evidence what was testified to by this witness to be a certificate of analysis of a sample of the merchandise, made by Ricketts & Banks, analytical chemists, which represents it as containing metallic iron, 63.79 per cent.—equivalent to ferric oxide (sesquioxide), 91.14 per cent. Counsel for the government also offered a certificate of the official chemist in the United States appraiser's office at the port of New York (Exhibit 2), showing the analysis of a sample of each of the four lots covered by the invoices in detail, which differed considerably from the analysis offered by the importers.

On behalf of the government, two witnesses were produced and testified. Each of them was shown to have had extended experience in handling dry colors, including oxides of iron, umbers, siennas and

ochers. From the testimony of these witnesses it was shown that paints made from siennas are adapted to special uses—that made from raw sienna to be applied on soft wood to make the surface imitations of ash and oak, and that made from burnt sienna to make surface imitations of cherry, mahogany, and rosewood—and that paints made from siennas are specially fitted for such uses because of the transparency natural in sienna.

One of these witnesses, after mixing a sample of the merchandise, being asked what it was, answered: "It is a brown oxide of iron." This witness also testified that such oxides of iron are used for making paints, and that such paints are generally used as preservative coatings for either iron or wood when exposed to the weather. In every essential detail the testimony of the other government witness was in harmony with and corroborative of that of the first witness.

The Board held: "On the record before us protestant has failed to sustain either of the claims set forth in the protest for classification different from that made by the collector, while on the other hand we think it has been clearly established that the merchandise is a crude paint."

Ground Emery.

This was imported by the Canada Atlantic Transit Company as corundum ore concentrates, when imported at Chicago, but the Board held it properly classified as ground emery.

Sandalwood Chips Crude Drugs.

The Board sustained the protest of R. Hillier's Son Company against the assessment of duty by the collector of customs at New York. The goods consisted of sandalwood chips taken from the surface of the tree after the bark had been removed, being clipped off to prepare the tree itself for sale to sandalwood oil makers. After being ground or powdered, they are used by manufacturing pharmacists in making extracts. The Board sustained the importer's contention that they should have been classified as crude drugs.

Powdered Pumice Stone.

This importation of Charles D. Stone & Co., at Chicago, was held to have been properly classified as manufactures of pumice stone.

Galmel—Oxide of Zinc.

The Fox & Carhart Specialty Company imported at Indianapolis, merchandise which they invoiced as "mineral-galmel gemahlen," which they claimed was free of duty as "calamine." It was assessed for duty, however, under the classification of colors and after consideration the Board upheld the collector.

The Board summed up as follows: The protest is submitted for decision on the record, letters from protestants elaborating their claim, and an official sample of the merchandise. This sample was submitted to the chemist in the appraiser's office at the port of New York, and that officer reports that it "consists of zinc oxide which is more or less tinted with mineral color. This article is comparatively free from silica, yielding but .40 per cent. insoluble residue on analysis." He reports further that—

Calamine is a hydrous silicate of zinc. Prior to 1803 the native carbonate (smithsonite) and the hydrous silicate (calamine) were known as calamine, as no at-

tempt had been made to prove them different minerals. Smithson in that year analyzed them, and they became mineralogically separated, the hydrous silicate retaining the name calamine and to the carbonate was given the name smithsonite.

The term "calamine" is also metallurgically applied to native carbonate of zinc, which, on being roasted, yields an article similar to the merchandise under consideration. Such product is no longer calamine, as it is neither carbonate nor hydrous silicate of zinc.

Protestants entered the merchandise as "dry oxide of zinc," and that designation would seem to be in harmony with said analysis. Oxide of zinc is specifically provided for in paragraph 57 of the tariff act of 1897, but as protestants make no claim under that paragraph, we refrain from making any direct finding on the imperfect record before us as to whether the merchandise should have been classified thereunder.

We find that the merchandise is not calamine, and the protest is therefore overruled without affirming the action of the collector.

DRUG TRADE JOTTINGS.

The sale of pharmacies in Harlem is as active as real estate.

C. A. Marsh, 2140 Fifth avenue, New York, has moved his store to 1806 Park avenue.

Henry Glassman, 813 Third avenue, New York, has succeeded Carl Koeler, of the same place.

Prune Wafers give a good subject for a window display. They are the output of the Irving Mfg. Co., Philadelphia, Pa.

Leo Dreyfus, of 69 Sixth avenue, New York, has opened a branch store at corner of Fourteenth street and Second avenue.

A certain class of chemists will not depart from the custom of filling one window with a case of sponges and the other with show bottles.

Milhaus, 183 Broadway, New York, recently had a large sign in the center of the show window, stating: "New York Journal American coupons redeemed here."

Morris Dlugasch, Tenth street and Avenue B, recently opened another pharmacy at Second avenue and Eighth street. He also contemplates one at Third street and First avenue.

A Third avenue, New York, druggist has taken out his old soda fountain and is very undecided if in his block a new one would pay, there being seven liquor stores on his side of the street alone.

Mr. Harry W. Foeller, for fifteen years manager for W. S. Rockey's store, Eighth avenue and Thirty-fourth street, Manhattan, has joined the Benedicts, and is away on a wedding tour to Washington, D. C.

An advertising sample of a new combination corn file and salve sent to a party, brought out this from our country friend: "The little match scratcher and sample of corn salve received. Who sent it?"

Koehler & Wool, 2225 Eighth avenue, New York, not only carry a fine line of face powders, but have a screened mirror to aid ladies in applying them.

The Koickerhoecker Drug Company, 648 Broadway, states that the new store with its light basement will give 18,000 feet of floor space.

A substitute has been discovered for cocaine, says the Chemist and Druggist. It is called stovaine, and is a synthetic product. Its form in prescription is a syrup. Its uses are both internal and external, alleviating affections of the stomach, and neuralgia.

A peculiar feature of the trade of a druggist in a certain Brooklyn locality, is that there is no call for anything for young children, there being none in his territory. It is evident the president's theories have little weight in that neighborhood.

A. A. Thompson, Halifax, N. S., publishes a bright little drug store paper called *Agricola Whispers*, a copy of which has reached us. This is a good example of a retailer making a success of his own paper, a very profitable advertising idea utilized by hundreds of pharmacists.

The Treasury Department has announced its acquiescence in the recent decision of the Board of General Appraisers that soap pencils used for cleaning spectacles and eyeglasses, are dutiable only to the extent of 20 per cent., as unenumerated manufactured articles. No further action will be taken.

S. Palitz, formerly of 1400 Fifth avenue, New York, has moved his business to 100 Lenox avenue, and it will henceforth be conducted under the firm title of Palitz & Kassel. The new store is run as an all-night pharmacy. The building is new and the firm are enjoying all the conveniences of modern fixtures. The formal opening occurred on May 1, when souvenirs were distributed with a lavish hand. Some of these were cigar and coffee trays, Easter eggs filled with candy, painted china plaques, and clinical thermometers.

The Sun frequently hits things off well. It recently published the following:

"No matter how badly a man is hurt, if he can walk or can get someone to help him along, the drug store is his haven of refuge," said a drug clerk. "He may pass a hospital or two, but he would no more think of going there than he would of flying.

"A man came in to me recently with a deep gash in his head.

"Fix it up, doctor," said he, "and I'll pay you for it."

"That's a bad cut," I answered. "You ought to go to a hospital and have it stitched."

"Wot," he cried, "me go to a hospital? Not on your natural. They cut you up over there, and if you kick you get the black bottle."

"Then I put some cotton on the wound and persuaded the man to go to a physician."

Plum City.—Geo. Moser, new store.
Welcome.—M. C. Kutchin, new store.

WYOMING.
Rock Spring.—McDougall & Swartwood, succeed A. A. Bassett.

TO EXAMINE IMPORTED GRASS SEED.

The Treasury Department has issued instructions at the instance of the Secretary of Agriculture, that commencing July 1, and continuing for one year, 2-ounce samples of all importations of 100 pounds or more of grass, clover, and forage-plant seeds be prepared at the earliest practicable date after entry, and forwarded to the Seed Laboratory, Department of Agriculture, labeled with names and addresses of consignors and consignees, name of seed as given in the invoice, and quantity of consignment.

CARTER'S PILLS IN ENGLAND.

The Carter Medicine Company have placed their product on the Proprietary Articles Trade Association basis in Great Britain, with a minimum retail price of 1s. Adopting the conditions of the P. A. T. A. involves the reduction in the wholesale price of Carter's Little Liver pills equivalent to 50¢ upon every 1,000 pills.

A pharmacist wishes The Era to warn the trade for him never to locate near a church, park or school, because, he says, a druggist so situated will not do much business, as the number of residents in a block is lessened materially by such public institutions.

TRADE MARKS.

Published May 9, 1905.

- Ser. No. 97—Tonic beverage and syrup for soda water. Frank Pitzer, Washington, D. C. The word symbol "Speedball" and the representation of a baseball.
- Ser. No. 187—Laxatives. F. August Luyties, St. Louis, Mo. The hyphenated word "Mano-lax."
- Ser. No. 190—Antiseptic preparations. F. August Luyties, St. Louis, Mo. The word "Pyroto-xide."
- Ser. No. 316—Hair brushes, nail brushes, flesh brushes and tooth brushes. Florence Manufacturing Co., Northampton, Mass. The word "Neophylactic."
- Ser. No. 360—Blood tonic. The Maltine Company, Brooklyn, N. Y. The word "Neoferrum."
- Ser. No. 382—Headache cure. Algosine Manufacturing Co., Reading, Pa. The word "Algosine."
- Ser. No. 413—Preparation for treatment of the hair and scalp. Chauncey F. York, Warriors' Mark, Pa. The fanciful title "ZoKoz." and the representation of a bow and arrow.
- Ser. No. 451—Medical preparation possessing curative properties and being a curative remedy for injuries and acute and chronic inflammatory affections. The Denver Chemical Mfg. Co., Denver, Colo. The word "Antiphlogistine."
- Ser. No. 519—Medical preparation for uterine diseases. Dios Chemical Co., St. Louis, Mo. The word "Dioyiburina."
- Ser. No. 520—Certain named proprietary medical preparation. Dios Chemical Co., St. Louis, Mo. The word "Neurosin."
- Ser. No. 588—Nerve tonic. E. C. DeWitt & Co., Chicago, Ill. The word "Kodol."
- Ser. No. 591—Headache remedy. E. C. DeWitt & Co., Chicago, Ill. The words "Kennedy Headache Tablets," arranged in three horizontal lines, the word "Headache," being preceded by the representation of a woman with her hand raised to her head and the word "Tablets" being followed by the representation of a man with his hand raised to his head.

MARKET REPORT

CAMPHOR LOWER AGAIN.

Quinine Weaker at Wholesale, Jobbers Not Yet Following.

AGENTS OF FOREIGN MANUFACTURERS CUT PRICES ONE PER CENT.—AMERICAN SAFFRON, ASA-FETIDA, CODLIVER OIL, SEVERAL ESSENTIAL OILS AND A NUMBER OF ROOTS LOWER.—ALCOHOL HIGHER.—MARKET GENERALLY STEADY AND DEMAND NORMAL.—OUTLOOK FOR CONTINUANCE OF HEALTHY CONDITIONS.

New York, May 15.—The unexpected has happened again. Camphor and quinine have declined. In neither case were there evident any sign of the coming of such a movement, although quinine had been disappointingly dull for some time and foreign statistics had been bearish. It was this latter factor that broke the market, the local agents of a German concern being the first to announce the decline of one cent. Camphor has gone off three cents. Opium is also easier at first hands, although jobbers have not announced a change. Indeed, the important reductions have influenced the whole market so that the general tone is easy. The advances this week are few and unimportant, that of greatest interest being the rise in alcohol. As for the volume of trade, it is perhaps a trifle better, the declines stimulating demand somewhat. Jobbers report normally healthy business, but do not complain of being overworked. Little speculative interest is evident.

OPTIC.—Poor demand and competition have resulted in further easiness at first hands, cases declining to \$2.85. On the other hand, the foreign situation is somewhat firmer, as high test is called higher. Reports from growing regions confirm the serious extent of damage to the new crop, but large stocks are depressing. Jobbing prices remain unaltered, being \$2.00@3.20 for nine per cent., and \$2.10@3.30 for eleven and thirteen per cent.; powdered remains unchanged at \$3.85@4.10 for thirteen per cent., and \$4.06@4.85 for sixteen per cent.

MORPHINE SULPHATE.—The situation is unchanged, the demand continuing normal, but without feature. Jobbers still quote \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 in ounce vials, and \$2.25½@2.35 in 5-oz. tins, according to brand and quality.

QUININE SULPHATE.—On the 13th the Roessler & Hasselbacher Chemical Co. announced that they had been instructed by cable to reduce the price of sulphate one cent. This brings it down to 20c. at wholesale for 100-ounce tins. This move was unexpected, and domestic manufacturers displayed reluctance in following their lead, but finally did so. The causes are the lack of demand, competition, and easier foreign advices. At the Batavia sale of Java quinine, last week, the unit realized was 16.20 florins, again 16½ at

the previous sale. The next sale of interest to the trade will be held in London, to-morrow, May 16, but the result arouses little attention. The market is rather easy still. Jobbers have not yet had time to announce whether they will follow the reduction or not. They probably will, but their old quotations at present still prevail. These are: 21@21½c. for bulk in 100-oz. tins, 21½@22c. in 50-oz. tins, 22@22½c. in 25-oz. tins, 23@23½c. in 15 or 10-oz. tins, and 28@29½c. in ounce vials, according to brand and amount.

CAMPHOR.—The market has once more declined, refiners announcing a cut of 3 cents this time. The keen competition prevailing is responsible and it is said that the Japanese article is still underselling the domestic a trifle. The new lower jobbing schedule is as follows: Barrels, 88@68½c. and less, 70@75c.; 4-oz. blocks in cases, 68½@70c. and less 71@75c.; 1-oz. blocks in cases, 70@70½c. and less, 76@82c.; 2½ in cases 72@72½c. and less, 78@82c. all per pound. Ounce cases and 2½ in 1-lb. boxes, 1c. per pound additional. Jobbers are quoting Japanese, 68c. per pound, for ounces in cases, and less, 70@75c. per pound.

ALCOHOL.—Western producers have advanced grain five cents and jobbing prices rise accordingly to \$2.50@2.51 per gallon, for barrels; \$2.60@2.65 in ten-gallon cans, and \$2.65@2.75 for smaller quantities, per gallon.

AMERICAN SAFFRON.—Heavier arrivals of the new crop and lack of demand have induced holders to again cut prices. Some offerings from Mexico have been made. The tone remains weak. Jobbers have also reduced their quotations, which now are \$1.25@1.35 per pound, and powdered, \$1.35@1.45 per pound.

COCA LEAVES.—Huanuco are higher because of scarcity, fair demand and advancing foreign markets. They are up 3 cents here, and local jobbers have raised their figures to 45@50c. per pound. Other varieties unchanged.

ASA-FETIDA.—A decline of 3 cents results from a lack of business and sellers' desire to move stocks. Lower jobbing values are 20@25c. for good fair, and 30@35c. for select, per pound.

MASTIC.—This is again higher abroad, because of the practical failure of the last crop. An advance of 2 cents puts jobbing prices here at 62@67c. for tears, and 67@72c. for powdered, per pound.

BEBBER'S AQUIFOLIUM.—The expectation of the arrival of the new crop on the market weakens prices, and jobbers have lowered their figures to 28@33c. per pound.

SASSAFRAS OIL, NATURAL.—The true oil is lower, as is natural at this season. Jobbers have reduced to 65@75c. per pound.

ERGOT.—As this has been dull, prices have dropped, jobbers lowering their quotations for Russian to 43@48c. per pound and 53@58c. for powdered, per pound.

LADIES' SLIPPER.—Spot stocks are practically out of the market. It is said that one holder controls all available, asking 50c. at wholesale. Jobbers have advanced prices to 60@65c. per pound.

GOLDEN SEAL ROOT.—Lower offerings, especially from the West, weaken the market. The fear of the spring-dug root is prevalent among holders. Jobbing quotations drop the \$1.70@1.80 per pound and \$1.80@1.90 for powdered per pound.

BAYBERRY WAX.—This commodity has taken a sharp tumble. It was too high anyway, being forced up by the artificial influence of manipulation. Freer country offerings have unexpectedly developed. Buyers are still holding off. Jobbers have lowered prices to 55@60c. per pound.

SIMARUBA BARK.—Supplies are plentiful and demand slow. Lower jobbing quotations of 38@45c. and 48@53c. for powdered per pound.

THE BROMIDES.—Jobbers have at last openly quoted prices commensurate to wholesale values. This makes them all lower. New rates are: Ammonium, 29@32c. potassium, 22@25c., and sodium, 27@30c. per pound.

SENEGA ROOT.—With the approach of summer, easiness prevails and jobbers have reduced their prices to 84@89c., and powdered, 90c.@\$1.09 per pound.

SERPENTARIA ROOT.—Like many other roots, this is easy at this season. Lower jobbing values are 50@55c. per pound.

RAY RUM.—The market for Porto Rican at wholesale, shows further strength, because of labor troubles in Porto Rico. But jobbing prices remain unaltered at \$2.25@2.30 per gallon, in barrels, and \$2.50@2.75 for less per gallon.

CLIVER'S ROOT.—Another root easy to move stocks. Jobbers now quote 16@21c. per pound.

ALOES.—The Curacao show strength because of diminishing stocks and a fair demand. Producing regions report a short crop. No change in the jobbing prices of 10@12c. per pound and 14@16c. for powdered.

CAJUPUT OIL.—During the week this has been easy, through unsatisfactory demand. Lower jobbing prices are 83@98c. per pound.

CITRONELLA OIL.—Scarcity abroad continues with firmness. A few cheap lots, available here have been absorbed by a strong holder and the market has advanced. The consumptive demand is increasing and prices have risen. Jobbers are now asking 62@77c. per pound.

CASSIA BEANS.—Some weakness has developed through lack of demand and jobbers are now quoting 25@30c. per pound.

SANGHARBA.—The new crop is coming and values are declining. Jobbers reduce to 19@24c. per pound.

RUSSIAN MUSK ROOT.—This also is easier, new jobbing prices being 19@24c. per pound and 24@29c. for powdered per pound.

CODLIVER OIL.—Demand continues to fall off and prices to ease as befits the season. Little interest is shown anywhere. New jobbing prices for barrels may be given as \$31.00@32.00, while gallon prices still range \$1.50@1.75.

A TESTIMONIAL.

A Benton Harbor man writes the following testimonial to a well-known patent medicine company: "It gives me extreme pain to recommend your medicine. Before my wife began taking your tonic she was so weak that she could scarcely stand on the floor, but after taking one bottle of it she has had the floor all the time and can throw a flatiron with all of the accuracy of the best shotputters of the university. Please send me six bottles for personal use and self defense."—Transverse Record.

EDITORIAL COMMENT

Combination Ownership.

An interesting phenomenon of the
last decade has been the combination
ownership of drug stores, one or more
of such combinations operating in
nearly every large city in the country.
Some of these companies have been
successful, some have not. The ques-
tion now arises, has the pendulum of
combination and centralization, so far
as it relates to the management of re-
tail drug stores swung forward as far
as it will, or is it on the return move-
ment?

In our news columns this week is
related the experiences of a San Fran-
cisco company which began business
two years ago with eight stores under
its management. Recently two of these
stores were sold, and now, it is re-
ported, the company is confronted with
the problem of maintaining two of the
stores without the attraction of their
original owners' personality. These
two stores are for sale for the reason,
according to the statement of an official
of the company, "that where clerks
have been placed in charge, business
does not keep up."

This experience, and it has been du-
plicated in other cities, would seem to
indicate that combination ownership
does not always work well when applied
to retail pharmacy. The personality of
the druggist is and always will be an
important factor in the business equa-
tion. In a degree his professional fame
is one of his chief assets, and he can
make friends for business in a manner
that cannot be accomplished by the
agent or clerk of an impersonal owner-
ship. The druggist becomes familiar
with his customers' idiosyncrasies, and
they seek his advice and trust to his
judgment. Outside of those stores
which have a large transient trade a
large part of the community, if it pat-
ronizes the store at all, prefers to do
business with the proprietor.

This phase of the subject is one of
the drawbacks to combination owner-
ship. A plurality of business offices
has always worked to the disadvantage
of the physician for the reason that
the number of these has caused an un-

certainty to arise in the minds of the
people as to where the physician might
be found. In a less degree the owner-
ship of many pharmacies by a single
druggist or company of druggists may
not always be a trade winning proposi-
tion. It does not appear to have been
so in San Francisco.

Common-Sense Health Laws.

The latest report of the New Jer-
sey State Board of Health shows that
much can be accomplished in the mat-
ter of preventing food and drug adul-
teration by judicious, business-like
methods, and without resort to string-
ent measures, which in many in-
stances result in working a positive
injustice.

This Board of Health has been ac-
tive in running down offenders, and
\$5,500 has been turned over in fines
to the State. The number of speci-
mens examined in the laboratory for
the year was 3,526. All of this was
done without a flare of trumpets and
a beating of drums, and without mak-
ing an enemy of a single pharmacist
whose friendship was worth having.

From time to time common-sense
statutes have been added to the laws
of the State, for the guidance of those
whose duty it is to see that drugs and
food are not adulterated, and that if
the laws are broken, the offenders are
promptly and properly punished. Rad-
ical changes in the laws have been
attempted. Behind these attempts have
been agitators who have managed to
gain the ear and support of the sensa-
tional press. Most of these measures
have died aborting, wise legislators
and vigilant pharmacists seeing that
they were put down with a firm hand.

The result is that the Health Board,
which operates under the pure food
and drug law of 1901, has not been
hampered by unwise legislation and
forced to assume an attitude which
would place the members in a position
of antagonism and apparent unfriend-
liness to those druggists who are
strongly in favor of all reasonable
measures that will tend to prevent the
sale of deleterious drugs or food.
There is a resultant feeling of friend-
liness and a desire on the part of every
honest druggist to assist in the search-
ing out and punishment of those who
are guilty of fraudulent practices.

By the exercise of good judgment
and with the assistance of common-

sense laws, this one board of health has at least partly eliminated features of the drug trade in New Jersey which had a tendency to reflect on the honest and dishonest alike. This has been done without an over-strenuous effort to see that the laws were too strictly enforced, both in the spirit and the letter. The members of the legislatures of other States, where there is an outcry for pure drugs and a tendency to agitate for more stringent statutes, might profit by reading the report of the New Jersey State Board of Health.

Another Honor Roll.

Once more the druggists of New York City have been invited to have their names published as dealers in strictly pure drugs. For the modest sum of \$12 a pharmacist may secure a place on this "honor roll," printed in a business telephone directory. Physicians also, have been invited to have their names printed in this book, in a list restricted to practitioners of the highest character and ability. In other words anybody may become a "somebody" by the payment of a merely nominal sum.

This is a repetition of the scheme launched last fall by a daily newspaper but which was suppressed through the combined efforts of the local associations. The present scheme, however, has all the evils of its predecessor in an aggravated form, for a telephone directory is more or less a fixture in every store, office, public building and private dwelling. Hence any druggist who failed to get his name on the "honor roll" would be condemned as a substitutor and a seller of impure drugs until the next issue of the directory.

The situation is one that calls for heroic treatment and the Press Committee of the Manhattan Association should lose no time in bringing home to the proper persons the sentiment of the trade on this subject.

Illegal Dispensing.

The Italian Pharmaceutical Association of this city, as told in our news columns last week, has begun a vigorous campaign against doctors who sell their patients medicines compounded by non-registered pharmacists in their employ. It is claimed by the members of the association that they have plenty of evidence with which to secure convictions and put a stop to this practice. This is a matter worthy the careful attention of the Board of Pharmacy. If the evil is indeed as widespread as we are asked to believe, then it is high time that measures were taken to put a stop to it, both for the welfare of the druggist and for the welfare of the medical profession.

We are aware that the pharmacy

law of this State gives physicians the right to supply their patients with medicines compounded by themselves. The point which the Italian Association makes, however, is that this branch of the doctors' practice has grown to such an extent that he is no longer able to handle it himself, and is therefore compelled to hire a man whose sole duty it is to put up his prescriptions. These employes are not licensed druggists nor do they make any pretence of knowing anything about pharmacy. Their work consist chiefly in transferring from a large bottle to a small one varying quantities of the preparations that the doctor orders.

Under these conditions it is extremely difficult to obtain evidence of violation of the law. If the Italian Pharmaceutical Association has such evidence as it claims to have, it will render distinct service to the drug trade by turning this evidence over to the Board of Pharmacy. The Board will no doubt do all in its power to remedy the evil.

Dr. Noel in New York.

The fact that the head of the organization department of the N. A. R. D. deemed the situation in New York sufficiently serious to demand his presence here for a short time, seems to indicate that at last the Chicago office has begun to realize that New York is not yet won beyond the shadow of a doubt. Evidently headquarters did not fully understand the situation, and was ignorant of the friction existing in the Eastern office of the N. A. R. D.

It is utterly useless, even were it expedient, to attempt to conceal the fact that in the past month the breach has been steadily widening between the national representatives on the one hand and the representatives of the New York druggists on the other. The beginning of the trouble may be traced as far back as January, when the retailers were suddenly informed that they must pay an organization fee of \$2.50 to the N. A. R. D. Some discontent resulted, but was soon smoothed over.

Since then the druggists have been wondering what they were getting for their money. The matter came to a head last week, when the Executive Committee of the N. A. R. D. concluded to hire its own men and pay them with the organization fee, instead of turning it over to the N. A. R. D. That this decision has now been reconsidered, with the understanding that the N. A. R. D. is to put ten men in the city by the first of June, seems to indicate that Dr. Noel's trip has been not without profit, both to the national and the local association.

Professor Good Honored.

In studying the development of pharmacy, of intellectual advancement, of literature, it is not difficult to trace many an impulse that has been imparted or received from intelligent workers in the past. Any advance, any improvement has been the result of good honest work. This thought, as some one has sagely remarked, gives interest to the man who stands back of the work, and it forms a bond of comradeship among those who have toiled in the past and those who are toiling now in the common field. The thought puts us of the present in touch with kindred spirits all along the line.

There are reasons ample and abundant enough that should recommend Prof. James M. Good to the consideration of the Alumni and friends of the St. Louis College of Pharmacy. Beginning his work at a time when technical instruction was not what it is to-day, he has lived and labored to upbuild the institution with which he has been connected; but in a greater degree he has shown what the practical workaday pharmacist may do for his calling. In this respect Professor Good has had the opportunity of dealing with the everyday affairs of active pharmaceutical practice, and consequently has had the chance to see things at a closer range than many others. But while representing the toiling druggist he has never lost sight of the goal.

Thirty years is not so long a period when measured by the lifetime of the nation, but Professor Good has witnessed more important changes bearing on the practice of pharmacy, in this country at least, than all of his predecessors combined. Educational methods as we now understand them, pharmaceutical legislation, general interest in trade matters, organizations, the commercial spirit, are all of recent growth. Through it all he has toiled with the toilers, and it is fitting that the St. Louis College of Pharmacy should honor the son who has contributed so loyally and faithfully to the upbuilding of his Alma Mater.

Fundamental Principles Recognized.

The latest development in the fight to maintain prices in Baltimore is a movement among cut-rate druggists to combine for their common interest. Is the campaign of education and organization beginning to bear fruit so soon? When the besieged has to adopt the tactics of the opposition it is manifest that the importance of fundamental principles is recognized. It is also evidence that the intrenching lines are being tightly drawn. A graceful surrender would be a pleasing conclusion.

Whiskers Unsanitary?

From Des Moines, Ia., comes the announcement that the State Board of Health has declared war on whiskers. The president of the board says that in several countries physicians are required to discard their whiskers, they being regarded as not only unprofessional, but a menace to the families visited by the doctor. The Iowa State Board of Health will hereafter regard the be-whiskered doctor as an unsanitary person, and will "have the law on him" unless he makes frequent and regular trips to the barber, whose razors and brushes have been sterilized and who uses only antiseptic soap. Thus another blow is dealt to the elusive microbe.

No longer can beardless be applied to the young doctor as a term of ridicule, suggesting that a lack of whiskers indicates a lack of experience. If other boards of health should follow the example of the Iowa body, the young man with the down upon his lip will be *au fait*, while he of the hirsute appendages, those adornments of the face which were once his pride and glory, will lie himself to the solitude of his chamber, there to wrestle with a dull razor and wire-like beard, while he indulges in some bitter reflections on the idiosyncrasies of boards of health.

To the medical man who perforce must be divested of his beard, history presents an enigma. An absence of beard was a mark of rank in ancient Egypt, while in Turkey only slaves were shaved, as a token of their servility. But Turkey never stood very high in the sanitary percentage column. When the erstwhile symbol of dignity and wisdom is put in the scales against a sanitary suggestion, with a board of health holding the balances, it is a foregone conclusion as to which way they will tilt.

Philosophers have affected the full-grown beard, it being esteemed by them as an evidence of a sage mind. The practice of wearing the beard has been advocated by many physicians for hygienic reasons, as protecting the throat from damp. Now the philosopher is to be stamped as a fool and the man of medicine hoisted on his own petard.

It may be that this board of health has been reading of Peter the Great. That worthy issued an edict toward the "compulsory civilization of his people," which had reference to the beard. He taxed this appendage and afterwards ordered all those found bearded were to have the hair plucked out with pincers or to be shaven with a dull razor. The Iowa doctors may find a grain of comfort in the reflection that they were not subjects of Peter.

The ban has not yet been placed

on the whiskers of the druggist, but doubtless he will become an object of suspicion by the over-zealous members of this board of health, unless they can be convinced that he has the means of disinfection so close at hand that the germ will not venture into such forbidding territory.

Causes of Failure in Clerks.

A Chicago newspaper has been offering a weekly prize for the best explanation as to why a job had been lost. Many frank answers were received in which the unfortunates freely admitted that their own shortcomings had caused their separation from good positions. In one week eighty-one competitors sent in letters, and it is noteworthy that of these only eight blamed their employers. Drink was the chief cause of discharge, next, loafing with bad company and arousing breaking even for third place.

This is what might be expected. But some of the reasons given were certainly unique. "Because the beer froze," "Gave the boss wrong tip on the race," "Kidded the boss," "Offered to box with a priest," "Wanted to marry boss' sister," and "Forty-year-old stenographer wanted to marry him" are certainly most extraordinary explanations.

If true the dismissals seem hardly fair in most of these instances. But the real moral to be drawn is that drink, loafing, and bad company are the usual causes of business downfall. They are so for both the clerk and the boss, and indeed, the latter is subjected to two more evils, speculation and lack of capital. But the lesson is the same for all in every line of work, the drug business included.

A Question of Exports.

The annual meeting of the National Association of Manufacturers in Atlanta, has been the occasion of some reflections by the daily press which seem well founded. It is urged that an organization which represents such important interests, producing \$15,000,000,000 worth of merchandise annually should possess a larger membership than three thousand when their class numbers several hundred thousands. More, that an attendance at the meeting of but three hundred of these members is regrettable.

On the surface it would seem as if there was some good reason for this and it is found in the present methods of the organization as illustrated by the subjects considered at the meeting. These were industrial evils, socialism, reciprocity or other generalities of economic or political significance. It is suggested that a more fitting object would be the consideration of practical means to expand our ex-

ports, by live business methods, not by the pursuit of subsidies, bounties, or other paternal aid from the government. First of all the association should try to aid in discovering where and how this country can sell more goods. An application of this to the drug trade is obvious when the size of imports of drugs and chemicals from Germany are considered.

Among the members of the Manufacturers' Association there are probably some pharmaceutical houses represented.

Objectionable Show Windows.

The truth that nothing is neutral, that everything must have some influence, deleterious or beneficial, on its surroundings, or, as it is frequently phrased, must either progress or decline, is well illustrated by the treatment of a show window. A window is always exerting some influence. If it does not arouse interest or admiration it repels. If a window is habitually neglected or is decorated in bad taste it not only fails to draw the new trade which belongs of right to the pharmacy from its position but it even drives business away. Even if nothing worse results customers are bound to consider the place behind the times and so will drift elsewhere.

But if neglect causes loss, how much worse is the active abuse of a show window. Perhaps the worst form of this shortsightedness in policy is the use of objectionable or suggestive goods as fillers. There may be nothing really immoral or disgusting about such lines. They have a necessary place in every stock, and they perform a useful service, but they do not belong in the show window. Let them be kept in the stock-boxes and drawers within the store. To some sensitive, refined people such displays are positively disgusting and nauseating, to the prudishly inclined they are immoral or suggestive, in any event they offend many and please no one. They never attract trade. It is a mistake to feature such goods.

Drug Plants in Texas.

From Sherman, Texas, it is reported that a citizen of that town recently collected in adjacent fields fine specimens of twenty-one species of valuable drug plants. Among these were burdock, catnip, larkspur, tansy, lemon balm, rue, wormseed, opium poppy, wormwood, yarrow, balmoney, spear mint and starwort. It is believed that over a hundred species of drug plants could be cultivated profitably in that section. It is said that the Government is considering establishing an experimental farm in Grayson county to undertake experiments of this character.

OUR
LETTER BOX

BULK PERFUME TRADE.

Rochester, May 17, 1905.

Editor Pharmaceutical Era:

The remarks of Mr. Green, published in your esteemed journal (Feb. 9, Era, page 165), have, in a measure, attracted attention. Being somewhat conversant upon the subject, it is hoped that you will see fit to present your readers a few facts and figures herewith, which can be easily verified. His assertion that "more bulk goods than ever are sold to-day" is not denied, but it is not in error in saying the American perfumers do not profit thereby? The following figures are tabulated from the records:

Total amount of imports of perfumery, toilet preparations, etc., for the fiscal year ending June 30, 1903, \$824,040; for the year ending June 30, 1904, \$844,621.

Total imports of strictly alcoholic perfumes for 1903, \$510,642; for 1904, \$508,536; decrease for 1904 over 1903, \$2,106; increase for 1903 over 1902, \$68,474 (or 15 per cent. or over). The statistics for 1904 show a total increase of \$20,581 (2½ per cent.).

Thus it would appear with the shown increase of only \$20,581 in actual values of merchandise, instead of an increase of \$119,000 in "duties," as stated by Mr. Green, that he must have been beguiled into the land of unattested figures.

Regarding the age of fine American perfumes, I believe that this particular feature receives far better attention than is given by foreign manufacturers, else American perfumers would be woefully slow indeed.

The gentleman further remarks that many druggists are making their own perfumes, by what he terms a simple process, viz.: "Concentrated floral oils." It is feared he has not pursued the subject far enough to become convinced that wherever that experiment has been tried, a re-order is unknown and loss of trade is inevitable. If the profession of *parfumeur* had nothing more to it than that, this or any other communication upon the subject would be entirely superfluous. And again, don't you smile, Mr. Editor, when, according to Green, the American perfumer has not "advanced." If this be true, it is the only one thing in which the American has not advanced, and the writer hereof, representing the third generation of odor-makers from the Maritime Alps, with due reverence to ancestry, insists that "advance" is the war cry upon its banners as a constantly increasing trade verifies, yet "advance" is still the slogan. Thus again we presume to give denial to that "non-progressive idea," we live and still strive in the expectation of outdoing the past. And still again, isn't there an unwarranted injustice done by saying that the up-to-date American perfumers merely issue old odors under new names? This calls for actual proof—else it is slanderous. Mr. Green states producers pay "too much attention to special odors." I would request knowledge as to what class of odors the French, to whom he so often

refers, devote their attention, to say nothing of high prices. American goods do not simply carry the price on account of the pace set by French competitors. To make a perfect perfume it is necessary to use goods of no small value.

The writer has a personal acquaintance with Mr. Green, who is esteemed highly, and it is a pleasure to reply to his communication, for, during March, 1901, I had a very pleasant conversation with him relative to perfumes. Modestly alone prefers repeating assertions made relative to at least one American perfumer. French goods are not the best, and French perfumers do not excel American perfumers. This can be practically demonstrated beyond the doubts of Mr. Green. He says truly, if the department stores control the sale of perfumes it is only because of their display and push, but I cannot see how Mr. Green can encourage a druggist to make his own perfumes. It is a case of "Shoemaker stick to your last." A pharmacist can compound drugs, but when he tries to make his own perfumes I will guarantee that within one year his sales will show a decided decrease in this department. When department stores make their own perfumes they do not employ a druggist, nor employ the use of "Concentrated Floral Oils," but they engage an educated perfumer and the perfumer is one of a profession of his own kind.

I wish to correct another statement, which is somewhat misleading, relative to the French perfumes being sold without advertising. Mr. Green must know that at least one large French house spends a fortune advertising yearly. Moreover, every department store in the United States handling imported perfumes, advertise them incessantly in the local newspapers. Mr. Green furthermore knows that there are but three or four houses in the United States who manufacture strictly high grade perfumes, and he further knows that it is the policy of these manufacturers to sell to no other trade than the retail druggists. Were these manufacturers to sell department stores the imports of perfumery would naturally show a marked decrease. The trouble with the retail druggist who does not do a profitable business in perfumes, is simply due to the fact that he does not devote sufficient attention to his perfume trade, which can be made one of the best-paying departments in his store. Too many druggists take it for granted that the big department stores are taking the business in this particular line. Inasmuch as these same stores retail patent medicines and compound prescriptions, there is no better argument to employ than that if you present a nice display of perfumes and use discretion in the choice of odors, etc., profitable results are sure to follow. I can refer you to many druggists friendly with the writer, who are successfully following suggestions in these lines. The perfume and toilet article trade belongs to the retail druggist and it will remain with him if he will devote the required attention to this feature.

In conclusion, permit me to state that it is the "American perfumer" who has reproduced the natural odor of the flower, but the French perfumes embrace no science or art, merely a conglomeration of heavy odors which become obnoxious to the average person. An artist, in painting

a picture, imitates the colorings of nature as closely as possible; the American perfumer, in making an odor, reproduces the natural scent of the flower as given by nature as a criterion.

Very truly yours,

OSCAR B. SPIEHLER.

THOSE CHILDLESS FLATS.

New York, May 19, 1905.

Editor Pharmaceutical Era:

There was a little paragraph in the last edition of *The Era* to the effect that "a peculiar feature of the trade of a druggist in a certain Brooklyn locality is that there is no call for anything for young children, there being none in his territory. It is evident the President's theories have little weight in that neighborhood."

Nay, nay, Mr. Editor. Hardly evident that the good people in that benighted neighborhood are not in accord with the President's views on race suicide. All good people love little children, but there are lots of landlords who do not come under the appellation, "good people." To many such the cost of a broken window-light overshadows all the sunshine and happiness that might be brought to a home by the pattering of little fingers on the window pane. I venture the guess that this druggist is in a neighborhood where the flint-hearted landlord inserts in the lease, along with the clause barring dogs, one which also says children are not allowed.

GOWANUS.

Bacteria in Water.

German papers state that pure and clear water can contain disease germs for a long time in a living and poisonous state. It has been presumed that disease-causing bacteria could not increase in pure water and, therefore, soon died, due to the effect of light, low temperature, current of the water, other harmless germs, and lack of suitable nutrition. It has been demonstrated that the typhus bacillus requires at least 67 milligrams of nitrogenous matter in 1 quart of water and the sewer germ over 400 milligrams. The typhus bacillus is said to be able to live only seven days in common waterworks water, and the cholera bacillus only three days. It would appear that these researches were made somewhat superficially, as, according to Konradi, water is suited to many disease germs which in time overcome harmless bacteria instead of succumbing to them. The experiments of Konradi with the bacillus Miltzbrand, which causes inflammation of the spleen, and the typhus bacillus, have demonstrated that the harmless bacteria in the water increased largely for some time, but died subsequently, so that, finally, the water kept in ordinary room temperatures contained only the disease bacillus in full malignancy. The "spleen" bacillus remained alive from 264 to 816 days, and displaced the other bacteria within three to four weeks. The pus bacillus overcame the other bacilli after three months, and lived 508 days, while the typhus bacillus became dominant only after more than four months, but lived 490 days. The "spleen" bacilli thrive even in sterilized water.—Consul General Guenther in Consular Reports.

VETERINARY PRACTICE.

BY EDMUND F. L. JENNER.

Among the many "side lines" open to the retail druggist, and more especially to the druggist who practices in the smaller towns, or large villages, is veterinary medicine. In all large towns, there are regular veterinary surgeons, who have qualified themselves, and is only right that they should be protected in the exercise of their profession, to the exclusion of the unqualified and unregistered. In my own case, the nearest qualified D.V.S. lives seventy miles away. There are a number of "horse doctors," who castrate colts and prescribe for the different ailments of horses, cattle and dogs; they are fairly proficient with the knife, but they are abysmally ignorant of therapeutics, they know nothing of compounding and less of toxicology.

The druggist, assuming that he is up-to-date, should have a full knowledge of both these most important subjects. It is only by careful study, and much reading that he will gain an insight into the different diseases, and become a good diagnostician. In my own practice, I use both the homeopathic and allopathic remedies. I use the former when I am first in the field, the latter when some truckman has been called in first, and has filled the sick animal with medicine of his own devising.

One great objection to the homeopathic veterinary treatment, is the extreme difficulty of persuading the public to abide by the directions. It is not until a man has actually witnessed the effect of a minute dose of colic remedy, frequently administered, that he will believe that a few teaspoonfuls of medicine, given at the proper interval, are more than the equivalent of a quart of mixed carminatives, opiates and stimulants, given at one dose.

The following is an example of a "colic" prescription I have often filled: "Take of laudanum, tincture of cardamon, compound tincture of ginger, of each, one ounce; tincture of capsicum, ½ ounce; alcohol, 6 ounces; water to make one pint. Give at once. Sometimes asafetida is added, and it is a good remedy. The prescription I have outlined above is a fair one for colic, but should the disease be inflammation of the bowels—and it is a difficult matter to distinguish inflammation from colic in the early stage—it is very much the reverse.

The reader has doubtless encountered that infernal nuisance, the family "doctor book." In his dealings with people. In veterinary practice, the same thing exists, but in a far more marked degree. The average farmer who owns a work on veterinary medicine, published in the forties, or fifties, and probably "written to sell" in the bargain, will treat a case of colic, inflammation, or milk fever, until the animal is almost dead. Then, as a last resort, the veterinary surgeon or druggist is called in. Under such circumstances I only accept the case under protest. Frequently I find that the diagnosis of the case is utterly incorrect, or else, that the treatment is obsolete. Drastic purgatives, huge doses of colamel and profuse blood letting are practically things of the past in human treatment. It is to be hoped that they will become so in modern and humane veterinary practice.

Under ordinary conditions the druggist

carries in his usual stock nearly all the drugs he is likely to require for veterinary work. For internal use the medicine used on valuable animals should be the best procurable. For external use a line of liniments and tinctures manufactured from deodorized wood alcohol may be made, and kept in stock. The Era and Standard Formularies are most valuable works of reference; so is Humpbrey's Homeopathic Veterinary Book. Ashmont's work on dogs is another invaluable book. I have a strong predilection for homeopathic treatment, but where allopathic treatment is desired, no better work can be had.

Incidentally, the treatment of sick dogs is one of the most lucrative branches of the veterinary business. As a rule the "patient" is brought to the store, and no time is wasted making visits. A man who will grudge a dollar for medicine for his horse, will pay twice that sum for treatment for a favorite dog, and the intelligence of the creatures make them more amenable to treatment than horses, or cattle. In the great majority of cases there is no need of violence in administering medicine. The huge bolus of aloes and area nut which used to be rammed down the dog's throat, has been supplanted by the minute dose of santonine, colamel and aloin, enclosed in a gelatin capsule, and wrapped in a shaving of raw, or cooked meat. Now I advocated the use of wood alcohol in veterinary liniments earlier in this article. My reason for doing so is the fact that the surfaces to be covered are frequently large. The price of grain spirit is high, and judging by my experience of twenty years, the danger of ill effects through absorption is almost nil. It should never be used internally, however. It is a deadly poison to animals, as well as to men.

In prescribing remedies for animals, it must be borne in mind that the weight of the animal bears a distinct ratio to the dose. That is to say, that where the dose for an ordinary man is one grain, the dose for an animal will be in proportion to its weight. Arsenic and antimony are two exceptions to this rule. A horse can, under certain conditions, tolerate an enormous dose of arsenic, and animals can take with impunity, what would be a lethal dose of antimony for a man. I know of a case where a farmer had some condition powders prepared in my store. He mixed them thoroughly with a barrel of corn meal, and directed his man to feed the usual rations to his cows. In the course of a few days a negro broke into the stable, and stole half a bushel of meal. Two of his children died from antimonial poisoning, and the remainder of the family were saved with the greatest difficulty.

The condition powder is a branch of veterinary medicine with a chance for the retail druggist to make money. Many of the "patent" powders are excellent, but they are sold at cut-rate prices. Often they are sold to the retail trade at absurdly enhanced rates. It is by no means difficult to prepare a good condition powder, and it is still easier to get one put up by some reliable house. The net profit on condition powder should be one hundred per cent. Only the best ingredients should be used, and no extravagant claims should be made on the wrapper, or in the advertising matter. The difference in profit between the sale of a package of veterinary liniment prepared by the retail druggist

from some well-known formulas, and a "patent" handed down from the shelf, is very considerable. The price to the consumer is about the same. The result to the "patent" is usually in favor of the homemade medicament, assuming that the druggist makes use of good materials. Blisters, liniments for spavin, ringbone and lameness are in constant demand. They are not at all difficult to prepare. Dogs are frequently affected with mange, or troubled with fleas, or other parasites. The possession of a good formula, the use of a spatula and ointment slab, and the exercise of a little common sense, will enable the druggist to make many a dollar, where he is at present only making a "quarter."

I do not for one moment insinuate that the druggist should usurp the place of the veterinary surgeon, when a duly qualified "vet" can be procured. In another issue, I propose to give a few formulas I have found efficacious in different cases I have had.

NOTES ON FORMULAS.*

BY FRED W. FLEET.

Syrup of Wild Cherry, B. P.

Improved Method.

The advantage of the syrup made after the following manner, in my experience, is, that there is no loss to the pharmacist in this climate as a result of fermentation. The syrup itself is of a bright, rich color, characteristic flavor, full aroma and answers all the requirements of the pharmacopœia. For 20 ounces of syrup proceed as follows:

Virginia prime bark in	
No. 20 powder	3 ounces
Refined sugar	15 ounces
Glycerin	1¼ fl. ounces
Distilled water, a sufficient quantity.	

Mix the glycerin, 1¼ fl. ounces, with 9 fl. ounces of distilled water, as a menstruum, and having moistened the powder sufficiently, let it stand in a closed vessel for 12 hours, then pack it firmly in a percolator and add enough menstruum to saturate the powder and leave a stratum above it; when the liquid begins to drop, close the lower orifice, and having closely covered the percolator, macerate for 12 hours. Then allow the percolation to proceed slowly—gradually adding menstruum (in like proportions of glycerin and water) until 10¼ fl. ounces of percolate be obtained. In this dissolve the sugar by cold percolation, and pass sufficient distilled water through the percolator to produce 20 fl. ounces of finished syrup.

Elixir Aurantii Sine Saccharum.

Simple Elixir Without Sugar.

Tincture of fresh sweet	
orange peel	6 fl. ounces
Alcohol	20 fl. ounces
Glycerin	25 fl. ounces
Distilled water—a sufficient quantity.	

Mix the tincture of orange, alcohol and glycerin together, add 49 fl. ounces of water in several portions, shaking after each addition. Pass through filtering paper sprinkled with precipitated phosphate of calcium, returning the filtrate until clear, and finally pass sufficient

*Presented at the April meeting of the Toronto Drug Section (Canadian Ph. Jour.).

water through the filter to make 100 fl. ounces of finished elixir.

Elixir Glycerophosphatum Compositus.

Compound Elixir of Glycerophosphates.	
Calcium glycerophosphate	160 grains
Sodium glycerophosphate	80 grains
Potassium glycerophosphate	80 grains
Magnesium glycerophosphate	80 grains
Iron glycerophosphate (scale)	40 grains
Quinine hydrochloride	10 grains
Strychnine hydrochloride	2 grains
Citric acid	30 grains
Gluside	10 grains
Tincture sweet orange peel	1 fl. ounce
Alcohol (95 per cent.)	1 fl. ounce
Glycerin	5 fl. ounces
Distilled water, a sufficient quantity.	

Dissolve the glycerophosphates of calcium, sodium, potassium, magnesium, iron, the quinine and strychnine hydrochlorides and citric acid in 10 fluid ounces of boiling distilled water, and when solution is effected add the glycerin. Dissolve the gluside in the tincture of orange and alcohol and add to former solution when cold. Filter through paper sprinkled with talcum and pass sufficient water through the filter to make the finished elixir measure 20 fluid ounces.

Dose: One to two fluid drams.

Each fluid ounce contains 8 grains calcium glycerophosphate; 4 grains each of the glycerophosphates of sodium, potassium and magnesium; 4 grains of glycerophosphate of iron, and $\frac{1}{2}$ grain of quinine, and 1-10 grain strychnine.

Paraffinum Liquidum Compositum.

Oil of pinus sylvestris	100 minims
Oil of wintergreen	40 minims
Oil of eucalyptus	40 minims
Thymol	40 grains
Menthol	40 grains
Liquid paraffin,	20 fl. ounces

Mix. Each fluid ounce contains 5 minims oil of pinus sylvestris, 2 minims each of the oils of wintergreen and eucalyptus, 1 grain menthol and $\frac{1}{2}$ grain thymol.

THEORY AND PRACTICE

Removal of Tattoo Marks.

There is no entirely satisfactory method of removing tattoo marks and other marks due to the deposit of insoluble color substances in the skin (Journ. Am. Med. Assoc.). The principle of almost all of the methods for removing these marks is to cause their destruction either by mechanical means or by the production of an inflammatory process which causes a superficial eschar. Small marks can be removed by excision or by electrolysis. In removing them by electrolysis, the needle attached to the negative pole is inserted parallel to the surface of the skin into the mark, and a current of from 5 to 8 milliamperes (5 to 10 small bichromate cells) is passed through the

needle. Several such punctures are made parallel to each other until the surface is blanched. Usually it is not necessary to allow the current to pass more than 20 to 30 seconds for each puncture. In this way a superficial eschar is formed which will drop off in the course of a week, and will leave a white superficial scar. Of course, neither this treatment nor excision is satisfactory for large marks. For all but the smallest marks the method of treatment is to produce a violent inflammatory reaction and a superficial eschar by the use of a chemical. Various methods of doing this have been suggested. Perhaps the best of these is Vario's, which is as follows: First place on the tattoo mark a strong solution of tannin, and tattoo this into the surface. Then the surface is rubbed vigorously with a nitrate of silver stick until the area becomes black from the foundation of a silver tannate in and on the skin. In the course of the next few days there is a moderate inflammatory process and a close adherent crust forms. Ordinarily there is not much pain and after the third or fourth day this almost disappears, except on motion of the parts, unless secondary infection should occur. After about two weeks the crust comes away, leaving a superficial pink cicatrix, which gradually becomes of normal color. After about two months the scar is hardly noticeable. It may be necessary to repeat the treatment when it has not been vigorous enough.

Detection of Wine Adulteration.

A discovery that adulteration of wine with water, other liquids, and with solids can be detected by the aid of the telephone, is reported by the American consul-general at Frankfurt. Two glasses, one filled with the wine to be tested, and the other with a like quantity of wine known to be pure, are placed upon an apparatus resembling a scale and a telephone connected with both liquids. If both wines are pure, no sound is heard in the receiver, but if one contains water a noise is produced until a pointer is moved to a given place on the dial plate, whose movement renders the conductivity of the liquids uniform. The gradation on the dial where the pointer stops shows the quantity of extraneous matter in the wine. The discovery is credited to Maneuvrier, a chemist of Paris.

Sterilizing Water.

Calcium peroxide is recommended by Freyssinge and Roche for sterilizing water (Bull. des Sci. Pharm.). The calcium peroxide, 30 to 50 ctgms., is added, and allowed to remain in contact with 1 liter of water for two or three hours. The water is then filtered through manganese binoxide. The use of the peroxide is also recommended for keeping water sterile. It is added to the water and allowed to remain in it until the water is wanted for use; it is then filtered through manganese dioxide.

Fibrolysin.

The pain caused by the subcutaneous injection of alcoholic solutions of thiosinamine has led F. Mendel (Pharm. Zig.) to prepare a substance that can be administered in aqueous solution. This substance is fibrolysin, a compound of one molecule of thiosinamine and half a molecule sodium

salicylate. Fibrolysin is described as a white, crystalline powder, soluble in water, both hot and cold. The solutions are not stable, however, hence, are marketed ready for use in sealed tubes holding 2.3 cc. of a solution of 1.5 parts fibrolysin in 8.5 parts of water, and sterilized at 115° C., each tube representing the activity afforded by 0.2 gram thiosinamine. Fibrolysin is said to possess a resolvent action on tissue, and has been successfully used in lupus, chronic glandular tumors, scleroderma, etc.

Conium Ointment.

Hyrous woolfats of commerce, when triturated with even small quantities of water, or a substance of the consistency of a soft extract, as in the preparation of conium ointment, give out more liquid than they will take up; and even with such a drug as ichthyol, it is almost impossible to turn out a satisfactory ointment. Lenten, who makes these observations (Pharm. Journ.), has found the following method to prove satisfactory: Conium juice, 2 fl. ounces; anhydrous woolfat, $\frac{1}{2}$ ounce. Evaporate the conium juice to $\frac{1}{2}$ ounce by weight, and incorporate with the woolfat in a slightly warmed mortar. The resulting ointment is of a nice consistency and the process is less troublesome than that of the B. P., for the conium juice is subjected to heat for a much shorter period.

Preservation of Cider.

A patent has been granted in France on a process for preserving the sparkle in cider. The cider is placed in the cask with isinglass and allowed to remain for eight days, when it is racked off into new casks, where it remains for a similar period. It is then bottled and allowed to remain in the bottles, which are furnished with conical corks that are readily removed, bottom-up for a period of from twelve to fifteen days. When the bottle is restored to its usual position, a crust formation will be found upon the cork, which, with the deposit, is thrown away. The cider is then ready for the last treatment, which is effected by decanting into patent stoppered bottles, which are thereafter stored in an upright position.

Sodium Perborate.

Sodium perborate is now made use of to obtain extemporaneous solutions of peroxide of hydrogen. The following formulas are submitted by a writer in L'Union Pharm.: Solution 10-12 volumes: Sodium perborate, 170 grams; powdered citric acid, 60 grams; water, 1 liter. Solution 18-20 volumes: Sodium perborate, 210 grams; powdered citric acid, 105 grams; water, 700 grams. Filter if necessary. Tartaric instead of citric acid may be used, if desired.

Milk Powder.

A process has recently been patented in Canada for the manufacture of milk powder, which consists of mixing with milk a sufficient quantity of milk salts to render the albumen soluble, such as 1 per cent. of nitrate of calcium and phosphate of potassium. The milk is then evaporated and noncrystalline sugar is added in a proportion of about 1 to 2 per cent. of the weight of the milk in order to prevent decomposition.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of The Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Medical Certificates to Pharmacists.

(H. D. P.)—"Should not, in your judgment, a licensed pharmacist be entitled to a medical student's certificate? If such was the case, would it be of benefit to either profession?"

It depends altogether on one's point of view. As a general proposition, however, there is probably nothing at the present time to be gained by granting licensed pharmacists medical students' certificates; at least, that is the way most legislators view the question. In this State, to obtain a medical student's certificate, the matriculate must secure forty-eight academic counts, or present satisfactory evidence of the completion of high school work, after eight years of pre-academic work, as an equivalent to be determined by the board of regents (three years of such work is accepted if the work is completed before August 1, 1896). At the present time applicants for registration as pharmacists must present qualifications of pharmacy students—twelve counts—besides diplomas of graduation from colleges before they can appear before the board for examination.

The question may then be asked, "Does the pharmacist's college training make up for the difference in the required standards of the two professions?" An answer in the negative is found in the law governing the registration of both physician and pharmacist. The pharmacist may not qualify as a medical student unless he presents qualifications of an academic character. To be sure, his studies as a pharmacist have carried him into subjects essentially medical, but he has approached them as a student of pharmacy, not as a student of medicine. No, we do not think that licensed pharmacists should be entitled to a medical student's certificate any more than we think a physician should be allowed to present his diploma as the equivalent of a college of pharmacy diploma in the qualifications demanded by law for registration before the board of pharmacy.

Compounding an Ointment.

(W. D.)—"Your reply in the January 12, 1905, Era (page 41), to my question 'what is the correct way to arrive at the amount of vaseline required in compounding a prescription where the last ingredient reads: 'Vaseline q. s.ij'; should the ointment jar be delivered full, or should the ingredients all be weighed, regardless of whether the finished ointment fills the

jar or not? Is in accordance with my expectations and my practice, but I cannot help but think that to make it up by volume would give more uniform results.

"Probably I am encroaching on the old percentage controversy, but as the 'dose' of an ointment is measured by volume, the amount of active ingredient applied will vary with the density of the ointment, a condition of uncertainty not allowed for by the writer of the prescription. In one prescription a dram or two of the finished ointment must be thrown away (and a portion of the active ingredient with it); in the other (calling for the same number of grains of active ingredient to the ounce) the jar is only half full, the patient receiving double the dose of active ingredient or twice as much as he would from the first prescription, for the amount applied remains practically the same."

We do not think there is any argument in favor of measuring the volume of vaseline required to complete the ointment by assuming that the container will hold just one ounce of finished product and no more. Some so-called "ounce" ointment jars hold less than an ounce, some hold more, and the only way absolute accuracy can be obtained is by weighing all of the solid ingredients, the vehicle included. It is taken for granted that the prescriber knows what he is prescribing and it remains for the patient to apply the ointment according to directions. If these be closely followed and the ointment has been carefully made, the patient will nearly always apply about the same quantity, even though he should be given another kind of an ointment jar in case the prescription is refilled. The capacity of the ointment jar should not enter the problem of compounding. The only consideration that should be given to the jar may be found in the answer to the question, "Will it hold the finished ointment?"

Essence of Lemon.

(D. C. O.)—"Kindly give me two good formulas for making extract of lemon, one using lemon peel, the other being made from the essential oil alone."

For the first formula we would recommend that given by the U. S. Pharmacopoeia, which is the standard, according to the laws of the various States. For a formula of the second type the following is taken from a manufacturer's note book: Oil of lemon, 8 ounces; cologne spirit, 95 per cent., 96 ounces; water, 24 ounces. Dissolve the oil in the spirit, shake well, slowly add the water, and filter. Tincture of turmeric may be used to color.

Another formula which differs from either of the above is the following:

Oil of lemon	4 fl. drams
Alcohol, deodorized	16 fl. ounces
Tincture of turmeric sufficient to color, or	
Oil of lemon	1 fl. ounce
Pumice, powder	1 av. ounce
Glycerin, alcohol, deodorized, water, of each,	sufficient.

Mix the oil with 3 fluid ounces of alcohol and 4 fluid ounces of glycerin in a quart bottle, add the pumice, previously well washed with water, incorporate the whole thoroughly by agitation, and place in a water bath for several hours, shaking frequently. Then add 8 fluid ounces of

water in portion of 2 fluid ounces, shaking thoroughly after each addition. Keep the mixture in a warm place for twenty-four hours more, finally filter, and add enough of a mixture of alcohol, glycerin and water in the above proportions to make 16 fluid ounces. Color yellow if desired.

Instead of using oil of lemon alone in making this extract, the oil may be mixed with citral, which is the odorous constituent of the oil. If the oil be mixed with citral in the proportion of 288 grains of the latter to 8 fluid ounces of the former and to the mixture be added 8 fluid ounces of alcohol, the product will be equal in flavoring strength to ordinary oil of lemon. The advantage of using such a mixture is that it is soluble in weak alcohol, and does not so speedily acquire a terebinthinate flavor.

Antiseptic Solution.

(L. P.)—"We cannot give the formulas for the proprietary articles. For antiseptic solution, we suggest that you try the following, from the report of the Committee on National Formulary, published in the 1902 Proceedings of the A. P. A.:

Thymol	1 gram
Menthol	1 gram
Eucalyptol	1 Cc.
Oil of wintergreen	1 Cc.
Fluid extract of wild indigo	8 Cc.
Natural benzoic acid	8 grams
Powdered orris root	10 grams
Boric acid	24 grams
Alcohol	375 Cc.
Water	625 Cc.

Dissolve the thymol, menthol, eucalyptol, oil, benzoic acid and fluid extract in the alcohol and add the powdered orris. Macerate seven days with frequent shaking. Dissolve the boric acid in the water and add to the alcoholic solution. Shake frequently during fourteen days, then filter.

Prof. W. L. Scoville is the author of this formula for alkaline antiseptic solution:

Potassium bicarbonate	40 grams
Borax	10 grams
Salicylic acid	6 grams
Benzoic acid	6 grams
Eucalyptol	0.1 Cc.
Thymol	0.1 gram
Menthol	0.2 gram
Oil of wintergreen	0.4 Cc.
Solution of carmine	1 Cc.
Tincture of cudbear	15 Cc.
Glycerine	259 Cc.
Water, a sufficient quantity to make	1000 Cc.

Dissolve the potassium bicarbonate and borax in 650 Cc. of water. Dissolve the acids, menthol, thymol, eucalyptol and oil of wintergreen in the alcohol and mix with the glycerine. Then mix the two solutions, add the carmine solution and tincture and finally enough water to make 1,000 Cc. Allow to stand a few days and filter.

A formula for a clay poultice was published in April 14th Era, of last year, page 358.

Label Varnish.

(C. G.)—"The following are from The Era Formulary:

(1.)	
White lac	1 ounce
Lead carbonate	4 drams
Ether	½ pint
Place the white shellac in a mortar and	

reduce to a moderately fine powder; then transfer to a bottle containing the ether and set aside, shaking the bottle occasionally until the powder resolves itself into a uniform solution; then add the lead in fine powder; shake well and filter through paper, returning the first portions of the filtrate two or three times until it becomes perfectly clear. Ordinary shellac may be used, but it imparts a brownish color to the labels. Paste the label upon the bottle smooth as usual (it is not necessary to wait until it is dry), then apply the varnish with a soft brush.

(2.)

Sandarac (In coarse powder)	100 parts
Mastic	40 parts
Copaiba	15 parts
Venice turpentine	30 parts
Oil of turpentine	40 parts
Alcohol	90 parts
Absolute alcohol	30 parts

Macerate until solution is effected.

Destroying Roaches.

(P. L.)—A good plan is to render the place which the roaches frequent perfectly dry, and then coat the boards or shelves with a strong concoction of quassa. When this has become thoroughly dry, cover the boards, etc., with clean paper. Other bitter substance may be used in place of quassa. In places where articles of food, drink, clothing are not likely to be placed, some poisonous substances, such as corrosive sublimate, may be employed. But great care should be taken that it be not applied in such manner that it can eventually be brushed off in dust. A good plan is to dissolve a little shellac in solution of borax, to add a very small quantity of bichloride, and to paint the solution into the cracks and corners. If water or dampness is kept away from the shelves or closets, the roaches will leave the place of their own accord.

For a liquid preparation to destroy roaches, Hager directs the use of petroleum, the fluid being injected into the cracks of the floors.

The Era Formulary gives this one:

Thymol	2 parts
Salicylic acid	2 parts
Alcohol	200 parts
Oil of lemon	1 part

This preparation makes no stain, and is said to kill roaches and vermin immediately. The odor is not unpleasant and is quickly removed by airing the room.

Here are three formulas for roach powders:

(1.)

Borax, in fine powder	30 parts
Sugar, powdered	8 parts
Cacao powder	3-4 parts

Mix. Sprinkle in places frequented by the roaches. Starch may be used in place of sugar, or a mixture of the two substances will answer.

(2.)

Pyrethrum insect powder, 1 pound
Tartar emetic powdered . . . 2½ drams
A similar mixture with sodium fluorid and insect powder has been suggested.

(3.)

Colocynth seed, pyrethrum flowers, borax, of each, equal parts. Reduce each ingredient to a fine powder, and mix.

Toothache Gum.

(A. E. L.)—The following are from The Era Formulary:

(1.)

Paraffin	94 grains
Burgundy pitch	800 grains
Oil of cloves	½ fl. dram
Creosote	½ fl. dram

Melt the first two ingredients; when nearly cool, add the rest, stirring well. May be made into small pills, or sent out in form of small cones or cylinders.

(2.)

Melt white wax or spermaceti, two parts; when melted, add carbolic acid crystals, one part, and chloral hydrate crystals, two parts; stir well until dissolved. While still liquid, immerse thin layers of carbonized absorbent cotton wool and allow them to dry. When required for use a small piece may be snipped off and slightly warmed, when it can be inserted into the hollow tooth, where it will solidify.

(3.)

Griffiths gives this one:

Beeswax or hard paraffin	2 ounces
Lard	½ ounce
Oil of cloves	1 ounce
Creosote	1 ounce
Powdered sugar	1 dram

Melt the beeswax and lard; when cool, add the oil of cloves and creosote; pick absorbent cotton into fine threads, and thoroughly saturate it with the above mixture; sprinkle with sugar, then roll into pipes; wrap with waxed paper and place in vials.

(4.)

Oil of cloves	2 drams
Carbolic acid, crystals	6 ounces
Yellow beeswax	1 ounce

While still liquid, immerse thin layers of absorbent cotton, and when sufficiently cool, roll them into the shape of rods.

China and Porcelain Cement.

(J. A. E.)—Try the following:

Isinglass	1 ounce
Water	4 ounces
Alcohol	4 ounces
Mastic in tears	½ ounce

(Dissolved in 4 ounces of alcohol.)

Gum ammoniac ¼ ounce

Soak the isinglass in the water for a few hours and stand in a warm place, so as to hasten the solution; then heat up, to evaporate all unabsorbed water. Keep the isinglass mucilage hot, so that it will not set solid. Separately dissolve the mastic resin in the other 4 ounces of alcohol, to which add the gum ammoniac. When these two preparations are ready, add 4 ounces alcohol to the hot isinglass mucilage, and mix that with the mastic varnish, and heat the whole until it liquefies, standing the vessel in a water bath. For use, it is re-melted over a water bath and used hot.

Information Wanted.

(H. B. M.) wants "a formula for making 'wafers' for fish food; also to be informed if he will need a machine for their manufacture. If so, where can the machine be bought?" Can some reader supply the information?

**BOOK
REVIEWS**

PROCEEDINGS OF THE MANUFACTURING PERFORMERS' ASSOCIATION OF THE UNITED STATES, AT THE ELEVENTH ANNUAL MEETING.

We have received from Secretary Frank B. Marsh, a copy of the volume of the proceedings of the eleventh annual meeting of the Manufacturing Perfumers' Association of the United States, held in New York, February 1 and 2, 1905. For the first time in many years the name of James E. Davis, the former secretary, is not on the title page, as the compiler and editor of the report. In an editor's note, Mr. Marsh thanks Mr. Davis for his assistance in preparing the report. He says: "The secretary is glad to avail himself of this opportunity to acknowledge his great indebtedness to Mr. James E. Davis, of Detroit, the former secretary of the association, whose painstaking care and assistance in preparing this report for the press have hastened the appearance of this volume, and to an important degree lightened the labors of the secretary."

The "List of Trade Names Used by Manufacturing Perfumers," which has heretofore been such a conspicuous feature of the report, is omitted from the latest number, in accordance with an order of the association. The omission is a most noticeable one. The secretary's report shows that the association now has a membership of 125, of which 55 are active and 70 are associate members. The report covers a number of details regarding matters of great interest to the association, is most complete and is exceptionally handsome typographically.

PROCEEDINGS OF THE NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION, THIRTEENTH ANNUAL MEETING AT NEW ORLEANS, NOV. 15 to 19, 1904.

The proceedings of the thirteenth annual convention of the National Wholesale Druggists' Association have been published in a handsome cloth-bound book of some 500 pages. The reports of the president and other officers are printed in full, as are the addresses of President Shoemaker, Mayor Paul Capdevielle and others. The president's report shows there was a gratifying increase in membership as a result of the districting of the country. Communications from the National Board of Trade and the executive committee of the Inter State Commerce Law Convention and other bodies, take up much space in the volume.

The secretary's report places the present membership at 229 active members and 187 associates. Thirty-two active and seventeen associate members were elected during the convention. A feature of the book is the memorials to the members who have died within the year, with their pictures. Of the many committee reports, that on adulterations will be found especially interesting. The treasurer's report shows the association to be in a thriving condition.

The value of chemicals, drugs and dyes imported by the United States from Germany in 1904, was \$16,227,443.

NEWS SECTION

HOUSE ORGANS.

Representative Men of the Trade Express Their Ideas.

"FOR UNBIASED OPINIONS AN INDEPENDENT JOURNAL MUST BE READ."—LET DRUG FIRMS ATTEND TO THEIR BUSINESS AND LEAVE PUBLICATION OF JOURNALS TO OUTSIDERS.—SAMPLE COPIES.

From Cincinnati.

"The Era's editorial hit the nail on the head," said Wm. Henry Gansz, president of the alumni of the Cincinnati College of Pharmacy. "An independent drug press would be a godsend to the trade, providing, of course, it was influential. To my notion the best way to bring this desired result about would be for the manufacturers to quit publishing their own journals. I am sure the majority of druggists everywhere would be more than anxious to subscribe to any paper that might be a power."

"An independent press is what we are clamoring for, and The Era is to be congratulated for its stand," said George Eger. "Every day we receive journals put out by drug firms, and as they come in countless numbers, naturally we do not place much weight in their opinions."

"About the only interesting matter in these drug house journals is the price list of the issuing firm," said Henry Heberle. "For unbiased articles the independent press must be read. May their weakness be rectified."

"Both classes of publications should be read," said Louis Heister. "Of course, strength could be secured by concentration in a few papers."

"Conditions are such that an independent press is needed," said Balthasar Fries. "A publication gotten out by a drug firm is bound to be more or less colored in its ideas."

"An independent drug press, providing it is conducted on proper lines, would be the real thing," said F. W. Kisker.

"Let the drug firms attend to their own business and leave the publication of journals to outsiders. Better results would be obtained," said G. A. Fleber.

From St. Louis.

C. P. Walbridge, speaking for the J. S. Merrell Drug Co., of which he is president: "The absence of a standard drug journal to which we can look as the voice of the trade, is, and has been keenly felt by all interested in the drug trade. Without reflection on any journal, we can readily understand that the dissipation of journalistic talents in the trade among so many journals, and the consequent dissipation of patronage is responsible for this."

"The Era editorial on trade journals was noted on arrival of that publication, and passed around among the members of

this firm to be thoroughly digested. We heartily approve of it. The broad view of the situation makes elimination necessary."

From Baltimore.

Fuller Nance, Ph.G.: "I have read the article on drug journals in The Pharmaceutical Era, and I heartily endorse every word that is there said. I am a graduate of the Maryland College of Pharmacy, served my apprenticeship with two of the best druggists in the city, and during my five years in the business The Era has been a warm friend of mine and I have secured from it many valuable helps that I would have never gotten otherwise."

From Detroit.

Frederick Stearns & Co.: "We certainly agree with you as regards the need of a strong independent drug journal, which shall represent as much in our line as does the Iron Age, for example, in its line. Not that we have not several good journals already, but there is none that is what it ought to be, considering the high average intelligence of the drug trade—and might be, we believe. If we can be of assistance in carrying out your plans it will give us pleasure to co-operate with you."

"We doubt, however, whether the druggists as a class care very much whether the journal they read is a house organ or not in fact, numbers of them doubtless prefer house organs, as they cost nothing, or next to nothing. When a dollar-a-year journal sends a free sample copy in March or April with an offer to continue it for the rest of the calendar year for "two-bits," and furnishes a pretty good readable journal into the bargain, it is easy to see where some of the large circulations come from. The proposition that The Era and other independent journals are up against, as we see it, is to publish a journal that is so much better that druggists will willingly pay the difference in price to get it."

"The Era can slash into the house organs as hard as it wants to, so far as we are concerned. The New Idea is a house organ, but there is not disguise about it and nothing The Era has said so far against them would apply to it anyway. The Era calls on druggists to quit reading "house organs" even, and while this might seem prejudicial to our interests, as far as The New Idea goes, we believe that they will quit reading it only when it ceases to be readable—a condition that we shall labor strenuously to prevent coming to pass."

D. C. C. ELECTS OFFICERS.

At a meeting of the Drug Clerk's Circle, held last Thursday, Chairman W. Karlin, presiding, new officers were elected as follows: President, P. Levy; vice-president, W. Karlin; secretary, H. W. Dulberger; treasurer, S. Normau; financial secretary, H. Harkavy; sergeant-at-arms, J. Klein; trustees, Messrs. Lewin and Mishkin; editor, Joseph Kahn.

HARMONY RESTORED!

M. A. R. D. NOT TO HIRE MEN.

But Chief Organizer Noel Promises Ten Men by June 1.

FOUR ALREADY HERE AND FIVE MORE SENT FOR.—DECISION REACHED AFTER MEETING LASTING ALL MORNING.—LOCAL ASSOCIATION WILL GET AT LEAST ONE DOLLAR FROM ALL DUES COLLECTED.

All misunderstandings between the N. A. R. D. and M. A. R. D. were cleared away at the meeting of the Executive Committee of the latter body, on Monday morning, in Colonel Dible's office. Harmony was established, but only after a meeting lasting three and one-half hours, which is reported to have been one of the most exciting ever held in this city since the advent of the N. A. R. D.

Ten members of the Executive Committee were present, as were also Colonel Dible and Dr. Noel, head of the organization department. The conclusions reached after the morning's deliberations were:

MONEY TO GO TO M. A. R. D.

First, the treasurer of the M. A. R. D. is to receive all money collected in the future, and whenever \$7 or more is received from any member the treasurer is to remit \$6 to the N. A. R. D., retaining the balance for the local association. Thus the latter will get at least \$1 and may obtain \$2 whenever the \$8 dues are paid in full.

Second, the Executive Committee set aside all intention of employing its own organizers, on the promise of Dr. Noel to have nine men here by June 1. S. V. B. Swann is to be a tenth man, and for necessary expenses he is to receive \$100 per month from the N. A. R. D. This compensation is merely to be for his work as an organizer and has nothing to do with his position as secretary of the M. A. R. D. Mr. Swann has thus far refused to accept any salary from the M. A. R. D., preferring to wait until the association is on its feet financially.

Third, the N. A. R. D. is to return to the M. A. R. D. \$1 for each member from whom dues were collected since March 28, the date when the local association was organized.

BEST WISHES TO N. A. R. D.

A resolution of good will and best wishes towards the N. A. R. D. was adopted, to be conveyed through Chief Organizer Noel.

Although all these arrangements must be approved by the Executive Committee of the N. A. R. D., no difficulty is anticipated in that direction. To an Era re-

porter, Dr. Noel, on Monday afternoon, said:

READY TO LEAVE NEW YORK.

"I came here for the purpose of harmonizing things, to work for the interest of the M. A. R. D. and the N. A. R. D. We were prepared to pull out of New York if necessary, simply for the sake of peace and harmony, but I am glad to say that we have succeeded in reaching an understanding.

"There are now four men on the ground and I have just telegraphed to Chicago for four more and to New England for another, making nine which will be here by the first of June. It is rather a difficult job to collect nine men scattered over different parts of the country, but we shall spare no pains to have the work here done quickly and thoroughly. New York has already cost the N. A. R. D. \$600 over and above what we have collected in dues and organization fees. These ten men will be used in organization work and in getting contracts signed, as the local Executive Committee may see fit.

"The number of men who have paid dues in full is now 561, while about 590 have paid the organization fee. Whenever money is collected in instalments, it is credited first to the organization fee."

"What is your opinion of the action of the Executive Committee in deciding to hire its own men?" Dr. Noel was asked.

DOESN'T BLAME EXECUTIVE COMMITTEE.

"I don't blame them a bit," he replied. "I can understand just how they felt and I would probably have done the same thing in similar circumstances."

Dr. Noel arrived in this city last Thursday and immediately proceeded to visit all the members of the Executive Committee and the various district leaders. He went through all the districts on both sides of the city, attending meetings of the district organizations and getting full information in regard to the situation. He left for Chicago on Tuesday.

GINSENG TRADE FLOURISHES.

Syracuse, N. Y., May 16.—The reports from New York that the bottom of the ginseng market had dropped out is not credited by growers of the root in this section. A large share of all the ginseng grown in the State is grown in Onondaga county. The acreage is showing a constant increase. One of the prominent growers has this to say:

"The attempt to hammer the ginseng market will not amount to anything. China is taking a large amount of the root every month and it is not true that the traders in the Chinese market prefer the wild root to the cultivated. The prices obtained prove this assertion. Pretty soon the American demand will exceed that of China and the American product will be used at home. It is being used largely already by certain drug houses for certain compounds. There is good money in ginseng and it cannot be labelled a craze."

CITY PHARMACIST RESIGNS.

Lawrence, Mass., May 8.—Edward L. Barnett has resigned as city pharmacist to engage in business. He had held the office since it was created, in 1902.

THEY BOWLED FOR PRIZES.

Friday Club Ends 34th Year With Fine Banquet—Thursday Club, Too.

The West Side or Friday Bowling Club celebrated the completion of its thirty-fourth year of existence, at Terrace Garden, last Friday, with prize bowling and a banquet, at which all the members were present. There was plenty of wine and song, each man being required to take his turn at some humorous ditty or recitation. Frequently these were original compositions set to old German melodies, or student songs of their university days. A feature of the evening was the singing of Dr. A. Herzfeld's original composition introducing the names of all the members.

There were three different kinds of games—head-pin, battle-game and strikes and spares. As usual, Carl Schnackenberg had the highest average in all three and therefore took first prize. Henry Ihlefeld came second, and George Kiefflin third. The prizes were cash, the sum of \$170, which had accumulated during the season, being divided among all the members. Hence, each member received something, there being a variation of only fifteen cents between each prize. A handsome painting, the work of Henry Ihlefeld, was offered for the best score in the battle-game and went to Carl Schnackenberg.

The other members present were Charles W. Roux, F. W. Bruckmann, Dr. August Drescher, Robert Hasselbach, Hugo Kantowitz, Herman Reaske and Carl Schmidt. The Thursday Club, which held its prize bowling on the previous day, had \$160 to divide among its fifteen members. The only absentee was Carl Kessler, who had undergone an operation at the hospital. For his benefit each member rolled a "blind," as the result of which Mr. Kessler won third prize. The first prize went to E. H. Plump, and the second to Albert Hatcher. At the banquet which followed, a large and handsome stein was presented to Treasurer Otto Lenc for his services during the past year. An uproarious time was reported. Not the least important incident was the initiation of S. V. B. Swann as a "dutz bruder," in which ceremony the new brother locks arms and drinks a glass of wine with every other individual member.

A. B. C. AT CITY ISLAND.

The A. B. C. run to City Island, on May 18, was thoroughly enjoyed by six members. Up Boston road to the back entrance of Bronx Park led the road, where a family of buffaloes viewed the wheelmen with mild astonishment. One old fellow, rolling over and over in the dust, prompted Mr. Wernert to make the remark: "He flees his fleas." Weather conditions and roads were excellent. A brief call was made in City Island on Commodore Louis F. W. Selfert, who was the picture of health and brown as a berry, and who did not regret getting out of the drug business.

There were no casualties, except that a cracked tube put Mr. Stolzenburg's wheel temporarily out of commission, but as Mrs. S. was present, he had to bottle up his wrath and no doubt did a lot of thinking about poor bicycle frame construction and what he was going to write to the manufacturer. An early return was made to the

city, in order to give Messrs. Wernert and Stolzenburg, who are members of the Thursday Bowling Club, an opportunity to compete in the prize bowling. All the members are busy this week, giving their wheels a thorough overhauling and putting them in trim for the grand Pennsylvania tour, May 25, 26, 27 and 28, and are looking forward to having a good time, Jupiter Pluvius permitting. The schedule of runs as arranged for the remainder of the season is as follows, giving time, destination and hour a. m., at which start is made:

May 25, 26, 27, 28, Pennsylvania tour, Pennsylvania fery, 8.15; June 1, Goshen, Montgomery, Newburgh, Erie fery, 9.00; June 8, Glenwood, L. L. College Point fery, 8.45; June 15, 16, 17, Lakes Mohonk and Minnewaska, New York Central depot, 7.45; June 22, Fishkill, down the Hudson, New York Central depot, 7.45; June 29, Boonton, via Montclair, Erie fery, 8.30; July 6, Coney Island, East Forty-second street fery, 9.00; July 13, Tuxedo, via Pompton, Pennsylvania fery, 8.15; July 20, Lakewood, Pennsylvania fery, 8.40; July 27, Elizabeth, Plainfield, New Brunswick, Penn fery, 8.30; August 3, 4, 5, Long Island tour, East Twenty-fourth street fery, 8.00; August 10, Paterson, Pompton, Ringwood, Erie fery, 8.20; August 17, Rockaway Beach, E. Thirty-fourth street fery, 8.30; August 24, Morristown, Gallia, Erie fery, 8.30; August 31, Roton Point, Conn., Central Depot, 8.40; Sept. 7, Spring Valley, Fort Lee fery, 8.30; Sept. 14, 15, 16, Kingston-Port Jervis, Central Depot, 7.45; September 21, Passaic Valley via W. Orange, Erie fery, 8.20; September 28, Kenosha, One Hundred and Tenth street and Fifth avenue, 8.30; October 5, 6, 7, Catskill Mountains, Central Depot, 7.45; October 12, Coruwall-Tuxedo, Suffern, West Forty-second street fery, 8.10; October 19, New Foundland-Goshen, Pennsylvania fery, 8.15; October 26, Pompton-Ringwood, Pennsylvania fery, 8.15; November 3, Orange Mountains, Erie fery, 8.20; November 10, Staten Island, Pennsylvania fery, 8.30; November 17, Hempstead, L. L. College Point fery, 8.45; November 24, Yonkers-White Plains, One Hundred and Tenth street and Fifth avenue, 8.30; November 31, Coney Island, East Forty-second street fery, 9.00. Also Sunday runs by special notice.

HOWARTH & BALLARD'S PLANS.

Jtica, May 20. Howarth & Ballard, whose stock was badly damaged by fire recently, have moved their office into the old library building on Main street, until their store is repaired. The firm will serve its customers from a stock which will be kept in the library building.

An inventory of the burned stock is being taken, preparatory to presenting the claim to the insurance adjusters. Examination of the stock has revealed much more damage than was at first announced. Drugs were damaged by the water, and surgical instruments suffered from the water and acids.

—Peter Beyer, a druggist of Harvard, Kent, Co., Mich., was found dead in his chair at the store. Heart failure.

—Wm. Z. Bangs, formerly in the drug business at Holland, Mich., is dead of spinal meningitis at his home in Rochester, N. Y.

COCAINE IN POWDERS.

Catarrh Snuffs Show Varying Percentages of the Poison.

BOARD OF PHARMACY NOTIFIES MANUFACTURERS THAT EVERY PACKAGE MUST BEAR A POISON LABEL, PRINTED IN RED INK.—FOUR SAMPLES ANALYZED BY STATE BOARD, FIVE BY EASTERN BRANCH.

The results of the investigation into catarrh powders sold in this State, which was decided on by the Board of Pharmacy at its last meeting in January, have just been given out. Five samples of powders were analyzed, last month, by the Eastern Branch independently of the work done by the general board, and these samples contained the following proportions of cocaine hydrochlorate:

	Per Cent.
Gray's Catarrh Powder.....	0.98
Crown Catarrh Powder.....	2.699
Coryzon Catarrh Powder.....	0.96
Dr. Cole's Catarrh Cure.....	3.76
Dr. Birney's Catarrh Powder.....	1.982

Four samples were analyzed by the general board. To each of the four manufacturers, viz. C. N. Crittenton & Co., N. Y. (Birney's), Anglo-American Medicine Co., Toronto (Agnew's), Crown Pharmaceutical Co., N. Y. (Crown), and Gray Medicine Co. (Gray's), Secretary Warren L. Bradt sent the following letter:

"Your attention is hereby directed to Section 198 of the Pharmacy Law, which requires all poisons to be labeled upon the exterior of every package, the word 'poison' distinctly shown in red ink.

"A sample of _____ Catarrh Powder, manufactured by your firm, has been examined by the chemist for this Board, and is found to contain cocaine. Your attention is also called to Section 201 of the same law, which provides penalties for non-compliance with this act."

The results obtained by the Eastern Branch will be laid before the general body, at the meeting in June, when similar notices, it is likely, will be sent to the manufacturers of the powders examined by the Eastern Branch.

Specimen labels, printed in red ink, have already been submitted by some of the manufacturers. Joseph Weinstein, secretary of the Eastern Branch, expressed the opinion that many people would be deterred by the word "poison" from beginning the use of a catarrh powder. He did not believe it would have any effect on hardened victims of the habit.

RED CROSS CASE COMPLETED.

Trenton, N. J., May 20.—In the case of Johnson & Johnson, of New Brunswick, vs. Seabury & Johnson, of New York, all the evidence is now in and a decision is awaited. Vice-Chancellor Bergen heard the case, which has been pending in the New Jersey courts for the past four years.

Johnson & Johnson claim the exclusive right to the use of the red cross as a trade mark on pharmaceutical and medicinal preparations. The defense of Seabury & Johnson is that Johnson was formerly a member of their concern and originated the red cross as a trade mark, hence they claim they are entitled to use it as such.

WAR ON IMPURE DRUGS.

Edward Thimme Says Druggists Use "Home Made Essence of Pepsin."

The Anti-Adulteration Society, which was organized two weeks ago, for the purpose of warring on impure foods and drugs, is endeavoring to arouse public sentiment by distributing "public endorsement" blanks. Edward Thimme is president of the organization and at a meeting of the Executive Committee, last week, he is reported to have spoken in part as follows: "Adulterated water is easily detected, if you get it as water. But it is the height of criminal greed to taint it with 2 per cent of sulphuric and sulphurous acids, give it a high sounding, scientific name and then sell it as a cure-all at forty cents per bottle, when it costs five cents to make it. This fraud ought to be stopped, and stopped quickly.

"Essence of pepsin is very much used in physicians' prescriptions, but a standard essence is prescribed. This, of course, is chemically pure and very effective. To save a few cents the dishonest compounder betrays the physicians' trust and the public's confidence by using a home made stuff in place of the standard essence prescribed.

"To secure effective action, let me suggest that you invest your executive officer with full authority to select the particular object to be singled out for attack, as well as the necessary method to be pursued in obtaining lasting results."

Thimme achieved considerable notoriety five years ago by championing a bill intended to shorten the hours of the downtown, hard-working drug clerks. He did not appear at that time as a very fervid friend of the drug trade.

PROTEST AGAINST CENSUS.

Strong protests against the variety of information demanded by the Census Bureau, were made by representatives of manufacturing houses at the monthly meeting of the Drug Trade Section of the Board of Trade and Transportation, last Thursday afternoon. A letter received from one prominent manufacturer declared that he had refused to comply with the requirements until the Section had taken some action, and questioning whether the Act of Congress was constitutional. The following resolution was endorsed and referred to the General Board:

"WHEREAS, The Bureau of the Census of the Department of Commerce and Labor, operating under provisions of the laws of March 6, 1903 and March 3, 1899, has prepared a schedule of interrogatories for census purposes calling for statistical details, the compilation of which would be of no public advantage, but which would entail exposure of the private affairs of manufacturers to an extent that is not justified by the avowed purpose of such a census, therefore, be it

"Resolved, That the New York Board of Trade and Transportation protests against the form of interrogatories prepared by the Bureau as calling for information more comprehensive than it is in the power of the government to exact, and that a special committee of three be appointed to present such protest to the proper officers of the government and endeavor to secure a modification of the

schedules, or falling in this, to bring the matter before Congress at its next session, and if possible secure legislation of like purpose."

AMERICAN MEDICAL ASS'N.

Arrangements have been made for a special overland limited train to the meeting of the American Medical Association, which will be held at Portland, Ore., on July 11, 12 13 and 14. It is hoped by providing for an expeditious trip that the largest possible number of physicians and surgeons will be induced to make the trip. A special party is being organized to leave Chicago over the Chicago Union Pacific and Northwestern line, on July 6. The round trip rate from Chicago to Portland will be \$56.50, and proportionate low rates from other points will be in effect. The sleeping car rate from Chicago to Portland for double berth, in special train, will be \$14, and for a drawing room car, \$53. The meeting will be held in Portland while the Lewis and Clark Exposition is in full swing. Dr. K. A. J. Mackenzie, of Portland, is chairman of the committee of arrangements.

ELECTION OF OFFICERS.

Albany, May 22.—The Columbia County Druggists' Association has elected the following officers: President, George McKinstry, Hudson; vice-president, the Rev. Seymour, Chatham; secretary, H. A. Branion, Chatham; treasurer, N. L. Waltermire, Philmont; trustees, A. J. Fellows, of Chatham; A. W. Rice and Harold Wardie, of Hudson.

HILL BILL BECOMES LAW.

Albany, May 23.—Governor Higgins has signed the Hill bill, amending the Penal code with regard to the sale of poisons, so as to conform to the provisions of the Pharmacy Law. The new law is now part of Chapter 442, laws of 1905.

NEW KENTUCKY PHARMACISTS

At the meeting of the Kentucky Board of Pharmacy, held in Louisville, April 11, the following out of a class of fifty-nine successfully passed: L. A. Bentler, Louisville; Elmer Cants, Hopkinsville; D. C. Donan, Jr., Three Springs; G. S. Du Bois, Paducah; H. F. Emerson, Patroit, Ind.; O. H. Falk, New Albany, Ind.; W. H. Fitzpatrick, Paducah; S. L. Gill, Paducah; L. H. Goemmer, Louisville; C. G. Hambo, Bellevue; C. V. Hocker, Leitchfield; J. A. Hoffman, Greentop; T. J. Keaney, Louisville; F. F. Langenfeldt, Louisville; R. C. Pryse, Beattyville; C. W. Rader, Wellston, O.; L. B. Robinson, Morton's Gap; L. T. Schroff, Frankfort; L. B. Severs, Cloverport; A. L. Suter, Louisville; H. A. Taylor, Louisville; T. J. Windor, Cottageville; F. L. Zoeller, Louisville; J. Ambrosius, Louisville; Bruce Keith, Upton; W. H. Gardner, Jr., Elizabethtown; C. A. Luckert, Louisville; Miss Ida Lambert, Louisville; Harry Plock, Louisville.

The next examination will be held at Dawson Springs, July 11. Applications should reach the secretary, J. W. Gayle, Frankfort, Ky., at least ten days before that time.

GOVERNOR APPOINTS JONES.

Member of New Jersey B. P. to Succeed Ryerson.—Successful Applicants.

Trenton, May 23.—Edward B. Jones, of Mt. Holly, has been appointed by the Governor a member of the New Jersey Board of Pharmacy, for the full term of five years, to succeed Henry O. Ryerson, of Newton, whose term of office expires. Secretary Jordan has just made public the list of successful candidates who took the April examination. Their names follow:

Registered Pharmacists.—Starr H. Ambler, Red Bank; Benedict B. Alt, Jr., Town of Union; Carl F. W. Baum, New York City; Anna I. Branower, New York City; David Bergman, Newark; Henry Balson, Newark; Geo. M. Berlinger, Jr., Camden; Frank Cohn, Newark, N. Y.; Giuseppe D'Amico, Newark; Wm. J. Doherty, Atlantic City; Emma P. Egge, Newark; Benjamin R. Faunce, Philadelphia, Pa.; Samuel W. Flood, Jersey City; Wm. Nathan Frankel, Newark; Henry J. Goeckel, New York City; Francis C. Handwork, Palmyra, N. J.; John W. Harrigan, Philadelphia, Pa.; Ernest Hassinger, New York City; Samuel Jacobs, Paterson; C. Herbert Johnson, Wildwood; Philip M. H. Le Noir, Beverly; Jacob Lesser, Newark; Michael Joseph Moore, Trenton; James Alexander Orr, Atlantic City; Robert K. Pentland, Philadelphia, Pa.; Roy W. Pignol, Brooklyn, N. Y.; Gennaro Ronanelli, Orange; Ferdinand A. Sieker, Hoboken; Frederick Daniel Sterk, Paterson; Gaetano Schillaci, Passaic; Iluzo Albert Silsby, Union Hill; Henry Silk, New York City; William Schmidt, Whitaker; Jacob Steinhard, Newark; Mand Sollenberger, Mahoney City, Pa.

Registered Assistants. Elliot Daniel Cook, Trenton; George Covell Davy, Coatesville, Pa.; Joseph M. H. Hain, Newark; Myer Olshin, Newark; Bronislaw Prebol, Passaic; Charles O. Riede, Newark; Seth Solomon Sawtelle, Elmer; Frank Henry Scholz, Newark; Bernard Simon, Newark; Edwin Elmer Wilkins, Burlington.

The next examination will be held on July 20 and 21, in this city.

MONEY IN GINSENG.

Syracuse, May 23.—An interesting story is that of Miss L. Melina Smith, of St. Johnsville, this State, who is a successful ginseng grower. In three years she has sold roots, seeds and berries amounting to \$2,533. In the fall of 1903 she sold young roots to the amount of \$973. This she invested in germinated seed, the same fall paying \$125 a pound for the seed. In the fall of 1904 she picked fifty quarts of berries from her garden. She sold twenty quarts for \$15 per quart and the balance of the seed she put in to germinate. Besides what she sold during the three years, she has stock in her garden valued at \$7,000 to \$8,000. She takes the entire care of the bed herself. She is a member of the New York State Ginseng Association.

ATTEMPTING ORRIS CULTURE.

Syracuse, May 22.—Some of the up-to-date gardeners in this vicinity are carrying on experiments in the culture of orris root, which is used in perfumed powders.

COMPANY WAS INSOLVENT.

Ex-President of Witch Hazel Co. Gives Interesting Testimony.

A hearing for the appointment of a trustee to take charge of the affairs of the American Witch Hazel Company, which failed in January, was held before Seaman Miller, referee in bankruptcy, last week. Charles C. Dickinson, ex-president of the company, told of having been appointed on the Executive Committee without his knowledge. He asked to have his name withdrawn and then a committee was appointed, which reported that the company was grossly insolvent.

"The stock that was issued," said Mr. Dickinson, "none of the directors would accept with a ten-foot pole. I never qualified as an officer in the corporation."

An attempt at reorganization failed and then the officers were threatened with indictment for false statements. This was obviated by buying up the stock. Mr. Dickinson was asked to reorganize the company, but refused to touch it under \$100,000. This was agreed to and the Witch Hazel Company was incorporated in New York.

"A bond and mortgage of the company to the amount of \$100,000 had been sold for what I heard to be \$100 on the Bourse at Philadelphia," said Mr. Dickinson.

It is claimed that Dickinson has lost \$20,000 through the company, but is ready to meet his obligations if the others interested do likewise.

HEARING ON RAINES BILL.

The information that a hearing on the Raines bill would be given by Governor Higgins, this afternoon (May 25), at 4.30 o'clock, was received last week, by Dr. William C. Anderson, president of the New York State Ph. A., and Dr. William Muir, chairman of the Legislative Committee of the Kings County Pharmaceutical Society. All the members of the two Legislative Committees have been notified of the hearing, and a good representation is expected to be on hand to urge the governor not to sanction the abolishment of the stamp tax.

NEW YORK NOTES.

—F. Ad. Richter & Co., 215 Pearl street, announce that the former manager of their New York house, E. E. Lorenz, has resigned, owing to ill health. He is succeeded by A. Paul Fricke.

—Henry S. Clark, treasurer of Schiefflin & Co., is spending an enjoyable vacation at Caughwannauga Club, in the Adirondacks. Chas. M. Mersereau, of the same company, has also gone up the State for a holiday.

—Seen downtown: W. B. Van Vliet, of Johnston, N. Y.; D. A. Greenless, representing Schiefflin & Co., at Sydney, New South Wales; Walter Fox, Alexandria Bay, N. Y.; Daniel Dutcher, St. Albans, Vt.; J. C. Prote, Bridgeport, Conn.

—Samuel Harry Ellison, of 315 West Ninety-fourth street, formerly a member of the firm of Van Horn & Ellison, druggists, who dissolved in May, 1896, with no assets, has filed a petition in bankruptcy, with liabilities of \$29,379, and no assets.

DEMONSTRATING IN WINDOWS.

Should Patent Medicine Man Use Druggist's Store to Distribute His Wares?

Milwaukee, May 22.—Should a druggist allow a "patent medicine man" to make use of his place of business to distribute his wares? is a question that has occupied the minds of some Milwaukee druggists recently. The "patent medicine man" is not a physician, not even an advertising physician, against whom the regular medical profession has so much to say. He is merely a man with money enough to advertise and push a line of goods. He sometimes hires a practicing physician, where he can find one willing to endanger his practice (if he has any) by accepting the work of "demonstrating" the value of the particular line of curesalls the "patent medicine man" carries.

Whether it is legitimate for a druggist to lend the aid of his name to such a man has been discussed here lately, owing to the presence of a Mr. Cooper at the store of the A. Spiegel Company, at Grand avenue and East Water street. Leaving out the question of the quality and value of the goods the "patent medicine man" has to sell there are some druggists who declare it is outside the sphere of the legitimate pharmacist to permit the use of his place of business and the guarantee that the public infer from the use of the name. On the other hand, it is argued that these men are jealous and would be pleased to have the successful "patent medicine man" come their way.

In the case referred to the itinerant has certainly made good if getting the people interested is making good. He has drawn crowds to the Spiegel store and has caused the sales to increase in other lines of stock. But the wholesalers say it has all been done at the expense of other lines that would have been sold any way; that the only man to profit in the long run is the itinerant and that he profits at the expense of the old established manufacturers, who are the best friends of the retailer, and who are entitled to better treatment.

SODA DRINKS "SPIKED."

Chattanooga, May 20.—A special revenue officer has been making an investigation of the charges that soda fountain drinks served in this city were "spiked," and he says the charges have been sustained. It is charged that the fountain people serve what they call "soft" drinks, but which have been shown to contain intoxicants. Upon the statement of one dealer that he had been serving such drinks for six years, he was compelled to pay the usual federal license fee.

Special Gauger Smith has made an inspection of "soft" drinks which have turned out to be intoxicants. It is understood that the government will not prosecute the offenders, owing to the fact that the drinks were sold ignorantly. Dealers have been informed that if they want to continue in business they will have to pay the regular saloon license fee.

COMMENCEMENT WEEK.

Philadelphia C. P. Confers Degrees Upon its Graduates.

YOUNG WOMEN IN THE CLASS.—STUDENTS FROM MANY STATES.—THE PRIZE WINNERS AND HONOR MEN.—THE PROGRAMME.—ALUMNI ASSOCIATION ELECTS OFFICERS.—EXHIBITION OF SPECIMENS.

Philadelphia, May 19.—Before an audience that filled the Academy of Music, 126 young men and five young women last evening received their diplomas as graduates of the Philadelphia College of Pharmacy. Among the friends and relatives of the graduates were representatives from nearly every State in the Union. The exercises were begun with several selections by a large orchestra, after which, to music, the graduates, clad in cap and gown, marched to their seats. On the stage were seated President Howard B. French, Dean Joseph P. Remington, members of the faculty, also in cap and gown, and trustees and invited guests.

After prayer by Rev. John R. Davies, D.D., the degrees were conferred, the recipients marching up the aisles to the stage. Then came the announcement by Dean Remington, in which he complimented the class for their faithful efforts and referred briefly to the pre-requisite law, which becomes effective on January 1 next. This law, he said, was a matter which most directly concerned the public, for it will be now necessary for the applicant for a certificate of registration to be a graduate of a college of pharmacy before he can take the Board examination to receive such a certificate and be qualified to dispense drugs.

Hon. Alexander K. McClure, the veteran editor and journalist, in a short stirring address, reviewed the progress of teaching and education that had been made in his lifetime. He remarked that it was frequently said that the youth of to-day did not have the opportunities of those of a generation ago. This, Mr. McClure declared, was false. Never before, he stated, was there so much demand for bright, capable, well-educated men and women. He urged his hearers not to wait until opportunities came to them, but to start out and by hard work and perseverance, gain the prizes that were to be had on every hand.

Then came the announcement of honors and the awarding of prizes. The distinguished students were: George M. Beringer, Jr., Frederick W. McNess, Lloyd P. Palmer and Ralph McD. Reahard; meritorious students, Irvin M. Anspach, Joseph H. Fekula, George W. Miller, Edwin R. Mohler, Richard H. Ottman, Joseph P. Remington, John R. Rippetoe, John S. Saurman, Miss Mande Sollenberger, Miss Nellie J. Stevenson and Edward E. Woodland. Prizes were awarded as follows: Proctor prize, gold medal and certificate, for the highest general average in the branches of committee, operative pharmacy and specimens, John S. Saurman; chemistry prize, twenty-five dollars, offered by Prof. Samuel P. Sadtler, Joseph P. Remington; materia medica prize, twenty-five dollars, offered by Prof. Clement B. Lowe,

Joseph P. Remington; pharmacognosy prize, a Zentmayr microscope, offered by Prof. Henry Kraemer, John Ross Rippetoe; analytical chemistry prize, twenty-five dollars, offered by Prof. Frank X. Moerk, Ralph McD. Reahard; operative pharmacy prize, twenty dollars in gold, offered by Prof. Joseph P. Remington, Mande Sollenberger; Maisch prize, twenty dollars in gold, offered by Jacob H. Redecker, of Lebanon, Pa., John R. Rippetoe; theoretical pharmacy prize, a Troemmer agate prescription balance, offered by Mahlon N. Kline, George M. Beringer, Jr.; commercial training prize, twenty dollars in gold, offered by Prof. Joseph P. Remington, Clarence LaRue Bonta; instructor's prize, twenty dollars, George M. Beringer, Jr.; pharmacy quiz prize, year's membership in the American Pharmaceutical Association, offered by Prof. Charles LaWall, George M. Beringer, Jr.; Kappi Psi Fraternity prize, twenty dollars in gold, offered by the Eta Chapter for the highest general average during the three years' course at the college, Lloyd Preston Palmer.

The names of the graduates and the States in which they reside are as follows:

Pennsylvania: Raymond Albauns Acuff, Joseph Landis Althouse, Irvin Milton Anspach, Clyde Kreider Baer, Walter Westbrook Bander, Raymond Clyde Becker, Lewis Edmund Boesser, John Edward Bonner, Karl Leander Bosch, Benjamin Franklin Howersow, Walter Tazgart Butler, Clarence Casper Carhart, Arthur Cohen, William Jasper Coit, Miss Katie Minerva Davidowitch, George Bertram Davies, Charles Marclay Diller, Chester Arthur Duncan, Harry Wilson Dundore, Joshua Evans Eckman, William King Ehrenfeld, Harry Eisenhardt, Francis Theodore Elliot, Charles Palm Eves, Joseph Harry Fekula, Leslie Stella Freeman, Charles Dunning French, Frank M. Garton, John Isaac Gerhardt, Ray Hill Gilliland, William Andrew Glenn, Frank Ellwood Goulden, John Henry Gross, Landis R. Hahn, Powell Hampton, David Morris Hassman, Lewis Henry Hausmann, Jr., Miss Mary Margaretta Hodge, Frank Herman Halzschuh, Joseph Howard Hook, Leonard Houghes, Walter Hamilton Joerg, Harry Clifford Karns, William Kennedy, Samuel Benjamin Kern, John Phoon Krause, LeRoy William Kurtzman, John Christopher Lehman, Harry D. McEntire, Charles Henry McLaughlin, Gilbert March, George Washington Miller, Edwin Royer Mohler, George Lohman Nevins, Samuel Snyder Newcomer, John Bayer Oellig, David Owens, William J. Phillips, Joseph Perry Remington, Clarence Hull Renfrew, Wilmer Beaver Rhoads, Hervey Taylor Richards, Patrick Aloysius Roan, Frederick William Schimpf, Henry Joseph Schlitzer, George Ralph Schrader, Walter Edward Scott, Samuel Arthur Shiffer, William Styres Shugars, Miss Hannah Wilson Slifer, Stanley Gloninger Smith, Frederick Maurice Snyder, Miss Maude Sollenberger, Andrew Eaton Spalding, Franklin Pierce States, Jr., Miss Nellie Jane Stevenson, John Edward Sweeney, Howard George Sylvestor, Joseph Louis Wade, Canby Paul Warnick, Clinton Robert Weiser, Louis Joseph Frederick Welch, Eugene James Wipf, Paul DeLancey Witmer, Nelson Lewis Yeakel.

New Jersey: George Mahlon Beringer, Jr., William Dubois Buzby, Frank William Cast, Horace Ware Givens, Joseph Anthony

Glenn, Frank Hohmeier, Charles Herbert Johnson, Phillip Marion Hutchins, Charles Maier, William Mathis, Edwin Leigh Newcomb, Jolu Francis Sweeney.

Ohio: Frederick William McNess, Harry Freeman Plum, Ralph McDonnell Reahard, Carl Emil Schmidt, Clement Jerome Sibilla, Seth Arden Bardwell.

Maine: Eugene Ricker Littlefield, Harry Nelson Whitney.

Massachusetts: Edwin Cowel Hathaway, John Shelley Saurman.

Texas: Jesse Connor Chisholm, Edward Elias Woodland.

Alabama: Jane Callahan Van Antwerp.

Indiana: Clarence LaRue Bonta.

Maryland: Howell Guy Crothers.

Kentucky: William Howard Dodds.

California: Harry Frederick Eckhardt.

Mexico: Juan Diego Fernandez.

Delaware: Thomas Lawrence Gravel.

Oklahoma Territory: William Hand.

Illinois: Eugene Mark Holroyd.

Nebraska: Robert Joseph Hunt.

South Dakota: Richard Henry Ottman.

Georgia: Lloyd Preston Palmer.

Washington: George Henry Retzer.

Virginia: John Ross Rippetoe.

Arkansas: Jay Fisk Smith.

Montana: Bertram Kahweiler.

New York: Dean Burton Crawford.

Commencement week exercises began on Sunday, with the preaching of the baccalaureate sermon. Clad in cap and gown, the members of the class and faculty marched from the college to the Church of St. Luke and the Epiphany, where the rector, Rev. David M. Steele, preached a strong sermon.

On Monday afternoon the annual meeting of the Alumni Association was largely attended and the election of officers resulted as follows: President, Freeman P. Stroup; vice-presidents, John D. Burg and Charles H. LaWall; recording secretary, Joseph W. England; treasurer, C. Carroll Meyer; corresponding secretary, E. Fullerton Cook; directors for three years, William H. Gano, David J. Reese, Jacob M. Baer, William E. Ridehour.

In the evening the annual reception to the graduating class was held in the college auditorium. Walter A. Runsey, the retiring president, made a few introductory remarks and was followed by Secretary England, who called the roll of the members elected during 1904 and 1905. The address of welcome to the class of '05 was made by Dr. Henry Beates, president of the State Board of Medical Examiners. Then came the presentation of prizes and honor certificates as follows: Gold medal for the best general average of the class, Lloyd Preston Palmer; prize certificates for the best examination in the following branches: Pharmacy, George M. Beringer, Jr.; chemistry, Richard H. Ottman; materia medica, Joseph P. Remington; general pharmacy, George M. Beringer, Jr.; operative pharmacy, Miss Maude Sollenberger; analytical chemistry, Irvin Milton Anspach; specimens, Lloyd Preston Palmer; silver medal for the best general average in the first year examination, Nino Berta Whaland; bronze medal for the best general average in the first year examination, Eli Lilly. The class oration was delivered by Clarence LaRue Bonta; Clement J. Sibilla read a poem dedicated to the class of '05; Edwin R. Mohler read the class history and William J. Phillips, the class

boroscope. Joseph J. Remington presented each member of the class with some little trifle which had some humorous connection with the recipient's college life, or with some marked trait in his character or his habits. Dancing followed the reception.

On Tuesday many of the graduates attended the Alumni Association banquet and reception at Lulu Temple. Professor Remington presided. Outside of the representation from the last class, the class of '84 had the largest number of representatives present. On Wednesday the faculty banquet was held at the college.

A feature of commencement week was the exhibition of drug specimens, botanical specimens and specimens of bacteriological, pathological and all-round microscopic work, arranged under the direction of Professor Henry Kramer. The display attracted a great deal of attention from visiting pharmacists and friends of the graduates, many of whom had assisted in collecting and arranging the specimens.

TO WIND UP DRUG BUSINESS.

McKeesport, Pa., May 8.—The stockholders of the Dr. Lang Drug and Manufacturing Co. have agreed to wind up the affairs of the corporation. Dr. Lang left the city recently, and took with him the formulas of the medicines manufactured.

PHILADELPHIA NOTES.

—The timely discovery of a fire at the pharmacy of E. C. Swineford, at 540 South Fifty-second street, prevented a disastrous conflagration. The origin was spontaneous combustion and the loss \$100.

—Among the representatives of out-of-town houses who were seen in this city this week, were H. S. Ferry, of the Ferry Manufacturing Co., of New York, and H. W. Thomas, of F. R. Arnold & Co., of New York.

—Magistrate C. H. Howell, of Phoenixville, near here, on Friday held ten dealers under \$200 bail each for their appearance at court on the charge of selling a decoction labeled "Jamaica ginger" which had been adulterated, producing the same effect as the cheapest whiskey on those who drink it. The prosecution was brought by Robert M. Simmers and M. K. Ely, agents of the State Pure Food Department.

CHAS. FLEISHNER APPOINTED.

Hartford, Conn., May 19.—Charles Fleishner has been appointed a member of the State Pharmacy Commission of Connecticut by Governor Roberts, succeeding Willis L. Mix. Mr. Fleishner has been prominent in organization work and was formerly a member of the Executive Committee of the N. A. R. I.

PASSED IN RHODE ISLAND.

Providence, May 23.—At the last monthly meeting of the Rhode Island State Board of Pharmacy, seven candidates were examined, of whom the following passed successfully: Henry A. Kalkman, Newport; George H. Adams, Boston; Jesse L. Hanscom, New Hampshire.

MASSACHUSETTS C. P.

Class Day and Commencement Well Attended—25 Graduates.

Boston, May 20.—Of more than usual interest were the exercises planned for class day and commencement at the Massachusetts College of Pharmacy in this city, this week. They took place on May 18 in the afternoon, followed by the annual banquet of the alumni association in the evening.

There was a large attendance at the college building in St. Botolph street for the class day observance. The programme opened with a musical selection by an orchestra, which throughout the afternoon played acceptably to intersperse the other numbers on the programme. The customary address of welcome was given by Theodore P. Babbitt and then the "Class History" was reviewed by Lamert Oulton, followed by the "Class Oration," delivered by Louis E. Phaneuf. William G. Fuller was responsible for the usual "Class Poem," which he recited, and the "Class Prophecy" was rendered by Arthur O. Austin. The farewell address to the class was given by Edward P. Bigelow.

After a brief intermission, the commencement exercises began, the president of the college, William D. Wheeler, Ph.D., presiding. Following a musical selection, an address was given by Rev. J. Stanley Durkee, a Roxbury clergyman. This embodied sound advice to the graduates and helpful hints for their future careers. After the roll call had been read by the secretary, George E. Coleman, Ph. G., of the board of trustees, degrees were conferred upon the students by President Wheeler. There were twenty-five to receive the degree of Doctor of Pharmacy, as follows: Arthur H. Ainslie, Arthur O. Austin, Theodore P. Babbitt, Frank D. Beane, Eugene W. Benjamin, Fred W. Bennett, Edward P. Bigelow, Charles H. Brooks, David L. Burdo, Walter J. Burke, Peter G. Chagaruly, Michael F. Donnelly, Elmer D. Full, Willis St. Leger Furubush, Thomas P. Grimes, George B. Gunn, Jacob Harris, Clinton H. Hart, James A. McCoy, Charles E. McMurray, Kenneth J. Mitchell, Lamert Oulton, Louis E. Phaneuf, John J. Ryan and Chester E. Tracy.

The degree of Pharmaceutical Chemist was conferred upon seven students, Hyman Alkon, Bernhard C. Burdette, William G. Fuller, Carl J. Harris, Louis E. Phaneuf, Harry L. Scott and Raymond P. Young. The class officers are: President, Michael F. Donnelly; vice-president, Clinton H. Hart; treasurer, Hyman Alkon.

The thirty-fifth annual banquet and reception of the Alumni Association of the Massachusetts C. P. took place at Young's Hotel, in the evening, the reception beginning at half past six o'clock and the dinner coming soon afterward. The attendance was exceptionally large and the occasion of more than ordinary interest. It was enlivened by specially good music by the Salem Cadet Orchestra. The president of the association, Frank Piper, M.D., class of '89, presided, and gave the introductory address. Among the speakers were President Wheeler, of the college, class of '90; William C. Durkee, '75; William W. Bartlett, '73, who is now a practising lawyer and who at the State House looks after matters of legislation affecting the drug trade. A woman member of the associa-

tion, Agnes Wilbur, '92, also made an interesting address. Following the usual custom, the association invited President Donnelly, of the graduating class, to be its guest, and he also was one of the speakers. Readings by Dr. Stiles added variety to the evening's programme, as did selections by a vocal quartette.

"JOBBER'S NIGHT" IN BOSTON.

Retailers Receive Assurance of Loyal Support of Wholesalers.

Boston, May 15.—The meeting of the Boston A. R. D., on May 10, was "jobbers' night," representatives of the wholesale trade having accepted the invitation of the association to be present. Fred Carter, of Carter, Carter & Meigs; Chas. A. West, of the Eastern Drug Co., and J. A. Gilman, of Gilman Bros., all assured the retailers of the hearty support of their firms. Mr. Carter spoke of the benefits of organization, while Mr. Gilman declared that a great deal of trouble would be saved to the wholesalers, were the retailers to sign at once all the contracts on protected goods.

Mr. Gilman's announcement that a prominent manufacturer would soon adopt a system of price protection under which the goods would be sold only at full prices, created loud applause. A rising vote of thanks was extended to the wholesale representatives for their attendance at the meeting and for their loyal expressions of support. Additional evidence of the thorough way in which the jobbers are helping the price protection movement in Boston was given by Secretary Tobin. Mr. Gilman suggested that the filling of orders on contract goods would be facilitated if the retailers, immediately on signing the contracts were to notify their jobbers of such action.

In reply to a question, the wholesalers stated that they had disposed of all their unnumbered goods, and that all the stock which they have on hand at present is serially numbered.

President Canning announced that the invitation of the association to hold the next national convention here had been accepted by the Executive Committee of the N. A. R. D. The president then named the following convention committee: F. E. Ernst, chairman; William D. Wheeler, C. P. Flynn, S. V. Rintels and H. O. Nute.

DRUG STORE RAIDED.

Lowell, Mass., May 22.—The police have raided the drug store of Brouseau & Co., at the corner of Cabot and Merrimack streets. A large quantity of liquor was found in the cellar.

It is charged that one of the proprietors was making a sale of gin when the raid took place. A United States revenue license for the months of May and June was found in the cellar, but there was no druggist's license to sell liquors.

MALDEN DRUGGIST DEAD.

Malden, Mass., May 20.—William L. McGarr, one of the best-known druggists of this city, is dead. He was only forty-seven years old and had been ill a long time.

PROGRESS IN WASHINGTON.**Many Improvements Made in Capital City Drug Stores.**

Washington, May 18.—The spirit of progress seems to have taken a firm hold upon the druggists of this city, and a number of stores have been improved of late, the fixtures and additions being usually of an expensive character. Thus, Edward F. Albert, who recently bought out J. W. Hodges, Second and Pennsylvania avenues, has made extensive repairs, putting in a new floor of improved material, installing fixtures of an artistic style and otherwise modernizing the establishment.

Mrs. H. M. Proctor, who succeeded C. F. Keim at 1818 Fourteenth street, N. W., has also had the place in the hands of artisans. These latter have almost transformed it and have made the interior very pleasing to the eye. Mrs. Proctor is a graduate in pharmacy and one of the most successful druggists in Washington.

F. R. Richardson & Co. have purchased the store at Pennsylvania avenue and Third street, where improvements of a thorough character have been made. The fixtures, shelving, counters and show cases are new and all the furnishings conform to the very latest ideas in the arrangements of drug stores.

The many customers of Druggist James O'Donnell, who has opened a pharmacy at 304 F street, are strongly impressed with his artistic sense and his enterprise. He has beautified the store, the fixtures and furniture being mahogany and gilt, and the shelving and show cases of glass. The spacious interior glisters with newness, and countless things that appeal strongly to the eye are to be found there.

William P. Herbst, 2500 Pennsylvania avenue, is having put down a new tile floor, and is also installing a new soda water apparatus of the latest design.

Druggist P. J. Affix, who has been very successful on Pennsylvania avenue, near Fifteenth street, is putting in a new soda water fountain of the most advanced design, besides doing other things to render the place more attractive.

John P. Sullivan has opened at Seventh and D streets, S. W., and expresses himself as well satisfied with the results so far attained. He was formerly located one square away.

The pharmacy at Fourteenth and L streets, formerly conducted by E. M. McComas, has passed by purchase into the possession of H. T. Dodge & Co., who have made a number of improvements and adopted progressive business methods.

Charles E. Gross, Fourteenth and Park streets, N. W., has recently remodeled his pharmacy, installing oak fixtures and brightening up the place generally. His pharmacy is now up-to-date in every respect.

George H. Hurlbeaus, Fourteenth and V streets, has had put in a new soda water apparatus and made a number of other improvements.

Lloyd T. Tayloe has secured control of Sack's Drug Store, at Ninth and P streets, and has made various improvements.

Morris W. Waters, a Georgetown, D. C., druggist, has made several purchases of real estate of late, and this is taken as an indication that the drug business can still be made profitable.

THEY MAY COMBINE.**Baltimore Cut-Rate Druggists Considering the Proposition.**

SOME OF THE DIFFICULTIES.—JOBBER COMPLAIN THAT THEY ARE SUBJECTED TO UNFAIR DISCRIMINATION AND THAT MANUFACTURERS PROMISCUOUSLY SELL GOODS NOT IN THE SEVERAL AGREEMENTS.

Baltimore, May 20.—The latest development in the fight for the maintenance of prices here is a movement among the recognized cut-rate druggists to combine by forming a company which is to purchase goods at wholesale prices and in large quantities, and distribute them among the members of the organization. The matter has not so far, it appears, gone beyond an informal discussion, but the various cutters have been approached on the subject and have been asked to indicate their intentions if the move is actually gotten under way.

In case the object is realized, it is not the intention to incorporate, because this might in some of its effects prove inconvenient, for equity would seem to require that if a combination to cut prices is legal, one to maintain prices would have not less justification. In any event, however, there are obvious difficulties in the way. Thus, if the proposed organization succeeds in getting goods not included in the tri-partite agreement and distributes them to be sold at cut prices, justice would appear to require that the jobbers, instead of being bound, as now, to shut off cutters on all goods, be permitted to sell to anyone who can pay for all articles not on the list. The wholesalers complain that they are being subjected to unfair discrimination, and that the manufacturers sell promiscuously goods not in the several agreements, while the wholesalers are held up to a rigid observance of contract arrangements that affect few articles, yet are made to apply generally.

The jobbers contend that if the cutters are supplied with goods they ought to have the same privilege as to selling which the manufacturers reserve to themselves, and should not be ground between the upper mill-stone of the manufacturer, who disregards the status of the purchaser, whether he be a cutter or not, and the lower mill-stone of the druggists' associations, which are either unable to stop such sales to cutters or maintain an attitude of indifference, and yet undertake to hold the recognized wholesaler up to a rigid compliance with the tri-partite and other agreements which are given a sweeping application.

As far as the movement among the Baltimore cutters is concerned, there appears to be every prospect that it will attain some tangible shape before long, though it must also be said that some feeling of distrust prevails among the cutters, whose business methods naturally dispose them to the finding of loop-holes wherever possible.

FIRE IN M'CORMICK'S PLANT.

Baltimore, May 20.—Fire of unknown origin broke out, yesterday morning, in the establishment of McCormick & Co., manufacturing chemists and drug millers,

of this city. Three large mills and a thirty-horse power electric motor were more or less damaged. The blaze was confined to building No. 1, used as a spice mill, the other two being cut off by fire-doors, which are closed every night. The loss is covered by insurance. Business was not interrupted. An alarm was turned in by the engineer of the plant, and the flames were soon extinguished.

NEW CHEMICAL CO.

Baltimore, May 20.—A new chemical company was incorporated on Thursday last, under the name of the Cameo Chemical Company, by Thomas E. Jenkins, E. Howard Richards, Robert E. Lee Williamson, Daniel Cloud, Jr., and Harry T. Poor. The authorized capital stock is \$25,000, divided into shares of \$10 each. The company will manufacture drugs and proprietary medicines. Mr. Williamson is of the drug firm of Williamson & Watts, and well known in the drug trade.

BALTIMORE NOTES.

—Druggist J. L. Meyer, whose pharmacy at Pennsylvania avenue and Wilson street, was sold at public auction, has accepted a position as clerk for John M. Wiesel, 1101 Madison avenue.

—Among the visiting druggists in Baltimore, last week, were J. H. Johnson, Elliott City, Md.; A. T. G. Bodnutt, York, Pa.; Mr. Higgins, of Higgins & Bell, Laytonsville, Md., and Mr. Powell, representing Brown's Iron Bitters.

—A. Febler & Co., Madison avenue and Biddle street, have installed a handsome soda water fountain in their store. The apparatus is one of the latest style, sparkling with silver plating and being composed of onyx and other costly materials.

—J. H. B. Hurst has bought out H. G. Wilson, at Frederick road and Gilmor street. The new owner has made a number of improvements, including the installation of new fixtures and a general renovation, so that the pharmacy is now very attractive.

—All gossip as to the possibility of a drug store being located at the southwest corner of Fayette and Charles streets, has been set at rest by the leasing of the building to a lunch room proprietor. Several druggists negotiated at different times for the place, but the rental was too high for them. It is said that the lessee agreed to pay \$15,000 a year. He will, however, have four upper floors to sub-let.

GASOLENE CAUSES FIRE.

Pittsfield, May 20.—Gasolene fumes were ignited by a gas stove in the Engstrom Pharmacy, and the flames did \$1,000 damage.

A clerk went to the cellar to draw gasolene from a tank. Above the tank was a lighted gas jet, and the flames ignited the fumes from the gasolene and soon all the gasolene in the cellar was burning. Near the gasolene tank was a harrel of whiskey. This caught fire and added to the flames and smoke. The other drugs and chemicals caught and the cellar became like a furnace. Water was poured into the cellar a half hour before the flames were extinguished.

AWAIT AN OFFICIAL OPINION.**Ohio Board Asks Attorney-General if Certificates May be Revoked.**

Cincinnati, O., May 23.—The State Board of Pharmacy met in Columbus, last week, at the request of Member Julius Greyer and a number of physicians and druggists of this city, and discussed its right to assist in putting fiends out of business as well as druggists who sell the drug in violation of the law. The law specifies a fine of from \$50 to \$500 for selling the poison without a prescription from a reputable physician in actual practice. The law is not at all ambiguous, but plainly makes this a police regulation. The attorney-general's department notified the Board that regulation was not within their province, and if the drug was sold against the law, this was due to neglect on the part of the police.

Attorney General Wade Ellis was asked by the Board whether certificates of druggists who violated the law could be revoked. Mr. Ellis' staff held that the Board had that right, but Mr. Ellis himself was not entirely convinced, and will look further into the authorities before approving the opinion. The statute regulating the Board of Pharmacy gives it the privilege of taking away certificates of druggists who are found guilty of immoral conduct.

The Cincinnati police department had several men last week touring the districts in which cocaine is said to be illegally sold. They declare they have secured much valuable evidence and that as soon as the attorney-general gives his opinion on the question before him, a number of arrests will be ordered. In one store recently a fiend tried to secure some of the poison without a prescription, and when refused, almost killed the clerk. Several police characters have told the officials the methods used in purchasing the cocaine, which in some places is alleged to be prepared in live, ten and fifteen cent packages.

ONE CENT TELEPHONES.

Cincinnati, O., May 23.—One cent telephones for Cincinnati is the latest proposition in the independent telephone situation. Phillip Fitzimmons, president of the Fitzimmons Co., has held conferences with out-of-town capitalists, and with officers of a local bank to arrange for the formation of a new company to operate on the Fitzimmons franchise in Cincinnati. The new company is to be capitalized at \$8,000,000. The service is to be placed on the basis that the subscriber shall pay only for what he gets. In drug stores and other public places the 'phones will be installed for use at one cent a call. It is said that the deal to finance the scheme has been closed and that work on the system will be arranged for shortly.

PROGRESS OF DOW SUIT.

Cincinnati, O., May 23.—A special meeting of the members of the Ohio Valley D. A. has been called for the first week in June. It is believed that plans for fighting the \$50,000 damage suit of Miss Cora Dow against the association, will be prepared. The case has not been set for trial, but will hardly be held before late summer.

OHIO DRUGGISTS MEET.

The twenty-seventh annual convention of the Ohio State Ph. A., will take place at the new theatre auditorium, Cedar Point, on Lake Erie, Ohio, on June 20, 21, 22 and 23, with headquarters at the Breakers Hotel. Special low rates on the certificate plan have been secured from Columbus, Cincinnati and Cleveland, and other low rates are issued from Toledo, Portsmouth, Lima, Steubenville and Mansfield. Boats will meet all trains and leave Cedar Point dock, in Sandusky, for the resort.

In the invitation issued, the members claim that the association is again honored by the A. Ph. A., in selecting an Ohio man for its highest office, and that the workers who started the serial numbering plan and contract plan for marketing patent medicines, and now put into execution by the N. A. R. D., are members, as also are those who operate the cheapest fire insurance company in the world. A good working programme has been planned, including one forenoon's rest on the advice and under the ban of the traveling man. There will also be amusements galore, including theatre party, ball and reception, pleasure trip on the lake, dancing, roller skating, polite vanderville, bathing, rowing, sailing, fishing, shell hunts, excursions and continuous polite amusement devices, etc. Theo. D. Wetterstrom, 3935 Spring Grove avenue, Cincinnati, is the secretary.

DRUG BOWLERS TO MEET.

Cincinnati, O., May 23.—During the meeting of the O. S. Ph. A., at Cedar Point, June 20-23, the first tournament of the Ohio Drug Bowling Association will be held. Prizes will be distributed among five men teams, two men teams and individuals, and also to the best lady bowler. The following cities have teams entered, in charge of their respective captains: Cincinnati, Edward Klipp; Cleveland, Joseph Albrecht; Columbus, Carl F. Beck; Toledo, C. G. Neipp; Dayton, George W. Martin; Lima, Henry L. Vorkamp; Zanesville, Fred W. Conrad; Canton, E. J. Schla-hach; Sandusky, L. A. Blehl; Portsmouth, Frank Amann; Marion, M. L. Dumble; Springfield, Adam Schmidt.

SODA BUSINESS LIGHT.

Cincinnati, May 23.—The weather for the last two weeks has been unseasonably cool and a number of druggists who store their soda fountains at the end of summer, have not disturbed them. In stores where the fountains are running, business has been small.

GETS SURPRISE AND A WATCH.

Detroit, May 22.—Frank Trepoten, of Bay City, last October was repairing the roof of his barn when he was precipitated to the ground. In the shuffle he lost his \$65 gold watch. He hunted high and low but could get no trace of it. Last week he had occasion to remove a board from the building on which he had been working at the time of the accident, and was surprised to find his time piece lying on a joist. Although it had been exposed to the weather all winter, when wound up it ran as well as ever.

APPRENTICE REGISTRATION.**Illinois Board Says it is on the Increase.—New Rules for Examinations.**

Springfield, Ill., May 19.—At the meeting of the Illinois Board of Pharmacy in this city, May 16-17, eighteen out of a class of twenty-nine passed successful examinations for registered pharmacist, ten of the seventeen applicants for assistant pharmacist were successful, and two of the six candidates for "locality certificates" under section 5 of the law, made the required grades. The names of the successful applicants follow:

Registered Pharmacists—Wm. A. Balcke, Crosey; W. K. Barthell, Peoria; Harry Brent, Decatur; Itay M. Brown, Elgin; E. R. Chase, E. St. Louis; R. C. Etlinger, Chicago; C. T. Evans, Bloomington; C. C. Garber, Springfield; G. Knewitz, E. St. Louis; L. A. Kravick, Springfield; E. A. Lukasek, Chicago; A. W. Nimmer, Chicago; J. C. Patterson, Chicago; F. D. Pratz, Moweaqua; W. D. Richardson, Centralia; C. Romano, Chicago; F. A. Schneider, Chicago; Jerome Sivia, Springfield.

Assistant Pharmacists—H. G. Carlson, Moline; L. J. Ehlert, Springfield; A. P. Enlow, Bloomington; Wm. L. Cott, Mt. Carmel; Jas. M. Honsik, Chicago; R. C. Luly, Alton; C. D. V. McKinley, Mason City; T. H. Pomeroy, Chicago; Rolf Reite, Chicago; Edw. A. Schaub, Alton.

Registered Pharmacists, Time Service—M. F. Taass, Frankfort Station; Nathan Hertzman, Chicago.

The next meeting of the Board will be held in Chicago, in July. On Tuesday, July 11, an examination will be held for all applicants who have not heretofore passed the preliminary test required by the Board. On Wednesday, July 12, the examination will be for those who have heretofore made the required grade in preliminary. Applications for this examination should be on file in the Springfield office not later than July 6.

The rule recently adopted, whereby applicants for apprentice registration may take the examination before a reputable druggist in the county seats of their home counties and the vigorous campaign which is being waged by the Board to get all young men to make application for apprentice registration when they enter the drug business, has resulted in a remarkable increase in the number of apprentice applications received by the Board. As compared with the first five months of 1904, there is an increase of over 33 1/2 per cent. in the number of applications.

As a further inducement to these young men the Board will hereafter conduct monthly examinations and but a few days will intervene between the filing of an application and the receipt of an official certificate by those who are successful in their examinations.

OFFICERS ELECTED.

Wheeling, W. Va., May 22.—The board of directors of the Wheeling Drug Company has elected the following officers: John Coleman, president; Chatham Sinclair, vice-president; W. C. Gordon, secretary; Bruce Dawson, recording secretary; John Klari, treasurer.

PROF. GOOD HONORED.**St. Louis C. P. Alumni Celebrates His Thirtieth Anniversary.**

St. Louis, May 23.—It is not recorded that Prof. J. M. Good dodged Thursday night, but it would have been little use if he had. Bouquets were coming his way too thick and fast for even a long practiced dodger to escape them. And then, be it said to his credit, Professor Good, in his thirty years' experience in the St. Louis College of Pharmacy, has never dodged responsibility or work; in his long experience as a citizen of St. Louis and a druggist he has never dodged the responsibility of public duties, and in the matter of organization, he has sought the thickest of the fray for the benefit of the profession.

All these things came home to roost May 18, when Professor Good, for one night was the sole guest of honor of the St. Louis C. P. Alumni Association and the drug trade of St. Louis and was honored and banqueted to the queen's taste.

The plan originated with the C. P. class of '75, at its annual reunion in March, and was turned over to the Alumni Association. All plans were laid and the entire programme mapped out before the event was announced to the public, and Professor Good made aware that he was to be so honored on the thirtieth anniversary of his election to the chair of pharmacy of the college, of which he has served as dean of the faculty and has undertaken various duties that seemed best for the school.

The guests of the evening gathered at the college building at 8 o'clock, where Charles H. J. A. Hahn, president of the A. A., presided over a meeting at which Dr. Henry Schwarz presented a portrait of Professor Good to the college, and Professor Francis A. Himm presented a similar portrait to the Good family. Dr. Otto Claus responded for the college, and Professor Good for his family. Then the company adjourned to the Jefferson Hotel, where an elegant banquet was served.

William C. Bolm was toastmaster, and Prof. O. A. Huegel responded to "Our Professor and the Day We Celebrate"; William H. Lamont, the general manager of the festivities of the evening, to "Our Guest and His Relation to Pharmacy"; Henry T. Rohling to "College Education"; Charles E. Caspari to "The Life of a Professor"; Orval J. Clongby to "Life of a Student"; C. P. Walbridge to "Commercial Pharmacy." Thirty minutes, a minute for each year, was allowed Professor Good for "Self Defense," and he exceeded the time.

The entire affair was as pleasant and well managed as any event that has concerned the druggists of St. Louis for many a day and Professor Good's record was dwelt upon with considerable freedom.

Professor Good's store is at Jefferson avenue and Olive street, which has recently become almost the equal of the downtown district for activity.

LINDLEL PHARMACY CLOSES.

St. Louis, May 22.—When the Lindell Hotel Pharmacy closed its doors at midnight, Sunday night, simultaneously with the closing of that famous hostelry to make room for the largest department store in the West, the career of one of the

best known drug stores in the country was closed. The store has long been familiar to the traveling public as a downtown store. Late it had figured in several poisoning episodes and gained some notoriety that was, it seems, unavoidable under the circumstances. Before closing the store, one of the most sensational sales in sundries this city has witnessed, was on and some real bargain prices were made. Johnson Bros., of Franklin avenue and Broadway, bought what stock remained in the city.

ST. LOUIS NOTES.

—Dr. A. Enderle is having the front of his downtown store at Market street and Broadway, remodeled in the most modern style.

—The anti-cocaine law goes into effect June 1 and it is predicted that after that date some of the Market street stores will see a time of hard sledding.

—Milk chocolate and Mackintosh toffee demonstrators have been assisting local druggists to interest customers in the candy trade.

—Local druggists who handled the Male preparations are up in arms over the recent cut price advertisements appearing from a local department store. The goods are not scheduled, however.

HOLDS ANNUAL ELECTION.**Secretary Reports Gain in Membership and Money in Treasury.**

St. Louis, May 23.—President F. V. Johnson and Secretary Charles J. Koch, under whose administration the St. Louis R. D. A. has seen its most prosperous season, were re-elected at the annual meeting at the Southern Hotel, May 16. At that meeting the members decided to carry their social sessions on a step further and have their wives and sweethearts present at the June meeting.

The other officers elected were: E. A. Sennewald, first vice-president; C. B. Seidlitz, second vice-president; C. W. Stockhausen, treasurer; trustees, John Raboteau, E. H. Wolff, E. M. Pirner, Theodore Hagenow and Charles Pirner.

The attendance was something of a disappointment, but otherwise the meeting was a decided success. Only seventy-five were seated in the dining room. Collections were excellent, over \$400 in dues being paid. Secretary Koch's report showed that during the last year, more than 300 members had been enrolled, a gain of 151 per cent. in two years. The treasurer's report showed that the association had no unpaid claims and about \$400 in the treasury.

For the first three months of President Johnson's administration, he was unable to give any time to the business of the association because of illness, but since he has been able to take the helm, things have moved forward apace.

WORKHOUSE DRUG WARD.

Kansas City, Mo., May 22.—Dr. St. Elmo Sanders, the city physician, will make an effort to institute a ward for drug "fiends," at the city workhouse. Many of these ask to be sent to the workhouse for terms long enough to allow them to overcome the habit. Without the drug the victims suffer greatly. The ward is to be instituted to alleviate this suffering.

COMBINE PLAN FAILS.**Does Not Work Well When Applied to Drug Houses in San Francisco.**

San Francisco, May 20.—That personality is an important factor in the drug trade has been proven in this city, where the combine plan, when applied to drug stores, has proved unsuccessful. The Union Drug Company's plan in connection with the drug business is a failure. After an experience of a little more than two years the company finds itself confronted with the problem of maintaining two of its stores without the attraction of the personality of the original owners, coupled with the admitted fact that the same stores are not satisfactory from a financial standpoint when conducted by clerks. As a result the company now has under consideration the sale of these two stores.

The company recently disposed of two stores for the reasons which now apply to those which are for sale. The corporation began with eight stores, several of which were among the most popular in the city. Rosy views were held out of the possibilities of combination in the drug business, which, however, did not materialize in the face of the sharp competition in the trade. Still, business was conducted in the stores at a profit, until the death of Mr. Gore, whose store at California and Fillmore streets, had been taken into the combine. This store had a large trade which a clerk and a stranger in the store failed to hold. George Dahlbende and C. L. Barrington came into the combine with their stores. They thought they could reach out for business, so they started stores in San Jose, at Stanford University, and at Palo Alto. They gave their attention to these stores, with the result that their business in the city suffered under the management of clerks. So Gore's and Dahlbender's stores were sold within the last couple of weeks.

John H. Dawson has had to go to a hospital, where he had a foot amputated. He was popular in his district and enjoyed a good business; now his old store and that of Barrington are in strange hands, and the results are unsatisfactory.

F. C. Smith, secretary of the corporation, said: "We do not want the impression spread that the sales of these stores means that we are going out of business or are in difficulties. The fact is, we find that where clerks have been placed in charge of stores, the business has not kept up. The company has four good stores and will continue them."

JERMAN GOES TO MINNEAPOLIS.

Milwaukee, May 22.—Charles A. Jerman, who recently sold his interest in the Jerman, Pfueger & Kuehnmsted Co., wholesale druggist of this city, has re-engaged in the same business at Minneapolis. For years he has been general manager of the J., P. & K. Company, and left it about three months ago. Previously he had been quite ill, and after closing out with the company, he went to California for a long rest. He returned here about May 1 and disposed of his residence property.

—Dr. J. W. Kirtland is dead at Lakeview, Mich., aged fifty-eight years. He was president of the Kirtland Drug Co., which has stores at Lakeview, Mecost and Remus.

MEMBERS OF THE GRADUATING CLASS BROOKLYN COLLEGE OF PHARMACY, THE CLOSING EXERCISES OF WHICH WERE DESCRIBED IN LAST WEEK'S ERA.

AMONG THE COLLEGES

UNIVERSITY OF MICHIGAN.

Ann Arbor, May 19.—At the meeting of the board of regents on Saturday, May 13, Prof. J. O. Schlotterbeck, Ph.C., '87, Ph.D., '96, was appointed dean of the school of pharmacy, to succeed the late Dr. A. B. Prescott. Dr. Schlotterbeck began his work in this school as assistant in pharmacy and pharmacognosy in '88, and with the exception of one year, '95-'96, spent in study abroad, has been connected with his institution ever since.

Prof. A. E. Stevens writes from Bern, Switzerland, that he is enjoying his work with Prof. Tschirch, and that he will return to this country with his family during the summer. With the opening of the university, this fall, he will resume his old position as professor of pharmacy. During his absence his place has been supplied by W. H. Blome, Ph.C., '98, B.S., '02.

Wm. H. Burke, '84, president of the Central Drug Co., Detroit, has leased a large four-story building in Grand Rapids, in which he will open one of the largest retail pharmacies in the Middle West.

E. C. Worden, '90, is engaged in business for himself as manufacturer of organic chemicals. His factory is located at Milburn, N. J.

R. S. Tidrick, a member of the class of '91, who has been in California for some time, is now engaged in the general merchandise and drug business at Bringham, Ind.

Darius P. Schuler, '87, paid the school a short visit a few days ago. He is located in Detroit as analytical chemist with a large manufacturing house.

Charles R. Eckler, '02, for some time past with the Conneaut Drug Co., Conneaut, O., is now engaged in the manufacturing department with E. R. Squibb & Son, Brooklyn, N. Y.

Wm. C. Kirchgessner, '89, for many years with Peck Brothers, Grand Rapids, is doing detail work for F. Stearns & Co., Detroit.

Northwestern Alumni.

Chicago, May 18.—At the regular meeting of the Alumni Association of Northwestern University School of Pharmacy, the following officers were re-elected: President, Thos. V. Wooten; secretary, Judson W. Hoover; treasurer, M. A. Miner. The other officers elected were: Vice-presidents, H. F. Schaper, J. F. Fischner and B. M. Meyer; trustees, A. F. Kasper, B. M. Tyler, W. H. Harrison.

The Association is trying to make its organization one of the leaders in the West, and to carry out this effort the present officers were unanimously re-elected in recognition of the work they did last year. H. F. Schaper presented one of the most interesting papers ever read before the association. His subject was "The Best Method of Increasing and Maintaining a Good Prescription Business."

MILWAUKEE C. P.

Milwaukee, May 15.—The Milwaukee Medical College, School of Pharmacy, will hold its commencement exercises in the Alhambra Theatre this afternoon. The class roll of 1905 contains the names of Anna J. Fetzer, president; Percival V. E. Atkinson, vice-president and valedictorian; Harris Coleman, secretary; Frank O. Stratton, treasurer; Matt Globisy, George A. Miller, Philip J. Naber, Wm. G. Schroeter and Donald L. Searle.

FERRIS INSTITUTE.

Big Rapids, Mich., May 20.—The regular school year in the pharmacy department of the Ferris Institute ended May 18, after three days of examinations. Most of the students were successful, although a few fell by the roadside. Five students were declared competent to graduate. They are Harry Bennett, Claud Owen, Albert McGeorge, Lyman Pinney and J. Bullock.

Work in the pharmacy department will continue twelve weeks for review work. Twenty students expect to take the State Board examination, to be held at Star Island, the last of this month. They are working hard and have resorted to a novel scheme to make them more proficient. They give regular weekly examinations on every Saturday morning. The examination questions are made out and papers looked over by them, and they follow as closely as possible the programme of the regular State examinations. This gives them an opportunity to see how others express themselves, and a chance to review points that have been troublesome.

The regular fall term begins on September 4. A good attendance is expected. The department is in better condition than ever before, and the course will be materially strengthened during the coming year.

WISCONSIN'S SILVER JUBILEE.

Milwaukee, May 22.—The Wisconsin Pharmaceutical Association will hold its annual State convention at Madison, June 11 to 14. This will be the silver jubilee of the association and it is expected that it will be made a memorable occasion. A souvenir programme is being prepared by Prof. Edward Kremers, of the school of pharmacy at the State University, and Edward Williams, local secretary, at Madison.

LAXATIVE BROMO QUININE

ON THE DIRECT CONTRACT, SERIAL NUMBERING PLAN.

Among the universally sold articles — the staples in the Drug line during the past ten years, none has received greater support of the entire Retail Drug Trade than **LAXATIVE BROMO QUININE**.

The manufacturers fully appreciate this, and in keeping with the policy of allowing from the beginning a profit of one hundred to one hundred and thirty per Cent, **LAXATIVE BROMO QUININE** has been placed on the **DIRECT CONTRACT SERIAL NUMBERING PLAN**, as the best discovered means of assisting every legitimate Retail Druggist to maintain this profit under the conditions which he now has to face.

At great expense, not only of money but most complicated labor, the manufacturers have been proceeding quietly for some months to put this plan in operation. A majority of the druggists throughout the country already have signed and returned the contract and the names of hundreds of other druggists who sign and return the contract, are being added to the list every week. The results obtained up to this time insure success to the effort, and in order to make the Plan effective to the greatest possible degree, it simply remains for every Retail Druggist to realize that his individual co-operation is essential. Every Druggist who has not signed and forwarded the contract on **LAXATIVE BROMO QUININE** should take such action immediately.

If a supply of **LAXATIVE BROMO QUININE** is needed or if the stock on hand will permit it, the extraordinary **DATING OFFER** now in force enables the Druggist to purchase a quantity of **LAXATIVE BROMO QUININE**, obtaining the regular free goods, to be delivered at once and invoice dated November 1st, 1905, for cash discount.

LAXATIVE BROMO QUININE

Price \$1.75 per dozen.

6 dozen lots,	1 dozen free,	Cost	\$10.50	or	\$1.50	per dozen
12 dozen lots,	2 dozen free,	5% trade discount,	\$19.95	or	\$1.43	" "
36 dozen lots,	6 dozen free,	8% trade discount,	\$57.96	or	\$1.38	" "
60 dozen lots,	10 dozen free,	10% trade discount,	\$94.50	or	\$1.35	" "

All Wholesale Druggists will accept orders under this **DATING OFFER**.

TRADE SECTION

PURE ARNICA SCARCE.

Only Fifty Pounds in This Country, Says Mr. Hood.

HIS TALK AT THE VERMONT P. A.'S MEETING IN BURLINGTON.—WANTS TO FIND OUT SOMETHING ABOUT "VERMONT" ARNICA.—IS IT EVER GROWN IN VERMONT.—A SPECIMEN WANTED.—WORK OF THE GOVERNMENT IN GROWING OTHER MEDICINAL PLANTS.—THINKS IMPORTATIONS COULD BE CUT IN TWO.

At the eleventh annual meeting of the Vermont State Pharmaceutical Association, held in Burlington, last October, the official report of which has just been issued, one of the interesting developments was a discussion of Vermont arnica. President F. Henry Parker informed the association that Mr. Hood, representative of the Vermont State Agricultural College, and also of the United States Government, was present and called on that gentleman for some remarks.

Mr. Hood said: "I was just speaking to Mr. Zottman about a problem that we have been working on at the college, in regard to Vermont arnica, if we have any of that article, and if so, what it is. Probably there is not fifty pounds of pure arnica in the United States, and this being so, all of it naturally contains something else, and what, is the question? We find there is an article listed in the drug catalogues as "Vermont arnica," but we have not been able to get hold of it in the laboratory, and we thought some of the members of the association might have come across the same thing, and might know what it was.

But none of the members knew. There was general surprise that there should be no more than fifty pounds of pure arnica in the country. Mr. Hood was asked concerning the source of his information. He replied:

PURE ARNICA VERY RARE.

"The information is from the report of the head of the drug laboratory at Washington. Work has been going on in that regard for four or five years and the article sold as arnica is found to consist of fourteen different things entirely separate and distinct. The common hawkweed, "devil's paint brush," resembles arnica in every way, both in the powder and solution, but we thought we would like to know just what the situation was in regard to Vermont arnica.

"It occurs to me that in some of our old Vermont farms, years ago, in the days when we used to raise so much chamomile, tansy, etc., there was an herb called arnica that was raised. I have such a garden in mind, where I was born, and I think there was there an herb we used to call arnica, but why, I haven't the least idea."

Mr. J. W. Colcord, who represented the Massachusetts State Pharmaceutical Association,

then commented on the subject. "I have had quite an experience along similar lines," said he. "Several years ago, an English collector sent to me for wild hops and I hunted the country over and could not get half a pound of wild hops in the United States, but I finally got on the track of some arnica down in the Jersey logs. There are many articles on the list that we cannot furnish, but undoubtedly this arnica originally came from Vermont, and it may be that it is grown in other parts of the country. I would like to ask if the experts got any fair results with the tincture of arnica made from this article they have."

To this Mr. Hood answered that the superintendent of the Washington laboratory had found that tests showed it to be as good as any arnica, but that all authorities agree in holding that practically no pure arnica comes to this country. Enlarging on the work of the experiment station, he explained that the seeds for growing arnica had necessarily come from Germany and that in the two years of test the seed had not grown.

THE WORK OF CULTIVATION.

"I have not thought of saying anything about station matters," continued Mr. Hood, "but perhaps a few things in regard to its organization would be of interest. Our work is of three kinds: First, the work of plants purely, then the work of seed cultivation in the United States, and third, the plants poisonous to the human family and to stock. There are four stations in the United States, two in South Carolina, one in Texas, and one in Burlington, where we are trying to raise in this country, as far as possible, medicinal plants. You are bringing in here annually \$20,000,000 worth of drugs and probably half of that could just as well be grown here. You are bringing into this country a million and a half dollars worth of quinine, which comes from all over the world. It used to come from Peru, but now we only get about one per cent. of the quinine there.

"Then another line of work is the improvement of the quality of drugs, and just such questions come up as we have just been talking about, that is about arnica. There are lots of other drugs that are adulterated. And then we are trying to save some of the important drug plants from the hands of the collector. Take senega; twenty years ago that was fairly abundant in Carolina, but they crowded it out, and the price has gone up from twenty cents a pound to one dollar, and when it is gone, what are we going to do? Then here at the Burlington station, we have been at work with beladonna, aconite, lobelia and other things and this fall we are going to put in still more things. We are now trying to produce opium. We had two acres of opium poppies and that perhaps will be worked up during the winter into morphine; then digitalis will be worked up this winter; we had half an acre of that, and we are working on the

better methods of producing and cultivating these things. Now, in regard to senega, just to show you the difficulties we need to meet. Of course, we did not know anything about its habits, could not find anything about it, but there is quite a little of that plant around Burlington, and we got enough there to start with. I got two quarts of seed. That seed was taken care of, the next year it was planted, and quite a quantity of seed was grown, which will be used for seed next year.

TRIBULATIONS AND RESULTS.

"We started in the same way with ginseng. That has to be started in moist sand, and not allowed to dry up at all throughout the winter. There is another thing, I would call your attention to, and that is the value of our common weeds.

"Take the common weed known as "witch grass." We are importing 240,000 pounds of that seed; then there is burdock and yellowdock and mullein. Now, last year there was something like 100,000 pounds of mullein seed brought into town. I believe this can be cultivated properly, and I believe that one-half of the \$20,000,000 worth of drugs we are buying from foreign countries can be grown in this country. If the results are as fruitful in the next five years as in the past three years, we shall have drug farms in the United States. In North Carolina we find stramonium in large quantities and many other things that nobody knows much about as being grown within the United States."

Mr. Colcord then made a few remarks about similar work in Massachusetts. "We have no trouble in raising burdock seed and mullein seed. I had an experience in regard to rhubarb. I went to the agricultural station and asked if it was possible to obtain any seed of medicinal rhubarb; they said I could not get a seed in the United States. I tried in Canada, but I could not get it there. They referred me to Peru and they referred me to St. Petersburg, and from there I obtained a pound of pure rhubarb seed, which they said was produced from seed brought out of China by a Russian officer. We raised some very fine specimens from that, but the plants I had were destroyed, so I was unable to continue my experiments here. Then, again, take the menthol plant. I started in to raise that and raised two quarts of seeds. I think they can be raised anywhere in New England."

SUBSTITUTION?

A customer came into a drug store at Marshall, Mich., and asked for a bottle of "Scott's Compulsion." The druggist promptly turned to the shelf and took down a bottle of the Emulsion, saying, "this is about the same thing; will you have it?" "Yes, I guess so," was the reply; "I suppose they are put up by the same firm."

SODA IN A RAILROAD STATION

The Features of the Stoever Fountain Business in Philadelphia

In the Pennsylvania Depot—The Proprietor, J. M. Stoever, and the Manager, A. G. Burk, Have Developed a System Suitable to Local Conditions—Speed Essential—Advance Payments Necessary—No Flourishes in Dispensing—Belief in Novel Beverages.

To the residents of Philadelphia, to those who live in any of the many suburban towns, and to the traveling public in general there is perhaps no better known pharmacy than that conducted by J. M. Stoever, in Broad Street Station, in that city. The "Broad Street Station Pharmacy" is the name under which it is popularly known. Located on the ground floor of the Pennsylvania Railroad Company's big terminal at Fifteenth and Market streets, the pharmacy, with its handsome soda fountain, its neat attendants and the general prevailing attractive air, that cannot help but impress one, acts as an eddy in the stream of humanity, hurrying

to and from all parts of the world and irresistibly drawn one side for a few minutes.

From 6 o'clock in the morning to midnight, the clerks at the fountain are busy serving to a class of trade which is peculiar to this location. There are other fountains where perhaps the number of patrons at certain hours is larger, but it is a question if there are any where the identity of the patrons changes as often as it does at the "Broad Street Station Pharmacy." It is rarely that a customer carries over his purchase, however tempting and enjoyable it may be, more than five minutes. They have not the time and

it is with this peculiarity of his trade in mind that A. G. Burk, who for three years has been Mr. Stoever's manager, has made every effort to serve his patrons with the best to be had in the shortest time possible. One has only to watch for ten minutes to realize the success that has followed his efforts.

HURRYING PATRONS DEMAND QUICK SERVICE.

The majority of those who buy soda at this fountain stop there on their way to or from a train. They have a few extra minutes and they want to take no chances of missing their train. The principal feature in this quick-service method is the construction of the fountain. It is one of the "Innovation" type, manufactured by the American Soda Fountain Co., and has been in use there about two years. The syrup tanks, as well as the dispensing arms, are located in front, the former under and the latter on top of the marble counter. By this arrangement the dispenser faces his customer and does not have to turn around and grope for any of the ingredients of the drink he is preparing. There are minutes saved on every order. All the cans for ice cream, cans for milk and cream and other requisites are kept under the counter in front and from the upright draft arms are drawn soda water, vichy, deep rock and various other mineral waters that are frequently used. These uprights are handsome affairs of onyx and German silver surmounted by a

J. M. STOEVER,

Proprietor Broad Street Station Pharmacy,
Philadelphia.

glass globe, which contains an electric light. Of the ten attendants, working in shifts of five, every one has all the necessities for any order he may receive, right within arm's reach. He don't have to lose a second, running up and down behind the counter for something he may need. It is all before him in his own space. Another important feature, the attendants are instructed to lose no time with flourishes or fancy movements. There is no mixing an egg and milk with one receptacle receiving the mixture from the other at a distance of three or four feet. That takes time and when a customer has but a few minutes he does not appreciate any of those sleight-of-hand performances. If an attendant is seen indulging in any of this sort of work, he is immediately notified to discontinue it.

All these ideas, Mr. Burk has worked out and has now reduced to a smoothly working system. In telling of some of the methods to which special attention is paid and which, in the opinion of himself and the proprietors, accounts for their large patronage by soda-lovers, Manager Burk said: "We believe there is nothing that appeals to the public so much as cleanliness. With that in mind, we train our men to be neat, not only in their appearance, but in their handling of the drinks and their care of the counters and glass-ware and silver. That is one advantage in having a fountain about which there is no wood. There is always some water and dampness about a fountain which soaks into wood and in time causes an odor that is not only offensive, but is impossible to get rid of. That is avoided by the use of a metal, oxyn and marble fountain such as ours. At night we have one man whose sole duty it is to clean the fountain. He works from midnight to 6 o'clock in the morning, and not one bit of the metal or glass is overlooked. The syrup tanks, the cans and other receptacles are all sterilized and thoroughly polished. We have adopted a sandae cup which not only is easier to clean, but it looks cleaner and more attractive. It is of heavy silver plate, shaped like a saucer with a stem and a base almost as broad as the saucer-like top. Their use also means less breakage.

LOCATION NECESSITATES ADVANCE PAYMENTS.

"The system of paying in use here we find is about the only one that could be employed, under the existing circumstances. We formerly had celluloid checks, which were handed to the customer when he had received his order and which were to be presented to the cashier when payment was made. I found we were not only losing a lot of money, but many checks as well. Some persons would rush in and rush out, and would never think of the check they held in their hand until they were seated in the train bound for home. Some perhaps omitted this formality on purpose, and it kept a man busy watching the customers and showing them the cashier's desk. That is all done away with now. The cashier has rolls of five and ten-cent checks and every customer must purchase his or her check before they can be served. Some regular patrons buy a dollar's worth and use them as they wish. When the attendant receives the check he tears it in half to insure against its not being used again, and deposits it in a glass jar on the

A. G. BURK,

Manager Broad Street Station Pharmacy,
Philadelphia.

counter. Our drinks range from five to twenty-five cents and there is very little confusion in buying checks. Our system also obviates the necessity of handling checks that are sometimes wet, and thereby a lady who is wearing gloves need not fear soiling them.

"To those who wish them we furnish Japanese paper napkins. We use only the pure white, for the colored ones, in our estimation, are not nearly so neat as the plain ones. A delicate suitcase wafer is served with hot drinks, particularly in winter time.

"We pay strict attention to the decoration of the fountain, although we try and have everything in proportion and avoid creating over-loaded effect. We depend on flowers, pyramids of fruit and cut glass, while the electric lights which are worked half-a-dozen to a switch, can be used very artistically. Where the two sides of the fountain come together at the back, in the form of a right angle, we have long chains

of glass prisms and behind these electric lights of various colors. The light, striking these prisms and reflected through them makes a very pleasing effect. Frequenty bisque figures are used in the decorations. We have more electric lights in use during the winter than in summer time, for to some the numerous lights give the impression of heat. I don't believe in the use of signs stuck around in conspicuous places. The names of all our flavors and drinks are to be found on an attractive menu card and at the top of these cards are spaces for special drinks that we feature every day.

WHAT'S IN A NAME? A GOOD DEAL.

"It is doubtful if any fountain anywhere excels us in the variety and number of drinks. We try to have something new all the time and something appropriate to the season, or in keeping with the leading events of the day. For instance, during the horse shows at Bryn Mawr, we have Bryn Mawr Punch, Horse's Neck and Striplap Cus. There is also Tally-Ho and Rough Riders's Punch, while at certain seasons the Derby catches the eye of those who are looking for something up-to-date. For the theatre-goers who drop in on the way to the late suburban trains, there is the opera chocolate, while to the residents of many of the suburbs the names of their home villages such as the Ardmore, Wissahickon Punch, the Merion and others attract the eye, to please the palate later. We find this a very good rule, for many persons do not recognize a former favorite under a new name. We are, however, always getting up something new. Just at present we are having a run on various fruit sandaes. Only fresh fruits are used in their manufacture, and it is an inflexible rule here that no preservatives are to be used. Sandaes sell on sight, for they can be made extremely attractive by the use of various fruits and juices, which flavor as well as color them. Then our nut sandaes are very popular. Besides ice cream, they include chipped and ground nuts, other favorites to which we devote a lot of care are fruit lemonades. They are always topped off with slices of the choicest fruit, together with whole strawberries and cherries.

In winter time, beef tea, clam bouillon, malted milk and hot chocolate lead the list. We use only the best of these materials. Some time ago a salesman tried to induce us to adopt the make of chocolate he was handling, by saying that among the other advantages in using it, was its cheapness. I told him that was the last thing we considered in purchasing our supplies. We want the best, regardless of cost.

"The water used by us is filtered three times before it goes to the customer and our soda water is carbonated by the Ferry automatic system, in our basement. Run as it is by electricity and stopping and starting automatically, we find the device most successful. It is in keeping with our main idea, which is to serve our trade quickly with the best that is to be had."

AN ALL DAY RUSH.

The rush at the Broad Street Station Pharmacy is from four to six and from ten to twelve, p. m. While there are very few dull minutes from the time the store opens, 6 a. m., until midnight, the closing hour, it is during the rush hours that the result of Manager Burk's system is shown

in the celerity with which the hurrying patrons are served. With all there is no running to and fro back of the counter, on the part of the clerks and to see them over the heads of those seated and standing along the counter, one would think that they were less in a hurry than those to be served. But get closer and notice what they are accomplishing and one can readily see the value of quick service and the advantages of having things within arm's reach.

Mr. Burk, to whose efforts the perfection of this successful system is largely due, has been with Mr. Stoeber for three years, and in that time has made a host of friends for the establishment, as well as for himself. Always on the ground, and on the lookout for anything that will contribute to the comfort or convenience of his patrons, there is little of moment that escapes him. He is a graduate of the Philadelphia College of Pharmacy, class of '87, and previous to becoming manager of the Broad Street Station Pharmacy, he occupied a similar position with another of this city's leading retail drug firms.

MEDICINE SHOW'S COUP.

A traveling medicine company held forth last week, in the opera house at Pontiac, Michigan, and the successful madus operandi of this itinerant troupe may be of interest to druggists in general, who also deal in "patents," though in a sane, legitimate way.

It was announced on the opening night that a gold watch would be given away to the most popular child in town. This popularity was determined by votes cast at the show ballot box, and in order to vote a person had to buy some of the stuff on sale by the company. One vote was allowed for each cent's worth of goods sold, a purchaser of a dollar bottle of medicine being entitled to one hundred votes. The management announced the result of the contest each night, at the close of the performance, and by Friday the contest began to get hot. Two little tots of the town were in the lead, with over 6,000 votes each to their credit. By Saturday night the gold watch had grown to be as big as a gold mine in the eyes of supporters of the leaders and in the excitement five and ten dollar notes began to chase one another into the tills of the troupe. Then there was a disturbance and a rough-house seemed to be right at hand. But the doctor of the show had his nerve with him, and he whipped out a revolver. The cold steel barrel seemed to mesmerize the crowd for a moment, then two officers stepped into the breach and matters were finally amicably adjusted.

When the contest closed the winner had 18,750 votes. She had captured the watch and her father had a wagon load of soap, medicine and oil on his hands. Her nearest competitor had over 16,000 votes, also a wagon load of stuff, the two alone representing a revenue to the company of about \$250. It was a great "killing" for the medicine company.

Artificial Oil of Rose Free.

Artificial oil of rose, imported at New York by Pitt & Scott (Limited), was held by the Board of Appraisers to be free of duty, under paragraph 626 of the tariff law, on the authority of a former decision.

ETHICAL PHARMACY.

It Pays. Says Mr. Thomas Knoebel, of East St. Louis.

PRACTICES WHAT HE PREACHED TO ILLINOIS PH. A. WHEN HE WAS ITS PRESIDENT.—BELIEVES IN MAKING HIS OWN PREPARATIONS VERY EXTENSIVELY.—DISCOURAGES SALE OF PATENTS AND PHARMACEUTICAL READY MADE IN A MILD WAY, BUT SELLS WHAT IS DEMANDED.

"This is a drug store. We do not sell ice cream, cake or spring chicken. Some of our neighbors do."

The above sign greets a visitor to Thomas Knoebel's store at 209 Collinsville avenue, East St. Louis, Ill. It expresses just what Mr. Knoebel thinks. It was inspired after a visit to a neighbor's store

THOMAS KNOEBEL,
East St. Louis.

on Illinois Ph. A. business, while Mr. Knoebel was president of that body.

If the sign should prompt a critical glance about the store, several things would come immediately to the notice of the trained observer. For instance:

There is not a bottle of "patent" medicine in sight.

The shelves contain only "shelf" bottles and jars. These contain simple drugs of every day preparations.

The show cases contain only toilet articles and the old fashioned drug accessories, and "good stuff" at that; nothing cheap, or of an unlisted manufacturer.

The front of the store set apart for customers is very little larger than the space behind the prescription case.

There is not a "ready made" sign in

sight, and nothing to suggest the purchase of any novelty or "patent" remedy. The only signs suggest purchase of goods made in the store. These signs are neat, plain, very much to the point, and suggest that the author would have been a success as a professional advertisement writer. Once through the gate that shuts off the prescription case the amazement continues. The large case is crowded with small bottles, many phials, and small jars, all neatly labeled. On the wall is a large case filled with expensive chemical apparatus. Near that case is a well-stocked library. All the familiar books are there, and many that usually adorn only the professor's or professional chemist's table, references on specific gravities, for instance.

ARRANGEMENT OF THE SANCTUM.

Should Mr. Knoebel be at his roll-top desk and you asked him a question, the chances are that he would open one of the drawers as he answered to show you the goods. In those drawers are price-lists and pharmaceutical journals, including *The Era*.

The sink is large and is equipped with distilled water only. A copper drain board is furnished for the graduates. The long plain side of the room has well-filled shelves with the larger bottles used in the prescription work. Underneath these, in the wider enclosed shelves are the larger utensils, cotton, paper and other articles needed. On the shelf is a suppository machine.

In the center of the room is the tablet machine for turning out large quantities, and another machine for a small batch. There is a large desk with not a sheet of paper in sight, but a typewriter handy. This is used for all labels, and when Mr. Knoebel and his clerk are both on duty, one writes the label, the other pastes it on the bottle.

At the side of this room is a dark room, with shelves filled with fluid extracts with the protecting papers removed, and the pill case as well as scores of miscellaneous drugs. The gas is always burning, ready to go to full blaze when the chain is pulled. An electric search light, one of the detective kind, is handy for looking into the far corners for a label. All shelves are arranged so as to place the small bottles on the lowest shelf.

"Simply carrying out my ideas," said Mr. Knoebel. "I consider myself a druggist, not a merchant," he continued. "Everybody does not take kindly to my suggestions, but here at home I do as I please. I have tried to make my store convenient, and still arrange it logically; you can see the result."

Then *The Era* man remembered, and what flashed through his mind was the neatly printed pages of Mr. Knoebel's address as president of the Illinois Ph. A., at the twenty-fifth annual meeting held at Rockford last summer, and he asked to see it.

MR. KNOEBEL'S BELIEFS.

Here is one extract: "The advance in retail pharmacy has been slow, comparatively speaking, during the past twenty-five years. There has been a decided improvement in conducting the retail business of to-day, as compared with former years. The introduction of new methods and appliances for the manufacture of pharmaceuticals have lessened the labor

to a large degree, yet the retail druggist has not progressed with the firm step that he should. This is due to the willingness of the retailer to permit others to do his work for him."

And here is another: "The almighty dollar is a necessity for the proper maintenance of our business, but since such is the case, it does not follow that all of our work, our education, our ambitions and our hopes should be measured by the cold standard of the almighty dollar.

"The reputation and qualifications of the druggist, as a professional man, is not gauged by the dexterity with which he wraps up and hands out a patent medicine, or by the celerity with which he dishes out cream-soda and candies, or by the eloquence with which he expounds upon the delicacy of flavor of the latest brand of five-cent cigars, but is entirely governed by the knowledge the druggist possesses as a professional man and not as a tradesman."

"This one refers to patent medicines: "That the druggist is largely to blame for these unfortunate conditions is beyond dispute. Had it not been for the recommendation the druggist gave these remedies, they would not to-day be enjoying the 'reputation' they do, and their demand, instead of assuming such stupendous proportions, would now be gradually decreasing."

HANDLES PATENTS AS ACCOMMODATION.

"Do you mean to say that you live up to your Rockford address?" was asked.

"Not exactly," replied Mr. Knoebel. "You see, I have to live. I may be a reformer and an extremist, but I am not a martyr."

"But patents; do you keep them?"

"Yes, they are in the closed cases under the shelf jars, where no one can see them. My stock is complete and I give each customer exactly what he asks for. If he asks me for advice, it is different. I give twenty-five preparations that I make myself and I know that they are pure and what they are good for. Whenever possible, I sell these, but I never turn away the firm customer from what he wants and knows he wants. I catch the doubtful ones, however."

"But you preach against patents and their use?"

"Yes, and if I could, I would sweep the whole trade away (my own included), and leave the field to the physician and the dispenser. I am sincere. Come, and I will show you."

In the clean, dry well-lighted basement was found the laboratory. An enclosed zinc box was one of the first things seen. It was for the mixing, heating and percolation of disagreeable and strong-smelling drugs. Nearby was the water-still, the work table and sink. Board cupboards protected cartons for the homemade remedies. Two zlant water filters furnished clear and pure water, delightfully aerated through pressure furnished to carry the water upstairs. Towards the front of the basement were original packages of patents, their number suggesting gross purchases, and a set of well-protected shelves for broken packages of reserve stock. On other shelves was reserve stock of fluid extracts, most of them in gallon bottles. Half a dozen bottles of golden seal suggested that Mr. Knoebel had turned a good profit in that. Six more of arnica flowers is an-

other instance of his purchases. On the dark side were a dozen barrels, every one carefully covered, and these suggested crude drugs. The carbos were well balanced so that one man could handle them. At the foot of the stairway was an ice chest for toxins.

PAYS TO BE ETHICAL.

"Does it pay to be a real druggist?" was the first question asked when we were back in the store.

"In 1876," said Mr. Knoebel, "I came to St. Louis to clerk for the man who owned this store. It was then situated across the street. My property consisted of my education, my clothing and my willingness. In five years' clerking I saved \$500. My employer wanted to sell and trusted me. I paid him \$500 and promised the rest. It is all paid."

Mr. Knoebel might have added that the building he occupies as a store and residence above was also paid for, and that last spring he bought an automobile. He might also have added that his charity list is large, and he is suspected of having some very good investments that do not demand his attention. He is not the kind of man to buy an automobile until he is sure he can keep it.

While The Era man was thinking, Mr. Knoebel continued: "Last week Dr. Collins, of the Isolation Hospital, told me that my digitalis had kept a man alive for a week, and he was depending upon it to keep him alive for two more days; then he could save him. I made that digitalis and proved it. I know what it contains. Dr. Collins knows that, and so do the other physicians. When a case demands the most careful dosing, I get the business sure. I get my share at other times. These goods are not on the market, and never will be over my name. I am perfectly willing to tell any physician what is in them, if I think he asks in good faith. I do not intrude them on the people, and send many persons, to whom I could easily make sales, to the physician, many of whom I honestly believe I could do good to. I never prescribe; I only recommend at best."

"Side lines then have no place with you?"

ONLY ORTHODOX SIDE LINES.

"Oh, yes; I recommend any druggist to have side lines. But let them be professional, connected with caring for the sick and not of the distracted sort. My chief side line, in a business way, is electric batteries. I have studied them carefully, handle a splendid line, and explain them thoroughly to customers. I also use chemistry both for profit and recreation. I make many urine and water analyses and find that it comes in very conveniently with my work in the store, and yields a very good income. These things do not take my attention far from my business, and as they are distinct specialties, they advertise me somewhat.

"Do I believe in advertising? Certainly. Good advertising and plenty of it. My calendars are always in great demand on December 1, when the distribution commences. I patronize other advertising means of making announcements, and always make a real announcement, when I pay my money. There is plenty to advertise."

DRUG TRADE JOTTINGS.

Sherlock's 487 Broadway, is utilizing one of the large show windows for a display of the Thermalite bag.

"Cleanliness is next to Godliness" was a sign noted in an Eighth avenue window, where insect destroyers were displayed.

James' Pharmacy, 700 Eighth avenue, is booming the sale of Pond's Extract, by a window display and the card announcement of a price of 19 cents.

Frank's Pharmacy, 185 St. Nicholas avenue, Manhattan, will open a branch at 1909 Second avenue, corner One Hundred and third street, about May 15.

Murphy & Kelly, 5602 Third avenue, Brooklyn, have recently furnished the noted yachts Atlantic and Endymion with their stocks of pharmaceutical goods.

Roth & Holmes, 64 Court street, Brooklyn, N. Y., in order to attract attention to their window display, have added a small aquarium, in which are gold and silver fish.

F. A. Katterman, 411 Myrtle avenue, Brooklyn, makes a practice of placing a few cut flowers on the center of his soda fountain. Pansies were the attraction this week.

Murphy & Kelly, 5602 Third avenue, Brooklyn, N. Y., add to the attractiveness of their store by the placing of four canaries in separate cages in the windows. The constant warble is very cheery, even in dull hours.

Schnaf's, 798 Eighth avenue, is now featuring Welch's Grape Juice in the well-known way. The only difference is that it is a low display instead of a full window. This is quite as attractive and yet permits light for the interior.

Riker's, St. Marks and Flatbush avenues, Brooklyn, have experienced a small strike, the whole force from manager to boy leaving. One of the salesmen from the 456 Fulton street store has been promoted to manager, and an entire new force engaged.

It is reported that Sir William Ragsap was asked £20 a milligram for radium recently, at which rate an ounce would cost \$3,000,000. An English expert states that not more than half an ounce of radium has been manufactured since Prof. Curie discovered it.

McDonald's Pharmacy, Third avenue and Fifty-fourth street, Brooklyn, have added a bicycle delivery system. There are two deliveries per day, as far as Ninetieth street. Since May 1, a daily call is made on all regular customers for orders. The morning orders are delivered in the afternoon, and the evening orders on the next morning trip. This is in addition to the special deliveries.

B. Mishkin has sold his store at 56 Jefferson street; also the one at One Hundred and Thirty-ninth street and St. Ann's avenue, and purchased the business of J. Bockar, 1360 Fifth avenue. Mr. Mishkin states that he has been eleven years at the

Jefferson street stand, but about fifty per cent. of his customers having moved to Harlem, yet remaining his customers, and the neighborhood having changed very rapidly in other ways, he was induced to make the change.

George Kneuper, Jr., who has recently passed through a severe attack of pneumonia, is recovered and back at business in the Kneuper Pharmacy, 263 Broadway, New York.

The Hegeman Corporation has leased the corner store at One Hundred and Twenty-fifth street and Lenox avenue. This will give a frontage of 45 feet on One Hundred and Twenty-fifth street and 100 feet on the avenue. It is stated that the new soda fountain will cost \$25,000. It is the intention of the Hegeman Corporation to spare no expense in fitting up the store. July 1 has been set as the date of the opening. These arrangements are not to interfere with the business of the store of the same firm at Seventh avenue and One Hundred and Twenty-fifth street, which will be retained and run as usual.

P. A. Lignell, 620 Tower avenue, Superior, Wis., has issued the following ingenious package slip:

I want you to be satisfied.

I want you to become a steady customer.

I can sell you goods cheaper.

I will treat you a little better than you are used to.

You want to find a reliable drug store. You don't want to pay "fancy prices."

You must tell me if you are not treated right.

You want competent men (not kids) to wait on you.

"Kicks" and "Praises" received by

P. A. Lignell.

Mr. Lignell's bust decorates the left corner.

Another of his slips is labeled "Prescription Talk No. 12." It is adorned with a man's figure (presumably Mr. Lignell's himself) pointing towards success, which is rising like a sun over the horizon. The talk runs:

Success can only come to the drug store that will fill your doctor's prescriptions right.

Success can only come from a medicine that is prescribed for your disease by a good physician.

Success to cure that disease can only be possible if that prescription is compounded in the right way, from the right drugs and chemicals, and by the right druggist.

Medicine from my prescription department, must be successful, because my stock is fresh, and because I am queer enough to think that substitution is a poor policy.

The Flower Drug Company, Hudson and West Eleventh streets, New York, have profited by the closing of the sub-station of the post office, which was formerly at the corner of Hudson and Bethune streets. The branch station has been removed to and placed in charge of the Flower Company. A writing table with accessories and two chairs is placed in the center of the store for the convenience of customers who wish to fill out a money order, write a postal, or address an envelope. It cer-

tainly is better than the stand-up way, found in some such places, but, be it said to the honor of the trade, this consideration for the public is usually found in drug stores which are sub-stations of the post office.

Wilson's, at Wall street and Broadway, were obliged to surrender their store, due to the expiration of their lease, and the fact that the United States Cigar Stores Company had leased the entire building. The cigar company re-leased to Wilson a part of the store, but retained the corner. In order to adjust matters, extensive alterations were necessary. The store's popularity was never more clearly shown, for the old patrons found it, although the entrance was half concealed by the steps of the raised walk over the subway work. The firm has decided not to serve ice cream soda in future, on the grounds that its manufacture and consumption takes too much time and space and that in their small quarters its sale would interfere with their other business.

While the Wilson Pharmacy was in the throes of removal and alteration, a partition was hastily erected and space added to the new store from the rear. While this was being done, business went on as usual, the clerks working nights to help move into the new space allotted the business, although the bulk of the goods had been removed to the firm's warehouse at 42 Cliff street. One Sunday the force was engaged all day and night. Although a new soda water fountain was to be installed, nevertheless the old dispensing soda counter was pinned in position, the hastily erected partition wall was covered with plain turkey red print, and upon that were pinned the lists of the various drinks the concern was prepared to band out. The alterations are to be extensive, as the whole front of the building has to come out to be replaced with a new window and door arrangement.

MERIT MAKES SALES.

That the trade appreciates a good thing when seen is proved by the number of window displays of the Thermoalite bag to be seen throughout the city of New York. Upon observing one of these the other day, a representative of The Era entered the store and made some inquiries. The druggist stated that he believed the bag a useful and ingenious article, that it worked as advertised, that his profits were fair, that the retail price was reasonable, and there already was a good demand for it.

"Why," he said, "I have received five mail orders to-day from regular customers who have already gone to the country for the summer. Believing the bag would interest them, I sent them a brief description of it and a circular. They all ordered it. Now I am about to write to a number of others. Of course, I haven't time to do much of that sort of thing, but when I do, they buy."

Not one complaint of any kind about the bag can be heard in the trade. These are unvarnished truths. If you have not investigated the bag, it will pay you to do so. The manufacturers are the Thermoalite Company, 164-165 Elm street, New York. Please mention The Era when writing to them. Their advertisement will be found on another page of this issue.

SHOW WINDOWS AND FEATURES.

Animal Displays, Live and Stuffed, Most Effective This Week.

A CHAMOIS DEPICTED AMONG HIS NATIVE CREWS.—CALLS ATTENTION TO GENUINE CHAMOIS.—LIVE CHICKENS—EMPHASIZES FRESH EGGS FOR FOUNTAIN DRINKS.—AN INVITING RUSTIC ARBOR EMBOWERED IN VIOLETS AND FEATURING VIOLET TALCUM.

Riker's, Sixth avenue and Twenty-third street, call attention to their stock of chamois by an attractive window display. The floor is covered with boxes of various sizes which increase in height as they approach the back of the window, over which are thrown large pieces of chamois skins. In each corner of the window are tall piles of the original unpacked cases of the goods. Naturally the larger are at the bottom and on these the smaller mount up in a way to suggest Alpine heights. Large dyed chamois skins, dark green, red, brown and stone color, cover the mirrors at the back. In the center of the display stands a stuffed chamois, so natural that it takes several glances to convince the observer that it is not breathing. At the feet of the animal lies a card extolling the quality of the skins: "You can use them wet or dry. The only kind you want. 10 cents to \$1.39." Another card at the right gives a lesson in natural history in these words: "The Swiss Alps is where these animals are found and their skins secured. These are genuine, from the true chamois. Don't buy doe skins for chamois. It takes an expert to tell the difference by appearance. Anyone knows after using. We have the right goods and our prices are right."

R. H. South, 191 Bowers, features his own make of beef, wine and iron by an unusual window arrangement of the goods. The whole pane is filled from bottom to near the top with the bottles, rising, row on row above each other. The first two bottom rows are formed of thirty gray covered, red lettered containers. In the next row the fifteen central bottles are unwrapped. Standing on top of these, but leaving a space in the center, are four rows of nine bottles each, the three at the center being unwrapped. Next above an invisible board supports another row, of which the fifteen central bottles are uncovered, and still higher are two more lines similar to the lowest ones. The open square mentioned, framed by the goods themselves, contains this card: "Wine, beef and iron." Balancing this is the rosy face of a cardboard young lady, while below is an inscription, "Iron manganese peptonate, 50 cents," and in small type, "For pale people."

AN ARRANGEMENT OF SOAP.

The second window displays toilet soap in the same manner, with the exception that light is allowed to enter the store by an arrangement of obliquely running boards which support the boxes. These produce a good effect from the street, but their appearance from the interior of the store is unsightly. The soap used is green

and white, buttermilk and witch hazel. First, close to the window pane are three rows of the soap boxes, three cakes to each box, with the green and white arranged in a border design. The center of the next row of boxes, placed perpendicular to the floor of the window, as are all the units, is occupied by a price card. The white buttermilk soap is placed next to the card and the remaining six boxes of soap in that line are the witch hazel. The boards previously mentioned run up from the floor through the center of the boxes, on either side of the price card, and form a rectangular opening through the boxes. From the street the effect is quite pleasing. Light enters through the central space over the card.

P. B. Knapp & Sons, Hudson and King streets, have a scheme for permanent window decoration which possesses the merit of originality and breaks up the harsh straight lines of the show windows. They have had this in use for some time and find it suits their purposes admirably. The corner window is fitted with a wooden framework in its interior. The material may be pine, but it is oak finished. The effect from the street is that of a miniature arcade, with pillars and arches which are faced up with bedford cord cloth. The floor of the window is usually covered with crepe paper of the same color. All the pharmaceutical or other goods desired can be effectively displayed as in any window, there being ample space left, and the outlines of the window are far more graceful than would be the case without the woodwork and columns.

A FLOWER CROWNED ARBOR.

Riker's, 456 Fulton street, Brooklyn, are featuring their new violet talcum powder in one of their window displays. The floor of the window is given the effect of uneven ground, by the use of boxes of different sizes, over which is placed green plush, to give the effect of grass, while rush or crane artificial grass borders it. The central feature of the window is a large arbor in the German lattice style and nearly covering the mound. Climbing up the sides of the lattice are vines of smilax and attached to the arbor sides at various heights and across the mirrors in the rear are bunches of artificial violets. The yellow hexagonal cartons of the goods are displayed on the steps of the mound, in the arbor, outside of it, on the floor, and intermingled with the violets and smilax on the green painted arbor. There is the usual price-card telling the cost.

Koehler & Woell, Eighth avenue and One Hundred and Twentieth street, New York, are pushing the sale of a well-known tooth powder, by a neat window display. From a solid base in the center of the window rise three tapering spires of the blue tinted cartons, which from across the street appear like slender church steeples. These are flanked by a group of three smaller spires, but a little to the rear, thus filling in the corners. The rest of the space is filled with miniature spires. The center one carries the price card. The corner window is featuring a new skin food. The signs pasted to the pane are black, with lettering in green and red alternately.

A GOOD OBJECT.

Stern's Insectago is found as one window display in nearly all the pharmacies

GRAND PRIZE DIPLOMA AWARDED THE L. A. BECKER COMPANY, CHICAGO.

By courtesy of the L. A. Becker Company, we present a reproduction of the Grand Prize Medal conferred upon the manufacturers of the Twentieth Century Sanitary Fountain by the International Jury of Awards of the Louisiana Purchase Exposition.

The records show that the Twentieth Century Sanitary Fountain scored the largest percentage of points in sanitation, cleanliness and other features, which placed it in the highest class for which prizes were given.

This medal is the only insignia of award for the Grand Prize which is bestowed by the International Jury. It is the official diploma, is protected by copyright and is distinct from the announcement ribbons issued by the authority of the Jury of Awards of the Exposition.

on the avenues. New York druggists are pushing it to aid the proprietor, a pharmacist, who has lost his sight and has no other support.

Alpers Pharmacy, Thirty-first street and Broadway, has a cool and inviting window display, soothing the eye in contrast to the glare and confusion of Broadway. One half is devoted to a patent wash-cloth, which is simply exposed in the opened boxes. A card states that six reasons for using these goods will be found in the circular folded inside each. The other half of the window is filled with white cartons of Oxzyn Balm. This produces an entirely white window of attractive appearance.

The Cameron Pharmacy, One Hundred and Twenty-sixth street and St. Nicholas avenue, New York, confines its window display to pharmaceutical and regular goods; no patent medicines. This pharmacy believes in a style of window display, allowing a view into the interior of the store. The floors of the windows are tiled in pale blue and dull white. The St. Nicholas avenue window contains green castle soap this week, but these squares are arranged in an ingenious manner. At the rear corners ten of these "slices from the bar" are standing perpendicularly, but set on a bias line. In front runs another line, with one less cake, and so on until a triangle is formed. The center is filled in by a double reverse curve made of the blocks of soap. Across the rear is a platoon.

FRESH EGGS FOR FOUNTAIN.

Riker's, St. Marks and Flatbush avenues, Brooklyn, featured their soda fountain drinks, egg lemonade, egg pineapple, egg phosphate, by a farmyard scene in the window. The rear of their window was covered with a painting representing a farm. The perspective was good, and viewing it from the street it gave the effect of distance. There stood the unpainted farm-house, upon the side of a hill, amid all its familiar and natural surroundings. A creek at a distance ran by

and there were many trees. In the immediate vicinity of the house were flower beds.

The floor of the window was covered with gravel, and strutting up and down, or scratching in this gravel for grains, were a brood of pure white leghorn hens. At night they rested upon a perch in an improvised hen coop which stood at one end of the window, and in which also were displayed the nests holding the new-laid eggs. The inference was obvious. Fresh eggs for the fountain drinks.

Leland Miller, Sixth and Locust streets, St. Louis, is using his windows for a special display of Porto Rico cigars. He has the Flor De Juncos and Lagarita, rough shapes, at two for five cents, and the new shape, long slender, El Toros, at five cents each. All his windows were given up to cigars.

GENUINE HAARLEM OIL.

I beg to announce to the general public and trade that I have appointed as my sole agents for the United States, Canada, British Columbia, Central and South America, the Holland Medicine Co., 1406 Arch street Philadelphia, which from now on will be the exclusive importer in said countries of my celebrated "Genuine Haarlem Oil," originally invented by my forefather in the year 1696, at the place where the present business is still located.

We call your attention to the fact that some unscrupulous men have put imitations upon the market resembling closely in form the "Genuine." It is a cheap grade and absolutely worthless. Look for the red signature of C. de Koning Tilly, which is printed on every circular and bottle. The uniform retail price is 25 cents per bottle. Buy no other.

C. DE KONING TILLY,

13-15 Achterstraat, Haarlem, Holland.

Address all communications relative to above to the Holland Medicine Co., 1406 Arch street, Philadelphia, Pa.

A SQUARE DEAL FOR ALL.

L. Jay Gerson, president of the Ge-Ge Company, is probably not unknown to the majority of druggists, for as general sales manager of the Frog in Your Throat Co., Inc., a position he held until recently, and of which company he is still one of the original stockholders, he has traveled extensively, calling upon druggists in nearly every locality. During these travels he has had an opportunity to investigate the demands of the trade. As a result of these investigations, he became convinced that an efficacious throat lozenge to sell at five cents was a desideratum, for he argued, this price is one which appeals to all classes of purchasers. The "nickel" is the

L. JAY GERSON.

logical and popular coin for quick selling package goods, a statement that experience in selling many popular specialties proves.

Mr. Gerson has recently placed upon the market "Ge-Ge," a novelty in the way of remedies, but he claims, designed to become a leader and the quickest seller of all throat lozenges. Ge-Ge will not spoil in any climate. The formula employed is first-class, and the use of Ge-Ge is not attended with any deleterious effects. In marketing its specialty, the Ge-Ge Company has "cut out all schemes and adopted a policy of square dealing," open to all alike. Druggists should read their advertisement on another page for particulars.

DELAYED IN REMOVAL.

H. Plantan & Son, the Pioneer American Capsule House, established in New York in 1836, inform us that owing to various delays incidental to erecting a large building, they will not occupy their new laboratory, 93 Henry street Brooklyn, N. Y., until August. During their removal, however, all orders will be shipped with their usual promptness.

FLY-TIME HERE.

The Bigelow Fly Killer, manufactured by J. F. Bigelow, Worcester, Mass., and advertised on another page, is of unique and original design. As a seasonal specialty, it presents some attractive features. Druggists should read Mr. Bigelow's "ad" for particulars.

BUSINESS RECORD.

ARKANSAS.

Mountain Home.—Baker & Tipton, new store.

CALIFORNIA.

Antioch.—M. W. Dunnigan, succeeds J. W. Lewis.

Palace Drug Co., new firm.

Geyersville.—Geyersville Phcy. (W. W. Dunnigan, Propr.), new store.

San Francisco.—Bowman & Co., succeed Union Drug Co., 214 Kearney St.

COLORADO.

Denver.—John A. Martin Drug Co., 930 15th St., new firm.

Loveland.—R. D. Miller, new store.

CONNECTICUT.

Fairfield.—Perry Phcy, new store.

(N.) Woodbury.—H. H. Canfield, succeeds Canfield & Terrill.

DISTRICT OF COLUMBIA.

Washington.—Chas. G. Lennon, 12th and Newton Sts. (Brookland), new store.

FLORIDA.

DeLand.—Lumley & Osteen, succeed J. M. Lumley.

GEORGIA.

Parrott.—J. H. Willford & Co., destroyed by fire.

Thomasville.—Bracey Phcy Co., new store.

S. H. Price & Co., new firm.

ILLINOIS.

Chicago.—Albert J. Sachse, succeeds R. L. Brown, 1983 N. Ashland Ave.

Edinburg.—W. S. Denton, new store.

Marselles.—Eugene Allen, succeeds J. H. Allen & Son.

INDIANA.

Fairmount.—C. H. Daugherty, succeeds Mendenhall & Daugherty.

Fort Wayne.—H. F. Beverlyorden, succeeds David L. Beuton, 1240 W. Main St.

Grand View.—F. M. Ragsdale, succeeds L. F. Gage.

Kokomo.—Jay Bros., succeed Martin & Groff.

Sedalia.—M. M. Chittick, succeeds J. H. Rockwood.

IDAHO TERRITORY.

Sapula.—L. H. Smith, succeeds De Lozier-Burnett Drug Co.

IOWA.

Bloomfield.—Williams Drug Co., succeeds Bloomfield Drug Co.

Churdan.—M. M. Biery, succeeds G. M. Miller.

Guttenberg.—Gossard & Woolford, succeed R. E. Schroeder & Co.

Haverhill.—A. E. Hoefler, sold out, no successor.

Monmouth.—H. R. Miller, burned out.

Nevada.—A. V. Graves, & Co., succeed Nevada Drug Co.

Newmarket.—O. B. Roberts, burned out.

Templeton.—Callanan Drug Co., succeed H. J. Strunk.

Waverly.—Stauffer & West, succeed F. J. West.

Webster City.—Mr. Higgins, succeeds Higgins & Bryant.

West Bend.—Easton Drug Co., sold out, no successor.

West Union.—C. J. McLaughlin & Co., succeed E. M. Phillips & Co.

KANSAS.

Coffeyville.—Brown & Cross, succeed Geo. P. Harvey.

Delphos.—Verne Mitchell, succeeds A. L. Kinsey.

KENTUCKY.

Frington.—Dr. P. E. Dempster, new store.

LOUISIANA.

Crowley.—Pelican Drug Co., succeed Chachere & Minus.

MAINE.

Deering Center.—Frank L. Winship, damaged by fire.

MARYLAND.

Baltimore.—Morrison & Fifer, succeed Morrison & Turlington, Linden Ave. and Dublin St.

MASSACHUSETTS.

Malden.—Wm. L. McGarr, 401 Highland Ave., dead.

MICHIGAN.

Charlotte.—H. A. Blackmar, succeeds Kinsman Bros.

Chatham.—R. J. Burrows, succeeds Olson & Burrows.

Detroit.—Albert I. Luke, succeeds Wm. C. Kirchengraber, 3d and Merrick Aves.

Hastings.—A. E. Mulholland, succeeds Wm. H. Goodyear.

Lansing.—Hercules N. Meloche, succeeds J. Williams, 231 Washington Ave.

Riverdale.—Wm. H. Owen, succeeds F. D. Hudson.

St. Joseph.—Frank T. Gillespie & Co., succeed Howard & Pearl Drug Co.

MINNESOTA.

Sedan.—Sedan Drug Co., new store.

MISSISSIPPI.

Flora.—G. S. Nobles, damaged by fire.

MISSOURI.

Arrow Rock.—Thomas & Romines, succeed Thomas & Beazley.

Brookfield.—Fred Alberts, succeeds Pettli-John Drug Co.

Fredericktown.—Davis & Ward Drug Co., succeed C. W. Brown.

Lasco.—Wm. F. True, new store.

Nixa.—J. H. Goddard Drug Co., new firm.

Jessup & Fisher, succeed Wilson & Jessup.

St. Louis.—Bredemeyer Drug Co., succeed Chas. W. Bredemeyer, 2233 S. Grand Ave.

Funsch, Diesel Drug Co., succeed O. J. Funsch, 2001 Cherokee St.

Funsch-Diesel Drug Co., succeed O. J. Funsch, 400 S. 14th St., now 184 Sidney St.

NEBRASKA.

Bennington.—Chas. W. Hickey & Co., succeed Dr. J. Stack.

Dorchester.—Waller & Ferguson, succeed Martin & Ferguson.

Friend.—Aule Dorwait, succeeds O. H. Price.

Plattsmouth.—Fried & Harris, succeed Geo. W. Gilman.

Stockham.—Stockham Drug Co., succeed Bowen & Co.

NEW HAMPSHIRE.

Concord.—Benj. I. Jewell, succeeds A. E. Clarke & Co.

NEW YORK.

Albany.—G. C. & W. B. Hogan, cor. N. Y. C. and Clinton Ave., new store.

Faust.—Barrett & Foley, succeed Dunham Barrett.

New York City.—Abraham & Bockar, 1503 Madison Ave., new firm.

A. Ackerman, succeeds Simmons Phcy., 1102 1st Ave.

L. Altman, succeeds S. Marelescu Drug Co., 117th St. and Madison Ave.

Louis F. Carell, 913 Forest Ave., new store.

Louis Epstein, succeeds A. W. Sanborn, 940 2d Ave.

S. & B. Gluck, moved from 1626 Madison Ave. to Lenox Ave. and 144th St.

Leibowitch & Robens, succeed Isaac Hoffman, 1692 Madison Ave.

Levitas Bros., succeed A. J. Levitas, 1408 Madison Ave.

C. Lischitz, succeeds L. A. Lotz, 959 Mome St.

Livingston Bros., succeed M. T. Cooper & Co., 1766 Madison Ave.

Livingston Bros., succeed S. J. Livingston, 723 9th Ave.

Mendel Joffe, 2001 Amsterdam Ave., succeeds Geo. W. James.

Martino Mariani, 283 Pleasant Ave., new store.

A. May, succeeds I. Blainstein, 589 11th Ave.

J. F. Smith, 2037 Madison Ave., succeeds H. J. Power.

Zimmermann Phcy., succeeds Dungs's Phcy., 91 Bowery.

Brooklyn.—Harry M. Borschers, succeeds Henry Noss, 288 Jay St.

B. Goldenthal, succeeds J. M. I. Loss, 94 Graham Ave.

John P. Friedman, 327 Atlantic Ave., new store.

Long Island City.—August Ziegler, 339 Webster & Astoria, new store.

Utica.—Howarth-Ballard Drug Co., 183 Genesee St., burned out.

NORTH CAROLINA.

Spencer.—Cook Drug Co., succeed Spencer Phcy.

Statesville.—Gray Drug Co., succeed Tunstall, Gray Drug Co.

NORTH DAKOTA.

Fargo.—Bruce Crosby, new store.

Steele.—E. Campbell, succeeds G. M. Hogue.

OHIO.

Lima.—Mowen & Rickett, succeed Mell's Phcy.

Toledo.—Herman J. Able, succeeds F. B. Stephens, 426 Adams St.

PATENTS.

Issued May 16, 1905.

789,731—William S. Hobson, Aberdeen, Miss., assignor of one-half to William F. Hobson, Senatobia, Miss., and Jesse B. Hobson, Aberdeen, Miss. Truss.

789,757—Burt Prouty, Coshocton, Ohio, assignor of one-half to Dennis J. Fleming, Columbus, Ohio. Non-refillable bottle.

789,781—Phillip H. Wynne, Boston, Mass., assignor of one-half to L. E. Knott Apparatus Company, Boston, Mass., a corporation of Massachusetts, and one-half to Agnes Wynne, Boston, Mass. Balance.

789,793—Henry W. Buschemeyer, Louisville, Ky. Vacuum-pan.

789,902—Max Engelmann, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y., a corporation of New York. Process of making dialkyl barbituric acid.

789,968—John H. Ernst, New York, N. Y., assignor to Silver & Company, Brooklyn, N. Y., a corporation of New York. Filter.

790,049—Hyman J. Gumbinsky, Chicago, Ill. Non-refillable bottle.

790,079—Robert E. Schmidt and Arnold Fischer, Elberfeld, Germany, assignors to Farbenfabriken of Elberfeld Co., New York, a corporation of New York. Alizarin dye.

790,116—Alfred Elhorn, Munich, Germany, assignor to Farberwerk vorm, Melster, Lucius & Brün-

ing, Höchst-on-the-Main, Germany, a corporation of Germany. Process of making diethyl-barbituric acids.

790,138—Alfred Koelliker, Beul, Germany. Process of obtaining nicotin.

790,192—John F. Curtis, Chicago, Ill. Bottle-disk extractor and holder.

790,263—Ernst Preiswerk, Basel, Switzerland, assignor to the Firm of Society of Chemical Industry to Basel, Basle, Switzerland. Process of making C-C-dialkyl-barbituric acids.

TRADE-MARKS.

Published May 16, 1905.

135—Ralph F. Burnham, Auburn, Me. Medical preparation for rheumatism, sciatica, neuralgia, asthma, eczema and dermic disorders. The hyphenated word "Sal-iodide" and the fac-simile signature "Ralph F. Burnham."

198—Max Sterehlow, New York, N. Y. Non-alcoholic beverages having a taste similar to that of beer, and extracts for making the same. The word "Beerine."

361—The Maltine Company, Brooklyn, N. Y. Medical preparations containing the nutritive elements of grain. The word "Maltine."

362—The Maltine Company, Brooklyn, N. Y. Medical preparations containing the nutritive elements of grain. The words "Malto Yerb-line."

409—Chauncey F. York, Warriors Mark, Pa. Pills and tablets for diseases of the blood, liver, stomach, bowels, kidneys and nerves. The hyphenated word "Ma-Le-Na."

424—Merrell-Soule Company, Syracuse, N. Y. Farinaceous dietetic foods. The word "Justfood" and the conventional representation of "Justice" mounted on a pedestal.

449—Arthur Ellery Broga, Oneida, N. Y. Medicine for blood and liver diseases. The portrait of Dr. Kinsman D. Broga, the deceased father of registrant.

622—Florence Manufacturing Co., Northampton, Mass. Tooth brushes. The word "Rational."

623—Florence Manufacturing Co., Northampton, Mass. Hair brushes. The words "Sir Prize."

624—Florence Manufacturing Co., Northampton, Mass. Hair and clothes brushes. The word "Cosmeon."

630—W. W. Gavitt Medical Co., Topeka, Kans. Tonic or system regulator. A representation of the State capitol at Topeka, Kans.

653—Od Chemical Co., New York, N. Y. Remedies for diseases of the kidneys, bladder, etc. The word "Sanmetto."

681—Martio & Bowne Co., New York, N. Y. Tooth, nail, hair and flesh brushes. The hyphenated word "Vent-Aseptic."

682—Martin & Bowne Co., New York, N. Y. Tooth, nail, hair and flesh brushes. The words "The Autocrat."

683—Martin & Bowne Co., New York, N. Y. Tooth, nail, hair and flesh brushes. The words "Iron Duke."

634—Martin & Bowne Co., New York, N. Y. Tooth, nail, hair and flesh brushes. The word "Marguerite."

701—Florence Manufacturing Co., Northampton, Mass. Hair, nail, flesh and tooth brushes and other toilet brushes. The word "Dux."

MARKET REPORT

ROUTINE CONDITIONS.

Quinine Reduced By Jobbers Following Manufacturers' Cut.

MARKET SHOWS EASY UNDERTONE, BUT NO IMPORTANT DEVELOPMENTS.—OPIUM FIRMER AND SPIRITS TURPENTINE HIGHER.—PEPPERMINT OIL DECLINES.—LOWER SCHEDULE ON ROCK CANDY SYRUP. FEWER SMALL FLUCTUATIONS THAN USUAL.—LITTLE SPECULATION BUT CONSUMPTIVE DEMAND SATISFACTORY.

New York, May 22.—The only feature this past week has been the jobbing decline in quinine, following the wholesale reduction mentioned in our last report. Indeed, the number of minor changes is less than usual this week, but it is noticeable that they are mostly downward. Advances are few, the most important being in spirits of turpentine. Most of the easiness observable in the market is directly attributable to the season of the year, the arrival or expected arrival of new crop supplies in a number of articles tending to unsettle existing values. On the whole, conditions are satisfactory, both to buyers and sellers, and the lack of speculative operations tends towards stability, which is beneficial to buying for legitimate needs.

Jobbers report a steady, moderate business. A representative of a large house, however, summed up the situation by saying: "We are not supposed to be busy, but I notice there is no time to spare if current orders are to be properly attended to."

OPIUM.—The market is steady and again shows upward inclinations in its undertone, for foreign markets are firmer and Smyrna has risen 4d. in the last few days. This is due to more bullish reports from growing districts, because of severe drought. On the other hand the new crop is now estimated at Smyrna at 5,000 cases, whereas a short time ago the figures were given as 3,500. This market would be strong were it not for the lightness of demand and competition between holders. Jobbing prices remain unchanged, being \$3.00@3.20 for nine per cent, and \$3.10@3.20 for eleven and thirteen per cent.; powdered remains unchanged at \$3.85@4.10 for thirteen per cent, and \$4.00@4.85 for sixteen per cent.

MORPHINE SULPHATE.—The week has brought no developments. A moderate demand continues from consumers and the unchanged jobbing prices are still \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 in ounce vials, and \$2.25½@2.35 in 5-oz. tins, according to brand or quality.

QUININE SULPHATE.—Jobbers have all reduced their prices to a level corresponding to the cut declared by manufacturers last week. Statistics continue bearish. Bark shipments from Java are large. For the first half of May they were 570,000 pounds against 665,000 for the same period

last year. At the London auction on May 16, the unit realized show about ten per cent decline from the previous sale. To be exact, the price was 1 1/16d. against 1 3/16d. realized the last time. Last week's decline has not stimulated demand very much and the market is barely steady. The new jobbing schedule of prices is as follows: 20@21c. for bulk, in 100-oz. tins, 20½@21½c. in 50-oz. tins, 21@22c. in 25-oz. tins, 22@23c. in 15 or 10-oz. tins, 25@26c. in 1-oz. tins, and 27@28c. in ounce vials, according to brand and amount. All the salts are reduced one cent per ounce under former prices.

OIL PEPPERMINT.—All reports from growing districts, continue favorable, exerting a bearish influence. It is said that three times the usual acreage will be grown in Wayne county this season. Western offerings are freer and lower. Jobbing prices have been reduced to \$3.55@3.80 for western, \$3.65@3.90 for Wayne county, and \$3.90@4.15 for H. G. H and redistilled, all per pound.

RISORCIN.—Because of increased supplies and unsatisfactory demand, jobbing prices have been lowered to \$1.40@1.50 per pound for pure white.

SPRITS TURPENTINE.—This important commodity is fluctuating sharply of late. The primary market is controlled at the South by several combinations and speculative manipulation is evident. Moreover, the demand at wholesale has been good, exports have been heavy, and receipts have been light because of a late producing season. The latest change is an advance and jobbing prices have followed, rising to 74@75c. per gallon in barrel lots and 85@90c. per gallon in smaller quantities.

ROCK CANDY SYRUP.—Owing to the smaller cost of raw material, manufacturers have lowered prices. Jobbers follow, quoting as follows: Barrels, gal, 57@58c.; ½ bbls., gal, 59@60c.; 10 gal. kegs, gal, 64@65c.; 5 gal. kegs, gal, 68@69c.; second grade, barrels, gal, 54@55c.; ½ bbls., gal, 56@57c.; 10 gal kegs, gal, 61@62c.; 5-gal. kegs, gal, 65@66c.

CODLIVER OIL.—The undertone continues easy, the demand being small, as is natural at this season. The Norwegian crop is undoubtedly quite sizeable, present reports showing 30,500 barrels and more unaccounted as yet. Jobbing prices remain unchanged, but quotations for Newfoundland oil have been lowered to 95c.@1.00 per gallon in barrel lots and \$1.10@1.25 per gallon for less.

VANILLIN.—There is considerable competition between dealers, resulting in a decline. Jobbers now quote 75@80c. per ounce.

OIL SASSAFRAS, SYNTHETIC.—This also is unsettled by undercutting, the competition resulting in a decline all along the line. Jobbers have reduced prices to 40@50c. per pound.

CANARY SEED.—Cables from Smyrna are decidedly bullish. The New York Commercial sums the situation in these words: "Stocks in the United States are said to be smaller than ever before, the Morocco crop is practically a failure, and now comes the report that the Turkey crop is likely to be exceedingly small, as the growing districts are suffering from severe drought." New and lower jobbing quotations are: Sicily, 57.66c. per pound, in bags, and less, 7@9c. per pound; Smyrna,

5½@5¾c. per pound in bags, and 7@8c. for less per pound.

BAYBERRY BARK.—Arrivals of the new crop on the market weaken prices. Jobbers here cut to 18@23c. for whole and 23@28c. for powdered, per pound.

CHIAMOMILE FLOWERS, ROMAN.—Supplies are scarce and stocks in primary markets are said to be entirely exhausted. Jobbing values have advanced to 35@40c. per pound.

AMERICAN SAFFRON.—Easiness is still manifest. Arrivals and expected arrivals of fresh supplies because of the new crop have caused another decline. Jobbers now quote \$1.20@1.30 for whole, and \$1.30@1.40 for powdered, per pound.

GINGER ROOT, EAST INDIAN.—In sympathy with recent price changes in other varieties, East Indian has been reduced by jobbers to 10@12c. per pound.

MAICE.—Jobbing prices lowered to 60@65c. for whole and 65@70c. for powdered, per pound.

SASSAFRAS PITH.—More plentiful supplies cause a decline, jobbers quoting \$1.15@1.25 per pound, and 18@20c. per ounce.

SENEGA ROOT.—A good demand and some scarcity create a small advance. Jobbers now ask 85@90c. for whole and \$1.00@1.10 for powdered, per pound.

SUNFLOWER SEED.—Supplies are more plentiful and prices on quantity lots may be shaded. No general change.

BALSAM TOLU.—Lack of demand has caused slight easiness and jobbing values may be given as 28@40c. per pound.

CAMPHOR.—The market continues unsettled for the competition of the Japanese still continues, in spite of the recent reduction. No further change by jobbers.

MALAGA OLIVE OIL.—At wholesale a slight decline has occurred, because of freer offerings, but jobbers make no change.

TONKA BEANS.—Steady, diminishing stocks and good demand. No price changes.

JALAP ROOT.—There is a better demand for old crop. This improved inquiry has developed the fact that there is very little to be had in this market.

ELM BARK.—The near approach of the time when the new crop will be offered on the market continues to pull down the level of prices, but no further change is announced by jobbers.

REVENUE WARNING.

The Commissioner of Internal Revenue has issued this warning, of interest to anyone handling tobacco:

The typographical union label may be printed on minor packages of smoking tobacco bearing the reduced size caution notice, but such label must not cover or encroach in any way upon the space reserved for the caution notice.

The Treasury Department has granted a drawback on the exportation of Dr. S. P. Townsend's sarsaparilla, manufactured by the Nostrand Trading Company, of Brooklyn, equal in amount to the duties paid on the alcohol so used, less the legal deduction of 1 per cent. In liquidation the quantity of alcohol is not to exceed 13½ per cent. of the sarsaparilla and allowance will be allowed of ¼ of 1 per cent. for loss in manufacture.

EDITORIAL — COMMENT

The Park Suit.

With the second suit of John D. Park at last brought to trial and an early decision expected, we may prepare to hear some interesting judicial rulings on the subject of combinations to control prices, as to when they are lawful and when they are not. It can hardly be said that the contention of Park, concerning non-patented "patent medicines," is new. This point was raised when the suit was started, a year ago. It does not seem to us that there need be any apprehension as to the outcome.

We have a so-called parallel between the Park and Macy cases. In the latter it was decided that the price of copyrighted books may with perfect right be restricted, but that this right does not extend to uncopyrighted books. Hence it is argued that the price of patent medicines, which are not patented at all, may not be controlled either.

But there is one essential difference between the two cases. It will be noticed that the report to the American Booksellers' Association makes mention of "former resolutions of the Publishers' Association and of the Booksellers' Association." This plainly indicates that there was in fact a formal combination to regulate the price of books. We fail to recall any occasion when the Proprietary Association of America ever adopted any resolution calling either on its own members or those of any other association to regulate the price of drugs.

Evidently, then, it remains for Park to prove the existence of an alleged combination in drugs. But whatever happens, the direct contract plan will remain as solid as ever. It is not part of the tri-partite plan. Until evidence to the contrary is produced, the contract plan remains an unassailable business agreement between the manufacturer and his agent.

One Cent Telephones.

One-cent telephones is the latest proposition Cincinnati druggists have had brought to their attention. It remains to be seen whether the

proposition will develop or not. The transmission of the human voice by means of the application of electrical force at one cent per conversation would be a temptation that many otherwise thrifty bargain hunters or message nuisances could scarcely withstand. Query: Would the inauguration of such a tariff tend to increase the druggists' delivery force and would it bring him any more income? Another problem for Messrs. Bodemann and Straw to solve.

Negligent Prescribing.

In denying a motion for a new trial in a suit against the Bolton Drug Co., of Brooklyn, Justice Gaynor renders a most commendable decision in regard to the careless prescription writing of a physician. The plaintiff claimed that she had been poisoned by an overdose of morphine. Here is the prescription: "Elixir pinus comp. cum heroin—ounces 4—Merrills. One teaspoonful in water every four hours."

The clerk found a bottle in stock labeled "Elixir Pinus Compositus." Having ascertained through the advertising literature that Merrell made an Elixir Pinus Compositus with heroin and that the proportion of heroin was one twenty-fourth of a grain to the dram, he added one twenty-fourth of a grain of heroin and thus filled the prescription. The original bottle contained one-sixteenth grain of morphine acetate to the dose, hence the claim of an overdose of morphine.

Justice Gaynor holds that "one twenty-fourth of a grain of heroin and one-sixteenth of a grain of morphine combined would make only one-tenth of a grain of morphine to the dose. I believe that a court may take judicial notice of the scientific fact that one-tenth of a grain of morphine taken every four hours could not have poisoned the plaintiff." Justice Gaynor places the blame on the physician, who failed to distinguish between the two preparations of similar names put up by Merrell, the only difference being the omission of heroin from one. In holding that the doctor's prescription was negligent, Justice Gaynor does a service both to the medical and pharmaceutical professions. The pharmacist must obey the instructions of the doctor, but the latter needs to be more careful in writing prescriptions.

Prescriptions by Telephone.

The danger of taking prescriptions over the telephone has often been commented upon, but another case serves to emphasize it again. A young woman was taken suddenly ill in a drug store. The druggist telephoned a physician, who, being busy, inquired her symptoms and prescribed bromide of potassium and strychnine. This was administered by the druggist. The patient revived slightly, but relapsed again into unconsciousness. Thereupon an ambulance was summoned, and the surgeon declared the dose had been too heavy. The woman was removed to the hospital, where she recovered.

This unusual case aroused interest and a newspaper sent a reporter to interview the physician who had prescribed over the telephone. But he was not seen. Although no blame has been attached to the druggist, it is a nice question as to what he would have done had the dose proved more injurious in its results. With no authority to show for his action his position would have been extremely awkward. The question might be asked was the physician justified in prescribing upon the diagnosis of the druggist? In this instance the druggist, when he found the physician unobtainable, should have at once summoned the ambulance.

Of course there are many occasions when prompt action is necessary and too much red tape in emergencies is frequently more fatal than action on one's own judgment. In the case in point the druggist did the best he could. He probably felt no time should be lost in waiting for an ambulance. He was unwillingly placed in an unpleasant position.

Our Business Record.

Under the above head appearing in *The Era* each week are compiled all of those changes in the trade which relate to ownership, new proprietors, new stores, the ravages of fire, obituaries, etc. Each fact so briefly stated therein is full of meaning to somebody. It requires but little effort to read between the lines of the bright hopes of the new proprietor, most likely a young man making his first business venture, or of a new store with its beautiful fixtures and long lines of sparkling shelfware bearing golden labels. But there another side to the picture, and in imagination we can see the charred remains of the old-established pharmacy which has so long withstood the ravages of time and the inclemencies of the seasons only to be consumed so miserably by that best of servants and worst of masters. And how much is conveyed in the announcement "dead." The world at

large knows not the motives which prompted him to whom the word relates, and he now needs no vindication. The "business record" is an abbreviated commentary on the efforts of the druggist and the vicissitudes of his fortune.

One Law for the Druggist.

It is impossible to overestimate the importance of the Hill bill, which became a law last week, amending the Penal Code so as to conform to the Pharmacy Law in relation to the sale of poisons. It does away with the anomalous situation of a druggist obeying one law and violating another, both by the same act. The worst phase of this for the druggist was the fact that while he dispensed poisons according to the Pharmacy Law, if he was so unfortunate as to get into trouble the police magistrate would dispense justice according to the Penal Code. This state of things is now at an end.

Another important phase of the matter that should not be overlooked is the fact that by a curious combination of circumstances the Board of Pharmacy is now enforcing some of the provisions of the Penal Code in addition to those of the Pharmacy Law. This is the first time, we believe, that the Board has ever been given so much authority, and it should make the work of the Board vastly easier than it has been in the past. The chief advantage, of course, will appear whenever a druggist is brought up for trial, for hereafter when a magistrate frames his decision according to the Penal Code, which is the only law he knows, he will be acting at the same time in strict accordance with the law as the pharmacist has understood it. The result to all three parties concerned—pharmacist, Board of Pharmacy and general public—should be most beneficial.

Self-Protection Against Hold-Ups.

Another druggist has been held up in his own store. This time it was in a remote part of Jersey City, and the thief obtained no booty. But he left the druggist prostrate on the store floor with several scalp wounds. The incident can but serve to draw attention to the prevalence of assaults on druggists. The unprotected condition of their stores, the certainty that ready money in some quantity is easily accessible in their cash drawers, and the ready access which can be had to cashier and proprietor, prove too much of a temptation to marauders.

It would seem as if there should be some remedy for this state of affairs. Let one or two of these desperadoes get a good dose of their own medicine, and the depredations will surely

grow less frequent. Why would it not be a good plan for druggists whose stores are in lonely or tough localities to keep a good self-cocking revolver in the cash drawer along with the money? If taken by surprise they could draw the gun instead of the currency, and this unexpected result should give them a bloodless victory. But if necessary to shoot, let them shoot to kill. Another thought is that wherever possible most of the money should be kept in a locked safe, leaving only enough funds in the cash register or till to carry on change making for ordinary business needs.

Municipal Ownership.

A correspondent in the *Boston American*, signing himself "Drug Clerk," makes a plea for municipal drug stores.

"A few nights ago," he complains, "a friend of the writer had to run six blocks to find a drug store where he could get some medicine for his sick child. He passed many drug stores, but they were all closed. Druggists say that they cannot afford to keep their stores open all night; it would mean two sets of clerks, and the drug clerks now work outrageously long hours. Why would not municipal ownership make it better all around? It would guarantee better service, pure medicines and make better working hours for the clerks and save the public from the threatened capture by the drug trust."

This reads suspiciously like a "letter" that might have been written not very far from the editorial office. For a drug clerk it would be rank heresy. But whoever the guilty person may be, he is taking great risks in asserting that municipal ownership "would make it better all around." Municipal ownership has not yet been tested so thoroughly that a man could compute the exact amount of "graft" to be derived from the supply of strictly pure medicines. That a city would be able to purchase drugs of any better quality than that demanded by a Board of Pharmacy is a proposition that yet remains to be proved.

Druggists should regard any move toward municipal ownership of drug stores, other than charitable distributions of medicines or serums to the poor, as distinct encroachments on their rights as professional men. All prescriptions must be mixed with a sufficient quantity of brains, which are not an altogether conspicuous possession of the average municipal employee holding his "job" through political influence.

Parks, Churches and Trade.

Druggists are not of one mind as to the undesirability, from a business

viewpoint, of a neighborhood in which there are parks, schools and churches. A Jersey City pharmacist writes that he is near two schools and a church and a friend has a store near a park, church and school. These two brethren would seem to be in a position to thoroughly test the theory that these three institutions have a tendency to divert trade from a drug store. Their experience has been that the reverse is the case, and that the church, the school and the park are a benefit rather than a detriment.

On second thought, this would seem to be reasonable. The object in advertising is primarily to call attention to the goods which are offered, with the ultimate object in view of leading prospective purchasers to inspect and buy them. The church, park and school to an extent perform one of the functions of advertising. They bring the crowd to the proximity of the drug store, and then it remains for the druggist to so display and offer his goods as to derive the largest possible benefit from this gratuitous publicity.

There are probably exceptional cases where public institutions might prove injurious to the trade of a drug store, but in most instances an increased trade can be expected wherever any large number of persons are attracted to a locality. Thus, the church, the park and the school should add to, rather than decrease, the sales of the pharmacist, especially in those lines which are not strictly of a medical character.

Carrying the War Into Africa.

The favorite policy of the elder Cato possesses for many minds a fascination not to be denied. Many military commanders, since the days of the Roman republic, have found the principle of his policy effective in diverting unpleasant attentions from the enemy. And certainly it is a bold course. The battles of trade are often surprisingly similar to those of war save for the lack of bloodshed and it is to be doubted if the commercial adversaries would not often add an actually sanguine tinge to their conflicts if it were not for fear of the law.

The announcement by the representatives in this market of the German Bromine Syndicate that some of their sales were being exported to Germany and sold there to break the syndicate's hold on their own market arouses several sentiments. Of course the breaking of any agreement is to be deplored and the syndicate claims to have sold buyers here for American consumption only. And their present circular to the trade reminds all of this. But the policy of attacking them in their own stronghold in order to

shake the German assault on this market seems a clever stroke. The bromine war is certainly still on. May the consumer at least get some benefit. It is an ill wind that blows no one good.

May Be Trouble.

There was a stranger in town last week looking for a location for a drug store. We do not know whether he will locate here or not.—Traer (Ia.) *Star Clipper*.

OSLERETTES.

BY JOEL BLANC.

The height of nonsense was reached when a learned professor more than echoed the cry of the age: "Young men are in command," by setting a year limit to man's usefulness on earth.

A little retrospective look into world history shows that in all past time years counted but little in individual careers, and the same rule holds good now. One day we read a list of the men who won greatness in comparative youth, and the next, another gives us a list of those whose fame dawned when life was full of years.

Of course, in the commercial world, the rapid growth and perfection of system of the present era, enables young men to become masters of detail much earlier in life than they could in the past, but now, as ever, the human unit succeeds and must be judged through individuality.

However, there are becoming noticeable in the commercial life of America a class of young men whose very prominence proves the tendency toward a commercial aristocracy. Their counterpart has been noticed in the blue bloodlessness of old world autocracies in all times, but only recently have we of America had our attention called to their development among us.

The fact that their most pronounced characteristics show themselves unexpectedly; that to a certain point of emergency they may command our highest respect, shows that it is next to impossible to judge them otherwise than as individuals.

While many of them have had the influence of successful fathers or patrons to advance them, it is not unusual to see a young man who has climbed to a responsible position solely through self effort, suddenly lose his balance and become an Oslerette.

There have been several examples of the Oslerette in the drug world—especially in the jobbing part of it. We have seen an immense business built up by several generations, each of which grew old and honored in harness, followed by some young man who, through labor and study—with or without influence—has risen to the position of managerial head. His seniors have gradually retired into the background to take a well-earned rest, and in proud contentment they look upon their protegee and see that he, while widening the path that they have trod, is keeping it straight and clear. Suddenly this young man makes a radical move; a move that attracts more attention than he ever received before—but by no means favorable attention. By one act he may change the

policy of years, sever life-long friendships, defy the commercial sentiment of the time, drive away his best trade and bring sorrow and regret, if not shame and ruin, to those who reared the structure that he has shattered above their heads.

What brings this sudden change in these young men of apparent ability, clean lives and thorough training? Must it not be something that always was lacking within the man? Does it not show that they lack the moral stamina of those who have trained and trusted them?

What more bitter, crushing blow can come to a father or loving patron than to rear a man until he is master of the business in every calculable detail; to hand it over to him when he is between thirty and forty; to see that all is well for a few years and then on a dark day learn that by some rash act the young man has undone the work of years?

These young men, these Oslerettes, are blind. They are blind to the overwhelming sentiments of the time; blind to the fact that no man is strong enough to stand alone; no house so great that its greatness cannot fade.

There are none within the jobbing trade who are so close to their retail patrons and friends as the men of many years. Co-operation is no new thing to them; they have toiled for years in co-operative effort with proprietors and retailers, and through this effort have won success. Yet in spite of the fact that the Oslerette should know—must know—this, he assumes that he is above co-operation. He assumes that he is absolute master of others, and even more unreasonably, he assumes that he is absolute master of his own destiny. He seems to feel that he, between the proprietary and retailing ends, is dictator to both. If he was not so narrow in his view, if he was less agnostic upon the subject of commercial morality, he would see that those whom he defies—calls slaves—are being turned by him into mill stones between which he may be ground out of commercial existence.

What can we think of the Oslerette who is perversely blind to the fact that no firm or corporation can hold the power of co-operating organizations representing the trade sentiment of the continent? He calls himself strong, when he is but a weakling, living in a fool's paradise and rushing to a fool's doom.

The many need have no fear of the Oslerette; his power is soon shown from him. But those who have made him what he is, they are the ones who suffer most. From them he turns the light of kindly faces, he shames them by the violation of contracts that they have made. Even though he bring no financial ruin upon them, he brings a shadow upon the name he was looked to uphold, a shadow that follows to the tomb.

Years count for nothing, except when the battle is won or lost. But now, when a passing fancy of the world would at least speak of the years as a measure of worth, note the type I have here displayed and watch it well. Watch your interests, you patriarchs of the wholesale drug trade, and when you take your well-earned rest, see that you may be rust and not the draining of a bitter cup; see that you do not leave your honor in charge of— an Oslerette.

LETTER BOX

PROFITABLE NEIGHBORS.

Jersey City, N. J., May 22, 1905.
Editor The Pharmaceutical Era:

The brother pharmacist who is friendly enough to warn the trade against locating near a church, school or park, evidently does not know a good thing when he sees it. All of these institutions are as good for the pharmacists as a solid block of double-decked tenement houses.

We are located here within five minutes walking distance of two schools (one municipal, the other parochial), and two churches. Every school session is marked by a rush of trade, prescriptions, and orders for counter goods left with the remark: "I will call for them after school." Then, there is the chance to dispose of pens, writing pads, ink and other school needs. Soda water and candy, too, are lines in which school children figure largely as customers. As for churches, every high mass read brings so many churchgoers to the store, either before or after the services, and our perfumery and cigar case counters are kept busy.

A friend of mine has even all the three, church park and school, with a public library within a block of his store, and he is none the worse. As for parks, they are but another magnet to bring people near the store and, while there may not be many in winter time, their influence in spring and summer time is not to be underestimated. I am inclined to think that our brother pharmacist, although he meant it well, has been a wee little bit too pessimistic in his warning.

K. RIVER.

A PRYING CENSUS.

New York, May 27.

Editor The Pharmaceutical Era:

The protests against the variety of information demanded by the census, made by representatives of manufacturing houses at the monthly meeting of the drug trade section of the Board of Trade and Transportation were none too strong. These protests should be made as forceful as possible and there is no time to be lost if these protests are to be effective. From now on there should be a stubborn fight to induce the Bureau of the Census to modify the schedule of interrogatories, so that they will not be of an unfair nature and so strongly suggestive of a disposition to pry into the affairs of manufacturers to an extent which should not be permissible in this country.

There is no disposition to evade questions whose answers are rightly needed to help complete the census reports, but there are certain secrets which every manufacturer has, which the government has no right to ask him to lay bare. It is these secrets that he seeks to protect, and to do so the Bureau must be made to modify its list of questions. The effect of the answers to many of the questions which are to be asked, will be merely to litter up the reports with a useless mass of data which can be of absolutely no value to anyone. This unfavorable feature should

be considered, in addition to the fact that many of the questions are little short of impertinent. The value of the census of 1890 was largely impaired by the amount of useless matter which was incorporated in the reports, and which had only the effect of making them more bulky and the indexes more complicated.

The officials who have charge of the census do not seem to have profited by this experience, for they are apparently falling into the errors which were made by their predecessors. Loading the census reports with answers to questions of a prying character, which seek to get at the legitimate secrets of any trade, is to be condemned as unfair and as an indication that the results will not be as satisfactory, as if those who have charge of collecting the data confined their efforts to securing and classifying statistics which may properly be made a part of the government records. Any attempt to go beyond this will surely result in the accumulation of much unreliable information, which is not based on fact, and will have a tendency to destroy the very basis of a census which is to be of any value to the manufacturer and merchant, and that is accuracy. The asking of unfair questions is one way of putting a premium on perjury, for it cannot be expected that the weaker brother is going to reveal trade secrets which will enable his rival to successfully compete with him.

MANUFACTURER.

STREET MEDICINE MEN.

Newark, May 29.

Editor The Pharmaceutical Era:

With the mating of the birds and the coming of the spring blossoms, the itinerant medicine man hears the call of the wild, gathers up his kit and sallies forth in search of the quarters and half dollars of the hypochondriacally inclined. He is in his glory in this city. Here he finds his haven of rest and his harvest of coin, for the unsophisticated Jerseyman, sharp in many things, is ever ready, it seems, to listen to the tale of the man with the cure-all. Apparently there is none to say him nay. In some respects, Newark is more provincial than the smallest village, and the glare of the gasoline lamp and the shrill voice of the medicine vender seem to possess unheard of charms for the dwellers on the banks of the Passaic.

With the tin badge which is issued by the license department as the shield by which he is to ward off the too inquisitive policeman, he sets up his stand nightly in front of the old court house and beneath the shadow of the new two million dollar temple of justice, and there he shouts the merits of his seven roots, herbs and barks to whosoever comes within the range of his penetrating voice. His audience is not confined to half-grown boys and girls, or to spouzy couples out for a stroll, but men and women with money to spend, gather around and listen to his tale of the wonderful merits of his medicine. His oily tongue coaxes from their pockets money that might be put to better use, and nightly he gathers in the shekels until they amount to much more than the cost of the license and the bit of oil which he burns.

The medicine men know Newark for a good spot, and few of them fail to visit this town. Sometimes as many as three

hold forth on the court house plaza on a single evening. From the amount of the nostrums purchased, the citizens of this town must be afflicted with nearly as many ailments as were visited upon the patient Job. With no rent to pay, and only a nominal license fee, it is not surprising that they flock here, as long as they get so much encouragement and support. Perhaps, it doesn't injure the legitimate drug business, but it surely does not help it any.

AN OBSERVER.

PHARMACAL JURISPRUDENCE

San Francisco, May 24, 1905.

Editor The Pharmaceutical Era:

Dear Sir: Permit me to thank you for your kindly and discriminating review of my little book on Pharmacal Jurisprudence (May 18, Era, page 562). It may interest you to hear the point of view of the author, relative to some thoughts presented in the review.

The book was designed to be of use to the college student, the practicing pharmacist and the practicing lawyer. The thesis is for the student, wholly unfamiliar with the law, in order that he may prepare his mind by a glance at the general principles and nature of the law, before trying to understand one of its special applications; also to give him a general grasp or "bird's eye" view of the laws of his country, such as is properly a part of the education of every citizen.

It was my plan (imperfectly carried out, I know) to present a principle of law so simply that the pharmacist might himself apply it to cases arising in his daily experiences, and so avoid encumbering the work with specific questions. For instance: Your question, "Would a man who handed over a doctor's prescription to a friend suffering from the same complaint be prescribing or violating the law?" would come within the principle stated in the second paragraph on page 108. The man would be diagnosing and prescribing, and it would not matter whose prescription he used; though he might have another question to settle concerning his right to use the prescription.—Page 239-240.

In order that the book might be useful to lawyers, it was necessary to give the case law as stated by the court, hence the quotations; it is also good for the student to have the line of reasoning leading up to a decision.

The case law, except where it interprets a local statute, is the same in the different States, nearly so in England and Canada, and could be applied, with slight modification, in most other civilized countries. It would be almost useless to publish the statutes of the several States, verbatim, since they are so frequently altered. Their general principles are nearly the same in all of the States, and one must watch the action of the Legislature.

Very truly yours,

H. R. WILEY.

China's First Patent.

It is stated that China has granted its first patent, the invention being an electric lamp which the inventor calls the "bright moonlight." The comment is made that the entrance of China upon the granting of letters patent is undoubtedly of more importance than the invention.

DIPLOMA AS PREREQUISITE.*

Associations Warned Against Idea as Wrong in Principle.

The recent action of the Association of American Medical Colleges in adding the possession of a high school diploma to the prescribed qualifications for entrance to medical colleges, is evoking strong protests from fair-minded practitioners and from members of medical boards. This action illustrates the extremes to which the medical colleges are disposed to go in the assertion of their authority. But, protest as loudly as they may, the members of the boards and of the profession at large, find themselves powerless to provide a remedy.

The provision which during the past ten years has become an integral part of nearly all State medical practice acts, requiring that no person other than a graduate in medicine can appear for a State medical examination, has, in effect, divested the medical boards of supreme authority in determining the qualifications required for medical practice and has delegated this vital authority to the colleges.

The association of medical colleges is virtually a medical educational trust, however absurd may be the prescribed entrance requirements to the colleges, however unjust and mischievous the conditions, the medical boards can do nothing. By making a medical diploma a specific condition of appearance for a board examination and by placing no limit on the requirements for entrance or graduation, the law has elevated overboard control over all licenses or certificates to practice, not a representative State board, answerable to the people, the executive and the members of the profession as citizens, but any group of men who may get together as one of the medical colleges in the American medical combination—a group answerable neither to the State nor to the executive, nor to any part of the people, save the fragment in control of the medical schools.

This situation, aside from the peril always attending the usurpation of a governmental function by a private agency, is a wrong which threatens the very life of all rational medical legislation in every State. Bigotry and intolerance have marked the rule of the colleges to such a degree that the medical practice acts are being amended in the interest of the osteopaths and "scientists" and every manner of cult and vagary, until disaster faces all legislative progress achieved in the past. This evil tendency, in its acute form, dates from the time of the diploma, before examination craze, and can be remedied only by re-establishing the supremacy of the State, through the proper boards, in determining the qualifications essential to a medical license and forbidding the delegation of an authority essentially governmental, to private corporations.

Wide legislation demands as a fundamental principle that the power of license shall never be made subservient to a teaching institution whatever its prestige and strength; that the licensing board

shall be free and untrammelled in determining who is and who is not fit to practice, and that the sole question as to any candidate shall be, "Is he qualified?" and not "Has he a college or other diploma?"

What is true of medical legislation is also true of pharmacy legislation. As the latter has followed closely in the footsteps of the former, it is especially important at this time that pharmacy carefully avoid the errors of its ill-advised sister profession.

If it be said that the boards of pharmacy are not composed of men of the education and training to do the work assigned them, then we say, improve the boards; if it be said that the present system of examinations does not examine, then let the system be modeled after that of the colleges and universities where the testing virtue of examinations is unquestioned; if it be said that with rare exceptions, those applicants can only hope to pass the examinations who have had a college of pharmacy education, then let the boards so rule; let them speak with emphasis and warning, but do not let this revocable ruling by a judicial State board give way to a statute vesting the power in a private institution by direct right.

And finally, as a matter of individual right, do not deny to the "rare exceptions" the opportunity to prove their qualifications by a direct road to the board examinations. The man who is qualified has an inherent right to practice; it is the concern of nobody where he obtained his education; whether by study in the store or in the school room; whether by a year of experience under the eye of a Professor or Malsch or of the humblest devotee of pharmacy in the land; whether in Illinois, or New York, or Louisiana, or California, or Great Britain, or Germany, or anywhere between the north and south poles—it matters not what or whose stamp the qualifications passport may bear, the passport carries with it a natural and inalienable right, subject to no just abridgment by law board or institution. The direct road to the royal presence may be unpromising and hard, but even royalty will find it the part of wisdom to keep the road open. Pharmacy has no need of putting on aristocratic airs and surely has no desire to close the door of opportunity to any worthy disciple of the faith.

Let the colleges of pharmacy continue on in their good work; let them be given all encouragement; let the boards of pharmacy attach all due importance to their diplomas as indicative of professional competency and trustworthiness; let the boards even rule, if they must, that the absence of a diploma will be deemed presumptive evidence of incompetency, to be overcome only by a special extra examination, but let them preserve their independence as the representatives of the State; do not shackles them with college handcuffs; leave them free to name the conditions under which applicants may appear for examination and to name also the qualifications for entrance and for registration; let them in all their examination work be at full liberty at all times to take account of the contents of the package rather than of the wrapper, of personal merit rather than of its paper certificate.

Let it be clearly understood that we

yield to no one in our estimate of the value of a good college education or of its importance as a determining factor in qualifications for registration. For the same reason, however, that a college diploma in the interest of the colleges themselves, of the professions and the people, is not accepted as sufficient for State license without a board examination, it is in the common interest of all that a diploma should not be the only road to an examination. But if it be made the only road, then let it be by a hard ruling and not by the law direct. A board ruling, if done unwise, can be readily changed. Emanating from State authority, it is amenable to public and professional sentiment, and as regards pharmacy laws, it means in effect a ruling formulated by the druggists of each State and the retention by them of appellate powers they cannot in justice to themselves delegate to an outside authority, over which they have no control. Only by keeping the boards in supreme control can the druggists, to whom the boards owe in such great measure their creation and success, maintain that measure of control over registration conditions to which it is universally conceded they are entitled.

We have not thus far referred to the diverse conditions resulting in the only State which has thus far adopted a statutory edict for what should be at most a board ruling; nor have we discussed the certain effects on the drug business of legislation calculated to deny opportunities to thousands of young men who have the misfortune to be poor, or whose fathers may have less of ready money than of willingness and ability to do for their sons the work of college training; neither have we discussed the effects of such legislation in diminishing the supply of drug clerks far below the demand, and thus causing an abnormal increase in the cost of clerk hire, which even under present conditions in many States, has become a burden of pressing weight. Our present purpose is merely to point out a few of many reasons why the State Pharmaceutical Association, at its ensuing annual meetings, may guard against being captivated by an idea as fundamentally wrong in principle as it has proven pernicious in practice.

Quality of Senna.

In a paper read before the New York section of the Society of Chemical Industry, last month, Russell W. Moore, chemist at this port, stated that importations of senna are generally of good quality, and there appears to be no great necessity for frequent analysis. For customs purposes 10 grams of the drug are boiled in a litre flask with water, and the contents of the flask made up to the mark and thoroughly mixed; 200 cc. are filtered off and evaporated to dryness on the water bath and the residue dried in the steam oven to a constant weight. Attempts to extract with water in a Soxhlet tube were unsuccessful, as the extraction was extremely slow, and even on long continuance was incomplete. The Treasury regulations require 28 per cent of "soluble matter." The following results were obtained from six different samples: 34, 37, 32.75, 39.00, 38.54, 39.44 and 32.28 per cent. soluble matter; average 37.06 per cent.

*Reprinted from the Western Druggist.

OPIUM CULTURE.

The Gathering and Preparation of the Drug Described.

At Pantia, Benares, Malwa, in Indo-China, in Persia or in Java, is cultivated only the *Papaver somniferum* under the varieties Boissier, *setigerum*, *glabrum*, *album*, with purple, white or hairless flowers.

The temperate climates, humid up to the time of harvest, conduce to this culture in the sub-tropical zone, practiced, however, below the tropics, but at altitudes varying from 1,500 to 2,000 meters. In the English Indies, it extends from the 25th to the 27th degree, north latitude.

The most appropriate soils are alluvial and marly, quite permeable, rich in potash, and as the poppy requires considerable manure the neighborhood of towns is chosen by preference. If needed, an artificial dung is supplied, with a base of superphosphate and nitrate of potash; in addition, in case of insufficient rain, irrigation is provided by means of a stream, river or canal.

The seeds are sown in autumn, the harvest is made in March. Flowering is rapid. In the English Indies, three days after the budding of the flowers, the petals are detached by hand, reduced to a paste and used under the name of leaves, to envelop the leaves of opium of Bengal, to which they give their particular aroma. The eight or ten days which follow suffice to develop the capsules, from which the milky juice is extracted by repeated scarifications, not going beyond the thickness of the epicarp. The moment is seized when they commence to turn yellow, without waiting for full maturity. The duration of the process varies from fifteen to twenty days, during which a clever workman gathers, each day, 150 to 200 grams of juice; the yield may be valued by the hectare at 15 kilograms.

The countries which produce and export the opium of smokers are Persia, the English Indies and Macao, a very small Portuguese colony situated in the neighborhood of Hong-Kong, China, Indo-China and Java produce it also, but in quantity insufficient for their consumption. The imported drug varies in form according to its origin. Thus one finds it in rectangular leaves, elongated, enveloped in maize or other leaves, more often in spherical buds surrounded by leaves (Patna, Benares).

The extract is obtained at Halphong by the ordinary procedure, which consists in macerating in water the dry opium cut into thin slices and evaporating the filtered liquor to a firm consistency, but with such precautions that a man is needed to handle each basin.

The crisping requires still more skill. The firm mass, settled at the bottom of the basin, is beaten with a pestle until reduced five or six centimeters in thickness, is reversed on itself and exposed to the direct action of a charcoal furnace. The workman lifts, with a clip of his finger-nail, a corner of this solid mass, which represents quite well the form of a pancake of a uniform thickness of two millimeters. The operation is repeated and the pancakes, dried over a bamboo fire, are freshened by the water which precipitates the resinous matter and the meconate of calcium.

It is this decanted and filtered liquid which gives, by evaporation to the consistency of a smooth extract, the opium of smokers, known in Indo-China under the name of Chandoo. It is turned into bowls and beaten for several hours with large spatulas, in order to incorporate the air whose oxygen, specialists say, deepens the color and accentuates the perfume.

Left to itself, the air incorporated by the beating, forms in escaping, a layer of bubbles, which sometimes make up one quarter of the volume of the mass.

This layer of air disappears in ten days. The Chandoo, in drying, becomes cloudy at the surface of the inevitable *Mucor mucedo*, mould which is taken up on the spatula, to be treated with boiling water which is added in succeeding operations.

The average yield of the above operations may be valued at 50 per cent. In Batavia, where the perfected equipment of tools substitutes machinery for man, where electricity displaces the recent boilers, it reaches 56 and 60 per cent.

Such is the opium of smokers; in color, black, glossy, perfumed, sold by the State in sealed metallic boxes, having a capacity of forty grams.

The official opium of Egypt, Smyrna or other oriental countries, whose standard is raised to 10 per cent. on an average, cannot be used and is not able in any case, to compete for this purpose with that of the English Indies, Persia or China, which owe their peculiar qualities, aroma and chemical composition to the nature of the soil, climate, etc.

The culture of the poppy, the preparation and sale of opium are the subject of a system of regulation varying with the country, but analogous, in general, to that of the tobacco monopoly in France by the State.—M. Claude Verne in Nouveau Remedes.

THEORY AND PRACTICE

Perborate Solutions.

Solutions of different strengths of hydrogen peroxide may be obtained from perborate within five to ten minutes. From a trade circular of the Roessler & Hasslacher Chemical Co., this city, we take the following data:

As heat above 110° F. will involve a slight loss of oxygen before the solution is completed, it is preferable to use acids instead of heat, if higher concentrations are desired. Experiments have shown that to obtain good bleaching effects perborate solutions of 1 to 3 per cent. work most

satisfactorily. One advantage perborate offers over the peroxide of hydrogen bleach, is that in order to start the action of oxygen no addition of ammonia or an alkali is needed. It is advisable before actual use to repowder the perborate, should it, through exposure, have become caked.

In the schedule at the foot of this page the weights are given for tartaric and citric acids. For commercial purposes sulphuric acid may be economically used, instead.

The sulphuric acid solution should be filtered. In using for the same solution 110 instead of 75 cc. H₂SO₄ of 66° B and adding to the filtrate 75 to 80 grs. perborate, a hydrogen peroxide solution of 50 vols. may be obtained.

Cocaine Identification.

C. Reichard gives the following new reactions for the detection and identification of cocaine:

(1.) If to a rather concentrated cold solution of a cocaine salt a solution of sodium nitroprusside be added, the solution becomes turbid, and, with the aid of a magnifying glass, small crystals of a reddish color can be noticed in the liquid. Morphine salts do not give this reaction.

(2.) If to a quite concentrated solution of cocaine hydrochloride a strong solution of uranium nitrate be added, a yellow crystalline precipitate is formed which is most probably a double salt of cocaine and uranium.

(3.) If some titanic acid be dissolved in warm concentrated sulphuric acid and to the cooled solution be added some cocaine hydrochloride, there is no reaction whatever in the cold, even on prolonged standing. But if the mixture be warmed in a porcelain dish till stripes and oily drops appear on the sides of the vessel, a beautiful blue or violet color is developed, which is very stable. On adding water to the liquid a blue precipitate settles at the bottom of the vessel. The reaction is undoubtedly due to the reduction of titanic acid by the methyl alcohol formed in the saponification of the alkaloid by the sulphuric acid.

(4.) If to a mixture of potassium methylsulphate and sulphuric acid a little cocaine hydrochloride be added and the mixture warmed, a strong peppermint odor is developed which is permanent for a long time.

(5.) On warming cocaine hydrochloride with a mixture of urea and sulphuric acid the mixture assumes a blue color, which becomes deeper as the temperature rises. If in this reaction ethylene diamine be substituted for urea, there is first an evolution of hydrochloric acid, but on applying heat the blue color appears.—Chim. Ztg.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Thermite.

(Thermite).—"Thermite" is a fanciful name for a mixture of aluminum and oxide of iron in fine powder and in chemical proportions. The honor of coining the name is generally attributed to Dr. Hans Goldschmidt. Other oxides are also employed.

The history of thermite dates back to 1804, when Claude Vantin, of London, made use of aluminum mixed with metallic oxides, sulphides, chlorides, etc., to effect a corresponding reduction of metals with which oxygen, sulphur, or chlorine might be combined. He found on mixing aluminum in a finely divided state with these bodies, that the mixture when heated in the crucible to a sufficient temperature would react and that the mass would attain an intense heat, in virtue of the enormous heat developed by the oxidation of the aluminum. So great was the temperature, that metals ordinarily intractable and infusible, such as chromium, could be reduced and obtained in a compact form. Not only this, but the absence of carbon made it possible to obtain many metals with a degree of purity hitherto unknown. One drawback, however, resulted from the very great temperature set up, namely, there was risk of losing a large proportion of the contents of the crucible, which was apt to be more or less violently projected into the air.

The next stage in the development of this subject was made by Vantin a little more than two years later. Instead of heating the materials in the crucible up to the point at which reaction begins, he ignited a portion of the cold mixture by the aid either of burning magnesium, or of a special ignition powder, consisting of finely divided peroxide of barium and aluminum. This mixture is claimed to be specially valuable for creating high temperatures, because the peroxide of barium is quite ready to give up its extra atom of oxygen, and the product, namely, baryta and alumina mixed, is solid, so that there is no loss of temperature, owing to the latent heat of a liquid, or still more so of gas. A little of this mixture, which is easily lighted by a match, may be placed upon the mixed oxide of chromium, manganese, or whatever the metal may be, and aluminum, and ignited. The local heat is so intense as to start the reaction in the mixture in immediate contact with it. The heat produced by this is so great as to

set up the reaction in surrounding quantities, and so a combustion gradually proceeds through the mass, after which the metal is found at the bottom of the crucible, in a pure melted state, and the alumina, or oxide of aluminium, remains, floating on the surface.

Nearly three years later Dr. Hans Goldschmidt, named above, described a further invention for utilizing the heat of the reaction for the purpose of welding iron, steel, etc.

Cinchona Assay.

(Student).—Most any work on pharmaceutical assaying will give you methods for assaying cinchona bark, and you should read what the dispensatories have to say on this subject. The following comments on the U. S. P. method are from a contribution by Professor Virgil Coblenz, to *The Era*, some years ago:

The U. S. P. method (Prollius) of assay for cinchona consists in macerating a weighed quantity of the powdered bark with a measured volume of Prollius' fluid, which consists of a mixture of alcohol, chloroform and ammonia water. The combination of the alkaloids which exist in the barks as cinchonates is broken up by the ammonia water, liberating the free alkaloids, which are taken up by the chloroform and alcohol, in conjunction with some coloring matter and extractive. An aliquot portion of this filtered solution is then drawn off, evaporated to dryness and dissolved in an excess of normal sulphuric acid and water, and filtered to remove the insoluble matter. Then a sufficient quantity of normal potassium hydrate solution is added to the filtrate until the liquid has become of an alkaline reaction, whereby the total alkaloids are thrown out of solution. These are dissolved by shaking with chloroform in several portions, until no more alkaloids are taken up. The united chloroformic solutions are then evaporated in a tared beaker and dried at 100° C. This gives the weight of total alkaloids.

The proportion of quinine in this residue is estimated by a very simple process, depending on the relative ready solubility of quinine (1 to 25) and quinidine (1 to 34) in ether, while cinchonidine (1 to 188) and cinchonine (1 to 371) are comparatively insoluble. Quinidine occurs in such small quantities that its solubility is not regarded. A measured volume of the chloroformic solution of the alkaloids is poured over some powdered glass and dried; this serves to distribute the alkaloids over as much surface as possible, for facilitating the solvent action of the ether, which is added in portions and filtered off until 10 cc. are collected (marked A); then a second portion of ether is poured over the residue and a second 10 cc. are collected (marked B). These reserved filtrates are evaporated to dryness and weighed. The residue A contains the ether soluble alkaloids (quinine with little or no quinidine) with a portion of those less soluble, while the residue B will consist almost entirely of the ether insoluble alkaloids (cinchonidine and cinchonine). From the amount of residue obtained from A deduct that contained in B; this gives practically the total amount of quinine in the alkaloidal residue.

Sealing Wax.

(C. W.).—A number of formulas were printed in *The Era* of September 19, 1901, page 337. Here are some others:

Yellow.—Shellac, 76 parts; turpentine, 85; pine resin, 45; gypsum, 15; chalk, 15; ochre, 45. The shellac used for fine qualities of yellow sealing wax must be bleached, otherwise it is impossible to produce a pure tone of color. All gradations of yellow, from orange to red, can be produced by adding cinabar or chromed to fine qualities and red lead (minium) to inferior qualities.

Green.—Shellac, 50 parts; turpentine, 40; pine resin, 80; gypsum, 15; chalk, 20; mountain blue and ochre, mixed, 30. Green ultramarine may also be used to advantage for the finer qualities in place of a mixture of pigments. In the above formulas the quantities of the blue and yellow pigments to be used are not given separately, as the different shades of green may be obtained by varying the quantity of each pigment.

Blue.—Shellac, 70 parts; turpentine, 60; pine resin, 35; magnesia, 10; chalk, 20; blue coloring matter, 20 to 25. Light colored ultramarine or mountain blue is used for light blue varieties, Berlin blue for the darker kinds. Blue sealing wax of a lighter color, produced by mixing Berlin blue with oxide of zinc or nitrate of bismuth, has a very beautiful enamel-like appearance. As blue colors are very sensitive towards admixtures, bleached shellac should always be used, if it is desired to obtain sealing wax of a beautiful color, and the greatest care must also be exercised in the choice of the pine resin. Opaque and brown colored resin must never be used.

Brown.—Shellac, 70 parts; turpentine, 60; pine resin, 40; gypsum, 20; chalk, 20; amber, 20. The shellac used for preparing delicate chocolate brown sealing wax must not be too dark. The product of the above formula is dark brown, and unbleached shellac and dark resin may be used for preparing it. Of course, the same holds good in an equal degree in regard to the following varieties:

Black.—(1) Shellac, 50 parts; turpentine, 90; pine resin, 65; chalk, 40; lampblack, 12. (2) Shellac, 80 parts; turpentine, 60; chalk, 15; gypsum, 10; Frankfort black, 35.

Foam Producer.

(F. W. R.).—"I have been looking over a copy of *The Era* just received. About the first article my eye dropped on was a soap bark formula for foam for soda water. How can you expect me to subscribe for your paper when you publish such a formula as this? Now I am going to give you a good one, which is harmless, but be sure and don't let any one find it out except your subscribers. It is 'fluid extract of glycyrrhiza, one dram to the gallon.' This quantity works all right except for lemon and sarsaparilla."

We thank "F. W. R." for his kindly comments. At the same time we would state that the use of soap bark as a foam producer for soda water has the sanction of good authority, and for the purpose, it is used, perhaps, more extensively than any other agent. On this point the author of "Manual of Soda and Other Beverages" states that "of all these 'foams' the thic-

ture of soap bark is most generally satisfactory, and most convenient. True it is that it contains an irritant principle, saponin, which will make itself felt if added in too large amount to syrups." However, the suggestion to employ fluid extract of glycyrrhiza is not a new one. In the early part of 1896 Charles H. Bowersox, Columbus, Ohio, contributed an article to *The Era* on "Licorice as a Foam Producer for Soda Water," in which he recommended its use for the purpose, stating that he had found it superior to anything that he had ever tried. Six to eight fluidrams to the gallon of finished syrup were the quantities named by him. To those who objected to a slightly dark color which the fluid extract imparted to such syrups as lemon, pineapple, etc., Mr. Bowersox recommended the use of a solution of gum arabic, which in his hands, he stated, had proven more satisfactory than any other.

Laundry Gloss

(R. P. S.)—"Please publish a few formulas for laundry gloss that can be sent through the mails."

Two formulas for laundry gloss in cake form were printed in *The Era* of May 4, 1905, page 496. Here are three formulas for "powdered gloss":

(1.)

Boric acid	5 ounces
Borax	3 ounces
Stearin	1 ounce
White wax	1 ounce
Starch, a sufficiency.	

Heat together with sufficient caustic soda to give a clear solution, then evaporate to dryness. Powder and mix with fine starch powder in the proportion of one to ten.

(2.)

French chalk	3 ounces
Powdered white soap	1 ounce

Take a piece of new dry flannel and dip it into the glaze-powder, rub it well over the right side of the starched article, then proceed to iron in the usual way, when a beautiful gloss will be obtained. Put in a little borax in making the starch to give stiffness as usual.

(3.)

Powdered borax	1 dram
Powdered spermaceti	1 dram
Powdered French chalk	6 drams
Mix and sift.	

Green Mountain Oil.

(A. R. W.)—A formula for a liniment under the above title, in use in some parts of the country, is the following:

Oil of sesame	16 ounces
Oil of peppermint	1½ ounces
Oil of gaultheria	2 ounces
Oil of spearmint	10 minims
Oil of sassafras	3 ounces
Oil of cassia	20 minims
Oil of eucalyptus	10 minims
Menthol	30 grains
Chlorophyll	30 grains

Mix all of the oils except the sesame, and put in the menthol; dissolve the chlorophyll in 4 ounces of oil of sesame by the aid of heat; mix the two solutions; add the remainder of the oil of sesame, and filter if necessary.

Kola for the Soda Fountain.

(P. H.)—Kola may be employed in various combinations at the soda fountain. We give several formulas that have been published, but any one of them may be modified to suit individual tastes. Any fanciful or catchy name may be employed. Try one of the following:

KOLA FIZZ.

Fluid extract of kola	2 drams
Grape juice	8 ounces
Pineapple syrup	6 ounces
Fruit acid	1½ ounces
Syrup, enough to make	1 quart

KOLA FERRONE.

Iron and ammonium citrate	48 grams
Water	2 ounces
Fluid extract of kola	2 drams
Syrup of lemon	
Syrup of vanilla, of each	7 ounces
Serve solid in 8 ounce glasses, using one ounce of the syrup for each glass.	

KOLA MINT SYRUP.

Kola cordial	1 ounce
Spearmint cordial	3 drams
Fruit acid	1 dram
Lemon syrup, to make	1 pint
Mix. Trim with sprigs of fresh mint.	

KOLA TONE.

Fluid extract of kola	½ ounce
Port wine	1 pint
Tincture of celery seed	1 ounce
Raspberry juice	4 ounces
Fruit acid	1½ ounces
Soluble extract of orange.	2 ounces
Syrup, to make	1 gallon

Use 1 ounce of this syrup in an 8-ounce mineral glass one-third full of crushed ice. Serve "solid" with straws.

We do not answer queries by mail.

Angostura Bitters.

(G. D. C.)—Very many formulas have been published for making tonics containing the bitter principles of angostura bark. One much used in England is the following:

Soluble essence of orange	2 fl. ounces
Soluble essence of lemon	2 fl. ounces
Conc. infusion of cusparia	3 drams
Orange wine, to make	10 fl. ounces
Another formula is this one:	
Angostura bark	4 ounces
Orange peel, bitter	8 ounces
Anise seed	1½ ounces
Cascarilla	1 ounce
Cinnamon	1 ounce
Cardamom	½ ounce
Cloves	½ ounce
Nutmeg	½ ounce
Coriander	½ ounce
Glycerin	4 fl. ounces
Diluted alcohol, enough to make	½ gallon

Mix the solids, reduce to a coarse powder, and extract with the diluted alcohol and glycerin by means of percolation.

Filling Device.

(G. T. R.)—"Please suggest some inexpensive home-made device for bottling a preparation containing a sediment. I do bottling in a small way for my retail trade and I find it is very inconvenient without some kind of a device."

A practical pharmacist and one who had considerable experience in bottling, informs that there is no machine much better for bottling sedimentary liquids on a

small scale than an ice cream freezer to which has been soldered a spigot for the withdrawal of the liquid. A similar contrivance with revolving paddles to keep the liquid in agitation might be easily devised, or it is possible that you might secure a satisfactory mechanism by writing to manufacturers of pharmaceutical machinery, like the A. W. Strath Co., 3737 Filbert street, Philadelphia; John W. Ayers & Son, 144 Centre street, New York, or Mead & Co., Nineteenth street and M. C. R. R., Station B, Detroit, Mich.

Information Wanted.

(A. M. L.)—"Name and address of the manufacturer of 'pulmonic cordial'?"

(P. H. S.)—"Where can I buy benzoin-form. I can find no quotation in any list I have at hand?"

New Uses for Acetylene.

New uses for acetylene have been looked for some time. The latest invention is its use as an explosive. By means of an air mixture, explosive force is obtained which can compete with that of powder and dynamite. Calcium carbide is reduced to small particles and put into a cartridge, consisting of a tin box. In this the carbide lies at the bottom and above it is a partition filled with water. Above this is a vacant space with an electric percussion device. An iron pin on the side of the cartridge enables the partition between the carbide and the water to be pierced after the cartridge is put in place. The acetylene is then ignited by an electric spark. The process is employed for blasting rocks. About 1.7 ounces of carbide, which produce 16 quarts of acetylene gas, are used in each cartridge.

OUR OFFICE BOY ON DRUG STORES.

Drug stores is places where nasty medcins and poyrins is mixt & where you can drink ice cream sodas if you have enuf munny. Medsin has a boribel smell & taste & generally speakin' a more painful effect. People that takes medsin mostly always dies, & the only ones that can take it with impunitie is men with a jag. Boys never go to a drug store for medsin, if it is for themselves, unless they has toothake. If it is sinnly or kastor oil there fathers has to go. Grown ups never take kastor oil unless they have whiskey in it, abuv & below. Men will never go fur a feedin' bottle bekaus the drugist would laff. The only thing drug stores is good fur, in my opinyon is for sigars & Sigrets. If I was a drugist I wud smoke them all day, eksept when I was drinkin' ice cream sodas. Drugists kep chlorform. I herd pa talk about it. He said he wud like to chlorform Aunt Jemina, as she was an old cat. I thot I wud like to chlorform our cat fur an eksperimint, so I went to a drug store and asked the man for 5c worth. He asked what it was fur, so I told him & a gurl that was in the store slopped m'eres & sed "You krule and Wildid boy." I cud not bit a gurl, so I just knocked over a large bottel of strong amoniah & walked out with dignity. The drugist told pa and he spanked me so hard that I cant sit down. When I can resoom m' sent, I am goin' to study to be a drugist, & make ertrubdy suffer that has kaused me pane.

LAXATIVE BROMO QUININE

ON THE

DIRECT CONTRACT, SERIAL NUMBERING PLAN.

Among the universally sold articles — the staples in the Drug line during the past ten years, none has received greater support of the entire Retail Drug Trade than **LAXATIVE BROMO QUININE**.

The manufacturers fully appreciate this, and in keeping with the policy of allowing from the beginning a profit of one hundred to one hundred and thirty per Cent. **LAXATIVE BROMO QUININE** has been placed on the **DIRECT CONTRACT SERIAL NUMBERING PLAN**, as the best discovered means of assisting every legitimate Retail Druggist to maintain this profit under the conditions which he now has to face.

At great expense, not only of money but most complicated labor, the manufacturers have been proceeding quietly for some months to put this plan in operation. A majority of the druggists throughout the country already have signed and returned the contract and the names of hundreds of other druggists who sign and return the contract, are being added to the list every week. The results obtained up to this time insure success to the effort, and in order to make the Plan effective to the greatest possible degree, it simply remains for every Retail Druggist to realize that his individual co-operation is essential. Every Druggist who has not signed and forwarded the contract on **LAXATIVE BROMO QUININE** should take such action immediately.

If a supply of **LAXATIVE BROMO QUININE** is needed or if the stock on hand will permit it, the extraordinary **DATING OFFER** now in force enables the Druggist to purchase a quantity of **LAXATIVE BROMO QUININE**, obtaining the regular free goods, to be delivered at once and invoice dated November 1st, 1905, for cash discount.

LAXATIVE BROMO QUININE

Price \$1.75 per dozen.

6 dozen lots,	1 dozen free,	Cost	\$10.50	or	\$1.50	per dozen
12 dozen lots,	2 dozen free,	5% trade discount,	"	\$19.95	or	\$1.43	" "
36 dozen lots,	6 dozen free,	8% trade discount,	"	\$57.96	or	\$1.38	" "
60 dozen lots,	10 dozen free,	10% trade discount,	"	\$94.50	or	\$1.35	" "

All Wholesale Druggists will accept orders under this **DATING OFFER**.

PARIS MEDICINE COMPANY,

Saint Louis and London.

NEWS SECTION

NEW CLAIM IN PARK SUIT.

Present Complaint Does Not Refer to "Patent Medicines."

ORIGINAL BILL AMENDED SO AS TO PRESENT AN ENTIRELY NEW STATE OF FACTS, SAY ATTORNEYS. —PATENT MEDICINES ARE NOT PATENTED, HENCE COMBINATION IS UNLAWFUL.

Argument in the new suit of John D. Park & Sons against an alleged drug combination, consisting of the N. W. D. A., N. A. K. D., F. A. of A., etc., was heard last Wednesday before Justice Platt, in the United States Circuit Court for the Southern District of New York. Elihu Root, who with Morris & Fay, of this city, is counsel for Park, argued against the plea of the defendant, who claimed that the judgment of the New York Court of Appeals two years ago, prevents Park from bringing a new action. The original complaint, say the big cutter's attorneys, has been amended so as to present an entirely new state of facts, which they believe will result in a decision favorable to them.

"If the decision is in favor of Park," said Mr. Fay to an Era reporter, "the effect will be to hold that the decision of the Court of Appeals two years ago, finding the combination lawful, is not applicable to the facts as set up in Park's present suit, and will substantially hold that Park is entitled to relief on the different state of facts averred."

RIGHTS OF THE PATENTEE.

The Court of Appeals, it will be remembered, sustained the legality of the alleged combination, because the subject of complaint was "patent medicines" and the right to fix prices, it was held, was one of the rights of a patentee. One of the substantial differences in the present bill, Mr. Root claimed, was that the class of goods named are none of them patented, hence the action of the association as to these goods is illegal. A further ground of difference claimed is the tri-partite plan, which has come into existence since the former suit.

"These so-called 'patent medicines,'" said Mr. Fay, "are no different from so many bags of flour. They are simply merchandise which has acquired an added value through persistent advertising. They are not 'patented' in any way. An analogous case is that of R. H. Macy & Co. against the American Publishers' Association, in which the court held that the defendants had a right to fix the prices on copyrighted books, but not on uncopyrighted books."

Asked as to the status of the direct contract plan, Mr. Fay replied:

CONTRACT PLAN A DETECTIVE SYSTEM.

"I regard the contract plan merely as a sort of detective system, a means of trac-

ing goods. It is a part of the machinery of the tri-partite plan. That system, which is simply a plan to protect prices, has never been abandoned. It is only the various ways of carrying it out that have been changed.

"We don't purpose to attack the contract plan. That is only one of the branches, while we are striking at the very root of things, the idea of price protection itself. If we win, the whole tree falls to the ground."

"And if you lose?"

"We shall simply carry the case to a higher court."

HISTORY OF THE MACY CASE.

Concerning the suit of Macy & Co. against the American Booksellers' Association, alleging an unlawful combination to maintain the price of books, and which has frequently been referred to in connection with the Park suit, a report was made before the annual meeting of that association on May 16. It showed that Macy & Co. had been defeated on every point and was in part as follows:

"The Court of Appeals broadly conceded the right of publishers and booksellers to co-operate, as we are doing, to maintain the price of copyrighted books, but denied our right to decline to sell uncopyrighted books to price-cutters.

"Immediately on the filing of this decision, the reform resolutions of the Publishers' Association and of the Booksellers' Association were revised so as to eliminate all reference to uncopyrighted books. We then filed our answer, pleading the facts as they existed after our reform resolutions had been revised to conform with the decision of the Court of Appeals. This placed us in a position to try the case on the facts, even granting—for the sake of argument—the truth of all the facts alleged by Macy & Co., after having had the law decided in our favor by the highest court.

"Macy & Co. then demurred to our answer, and made a motion in the Supreme Court to compel us to broaden our answer so as to plead the facts as they existed at the time the action was begun—at which time uncopyrighted books were included in the penalty clause. This motion was argued last fall, before Justice Blanchard, who gave a sweeping decision in our favor—overruling the demurrer of Macy & Co."

A petition by Macy & Co., to carry a demurrer to the Court of Appeals was denied by the Appellate Division of the Supreme Court on May 12. There is now nothing for Macy & Co. to do but to try the case on the facts.

NEW YORK NOTES.

—Henry Galin, well known to the trade here as a pharmacist in the Marine Hospital Service, has been ordered to Washington, D. C., for special temporary duty.
—Brent Good, of the Carter Medicine Co., sails for Europe next Wednesday.

DEATH OF WILLIAM ZEIGLER.

Apoplexy Carries Off Head of the Royal Baking Powder Company

William Zeigler, the largest stockholder in the Royal Baking Powder Company, and one of the foremost backers of Arctic exploration expeditions, died last week at his country home on Great Neck Island, Noroton, Conn. His death was due to apoplexy. Mr. Zeigler was injured in a runaway accident a few weeks ago, and had never recovered.

Mr. Zeigler was born in Beaver county, Pennsylvania, sixty-two years ago. In early life he was a printer's apprentice, and later became a drug clerk, and then began the study of chemistry which made his fortune for him. After he had learned the printer's trade, he realized the deficiency of education, and took a course at Eastman's Business College, in Poughkeepsie. He began making a baking powder in 1870, which he peddled from door to door. With J. C. Hoagland and John H. Leal he organized the Royal Chemical Company, which developed into the Royal Baking Powder Company. The capital stock was \$60,000, and in 1880 it paid 70 per cent. dividends on 1,600 shares of \$100 par value. A year later it paid 100 per cent. In 1888, after a long legal fight, Mr. Zeigler sold his interest for \$4,000,000.

He went West and established the Price Baking Powder Company, which became such a rival of the Royal Company that a consolidation was effected between the Royal, Cleveland and Price companies, and at the time of his death, Mr. Zeigler owned a controlling interest in the new company, which was capitalized at \$20,000,000.

In November, 1903, Mr. Zeigler was indicted by the Missouri Legislature on a charge of complicity in the bribery of the Missouri legislators in 1901, when an effort was made to pass a law to prevent the sale of alum powders in Missouri. Nothing ever came of the indictment.

Mr. Zeigler made much money speculating in Brooklyn and Long Island real estate. His wealth is estimated at \$10,000,000. He fitted three expeditions for search in the polar regions.

G. A. S. OUTING, JUNE 8.

All arrangements have been completed for the outing of the German Apothecaries' Society, next Thursday, June 8. Excursionists are urged to be at the foot of Thirty-first street and East River promptly at 9.30 a. m., or at Ninety-first street at 10 a. m. The steamer will arrive at Karatsonyl & Kmetz's about 11 a. m., and then the fun will begin. There will be games for both boys and girls (small and large) and as the G. A. S. is noted for its jolly outings, the breeziest kind of a "time" is expected.

WANTS MUSIC IN DETROIT.

Frederick K. Stearns, of Frederick Stearns & Co., Detroit, who was in New York last week negotiating with Walter Damosch for "a musical Detroit," is anxious to establish an orchestra society there for the purpose of giving the city a series of high-class orchestral concerts. Mr. Stearns addressed letters to a number of prominent men in Detroit, asking their co-operation in his scheme.

He proposes that about one hundred citizens guarantee \$100 each toward any deficit that might occur. He would then be willing to go ahead with his plan, financing it himself, if necessary. Mr. Stearns believes that it would not be necessary to put up any money at first, as the advance sale of season tickets would furnish sufficient funds to start the undertaking.

In all this Mr. Stearns has a purely philanthropic and educational interest. He says:

"We cannot start an orchestra of our own—that is just yet; we cannot, all of us, go to Chicago, Pittsburg or Cincinnati to hear their splendid orchestras whenever we might feel like it, but I believe that we can bring these organizations to Detroit, if I can interest enough citizens who love good music or are endowed with sufficient civic pride to warrant me in undertaking a purely educational scheme of this kind."

SUE FOR HORSES' DEATH.

Suit has been brought by L. Ladin Kellogg and his son, McIntosh Kellogg, to recover \$1,533.50 from Harry S. Kovar, a druggist, on account of the death of two horses belonging to the Kelloggs, in 1902.

The plaintiffs say that on September 13 of that year, when the horses were in poor condition, they sent their coachman to Kovar's store for a quart of linseed oil with a few drops of turpentine in it. The coachman came back with the bottle, which he said the druggist had filled. The horses were given a dose of the mixture and died. The Kelloggs allege the druggist filled the bottle with boiled oil, which is a poison. Mr. Kovar denies this and says he is not to blame.

RED CROSS AS TRADE MARK.

Editor The Pharmaceutical Era:

You state in your issue of May 25th last, page 583, under "Red Cross Case Completed": "The defense of Seabury & Johnson is that Johnson was formerly a member of their concern, and originated the red cross as a trade mark. . . ." an assertion that is absolutely untrue. The statement as printed by you is decidedly misleading, and not at all in conformity with facts. The Red Cross trade mark used by Seabury & Johnson was originated and designed by myself alone and used by Seabury & Johnson before Johnson & Johnson were in existence as has been abundantly proven in this litigation; no other person had any part in creating the application.

I therefore ask you to give this correction the same prominent publicity that you gave to the erroneous statement printed in your last issue. Yours truly,

GEORGE J. SEABURY,
President Seabury & Johnson.

NO BOYCOTT.**McKesson & Robbins Do Not Think They Are Being Blacklisted.**

NOTHING NEW IN THE SITUATION. JUST NEWSPAPER TALK, THEY SAY. —DO NOT CONSIDER THE LOVELAND SHIPMENT EXCESSIVE.—TROUBLE WITH SHARP & DOHME HAS BEEN ADJUSTED.

Wild rumors were circulated last week about a boycott declared by the N. A. R. D. against the manufacturers and jobbers who insisted on selling to cutters. The basis of the long accounts printed in the daily papers was the trouble which McKesson & Robbins had with the Peruna Company, coupled with the statement that Sharp & Dohme had been cut off. The latter misunderstanding was satisfactorily adjusted on Saturday.

"Do you feel that you are the victim of a boycott?" Mr. G. C. McKesson was asked by an Era reporter on Monday.

Mr. McKesson smiled and replied: "No, I do not."

"Is your business being injured?" he was asked.

Mr. McKesson replied in the negative. In an interview in a daily newspaper, Mr. McKesson was quoted as saying:

"I am informed that our firm has been placed upon the cut-off list, but we have not been notified officially and will not be, for the association, while powerful, has no tangible official existence. Nevertheless it counts thirty thousand members, with paid agents scattered all over the country.

"What the charges against us are we do not know and have no means of finding out. The cut-off, or blacklist, formerly was published in the N. A. R. D. Notes, which is supposed to be the official organ of the association, although no responsible editors or publishers have ever been found. The government got hot on their trail, however, and the work of disseminating the cut-off list was turned over to a concern called the Roanoke Mercantile Agency of Chicago, which, I understand, has no corporate existence.

"Just what the effect will be upon our business we cannot tell until it has been in force long enough for us to get reports from our traveling salesmen and to tabulate our house orders. It stands to reason, though, that our business will be very seriously injured.

"The methods of the N. A. R. D. are very mysterious; they must be so to escape prosecution by the government for violating the laws relating to boycotts and other acts in restraint of trade. We have carefully complied with all the rules laid down by the association and are at a loss to understand why we have been blacklisted."

In reply to a question Mr. McKesson stated that the interview as reported above was substantially correct.

"But there is nothing new about the situation," he maintained. "It has only just reached the papers and they are working it up. That is all."

Speaking of the Loveland shipment and the published statements that his firm was wrong in sending an excessive amount of Peruna, Mr. McKesson said:

"I have explained all that already. The fact that Loveland was on the retail and

not on the wholesale list makes no difference. His letterhead showed that he dealt at wholesale as well as retail. We sent the Peruna one car-load at a time—300 dozen. What is 300 to a wholesaler? He knows that the more he buys the less it costs him proportionately. It is perfectly legitimate for anybody, wholesaler or retailer, to save as much money as he can."

One of the most prominent and best informed wholesale druggists in this city," according to one newspaper account; is quoted as saying:

"So far none of the facts relative to the McKesson & Robbins trouble has been made public—and probably none ever will be. If this concern had announced publicly when they first learned that they were on the cut-off list that they could prove to the trade that they had broken no agreements, verbal or otherwise, entered into with retailers and manufacturers, that they were not in sympathy with the methods of the N. A. R. D. and that they would fight the boycott in the open, I know that they would have had the support of practically every wholesale drug house in this city.

"It is well known that I am opposed to the principles of the N. A. R. D. There are many other drug men who feel as I do, and the time is ripe for a change in business methods."

Col. J. B. Doble made this statement:

"All this talk of a boycott is sheer nonsense. There is no such thing as a boycott against the jobbing houses. The retailers have simply lost faith in McKesson & Robbins as friends who had promised to stand by them against the cutters, and naturally refuse to buy any goods from a house which is injuring their business. It is a purely business proposition.

"McKesson & Robbins are now unable to get Pierce goods, Peruna, Laxative Bromo-Quinine or Swamp Root. They are beginning to realize that they cannot remain friends with the retailers when at the same time they are selling goods to cutters who will demoralize the legitimate business. In this every druggist acts for himself. The N. A. R. D. has nothing to do with it."

PASSED WESTERN BRANCH.

At a meeting of the Western Branch of the New York State Board of Pharmacy, held at Niagara Falls, May 25, the following were granted licenses on the examination held at Buffalo, May 17: Pharmacists, Anthony A. Labrowski, Buffalo; Albert J. Itey, Buffalo; M. Frank H. Kenny, Auburn; Ernest Lambert, Theresa; James A. McGarr, Buffalo; Hubbard J. Meyers, Buffalo; William G. Overocker, Clyde; Howard A. Stover, Trumansburg; Thomas E. Tefft, Belmont; Arthur C. Wallis, Niagara Falls. Druggists, Victor H. Bargar, Buffalo; Charles A. Jeffers, Buffalo; Harry G. Jewett, Buffalo; Louis A. Kaiser, Buffalo; Benjamin F. Miles, Buffalo; Charles H. Pusback, Salamanca, N. Y.; Willard H. Vincent, Buffalo; Fred J. Rice, Buffalo.

The Erie County Pharmaceutical Association has called a meeting of the druggists and pharmacists of the Western Section at 3 p. m., on Wednesday, June 7, at the Buffalo College of Pharmacy, for the purpose of electing a member to the State Board of Pharmacy to succeed A. M. Palmer, of Olean, whose term of office expires December 31, 1905.

SLOT 'PHONES WANTED.**N. Y. R. D. A. Will Ask Other Associations to Join in Fight.**

A fight to have slot machine telephones installed in Manhattan was inaugurated last Friday night by the New York Retail Druggists' Association, at their regular monthly meeting. The question was brought up by Charles Bernstein and considerable discussion followed, as a result of which a committee of three was appointed to arrange a joint conference with the other associations and then demand of the telephone company that only slot 'phones be installed in drug stores. A committee on press was also appointed, to use moral suasion with the newspapers that are constantly attacking druggists.

Dr. George C. Diekman was endorsed as candidate for the Board of Pharmacy, and three members were chosen to represent the association at the New York College on June 15.

Delegates to the convention of the New York State Pharmaceutical Association were chosen as follows: Charles Bernstein, Joseph Beck, Dr. W. Tulch, A. Segall, Wm. S. Sindy, Peter Diamond, J. Weinstein, I. Mishkin, I. Mitchell, M. Dlugasch.

 BOARD ELECTION, JUNE 15.

The following notice of election was sent last week by the Board of Pharmacy to twelve associations in the Eastern Branch:

"In accordance with subdivision 4, section 190 of the pharmacy law, you are hereby notified that an election will be held on Thursday, June 15, 1905, from 9 a. m. to 4 p. m., at the College of Pharmacy of the City of New York, 115 West Sixty-eighth street, Manhattan, for the purpose of electing a member for the Eastern Branch of the State Board of Pharmacy of the State of New York, in place of George C. Diekman, whose term of office will expire December 31, 1905."

"It will be noticed that no mention is made of any requirement as to citizenship, the question which created such a row a year ago.

"I regard that question as having been settled last year," said Dr. Diekman, "and I do not believe it will be brought up again."

The twelve associations which received notice of the election are, New York State Ph. A., Manhattan Ph. A., German Apothecaries' Society, New York Retail Druggists' Association, Interborough Ph. A., Italian Ph. A., N. Y. Pharmaceutical Clerks' Association, Drug Clerks' Circle, Westchester Ph. A., Kings County Pharmaceutical Society, Bushwick Ph. A., Queens County Ph. A.

The candidacy of Dr. Diekman to succeed himself has not developed any opposition. There are strong probabilities that he will be unanimously elected.

 OLD TIME DRUGGIST DEAD.

Altoona, Pa., May 29.—George W. Kessler, eighty years old, who established the first drug store in this city, is dead. He had been a leading citizen for many years. He leaves a widow, one daughter and two sons.

 A. B. C.'S PENNSYLVANIA TOUR.

The Pennsylvania tour of the A. B. C. proved to be an unqualified success and the members participating enjoyed it thoroughly. On May 25 the party composed of Mr. and Mrs. Geo. Stolzenburg, George Leinecker, Wm. F. Traeger and S. Faber, took the 7:25 a. m. Lehigh Valley train for Mauch Chunk, arriving there 11:29 a. m., where they were received by Alonzo F. Blaklee, proprietor of the Mauch Chunk Pharmacy, and also General Manager of the celebrated Switchback Railroad. Mr. Blaklee fairly overpowered the party by his hospitality, first taking them to the Mohegan Club for refreshments, and then going with them over the Switchback Railroad. At Summit, the party reluctantly said good-bye and rode on their wheels through the coal country of Tamaqua, where a stop was made for dinner at Wenzel's Hotel.

After a hearty dinner, the ride was resumed, 52 miles through the valley of the Little Schuylkill, passing innumerable coal mines, winding in and out through dense glades of mountain laurel and rhododendrons. At times the mountain roads were very poor, and then riding between the tracks of the Philadelphia & Reading R.R. was tried. This was fairly smooth and good, and while thus avoiding the many long hills, it also had the drawback that a constant watch had to be kept for trails and every mile or so a trestle had to be crossed by walking on the ties and carrying the wheels on the back. This, however, only served as a little variety. In Hamburg excellent quarters were provided at Matten's Hotel, where H. G. Ramsperger joined the party. Early next morning, May 26, the party rode on the towpath of the Schuylkill Canal to Leesport, and then on the turnpike to Reading. A stop was made there for a few hours, to have dinner and a trolley ride up and around Neversink Mountain. The railroad was used as far as Phoenixville, and then the party wheeled to historic Valley Forge, and put up for the night in the Washington Inn, which in 1778 was the headquarters hospital.

Early in the morning of May 27, the party were joined by Messrs. Wm. McIntyre and Wm. Hoch, of Philadelphia, members of the Philadelphia Doctors and Druggists' Bicycle Club, who came to escort the A. B. C. into Philadelphia. The 26 miles were covered in time to take dinner at the Belmont Mansion in Belmont Park, after which a brief visit was made to the Baldwin Locomotive Works in order to visit John P. Faber, son of S. Faber. The evening was spent in Willow Grove. Early Sunday morning the ride was resumed towards New York. Mr. McIntyre escorting the party as far as Trenton, where an excellent dinner was served at the American House.

 ATTACKED IN HIS STORE.

August Zeller, a druggist at 940 Summit avenue, Jersey City, was assaulted Sunday night, while alone in his store, by a poorly dressed man, who asked for tooth-ache drops. As Zeller turned to get the bottle, the man drew a revolver and demanded money. Zeller hurried the bottle at the robber, who grappled with the druggist, and after striking him several blows on the head, escaped.

 GOVERNOR HEARS DRUGGISTS. **Good Arguments, But Tax Probably Will Be Repealed.**

Governor Higgins gave a hearing at Albany, last Thursday, on the Baines liquor bill, going away with the stamp tax for druggists. There were present William C. Anderson, president of the State Ph. A.; William Muir, representing the Kings County Ph. Soc., as well as the State association; J. A. Lockie, of the Erie County Ph. A.; W. B. Bissell, Syracuse D. A.; John Hurley, Herkimer Co. Ph. A.; A. C. Searles, Manhattan Ph. A.; Mr. Jennings, Cortland County Ph. A.; Warren L. Bradt and George E. Thorpe, members of the Legislative Committee of the State association.

Although the representatives had little hope of influencing the governor not to sign the bill, some good arguments were advanced. Some of the points brought up were, that the stamp tax was never intended as a revenue getter, that it was not a relief for the pharmacists of this State, but a measure intended to amend the original excise law so as to give relief to the sick who use the liquor as a medicine.

Under the stamp law, it was shown, pharmacists do not and never can do a business that will interfere with the general intent of the excise law. Another point was that the penalty for violation was much too severe.

 FRAUD ORDERS ISSUED.

Postmaster George H. Roberts, Jr., has been ordered not to deliver any mail matter received for the following concerns: Carol Drug Company, the Ward Jewelry Company, the Ward Manufacturing Company, the Edwards Manufacturing Company, the Laxal Drug Company, the Laxal Drug Company, the Swift Chemical Company, the Best Chemical Company, the Court Company and the Brooklyn Supply Company. These have been pronounced fraudulent by the Post Office Department, and steps will be taken at once to prevent their further operation.

 CENSUS PROTEST ADOPTED.

The Board of Trade and Transportation last Wednesday unanimously adopted the resolutions presented by the Drug Trade Section, protesting against the methods of the Bureau of the Census in demanding information of a private character from manufacturers. Mr. J. L. Hopkins, in introducing the resolution, declared that the information demanded could be of no use to any one. The general sentiment of the members on the subject was that the questions were inquisitorial.

 BOWLERS END SEASON.

The Friday Bowling Club closed its season last Friday afternoon with one of the jolliest meetings ever held by that following organization. Outside of the regular play, a special feature was the presentation of a fine cut glass howl to George Riellin, the secretary and treasurer, as a mark of appreciation for his excellent services during the past year. Mr. Riellin has been secretary for the past five years. The presentation speech was made by Hugo Kantowitz and Mr. Riellin replied gracefully. The club does not meet again until September.

R. D. B. A. SHUTS DOWN.

The Retail Druggists' Bowling Association rolled the final games of the season, last Friday evening, at the Broadway arcade alleys. R. H. Timmerman was awarded the medal for the highest average for the season. Although Mr. Schweinfurth had a higher score, he was disqualified, as he did not roll the requisite two-thirds of the total number of games. The medal for best improvement went to S. F. Haddad. Following are the averages for the season: Schweinfurth, 158 43-71; Timmerman, 157 76-109; Hitchcock, 157 63-110; De Zeller, 156 66-92; Grube, 155 68-74; Haddad, 149 99-115; White, 148 4-55; Weiss, 146 8-32; Reeder, 135 11-75; Boeddiker, 134 5-51; Heinemann, 131 39-42; Fringie, 130 55-103; Jauseha, 130 27-66; Wichelns, 119 24-31.

VERSED IN ART OF FLIMFLAMMING.

Rochester, May 29.—The police have in custody two young men who they believe are somewhat versed in the art of flimflaming. The two visited several stores and in each case bought some trifle and handing a \$20 bill in payment; when the change was laid down for them, one of the two would find some small change and tender this in payment and when the \$20 bill was returned one of the men would attempt to get away with some of the change. The police were notified and located them near Houghton's drug store, corner of West avenue and Brown street. The two had just left there and Mr. Houghton had informed the police. Both were taken back to the drug store and identified there. The men gave their names as Henry Martin and John Thomas, of Wheeling, W. Va. The case was adjourned until later.

LUELYTIC SERUM CO. SUIT.

Trenton, May 27.—George I. Buxton, of Norwalk, Conn., and Dr. Justin DeLisle, of New York, have applied in the New Jersey Court of Chancery for the appointment of a receiver for the Luelytic Serum Company, of 500 Fifth avenue, New York. The company has laboratories in New Rochelle.

The petitioners ask for the removal of James W. Maples, president of the company, on the ground that he has mismanaged the funds. They also say the company is insolvent.

DEATH OF W. J. HUNTLEY.

Leckport, May 26.—Willis J. Huntley, who for many years conducted a drug store on Main street in this city, died last week, at Redlands, Cal., where he had gone for his health, about three years ago.

Mr. Huntley was married in 1877, to Mary Elizabeth Ralston, daughter of Alexander Ralston, in whose drug store he clerked. He is survived by his widow and two daughters.

DRUGGIST STONED IN AUTO.

Stamford, Conn., May 25.—John K. Lawrence, a well-known druggist here, was driving in his automobile along Canal street, when some boys began throwing stones at him. He jumped out, caught one of the urchins and was thrashing him,

when a gang of Italian women surrounded the druggist and started to attack him. Mr. Lawrence hastily beat a retreat.

DEATH OF AI WILLOUGHBY.

Plymouth, N. H., May 27.—Al Willoughby, of the drug firm of E. B. Mann & Co., died at his residence in Woodsville, last week. He had been ill for several months with Bright's disease. Mr. Willoughby was born in 1851. In 1889 he purchased the interest of George S. Cummings in the firm of E. B. Mann & Co., druggists and dealers in paints, oils and stationery.

Mr. Willoughby was a prominent Odd Fellow. He was twice married and leaves a widow.

ROCHESTER NOTES.

—The drug-buying public is greatly interested and exercised over a rate war on Ligonzo, which threatens to disturb the peace and tranquility of the drug trade in this city.

—William T. McBay is returning from a trip to Canada, where he has been for the past three weeks for the benefit of his health. Mr. McBay will visit Hamilton, Winnipeg, Minneapolis, St. Paul and Buffalo on his return trip.

—Many and unique were the Memorial Day decorations of the Rochester druggists. Flags and bunting were used to a large extent, but in such a clever manner by most of the pharmacists that the effect was quite striking and original in most cases.

—Frank Barber, of the '07 class of the Hahnemann Medical College, Philadelphia, Pa., is with William T. McBay, 330 Monroe avenue. Mr. Barber will do relief work in this city until the opening of the fall term, when he will return to college.

NEW JERSEY'S COMING MEETING.

Atlantic City, N. J., May 27.—Extensive preparations are being made here for the thirty-fifth annual meeting of the New Jersey Ph. A., to be held at the Hotel Islesworth, June 14 and 15. The local committee consists of William F. Bidgway, M.D., A. D. Cuskaden, M.D., H. H. Deakye, M.D., G. M. H. Demer and W. C. Westcott. Special rates have been secured at the Islesworth, and a number of entertainment features have been provided. Interesting papers have been promised and a prize is offered to the author of the paper deserving the most merit. The membership committee hopes that this will be the "banner year" in point of members.

It is expected that considerable discussion will develop on the proposed amendment to the constitution providing that manufacturers, wholesalers and traveling men who call on the retail trade, may become associate members, with all the privileges except voting and holding office.

NORTH CAROLINA B. P.

The next meeting of the North Carolina Board of Pharmacy, for the examination of applicants to practice pharmacy, will be held in the Atlantic Hotel, Morehead City, Tuesday, June 20, at 9 o'clock, a. m. All candidates who expect to take the examination will please notify the secretary at least one week before the meeting. F. W. Hancock, secretary, Oxford, N. C.

IMPORTANT DECISION.**Sale of Adulterated Wines Not a Violation of Pure Food Laws.**

Philadelphia, May 29.—Druggists in this State who feared that eventually they would be visited by agents for the Pure Food Department, received with interest this week the announcement of the decision of the Supreme Court of this city, reversing the Superior Court in the case of Commonwealth against Kebort, a Crawford County hotel man, convicted of selling adulterated blackberry wine. This practically ends all the snits against liquor dealers, beer sellers and venders of sprituous and malt liquors. The Kebort case had been appealed after conviction, to the Superior Court, which affirmed the lower court and ordered him to be sentenced. He again appealed, this time to the Supreme Court, which reversed the Superior Court and decided that such liquors are not food or drink under the meaning of the law.

In the past two years, the Pure Food Department has collected as fines for selling adulterated liquor, \$60,000, and has five hundred cases pending in the State, awaiting the decision of the Supreme Court. All of these must be dropped. In the cases that must be dropped, the evidence, it is said, was direct and the State will be the loser by about \$25,000. Commissioner Warren had withheld further suits, pending the decision, and in all there were about one thousand.

COLORADO PH. A.

The sixteenth annual meeting of the Colorado Pharmacal Association will be held at the Cliff House, Manitou, Col., June 20, 21 and 22. The entertainment committee has arranged an elaborate programme. The officers of the association expect this to be the most successful meeting ever held.

Special arrangements have been made with the hotel proprietors, whereby very low rates will be obtained. These rates will range from \$2.50 to \$4.00 per day. A railroad fare of a rate and one-fifth has been made on the certificate plan. The delegation from Denver and points north will leave at 9:30 on Tuesday, June 20. A special car for the accommodation of delegations will be attached to this train.

There is a valuable prize awaiting for the member who brings in the most members. A list of fifteen queries has been prepared, and an invitation extended to members to write a paper on each of these queries. They all have to do with some phase of the drug business, and the discussion which will result from the propounding of these queries cannot help but prove helpful to those who hear the papers read. A prize is offered for the best of each of these papers.

DRUG CO.'S NEW OFFICERS.

Salt Lake, May 27.—Stockholders in the W. A. Nelden Drug Company, at their annual meeting, elected as directors: Joseph Young, E. H. Atris, L. R. Martineau, L. L. Baumgarten and Mrs. W. A. Nelden. The officers elected were: President, Joseph Young; manager, John J. Judson; secretary and treasurer, Wayne G. Hemple.

The annual reports showed a gratifying increase in the business of the company.

CUTTERS SIGN PERUNA CONTRACT.

Baltimore, May 27.—The cutters have not yet formed their organization to purchase goods at wholesale and distribute them among the membership, in opposition to the druggists who observe the established schedules. There appears to be a pronounced feeling of distrust among them, one not being satisfied that the other is not getting an undue advantage, and this feeling is brought out by the movement to establish the proposed company. On the other hand there are signs that the cutters and the rest of the druggists are coming closer together, a decided step having been taken this week, when all the cutters with one or two exceptions, these being the Messrs. Robinson, signed the contract of the Peruna Company, obligating themselves to sell Peruna at not less than 53 cents; and as far as this preparation is concerned, the war has been brought to a close.

The result is due chiefly to the efforts of H. S. Beckler, who has been at work for several weeks explaining the plan and otherwise smoothing the way to agreement. The outcome does great credit to his diplomacy and tact, he having succeeded in doing what others failed to accomplish. The closing formalities were attended to last Thursday, when the cutters met and appended their signatures to the contract.

MARYLAND PH. A.'S ANNUAL.

Baltimore, May 27.—The details of the arrangements for the annual meeting of the Maryland Ph. A., which will be held this year at Betterson, on the Eastern Shore, are rapidly taking shape, and the major part of the programme has been outlined. H. Lionel Meredith, of Hagerstown, was here this week in connection with the matter and conferred with the members of the committee of arrangements, of which J. Edwin Hengst is chairman.

The meeting will take place June 20, 21 and 22, and the business proceedings will be interspersed with diversions of various kinds. On the evening of the opening day there will be an informal reception to the members and their ladies. For Wednesday afternoon a crab feast has been arranged, and at night the party will take a sail on the bay, with or without moonshine, if it does not rain. Thursday afternoon a bowling and billiard contest for ladies and men is on the tapis, while at night the annual banquet will take place with its accompaniment of speeches.

There will, of course, be no lack of matters of scientific interest. A number of the members will read papers on topics of importance to druggists, and a large attendance is expected.

WHAT IS A DRUG STORE?

Baltimore, May 27.—The principle that when a man rents a store for use as a pharmacy he need not necessarily confine himself to the dispensing of medicines in order to comply with the terms of the lease was upheld in Circuit Court No. 2, last Thursday, when Judge Dennis signed a decree dismissing the suit of Mrs. Mary R. Hughes and her son, George S. Hughes, trustee, to prohibit Williamson & Watts from conducting a telephone exchange, ex-

press and post office business in their drug store at the southeast corner of Howard and Franklin streets. The plaintiffs contended that the addition of the three activities mentioned was a violation of the lease, the terms of the latter restricting the defendants to the drug business in its narrow sense. The lessors also sought to prevent the firm from using the cellar for divers purposes. The decree orders that the cellarway be unobstructed, and requires Mrs. Hughes and her son to pay the costs of the proceeding. The case was tried several days before. It was filed some time last winter. Williamson & Watts have another pharmacy on the northeast corner of Baltimore and Eutaw streets.

RESIGNS FROM BOARD.

Baltimore, May 27.—David R. Millard, secretary of the State Board of Pharmacy, sprung a surprise this week on his colleagues and the drug trade generally, by sending in his resignation as a member of the State Board of Pharmacy. The letter is now in the hands of Governor Warfield for action. Astonishment is all the greater because Mr. Millard was appointed only recently for the full term of five years, having completed a two-year term. That he was named again is taken as an indication that he desired the appointment or it would have gone to someone else. Persons acquainted with Mr. Millard's affairs, however, state that private business concerns prompted him to relinquish the post, which he filled to the entire satisfaction of the profession. His time will be much occupied in the near future with the fitting up and other details of his new pharmacy in the building on the old site of The Sun, southeast corner of Baltimore and South streets, which is nearing completion, he being a member of the firm of Morgan & Millard, the proprietors of the store. These demands, it is stated, are so extensive that it will be impossible for him to look after the duties of commissioner, hence his retirement.

RESIGNS FROM BOARD.

Baltimore, May 27.—The commencement of the National College of Pharmacy at Washington, D. C., took place at the Lafayette Theatre, last Thursday evening, and proved to be an event invested with much general interest. It was largely attended, and the exercises were of an engrossing character. The graduating class numbered thirteen and made an attractive spectacle, the members being appropriately gowned. After an overture, a waltz and a march dedicated to the class of 1905, played by an orchestra, Rev. Dr. John Lee Allison spoke an invocation, which was followed by the rendition of the evening song from "Tannhauser" as a "cello solo, whereupon Dr. Harvey W. Wiley delivered the principal address, dwelling on the duties the graduates would be called upon to perform, and enjoining them in all situations of life to manifest the qualities of steadfastness and of high principle.

Dr. Henry E. Kalusowski, president of the college, conferred the degrees, and Mr. Matthew John Beistle delivered the valedictory. The benediction by Rev. Dr. All-

son concluded the programme. All the graduates received handsome floral gifts from relatives and friends and several prizes were awarded, the first one going to Elmer Leonard Spittle. The other graduates were: Joseph Franklin Arth, Matthew John Beistle, Fred Burns Campbell, Albert Patton Clark, Bert Cupperbell, Robert George Harvey, Sylvern Laupheimer, John Clayborne Peacock, Sald Tannus Samaha, Charles Clarence Small, Elijah White Tultus and George Scott Webb.

The class officers were: Fred Burns Campbell, president; Charles Clarence Small, vice-president; John Calaihorne Peacock, secretary; Albert Patton Clark, treasurer. The executive committee included Messrs. Clark as chairman, Arth, Peacock, Titus and Webb.

LEFT AN ESTATE OF \$157,000.

Baltimore, May 27.—The personal estate of the late Arthur Nattans, proprietor of the Read Chemical Company, is appraised at \$157,659.91 in inventories filed in the Orphans' Court, yesterday. The total is made up of the following items: Property southeast corner of Lexington and Howard streets, \$60,000; stocks, \$43,225; household furniture, \$1,804; cash, \$32,357.79; debts due the estate, \$20,182.22. The securities are made up of bank stock, 39 shares of the Read Drug and Chemical Company, worth \$39,600, and four shares of the Emerson Drug Company, worth \$880. Mr. Nattans, as stated at the time the will was filed, left a number of bequests to employes, consisting of the income of shares of the Read Company, which the beneficiaries were to enjoy only as long as they remained in the employ of the company. He was one of the most aggressive of cutters.

BALTIMORE NOTES.

—W. E. Hancock, representing the Keasbey & Mattison Company in this territory for some time past, has gone on an extended trip south, with his wife. J. L. Lyman, who was formerly with the Mulford Company, is taking his place temporarily.

—Among the June weddings will be those of two druggists, one being that of Leroy Oldham, connected with Gilpin, Langdon & Co., which is to take place June 3, and the other that of E. R. Downes, who ran for the city council at the last election.

—The Baltimore Drug Trade Duckpin League began work last Friday night. It had been intended to hold the contest at the Mount Holly Inn and to invite the ladies, but it was impossible to get four alleys there, and the club consequently split, some going to the Diamond and others to Schneider's.

BUILDING FOR DRUG CO.

New Orleans, May 29.—The I. L. Lyons Drug Company has purchased the three-story granite building at 510 Gravier street, for \$11,000. It is understood that the company will tear down the old building and erect an eight-story pressed brick building in its place, to be used as a storehouse. The increasing business of the firm calls for increased facilities, and the work will be started without delay.

THE DOW SUIT.

Ohio Val. D. A. Appeals to Drug-gists to Assist Defendants.

Cincinnati, May 30.—The Ohio Valley D. A. treats in a sarcastic vein the suit of Miss Cora Dow, the cutter, against the association for \$50,000 in this manner, through its monthly news bulletin:

The Ohio Valley Druggist Association, together with some of its members, and other associations, as well as the Cincinnati wholesalers, have been made defendants in a suit by Cora Dow Goode, a druggist of Cincinnati, who in her petition claims to do the largest drug business in this city.

There are many mean things charged against the defendants, and Cincinnati druggists generally will no doubt be surprised to know of the very bad men in their ranks.

While plaintiff's petition does not exactly present matters in the following light, it would nevertheless appear that the most serious objection found is that the defendants are trying to make an honest living for themselves or their respective members. Just why this should be deemed so very objectionable will have to develop at the trial of the cause, and we will take pleasure to make a full report at that time.

Meanwhile it is not to be denied that, owing to the resources of the plaintiff, a great effort will be made in order to prove our desire for an honest living unlawful. It is, therefore, the bounden duty of every legitimate druggist in this vicinity to give his best possible assistance and encouragement to the gentlemen who will have to bear the greatest part of this burden.

SECURES AN INJUNCTION.

Cincinnati, May 30.—Attorney George Hoadley, Jr., of this city, secured an injunction in the United States Courts at Cattlesburg, Ky., last week, restraining W. F. Stock, of that place, from pirating patent medicines. Stock, it is alleged, had been buying up old bottles with the name of a Cincinnati manufacturer stamped thereon and refilling them with a preparation of his own.

ASSOCIATION ELECTS OFFICERS.

Springfield, O., May 30.—The State Association of Physicians, Surgeons, Dentists and Pharmacists met in annual convention here last week. New officers were chosen as follows: President, Dr. T. W. Barton, Springfield; vice-president, J. C. Dickerson, Cleveland; secretary, C. W. Gordon, Springfield; and treasurer, Dr. Wm. Woodlin, of Columbus.

COCAINE CASE DISCUSSED.

Columbus, O., May 30.—The efforts of the police department to check the alleged promiscuous sale of cocaine were blocked last week by Judge Court Judge Wildermuth. R. W. Williams, a Chestnut street druggist, was dismissed on the ground that he had not sold cocaine, but instead, salts of cocaine and that therefore there was no violation of the law. The evidence in the case showed that the cocaine was treated with an acid, which caused a reac-

tion and it was not a compound. Judge Wildermuth held that when chemicals were added to anything which caused a reaction, each article lost its identity. It was the intention of the prosecutor to obtain additional warrants, providing a conviction was secured in Williams' case. New affidavits will be filed.

WILL SEND DELEGATES.

Cincinnati, May 30.—The O. Val. D. A. has decided to send five delegates to the O. S. Ph. A. annual meeting, to be held at Cedar Point, June 20-23. The Board of Control will meet next week and select representatives. A large body of druggists from this city have arranged to attend the convention.

OHIO HAPPENINGS.

—Fred Boss, of Arondale, a Cincinnati suburb, and George Eggers, of central avenue, have installed new soda fountains.

—M. J. Welsh has sold his store at Seventh and Linn streets, Cincinnati, to Leo Nelson, and purchased Emil Zorn's establishment at Twelfth and Elm streets.

The Ohio Valley D. A. has decided on Hartman's Grove, about twenty miles from Cincinnati, as the place for its picnic, this season. The Entertainment Committee has set the date Tuesday, July 18.

—The Glenn S. Freeman Co., of Lagrange, has been incorporated to do a general business, with a capital of \$25,000, by Glenn S. Freeman, B. L. Wilkins, D. C. Deutscher, C. B. White and Robert E. Carr.

—Louis P. Ohlinger and J. R. Zimmerman, of Wooster, who, until a few months ago, conducted a drug business, are to plead guilty to a number of indictments against them for allegedly wrecking the Wooster National Bank.

—The Morrow Drug Co., Incorporated, with a capitalization of \$10,000, will conduct a retail store at Springfield. The incorporators were John Morrow, John X Garver, George C. Lynch, W. W. Whitmayer and Roger N. Smith.

—Edward W. Crother, who for years conducted a store at Seventh and Mound streets, Cincinnati, died at the age of sixty years. When the store was built the fixtures were conceded to be the handiwork of west of New York. He left \$50,000 to his wife.

WARRANTS FOR DRUGGISTS.

Chicago, May 29.—Warrants have been issued for five druggists who are charged with selling adulterated drugs and against whom indictments have been found. The men who were indicted are: Edvard A. Kuehnstedt, 6325 Ingleside avenue, 13 indictments; J. N. Levy, Wycherly Hotel, Eighteenth street and Indiana avenue, five indictments; W. U. Nay, 1452 Fulton street, two indictments; G. Ephraim, 477 Ogden avenue, two indictments; Burtis D. McAnn, No. 6, 113 Indiana avenue, two indictments. Levy was arrested and promptly gave bonds for his appearance in court. The first raid made by the police in connection with these indictments was last October. About two weeks ago complaints began coming in from druggists that they were again being defrauded, and the police renewed the crusade.

ILLINOIS PH. A. PROGRAMME.

Chicago, May 19.—At a recent meeting at the Chicago Drug Trade Club, the following resolution was passed:

Resolved, That we, the entertainment committee of the Illinois Pharmaceutical Travelers' Association with the auxiliary committees of the Illinois Pharmaceutical Association, Chicago R. D. A., Chicago Drug Trade Club, and Social Drug Club, respectfully request the assistance of the pharmaceutical journals in advertising the twenty-sixth annual convention of the Illinois Ph. A., to be held in Chicago, August 22 to 24; and that we hereby extend our cordial appreciation of the assistance already rendered by the pharmaceutical press of the country.

In accordance with the above resolution, the joint committees have prepared the following announcement:

"There is nothing too good for us," is the best way to express the attitude of the entertainment committee of the Illinois Pharmaceutical Travelers' Association toward the twenty-sixth annual meeting of the Illinois Ph. A., to be held in Chicago, August 22 to 24.

This is the travelers' third appearance in the role of entertainers. They are bending every energy toward making this meeting the best ever held in any State. How does the following look for a programme?

August 22d, a. m. Business session.
August 22d, p. m.—Business session.
Evening—Informal reception to the president, followed by an informal dance.
August 23d, a. m.—Business session.
August 23d, p. m. Athletic programme consisting of various contests and sports which very likely will be held in some athletic field near Chicago.
Evening—Valedictory.
August 24th—Boat ride on the lake and shore dinner.

Evening—Banquet and speech-making.
During intervals between the above events, other entertainment features will be provided, which will likely include a trip to White City, Chicago's new Coney Island.

It must also be remembered that the ladies' auxiliary proposes to keep the fair sex busy during the business meetings.

The guests will be admitted to the various entertainment features on coupons, a book of which will be sold each visitor at a nominal price. Several hundred dollars in cash and about eight hundred dollars' worth of prizes are already in the hands of the entertainment committee.

If you can't come to the meeting—don't telephone—come anyway. Be proud of the opportunity. Bring your wife and children, or sweetheart, and two extra col-lars. Wear a negligee shirt and a smile. When we get through with you it won't come off.

Yours fraternally,
THE ENTERTAINMENT COMMITTEE.
P. S.—It is the smile that won't come off.

CHICAGO SOCIAL DRUG CLUB.

Chicago, May 27.—At a largely attended meeting of the Social Drug Club, last Monday, in the parlors of the Sherman House, J. M. Schwalbe was elected financial secretary and John Krone, sergeant-at-arms. Mr. Krone is the 300 pound champion of the club and it was particu-

larly fitting that he should be chosen to maintain order. A large number of applications for membership was received.

After the business session there was a social hour. Prof. Stitzel played the piano, and some of the musically inclined members demonstrated that they could sing. Sandwiches and the amber fluid which made Milwaukee famous, were served.

L. A. J. Horlick, of Racine, addressed the members. He complimented the club upon its aim, and especially upon its social features. His interest in another bowl enabled him for the time to forget malted milk.

The entertainment committee was instructed to arrange for a picnic to take place July 10.

CHICAGO VETERANS CELEBRATE.

Chicago, May 23.—The annual meeting of the Chicago Veteran Druggists' Association on May 22 will go down in history as "Ebert Day," and inasmuch as Mr. Ebert instigated Mr. Jamieson to call the old druggists together, the May meeting will hereafter be known as "Ebert Day."

President Biroth read an address which was ordered printed and distributed to the members. Next came Historian Ebert's report. Secretary Bodemann called attention to the fact that the services of our historian were not adequately recognized. Having submitted this report to the officers a few weeks ago, a handsome loving cup has been selected, duly engraved with words of recognition on one side and the association motto on the other. This was presented to Mr. Ebert in a touching speech by President Biroth. For once the valiant, gallant plumed knight was non-plussed. He was overcome and begged to be excused from speaking. The cup was filled with Haut Sauterne.

Starting with Ebert it made the rounds and the historian was toasted as each man partook. Altogether this was a scene never to be forgotten.

The new officers elected were: Louis Woltersdorf, president; M. Krembs, vice-president. The rest of the officers were re-elected, viz.: Wm. Bodemann, secretary; John Blocki, corresponding secretary; Albert E. Ebert, historian. O. F. Fuller and H. B. Penton were elected associate members.

INDIANA ITEMS.

—At Shelburn, George Lyons has started a new store with a new stock.

—N. W. Mendenhall, formerly of Fairmount, has bought the drug store of J. D. Sourwine, at Brazil.

—The store of Thomas E. Collins, a well-known druggist of Indiana avenue, Indianapolis, is now being successfully operated by his widow.

—At Rushville, John B. Wehrle has sold his drug store to Thomas W. Lytle. Immediately following this sale, Mr. Lytle bought the drug store of Walter B. Kessens, at Anderson.

—The store of Robert Lostetter, who died suddenly, at Irvington, a suburb of Indianapolis, being found dead in the basement of his store, from apoplexy caused by over-work, has been sold by his widow to L. M. Green, of Rushville.

DRUGGIST'S SUDDEN DEATH

Detroit, May 30.—"Never felt better in my life." With these words on his lips, Charles Herfurth, a druggist employed in the pharmacy of William G. Siez, at 1795 Michigan avenue, toppled over on the floor, dead. He had just finished a waltz with his sweetheart, and was answering the inquiry of a passing couple. Herfurth had journeyed from his home at the east side of the city to Daniels' hall, on the west side, to spend the evening at a private dancing party.

After the waltz the pair sat together for a moment and indulged in low-toned conversation. He laughed gaily at some remark that his companion made and arose from his seat. It was at this moment that the couple who addressed him passed, and as soon as he answered them, he fell. His sweetheart uttered a scream and fell across his prostrate body. Friends rushed up to find him dead, with the smile still lingering on his face.

Herfurth was twenty-three years old, and to all appearance, physically sound. He had not danced excessively. He was the son of Mary Herfurth, a widow, and the funeral was held from his late home, 297 Field avenue, last Saturday.

Drug Clerks Organize.

Grand Rapids, May 27. The Retail Drug Clerks' Association of this city has been formed with charter membership of forty. This is the first organization of the kind here, and it starts out with fine prospects for the future. The first meeting was held at the offices of the Hazeltine & Perkins Drug Co., and officers were elected as follows: President, George H. West; vice-president, J. E. Pettit; secretary, N. D. Torbeson; assistant secretary, W. T. Gilliam; treasurer, James Benkema. Both registered and assistant pharmacists are eligible to membership. Meetings are held fortnightly, opening at 10 p. m. Mr. West, the energetic president, is manager of Henry Riechel's branch store, at Fourth and Stocking streets.

SUPPOSED INCENDIARY FIRE.

Whitehall, Mich., May 27.—What is supposed to have been an incendiary fire damaged the drug stock of Bastian Meinbaidi \$1,200, and did a \$1,000 damage to the building which was occupied by the drug store, and which was owned by E. T. Slocum. There was \$500 insurance on the drug stock.

The blaze began in another building and spread to the drug store. There is hardly any doubt that the fire was of incendiary origin. This is only one of many fires which have occurred here within the past few months, and which had a suspicious appearance.

MICHIGAN NOTES.

—Percy Lewis succeeds Warner Bros., at Benton Harbor.

—The Crown Drug Store, at South Haven, is now known as the City Store.

—C. W. Cook, of Greenville, will remove his drug business to the McDermott block, on the opposite side of the street.

—W. W. Morse, of Kalkaska, has entered

into partnership with Mr. Mulholland, at Reed City, and the pair will make a strong drug team.

—Robbers broke into the store of the Detroit Drug Co. and made away with \$45 in cash and a lot of valuable sundries. They effected an entrance by sliding down the ice chute into the cellar.

—Edward A. Blackmar, of Saginaw, has purchased Kinsman Bros.' store, at Charlotte, and will remove to that city. Frank T. Gillespie & Co. succeed the Howard & Pearl Drug Co., at St. Joseph.

—Horace McDonald, of Decatur, has bought the stock of Albert Globinski, in the American Drug Co., of Traverse City, and will succeed him as secretary and general manager of the business.

—Isaac Dowsett has reopened the drug store at 110 Calhoun street, Battle Creek, formerly run by Claude C. Jones. Mr. Jones will soon reopen the C. E. Humphrey store, operating the same in his own name.

—The Central Drug Co., of Detroit, has leased a four-story building in Monroe street, Grand Rapids, now occupied temporarily by the Grand Rapids National Bank, and will open a large and handsome store there.

—Dr. F. M. Gier, of Hillsdale, has entered into a fifty-year contract with Parke, Davis & Co., by which the big drug house takes entire charge of the sale of Abilena water. Dr. Gier is president of the Abilena Company.

—Stanley E. Parkhill, who is serving a second term as mayor of Owosso, and is one of the most prominent druggists of the State, is being seriously considered in political circles as a candidate for governor on the Democratic ticket, two years hence.

—M. Van Alstyne, formerly of Manchester, Iowa, has opened a store at South Haven. J. R. Schoonmaker has sold his business at Plainwell to the Miller Drug Co., composed of John Miller, of Monroe, and Anthony Miller, of Paw Paw. Elmer A. Anderson, of Cadillac, has bought the City Drug Store, St. Clare.

—Dr. N. A. Goodwin, for a number of years State representative for Eli Lilly & Co., and for the past year with Wm. R. Warner & Co., has bought the Wm. Buyer store, at Harwood, and will engage in pharmacy and medical practice. Alton Nye will open a first-class store at Lake Odessa, about July 1.

—A Grand Rapids newspaper is running a series of half-tone cuts of business men of western Michigan, who typify the spirit of hustle, and Alderman and Druggist Geo. E. Eckel, manager of the Eckel Drug Co., of Petoskey, appeared in a recent number, together with a very complimentary notice. Mr. Eckel also has a half interest in the R. T. Bower Drug Co., of Detroit.

—W. A. Gaines & Co., whisky distillers of Frankfort, Ky., have started three suits in the United States Circuit Court, at Grand Rapids, claiming infringement of rights by the use of registered trade marks without permission. One suit is brought against the Hazeltine & Perkins Drug Co., the question at issue in this case being the use of "Old Crow" as a trade mark.

BOARD WILL NOT DROP CASE.

Now After the Real Proprietor, Determined to Protect Legitimate Pharmacists.

St. Paul, Minn., May 26.—It seems that full justice was not done in this correspondence to the Minnesota State Board of Pharmacy in the matter of the prosecutions at Stewartsville. The Board, it is learned, has not by any means abandoned that fight. It has finally got tab on the real proprietor of the Cash Supply Store, whose two women clerks were arrested on the charge of selling strychnine contrary to law. One of the women, as *The Era* has already set forth, was tried and acquitted and the Board dropped the case against the other. This was for the reason that no conviction could have been possible, the jurors being too gallant to find a verdict against women, and thereby, as they felt, injure their reputations.

The Era stated that counsel for the accused women made the point that as the seals of the strychnine packages sold the Board's detective, at the store, were unbroken, the State could not prove they really contained the poison. It transpires that when the Board offered to prove the contents of the packages to be strychnine by chemical analysis in court, the challenge was not accepted and the sales of the poison were admitted. B. W. Moore, whom the Board next prosecuted in vain, proved not to be the proprietor, who, it has since been found, is James Anderson. This is said to be Anderson's second offense and the Board expects to "sock it" to him. It will take the case to the district court, where, it is confidently expected, the court will instruct the jury to find for the Board. The latter has thus far spent \$300 in prosecuting these cases and naturally does not purpose to "lay down."

An instructed verdict for the State is apparently the only thing possible to be done, the sales of the poison having been admitted and the law forbidding such sales except by a registered pharmacist, and none such was employed at the Stewartsville store. The Board of Pharmacy is acting with commendable energy in this case, being inspired only by a determination to protect the legitimate pharmacists of the State, who are regularly paying fees to the Board for just such protection.

NOW ELIEL-JERMAN DRUG CO.

Minneapolis, Minn., May 27.—One of the most important changes that ever took place in the drug trade of this city has just been announced. The Lyman-Eliel Co. has been reorganized. George R. and Frederick W. Eliel both retire and C. A. Jerman, formerly managing partner of the Jerman, Pflueger & Kuehmstedt Co., of Milwaukee, Wis., becomes associated with the Minneapolis company, whose new style is the Eliel-Jerman Drug Co. Julius C. Eliel, vice-president, and Henry E. Eliel, secretary, remain with the company in the same official capacities. George R. and Frederick W. Eliel have been elected, respectively, president and treasurer of the organization. The first named has been associated with J. C. Eliel as the senior partner of the firm twenty-two years. It is one of the two or three largest wholesale drug houses in the Twin Cities.

MINNESOTA MENTION.

—S. F. Boyce, of Duluth, has moved two doors east, being now located at 329 West Superior street.

—Dr. Ittis will add a story to his drug store building at International Falls, on the Canadian border.

—M. D. Martin, of Jasper is now without a competitor, having bought out A. W. Jameson's drug stock.

—Frank Palmer has left F. W. Kreger & Co., Duluth, and bought the Carson Drug Store, at Lakeside, a suburb.

—Dr. P. E. Preston has resigned as St. Paul and northwestern Wisconsin representative of Parke, Davis & Co.

—The A. D. Thompson Drug Co., Minneapolis, has employed John McLeod, of Winnipeg, as expert window dresser.

—B. F. Carter has resigned as purchasing agent at the University of Minnesota, to re-enter the drug business at St. Cloud.

—The store of Rufus H. Lane, 501 Hennepin avenue, Minneapolis, has been remodeled and equipped with new fixtures.

—C. C. Middents has left his brother's store in St. Paul, to take a course at Drew's School of Pharmacy, Minneapolis.

—The interior of Neff & Rosenquist's store, at Seventh and Jackson, St. Paul, has been redecorated and papered anew, improving appearances materially.

—L. H. Brown, for some time connected with A. A. Campbell, St. Paul, has opened a store at Harvard and Washington avenues, S. E., Minneapolis.

—J. P. Allen, one of the oldest druggists of St. Paul, has made several changes in his store at Seventh and Jackson streets, including a new hardwood floor behind the counters.

—Daniel R. Noyes, the St. Paul wholesale druggist, has resigned as a trustee of Carleton College, at Northfield, Minn., having been some time ago appointed a member of the board of regents of the State University.

—Daniel R. Noyes, the St. Paul wholesale druggist, has been made president of a committee whose efforts are directed toward the building of a large auditorium for St. Paul, of which the city has long stood in need.

—J. E. Lobdell, traveling for Noyes Bros. & Cutler, St. Paul, is recovering from an operation which followed a serious illness. His territory—Duluth, Minn., and Superior, River Falls and Hudson, Wis.—is meanwhile being looked after by J. Douglas.

—Thomas Voegel and A. D. Thompson, another Minneapolis druggist, constitute a majority of a committee appointed by the Minneapolis Retailers' Association, to represent that organization in a fight against the proposed placing of kiosks on the streets. The contentions to be made are that these kiosks will compete with merchants who are paying large rentals, that the conveniences promised from the kiosks are already furnished gratis by the merchants and that such institutions would be a detriment to the legitimate merchandising interests.

—W. W. Munger has sold his drug business at Three Rivers, Mich., to Willis Gibbs, and will go to Seattle, Wash.

WORKS INJUSTICE.

Druggist Contends That Physicians Should Not Use Special Prescription Blanks.

Minneapolis, Minn., May 27.—Here and there are to be heard complaints from druggists that the practice of many doctors in using prescription blanks with the name of some particular druggist printed thereon works injustice in more ways than one. A Minneapolis druggist has this to offer on the subject:

"Many physicians wonder why they fail to do business in certain localities, especially in the cities. They should pause to think that the prescriptions they write are too frequently on blanks furnished by some down-town apothecary on which it says: 'Take this to John Smith, druggist,' and having the doctor's autograph thereon occasionally take it verbatim and follow it out to the letter. The suburban apothecary may stand it for a time, but eventually he recommends a practitioner in his own territory for self-protection on the doctor-druggist blank. Often a double injustice is worked on both doctor and druggist. In the layman's eyes there is an appearance of combination. The sooner physicians write on blanks that are not specifically for one druggist, the sooner they will have the good will of all the other druggists. The drug men are fair and willing to call whomever the patient requests and only ask for reciprocity in not being prescribed against."

THREE CLASSES OF DRUGS.

St. Paul, Minn., May 22.—Dr. A. B. Cole, of Pergus Falls, retiring president of the Minnesota State Homeopathic Institute, discussed the use of drugs in his annual address at the recent meeting in this city. Among other things he said:

"There are three distinct classes of drugs. First, the remedies for the relief of pain. I admit that the old school understands this branch of the healing art better than we do. There is no reason why we should not understand it as well as they do, and it is as legitimate for us to use it as it is for them, only we do not have to resort to it so often. There is no reason for us not to use it at times, but we should consider whether excessive pain or the medicine to relieve it is the more harmful to our patients.

"The second division includes germicides and the toxins. It is just as necessary for us at times to give an antidote as for the old school. I believe the physician who opposes vaccination or the use of antitoxin is stubbornly wrong and blinded by prejudice so that he cannot see the right or recognize it when he does see it. The same may be said of the use of antitoxin in diphtheria. Its use is not an admission that the homeopathic law is erroneous, but I believe, whether it can be so considered or not, it is our plain duty to use it.

"The third division is the curative drugs, and there is where we shine. In the old school those who have practiced the longest have the least faith in the action of medicine to cure the sick; but the more the homeopathic practices the more faith he has in the action of the remedies."

LOUISIANA DRUGGISTS.

State Association Renews Affiliation to N. A. R. D.

The annual meeting of the Louisiana Pharmaceutical Association was held in New Orleans, May 2, 3 and 4, about 125 members being in attendance. Important papers were read at the business sessions. The entertainment features included luncheons by various manufacturing houses, and a ball given by the New Orleans Pharmaceutical Association. The Association renewed its affiliation to the N. A. R. D.

The meeting was called to order at 11 o'clock Wednesday morning by President Godbold. Adam Wirth, chairman of the committee on education, read a very able report on the progress of pharmacy in general. W. P. Duplantis handled the subject of "Trade Interests" at exhaustive length and compared the present complexity of trade interests with those of the past.

The committees on transportation and the N. A. R. D. then read their reports, after which President Godbold presented a communication from the State Board of Pharmacy, which elicited the fact that there are now in the State 866 registered pharmacists, 359 apprentices, and 97 qualified assistants.

A committee from the Retail Drug Clerks' Association, through its chairman, J. H. Dunn, argued in favor of an entirely new pharmacy law. In his remarks Mr. Dunn stated that the old law was so patched up with amendment on amendment that it had nearly lost its original form and color; like Jacob's coat, was distinguishable only by the variety of constructions that might be put upon it, and was as efficacious as no law at all. He claimed that in some instances qualified assistants had been usurping the places of registered pharmacists, which was contrary to law, but that under existing conditions it was almost impossible to convict under the present State law, as no provision for funds had ever been made by any legislature for prosecuting. Mr. Dunn went into details and showed quite conclusively the defects of the existing pharmacy law. Copies of the proposed pharmacy law, as suggested by the Retail Drug Clerks' Association were circulated freely among the members and created much discussion. The proposed law covers many of the weak points of the old enactment, and deals specifically with the illegal sale of certain drugs, poisons, cocaine and the like. It forms a sharp line of demarcation between apprentices, qualified assistants and registered pharmacists, and defines the number of years requisite for the lawful graduation of each. It provides for a Board of Pharmacy appointed by the governor, consisting of nine reputable registered pharmacists practicing in the state. It calls for a special law prohibiting the sale of cocaine, hydrochlorids or any compound or preparation containing cocaine or its salts, excepting upon the written prescription of a licensed physician.

In the afternoon, a luncheon was given by Parke, Davis & Co., at their reception parlors, 600 Camp street. The reception of the New Orleans Pharmaceutical Association took place in the evening in

the grand hall room of the Odd Fellows' Hall. At 7:30 the young folks were given the privilege of the hall room until 9:30 o'clock, when they were sent off to bed, and the floor was left clear for the older people.

On the last day the following officers were elected: President, T. J. McGuire, Baton Rouge; first vice-president, C. D. Sauvinet, New Orleans; second vice-president, C. L. McClung, Natchitoches; treasurer, George S. Brown, New Orleans; secretary, George W. McDuff, New Orleans; corresponding secretary, W. J. Shisa, New Orleans; executive committee, William M. Levy, John E. Scott, George V. Claren, F. C. Godbold and A. di Trepiani, all of New Orleans. Delegates to the A. Ph. A., F. C. Godbold, M. T. Breslin, Max Samson, M. Bernstein, B. V. Richard. Delegates to N. A. R. D., C. D. Sauvinet, A. O. Kaczorski, M. T. Breslin, A. P. Irwin, J. L. Watkins. Delegates to N. W. D. A., A. D. Parker, F. A. Dicks, I. L. Lyons, P. A. Capdan, H. Gelger.

In the afternoon Sharp & Dohme gave a luncheon, and J. L. Lyons & Co. took the visitors for an automobile ride around the city. The meeting wound up with a grand banquet in the evening.

KANSAS PHARMACISTS

In Annual Session Elect Officers and 111 New Members.

Kansas City, May 25.—The twenty-sixth annual session of the State Pharmaceutical Association of Kansas began at Junction City, last Tuesday and ended last evening. The opening meeting was called to order by John T. Moore, of Lawrence, president of the association, and the Rev. Robert Spencer pronounced the invocation. Dr. F. O. O'Donnell, mayor of the city, delivered an address of welcome and F. E. Halliday responded. In the evening there was a reception and a ball in honor of the visiting delegates. One hundred and fifty delegates attended the second day's session. Professor L. E. Sayre, of the pharmaceutical department of the Kansas University, read a paper on "Official Antitoxin."

These officers were elected: President, Carl Engel, Manhattan; first vice-president, M. W. Friedenburg, Winfield; second vice-president, A. R. Holzschuber, Junction City; secretary, A. E. Tapping, Overbrook; assistant secretary, W. S. Miller, Topeka; treasurer, W. S. Henrion, Wichita; librarian, Professor L. E. Sayre, Lawrence.

An executive committee was named, as follows: S. O. Putnam, Leavenworth; Louis B. Loeb, Junction City; G. F. Lake, Kansas City, Kans.; George F. Gehring, Wichita; F. W. Cartin, Salina.

Members qualified to serve on the State Board of Pharmacy: L. Ardery, Hutchinson; W. W. Naylor, Horton; M. Hall, Atchison; C. A. Gregory, Council Grove; W. S. Henrion, Wichita; John T. Moore, Lawrence; W. J. Evans, Iola; Harry Playman, Winfield; H. W. Mehl, Leavenworth; G. W. Stanfield, Topeka.

One hundred and eleven druggists were elected to membership at the meeting. The meeting next year will be held at Emporia.

NO JOINT SESSIONS FOR THEM.

Indian Territory Ph. A. Will Not Meet With Oklahoma Pharmacists.

Kansas City, May 29.—A dispatch from South McAlester, I. T., received to-day, says: The Indian Territory Pharmaceutical Association adjourned here, last night. These officers were elected: President, T. W. S. Shackle, Tulsa; first vice-president, J. D. Humphrey, Bristow; second vice-president, H. H. Mitchell, Vinita; third vice president, W. Y. Chittwood, Mill Creek; secretary-treasurer, H. D. Kinsley, Checotah. These members were named for submission to Judge Raymond, of the Court of Appeals, with the recommendation that from among them he select a member of the Indian Territory Board of Pharmacy, there being a vacancy: J. C. Johnson, South McAlester; H. H. Hookey, Krebs; L. Matthews, Miami; C. C. Jenkin, Blue Jacket; H. L. Mitchell, Vinita; C. J. Lane, Chelsea; N. E. Tuell, Hartsborne; E. T. Ramsey, Ardmore; Edward Shaumahan, Vinita; Ernest Roope, Tulsa.

A proposition to hold the next meeting jointly with the Oklahoma Association was voted down. The next meeting was voted to Sulphur Springs without opposition. A ball and reception were given to-night.

NEW PHARMACISTS IN KANSAS.

Kansas City, May 27.—The reorganization of the Kansas State Board of Pharmacy was effected at Junction City, Kas., yesterday. These officers were elected: President, L. Ardery, Hutchinson; treasurer, W. W. Naylor, Horton; secretary, W. E. Sherriff, Elsworth; chairman of the finance committee, C. L. Becker, Ottawa.

The board will meet in Ottawa, August 23, when the next examination for pharmacists will begin. At the examination yesterday, twenty-nine passed as registered pharmacists and six passed as assistants, as follows:

Pharmacists—L. Atwood, Meriden; Max E. Bacon, Lakin; F. E. Chapin, Delphos; Henry J. Caspers, West Moreland; A. W. Cushman, Council Grove; J. H. Callahan, Kansas City, Kas.; Dan A. Carlin, Salina; L. F. Freeman, Parsons; Harold G. Gattin, Paola; W. H. Hinkle, Junction City; W. G. Hlggie, Girard; W. L. Holt, Cherryvale; P. F. Herrud, Kansas City, Kas.; L. H. Houghton, Washington; F. K. Joslyn, Cheney; J. O. Klein, Wichita; Will Kohler, Downs; Frank R. Kibby, Oswego; F. H. Merriam, Topeka; Edward Leurance, Leosho Falls; J. H. Looks, Stockton; W. B. Munford, Topeka; H. C. Martin, Topeka; S. S. Reed, Soldier; H. Ryman, Topeka; B. A. Roy, Osborne; R. G. Schoonhoven, Topeka; A. J. Williams, Sabetha; W. S. Wiese, Reserve.

Assistants—Roy C. Bouldin, Longford; T. D. Blasdel, Haven; H. J. DeVries, Helper; A. J. Killinger, Topeka; M. G. Reed, Soldier; James Whitell, Haddam.

BRINGS SUIT FOR DAMAGES.

Kansas City, May 25. Suit has been filed in the Circuit Court by F. D. Mitchell, a druggist at 2206 Benton boulevard, against J. C. Martin for \$10,000 damages. The petition alleges that Martin made the statement that the plaintiff had substituted drugs in filling prescriptions.

WESTERN DRUGGISTS MEET.

Busy Annual Convention of Oklahoma Pharmaceutical Association.

Shawnee, Okla., May 29.—At the annual convention of the Oklahoma Pharmaceutical Association, which was in session in this city for three days last week, much business of importance was transacted, and the sessions proved to be of interest and instruction to those in attendance. The beneficial results of the convention will be many, and will elevate the scientific knowledge of those who heard the many excellent papers read and who listened to the discussions on timely topics by pharmacists who are conversant with what is best for the members of the profession.

The meetings were held in the Chamber of Commerce rooms. President J. M. Remington was the presiding officer. At the opening session speeches were made by Charles F. Barrett and Prof. Edwin DeBarr. Mr. Barrett's address was replete with words of praise for druggists generally, and the local druggists were energized for their hospitality and the important part they had played in building up the city.

Prof. DeBarr is an old friend and was warmly welcomed. The trend of his theme was the love of home, and the uplifting influence of that love in guiding the men and women of the world to higher ambitions. "We came to this convention for the value there is in it," said the speaker, "that we may serve the people well. I think it is the duty of every man to get as much out of life's good things as possible, not from the value point, but that he may serve those he loves better."

At the business sessions many interesting papers were read and special prizes were awarded. The members of the committee on prize papers were: Prof. Edwin DeBarr, Graves, Tolberts and Frederick Reed. The committee made the following awards: W. S. Daniels, of Pawhuska, special prize on paper; F. A. Dunklin, of Hennessey, first prize for best paper read before the association, and J. C. Burton, of Stroud, prize for second best paper.

President Remington appointed the following committee on resolutions: F. B. Little, J. C. Benton, A. B. Clark, Nelson Sturgeon and C. A. Dow. Fifteen new members were taken into the association. J. M. Remington, F. M. Weaver and Profs. DeBarr and Washburn were chosen as delegates to attend the Indian Territory Pharmaceutical Association convention at South McAlester, on May 16 and 17. H. C. Cobb, of Muskogee, F. A. Savage, of Hartshorn, and H. D. Kniseley, of Chetotah, were delegates from the Indian Territory Association, who met with their Oklahoma brethren in this convention.

The newly elected officers are as follows: A. B. Clark, of Watonga, president; F. A. Dinkler, Hennessey, first vice-president; Wallace Mann, Shawnee, second vice-president; F. M. Weaver, Oklahoma City, secretary and treasurer.

The ten names selected from which to choose names to fill vacancies which may occur on the Board of Pharmacy, are as follows: A. B. Clark, Watonga; F. M. Weaver, Oklahoma City; J. M. Remington, Shawnee; C. A. Dow, Fond Creek; Hennessey, Elk City; F. A. Dinkler, Hennessey; J. C. Barton, Stroud; Fred Reed, Nor-

man; F. B. Little, Guthrie; E. E. Hoven-dohler, Perry.

Guthrie was chosen as the place for a joint meeting of the Oklahoma and Indian Territory Associations in May, 1906.

The convention came to an end with a ball, followed by a banquet.

IN OKLAHOMA.

Guthrie, Okla., May 27.—At the regular quarterly meeting of the Board of Pharmacy at Enid, out of a class of twenty-two the following were registered: Fay Alexander, Fallis; Ross H. Beam, Herrington, Kan.; A. J. Brace, Fletcher; F. T. Corwin, Enid; Chas. F. DeSmith, Stroud; Byron B. Fees, Alva; W. W. Gill, Ringwood; T. J. McNaughton, Newkirk; A. E. Wilkins, Covington.

The following were registered on diplomas from colleges of pharmacy: J. C. Alexander, Valparaiso, Ind.; Thomas M. Bailey, Galena, Kan.; Harry L. Bickel, Atlantic City, N. J.; Joseph M. Gries, Ogden, Utah; C. A. Harrod, Washington, D. C.; H. O. Hershey, Baltimore, Md.; Alpha R. Johnson, Pomeroy, O.; R. G. Lewin, Atlantic City, N. J.; Roy Lopez, Enid, Okla.; H. J. Losh, Kewanee, Ill.; E. F. Menger, Philadelphia, Pa.; J. H. Mundt, Valparaiso, Ind.; T. E. McTherson, Kennett, Mo.; Walter S. Pollard, Hot Springs, Ark.; Victor A. Rankin, Oklahoma City, Okla.; Michael Saccar, Hallettsville, Tex.; C. D. Wheeler, Charles City, Ia.

For the information of those applying for registration on diplomas, the secretary gives the following information:

First.—All candidates must have had four years of practical experience outside of a college course.

Second.—The college recognized must require a high school training or its equivalent, as a preparation for entrance, and two years' school course of not less than twenty weeks each.

Third.—The candidate must furnish a certificate from the Dean showing the above facts, also recommendations from present employer, or other reputable person, as to honesty and ability.

Fourth.—The registration fee is \$5, and the renewal fee is \$2 per year, payable on July 1 of each year. Applications may be submitted at any time, accompanied by the examining fee, but will only receive the action of the Board at its regular quarterly meetings, the second Tuesday of July, October, January and April.

The next meeting of the Board will be held at Oklahoma City, July 11.

CHARGED WITH SELLING COCAINE.

Kansas City, May 26.—Four druggists have been arrested for selling cocaine without prescriptions. They are: John C. Surface, 1411 Walnut street; H. B. Sargent, 1905 Grand avenue; William Able, 1435 East Eighteenth street; J. B. Gadinsky, Centropolis Hotel. The arrests were made by order of the city attorney. When arraigned in police court to-day, the defendants were granted continuances.

At a Forty-second street drug store a customer regularly calls for a cigar named La Solar, but with blissful ignorance asks for "Two Solar Plexis."

ARKANSAS PHARMACISTS.

Committee to Investigate N. A. R. D. Affiliation.

Little Rock, May 22.—In his report to the Arkansas Association of Pharmacists, which held its annual meeting in this city last week, J. W. Jeldelman, secretary of the Board of Pharmacy, stated that seventy-one persons had been examined during the past year, a larger number than had ever applied in any previous year. Only thirty-nine received certificates, however, the failure of so large a number being due to the educational test now exacted. "A strong demand," he said, "is now coming from throughout the state for well-qualified pharmacists."

President R. B. King, in his annual address, reported that the drug business was in good shape and that no one hardly complains of dull times. He referred to the cocaine law that had been recently passed by the Legislature, and that while it was up to the judges and prosecuting attorneys of the state to see that the law was enforced, the druggists could do more than anyone else to have this done. In Helena, where four years ago the city prison was filled with cocaine victims, no druggist sells the drug at all except on prescription. The druggists there do not care to sell cocaine.

In retiring from the office he had held for two years President King had this to say:

"I have at last reached the middle age of life, and have overstepped its usefulness by fifteen years, and if the Lord in his wisdom will permit the healthful breezes of five more summers to waft through my snowy locks on the 24th of July, I will gently call the assistant druggist, and ask him to bring out the old mortars and pestles, pill tile, spatulas, funnels and graduates; after he has spread them out before me I will look them over carefully, and try to realize all of their usefulness to me; I will then have him pass me the chloroform bottle, so that I may be Oslerized to the shade of old age."

The most important business considered at the second day's session was the question of affiliation with the N. A. R. D. No decision was reached, but a committee, consisting of J. A. Ginochio, J. F. Dowdy and D. F. Rogers, was appointed to investigate the matter.

The reports of the secretary and treasurer were presented and both showed the association to be in satisfactory condition. Twenty new applications were received and about seventy-five members were in attendance. L. Mathews, of Miami, I. T., a former member of the association, made an address, and E. T. Mitchell of New Orleans, delivered a lecture on the "Growth of Plants," and their relation to pharmacy.

Hot Springs was chosen as the place of next meeting. The following officers were elected: President, W. H. Skinner, Pocatohas; vice-presidents, Charles Schenk, Hot Springs, and Gus Nash, Jonesboro; secretary, Miss Mary A. Fein, Little Rock; treasurer, D. J. Rogers, Little Rock.

A feature of the exercises at the banquet, which concluded the meeting, was the presentation to Miss Mary A. Fein of a gold medal as a token of the members' appreciation of her services as secretary for the past eight years.

Help on Both Hands!

On the one hand we have Dry-Sole which will be a mighty good thing for *you* to have on hand this winter—

For on the other hand we have a bunch of ads which are to appear in the leading magazines, and interest more than twenty-five million people—about nine out of ten of the *buyers in your town*.

We want you to anticipate the effect these ads will have upon the twenty-five million or more people who read them. We want *you* to be prepared to *supply their demand* for Dry-Sole—we don't want to be bothered with mail-orders, they're not in our line.

DRY-SOLE

"Keeps Feet Dry."

There is always room in a good store for a thing that sells. When you get a customer in your store, be prepared to sell him everything he can use to advantage. Little things, "only a quarter," sell easiest. Our effective advertisements of Dry-Sole will bring many people to your store looking for it—for each ad mentions that you carry it in stock. To disappoint them would be to discourage future "inquiring" visits.

There is easy business ahead of you if you make preparations to cinch it.

Dozen lots Dry Sole cost you \$2.00—sell for \$3.00

Half gross lots Dry-Sole cost you \$11.00—sell for \$18.00

Gross lots cost you \$21.00—sell for \$36.00

your profit 50 per cent.

your profit 64 per cent.

your profit 72 per cent.

Buy early, display early—so people will *know* and *remember* you have "Dry-Sole as soon as our ads convince them they want it. Send your order to-day—start your profit at once.

Write now for our free book, "Good Advertising for Retailers."

DRY-SOLE CO., 99 Warren St., NEW YORK CITY

Canadian Depot: 126 Wellington St. W., Toronto

DRUG SALESMEN WANTED to carry Dry-Sole as a side-line. Liberal terms to good men on an attractive proposition. Act quickly. Write: Dry-Sole Co., 99 Warren St., New York.

TAKA-DIASTASE

THREE-FOURTHS of all cases of dyspepsia, it is said, are due to indigestion of starchy foods. *Taka-Diastase* is

THE PHYSICIAN'S MAINSTAY

in this class of ailments. It is the most powerful and reliable starch-digestant known.

Now is a good time to

LOOK TO YOUR STOCK

as we are advertising *Taka-Diastase* in every medical journal of note in this country.

CONSULT OUR PRICE LIST

(pages 150-151) for information as to our full line of *Taka-Diastase* preparations.

PEPSIN CORDIAL

STOCK THIS FINE PEPSIN PRODUCT.

In the treatment of intestinal disorders of infants and children it is a prime favorite with physicians.

You will have frequent specifications for it

when your medical patrons know that you can supply it.

Pepsin Cordial is pepsin in its most agreeable form, being acceptable even to very sensitive palates.

TRADE SECTION

HOW ONE DRUGGIST ERRED.

Faults in His Policy Plain to All Save Himself.

COMPLAINED OF SLOW BUSINESS.—“ONE GOOD MAN TO A STORE ENOUGH!” HIS IDEA.—COLLEGE STUDENTS AS JUNIORS.—FIRED WHEN THEY QUALIFIED.—SAVED SOME MONEY; LOST GOOD MEN.—DROVE HARD BARGAINS AND OVERWORKED HIS MEN.

“The drug business is going to the dogs.” A pessimistic druggist, reputed successful, owner of several stores, thus summarized trade conditions. The friend to whom he said this asked why he thought so and drew out the fact that the druggist believed it was true in the case of his own business and so was disposed to judge that it was equally true for the trade in general.

“Here I am,” he explained, “with three drug stores on my hands. I made so much money in my first store that I bought another and later a third. And I prospered until lately. Now I am barely clearing expenses, except in my first store. Why is it so? I only wish I knew. If I could discover the reason I should be on the right track to find the remedy.”

His auditor expressed the wish to help him look over the situation to try to discover the why and wherefore, on the supposition that two heads are better than one in devising a remedy for any ill. The druggist consented and began.

HIS BUSINESS METHODS.

“Before we look at the books, let me explain a few things about my policy. I have always had one good man in each store and I have still. I pay the oldest manager (oldest in point of service with me) \$22.00 a week. The others get \$20.00 each. The hours are long, but the work is not hard. Of course, I have to have assistants in each store. My assistants are college boys getting experience while pursuing their course of study. I have only one registered man in each store and I am my own relief clerk.

“Of course, I do the buying myself. Advertising? I do a little advertising. Of course, I am in the business to make money. It isn't philanthropy that makes me give the college students a show; it's necessity. But if trade continues to fall off proportionately to the increase in my bills, I'll have to hire boys next year.”

“Here the friend interposed. “Perhaps,” said he, “you yourself are to blame for the state of affairs. Isn't it a fact that your stores are individually and collectively dirty? that you have only one really competent man in each one who assumes responsibility? that the other employes are temporary birds of passage, so to speak? that they are young, inexperienced or lacking in self-confidence with the exception of an occasional ‘cock-sure’ junior?

Is it not true that your ‘just outs’ are numerous and ‘never heard of’ its frequent? Doesn't one store borrow from another without restraint? Do you actually know what each store is doing? And in short, are you running your business right?”

The druggist had ceased grinning by this time. “Frankly,” he admitted, “these things are as you surmise. When I had but one store, it was the cleanest ever. I personally saw that it was kept clean. But now, of course, I can't turn to and clean it up myself. This is a hard neighborhood in which to get errand or cleaning boys. The juniors ought to take more pride in the stores. Glad you spoke of that; I'll get after them.”

FAULTS OF POLICY PERSISTENT.

“As for ‘one competent man,’ as I've explained, that is my policy. Of course, he is responsible. I'll have to shake the boys up a bit; they're getting careless. But business is slow, and you know there's not the same incentive to employer or employee when things are quiet.”

“Now's the time to hustle, you say. Clean up and get ready for business, eh? Of course, your point about the juniors is well taken. After they are graduated and licensed, they leave me. That's my fault. But I can't afford to pay registered men's wages. Naturally I have to fill their places and you'll find very few juniors since the pre-requisite law, that are not going to college.

“As far as having inexperienced help, you're right, but they always have a reliable man to fall back on. When you talk about stock keeping you bit me right where I live. It's a funny thing, but on the days when I relieve the managers, I find a plenty of ‘sold and not replenished’ stock. When I kick, I find that one of the other fellows is to blame. The Blank street store was short and sent up for an article. The junior clerk handed it out and forgot to reorder.

“Yes,” he added reflectively, “it's always the other fellow that does it. Requisitions from store to store? That's rot. A lot of extra time and trouble for nothing. Doesn't it all come out of me, no matter which store buys?”

“But,” insisted his friend, “you say the Blank street store is a winner; is steadily forging ahead pro rata to your monthly bills.”

The druggist assented.

“Well,” said the friend, “complaints are heard all over this town that ‘business is bad,’ whatever that means. Therefore, if one of your stores is doing so well, is making money for you, it's clear that something is wrong with the others, or else the first store is galloping at the expense of the others.”

The druggist looked serious. “I have thought of that myself; guess that requisition scheme of yours would tell the tale, eh?”

The books were produced; it would have taken a mighty experienced bookkeeper to

figure out what they did show anyway. But enough could be gleaned from the chaos of figures to tell something of a story. Plainly something was wrong. But what?

AS OTHERS SAW HIM.

Now the friend knew that an employer is usually the last one to hear disquieting rumors about his own business or his methods. His friends fear or are too considerate to tell him the things he ought to know. His enemies, or his competitors, naturally will not point them out. He therefore bided his time and began to make a few inquiries on the outside. It's a wise old saw that says something about every one else knowing more about your private business than you do yourself.

The business men in the neighborhood were naturally reluctant to draw inferences about the druggist. But here and there a word was dropped that was fraught with meaning. An enemy of the druggist was indeed quite fluent on the subject. Said one, “He's going to pieces, he's playing the races. He don't attend to business and he has a lot of ‘kids’ working for him at starvation wages. Why, one of them didn't know what spirit o' salt was. Had to get a big dictionary and hunt it up. We take prescriptions in there?—not on your life.”

Later the friend met some other competitors of the druggist and in their stores he met traveling salesmen. There was no doubt that the three-store man was considered a poor buyer.

“He's a driver,” summed up the salesman. “He's been on hard lines in the past and has had to drive himself so much that he now has the habit and overrides his men. The price he paid for success was his own health and that of several of his old-time clerks. He proceeds on the theory that everyone is trying to get the better of him. If you quote him a price he'll try to beat you down until you barely realize a commission. No, sir; I don't sell him and don't want to, for all he's good pay.”

TOO KEEN FOR POUND OF FLESH.

There appeared to be more than an element of truth in that criticism. A story was also told of the druggist, which was vouched for. In quoting a price to him, a certain salesman made a very palpable error through inadvertence. The druggist sat down at his desk at once, wrote out a check for the full amount less 5 per cent., and although the mistake was plain afterwards, insisted on the house shipping him the goods. It cost the salesman his job incidentally.

After that the friend quit. He knew enough to know there was little he could do to remedy conditions. It lay with the druggist himself, and it was hardly to be expected that he could change his entire nature. But the faults of his lack of system were plain enough.

ST. PAUL'S NEW SODA FOUNTAIN

Beauty and Originality in the Apparatus of the Mansur Drug Company

A Center Post of Leaded Glass Representing the Depths of the Sea—Illumined from Within—Work of Manager and Chief Dispenser—Cleanliness, Politeness, Novelty, They Say Essential—A Clever Menu of Much Artistic Merit—Serves Both Hot and Cold Drinks the Year Round.

The Mansur Drug Co., St. Paul, Minn., has opened the soda season at Seventh and Robert streets with an original soda fountain that is bound to attract wide attention in the trade. It is the only one of its kind in the world and in this country there is but one that bears the slightest resemblance to it, and that is in St. Louis. The style of fountain is known as the Sanataire system and was built by the Acorn Brass Co., of Chicago, from designs furnished by the Mansur Co. It is not imposing in appearance, with wide, towering bulk like the generality of fountains, but was planned to economize space and at the same time impress the public with innovations and attract the eye with a beauty that is nothing short of striking in effect. The Mansur fountain may be compared with

one of the big ordinary concerns about as the little Monitor of Hampton Roads compared with the gigantic Merrimac—smaller, but more effective, and therefore of greater real capacity than its leviathan antagonist.

The fountain, which is located in the middle of the store, is twelve feet square, with round corners. It is of green Verde antique, or French serpentine marble, from the top of the slab to the workboard, and below, of white Italian marble. The workboard, which has the distinction of reaching entirely to the floor, is of German silver. There are drawers into which the stop china empties and which are removed and cleansed thoroughly every morning. The front part of the fountain is cut glass mosaic. There are two magnificent onyx

draught stands, each about two feet in height, with extra large bore to allow the constant and all permeating circulation of ice cold air. The water is thus kept at its coldest from the bottom to the top of the draught stand. The fountain has a seating capacity of twenty-four. Another idea is the arrangement whereby four dispensers can work inside the fountain without interfering with another in any way. Each dispenser has his full "kit" of bottles, glasses and the whole paraphernalia before him in easy reach and is never compelled to brush by or reach beyond one of his fellows on any occasion or for any purpose. These four dispensers, with every convenience at hand, will be able to take care of all possible rushes in the least time. The dispensers are not handicapped by taking the money and making change, for their business is done by means of checks which are paid at the cashier's window.

AN ARTISTIC CENTER POST.

But the chief attraction of the Mansur fountain is a decorative center post, something like an hour glass in shape, which rises from the refrigerator base of the fountain to the ceiling. This post, made by Turyea & Potter, of New York, at a cost of \$1,000, is of leaded glass, illuminated by several inside electric lights with frosted globes, which prevents a harsh glare. The post is a representation of a section of the ocean or a lake. At the bottom appear rushes and various seaweeds. Above them pretty fishes are seen swimming, and thence to the surface are strata of water of various harmonizing

A FOUNTAIN WITH MANY UNUSUAL FEATURES. THAT OF THE MANSUR DRUG COMPANY, SEVENTH AND ROBERT STREETS, ST. PAUL, MINN. A SANATAIRE, MANUFACTURED BY THE ACORN BRASS CO., OF CHICAGO.

colors, brilliant or subdued. The predominant tint, of course, is green. At night the center post, all aglow with its richness of hue, with the other lights in the store turned down just enough to bring out the post in dazzling contrast, shines far out into the street and attracts customers as an arc light on a July night attracts moths or an open jug of molasses draws flies.

Among the novelties on the fountain is a 200 pound block of ice, dyed red and green, placed there in a glass case every morning. It resembles a heap of enormous gems and nobody can tell what it is unless he asks or someone volunteers the information. The fountain is to be lavishly decorated daily with the choicest flowers.

Louis Haisb, treasurer of the Mansur Drug Co., is the manager of the fountain. Mr. Haisb was for ten years connected with the celebrated Vogelli Bros., of Minneapolis. The main business of Mr. Haisb is and always has been that of druggist and pharmacist. The soda water adjunct is a minor feature of his interests.

THE CHIEF DISPENSER'S SOUFFLES.

The chief dispenser is Myron L. Derby, who for nearly five years acted in similar capacity with Charles Cirkler, the Minneapolis druggist. Mr. Derby is but twenty-one years of age, but has been in the drug and soda business nine years, and as a contriver of soda mixtures is a genius if ever the West produced a genius in this line. For two weeks he worked every day, designing an eye opener in the way of a menu for the Mansur Company, and his success was unequalled. The menu requires twenty-five fruits and combination of fruits, besides the other materials. These fruit combinations are always on display. Among Mr. Derby's inventions are souffles of different kinds whose central and new idea is to serve something hot with ice cream soda. They are compounded of ice cream soda, whipped cream and Marshchino (stoneless) cherries, with a hot syrup, such as chocolate paste, to be poured over it. The souffle is served on a plate with pretty paper napkin, the syrup being in a tiny pitcher. One of the favorite drinks dispensed is Tangerine, Mr. Mansur's own invention. The glass is half filled with cracked ice, then comes the tangerine, with fruits on top.

The fountain does one thing never before attempted or heard of in this part of the country, and that is to serve both hot and cold drinks the year around. Should one be so erratic as to call for a steaming beverage the middle of the most torrid July, or for ice cream (Christmas or New Years, he will be accommodated. The Mansur Company manufactures its own ginger ale and root beer, which are served in big stone steins. The theory here held and lived up to is that ice cream soda well served and with all the up-to-date accessories can just as well command a ten-cent as a five-cent price. Experience has proved the wisdom of this idea, as the druggist's cash drawer will bear witness.

THE MAKING OF THE MENU.

But Mr. Derby's new menu will abundantly repay further examination. It is happily entitled "Goblets of Goodness" and is printed on purple paper with gilt and white lettering and decorations. The front page of the cover bears a design con-

sisting of two modestly dressed young women slipping from one soda water glass with straws. Between the covers is the menu proper, affording the most elaborate layout of the sort ever shown the public in the Twin Cities, at least. Following is a recapitulation of the general heads with the number of drinks and other dishes under each:

Sundaes, seventeen kinds; souffles, fourteen; mousse, six; frappes, sixteen; specials, five; fancy mixed drinks, twenty; a hit with the ladies, seven; egg drinks, eighteen; lemonades, ten; nerve tonics, eight; mineral waters, twenty.

The back cover is inscribed with "The Last Word," in this square-dealing style: "See that you are suited. We want to serve it as you want it, and strive to learn your tastes. Give instructions and if the attendants fail to get it right, ask them to try again. Their intentions are good."

Mr. Derby thus outlines his ideas as to the successful operation of a soda fountain:

"The first requisite, of course, is cleanliness. My idea is to keep the bar of the fountain over which customers do their buying dotted with fruit bowls filled with the most appetizing contents that can be devised. I also keep a supply of our tastily printed menus, which, being carried away in some instances by those to whose artistic sense they appeal, become a good advertisement for our fountain and store. In dispensing drinks it is important to originate fetching decoctions and little show pieces of one's own and not follow the old beaten paths of other dispensers. It is easy to think of some simple aid in attracting trade, such as placing a big piece of colored ice on the bar, with flowers or chemicals arranged in some new and striking fashion. By such means you will appeal to the curiosity of the public and naturally increase sales. The thing to do is to advertise, not in a loud, garish manner, but—advertise.

THE DISPENSER'S DEPARTMENT.

"When a customer has purchased a drink and left the counter the up-to-date soda clerk immediately clears the bar before serving another patron, whether a 'rush' is on or not. One thing more which draws customers, especially young women: Let the dispenser be tidy in appearance, genial, always ready to joke, but never for an instant slighting his work. It is easy enough to fill orders and talk pleasantly at the same time. Customers may thus get something good besides what they pay for, and will therefore want to come again and again. The dispenser, of course, must be discreet of speech; but with a little tact he can 'turn the trick' easily."

Of the men composing the Mansur Drug Co. and their employes, it may be said that they are the "pick" of the Northwest as drug tradesmen generally and soda fountain experts particularly. Their advent in St. Paul spells innovation and success of the top-notch stripe. Having "made good" in Minneapolis for many years, they will now "show" St. Paul, or know the reason why.

The United States Circuit Court has reversed a decision of the Board of General Appraisers, deciding that chrysanbrin is not dutiable as a medicinal preparation, but as a drug advanced in value.

DATA ABOUT MORPHINE.

1804—Seguin discovers a crystalline substance in opium.

1805—Serturner recognizes that a crystalline substance is the sleep-producing principle of opium. He also recognizes the basic nature of this principle, thus discovering the existence of the whole class of alkaloids and "opening a way which has led to great medicinal discoveries." (Clausen used by the Institut de France in awarding Serturner the Montyon Prize.)

1816—The name morphine is given to the sleep-producing principle of opium, being derived from "Morpheus," the Greek god of sleep.

1823—Dumas and Pelletier determine the composition of morphine.

1827—Merck is first to manufacture morphine and to place it on the market for medicinal purposes.

SOMETHING NEW AND GOOD.

The success and popularity of a really good article is assured from the start. If it fills a useful purpose the consumer will soon find it out and inquire for it, all the sooner when it is exploited by systematic, clever advertising with persistence. If the retail price is then found to be fair the public will buy freely and the dealer who is in a position to supply the demand is sure to reap a harvest. There is one other factor of great importance. The trade which is the natural distributor of the article must be willing to handle it; must be sure that its profit is fair, making the pushing of the goods worth while. When all these essentials are fully satisfied the results will be tremendous and the retailer who fails to investigate and feature the article is certain to rue it later. The greatest profit will come to the one who was first in the local field with the new commodity. The Thermalite bag is a new article of great merit, reasonable retail price, and fair profit to the trade, to whom the manufacturers make liberal terms. It literally almost sells on sight, for it possesses elements of novelty which appeal to the popular imagination, while experience of its use reveals sterling qualities not observable at a glance. Now is the time to stock it and push it for all it is worth. Be the first in your neighborhood to market it, before your competitors realize its value. The department stores will be ahead of the druggists if the latter is not alive to his own interests. The Thermalite bag is filled with a heat-storing and heat-imparting salt, which can be prepared for future use. When wanted, the heat may be turned on without further preparation. It is far superior to a hot water bag in that it gives a more even, dryer, longer sustained heat. There is no danger or trouble attached to its use. The druggists of New York, and indeed, of all sections of the country, are selling it rapidly. If you are not one of them, look into the subject and you will find these remarks true. When writing to the manufacturers, the Thermalite Company, 161-165 Elm street, New York City, please mention The Era. The firm's advertisement with illustration appears on another page.

GARDEN PARTY AT A FACTORY.

National Cash Register Company
Entertains 25,000 Guests.

CITIZENS OF DAYTON SPEND EVENING AT MODEL POWER PLANT—BUILDINGS ILLUMINATED BY 10,000 INCANDESCENT AND 300 ARC LIGHTS.—ATTRACTIVE OF BIG INDUSTRIAL ESTABLISHMENT.

A garden party at a factory—it seems an anomaly, doesn't it? Ordinarily, one does not speak of gardens and factories in the same breath. There is one factory, however, to the surroundings of which the same garden can be fairly applied. When the National Cash Register Company recently invited the people of Dayton, Ohio, to spend an evening at its model plant, it was really a garden party which the 25,000 guests attended.

The factory, itself, was not open, but the big buildings were illuminated from top to bottom by 10,000 incandescent lights and 300 arc lights—more than the average city of 25,000 uses. The grounds,

ENTRANCE TO POWER PLANT.

lawns, flower beds and shrubbery patches were all open to the people, who spent their time strolling about the beautiful N. C. R. vista, listening to the music of the N. C. R. band, and enjoying the brilliant spectacle of the illumination. Lights, music, flowers, shrubbery, greenward, trees, guests in summer clothing—all the characteristic features of a garden party were there—and all this at a factory.

MAMMOTH POWER PLANT.

The "garden party," which lasted for three evenings, was arranged by the N. C. R. Company to celebrate the completion of its new power plant, and to give the people of Dayton a chance to see what experts declare to be the handsomest and, for its size, the best equipped electrical station in the country.

The new power plant of the N. C. R. is interesting as showing what can be done in the way of making attractive an ordinarily prosaic part of a big industrial establishment. Externally, the building itself is unusually handsome. Built of warm red brick, its architecture is simple and dignified. It does not pretend to be anything but a power house, and accordingly its characteristics are strength and solidity. Shrubby about the base of the building and vines around the large windows relieve the walls of monotony.

BOILER ROOM SHOWING COAL SHUTES.

BEAUTIFUL ENGINE ROOM.

Inside the power house, the visitor is struck with the beauty of the engine room. Polished maple floor, walls varnished in white enamel brick and finished above in cream color, make the interior as bright and clean as any parlor or hall room. Contrasting with the light color of the walls and floor are the dark green bodies of the four big engines, their sombre hue relieved by polished steel trimmings.

The boiler room of the power house is not less interesting than the engine room. Though, of course, not so beautifully finished, it impresses the visitor by its cleanliness. Automatic stokers feed the sixteen great furnaces with coal, and the ashes are removed through a tunnel under the grates almost entirely without the intervention of human labor. Perfect ventilation keeps the room comfortably cool.

WONDERFUL GROWTH.

The equipment of the power house is an outward sign of the growth of the business of the N. C. R. Company. Until six years ago a single engine of 300 horsepower was sufficient to turn the wheels of the entire plant. In 1899 a 600 horsepower engine and dynamo were added. Before three years had passed, however, increased demand for the factory's output necessitated further enlargement of the plant and consequent extension of the power station. In 1902 a 1,200 horsepower compound engine and generator was installed. Two years later it was necessary to duplicate this unit, and now the total equipment of the plant is 3,300 horsepower. The boilers are capable of developing 3,500 horsepower, if needed.

The increase in business illustrated in the growth of the power plant is also

FOUR ENGINES AND DYNAMOS.

shown in the development of the company's product. Twenty years ago the N. C. R. factory turned out one style of register, a crude affair, which recorded sales by punching holes in a strip of paper. To get the total of the day's business one counted the holes, multiplied the number of holes by the denomination of the key pressed and added the results. Today the Dayton factory turns out 403 different styles and sizes of cash registers, built on twelve different principles and adapted to the needs of every kind of business.

WORK OF THE MACHINES.

Last year registers were sold to 212 different kinds of trade. The latest machines do practically everything for a merchant in keeping track of his accounts, recording each clerk's transactions separately and keeping his cash in a separate drawer. A new machine has just been perfected for department stores, which does away entirely with the waiting for change, generally so annoying to customers. These registers have been installed in several of the largest department stores in the country.

The new N. C. R. power station is the

POWER HOUSE.

outcome of the company's policy of making the buildings and surroundings of the factory beautiful and healthful. Such an environment is an aid to good work and makes intelligent and conscientious effort characteristic of the employes of the N. C. R.

MR. SMITH TO STUDENTS.

Mr. J. Hungerford Smith, Ph.C., president of the J. Hungerford Smith Company, Rochester, N. Y., recently delivered a most interesting lecture, illustrated by stereopticon views, before the students of the Michigan University, of which Mr. Smith himself is an alumnus. The lecture was descriptive of the various improved facilities and processes in the manufacture of soda fountain syrups, crushed fruits, flavoring extracts, etc., at the J. Hungerford Smith Company's factory, which is the largest in the world devoted exclusively to this line.

POPULARITY SURPRISED THEM.

When the C. H. Bangs Druggists' Fixture Co. produced their first Ice Cream Table and Show-Case, with seats attached, they felt quite confident they had a trade getter; but they are free to admit that its immediate popularity, and the large demand created, had surprised them.

INTERIOR OF GEORGE H. GRAYDON'S KING EDWARD PHARMACY AT EDMONTON, ALBERTA, N. W. T. THE NEAT, CLEAN-CUT APPEARANCE OF FIXTURES AND STOCK IS NOTICEABLE. MIRRORS INSET IN PARTITION BACK OF WHICH IS THE PRESCRIPTION COUNTER.

PRICE OF ICE CREAM IN DIXIE.

Some interesting figures on the price of milk and ice cream have just been published by the Department of Agriculture, Bureau of Animal Industry, in a bulletin entitled "The Milk Supply of Twenty-nine Southern Cities." These statistics were compiled after investigation by Prof. C. F. Doane, M. S., professor of dairy husbandry and bacteriology, in the Maryland Agricultural College, while acting as special agent for the Bureau of Animal Industry. Nine Southern States are treated, the most important cities in each being studied.

The population in each case is shown, the daily consumption of milk in addition to family cows, the number of cows kept in the city, the retail price per quart and per gallon, and the price per gallon paid to producers. The per cent. of fat and the price per quart of cream is given. Passing to ice cream, the price per gallon in each city is tabulated.

It is this latter information which is perhaps of the most interest to the drug trade. The lowest price quoted is 80 cents, for Memphis, Tennessee, and it forms part of a range of 80 cents to \$1.00 for that city. The highest price is \$4.00, for Norfolk and Portsmouth, Virginia, but a range is also shown there from the low price of \$1.00. Of course, much depends on the quality of the cream. The average price for ice cream per gallon is \$1.58, according to these figures. At New Orleans the cost ranges from \$1.50 to \$2.00; at Charleston, \$1.00 to \$2.60; Memphis, 80 cents to \$1.00, and Richmond, \$1.25. In

the same order, the price of cream per quart is 30 to 40 cents, 25 cents and 30 cents. It is noticeable that the per cent. of fat in the cream is the lowest at Charleston, being but eighteen, while Memphis is as high as any, with 30 per cent. The average per cent. of fat per quart is 25. The figures, at least as far as price is concerned, indicate little difference from conditions prevailing in the Northern States.

A CANADIAN DRUG STORE.

They know how to do things in Alberta, N. W. T., certainly at least in the fittings of a pharmacy. We reproduce a photograph of the King Edward Pharmacy, at Edmonton, Alberta, N. W. T., the proprietor of which is George H. Graydon. The general effect speaks for itself. Everything is of modern style and is beautiful in simplicity of line. The sanitary results from the lack of cumbersome, useless ornamentation is to be commended, and the ceiling, show cases and stock shelves are of desirable pattern. The same discrimination marks the advertising done by the store. Mr. Graydon issues a calendar of very good value and style. This year it carried this very same view of the store in the upper half, below being the usual block of paper slips, one for each month. The whole was upon strong, but flexible, glazed paper. Above the photograph was the superscription "Compliments of George H. Graydon, Chemist and Druggist," and below, the name of the pharmacy. At top and bottom were brass binders and in the former was fastened a

ring by which to hang up the calendar. The whole sheet was easily rolled without marring for mailing purposes.

THE PROCTOR ADVERTISING.

When you can't turn to the East or the West or the North or the South, the right or the left, without seeing the name of Proctor, it is evident that something is doing. Never in the history of theatricals in this country has any theatrical manager dared to make the display that Mr. Proctor is making of his various theatrical properties. Just think of a farm of fifteen acres, and then think of seeing the surface of that farm covered entirely with Proctor signs, and you will have some appreciation of how much advertising space is covered in New York City with Proctor Theatre signs; or, think of taking two miles of Broadway, New York, and covering it from building to building with Proctor signs, and you will have another idea of the immensity of this showing, and, of course, all this does not include the great amount of newspaper advertising, or the notices of Proctor attractions in every street car, in every elevated station, or in every ferry house. But builded, even more securely than the signs, are the attractions which those who read the signs may see at the various Proctor Theatres.

In the Netherlands the consumption of tea per head per annum is 1.48 pounds; in the United States, 1.09 pounds; in Russia, 0.93 pound; in Germany, 0.12 pound and in France 0.96 pound.

DRUG TRADE JOTTINGS.

G. Wiley Holmes has opened his new store and is doing business at 1921 Broadway, although it is not entirely fitted up yet. There is a new fountain.

C. H. Love, 761 Amsterdam avenue, New York, has opened his summer pharmacy for the eleventh season, at Arvergne-by-the-Sea, Long Island.

The Welch Grape Juice window display has now reached the store of Joseph Giblin, Eighth avenue and Forty-second street, and Schaafl's, 708 Eighth avenue.

S. F. Haddad, of 89 Broad street, sailed for Europe on May 20, where he will spend the summer. This recreation is the more pleasant after sixteen consecutive years of business activity.

On John street may daily be seen a push cart, the proprietor of which sells ice cream. His sign reads: "Delicious crushed fruits, 2 and 3 cents." Apparently a sort of a low-priced sundae.

Drug stores using lay figures to feature goods may be interested to learn that one has been put on the market which moves its eyes, head, arms, etc. It seems to catch the attention of the public easily.

Carpenter, Wellington & Co., Broadway and Sixty-sixth street, are ready to aid the public in ascertaining the degrees of summer heat and are offering a line of out-of-door thermometers, through the medium of their window.

A noticeable feature of the drug stores between Fourteenth and Forty-second streets, Manhattan, on Second avenue, is the absence from the counters of advertising literature for proprietary goods. Certainly this leaves a clear, neat looking counter.

A customer in a drug store the other day called for pepsin, bismuth and charcoal tablets. Whereupon an old Irish-woman stepped up and asked: "Say, miss, is that phvat you're buyin' good for moths? I'll be takin' some too, if it is."

An unusual way of dressing a show window can be seen at the Olympia Pharmacy, 1552 Broadway. Palms of various sizes are employed, producing a cool looking effect, which intercepts the glare of the sun, reflected from the asphalt pavement of the street.

A. M. Redmond, of the Riker New York store, at Broadway and Ninth street, has been placed in charge of the St. Marks avenue Brooklyn store of that firm. Mr. Wilson, of the Twenty-third street and Sixth avenue store, assumes charge of the one at Ninth street.

Alexander G. Wilson, former manager of the Riker store at St. Marks and Flatbush avenues, Brooklyn, has purchased the business of D. Master Jr., at the corner of Flatbush and Sixth avenue. Here he will be in business for himself. He has already issued a very neat announcement card in blue and white.

Robinson Brothers, 1837 Seventh avenue, have just completed their second suc-

cessful year at that location. Several other firms have in the past carried on a drug business at 1837, but failed to make a go of it, because of the peculiarities of environment. What others failed to accomplish, however, the Robinson Brothers have done.

In the Lenox avenue window the public is told that it may purchase as follows: Pure talcum powder, 15 cents per pound; Father John's Remedies, 35 and 70 cents; Fellows' hypophosphite syrup, 90 cents; six pounds of tar balls or flake, 18 cents; a full pint of wine, beef and iron, 25 cents; Coke's dandruff cure, 54 cents, and Pond's Extract, 35 cents.

Forsythe street, New York, has no drug stores, but a great number of street stands, boasting affairs called by courtesy soda fountains, from which more bottled soft drinks are sold than ice cream sodas. The appearance of these booths is not reassuring as to the quality of the stuff served. Results of activity on the part of the city health authorities in the past have shown that many of them use materials positively dangerous.

George E. Thorpe, the well-known druggist of Syracuse, was surprised recently, by a request from an Italian woman for a love powder to restore the affection of her husband. She said that her spouse was at the hospital and that another woman had been taking him soup and other dainties, so that he did not seem to care for her, his wife, any more. Mr. Thorpe gave the woman some harmless sugar of milk and told her to take some extra fine soap and other pleasing things to her husband. He also recommended that she show her affection a little more than usual. At last reports the couple were happily reunited. The question is whether the powder or the food did the business.

C. H. Platt, of Brooklyn, can boast that his pharmacy is situated in an old, abandoned hotel at 33 Atlantic avenue. The past has handed down some odd decorations to him. On top of the shelves at the side of the store is a miniature "Hall of Fame." The busts of poets, Shakespeare, Aeschylus, Longfellow, look down from one side, while lawgivers and warriors, Socrates, Solon, Dioxysius, gods, goddesses and statesmen, adorn the other. Large, low urns of a Grecian pattern alternate with these busts of famous men. All are made of a composition resembling white marble, which stands out well against the dark green tint of the wall decoration.

The detriment to businessness as street improvements, especially excavation work, is illustrated by the case of Wilson's Pharmacy, Wall street and Broadway, this city. The sidewalk in front has been removed for some time, because of the work on the subway, which is being extended under lower Broadway. It has been replaced by a temporary wooden structure which is elevated several feet above the regular level. A certain concern recently arranged with Mr. Wilson for a window demonstration. At the end of the second day, as the results were not satisfactory, a man was stationed on the street to watch the passers-by. He reported that the public was so intent upon noting the irregularities of the path, watching the steps which lead

up to the wooden sidewalk, that never an eye was turned from the line of march. The demonstration was therefore called off.

S. Albert, 114 Lenox avenue, has issued a circular to his patrons calling attention to his prices. It runs as follows: "The Drug Trust circular has raised the prices on the following articles and will continue to do so with others:

Schedule Price.	Our Price.
83c. Peruna	67c.
90c. Paine's Celery Compound	69c.
25c. Will's English Pills	19c.
45c. Kidneywort Pills	37c.
45c. California Fig Syrup	35c.
25c. Piso Consumption Cure	18c.
25c. Bull's Cough Syrup	18c.
45c. Kilmer's Swamp Root (50 cent size)	38c.
82c. Kilmer's Swamp Root (\$1.00 size)	73c.

"Retailers who do not comply with the trust's demands are black listed. We are not controlled by anybody. Our prices remain the same as before. We give our customers the best for the least money."

One of the neatest booklets in circulation which calls attention to the merits and uses of various proprietaries is issued by the Pacific Coast Borax Co., who market Twenty Mule Team Borax. It is really an artistic creation. The cover is of rough drawing paper, on which is inset the picture of a girl who strongly recalls the women of our old friend, Howard Chandler Christy. Below is the title, Modern Miracles, the initial letters of which are illuminated in red. The contents of the booklet are in equally good taste, being handsomely illustrated with original drawings of pretty girls and young matrons at their household duties, in all of which borax proves a great aid. The quality of the paper is excellent and the type is well selected. The necessary featuring of the particular brand of borax put out by the company is done with a delicacy of touch which must carry conviction and is far more pleasing reading than the usual crass style of advertising literature.

Is a drug store a public place? A man entered a Third avenue pharmacy, recently, and requested the use of the telephone. He used the wire twelve minutes and offered ten cents in payment. The clerk requested twenty cents more, pointing out that he had had three separate calls. This the stranger denied. The dispute waxed constantly warmer and the angry voices louder until the clerk called in an officer of the law, who was standing on the corner. The policeman stated that he would not interfere unless the clerk was willing to make a formal complaint, and to accompany the prisoner and officer to the station house. This the clerk could not do, as he was alone in charge of the store. So he dropped the charge, but requested the officer to clear the store of the crowd which had collected by this time inside the store, to watch the possible fight or arrest. The intelligent policeman refused, delivering himself of this interesting decision: "Drug stores are public and anybody has a right in them." With this he departed to consult another policeman on the beat and from this second authority the same decision was handed down.

CARTER'S PILLS.

IMPORTANT COURT DECISION.

Carter Medicine Co. is Granted Decree by United States Court.

HAVE RIGHT NOT ONLY TO THE NAME "CARTER'S LITTLE LIVER PILLS," AS TRADE MARK, BUT EXCLUSIVE USE OF THE RED WRAPPERS OR LABELS PRINTED WITH BLACK INK.

The Carter Medicine Company, of this city, has just been granted an important decision in the United States Court for the Eastern District of Pennsylvania, at Philadelphia, which not only confirms its claims to lawful trade mark rights in the name "Carter's Little Liver Pills," and its exclusive use, but also, to the exclusive use of the red labels and wrappers and the well-known imprint used by the Company.

The adjudication, coming as it does from a United States court, is important and far-reaching in its effects, for it may now serve as a precedent in other cases of imitation of the Carter Medicine Co.'s specialty. In the case under consideration the defendant was particularly enjoined from putting up or selling pills in packages with red wrappers or labels printed with black ink.

Mr. Brent Good, president of the Company, commenting on the significance of the decree, said he had no desire to annoy with litigation the retail druggist, for whom he had the greatest respect, but the decision was a just one and confirmed all of the claims they had ever made for their trade mark, as to the style and color of their wrappers or labels, as well as the arrangement of the printing thereon. The publication of the decree should serve to inform druggists that the Company proposes to defend its rights, which have been so clearly defined by the U. S. Court and which are sure to be respected by all reputable druggists.

THE DECREE.

The decree of the Court follows:
At a Stated Term of the United States Circuit Court, for the Eastern District of Pennsylvania, held in Philadelphia, on May 17th, 1905.

Before Hon. John B. McPherson, Judge.
The Carter Medicine Company } April Sess.,
against } 1904,
Charles A. Eckles. } No. 4.

The bill of complaint herein having been filed, the complainant appearing by its solicitors, E. Clinton Rhoads and Philip Carpenter, and a subpoena having been issued and duly served, and the defendant having appeared by his solicitors Oliver E. Shannon and Alex. Simpson, Jr., and the defendant's answer having been filed, and the proofs having been taken, now, the cause having come on to be heard this 17th day of May, 1905, and after due consideration of the evidence and the allegations, it is.

Ordered, adjudged and decreed as follows:

A LAWFUL TRADE MARK.

First.—That the name "Carter's Little Liver Pills" printed with the capital letter L in large type, forming the initial letter of the words "Little" and "Liver," with

the fragments of the words "little" and "liver," and the word "Pills," so arranged in the angle of said capital letter L as to read "Little Liver Pills," all placed within a rectangular border, which also includes the word "Carter's," is a lawful trade mark and the exclusive property of the complainant, the Carter Medicine Company, and that said Carter Medicine Company is entitled to the exclusive right of the peculiar form and color of label, wrapper and imprint when used by it in connection with its medicinal preparation called "Carter's Little Liver Pills," specimens of said labels and wrappers containing said trade mark being attached to the bill of complaint.

RED WRAPPERS OR LABELS.

Second.—That the defendant, Charles A. Eckles, has infringed upon the said trade mark and upon the rights of the said Carter Medicine Company by putting up and offering for sale to the public his own pills in bottles with labels and wrappers substantially similar to the bottles, labels and wrappers of the complainant, said labels and wrappers bearing the complainant's trade mark aforesaid, "Little Liver Pills," with the complainant's peculiar arrangement of the letters and words already described: said labels and wrappers also containing substantially the same wording in addition to the trade mark as the complainant's labels and wrappers, with a similar arrangement thereof; the defendant's labels and wrappers being colored red, with the trade mark and the complainant's other wording printed thereon in black ink in imitation of the wrappers and labels of the complainant.

FOREVER ENJOINED.

Third.—That the defendant Charles A. Eckles, his servants and agents be and they hereby are forever enjoined from making any use of the complainant's said trade mark, or of the words "Little Liver Pills," either with the arrangement and in the form used by the complainant as aforesaid, or in any manner whatsoever in connection with any medicinal preparation, except that of the complainant, either alone or in combination with other words, and from manufacturing or selling or offering for sale any preparation except the complainant's to which the said trade mark or the words "Little Liver Pills" shall be applied; and from putting up any pills or other medicinal preparation in packages of the kind or in the form heretofore used by the defendant, as aforesaid, with red wrappers or labels printed with black ink, or in any manner resembling in color or style or otherwise the package used by the complainant, as above described, and from doing any other act or thing whatsoever which shall be calculated or liable to cause any preparation not put up by the complainant to be offered or purchased as the preparation of the complainant.

IMITATIONS TO BE DESTROYED.

Fourth.—That the defendant Charles A. Eckles be and he hereby is directed and required to deliver up to the complainant or its solicitors, to be destroyed, all bottles, packages, wrappers, circulars or other thing in his possession or under his control, bearing the complainant's said trade mark, or the words "Little Liver Pills," or any imitation thereof as herein described or otherwise—excepting only such genuine bottles, packages and wrappers of the

complainant as may be in his possession for the purpose of selling the complainant's genuine goods.

ACCOUNT FOR ALL PROFITS.

Fifth.—And it is further Ordered, Adjudged and Decreed that the defendant Charles A. Eckles account for all profits received by him or diverted from the complainant, and for all damage suffered by the complainant by reason of the defendant's aforesaid unlawful acts, and that the complainant have judgment against the said defendant for the amount found due on such accounting, together with the costs and disbursements of this suit.

By the Court.

Attest: GEORGE BRODBECK, Jr.,

Chief Clerk.

True copy certified to from the records, May 23, 1905.

GEORGE BRODBECK, Jr.,
Chief Clerk.

HIGH-GRADE GLYCERINE.

Pure glycerine is now manufactured in the United States in immense quantities, and technical chemists speak very highly of that made by the Van Ruyambeke's new distillation process, advertised on another page by Wm. F. Jobbins, successor to the patentees, Messrs. Jobbins & Van Ruyambeke, whose works and principal office are located at Aurora, Kane County, Ill., with branch offices in San Francisco and New York. Mr. Jobbins not only makes a specialty of chemically pure glycerine for medical and pharmaceutical purposes, but he also manufactures glycerine for the preparation of nitro-glycerine and other purposes. Another of the specialties noted in his advertisement is Glauber Salts for dyes, etc. Druggists and manufacturers desiring high-grade goods of the character named, and at the right prices, should write to Mr. Jobbins for particulars.

PRESCRIBED A CANNON BALL.

Perhaps the queerest prescription that ever a druggist had to put up was one for a three-pound cannon ball, which came into the hands of Arthur Raiche, of the Owl Pharmacy, of Marquette, Mich., while he was employed in the drug store of Daniel R. Jones, in Milwaukee.

"When the prescription came in I at first thought it was a joke," said Mr. Raiche, "but it bore the doctor's signature and could not be slighted. I showed it to Mr. Jones and although he was quite surprised, his long experience in the city drug business told him that it was genuine, and also right where it could be obtained immediately. He sent me to Gross Bros.' hardware store and I found exactly what was wanted.

"The doctor who sent the prescription wanted the iron ball to use in kneading his patient by rolling it gently on the patient's abdomen.

"Although such process of relieving stomach trouble is common, I never before heard of a cannon ball being used."

The U. S. Circuit Court of Appeals has decided that so-called soap pencils, intended for cleaning spectacles and eyeglass lenses, are not dutiable as pencils of paper or wood, filled with lead or other material, and pencils of lead, but are dutiable as unenumerated manufactured articles.

BUSINESS RECORD.

ALABAMA.
Stevenson.—Alston Bros., succeed Alston & Chapman.

CALIFORNIA.
Elmonte.—Elmonte Drug Store, damaged by fire.
Los Angeles.—Maerz & Lemke, succeed R. B. Boyd, Vermont and Washington Sts.

Ont., Thorny.—H. J. Dennis, moved from Chatham.

Que., Magog.—John West, M.D., succeeds J. O. Goyette.

Radiumite Advertising.

The Era this week reproduces two of the attractive window pasters furnished to dealers with the Radiumite Free Razor Display Stand Assortments, one of which is illustrated in the advertisement appearing on page 3 of this issue of The Era.

The Radiumite plan of giving a fine, hollow ground, hand finished razor free with each dollar stop, is in itself startling, but that all dealers, handling the proposition, offer to refund the dollar to any dissatisfied customer, and that owing to the wonderful honing and finishing properties of the Radiumite strops, and the superior material and workmanship of the razors, none are returned, would be almost unbelievable, were it not true that hundreds of dealers located in all parts of the country are making this with the greatest success.

A small cut of the Radiumite Window Display Stand is shown in the advertisement of The Peter L. Frost Co., 97 South Clinton street, Chicago, Ill., on page 3 of this issue. This little cut does not do justice to the handsome appearance of the stand and goods, which are more elaborately described and illustrated in a handsome folder, in colors, issued by the company. The merit of the Radiumite strops makes the line one of the most desirable on the market.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued May 23, 1905.

- 790,281—William B. Bostwick, La Salle, Ill. Means for guarding against the re-use of bottles.
- 790,318—Walter Sams, Chicago, Ill. Atomizer.
- 790,427—Ellis F. Frost, Washington, D. C. Bandage-roller.
- 790,429—Adolf Gutensohn, Southend, England. Process of recovering metals and oxides from solutions.
- 790,455—Richard Pfaff, Zurich, Switzerland, assignor to Alfred Tobler-Merz, St. Gall, Switzerland. Bottling machine.
- 790,463—Whitcomb T. Taliaferro, New York, N. Y. Funnel.
- 790,468—Henry V. Walker, Brooklyn, N. Y. Process of fumigation.
- 790,504—Geo. F. Jaubert, Paris, France. Production of oxygen from hypochlorites.
- 790,565—Arthur Eichengrün and Theodore Becker, Elberfeld, Germany, assignor to Farbenfabriken, of Elberfeld Co., New York, N. Y., a corporation of New York. Triacetyl cellulose.
- 790,601—Karl Stephen and Paul Hunsatz, Berlin, Germany, assignors to Chemische Fabrik and Actien (vorm. E. Schering), Berlin, Germany. Process of making camphor.
- 790,635—Harry Hirsh, Eastman, Ga. Apparatus for distilling turpentine.
- 790,655—Marius Otto, Paris, France, assignor, by mesne assignments to American Ozone Co., Niagara Falls, N. Y., a corporation of New York. Medical ozonizer.
- 790,790—Jacob E. Moseman, Donaldsonville, La. Non-refillable bottle.
- 790,817—David Boyle, Paterson, N. J. Bottle washing apparatus.

- 790,836—Forrest A. Heath, Jersey City, N. J., assignor of one-half to Charles C. Guernsey, Jersey City, N. J. Non-refillable bottle.

MARKET REPORT

CHLOROFORM WEAK.

Patents Expire Soon, So Prices Lower—Turpentine Strong.

OPIMUM FIRM, BUT JOBBING PRICES UNALTERED.—SALAD OIL AND JAPAN WAX HIGHER.—AGENTS OF GERMAN BROMINE SYNDICATE COMPLAIN OF VIOLATIONS OF CONTRACTS.—PURCHASES EXPORTED AND SOLD AGAIN IN THEIR HOME MARKET BELOW THEIR FIGURES.

New York, May 29.—The most interesting development of the past week was the appearance of the following circular letter to the trade by the Roessler & Hasslacher Chemical Co., under the date of May 22:

"Due to the fact that several parcels of bromides sold by us have been exported to Europe, we are instructed by the German Bromide Syndicate, for whom we are acting as sole selling agents, to once more call the attention of our customers to the condition under which we are willing to enter additional orders or to make further deliveries on account of contracts entered with us for bromide salts. Said condition is as follows:

"Bromides purchased from us are for the legitimate wants of our customers, and are sold and purchased for consumption in the United States; the buyers guarantee not to directly or indirectly re-export the same, and to bind their customers to the same conditions."

The first statement of the above is particularly interesting, as it confirms many rumors on the subject which have been in circulation for some time.

The tone of the market remains in general steady, advances and declines being about equal in number and importance. The two most important movements are a further decline in chloroform and another advance in spirit of turpentine. The demand continues normally healthy and in a few commodities greater activity is reported by jobbers, but there is little special feature.

OPIMUM.—Foreign markets are higher and an advance of 2d. is cabled from Smyrna. The reports of droughts in the growing districts are confirmed. The wholesale market here responded to these influences and cases are now quoted by most holders at \$2.90. There seems to be rather more interest on the part of consumers and the demand is therefore a little better. Jobbing prices remain unchanged at \$3.00@3.20 for nine per cent., and \$3.10@3.30 for eleven and thirteen per cent.; powdered remains unchanged at \$3.85@4.10 for thirteen per cent., and \$4.00@4.85 for sixteen per cent.

MORPHINE SULPHATE.—The market holds steady with a moderate satisfactory demand at the unchanged jobbing quotations of \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 in ounce vials, and \$2.25@2.35 in 5-oz. tins, according to brand or quality.

QUININE SULPHATE.—The tone is some-

what steadier and the demand is slightly improved. Otherwise there is nothing to report. Foreign statistics remains bearish, but apparently have spent their force for the present. The next Amsterdam bark sale will occur June 8, but not much interest in it is displayed. The next London auction is scheduled for June 20. A routine demand for immediate needs continues on jobbers, who quote the following unchanged prices: 20@21c. for bulk, in 100-oz. tins, 20½@21½c. in 50-oz. tins, 21@22c. in 25-oz. tins, 22@23c. in 15 or 10-oz. tins, 25@26c. in 1-oz. tins, and 27@28c. in ounce vials, according to brand and amount.

CHLOROFORM.—Manufacturers have again reduced prices, this time by two cents. This makes a total decline of twenty cents since last September. This is because of the approach of the date when the patents controlling present processes of manufacture will expire. This happens early in June. The mutual agreement between manufacturers seems to be to put prices on such a low level that there will be little inducement for new capital to enter the manufacturing field. Jobbers have lowered their figures accordingly, and these now are 33@38c. per pound.

SPIRITS OF TURPENTINE.—The sharp upward movement of prices continues, because of speculative manipulation by powerful interests in the producing regions of the South. The highest price ever touched on the Savannah Board of Trade was recently reached and shorts are forcing up values in a wild scramble to cover. There are several rival interests and if they do not work in harmony, prices are likely to break very sharply next month. Jobbers are constantly revising their figures to meet the wholesale fluctuations and their latest prices are 79@80c. per gallon in barrels and 90@95c. per gallon for smaller quantities. Retailers will do well to buy only for actual necessities and to keep a close watch on market conditions.

LINSEED OIL.—Because of high prices for flaxseed, linseed oil has been gradually advancing at wholesale, and shows a further upward tendency. Jobbers have raised their prices to the following: Raw, barrels, 53@54c. per gallon and 60@65c. for less; boiled, barrels, 55@56c. per gallon, and 62@67c. for less.

UNION SALAD OIL.—Producers have advanced their scale of prices. Raw material conditions are more bullish. Jobbers cover themselves with a similar advance and now quote 37@38c. per gallon in barrels, and 47@55c. per gallon for smaller quantities.

MENTHOL.—Liberal stocks, slow demand, and keen competition among dealers keeps the market easy and unsettled. Another decline has been registered and jobbers now ask \$2.45@2.70 per pound.

MERCURY.—A short time ago the wholesale market developed some easiness through desire to move stocks and this is now reflected by jobbing prices, which have been reduced to 62@67c. per pound.

AMERICAN SAFFRON.—Values continue to decline, because of lack of demand and anticipation of fresh supplies which are said to be coming from Mexico. New jobbing prices are \$1.20@1.30 per pound.

GOLDEN SEAL ROOT.—The market has reacted a trifle this week because of scarcity. Offers of low priced, spring dug in the West continue, but do not exert so much

influence for the moment. Jobbing quotations have risen to \$1.55@2.10 for whole, \$2.00@2.15 for ground, and \$2.05@2.20 for powdered per pound.

JAPAN WAX.—Because of the suspension of traffic in Japan, shipments of new supplies are not expected for some time. Short sellers are said to be anxious to cover. Prices seem likely to go higher. Spot stocks are rather light. Jobbers have advanced their figures to 16@20c. per pound.

SPIKENARD ROOT.—Jobbers have revised prices for crushed to 35@40c. per pound. This advance is due to some lightness of supplies.

SILVER NITRATE.—As the metal is higher, prices for the nitrate have also risen and jobbers are holding at 45@50c. per pound and at 47@52c. for fused per pound.

SENEGA ROOT.—As new crop has not yet arrived and spot supplies are light, jobbing prices are up to 80@90c. for whole, 85@95c. for ground, and 90c.@\$1.00 for powdered, all per pound.

CODLIVER OIL.—There is very little demand, since this is the summer season. Latest estimates of the production of Norwegian oil are about 32,000 barrels, an unusually good crop. Prices are again lower, jobbers quoting as follows: Norwegian, barrels, \$31.00@32.00 per barrel, \$1.40@1.50 per gallon in 5 gal. tins (tins inclusive), and \$1.30@1.40 per gallon for smaller quantities (containers extra). Prices for Newfoundland oil are down to 85@95c. per gallon in barrels and \$1.10@1.25 per gallon for smaller lots.

CHIAMOMILE FLOWERS, GERMAN.—Jobbing prices have been reduced a trifle to readjust them to market conditions. They were too high. Present quotations are: 22@27c. per pound for best, and 17@22c. per pound for ordinary.

OIL PINES PUMILIONS.—Latest jobbing terms are 35@40c. per ounce.

FULLER'S EARTH.—A slight advance is now asked by jobbers; 6@7c. per pound for underground.

DRAGON'S BLOOD.—To more stocks and because of plentiful supplies, jobbers have lowered values to the following schedule: Reeds, 55@60c. per pound; ordinary, 40@45c. per pound; powdered, extra, 90c.@\$1.00 per pound, and ordinary, 55@65c. per pound.

FLAXSEED, CLEANED.—Reduced by jobbers to \$6.75@7.00 for 182-lb. barrels. Pound, 5@6c. in smaller quantities.

CHINESE CANTHARIDES.—Sharp competition continues between wholesale holders. Our market is not below parity with foreign. Jobbers reduce quotations to 79@89c. for whole and 88@90c. for powdered per pound.

LYCOPodium.—Poor demand lowers foreign market and local competition. Jobbing prices cut to \$1.03@1.13 per pound.

CANARY SEED.—Primary markets are cabled higher with an upward tendency. Crop materially damaged by drought. Local prices unchanged.

CARBOLIC ACID.—London cables are higher on crystals. No change here.

CUMIN SEED.—Foreign markets are higher and there is a scarcity of supplies abroad. Jobbing prices here remain unaltered.

ESSENTIAL OILS.—Neroli and sweet almond are reported as higher abroad, but our market shows no price movement.

EDITORIAL COMMENT

Prejudice Against Druggists.

Members of the committee which has been appointed by the N. Y. R. D. A. to use moral suasion with the newspapers which are constantly attacking druggists, will find they have a most difficult task assigned them. Not that it will be difficult to approach the powers that be in the newspaper offices and get a hearing of the arguments against the indiscriminate attacks which are made on dealers in drugs through the columns of daily newspapers, but because of a deep-rooted prejudice against the drug trade in general.

This sentiment against the trade has no foundation in fact, but that it exists no one conversant with the facts will deny. It is the direct outgrowth of crusades which have been made from time to time against the sale of cocaine and other illegal drugs. A few dishonest druggists are found guilty of the offense, and the whole body must suffer for the acts of the few. This feeling will be found stronger than that inspired from sources which are inimical to the welfare of the druggist, and much more difficult to eradicate. One is the result of a misstatement of facts, and the other is due to an erroneous but long existing impression that all druggists are in the business for what they can get out of it, and that they are none too particular as to the sources of their incomes.

As an illustration, a crusade in a neighboring city against the cocaine evil may be mentioned. Only five convictions were obtained, but every pharmacist in that city, and there are nearly 125 of them, was placed under suspicion for the time being. And the feeling no doubt still exists that the five who were caught did not represent all of the guilty. It was this that gave rise to the prejudice against druggists in the newspaper offices in this one city, and similar cases have had a similar effect in other places.

The remedy for this state of affairs is a simple one, and is in the hands of the druggists, who are sure to suffer

most while this prejudice continues. To remove this unwarranted prejudice it is only necessary that all pharmacists should take a firm attitude against dishonest members of the profession. Illegal sales of drugs and the traffic in liquor cannot be too severely condemned. Only a small percentage is so blind as not to see that profits from such a traffic will be of short duration and are not to be compared with the results of trade built up by honest dealings. Weed out the bad druggists, those whose practices bring into discredit, whether rightly or wrongfully, the whole profession, and with nothing to keep it alive this prejudice will soon die. There must be no palliation of offenses because of friendship or the influence of the individual in the community. All offenders must be driven out for the general good, and then the work of the committee will be easy.

Poisons and Labels.

In a morning paper we notice an account of the death of a child resulting from the administration of wood alcohol instead of lime water. The physician, it appears, had ordered that the child's food be treated with lime-water. The servant who bought the fatal poison insists that she asked the druggist for lime-water, but the druggist is equally positive that wood alcohol was demanded.

There are some points in the story that evidently need explanation. How was it possible for a substance with so characteristic an odor as wood alcohol to be used in place of the odorless lime-water? And why should an important matter of this kind have been left to the care of a servant?

But these points are not nearly so worthy of attention as the blame which attaches to the druggist. The statement is made that a bottle labeled "lime-water" was filled with wood alcohol without any other label being attached. It is said that the druggist "never looked at the label." If this be true (and the pharmacist himself admits that he dispensed wood alcohol), then a very serious and inexcusable blunder has been committed. We have called attention time and again in our columns to the importance of careful labeling. A pharmacist has no right to suppose that a bottle presented

to be filled with a certain drug is always used for that same purpose. It is his business to see that everything that leaves his store is properly labeled. Additional caution should be used in handling poisons.

There may have been extenuating circumstances in the case just cited, but as yet they have not come to light. It is to be hoped that the druggist will be able to clear himself of blame, for the effect of such an incident upon an already suspicious public will be anything but beneficial.

The New Pharmacopœia.

There will none hail the appearance of the new Pharmacopœia with more joyful acclaim than the editors of pharmaceutical journals, for the most of them, within the last three or four years, have answered more than one inquiry relating to its publication. It is safe to say that the time consumed in answering these inquiries and the postage thereon would amount to more than enough to supply each of them with several copies of that work, which is now definitely announced to appear before the end of June.

The Revision Committee has not been working to relieve the editors, however. But its members have worked intelligently and unceasingly nevertheless; all should know that careful revision in an undertaking of such magnitude requires time. Fully five years have elapsed since the meeting of the Pharmacopœial Convention which authorized the publication of the book, and it is to be hoped, and we have reason to believe from what the members of the committee have given out, that the new book in character will mark a distinct advance and soon be esteemed as highly as any of its predecessors ever were. The new revision will become official on August 1 next.

Colleges of Pharmacy.

Two reports have come to hand during the past week which serve to give one a bird's-eye view of our educational institutions, at least in so far as they relate to pharmacy. We refer to Prof. Wilbur F. Scoville's pamphlet, "American Pharmaceutical Colleges and Schools," published by the American Conference of Pharmaceutical Faculties, and the report of the United States Commissioner of Education, issued by the Government.

These reports are as a matter of fact largely statistical, and in a way they remind the reader of the registration data furnished each year to the American Pharmaceutical Association by the secretary of the section on Education and Legislation. Thus, Professor Scoville reports eighty institutions now teaching pharmacy in the United States, four of which were es-

tablished since the beginning of 1903 and eighteen since the close of 1899. Of the total number the Commissioner of Education presents statistics for the year 1903 from sixty-one schools, having a total enrollment of 4,411, or 4,193 men and 218 women. The graduates numbered 1,372.

Careful scrutiny of the statistics further reveals that only ninety-five of this small army of students possessed literary degrees. In the light of these returns it may be assumed that pharmacy has not yet reached the dignity of a profession, unless colleges can make professional men and women of persons who have had no academic training. It is refreshing, however, to note that most of the institutions are on the upward grade and that many of them have already increased their entrance requirements. In this work the influence of the American Conference of Pharmaceutical Faculties has been in the right direction, and to this trend every college of pharmacy must conform or fall behind the age.

College Libraries.

The sixty-one colleges of pharmacy whose reports are included in the statistics supplied by the Commissioner of Education have 49,409 volumes in their libraries. Some schools have no libraries at all; others have but a few volumes. It is to be hoped that this deficiency will soon be rectified. Effective study in any branch of science demands the use of books for consultation and reference, and a library is a necessary part of the college equipment.

It is largely to these libraries that the true pharmacist must look for those influences which create and preserve the highest scholarship and attainment in his calling. We are aware of the effort that some of the older colleges have made to develop this particular feature of their equipment, and a no less important duty devolves upon the college young in years as well as the college which has never made practical use of its opportunities. It is only a few years ago that the statement was made that less than ten colleges of pharmacy had in their possession complete sets of our National Pharmacopœia. A paucity of standard reference works is a reflection upon the equipment of the practical pharmacist in every-day life; in a greater degree, the absence of representative literature of pharmacy in the library is no less an indication of inadequate equipment on the part of the college. So long as the pharmacist must continue to acquire his education from those who have gone before, the more important it becomes that the college should encourage the establishment and extension of its own pharmaceutical library.

Women in Colleges.

An allusion has been made to the enrollment of women in colleges of pharmacy, the numbers of which seem to be on the increase. It is not likely, however, that they will ever usurp or entirely crowd out the masculine members of the race, but it is interesting to be informed that in the educational contest for pharmaceutical honors they are not to be found very far behind their brethren.

A review of woman's work in colleges shows her capabilities for the practice of pharmacy. More than once during the present year has she been one of the prize winners of her class. In practical work in the store she has also fulfilled the arduous exactions of the pharmacist's daily life, and through it all she has never been accused of losing either her natural simplicity or tact. He would be a bold man who would dare assert that because she is a pharmacist she is apt to forget the promptings of that instinct which teaches all women to discriminate between the knowledge they ought to possess and that which is outside of their proper domain. The most bitter and uncompromising opponent of "woman's rights" now generally admits that women are more thoroughly educated than they once were and that they may also successfully do things once forbidden to them. All things considered it is safe to say that woman will continue to hold her own in pharmacy.

Illegible Prescriptions.

In the Era of last week comment was made upon the careless writing of prescriptions by physicians, a fault which seems to be almost universally common to the medical profession. According to one of our French exchanges the Austrian Minister of the Interior has recently proclaimed an ordinance relating to illegible writing, and which is aimed more particularly at the doctors. Pharmacists are forbidden to deliver medicines on prescriptions whose sense is not absolutely certain and the signs perfectly plain. Further, on each prescription must be written in large letters the name and address of the patient, or should he object, as he evidently might, the prescription is to be marked with a particular sign to avoid possible confusion later. Our exchange remarks that the ordinance is worthy of imitation in France, where many doctors over-exert themselves to write as poorly as possible.

A harsh criticism, though doubtless much of it justly deserved. Crooked and bad handwriting may be the traditional sign of learning, yet the practice of it does not excuse or release the physician from performing his duty. The pharmacist should not be com-

pelled to decipher hieroglyphics or senseless abbreviations, and it is better for all concerned that he should refuse to fill a prescription than to attempt to compound one he does not fully understand.

The Druggist as an Investor.

Much has been said and written about the readiness of the average druggist to take up any scheme that promises quick and sure profits, but we desire to call attention to another interesting case of this kind, which we present in our news columns this week. In this instance the druggist subscribed for stock in a patent medicine company, which a few months later went into bankruptcy.

Close examination shows that the investment presented a much more conservative appearance than the usual run of those in which druggists indulge. In fact, it is highly probable that had the company continued in business it would now be meeting in full its guarantees as to stock and dividends.

To the druggist it must have seemed that he was making a perfectly safe investment. The average man, indeed, would have taken such a view of the proposition. But profitable investment is something that requires not only business ability of a high order, but also a thorough training. Certainly this combination is a rare one among druggists, for obvious reasons. Their business is to sell drugs and compound prescriptions. Investment should either be left strictly alone or else placed in hands competent to handle the subject with a reasonable degree of safety.

Enterprising Druggists.

Are retail druggists lacking in enterprize? A contemporary takes the position that they do not make the most of their opportunities—that they might push their business with more vim and get better results. Unquestionably this is true to some extent, but no more so of the retail druggist than of merchants in other lines. Few of us put forth our utmost endeavors, and in every walk in life many opportunities to better our condition are allowed to slip through our fingers. Too often is failure written where a display of a little more enterprize and energy and a watchful eye to the main chance would have brought success.

It is these missing opportunities that bring regret when failure comes. It is far more bitter to have been near the goal and missed it, when it might have been grasped, than it is to have failed through a combination of fortuitous circumstances, the results of which could not have been averted. In one respect the druggist is woeefully behind the times in that he does not advertise early and late and often. He has a

constant illustration before him of the success which advertising brings, and yet too many druggists remain blind to their opportunities in this respect. Their shelves are loaded with goods which are known from one end of the country to the other, not because of any merit they may possess, but because they have been kept constantly in the public eye by the judicious use of printer's ink.

With such examples before them too many druggists neglect to push articles, the larger sales of which would mean increased profits, and which could be easily brought to the attention of customers. This does not always mean an outlay of money. The advantages of window displays have repeatedly been called to the attention of druggists in these columns. This is only one of the methods of publicity which the druggist does not use to the fullest extent. Many drug stores are on corners, where every opportunity is presented for an attractive showing, which is too often permitted to go to waste.

The druggist who realizes the value of judicious advertising and who does not fail to call attention to his wares whenever he has the chance, need not fear that he will be classed with those who fail to show a commendable degree of enterprize. Success will be his, and with success comes a recognition of the fact that it is only to be won by the man who has ambition, backed by enterprize and energy.

The Small Man's Real Worth.

It is not given to most to be great. The largest prizes of any line of activity can not be for all, for there must be an average against which a few instances contrast to make them loom forth large and prominent. Many a man who has the elements of big achievement in him never gets the opportunity to show what he could do, and so he goes his modest way unknown to any save his own small, immediate community. Yet is he any the less deserving of praise? Is he any the less great because when he passes he leaves no ripple on the surface of the world's affairs? If he possessed the qualities of greatness, was he not really so, although unkind fate left him without the call to show them? For after all, many will agree that chance, opportunity, is essential to rise in this world.

Is it then but fair occasionally to heed the doings of the obscure individual? In every business there are thousands who plod along without producing very prodigious results, according to the generally accepted standards of society. But since they cheerfully face the day's work and manfully do well what comes to their

hands they are indeed as much deserving of praise as he who causes a great furore by his actions. In every city, in every hamlet, in this vast country are pharmacists who toil as hard as if they were netting tremendous results, yet who, at the year's end, have little to show save duty well done, a clear conscience and a business free of debt. One year follows another in the same way, and when their time comes they leave behind them little save the respect of their community and a modest pitance for their families.

All honor to such. As long as they neglected no opportunity they have lived as greatly as any hero of history. They have played their part like men, and, indeed, the fact that they never despaired under such monotony and lack of fortune redounds the greater to their credit. Let not the corner druggist in the modest little store think lightly of himself and his work. His is a noble calling when he will but think it so himself, and he can truly say that he has relieved much suffering, exerted a fine influence on his fellow men and left the world the better for his being.

Trade-Marks in Turkey.

It is reported that the Turkish Government has issued an order to its customs authorities not to admit any foreign goods which bear the mark or design of a star. It is supposed that the reason for this is that the representation of a star is part of the Turkish coat of arms. How about the admission of vessels bearing the Stars and Stripes into Turkish ports?

Speaking of the next N. W. D. A. convention in New York City, a western drug journal says: "The association headquarters will be the New Astor House." And New Yorkers pride themselves on their new Hotel Astor! The Astor House, brother, was built about sixty or seventy years ago, or before the discovery of gold in California. It is hardly new. Not even modern.

A chemist out in Wisconsin says he has produced a liquid which is 11,000 times stronger than the best quality of beer. One drop of it placed in a beer glass containing ice water will produce a glass of pure beer. Expert chemists, we are told, ridicule the alleged discovery as an utter impossibility. We can well believe it. Should it be true, every man, woman and child in the country could be supplied with beer in unlimited quantities. One shudders to think of the consequences. We suspect the chemist may have been partaking of his own invention—undiluted.

OUR
LETTER BOX

SPECIAL PRESCRIPTION
BLANKS.

Chicago, June 3, 1905.

Editor The Pharmaceutical Era:

In your recent issue (June 1, page 616) you have an article from Minneapolis that complaints are heard from druggists "that the practice of many doctors in using prescription blanks with the name of some particular druggists printed thereon works injustice in more ways than one." Now it seems to me that the druggists complaining are somewhat in the position of the fox and the grapes, as they have not themselves been imbued with the modern system of advertising and are jealous of their more enterprising brother druggists who supply the physician with these blank prescription books. These grumblers might do worse than get up some attractively arranged book of forms of their own and send them to all the doctors in their vicinity, and it is very probable they will get results. Is it not a case of "You scratch my back and I'll scratch yours?"

F. R. SNYDER.

BODEMANN VISITS WAUKESHA.

Chicago, May 25, 1905.

Editor The Pharmaceutical Era.

If ever I was in the hands and the house of my friends it was on Tuesday, April 18, when, bright and early, and in company with George Schmidt, of Hinckley & Schmidt, the Chicago agents, I went to Waukesha to visit the White Rock Spring Co.'s plant. George is one of my old State street clerks, and the White Rock Co. counts my old friends, E. O. Gale, W. F. Blocki and Walter Gale among its owners. Since I saw the spring last the spring has sprung into worldwide fame, and, aside from the fact that the Chicago stockholders are old pharmacists, an inspection of the works is of greatest interest to a pharmacist. The manager, Mr. Welch, a highly interesting gentleman, met us most cordially and at once accompanied us on our tour. The whole works seem to be under the controlling spirit of a master of system and the machinery works like clockwork; the packing boxes are made right there by machinery.

The bottling works excited my greatest attention. The carbonic acid is generated from C. P. sulphuric acid and bicarbonate of soda. The company bottles 75,000 gross in ½ pints, pints and quarts a year, in addition to the still water in ½ gallons and gallons, over eleven million bottles a year. The Crown stopper is used for the effervescent product and a very ingenious apparatus sinks the bottles in dozen lots under water, imperfect corks by this means being very easily detected by the bubbles, thus avoiding loss of gas. The spring itself is a gem, the water coming out of the perfectly pure virgin white rock. To describe the poetry of this beautiful spot in the majesty of its cleanliness and purity, requires the muse of a Longfellow; suffice it to say that when the demand requires it, 100 gallons per minute can be pumped into the works,

and the level of the water in the spring does not materially drop. Mr. Welch is ably assisted by Messrs. Parker and Heath, both old pharmacists, and very pleasant gentlemen, who did all they could to make my visit both pleasant and instructive.

The products of the White Rock Co. are now to be found in all of the leading hotels of the Old and New World, in Pullman cars, restaurants and drug stores from Maine to Maine—that is, in all the intervening villages in Hawaii, Japan, China, India and Europe.

CARL ENGEL.

Of Manhattan, Kan., Recently Elected
President of the State Pharmaceutical
Association of Kansas.

The advertising activity of the concern amounts to genius, and I am under the impression that the budget for advertising alone throws out \$100,000 annually. Talk about side lines for druggists—here, indeed, is a side line that has assumed a world-conquering power, and I rejoice in the fact that my friends, Welch, Gale and Blocki struck oil when they struck this water, although it took pluck, perseverance, talent, genius and skill, and a clear business head to achieve this result.

Yours,

W. BODEMANN.

OFFENSIVE SHOW WINDOWS.

New York, June 6.

Editor The Pharmaceutical Era:

Your stand against objectionable show windows cannot be too highly commended, and the attitude is one which should receive the approval of every pharmacist who is in favor of that which works for the good of the profession. This tendency to put offensive articles in the windows of drug stores seems to be on the increase, rather than on the wane, and while druggists are making progress in many ways,

there are not a few among them who seem to be inclined to take a backward step. Leading this procession in retrogression are those who have the bad taste to fill their windows with articles which should be kept out of sight. As you truthfully say, these things have their places in drug stores, but they should be kept in drawers and closets until called for.

This exposing of such articles to the public gaze might be pardoned if it increased sales, by even so much as a penny's worth. But it does not. On the other hand, it is a question whether it does not keep sensitive people from entering stores where such things are shown. These displays do more harm than good, thus removing any slight excuse which might be bad for making them. There is too much that adds to the attractiveness of the windows and the sales of which are increased by pushing to the front, for druggists to make use of that which is objectionable to the few, to say nothing of filling his windows with things which cannot help but prove repulsive to the many.

Druggists who read what you have printed on the subject will be wise to profit by the kindly advice you have given. When there is no hope of profit, the last vestige of an excuse for such displays has been swept away. With public opinion and good taste against him, it is hard to understand how any druggist can be so far behind the times as to make the mistake of permitting anything to be put in his windows which will not add to the attractiveness of the display.

OBSERVER.

OUR OFFICE BOY GETS NEW
JOB.

Last week when the Editor rede what I had wrote about drug stores he thot that as I cud not sit down I wud be as well out of his way far a time, so he gave me a letter to a drugist that was advertisin for a youth with an inquirin turn of mind, and I got the job. The first day I was there, the drug clerk, who was quite a masher, sent me to clean out bottles that was filled with straw, and altho I rinsed them out with water the straw wud not kum off, so I put sum whitin in the water and while I was trying to get out the straw and the whitin a man came in & askd for idy-forum supose-it-oreys. The clerk ran into the back shop wher I was & swore, bekaus his best girl had come in when he was miksing the stuff & askd him if he bed been to visit the morg. I did not kno what that was but I thot he had been in the black hole of Kalkuta. When he washed his hands he sed he wud have to use pach-hooler, and the girl wud not stay. A Dr. kame in and told him he might try Ikey-thoal, but he sade on rekunsid-erashun he wud try rose & violet. He told me to go to the 5th drawer from the top in the front store & bring some, & when I brot him a pakit of valery Ann he swore again. He winkd to the Dr. & said I had beter get down the last bottel in the top row, & to be sure & smel it to see it was rose. I got the step lader & take the bottel off the shelf, & a gude smel. It was so hydious I dropped the bottel. The clerk got in a raze & sent me home saying that the assesseftidia I had split wud driv al the kustomer away. I wish it wud drive him a way.

SYSTEMATIC ECONOMY.*

BY D. STRODE JEFFERIS.

Philadelphia, Pa.

That economy begins at the "want book" no one will dispute, though it is sorely neglected in a great many instances. The drug store proprietor will reap more by practicing economy in buying than by a whole string of catch-penny schemes. If he exercises economy in ordering his supplies he will be very likely to practice it in all his departments, and by careful training of his help will imbue them also with the spirit of economy.

It should be remembered, however, that economy and stinginess are not synonymous, although the line of demarcation between the two is often very narrow, indeed. So closely related are they that it requires careful forethought to refrain from miserly practices.

PRACTICAL ECONOMY.

There is little doubt that the person who is known to be a miser, considers himself economical, whilst the outside world considers him "close" and "mean." Practicing economy becomes, therefore, more than mere haphazard tactics for saving money, but it may rather be termed "a system for stopping wastes." If the store is expected to be run successfully, it must be run by a system. This is true with all business, and applies naturally to that important branch known as "economy."

LEAKS IN THE LABORATORY.

Look for a moment at the laboratory leaks. You'll see a careless operator who is trying to make 4,000 cc. of tincture of ginger, and continues the pouring of alcohol on the drug until the desired 4,000 cc. mark is reached in the receiver; which brings to notice a series of similar leaks. After the drug to be percolated is moistened and kept thoroughly airtight, or nearly so during the macerating stage, it should not absorb and hold intact any appreciable amount of liquid. Hence in making 4,000 cc. of tincture of ginger, having moistened the drug with the 200 cc. of alcohol as the U. S. P. designates (bearing in mind constantly the necessity of avoiding undue exposure to the atmosphere to prevent evaporation), it should not require much over 4,000 cc. alcohol to finish the product; provided, however, that after the last portion of alcohol has disappeared below the surface of the drug in the percolator a sufficient quantity of water is carefully poured on to entirely displace all the menstruum held in the interstices of the drug.

There are, of course, modifications to all rules and so are there differences in absorbing power of drugs, but generally speaking there is a considerable quantity of menstruum wasted in the laboratory by failure to displace this menstruum. A good rule to abide by and prove the worth of the assertion is this: When making any preparation to be percolated, have a bottle into which place as much menstruum as there will be finished product, plus the quantity necessary to moisten the drug. For example, 4,000 cc. tincture of ginger are to be made. First measure out 4,200 cc. of alcohol and moisten the drug with 200 cc. and the balance, which is to be added as required, placed in a suitable container.

When macerating such volatile tinctures, it is a very good plan to have a wide-mouth jar with a hermetically sealed top, which makes an ideal macerating vessel, as it prevents evaporation. It is, indeed, surprising to those who practice these important precautions against alcohol waste that so many others fail to grasp its importance. The loss sustained in each operation is sufficiently great to cause a material deficiency in a short time if allowed to continue.

Here might be mentioned a few other alcohol wastes in the percolating process, such as leaving the percolator uncovered, or not sufficiently well covered to prevent loss by evaporation; not having the receiver properly protected; or having the percolator suspended so high above the receiver that the liquid must needs descend through an unnecessary space. The failure to displace the alcohol in the percolator is undoubtedly the greatest leak of those mentioned, but the others if allowed to exist and continue, all help to make up a great drain on the alcohol barrel.

DIFFERENCE IN METHODS.

Behind the various prescription counters may be seen a vast difference in the manner of practicing economy. Take, for instance, the powder papers (so evenly cut and blank on both sides; no wonder they're such a temptation; you'll see them put to every conceivable purpose other than that for which they are intended. Most likely you'll see them used as memorandum blanks or as scrap paper for the paste drawer, or to smooth down freshly pasted labels, or to clean off the ointment slab, and for weighing out various ingredients on the scale-pan, instead of having a compartment, say, in the back of the paste drawer, where should be kept a liberal supply of clean scrap papers cut into a convenient size and which can be used to a good advantage for all the foregoing purposes, and, perhaps, many others, too. There certainly can be no excuse for anyone not being able to obtain the necessary cast-off paper to cut up for this purpose.

Somebody will say, "Oh, well, we don't have time to cut up papers and trifle with such little things, and, anyhow, powder papers are cheap." It would be gratifying to come across the store that couldn't find time to cut up a few scrap papers.

HINTS ON STOCK-KEEPING.

Another important business economy, and one often overlooked, is the manner of keeping stock about the store in suitable places and containers in order that it may not deteriorate or become wholly worthless, thereby causing inevitable loss.

Campbor keeps better in a ground glass stoppered bottle than in an ordinary drawer or other more or less exposed container; and so also do dried alum, Rochelle salt, and numerous others. These particular ones the writer has seen kept in a drawer. What was the result? Well, the campbor having a slow demand in winter months, naturally evaporated, and the dried alum, during a murky season, absorbed all the moisture which came within reach, with the result that it was no longer "dried" alum, nor was it fit to sell; and the Rochelle salt during a long heated spell of weather dried out into lumps almost as hard as stone, so that customers demanding fresh seltz powders were not

supplied with such out of this particular store.

If the syrup of ferrous iodide is kept exposed to strong sunlight, if possible, it will not be necessary to throw any away, and make up a new batch every now and then.

Frequently there are small pieces of Castile soap left over after cutting up a bar for sale. These, if put away where they will dry out thoroughly, make an excellent substitute for the powdered soap directed by the U. S. P. in the manufacture of soap liniment.

REVENUE FROM BOTTLES RETURNED.

Perhaps one of the best places to exercise our leak-stopping energy in is the bottle department. The odds and ends, and the citrate of magnesia bottles, or the bottles "with your own name on," when brought back form a profitable means of economizing if gone at in the right way. We pay approximately six cents apiece for citrate of magnesia bottles when we buy in case lots from the manufacturer. Then we buy them back, if in usable shape, for five cents each. In this way it means a saving of about \$1.50 on a case of bottles, and in addition it induces a second call from the customer. In the majority of instances bottles are brought back by children, and we all know how elated they are over the receipt of a few pennies. Very frequently they turn right around and spend this bottle money with you, which makes you an additional profit or brings the "buying back" price down to the cost of the candy or whatever they purchase. So, no matter which way you figure it you come out ahead. We consider every one of our citrate of magnesia bottles out a good "drawing card," since it has been the means of bringing back to our store persons who might otherwise not have come in.

This method of practical economy can also be carried out with all kinds of bottles which may be of value. On proprietary preparations of our own make, we have found that it has paid us well to offer an extra inducement, such as deducting a specified amount, for the return of the empty container. The specified amount being sufficiently large, however, to be an inducement, yet a trifle less than the price paid to the manufacturer—when we figure the economy.

With our prescription ware we make no extra charge for the container, hence, when, as is often the case, a customer comes in with a basketful of such bottles, being aware that they were gotten at no additional cost, receiving a cent or two apiece for the bottles is regarded as so much money found. Of course, we do not repurchase soiled bottles or those not easily cleaned. In this way we renew in a measure our stock of empty bottles at about one-third of their original cost.

WASTE IN CLEANING BOTTLES.

Speak of cleaning bottles, how many bottles does your boy throw away simply because he can't get them clean with water and, perhaps, soap? Or how much alcohol leaks down the sink in the bottle-cleaning operation? The sink will bear a great deal more watching than it usually receives, from the boy, true enough, but also from somebody who understands a little of the ins and outs of the business more thoroughly. The boy wastes costly materials simply because he doesn't know

*Mercer's Report.

better, because he hasn't been properly instructed or looked after, or for many other reasons. Let him have a small quantity of clean bird shot in a bottle handy to the sink, then when a bottle is to be cleaned, drill him to use a little warm soapuds and a few grains of shot, and a little shaking will complete the operation satisfactorily, generally speaking. If, however, the undesirable lining to the bottle does not succumb to this treatment, have another small bottle of potassa solution at hand for this sole purpose. Teach him how and when it is necessary to use this, as well as hydrochloric acid, and with these aids at the sink, bottles may be economically and speedily cleaned. If more of us would come to realize the importance of these little things we would early see the larger ones self sustaining.

JUGS NOT TO BE DESPISSED.

Recently we mentioned the fact to our neighbor grocer that we had an accumulation of gallon stoneware jugs which would be pleased to dispose of, and he promptly acquiesced, saying "that they quite often had use for just such articles." Since that time we have cleared out nearly thirty of them at ten cents each. He, of course, charged his customers for them, but they were well pleased and, of course, we being about \$3 better off, haven't as yet offered a word of disapproval.

As said before, to make practical economy effective, it must be backed up with a "working system." If one clerk economizes now and then, and another wastes twice as much as the former saves, the proprietor may expect to go on forever endeavoring to stop leaks, for, in spite of all the economy he may exercise at the want book, it will all come to naught unless he has a "working system" to make all ends balance.

Face Cream.

A formula for a crême (Schoenheit's crême) which is claimed to give "the skin a beautiful smooth and fresh appearance, and at the same time serves to protect and preserve the same," is the following, taken from the Pharm. Zeit.—Natl. Dr.:

Alum, powdered	10 grams
Whites of	2 eggs
Boric acid	3 grams
Tincture of benzoin	40 drops
Olive oil	40 drops
Mucilage of acacia	5 drops
Rice flour	q. s.
Perfume	q. s.

Mix the alum and the whites of eggs, without any addition of water whatever, in an earthen vessel, and dissolve the alum by the aid of very gentle heat (derived from a lamp or gas light, regulated to a very small flame) and constant, even stirring. This must continue until the aqueous contents of the albumen is completely driven off. Care must be taken to avoid coagulation of the albumen, which occurs very easily. Let the mass obtained in this manner get completely cold, then throw into a wedgewood mortar, add the boric acid, tincture of benzoin, oil, mucilage (instead of which a solution of fine gelatin may be used), etc., and rub up together, thickening it with the addition of sufficient rice flour to give the desired consistency, and perfuming at will. Instead of olive oil any pure fat, or fatty oil may be used, even vaseline or glycerin.

PHARMACIST AS A VETERINARIAN.

BY EDMUND JENNER,
Highby, N. S.

It not unfrequently happens that the druggist who adds veterinary practice to his ordinary avocations, is asked to remove some obstruction or foreign body from the mouth of a dog.

Needles, porcupine quills, splinters of bone, thorns and burrs all get into the mouths of canine patients. For cases such as these, I keep an assortment of stout leather collars, a couple of yards of fine, strong rope, and two or three pairs of ordinary long-nosed pliers. To remove the foreign body, fit the dog with a suitable collar, tie the cord to the collar, and also to a ring-bolt in the floor, grasp the animal's hind legs and turn him on his back. Then let your assistant hold the hind legs, insert a gag of cork or wood in the animal's mouth, turn the upper lips over the teeth, and you can withdraw the gag. The thumb and fingers of the left hand will then be grasping the upper jaw at the molars. The harder the dog presses your hand with his lower jaw, the greater the pressure on the in-turned lips. It may be necessary to fasten the fore-feet, but I do not often have to resort to this. The assistant must on no account relax his strain on the animal's hind legs. The collar used should be a broad one, and only enough force to keep the dog extended should be used.

The forceps can then be used with the right hand, and the needle, splinter of bone or porcupine quills removed. In the case of bones lodged in the throat, close the nostrils and in nine cases out of ten, the bone will be ejected in ten seconds. If this fails to work, recourse must be had to the probang, an instrument like an enlarged catheter, which is introduced into the dog's throat until it meets the obstruction, when it is gently pushed downward. A hypodermic injection of apomorphine will sometimes remove an obstruction; the act of vomiting will eject the bone. No violence should ever be used in passing the probang, as a fatal laceration of the throat may ensue.

On more than one occasion I have had to deal with an obstruction of the rectum. In several cases this was merely the result of impacted feces, and yielded to an injection of olive oil; in other cases it was caused by bones, which had passed through the stomach, and became lodged above the upper sphincter.

When the injection of oil fails to produce the desired effect, the dog should be laid on his back, as described above, and the second finger anointed with vaseline, and introduced gently into the rectum. In most cases, the gastric juice will have rendered the bone soft, and it can be removed piecemeal by the finger.

On several occasions I have found in place of bone, small pieces of sponge, which have either been chewed up by the animal, in the way of mischief, or else administered as a poison. By some lucky accident, they have passed out of the stomach and come within reach of my fingers or my forceps.

Abscesses in the mouth are often caused by the presence of minute spiculae of bones, thorns, or the burrs from teasels or burdocks. These latter pests become entangled in the dog's coat. He tries to gnaw them off, and the spines become imbedded

under the tongue. The only procedure with such abscesses is to lance them. The point of a small scalpel or history is driven through an ordinary prescription cork (to obviate any danger of inflicting a deep wound), and applied at the point where fluctuation is most readily discerned. For the removal of teeth, an ordinary pair of child's universal forceps will answer in most cases. For molars in large dogs, the "cow-horn" forceps are sometimes of great service.

Dogs suffer more from intestinal parasites than any other domesticated animal. For tapeworm, I use capsules of extract felix mas; for lumbricoids, santonin, areca nut, and spicelia and for ascariids, injections of salt and water, or cottonseed oil.

For external parasites, a strong infusion of quassa is an excellent thing (two ounces of quassa to two gallons of water), used twice a week; also the use of a small-tooth comb every day for a fortnight. Johnson's dog soap is about the best thing of its kind I have tried. A tincture made by macerating one part of pyrethrum flowers in nine parts of deodorized wood alcohol is most effective. In giving injections, I use the ordinary infant rubber rectal syringe. For very large dogs, I use a small veterinary syringe of pewter or an enema.

In cases of canine poisoning, the two drugs I have met with most frequently, are arsenic and strychnine. The former is easily procurable as rat poison, the latter in the shape of tablet triturates, "dog buttons," and even in the alkaloid itself.

The symptoms of arsenical poisoning in the dog are extreme thirst, tongue and mucous membrane of the mouth and throat swollen and red, abdomen swollen and tympanitic, with pain on pressure, vomiting or purging, or both.

Give an emetic if possible, then prepare the best antidote there is—the hydrated sesquioxide of iron, by saturating dilute tincture of iron with ammonia water.

The prognosis in cases of arsenical poisoning is always unfavorable. Arsenic is a slow poison, and by the time the symptoms are definite enough for recognition, the poison has permeated the whole system. Dog poisoning is more fashionable by night than by day, for obvious reasons. A dog which has taken arsenic early in the evening will stand a poor chance of recovery in the morning.

With strychnia the case is different. The attack is almost directly after taking the poison. The symptoms are unmistakable; the paroxysm can never be forgotten when once it has been seen. It commences with relpings (caused by pain), then sharp muscular twitches, foaming at the mouth, and snapping of the jaws. Then the convulsive stage ensues, with intervals between the spasms, followed by death. I always keep a bottle of solution of chloral hydrate, one dram to the ounce, in readiness for a case of poisoning of strychnia. Half an ounce of this solution should be injected into the rectum and retained there by pressure of the thumb against the anus. Repeat in fifteen or twenty minutes, if the convulsions continue. If chloral hydrate is not procurable, olive or cottonseed oil may be given by the mouth, or oil of lard. They can do no harm, and in some cases, they undoubtedly do good.

The saving of a valuable or favorite

dog by prompt action will most probably win you the good-will of the owner for life. An article such as this must of necessity be a brief one, but I hope the reader may have picked up some points here—or she—was previously ignorant of.

I would advise the druggist to lose no time in calling in a veterinary surgeon, if one is to be had, in any case of poisoning. Where no such person is to be found, he has the right, and it is his duty, to do all he can to alleviate the sufferings of any creature.

THEORY AND PRACTICE

Infection from Communion Cup.

Moeller is superintendent of the great Belzig sanatorium, and relates bacteriological tests of pieces of sterile cotton with which the edge of the communion cup was wiped after the communion service at the sanatorium (40 persons) and also in the city church (150 persons); also in a church in Berlin, where several hundred persons had participated and also in the city of Eupen. The wine left in the cup was also used for the tests. He mentions that scraps of bread were found in the wine. The results of the tests were positive in regard to tuberculosis in only one out of the six guinea pigs inoculated, but many other pathogenic bacteria were cultivated. He suggests as a simple, cleanly and practical means of avoiding the transmission of infection from this source to have each communicant bring a spoon-shaped small dish with which he can dip up the wine for himself, or the clergyman can take a fresh spoon for each person from a pile on the tray. The sexton could collect and boil these spoons afterwards, ready for the next service, or they could be made of paper and burnt. This would remove every hygienic objection without sacrificing the spirit of the sacrament, and even the poorest congregation can well afford the expense of these small spoons or scoops.—*Centralblatt f. Gynäkologie*; Jour. Am. Med. Assoc.

New Test for Ammonia.

A delicate test for the presence of ammonia and its determination colorimetrically by the action of iodine on ammonia (*Bull. Soc. Chim.*). The direct use of iodine is not convenient, but if iodine chloride be employed in the presence of a base, the reaction is very delicate and affords an appreciable coloration to the extent of only one part of NH_3 per 500,000. The liquid to be tested should be approximately neutral, and the best method for applying the test consists in producing the iodine chloride directly by the action of an alkali hypochlorite upon potassium iodide. Of course, the precipitate of nitrogen iodide is soluble in an excess of either of the two reagents and, therefore, an excess of potassium iodide should be avoided or the liberation of iodine will lead to confusion. The reaction is available for all ammonium salts, including the cyanide and sulphide.

Potassium Sulpho-Guaiacolate.

According to Tritz (*Oest. Zeits. für Pharm. through Pharm. Journ.*), the pure salt of potassium sulpho-guaiacolate should answer the following characters and tests. A colorless, odorless, crystalline powder; at first bitter, then sweet to the taste. Extremely soluble in hot water, soluble 1.35 in cold water, scarcely soluble in absolute alcohol, and insoluble in ether, chloroform, benzol and acetone. Tartaric acid gives a crystalline precipitate with a 5 per cent. aqueous solution of the salt. A dilute aqueous solution gives a deep blue color, with a drop of ferric chloride reagent; the color disappears on warming, with the production of ferric oxide. With strong solutions the same reagent gives at first a blood-red color, which turns blue with more of the test solution. Alcoholic solutions give a green color, passing to yellow. In the cold, sulphuric acid gives no color; silver nitrate at first gives no reaction, ultimately a gray precipitate is formed. Traces of caustic potash give a reddish-yellow color, which is discharged by acids. 1 gram of the salt treated with 2 c.c. of strong sulphuric acid and 2 c.c. of zinc chloride solution should show no deep color in one hour.

Carbon Tetrabromide.

Carbon tetrabromide is formed by treating acetone with bromine in very dilute alkaline solution. For increasing the yield of tetrabromide, the following modification is suggested (*Chem. Zeit.*): 150 cc. of a solution containing 25 per cent. of sodium hydroxide are added to 1 litre of water and treated with 1 cc. of acetone and 5 cc. of bromide. The mixture is thoroughly shaken, allowed to rest for two or three hours, and the precipitate filtered off. The filtrate is then treated repeatedly with fresh acetone and bromine until no further precipitation takes place. The best result is obtained with a consumption of 6 cc. of acetone and 20 cc. of bromine. The purification is best effected by dissolving the product in a small quantity of boiling methyl alcohol, filtering while hot, allowing the tetrabromide to crystallize, and adding boiling water in excess to complete the separation.

Milk Preservation.

Hydrogen peroxide has been suggested by Renard (*Monit. Scient.*) as a preservative for milk. One or two per cent. of a 12-volume solution of hydrogen peroxide added to milk decomposes completely in six or eight hours, but larger amounts remain much longer. Some undecomposed peroxide remained at the end of several days, when a 5 per cent. solution was added. It is claimed that milk so treated can be kept much longer without souring than untreated milk. The peroxide should be added directly after milking, and the milk kept cool for six to eight hours, until the peroxide is decomposed. The odor and taste are said not to be affected, and the milk is claimed to be satisfactory as an infant food.

Test for Morphine.

A reagent, consisting of concentrated sulphuric acid, 1.5 ccm., to which 1 drop 40 per cent. solution of formaldehyde has

been added at the time of using, is recommended by Marquis as a test for morphine. The reagent dissolves morphine and codeine and their salts, the solution turning a red-violet color, then slowly changing to a blue-violet, blue and finally to a green. The test is very sensitive. "Formalinic sulphuric acid," so called by the author, has been tried with 300 other substances, but of the number only brucine, papaverine, aniline and pyrocatechin gave anything like the same color reaction and these were easily distinguishable from the morphine reaction.—*Pharm. Zeit.*

Eserinol.

Saturated solution of physostigmine salicylate in oil is found to be preferable to the oily solution of the alkaloid, since its application is quite painless, whereas the latter gives rise to a considerable smarting and irritation. Twenty centigrammes of the salicylate is rubbed to powder and dried at 100° C., to constant weight. The dry salt is then transferred to a dry flask containing 40 grams of pure olive oil. After thorough shaking, this oily mixture is heated in the air oven to 150°-156°. Solution commences at 150° C., and with frequent shaking is complete in about 20 minutes at 154° C. A temperature above 160° should be avoided, or the alkaloid may be decomposed. The solution is then allowed to cool; at about 30° C. it becomes opalescent. It is well shaken and allowed to cool to 10° C., when a portion of the dissolved salt crystallizes out in small crystals, without, however, in the least affecting the activity of the preparation. One-half per cent. eserinol thus prepared is a turbid liquid, which should be shaken before use. It should be dispensed in non-actinic bottles which have previously been washed out with ether and dried.—*Pharm. Zeit.*

Constituents of Rose Oil.

Otto of rose, according to Van Soden and Traff (*Ber. d. chem. Ges.*), contains 5 to 10 per cent. of nerol alcohol and about 1 per cent. of eugenol. By fractionation of these alcohols in a vacuum, an alcohol was obtained having the formula $\text{C}_{15}\text{H}_{26}\text{O}$, and which is probably identical with the farnesol of oil of acacia flowers. This alcohol also is present in otto of roses to the extent of about 1 per cent.

Denaturing Alcohol.

Duchemin considers a wood distillation product, containing about 65 per cent. of methyl alcohol, and having a sp. gr. of 0.83, as the best denaturing material for alcohol. About 10 per cent. of this material is used. It does not clog the wicks of the spirit lamps nor give a bad odor when burned, but it has a very disagreeable taste and cannot be separated from the alcohol.—*Rev. Gen. de Chim.*

De Candolle Prize.

The De Candolle prize, founded in honor of the Geneva family of botanists, is now offered by the physics and natural history society of Geneva, Switzerland. The subject will always be a description of a species or family of plants. The essays may be written in Latin, German, French, English or Italian, and must be transmitted to the society before January 16, 1906.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Bismuth Subnitrate and Sodium Bicarbonate.

(F. L.)—"The following prescription I have filled five times, and always with the same result:

Bismuth subnitrate ½ ounce
Beechwood creosote 4 drops
Mucilage of acacia 1 ounce
Sodium bicarbonate 2 drams
Water, enough to make 2 ounces

"Each time the mixture was sent out the bottle was either broken or the cork was blown out, allowing the medicine to escape. The doctor said the mixture was feasible, but finally authorized the prescription to be filled by leaving out the sodium bicarbonate. This worked 'O. K.' Fresh mucilage of acacia was used along with Squibb's bismuth subnitrate and good beechwood creosote. The prescription number was also somewhat peculiar, being 3,999."

The difficulty here is due to the reaction between bismuth subnitrate and sodium bicarbonate, carbonic acid gas being liberated. It is this evolution of gas which caused your bottles to break. To avoid the reaction some dispensers recommend the use of the subcarbonate instead of the subnitrate of bismuth, but this is hardly allowable. The mixture may be compounded by first placing the bismuth salt and the sodium bicarbonate in a mortar and pouring a little hot water upon them, when effervescence will take place immediately. Of course, if the sodium bicarbonate is in solution, the bismuth subnitrate may be added and the mixture gently heated to facilitate the reaction. The resulting mixture should be sent out under a shake label. The prescription is a type of one frequently prescribed. We do not think that any peculiar significance can be attached to the number "3,999." It may be just a coincidence.

Pulmonic Cordial.

(A. M. L.)—Replying to your inquiry for "the name and address of the manufacturer of pulmonic cordial" (this journal, June 1, page 608), William Fosgate, Auburn, N. Y., writes: "This remedy was manufactured many years ago by my father, the late Dr. Blanchard Fosgate. The preparation is not now on the market, and the formula is owned by the writer, who would be pleased to hear from A. M. L."

Throat Pastilles.

(L. P.)—The pastilles of the London Throat Hospital Pharmacopœia form an agreeable lozenge and are easily prepared. The base is composed of glyco-gelatin, and is recommended to be kept prepared in stock, so that the pastilles when ordered may be made fresh. The base is prepared as follows:

Refined gelatine 1 ounce
Glycerine by weight 2½ ounces
Solution of carmine in ammonia, q. s. to color.

Orange flower water 2½ ounces
Soak the gelatin in the water for two hours, then heat in a water-bath until dissolved, add the glycerine, and stir well together. Let the mixture cool, and when nearly cold add the carmine solution. Mix till uniformly colored, and place on one side to set. After medicating as required, the mass should be poured into a flat oiled tray, to about half an inch in depth, and when solidified may be cut into the requisite number of pastilles.

"Pharmaceutical Formulas" gives this formula for Menthol Pastilles:

Gelatin 1 ounce
Glycerin 2½ ounces
Orange flower water 2½ ounces
Menthol 5 grains
Rectified spirit 1 dram

Soak the gelatin in the water for two hours, then heat on a water-bath until dissolved and add 1½ ounces of the glycerin. Dissolve the menthol in the spirit, mix with the remainder of the glycerin, add to the glyco-gelatin mass, and pour into an oiled tinned tray. When cold the mass is divided into ten dozen pastilles.

Tooth Paste.

(E. G. M.)—Here are some formulas from various sources:

(1.)

Precipitated chalk 16 ounces
Armenian bole 6 ounces
Powdered area nut 3 ounces
Powdered sugar 3 ounces
Oil of cloves ½ dram
Oil of cinnamon 20 minims
Glycerin 20 ounces
Rose water q. s.

Mix the powders, sift through a fine sieve, sprinkle on the perfumes and again sift; then work into a mass with the glycerin and rose water.

(2.)

Cherry Tooth Paste. Mix thoroughly in a mortar powdered orris root, 2 ounces; myrrh, 4 drams, and pumice stone, 2 ounces, adding sufficient solution of carmine, N. F., to tint; add 30 drops oil of cloves, 1½ drams oil of lemon, 8 drops oil of rose and 4 ounces of honey and continue the trituration until a homogeneous paste results and the flavor is fully developed.

(3.)

Areca Tooth Paste.—Precipitated chalk, 8 ounces; powdered areca nut, 4 ounces; white castile soap, 2 ounces; powdered orris root, 4 ounces; Armenian bole, finely levigated, 2½ drams; glycerin, 2½ fl. ounces; rose water, 2½ fl. ounces, oil of rose, 4 drops; oil of clove, 5 drops; oil of pimenta, 5 drops.

Many other formulas have been published in *The Era*. Consult the indexes.

BOOK REVIEWS

THE SPATULA SODA WATER GUIDE and Book of Formulas for Soda Water Dispensers. By E. P. White, Soda Expert. Editor *Spatula Soda Water Department*. Second Edition. Paper, \$1.00; cloth, \$1.50. 124 pages, 8vo. Boston, Mass.: Spatula Publishing Company.

Another edition of this book has just been published which gives quite a number of new formulas. The book is somewhat larger than its predecessor, and deals, its author asserts, with every known soda fountain drink, as well as questions which may arise in connection with the management of a soda fountain. It contains some forty chapters which are well written, and should prove a help to the pharmacist whose customers indulge in this popular modern necessity.

MERCK'S 1905 MANUAL THE MATERIA MEDICA. A Ready-Reference Pocket-Book for the Physician and Surgeon. Cloth. New York: Merck & Co.

Most of our readers are familiar with previous editions of this manual issued by Merck & Co., of this city, and they will not be disappointed by a perusal of the present one. While intended principally for the physician, it contains much information that is useful to the pharmacist. The section devoted to prescription formulas in previous editions has been replaced in this one by a list of therapeutic indications, and a comprehensive table giving dosage of drugs, chemicals and galenical preparations in frequent use has been added.

"Pennsylvania Pharmacy Laws," 1887-1905, a digest of the laws of Pennsylvania, regulating the sale of drugs and the practice of pharmacy, is a handy little volume which has just been issued. It is by Miles H. Shimer, Ph.G., and was compiled and annotated by Walter Tresse Singer, of the Philadelphia bar. The pamphlet contains in concise and convenient shape a digest of all the laws which relate to the adulteration and sale of drugs and it will be found most valuable to the pharmacists of the Keystone State. In addition to laws which had previously been on the statute books, it contains those measures passed by the Legislature last April, relating to the adulteration of fruit syrups, and the sale of poisons, liquors and cocaine. The price of the pamphlet is 25 cents.

We have received from the Lloyd Library an interesting brochure by C. G. Lloyd, on "The Lycoperdaceae of Australia, New Zealand and Neighboring Islands"; illustrated by fifteen plates and forty-nine figures.—Mycological Series No. 3. The author says that "Australia is the richest country in the world in lycoperdaceae, and more strange and endemic genera are found there than in any other continent. Probably not more than a hundred specimens have reached the museums of Europe * * * I do not feel that the knowledge we have of the subject is more than introductory." The brochure should interest students and collectors of fungi.

The "Quick Loader" Insect Powder Gun.

This gun has for several years been a favorite with the trade and with users. It is readily loaded, emits the powder with force

Have you seen our new catalogue of Druggists' Tinware? If not ask for Catalogue No. 20.

and is a compact, handsome and durable gun. Carried in stock by all large jobbers. Ask for the "Quick Loader."

G. A. S. HONORED.

Hears Address on the Race Problem by Noted Editor.

GEORGE VON SKAL MAKES AN INTERESTING EVENING OF AN OTHER-WISE ROUTINE MEETING.—LEGISLATIVE COMMITTEE REPORT ADVISES NO CHANGES IN PHARMACY LAW.

The German Apothecaries' Society was honored at its meeting, last Thursday night, with the presence of George von Skal, editor-in-chief of the New York Staats-Zeitung, who delivered a most interesting and able address on the race problem in the United States. Mr. von Skal spoke from personal experience and impressed his hearers as having an exhaustive knowledge of the subject.

Mr. von Skal stated that the prospects for social equality are steadily growing smaller and that the opinion prevails that the problem should be left to the South for solution. He cited prominent southerners on the race question, the unanimous opinion being that the negro can never be put on an equal footing with the white man. Some interesting statistics were given, showing that the negroes form 11 per cent. of the population, and that illiteracy exists among 48 per cent. of them, but only among 12 per cent. of the whites. On the whole, the race is improving.

President Imhof thanked Mr. von Skal for his lecture and congratulated him on his masterly and exhaustive study of the race question, assuring him that he had an appreciative and grateful audience on this subject, which is of interest to the whole population. He tendered the thanks of all the members to Mr. von Skal for his cheerful readiness to honor the society with his presence. A rising vote of thanks was given.

A communication from the Board of Pharmacy was read, calling attention to the election on June 15. Chairman Robert S. Lehman, of the Entertainment Committee, reported that the advance sale of tickets for the outing on June 8 amounted to \$90. A full report on legislation was rendered by George Kleinau, who thought it inadvisable to make any changes in the pharmacy law at present. If changed at all, it should be done all at once, and not by separate bills. The twelve regents' counts Mr. Kleinau declared should not be increased for two or three years. He favored the appointment by the governor of a commission to draw up, with the aid of the societies, a new pharmacy law, to be presented to the governor.

A letter from Dr. Diekman was read, expressing his thanks at the endorsement given him by the society for re-election to the Board of Pharmacy. Dr. Frederick Grosse also sent a letter of thanks for his election as honorary member. Twenty-five dollars was voted to a colleague in distress.

Delegates to the New York State Ph. A. were elected as follows: Dr. C. F. Kilpert (chairman), George Kleinau, S. V. B. Swann, August Diehl, B. J. Lauer. Mr Swann gave an outline of the entertainment to be provided at Saratoga. At 11.45 the meeting adjourned to discuss an excellent lunch.

LAZELL, DALLEY EXPLAIN.

What the "Under the Hat Agreement" Meant—Verbal Promises.

Referring to the publication in N. A. R. D. Notes of an article criticising their action in selling goods to a department store in Rockford, Ill., Lazell, Dalley & Co. have made a statement to The Era, giving their side of the case. They maintain that they were perfectly justified in their course and criticise Notes for pretending ignorance as to the "under the hat" agreement.

"In this 'under the hat' agreement," says Lazell, Dalley & Co., "nothing was signed, all promises were verbal. It was made in the loop district in Chicago, where all the big department stores and druggists had been cutting each others' throats for years. The department stores agreed to withdraw all their cut-rate advertising from the newspapers and to establish a minimum schedule of prices, as for instance, 72 cents for Peruna, instead of 83 cents. Only one department store refused to enter the agreement. On its part the N. A. R. D. requested the manufacturers to grant these department stores and cutters the same discounts and privileges as were granted to other members of the trade.

"This system worked satisfactorily and representatives were sent to other towns, Rockford among them, to put the same plan into effect.

"Now this dealer came to us from Rockford, said that he was a member of the city association there and claimed that he was entitled to the same privileges in his city as were the department stores in Chicago, under the 'under the hat' agreement. Of course, we took his word for it, just as the N. A. R. D. or anybody else would have done. As a matter of fact, we did not receive any complaints until April, 1905, when presumably the drug and department stores had a falling out.

"It seems to us that the N. A. R. D. are trying not to air this 'under the hat' agreement any more than they can help, for fear of having trouble with some of their dyed-in-the-wool people out there."

DEATH OF PIONEER DRUGGIST.

Kansas City, May 27.—Lemuel W. Newell, eighty-four years old, died at the home of his daughter, Mrs. Lillie Browning, yesterday. He conducted a drug business at Lowry City, Mo., for more than twenty years. He is survived by a widow and four children. The body was sent to Lowry City for burial.

MAY BE SUED ON A NOTE.

Druggist Asked to Pay for Stock in Greene Nervura Company.

THE CONCERN FAILED OVER A YEAR AGO WHEN THE DRUGGIST HAD PAID PART OF HIS SUBSCRIPTION.—HE WAS TO RECEIVE A TWELVE PER CENT, \$100 GOLD INTEREST-BEARING COUPON BOND.

Investment in gilt-edged stock of a patent medicine company has not proved profitable to a well-known Brooklyn druggist. Two years ago he gave notes for a certain amount of stock in the Dr. Greene Nervura Company. When that concern failed, he left one of the notes unpaid. It has just turned up in the hands of a Boston lawyer, who threatens to sue for collection. The druggist does not care to have his name used, because, he says, "I don't want people to know what a fool I've made of myself."

This was a "special bond subscription for the drug trade only." The three notes were for \$25 each, at four, eight and twelve months, with interest at five per cent. Upon full payment of the notes, the druggist was to receive a bond for 100 shares of stock in the Dr. Greene Nervura Company, par value, \$100. On this stock a dividend of twelve per cent. per annum was guaranteed. The company agreed that

"If, for each or any of the years 1906, 1907, 1908, 1909, 1910, 1911, 1912 or 1913, the dividends declared and paid on each and all of the shares of stock to which you shall become entitled under the provisions of said bond, shall amount to less than twelve per cent. per annum upon the par value thereof, to deliver to you, free of charge, a sufficient amount of Dr. Greene's Nervura, calculated at the rate of \$8 per dozen, to amount to the said twelve per cent. on said stock in each and every year as above set forth, the only condition being that you shall sell the Dr. Greene's Nervura which you may receive under this contract, in your own store or stores at your usual selling price."

After two of these notes had been paid, the Dr. Greene company collapsed, a little over a year ago. The underwriting company which handled the bonds was ordered to turn over to the receiver all unpaid notes held by them on account of subscription for the bonds of the Nervura Company. These notes were not discounted nor used in any way and naturally the underwriting company disclaimed all responsibility.

The druggist concluded not to send good money after bad, and thought no more about the matter. Last week he received word from a Boston lawyer that the note had been placed in his hands for collection, and that he had satisfied himself that a judgment against the druggist would be collectible. Suit was threatened unless

immediate payment was made. The druggist replied that he would pay the note if the lawyer would guarantee the delivery of the bond. Developments are still awaited by the druggist. He now has a very poor opinion of his business shrewdness.

PASSED EASTERN BRANCH.

As a result of the last examination held by the Eastern Branch of the State Board of Pharmacy, the following have received certificates as licensed pharmacists:

Wm. H. Abeling, David Bluvstein, Tobias Breitzer, Elizabeth Croll, David Dolinsky, Arthur L. Duplantis, Miguel Alvarez, Clark H. Fitch, Simon Friedman, Julius Klepper, Paul O. Krause, Andrew Lang, Leonard F. B. Levy, Leon N. Mandelstam, Jacob Mirsky, May W. Pignol, Carl W. Poetz, Clifford Sadler, Edward F. Schuchmann, Samuel A. Shibley, Wm. W. Sitterly, Lawrence J. Wangler, Henry G. Wenzel, Arza E. Wickware, Jacob B. Zimmerman, Joseph Zrubek, Jr., Antonio Virdone, Isidor Juliber, Jacob Abowitz, Samuel Berlin, John G. Brennan, M. C. Conello, Jus. Cooperstone, Burt L. Daniels, Buena Ventura DeStefano, George Elson, Gustave J. Ernst, Jacob S. Ganeless, Francesco Genovese, Robert Haberman, Lambert H. Hanstein, August C. Hillmann, Martin Kaplan, Isaac Kaufman, Frederick H. Kern, B. H. Kirschberg, Alex. Krakower, Max Lichtman, Frank Markensohn, Bernard Matzkewitz, Gustave H. Meyer, Vito Miranda, Goetano Modica, Henry R. Moorhead, Julius Muller, Anthony V. Notarfrancesco, Leo P. O'Farrell, Matteo Pianterci, John F. Ryan, Chas. F. Sackett, Raffaele Santangelo, John M. Schapiro, Wm. J. Slattery, Samuel Smith, Henry E. Urstadt, Joseph E. Viola, B. A. Walton, B. Weyermann, John H. Wieholz, Wolf Yalovich, Anton Urbanowitz, John A. Nhare, Jr., Elias Silpe. This makes a total of seventy-three successful candidates out of seventy-six who tried.

INTERBOROUGH FOR DIEKMAN.

At a regular meeting of the Interborough Pharmaceutical Society, held May 24, Dr. George C. Diekman was endorsed for re-election as a member of the State Board of Pharmacy. Election will be held at the New York C. P., 115 West Sixty-eighth street, on June 15.

The Interborough society was formed about a year ago, in order to give graduates of the New York College of Pharmacy, who were not members of an incorporated pharmaceutical society, an opportunity to vote. The officers of the society are: Philip Fitz, president; Nathan Cohn, secretary; Charles S. Erb, treasurer; Hieronimus A. Herold, counsel.

RED FIRE IN DRUG STORE.

Binghamton, June 3.—A clerk mixed some chemicals in the laboratory of the Elk Drug Company last night, and as a result there was an explosion and a beautiful display of red fire. The damage was slight, but the excitement was intense when the red light streamed from the windows of the laboratory, illuminating the opposite side of the street for a half block.

The clerk who mixed the chemicals said he didn't want to do it, because he knew there would be a fire, but the boss told him to, and he obeyed orders.

M. A. R. D. GAINED ITS POINT.

Strenuous Time When Agreement Was Reached and Then Broken.

LOCAL MEN OBJECTED TO HAVING N. A. R. D. ACT AS THEIR TREASURER, SAYS PRESIDENT ANDERSON.—TROUBLE APPARENTLY NOW SETTLED.—THE STORY OF THE CONTROVERSY.

That the past three weeks have been most strenuous for the Executive Committee of the M. A. R. D. and the N. A. R. D. representatives in this city, is gradually becoming known. It is now learned that the local men opposed vigorously the plan of the N. A. R. D. to take charge of all the money collected here and this question was discussed with unusual warmth at the conference with Dr. Noel two weeks ago.

At that meeting an agreement was seemingly reached, but Dr. Noel asked for another conference the following morning and everything was again upset. This meeting was attended by only five members, however, so another meeting of the Executive Committee was called last Friday afternoon. It is reported that matters have again been straightened out to the satisfaction of the local men.

All these meetings have been strictly executive and no details are given out. Some idea of the situation was given by President William C. Anderson, who said:

"At the time that we decided to hire our own men we asked Colonel Duple what we were to expect and he practically told us that we could expect nothing. All but two of the organizers had been withdrawn and those two were not working in a systematic way. Therefore we decided that since we were compelled to do the work ourselves, we would retain the organization fee to pay the expense. It was the only thing left for us to do. Dr. Noel admitted that himself.

"Now when Dr. Noel agreed to send a sufficient number of men here to do the work as it ought to be done, we planned to divide the \$8 dues in this way: No payments less than \$3.50 were to be received, of which \$2.50 would be credited to organization fee and \$1 to the M. A. R. D. After that was paid, 50 cents was to go to 'Notes' and \$4 to Chicago as national dues.

"We wanted all this money turned directly over to our treasurer, who would distribute it according to our plan. The N. A. R. D., however, wanted all the money sent to Chicago and they would send us \$1 out of the organization fee! This was such a ridiculous, roundabout method that we could not entertain it for a moment. We didn't have to go to all the trouble of organizing here to have the N. A. R. D. act as our treasurer. The idea of being compelled to look to Chicago to pay all our little bills and expenses is simply absurd.

"There was more trouble about the employment of Mr. Swann as an organizer. Naturally we wanted one local man who was popular and acquainted with the trade and we thought the N. A. R. D. should pay him enough to enable him to get a relief clerk. That was really putting money into the pocket of the N. A. R. D., as it saved them the expense of sending

another man here. This salary, of course, has nothing to do with Mr. Swann's services as secretary, for which at present he receives no compensation.

"In the end we had our own way. There are now nine organizers here, including Mr. Swann. Dr. Hoffman is expected to make the tenth. Four men have been assigned to Brooklyn and the work is progressing satisfactorily."

At the suggestion of Secretary Swann the Executive Committee decided on Friday to ask every proprietor who is using the direct contract plan to station a representative in this city.

PROGRAMME AT SARATOGA.

The programme of entertainment for the twenty-seventh annual convention of the New York State Ph. A. at Saratoga, June 27-30, has been completed and is as follows:

Tuesday evening, June 27, president's reception and ball. Wednesday afternoon, carriage ride to points of interest in and about Saratoga. Wednesday evening, entertainment at Town Hall under the auspices of the Commercial Travelers' Association. Thursday afternoon, card party for the visiting ladies. Thursday evening, music and recitations. Friday forenoon, trolley trip to Lake George, lunch at Fort William Henry Hotel.

There will be two sessions on Tuesday, at 10 a. m. and 2 p. m., also two on Wednesday, at 9 a. m. and 1 p. m. The Thursday and Friday sittings are each scheduled for 9 a. m.

DATE OF N. W. D. A. MEETING.

The Committee on Arrangements and Entertainment of the National Wholesale Druggists' Association announce that they have chosen the first week in October as the time for the annual meeting. Headquarters will be at the Hotel Astor, the top floor, comprising all necessary rooms, having been placed at the disposal of the association. Rates are from \$2.00 per day up, according to room (European plan).

JOHNSON & JOHNSON WIN.

New Brunswick, N. J., June 3.—Vice-Chancellor Bergen, in Trenton, has rendered a decision in the long pending suit of Johnson & Johnson, of this city, against Seabury & Johnson, for infringement. The conclusion of the suit is a victory for Johnson & Johnson. The vice-chancellor in his opinion said he would grant an injunction against Seabury & Johnson, restraining that firm from putting absorbent cotton and gauze in packages in such a manner as to imitate the product of Johnson & Johnson. The case has been pending for five years, and thousands of pages of testimony had been taken.

STAMP TAX REPEALED.

Albany, June 3.—Governor Ilgizins yesterday signed the Raines bill, abolishing the liquor stamp tax for pharmacists. Two other Raines bills which were signed by the governor, provide that a person selling any kind of a beverage which requires a United States internal revenue license must hold a Raines law certificate also. Any citizen is permitted, without the consent of the State Excise Commissioner, to institute proceedings to annul a liquor tax certificate.

PARK MUST ANSWER.

Peruna Company Scores a Point in Conspiracy Suit.

COURT HOLDS THAT "TRADE SECRETS" REFERS TO METHODS BY WHICH PARK OBTAINS GOODS ILLEGALLY.—"HARDLY A TRADE SECRET THAT SHOULD BE PROTECTED BY THE COURTS."—PERUNA WAS OBTAINED BY CONSPIRACY.

Cincinnati, June 2.—Samuel B. Hartman has won an important point in his action brought in the United States Circuit Court against Loveland and others, in which he applied for an order to compel Ambro R. Park to answer certain questions and produce certain documents. Park's testimony is being taken in the suit in reply by the Peruna Company against McKesson & Robbins, of New York, Loveland and the John D. Park & Sons Company, for conspiracy in obtaining a carload of Peruna.

Park refused to answer the questions or produce the documents on the ground that they were not material or relevant and that the answers to the questions would disclose trade secrets. The decision, delivered orally by Judge Thompson, is as follows:

I have read the testimony, so far as it has been taken, and have in mind the questions that were asked, which the witness refused to answer.

In the first place as to the relevancy of the testimony sought to be elicited by those questions: The case sought to be made in the reply in this: That McKesson & Robbins and Charles H. Loveland and John D. Park & Sons Company, conspiring together for that purpose, fraudulently obtained a carload of Peruna from plaintiff, and that the plaintiff, when he discovered the fraud, promptly repudiated the contract of sale, tendered back the purchase price which had been paid and reprieved the goods. In order to maintain the suit, therefore, it is necessary to show that the possession of these goods was obtained by fraud practiced upon the plaintiff, which justified him in repudiating the contract.

I don't care to discuss the question of the right to repudiate the contract; I think there can be no question about that. McKesson & Robbins and Loveland both had contracts with Hartman to enable them to procure Peruna, and the claim is, that in violation of these contracts, they entered into a conspiracy with the John D. Park & Sons Company to obtain Peruna from Hartman and ship it to that company, the company being engaged quite extensively in the business of selling Peruna, and having no relation or contract with Hartman which would enable it to obtain Peruna in any other way.

If this be true, undoubtedly Hartman had a right to repudiate the sale obtained by a fraud practiced upon Hartman, and in furtherance of the scheme by which the John D. Park & Sons Company sought to obtain Peruna, when they could not otherwise have obtained it. The representation of McKesson & Robbins to Hartman was this: "Under our contract we want to buy this Peruna, but it upon the market and sell it as your agents, as we have been doing heretofore," when, in fact, that was a misrepresentation. They did not want to buy this Peruna, but they wanted it for the purpose of selling it to the John D. Park & Sons Company, in violation of their contracts with Hartman.

Therefore, in the opinion of the Court, the testimony sought to be elicited from this witness, Ambro R. Park, is relevant as tending to show this fraudulent scheme by which the Peruna was obtained from Hartman.

The witness repeats over and over again that the answers to the questions put to him will not incriminate him or will not subject him to a penalty or forfeiture; but, as I have already stated, his sole ground for refusing to answer is that the questions are irrelevant to the issues in the case pending in the New York courts, and that the answers thereto would disclose trade secrets. The Court is of the opinion that the testimony is entirely relevant, and that there are no trade secrets disclosed.

The suggestion is that this firm of John D. Park & Sons Company is fighting Hartman and the trust organizations, as they are called, which are engaged in this business; that this firm is outside and independent, but, at the same time, are trying to get these goods by indirect methods, and the trade secret set up here is that if Park discloses the names of the men he uses to fraudulently obtain goods from Hartman, it will prevent him in the future from fraudulently obtaining goods in that way. Well, that is hardly a trade secret that should be protected by the courts.

The line of examination here in the opinion of the Court, was legitimate and counsel for the plaintiff in the case has stated to the Court here that it is his purpose and intention to keep within the line of relevancy and not to call out or seek to call out from this witness anything that would not be entirely relevant to the issue in the reply in this suit. It has been suggested that the Court should instruct counsel as to the line of questions to which the examination should be confined. The Court cannot do that. Counsel on both sides are able; they know what is relevant to the issue. It is a simple issue and they know what is relevant to the issue, and the Court expects them, of course, to keep within the rule and not go outside of it to ask impertinent questions which may be annoying to the witness, but would not contribute anything to throw light on the matter under investigation. I take it there will be no trouble on that score. What this witness said relative to the transaction under investigation in the Federal Court at Buffalo should be disclosed and any documents or papers in his possession which may throw light on it should be produced. He should answer the questions and produce the papers and documents, if he has them, and the Court will so order.

Mr. Reed—As to the subpoena—do you not want us to issue a formal subpoena?

The Court—Well I had forgotten that. I am in doubt as to whether it is necessary, but it seems to have been the practice and I will conform to the practice and make an order directing the Clerk of this Court to issue a subpoena duces tecum for the books and papers called for.

Mr. Schroder—I do not insist upon the issuing of the subpoena; I am satisfied with the order, Your Honor.

The Court—Very well, then.

Mr. Schroder—There is one line of questioning which I would like to have defined, so as to avoid any future controversy, if possible, and that is those questions that relate to the John D. Park & Sons Company did with the goods after they received them. I submit that is plainly irrelevant to the issue, and immaterial.

The Court—Well, I do not see the relevancy of that.

Mr. Reed—I do not intend to pursue that, Your Honor, or to ask for any names.

The Court—There is one feature of the case that justifies counsel in going further than he would otherwise be entitled to go. This is an unwinding with regard to a measure might be dealt with as if upon cross-examination, but counsel should keep strictly within the line of relevancy and not go into the private life of this firm, which has no reference to the matter now under investigation.

Mr. Reed—I do not intend to examine as to the disposition of the goods at all subsequent to that.

The Court—As now advised, I cannot see what relevancy it would have to show what they did with the goods afterwards.

H. B. HARDING IN COSTUME.

Fantastic Picture Painted by Artist Hooper and Shown at the Sphinx Club.

While the accompanying portrait of Herbert B. Harding, secretary and treasurer of the Humphreys Medicine Company, shows that gentleman in a strange garb, the likeness is easy recognizable. Indeed, by his friends it is said to be an excellent portrait. The coat in which Mr. Harding

is pictured contains as many colors as did the famous garment which was worn by Joseph. This variegated attire is the product of an artist's fertile brain. It was never worn by Mr. Harding.

The picture was drawn and painted by Will Phillip Hooper, the artist, whose penchant for caricature of a friendly sort, is as well known as is his ability to faithfully portray the subject which he selects. Mr. Harding is shown in all the glory of a cap decorated with a peacock feather. The coat might have been modeled after the famous yellow jacket which was worn by Li Hung Chang, when he was in this country.

This Chinese caricature is one of five which were exhibited at the recent ladies' evening of the Sphinx Club, at the Waldorf. The portraits were those of the present president of the club and the gentlemen who had previously held that office. The decorations for the dinner were Japanese and Chinese effects, and the portraits were a part of them, being enclosed in frames which had previously held advertisements in the subway. Mr. Harding will have Mr. Hooper's work of art appropriately framed, and will give it a place among the other pictures in his house.

ALUMNI'S BANNER YEAR.

The annual meeting of the Alumni Association of the Brooklyn College of Pharmacy, held May 18, showed that the past year was the most successful socially in the history of the association. This report, made by Secretary William H. Weygandt, was corroborated by Treasurer William C. Anderson, whose itemized account of "past performances" clearly showed that financially the year had also been a record-breaker. Sixty new members were elected. The election of officers for the ensuing year resulted as follows:

President, Edward Kleine, '04; first vice-president, Wm. H. Weygandt, '01; second vice-president, Wm. G. Meister, '03; secretary, James E. McNamara, '05; treasurer, Dr. Wm. C. Anderson, '92. For registrar, the newly-elected president insisted that a "real live man" be elected and I. V. S. Stanislaus, '03, whom Dr. Walter Bryan pronounced "really alive," was chosen. Executive Committee, F. P. Tutthill, '08, chairman; Thos. F. Raymond, '03; Mrs. Mamie Gesell, '04; Berthold Gersen, '05; Joseph P. Farrell, '05. Delegates to the A. Ph. A., I. V. S. Stanislaus, Edward Kleine, H. Sturz; delegates to New York State Ph. A., F. P. Tutthill, Wm. G. Meister and Miss Alice Kunkel.

An athletic committee was appointed, with Stanislaus as chairman, to look after the physical well-being of the members. The meeting was very largely attended, the good spirit and fellowship extended the newcomers of the class of '05 seemed well appreciated, and Dr. Mulr contributed his share to keep things "a-hummin'."

DRUG CLUB'S NEW QUARTERS.

The Board of Governors of the Drug Trade Club announce the completion of arrangements by which the club is to move into handsome new quarters, occupying the entire fourteenth, fifteenth and sixteenth floors of the addition to the Woodbridge building. This is now under construction and will be ready for occupancy on May 1, 1906. These three floors are being planned and built with reference to the requirements of a club of 500 members and will include spacious general dining-rooms, grill-room, several private rooms, smoking-room, reception halls, ladies' reception-room, lavatories, bathroom, etc., all well appointed and handsomely decorated.

NEW YORK NOTES.

—Albert Plant, of Lehn & Fink, sailed for Europe on Tuesday morning on the steamer Kaiser Wilhelm der Grosse. He will be gone about three months, combining business with pleasure. Mr. Plant will shortly be followed by E. H. Shaw, head of the sundries department.

—Dr. William C. Alpers leaves for Europe to-day. On Tuesday he was given a banquet and hearty send-off by the Social Scientific Society, of which he is a leading member. The committee in charge of the affair were W. C. Hess, Dr. J. A. Schmitt and Joseph Winter.

—Truth, in a recent issue, prints a sketch of the life of Thomas Stoddart, of Buffalo, one of the best known pharmacists in this State. He has had a most remarkable record for honest business dealings and is one of the city's most trusted and efficient counsellors. Truth hints at still higher honors for Mr. Stoddart.

AGAINST PRIZE GIVING.

Philadelphia Druggists to Discourage Souvenir Habit.

DELEGATES SELECTED FOR BOSTON CONVENTION.—ORGANIZATION TO GET PREMIUMS ON CRYSTAL CAPSULE CO.'S GOODS.—TIMELY SUGGESTION TO PHARMACISTS REGARDING FRUIT SYRUP LAW.

Philadelphia, June 3.—The efforts of certain manufacturers to induce the public to use their goods by giving away various prizes and souvenirs, were denounced yesterday, at the monthly meeting of the Philadelphia Association of Retail Druggists, and after a lengthy discussion the feeling of the members was voiced in the following resolution, offered by Charles Rehfs:

"That we recommend to our members that they discourage the sale of anything that carries with it the giving away of any prize or souvenir."

It was reported that some members of the association were handling a line of goods which carried with it a souvenir or prize system, in violation of a previous agreement of the association.

Preliminary to the meeting a session was devoted to the nominating of delegates to the national convention in Boston, in October. Twenty delegates and the same number of alternates were appointed.

Vice-President W. L. Cliffe, as chairman of the Schedule Committee, reported that the new schedule would not be ready before the next meeting. He was instructed to distribute the schedule among the members as soon as it was printed.

Organizer E. E. Pottume made his usual interesting report, items of which were the announcement of the securing of four new members and the collection of dues amounting to \$127 and a donation of \$50.

Chairman A. J. Frankeberger, of the Membership Committee, said there were quite a few prospective members who would probably be enrolled in the course of a month or two. Chairman S. W. Strunk, of the Entertainment Committee, asked for an expression of opinion on the question of holding an outing at Willow Grove the latter part of July or early in August. The latter part of July was selected as the most convenient time for the picnic. In the reports by districts there was little out of the ordinary, except in the case of the eleventh. Mr. Koch, the chairman, stated that unusual interest was being taken there in the attempts to better conditions and that at the last meeting, a committee had been appointed to canvass the district to obtain signatures to discover the sentiment on the question of raising the price of ice cream soda from five to ten cents.

There were expressions of sympathy adopted on the part of the association when the deaths of D. E. Bransome, the representative of Johnson & Johnson, in this city, and a son of H. J. Siegfried were announced.

Visitors who were present at the meeting were H. S. Beckler, of the Peruna Company, who had just come here from Baltimore, where he has been smoothing the way to an agreement between the cutters and the retailers of that city; Charles

C. Hay, of Dubois, formerly president of the State Pharmaceutical Association, and Francis Sheldon, of Buffalo, representing the St. Louis Club.

The Crystal Capsule Company, of this city, offered to turn over to the organization fifty cents on all five dollar orders received from the members and twice that amount on ten dollar orders. The offer, Mr. Leedom said, was only a business proposition, and as such was accepted.

President Potts announced that the delegates to the State Pharmaceutical Association's convention the latter part of the month, were Charles Leedom, William E. Lee, Richard H. Lackey, H. L. Stiles and Charles Rehfs. In this connection, a resolution was adopted endorsing the candidacy of Secretary Charles T. George, of the State Examining Board, who has been renominated. A copy of this resolution was ordered sent to Governor Pennypacker, as an indication of the feeling of the Philadelphia Association as to the faithful efforts of Mr. George.

S. W. Strunk called the attention of the members to the wording of the Fruit Syrup law, which was approved by Governor Pennypacker on April 26, last. He said druggists should be careful in their interpretation of it, for while it did not mention sodium benzoate as one of the preservatives that was not to be used in fruit syrup, it did prohibit the use of any preservatives "injurious to health." Some experts, it was said, had declared that this preservative in certain quantities was not injurious to health, but as no quantity was mentioned, it might give rise to a question, and for that reason it was well for the druggist to be posted as to the exact wording of the law.

The new members who were elected were: W. A. Shannon, of Eighth and Spring Garden streets; Harvey A. Fenner, of Broad street and Columbia avenue; J. P. E. Gotel, of Seventeenth and Dauphin streets, and Emil Graff, of Twelfth and Race streets.

The delegates to the Boston convention are as follows: Messrs. W. H. Poley, T. H. Potts, G. W. Fehr, Charles Rehfs, C. W. Shull, S. W. Strunk, W. E. Lee, A. J. Frankeberger, Charles Leedom, N. A. Cozens, Otto Krans, H. L. Stiles, A. F. Follard, J. N. G. Long, H. C. Blair, W. H. Lackey, S. B. Davis, J. C. Perry, O. W. Osterlund and Christopher Koch. Alternates: F. W. Fluck, Jacob Epstein, L. J. Steltzer, John Fray, Frank H. Eberly, R. L. Lackey, W. F. Steinmetz, Charles Eckles, Lewis Sorber, John D. Burg, H. A. Nolte, Walter R. Rumsey, W. H. Morrison, H. J. Siegfried, E. K. Boltz, George B. Weideman, Harry Swain, W. H. Lantz and J. C. Peacock.

VISITING BOWLERS WIN.

Philadelphia, May 29.—The representatives of the Baltimore Wholesale Druggists' Bowling League visited the Philadelphia Wholesale Drug Bowlers on Saturday afternoon, May 27, and rolled five games. Philadelphia won four out of the five. The evening was very pleasantly spent around a banquet table at the Iltanor Hotel. The scores:

Philadelphia	828	829	924	843	904
Donnel					241
Baltimore	853	794	860	809	797
Coulson					218

SCHOOLS WITHIN LAW.

Institutions Which Will be Recognized by Pennsylvania Pharmaceutical Examining Board.

Pittsburg, June 6.—The Pennsylvania Pharmaceutical Examining Board has announced the accompanying list of pharmacy schools which will be recognized as coming within the meaning of a recent act, and are "reputable, properly chartered colleges of pharmacy schools, and whose graduates will be acceptable for examination for registered pharmacists certificates." These institutions have been selected for the reason that they are all in affiliation with the American Conference of Pharmaceutical Facilities, except the last named, and it is included because it has applied for acceptance in that body, having met all requirements:

Albany College of Pharmacy, Dept. of Union University, Albany, N. Y.; Brooklyn College of Pharmacy, Brooklyn, N. Y.; California College of Pharmacy, Dept. of University of California, San Francisco, Cal.; Chicago College of Pharmacy, Dept. of University of Illinois, Chicago, Ill.; Cleveland School of Pharmacy, Cleveland, O.; University of Iowa College of Pharmacy, Iowa City, Iowa; University of Kansas School of Pharmacy, Lawrence, Kan.; Louisville College of Pharmacy, Louisville, Ky.; Maryland College of Pharmacy, Baltimore, Md.; Massachusetts College of Pharmacy, Boston, Mass.; University of Michigan School of Pharmacy, Ann Arbor, Mich.; University of Minnesota College of Pharmacy, Minneapolis, Minn.; National College of Pharmacy, Washington, D. C.; New York College of Pharmacy, Dept. of Columbia University, New York, N. Y.; Northwestern University School of Pharmacy, Chicago, Ill.; Ohio State University College of Pharmacy, Columbus, O.; Philadelphia College of Pharmacy, Philadelphia, Pa.; Pittsburg College of Pharmacy, Dept. of Western University of Pennsylvania, Pittsburg, Pa.; Purdue University School of Pharmacy, Lafayette, Ind.; Scio College Department of Pharmacy, Scio, O.; St. Louis College of Pharmacy, St. Louis, Mo.; Vanderbilt University Department of Pharmacy, Nashville, Tenn.; University of Wisconsin School of Pharmacy, Madison, Wis.; Medico-Chirurgical College, Pharmaceutical Department, Philadelphia, Pa.

ROW OVER "YELLOW CARD."

Pittsburg, June 6.—There was a stormy scene in the rooms of the Western Pennsylvania R. D. A., in the Bessemer building, when Secretary B. E. Pritchard refused a "yellow card" to a representative of Makeman tablets. The latter made some threats and talked about a restraint of trade, but he lost his point. Mr. Pritchard gives this cheerful view of the matter: "We refused a salesman's card to a representative of Makeman tablets, because the trade elsewhere was overstocked and the goods could be bought for one-half the price he was asking. Besides, as might be surmised, the goods do not sell.

"The fellow returned the next day, with a friend as a witness and demanded that we issue him a card, and upon being again refused, served notice that he would enter suit to compel us to issue it, as we were acting in restraint of trade."

PHILADELPHIA NOTES.

—Frank Carbona, Italian pharmacist, has opened a fourth store at 743 South Sixth street.

—The Scotch Hop Ale Manufacturing Company, at 1456 Cherry street, has enlarged its plant.

—Benjamin Ulanski has installed a new soda fountain in his new store at Sixth and Reed streets.

—J. F. Yealey, proprietor of the Wilson Pharmacy at Ninth and Filbert streets, has installed a new fountain.

—J. B. Hagenbach has remodeled his store at Fifty-first street and Baltimore avenue, and has put in a new soda fountain.

—A. L. Rinker will soon have his new pharmacy at Seventy-second street and Germantown avenue ready for business.

—Frederick Rapp has sold his store at Fifty-second and Market streets and has secured a site on Fifty-second street above Chestnut street.

—D. J. Lynch, proprietor of the pharmacy at Eleventh and Jackson streets, has opened a handsome new store at Eleventh street and Moyamensing avenue.

—Moss & Moore have secured an excellent location directly opposite the site of a subway station, for their new store at Fifty-second street and Baltimore avenue.

—H. J. Lachenmayer has opened another new store at Twenty-sixth and York streets. His soda fountain is one of the handsomest in that section of the city.

—Many improvements, including a large new soda fountain, have been made to the old-established pharmacy at Eighteenth and Market streets, conducted by Campbell Brothers.

—A. W. Crawford is now the owner of the pharmacy at Fifty-ninth street and Haverford avenue. W. P. Kram, the former owner, is with the American Soda Fountain Company, in this city.

—W. C. Francis has gone into business for himself at Forty-second street and Lancaster avenue. He has a handsome eighteen-foot "Innovation" fountain. Mr. Francis was formerly the manager of George B. Evans' store on Market street.

—W. A. Gillespie has purchased the property at Fifty-ninth and Race streets, and is having it remodeled into a handsome pharmacy. The improvements include a new soda fountain. Another new fountain is that in the store of Charles M. Morell, at 5149 Market street.

—Frank Groff, a pharmacist in West Philadelphia, has purchased the interest of his partner, Lawson C. Funk, in the pharmacy at Forty-fourth street and Lancaster avenue. Mr. Funk, it is understood, will devote his entire attention to his store at Forty-first street and Lancaster avenue.

—Secretary E. T. Hahn, of the Philadelphia Drug Athletic Association, reports that their out-of-doors meetings are well-attended, and that many new members have been admitted since the athletic season began. On Memorial Day, the members were the guests at the Stenton athletic field, of Allen May, the well-known vocalist of this city. Another treat will be a shad dinner on June 15, at "The Orchards," Essington on the Delaware, the summer home of the Philadelphia Athletic Club, when they will be the guests of Charles Willis.

TO BREAK WEIGHTMAN WILL.

Suit Begun by Granddaughter of Rich Chemist's Granddaughter.

Philadelphia, June 2.—Charles E. D'Ingvilliers, guardian for Martha Rogers Weightman, granddaughter of William Weightman, yesterday filed an appeal in the Orphans' Court, praying it to set aside the action of the Register of Wills in admitting the Weightman will to probate. If the proceeding is successful, Mrs. Anne Weightman Walker, sole legatee under the will of her father, will lose two-thirds of the fortune. Should the suit be successful five other grandchildren will share in the fortune, which is estimated at upward of \$60,000,000.

Representatives of both parties to the litigation said yesterday that no compromise is now possible. It will be left to the courts to decide whether Mrs. Anne Weightman Walker is to remain undisturbed in possession of the estate, or whether it shall be apportioned equally among the heirs. These are, besides Mrs. Walker, the heirs of her two brothers, Dr. John Farr Weightman and William Weightman, Jr.

Neither side will recede. Mrs. Walker will not compromise. Miss Weightman, whose claim to participation in the estate of her grandfather comes through her father, William Weightman, Jr., will be advised by her lawyers and family counselors, chief among the latter being Mrs. Jones Wister, her mother, not to consent to dropping the case. It is probable that court proceedings will not be begun until the fall.

MUNYON'S OFFER REJECTED.

Wilmington, Del., June 3.—The Wilmington Association of Retail Druggists has elected the following officers for the ensuing year: President, T. B. Cartmill; secretary, James Ferris Belt; treasurer, Joseph Zimmerman; executive committee, J. F. Gradwohl, Albert Dougherty, B. Ballea and Dr. W. E. Smith. The organization has unusually good prospects and has enrolled as members the majority of the druggists not only of the city but of New Castle county as well. As the result of the efforts of Mr. Adams, the N. A. R. D. organizer for New Jersey and Delaware, the following have just been elected to membership: E. Challenger, of E. Challenger & Son, of New Castle; C. E. Ferris, of C. E. Ferris & Son, of New Castle; J. Lee, of Middleton, and C. H. Scarborough, manager of the Miller Drug Co.

At a special meeting on Monday, the association rejected the "combination offer" which the Munyon Company has been trying to introduce.

PRISON FOR LIQUOR SELLER.

Detroit, June 5.—William J. Remus, a South Haven druggist, was arrested several months ago on a charge of violating the local option laws. He escaped punishment. He was again complained of recently. The court took cognizance of the fact that this was his second offense, and sent the druggist to the State prison at Ionia for a term of not less than ten months nor more than twenty, under the indeterminate sentence law.

MR. DOHME COMING HOME.

Baltimore, June 3.—The foreign trip of Charles E. Dohme, who has been abroad for some months, is drawing to a close. He will sail on the 7th inst. for the United States, arriving in New York, June 15. He has covered the larger part of Europe and has also gone somewhat beyond the borders of that continent. In Rome he met his brother, Louis Dohme, who went to the other side of the Atlantic last October and has been traveling ever since, though he also spent a large part of the time at famous baths. When Mr. Charles E. Dohme gets home, Dr. A. R. L. Dohme will leave for a short trip. He goes to attend the meeting in England of the Society for Chemical Industry. The American members who attend this meeting will be conveyed by special train, all over the United Kingdom, and will be shown particularly the cathedral towns and other places of great historic interest. Dr. Dohme will leave here July 1, sailing on the Copenhagen. He intends to return July 29, coming back with E. Staufen, the head of the New York office of the firm, but the two gentlemen will not leave here at the same time.

LEROY OLDHAM MARRIED.

Baltimore, June 4.—Leroy Oldham is married and this is no joke. The ceremony that made Miss Mabel Kay Sharretts the wife of the popular entertainer and drug man took place yesterday afternoon, at Brown Memorial Presbyterian Church, Rev. John Timothy Stone officiating. Her sister, Miss Marguerite Sharretts, was maid of honor. Joseph Robb, Jr., Robert Halliday and J. Carey Martin, of Baltimore, and A. H. Parlett, of Alleghany, Pa., acted as ushers, while Ralph C. Sharretts, a brother of the bride, was best man. Mr. and Mrs. Oldham afterward left on a wedding tour.

BUSINESS AND CHARITY.

Baltimore, June 3.—Druggist George Bunting, 6 West North avenue, combined business with charity this week by dedicating his handsome new soda water fountain and devoting the proceeds of one day to a meritorious benefaction, the Children's Fresh Air Fund.

This organization provides children with an outing of two weeks by appealing to residents in the country with room to spare to take care of the little guests, and otherwise looks after the welfare of these charges. The day's receipts at the soda water fountain amounted to a considerable sum. There was also music and a profuse floral display. The fountain is one of the handsomest and costliest in the city and combines in its construction all the latest features. It adds greatly to the attractiveness of the place.

A less agreeable incident in Mr. Bunting's business career was the disappearance some time ago of William Jones, a young negro employed in the store, with \$106 in postal funds. Jones was traced to Wilmington, Del., and arrested there this week. He had a hearing yesterday, before United States Commissioner Rogers and was committed to jail for the action of the United States Grand Jury.

BODEMANN ON BOARDS.

Chicago, June 3.—An important Pharmaceutical Congress will be held in July in connection with the Lewis and Clark Exposition, now in progress at Portland, Ore., and William Bodemann, member of the Illinois B. P., has been selected to prepare a report on the State boards of pharmacy of the country.

Mr. Bodemann has already begun the collection of data for this purpose and he has sent a circular letter to the officers of the various boards asking for information. He particularly desires data which will show the dates of formation of boards, the number of members, per diem remuneration, requirements for membership, Governor's appointments of associa-

GEORGE H. WEST,
President of Retail Drug Clerks' Association,
Grand Rapids, Mich.

tion nominees and amount of State appropriations. Mr. Bodemann asks secretaries of boards to co-operate with him in collecting this data.

CHICAGO NOTES.

—The Chicago Veteran Druggists will celebrate Jamieson day on June 21.

—The north side druggists were defeated by their brethren of the west side in the game of baseball, May 29. Score, 15 to 8.

—Robbers blew open the safe in the drug store of Frank W. Thomas, 208 S. Western avenue, at 3 a. m., May 30, and escaped with \$390 in money and valuable papers.

—Another death to be recorded is that of Peter Finna, druggist, at 477 Grand avenue. By some it is supposed that he died in a fit while the papers report that he was choked to death and robbed by footpads.

—The Illinois Board of Pharmacy will hold meetings for the registration of apprentices on June 16 and July 7. Regular examinations for pharmacists and assistants will be held on July 11 and September 12.

—Jesse M. Goodell, a well-known member of the Chicago Retail Druggists' Association and druggist at 1082 Fifty-eighth street, died very suddenly on May 26 during a dance given in his honor by the Charlevoix Club.

NEW PHARMACOPOEIA SOON.**Trustees of Pharmacopoeial Convention Meet and so Announce.**

St. Louis, May 30.—Dr. H. M. Whelpley, secretary of the United States Pharmacopoeial Convention, has just made public the minutes of the fifth annual meeting of the Board of Trustees of that body, held at the Philadelphia College of Pharmacy, May 13. The members present were: Dr. J. H. Beal, Scio, O.; Albert E. Ebert, Chicago; Professor Joseph P. Remington, Philadelphia; S. A. D. Sheppard, Boston; Dr. H. M. Whelpley, St. Louis; Dr. H. C. Wood, Philadelphia. In the absence of Chairman Charles E. Dohme, who is in Europe, Vice-Chairman Beal called the meeting to order.

The minutes of the fourth annual meeting and the intervening correspondence of the Board were read and approved.

It was decided that a sample page or pages of new books in which it is desired to use some of the text of the pharmacopoeia shall be submitted to the chairman or acting chairman for approval before permission to use pharmacopoeial text be given.

Professor Remington, chairman of the Committee on Revision, made a detailed report of the progress of the work and stated that the new pharmacopoeia would be out before the end of June. The action of the chairman in fixing August 1, 1905, as the date from which the new revision will be official was approved. One hundred unbound copies will be distributed simultaneously to pharmaceutical and medical journals for review purposes.

All books paying for the use of pharmacopoeial text will be required to print upon the obverse of the title page the following words, in full-face or black-letter type: "Authority to use for comment the pharmacopoeia of the United States of America, Eleventh Decennial Revision." In this volume, has been granted by the Board of Trustees of the United States Pharmacopoeial Convention, which Board of Trustees is in no way responsible for the accuracy of any translations of the official weights and measures or for any statements as to strength of official preparations."

The subject of a Spanish edition of the Pharmacopoeia was reported upon by President Wood. He was instructed to continue his investigations and again report to the Board. Dr. Wood finds considerable demand for a Spanish edition of the pharmacopoeia in Cuba, Mexico, Costa Rica and Porto Rico.

The Rice Memorial Fund Committee made a final report. S. A. D. Sheppard was appointed a special committee of one to take charge of this fund and deposit the same in the name of the Board of Trustees of the U. S. P. Convention.

It was decided that as soon as sufficient monies shall have been received after paying present indebtedness and current bills, that \$200 be paid to each member of the Committee on Revision excepting the chairman (Prof. J. P. Remington), to whom shall be paid \$2,000; to the secretary of trustees (Dr. Murray G. Motter), \$500, and the treasurer of the convention (Dr. George W. Cook), \$200. The secretary of the Board reported progress on the Abstract of Proceedings of the Board of

Trustees and further action was postponed.

The following officers and standing committees were elected for the ensuing year: Chairman, Charles E. Dohme, Baltimore, Md.; secretary, Dr. Murray G. Motter, Washington, D. C.; Executive Committee, Dr. J. H. Beal, Seol, O. (chairman); Dr. H. C. Wood and Charles E. Dohme; Auditing Committee, Dr. H. M. Whelpley, St. Louis, Mo. (chairman); Dr. A. E. Ebert, Chicago, and S. A. D. Sheppard, Boston, Mass.

DRUGGIST SHOOTS HIMSELF.

Savanna, Ill., June 1.—Bothwell Pulford, a druggist and leading citizen of this city, owner of the electric light plant and other properties, died last week of a self-inflicted bullet wound. Last Monday, Daniel S. Berry, an attorney, was shot at his office door. It was suggested by the coroner's jury that Pulford was implicated in the murder and he was questioned at length over the circumstances. He denied the murder. Pulford and Berry had formerly been firm friends, but lately had been estranged by rumors of attentions paid to Mrs. Berry by Pulford, which he denied. Recently Pulford has been in a sanitarium, and the officials of the county, and his wife, say he was mentally unbalanced. A widow and two grown daughters survive.

DRUG CLERKS' SCHEME FOR SAVING.

St. Louis, June 5.—Two clerks, ambitious young men who are employed in an all-night store down town, have ambitions of owning a store of their own in the near future and their methods of economy have given rise to some queer stories about them lately. Here is one: The clerks relieve each other night and morning. One lives in the west end, the other in the south end. The street car lines cross within a square of the store. In the evening the south-end man gets a transfer to the west-end line and gives it to his fellow clerk, and the next morning the other clerk returns the favor with a south-end transfer. Hence the saving is five cents a day for each.

IN MISSOURI.

—Louis Schreier has opened a drug store at Virginia avenue and Dakota street, St. Louis.

—E. A. Busch has bought the Hermann Bros.' store at 2613 South Broadway, St. Louis.

—Henry Steingoetter, of Belleville, has been elected president of the St. Clair County R. D. A. The association includes the East St. Louis stores.

—Fred J. Scharloch, of the J. S. Merrell Drug Co., St. Louis, accompanied the T. P. A. delegates on their excursion to Cuba, after the national meeting at Savannah.

—Great preparations are being made by the St. Louis A. R. D. for the meeting on June 20, when the wives and sweethearts will be the guests of the association. A splendid attendance is expected.

—George Tebus, of Belleville, Ill., bought the store of Paul M. Nake, at Jefferson and Lafayette avenues, Thursday and took immediate possession. The store is at one of the prominent business points on the south side in St. Louis.

QUIETNESS A FEATURE.

Members of the Trade in St. Louis Complaining Cold Season a Drawback.

St. Louis, June 6.—The extreme quietness is the feature of the drug trade in St. Louis this spring. Attempts of the druggists and jobbers alike fail to explain the cause, but that business is dull, nine-tenth of the trade admit of hand.

"It certainly is not a lack of money," said a West End druggist, "for my candy and cigar trade have held up splendidly," and the same is the sentiment elsewhere. It can hardly be the World's Fair, for the reason given above, and for the additional that some of the few stores in the district most affected by removals from the city after the fair are doing very well. Other stores in a settled residence district that have hardly lost a resident or a boarder since the Fair, are doing poorly.

The coolness of the season has proved a direct drawback to the soda trade and the slump there has been felt since Easter. Not half a dozen real ice cream days have been experienced.

The jobbers complain of the quietness, in the drug and proprietary departments alike. The sundry men are not complaining so loudly. It may be that health in St. Louis is extra good, but the doctors are not complaining of lack of work.

CLAIMS \$5,000 MONTHLY SALARY.

St. Louis, June 3.—Bruno Batt, a chemist, has brought suit against John T. Milliken & Co., for \$13,166.66 and interest, alleged to be due him for salary and profits during twenty-one months. He alleges that he entered into a contract to establish a drug and chemical manufacturing company and that the profits in twenty-one months were \$8,000, to one-third of which he is entitled. He says his services were worth \$5,000 a month, and asks that such sum be granted him as salary.

CONTEMPLATES ANOTHER SCHOOL.

Milwaukee, Wis., June 1.—The Wisconsin College of Physicians and Surgeons of Milwaukee has practically decided to add a school of pharmacy when the college opens next fall. There have been many applications in recent years from prospective pharmacy students and there are always quite a number of the regular medical students who would take the course or a part of it, were it convenient. The board of directors have appointed a committee to investigate the desirability and the feasibility of taking this step and the committee is expected to make a favorable report at the next meeting. It is argued that there is plenty of room in the building now used by the school for the increased number of students and there are already in the faculty several teachers who could give instruction. There are also in the city quite a number of practical druggists who would be glad to give a little of their time at regular intervals in class work or laboratory work.

NORTH CAROLINA PH. A.

The twenty-sixth annual meeting of the North Carolina Pharmaceutical Association will be held in the convention hall of the Atlantic Hotel, at Morehead City, on Thursday and Friday, June 22 and 23. A special hotel rate of \$2 per day has been made, and the railroad companies will make low rates.

A representative of the N. A. R. D. has recently visited the State, and organized it into branches of the N. A. R. D. The benefits of such organization will be fully discussed at the forthcoming meeting. Many interesting papers will also be read.

The State Board of Pharmacy will hold its meeting for the examination of candidates at the same place on June 20. Applicants are notified to be on hand promptly by 9 a. m., on the 20th, or they will lose the opportunity of being examined until another meeting of the Board.

MAINE PH. A. ANNUAL MEETING.

Arrangements have been completed for the annual meeting of the Maine Pharmaceutical Association, which will be held at the Mount Pleasant House, White Mountains, Thursday and Friday, July 6 and 7. Those attending the meeting will have the benefit of reduced rates on the railroads and at the hotel. A cordial invitation is extended to all druggists and their families to attend, and a pleasant and profitable time is promised. A complete programme will be ready shortly, and may be had upon application to M. L. Porter, secretary, Danforth, Me.

NEVADA BOARD OF PHARMACY.

Carson City, Nev., June 3.—The ninth semi-annual meeting of the Nevada State Board of Pharmacy was held at the Riverside Hotel, Reno, last week. There were no candidates for examination. The following were granted permanent certificates to replace the temporary certificates issued by the secretary upon the presentation of satisfactory proof of registration by another state board: B. Frank Stout, Tonopah; Edwin J. Roberts, Goldfield; William Baumgarten, San Francisco, Cal.; Geo. L. Olds, Goldfield; Samuel W. Brewett, Columbia; Thos. J. Curley, Goldfield; George Swallow, Knowlton, Iowa; Vivian T. Lewis, Ely; Oliver Stout, Philadelphia, Pa.; Fred P. Shannon, Las Vegas; John A. Kelly, Forsyth, Mont.; Z. E. Burgess, San Francisco, Cal.; Julian L. Waller, San Francisco, Cal.

ATLANTA C. P.

Atlanta, June 5.—At the recent commencement exercises of the Atlanta C. P., Dr. Geo. F. Payne, dean, was presented with a handsome bouquet of flowers by the members of the graduating class.

Dr. L. C. Mosely, a graduate of the class of 1902, was the donor of a gold medal, offered to the student of 1905 who should receive the highest general average in all branches of his studies. The medal was awarded to C. E. Black by the dean.

The graduating class numbered thirty-six (their names appeared in The Era of April 13, page 432). The degrees were conferred by Judge Howard Van Epps, President of the college.

PHARMACY CLASS OF 1905, MEDICO-CHIRURGICAL COLLEGE.

Photo by Gutekunst.

MEDICO-CHI'S GRADUATES.

Philadelphia, May 29.—Twenty-one graduates represented the department of pharmacy at the commencement exercises of the Class of '05, of the Medico-Chirurgical College, which were held at noon on Saturday, in the Academy of Music. In all there were 128 students graduated from the three departments of the college—medicine, dentistry and pharmacy—and the spacious Academy was crowded with the friends of the young men who represented nearly every state in the Union, as well as several foreign countries.

After devotional exercises by Rev. Archibald H. Bradshaw, the members of the class marched to the stage where they received their degrees from Henry F. Walton, president of the college. The oration was made by Judge William X. Ashman.

In the department of pharmacy, the senior gold medal for the highest general average was awarded to John Oscar Bower with honorable mention to Lee Ellsworth Hyres and Harry Howard Searl. The Fisher prize for the highest general average in materia medica was also won by with honorable mention to Percy H. Shaw and John Cooper, M. D. The Prof. Henry junior gold medal for the highest general average was awarded to Lewis B. Myers John Oscar Bower. The graduates are: Delaware—William Smithers Lank.

Pennsylvania—John Oscar Bower, Harry Wolfe Bowers, Tilden B. Bordner, Merritt Clay Berger, Thomas M. Cook, William Ross Gibble, John I. Harvey, Lee Ellsworth Hyres, Harry Clinton Helm, Paul H. Langner, Maurice Leonard

Lewis, Benjamine Mauldin Lum, John Tremper MacDonald, Harry Howard Searl, Harvey Whitney Springer, Charles Edgar Thrush, Edwin Quinn Thayer, Heber Wilkinson Youngken, Edwin Henry Yeagley.

OMAHA C. P.

Omaha, Neb., June 3.—The pharmaceutical association of the Omaha College of Pharmacy held its semi-annual election of officers recently. The following were elected: A. Martin, president; Miss Evelyn Robinson, vice-president; Joe Cording, treasurer, and Miss Pearl Ratcliff, secretary.

The junior class has finished physics and Latin, and taken up pharmacy and materia medica.

The senior class has done well in volumetric analysis and are now taking up drug assaying in earnest.

The college has organized a baseball team, John Motl being elected manager. As yet no games have been arranged, but the boys are doing well and will soon be ready for a challenge.

E. J. Stave, who graduated from the Omaha College of Pharmacy two years ago, and who just completed the State requirements, went before the State Board and passed a successful examination.

—Fred Lessick, forty-three years old, one of the leading druggists of Kalamazoo, Mich., was found dead in bed, by his wife, when she went to awaken him. Heart failure was the cause.

UNIVERSITY OF IOWA.

Iowa City, Ia., May 25.—The annual alumni meeting will be held on June 13, the day preceding commencement. The regular business session will be held in the morning. In the afternoon the following program will be given: President's Address, W. F. F. Junger, '90, Reinbeck; "Medicinal Plants of Iowa," Prof. Bohumil Shimek, Iowa City; "Importance of Records," J. M. Lindley, '89, Winfield; "Life of Edward R. Squibb," R. E. Humphrey, '05, Carroll; "Pills and Pill Excipients," H. B. Moore, '05, Iowa City; "Cottonseed and Its Products," Geo. L. Friedholdt, '05, Davenport; "Milk," B. E. Manley, '05, Sloan, Ia.

The university has been prosperous this year and several new buildings will be erected.

The seniors will be entertained at the home of President and Mrs. MacLean on the evening of May 22.

Geo. L. Friedholdt, '05, who has been quite sick, is again able to attend classes.

R. H. Gates, '01, a traveler for the W. W. Warner Co., called at the college a few days ago.

Miss Cooper entertained the members of the senior class on the evening of May 11.

The Pharmacy baseball team has won all of the games it has played. The team will probably be the champions of the university.

The Juniors have finished their work in the pharmacy laboratory and will devote the remainder of the time to the chemical laboratory.

We Want Every Druggist to Become Familiar with

GRISERIN

SOLE AGENTS FOR AMERICA

AMERICAN GRISERIN WORKS

108 FULTON ST., NEW YORK

McKesson & Robbins and the N. A. R. D.

TO THE TRADE:

In view of the attempt which has been made to embroil McKesson & Robbins with the National Association of Retail Druggists, the former deem it advisable to make public statement of their side of the question.

McKesson & Robbins have remained silent hitherto, trusting to the spirit of fairness which the drug trade has always displayed to suspend judgment until both sides to the controversy had been heard.

McKesson & Robbins have no quarrel with the N. A. R. D. They have loyally supported the Association and endeavored to work in harmony with its ideas. They have repeatedly refused to fill orders for proprietaries from dealers upon the cut-off list, only to find that these orders have been filled by manufacturers direct, and the latter are doing the same thing today. McKesson & Robbins have received letters from manufacturers of proprietary medicines, offering an extra discount if they would sell certain dealers. All such offers have invariably been rejected. The accusations of bad faith against McKesson & Robbins are made by those who are not acting in good faith with the N. A. R. D., and to whom it is of vital importance to sell as many goods as possible.

McKesson & Robbins have made no shipments of goods upon the serial numbering plan except to those from whom they had a signed contract, or whose name appeared upon the recognized list of distributors.

McKesson & Robbins prefer to leave the question of their good faith to the fairness of the trade. They regard the attacks that have been made upon them as attempts on the part of manufacturers to shift the blame for their own dereliction.

To their many friends in the trade, and to all those who have so loyally supported them in the present controversy, McKesson & Robbins desire to express their sincere thanks.

McKESSON & ROBBINS.

91 Fulton Street,

BELIEVES IN FAIR PRICES.

President of Carter Medicine Co.
May Protect Profits in the
United States.

Mr. Brent Good, president of the Carter Medicine Co., sailed yesterday on the Oceanic for Liverpool. Before sailing, Mr. Good told an Era reporter that he was going to Europe for the special purpose of seeing what the results have been on the sale of Carter's Little Liver Pills in Great Britain, under the restricted contract plan. "Last March," said Mr. Good, "I arranged with the P. A. T. A. of Great Britain, to place the sale of Carter's Pills under their restricted contract plan, whereby the goods were sold only to those chemists who agree not to sell them below a minimum retail price. The proprietary business is in a much more democratized condition in that country than it is in ours, and before deciding to adopt this plan, I canvassed the matter very thoroughly with many of the leading chemists, remaining several months in London for that special purpose.

"There are two ways of looking at this subject. Some proprietors believe that it is best for their interests in the sale of a proprietary article to attempt no restrictions, but to create the demand through advertising and let the dealers sell the goods for whatever they can. As for myself, I believe that proprietary articles should be sold by druggists, and that fiscal should be done to protect these druggists in their profits. I hope that we may be able to do something of the same kind for the druggists in this country in the near future, if the results of our experience in Great Britain are satisfactory."

WINDOWS AND BUSINESS.

Attractive windows stimulate business. This is a positive fact and is perfectly true with the retail drug business as well as all other lines of trade.

How to have an attractive window without any expense to the dealer is explained in the advertisement of the C. I. Hood Co., in another part of this journal.

Mr. R. W. Carter, representing Samuel Maw Sons & Son, one of the oldest manufacturers of pharmaceutical specialties of London, England, is making a tour of this country and Canada to study the methods of business and the goods on the American market.

Babeskin Soap is recovering from the recent attempt of a daily paper to wash itself and the public clean with its aid. A new window display of it is now going the rounds.

A Well Managed Prescription Department

In the Store of The Riker Company, 456 Fulton Street, Brooklyn

On the Top Floor—Perfectly Quiet, Plenty of Daylight,
Lots of Room—Details of Arrangement of Stock—Any
Article May be Found Readily—Views of the Department's
Manager, George Whatmough—Necessity of
Advertising—How to Handle Physicians.

What are the main requisites for an ideal prescription department, allowing of course for adequate fittings? Almost any pharmacist would in all probability answer quiet, ample space, and good light. The combination looks simple enough in words and in rural localities it can readily be achieved. But in the city it is not so easy, with high rents putting floor room at a tremendous premium, the noise and confusion of a large trade floating in over the partition, and the only light permitted by high buildings frequently artificial.

When, therefore, a prescription department is found nearly approaching these model conditions and interesting in the arrangement of stock, it merits attention. And such a department is in the store of the W. B. Riker & Son Company, at 456 Fulton street, Brooklyn. As the firm occupies the whole building, which chances to be only three stories high, it was possible to put the prescription department in the best place for it: at the top. On the highest floor it is and is splendidly lighted by plate glass skylights in the roof. At the same time the height of the floor is sufficient to prevent stuffiness, sometimes characteristic of top floors, while the shade of adjoining high buildings renders it cooler than would otherwise be the case. In this desirable position the very finest light obtainable is abundant; daylight. The department takes up more than half the whole floor and is 30 by 50 feet. This is certainly a fine amount of space for prescription work. But perhaps best of all is the fact that it is perfectly quiet, permitting the prescription clerks an undisturbed field for their actions.

THE PLAN OF ARRANGEMENT.

As one steps out of the elevator which glides noiselessly between the floors, he finds himself directly in one end of the prescription department. To be sure, the office and the mail order departments are located in the front part of this top floor, but they are reached through another door in the elevator. The callers at the office do not therefore disturb the prescription men a particle and they work in fitting quiet all day long. But having

entered the department, it is at once seen that the room is large and rectangular. All four sides are covered with stock shelves on which are ranged row upon row of bottles, and other kinds of containers. In a line through the center of the room are four erections or isolated piers of other stock shelves. The fact that shelves run on all four sides of each of these allows as much storage space as if the row down the center of the room was continuous without any intersecting openings, while these apertures permit easy access to any portion of the room and make the whole department more light than could be the case from other arrangement. Our illustration plainly shows this system. It will also be readily seen that all round these erections are constructed desks which jut out, affording an ample surface for writing, compounding, or sorting of containers and supplies. Beneath these table-like surfaces are rows of cupboards which hold various kinds of stock and miscellaneous articles. Below the desks at the ends of the central erections are label drawers. Corks are kept in other drawers at the southeastern corner of the department. In short, the system of arrangement has been carefully designed to give the greatest amount of storage space permissible with easy access to any part of the room and plenty of working space.

HOW THE STOCK IS PLACED.

The plan of classifying stock is highly systematized, but workably simple. On the western wall, the same side of the room into which the elevator opens, are grouped all the tablets in their glass containers. There are fifteen shelves devoted to these for the larger sizes and directly beneath are 300 little drawers specially adapted to holding the smaller sized bottles. The contents of each drawer is labeled on the outside of the drawer, the classification being based on manufacturer's lists. But it is not necessary for a prescription man to examine these outside labels as a rule, for the drawers are all numbered and the numbers are registered in a stock book as index keys corresponding to an itemized description of their con-

A VIEW OF THE RIKER PRESCRIPTION DEPARTMENT, 456 FULTON STREET, BROOKLYN.

tents, the general sequence of the book being also, of course, the same as manufacturers' lists.

At the northern end of the department are the pills, ranged in orderly rows of bottles in six upper glass-doored closets, with many drawers full of the smaller sizes below. These too are grouped according to lists. And so it goes all 'round the room. In one portion are the fluid extracts, a full line of pounds and quarters, the heavier above the lighter in the section. Those staple fluids which are continually drawn upon for prescriptions are kept in a regular set of dispensing bottles, labeled in the usual way, as used by the retail pharmacist. Back of them are unwrapped bottles of the very same extracts in the original containers supplied by the manufacturers, but the latter are usually kept wrapped in their first paper coverings and are only drawn upon when the first bottle is drained. They are a reserve supply to fill any gap suddenly developed during rush hours.

PROPRIETARIES AND CHEMICALS.

The non-secret proprietaries and specialties are kept in two sections reserved for them. They are arranged as far as possible in alphabetical order of manufacturers' names, commencing from the upper right hand shelves. Only one important exception is made to this plan; the iron compounds are all together, regardless of the manufacturer. This was done because there were so many of the irons.

The heavy chemicals are given a large portion of one side of the room, while the lighter staple chemicals fill the lower cupboards of one whole section. The more valuable alkaloids and changeable salts are kept in a glass cupboard of ample dimensions by themselves. Of course, the poisons are a company mustered side by side together, somewhat apart from other supplies.

So much suggestive of the arrangement, all of which is characterized by a highly developed system, is perfectly orderly and workmanlike. Mr. George Whatmough, who is manager of the prescription department, in discussing his experience with the work, said: "The only solution of a large prescription business, the only way it can be successfully handled, is by

systematizing everything as far as possible. I soon was convinced of that after entering the profession and it has been my guiding star ever since. Our work here must be done systematically and speedily, yet deliberately. It is not the brilliant spurter who gets through the most work in a day in any line. It is the man capable of painstaking, systematic work. It is the man who never wastes time at his labor or in thinking over what he ought to do next. My motto personally, and the one I try to make the active spirit of the work of this department, is 'Purity, Accuracy, Despatch.' It was the favorite maxim of my first employer, and I have always remembered it, trying my best to live up to its admonition."

THE DOWN STAIRS COUNTER.

Although the prescription department is thus separate from the rest of the store, it is necessary, a very important part of the prescription business, to have some direct contact with prescription customers. This is accomplished by placing a dispensing counter at the rear of the main store floor. Here are taken orders for filling prescriptions and tablets and original packages of medicine are delivered directly to customers. No patent medicines are handled; there is a special department for them. There are three men on duty at the downstairs counter during the course of the business day, but they are not all there at the same time, for they relieve each other, according to the usual system. During rush hours two of them are on duty. In the main prescription department upstairs there is a force of five men, who also work in reliefs, but frequently four are on duty at the same time. All these prescription clerks are registered men.

The necessity of a rapid means of communication between the receiving department downstairs and the main room are obvious. This is supplied by a dumb waiter, which runs right through the intervening floor and by a speaking tube. The receiving prescription clerks downstairs place the written doctor's prescription and the old bottle, if it is a repeat, on the dumb waiter and can easily deliver verbal instructions through the speaking tube. In order that absolute accuracy may be maintained in filling orders, a very good check system is used. Another of our illustrations reproduces it so clearly that no explanation is really necessary. One portion is pasted on the filled bottle or package, one section goes to the customer with the price marked on it, and the third is attached to the original prescription, which is, of course, pasted in the prescription file. All three portions of this combination slip are numbered with the special number of the prescription and the figures are printed on in red. The three portions are divided by lines of perforation, so that they easily tear apart and the two first parts are gummed on the back, while that which goes to the customer is left ungummed. This systematizing of important details does more than assure accuracy; it saves time. Mr. Whatmough himself checks back each prescription that goes through his department, managing to spare the time to do so even when exceedingly busy. "I am primarily responsible," he says, "and I regard a personal supervision as absolutely essential."

ONLY REGISTERED MEN EMPLOYED.

The policy of both the Riker firm and Mr. Whatmough in regards to the class of men considered eligible for engagement as assistants in the prescription depart-

PRESCRIPTION DEPARTMENT.

THE BOLTON DRUG CO., Ltd.
456 Fulton St., Brooklyn, N. Y.

We make a specialty of Physicians' Prescriptions, at Popular Prices, and with the new copyrighted Safety Check it is simply impossible for an error to occur. Present this Check when you call for your prescription and see that the numbers correspond.

21677

THE MAIL ORDER DEPARTMENT. HERE, AMONG OTHER THINGS, ORDERS FOR PRESCRIPTIONS ARE RECEIVED.

ment coincides. It is believed that only the very best should be considered, and therefore all men must be registered. A decided preference is shown for college graduates, as it is held that they must, through their training, be of greater breadth of mind and view, and that since their intellectual powers must have been cultivated by their college course, they are the only ones to be intrusted with careful work demanded by the prescription business.

As may be supposed, the amount of business transacted by the department is very large. "We hope to increase our business considerably," said Mr. Whatmough, "and indeed we have already expanded it in the last few months. To-day we are putting up an average of 125 prescriptions daily. A year from now we hope to be counting at least 150 a day. Next to the system used, the most important phase of prescription work is the quality of the drugs and chemicals. Of course, we buy goods from all the leading manufacturers, but we carefully inspect every purchase and insist on the best standard of quality made by the seller. I personally do all the buying of supplies for this department. The manager, in my opinion, should never delegate that important duty to a subordinate. But as anyone in the trade knows, there are other important sides to prescription work. No matter how fine your facilities and work, you must constantly advertise if you wish to not only increase your business, but even hold that which you already have. We spend a good deal of thought on our advertising.

NECESSITY AND SCOPE OF ADVERTISING.

"Prescription department advertising may be readily divided into two distinct portions. That to the consumer, the customer, and that to the physician. For no matter what anyone may say, the pharmacist is greatly dependent on the physician for his success. On the other hand, the physician is also indebted to the pharmacist and I am glad to say that each year shows more medical men willing to acknowledge this. It may be truly said that the doctor can neither entirely make nor break a prescription business, but he

can wield a very powerful influence and any displeasure on his part is instantly reflected in the volume of business.

"We advertise persistently to the customer. Our theory is that he should be told in simple language that our work is absolutely reliable, that our materials are the best, and that our first object is to look after his interest. Prescription customers are the hardest class to please, for when you come in contact with them they are probably already under the weather, and a sick man is naturally cranky and irritable. A druggist should never forget this fact. Consequently our men at the downstairs dispensing counter are selected with a view to their personal manner, and possession of tact is a necessary qualification. Through delicate work we make a good impression on irritable people. This finesse we cultivate and it might, in a way be called part of our advertising to the consumer.

"Each prescription package we send out is wrapped with one of our little books on the prescription department. It is the best form of advertising. It means that the booklet will enter the home and therefore stands a good chance of being examined carefully. The front and back covers are half tones of photographs of our department. A photograph holds the attention of the reader and induces him to look for more inside. The reading matter is simple and short. We merely emphasize our quality, accuracy and other qualifications. Our prices are reasonable. Then we also advertise in the daily newspapers. In a large city the value to a druggist of an ad. in a daily is not so great as it is in a small town, but it is all dependent on circumstances. We use the dailies in moderation. We also feature our mail order department in connection with our prescription work.

HOW TO APPROACH PHYSICIANS.

"The physicians are a more difficult problem. There is one prime requirement: tact or adaptability. Personal calls are the only things of much use. The head manager of the department should make these himself. I give as much time to this work as I can spare. In all my experience only two doctors have treated me discourteously when I called on them.

Results are sure if the right kind of talk is given. Moderation and accuracy in statement is essential. Point out to the doctor that you can assure him of accurate filling of his prescriptions with drugs which may always be relied on to exert their full natural powers and that the highest quality is all you handle. We are much aided by the fact that we keep a complete stock of all the new remedies and preparations. As fast as they appear we order a twelfth of a dozen at the least and reorder if the demand appears. A new thing can be found at Riker's when no one else has it. The medical profession is fast learning this. We also please them by presenting a very handsome prescription pad for desk use."

The manager of the Riker prescription department at the 456 Fulton street store, is a comparatively young man. He is but twenty-seven. But he has worked his way to his present position strictly by merit and achievement of hard work. By birth he is a Canadian. Originally he started to study law in Toronto, but finding it distasteful, deliberately picked out pharmacy as his profession. He was graduated from the Toronto College of Pharmacy in the class of '99, and came to New York, where he entered the employ of Reed & Yeomans, in their Brooklyn store. Later he served at the Hegeman Corporation Store, 200 Broadway, and at Heydenreich Bros., Brooklyn. His experience has been thorough and varied. From the start, Mr. Whatmough has steadily kept sight of the fact that pharmacy is a noble and intellectual profession with great fields for the experimental explorer and he is constantly reading or experimenting to improve his scope of information in all kindred lines.

BUT A PART OF THE WHOLE.

One of our illustrations shows the mail order department, which handles many orders for prescriptions. Each Riker store has a special general manager for all departments. In this case, the important office is ably filled by Mr. W. L. Snow, who is, of course, a pharmacist himself. But each department head is left full authority to work out the details of his own special line according to his personal ideas. All he must do is to produce results.

A Simple Tale of Enterprise and Industry

An Example of Determined Effort Lifting an Old Business Out of a Rut

How a Pharmacist is Improving a Modest Business in a Discouraging Situation—M. Schwarz of Greenpoint, Brooklyn, Believes in Work and New Ideas—Making the Most of Small Things—Two Original Window Displays at an Anniversary Celebration.

An example of what enterprise can accomplish in a poor situation, with other unfavorable conditions to be combatted, is to be seen in the business built up by M. Schwarz, in his pharmacy at 849 Manhattan avenue, Brooklyn. When he first acquired the store, it was like many another, just running along. The district in which it is located is not noted for the number or beauty of its buildings, lying as it does between the oil and sugar refineries. To make a success was a difficult problem and required the revolutionizing of methods in vogue in the drug stores of that region by a strong, ambitious man, who was full of new ideas, enterprise, and a determination not to count the hours he worked. Most of the nearby drug stores were German and not in favor of Ameri-

can methods and the population had to be educated up to a taste for something better in the way of a pharmacy than they had ever known. This herculean task is being successfully worked out by Mr. Schwarz.

To be sure, it was not a case of establishing an entirely new enterprise. The business is an old one, so much so indeed that Mr. Schwarz has but recently celebrated its fiftieth anniversary. The pharmacy originally was on Franklin street, near Greenpoint avenue, where it was established by a Dr. Peer, in 1855. He sold it to Dr. Field, who is still practising as a physician at Greenpoint. Dr. Field turned it over to J. B. Winter, who removed the business to the present location, only to sell it to Louis Warth, from

whom Mr. Schwarz, the present proprietor, purchased it a short time ago. So it may be seen that it has undergone as many changes as usually fall to the lot of a drug store.

This is not the first pharmacy Mr. Schwarz has owned. After he was graduated from the Brooklyn College of Pharmacy he started in business at 82 Fourth avenue, Brooklyn, and, receiving a good offer, sold it eventually to purchase his present place.

PLEASING FIXTURES AT MODERATE OUTLAY.

Determined to make a great success, the new owner has remodelled and refitted the store completely. The present result may be seen partially in the illustration, but the view shows but half the interior. The color scheme of decoration has been selected with good judgment, for the ceiling is pure white and the walls dark green. Against this the new shelving of cherry and trimmings to match stand out pleasingly. Silent-salesman show cases run in an even row on both sides of the store for its entire length. Half way down the room the moulding topping the shelving rises to encase a gilded mortar. Across the rear of the store runs the partition concealing the prescription department, which, as the photograph shows, possesses a decided decorative value. Back of the partition is found an unusual abundance of light, for three windows open into the prescription department.

The floor of the sales department is covered with a linoleum of a checkered pat-

THE PHARMACY OF M. SCHWARZ, 849 MANHATTAN AVENUE, BROOKLYN. AN OASIS IN A DESERT OF THE COMMONPLACE.

tera. The soda fountain, while not large, is modern and attractive. Much labor is expended to keep it scrupulously clean, and the decorations about it are frequently changed. It is not dotted with unattractive sign cards. Instead its mirror reflects natural, graceful maiden hair ferns which deck the center of its top. From this dotted center piece garlands of red roses extend each side to the edge. On one corner stands a diminutive cherry tree in fruit, its pot covered with white crepe paper tied with cherry-colored ribbon, the streaming ends of which nearly reach to the floor. Indeed, the color scheme of cherry is carried out carefully to most details.

FEATURED THE FIFTIETH ANNIVERSARY.

On anniversary day, May 13, last, the store was decorated with crepe paper garlands, bunting and masses of natural flowers. All day long souvenirs were presented to visitors and the most popular articles were of Japanese ware, a tea pot easily proving the favorite. Many people crowded the establishment and the popularity already achieved by the enterprise of the new management was plainly to be seen.

The arrangement of the show windows on this occasion was decidedly effective and original. The theme of the most prominent was the age of the business, recalling the vicissitudes through which it had passed and a promise of progress in the future. The central object was a large picture of Father Time, scythe in hand, his hour glass at his feet, to show him how he is constantly cutting down the minutes, making the present ancient history, as each grain of sand glides to the bottom of the glass. Down one side of the window ran a row of jars, each representing a year to come. They were numbered in sequence '08, '07, 1906, the last being the nearest to Father Time's scythe. At the left corner was a larger one, lettered quaintly on the surface, 1855. On the right of the old gentleman was the representative of the current year, and this seemed to be giving off smoke, signifying active existence. The background of the window was banked with palms, while the foreground was occupied by a quantity of old prescription files, bulging with their age-yellowed contents. These were at the feet of the old man with the white beard, who never rests. A single card, loud in its brevity read, "600-000 prescriptions filled and no mistakes." SIMPLE, BUT EFFECTIVE WINDOW.

The other window featured tooth paste and tooth brushes. Its color plan was violet and the containers of the goods displayed were that tint. From the middle center of the ceiling hung a white-covered hoop and from this fell and radiated myriads of white cords. Attached to the cords at short intervals from top to bottom were tooth brushes and each of these was set off with a natural-looking double violet. The tooth paste containers, violet as said, floored the window and filled much glass shelving. Natural roses in vases flanked the display. Electric lighting is still a novelty in business houses at this point, and a number of colored electric light globes were used to line and set off the windows, producing a charming effect, especially at night.

FACTS AS TO TIN CONTAINERS.

The consumer who buys a talcum powder, an ointment, or a tooth paste is not likely to devote much time to thinking of the container in which his purchase is held, unless it is defective, when he will certainly turn up sooner or later to register a kick with the druggist. If any association of ideas arises in his mind it will be something about the trade mark or maker's name stamped on the box or can. If he is pleased with the general make-up of the package he will probably give the credit to the druggist from whom he purchased. In short, very little thought is given to the humble container which fills such a useful purpose. But the druggist knows how important a good container is, and if, as is probable, he is a manufacturer of "own makes" in any quantity, he knows from experience how the cost of these little cans runs up rapidly into large figures. The necessity of buying right both as to quality and price is deeply impressed upon him.

It stands to reason that the larger a manufacturing concern the greater service they can render to a buyer, providing their management is good; for their stock is proportionately large, allowing a great variety in style and quality to choose from. A small concern could not afford to carry such an enormous stock. Perhaps our best known, as it is the largest, company manufacturing all sorts of containers of metal for the use of the drug trade is the American Can Company. Their business is prodigious and they are able to supply any container of tin, brass, iron, or, in fact, any metal for any purpose. They have forty factories at various parts of the country which enables them to distribute goods more economically saving freight and giving the benefit of the lower price to their customers. The main factories devoted to making supplies for the drug trade are located at Philadelphia, Baltimore and Chicago.

Their last catalogue, No. 20, is devoted to druggists' tinware and a copy of it should appeal to everyone in the trade. It can be obtained on request to the main offices of the company, 11 Broadway, New York City. This new catalogue lists a remarkable number of articles, some of them interesting through novelty of design and usefulness, and all through the fairness of prices quoted. There are seamless tin boxes in great variety, decorated (in colors) ointment, pill, tooth powder, and talcum boxes, cold cream containers, insect powder cans and cans, quinine cans, inhalers, pharmaceutical stills, lithographed labels for herb cans, funnels, tin percolators, dispensing tanks, and acid and spice cans. There are many more styles and varieties of cans. In fact, everything imaginable. Many druggists need no introduction to the merits of the goods turned out by the American Can Company for they have tested them for themselves by frequent purchases. Those who have not done business with them will find all inquiries courteously attended to and will be benefited by an examination of the concern's offerings when next in the market for tinware supplies.

Blue on a black ground is quite effective as a color scheme in a window.

WONDERFUL PROPOSITION.

M. P. Gould Company, drug store advertisers, 99 Nassau street, New York City, after six months of careful preparation and hard work, have at last completed arrangements for offering the druggists of this country the greatest business-getting proposition that has ever been seen.

This is offered through M. P. Gould Company's system of advertising for retail druggists. The druggists who are interested, will find M. P. Gould Company's advertisement on another page of this issue. It will be worth while to read this advertisement carefully, and certainly to write and secure their proposition. Nothing is lost and everything is to be gained by writing.

M. P. Gould Company's name is probably known in every drug store in America. Their system of advertising, now nearly four years old, is being used by the best druggists in the localities from one end of this country to the other.

No druggist can afford not to write for this new proposition. Address all letters to M. P. Gould Company, 99 Nassau street, New York City.

IMPROVED PLASTIC DRESSINGS.

The Meys Chemical Mfg. Co., 69-71 W. Jackson Boulevard, Chicago, manufacturers of Meys' Pautice (Hycroscopine), an antiseptic paste dressing for physicians' use, sold through jobbers only, advertise each month on the inside cover of The Era.

Low prices and non-corrosive containers are the inducements featured. The 2-lb. size, which is styled their "trade buster" in new territory, sells for \$8 the dozen and retails at \$1. Another size, in an amber-glass jar, containing 5¼ lbs. net, is listed at \$1.50. The non-corrosive glue containers are an additional attraction to the jobber.

The Meys' manager is confident that a little time, co-operation of dealer and physician, and consideration of patient's needs will establish their product at the head of the list in its class. The company is one of the most progressive in plastic dressing production, having made many improvements.

The following is from the New York Sun: Topeka is very strong for temperance. One Lee Jones is a prominent pharmacist of the place. He has obtained a renewal of his permit to sell liquor. When he made his application it was fought bitterly by the State temperance union. Mr. Jones was asked if he did not keep an icebox in the room behind his drug department, and answered that he did. "What for?" inquired the attorney for the temperance union. "To keep the beer cold." "Why?" "Because people want their beer cold," said Mr. Jones. Which goes to show that frankness pays, even when you are fighting fanaticism.

Straw hat cleaners are now going the rounds of the stores in the drug trade and are usually featured in the well-known way by displaying a straw hat, one-half of which is soiled and the other clean and new looking.

DRUG TRADE JOTTINGS.

A Greenspoint druggist uses green mosquitto netting as a background for his show windows. In the summer months, he states, it gives a cool effect to his store and also confines the heat from the lights within the window space, thus making the rest of the establishment more comfortable. The artistic effect of the idea is good.

Among recent deaths in the trade was that of Charles D. H. Gerken, 1485 Broadway, Brooklyn, which occurred on May 23. Emil Miskhofer, the senior assistant, has been placed in charge of the store and will manage the business until the estate is settled. It is understood that the heirs do not intend to sell out.

A demonstration within the store has been going on at the Hegeman Corporation establishment, 200 Broadway. It was the Douglas Manufacturing Company's New Skin that was featured. A portion of the counter was covered with artificial grass upon which was placed the well-known tableau display of the cat upon the stump and the fox terrier barking at her from the lawn. The card, "Good for scratches: so is New Skin," was well in evidence. A pretty girl stood ready back of the counter to play the doctor by applying a sample of the goods to any injured caller. Whenever she did so, she usually had no trouble in inducing the customer to buy a box of the remedy.

Job's tears are still in existence and are sold strung on rubber cords. In the foreign resident districts of the metropolis they are good sellers and often form part of the regular decorations. They are said to be useful and the superstitious believe they prevent a teething child from suffering the usual ills of that trying period. These seeds are said to be imported from Spain.

The Merchants' Association of New York announces that on July 22-26, inclusive, and on August 19-23, inclusive, special fares for the fall buying season will be in effect to New York City, the rate for the round trip to be one fare and one third. The special fares will be operative under the usual certificate plan, with a thirty day return limit. The territory of the Central Passenger Association, from which the rates will apply on the above named dates, is as follows: Points west of, but not including Buffalo, Niagara Falls, Suspension Bridge and Salamanca, N. Y.; Pittsburg and Allegheny, Pa.; Bellaire, O.; Wheeling, Parkersburg, Huntington and Charleston, W. Va.; north of the Ohio River and east of the Mississippi River, and south of a line from Keokuk, Iowa, to Chicago, Ill., including Chicago, St. Louis, Louisville and all points in Kentucky on the Chesapeake & Ohio Railway. The association is now moving for favorable action on its application for merchants' rates from the Southwestern Excursion Bureau, eastern railroad connections having agreed to concur in special fares to New York from that section.

BUSINESS RECORD.

ALABAMA.
Demopolis.—Dr. J. R. Tucker, new store.
Fackler.—Sam. McVary, new store.

ARKANSAS.
Carlisle.—Dudley & Callahan, new firm.
Eglington.—Dixon & Bradford, succeed Ira Dixon.

ARIZONA.
Havlicek.—Dr. W. L. Mason, succeeds Mason & Bradley.
Webb City.—C. C. Cooper, succeeds L. C. Nolan.

COLORADO.
Colorado Springs.—Frank A. Bissell, Dale and Weber Sts., new store.
Bissell-Marcy Drug Co., succeed Frank A. Bissell, 403 S. Tejon St.
Hotchkiss.—Harry Johnson, succeeds E. P. Barrow.

FLORIDA.
Freeport.—Freeport Drug Co., new firm.
Punta Gorda.—G. M. Vincent, new store.

GEORGIA.
Columbus.—Brannon & Carson Co., A. M. Braunton, dead.

IDAHO.
Shelley.—R. J. Maguire, succeeds Jones & Brundage.

ILLINOIS.

Oregon.—L. J. & W. C. Bennett, succeed Geo. Cridde & Son.

The Treasury Department has allowed an extension of the drawback on alcohol manufactured by the Columbus Distilling Company, of New York City, in part from imported molasses to cover alcohol manufactured by the Louisiana Distilling Company (Limited), of New Orleans, from imported molasses combined with domestic molasses.

The United States Circuit Court has decided that molded lenses are not covered by the provision in paragraph 109, tariff act of 1897, for "lenses ground and polished to a spherical cylindrical or prismatic form." In order to be embraced within that provision, it is necessary that lenses should have been brought to such form by both grinding and polishing.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued May 30, 1905.

- 790,922—Charles W. Roeppler, Philadelphia, Pa., and William F. Harmon, Mechanic Falls, Me., assignors to American Electrolytic Co., a corporation of Delaware. Apparatus for obtaining oxides of alkaline metals.
- 791,040—Stephen W. Moran, Brookline, Mass., assignor of one-half to Samuel H. Hellen, Wakefield, Mass. Dispensing apparatus for liquids.
- 791,061—Georg West, Godesberg, Germany. Stopper for bottles or other vessels.
- 791,097—John H. Jericho, Philadelphia, Pa. Bottle drip receptacle.
- 791,108—Stuart H. Patterson, Plainfield, N. J. Bottle stopper fastener.
- 791,136—Joseph C. Condo, Alexandria, Ind. Non-refillable bottle.
- 791,194—William Hoopes, Pittsburg, Pa. Process of manufacturing ammonia.
- 791,232—Casmir Wolpers and Thomas F. Barrett, Chicago, Ill. Apparatus for treating rheumatic or other diseases.
- 791,233—Casmir Wolpers, Chicago, Ill. Method of treating rheumatic or other diseases.
- 791,240—Claude Boucher, Cognac, France. Manufacture of bottles, flasks, etc.
- 791,261—Henry F. Ganon, Indianapolis, Ind., assignor of one-half to William Tron, Indianapolis, Ind., and one-fourth to D. Belmont Lester, Indianapolis, Ind. Funnel.
- 791,270—Samuel R. Kennedy, Philadelphia, Pa., assignor to the American Dairy Produce and Manufacturing Co., Philadelphia, Pa. Process of treating milk cream, etc.
- 791,306—Felix W. Westhauser, Hohen-

- heim, near Stuttgart, Germany. Process of making hydrohalogenic acid.
- 791,354—Mary S. Merklej, Brooklyn, N. Y. Catamenial appliance.

TRADE MARKS.

Published May 30, 1905.

- 160—Forbenol Dental Chemical Co., Washington, D. C. Tooth powder and tooth and mouth wash. The word "Forbenol."
- 163—Seabury & Johnson, East Orange, N. J. and New York, N.Y. Surgical and dental silk and floss. The representation of a Greek or Geneva cross appearing in red on a circular contrasting background, which is surrounded by a circular marginal band or border, in the upper part of which appear the words and character "Seabury & Johnson," and in the lower part the words and abbreviations "New York, U. S. A."
- 850—The Drevet Mfg. Co., New York, N. Y. Remedy for the destruction of bacteria, microbes and germs in the human system. The word "Glycozein."
- 450—The Guyer Medicine Co., Hudson, Mich. Liquid compound for the relief and cure of diseases peculiar to women. A representation of the roots, branches and leaves of the parsley plant, having arranged therein a woman's head, and associated with the words "Parsley Compound, Nature's Relief for Women."
- 643—Leroy J. Meroney, New York, N. Y. Hair invigorator or renewer. The word "Marvelline" crossing the representation of a winged disk, the word being printed on a curve simulating the line of beauty, and the wings springing from the sphere above and below the word.
- 665—Chesebrough Mfg. Co., Consol-

- dated, New York, N. Y. Emollient and medicinal preparation for external and internal use. The word "Vaseline."
- 843—Ozomol Chemical Co., Odessa, Mo. Ointment for the cure of skin diseases and inflamed conditions of the skin and mucous membrane. The hyphenated word "O-Zo-Nol."
- 867—George C. Frye, Portland Me. Remedy for dyspepsia. The word "Pancreo bismuth."
- 1,135—Samuel S. Kingery, Cincinnati, O. Gelatin. The words "Crystal flake."
- 1,286—Albert R. H. Fiedler, Philadelphia, Pa. Medicinal remedies for the cure of catarrh, colds, headache, sore throat, asthma and loss of sense of smell. The word "Nez."
- 1,320—Seabury & Johnson, East Orange, N. J. and New York, N. Y. Medicinal surgical and antiseptic plasters and dressings. A representation of the god Mercury having a Greek or Geneva cross inclosed in a border or wreath upon his breast and appearing above the earth partially enveloped in clouds.
- 1,374—George L. Harding, Binghamton, N. Y. Poultry foods and remedies. The conventional figure of a man known as "Uncle Sam," etc.
- 1,746—Passfield Soap Co., Brooklyn, N. Y. Medical toilet and shaving soap. The word "Cuticle."
- 1,978—Fairchild Bros. & Foster, New York, N. Y. Antiseptic solvent fluid preparation for external application. The word "Enzymol."
- 1,979—Fairchild Bros. & Foster, New York, N. Y. Dyspepsia remedy. The word "Diazyme."
- 1,982—Fairchild Bros. & Foster, New York, N. Y. Biphtheritic solvent. The word "Trypsallin."
- 2,007—Elias Howell Cross, Gadsden, Ala. Syrups, flavorings, tonics or extracts for non-intoxicating aerated beverages. The hyphenated word "Pep-To-Lac."

MARKET REPORT

TURPENTINE STILL SOARING.

Otherwise Very Little Feature and Few Changes.

PRICES HOLD GENERALLY STEADY AND DEMAND IS MODERATE AND NORMAL—OUTLOOK FOR MAINTENANCE OF QUININE VALUES, BUT STATISTICS MORE BEARISH THAN EVER.—OPIUM STRONGER AND CASE PRICE IS HIGHER, BUT JOBBING TERMS STILL UNAFFECTED.

New York, June 5.—As far as price fluctuations at least are concerned, summer quietness seems to have settled already on the market. The week has seen few changes and no new feature of great interest has developed. Not for months have there been so few alterations in quotations to report and what there are, are inconspicuous. Turpentine continues on its meteoric career and has again advanced. Opium shows greater firmness and cash prices are higher, in sympathy with foreign cables. Jobbers are experiencing a steady, fairly satisfactory demand from consumers. But large orders are not the order of the day. Some stimulus to buying has been imparted by reductions during the last few weeks, but in no lines can real activity be said to prevail. To a great extent this situation is encouraging, causing a hope that with stable values, both retailers and jobbers will be assisted in transacting business satisfactory to each and that the trade as a whole will derive benefit from such placid conditions.

OPIUM.—In the early portion of the week considerable interest was manifested in the wholesale situation. Cables from foreign markets reported them excited and higher on very bullish crop advices from growing regions. It is now stated that the new crop will probably not exceed 4,000 cases. In Smyrna and other primary markets speculation began buying heavily on this announcement. While no great activity has been displayed here, the price of cases has risen about five cents and may now be quoted as \$2.95@3.00. Conditions argue a further rise. The jobbing situation, however, remains unaltered, although it should in time be affected by wholesale conditions, if the latter continue. The demand from consumers holds steadily moderate and jobbing prices still are \$2.00@2.20 for nine per cent., and \$3.10@3.30 for eleven and thirteen per cent.; powdered remains unchanged at \$3.85@4.10 for thirteen per cent., and \$4.00@4.85 for sixteen per cent.

MORPHINE SULPHATE.—While the firmness of opium is felt a little, no movement has resulted. Demand continues moderate for actual requirements. Jobbers still quote the unchanged values of \$2.50@2.60 for eights in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 in ounce vials, and \$2.25@2.35 in 5-oz. tins, according to brand or quality.

QUININE SULPHATE.—Undoubtedly the

undertone of the market is a little less steady as a result of large bark shipments, but no actual change is expected. The bark shipments for May were heavy, being 1,527,000 lbs. against 1,166,000 for the same period last year. Since the first of this year the total of shipments is 5,794,000 lbs. against 5,084,000 for the corresponding five months of 1904, showing an increase of 710,000 lbs. It is estimated that if this rate of increase continues, the Java shipments for 1905 will exceed 16,000,000 lbs., a quantity which would break all records. The next auction will be held at Amsterdam on the 8th of this month, and 8,806 packages are then to be offered for sale. In spite of this array of bearish influences, prices are not expected to decline. There is, however, little possibility of their improving from the present level. The jobbing business remains fair, consumers ordering moderately when in need of supplies. Jobbing quotations are held unchanged at 20¢@21¢ for bulk, in 100-oz. tins, 20½¢@21½¢ in 50-oz. tins, 21¢@22¢ in 25-oz. tins, 22¢@23¢ in 15 or 10-oz. tins, 25¢@26¢ in 1-oz. tins, and 27¢@28¢ in ounce vials, according to brand and amount.

SPIRITS OF TURPENTINE.—A really extraordinary situation exists. Prices keep steadily advancing and no end of the movement is in sight. While speculative manipulation at the South is primarily responsible, still some legitimate influences have contributed to bull the market. Receipts have been running on a smaller scale than expected, as a result of unfavorable weather. Labor troubles at producing centers have also cut down the supply. Added to this is the fact that consumers did not anticipate such a rise by laying in adequate supplies several months ago, and as they then held off because of high prices, they are now being compelled to pay much higher terms to secure their actual requirements. This has aided manipulators in forcing up values. There are several cliques of operators in the South and one, called the new Jacksonville combine, is not the most active force sustaining the fictitious level of prices. The jobbing trade merely follows wholesale influences, pushing prices up only when necessary. The demand from retailers is not great, naturally, but larger than might be expected. New and higher jobbing quotations are \$2¢@3¢ per gallon in barrels, and 95¢@\$1.00 per gallon in smaller quantities.

MAGNESIA, CALCINED.—Following the advance in magnesia, which we reported early in May, jobbers have advanced the prices of several well-known brands and these are now quoted as follows: Jennings and Pattison's, both 60¢@65¢ per pound in 1-lb. bottles and 55¢@60¢ in 1-lb. tins.

SILVER NITRATE.—Reversing the movement of last week, this article is lower, because of lower cost of bullion. New jobbing prices are: Crystals, 44¢@49¢, and fused, 46¢@51¢ per ounce.

ANISE SEED, STAR.—Owing to some scarcity of supplies, the market has risen, causing jobbers to quote 35¢@40¢ per pound.

GAMBAGE.—A slight decline at wholesale renders jobbing values easier and they now are on the following basis: Blocky, 87¢@97¢; powdered, 97¢@\$1.07; selected bright pipe, 97¢@\$1.02 per pound.

LYCOPODIUM.—Foreign competition and high demand still affects the market, although it is said that the new crop will not be available before September or October, and jobbers have reduced their prices to \$1.02@1.12 per pound.

OIL SASSAFRAS.—Supplies of the natural offered are liberal, causing the slightly lower jobbing quotations of 60¢@70¢ per pound.

OIL WINGTEGREEN.—A similar movement has occurred in this commodity and jobbers now hold at \$2.30@2.40 per pound. Offers from producing regions are quite freely made.

CANARY SEED.—Foreign markets are still higher on confirmations of previous reports of serious damage to the crop. Only about 1,500 bags of old crop is left in Smyrna. While our market is sympathetically firmer, no further price alterations have been made by either wholesalers or jobbers.

CARAWAY SEED.—The market for both seed and oil are both very strong and the imported oil is a trifle higher at first hands. No change in domestic and jobbing prices for all are unaltered.

TERPIN HYDRATE.—As raw material is higher, an advance on the hydrate has occurred at wholesale, but the movement has not yet affected jobbing values.

TARTAR EMETIC.—Here again raw material has risen and in large lots prices have been advanced, but jobbers have not yet raised their figures.

"M. C. W." PRICE LIST.

The Mallinckrodt Chemical Works have changed the form of their price list, which, for a great many years has been issued in the form of a double column sheet. Their new list is in a compact single column form, which will make it more convenient to handle, and the change will doubtless be appreciated by the drug trade. The "M. C. W." price list will be forwarded to any druggist upon receipt of a postal card, and a copy should always be kept at hand for the purpose of reference, when making up orders to the wholesale trade for the "M. C. W." chemicals. Many chemicals are carried in stock by jobbers in various forms, for example, "Crystals," "Granulated," "Powdered," "Pure," "Commercial," "C. P.," "U. S. P.," etc., and by making correct designation when ordering, pharmacists will avoid mistakes and misunderstandings.

The Mallinckrodt Chemical Works, a number of years ago, introduced the pure granulated salts as being more convenient and desirable for dispensing than crystals, and pharmacists desiring these salts must always be sure and specify "M. C. W." "Granulated," otherwise the "Crystals" are likely to be supplied.

Joseph D. Dahlbender, 1153 Broadway, Brooklyn, improved on his window display of a new corn cure which has previously been described, by the addition of four large ears of husked seed corn, tied together, which were suspended from the center of the lighting fixture. As a border, lithographs of ears of unhusked green corn were pasted on the glass. They showed the husk open enough to afford a glimpse of the enclosed kernels.

EDITORIAL COMMENT

The History of Contracts.

The subject of price protection seems to be absorbing a large share of attention at the present moment and a brief review of the history of this movement would be both interesting and instructive. Price protection as we understand it to-day began some fifteen years ago, when C. I. Hood attempted a contract system. He was unsuccessful and so also was Dr. R. V. Pierce, who tried a few years later. They appear to have had difficulty in keeping contract goods out of the hands of non-signers.

Eight years ago Dr. Julius Garst asked the Proprietary Association of America to appropriate a few hundred dollars for the purpose of testing whether an injunction could be obtained against a retailer who bought goods under a contract and then violated it. Many members of the association, however, did not favor the restriction of the retail price nor did they believe that the courts would uphold any such proposition.

When in 1900 Dr. Garst obtained a decision its importance was at once recognized by the retail trade. To Dr. Wm. C. Anderson belongs the credit of having strongly advocated a plan based on that decision at the N. A. R. D. convention in Buffalo, at which he presided. It was thought then that the plan was too radical in many ways and its validity was questioned.

Basis for the Present Plan.

A decision obtained by Dr. Garst in Chicago furnished a satisfactory basis for the present contract plan. There remained to be settled only the status of a non-signer of a contract who cut the price on goods obtained by fraud, and on this point several Circuit Court decisions have been obtained by the Dr. Miles Medical Company.

The latest decision is that of the Massachusetts Supreme Court in the case of Garst vs. Charles, which is again a complete victory for the contract plan. It was shown that the defendant, who had not signed the contract, had entered into a conspiracy to obtain

goods through a retail agent who had signed. The decree of the lower court was affirmed, granting an injunction with damages.

All these cases prove the absolute stability of the direct contract and serial numbering plan. It will be a glad day for the retailers when they cease to pin their faith to schedules and rely wholly on the contract plan. All other systems of price protection are flimsy and illegal, because they include the element of combination. The contract plan lays the burden squarely on the shoulders of the manufacturer—where it belongs.

Systematic Economy.

In D. Strode Jefferies' article on systematic economy there are many suggestions which should be carefully noted by the pharmacist who knows there is something wrong with his business, but who cannot tell just what it is. He practices economy, but it is of the penny wise and pound foolish sort that does not remedy the evil.

Mr. Jefferies points out that it is not only the saving in the big things which counts but that the trifles must also be looked after, if success is to be assured. Trifles, light as air, which hardly seem worth noticing, sometimes assume vast proportions. It is the accumulation of the pennies that makes the dollars. Attention is called, for instance, to the useless waste of powder papers. This, in itself, seems such a trifling thing, and yet it is these infinitesimal violations of systematic economy, that disorganize the whole plan. The saving here and there of small amounts, which are hardly perceptible as separate items, in the aggregate add much to the right side of the ledger in the course of the year.

It is following out the old adage that a stitch in time saves nine, which is to say that if the little leaks are stopped there will be no big ones.

Gift Enterprise Schemes.

That was a wise move of the Philadelphia Association of Retail Druggists against manufacturers who try to induce the public to use their goods by giving away prizes and souvenirs. The resolution was a strong one, recommending to the members that they discourage "the sale of anything that carries with it the giving away of any prize or souvenir."

It is far better to put the money in the goods or to reduce the price so that the customer will benefit directly and not by getting a worthless catch-penny contraption, for which he probably has no use. A belief in fair prices, a willingness to let the retailer share in the profits and a determination to convince the customer that he is getting his money's worth, will do more to sell goods than all the gift enterprise schemes that were ever evolved.

Beauty and a Porous Plaster.

A New York woman has begun suit for \$500 damages against the manufacturers of a porous plaster because by the use of one her beauty has been permanently marred—so the doctor says. The trials of Job are as nothing compared to her affliction; for alas! she is no longer able to wear décolleté gowns or thin shirt waists, owing to the ugly scars and discolorations left by the plaster.

It is declared that the plaster cost eleven cents, and was bought at a bargain sale upon the recommendation of one of the woman's feminine friends. An additional reason for the purchase was an alluring advertisement as to the composition of the plaster, in which "Frankincense of the Bible" appears to play an important part. And so the woman yielded to temptation.

It will be interesting to know at what sum the Court will place compensation for the hardship of being compelled to do without décolleté gowns and thin shirt waists. Five hundred dollars hardly seems adequate. It would serve the horrid manufacturer right for allowing porous plasters to be sold at bargain rates.

Anonymous Complaints.

Secretary Bradt takes a wise course in announcing that hereafter the New York State Board of Pharmacy will pay no attention to unsigned complaints of violations of the Pharmacy Law. One can easily understand how accusations of this variety would constitute a large proportion of those received by the Board. There is no doubt that many of these charges are sent by small-minded druggists who have one reason or another for desiring to "get even" with some one of their neighbors.

Unfortunately this practice is not so rare as one would like to have it. To sign every complaint would bring home to the druggist a realization of his responsibility in invoking the law against his neighbor and would deter him from trying to satisfy his petty grievances in this way. Certainly the Board is entitled to protect itself from the avalanche of anonymous complaints that seem to be the lot of every State body.

Ownership of the Prescription.

The status of the physician's prescription, as to its ownership, is apparently definitely settled by legislative enactment in North Carolina. The new pharmacy law of that State provides that each proprietor or manager of a drug store or pharmacy shall keep a suitable book or file in which shall be preserved the original of every prescription compounded or dispensed. On the request of the prescribing physician, or of the person for whom the prescription was compounded, the pharmacist must furnish a true and correct copy. The file of original prescriptions must be kept open to the inspection of duly authorized officers of the law and such other persons directed by the board of pharmacy to make inspections.

The inclusion in the pharmacy law of a section of this character should be one of the objects of the pharmacists of other States. The druggists of North Carolina are to be congratulated over the successful burial, in their State at least, of a question which has caused nearly as much discussion as the quadrature of the circle, and one which never has been settled by the courts.

In a recent book on pharmaceutical jurisprudence, the author, Mr. Wiley, takes the ground that the legal rights of the physician himself in his own prescription, in the absence of statutory provisions, are those of the author of any writing under the principle of common law copyright. As the physician is the author of the prescription he undoubtedly should be protected from any unwarranted use or publication of his work by another. The author's argument follows:

"Prescribing for a patient is not a general publication of the formula used; it is furnished to the patient for a specific use or purpose, undoubtedly limited, the nature of which is understood, presumably, by both him who furnishes it and him who receives it. This view of the subject seems reasonable, and it is in accordance with the judicial rulings in cases most nearly allied to that under consideration. Proceeding on academic lines, in the absence of decisions, it seems fair to hold that the patient buys only this specific use of the remedy, and that his rights in the formula employed are limited to that use. He owns the paper on which the formula is written, but does not own the ideas embraced in the writing and the author of it may forbid its refilling. The physician still owns the exclusive right to sell the prescription to other patients; as, under copyright by statute, the buyer of a book owns the individual copy purchased by him, while the author still owns the ideas or thought

expressed in the book, with the exclusive right to sell other copies. Having once been filled, the life of the prescription is ended. It is *inunctus officio*. Its chief importance beyond this point is in its use as evidence of its own nature, in case mistake is charged against either physician or pharmacist. For this reason it is made the pharmacist's duty, by statute, to file and preserve the prescription for a certain number of years."

A Successful Down-Town Club.

The oft-repeated assertion that a down-town club in New York cannot be made to pay, is disproved by the experience of the Drug Trade Club, which is to go into new quarters within a year, having outgrown the old. The secret of the success of this, and of any other club which becomes popular, is courteous treatment of its members and a service which is not surpassed by that in the hotels and restaurants. All of this is offered by the Drug Trade Club.

Another attraction which has much to do with the popularity of the club is the added inducement of an opportunity to meet men in the same line of trade, for however wise the injunction to so do, business is seldom left behind when the lunch hour comes.

May the Drug Trade Club prove more successful in its new quarters, and add to that great popularity which it now enjoys.

Marwin, Kin Talyen.

"Can the Ethiopian change his skin, or the leopard his spots?" Try "marwin," a compound advertised "to turn the skin of the blackest of negroes to a lily white." At least that is the claim which was in a fair way to become established until the post-office officials in Washington issued an order debarring from the use of the mails "Dr. Winfield & Co.," of Richmond, Va. The celebrated French scientist who "discovered" the compound claimed that it "would change red, black, blue, green or yellow to a beautiful pinkish white," but the beautiful changes are not to be effected, for department chemists have said that "marwin" is nothing more than bichloride of mercury, benzoin, glycerin and distilled water. Therefore, Dr. Win & Co. lose.

Following close on the announcement of the birth, rise and fall of "marwin" comes the newspaper story of "Kin Talyen," a wondrous drug that makes three Japanese grow where two grew before. Details are meager, but the newspaper paragrapher whose descriptive powers are so luminously in the ascendant, kindly leaves the identity of the drug with Professor Smith Ely Jelliffe of the New York College of Pharmacy for investigation, and who

"hoped soon to be able to give the Western world a definite account of what would seem to be the grandest thing on earth." The reporter was further convinced that there would be no more race suicide so long as there is a supply of "kin talyen" handy.

Marwin, kin talyen! What a euphonious combination for a college yell!

A New Pharmacy Law.

We have received, through the courtesy of Mr. F. W. Hancock, secretary of the board of pharmacy, a copy of the new North Carolina pharmacy law, recently passed by the legislature of that State. In many respects this law conforms to the model law drafted by Prof. J. H. Beal, and adopted by the American Pharmaceutical Association. There are some exceptions, however.

In the latter part of Section Four of the Act provision is made, in the following language, for the registration, without examination, of physicians as pharmacists in villages:

"That in any village of not more than five hundred inhabitants the board of pharmacy may grant any legally registered physician a permit to conduct a drug store or pharmacy in such village, which permit shall not be valid in any other village than the one for which it was granted, and shall cease and terminate when the population of the village for which such permit was granted shall become greater than five hundred; And provided further, that the board of pharmacy may, after due investigation, grant to any legally registered practicing physician in towns or villages of not more than five hundred, and not exceeding six hundred inhabitants, a permit to conduct a drug store or pharmacy in such village subject to the provisions of this Act."

Rather contradictory, but the inclusion of the paragraphs quoted was not at the request of the druggists of the State. They are there, Mr. Hancock informs us, "as the result of the opposition of physicians who wanted to register everywhere without examination." If these physicians in the practice of pharmacy "in villages of not more than five hundred, and not exceeding six hundred" get as badly mixed in their compounding as they have in the use of language in this part of the act the board of pharmacy will have some work to do.

The Association and the Law.

The new North Carolina pharmacy law throws much into the hands of the members of the State association which, in the language of the act, continues "to be a body politic and corporate" and gives the members the power of electing a resident pharmacist from its membership to fill the vacancy annually occurring in the board of pharmacy and who shall be commis-

sioned by the Governor, the law being mandatory in this particular. By this provision the druggists have the power of appointment in their own hands and they should be able to know who of their number is the best man for the place and further, that when he is once nominated he is pretty sure to be commissioned.

A provision which will doubtless please the members of the National Association of Boards is that providing for the registration without examination of pharmacists licensed by other boards. To take advantage of this provision the applicant must present satisfactory evidence that he has been licensed by examination in another State, and that the standard of qualification there is not lower than that maintained by the North Carolina board. The interchange of certificates idea is growing and this provision of the North Carolina pharmacy law proves that the druggists in that State have taken a step in the direction of more rational and more thorough education in pharmacy.

Other Provisions of the Act.

Re-registration each year is made compulsory and the revenue derived therefrom will probably constitute the greater portion of the financial resources of the board. Fines and penalties for violations are recoverable by suit, and the secretary is empowered to prosecute offenders. The board is given power to refuse licenses to persons guilty of felony or gross immorality, or those who are addicted to the use of alcoholic liquors or narcotic drugs. Applicants for registration shall not be less than eighteen years of age, and are required to have had three years of practical experience, in lieu of which, time in attendance at a reputable college of pharmacy may be in part substituted. The pharmacist is not to be held responsible for the quality of the "patent or proprietary medicines" he may sell, and the act does not interfere with the selling at retail of non-poisonous domestic remedies, nor with the sale of "patent or proprietary preparations which do not contain poisonous ingredients." This latter provision prompts the question, who will determine what constitutes a poisonous ingredient, the board of pharmacy or the manufacturer of the proprietary?

North Carolina Anti-Narcotic Law.

Independently of the pharmacy law the General Assembly of North Carolina has enacted an anti-narcotic law, which makes it unlawful for any person to sell by retail or give away any cocaine, opium or morphine except on the written prescription of a reputable practicing physician, veterinary sur-

geon or dentist licensed in the State, and such prescriptions may not be re-filled unless so directed by the attending physician, "except in cases of emergency and in the absence of a physician." The provisions of the act do not apply to sales at wholesale by any manufacturer or wholesale dealer who sells to the retail druggist in original packages only, "nor to sales of laudanum and paregoric, or other preparations containing not more than 30 per cent. of cocaine, morphine or opium." In other words, the wholesaler may sell these narcotics in original packages, but if he manufactures preparations they must not contain more than 30 per cent. of cocaine, morphine or opium, or he cannot sell them. We admit our incompetency to intelligently interpret this act to our satisfaction. We are informed, however, that the act was passed without the concurrence of the legislative committee of the State association and that it "was fathered by a headstrong and ill-informed legislator who could not be persuaded to consent to aid in the passage of such an act as the druggists of the State knew would better accomplish the object intended."

That up-State clerk, who, Casabianca like, obeyed orders, when the boss told him to mix certain chemicals, which he knew would result in a fire, might make a good soldier, but he seems to be an inconvenient sort of a chap to have around a drug store. Obedience to orders is a highly commendable trait, but the exercise of common sense is also looked for in the drug clerk. Blind obedience to the general on the battlefield is all right, even if it leads to death, but in the drug store it is liable to lead to the same result, and then obedience ceases to be a virtue, and is all wrong.

ERA COURSE IN PHARMACY.

Graduates for May, 1905, Whose Grades are Above 90 Per Cent.

Number.	Name.	Per cent.
4172	Sister M. Constance, St. Elizabeth's Hospital, Danville, Ill.	95
3975	F. E. Shutt, Republican City, Neb.	95
4185	William B. Bush, Wilberforce, Ohio	95
4023	R. A. Hamrick, Tuskegee, Ala.	95
4080	W. R. Allison, Hopedale, Ohio	95

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing, will be furnished to all who request it, for the sum of \$2. Those who desire the latter should forward the necessary fee at once to The Pharmaceutical Era.

OUR LETTER BOX

COLLEGES AND DRUGGISTS.

New York, June 12.

Editor The Pharmaceutical Era:

The action of the Legislatures of the States of New York and Pennsylvania, in passing laws making a high school diploma a prerequisite for examination in pharmacy, is a fit subject for protest. The injurious effects on the drug business of legislation calculated to deny opportunities to thousands of able young men who desire to enter the business, hit who have the misfortune to be poor, cannot be overestimated. It is not my intention to decry the value of a college education and training in those institutions, but I am prepared to say that training in such institutions is not essential to the making of good pharmacists, and that in too many cases it retards rather than aids the young man who is starting out in life as a druggist. The tendency of the collegian to think he knows it all, is rather the fault of the individual than of the system, but it is a fault nevertheless, and one which time alone will eradicate.

The college education is undoubtedly a good thing, but alone it will not fit anyone to become a capable pharmacist. All things being equal, which means that both men must possess natural ability, industry and aptitude for pharmacy, the man who learns in a drug store will have a better chance than the man who learns in a college. My reason for thinking so is that the knowledge of one is practical, while that of the other is theoretical. This is an individual opinion, and as I am an old-fashioned druggist, I hardly expect it to coincide with modern ideas, but nevertheless, it is based on an experience extending over many years.

That the college man has the advantage of a more systematically trained mind, no one will dispute, and he is also more widely read. But of what value are these advantages to him? Do they help him in the actual experiences of life? Of how much use will his reading be in his chosen profession of pharmacy? The collegian must unlearn much of theories and acquire many practical ideas before his education will prove useful to him in his chosen vocation. The man who has worked faithfully in the store or laboratory, if he possesses the natural ability, stands a better chance to become quickly a practical pharmacist, for he has nothing to unlearn and his knowledge is of the sort that is needed every minute of the day if he would become a successful druggist.

A college education is unquestionably valuable, but that it is essential to the making of a good pharmacist is not proven by the records of the men who have gone to the front without the aid of a diploma. If the pupil has the requisite knowledge to pass the examination, why should the Board ask him whether he gained that knowledge in a college or by turning the midnight oil, after he had spent a day behind the counter in a drug store?

The diploma as a prerequisite would mean that many poor boys, who now get to the front through sheer pluck, and who

could meet the requirements in all other respects, would be prevented from following their chosen profession in life because they could not obtain a college education.

"OLD FASHIONED."

DRUGGIST AS VETERINARIAN.

Orange, N. J., June 10.

Editor The Pharmaceutical Era:

The articles which you have printed on "The Pharmacist as a Veterinarian" contain many valuable hints to the druggist in the country, and if he will read them closely he will profit thereby. The article last week on the handling and treatment of sick dogs was filled with good suggestions, especially valuable at this season of the year, which is the worst for the ills of dogs. As Mr. Jenner suggests, it is an easy matter to make a friend of the dog fancier, and many an honest penny may be earned by relieving the sufferings of pets. The work is not as objectionable or as hard as would seem, once the knowledge which comes with experience has been acquired. If it were known in a country district, especially such as this, that the druggist was capable and willing to treat sick dogs, many animals would be brought to him which are now treated at home until they are past the point of saving. In most instances the owners are willing to pay well for whatever relief is afforded their pets.

In this connection I have found a little book, "Veterinary Counter Practice," very helpful. It tells all about horses, oxen, sheep and dogs and their diseases, and how to diagnose and treat them. The advice is sound and the treatment safe. It will be found of much use to country druggists, who should cultivate the veterinary trade and make it profitable.

One of the most frequent troubles with which I have found dogs afflicted has been worms. This is a complaint which is easily cured, but one which is usually allowed to become so aggravated that in many instances death results. There are several simple remedies for worms, which if administered in time, will effect a cure. All the tape worm class can be ejected by pulverized arca, if the powder is fresh and has not lost its virtue. A pill or capsule made of the following ingredients is often used, with success, and it is applicable in almost all cases:

Santonine	2 grains
Powdered glass	3 grains
Powdered arca	10 grains
Oil of male fern, sufficient	
to make one pill or capsule.	

For a standby though, there is nothing better than powdered arca nut made into a pill, for ordinary sized dogs, of about one dram. For small dogs it is better to make it into two pills, giving one immediately after the other. The arca nut should be given at night, followed by a dose of castor oil in the morning. Wormseed and santonine are also good.

Eczema is a common disease among dogs, and is often mistaken for mange. This disease is usually the result of over-feeding and deranged digestion. In simple cases an aperient, such as syrup of buckthorn and olive oil are advised, to be followed up with the following mixture:

Potassium bicarbonate	1½ drams
Epsom salts	3 drams
Syrup of poppy	3 drams
Water enough to make.....	6 ounces

The dose is from one teaspoonful to two tablespoonfuls twice a day, according to the size of the dog. To allay irritation and prevent the dog from scratching, a bath of glycerine, one part, and water, 60 parts, should be given once a day.

These are but a few of the remedies which I have found effective in the cases which are most frequently brought to my attention, and any druggist who is called upon to treat many dogs, will find them useful.

COUNTRY DRUGGIST.

Sodium Cinnamate.

Squires and Caines state (Pharm. Journ.) that although the solubility of this salt is 1 to 11 of water, a clear solution may be prepared by the aid of heat of a strength of 1 in 10, but it requires very careful handling, and the friction of the stopper of the bottle is very often sufficient to cause the salt to crystallize out. For hypodermic use the salt should be a little weaker than 10 per cent. Some authorities have claimed that a clear permanent 10 per cent. solution may be prepared in absolute glycerin, but this is contrary to our experience. The solution, though clear when first prepared, develops crystals in the course of a few days, and becomes practically a solid mass of crystals. The salt has assumed importance, owing to its hypodermic employment in the treatment of pulmonary tuberculosis and of cancer.

OUR OFFICE BOY IN CHARGE.

When I got home from my first day in the drug store, my parents would not allow me to sit in the same room until I had taken a bath and changed my clothes & even then pa sed I smelt like a dead koyot. I was cent erely to bed & next day when I got to the store the boss sed the klerk wud not be back as the kustomer that came into the store after I left had neredly finched him. Things were prity quiet til after the los went home to lunch aftr telln me not to sel any poysen. A man with a jag kame in and askd for a sediz powder in water. I gave him 2 dubble strong I's & he then askd for a box of liver pills. He opind the box & pored it in the glass and drank the hole bises of. When he had gone off another man kame in & askd for 10c. worth of kokane. I thot that as it was neredly the same spelln as koka, that it kud not be a poysen, so I gave him a prity stiff dose in soda water. He sat down in a chair & went to sleep in no time which gave me a chance to git a sigret & to smoke it at the frunt dore. The 1st thing that struck mI observing I was that the man's horse & bugy wer at the edge of the sidwak & that the horse was very thin, in fakt lrry rib shode. I went into the store agane & as the man was snorin I printed a kard with thes words, "Otes wanted apply with in" & hanced it on the horse. Ther sune was a krownd round the dore & then a kop kame in. He askd me who wantit otes so I sed that man thare. The kop shook him fels but kud not waken him up, so he askd me what I had gave him. When I told him he telifoned for the ambulance wagin & the bos, so the bos cent ne home with a not to pa & I will draw a vale over the paneful sene that hapind when I got thare & which dwtles ju kan wel imajin.

PLEA FOR THE DRUGGIST.*BY J. H. MALLERY, M.D.,
Eureka, Cal.

In these days, when we hear so much of the druggist's shortcomings, when the air is full of his faults, it seems but right that someone should present his side of the question.

For many years the professions of medicine and pharmacy have gone hand in hand. The physician wrote the prescription, or ordered the preparation, and the patient must needs wait until one skilled in the compounding of drugs could put together those agents ordered into the complete mixture. In those days many mixtures were undoubtedly imperfect, and as time passed, the pharmacist, whose whole time was given to this work, studied to improve them, to make them more palatable, to reduce their bulk and eliminate the inert portions, in short, to make them more elegant. It was a long and painstaking process, and our modern pharmacy, just as our modern medicine, contains the best thought and effort of all the shining lights of the profession for ages past. Each profession has been the teacher of the other and they have grown and improved side by side. Pharmacy is as old as medicine, it is as dignified as medicine, it is even as important as medicine, for without pharmacy medicine is well-nigh powerless. Where would the average physician be without the man behind the mortar, who covers up his errors, corrects his dosages, and once in a while saves him from a possibly fatal mistake? Therefore, gentlemen, I am presenting the case of an old, an honorable, and a necessary profession.

APOTHECARY OLD AS HISTORY.

The mixer of draughts and ointments, in short the apothecary, is as old as history. He was an honored member of society in the Old Testament days we know. When the father of medicine was teaching his followers in the Attic groves, the apothecary was mixing his draughts and making his ointments, and day by day improving them. The improvement was slow, until the time of Galen, the first great pharmacist, who taught that pharmaceutical mixtures should be elegant, and so set the goal toward which the profession has been striving ever since. After Galen there came many wise ones, each improving and adding to the lore of pharmacy, each leaving something of the best of his life to the profession he followed. They were all careful, painstaking, hard working men, as became their occupation, and they worked to maintain its ancient dignity and to lift it to even a higher plane.

SECRET REMEDY OLD AS TIME.

The secret remedy is as old as time. In the old days it was some miraculous love philter, which owed its wondrous power to the smiles of Venus, or a magic powder, guarding its partaker against evil spirits. It was always, as now, a play on the credulity of the public; and it is no far cry from the potions and philters of the ancients to the thousands of so-called patent medicines which cumber the modern druggist's shelves, because the trusting public believes everything it "sees in the paper."

Then one arose, who saw that while the

physicians were learned in their profession, they were unworldly men, and so credulous, and he presented to them a mixture, "the formula of a great African physician, now dead," which was a sovereign remedy, not for all the ills of the flesh, but only for those due to disorders of the nervous, digestive and circulatory systems; and the physicians bit. This remedy was easy to give, because it came put up ready for use; it was easy to write for, because it had a nice short attractive name, and it did the work, many times, because it was harmless and the patient got well in spite of the treatment. Thus arose the first of the great army of ready-made prescriptions, and with it appeared the first wave in the smooth sea over which pharmacy and medicine had been sailing. Many appeared, who, often without adequate knowledge of the art of compounding, mixed up a compound with a carefully obscured formula, and by means of attractive, plausible advertising and a detail man, built up a large and paying business at the expense of the physician and the pharmacist.

COMMON DRUGGIST FORESTALLED?

The careful druggist, realizing the situation, examined and analyzed many of these ready-made prescriptions and seeing that he could make better himself, did so, and offered them to the medical profession. He found himself forestalled, by the story of a new and secret process of preparation, or of a special method of compounding, and the tale of the greater ability of the man who devoted his whole time to one compound, as against the common druggist. And this in the face of the fact, that some of the more prominent of the "hand-me-downs" are so badly compounded, and contain ingredients of such poor quality that any self-respecting druggist would be ashamed to have them appear under his label. Again, why should we take the word of an unknown manufacturer against the man we meet daily, whose honesty we can judge at close range? The great manufacturer tells us that he uses only the purest chemicals and drugs, that they are compounded with exacting care, but how do we know? On the other hand we can prove the statement of the druggist who fills our prescription, as we can watch him put together the mixtures we have ordered and we can see for ourselves whether his work and materials be good or bad. Still we have taken the word of the man who puts up the ready-made against the man we know, and we have filled the shelves of every prescription pharmacy in the country with these, tying up the druggist's capital and attesting to the credulity and carelessness of the medical profession.

We know that many of the manufacturers are not the models of virtue which they profess to be, as when forced to give formulas for their various nostrums, they have deliberately falsified, and have resorted to more falsification as a defense when they were caught.

THE CHARGE OF SUBSTITUTION.

As the ready-made prescription man brought about the first breach between the two professions, so, wisely for himself, he wished to widen it and brought the first charge against the druggist; that of substitution. Personally, I do not think that such a thing as substitution exists among reputable pharmacists. But, consider the temptations. If a common druggler can mix a little acetanilid with

three very common and inexpensive chemicals, and with the help of a copyrighted name and a yellow tin box make a mixture worth a dollar an ounce, which would be dear at the same price per pound, why should not the druggist make the same mixture and save the profit? And why not, indeed? The physician cares little for copyrighted names or tin boxes, he wants results, and the druggist's mixtures give the same or better results. Yet, so thoroughly as the above case has been exploited, there are still men who in spite of the fact that they could not tell the copyrighted kind from the druggist's by looks, taste or action, insist on an alphabetical tablet or a properly colored box. And this class has done the most to bring about the second charge; that is, counter prescribing.

The druggist himself discovered this evil first, and for years the writers in the best drug journals have thundered against it. Still, every druggist is guilty of counter prescribing if you will. He does it in self defense.

WHO SEEK MEDICAL AID?

The people who go to a druggist seeking medical aid may be divided into three great classes: those who will see a physician if advised to; those who will see a physician after much coaxing; and those who will not see a physician under any circumstances. The first class, the druggist advises to see a physician, perhaps recommends the particular doctor, the patient sees him and all is well. With the second class he has more trouble. It is composed of those who either consider the trouble too trivial on which to waste a physician's fee, or who know a patent medicine which cured a case exactly like theirs. The druggist may be able to talk him into seeing a physician, but more often he must either sell a patent medicine, of which he knows nothing, or recommend "something better," of his own manufacture usually, which he knows to possess some merit. This he must do or lose a customer, perhaps permanently. The third class is the worst. It is those the man who has been unfortunate in the choice of physicians, and who has formed a bad opinion of the entire profession; and the man who knows as much medicine as the doctors. The first may be persuaded, but the last never. The man of the last type informs the druggist that he has a pain, and Dr. Blank uses Anti this or that for pain, and he wants some. Or he may have some other ailment and want this or that Ine or Compound or Elixir, "the same Dr. Dash used when my brother was sick." When the druggist demurs and suggests that these are powerful medicines to be used only by physicians, he is probably informed that "Dr. Space told me to keep Antblank in the house and use it whenever I needed it," which is unanswerable.

MAKES HIS OWN DIAGNOSIS.

The average man who gets a mixture over the druggist's counter makes his own diagnosis, and if the druggist does not put him up something, either buys a "patent medicine" or finds a man who will accommodate him. Not long ago a man came to me suffering from a severe cold. On inquiring as to previous treatment, I found that he had been taking freely a coal tar and codeine tablet, supposedly put up for physicians' prescriptions only. I asked

BOOK REVIEWS

CLINICAL TREATISE ON THE Pathology and Therapy of Disorders of Metabolism and Nutrition. By Prof. Carl Von Noorden, Physician-in-Chief to the City Hospital, Frankfurt-a-M. Authorized American Edition. Translated under the direction of Boardman S. Freed, M. D., Professor of Diseases of the Gastro-Intestinal Tract, Hygiene and Climatology, Department of Medicine, Temple College; Physician to the Samaritan Hospital, Philadelphia, etc. Part VI. Drink Restriction (Thirst cures), particularly in Obesity. By Prof. Von Noorden and Dr. Hugo Salmon. 72mo, cloth, 90 pages, 75 cents. New York: E. B. Treat & Co.

Following on Parts IV and V, which we noticed a short time ago, comes along Part VI. of the series of monographs on the diseases of metabolism and nutrition. There are five chapters in the book. Chapter I. deals with a clinical and historical review of the therapeutic employment of thirst-cures in (a) diseases of the blood vessels, the stomach, the heart, the kidneys and in diabetes insipidus, and (b) in obesity; Chapter II. with a review of physiological investigations on the effect of thirsting on the organism, particularly on metabolism; Chapter III. with investigations by the authors on the effect of thirsting upon the metabolism of human subjects: (a) in subjects who were not obese; (b) in obese subjects; (c) review of investigations; Chapter IV. with conclusions, and Chapter V. with therapeutic considerations: (a) the restriction of liquids in reduction cures; (b) in chlorosis; (c) in chlorosis of the liver; (d) in hemorrhages and tables and bibliography. The American editor claims that in this country "hot water drinking and colon douching have been carried to an irrational, ridiculous and very often harmful excess by the advice of certain irregular practitioners and cranks." The book is certainly an interesting one, and should not only interest the pharmacist and physician, but also the thinking layman.

BULLETIN OF THE LLOYD LIBRARY OF BOTANY, PHARMACY AND MATERICA MEDICA. Cincinnati, Ohio: J. T. & C. G. Lloyd. Reproduction Series No. 4.

This volume, No. 4 of the reproduction series issued by Messrs. Lloyd, is "An account of some of the vegetable productions naturally growing in this part of America, botanically arranged by the Rev. Manasseh Cutler, F.A.A. and M.S., and member of the Philosophical Society at Philadelphia," first published by the American Academy of Arts and Sciences in 1785. The "account," which is preceded by an address in the course of which the author observes: "The almost total neglect of botanical enquiries in this part of the country, may be imputed in part, to this, that botany has never been taught in any of our colleges, and to the difficulties that are supposed to attend it; but principally to the mistaken opinion of its inutility in common life," gives not only the proper Latin names of the New England plants, but also their English names, peculiarities and season. In addition to an excellent frontispiece portrait of the author, there is a preface by Mr. J. T. Lloyd, which informs us that "This

treatise antedated by two years the 'Materia Medica Americana' of Johann David Schöpf," and gives a short sketch of the very versatile author, who entered Yale in 1761, graduating "with high honors" in 1765. He was very proficient in astronomy, meteorology and botany, became a schoolmaster, and after his marriage in 1766, became a storekeeper, fitted out whaling vessels, conducted business and even practiced law before the Court of Common Pleas. In 1768 he took his Master's degree from Yale, after which he studied for the ministry, and was ordained in 1771. Among his botanical correspondents and associates were such men as Professor C. S. Rafinesque, Professor B. S. Barton, Rev. Dr. Muhlenberg, and others of that time. In 1787 he formed the "Ohio Company" for the purpose of purchasing land for a western colony, which resulted in the settlement of Marietta and vicinity. He died in 1823 at the advanced age of eighty-one. The book, which consists of nearly 500 pages, is well printed, and should be in the hands of every student of pharmacy, young or old, who is interested in this interesting branch of the profession.

NEW BOOKS.

A List of Recently Published Books of Interest to Druggists.

- Alling, Arthur Nathaniel, and Ovidus, Arthur Griffin. "Diseases of the Eye and Ear"; a manual for students and practitioners. Philadelphia, Pa., Lea Brothers & Co., c. 17, 252 p., il, 12c. (Lea's ser. of medical epitomes) cloth, \$1 net.
- Babcock, Robert Hall. "Diseases of the Heart and Arterial System"; designed to be a practical presentation of the subject for the use of students and practitioners of medicine; 3 col. pl and 139 il., 2d ed., rev., New York, N. Y., Appleton, c. 21-853 p., pls. partly col., cl, \$6; hf. leath., \$6.50.
- Barber, Elmer De Vergne. "Confessions of an M.D."; being a series of semi-humorous letters from a doctor to his son. Kansas City, Mo., Franklin Hudson Publishing Co., 250 p., por., 12c, cl., \$1.50, pap., 50c.
- Duncan, Rob. Kennedy. "The New Knowledge"; a popular account of the new physics and the new chemistry in their relation to the new theory of matter. New York, A. S. Barnes & Co., c. 18+263 p., il., 8 vo., cl., \$2 net.
- "Experimental Electrochemistry." Sixth paper Faraday's law. Distinction between current required and energy absorbed; experiments to show mechanical movement of material. New York, Munn & Co., pap., 10c.
- Fanning, F. W. Burton, M. D. The open air treatment of pulmonary tuberculosis. Chicago, W. T. Keener & Co., 6+176 p., S., limp cl., \$1.50 net.
- Forward, C. W. "The Food of the Future"; a summary of arguments in favor of a non-flesh diet; with a preface by Ernest Bell. New York, Macmillan, 11+128 p., 12c, cl., 50c. net.
- Hare, Hobart Amory. "A Text Book of the Practice of Medicine"; for students and practitioners; il. with 129

engravings and 10 plates in col. and monochrome. Philadelphia, Lea Bros. & Co., c. 17-199 p., diags., cl., \$5 net; leath., \$6 net; hf. mor., \$6.50 net.

Holland, Ja. W. "A Text Book of Medical Chemistry and Toxicology." Philadelphia, W. B. Saunders & Co., c. 11-592 p., il., col. pls., 8c, cl., \$3 net.

MacCallum, J. Bruce. "On the Diuretic Action of Certain Haemolytics, and the Action of Calcium in Suppressing Haemoglobinuria (preliminary communication)." Also "On an Improved Method of Artificial Parthenogenesis (second communication)," by Jacques Loeb, Berkeley, Cal., University of California Press, 92 p., Q. (University of California publications, Vol. V, 2, Nos. 10 and 11.) Pap., 10c.

MacCallum, J. Bruce. "The Action on the Intestine of Solutions Containing Two Salts."; also, "The Action of Purgatives in a Crustacean (Sida crystalline)." Berkeley, Cal., University of California Press, 47-70 p., 4 to, pap., 25c.

Newton, G. Whittemore. "Practical Hygiene, For Use in the Home and School." Cedar Falls, Ia. Published by the author. 12 c., 157 p., 12, cl., 50c.

Pattee, Alida Frances. "Practical Diets, With Reference to Diet in Disease." 3d ed. New York, N. Y., A. F. Pattee, 16 c., 352 p., 12c, cl., \$1 net.

Robinson, C. H. "Outlines For Field Studies of Some Common Plants." 2d ed., rev., pt. 1. Mayville, N. D., C. H. Robinson, c., 12c, pap., 25c.

Roger, G. Henri. "Principles of Medical Pathology"; authorized tr. by M. S. Gabriel, M.D., with additions by the author. New York, Appleton, c. 7+545 p., 8c, cl., \$5; leather, \$5.50.

Root, C. Marvin. "What is Gingseng?" an account of the history and cultivation of gingseng. Omaha, Neb., J. M. Roucek, 59 p., il., 12c, pap., n. p.

Satterthwaite, T. E., M.D. "Diseases of the Heart and Aorta." New York, E. R. Pelton, c. 2-304p., il., 8 vo., cl., \$3 net.

Scott, R. J. Ernst. Comp., "Question In Physiology and Hygiene Asked at the Examinations Held by the New York State Board of Medical Examiners," complete, with references and answers to every question. Philadelphia, Pa., Lea Bros. & Co., 19 c., 216 p., il., 12c (State Board examination ser.), cl., \$1.50.

Sidener, C. F. "Quantitative Metallurgical Analysis"; selected methods for chemical analysis of ores, slags, coal, iron, pig iron and steel. Minneapolis, Minn. H. W. Wilson Co., 12c, cl., \$1 net.

Taylor, J. Traill. "The Optics of Photography and Photographic Lenses," 3d ed., rev.; with an additional chapter on anastigmatic lenses, by P. F. Everitt, New York, N. Y. Whitaker & Co., 280 p., il., 12c, cl., \$1.

Redo.

Redo, a commercial name for calcium hydrosulphite, has found a wide field in the sugar industry. It is said to act in an alkaline solution, and does not have any action upon the saccharine.

Special Prices in Bulk

JOHN WYETH & BROTHER

INCORPORATED

Pharmaceutical Chemists

PHILADELPHIA, PA.

Era Key to the U. S. P.

Every druggist and physician should have copies of this valuable little book in his vest pocket.

It contains a complete list of the drugs and preparations of the Pharmacopoeia and gives the official titles, common names and synonyms of the drugs, chemicals and preparations, their strength and doses in Apothecaries weights and measures with equivalents in Metric Terms.

As a companion to the U. S. Pharmacopoeia the Era Key gives to the physician and pharmacist an epitome of the contents of the official guide, in convenient shape for every day use and quick reference and in a form that will assist them as prescribers and dispensers.

LAXATIVE BROMO QUININE

ON THE

DIRECT CONTRACT, SERIAL NUMBERING PLAN.

Among the universally sold articles — the staples in the Drug line during the past ten years, none has received greater support of the entire Retail Drug Trade than **LAXATIVE BROMO QUININE**.

The manufacturers fully appreciate this, and in keeping with the policy of allowing from the beginning a profit of one hundred to one hundred and thirty per Cent, **LAXATIVE BROMO QUININE** has been placed on the **DIRECT CONTRACT SERIAL NUMBERING PLAN**, as the best discovered means of assisting every legitimate Retail Druggist to maintain this profit under the conditions which he now has to face.

At great expense, not only of money but most complicated labor, the manufacturers have been proceeding quietly for some months to put this plan in operation. A majority of the druggists throughout the country already have signed and returned the contract and the names of hundreds of other druggists who sign and return the contract, are being added to the list every week. The results obtained up to this time insure success to the effort, and in order to make the Plan effective to the greatest possible degree, it simply remains for every Retail Druggist to realize that his individual co-operation is essential. Every Druggist who has not signed and forwarded the contract on **LAXATIVE BROMO QUININE** should take such action immediately.

If a supply of **LAXATIVE BROMO QUININE** is needed or if the stock on hand will permit it, the extraordinary **DATING OFFER** now in force enables the Druggist to purchase a quantity of **LAXATIVE BROMO QUININE**, obtaining the regular free goods, to be delivered at once and invoice dated November 1st, 1905, for cash discount.

LAXATIVE BROMO QUININE

Price \$1.75 per dozen.

6 dozen lots,	1 dozen free,	Cost	\$10.50	or	\$1.50	per dozen
12 dozen lots,	2 dozen free,	5% trade discount,	“	\$19.95	or	\$1.43	“ “
36 dozen lots,	6 dozen free,	8% trade discount,	“	\$57.96	or	\$1.38	“ “
60 dozen lots,	10 dozen free,	10% trade discount,	“	\$94.50	or	\$1.35	“ “

All Wholesale Druggists will accept orders under this **DATING OFFER**.

PARIS MEDICINE COMPANY,

Saint Louis and London.

NEWS SECTION

ALLEGED CONSPIRACY.

Argument in Suit Against Baltimore Druggists Heard—Judge Reserves Decision.

Baltimore, June 10.—In the suit of Klingel's Pharmacy against the Calvert Drug Company, the Baltimore Retail Druggists' Association, Sharp & Bohme, John G. Beck, manager of the Calvert Drug Company; Dr. A. J. Corning, and Owen C. Smith, alleging that there is a conspiracy to control the price of drugs, argument was offered on June 3, before Judge Wright in part 2 of the Superior Court. It was contended by the defendants' attorney that the declaration was vague and indefinite, and that for this reason the plaintiff ought not to be allowed to recover. It is stated in the declaration that the defendants are engaged in the wholesale and retail drug business here, and that the object of the combination is to maintain extravagantly high prices for drugs and druggists' supplies, and that it has also been effected to prevent the plaintiff from securing goods. The suit is for \$50,000 damages. Judge Wright reserved his decision on the plea offered.

The case grows out of the efforts to check the demoralizing work of the cutters, by making it impossible for them to obtain supplies. Mr. Klingel is one of the druggists who refused to abide by the price list fixed by the Baltimore Retail Druggists' Association.

In this connection it may be said that the proposed association of cutters to purchase goods in large quantities and distribute them among the members does not seem to have made any headway during the past week or so. It looks now as though the undertaking might fail.

AMERICAN CHEMISTS TO MEET.

Arrangements have been completed for the thirty-second general meeting of the American Chemical Society, which convenes at Buffalo, June 22 to 24. The session, which will be held in the rooms of the Buffalo Society of Natural Sciences, in the Buffalo Public Library Building, will begin next Thursday forenoon with an address of welcome by Herbert P. Bissell, on behalf of the Buffalo Society of Natural Sciences. President Francis P. Venable will respond for the chemists. The reading of papers will occupy the remainder of Thursday's sessions.

The Gratwick Research Laboratory will be visited at 4 p. m., and in the evening Francis A. J. Fitzgerald will deliver an address at the Iroquois Hotel on "The Electro-Chemical Industries of Niagara Falls." An informal luncheon will be served by the hotel. Friday afternoon there will be a trip in the harbor on the city fire tugs. Dinner in the evening at the Iroquois. On Saturday there will be an excursion to Niagara Falls, with visits to the power house and Niagara Research Laboratories.

SCIENTIFIC PAPERS FOR PH. A.

Estace H. Gane, 91 Fulton street, this city, chairman of the Committee on Scientific Papers of the American Pharmaceutical Association, desires contributions of scientific interest for presentation at the forthcoming meeting at Atlantic City. The committee will endeavor to arrange the programme so that every paper submitted will receive consideration. Contributors are requested to send their papers to the chairman by July 20.

Attention is called to the change in Article IV., Chapter 14, of the by-laws, adopted at the Kansas City meeting last year, which provides that "any person desiring to submit a paper to the association shall present to the chairman of the particular section to which it refers, at least ten days prior to the meeting, an abstract of said paper indicative of its contents and consisting of not less than fifty or more than two hundred words. This abstract shall be printed as a part of the programme. The paper itself must be submitted to the officers of the section previous to the first session."

The committee announces that Dr. Charles Baskerville, professor of chemistry at the College of the City of New York, has consented to deliver a popular lecture on "Radium and Radio-activity," experimentally illustrated, on the evening of Friday, September 8. The other members of the committee are Daniel Base and Charles E. Caspari.

DRUG STORE'S COSTLY SITE.

The recent sale of the historic southeast corner of Wall Street and Broadway calls attention to the fact that the Wilson Drug store, which has been on that corner for so many years, probably occupied the most costly site of any drug store in the world. The lot measures only 29.10 by 39.10 feet, and includes 1,170 square feet, for which \$700,000 in cash was paid. At this price a full lot, 25 by 100, would be worth more than \$1,700,000. The building on the lot, the lower part of which was occupied so long by Wilson, is an old four-story structure, and is now leased to the United Cigar Stores Company for a net rental of \$25,000 a year. Wilson sub-lets a part of the store from the cigar company.

The drug store which occupied the corner was one of the landmarks of New York, and the proprietor, William Wilson, is said to have made a fortune there.

SEABURY & JOHNSON APPEAL.

Seabury & Johnson announce that they will appeal from the decision of the Chancery Court in New Jersey, in which they lost their suit with Johnson & Johnson, over the red cross trade mark. Seabury & Johnson have instructed their attorneys to file a petition of appeals in the Court of Errors and Appeals. Meanwhile they intend to protect all purchasers of goods bearing the red cross label.

QUIET IN NEW YORK

Ten Organizers Now at Work—Disfranchising Nearly Completed.

Nothing of startling importance has developed in the N. A. R. D. situation in Greater New York during the past week. Dr. Hoffman has arrived, making the tenth organizer promised by Dr. Noel. The entire force is now at work on the districts, nearly all of which have now being organized. A general meeting of the local association will soon be called, but this rests with the Executive Committee of the M. A. R. D., which now meets regularly every week.

At the meeting of the Executive Committee, last week, all points of difference are said to have been finally adjusted. The M. A. R. D. is to get \$1 out of every instalment of dues collected and the N. A. R. D. is to pay for the services of S. V. B. Swann as an organizer.

COMPLAINTS MUST BE SIGNED.

That hereafter all complaints as to violation of the Pharmacy Law must be signed in order to receive attention, is announced by Secretary Bradt, in the following letter:

"Albany, June 8, 1905.

"I beg to call attention to the number of anonymous communications received from different parts of the State, in the matter of alleged violation of the provisions of the Pharmacy Law, which letters are referred to the inspectors for investigation. While it is the policy and duty of this Board to investigate complaints as is provided for by said law, yet in the future the Board must decline to consider any complaint not properly signed. This attitude of the Board is prompted by the fact that the Middle Branch at least, has sent inspectors great distances and expended large sums of money in the investigation of these anonymous complaints, with the result that in most cases the writers of these anonymous communications were inspired by personal spite, and in nearly all instances no provocation existed.

"Very respectfully,

"WARREN L. BRADT,
Secretary."

CIRCLE GIVES A DANCE.

A reception and dance was given by the Drug Clerks' Circle on May 31 at Terrace Lyceum, 206 East Broadway. The proceeds were used for the benefit of one of the members of the society, who is suffering from tuberculosis and must be sent West. About 300 people attended. A number of professional actors volunteered their services and helped to make the occasion a success. The arrangement committee consisted of Dr. Jos. Kahn, Philip Lewy, H. W. Dülberger, J. Klein, Dr. S. Harkavy, Mrs. R. Harkavy, Miss I. Plinkowitz.

TO REDEEM STAMPS.

President of Company Arrested and Promises Premiums.

President A. D. Marks, of the White Diamond Trading Stamp Company, of Jersey City, whose premium store in that city has been closed for the past week, has been released on bail, and has promised to redeem all the stamps which are out. It was said last week that an attempt was made to take away the goods, and warrants were issued for Marks and Marie Carroll, an eighteen-year-old girl, who was the manager of the store. Marks surrendered and declared there was no intention on the part of the company to go away without redeeming the stamps. Marks was finally given permission by the authorities to open the store and give out the premiums.

More than one hundred women turned over filled books to the police. One woman had four filled books. If Marks redeems all of the stamps, the charge of conspiracy will be dismissed.

TRADING STAMP TROUBLES.

Schedules in bankruptcy of the Benedict & Macfarlane Company, the blue trading stamp concern of 156 West Twenty-third street, show liabilities of \$78,257 for merchandise and on notes, and assets of \$4,500, consisting of merchandise in the hands of the receiver, and \$4,500 in cash in bank. No mention is made in the schedules of the liability on unredeemed stamps, of which it is reported there are outstanding 165,000,000.

CLERKS WILL INVESTIGATE.

At the meeting of the Drug Clerks' Circle, last Wednesday, the president was instructed to appoint a committee of three to investigate all complaints as to unlicensed clerks being left in charge of stores in the absence of employers. Complaints will receive attention when made by any pharmacist, whether a member of the society or not. All cases will be forwarded to the State Board of Pharmacy. The Circle requests that complaints be sent to "Investigation Committee, Drug Clerks' Circle, 235 East Broadway."

The secretary was instructed to cast one ballot for Dr. Diekman at the Board of Pharmacy election on June 15 (to-day). Dr. Joseph Kahn and H. W. Dülberger were chosen to represent the circle at the New York State Ph. A. convention at Saratoga.

OFFICE, 26; STOCK, 13.

Two baseball nines made up of men in the stock-room and office of Parke, Davis & Co., played a seven inning game at Prospect Park, last Saturday. The last two innings were left out because the office team got tired of running round the bases after they had rolled up a score of 26 to 13. They were captained by Tucker, while Stewer led the stock boys. An appreciative audience composed of heads of departments, pretty stenographers, etc., looked on and applauded several fine plays by Bourne, Hall, Carragan (Lester, not "Sid") and Dodd.

CHANGE OF DRUGS HARMLESS.

By a decision of Supreme Court Justice Gaynor, in Brooklyn, A. G. Wilson, a druggist formerly employed by the Bolton Drug Company, is exonerated, from the charge of negligence, although he admitted having changed a prescription of Dr. William J. Cruikshank, written for Mrs. Emma Laturen.

Justice Gaynor says the alteration in question could not have harmed the patient as the complaint averred. The complaint was dismissed and the motion for a new trial denied. The court assured drug clerks that his opinion does not mean that they can change prescriptions without liability.

FRANK J. CHENEY,
Toledo, O., President, Proprietary Association of America.

A. B. C. IN THE MOUNTAINS.

Despite the threatening aspect of the weather, the A. B. C.'s held a very enjoyable run from Goshen to Newburgh, via Montgomery, last Thursday. At Goshen the little party ran across Mr. Frank, the popular leader of the Liederkranz Band, who very kindly piloted them around town and showed them the various points of interest. After dinner, wheeling was resumed to Montgomery.

A three-mile coast brought them into Newburgh and the Hudson was crossed to Fishkill, where the party took the inclined railroad up Mount Beacon. A beautiful sunset was watched from the Beacon monument on the highest point of the mountain, after which an excellent supper was eaten at Flannery's Hotel, in Fishkill, and the return to the city made via Hudson River R. R. train.

The next run, June 15, 16 and 17, will be a three days' trip, New York to New Platz, then to Ellenville, down the Ramapo Valley to Tuxedo and Suffern and back to the city.

SUCCESSFUL OUTING OF G. A. S.

Perfect Weather, Handsome Prizes, Moonlight Trip on the Water.

Blustering winds and cloudy skies deterred many members of the German Apothecaries' Society from boarding the steamer "Isabel," last Thursday morning, but the hundred and fifty of both sexes who braved the white-caps on the Sound were rewarded by perfect weather in the afternoon and evening. From the moment of arrival at Karatonyi & Kmetz's, Glenwood, at 12.30 o'clock, all enjoyed themselves immensely until the time for departure at 9. The return trip was made by the light of a modest young moon which the Entertainment Committee had ordered for the occasion.

After an excellent luncheon had been put away, the prize bowling for ladies was started. In this Mrs. Henry F. Albert was first; Mrs. P. F. Gebelke, second; Mrs. R. H. Timmerman, third; Miss E. Eberhardt, fourth; Mrs. S. V. B. Swann, fifth. In the gentlemen's bowling, Hugo Kantrowitz won first prize by the remarkable score of 30 out of 30. R. Eschmann came second with 29. The other winners were H. F. Albert, Chas. H. White, Wm. F. Carr.

While a team from the Friday Bowling Club was wiping the alleys with their opponents of the Thursday Club, the other games were being held outside. In "Vogel-Stecken" (bird sticking), Miss E. Eberhardt showed her ability to hit the bull's eye oftenest. Next in order were Mrs. A. Amend, Mrs. C. F. Klippert, Mrs. E. Becker. Most exciting and enjoyable were the egg races, won by Miss W. Conover, Mrs. Klippert, Mrs. A. Koehler and Mrs. Swann, in the order named.

Many more members arrived by train during the afternoon, so that when the banquet was served at 6 p. m. the dining room was well filled. The level rays of the setting sun shining on the golden beverages and the gay decorations, made a pretty picture and kindled the flame of good fellowship. President Imhof made a German-American speech of welcome—German for the members and English for the visiting salesmen. George Riefflin responded for the guests, who received the "drei mal hoch." A similar honor was given to the ladies, whom Emil Roller toasted in a graceful speech.

The names of the prize-winners, as announced by R. S. Lehman, were cheered to the echo, especially the "high rollers." The prizes were handsome and valuable, among other things being a pound of pepsin contributed by Sharp & Dohme.

A side-show not on the programme was a baseball game between the druggists and the salesmen, captained respectively by Essig and Neville, of Warner & Co. The druggists won, score, 7 to 6. They finished the ninth inning with six men on bases—so it was reported, but it is suspected that someone saw through magnifying glasses. The number of men on each nine is still uncertain.

—The next meeting of the Vermont State Board of Pharmacy will be held at the State House, Montpelier, July 6, at 10 a. m. Application for examinations must be made to J. G. Bellrose, secretary.

ELECTS NEW OFFICERS.

Rochester, June 6.—The annual meeting and election of officers of the Rochester Ph. A., was held Friday, June 2. The meeting was enthusiastic and well attended. The pharmacists were doubly pleased to learn through the reports of their several officers that the association during the past year has made great progress. An increase in membership, and a corresponding increase in influence throughout the city and county, were among the facts made known through the reading of the reports. William R. Hall, treasurer of the association, in his report, showed the association as being on a sound financial basis, considerable money being in the treasury and no debts being outstanding of any importance. The election, which took place during the afternoon, resulted in the slate as prepared in the May meeting, being accepted without change. The officers are: President, Howard Moore; vice-president, William Esterheld; secretary, William T. McBay, and treasurer, William R. Hall. Messrs. McBay and Hall were re-elected.

CONTEST FOR POSSESSION.

Rochester, June 6.—The Burnham bankruptcy case at Watkins is becoming more complicated, and interest in it is daily increasing. Although Trustee George M. Stillwell placed a large padlock and heavy chain on the door of the drug store last week, Dr. L. M. Bennett again took possession of the store. He claims he is acting on the advice of his counsel, Thayer, Tuttle & White, of Buffalo, who advised him to secure and maintain possession at all hazards. The notice of the mortgage sale, which was torn down by the trustee, has been replaced, and Dr. Bennett asserts that the sale will take place. Nye & Velie, the Watkins attorneys, who secured a court order restraining Bennett from foreclosing his chattel mortgage, will undoubtedly take steps to have him arrested and punished for contempt. At the time of writing, Dr. Bennett was still in possession of the store.

DRUGGIST WINS SUIT.

Rochester, June 13.—Charles R. Gould, a druggist of Batavia, won his suit against the Merchants and Mechanics Fire Insurance Company, of Monroe county, last week. Mr. Gould brought an action in the Supreme Court to recover \$1,500 insurance, as the result of a fire at his store, 92 Main street, Batavia, on November 20, 1903. A jury was waived and the court proceeded to hear the evidence. Mr. Gould, J. A. Loveridge, H. B. Cone and J. J. Patterson gave evidence on behalf of the plaintiff and a judgment of \$1,607.50, including interest, was ordered entered by the court. There was no defense offered.

SUIT OVER DRUG STORE.

A suit brought by Simon Chess, in Jersey City, N. J., against Emil Vockroth, a Newark avenue druggist, to recover \$500 deposit on the purchase of a drug store, resulted in a non-suit in the circuit court. It appears that the price of the store was \$7,000 and Chess claims that Mrs. Vockroth refuses to sign a bill of sale. The court non-suited on the ground that no legal tender of the purchase price was made.

"CANNIBALS" SHUT OUT.

The "Atoms," the newly organized baseball team of the Brooklyn C. P. Alumni Association, crossed bats last Thursday afternoon with the "Cannibals," a strong team composed entirely of physicians. The game was started at 4 p. m., on their grounds in Maspeth, and when rain interfered in the fourth inning, the score was 7 to 0, in favor of the "Atoms." "It's an ill wind," said the "Cannibals," but they were promptly challenged again. The next game will be played on Thursday afternoon, June 22, at 3 p. m., in Feltman's Park. The line-up last week was as follows: Anderson, 3b.; Bryan, c.f.; Weygandt, p.; Rave, s.s.; Harloe, 1b.; Klemp, 2b.; Sandman, 1f.; Stanislaus, r.f.; Brandenburg, c.

OLD DRUG HOUSE FAILS.

Schedules in bankruptcy of Frederick W. Keith, formerly doing business as B. Keith & Co., 45 Cliff street, show liabilities of \$10,518, of which \$1,600 are secured, and assets of \$1,805, consisting of debts due. The firm was established many years ago and formerly did a large business, which is said to have fallen off considerably of late.

NEW YORK NOTES.

—Willard A. Smith, of Richfield Springs, is in town this week.
 —F. P. Wohlrich, Florida representative of Parke, Davis & Co., has been assigned to cover New York State during the summer.
 —Emil Imhof, son of President Imhof, of the German Apothecaries' Society, is now in Paris on his way to Carlbad, where he will take the cure.
 —Dr. A. S. Rosen, the former manager of the Park Pharmacy in East Broadway, has just returned from a wedding trip. He now owns a store in Yonkers.
 —Albert H. Brundage has been appointed chairman and chief contributor for the department of toxicology and pharmacology of the Lewis and Clark Exposition, Portland, Ore.

—Tripp & Braswell, the Brooklyn druggists, have leased for a term of years the basement store in the Produce Exchange Bank building, at Broadway and Beaver street. The rental is \$4,500 a year.

—There is a new face behind the desk in the Board of Pharmacy office. It belongs to George Le Lacey. He has removed his mustache, that formerly struck terror into the hearts of prospective candidates.

—Among the many representatives of Schieffelin & Co. in town recently were: W. E. Jenkins, of the South; Rush E. Blackman, Northwest; L. D. Worden, New York State, and Geo. E. Burroughs, East.

—In town this week: R. E. Miller, manager of the Owl Drug Co., San Francisco; Thad. Benjamin, of M. F. Benjamin's Sons, Riverhead, N. Y.; H. H. Stratter, formerly a druggist at Colorado Springs, but now located at Santa Clara, Cuba.

—President McConnell, of the Board of Trade and Transportation, has named J. L. Hopkins, J. M. Peters and W. S. Armstrong as a committee representing the Drug Trade Section in the proposed action against the methods of the Census Bureau in prying into what are considered private business affairs.

URGING DRUGGISTS TO JOIN.**Invitation for Them to Become Members of the Pennsylvania Pharmaceutical Association.**

Pittsburg, June 13.—H. E. Pritchard, chairman of the Committee on Affiliation of County Associations, has issued from the office of Prof. Julius A. Koch, president of the Pennsylvania Pharmaceutical Association, an urgent appeal to all druggists to come within the fold without further delay. Mr. Pritchard advances some strong arguments why every druggist should be in the organization, the strongest of which perhaps, is the work done during the last session of the Legislature in preventing the passage of mischievous laws and in aiding in the enactment of legislation which was needed by druggists.

Attention is called to other subjects of legislative enactment affecting pharmacy, and which will require close attention of the association to protect its interests. These proposed bills require the prescription of a known, reputable physician for each sale of so-called patent or proprietary medicine; forbid the refilling of any physician's prescription without the written consent of the prescriber; make provisions for a fixed educational requirement as a prerequisite for apprentices in pharmacy; require all apprentices in pharmacy to be registered with the State Board, the name of the preceptor to accompany said registration in all cases; fix sixty hours as a legal week's work for clerks; require that pharmacies be licensed in a manner similar to the provisions of the Brooks law; repeal that section of the pharmacy law requiring personal examination before being permitted to practice; amend the pharmacy law so as to provide all vacancies in the Board of Examiners shall be filled by vote of registered pharmacists instead of as present, by appointment by the governor; make it a misdemeanor to peddle medicines from house to house, or to hawk them in public places, without first having obtained a license from the State.

LANDMARK CHANGES OWNER.

Pittsburg, June 12.—One of the oldest landmarks in this city changed hands this week, when John H. Staley bought the late George S. Fleming's interest in the Market street drug store. It is said that the price was close to \$40,000 and the new firm will assume responsibility for the debts, that may reach \$50,000. W. P. Martsoff, who has been manager, retains his interest and has been elected vice-president and general manager. The name will continue the same.

OLD DRUG STORE SOLD.

North Abington, Mass., June 12.—The drug store known as "Spiller's North Abington Pharmacy," established by F. M. Spiller, who passed away April 5, after a long illness, has been sold to the new firm of Bemis & Cooper, the latter being the proprietor of the Plymouth Pharmacy.

Mr. Spiller commenced business in East Boston in 1871, and removed to North Abington in February, 1882. By close application he built up a good business and Spiller was well known among the wholesale houses for his uprightness and square dealings.

PHILADELPHIA DRUG CLERKS.**Sunday Closing not a Dead Issue with the Clerks—Prosperity and Growth.**

Philadelphia, June 12.—Business and pleasure were combined at the June meeting on Monday evening of the Philadelphia Drug Clerks' Association. Refreshments were served and the innovation proved a most attractive one, as the unusually large number of members present indicated. The principal subject of discussion was the Sunday closing question, but while no action was taken, it is evident that the matter is by no means a dead issue. Plans were discussed for bettering the position of the drug clerk in this city and it is likely that before long the proprietors will again be asked for a conference on the question.

The announcement that there was \$147.62 in the treasury was received with applause, as indicating that the association is in a prosperous condition. With a growing membership, a most successful year is predicted. It was with regret that the resignation of Harry B. Lupin, manager of the employment bureau, was announced. Mr. Lupin has purchased a store at Seventh street and Snyder avenue, and consequently is no more eligible for membership in the association. He becomes an honorary member. His successor has not yet been appointed by President Geasey. Secretary Carl Schmitt, Jr., announced the following applications for membership: Juan D. Fernandez, Gordon S. Brown, William W. Wittinger and Philip Reiser. They were elected. It is expected that the strength of the organization will be greatly increased during the summer by the graduates in pharmacy from the various colleges in the city.

EXPLOSIVES IN PITTSBURG.

Pittsburg, June 12.—Despite the general protest of the wholesale and retail druggists here, the ordinance which has for its object the regulating of the selling, storing and transporting of explosives and combustibles was passed by the City Councils. The ordinance, as a whole, is a very complicated, voluminous document, covering ten pages legal cap, typewritten matter, divided into forty-five sections, and it is a matter of serious doubt whether any man, not excepting the author, thoroughly comprehends its bearing upon the various trades that it proposes to regulate. The most essential clauses have been printed in *The Era*. In brief, it provides for the creation of a bureau that will see that the act is carried out and fines are levied on the violators of the ordinance.

The clause pertaining principally to druggists follows: No druggists are allowed to keep on the premises muriatic, sulphuric, nitric, picric, chromic and carbolic acids, ethers, collodion, acetone, methyl and amyl alcohols, turpentine, naphthas, bisulphide of carbon, essential oils, nitrate of soda, chlorate of potash, nitrate of silver, chlorate of sodium and many other explosives and combustibles. This pertains to large quantities.

—The Delzell Drug Co., of Lewiston, Montana, has sold out to Horace G. Phillips and Linn Bradley. They will do business as the Phillips Bradley Drug Co., with a capital stock of \$25,000.

PREPARING FOR CONVENTION.**Arranging for Big Attendance at the Pennsylvania Ph. A. Meeting.**

Pittsburg, June 5.—Arrangements are rapidly being perfected for the annual State convention of the Pennsylvania Pharmaceutical Association at Bedford Springs, June 20 to 22, inclusive. The arrangements are being made by Dr. J. A. Miller, secretary.

About one hundred druggists from the Pittsburg district have announced their intention of attending the annual meet and it promises to be one of the most successful in the history of the association. Many questions of utmost importance will come up for consideration which will tend to create better conditions in the drug trade.

PENNSYLVANIA NOTES.

—N. O. Eckels has opened a new store at Shippensburg.

—J. R. Smith has purchased the Stedem Pharmacy at Narberth.

—A new "Innovation" fountain has been put in the Schwartz Pharmacy, at Waynesboro.

—The Ross Drug Co. has had a new "Innovation" fountain installed in the store at Ridgway.

—George A. Wertz, of Thirteenth street, below Market, has sold his store at Chester to S. Headley.

—Dr. F. Winger has installed a new fountain in his drug store at Ephrata and contemplates making other improvements before fall.

—Alonso P. Blakesly, of Mauch Chunk, visited Philadelphia this week, and incidentally saw what was new in the way of trade matters.

—R. C. Roberts has made many improvements to his pharmacy at Ambler, the principal one being the installation of a handsome new soda fountain.

—The firm of Eschbach & Clapp, at Milton, has been dissolved. Clarence Eschbach purchasing the interests of his former partner, and continuing the business.

—W. A. Bright, formerly of Watsonstown, has purchased the store of Daniel Harris, at Fortieth street and Girard avenue, Philadelphia.

—W. S. Young, of Coatesville, one of the best-known pharmacists in Chester county, accompanied by a party of friends, enjoyed a trip to Harrisburg this week, in an automobile, to witness a game of baseball between the Coatesville and Harrisburg clubs. Mr. Young's new store, it is expected, will be ready for occupancy by the first of July.

—Frank M. Musser, formerly of Lewistown, is building two new drug stores at Johnstown. He will pay particular attention to the soda feature and with that in mind has installed two fountains, one costing \$5,000 and the other \$3,000, in the stores. On the roof of the larger store will be a roof garden, where soda will be served exclusively.

—Alton, Ill., druggists are likely to decide soon upon a Sunday closing movement, as a result of the recent determination of Paul Brothers not to open their store on Sunday. They have carried out the movement without assistance from other druggists, and have found some encouragement from many persons.

DR. DONAVIN DEAD.**Store Noted Rendezvous for Newspaper Men and Politicians.**

Baltimore, June 10.—With the death of Dr. M. W. Donavin, on last Sunday night, at his home, 1822 North Monroe street, an old-time druggist passed away. Dr. Donavin was for many years a well-known figure in South Baltimore, where he practiced medicine and also conducted a drug store on Sharp and Lee streets. The pharmacy became a gathering place for newspaper men, all of whom counted the doctor among their friends. He drifted into politics, and was for some years committing magistrate at various police stations.

He was born April 11, 1838, in Shippensburg, Pa., but had lived in Baltimore since he was nineteen years old. He attended public school in Shippensburg until his fourteenth year, when he began to assist his father in farming. Three years later he went to Charleston, W. Va., and entered the drug business. The following year he removed to Washington, where he was employed in J. D. O'Donnell's drug store until 1857, when he came to Baltimore and soon engaged in the management of a pharmacy at Entaw and Lee streets. In 1860 Dr. Donavin became the sole proprietor of the business and began the study of medicine at the University of Maryland, graduating in 1866. Most of his time, however, was devoted to the drug business, his activity as a physician being incidental. He served for three years as coroner, was elected to the City Council, occupying seats in both branches at different times, and was also a member of the House of Delegates in the Legislature, besides holding other positions. He is survived by a son and four daughters.

WEDGEWOODITES AFLOAT.

Baltimore, June 3.—The members of the Wedgewood Club had a royal time last Thursday, when they went down to Love Point on the steamer B. S. Ford, the trip of about thirty miles down the bay taking the form of a reunion of present and former members. At Love Point an excellent menu was served at the Casino, when a number of felicitous addresses were made, all of which had the merit of spontaneity. E. E. Quandt was the presiding officer for the occasion.

VACANCY IN PHARMACY BOARD.

Baltimore, June 10.—The resignation of David R. Millard from the Maryland Board of Pharmacy, in which he has served since the creation of that body as secretary, has once more given rise to speculation as to who will be named to fill it. It is intimated that all was not harmony in the Board and that a desire to avert friction was one of the reasons why Mr. Millard resigned so soon after being reappointed for five years. So far as can be learned, John A. Davis, who conducts a pharmacy at Carey street and Harlem avenue, has perhaps the best chance of securing the appointment. He stands high in the profession, being a graduate of the Maryland C. P., and enjoys an excellent reputation for probity and honor. He is a member of the College of Pharmacy Board, and being affil-

lated with the Maryland Pharmaceutical Association, as well as with the Baltimore Retail Druggists' Association, his appointment, it is believed by many, would be hailed with satisfaction.

VERDICT AGAINST DRUGGIST.

Baltimore, June 10.—A verdict for \$1,000 damages was rendered by a jury in the Superior Court, last Tuesday, against Melville Strasburger, a druggist on the north-east corner of Fayette and Eutaw streets, for injuries sustained by John M. Vogel, five years old, who had been struck with a brick which fell from the chimney of the building. The accident occurred July 22, 1903, when the boy was standing on the corner with his grandmother, watching a parade of the Elks, who held their annual session here at the time. The brick was dislodged by persons on the roof and struck the boy on the head, fracturing his skull. The guardians of the boy sued for \$10,000, the action being brought against Joseph Friedenwald, surviving trustee for the owner of the building, and Mr. Strasburger. Judge Baer directed the jury to bring in a verdict for Mr. Friedenwald, which action was forestalled by the other side taking a non pros.

DRUG CO. INCORPORATED.

Baltimore, June 10.—The Hamilton Medical Company, which intends to prepare medicines for the treatment of the drug and liquor habit, was incorporated last Tuesday by Dr. Ira E. Hamilton, Fanny G. Hamilton, Jesse H. Hurst, Catherine R. Hurst and Peter J. Campbell. The authorized capital stock is \$5,000, divided into shares of \$25 each. Dr. Hamilton has long conducted a private sanitarium for the treatment of the drug and liquor habit, and the incorporation is merely an extension of his plan.

MARYLAND DRUGGIST DEAD.

Baltimore, June 3.—From Emmitsburg, Frederick County, Md., is reported the death of E. R. Zimmerman, member of the drug firm of T. E. Zimmerman & Co., and a highly esteemed resident of that town. Mr. Zimmerman had been postmaster there for a number of years and was also one of the school examiners for the county. T. E. Zimmerman, his son, is the senior member of the firm, which will be continued under the old name of T. E. Zimmerman & Co.

BALTIMORE NOTES.

—Robert Luck has opened a new drug store at Orleans street and Milton avenue.

—Mr. Hipsley, who has been clerking for S. Y. Harris, Poppleton and Lombard streets, has taken a position with Percy Crowl & Co., commercial printers.

—Fred. Esslinger has bought the pharmacy formerly conducted by Robert Luck, but afterward purchased by W. A. Pryor, at the southwest corner of Clinton and Elliott streets, Canton.

—M. A. Hance, of Hance Bros. & White, Philadelphia, stopped here last Saturday on the way to his country place near Queenstown, on the eastern shore of Maryland. He has just returned from a trip West.

—Druggist George A. Fox, northwest corner of North and Greenmount avenues, has purchased the property adjoining his pharmacy and will add the lower floor to it, just doubling the space and making it one of the largest and most commodious pharmacies in the city.

—Sprue Heaps, who has been clerking for Downes Bros., has accepted a position with Morgan & Millard, who will soon open their new pharmacy on the site of the old Sun building, Baltimore and South streets. The furniture has already arrived and will be installed without loss of time.

—William Herman, a druggist at Cumberland, Md., is charged with being responsible for the death of Miss Jean Maxwell, twenty-nine years old, of Williams Station, Pa., to whom he was engaged, by a criminal operation. One Dr. John H. Tompkins, a negro, is accused of having performed the operation. Both the accused are in jail.

—Among the Baltimore visitors last week was Her Carl Berk, of the firm of Berk, Puettmann & Co., of Bagdad, Persia, who is here taking orders for gum tragacanth and other articles of which the firm makes a specialty. Mr. Berk was overjoyed to find in George L. Muth, of Muth Bros. & Co., some one with whom he could converse in his mother tongue. Mr. Berk speaks English with some difficulty.

—Most of the furniture for the new pharmacy of Morgan & Millard, on the old site of The Sun, has been installed, the soda water fountain is in place and little remains to be done. The store may be opened for business in a week or two. The pharmacy will be one of the best appointed in the city. The furniture is of mahogany and brass, and of beautiful design, while plate glass and mirrors add to the lustre.

E. W. THOMPSON DEAD.

Hartford, Conn., June 12.—Edward W. Thompson, who has been a druggist in this city for twenty-five years, died suddenly of heart trouble, last week. Mr. Thompson was born in New York State in 1850. He came to this city when a young man and bought out M. L. Long, of the firm of Long & Butler, druggists. The firm became Butler & Thompson. Later Mr. Butler's interests were purchased by Thomas Main, and the name of the firm was changed to Thompson & Main. Mr. Thompson bought out Mr. Main and the business has been conducted under the firm name of E. W. Thompson & Co.

Mr. Thompson was a successful business man and maintained for himself a high reputation in the quality of goods he sold and in the manner in which he conducted his business. He has been ill for a year. He leaves a widow and two sons.

DRUG STORE SOLD.

Denison, Tex., June 12.—The J. L. Jones & Co. drug store has been sold to A. G. Reynolds, who was formerly connected with the People's Pharmacy here. The price paid is said to have been nearly \$10,000.

George C. Meyers, who was the half owner and manager of the store, will leave Denison, and probably locate in Missouri.

INDIANA PHARMACISTS.

Association Has Over 600 Paying Members—Election of Officers.

Terre Haute, Ind., June 10.—The Indiana Pharmaceutical Association closed its annual meeting here to-day, thoroughly enthused with the entertainment given by the local pharmacists, an entertainment in which everybody in Terre Haute assisted with abundant hospitality. The banquet was characterized by a series of brilliant speeches, some of which would have done honor to Senator Depew for witty and felicitous expression. At this meeting the association has reached its highest mark in membership, over 600 paying members now being enrolled. The association has been meeting in recent years in various cities of the State, and while this has been advantageous in adding to the membership, no other city possesses the central location of the capital, Indianapolis, and next year's meeting will be held there.

The following officers were elected for the ensuing year: President, Harry Gluck, Lafayette; vice-presidents, Carl Schultz, Lafayette; Charles D. Dean, Bluffton, and Louis Tice, Evansville; secretary, Arthur Timberlake, Indianapolis, who has held the position for many years without opposition; executive committee, C. E. Cooney, South Bend; C. W. Everhardt and V. E. Silverberg, Indianapolis.

CREDITORS TAKE POSSESSION.

Indianapolis, June 10.—Gordon R. Gauld, a well-known druggist at Bedford, this State, killed his wife and babies good-bye on the night of Tuesday, June 6, since which time he has been missing from his accustomed haunts, lost to the sight of numerous creditors. The law firm of Brooks & Brooks, of Bedford, have taken possession of the store in the interest of creditors. His only asset is his stock of goods, valued at about \$3,500. He has borrowed right and left from friends and acquaintances, and if caught a criminal charge may be lodged against him for giving checks upon banks in which he had no deposit.

Gauld's liabilities will, it is said, reach \$10,000. He went to Bedford five years ago from this city. He was recently a candidate for the Republican nomination for mayor, but was defeated in the primary. He was a Scotchman by birth and it is surmised that he has gone to Canada, whence he will make his way to Scotland.

CARROLL CO., IND., DRUGGISTS.

Flora, Ind., June 13.—The druggists of Carroll county met here this afternoon and effected an organization to promote business and for mutual protection. The officers for the ensuing year elected were: President, C. E. Nobes, of Flora; vice-president, I. E. Tesh, of Camden; secretary, M. M. Murphy, of Delphi; treasurer, R. S. Tidrick, of Brimhurst; executive committee, P. W. Van Gundy, of Camden; I. H. Orr, of Delphi, and P. W. Stonebraker, of Burlington.

The organization will be known as the Carroll County Retail Druggists' Association. It will also become a member of the national association.

OHIO VALLEY DRUGGISTS.

Arrangements for Annual Outing—
Dues Now \$10 a Year.

Cincinnati, June 13.—Arrangements are being made to make the coming annual outing of the Ohio Valley R. D. A. a success in every detail. The affair will be given on Tuesday, July 18, at Hartman's Grove, about twenty miles from this city, on the Little Miami river. President Zwick has appointed John H. Lineaman chairman and officer of the day. Committees have been selected and various members are giving financial support. E. H. Thiesing has been appointed treasurer for these accounts and Henry J. Dusterberg, secretary.

At the last quarterly meeting of the association the following were appointed as delegates to the convention of the State association, which will take place at Cedar Point, on Lake Erie, June 29-33: Robert Greenland, Edward Voss, Jr.; Theo. D. Wetterstrom, H. B. Waltermann and Alfred De Lang. It is expected that a large party from Cincinnati will attend the meeting.

The dues of the Ohio Valley R. D. A. have been raised to \$10 per annum. Increased expenses made this move necessary and the members have offered no complaint.

DEATH OF JOHN BYRNE.

Columbus, O., June 10.—After an illness of several months, John Byrne, who was for many years a druggist in this city and who was president of the Ohio State Pharmaceutical Association and its auxiliary association, died last week. Mr. Byrne was one of the best known druggists in the State. He had long taken a prominent part in every movement that tended to advance the interests of the pharmacist and was elected president of the above-mentioned associations last June. Mr. Byrne was fifty-eight years old and leaves a widow, one son and four brothers.

He was a veteran of the Civil War, having been a member of Company B, One Hundred and Thirteenth O. V. I. He carried the mark of a bullet wound he had received at the battle of Resaca Mountain, Ga.

PISO CO.'S SUIT DISMISSED.

Cincinnati, June 13.—The case of the Piso Consumption Cure Co. against William L. Voight, of this city, was dismissed in the county courts by Judge Hosca, since there was no prosecution. The case was eight years old, had been before five judges and the bill of exceptions contained 2,500 pages and weighed over fifty pounds. The suit was brought in 1897 to restrain Voight from manufacturing a preparation almost similar and exactly like the plaintiff's product in shape of bottle and design of label.

MICHIGAN NOTES.

—C. H. Mumson, of Republic, occupies a new building with his drug stock.

—The store of Dr. J. Melnhardt, at Whitehall, was burned; loss \$1,100, partially insured.

—N. E. Roby is now sole owner of the store of Roby & Bailey, at Coldwater, having purchased the interest of his partner, Dr. Bailey, of Morenci.

—George Hemmeter, a well-known Saginaw druggist, has sold his business to G. W. F. Hesse, and has removed to Detroit, where he will re-engage in business.

—Tuttle Bros.' drug store at Metamora was visited by burglars last week. They took all the cash and some cigars. J. B. Tuttle and Harry Green were arrested. They pleaded guilty.

A pharmaceutical department is to be added to the Michigan College of Medicine and Surgery, in Detroit, which is about to move into its fine new building at the corner of Porter and Second streets.

—Redard & Lillie will open a new store at Webster and Pine streets, Muskegon. It will be in charge of Joseph Bedard. The firm conducts a store at Fruitport, which is looked after by Clyde Lillie.

—Howard A. Blackmar has again entered the drug business in Charlotte, after an absence of seven years. Before he went away Mr. Blackmar conducted a pharmacy in the city for ten years. His new store is a beauty.

—The old Beedon drug store in Battle Creek has changed hands, its proprietor, B. N. Beedon, having sold the business to William Peet, who has been connected with the establishment, under Mr. Beedon, for several years.

—A Grand Rapids newspaper is running half-tone cuts and sketches of the young business men of western Michigan, who typify the spirit of hustle, and James A. Skinner, druggist, of Cedar Springs, appeared in a recent issue.

—The job of city pharmacist for Detroit is a position much sought, and there are a number of candidates for the honor this year. The chances favor the reappointment of Dr. J. W. Hoffman, who has held the place the past two years.

—The Drug Clerks' Association of Michigan gave a "smoker" one evening last week. The boys report that they had the time of their lives. The association is in a most flourishing condition, and new members are constantly being added to the rolls.

—Jennie Horlacher, a pretty young woman of Central Lake, brought suit against John Vaughn, druggist of Bellaire, alleging breach of promise to marry, and a circuit court jury rendered a verdict of \$4,000 in her favor. The case attracted wide attention in the State.

—W. K. Walker, who has been in charge of the drug store of the S. A. Martin estate, at Holland, for the past three years, has bought a store at Elk Rapids. Mr. Walker covered Michigan for Parke, Davis & Co., of Detroit, twenty years ago, and is a veteran in the drug business.

—W. H. Goodyear, who has been in business in Hastings the past forty years, has sold his stock to Arthur E. Mulholland, of Alma, and will take a well-earned rest. The new proprietor has already taken possession. He is a comparatively young man, and a clever pharmacist. He has taken to Hastings, as his chief clerk, T. W. Creech, a graduate and registered pharmacist, who was in Mr. Mulholland's employ in Alma.

TO CATCH FALSE DRUG MEN.

Reward Offered for Arrest of Man
Who Sold Bogus Aristol.

Chicago, June 10.—One hundred dollars reward is offered by Chief of Police O'Neil for the arrest of G. Ephraim, alias Eifer, who was indicted by the Cook County Grand Jury for selling adulterated aristol. He is described as a Polish Jew, speaking broken English; 45 to 50 years old; dark complexion; smooth shaven; dark hair; weighs 160 pounds; 5 feet 4 inches tall; high cheek bones; wears dark clothes; inclined to be slouchy; well known to drug stores.

Ephraim is a member of the "gang" of men who have been supplying bogus and adulterated chemicals, such as aristol, phenacetin, etc., to retail druggists. The operations of these swindlers have been quite extensive here. In a raid on the gang's headquarters, fully a ton of adulterated drugs was confiscated. Indictments were found against Edward H. Kuehnmstedt, 6323 Ingleside avenue; J. N. Levy, with a dozen aliases, 356 Dearborn street; W. G. Nay, alias F. B. Soper, 1452 Fulton street; Burtis D. McCarr, alias George A. Barton, 6113 Madison avenue; G. Ephraim, alias Eifer, 477 Ogden avenue. Levy is an ex-convict.

BIG SALE FOR DRY-SOLE.

The latest thing in the drug horizon of promising profit-producers is Dry-Sole—the liquid preparation which makes the soles of shoes waterproof and more durable.

An extensive advertising campaign covering all the leading magazines of national circulation is bringing the public to a realization of their needs for such a preparation. No person likes wet feet—and the mere suggestion of such a desirable and easy preventive as Dry-Sole has quickly brought a generous response from the public. This advertising campaign will create a demand on the druggists, which ought to make Dry-Sole a good article to put in stock. The terms on which it is sold insure a profit as high as 72 per cent., and the trade is always safe in stocking a well advertised preparation such as Dry-Sole, and it is best not to disappoint the first demand for it.

CENTAUR CO. WINS.

Detroit, June 5.—The Centaur Company, of New York, proprietors of Castoria, have been granted a permanent injunction against the Moxon Liniment Co., of Mt. Clemens, Mich. The injunction was granted in the Federal Circuit Court of Southern Michigan, on complaint of Charles H. Fletcher, president of the company, residing in New York, who charged the defendant company with imitating Castoria. Judge Swan decreed that the defendant company turn over for destruction, all wrappers, labels, electroplates, etc., and in lieu of damages, pay the Centaur Company \$250, besides all court costs.

—The Charles Ammen Company, Limited, has been incorporated at New Orleans, with a capital of \$10,000, to manufacture and sell proprietary medicines. This company is to be entirely separate from the retail business of Charles Ammen.

KRAMER AND MEYER

Now Officers of Lewis Mail Order Bank—Former Directors Ousted.

St. Louis, June 13. Two men well known to the drug trade have been interested in the expose of the methods of the Lewis Mail Order Bank, in this city, during the last week. H. L. Kramer, of Kramer, Ind., treasurer and general manager of the Sterling Remedy Co., was and is vice-president of the concern, and T. F. Meyer, vice-president of Meyer Bros.' Drug Co., was made a director when the Lewis directors of the institution were ousted. No charge of intentional dishonesty has been brought against the bank officials, but from the evidence gathered, it has been demonstrated that E. G. Lewis was planning the institution for a "one man bank" and he was to be that man. Mr. Kramer had not given his personal attention to the bank. The selection of Mr. Meyer as a director has given the investors assurance that the \$2,500,000 gathered in the institution by Lewis will be properly administered. The bank had investors from every state and city, more from other cities than in St. Louis, as the publications through which it was exploited by Lewis are not circulated in this city, where they are published, owing to the rules of the mails.

WORKING OF SERIAL NUMBERING.

St. Louis, June 6.—Local jobbers are not complaining as loudly about the serial numbering plan as was expected before the system was adopted by the additional manufacturers.

"I believe it is having a good effect," says Mr. Schell, of Meyer Bros. "The expense is not less than we expected. Two men devote their entire time to keep things straight and that is about what we looked for. My hope is that the manufacturers will not load the system down with the small sale remedies. The big ones ought to hold the prices up without trouble. I do not object to giving a manufacturer a place on the list, when he published no roster of agents and trades his remedies to newspapers for space. The requirements need some careful inspection and they may wear us out, if they throw the gates down completely."

Another man connected with the jobbing trade said he could name two dozen preparations to be placed on the list that would give the movement sufficient moral effect to uphold prices.

MIXED ON LYMAN-ELIEL.

By an oversight in the report of the change of the Lyman-Eliel Drug Co. to the Eliel-Jerman Drug Co., Minneapolis, we printed "George R. and Frederick W. Eliel" instead of George R. and Frederick W. Lyman, as it should have been. Both these gentlemen retire from the firm. J. C. Eliel and H. H. Eliel, formerly vice-president and secretary, respectively, become president and treasurer of the new firm. C. A. Jerman becomes vice-president and James Crays secretary.

AMONG THE COLLEGES

THIRTIETH COMMENCEMENT.

Sixteen Graduates Receive Diplomas—Phi Chi's Annual Banquet.

Minneapolis, June 2.—The thirteenth annual commencement exercises of the College of Pharmacy of the University of Minnesota were conducted Thursday, June 1. Sixteen students were awarded the degree of pharmaceutical chemist.

The address to the graduates was delivered by Senator Knute Nelson.

The commencement exercises began Sunday, May 28, when President Northrop delivered the baccalaureate sermon. Monday was given over to the senior class day exercises.

Wednesday afternoon the Alumni Association held its annual meeting in the pharmacognosy building. Officers for the ensuing year were elected and the graduates were initiated. In the evening the usual banquet was held at the West Hotel. Paul H. Kelly, '04, was toastmaster. The principal speakers were Dean Wulling, on the subject "Things for the Alumni to do" and the Hon. W. J. Stock, on "Pharmaceutical Legislation." Gustav Bacman spoke on "Post Graduate Courses for Pharmacists"; J. W. Crowe on "Higher Education"; F. J. Noer on "Our Duties as Alumni"; L. H. Robitshchek on "The Faculty"; and Mr. P. H. Vaughn on "The Class of '05." A smoker followed.

The graduates were: Irving G. Robitshchek, George E. Haines, Jr., W. M. Jones, V. E. Chelgren, E. L. Hoffman, John W. Crowe, L. H. Heribert, C. C. Adams, E. S. Dowman, A. E. Essen, Florence Foote, A. E. Ostrander, Albert H. Mueller, A. G. Phelps, P. H. Vaughn and Edward O. Lyders.

The Phi Chi men held their annual banquet at the West Hotel on the evening of May 5. About thirty active and alumni members were in attendance. I. H. Robitshchek proved a worthy toastmaster. The following men responded to toasts: L. M. Heribert, "Review of the Year's Work"; F. K. Butlers, "The Fellow"; A. L. Dortschko, "My First Impression"; P. H. Vaughn, "Members of the Active Chapter"; W. M. Jones, "Theta Chapter"; H. E. Peterson, "Our Intentions," and C. W. Traiss, "Relations of Chapters."

WINONA TECHNICAL INSTITUTE

Indianapolis, June 12.—This city now has an institution which is likely to prove a rival to the Purdue School of Pharmacy, at Lafayette. This institution is the Winona Technical Institute, a trade school which started a few months ago. On last Friday diplomas were conferred upon fourteen pharmacy graduates, as follows: J. E. Ergenbright, Arkansas; J. M. Riebeck, Vermoo Parker, O. P. and E. Weakley, W. Va.; N. R. Conwell, J. L. Mauk, W. G. Miller, Edward Wagner, Roy McLain, N. W. Long, A. C. Coraet, Lottis Vaughn, E. Turner, Indiana.

CINCINNATI C. P.

Graduates Advised Not to Foster Crime by the Sale of Subtle Alkaloids.

Cincinnati, June 13.—The thirty-third annual commencement exercises and banquet of the Cincinnati C. P., were held last Thursday evening, in the convention hall at the Grand Hotel. Rev. Robert Watson opened with a prayer and closed with the benediction. Dr. Louis Schwab spoke on behalf of the college and Prof. Charles T. P. Fennel on behalf of the faculty. Prof. Fennel gave wholesome advice to the young graduates, and in passing paid an eloquent tribute to the late Prof. A. W. Bain, who for thirty years was the secretary of the college. Dr. Schwab said in part:

"Young men, never be guilty of willfully selling to your fellow creatures the least fragment of a drug that you believe will tend to destroy them.

"Let not your eagerness to acquire money lead to the indiscriminate sale of agents whose effect upon the human system is such that reason is impaired, mental excitement aroused and the victim led to acts of violence to his fellow man or upon himself.

"The police statistics record increasing crime due solely to the use of cocaine.

"In the general walks of life crime is fostered by the use of subtle alkaloids, whose baleful effects create uncontrollable frenzy.

"I am proud to say that the Ohio Pharmaceutical Association, in 1900, while considering the defeat of a legislative bill which sought to restrict cocaine selling, pledged itself to support a moral law to elevate the condition of their fellow-creatures by its restriction, in so far as it could compel it."

During the banquet that followed, Dr. Chas. Bonifield, Attorney R. G. Williams, Prof. John Uri Lloyd and Matthias E. Schwab responded to toasts. Dr. Julius Eichberg proved an excellent toastmaster. Music was given by the Eldorado Musical Club.

The prize winners were: Earl Lee Barton, prize in chemistry, given by Prof. Charles T. P. Fennel; H. Fenton Emerson, college prize for best average; John A. Hoffman, prize for practical chemistry, by Prof. John Apmeyer; Miss Bertha Ott, prize for microscopy; Roscoe Conklin Pryse, prize for materia medica, and Huber Serodino, prize for botany, by Prof. Adolph Leue.

The following were the graduates: Earl Lee Barton, Louis A. Bentler, Chas. A. Blankenhuehler, Walter A. Braunlin, Matthew S. Bronson, Hugh Joseph Brune, Jerry Carr, Elizabeth Lawler Clark, Abner J. Curtis, John Marion Depauw, Waldo E. Drummond, H. Fenton Emerson, Frank Thos. Gehring, Clifford G. Hambo, Lewis Wade Heizer, John C. Helmsdorfer, John A. Hoffman, Helen Louise Hunter, Henry Conklyn Keve, Luther Talmadge Kinnett, Ernst C. Klein, Louise A. Loecheinfeld, Arthur F. Lommel, William H. Mayo, Jr., Scott T. McGonal, Bertha Ott, Thomas H. Plummer, Roy L. Price, Roscoe Conklyn Pryse, Vincent Rhein, Frederick R. Riggish, Augusta M. Roeger, Matthias Ed Schwab, Huber Charles Serodino, Chester

JUNIOR CLASS 1905, SCHOOL OF PHARMACY, STATE UNIVERSITY, SEATTLE, WASH.

F. Spearing, Alexander H. Vossmeier. The annual election of officers of the alumni association was held last Wednesday, in the college building. President Wm. H. Gansz was re-elected. The other officers chosen were: M. Schwab, vice-president; Charles Bromley, secretary, and Fred Kotte, treasurer. The new graduates were then admitted to membership and a committee was appointed to draft a suitable memorial for the late A. W. Bain.

UNIVERSITY OF WASHINGTON.

Seattle, Wash., June 9.—The University of Washington has, for size and natural beauty, a campus that it would be hard to duplicate. The campus consists of 340 acres, which abound in vegetation, the variety of which is nowhere to be found north of California. The campus has about a mile of water front along the shores of Lake Washington, a lake thirty miles long and from five to six miles wide. Along the water front there are several peninsulas and these have been turned by the students of the different schools into picnic grounds. Not far from the Administration Building there is a huge natural amphitheatre.

The faculty, to encourage the beautifying of the grounds, set aside one day of each year for work on the campus, when the whole student body turns out in old clothes, each armed with axe, brush hook, shovel, etc., to make new paths and to extend the old ones. The pharmacy school was detailed to extend and improve the trail to one of the peninsulas on the lake shore, known as "Pharmacy Point." Several rustic seats were built and a sign placed along the trail, so that no one need

be lost (this meaning visitors) in their endeavor to find it.

The new catalogue for the school of pharmacy is out.

Commencement exercises will be held on June 14. The graduation class is small in quantity but excellent in quality.

N. D. AGRICULTURAL COLLEGE.

Fargo, June 12.—The North Dakota Board of Pharmacy held its examination of applicants for registration, in the Science Hall of the college, May 25. T. A. Findley and I. Bannister, both students of the School of Pharmacy, were among those who successfully passed, the first-named carrying off the honors of the examination.

The class numbered fifty-three, of whom six passed as entitled to be registered as pharmacists and fifteen will be registered as assistant pharmacists. Those registered as pharmacists are: T. A. Findley, Westhope; R. Bennett, Willow City; J. G. Cowan, Carrington; E. E. Clemens, Jamestown; I. Bannister, Flaxton; A. S. Sigurdson, Valley City. Assistant pharmacists: J. C. Reinson, Park River; A. L. Rachac, Fargo; Nelle E. Buck, New Rockford; W. R. Campine, Westhope; C. A. McKay, Langdon; H. N. Bjornson, Kulm; Olof Almiklov, Portal; H. T. Francis, Langdon; Geo. A. Richards, Granville; O. O. Stind, Sherwood; G. M. Shephard, Glasston; F. A. Scheuble, Dazey; Robert Swanlow, Milton; E. J. Skjold, Winnipeg, Man.; Joe Hayes, Hecla, S. D.

While the class examined was the largest in the experience of the Board, the number of successful candidates is not the

largest at any one examination. The Board aims to keep the examination up to the standard and seeing that applicants are thoroughly qualified to enter the work. There are now about 300 registered pharmacists in the State. The next meeting will be held in Fargo, September 19.

DETROIT, C. P.

Detroit, June 13.—Commencement exercises at the Detroit College of Medicine were held last week, in Harmonie Hall. A representative audience was in attendance. There were twenty-eight graduates, eleven pharmacists and seventeen dentists. The class and faculty made an impressive picture ranged in a semi-circle around the stage. The exercises consisted of prayer and address by Rev. John Munday; conferring of degrees by President Sidney Miller; presentation of registration certificates by C. J. Gray, D.D.S., of the State Board of Dental Examiners; valedictory for the department of dental surgery, by C. W. Colter, D.D.S., and for the department of pharmacy by L. A. Seavich, Ph.G., these numbers being interspersed with vocal and instrumental music. At the close of the exercises the pharmacy graduates banqueted at the Hotel Metropole. They were: C. M. Coons, A. W. Gunn, E. Hammon, E. M. Herrick, G. W. Hill, E. M. Jones, L. Krenger, A. Paton, W. C. Scott, L. A. Seavich and W. Thonczek.

—William H. Davis, a prominent druggist of Fall River, Mass., fell dead in his store, last week. Mr. Davis was only thirty-six years old. He was born in London, Eng. He left a widow and two children.

TRADE SECTION

GERMAN ESSENTIAL OILS.

Steady Increase in That Branch of the Chemical Industry.

SEMI-ANNUAL REPORT OF SCHIMMEL & CO. IN USUAL INTERESTING FORM.—DEPLORES RUSSIAN TROUBLES.—SCATHING REMARKS ON AMERICAN CUSTOM REGULATIONS.—1904 MORE PROSPEROUS THAN 1905 MAY PROVE.

A good deal of interesting light is thrown on the condition of the German chemical industry and considerable useful information on recent investigations in connection with essential oils, both from a scientific and commercial standpoint, is given by the semi-annual report recently issued by Schimmel & Co., and distributed in this market by their local representatives, Fritzsche Brothers. On the whole the German chemical industry, especially that portion of it connected with the production of essential oils, appears to be in a prosperous condition. This was especially true of the year just past, 1904. The present year has not opened so auspiciously, the two chief adverse influences being the upheavals in Russia, due to internal troubles and the disastrous war with Japan, and the inauguration of several commercial treaties or the imposition of new import duties which are objectionable to the German trade. The tone of the remarks on the Russian situation are noteworthy, as they are decidedly friendly, showing repeated evidence that German business men, at least in the chemical industry, regard Russia as an exceedingly valuable customer and one to be catered to in every possible way.

"We believe," says the report, "that every duty on raw material imported for use for manufacturing purposes is to be regretted." This remark is called forth by a consideration of the fact that the German tariff has been revised in several particulars. One of these is the increase of the duty on seeds, anise, fennel, coriander, caraway, etc., from the old basis of three marks per 100 kilos to four marks. Under the new regulations, seeds for use in extracting essential oils are admitted by Germany free of duty under the regulating control of the custom authorities, but it is evident that the manufacturers consider this provision of little real value, as they are not allowed to sell the residues after distillation for food for cattle, a custom which has formerly netted very considerable returns.

As to the German tariff on essential oils themselves, the inauguration of new commercial treaties with Italy and Russia has left details on the following basis: If the essential oils come from either of these two countries just mentioned, a duty of 20 marks per 100 kilos is exacted, while importations from all other lands require the

payment of 20 to 30 marks. The same terms have been put in force for menthol in the form of migraine pencils. Turpentine and pine needle oil remain free of duty as formerly. Artificial perfumes are now assessed at 80 marks per 100 kilos. This classification includes vanillin, coumarin and heliotropin. Previously vanillin paid 50 marks and the others were free of duty.

Changes in the tariff regulations of other countries have been fairly numerous. In Roumania the rate on artificial perfumes has been raised from 12.50 lei per kilo to 20 lei. The changes in the duty exacted by Austria-Hungary on imported oils has been revised to the following basis:

1. Oils from citrus fruits (sweet orange, lemon, bergamot, etc.), oils of bitter almond, cajeput, cedarwood, melissa, mustard, peppermint, sandalwood, sassafras, hitherto 15 gold florins, now 36 florins.

2. Other oils, not specially enumerated in the general tariff, hitherto 25, or under special treaties 15 gold florins, now 60 crown.

The paragraph on the American tariff we quote verbatim, for it is always interesting to know what others think of us. "The sale of our (German) products to the United States of America was exceptionally important and remunerative. The trade with this country is impeded by all kinds of petty regulations by the American customs respecting the making out of consular invoices. Since some time, these invoices must contain not only details of the goods themselves, but also of the bottles, cases, corks, metal capsules and even the labels on bottles—paltry matters which are absolutely of no consequence. These regulations are unique in the world."

The inauguration of a tariff on imported printed commercial matter, price lists sent open, etc., by Australia is spoken of in the report. The Era has previously informed its readers of this regulation.

As to German trade with France, there is a good deal of complaint of "arbitrary" tariff classification of various products by the French officials. The Schimmel report waxes so eloquent over one of these cases that it is enough to suppose that the firm of Schimmel were the importers. "Amethol was recently declared a chemical product," says the report, "whereas it is nothing but a purified anise oil. The method of preparation is considered analogous to that of eugenol, which, however, as is well known, is not produced mechanically, but by chemical process, by means of the sodium compound."

Another case of French decision considered unfair by Schimmel was one made by the custom authorities at Reully-Paris, which held that a consignment of camphor was a synthetic product and so should pay the usual penalty. This camphor, the German firm states, they make from camphor oil, as a sort of by-product. Anyway, it is claimed that artificial camphor is not yet an article of commerce, still belong in the experimental stage. All processes for manufacturing the synthetic are

patented and yield a product quite different from that involved in this case. At least that is what is stated by Schimmel, who produced it. They claim that it still contains traces of camphor oil, which renders it undesirable for anything except technical purposes. Further, that synthetic camphor, being optically inactive, can be readily distinguished from the natural dextra rotatory camphor, and on these grounds it is hoped that a revision of the decision will be obtained through the expert opinion of such eminent French chemists as Professor Dr. Haller, of the Sorbonne, Paris, who has himself been the author of several valuable works on camphor.

The Japanese side of the war is not to be found featured to any extent in Schimmel's report. It is mentioned, however, that German trade with Japan has increased since hostilities commenced and that as that country had imposed increased duties on imports to raise revenue for war expenses, the buying of supplies in advance of the date of inauguration of this measure had been very considerable. A few other countries are mentioned with regard to trade conditions, among them Argentine and Mexico, in both of which business, that is, German business, is increasing.

The weather of the world for the past six months is generalized in the description "normal." The one serious climatic irregularity mentioned is that much damage was worked by cold in the south of France during January.

Our German friends wax quite eloquent over the increase in the adulteration of essential oils. The practice is said to be more wide-spread. The Schimmel firm operates a chemical analytical laboratory for the testing of samples for themselves and customers and in this many products of supposedly reliable houses have been proven adulterated. The remarks on this subject end with a pretty clear threat to publish some of these results unless the practice is given up.

The death of Dr. Friedrich Hoffman is fittingly recorded and a handsome tribute is paid to his ability, his work, and his personality.

The remainder of the report, which is gotten out in its usual neat form, is devoted to digests and abstracts on various essential oils and their raw materials. There is a great deal of pharmaceutical, chemical and commercial information in these pages. A large portion of the more scientific points related are the results of original researches by the Schimmel firm. To these are added the best new developments of the year, from whatever source, as long as it has any bearing on the situation in essential oils. Thus the report contains a real epitome of the scientific progress of the world in this special branch of activity. In short, the report is just as able and interesting as it usually is. It would be carrying coals to Newcastle to explain fully to the drug trade concerning something so well known.

THE SPONGE FISHERIES OF FLORIDA

Methods of Gathering and Preparing, with Description of Various Varieties of Sponge.*

How the Vessels are Rigged and Operated—Wages and Division of Profits—Production of Various Varieties and Prices Realized from Sales—Occasionally Gathered in Foreign Waters by Americans—In past years Supplies were Abundant but now Declining.

There are two well-defined areas of the Florida coast in which sponging is prosecuted.

A chain of "keys," or islands, starts from the mainland at about Miami, on the east coast, and extends, in the shape of a horn, far into the Gulf of Mexico, the Dry Tortugas being the westernmost point of the horn. In the waters surrounding most of these keys, and also between the keys and the mainland as far as Cape Sable, sponges are found. This is called the "key grounds" and is worked exclusively by spongers from Key West and the few inhabitants of the many keys. The earliest sponging was on these grounds.

The "bay grounds," which are the most prolific, are on the west coast, in the Gulf of Mexico, and extend from John's Pass, a few miles north of the entrance to Tampa Bay, to St. Mark's lighthouse, a distance of about 200 miles. Sponges are also found in the gulf between Tampa Bay and Cape Sable, but not in sufficient quantities to justify making trips specially to this region.

The sponges taken from these grounds are classified as follows by the spongers and buyers: Sheepswal, yellow, grass, velvet or board, and glove. A few other unimportant kinds, such as "wire," "hard head," etc., are generally included with those previously mentioned.

TYPES OF SPONGERS' VESSELS.

Vessels of a schooner or sloop rig, ranging from five to forty-six tons (averaging slightly over eleven tons), operate chiefly on the "bay grounds," while small sloops, usually of less than five tons burden, work mainly on the "key grounds." The larger vessels, which average about \$1,168 in value, exclusive of outfit, carry from five to thirteen men, while the smaller vessels, which average in value about \$783, including outfit, carry crews of from three to five men.

The larger Key West vessels make three to four trips per year to the "bay grounds," and some of them make one or two trips to the "key grounds." Each "bay" trip occupies about two months, while the "key" trip is made in about a month. The Tarpon Springs and Apalachicola vessels average about five trips each year, each trip occupying about two months. None of these latter vessels visits the "key grounds."

The "bay" trips are usually arranged as follows:

The first trip begins about the first week of January, and ends from the 10th to the 20th of March, the spongers working from the mouth of Anclote River to St. Martin's Reef, about forty miles. Many of the vessels do not make this trip, as the weather is usually cold and windy.

The second trip begins about April 1 and ends from the 10th to the 20th of June. The grounds between John's Pass and Cedar Key are visited during this trip.

The next trip begins about July 1 and ends from the middle of August to the 1st of September, and is also carried on between John's Pass and Cedar Key. This is usually the best trip of the year.

The fourth trip is called the "hurricane trip," from the fact that it is prosecuted during the hurricane season, and lasts from the middle of August to about the 10th of October, the same grounds being visited as on the two previous trips.

The last trip usually begins the early part of November and ends December 20, the Rock Island grounds being visited.

A number of the vessels wait previous to the last trip, while other wait until the first two months of the year for this purpose.

DIVISION OF PROFITS.

The crews work on shares. The owner, or "outfitter," furnishes the food, fuel, boats, apparatus, etc., for the trip. While sponging in the "bay" each member of the crew is assessed thirty-five cents per trip for watchman's fee at the "kraals," and fifty cents per trip for wood. After deducting these two items from the gross proceeds of the trip, the vessel takes half of the remainder, and the other half is divided up equally among the crew. Besides his regular share with the crew, the captain gets 10 per cent. of the vessel's share, and each "hooker" gets one-fourth of one share from the vessel's portion. Should the captain also be a "hooker," which is generally the case, he only gets his regular 10 per cent.

The same division of proceeds is followed on the "key" trips, except that there are no charges for watchmen and for wood. The men generally camp on the keys where wood and water are convenient, and as settlers are scarce in this region the "kraals" do not have to be guarded.

The only apparatus used in this fishery is the sponge hook, a three-tooth curved hook attached to poles of varying lengths, according to the depth of the water in

which the sponger is working, and the sponge glass—a common water bucket with the bottom knocked out and a pane of window glass substituted. The latter is used for seeing below the surface when the water is disturbed by ripples.

A sponge "kraal" or pen is generally about ten feet square, built of watted stakes, and is placed in shallow water in the shelter of some key or island. Each vessel usually owns one, and for better protection from thieves, a number of them are congregated at some convenient place and a watchman employed to guard them. For a number of years many of the "bay" spongers had their kraals at the north end of Anclote Key. As these were exposed to the full force of the wind when blowing from certain directions, considerable loss was sustained on several occasions by the storms washing the sponges out of the kraals and carrying them out to sea. Owing to this the kraals were removed in 1890 to Bailey's Bluff, on the mainland about two miles north of the mouth of Anclote River. The latter are sometimes called the "cabbage kraals," from a large cabbage palm standing on the beach just opposite the kraals. At Bailey's Bluff there are about eighty-five kraals, while at Sawyer's there are about forty. A few kraals are also located at North Key, close to the town of Cedar Key. This was at one time a very important kraaling place.

GATHERING AND PREPARING.

Kraals were also located at Rock Island and near St. Mark's lighthouse at various times.

The key spongers build their kraals at various places, no effort being made to keep them together, as in the "bay." The spongers usually select a convenient key and make their camp on shore, and build their kraal in some sheltered cove close to the shore. They sniffer very little from thieves, so do not require watchmen. Should the key have any inhabitants, these usually watch over the kraal.

When first brought to the surface, the sponges are black and slimy. As soon as a dingy has secured a load it is sculled to the vessel, unless the latter is too far away, when she sails down to the boat, and the load is transferred to the deck of the vessel. They are then spread carefully over the deck in their natural upright position, so as to allow the slimy matter, or "gurry," to run off easily. At first they have a strong ammoniacal smell, exceedingly disagreeable to those unaccustomed to it; but this is soon succeeded by a scent very similar to that of decaying seaweed. After several days' exposure on the deck, the sponges die and a good part of the "curry" runs off. In the "bay" the vessels usually return to the kraals every Friday. The sponges are then transferred from the vessel to the kraal, where they are allowed to soak until the vessel returns from the next week's trip. Those brought in the previous week are then beaten out with a short, heavy stick, which removes most of the slime and animal matter still remaining in them, while those to which the black scum still adhere are scraped with a knife. The sponges are then squeezed out quite thoroughly with the hands, after which they are removed to the shore and strung on pieces of coarse twine about six feet in length, in which shape they are ready for sale. All sponges are sold by auction.

*By John X. Cobb, Agent of the United States Fish Commission.

VESSELS AND KRAALS AT BAILEY'S BLUFF.

SPONGES GATHERED IN FOREIGN WATERS.

In September, 1900, the schooner *Serafina C.*, of Key West, made a trip to the Mosquito Coast of Nicaragua, and brought back about 1,916 pounds of sheepswool sponges and forty-four pounds of velvet sponges. Most of these were taken in water shallow enough to permit of the sponges being secured by wading. No effort was made to gather other kinds, as they would not have sold for enough to pay for the collecting. The sheepswool and velvet sponges were of an inferior grade. On landing the sponges at Key West they were compelled to pay duty on them. Owing to the success of the *Serafina C.*, several other vessels have since been working on these grounds. For some years past Key West vessels have made occasional visits to these grounds, the schooner *Sea Gill* having been wrecked while returning from such a trip in 1886.

Shortly after the close of the Spanish war, one or two of the vessels visited Cuba and brought back a few sponges. These were not gathered by the crew, however, but were purchased from the natives. As they were of an inferior grade, and duty had to be paid upon them, no effort was made to continue the business.

PREVIOT'S ABUNDANCE.

The Key West sponge forms now the greatest portion of sponge sales. Cedar Key and St. Marks have dropped out of the fishery entirely, while Tarpon Springs and Apalachicola have decreased slightly since 1897, so far as the quantity is concerned.

The catch for 1900, in both quantity and value, exceeded that for any other year for which figures are available. The catch of sheepswool sponges for 1900 is lower than for 1895, but higher than for the other years. The value of this kind has increased very much, however. The catch of yellow sponges increased nearly 50 per

cent., while the catch of grass sponges has almost doubled since 1899.

As far as values are concerned, the most noticeable features are the great increases in value of the sheepswool and the yellow sponges. While the sheepswool has been steadily increasing in value for years, the yellow suddenly jumped from twenty-nine cents per pound in 1899 to fifty-nine cents in 1900. In 1901 they soared higher, some lots being sold on the Key West sponge wharf for an average price of about \$1 per pound. This increase is accounted for by the fact that the high prices prevailing for sheepswool sponges has caused many people to use yellow sponges in their stead for certain purposes. The general average for all kinds is also the highest for the period under question.

While the average catch of sheepswool has been decreasing, the average value has remained about the same. In 1900 the average value of yellow sponges is the highest of any previous year. The grass sponges show an increase in the average quantity over all other years, except 1897, which was an exceptional year for this kind.

BOER WAR SPECTACLE.

Realistic and complete in detail is the Boer War Spectacle which is being produced at Brighton Beach Park this season. A short but comprehensive introductory scene is followed by the battle of Colenso, in which the Boers were victorious. The defeat and surrender of Cronje in the battle of Paardeberg and DeWet's miraculous escape terminate the entertainment, in which over a thousand horses and men are actively engaged the greater part of the time.

Colonel Harrington, the South African explorer, procured a number of pygmies from the Great Central Forests while

there, and six of the number will be exhibited at the Brighton Beach Park in the near future, for the edification of naturalists and the public.

ABOUT FISHING TACKLE.

Whether a fisherman be an expert or the veriest tyro, there is nothing so aggravating as tackle which breaks at the supreme moment when the man behind the reel is about to land his catch. It is always the biggest fish that gets away, and when it is lost through defective tackle, it is the man who sold the tackle who comes in for the condemnation. Pfueger's fishing tackle, which is advertised in another column of *The Era*, is recommended as the sort which every druggist, who handles fishing tackle, should buy, if he wants to make sure of landing his customers. When they find the tackle will hold they will buy a second time, and excuses for poor tackle will not have to be made. Hooks, flies, lines, trolly, phantoms, spinners, reels, furnished lines, and in fact everything needed by the most enthusiastic disciple of Izak Walton, is supplied by the Enterprise Manufacturing Company, Akron, Ohio, which makes the Pfueger tackle. An illustrated catalogue, metal sign and an eight-color window transparency will be sent to all dealers in sporting goods.

IMPORTANT ANNOUNCEMENT.

The American Peroxide & Chemical Co., 88 Mulden Lane, New York, has requested us to announce that a change has occurred in the management of that company, Mr. E. B. Carroll being now vice president and general manager.

They are ready to receive orders from the trade for the "American Brand" of peroxide of hydrogen, or for peroxide of hydrogen of guaranteed quality, bottled under the dealer's own label.

APPRAISERS' DECISIONS.

H. Kohnstamm & Co. imported at New York, November 28, 1904, certain merchandise invoiced as "Extract d'Orseille B crist," upon which duty was assessed at 30 per cent. ad valorem. The importers claimed it was free of duty as "orchil or orchil liquid." The Board of General Appraisers found from the evidence that the article was in small, irregular particles of a dark green color with a metallic luster, is made from a crude fluid extract of archilla weeds (*Roccellinctoria* or *R. Fuciformis*), fermented in the presence of ammonia and containing more or less woody fiber. By the use of diluted sulphuric acid and filtering, the woody matter is removed; then a powder is precipitated and dried. This orchil powder is treated with fuming sulphuric acid, and the sulphonated article in question is the product. The sulphonation of orchil changes its constitution, and the product is an acid color or dyestuff soluble in water. It is not the orchil or orchil liquor provided for in paragraph 628 of the tariff, which are crude products from which coloring matters are formed.

The invoice heading of the manufacturer contained a description of the goods in French, which the Boards translated as follows: "Orchil and extract of orchil, for dyeing and printing. Special extracts of orchil, for the coloring of edible goods." This, with the invoice description and other evidence, was conclusive of the correctness of their finding in the Board's opinion. The protest was overruled and the importation held dutiable under paragraph 58, as a color.

Gauge of Whisky in Bonded Warehouse.

The Board of General Appraisers has decided that imported whisky which has been entered in bond for warehouse is properly assessable for duty on the quantity of the whisky as ascertained at the time of entry in bond, and not upon the quantity as shown by the gauge of the whisky at the time of the withdrawal from bond.

Liquidation—Severable Causes of Action.

Many of the various claims or demands which may arise from a single liquidation of an entry by a collector are severable causes of action and may be made the subject of separate protests, which may be considered and decided at different times.

Finality of Board Decision—Not a Bar to Proceedings under Pending Protests in Certain Cases.

A decision of the Board sustaining a protest is not a bar to further proceedings under another pending protest against the same liquidation and covering the same and other merchandise, but raising a question which was neither expressly nor necessarily determined in the decision of the former case.

Reliquidation under Board Decision—Effect upon Pending Protests.

A reliquidation of an entry by a collector to execute an order of the Board of Gene-

ral Appraisers sustaining an importer's protest is not a "decision of the collector," within the meaning of section 14 of the customs administrative act. It will give no new right of protest nor invalidate another protest filed against the original liquidation.

Rights and Liabilities on Abandonment of Goods in Bonded Warehouse.

Imported tobacco which has been produced in and exported from Cuba, and which has been placed in public stores or bonded warehouse and has remained there three years without being withdrawn is regarded as abandoned to the Government, and may be sold under such regulations as the Secretary of the Treasury may prescribe, and the proceeds paid into the Treasury.

The convention between the United States and the Republic of Cuba having been proclaimed by the President, and put in force and becoming operative on December 17, 1903, during the period of the three years while such merchandise remained in bond and prior to the date of abandonment, the dutiable character of such tobacco is governed by the provisions of such treaty. The rights and liabilities of both the Government and the importers were fixed at the time of such abandonment.

A protest claiming that such tobacco is subject to a reduction of 20 per cent. of the rates of duty provided for in paragraph 213, tariff act of 1897, under the provisions of said treaty, held to be tenable and will be sustained.

These rulings were given by the Board of General Appraisers in the case of importations of tobacco from Cuba by Chas. B. Lewis, at Boston. The goods were imported in January, 1901, and entered for rewarehousing in the months of February and May, 1901, respectively. The portions of these entries involved were withdrawn from warehouse on September 6, 1904, more than three years after the date of being placed in bonded warehouse.

Ground Kalksoar.

F. H. Shallus imported at Baltimore ground kalksoar, which was classified as gypsum calcined. The importer protested it was dutiable at a less rate as an unenumerated manufactured article. The Board sustained the protest.

Cologne Bottles.

Certain cologne bottles imported at Chicago by A. C. McClurg & Co., were classified as composed in chief value of cut and ground glass. On examining the protest of the importers, the Board decided they were dutiable as manufactures of metal, as composed in chief value of silver.

Cosmetic—Toilet Preparations.

The Board affirmed the assessment of duty on merchandise imported by E. Utard, at New York, and invoiced as "cosmetique" which was classified under the paragraph of the law for cosmetics and other toilet preparations. The importer contended that it was free of duty as a product of petroleum. An analysis failed to reveal indications of ingredients derived from petroleum.

Smokers' Articles.

Smokers' stands imported by R. F. Downing & Co., equipped with metal trays, cigar cutters, etc., also wooden pipes or cigar holders, were assessed as smokers' articles.

RUBBER GOODS NOVELTIES.

With a Reply to Some Unjust Remarks on the Thermalite Bag.

Two new designs in hot water bottles have recently been put upon the market. The first is characterized by a series of ribs made of rubber, which extend right across the surface of the bag. There are four of these and they are supposed to stiffen the bag enough to make it retain its shape, whether full or only partly full. This scheme also makes it easier to keep the bag in place on the patient's body when it is in use. The other appears to possess little real merit, but it is certainly novel. It is made to resemble a fish. The mouth of the bottle protrudes through the mouth of the fish. The surface of the fish bag is covered with scales (rubber, of course) and fins project at the sides like handles. The tail is bored with a hole, so as to permit hanging the bag by it.

Another perfume demonstrator has appeared. It is intended for the convenience of dealers who are demonstrating perfumes to customers. For it is claimed economy of perfume as well as speed. A seamless rubber bulb is attached to a spraying tube. The drops of perfume in the tube, after demonstration, need not be wasted, for by compressing the bulb with one finger over the spraying point, all the fluid in the tube may be returned to the bottle, saving one or two drops each time, an important matter in the case of an expensive perfume. Insecticides, deodorizers or disinfectants may be sprayed in solution with the same appliance.

These articles are described in the India Rubber World for June. In the same issue the World has an article on the Thermalite Bag, with which all readers of The Era are already familiar. Following the description is an interview with one of the leading manufacturers and marketers of rubber hot water bottles, which is so interesting that we quote it:

LOOKS LIKE FEAR OF A RIVAL.

"I cannot see," said the manufacturer, "how the Thermalite bag will menace the supremacy of the hot water bottle. It is novel and to my mind its chief claim to attention lies in that characteristic. It cannot be any cheaper, as the rubber bag used costs as much as if it were to hold water, while the chemicals are certainly as expensive as hot water. Then, too, it is a bother to get a big kettle of water and set it boiling for the purpose of getting the heat into the Thermalite. It would seem to be much simpler and quicker to fill a bag with hot water, which in the modern home is always on tap. The point in favor of thermalite which occurred to my mind when I first had it brought to my attention was that it was a solid, and therefore could not flow out of a leaking bag. But as I now understand it, that solid, when hot, is liquefied, and only regains its solid form when it gives up its heat. Personally I should be just as willing to be sealed by hot water as hot melted salts, although with high grade bottles neither is necessary."

Another important manufacturer in the same line said "that he believes the success of the new article would be found to lie in the selling organization of the company marketing it. Marked selling ability

might succeed in bringing about a large demand. In this event the rubber trade would not be sufferers. His own firm had already made some of the Thermalite bags."

Very interesting, but some exception may be taken to a number of points. It certainly does menace the supremacy of the hot water bottle for several good reasons, as is proved already by the great demand for it. There seems to be some evidence of fear of the new rival and a very natural attempt to make light of its merits while seeking faults in it. But there are none to find. It is novel. But it lives up to all claims made for it when in actual use. It can be used when wanted without immediate preparation and with the loss of hardly any time. It gives out a better, longer sustained and dryer heat than a hot water bottle could ever hope to. It does not lie on a patient like a clammy, loathsome corpse in the early morning hours, when no one is near to remedy, as the hot water bottle does. When it is cold it is not unpleasant to touch or sight. It fits itself to the patient's form closely and comfortably. It does not drop all over everything, and it does not have to be filled.

THE ADVANTAGES OF THERMALITE.

Certainly the Thermalite bag is no cheaper than the hot water bottle; the wonder is that it is as cheap, when its advantages are considered. Its worst enemies cannot say it is expensive. It can hardly be any more bother to put the Thermalite bag into a kettle of hot water than to draw hot water from the tap. If there is no hot water in the pipes of the house, water must be boiled to fill an ordinary hot water bottle with just exactly the same amount of trouble as boiling the Thermalite bag requires. If it is a city apartment and hot water can always be had (and how many apartments we all know which are not so blessed) it is just as easy to heat the Thermalite bag by holding it under the running hot water as it is to fill a hot water bag. No, the trouble is just the same in either case. And the advantages of the Thermalite bag should be considered. It does not have to be filled or prepared as often as the old style bottle by a difference of two to one. It can be prepared for future use while the hot water bottle must be used at once. It can be taken off the chair, without rising, and the heat turned on immediately.

As to the point of Thermalite being a liquid when ready for use and so being able to flow out and scald the patient: that is absurd. True, it is in a liquid state, but when thoroughly liquid it is cold, and it is while it is solidifying that it gives off its heat so that in a very little while it is too solid to flow from any ordinary aperture. As to the hot water bottle, it is well known that they some times do break. And it is a certainty that if the impossible should happen and the Thermalite leak out, it would not run all over everything the way hot water would, and the damage being confined to a smaller territory, would be more easily remedied.

The second manufacturer was right. The management of the Thermalite Company has marked selling ability, and is creating a widespread demand. But it is not all due to management. The bag has great merit.

SHOW WINDOW FEATURES.

When Original Ideas Are Exclusive
Try a Color Harmony.

SEVERAL INGENUOUS DISPLAYS.—A LAUNDRY SCENE; TUB, LINEN AND ALL SIGNALIZES A NEW ENTERPRISE.—FEATURING SUMMER STATIONERY.—REFERENCE TO WELL-KNOWN TOPICS OF THE DAY ALWAYS ATTRACT ATTENTION.

Ranney's Pharmacy, 27 Pearl street, New York, has been remodeled. All the fixtures and features pertaining to the old store are gone. Large new show cases of the silent salesman type greet the eye as one opens the door. A new soda fountain has been installed. These modern fittings, with the fine linoleum on the floor gives as pleasing an impression as is created by any upper Broadway store.

In one window is a display of violet ammonia which is featured by the use of violet crepe paper. This covers the floor and raised stands. In the form of a fringe two inches wide it covers the moulding of the window frame and so borders the whole display. The first row of bottles is prone, the next slightly elevated, their corks touching the base of a two-step platform upon which is one row of six bottles, and on the top eighteen bottles in a double row, there being six facing the street and six facing the store, while two at each end complete a long rectangular formation. Violet electric bulbs are arranged at regular intervals in the crepe fringe. There is one white bulb in each corner. By a device contrived by Mr. Renney, the current is so regulated that as one set of bulbs lights up, the other darkens. This intermittent light gives a very pretty effect at night. The second window has the electric display, but the bulbs are red and white, as they are aiding in feeding callisaya. This window has red crepe paper of the same color as the goods. The general arrangement is the same as in the other display. One peculiar line of trade supplied at this store is the furnishing of medicinal supplies for ships.

BETTER THAN POOR DISPLAY.

Heydenrich Brothers, 167 Atlantic avenue, Brooklyn, have extra large show windows of good depth, but do not attempt displays. The firm's policy eliminates them. The floors of both the corner and the Atlantic avenue windows are tiled in blue and white, with a walnut color border to match the fixtures. Standing in the center of each is a large, square, silent salesman, filled with sponges after the German style. These are reinforced by eight large show bottles, two to a window. An artificial potted palm stands on the top of each case of sponges. All this is because the firm does not care to boom side lines, seeking chiefly a prescription business.

The Alper's Pharmacy, Broadway and Thirty-first street, Manhattan, is calling attention to an own make lustered foot powder by a good window. The floor and draperies are pure white. The containers are white with orange colored covers which, when fitted on, extend down over

about one-third of the box. These cartons are similar in style to a talcum powder box, but are square. The goods are arranged in a conventional style, three pyramids, flanked by lesser groups. It is the combined effect of orange and white, also the feature of the decoration scheme of the soda fountain within, which attracts the eye.

F. L. Chambers, 782 Fulton street, Brooklyn, devotes both windows to a malted milk. They are arranged exactly alike. The floor is covered with dark red crepe paper. There is no background. In each window are two show bottles, mounted on high pedestals. The formation of the white cartoned goods suggests a piece of honey comb. This is achieved by placing the first square carton with its angle to the street. The second row has three cartons, the next five, and so on until the base is complete. On top of this is built the second layer in the same manner, which leaves small open spaces between the units. The plan is closely followed until the comb is finished off with one carton on top. There are no cards to tell the price or describe the virtues of the goods exhibited; the fact that they are generally well known seems to be thought sufficient.

W. S. Rockey, Thirty-fourth street and Eighth avenue, New York, has been holding a soap sale with prices to suit the pockets of all comers. The soap display window has a large "S" marked in colors on the pane, so big that it completely covers the whole window front. This forms the initial letter of the words "soap" and "sale" the other letters of the words being placed in smaller characters in the upper and lower curves of the "S."

A BABY WINDOW.

John Eckert's store, at Ferry and Jackson streets, Newark, is in a neighborhood where the most popular sign is "The Babies on Our Block." Catering to the needs of the little ones brings Mr. Eckert much trade, and he has arranged an original and unique show window of things for the baby. There is a big sign bearing the greeting, "How is the baby?" It is in letters so large that it is sure to attract attention, and it is the greeting that appeals to every mother. Underneath it is another sign, "Everything for the little snicker." This sign is supported by a row of nursing bottles, with a string of nipples entwined about them. The front of the window is given over to straight rows of boxes of talcum powder. Above these is pyramids rise semi-circular rows of other boxes, with a neat arrangement of nursing bottles, malted milk, baby food, sponges, nipples, sterilizing bottles, teething beads, rattles, comforters, baby combs and brushes, bottle brushes and a score of other articles which may be needed by the little one, from the bottle to the slipper. In a conspicuous place is an old piece of footwear, which looks as if it had done duty in a family where every effort had been made to rout the race suicide theory. The window has attracted much attention, and Mr. Eckert says it is a trade maker.

The Off & Vaughn Drug Co. has incorporated with a capital stock of \$40,000, at 352 South Spring street, Los Angeles, Cal. S. F. Bothwell is president and H. M. Newton, secretary and treasurer.

KEY TO QUICK SALES.

"More sales and quicker sales" is the motto of the Detroit Show Case Company, and the claims they make for their "Quick Sales" show cases are based on actual experience. They are being used in thousands of stores, and pleased customers everywhere offer their testimony as to the efficacy of these show cases in adding to the volume of trade. These cases in a store indicate a progressive spirit. They are modern and breathe the spirit of the present, giving the impression of vim and enterprise. The claim is made for them that they help business and bring people into the store. They certainly add greatly to the appearance and convenience of any establishment. The time for antiquated fixtures has gone by, and nothing but the most modern and up-to-date will do now for the merchant who wants to keep abreast of the procession. The illuminated "Quick Sales" Show Cases win friends on their merits. They take the place of the old fixtures, which have retarded trade and undo the damage which has been done by a lack of the progressive spirit.

A TIMELY HINT.

Nothing could be more timely just now than a hint about Fly Paper, and a suggestion as to where the best is to be found. The pestiferous insect is more troublesome during the dog days than at any other time and those days are fast approaching. Tanglefoot is the trap which is said to be the surest method of killing the troublesome fly. The claim is made for this paper that it is sanitary and is the only device known which will catch and hold both the fly and the germ and coat them over with a varnish, from which they cannot escape. Any device that will diminish the annoyance caused by flies in hot weather should be welcomed, and there is a wide field for Tanglefoot.

AN ARTISTIC CATALOGUE.

Artistic in design and execution is the catalogue which has been issued by the George W. Pitkin Co., Chicago. It is full of information about paints, and dealers and consumers will find in it all the information needed to enable them to purchase intelligently. The booklet is beautifully illustrated, showing the many colors which are made by the company. There is also a historical sketch of the house, which makes interesting reading, and pictures of the big factory where the paints are made, giving a pretty fair idea of the process of manufacture and the extent of the business. Several hundred paints, colors, varnishes, driers, fillers, and enamels are indexed in the catalogue.

FULL OF INFORMATION.

There is much information in the little book, "How Money Grows," which is issued by W. M. Ostrander, 351 North American Building, Philadelphia, and which will be sent free on application. There are timely hints on "How to tell a good investment"; "How to invest small sums"; "How to guard against poor investments," and scores of other hints and suggestions to the investor or beginner in business. The work has been carefully compiled, and is replete with all that relates to successful business methods.

BUSINESS RECORD.

ALABAMA.
New Dealer. W. G. Pride & Bro., succeed Pride & Slack.

ARKANSAS.
Brighton.—City Drug Store (Virgil Brown, Propr.) succeeds Breckenridge Bros.

CALIFORNIA.
Kelseyville.—Geo. H. Voss, succeeds W. A. Maxwell.
San Jose.—Marchand West Drug Co., succeed Geo. G. Morehead.

CONNECTICUT.
New Britain.—E. W. Thompson & Co., 181 Main St. E. W. Thompson, dead.

IDAHO.
Mackay.—Chas. F. Baker, succeeds Baker & Palling.
Twin Falls.—C. C. Bedford, succeeds Williams & Gooding.

ILLINOIS.
Chicago.—Hamilton Park Phcy, 73d and Vincennes Aves., new store.
Hitehook Phcy, succeed A. Rosenwald, 1181 E. 67th St.
North-Western Economical Phcy (Mr. Glassman, Propr.), succeeds E. B. Messer, 1045 Milwaukee Ave.
Oka Drug Co., 802 W. Lake St., new firm.
Danville.—H. A. Hall, succeeds Jno. L. Golen & Son, 103 N. Vermilion St.

INDIANA.
Indianapolis. F. E. Stuart, should be n. w. corner Senate Ave. and 21st St., and not Summit Ave.
Richmond.—Dickinson Phcy., succeeds Ballard & Snyder.
South Bend.—Economical Drug Store (Nicholas Schilling, Mgr.), succeeds Remben Fluk.

INDIAN TERRITORY.
Atoka.—Atoka Drug Co., succeeds Mrs. G. L. Alexander.
Kingston.—W. S. Courtney, succeeds R. W. Berry (Kingston Drug Store).

IOWA.
Boyd.—Dr. Norton succeeds M. Bunts.
Des Moines.—Lanfords Drug Co., 414 E. 5th St., new store.
Eagle Grove.—Engle Drug Co., succeed A. J. Smith.
Keller.—W. S. Watson & Co., succeed G. W. Carman & Co.
Le Mars.—Ed Cross Drug Store, succeeds Gynno & Black.
Oskaloosa.—A. A. Matthews Drug Co., closed up; no successor.
Washta.—Adams Drug Co., succeeds A. Orner & Co.
Whitney.—W. E. Koeman, succeeds W. E. Koeman & Son.

KANSAS.
Florence.—Fred. A. Biche, new store.
Kansas City.—Grandview Drug Co., succeed Hugh Collins.

KENTUCKY.
Berea.—Porter Drug Co., succeed East End Drug Co.
Marion.—Haynes & Taylor, succeed R. F. Haynes.

MAINE.
Presque Isle.—W. H. Ryan & Co., damaged by fire.

MARYLAND.
Baltimore.—Jacob Shulman, succeeds Levy & Shulman, 1407 E. Pratt St.

MASSACHUSETTS.
Boston.—W. H. Cole, 1876 Dorchester Ave., damaged by fire.
Westfield.—Dewey & Parsons, Elm and School Sts., damaged by fire.

MICHIGAN.
Battle Creek.—Wm. H. Deet, succeeds B. N. Beeden, N. W. Main St.
Kalamazoo.—H. J. H. Babcock, moved from Galesburg, new store.
Whitehall.—J. F. Meinhardt, damaged by fire.

MINNESOTA.
Cloquet.—A. M. Brunelle, succeeds Allen & Brunelle.
Duluth.—Martin Larson Phcy., succeed Ekman & Co., 1613 Piedmont Ave.
Minneapolis.—Dillen Drug Co., succeed S. E. Sanderson, 828 Nicolet Ave.
St. Clouds.—Frisch & Co., succeed E. O. Rollins.

MISSISSIPPI.
Shuqualak. J. W. Murray, succeeds C. D. R. Kirk.

MISSOURI.
LaMonte.—Louis Yunker, succeeds Chatham & Co.

MONTANA.
Lewistown.—Phillips Bradley Drug Co., succeed Delzell Drug Co.

NEBRASKA.
Fairfield.—J. V. Deines & Co., succeed Bradford & Knapp.

NEW JERSEY.
Avon.—Wm. H. Sanborn, succeeds Avon Drug Store.

NEW YORK.
Cortland.—B. C. Quick, succeeds F. J. Graham.
New York City.—Geo. E. Tappend moved from 1271 Broadway to 186 Columbus Ave.
Rochester.—Chas. Houghton, succeeds Strassenburgh & Houghton, 418 West Ave.
Scottsville.—L. C. Galpin, dead.
Syracuse.—Alonzo B. Hubbard, succeeds Soldan & Hubbard, 110 N. Salina St.

OHIO.
Jefferson.—John Jones succeeds J. L. Heitzman.
Medina.—Mr. Tuttle succeeds, Tuttle & High.

OKLAHOMA.
Moore.—Unique Phcy. (H. J. Fry, Propr.), succeeds W. S. Courtney.

OREGON.
Amity. Amity Drug Co. (Harris & Yoe, Props.), succeed Mrs. N. K. Saunders.
Salem.—G. W. Putnam, dead.

PENNSYLVANIA.
Bethlehem.—Eugene P. Uangst, dead.
Pleasantville.—H. C. Zeamer, new store.
Scranton.—H. Alex. Stokes, new store.

RHODE ISLAND.
Newport.—John M. Callahan, succeeds Geo. A. Wood & Co., 106 Broadway.
Woonsocket.—O'Connor & Rowen, new store.

TEXAS.
Cooper. McKinney Drug Co., succeed R. E. Dickinson.

VIRGINIA.
Petersburg.—W. E. Brown, 155 N. Sycamore St., damaged by fire.

WISCONSIN.
Rawlins.—Rawlins Drug Co., succeed Rawlins Consolidated Drug Co.

PEPTO-MANGAN IN PORTO RICO.

Guid's Pepto-Mangan was the only proprietary used by the Federal commission of experts, appointed in February, 1904, according to their just-issued voluminous report, in the treatment of the hookworm anemia in Porto Rico, due to the blood sucking of the parasite "ankylostoma."

The tests, which were successful, were prosecuted in tent wards at Bayamon and Utuado. The treatment consisted in the administration of a purge to remove mucus from the intestinal tract, a fast to the following afternoon at one o'clock was compulsory, and at that time a dose of thymol, not exceeding four grammes was administered; another purge was then administered. That treatment was continued until the feces failed to show any more of the parasites' bodies. The treatment removed the toxine and was preparative for the reconstructive medication which followed.

According to the report a few pharmacopoeial remedies were used, but in eighteen of the most severe cases of anemia Pepto-Mangan alone was used. The patients responded to the treatment, and what is not to be overlooked is the fact that no cases of gastro-intestinal disturbance were observed from the continued administration of the proprietary.

The report is that of an unbiased committee and as such is flattering evidence to be offered to the attention of practitioners by the M. J. Breitenbach Company, of 53 Warren street.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued June 6, 1905.

- 791,444—Robert J. Bartley, Cleveland, O. Non-refillable bottle.
- 791,459—William Elmereth and Joseph A. Langhead, Jeannette, Pa. Tool for finishing bottle necks.
- 791,468—Olin Q. Holman, Chicago, Ill. Nebulizer.
- 791,490—can Parmentier, Paris, France. Sterilizer for surgical instruments.
- 791,497—Willis E. Putnam, Worcester, Mass. Bottle cleaner.
- 791,628—Lewis Landau, San Francisco, Cal., assignor by direct and mesne assignments, to Landau Economic Siphon Co., San Francisco, Cal., a corporation of California. Siphon bottle.
- 791,634—Edward A. Lufkin, Beloit, Wis. Shot cup for bottle washing machine.
- 791,675—Louis Descamps, Lille, France. Process of making hydrosulphites.
- 791,774—Thomas M. Gregory, Akron, O. assignor to the Miller Rubber Mfg. Co., Akron, O. Form for making seamless rubber articles.
- 791,778—William E. Heath, Baltimore, Md., assignor to Standard Bottle-cap Corporation, Wilmington, Del., a corporation of Delaware. Sealing device.
- 791,781—Gustave A. Henckel, East Orange, N. J. Holder for bottles or other articles.
- 791,802—Justin de Lisle, New York, N. Y. Hypodermic syringe.
- 791,850—William I. Wolf, Upper Marlboro, Md. Non-refillable bottle.
- 791,934—Peter McGrath, Hibbing, Minn. Siphon.
- 791,962—Alvin W. Weikert, Washington, D. C. Non-refillable bottle.

TRADE-MARKS.

Published June 6, 1905.

- 174—Bloomington Canning Co., Bloomington, Ill. Canned fruits and vege-

- tables. The word "Climax."
- 188—F. August Luyties, St. Louis, Mo. Medical preparations for catarrh. The word "Pyrodol."
- 189—F. August Luyties, St. Louis Mo. Tonics. The word "Manola."
- 322—E. C. DeWitt & Co., Chicago, Ill. Salves. The words "De Witt's Carbolized Witch Hazel Salve," arranged with parallel lines above and below the words "Witch Hazel."
- 390—Frederick William Speidel, Senath, Mo. Cure for bowel and stomach troubles. The words "Drops of Life," associated with the representation of a recumbent invalid, etc.
- 603—Pineule Medicine Co., Chicago, Ill. Remedies for the cure of diseases of the kidneys and blood. The word "Pineules."
- 607—Pineule Medicine Co., Chicago, Ill. Remedies for liver and kidney diseases. The word "Teko."
- 1,250—Mullens & Kropff, New York, N. Y. Antiseptic fluid for internal and external use. The word "Resist-ine."
- 1,443—Charles E. Lavery, Warrensburg, N. Y. Remedy for the relief of dyspepsia. The word "Dyspepsio."
- 1,464—The Pisco Co., Warren, O. Medicinal tablets for the cure of diseases of women. The facsimile signature of "M. C. Talbott, M.D."
- 2,503—Seeger & Clarke, New York, N. Y. Electrical curative apparatus designed for use in treatment of nervous, rheumatic and similar diseases. The word "Oxygen-ure."
- 2,515—The S. H. Wetmore Co., New York, N. Y. Atomizers and bulb and fountain syringes. The word "century."
- 2,545—The Herpicide Co., Detroit, Mich. Remedy for diseases of the hair and scalp. The representation of healthy and diseased hair roots. Below the representation of the

- healthy hair roots are the words "Healthy Hair," and below that of the diseased hair roots are the words "Unhealthy Hair."
- 2,546—The Herpicide Co., Detroit, Mich. Remedy for diseases of the hair and scalp. An outline representation of the head and arm portion of a plurality of human beings each holding a comb, etc.

MARKET REPORT

TURPENTINE IS LOWER.

Prices Down in Sympathy with Decline at Primary Market.

SITUATION TOO UNWELDY FOR SPECULATORS.—FLUCTUATIONS GENERALLY OF MINOR IMPORTANCE.—MARKET CONDITIONS ARE SEASONABLE.—BUSINESS IS OF SATISFACTORY CHARACTER.

New York, June 12.—Fluctuations in prices of drugs and medicinal chemicals during the period under review have been limited chiefly to articles of minor importance, and where changes have occurred in the so-called leading commodities, they are wholly the result of natural causes, and do not call for much in the way of extended comment. Conditions, however, are reasonable, and no anxiety is manifested on the part of dealers.

Jobbers report a fairly steady inquiry for moderate quantities to meet current requirements of consumers, but the movement is also wholly of a routine character and it is only in the aggregate of sales that the volume of business reaches satisfactory proportions. Consequently, there is a disposition to report the general market quiet, but that is chiefly due to the absence of orders for large parcels.

Perhaps the most noteworthy change in prices since a week ago to-day is a sharp reaction in values of spirits of turpentine, with the decline here wholly in sympathy with a corresponding condition of affairs at primary sources of supply in the South, where speculative operators have apparently found the situation too unwieldy to maintain prices at their recently abnormally high level. It is as true of turpentine as of any other article, that prices can be forced upward to a point where consumption will inevitably show a material decrease.

OPHIM.—Under the influences noted last week, the market for this leading commodity is again stronger, with prices showing a further advance. Foreign markets continue strong and estimates of the new crop have been further reduced to 3,500 cases. Business, however, is of only moderate volume and the revised jobbing quotations are \$3.10@3.25 for 9 per cent. and \$3.20@3.40 for 11 per cent. Quotations for powdered have been marked up to \$4.00@4.25 for 13 per cent. and \$4.75@5.00 for 16 per cent.

MORPHINE.—There is no change in the condition of the market for this staple and a continued moderate movement into consuming channels is noted, with jobbers quoting \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, and \$2.30@2.40 in 5-oz. tins, according to brand and quantity.

QUININE SULPHATE.—Transactions are limited to small jobbing parcels to meet the light current wants of consumers, but the market is steady in tone under the influence of a slightly higher unit value of bark at the Amsterdam auction on

Thursday last. The ruling quotations are 20@21c. for bulk in 100-oz. tins, 20½@21½c. in 50-oz. tins, 21@22c. in 25-oz. tins, 22@23c. in 15 or 10-oz. tins, 25@26c. in 1-oz. tins and 28c. in ounce vials, according to brand and quantity.

SALOL.—Manufacturers' prices are 10c. per lb. lower and the revised jobbing quotations are \$1.05 per lb. for 5-lb. packages, \$1.20 for pounds, \$1.25 for halves, \$1.35 for quarters and 12c. for ounces.

SPIRITS OF TURPENTINE.—Prices have reacted sharply from the high level prevailing last week, owing to a corresponding decline at primary sources of supply, and jobbers have reduced their quotations to 68@69c. in bbls. and 80@90c. for smaller quantities, according to size of order.

TARTAR EMETIC.—Owing to increased cost of raw material, jobbing prices have been advanced to 37@42c., as to quantity.

SILVER NITRATE.—Values of bullion have again reduced slightly and jobbers have further reduced quotations to 43½@48c. for crystals and 44½@49c. for fused.

OIL OF ORANGE.—Cables reporting higher primary markets, have caused local jobbers to advance quotations to \$2.30@2.55 for pound bottles and \$2.45@2.65 for pound coppers, both inclusive.

OIL CALEPUT.—An easier feeling has developed among dealers, both here and abroad, and jobbing prices show a decline to 75@90c.

CASCARILLA BARK.—Owing to extreme scarcity of desirable grades, the tone of the market is firmer and jobbing quotations have been marked up to 27@32c. for whole and 32@37c. for powdered.

BELLADONNA LEAVES.—Supplies are more plentiful and quotations for German in jobbing quantities have been reduced to 24@29c. for whole, 27@31c. for ground and 29@34c. for powdered.

SAFFRON.—American is easier, owing to the near approach of new crop and spot jobbing quotations have been reduced to \$1.15@1.25 for whole and \$1.25@1.35 for powdered.

LADIES' SLIPPER ROOT.—Stocks are light and the market is firmer, with prices of jobbing parcels advanced to 60@70c. for whole and 65@75c. for powdered.

LOVAGE ROOT.—Holders offer more freely and an easier feeling has resulted in a decline in prices to 85@95c., as to quantity and quantity.

MATIO LEAVES.—Supplies have been reduced and the market is stronger, with jobbing quotations showing a decline to 40@45c. for whole, and 45@50c. for powdered.

RED ROSE LEAVES.—The market is better supplied and jobbers have reduced quotations to \$1.15@1.35 for whole and \$1.25@1.35 for powdered.

BLUE VITRIOL.—Manufacturers' prices are slightly lower and jobbing quotations are available at 5½@6c. in bbls., and 7@10c. in smaller quantities.

SCX FLOWER SEED.—Owing to scarcity, jobbers have advanced quotations for prime quality to 5½@6c. by the bag and 8@10c. for less, according to size of order.

GUM ELEMT.—Only a limited inquiry is noted and jobbing prices have declined to 30@35c., as to quantity.

LYCOPodium.—Moderate improved consuming inquiry, together with reduced stocks, jobbing quotations are firmer and show a reaction to \$1.05@1.15.

CHAMOMILE FLOWERS.—New crop Roman have begun to arrive and are held at 30@35c. while old are quoted at 25@30c.

CANARY SEED.—Owing to the influences noted last week, jobbers have advanced quotations to 5½@5¾c. for Smyrna by the bag, and 6½@8c. for less, 5¾@6c. for Sicily by the bag and 7@9c. for less.

SPICEKARD ROOT.—The market is firmer with jobbers holding at 30@35c., as to quantity.

PUSHING A GOOD THING.

Pushing a good thing is what the Pompeian Manufacturing Company is doing in calling attention to Pompeian Massage Cream. By constantly keeping before the public the claims which are made for the cleansing and beautifying powers of this cream, the sales of the druggist are increased. The axiom of the company seems to be "we set the pace, let the others follow." Attention is called to the many imitations which always follow the success of an article of merit, and dealers are warned against handling goods which are not genuine. The company aims to protect druggists to the limit, and they are asked to send in any complaints at once. Pompeian Cream has been on the market for a long time, and the degree of success which it has met has been due to the high standard of the goods.

SOMETHING NEW AND NOVEL.

Something new and novel are Saskets, which are being put on the market by Lehn & Fink. The many advantages of Saskets over seals or caskets are apparent at a glance. They are easy to fill, easy to close and no machine is required for closing them, which is a distinct advantage in itself. Saskets are wafer bags or capsules for the convenient administration of pulverous medicines. In order to fill them it is only necessary to hold the Sasket in the left hand, insert a spatula or knife in the flap, exert a slight pressure upon the sides, when it will open and then can be readily filled. To close, moisten with a camel's hair brush or other convenient means, which is another distinct advantage. Simplicity and convenience are the two strong points which will recommend Saskets to the busy druggist.

ACCURACY ASSURED.

In counting pills and tablets the first desideratum should be accuracy, after which speed and a saving of time should receive due consideration. To combine these three points is a most important matter to the pharmacist, and the Avers' Pill and Tablet Counting Machines do this. They are successful and quick operators on any shape or size, plain or coated, and run by hand or power. The possibility of breakage in these machines has been reduced to a minimum.

MARKETING PROPRIETARIES.

We wish to call particular attention to an ad. in this issue under the above title, on page 23, offering the long-needed benefits of a plan to radically correct evils of cutting and substitution.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

EDITORIAL COMMENT

New Jersey's Affiliation.

It is five years since the New Jersey Pharmaceutical Association decided, after one year of affiliation, to have nothing further to do with the National Association of Retail Druggists. During all this period New Jersey has been the one State in the Union which has steadily refused to give its support to the national movement. The change of attitude recorded at the convention last week must be highly gratifying not only to the officers of the N. A. R. D., but also to the men who have striven year by year to obtain this result.

What it means to have a scientific body of men like the New Jersey association cast its lot with an essentially commercial organization like the N. A. R. D. is too significant to be lightly passed over. The surprising action of the State association can only be explained by the supposition that its members have begun to realize at least two things with regard to the N. A. R. D.: First, that it is no longer an experiment; and second, that its greatest usefulness will ultimately be found in a sphere far removed from that of mere dollars and cents.

If the N. A. R. D. has been called "essentially commercial," it is because every great organization having for its object the general uplifting of any trade must of necessity first promise concrete cash returns in order to appeal to the great majority. But now that the motto "Live and let live" is in a fair way of being realized, we venture to predict that at no distant day this phase of the national work will be found of the least importance. Indeed, if we may take the Mann bill, the day of a higher and broader field of activity is already dawning.

The New York Prerequisite Law.

Not all pharmacists in this State have agreed upon the advantages that would accrue to pharmacy by the enactment of a prerequisite law. Such

a measure was passed, however, and it has now been in operation since January 1 last, too short a period, perhaps, to show all that its supporters claimed for it, or, upon the other hand, to develop all of the hardships which were predicted would come to pass by those opposed to its enactment.

The most distinguished critic who has raised his voice against the law is Prof. Joseph P. Remington, of Philadelphia. At the recent meeting of the New Jersey Pharmaceutical Association he stated that New York druggists had undoubtedly made a tremendous mistake in requiring eight years of academic work and twelve regents' counts before entering college. This requirement, he said, would bear hard on the young men who had been clerking for some time, as they could not be expected to go back to high school for an education. The pharmacy law, in his opinion, should only require graduation from a reputable college of pharmacy.

It seems to us that if the possession of a college diploma is to be made a prerequisite for examination for registration at all, then it becomes the duty of the State to determine what constitutes a reputable college of pharmacy. It is hardly possible for it to do this unless it prescribes certain standards of entrance requirements, hours and courses of study, etc., etc. This is just what the Legislature of New York did, and it remains to be seen whether the measure will work any hardships or not. But meantime, what about the young man who can demonstrate his ability to pass a board of pharmacy examination and who has had the necessary experience, but who is financially unable to take a course in a college? He is the one who will feel some hardship, at least. All are agreed that public health and safety require that the pharmacist should attain a certain degree of education and training to fit him for his responsible duties; the machinery necessary to secure this equipment is another matter.

Now a University School.

It was only a short time before the consolidation of the New York College of Pharmacy with Columbia University that a prominent educator of the West reproached the pharmacy of

the Eastern States with a lack of recognition by teachers of other branches of science in the great centers of learning. The reproach was removed when the affiliation was effected, and if any act was needed to consummate the bond of relationship it was completed at the commencement exercises of the University last week, when the degree of pharmaceutical chemist was conferred for the first time.

It is only a little over a year since the college became a part of the University, but since that time enough has developed to show the advantages of academic training and breadth of scope in even so commercial a calling as the practice of pharmacy. As Dr. H. H. Rusby remarked at the meeting of the American Pharmaceutical Association at Kansas City last year, the interest of the State Department of Education and the Board of Regents in pharmaceutical institutions can now be relied on to aid in the best development of the educational interests of pharmacy in New York City. Time has demonstrated that his faith was well founded, and the New York College of Pharmacy may well be proud of the work so far accomplished.

Altering Prescriptions.

The daily press all over the country has been using a great deal of printer's ink within the past two weeks over a decision of Justice Gaynor, in Brooklyn, with regard to the interpretation of a carelessly written prescription. The facts, as understood by most sane persons, were to the effect that the pharmacist had received the prescription for a certain preparation containing heroin. Having in stock a bottle of that preparation which did not contain heroin, he simply added sufficient of that ingredient to fill the prescription as called for.

A great many pharmacists undoubtedly do the same thing every day in the week, and it is difficult to see what harm there is in it. But in some mysterious way Justice Gaynor's decision has been exploited as a license to pharmacists to alter a physician's prescription. This utterly ridiculous notion has been gravely taken up and terrible warnings have been printed against the danger of giving additional power to a class of men already under public suspicion as adulterators and substituters.

To explain how such an absurd idea ever got abroad taxes the ingenuity. Justice Gaynor never made any mention, either express or implied, of a pharmacist's right to alter the prescription of a physician, without his knowledge, for such a right does not exist. What Justice Gaynor did was to hold the pharmacist justified in in-

terpreting a vague prescription as he did.

New Drug Store, New Booze.

"One of the six drug stores in Hiawatha changed hands last week." It is supposed this means the introduction of a new brand of booze in the country town. When it gets thoroughly introduced look out for another murder up there."

So runs a newspaper item in a Kansas town. Its meaning is not so cleverly concealed but what it can be detected by the careful reader. There seems to be something radically wrong with the druggists of Hiawatha, else why should the fact of a simple change in ownership mean the introduction of "a new brand of booze"?

A Question of Self-Respect.

A druggist in Grand Rapids has placed an electric push-button on a post outside his store so as to be readily reached by occupants of carriages and automobiles. The inference is that people who own such luxuries should not be given the trouble of stepping out and entering the drug store.

This is "drumming up trade" with a vengeance. As an appeal to a particular class of people it is all right, but it is questionable whether the druggist will gain anything in self-respect by being literally at the beck and call of every carriage owner. Many men in the trade will no doubt be of the opinion that anybody who needs the drug store man needs him badly enough to walk in and get what he wants. This is what the great public has to do in pretty nearly every other line of business. Why druggists should begin the practice is hard to understand.

The New York Convention.

From present indications the convention of the New York State Pharmacists' Association next week will not be the harmonious affair that it was last year. So far as the entertainment goes, of course, the visiting druggists are certain to have a most enjoyable time. But some of the subjects that promise to come up for discussion during the business sessions bid fair to be of a warm character. To take only a single question, we imagine that a very large share of attention will be given to placing where it belongs the credit for the repeal of the stamp tax on liquor. It is openly charged that the responsibility for the loss of this privilege rests with a certain element of druggists up the State who brought calamity upon themselves and others by demanding that they be allowed to sell a quart of liquor instead of a pint. Not so long ago the up-staters also started a

movement against the prerequisite law.

These questions of conflict between the two parts of the State are bound to induce a healthy and enlightening discussion. The prospect of straightening out the various tangles and of placing the responsibility where it belongs, should result in a larger attendance than ever before. Unlike its predecessor, the twenty-seventh annual convention will undoubtedly "do something."

Double Trouble.

A Denver paper mentions the unfortunate experience of a druggist in a small town, who, in addition to running his store, is also an agent for the telephone company. He employed a young man in the drug department and a young lady to attend to the telephone. One fine day both went to Denver, where they were married. Moral—there isn't any.

Sales of Poisons in New York.

Not all of our readers seem to be familiar with the requirements of the amendment to the Penal Code "in relation to crimes against the public health and safety," otherwise known as the "Hill bill," which received the signature of the Governor recently, thereby becoming a part of the law of the State. Every druggist should become familiar with this law and endeavor to observe it.

Under this act any person carrying on the business of selling drugs or medicines, who sells or gives away any poison or poisonous substance without labeling and recording the sale as provided, is guilty of a misdemeanor. To quote the language of the act:

It shall be unlawful for any person to sell at retail or furnish any of the poisons named in the schedules hereinafter set forth, without affixing or causing to be affixed, to the bottle, box, vessel, or package, a label containing the name of the article and the word "poison" distinctly shown, with the name and place of business of the seller, all printed in red ink, together with the name of such poisons printed or written in conspicuous, plain, legible characters, which schedules are as follows, to wit:

Schedule A.

Arsenic, cyanide of potassium, hydrocyanic acid, cocaine, morphine, strychnia and all other poisonous vegetable alkaloids and their salts, oil of bitter almonds, containing hydrocyanic acid, opium and its preparations, except paregoric and such others as contain less than two grains of opium to the ounce.

Schedule B.

Aconite, belladonna, cantharides, colchicum, coniun, cotton root, digitalis, ergot, hellebore, henbane, physalocia, strephanthus, oil of tansy, veratrum viride and their pharmaceutical preparations, arsenical solutions, carbolic acid, chloral hydrate, chloroform, corrosive sublimate, creosote, croton oil, mineral acids, oxalic acid, Paris green, salts of lead, salts of zinc, white hellebore or any drug, chemical or preparation which, according to standard works on medicine or materia medica, is liable to be destructive to adult human life in quantities of sixty grains or less, and such other poisons as the state board of pharmacy, under the authority

given to it by the public health law, may from time to time add to either of said schedules.

Every person who shall sell, dispose at retail, or furnish any poisons, included under schedule A shall, before delivering the same make or cause to be made an entry in a book kept for the purpose, stating the date of sale, the name and address of the purchaser, the name and the quantity of the poison, the purpose for which it is represented by the purchaser to be required and the name of the dispenser, such book to be always open for inspection by the proper authorities, and to be preserved for at least five years after the last entry. He shall not deliver any of said poisons without satisfying himself that the purchaser is aware of its poisonous character, and that the said poison is to be used for a legitimate purpose. The foregoing portions of this section shall not apply to the dispensing of poisons on physicians' prescriptions. Wholesale dealers in drugs, medicines, pharmaceutical preparations or chemicals shall affix or cause to be affixed to every bottle, box, parcel or outer enclosure of an original package containing any of the articles enumerated under said schedule A, a suitable label or brand in red ink with the word "poison" upon it. Any person who violates any of the provisions of this section shall be guilty of a misdemeanor.

The act takes effect September first next.

We have before commented on the importance of this law, which, in effect, unifies the former opposing and anomalous provisions of the Penal Code and the pharmacy law, so that now the druggist has but one law to obey. He should know what the Commonwealth expects of him. Experience has demonstrated that such restrictions do have a tendency to reduce mistakes and accidents, and serve to place a check upon crime. Poison laws also materially aid in fixing the responsibility for mistakes, and in detecting some of the mistakes they cannot prevent. Can the druggist afford to neglect them?

A Western druggist spent a part of his honeymoon before the board of examiners, where he passed the examination enabling him to become a registered pharmacist. The bride should give the diploma a place among her most prized wedding presents.

Adulteration of Saffron.

Pure saffron in the course of time becomes covered with a fine grayish efflorescence which, when examined under the microscope in olive oil, is seen to consist of irregular crystals; this substance appears to be sugar, of which saffron contains some 14 per cent. Such efflorescences have been observed by Vogl and Hanausek. If powdered sugar be dusted on saffron and allowed to stand, a similar efflorescence is produced, but in this case the crystals are well defined. Such fraudulent addition of sugar can easily be made to a considerable extent, and the addition cannot be satisfactorily determined by chemical means.—*Zeitschr. f. Waters, Nahrungs- u. Genussm., Pharm. Journ.*

All indications point to a record breaking meeting of the Iowa Pharmaceutical Association on July 12, 13 and 14. There have been liberal contributions in cash and prizes for the many events.

OUR LETTER BOX

THE RACE PROBLEM.

Bradentown, Fla., June 12, 1905.
Editor The Pharmaceutical Era:

Dear Sir: I have read, not with interest, however, in The Era of June 8 (page 637), that the German Apothecaries' Society of your city has recently heard from Editor von Skal on the Race Problem in the Southern States based on "personal experience."

What can have induced our friends to discuss the race question? Would they not be better employed discussing the recent marriage of the Crown Prince of Germany, or the grammatical construction of the following:

"Den lieben langen Tag
Hah ich nur Schmerz und Plag,
'Und abends muss ich immer weine.
Wenn ich am Fenster steh.
'Und in die Nacht 'naus seh.'
Bin ich alleine,
Dann muss ich weine."

They might do a great deal of good by discussing either one of the above topics and they certainly can do no good to anyone in listening to personal experiences on the race problem in Florida or German East Africa.

I have suggested the above topics to them as Germans. In their capacity of an Apothecaries' Society, they might discuss proposed improvements in the manipulation of glycerinum acid tannic, or the compulsory use of the metric system, or the definite composition of hexamethylene-tetramine; possibly it is tetramethylene-hexamine.

However, if they wish to help along the solution of the race problem in the Southern States, I would suggest that their society meet again and at once petition Congress to appoint a committee to solve the problem everywhere on earth, and that the committee shall be composed of three members, to wit: Theodore Roosevelt, President of the United States; Henri Soufranz, ex-President of Hayti, oow of Tampa, Fla., and W. T. Stead, of Pall Mall (London, England) Gazette fame, the latter to be chairman of the committee, and that as such chairman, he be allowed to cast his vote, but it shall not be counted, so that he may the more fully realize the condition of the negro voter in the South, that of the Anti-Chamberlaine in Birmingham, England, that of the working man in Barcelona, Spain, and that of the intelligent member of the Russian Zemstov. In case of a deadlock in any action of the committee, then and in that case they shall call upon the Begum of Bhopal to give the casting vote; to be given in person and not by cablegram.

And during the deliberations of this committee, I would suggest that our German Apothecary friends petition Congress to repeal all Chinese exclusion laws in full, without equivocation, and that they insist that the President shall call a special session of Congress to meet at once to pass such a bill instanter.

Yours truly,
JOHN M. STANSFIELD.

COLLEGES AND DRUGGISTS.

Brooklyn, N. Y., June 17, 1905.

Editor The Pharmaceutical Era:
The article in last week's Era entitled "Colleges and Druggists" interested me sufficiently to make a reply.

I do not agree with the writer that higher legislation bars thousands of poor men from becoming pharmacists. Being in close touch with one of the largest medical colleges in this country, and from which hundreds have graduated, I have made the acquaintance of many poor men, who in spite of high entrance requirements and a four years' course (in which practically every hour of the day is occupied), have succeeded, not only in graduating, but in obtaining honors.

Now then, if such poor men can take a medical course which is so rigid, why cannot a poor man study pharmacy? The poor man has a better chance to study pharmacy for the simple reason that he can work while taking his college course, the hours of study being so arranged that he can earn a living by working alternate days.

I will, of course, admit that in some cases the "practical" man is superior to some of our "college" men, but the writer cannot deny the fact that "practice and theory" combined are far superior to either one alone, and as some of our colleges require their students to have practical experience before diplomas are issued, graduates of such institutions are certainly, in the majority of cases, better pharmacists.

I will also admit that many a man has become a good pharmacist without a college education, but times are changing, and if we do not progress, we only retard others who are only too willing to take up the task. As a further proof that a poor man has a chance, there are evening courses in public and high schools which will fit a man for entrance to any college or university in the country. Thus the poor man has a chance, and while he needs a great deal of pluck to accomplish success, still, if he has made up his mind to obtain it, he certainly will, and it is a well-known fact that those who generally stand high in their classes and professions are those who have had to overcome the greatest obstacles.

WM. H. WEYGANDT.

MR. MILLARD'S RESIGNATION.

Baltimore, June 17, 1905.

Editor The Pharmaceutical Era:
I wish to impose myself upon your time, and request you to correct the statement made by your reporter that friction exists in the Maryland Board of Pharmacy, and that this was the reason I had resigned. This report is not only untrue, but does the gentlemen of the Board, as well as myself, a serious injustice. The reason has been stated (and rightly) that my private affairs demanded my attention. I wish to state in passing that I am not one who runs away when danger approaches, but only after it has been met, and if possible, overcome. I consider every member of the Board a personal friend, and the only regret I have in retiring is that I shall have to sever our official relations. I would be pleased to have you print this in your next issue.

Yours, very truly,
D. R. MILLARD.

MEDICINAL PLANTS.*

Suggestions on Their Cultivation in California.

By Dr. Albert Schneider, San Francisco.

As explained in the previous paper California is a country of varied vegetation, native and introduced. On looking over the existing agricultural, horticultural, and arboricultural resources of the state one is astounded at the variety of crops grown successfully. With few exceptions the plant-cultural enterprises are conducted on an enormous scale as compared with similar European efforts, or even those of the eastern and southern states. This brief statement should suffice as a significant hint to those who have the intelligence, ambition, and courage to begin the cultivation of medicinal plants in California.

Though a repetition, it may be stated that all medicinal plants which thrive well in the state of California (and this certainly applies to the majority of species now in use) may be cultivated profitably provided the enterprise is properly initiated and carried on. It should be emphasized that random, unintelligent, illy-considered attempts are to be discouraged, as they lead to mistaken conclusions and to failures. Excepting perhaps in a few instances, it is not advised to grow medicinal plants as a side line or "small crop," nor is it advised that those unfamiliar with the chemistry, constituents, and physiological action of vegetable drugs should initiate or superintend such cultural efforts. Well educated pharmacists are primarily qualified to take the initiative in this work, and it is to these that the information here given is primarily directed.

In order to avoid the unprofitable preliminary experimenting above hinted at, it is very strongly urged that beginnings be made with well-known and highly important medicinal plants, as digitalis, aconite, belladonna, scopolia, rhem, golden seal, and others. While it is possible to get valuable information from books, correspondence, and hearsay, with regard to the desirable cultural methods, and accordingly to make fairly successful beginnings, it would nevertheless be very profitable to send qualified men to countries where these various plants are already grown successfully, with instructions to remain at least several months, to work in the fields and to collect concise and reliable data with regard to the most successful and most profitable methods employed. On returning, these observers should be placed in charge of the field work, with specific instructions to adapt, to the best of their ability, the foreign methods to American (Californian) conditions and requirements. The difference in cost of European and American labor must be adjusted by the use of suitable labor-saving machinery and devices. For example, if it is desired to begin the culture of digitalis and other plants, an intelligent, well-educated man should be sent to the digitalis fields of England, secure employment as a laborer, and carefully record the culture methods, methods of curing, garbling, packing, shipping, marketing, etc. In the course of a

few months, or perhaps one season, he should be in a position to give reliable and exact advice as to how to begin the successful culture of English digitalis in California, and should be in position to conduct, take charge of, and superintend the field work, etc. As to what additional or new may be desirable in the way of methods, machinery, devices, etc., must be determined by experience, and inventive genius. Similarly, chamomile, chicory, and bittersweet culture should be studied in Germany; licorice, saffron, squill, and belladonna culture in Spain; licorice and rhem culture in Turkey and Asia, etc. Following these suggestions would in the end prove most profitable. As an instance may be cited the very successful Anglo-American method of growing English mustard in the Lopez Valley, Santa Barbara County, Cal. Much may of course be learned from the several attempts that have been made in this country, particularly in California. For example, insect flower, chicory, canazole, English mustard, calendula, lavender, tan oak, humulus, eucalyptus, rose (American Beauty), poppy, cardamom, ginger, have been grown with more or less success, to say nothing of the staple crops as onions, sugar-beets, oranges, lemons, limes, olives, carob, asparagus, celery, Indian hemp (for fiber), etc., and the native medicinal plants as cascara, yerba mansa, berberis, manzanita, and others.

Beginnings have been made in the United States to grow drug plants proper on a commercial scale, as for example, the nuts, belladonna and a few others. Numerous ginseng gardens have been established within recent years in different parts of the United States. Pot and garden herbs are grown everywhere, but almost wholly for culinary purposes.

SUGGESTIONS ON CULTURE METHODS.

Most of the medicinal plants like most other economic plants require rich well-tilled soil. Some thrive best in a moist rich soil, as rhubarb, iris, mints, infusa, colocynth, may apple, hydrastis and ginseng, while others thrive better in a rich, sandy, comparatively dry soil, as cacti, aloes, digitalis, aconite, mustard and belladonna. Some require shade, as hydrastis, ginseng, may apple, wild ginger, etc. We cannot enter into a discussion of the subject in full, nor can we discuss fertilizing of soil, rotation of crops, irrigation, special methods of cultivation, etc. These are all subjects which must be carefully considered by those who are about to enter upon drug culture.

It will be found that most of the plants recommended for cultivation are herbs or herbaceous, either annuals or biennials. In the case of biennials it is of course necessary to wait two seasons for a marketable crop, as with digitalis and hyoscyamus.

In conclusion it is desired to call attention to the possibilities in extending the range of successful plant culture, in many instances. We need only recall the extension northward of the orange and lemon culture in California. There is no doubt that many drug-yielding and other plants of the tropics and sub-tropics, which are now looked upon as unlikely of successful culture in California, may on careful and more extended trial do well, as ginger, cardamoms, cinchona and others. (For further information consult literature cited.)

PREPARATION FOR THE MARKET.

The following remarks are intended as mere suggestions which it is hoped will be found useful in adopting suitable methods of drug culture in California.

The exact chemical constituency of many medicinal plants is as yet not fully understood and much research work along these lines is still to be done. This applies especially to plants bearing medicinal alkaloids and glucosides. It is also known that the amount of active constituents varies greatly during the vegetative period and in plants from different localities, and it would be very desirable for the drug growers to make chemical analyses of the plants grown at intervals of about one or several months in order to determine the exact period when the active constituents are most abundant and what plant parts are most active. Such work should of course be supplemented by a reference to the literature on analyses made of plants growing in other localities.

The manner in which the drug is prepared also modifies the active constituents, quantitatively as well as qualitatively, for which reason the following suggestions are offered.

TIME OF COLLECTING.

Drugs should be collected at the time when the desired active principle or constituent is present in maximum quantity. Unfortunately this period is as yet not accurately determined for many plants. The chemical analyses above referred to should be applied in order to clear up the uncertainties.

Naturally the time of collecting depends upon the part of the plant to be used. In a general way it may be stated that the drug is collected when the plant organ or part to be used medicinally has reached its full development. Flowers, floral parts, fruits and seeds are collected at the time of maturity; not after maturity. There are, however, numerous exceptions. The flowers of pale rose, lavender, orange, santonica, the fruits of the poppy, elaterium, vanilla and the seeds of pepper, allspice and cubeb, are collected before maturity. Most leaves and leafy herbs are collected at the time of flowering or shortly before that period. Generally leaves and herbs not having a strong odor, as aconite, belladonna, verbasicum, stramonium, digitalis, hyoscyamus and others, are to be gathered shortly before blossoming, while aromatic leaves and herbs as absinthium, tansy, the mints, pennyroyal and rosemary should be collected at the time of blossoming.

With subterranean organs as roots, rhizomes, tubers and bulbs, also the bark of trees and shrubs, the time of collecting is more at variance: The most suitable time for collecting these is just prior to or at the time of the cessation of active seasonal growth of the plant, and as is known to the plant grower, this period varies considerably. There are, however, some very notable exceptions to this general rule. Belladonna roots gathered from the blossoming and fruit-bearing plants (July, in the Eastern States and in Europe) are twice as valuable as those collected in March or in October. The roots of taraxacum, valerian, gentian, angelica, tormentilla and others should be collected in the spring, although there is some difference of opinion with regard to

*Reprinted from San Francisco Druggist.

taraxacum and valerian, some authorities stating that these roots should be collected in the fall. Aconite roots should be collected from the flowering plants. Roots and rhizomes of perennial herbaceous plants, as calamus, asarum, inula, Helleborus, hydrastis, ginseng and others should as a rule not be collected before the close of the third year or season. Roots of biennial plants should be collected in the fall of the second year. Barks should as a rule be collected in the fall, at the time of the cessation of the seasonal active growth.

Leaves are generally collected at maturity, without any special reference to the age of the plant from which they are obtained. However, there are notable exceptions. The best tea is obtained from the exceedingly young leaves and terminal branches. The best coca leaves are picked from the shrubs three to five years old. The first year leaves of digitalis and hyoscyamus are not to be used, nor the young (dorsiventral) leaves of eucalyptus.

COLLECTING THE DRUG.

It is practically useless to attempt giving suggestions which will be of real value to the large grower of medicinal plants. It is very important that detailed information should be obtained from those who have been engaged in enterprises of a similar kind for years. The following are mere hints which may prove useful.

Roots, rhizomes and other subterranean organs may be turned up by means of a plow, like potatoes. Picking and removing dirt must no doubt be done by hand, although various mechanical devices as rake, hooks, etc., may be found very useful. It would be very desirable to invent a device for removing leaves and flowers from plants. It may be that such machinery is on the market, but none has come to the notice of the writer. In some instances the entire plant may be cut and dried and the leaves removed by flailing, as is done in the case of *Eriodictyon californicum* (mountain balm). This method could no doubt be employed with other herbaceous and shrubby plants having rather thick leaves which become very brittle on drying. Herbs, can, of course, be cut by means of mowing machines. Flowers and fruits must be collected by hand unless some one will invent suitable machinery to do the work, and the same may be said with regard to the removal of barks. Seeds, like mustard are collected by mowing the plants, drying and thrashing, as is done in the mustard fields of the Lomboc Valley, California. This method would be very practicable with umbelliferous fruits, as anise, cuminum, caraway, fennel, etc. Some seeds and fruits can be removed from the plants by shaking and afterwards gathering by means of rakes or similar devices.

CLEANING AND GARBLING.

All drugs should be freed from foreign and undesirable matter which may cling to them. This applies particularly to subterranean organs, which must be freed from soil, sand, foreign roots and rootlets and other foreign particles. Most of the soil may be removed by brisk shaking, especially if the soil in which the plants have been growing, is quite dry and sandy. Wet adobe soil clings quite tenaciously and after drying it bakes and clings still more firmly. Soil which cannot be removed by shaking must be re-

moved by washing in clean water. Leaves, herbs, barks, fruits and seeds should not be washed.

Washing should only be employed when necessary and should not be prolonged more than is required. Prolonged soaking and washing in water removes much of the active principle and reduces the value of the drug accordingly.

Garbling consists in sorting the drug; that is, removing by picking, sifting or winnowing all undesirable parts or particles. Careful cleaning and garbling gives the drug a clean, wholesome appearance and adds greatly to its commercial as well as medicinal value. Machinery and various mechanical devices are desirable or necessary in cleaning and garbling and splendid opportunities will present themselves to the progressive, enterprising, inventive genius.

Sorting proper is not permissible with drugs. That is, separating the crop yield into grades or different qualities as in the case of fruits and grains, for only first grades or qualities are wanted. Wholesale as well as retail dealers always call for the best quality drugs. The grower who sorted places on the market an inferior sort of article would be guilty of a gross misdemeanor.

PEELING, CUTTING AND SLICING.

These processes hasten drying by increasing surface exposure and increasing the rate of evaporation of moisture. The special function of the epidermis and cork tissue is to reduce the evaporation of moisture from the interior of plant organs. Removing these tissues therefore permits the more rapid escape of moisture; as a result the drug dries more quickly, which is not only time saving, but also lessens the decomposition of active principles and reduces the tendency toward the development of microbes, moulds, mildews and other fungi as well as animal parasites.

Occasionally peeling is for the purpose of removing the outer inert portions, as with many barks (cinnaomon, elm, soap bark, bitternut, etc.) and the fruit of colocynth. In some instances peeling is practised when it is unnecessary or undesirable, as in the case of ginger and calamus.

As a rule drugs which are cut or sliced are not peeled or decorticated for reasons which are perhaps self-evident, though there are exceptions, as for example, rhubarb roots, which are both peeled and cut. These operations are performed on fleshy roots, rhizomes, tubers and bulbs. Some are sliced or cut transversely, as bryonia, calumba and colchicum; some longitudinally, as gentian, calamus, belladonna, and some are generally cut in any direction, as inula, rhubarb and zedoary. The stems of bitterweet, rhizomes of couch grass, roots of chicory and others are cut transversely.

It should be remembered that peeling, cutting and slicing exposes the tissues containing the active constituents to the climatic influences which hasten their evaporation, dissipation and chemical decomposition, therefore these operations should be reduced as much as is practicable with a reasonably rapid and uniform method of drying or curing. In other words, the pieces should be left as large as possible.

Peeling is done by hand, likewise slicing (removing the outer bark) of barks,

but cutting and slicing may be done by suitable mechanical devices.

SCALDING.

Certain drugs, as some ginger, sarsaparilla, curcuma, saiep and a few others are placed in boiling water before drying. This kills the cells and prevents sprouting, it destroys parasites which may be present and hastens drying because moisture escapes much more rapidly from dead cells than from living cells.

LIMING AND BLEACHING.

It has become customary to bleach and lime certain drugs, as some ginger, calamus, orris root and althea roots. These processes are not necessary or desirable, excepting perhaps in rare instances and will be passed over without further comment. This also applies to the peculiar custom of coloring certain substances, as tea and coffee.

DRYING.

After the drug has been collected, cleaned, garbled and otherwise prepared, it is ready to be cured or dried. This is an exceedingly important process to which much attention should be given. The object to be attained is the removal of moisture in order to prevent the development of microbes, higher fungi and other organisms which feed upon the cell contents and as a consequence decompose the active constituents. It is desirable to dry drugs as quickly as possible. Exposing the drugs to direct sunlight is as a rule not desirable. Drying should be done under a shed with open sides and ends to insure free circulation of air. Fortunately the work of drying becomes easy as well as simple in the State of California, as most drug-yielding plants mature during the dry season, so that provision for rains need not be made. However, the dews and fogs of the nights, in many localities, especially near the coast, demand special consideration. Large sheds as above suggested should be built with tables or hurdles, on which the drug is spread. These sheds should be long and narrow and the roof should be quite high above the hurdles. The drug should be spread evenly and turned several times daily. The tops of the hurdles or tables should be perforated to permit ready circulation of air from below. As soon as the air becomes very damp in the evening the drug should be heaped and covered with canvas to prevent the re-absorption of moisture from the atmosphere. This applies especially to leaves, flowers, and herbs. Fleshy drugs (roots, rhizomes, tubers) may be left uncovered for the first night or two. Some drugs can no doubt be dried in the field on the ground, as mustard, fennel, caraway, mountain balm and some others.

Whether artificial heat is necessary or desirable must be ascertained experimentally. It would appear to the writer that air drying would prove satisfactory in nearly all instances. Such drugs as jalap, rheum, curcuma, ginger, saiep, sarsaparilla and a few others, are often dried in ovens, in houses, over an open flame, and in other artificial ways, but that is done only in countries where the natural dry air is not available.

PACKING AND SHIPPING.

As soon as the drug is thoroughly dried it is ready for packing and shipment. No drug should be packed, either in small or large packages, unless thoroughly dry

THEORY AND PRACTICE

Disinfecting Catgut with Benzol.

The catgut, wound on glass reels, is introduced into a copper bomb, fitted with a screw cap, which contains pure crystallizable benzol. After securing the cap, the bomb is heated in an autoclave for twenty minutes, then cooled. The reels of gut are then removed, placed in separate flasks, which are then immersed, uncorked, in a fresh bomb of benzol. This is heated as before in the autoclave, the temperature being gradually raised until a pressure of two atmospheres is obtained. The apparatus is then allowed to cool down. When the bomb is cold the screw cap is removed and the orifice plugged with wool, through which a syphon is passed, and the greater part of the benzol is syphoned off. The rest is evaporated, without removing the wool plug, on the water bath. When the benzol has been driven off, alcohol (70 per cent.) is syphoned into the bomb. After macerating for a time the flasks are withdrawn by means of a sterilized forceps, and corked. After this maceration the gut regains its suppleness and elasticity, while its breaking strain remains the same before and after sterilization.—*Journ. Pharm. Chim. Pharm. Journ.*

New Reaction for Aconitine.

In the examination of a specimen of pure aconitine, the red coloration with sucrose and sulphuric acid was not obtained. The alkaloid was readily saponified by alcoholic caustic potash, but no formation of veratric acid could be detected. The new reaction for pure aconitine is as follows: The alkaloid (0.0005-0.0002 gm.) is gently warmed with 5-10 drops of pure bromine, 1-2 c.c. of fuming nitric acid are added, and the mixture evaporated to dryness, with the addition of a little more bromine if necessary, from 0.5 to 1 c.c. of a saturated alcoholic solution of caustic potash is then added, and the mixture evaporated to dryness; the residue has a more or less intense brown or red color, according to the quantity of aconitine present. After cooling, 5-6 drops of an aqueous 10 per cent. solution of copper sulphate are added, when the solution soon acquires a deep green color, if aconitine be present.—*Chem. News.*

Salicylic Acid in Foodstuffs.

The colorimetric determination of small quantities of salicylic acid presents difficulties when tannic acid is present. The following method (*Analyst. Pharm. Journ.*) takes advantage of the insolubility of lead tannate and the solubility of lead salicylate in caustic alkalines: 50 Gm. of the sample is mixed with a little water, 15 C.c. to 20 C.c. of a strong solution of lead subacetate added, and then 25 C.c. of roughly normal soda. With this 15 C.c. to 20 C.c. of roughly normal hydrochloric acid is mixed, and the whole made up to 300 C.c. 200 C.c. is filtered off, acidified with hydrochloric acid, refiltered if necessary, ex-

tracted three times with ether, and the salicylic acid determined in the usual way. Different samples require different treatment with regard to the quantity of lead subacetate and alkali to be used, which can be judged by practice.

Sterilizing Catgut.

A new method of sterilizing catgut is recommended by Bartlett (*Cent. f. Chir. through Jour. Am. Med. Assoc.*) which consists in drying the catgut, placing it in liquid paraffin until it becomes transparent, about twelve hours, then heating to 100° C., and setting aside in a one per cent. methyl alcohol solution of iodine. The author claims that a year's experience and countless tests have proved the superiority of catgut sterilized by this simple, inexpensive technic.

YEARBOOK OF THE UNITED STATES DEPARTMENT OF AGRICULTURE, 1904. Washington: Government Printing Office. 776 pages; 8vo.; cloth.

The present volume is uniform in style with those of preceding years and contains much information that will be appreciated by the agriculturist. There are some matters of value to the pharmacist, principally in regard to the work of the Bureau of Chemistry, especially that relating to the investigation of food preservatives and adulteration, and the drug plants of America. An exceedingly able chapter is by Charles M. Dauberty, of the Bureau of Statistics, on "The Castor Oil Industry." The book is well filled with general useful information.

throughout. Containers, for shipment, whether large or small, should be porous so as to permit the escape of atmospheric moisture, and the escape of moisture, slight though it must be, from the drug itself. Tinny-sacks, barrels, wooden boxes, paper bags, pasteboard boxes, etc., will be found available. The problem of size and nature of containers, modes of shipment will solve itself with experience. The important facts to be kept in mind are that the drug should be thoroughly dry when packed, should be put in a dry clean, porous containers, should be stored in a dry place and should be kept dry in shipment.

MARKETING DRUGS.

It is of course perfectly natural that no one will attempt the cultivation of any drug unless there is a market for it. Nor is it reasonable to suppose that growers will so glut the market as to reduce the market value very considerably within say several years. No doubt the numerous ginseng plantations which have sprung up all over the United States within recent years will sooner or later reduce the market value of ginseng, but such effect is not yet appreciable. The grower can easily ascertain by inquiry where he can dispose of his product.

DRUG CULTURE AND MANUFACTURE.

In many instances it would be most desirable or even almost absolutely necessary for the grower to become manufacturer. The grower of lavender, for example, should manufacture and market the oil lavender. The California growers of insect flower manufacture and market also the insect powder (inubach). An Eastern manufacturer of belladonna plasters cultivates all the belladonna required in his business. The grower of mints would find it profitable to also manufacture the oil and menthol. This applies especially to the growers of those drugs which should be used in the fresh or undried state for example, such as yield stearoptens, oils, gums, etc.

The mere suggestion must suffice as it would be impossible, within the scope of this paper, to enter into a discussion or fuller explanation. It is reasonable to suppose that a maximum profit accrues from an enterprise when the resources are developed in all possible directions. If it is profitable, for example, to cultivate mustard it would no doubt also be profitable to manufacture and market mustard oil. It is hoped that some enterprising individual may experiment with the cultivation of the less common drugs and the manufactured products that are obtained from them. For example, the rose and rose oil, the eucalypti richest in oil, thyme and the oil, etc.

Emulgen.

Emulgen is an emulsifying agent which has recently been brought into commerce and 20 Gm. of which is sufficient to produce rapidly a good emulsion with 100 Gm. of oil. The composition of the emulgen is found to be as follows: Tragacanth, 10; gum acacia, 5; gluten, 5; glycerin, 20; alcohol, 10; water, 50. The emulgen contained 4.06 per cent. of proteids, existing according to Aufrecht's opinion, in the form of gluten.—*Pharm. Zeit.*, through *Pharm. Journ.*

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Sodium Bicarbonate and Bismuth Subnitrate.

(S. B.—) enclose the following prescription which was handed to me a few days ago. Will you kindly comment on it and give me the formula for 'Aq. laurocerasi?' I am not familiar with it."

Sodii bicarb	5ʒv
Bis. sub-nit.	5ʒv
Aq. chloroformi	ʒiij
M. et add.	
Aq. laurocerasi	ʒiij
Strych. sulph.	gr. ½
M. Sig. A teaspoonful in a little water ½ hour before each meal.	

The principal difficulty here is due to the reaction between the bismuth subnitrate and sodium bicarbonate, a reaction that was fully explained in a somewhat similar prescription in *The Era* of June 8, 1905, page 636. On allowing the mixture to stand the cherry-laurel water is decomposed. The propriety of combining strychnine sulphate in the prescription may also be questioned. We do not think the above prescription should be dispensed.

"Aqua Laurocerasi," or Cherry-laurel Water, is official in the British Pharmacopoeia, and is made by distilling fresh cherry-laurel water leaves with water so that when the finished product is tested it shall contain one-tenth per cent. of hydrocyanic acid (HCN). There is no corresponding preparation in the U. S. Pharmacopoeia, unless bitter almond water may be so called. The latter is a weak and uncertain preparation, however, as it contains variable proportions of hydrocyanic acid, owing to the character of the commercial oil of bitter almond from which it is prepared.

An artificial cherry laurel water, sometimes employed, is the following: Hydrocyanic acid, dilute, 1 dram; oil of bitter almonds, 4 minims; alcohol, 3 drams; distilled water, 20 drams. This, however, should not be used without the consent of the prescriber.

Grease Extracting Paste.

(M. S.)—Try one of the following: (1)—Fullers' earth, 15 parts; French chalk, ½ part; yellow soap, 10 parts; pearlsh, 8 parts; mix thoroughly and make into a paste with spirits of turpentine. Color, if desired, with yellow ochre. Form into cakes. (2)—An earthy paste for removing grease spots is made as follows: Mix ½

pound of fullers' earth, free from gritty matter, with ½ pound of soda, 8 yolks of eggs, well beaten up, and ½ pound of purified oxgall. Grind the whole together until a thick, uniform paste is obtained, which cast into balls or cakes, and lay aside to dry. A little of this detergent is scraped off with a knife when wanted for use, made into a paste with water and applied to the stain.

Oxgall soap may be similarly applied for removing grease stains. It is made by triturating extract of quillaja, 1 ounce; powdered borax, 1 ounce, with fresh oxgall, 4 fl. ounces. Then add 15 ounces of common or castile soap in powder, and beat the whole to a uniform consistency, and cut into cakes of the desired size.

Other formulas have been published in *The Era*. Consult the indexes.

Anti-Perspiration Powder.

(M. C. D.)—A typical formula for an anti-perspiration powder is furnished by the National Formulary under the title, "Salicylated Powder of Talcum." The corresponding preparation of the German Pharmacopoeia contains starch instead of boric acid. Here are some other formulas:

Zinc oleate, powdered	1 ounce
Boric acid, fine powder	2 ounces
Talcum, powdered	3 ounces

Salol	100 grains
Oil of wintergreen	½ fl. dram
Powdered talcum	10 ounces

Salicylic acid	2 drams
Powdered alum	4 drams
Starch	2 ounces
Oil of bergamot	½ dram
Alcohol	4 fl. drams
Powdered talcum	7 ounces

Dissolve the acid and the oil in the alcohol, and rub in a mortar with the other ingredients until the alcohol is dissipated.

Keeping Ice Cream.

(J. F. B.)—There is nothing better for keeping ice cream firm and in good condition than one of the various ice cream cabinets made for soda dispensers who serve ice cream at their fountains. Experienced dispensers say that by their use one can save ice, time and trouble, and the cabinets keep the cream in good condition over night, and always at the right consistency.

Here are some formulas for ice cream in which gelatin is employed to give the cream more "body":

Cream	1 gallon
Unskimmed milk	1½ gallons
Gelatin	3 ounces
Vanilla extract	2 fl. ounces
Powdered sugar	2 pounds

Soak the gelatin over night and add to it ½ gallon of hot milk (gradually), dissolve in this the sugar, and strain into the balance of the milk and cream. Place all in the freezer, allow the mixture to cool in the ice 20 minutes or more before adding salt, then proceed to freeze. In less than 20 minutes the plungers may be removed, and the cream is ready to re-pack. It will be noticed that the cream swells 40 to 50 per cent., according to the rapidity with which the churning is done.

Good cream	2 gallons
Milk	½ gallon
Granulated sugar	5 pounds
Best vanilla	2 ounces
Whites of eggs	1 dozen
Gelatin (shred)	3 ounces

Dissolve the gelatin in the milk by the aid of heat, and be careful not to scorch it. Mix the milk and cream, and dissolve the sugar in it by stirring. The cream should not be ice cold or it may lump the gelatin. Strain into the freezer and commence freezing at once.

Moulding Sealing Wax.

(F. B. C.)—Moulds for casting sealing wax may be obtained from almost any manufacturer of candle or other moulds. However, Brant, in his book on the fabrication of sealing waxes, states that brass moulds are rather expensive, on account of the cost of engraving. He also states that moulds may be constructed very cheaply by first making a single mould in which a stick of fine sealing wax is cast. The stick of wax is then rubbed over with a film of olive oil, the oiled stick being then placed in a suitable form and plaster of paris poured over it. When the plaster has become hard, it is carefully detached from the stick and thoroughly dried at a moderate heat. The plaster form is then in turn rubbed over with olive oil and a stick of plaster of paris moulded in it, which becomes a replica of the first casting of the sealing wax. The stick is now thoroughly dried and placed in a small wooden box, and melted type metal poured over it. In this manner, moulds of type metal are obtained which may be used like brass moulds. Many copies can also be made from a single form by the galvanoplastic process.

To mould the wax: Take the melted sealing wax from the melting vessel with a ladle and pour into a casting ladle provided with a spout and wooden handle, which has been previously heated. The wax is then poured into the moulds in a uniform stream. When the wax has become cold the moulds are covered with a board, turned over, and the sticks detached from the forms by a gentle tap. Moulds consisting of two pieces are opened and the sticks pushed out.

Label Varnish.

(E. E.)—We do not know that we can improve on the formulas given on page 580 of the May 25, 1905, *Era*. However, we give the following formulas for label varnishes for what they are worth, the first being recommended by E. Dieterich:

Sandarac	150 parts
Mastic	50 parts
Venice turpentine	15 parts
Alcohol	800 parts

Macerate, with repeated stirring, until solution is effected. Then filter, and add enough alcohol to make 1,000 parts. Paper labels are first sized with diluted mucilage, then dried, and then coated with this varnish. If the labels have been written with water-soluble ink or color, they are first coated with two coats of collodion, and then varnished.

(2.) Dissolve 10 parts dammar in 90 parts of carbon disulphide, and apply. This var-

nish is very glossy and is said to resist the action of both water and steam.

Celluloid Varnish.

Digest 2 parts of colorless celluloid with 20 parts of acetone, in a closed vessel, during several days and with occasional shaking, until a clear, thick mass results. This is mixed with 78 parts of amyl acetate and allowed to clarify by subsidence during several weeks.

Water Glass.

(R. M. J.)—"Will you kindly give me through the Question Box, a formula for preparing liquid silicate of soda, otherwise known as 'water glass'?"

Water glass is not a liquid silicate of sodium, as you infer, but it is a solution of sodium silicate, or to use the pharmaceutical title, it is "liquor sodii silicatis." This is made by fusing together sand and dried sodium carbonate, then boiling the mass with water. This solution contains about 20 per cent. of silica (SiO₂) and 10 per cent. of soda. It is used in surgery in preparing mechanical dressings. Potassium carbonate is also employed, the resulting silicate being more expensive. Sometimes sodium or potassium sulphate is substituted for carbonate, a little carbonaceous matter (small coal) being added, which reduces the sulphate to sulphide, which acts freely on the silica.

Commercial soluble water glass varies between the limits Na₂O.4SiO₂ and Na₂O.2SiO₂, the commonest grade being about Na₂O.3SiO₂, and is made by fusing 2 parts of quartz sand with 1 part of sodium carbonate and 0.1 part of small coal. The solubility varies inversely as the proportion of silica, a glass rich in silica being very sparingly soluble. Consequently, a large proportion of soluble glass is sold in solution, as the solid is often slow to dissolve. Soluble glass is decomposed by the feeblest acids, even CO₂, gelatinous silica being separated. It is employed in the building trades for making artificial stone, fire-proofing wood, as a detergent, and for protecting natural stone that does not stand the weather well.

Keeping Flies Off Horses.

(J. A. W.)—"Infusions of bitter substances like quassia, gentian, smartweed, etc., have been used for keeping flies off of horse, it is claimed, with satisfactory results. They are applied by means of a sponge or brush. Preparations like the following have also been recommended:

(1.)	
Carbolic acid	1 ounce
Oil of pennyroyal	2 ounces
Spirits camphor	2 ounces
Oil of tar	1 ounce
Glycerin	2 ounces
Lard oil	4 ounces
(2.)	
Pine tar	1 part
Fish oil	2 parts

The oil is used to keep the tar from sticking; if fish oil cannot be obtained, lard oil may be used. An addition of 2 ounces of crude carbolic acid to the gallon of paste will improve it. Paint the mixture on when necessary.

(3.)

Melt 50 parts of tallow or other cheap

er fat with 25 parts of resin; add 50 parts of crude soda and 25 parts borax, boil with water; add 75 parts carbolic acid and 30 parts calcium sulphide solution, and finally 80 parts extract of tobacco.

Weather Indicator.

(J. H. W.)—"Please publish formulas for preparations to put on paper or cloth to indicate changes in the weather. When the weather is fair the paper or cloth will be of one color, but when it is damp the color of the paper will change."

Various formulas have been published under such names as "weather forecaster," "paper barometers," "weather service indicators," etc., but all of them usually contain some salt of cobalt. The following will probably answer your purpose:

(1.)	
Cobalt chloride	1 part
Gelatin	10 parts
Water	100 parts
(2.)	
Copper chloride	1 part
Gelatin	10 parts
Water	100 parts

(3.)	
Cobalt chloride	1 part
Nickel oxide	0.75 part
Gelatin	20 parts
Water	200 parts

These solutions may be painted on the inside of windows, or may be applied to paper or cloth. In fine weather No. 1 appears blue, No. 2 yellow, and No. 3 green. When wet weather approaches, the colors disappear.

Limeseed Oil.

(T. D. M.)—"Referring to pages 1054-5 of the Proceedings of the American Pharmaceutical Association for 1895, there is a mention of limeseed oil. Have you any knowledge as to work done since on the line suggested there?"

The oil referred to in the abstract is that obtained from the seeds of one of the varieties of the European linden or lime tree. The seeds are said to contain about 58 per cent. of oil, which has properties which should warrant its extraction on a large scale. It is compared to olive oil in color and taste, is non-drying, will not become rancid, and does not congeal at -21.5° C. Quite a thorough search through recent literature fails to show results of later investigations.

Books on Essential Oils.

(M. & C.)—"Distillation as employed in the manufacture of essential oils, is pretty fully described in books on perfumery. The following may be consulted: Askinson, "Perfumes and Their Preparation," \$3; Deite, "Manufacture of Perfumery," \$3; Gildmeister and Hoffman, "The Volatile Oils" (translated by Dr. Kremers), \$5; Idris, "Notes on Essential Oils," \$2; Parry, "Chemistry of Essential Oils and Artificial Perfumes," \$5. Saver's "Odorography," 2 vols., will give you much information about raw materials and drugs used in the perfume industry and the aromatics used in flavoring. This work is published in London and we believe costs about \$11.

Swedish Nomenclature.

(S. R. C.)—"has received an order from a Swedish customer for some 'Publa Majors Droppar,' and he wants information about the preparation and its formula.

We cannot find this title in any of the polyglot reference works at our command, but we strongly suspect that it is the Scandinavian vernacular for some preparation containing wormwood employed in domestic practice. Possibly some one of our readers familiar with Swedish pharmacy can supply the information.

Formulas for Cold Cream, Skin Food, Etc.

(E. G. Mfg. Co.)—"The Era Formulary" (85) contains a large number of formulas for cold cream, skin foods, etc. It may be obtained through this office. Other formularies are Koller's "Cosmetics" (\$2.50); "The Standard Formulary" (84); Griffiths' "Non-Secret Formulas" (85); MacEwan's "Pharmaceutical Formulas" (\$2.50).

Massage Cream.

(M. S.)—"See last week's Era, page 650.

Gurjun Balsam Oil.

Gurjun balsam, obtained from *Dipterocarpus* species, is becoming more and more important for the trade, owing to its industrial and medicinal applications. The balsam is usually obtained in the spring, by cutting a deep slit in the trunks of the trees at an angle of 45°, and then making a wide cavity round the hole, in which the vessel serving for collecting the balsam is placed. At the commencement of the operation a few red-hot pieces of coal are put at the base of the slit, in order to start the flow of the balsam, which continues for about six months; that obtained during the dry season is the best. Some trees annually yield 200 litres or more of balsam; the average is 80 litres. The color of the balsam varies from bright yellow to black-brown, according to the species of *Dipterocarpus* from which it is obtained; in transmitted light the balsam is clear and more or less red, in reflected light it is grey-greenish and non-transparent. The odor reminds of copaiba balsam, but is less strong; the taste is bitter, not acrid. The balsam consists of a resin and an essential oil of yellowish color and faint odor. From the resin, gurjunic acid, soluble in ether, carbon disulphide and alcohol has been isolated.

Gurjun balsam finds general application in Cochin-China as a varnish for coating boats, etc., as it increases the resistance of the wood. Experiments made in Europe for preserving wood with gurjun balsam have also given satisfactory results. The white balsam, "shondrau," is most valued, and is exported in large quantities to China where it is used in the manufacture of lacquers. The medicinal application is similar to that of copaiba balsam, and is constantly gaining ground in France, where it is prepared into emulsions and capsules for internal use. Four markets come chiefly under consideration for the balsam of Cochin-China, namely: Tay Ninh, Thndaumot, Choben and Taymit. —Schimmel's Report.

The "Quick Loader" Insect Powder Gun.

This gun has for several years been a favorite with the trade and with users. It is readily loaded, emits the powder with force

Have you seen our new catalogue of Druggists' Tinware? If not ask for Catalogue No. 20.

and is a compact, handsome and durable gun. Carried in stock by all large jobbers. Ask for the "Quick Loader."

NEWS SECTION

EXEMPT FROM TAXATION.

Kings County Society Gets Welcome News Regarding Its College.

Very little business was transacted at the meeting of the Kings County Pharmaceutical Society, last week. The welcome announcement was made by Dr. Muir that the Cotton bill, exempting the Brooklyn College from taxation, had become a law. This will not become effective, however, until next year.

As this was the last meeting before the summer recess, the attendance was poor. Treasurer Ray reported a balance in the society's treasury of \$829.91. In his report on legislation, Dr. Muir thought that the passage of the Raines bill, doing away with the stamp tax and making the penalty for violation suspension of the pharmacist's license for one year, showed that the intention was to keep liquor out of the drug business. He thought the idea a good one, provided it were strictly carried out. On motion the secretary was instructed to notify all members of the new law and the penalty for violation.

An outline of the New York State Ph. A. meeting at Saratoga was given by Dr. Muir. Dr. Joseph L. Mayer read an interesting paper on "Some practical benefits to be derived from frequently consulting the College Pharmacy Library." He called attention to the many practical helps and suggestions obtainable from drug journals, which can be had in complete files only in the library. Every variety of information is easily found by means of a card index system. Very few persons, said Dr. Mayer, have consulted the library during the past year.

The following committees were announced by President Paradis: Legislative, William Muir, T. J. France, O. C. Kleime, A. E. Hegeman, W. H. Bussen-schutt; Pharmacy, A. P. Lohness, W. F. Morgan, C. Helmerzhelm; Trade Matters, J. G. Wischerth, B. Rosenzweig, E. J. Huels; Pharmacopoeial Revision, Walter Bryan, D. O. Mangan, H. W. Schimpf, F. P. Tuthill, J. H. Droze; Library, W. C. Anderson, W. J. Hackett, C. A. Kunkel, C. L. Gesell.

Messrs. Anderson, Muir, Mangan and Rehfuß were appointed a committee to attend a joint conference on the projected University of Brooklyn, on June 20, at the Brooklyn Club.

O. C. Kleime reported on the progress made in organization. He thought the King's County society should aid the N. A. R. D. organizers with the benefit of its experience. This was opposed by Dr. Muir. He thought that the work should go over until September, as that would be a better time for organization and it might then be possible to levy an additional tax of \$4.

Letters of thanks and congratulation were received from the Piso Company and the Dr. Miles Company. Dr. Anderson conferred the degree of Ph.G. on Abraham

Schweltzer, who graduated this year, but has only just fulfilled the age requirement. Dr. Anderson also made an earnest plea in behalf of the A. Ph. A., urging the druggists to join and to attend the meeting at Atlantic City.

DATE FOR N. A. R. D. MEETING.

The date for the N. A. R. D. convention in Boston, as finally selected by the Executive Committee, is September 18-23, and not October 9-13, as has previously been stated. As there is some doubt as to whether any hotel in Boston could furnish the required accommodations, Revere Hall, in the Mechanics' building, is spoken of as a possibility. The chairmen of the sub-committees are: Local transportation, J. P. Collins; reception, C. P. Flynn; entertainment, J. J. Tobin; financial, H. O. Nute; hotels, E. H. La Pierre; printing programme and badges, S. V. Rintels; telephone, H. O. Nute; ladies' auxiliary, C. H. Packard; information bureau, J. A. Bean; press, J. G. Finneran.

OUTING OF ANTISEPTIC CLUB.

The Antiseptic Club, an organization made up of men, young and old, in the employ of Merck & Co., held an outing at New Dorp Beach Hotel, Staten Island, on the afternoon of June 17, and from all accounts the microbe killers had rare sport. The committee in charge of the games was made up of Thomas Keble, "Fred" W. Knapp and Charles A. Darius, and they had in their possession a number of attractive prizes to award the winners of the various events, such as the swimming race, 100-yard dash, broad jump, sack race and hurdle race.

Everybody was well provided with cigars and in a convenient part of the field was established a wet-goods emporium, where the parched throats of contestants and lusty rooters were rendered aseptically moist. A bounteous dinner was spread in the hotel dining-hall, at dusk. When the cigar and coffee period had arrived, Master of Ceremonies Darius skillfully brought a number of diners to their feet to say a word or two on outings and good fellowship and allied topics. A number of guests from other houses responded. Encouraged by the success of its first effort, the Antiseptic Club intends to conduct another outing next year.

DEATH OF MRS. E. R. SQUIBB.

Mrs. Caroline L. Squibb, widow of the late Dr. E. R. Squibb, died last Sunday, at her home, 152 Columbia Heights, Brooklyn, the same house in which the noted chemist passed away on October 25, 1900. Mrs. Squibb was seventy-one years old. As Miss Carolin F. L. Cook, of Philadelphia, she was married to Dr. Squibb in 1852. He was survived at his death by his wife, two sons, Dr. Edward H. and Charles F., and one daughter.

HONORS FROM COLUMBIA.

Degree of Pharmaceutical Chemist Conferred for the First Time.

For the first time in its history, Columbia University, at the commencement exercises last week, conferred the degree of "pharmaceutical chemist," the candidates receiving the degree being George Martin Broemmel, B.S., Ph.G.; Samuel Kutscher, Ph.G., and Benjamin Nicholas Levy, Ph.G. These young men are the first to complete the new academic course provided for when the College of Pharmacy affiliated with the University, a little over a year ago.

The programme followed at the commencement included general exercises for the various affiliated colleges and schools, more than a thousand degrees being conferred. The pharmaceutical candidates were presented to the president of the University by the dean of the College of Pharmacy, Dr. H. H. Rusby, who gave them some kindly words of advice and congratulated them on the character of their work and their honorable efforts to secure the university degree.

The commencement was one of the most impressive ever held by Columbia University. The members of the College of Pharmacy faculty appeared with Columbia's faculty, the board of trustees of the college present being given the right of line in the academic procession. Among those present and representing the College of Pharmacy were Dr. H. H. Rusby, Prof. Charles F. Chandler, C. O. Bigelow, Owen McIntyre, Thomas F. Main, Max B. Brietenbach, Gilbert B. Knapp and Thomas P. Cook.

MORE COLLEGES REGISTERED.

At a recent meeting of the "Ad Interim" Committee of the Board of Pharmacy and the Department of Education of New York State at Albany, the following colleges registered under the provisions of the prerequisite law:

California College of Pharmacy, Northwestern University, School of Pharmacy, College of Pharmacy of the University of Maine, Massachusetts College of Pharmacy, School of Pharmacy of the University of Michigan, College of Pharmacy of the University of Minnesota. The Cincinnati College of Pharmacy was placed in the accredited class.

These are in addition to the Colleges registered some months ago. At that time there were several colleges which had not complied with all requirements. To consider and act upon these cases, an "Ad Interim" Committee was appointed, consisting of C. O. Bigelow (chairman), Dr. Willis G. Gregory, F. P. Tuthill, Warren L. Bradt. The Department of Education was represented at the recent conference by Dr. H. L. Taylor.

—R. A. Kerr, a druggist of Logtown, Miss., killed himself recently, by drinking carbolic acid.

FAREWELL TO CHEMISTS.

Smoker Given to Those Soon to Leave for London Meeting.

A farewell smoker was given by the Chemists' Club to the members of the New York Sections of the American Chemical Society, Society of Chemical Industry, Verein Deutscher Chemiker and American Electro-Chemical Society, last Saturday night, in the rooms of the club, 108 West Fifty-fifth street. It was intended as an occasion for bidding "bon voyage" to those about to sail for England to attend the meeting of the Society of Chemical Industry in London. About 250 persons were present. Dr. Wm. H. Nichols, president of the society, was the guest of honor.

The total of members and their families who will attend the London meeting numbers 115. They include Dr. Wm. H. Nichols, Dr. Charles Baskerville, professor of chemistry at the College of the City of New York; Dr. Nicholas Murray Butler, president of Columbia University; Dr. Charles F. Chandler, professor of chemistry at Columbia University; Mrs. Chandler, Virgil Coblentz, professor of chemistry at the New York College of Pharmacy; Dr. W. A. Converse, directing chemist of the Dearborn Drug and Chemical Works, Chicago; Dr. A. R. L. Dohme, of Sharp & Dohme, Baltimore; Herman Frasch, president Union Sulphur Co., New York; Wm. Wilson Hanna, of Schoellkopf, Hartford and Hanna Co.; Mrs. Hanna; Dr. Russell W. Moore, in charge of laboratory, U. S. Appraisers' Office, New York; Albert Plant, of Lehn & Fink; T. J. Parker, of the General Chemical Co., New York; Hugo Schweitzer, Farbenfabriken of Elberfeld Co., New York; I. F. Stone, president of the Drug Trade Section of the Board of Trade and Transportation; Dr. H. W. Wiley, Chief of the Bureau of Chemistry, U. S. Department of Agriculture; C. B. Zabriskie, Pacific Coast Borax Co., eastern manager; Mrs. Zabriskie.

TO GET LIQUOZINE REWARD.

Deputy Sheriff Murray has received an attachment against the Liquozine Company, of Chicago, for \$5,000, in favor of Ignatius V. S. Stanislaus, on a claim for a reward which the company advertised regarding the contents of its medicine. The attachment was discharged by the company giving a bond.

An attachment for the \$24,200 has also been obtained in the New York Supreme Court against the company on an assigned claim from the Cumberland Manufacturing Company for alleged breach of contract for glass bottles which the Liquozine Company refused to accept.

NEW YORK NOTES.

—B. B. Hamlin, Jr., formerly with the American Peroxide & Chemical Co., is now manager of the Hydrox Chemical Co., of this city.

—Some of those calling on the trade this week are Chester J. Brown, Newburg; D. E. Rosenbaum, Mt. Vernon, Indiana; James F. Wood, of A. F. Wood's Sons, New Haven.

—M. L. Holton, of Holton & Adams, has just returned from a three-months' business and pleasure trip to the Pacific Coast. On his way he stopped at the Lewis and Clark Exposition at Portland, Ore.

—The outing of the Alumni Association of the New York College of Pharmacy came off in good shape last Wednesday, at Bachman's, Staten Island. Over a hundred members and friends attended. A testimonial in album form was presented to Mrs. H. J. Binder, as a mark of appreciation for the handsome banner which she recently made for the association.

—Herbert Turrell, head of the "special preparations" department of Parke, Davis & Co., gave an outing to all the members of his department, last Tuesday, at his summer home in West Orange, N. J. This has come to be an annual affair and as the guests were told to pick flowers and play on the grass all they pleased, they enjoyed themselves immensely.

"NOT GUILTY" FOR GARDNER.

Boston, June 17.—A little over a year ago, Frederick M. Gardner, of this city, a druggist, was arrested by Hunking & Christie of Haverhill, on the charge of extortion. In a criminal session of the Superior Court in Salem, before Judge Stevens, on June 6, the case was tried, and after Dr. Hunking had testified, without any further evidence being given on either side, and without any argument on the part of counsel, Judge Stevens ordered the jury to bring in a verdict of "not guilty" without leaving their seats, as there had been no crime committed.

SYRACUSE NOTES.

—George Snyder, a clerk in the drug store of Walley & Co., of Auburn, has complained to the police that he had his pocket picked of a purse containing \$117, while on the trolley car between Auburn and Syracuse.

—George E. Thorpe, former president of the S. D. A., is a candidate for first vice-president of the New York State Ph. A., and Wayne B. Bissell, the president of the association, is candidate for member of the State Board of Pharmacy.

—Dr. A. W. Beach, the druggist, has come out with a statement that hereafter he will sell cocaine only on prescription by a reputable physician and has had signs posted in his store to that effect. He urges all druggists to take the same action.

DR. GALPIN DEAD.

Rochester, N. Y., June 13.—Dr. C. L. Galpin, for more than twenty years a druggist and pharmacist at Scottsville, died Sunday morning, June 4, of paralysis of the heart, which was induced by a severe case of blood poisoning which he had been fighting several weeks.

While unpacking drugs at his store, he injured his hand and the wound was irritated by the excelsior packing about the drugs. It is thought that this was the immediate cause of the trouble, for his hand began to swell and gradually the poison spread through his system.

Dr. Galpin was born in McLean, Tompkins county, New York, in 1840, being sixty-five years old at the time of death. He served in the Civil War and received a wound which never healed and which probably hastened his death. The remains were interred at Burns, Allegheny, where he lived at one time.

SEMINAR REVIVED.

Department Chemists Resume Their Self-Imposed Work.

REORGANIZATION ON BROADER LINES.—OFFICERS ELECTED FOR THE ENSUING YEAR.—REPORTS ON THE FIRST FOUR MEETINGS.—RESULTS OF INVESTIGATIONS.—DRUGGISTS INTERESTED.

Washington, June 15.—After lying dormant for nearly a year the Chemical Seminar of the Bureau of Chemistry of the Department of Agriculture was reorganized May 3. The object of the original Seminar was for the discussion of current literature by the several members of the Agricultural Department.

Following a number of inquiries regarding the discontinuance of the Seminar meetings a canvass was made. Dr. H. M. Wiley acted as temporary chairman of the first meeting which was called and as a result of the canvass a permanent organization was effected with great enthusiasm. The officers elected were: President, Dr. H. W. Wiley; Vice-President, L. S. Munson and Secretary Miss Doyle. The purpose of the new organization as determined upon at that meeting was to be two-fold: First, to receive reports from the several laboratories as to investigations being conducted and their object. Second, to review current literature. In addition, a committee was appointed for the consideration of important incidentals, such as new specimens and new methods which were to be presented for consideration. When the permanent organization was consummated it was decided to hold regular meetings Wednesday of each week, the sessions to last one hour.

At the second regular meeting, May 10, Dr. W. D. Bigelow read an interesting resume of "Food Inspection in the United States," beginning at 1833, when the initial food bulletin was issued. It also contained a general review of the food laws, their application and effectiveness; the divers difficulties encountered by the Federal government, the methods resorted to to overcome those difficulties; the adjustment of the delayed goods controversy. The scope of the branch laboratories was also reviewed.

Harmless adulteration was discussed but not condemned when purchasers were apprised of the fact that they were purchasing adulterated food stuffs.

The Journal Topic, "Preservatives," was ably handled by Mr. Dubois, who reviewed recent developments in connection with benzoic and salicylic acids. The reports of chemists of the presence of the acids in food and the repeated denials of the manufacturers that they had adulterated their products led to investigations which showed conclusively that those acids or their compounds were present in the natural fruits. A report of a French chemist that salicylic acid or its equivalent could always be detected in grapes when more than the stipulated amount was taken for analysis was lost sight of until a short time ago when a consignment of wine was detained on the basis that it contained salicylic acid as a preservative. The work of the Food Laboratory in conducting an

investigation to determine whether benzoic acid was contained in cranberries resulted in demonstrating that the acid was present in the berry in all stages of its growth. The method of determination was to pulpify the fruit, pressing the juice and extracting the acid with ether. The chemists also demonstrated that salicylic acid existed naturally in a number of other fresh fruits but in such small quantities that they were not easily detected.

The third meeting was devoted to dairy products. Professor G. E. Patrick, chief of the Dairy Laboratory, read a detailed report of his work and the physical and chemical methods employed in inspection investigations; in his experience the microscope furnished the most important and reliable single test for renovated butter. At the present cotton seed butter is undergoing investigation. Mr. Rodgers followed with an interesting talk on the "Influence of Bacteria on Dairy Products." The functions of molds, bacteria and enzymes present in butter, cheese and milk were outlined and the agencies influencing their growth and end products were clearly set forth. He said if the cheese were lightly compressed aerobic bacteria were shown to act much more vigorously than when firmly compressed. The resulting products vary, and temperature and amount of free acids are influential factors.

At the meeting of May 24, Professor C. C. Moore discoursed on "The addition of proper amounts of different plant foods to soils whose composition was known." The speaker stated that it was possible to add but the approximate amount needed and that in practice sufficient was usually added to replace any possible shortness.

Professor J. K. Haywood followed with a review of a method by which it is now possible to determine not only furfural in plant products, but methyl furfural can also be estimated, and separated from ordinary furfural-phloroglucin combination by its solubility in alcohol.

Dr. W. D. Bigelow next displayed a can of force rations as are used in the U. S. Army in cases of emergency. The can was hermetically sealed and contained a day's rations for one man. It is in the regulations for the men to open in the presence of an officer. The sample can examined contained three compressed cakes composed of cereals and nitrogenous food and three chocolate tablets. Despite complaints of the regulars that they were being starved it has been demonstrated, said Dr. Bigelow, that they can live for a week on the rations and frequently a gain in weight has been appreciable.

The meeting of May 24, was probably of greater interest to the druggists in that it was devoted to the discussion of "patents." Dr. K. P. McElroy, who was for a number of years in the patent office, read a paper on the "Practice in Patents." He pointed out that the patentee's aim was to make his claim as broad as possible while the duty of the examiner was to restrict the scope of the patent to proper limits. The subject was freely discussed and Dr. McElroy clearly stated that he was not in favor of the recently defeated Mann bill, which bill, he believed if it had become a law, would have been a great detriment to the country and would have worked a great injustice to chemical inventors.

BOOM IN PHILADELPHIA.

Many New Drug Stores Being Opened in the Quaker City.

Philadelphia, June 19.—Judging from changes already, this year promises to be a most active one as far as the buying, selling and opening of drug stores is concerned. Last year there were 126 changes in the ownership of stores within the city, and from present indications this number will be surpassed before September 1. The principal reason for this is the rapid development of West Philadelphia, following the commencing of work on the subway.

The rush to secure homes and stores near the subway route has halted the growth of other suburbs to a certain extent and the result has been that in not a few cases proprietors who had opened branch stores in boroughs and towns near the city have sold out when they could, and in many instances closed their branch establishments. Then, too, not a few of the 160 graduates in the classes this year at the several colleges in this city are on the look-out for desirable corners.

There never has been a year when druggists have taken so much interest in the development of their soda business. Although thus far the season has been a backward one, in every part of the city old fountains that have been doing duty for five, ten and often many more years, are being taken out and replaced with the modern apparatus.

A DAY'S OUTING.

Philadelphia, June 17.—Rarely has the roomy old mansion, "The Orchards," at Essington, the summer home of the Philadelphia Athletic Club, been the scene of a happier gathering than on Thursday, when members of the Philadelphia Drug Athletic Association with their friends, arrived on the scene for a day's outing. They were the guests of Charles Willis, an active spirit in both organizations.

After going over the historic building and grounds, the visitors there reserved to the winds and soon were deeply engrossed in baseball, shuffle board, pool, billiards and the other pastimes. Dinner was served at seven o'clock. Mr. Willis in the capacity of toastmaster was a pronounced success. Among those responding to toasts were Messrs. Masholder, Kraus, Duffy, Polard, Iahn, Johnson, Davis and Wittke.

After dinner there was a boat ride on the Delaware river, and it was said that there was a "quiet game" engrossing the attention of about seven of the members who were strangely missing. At 10.30 the party, sunburned and tired, took the train for Philadelphia, after passing a vote of thanks to the host, Mr. Willis, for one of the most delightful of the many gatherings that the association has had.

PHILADELPHIA NOTES.

—During the contest now being waged between Mayor Weaver and the machine politicians, the drug stores of the city have been used as distributing stations for literature issued by the reformers, and for tickets of admission to the numerous monster mass meetings that are being held nightly.

DENIED USE OF MAILS.

Baltimore, June 17.—Postmaster General Cortelyou has come to the aid of unsophisticated negroes who have been buying a preparation guaranteed to "turn the blackest skin to purest white without pain, inconvenience or danger." The individual who, it is alleged, has been taking advantage of the guileless colored citizen is Dr. James A. Herlihy, of Chillicothe, Ohio, and the Post-office Department at Washington issued an order to-day which denies him the use of the United States mails in furtherance of his scheme.

Herlihy has been working the same game on the negroes of Southern Ohio that was practiced recently, it is averred, by the Rev. Winfield Company, of Richmond, on the negroes of Richmond, Virginia, and other Southern States. He advertised for sale a chemical preparation which, externally at least, was warranted to change the Ethiopian into a Caucasian. "Black no more," is the alluring title of the great discovery, and it is sold for \$2 a bottle. The formula is practically the same as that of "Marvin," the "wonderful French boon" which the Richmond firm was palming off on the Old Dominion negroes. The ingredients are bichloride of mercury, tincture of benzoin, glycerin and distilled water, according to an analysis made by the Bureau of Chemistry of the Agricultural Department. Herlihy, however, seems to have been less considerate of his victims than Winfield, for he charged double the price for his marvelous skin changer.

CHARLES E. DOHME AT HOME.

Baltimore, June 17.—After an absence of months, Charles E. Dohme, of Sharp & Dohme, once more made his appearance at his desk to-day. The desk was almost covered with flowers, the gift of employes and friends. The recipient of these attentions spoke a few words of grateful acknowledgment. He said that while he had seen much that is of interest and had derived great benefit from the trip, he was glad to get back once more and it was especially gratifying to him to receive such expressions of kindly feeling and regard as those represented in the floral gifts.

Dr. Dohme looks exceedingly well and has been greatly benefited by the journey, which extended over a large part of Europe, and led him to many noted spots. Louis Dohme, who has been abroad since last October, is expected to return this week. Charles E. Dohme was accompanied by his wife and daughters.

ADVERTISING A DRUG STORE.

Baltimore, June 17.—Druggist F. W. Schanze, who conducts a pharmacy on the southwest corner of North and Pennsylvania avenues, is causing consternation among his business competitors by his original and decidedly aggressive methods of advertising. He believes in carrying the war into Africa, and with this end in view he is on the lookout for vacant lots in the neighborhood of pharmacists, who draw business in a measure from the same neighborhood. Having found such a lot, he proceeds to erect thereon a large bill

board, which is promptly adorned with a highly colored picture of his attractive horse and delivery wagon, and other characteristic pictures. The illustration is, of course, accompanied by suitable lettering. These bill boards have made their appearance at a number of places, some of them at a considerable distance from the pharmacy, and the druggists near whose stores they are erected have become rather severe critics.

DRUGGIST ACQUITTED.

Baltimore, June 17.—James W. Cocks, a well-known druggist of Petersburg, Va., was on trial in the Hustings Court there, yesterday and to-day, on the charge of stealing \$95 from the safe in the drug store of W. E. Brown, to whom Cocks had sold the pharmacy. To-day R. H. Mann, attorney for the Commonwealth, asked the court to instruct the jury to return a verdict of not guilty, as the testimony showed there was a reasonable doubt as to the guilt of the accused. This was done and the prisoner was discharged.

The arrest of Cocks caused a sensation, as he had been a prominent druggist for ten years, and was a member of the Petersburg Club. Cocks himself was put on the stand and denied all knowledge of the theft. His wife also was a witness.

MARYLAND PH. A.

Baltimore, June 19.—The arrangements for the annual meeting of the Maryland Ph. A., to be held at Betterton, on the Eastern Shore, this week, are complete, and an interesting session is anticipated. This is the first time the organization has selected a meeting place in the northeastern part of the State, the purpose in making the selection being to interest particularly the druggists of Harford, Kent, Cecil and Queen Anne counties. Among other things, desirable amendments to the State pharmacy law will be discussed. The legislature meets next January and some changes in the existing law are likely to be made; at least the druggists of the State may ask for modifications, with the view to securing greater effectiveness of the statute. As stated some weeks ago, ample provision has been made for the entertainment of the delegates.

DRUGGISTS' CHARGES DISMISSED.

Norfolk, June 19.—Charges preferred by Dr. Bowen, a colored druggist, against Patrolman George C. Beacraft, have been dismissed by the police commissioners. Bowen alleged that Beacraft came into his store intoxicated, and talked in an offensive manner. The druggist gave contradictory testimony, and the policeman had many witnesses to prove that he was not in the store at the time stated in the complaint.

DRUGGISTS' EXCURSION.

Pittsburg, June 16.—Invitations have been issued for an outing to be given by the Western Pennsylvania Retail Druggists' Association on Thursday, June 29. There will be a steamboat excursion and a basket picnic.

THE DOW SUIT.

Complainant Under Technical Arrest for Refusing to Answer Questions.

Cincinnati, June 20.—Miss Cora Dow, operator of seven cut-rate stores in this city, who recently filed suit against the Ohio Valley D. A., and a number of wholesalers and retailers, for \$50,000 damages for alleged interference with her business, was placed under technical arrest last week. She refused to answer certain questions in the taking of depositions in the suit against the O. V. D. A. She was placed technically in charge of the sheriff, under a commitment to jail for contempt. A petition in habeas corpus was at once filed and a writ issued for her release. She was allowed to go on her own bond, pending a hearing at a date to be agreed upon by opposing counsel.

SUBSTITUTION CHARGES.

Cincinnati, June 20.—A sensation was created at the hearing before the Board of Public Service of the charges that substitution was practised at the City Hospital and that different drugs were stolen. Representatives of nearly all the local wholesale firms were in attendance, although they had not been summoned. Substitution was admitted by the chief druggist, but charges that medicines had been stolen were denied. The matter has been, temporarily at least, dropped.

Hereafter supplies for the hospital will not be purchased exclusively from Cincinnati firms. Last week a proposition was received from a New York house to sell hexamethylenetetramine, carbolic acid and other drugs for less than prices charged by local concerns. In the future supplies will be purchased in the lowest market. There was an ironclad rule that all the buying be done in this city.

SUNDAY CLOSING COMPULSORY.

Moultrie, Ga., June 17.—The Moultrie Council has passed a resolution forbidding the opening of drug stores on Sundays. The drug stores have been allowed to keep open on Sundays heretofore. Prescription clerks will be allowed to fill prescriptions, but will not be allowed to open the doors or to admit anyone. The resolution was passed at the request of the churches.

PADUCAH DRUGGIST WEDS.

Paducah, Ky., June 16.—Edward Pettitt and Miss Lillian Rush were married here by the Rev. Father Jansen. Mr. Pettitt is in the drug business at Twelfth and Trimble streets.

SALARY ONLY \$500 A MONTH.

It must have struck many readers that \$5,000 per month, said to have been claimed in a suit brought by Bruno Batt, in St. Louis, was a pretty generous salary. Unfortunately, a misguided printer added an extra cipher to the original \$500. Mr. Batt modestly disclaims having asked for a bigger salary than "what we pay our Teddy for running the whole United States."

NEW BADGER PHARMACISTS.

Madison, Wis., June 12.—Thirty-seven applicants for pharmacists' certificates were examined by the State Board of Pharmacy on June 8, and the following received registered pharmacists' certificates: Percy V. Atkinson, Milwaukee; Alfred M. Berg, Eau Claire; Charles L. Muggah, Ellsworth; Clarence E. Klester, Chippewa Falls; Herbert J. Schell, Superior. Assistants' certificates were granted the following applicants: Robert N. Bauer, Milwaukee; Benjamin N. Smith, Janesville; George A. Miller, Cadott; Winfield S. Hess, Johnson's Creek; Anna J. Fetzer, Sturgeon Bay; Phillip J. Naber, Milwaukee; Claude C. Morrison, Bloomer; Frank L. Walter, Waupaca; Matt Chobisig, Mukwonago.

Members of the State Board present and passing upon the examination papers were: President D. A. Taylor, Stevens Point; Secretary H. G. Ruenzel, Milwaukee; A. F. Menges, Madison; Otto J. S. Boberg, Eau Claire, and H. A. Peters, Oconomowoc. The next examination will be held in Milwaukee, August 16 and 17.

AGED DRUGGIST DEAD.

Racine, Wis., June 15.—Horace Stone, aged 91 years, died at his home here. He was a resident of Racine since 1842. In 1834 he came to Sheboygan and erected the first hotel and also a government lighthouse. In 1850 he went to the gold fields of California and acquired a large fortune. He conducted the drug business here until two months ago. He leaves a widow and one son.

MICHIGAN'S OLDEST DRUGGIST.

Detroit, June 16.—St. Johns is very proud of A. O. Hunt, who is without doubt the oldest practicing druggist in the State of Michigan. He has just passed his seventy-third birthday, and has been in business in this city continuously for the past fifty years. He rarely misses a day at the store, and there are none of the younger generation who can give him any pointers on the business.

Mr. Hunt was a native of New York State, having been born near Rochester, May 3, 1833. He came to Michigan in 1838 with his parents, spending his boyhood days in Union City and Kalamazoo. On attaining his majority he came to St. Johns and opened a pharmacy for himself, and his career has been one continued success. Mr. Hunt is an ardent sportsman, and for the last thirty-eight years has spent a part of every year in northern Michigan, deer hunting. He has killed more than sixty deer in that time. He was married forty-five years ago, and is engaged in many charitable enterprises.

ELECTS NEW OFFICERS.

Grand Rapids, Mich., June 10.—The Druggists' Association of Montcalm county has elected officers for the year as follows: President, J. H. Passage, Greenville; vice-president, Sid V. Bullock, Howard City; secretary and treasurer, W. W. Slawson, Greenville; executive committee, S. V. Bullock, Howard City; W. J. Bullock, Fenwick; C. W. Vining, Lakeview; H. J. Wilson, Edmore.

VIOLETION OF THESE LAWS

Punishable by Forfeiture of Offender's Certificate or Closing His Store.

Madison, Wis., June 17.—Two bills, which passed the legislature and which have been signed by the governor, are of interest to druggists, especially in local option towns. One prohibits agents for brewers or distillers, whether resident agents or traveling representatives, from soliciting orders for any kind of intoxicant in "no license" towns and prevents grocers, druggists or other merchants from procuring stocks of liquors and selling to patrons as agents.

The other law prohibits druggists in prohibition towns selling liquor except for medicinal purposes. Each sale of liquor must be upon prescription only and each sale must be registered, the register to be kept in a public place in the store and subject at all times to the inspection of any citizen.

Violation of these laws is punishable by the forfeiture of the offender's certificate. A second offense means that the store shall be closed for from three months to a year. A third offense puts the offender out of business in the State.

DRUGGIST ROPED AND ROBBED.

Kansas City, June 16.—F. G. Summers, a druggist in the Chamber of Commerce building at Riverview Station, in Kansas City, Kas., was robbed in his store, last Tuesday night, by two men, in much the same fashion as was Louis Beck, proprietor of the Bonaventure Pharmacy in this city, the Wednesday night previous. Summers was closing his place at 11 o'clock, when the men entered, leveled pistols at his head and ordered "hands up." They took keys from Summers' pocket and unlocked a vault, from which they took \$40 and a gold watch valued at \$100. They then placed Summers in the vault and were about to lock him in, when he asked them to tie him instead. This they did with small rope and shoe strings. He managed to open the front door, twenty minutes after the robbers left and called for help. A patrolman responded and cut the cords, which still bound his hands. The men have not been arrested.

SOUTH DAKOTA PH. A.

Dells Falls, S. D., June 16.—Secretary Bent, of the State Pharmaceutical Association, has issued a letter in regard to the annual meeting, which will be held at Aberdeen three days, commencing August 9.

The letter calls attention to the fact that \$65 was appropriated at the 1904 meeting for prize papers, \$15 and \$10 for the best two papers on any subject in scientific pharmacy, and like amounts for the best two papers on any phase of commercial pharmacy. Besides these offers there are \$15 for the best two papers on any subject, first prize \$10 and the second \$5, to the members of the Ladies' Auxiliary. The local secretary, with an active committee to assist him, promises a most attractive programme.

AMONG THE COLLEGES

WASHINGTON STATE COLLEGE.

Pullman, Wash., June 16.—The junior class had a delightful outing to the foot-hills of the Rocky Mountains, eighteen miles distant, and made its annual collection of botanical and medicinal plants, which grow wild in the Palouse country. Professor Watt, who is well versed in the botany of the plants growing in the neighborhood, was leader. A healthy specimen of *Ursus Major* was encountered, but on account of its known dangerous properties, it was left undisturbed.

The annual interscholastic contest and field meet of the high schools of Eastern Washington took place here. Sixteen schools were represented by over one hundred athletes. Several prospective pharmacists were among the visitors.

The cadet band and battalion have had a week in camp at Portland. Most of the members are pharmacists, and several of the seniors are on the hospital corps.

The college now offers a four years' course in pharmacy, and graduates receive the degrees of B.S. and Ph.G.

CHICAGO C. P.

Chicago, June 14.—Beginning with the next session of the University of Illinois School of Pharmacy (Chicago College of Pharmacy), the Searle & Hereth Company will offer a prize, to be known as the Searle & Hereth Prize, consisting of a complete set of the Proceedings of the A. Ph. A., and nomination to membership in the association. The prize will be awarded to the senior student who attains the highest proficiency in chemistry.

In the new rooms of the school, the senior chemical laboratory is provided with a working library, which includes a set of the Proceedings, and which is frequently consulted in laboratory work. It is the intention of the donors of the prize to call attention to the value of the Proceedings for reference reading, and incidentally to stimulate an interest in the association itself. It is believed that this is the first time that a prize of this kind has been offered. Several schools have offered membership in the association, but none have before offered a set of the Proceedings.

TEMPLE COLLEGE.

Philadelphia, June 17.—Robert Trafford Devereux was the only graduate in the course in pharmacy at Temple College and Daniel Edward Maloy and Patrick John Maloy received diplomas as pharmaceutical chemists at the same institution, at the annual commencement held this week. President Russell H. Conwell announced that it is the intention of the trustees to erect a much larger building at Broad and Brown streets, so that college work can be carried on in a more extensive manner. Among the changes in the faculty announced was the appointment of Miss Jennie C. Adams, a graduate of the University of Pennsylvania and the Philadelphia Normal School, to be an instructor in botany and zoology.

NEBRASKA DRUGGISTS MEET.

Big Attendance at 24th Annual Session of the State Association.

York, Neb., June 17.—Much important business was transacted at the twenty-fourth annual session of the Nebraska State Pharmaceutical Association, which was held here last week. Delegates and members were present from nearly every city and town in the State. The druggists were welcomed by Mayor M. Sovereign, who told them to make themselves at home, and that they had the keys of the city. Henry Gering, of Plattsmouth, responded to the address of welcome. George Jerome also welcomed the druggists, and he was responded to by E. L. Wilcox. The York Commercial Club and their ladies tendered a reception to the delegates and their ladies, its large rooms being beautifully decorated for the reception.

At the second day's session the following papers were read: M. Minnich, of Palmer, "Assay of Linsseed Oil," with demonstrations; C. E. Hopping, of Beaver City, "How to Get Next to an M.D. and Keep Him Next to You." F. Simons, of Oakland, and F. B. Hardesty also read papers on the same subject. J. Earle Harper, of Plainville, "The Standard of Pharmacy"; John Motl, of Omaha, "Graduation"; Theresa St. Martin, of Eddyville, "Women in Pharmacy."

There was a street parade in the afternoon and a vaudeville entertainment at night. At the afternoon session the legislative committee made an excellent report. The committee on membership reported an addition of upwards of seventy. The last day's session was given over to the election of officers and the appointment of a committee to investigate the adulteration of linseed oil. The committee was: Dr. Minnich, of Palmer; H. Gering, Plattsmouth; Charles Sherman, Omaha.

The following officers were elected for the ensuing year: Nels P. Hansen, Kearney, president; Dr. F. Simon, first vice-president, Oakland; J. E. Harper, second vice-president, Norfolk; D. V. Adams, third vice-president, Johnson; George Downs, fourth vice-president, Bloomfield; N. B. Brough, fifth vice-president; Carl Spielman, treasurer, Sutton; O. P. Bauman, secretary, Grand Island.

Following are the applicants examined by the Board of Pharmacy who passed the examination: Ralph W. Beckly, Elmwood; R. L. Crawford, Bancroft; George E. Downs, Bloomfield; Elmer P. Johnson, Carroll; Orel Jones, Omaha; Mrs. Orel Jones, Omaha; Marry Millie, DeWitt; David L. Murray, Fremont; J. Roy Smith, Tecumseh; Burton Watson, Omaha; Frank X. Wright, Calro.

Hastings was the place selected for the meeting next year.

PROMINENT DRUGGIST DEAD.

Kansas City, June 19.—William P. Incke, died at his home here recently, of spinal meningitis. He had been ill several months and incapacitated from attending to business. He was thirty-eight years old. For many years he had been in the drug business at Eleventh and Walnut streets. A widow, formerly Miss Minnie Kinze, survives him. The business will be continued under her direction.

NEW JERSEY JOINS N. A. R. D.

Now Affiliates With That Body for the First Time in Five Years

Very Little Opposition at Thirty-fifth Annual Convention at Atlantic City—152 New Members Elected—Severe Criticism of New York's Prerequisite Law—Will Meet in Atlantic City Next Year.

For the second time in its history the New Jersey Pharmaceutical Association has decided to affiliate with the N. A. R. D. This action was taken at the thirty-fifth annual convention at Hotel Islesworth, Atlantic City, last week, with only a few dissenting voices. The last remaining State association has thus been gathered into the N. A. R. D. fold. It is five years since the New Jersey association broke away from the N. A. R. D.

So well did the members enjoy themselves at Atlantic City that they decided to meet in the same place next year. The unusual number of 152 active members were elected during the meeting.

The first session was opened on Wednesday, June 14, at about 11 a. m., with an address of welcome by Mayor Franklin P. Stoy, of Atlantic City. He felt so confident that the druggists would behave themselves that he had no hesitation in turning over to them the keys of the city. A response was made by E. A. Sayre, of Newark.

PRESIDENT'S ADDRESS.

In his annual report, President George M. Beringer, of Camden, congratulated the Committee on Publication on its rapid work in publishing the proceedings last year and on the use of a portrait of the late Wm. R. Laird, as a frontispiece to the volume. He recommended the selection of the late Wm. Thompson Brown's picture for a similar purpose this year. To reduce the percentage of errors in the published proceedings, the president recommended that the secretary engage a competent stenographer, and that in future galleys proofs of discussions be submitted to the authors for examination.

There has been danger of a deficit in the past, which was augmented by the failure of the Monmouth Trust Co., in which part of the funds were deposited. But in the past year the bank has declared a dividend and there is now a decided improvement. The president recommended that action be taken on members delinquent in dues.

The Board of Pharmacy has had a busy year and Mr. Beringer hoped the Board would investigate the sale of drugs by unqualified persons in districts not "rural." Although the State Board of Health has made some prosecutions for the sale of adulterated drugs, they were heartily endorsed. The claim of the druggists to representation on the Health Board was presented to Governor Stokes last January. Nothing had yet been realized from this effort, but this was no reason for abandoning the work. On the subject of adulteration, he said:

ADULTERATION OF DRUGS.

"That adulteration of drugs is practiced to some extent must be admitted; and the modern skilful adulteration is far more difficult to detect than the crudities of the past. It is the desire of every honest druggist to expose such fraud and in every way possible protect our calling and associates from improper accusations and prosecutions.

"I would therefore recommend that the association appoint a Committee on Adulteration, whose duty it shall be to collect samples of sophistications and information relating to same and through an annual report and publication in the proceedings, give the widest publicity to such acts and the means of detecting them."

An energetic campaign for members was carried on during the year. One member offered \$25 as a prize for the largest number of new members. The president recommended the enlargement of the membership committee by the addition of auxiliaries composed of at least one member from each county. He thought the membership lines should be broadened so as to admit traveling men, pharmaceutical writers, chemists and non-resident pharmacists. Some provision for the establishment of life membership was recommended.

PREREQUISITE LAW WANTED.

Concerning legislation, the president touched on the defeated anti-diphtheritic serum bill and then criticised New York's "prerequisite" law as being harsh and unfair to many of the young men who have entered the drug business in recent years. The Pennsylvania law was considered more moderate. It was recommended that the Legislative Committee prepare and secure the passage of a prerequisite amendment to the New Jersey pharmacy law.

"A radical and impractical advance is not contemplated," said Mr. Beringer, "but New Jersey must not be made a pharmaceutical dumping ground."

Other recommendations made were: The discontinuance of the Trade Interest and County Committees; co-operation of the Proctor Memorial Committee with the A. Ph. A.; co-operation with the A. Ph. A. in connection with their coming meeting at Atlantic City; a standing committee on the U. S. Pharmacopœia.

Seven members died during the year, namely: H. T. Bernhard, Wm. T. Brown, F. B. Drake, H. E. Otto, W. F. Mutchmore, Spencer Van Dalsen, T. P. White-neck, Fred Hoffmann. Memorials of these were appended.

Secretary Frank P. Stutzen's report showed a membership for the past year of

458, with twelve honorary members. Letters were sent to fourteen manufacturing pharmaceutical houses selling direct to physicians. Responses were received from six, who pleaded "not guilty." The following delegates were received: Kings County Ph. S., A. E. Marstand and F. P. Tutbill; New York State Ph. A., F. P. Tutbill; Ohio Ph. A., H. Lohmann.

Prof. Jos. P. Remington, amid great applause, was called upon for remarks on the new pharmacopœia. He stated that the work was already in its second edition and gave much interesting information regarding its compilation.

Treasurer J. C. Field's report showed a balance of \$2,170.38. The membership committee presented 152 applications for active and forty for associate membership. All the active members were unanimously elected. Henry A. Jordan, secretary of the Board of Pharmacy, reported on the year's work. There are 1895 registered pharmacists in the State and seventy-nine registered assistants. Out of a total of 407 candidates examined, 135 passed. There were fifteen violations of the pharmacy law. Treasurer George W. Parisien's report showed that the Board had turned over a balance of \$262.67 to the State Treasurer.

The following committees were appointed: Nominating, George H. White, E. T. N. Stein, L. P. Staley, Chas. Wuensch, E. B. Jones; Place of Meeting, E. A. Sayre, J. C. Gallagher, Wm. F. Ridgway; Publication, W. P. Rich, E. A. Sayre, Wm. M. Davis.

GUESTS OF THE YACHT CLUB.

In the afternoon the members were the guests of the Atlantic City Yacht Club, which provided music and refreshments. The entire party were treated to a long ride in launches owned by the hospitable yachtmen. Calamity befell several individuals with weak stomachs.

About 150 persons sat down to the banquet in the hotel at 9 p. m. The souveniers were dose-glasses for everybody, given by Whitall Tatum Co., while the ladies received bottles of perfume. Chairman Deakney, of the local committee, made an excellent toastmaster.

NEW YORK LAW CRITICISED.

Prof. Remington, the first speaker, sounded a note of warning on the subject of prerequisite laws. Every man desires advancement in pharmacy, he said, but in New York they have undoubtedly made a tremendous mistake in requiring eight years' academic work and twelve regentia counts, before entering college. This would bear hard on the young men who had been clerking for some time, as they could not be expected to go back to high school for an education. He commended the Pennsylvania law, which requires only graduation from a reputable college of pharmacy.

President Beringer was the next speaker and Wm. M. Davis followed with a witty toast to "The Ladies." C. A. Mayo responded to "New York." George H. White, speaking from his experience on the Board of Pharmacy, emphasized the primary need of ordinary common school education among candidates. Other speakers were W. P. Rich, James C. Field and E. A. Sayre, the last-named responding to "What shall we do with our ex-presidents?" Mr. Sayre believed that they were fully able to care for themselves; Dr. Osler not required.

MEMBERS IN ATTENDANCE AT THE THIRTY-FIFTH ANNUAL CONVENTION OF THE NEW JERSEY PH. A., ATLANTIC CITY, JUNE 13-14.

TRAVELERS' AUXILIARY FORMED.

Thursday's session opened at 10.20 a. m. W. P. Rich reported for the Auxiliary Committee that a traveling men's auxiliary had been successfully launched in the past year and that there were now about fifty members. At the suggestion of the president, a record of this organization was ordered made in the proceedings.

The amendment to Art. 3, section 2 of the constitution came up, making manufacturers, wholesale druggists and traveling men calling on the trade, eligible to associate membership. This was amended to include also chemists, pharmaceutical writers and non-resident pharmacists, and after a warm discussion over technical points, both amendments were unanimously adopted. At his own request, Charles F. Squibb, an honorary member, was also elected an associate member. Forty-five associate members were elected.

Harry C. Blair, of Philadelphia, delegate from the Pennsylvania Ph. A., was then received. Reports of delegates to various associations were called for, but the only complete report was made by Mr. Davis, delegate to the New York State Ph. A. A telegram of greeting from the Missouri Ph. A. was read and ordered acknowledged. Henry A. Jordan, of the Legislative Committee, made a complete report of the year's work.

The reading and discussion of papers, presented by Chairman Lohman, of the Query Committee, was next in order. Dr. P. E. Hommel, of Jersey City, read an

interesting paper on the uses of slippery elm bark. "Drugs Containing Tannic Acid," by Dr. Hommel, was read by title. Professor Chas. La Wall, of Philadelphia, followed with a comparative study of tests for formaldehyde, which created some discussion. George W. Paristen gave an easy method for the preparation of Tr. Cudbear.

SERIAL NUMBER PLAN HIT.

"The Preparation of Fluid Extracts" was treated by George M. Beringer, the "Estimation of Camphor in Camphor Preparations of the U. S. P.," by E. Fullerton Cook, of Philadelphia, and "Syrup of Hypophosphites," by Adolph F. Marofmir. E. A. Sayre submitted a paper on "One Year of the Serial Numbering Plan in Essex," criticising severely the methods by which the contracts on certain proprietaries were not put into effect until some months after the announcement of the adoption of the plan. By this means ample time was given cutters to stock up and they now sell the goods at prices equal to what the average druggist must pay for them.

All the papers were referred to the Publication Committee and adjournment taken at 12.45.

When business was resumed at 2.30, the report of the Trade Interests Committee was presented by Stephen D. Woolley. He told of good work being done for the N. A. R. D. in the various counties, ten of which are now organized. He recommend-

ed the continuance of the county organizations, as they have been a great help.

For the committee on the president's address, Mr. Woolley reported concurrence with all the recommendations except those relating to the employment of a stenographer, the establishment of life memberships and the discontinuance of the Trade Interests Committee. The committee's report was adopted. Twenty-six delinquent members were dropped from the roll.

Mr. Gallagher announced that Lakewood had been chosen as the next place of meeting. Mr. Cole moved to substitute Atlantic City, and this was enthusiastically agreed to. As part of the report of the Executive Committee, Mr. Davis announced that the names of Henry A. Jordan, Stephen D. Woolley and Louis L. Staehle had been chosen to be submitted to Governor Stokes as candidates for the approaching vacancy on the Board of Pharmacy.

N. A. R. D. RESOLUTION.

Joseph G. Smith, of Rahway, after introducing himself, began to talk of organization and the N. A. R. D. He mentioned that the New Jersey association was the only State body not affiliated with the N. A. R. D. Mr. Smith offered for adoption the following:

"Resolved, That the New Jersey Pharmaceutical Association affiliate with the N. A. R. D., and that the treasurer be directed to forward \$25 to the N. A. R. D."

Discussion showed that some members

objected to being "switched off" into the national organization.

"This is not a question of 'switching off,'" said Mr. Cole. "This is the first time that any serious work has been done. Shall we stand by and watch the procession pass, or shall we get on the band wagon, where we belong? Our action does not bind every member to abide by the principles of the N. A. R. D. A man can be a cutter if he likes."

A QUESTION OF TUNE.

"Suppose I belonged to a life and drum corps," demanded George S. Campbell, "would the other members have the right to make me join a brass band?"

"If Mr. Campbell belonged to a life and drum corps," retorted Mr. Cole, "does he think he would be allowed to play out of tune?"

After this passage of arms, Mr. Campbell was "squelched." In reply to a question, Mr. Gallagher stated that \$25 would pay the dues of one hundred members to the N. A. R. D., and so entitle the New Jersey Ph. A. to one delegate. The resolution was then put and carried by an overwhelming majority.

A communication from Secretary Wooten, of the N. A. R. D., was taken up. The Mann bill was endorsed, while the question of alcohol tax reduction was laid on the table. George H. White reported that the Nominating Committee had chosen the following officers for the ensuing year:

OFFICERS ELECTED.

President, Wm. M. Davis; first vice-president, P. E. Hommel; second vice-president, A. D. Cuskaden; secretary, Frank C. Stutzen; treasurer, James C. Field; Executive Committee, John C. Gallagher, L. E. Feindt, Jacob Betzler, George H. Whipple; Legislative Committee, George M. Beringer, Henry P. Thorn; local secretary, H. H. Deakney. All were unanimously elected. An amendment to the constitution was unanimously adopted, empowering the president to fill vacancies in committees. Adjournment was taken at 4.30, and all went down to watch the ladies bowl for prizes, under the auspices of the traveling men.

The last session was held at 8.30 p. m., when with all ceremony, the newly elected officers were installed. Only one hitch occurred, when Mr. Deakney asked to be relieved of the duty of local secretary and suggested instead G. M. Hays Deemer. Mr. Deakney's resignation was accepted with regret and Mr. Deemer elected.

On behalf of the local committee, Wm. F. Ridgway returned the donation of the association and reported all bills paid. D. E. Bransome, of the Auxiliary Association, presented the bowling prizes. The winners, in order, were as follows: Mrs. Horning, Mrs. Staehle, Mrs. Ridgway, Mrs. Beringer, Mrs. Clarence Smith, Mrs. Drake.

The rest of the evening was devoted to a smoker given by the traveling men, in the "Dutch room" of the hotel. There were corn-cob pipes in plenty, tobacco and hard and soft drinks for both sexes. A vaudeville performance was given by local talent, comedians, negro minstrels, etc.; the shapelier element was also represented. The general opinion was that the traveling men knew how to "do things up in style." Not until a late hour did the revelers retire, to dream of another good time next year.

MISSOURI PHARMACISTS.

More Druggists Interested in State Association Than Ever Before.

NEW OFFICERS ELECTED.—PHARMACEUTICAL TRAVELERS IN EVIDENCE.—MEETING OF BOARD OF PHARMACY.—LIQUOR QUESTION AND COCAINE LAW DISCUSSED.—250 PRIZES AWARDED.

St. Louis, Mo., June 20.—"We had a mighty good time and we interested a lot of new men," is the terse report given by most of the druggists and traveling men who have returned from Pertle Springs, where the twenty-seventh annual meeting of the Missouri Ph. A. and the fourteenth annual meeting of the Missouri Ph. Travelers' Association were held from June 13 to 16.

The attendance at the meetings was excellent, more druggists taking direct interest in the association than ever before. While no direct effort toward legislation was made at this meeting, the appointment of Charles L. Wright, of Webb City, as chairman of the legislative committee, was regarded as the most forward movement in this line in the history of the organizations' efforts. Mr. Wright was president in 1903-1904, and he has some strong ideas regarding pharmacy legislation, included in which is a plan to establish a board with considerable money at its command to enforce the laws.

The new officers are: J. F. Llewellyn, Mexico, president; C. D. Merrem, St. Louis, first vice-president; W. R. Ashbrook, Jamesport, second vice-president; Louis Grother, Cole Camp, third vice-president; Wm. Mittlebach, Booneville, treasurer; H. C. Wesner, Windsor, assistant secretary; Dr. W. H. Whelpley, St. Louis, permanent secretary; council, Wm. H. Lamont, St. Louis; Ed. G. Orear, Maryville; Wm. E. Bard, Sedalia; Dr. Otto Claus, St. Louis; Paul Hess, Kansas City.

The travelers elected Frank V. Perry, St. Louis, president; Dan Liddy, St. Louis, vice-president; Ed. Hunter, St. Louis, second vice-president; Henry J. Stolle, St. Louis, treasurer; Oscar Ott, secretary; Frank Koenke, St. Louis, chairman of the council.

At the meeting of the Board of Pharmacy prior to the convention, the following candidates were registered and granted certificates: O. Taylor, Warrenton; Charles R. Love, Otterville; George H. Bragdon, Reeds; M. F. Jackson, Montrose; Ed. L. Kelley, St. Louis; Grover C. Hall, Lee's Summit; George M. Dunn, Pleasant Hill; Arthur Walsh, Cuba, Ill.; Herbert A. Knight, Conway; Charles P. Hurt, California; Gilbert Gross, Kansas City; Lewis C. Driesel, St. Louis; Charles L. Jones, St. Louis; A. F. Kelsor, St. Louis.

President Ed. G. Orear, of Maryville, in his annual address, urged each druggist to do whatever was possible for the extension of the organization, as the only hope for improvement throughout the State was in the State Association. He expressed, especially, a hope that many more members would be enrolled by next year, when some definite steps would be taken to draft legislation to be presented to the next legislature, as there is no session this winter. G. W. Carmack, of

Plattsburg, the retiring member of the board of pharmacy, responded to the president's address.

The papers and subjects for discussion were along ethical and local lines. The liquor question, the new cocaine law and other topics were the burden. Business sessions were held only in the mornings. The afternoons were devoted to outdoor sports and entertainments. Two interesting fights arose, one being over the effort of President Orear and his friends to take the next convention to Maryville, Mo. The effort was lost, however, for Pertle Springs was too strong a favorite. The Springs is an ideal place for conventions and is called the "convention city," and as the druggists were the first to gather there this year, they were greeted as "boys who had come home to visit." This treatment won the day.

The second struggle was between Charles Geltner, of St. Louis, and G. W. Carmack, of Plattsburg, the retiring member, for indorsement for appointment on the State Board. The result was so near a tie, that the association recommended the appointment of "one of the two." St. Louis has not had a member for several years, but they are not fighting Mr. Carmack on his record.

Two hundred and fifty prizes were contributed by manufacturers and jobbers as rewards for those who entered the contests arranged by the travelers. W. H. Lamont, Mike Arendes, H. O. Stolley, Charles Wagner, "leader of the band," and Larry Seitz had charge and they had many novelties. The ladies were given the lion's share of the pretty things.

The soda water manufacturers and specialty men were liberal in their displays, and no druggist or traveler had any excuse for going thirsty. Crushed fruits were always on hand for those who wanted a little ice cream in the shade.

A barber shop, where safety razors and all the other necessities for a shave were on hand, was a welcome feature. The displays arranged by those who cater to the druggists' wants were never as good as this time.

Dr. H. M. Whelpley, the permanent secretary, who is permanent, and Mike Arendes, who each year vows he is through with the entertainment features, and will only enjoy the next convention, raced to see who could get to Pertle Springs first and stay the longest. Whelpley won by getting there Saturday, but Arendes took his children and they added seven days' advantage for each day he was there, and as they remained until the next Sunday, Arendes claimed the championship.

DELAWARE PH. A. OFFICERS.

Wilmington, June 17.—At the annual meeting of the Delaware State Pharmaceutical Association, the following officers were elected: President, Joseph P. Williams, of Wilmington; vice-presidents, J. C. Mecanone, New Castle county; J. S. Sterling, Kent county, and R. W. Kauffman, Sussex county; secretary, F. W. Penn, Wilmington; treasurer, Oscar C. Draper, Wilmington.

—William Whitney, of Saranac, Mich., is dead. He was for a large number of years in the drug business in that city. He leaves a widow and one daughter.

SALE OF LIQUOR.

Minneapolis Druggists Promise to Quit the Practice.

MAYOR CALLS A HALT AND HAS SEANCE WITH OFFENDERS.—SALOON KEEPERS THE ACCUSERS, AND ARRESTS WILL FOLLOW IF PRACTICE IS RESUMED.

Minneapolis, Minn., June 15.—“The powers that be” have been giving some of the druggists of this city an awful whirl. They were forced to “walk the plank” in Mayor Jones’ office and the seance was something whose like had never been witnessed in the Flour City.

It came about very naturally and developed into a seance that several of the druggists will not forget in a hurry. The start was made when the prosecuted saloon keepers, hard pressed by the mayor’s orders, asserted it would be a good thing to look after the druggists, in whose stores alcoholic drinks, plain whisky, high balls and fizzes were often sold. But the mayor did not believe it. He thought only saloon men would sell liquor, and so let it pass. But before long it was brought to his attention forcibly.

License Inspector Longfellow met a friend who was under the influence of some potent elixir and casually asking him where he got his load, was informed it was at a drug store.

“If you don’t believe me I’ll go and get another bottle,” said the happy volunteer witness.

The inspector allowed the test. Another bottle was procured, with the result that an arrest was threatened and a crusade with wholesale arrests appeared to be in sight, when several frightened druggists went to their friends, the wholesalers, who in turn called upon Mayor Jones.

All accounts agree that the occasion was warm. The mayor accused the drug men in general of serving intoxicants to fair women and brave men who wouldn’t drink in saloons. There was a general denial, however, and an armistice for a day or two was agreed upon. Then came another meeting, at which the mayor laid down the law. The druggists wanted his honor to stop proceedings which were bound to injure their reputation if wholesale arrests followed and would probably mean the workhouse for one of them. The mayor relented. He said he had evidence, but he wanted them to promise to abandon the sale of liquor as a beverage. They accepted the terms and the prosecutions were stopped. But it is understood that if the mayor finds the practice complained of is resumed, arrests will be made all along the line.

The Florence Manufacturing Company, Astoria, L. I. is the name and address of a new concern which manufactures chondrine preparations.

CHATTANOOGA WATER POWER.

We have received from C. W. Olson, president of the Chattanooga Chamber of Commerce, a copy of the Chattanooga Daily Times, which contains a highly interesting description of the organization of the Chattanooga-Tennessee River Power Company and the outline of its plans to construct the largest water power plant, next to Niagara, in America. This vast scheme to improve the natural advantages furnished by the Tennessee river at Chattanooga is to be supported actively by the government, whose engineers have been instructed to co-operate with the company. A tremendous industrial and commercial development should result from the undertaking, not only for the region in the immediate vicinity of Chattanooga, but for the whole South in a more general way. The drug trade will be interested not only in the possibilities of development for Chattanooga and the natural interest aroused by such a huge enterprise in everyone, but will be more directly touched by the fact that J. A. Patten, who is well-known to druggists as the secretary of the Chattanooga Medicine Company, is vice-president of the Chattanooga Chamber of Commerce. The successful completion of the great work will be hoped for by everyone. The new plant, when finished, will produce a continuous current of 36,000 horse power, which will undoubtedly cause the erection of a great number of factories.

CLOVERINE SALVE.

Cloverine Salve, manufactured by the Wilson Chemical Company of Tyron, Pa., under their well-known “Cloverine Salve” trade mark continues to be one of the best selling salves on the market. No effort on the part of the manufacturers has been spared to present a smooth, consistent salve which can be applied with ease. The two varieties, red and white, selling at ten cents and twenty-five cents are so well known to the trade they really need but a few words to remind the druggist that all jobbers supply the trade.

INSECT POWDER GUN.

The “Quick Loader” insect powder gun, manufactured by the American Can Co. of New York, Chicago and San Francisco, is the most compact, sure and powerful gun for the purpose on the market to-day. The gun is carried in stock by all jobbers and has large sales.

The insect gun is neat, attractive and is easily loaded. Slight compression suffices to eject a volume of any death-dealing bug dust the pharmacist may load the little machine with. The gun has proved the most satisfactory of any kind on the market.

—H. L. Buell, a pioneer druggist of Elgin, Ore., took a dose of aconite, mistaking it for camphor, and died from the results of the poisoning.

MEDICINES FOR INDIANS.

Much Care is Exercised in the Selection of Drugs for Them.

Francis E. Leupp, Commissioner of Indian Affairs, has adopted a policy which he believes will safeguard the interests of the government, and the Indians as well, in connection with the contracts for the award of Indian supplies. In the purchase of medicines, for example, the commissioner, to test the purity of the drugs, has all the samples analyzed by a professor of chemistry at the Chicago University. Then he has a well-known druggist examine the drugs and the price list, and say whether the supplies are offered to the government at a fair price. Quality is always placed before cheapness. In order to learn whether the drugs and hospital supplies are suitable for distribution among the Indians, the commissioner has one of his agency physicians, a man who has been among the Indians for fifteen years, pick out the kinds the Indians can be most easily induced to take.

Indians are more particular about the sort of bandage to bind their limbs and the appearance of the medicine they take, than they are about the food they eat. Physicians have to respect many little prejudices along this line. Mr. Leupp believes by these methods he will get better materials, with less loss by reason of waste than heretofore.

MILK CHOCOLATE.

The question whether the taste for milk chocolate was a fad or whether the chocolate was to become a staple confection has been answered. Milk chocolate is here to stay. As an importation it proved an attractive titbit, for there are many who prefer to pay more for an imported article than for a domestic production. However, the intrinsic worth of the confection established it, and now that a manufacturer in this country is producing milk chocolate, having smoothness, richness, fine flavor and nourishing qualities, it is replacing the foreign chocolate in the esteem of the public.

Runkle Brothers, the well-known firm of confectioners of 445 to 451 West Thirtieth street, this city, have placed on the market “Crème De Milk Chocolate” which not only equals the several foreign products but is superior to them in several ways. Runkle Brothers’ “Crème De Milk Chocolate” has been aptly styled: “The Confection of Perfection,” and as such is rapidly superseding the foreign chocolate.

TO MANUFACTURE PERFUMES.

Oxford, Mass., June 19.—H. B. Hilton, of Oswego, N. Y., is fitting up a laboratory here and will shortly begin the manufacture of perfumes. He will cater to the wholesale trade.

DISPENSING SODA WATER IN DELAWARE

How the Business is Conducted in the Oldest Pharmacy in the State

"Serve the Best, Secret of Success," Says Z. James Belt, of Wilmington—Trade in Hot and Cold Weather—Raises Own Berries—Fruit Syrups are Home Made—Gets Ten Cents for Ice Cream Soda

There are two important reasons for the popularity of the soda dispensed over the counters in the store of Z. James Belt, Sixth and Market streets, Wilmington, Del. The first is the quality of the soda itself and the second is the reputation of the house and the fact that at its head is a man who since January 13, 1847, has been building up this reputation.

Mr. Belt enjoys the distinction of being the oldest pharmacist as far as location in one place is concerned, not only in the city of Wilmington but in the State of Delaware. Located in the heart of the city, with several lines of city and suburban cars passing its doors, the store is a favorite stopping place for residents and visitors. For years Mr. Belt continued to use a small fountain with a limited variety of flavors, but a

year ago to accommodate the rapidly increasing trade he made many improvements, including the installation of one of the latest types of fountains, which it was supposed would entirely fill the bill. The results were beyond expectation.

SERVES ONLY THE BEST.

In discussing the development of his soda business, Mr. Belt declares that when a boy in the store of Edward Bringhorst, under whom he learned the business and subsequently succeeded, the worthy Quaker instilled into the minds of his employes the necessity of serving only the best and of making improvements wherever possible.

"For years we had served the standard flavors, such as vanilla, strawberry, pineapple and others, paying little attention to the growth of that branch of the business, until I found that it was

taxing us, with our facilities, to accommodate all those who were visiting our fountain," said Mr. Belt. "Last year we did away with our old fountain and made other extensive improvements. The new fountain was made by Robert M. Green & Sons of Philadelphia, and with its tasteful display of onyx, marble and German silver, it has, we believe, attracted trade as well as given excellent satisfaction. With more than twenty feet of counter space, we find that we are frequently crowded and it is likely that before the year is out we shall have to extend the soda counters along the entire side of the store.

HOT AND COLD DRINKS.

"Our busiest time is late in the afternoon and in the evening. Our fountain is well-lighted with electric lights and without giving an appearance of heat, we make it as bright and attractive as possible with the result that many who are waiting for cars on the corner, find that they have time for a glass of soda and a cracker. In Winter when it is cold work waiting on a corner for a car, we sell many hot drinks. While our busy season is just beginning, our fountain is by no means idle during the season for hot drinks. Hot chocolate leads in popularity, but other favorites are beef tea, tomato bouillon and malted milk. Just now we are introducing a number of drinks with local and popular names, which promise to become very popular. They are chiefly sundaes dressed with cherries, berries and slices of the fruits that are in season.

A DELAWARE FOUNTAIN.

In the store of Z. James Belt, in Wilmington. Made by Robert M. Green & Sons. Fine Mexican Onyx with White and Gold Superstructure, Embellished with Electric Fixtures and French Plate Mirrors. Length, about 20 feet.

"We use whipped cream and the best ice cream that is manufactured in the season. Unlike the druggists in neighboring cities and many here in Wilmington, I am getting ten cents for my ice cream soda. For five cents, the ruling price, we would have to put out a combination that would be inferior compared to the other drinks we dispense and rather than do that, we would take it off our lists. We overcome what to some would be an objectionable feature by really giving a ten cent drink. Our most expensive drink is the "horse's neck" which costs a quarter.

"Sundaes and egg drinks are our best sellers but there is a big demand for coca cola, root beer, which we buy by the keg, ginger ale, domestic and imported. Coca cola is the principal ingredient in a line of drinks that we are putting out at present with considerable success. It includes the coca cola glace, sundaes, trilly, milk-shake, frappe, flipp, lemonade, cabinet-sour, rickey and ice cream.

RAISES OWN FRUIT.

"I raise nearly all of the berries used at the fountain and for the other fruits we buy only the finest in the markets. We make all our own fruit syrups in quantities large enough to last us for a day or two. Not a particle of any preservative goes into our syrups. As we make them, we put them up in hermetically-sealed vessels and as we need it we open the jars one by one and in that way avoid carrying over supplies which would ferment if a preservative was not used.

"We also manufacture all our carbonated waters. We have a 900 gallon tank for filtering purposes and an electric carbonator.

"We believe that it is a good plan to give a wafer or cracker with our drinks, and there are always little trays with a few of them on the counter. The Japanese paper napkins, too, we think is a paying feature of the management of the business. The attendants are instructed as to neatness in appearance as well as to the care of the counters and glassware and silver. Carelessness in these respects means the loss in short order of many the most desirable customers. For decoration we depend upon pyramids and baskets of fruit, frequently re-arranged, as well as cut-glass vases and dishes filled with flowers.

USES FEW SIGNS.

"Our signs are few and small, containing only a few of the more popular fanciful, which act as a suggestion to a variety of soda drinkers who are always on the look-out for something new. These signs are changed every day or two. We are open from 7.30 a. m. to 11 p. m., but there is no soda sold on Sunday. The check system we find to be the most satisfactory. The patron buys a paper check from the cashier and exchanges it for his or her order at the soda fountain. The attendant upon receiving it tears it in half and deposits it in a jar on the counter. There is not the disagreeable feature of handling wet change for the customer, while we find that there are the advantages of quickness by avoiding the making of change and the loss that might result from

other systems that we have tried in the past."

YOUTHFUL, THOUGH OLD.

While Mr. Belt is seventy-two years old, he looks much younger. He never misses a day at the store. To his fondness for outdoor life and his regular habits, Mr. Belt attributes in part his excellent health. Mr. Belt gives to each of his employes two hours of each day for recreation in addition to the regular times for meals.

The store at Sixth and Market streets was established in 1830 by Edward Bringham and has been a drug store ever since. The present proprietor entered the employ of Mr. Bringham as an

Z. JAMES BELT.

errand boy January 13, 1847, and ten years later was admitted to the firm which became E. Bringham & Co. Twenty years ago Mr. Belt purchased the interests of Mr. Bringham's sons.

CIGARETTES TAXABLE AT \$1.08 PER THOUSAND.

Cigarettes, when sold by the manufacturer to one or more persons exclusively, under a contract or agreement, at a price not exceeding \$2 per thousand are taxable at the rate of \$1.08 per thousand, instead of 54 cents. Under these conditions the purchaser sells and distributes the cigarettes to the trade at a price exceeding \$2 per thousand, and he, instead of the manufacturer, fixes the wholesale price, upon which the tax is based. This has just been announced by the Commissioner of Internal Revenue.

A STRONG STATEMENT.

The following is what The Medical Council has to say about Goldbeck's Malt Extract:

"The best malt preparation in the world; the one which has survived its competitors and stands out triumphant as a therapeutic success, is Goldbeck's Malt Extract. For literature, address John F. Betz & Son, Ltd., Crown and Callowhill streets, Philadelphia, Pa.

APPRAISERS' DECISIONS.

"Preserved."

The Board of General Appraisers has recently decided that the word "preserved" has no technical or commercial meaning different from its ordinary signification, namely, to put in a condition of preservation so as to resist fermentation or decay. **Ground Pepper Shells or Cuticle.**

The Board has decided that a residuum from the process of decorticating the pepper berry, in the form of a fine powder, which, without further grinding, is used to adulterate ground pepper, is dutiable under the provision for "spices not specially provided for," and not free under the enumeration of the free list of "pepper, black or white * * * when unground," or dutiable as "waste not specially provided for." Grinding is the process of reducing to fine particles or powder by crushing or friction, and the process by which this result is attained is not important.

The case in point was an importation at New York by Frame & Co., which they invoiced as pepper shells. It was assessed for duty at 3 cents per pound as "spices not specially provided for." The importers protested it was free, under paragraph 667, exempting, among other things, "pepper, black or white, when unground," or dutiable at 10 per cent. ad valorem, as "waste, not specially provided for."

The Board claimed that the article is produced from black pepper berries by a machine prepared for the purpose of decorticating the pepper berry. The berries are placed in the machine between a stone and a wire covering, and by means of friction a coarse woody shell forming the outside covering of the berry is broken and removed. This rough outer covering, in the condition in which it comes from the machine, is the commodity which was held to be pepper unground in the United States v. Leggett. After the outer shell is removed the process of decorticating is continued until a further covering, intermediate between the outside shell and the kernel, is removed and the white kernel of the pepper is produced. The goods subject of this protest are the residuum from this continued operation of removing the inner cuticle from the white kernel.

Examination of the sample of the importation in evidence shows it to be in a fine powdery state. The testimony shows that it is imported for the purpose of mixing with various ground peppers to weaken them and reduce them in price. Nothing further is necessary to be done to it to change it into the pepper of commerce except to mix it with the ground pepper.

The only provisions in the act covering pepper by name are those for "capsicum or red pepper, or cayenne pepper," in paragraph 287, and for "pepper, black or white, * * * when unground," in paragraph 667. Ground peppers, other than red or cayenne pepper, must apparently find their classification under the provision for spices in paragraph 287. Under the principle of the Leggett case the article is clearly pepper. "Neither the berries, kernels nor shells," the court said, "are anything but pepper." The only point for the

to decide, then, is whether or not the article is ground.

The dictionary definition of grinding is to reduce to fine particles or powder by crushing and friction. The Board has said, "grinding implies the process of reducing to fine particles or pulverization." We do not think it matters whether the commodity is reduced to a fine powder by a system of decortication, or by trituration, or what is more generally known as grinding. In either event, if it is reduced to a fine condition or powder, we think it must be considered to have been ground.

The protest was therefore overruled.

Green Earth—Pigment.

The Board of General Appraisers has decided that ground earth of a grayish-green tint, known as "green earth," which is used as a substratum or base upon which are precipitated certain aniline dyes which impart color to such base, thus obtaining pigments or dry paints known as "lime-proof greens," is not a pigment, but a manufactured earth, and is dutiable at \$2 per ton and not at 30 per cent. ad valorem as originally assessed. The importers who had protested were A. B. Ansbacher & Co. and the merchandise was imported at New York. A large number of experts gave very contradictory testimony before the Board.

Coumarin Synthetic.

The protest of George Leuders & Co. that coumarin synthetic imported by them should be classified as a coal-tar preparation, not a color or dye and not medicinal, was sustained by the Board.

Hydroferrocyanate of Quinine.

This was imported by Merck & Co., and was held free of duty as a salt of cinchona bark, by the Board. Another protest of the same firm that gadool was dutiable as a chemical compound, was sustained on the authority of a previous decision.

Toilet Articles.

In the case of the protest of B. Hilder & Co., it was held that so-called toilets consisting of mirror plates set in leatherette cases, without combs or other fixtures, were properly classified as mirrors. Other toilets containing, besides the mirror, a comb, nail-cleaner, buttonhook, etc., were held to be dutiable as manufactures of the component material of chief value, as claimed by the importers. Other toilets imported by C. F. Rumpff & Sons were held dutiable as manufactures of leather.

Orange Flower Water.

The Board of General Appraisers held that orange flower water imported by George Leuders & Co., had been properly classified as a medicinal preparation.

Coumarin.

The protest of Engerer & Co. that coumarin was dutiable as a coal tar preparation, not a color or dye, and not medicinal was sustained by the Board.

Marjoram Flowers.

The assessment on marjoram flowers or origanum as a spice was affirmed in the protest of Moral & Co., importers. The Board did not find it necessary to classify the flowers as a crude non-edible drug, as the importers made no such claim.

SHOW WINDOW FEATURES.

Many Unusually Novel and Attractive Displays.

A SUCCESSFUL SOUVENIR DAY.—A COMICAL MECHANICAL WINDOW.—"THE OLD OAKEN BUCKET" TO THE FRONT ONCE MORE AS A DECORATION.—A STORE WHICH HAS SEVEN WINDOWS.

A spring souvenir day was a great success at J. W. Reed's Pharmacy, 118th street and Seventh avenue, Manhattan. Those customers who attended were more than pleased by a reduction of one-third in all prices and the premium of a souvenir as well. Large crowds took advantage of these inducements. Invitations were issued a week in advance in the form of an attractive circular of pale blue tinted paper with the text printed in dark blue. These were adorned on the cover with the figure of a mounted herald in medieval costume with his trumpet, on the banner of which was the inscription, "Great Souvenir Day." The pages were filled with descriptions of the bargains offered and the last one was devoted to a tabulation of prices on staple articles for the occasion as compared with the regular quotations. Some of the articles presented to customers by the house were chocolates, Japanese pictures, cedar moth camphor, and trays for pins and cigar ashes. A similar celebration was held at the other Reed store, 333 Columbus avenue, on Monday, May 29. In most respects it was a duplicate of the first celebration.

At the One Hundred and Eighteenth street store a new talcum powder was featured in the window, while at the same time a demonstrator discoursed eloquently on its merits, giving a picture of a Japanese child in native costume, a colored print, to every purchaser of a 25 cent quantity. The window, columns, sides, floor and background, was covered with white crepe paper dotted with a violet design. Large bunches of artificial violets, alternating with cans of the talcum powder, were attached to the columns and sides of the window. On the floor, lying prone, were four rows of the powder containers, in a geometrical design, from which rose a show card announcing that a Japanese picture was free with every purchase and emphasizing the fact that no advertising matter appeared on these prints. To the corners of the card were fastened bunches of violets. Samples of the pictures were, of course, exhibited in the window. They were framed in a dark cherry-colored wood, with Japanese matting used as mats.

MECHANICAL AND COMIC.

An unusual display was made in a window of the agency of the National Cash Register Company at the corner of Schermerhorn and Court streets, Brooklyn. As it attracted large numbers on the street and even brought many of them into the store by the originality of some of its points, it may serve to suggest some hints to druggists for their own windows. In the center of the window was a mechanical device of rapidly revolving balls, which were connected with a central rod by strong thin shafts. There were sixteen of

the globes, colored red, white, blue and green. The power was supplied by a concealed electric battery. The whole arrangement was framed and stood out on a background of variegated tinted paper, copiously sprinkled with sand to make it sparkle in the lights. The whirling balls were very effective in attracting attention. The best part of the display, however, were two comically designed figures, representing a messenger boy and a "Mamma's Darling." The former was clothed in a blue coat, yellow trousers and a flaming red tie. An undelivered message was protruding prominently from his breast pocket. His eyes seemed to protrude with wonder (an unusual thing in a messenger boy) as he gazed at the whirling globes. The other small boy was also in an attitude of fascinated admiration. He had a dejected-looking dog on a leash. His clothing was extravagantly effeminate. The only reading matter in the window was a sign running, "Confusing mistakes in business explained by the National Cash Register." The rapid motion of the central balls of the electric device certainly were confusing to the eye and suggested the first idea of the sign, while the stupefied expressions of the dummy boys enhanced it and brought the thought quickly to the mind of each observer. But this relation of the decorative design and the business application of the sign did not dawn on most spectators, who were thereby enticed into the store to inquire the why and wherefore. And a display which draws people into a store is a good one.

"HOW DEAR TO OUR HEARTS."

The "Old Oaken Bucket" was appropriated by the W. B. Riker & Son Company in the decoration of their window in the 456 Fulton street, Brooklyn, store, to feature the idea of purity in connection with their liquid green soap. The floor of the window was covered with imitation long grass, upon which the goods were strewn. In the center was erected a well box of pine in exact imitation of the genuine old-fashioned country well. A lay figure of a woman is cleverly made up and placed at the well. She is dressed in black and white printed calico, a white apron, and a blue sunbonnet. She is in the act of lifting the old bucket off the well sweep. On the front of the well curb is the inscription done in green, with prices, "Pure as the water that's drawn from the well. Get it at Riker's." The whole scene is extremely natural "b'gosh."

That the Sherman Square Pharmacy, 2035 Broadway, has more than the usual number of show windows is due to the peculiar location of the store. It is at the intersection of three streets, thus permitting seven windows, of which three are rectangular and the other four about the width of an ordinary entrance door with arched tops. On the Amsterdam avenue side one rectangular window is devoted to own make chlorides, arranged neatly on tiers rising towards the back of the window. But the thing that takes the attention of every passer, because of its application to present well-known conditions, is a card, green, with white lettering, which runs, "Meningitis Disinfectants, price 40c." Other cards state, "Prevents Contagion, Purifies the Air," and "Deodorizing Chlorides." Another window contains alk room and bath room supplies.

KEY WEST LEADS IN SPONGE FISHERIES*

Catch There is Many Times Larger Than at All the Other Grounds Combined

Nearly \$500,000 Worth Shipped in One Year—Blacks Largely Predominate as Spongers—Domestic Yield is Not Equal to the Demand—Condition of the Water Has Much to Do With the Size of the Catch

As the yield of domestic sponges is not equal to the demand, large quantities are imported each year, the greater part of these coming from the Bahama Islands, Cuba, Haiti, Greece, Austria-Hungary, and Turkey. During the fiscal year ending June 30, 1900, the imports of foreign sponges amounted in value to \$536,303, almost as much as the value of the catch of domestic sponges for the calendar year 1900, which was \$567,685. During 1900 we exported 71,642 pounds of domestic sponges, valued at \$32,199, most of which went to Great Britain, Germany, Netherlands, Belgium and France. Most of these were grass sponges, for which there is very little demand in this country. We also exported \$84,100 worth of foreign sponges which had been previously imported. Except in the imports during 1900, there has been very little fluctuation during the last three years. The following table shows the imports and exports for the fiscal years 1896, 1897, 1898, 1899 and 1900:

Fiscal year.	Imports		Exports of—	
	foreign sponges.	Domestic sponges.	Pounds.	Value.
1896.	\$493,706	36,338	\$14,257	\$73,746
1897.	487,143	125,492	53,992	73,704
1898.	401,725	75,819	34,547	89,192
1899.	430,271	71,637	26,452	92,064
1900.	536,303	71,642	32,199	\$4,100

STATISTICS OF FISHERIES.

The season of 1900 was one of the best that the spongers have had for years. Owing to the unusual clearness of the water on the "key grounds," the spongers were enabled to work over almost all the grounds, a thing which has not happened for some years. This was especially noticeable around Sandy Key, near Cape Sable. Usually yellow, muddy water is found stretching out for about forty miles in every direction from this key, except toward the mainland, which is about four miles distant, and from a distance the surface looks like a light yellow mud bank exposed at low water after the mud had had time to dry. Last season was the first time in about fourteen years in which the spongers were enabled to work this section. A noticeable feature was the unusual number of rotten sponges gathered on this ground. No sign of this rot appeared on the surface of the sponge, but after it had been cleaned it could easily be seen by pulling aside the fiber at the bottom. In some of them the whole inside had been rotted away, while the exterior presented a clean, healthy appearance.

*By John N. Cobb, Agent U. S. Fish Commission.

The tables show the condition of the industry for 1900. The great preponderance of Key West is very noticeable in all of the tables, and this place leads in persons engaged in all branches of the business, with a total of 1,827 persons. Tarpon Springs is second, with 354.

SPONGERS AND EQUIPMENT.

An interesting table is the one showing the color and nationality of the persons engaged in the business. Among the spongers themselves, the colored people predominate, there being 1,356 engaged, while the whites number 757. This disproportion is especially high at Key West. Among persons employed exclusively on shore the whites predominate, with 119 to 13 colored. Of 2,113 persons employed directly in sponging, 1,268 are British provincials, mostly from the Bahamas; of these 1,013 are colored. The native-born Americans numbered 339, of whom 343 are colored. One Norwegian and five Portuguese are also engaged in the business. Among the shore employes the native-born Americans lead, with 114, of whom thirteen are colored. The British provincials numbered seventeen, all white. There was also one Greek.

In the matter of vessels, boats, apparatus and shore and accessory property, Key West far exceeds all the others combined.

with a total investment of \$518,932. Tarpon Springs is second, with \$67,014, followed by Apalachicola, with \$10,652. The total investment for the fisheries amounts to \$594,598. The Key West fleet shows a most gratifying increase since 1895. In the latter year there were 99 vessels of over five tons, and 183 vessels under five tons measurement hailing from this place, while in 1900 there were 136 vessels of over five tons and 183 vessels of under five tons measurement, a gain of 37 vessels of over five tons and a loss of two vessels under five tons. So far as vessels of over five tons are concerned, Tarpon Springs has practically held her own, while Apalachicola has dropped off considerably, but in the matter of vessels under five tons, Tarpon Springs had made a considerable increase.

KEY WEST IN THE LEAD.

Key West leads in the catch of all kinds of sponges, with 359,854 pounds, valued at \$488,744, followed by Tarpon Springs, with 53,173 pounds, worth \$79,320, and the Apalachicola, with 5,098 pounds, valued at \$8,821. All the glove and velvet sponges were taken by Key West vessels. The total catch amounted to 418,125 pounds, valued at \$567,685.

An interesting feature is the showing of the catch by kinds and grounds. The "key grounds" were worked exclusively from Key West and the surrounding keys. The total catch from the "bay grounds" amounted to 228,461 pounds, valued at \$389,890, and for the "key grounds," 189,664 pounds, worth \$177,795. Sheepswool sponges are more frequent on the "bay grounds" than on the key grounds, while the reverse is the case with yellow sponges. The grass-sponge catch is almost equally divided between the two grounds. Very few glove and velvet sponges are taken on the "bay grounds."

The following table shows the average price per pound received for each kind from the various grounds. The "bay" sheepswool are much more valuable than the "key" variety, while the "key" yellow

SPONGERS AT WORK.

low, grass and velvet are all more valuable than those from the "bar." There is no difference in the value of the glove sponges from either ground. The general price was \$1.36.

Kinds.	Pounds.	Value.	per lb.	Average price
"Bay" sheepswool.	123,817	\$356,045	\$2.89	
"Key" sheepswool.	58,294	127,218	2.18	
"Bay" yellow	32,433	18,997	.59	
"Key" yellow	42,903	25,948	.62	
"Bay" grass	71,686	15,516	.22	
"Key" grass	71,426	17,747	.25	
"Bay" velvet or				
boat	386	64	.17	
"Key" velvet or				
boat	6,422	5,256	.82	
"Key" glove	1,185	168	.14	
"Key" glove	11,243	1,626	.14	

418,125 \$567,685 \$1.36

Heretofore the law in regard to the gathering of sponges less than four inches in diameter has been more honored in the breach than in the observance. This was largely owing to the fact that the law did not prohibit the sale of such sponges or the having of them in possession. The law was amended in 1901 to cover these points, and will doubtless prove useful in protecting the small sponges from the deprivations of the spongers, if properly enforced.

DISASTERS TO THE FLEET.

The spongers have not been exempt from the many perils of the deep, as is well shown by the following brief record of the principal disasters to the fleet since 1880:

Year.	Vessel.	Remarks.
1882	Minnie.	Struck on bar near Stump Pass.
1886	Sea Gull.	Capized by cyclone near Cuba, while on her way back from sponging trip to Nicaragua; 7 lives lost.
1892	Ethel.	Struck a drift log and foundered.
1893	Silver Spray.	Burned.
1894	Adelaide.	Capized at Peckles Reef in gale.
1895	Marion, Rosalie, Euphemia and Ada Norman.	Carried by cyclone into the woods, near Cedar Key. Shamrock, capized near Sea Horse Key; 6 men lost.
1896	Competitor.	Captured by Spanish gunboat while carrying cargo of contraband goods to Cuban insurgents. Crew condemned to death, but saved through intervention of United States.
1897	Rosalie.	Capized during cyclone; 4 of her crew lost.
1897	Euphemia.	Capized in gale.
1898	Speedwell.	Capized near Marques Keys. Had just been launched and was getting ready to go into sponging; 9 persons lost.
1899	Amanda Rosalie.	Stranded during heavy blow.
1900	Vim.	Beached.
	Evening Star.	Struck on St. Martin's Reef.
	Lone Star.	Struck on a rock near Anclote and was sunk.

The Enderle Pharmacy, at Chestnut and Sixth streets, St. Louis, advertises Charcot's Sarsaparilla as follows:

"In the spring a young man's fancy Lightly turns to thoughts of love. If you would have the girl adore you, Take a bottle of the above Sarsaparilla, 83 cents a bottle." Another window contains a display of hair tonic at 39 cents a bottle.

CRUSHED FRUIT BOWLS.

Leading wholesale druggists, confectioners, jobbers of bar supplies and soda fountain adjuncts, all soda fountain manufacturers and liquid carbonic people carry in stock the Bohner patent Crushed Fruit Bowls. The bowls only cost \$1.00, and \$1.50, and are such fruit savers and so cleanly that no dealer in crushed fruits can afford to do without them. The Bohner patent bowl keeps the ladle handle clean, the crushed fruit fresh and sweet, and free from dust and flies.

NEW ADVERTISING MATERIAL.

Horlick's Malted Milk as produced by the Horlick's Food Company continues to be a standard drink this summer at the soda fountains as heretofore. The Company is asking readers through The Era's advertising columns whether their supply of fountain signs, window strips and formula cards is complete. If any druggist happens to lack such advertising matter all that is necessary for him to do is to write the company and his wants will be filled forthwith.

MARKET REPORT

NO IMPORTANT CHANGES.

General Inactivity—Light Movement to Consumers.

SUBSIDIENCE OF INTEREST IN TURPENTINE.—OPIMUM AND QUININE FIRM.—GOOD BUSINESS IN OIL OF ORANGE.—ADVANCE IN ALCOHOL.—SHORT BECHU EASIER.

New York, June 19.—In the wholesale market the inactivity incident to this season of the year has been a conspicuous feature during the past week, and a similar condition of affairs is noted among the jobbers, but while the movement into consuming channels has been comparatively light, the aggregate volume of business shows satisfactory proportions, and there is no disposition on the part of dealers to complain. Fluctuations in values have been chiefly within a narrow range and of no particular consequence, the chances being wholly the result of natural causes. Interest in spirits of turpentine, which has been a prominent feature for several weeks, seems to have entirely subsided, and market conditions, so far as this article is concerned, are again of a normal character. Consumers are buying only in accordance with current requirements and the speculative element at primary sources of supply appears to have withdrawn. Among the leading commodities, opium and quinine are very quiet, but both are held with considerable firmness, the former wholly in sympathy with strong producing markets where reports have been received from the growing sections that unfavorable weather has materially curtailed the proper development of the poppy plants. Quinine has been influenced by steadier prices for bark in Amsterdam, reduced bark shipments from Java during the first half of the current month, and a firm Batavia market for quinine at the monthly auction last week.

OPICUM.—Although there is only a limited routine inquiry, with a consequent small volume of business, the tone of the market continues firm, owing to corresponding conditions abroad, and the advance in values noted last week is well sustained. The ruling quotations are \$3.10 @ 3.25 for 9 per cent, and \$3.20 @ 3.40 for 11 per cent. Powdered is finding a moderate consuming outlet at \$4.00 @ 4.25 for 13 per cent, and \$4.75 @ 5.00 for 16 per cent.

MORPHINE SULPHATE.—Jobbers report an average movement into consuming channels, with the tone of the market steady and quotations are well sustained at \$2.50 @ 2.60 for eights in ounce boxes, \$2.45 @ 2.55 in 2½-oz. boxes, and \$2.30 @ 2.40 in 5-oz. tins, according to brand and quantity.

QUININE SULPHATE.—Consumers' wants are light and transactions continue limited to small parcels, but the bark situation abroad is firm and dealers are not inclined to force business through the medium of

concessions. Consequently prices are steadily maintained at 20¢ @ 21¢, for bulk in 100-oz. tins; 20½¢ @ 21½¢, in 50-oz. tins; 21¢ @ 22¢, in 25-oz. tins; 22¢ @ 23¢, in 15 or 10-oz. tins; 25¢ @ 26¢, in 1-oz. tins, and 27¢ @ 28¢, in ounce vials, as to brand and quantity.

MENTHOL.—Liberal spot supplies, a bountiful consuming demand and easier markets abroad have caused local dealers to modify their views to some extent and jobbing quotations have been reduced to \$2.35 @ 2.50, as to quantity.

OIL OF ORANGE.—Primary markets are valued higher and local jobbers have advanced quotations to \$2.30 @ 2.55, according to brand and quantity. A fairly good seasonal business is in progress.

OIL CARAWAY.—Values are higher, owing to increased cost of seed and jobbing quotations show an advance to \$1.35 @ 1.60 for imported and \$1.85 @ 2.10 for domestic.

LOVAGE ROOT.—Available supplies are smaller than was supposed and the market is firmer, jobbing quotations having reacted to \$1.00 @ 1.10.

ALCOHOL.—Distillers have advanced prices 2 cents per gallon and spot values are correspondingly higher, the revised jobbing quotations being \$2.47 @ 2.48 by the bbl, and \$2.57 @ 2.62 for smaller quantities. Odorless is quoted \$2.52 @ 2.53 by the bbl, and \$2.62 @ 2.77 for less.

UNICORN ROOT.—An easier feeling has developed under the influence of the near approach of new crop and values are lower. True (altris) is quoted at 55¢ @ 60¢, for whole and 60¢ @ 70¢, for powdered, while false (belongas) is held at 60¢ @ 65¢, for whole, 65¢ @ 68¢, for ground and 65¢ @ 70¢, for powdered.

ANTIMONY.—Owing to extreme scarcity of needle, jobbing quotations for powdered have been advanced to 14 @ 17¢, as to quantity.

CANARY SEED.—Primary markets continue to show a hardening tendency and jobbing quotations have been further advanced to 66¢ @ 71¢, for Smyrna by the bag, and 7¢ @ 8¢, for less; Sicily, 6¼¢ @ 6½¢, by the bag and 8¢ @ 9¢, for less.

HEMP SEED.—Russian is firmer, in sympathy with stronger markets abroad and local jobbers have advanced quotations to 3¼¢ @ 3½¢, by the bag and 4¢ @ 6¢, for smaller quantities.

BECHU LEAVES.—Shorts are easier, owing to an overstocked market and a slow consuming demand, together with weaker conditions abroad, and jobbing quotations have been reduced to 33¢ @ 38¢.

EGGOT.—Supplies are offered more freely from abroad and at a concession from previous prices. As a result, the local market is easier, with jobbing quotations reduced to 48¢ @ 53¢, for whole, and 53¢ @ 58¢ for powdered.

SPIRMACTIN.—Reduced stocks and a stronger feeling among dealers have caused an advance in jobbing quotations to 31 @ 34¢, for lump, and 32 @ 35¢, for cakes.

MATICO LEAVES.—Owing to keen competition among dealers, values have reacted sharply and jobbing parcels are obtainable at 30¢ @ 35¢, for whole and 35¢ @ 40¢, for powdered.

JAPAN WAX.—Easier markets both here and abroad are reflected by a decline in spot jobbing quotations to 17¢ @ 20¢, as to quantity.

SAPPHON.—American is again easier under the influence noted last week and jobbing prices have been further reduced to \$1.10 @ 1.20 for whole and \$1.20 @ 1.30 for powdered.

GUM MASTIC.—The market is firmer under reduced stocks, and jobbers have advanced quotations to 60¢ @ 65¢, for whole, and 65¢ @ 70¢, for powdered.

RED CLOVER TOPS.—Spot supplies are very scarce and the market is stronger, with jobbing quotations advanced to 25¢ @ 30¢.

SPIRITS TURPENTINE.—Under the influences noted last week, jobbing quotations have further declined to 67¢ @ 68¢, by the bbl, and 78¢ @ 85¢, for smaller quantities.

SHELLAC.—Foreign markets are higher and local jobbers have advanced quotations to \$0.60 @ 0.65, for D. C., 60¢ @ 65¢, for bleached, 45¢ @ 50¢, for native, 60¢ @ 65¢, for orange, and 55¢ @ 60¢, for powdered.

CARPATE SALVE SELLS.

The plant of the Carpaté Salve Co., where Carpaté salve is manufactured, has been increased to double its size and capacity in order to meet the increased demand for the remedy. While only on the market a short time, Carpaté salve has proved itself all the makers have claimed for it. It sells at ten, twenty-five and fifty cents the box, and is recommended for burns, skin eruptions, cuts, bruises and piles.

Only a short time ago the manufacturer states that he had occasion to use the salve in his own household. One of the women servants accidentally sustained severe burns on both feet. The salve was not applied immediately but cold water was, thus irritating the injured tissue all the more. Daily applications of the salve for three days resulted in the wounds healing by first intention.

RIPPEY'S FOAMOLINE.

Now that the country is again in the midst of a heat wave charged with considerable moisture, the advertisement of William Rippey, of 105 E. Second street, Cincinnati, O., reminding the soda dispenser that he sells Powdered Foamoline, which is especially prepared for manufacturers of ice cream, sherbet, fruit frosts and water ices to give those preparations body and to save ice and labor, is timely.

Foamoline enriches and gives the smooth pasty appearance which is so attractive to lovers of internal refrigerants. It not only adds to the body of the cream but keeps it cooler and more solid longer than with ice. Users of Foamoline are not compelled to use either heat or eggs with it, but simply to mix it with the dry sugar, then adding milk and cream.

METAL FURNITURE.

Substantial and graceful in wire line are the products of the Chicago Wire Chair Co. of 67 N. Jefferson street, Chicago, Ill. Manufacturers of metal furniture of all kinds for many years, with unusual facilities for the production of wire furniture, the company quote prices to open the eyes of every progressive druggist in the world. That their goods are satisfactory they invite prospective purchasers to inquire from those who have been using their metal furniture ever since it has been on the market.

EDITORIAL COMMENT

Pure Food Laws.

The National Food Manufacturers' Association, which was launched last week in New York, has set out to secure a national food law which shall safeguard the public health and at the same time protect the rights and legitimate interests of the manufacturers. The object is a worthy one and of course legitimate manufacturers need not fear any legislation of this character. Such a law would put an end to the continual strife between the food and drug interests and the Bureau of Chemistry of the Department of Agriculture.

But there are one or two serious difficulties in the way of this project which seem to have been dismissed altogether too lightly or totally neglected by the men who perfected the organization last week. In the first place, it is hardly possible that the representatives of so many different industries would be able to agree on a law satisfactory to all. Manufacturers in the past have been noted for an unselfish and disinterested policy, but we doubt whether even they would allow their philanthropic tendencies to go so far as to consent to a law which would injure them while benefiting their neighbors.

A still greater obstacle is the impossibility of passing a pure food law without having a pure drug clause added thereto by the Department of Agriculture. This is bound to happen in spite of the excellent intention of the food men in proposing to leave drugs out of their movement. And when a pure drug clause is inserted, the drug industry will have to be reckoned with. It is well and strongly organized and would not for a moment stand idly by and watch the enactment of what might be obnoxious legislation.

"Post Hoc, Ergo Propter Hoc."

New discoveries in medical science which are calculated to destroy disease or arrest its progress have always been regarded with so much suspicion by ignorant classes of people that we

must regard as extremely unfortunate the case of a little girl, apparently in good health, who died twenty minutes after receiving an injection of antitoxin. This was given her as a preventive, her little sister being ill with diphtheria.

A coroner's inquest has since shown that the child's death did not result from the use of antitoxin but from the narrowing of important arteries near the heart, due to fear and excitement. Yet while the sensation lasted there were many who said nasty things about diphtheria antitoxin. Of course such an isolated case will have practically no effect on its professional employment, but the effect on the class of people most benefited by it is much to be deplored.

A Secretary's Ideas.

Secretary R. H. Walker, of the Texas Pharmaceutical Association, made some epigrammatic expressions in an extemporaneous speech at the recent annual meeting. Here are some of them:

"Ninety-nine per cent. of the druggists of this State are asleep. Over 90 per cent. of them never know a social moment."

"In Texas there are 5,000 druggists, and, honestly, some of them do not know that the war is over."

"The average druggist in Texas is wedded more tightly to his business than he is to his wife."

"It is a blazing shame that a druggist will not leave his pill tile and spatula for three days."

"The druggists of Texas are dying by inches and don't know it."

"You never in your life heard a druggist laugh so you could hear him a half block away. He is too much afraid he'll hurt somebody's feelings."

"You never knew a poor druggist in your life. The profits of the business are large enough to demand that all druggists be silent in public on the subject."

"I can talk about my own section. If all the energy in the druggists of San Antonio was collected and concentrated into dynamite, there would not be enough of the explosive to raise a child's hat an inch from the ground."

"Druggists are mixers in name only, not in practice."

The reported membership of the Texas association rather confirms Secretary Walker's comment that but a few of the druggists of the State have awakened to the benefits of organization. Shall the few do the work for the many? That is a question all associations have had to consider and are everywhere considering. Many pharmacists seem to forget that in union there is strength. To accomplish results pharmacists must have strong organizations. The great benefits are

particularly those derived from legislative work, and if the druggists of Texas were all united it is safe to predict that an all-State pharmacy law would soon be an accomplished fact. The opportunity to meet is also productive of good, for it engenders personal friendships which do more to consolidate diverse opinions and eradicate irregular practices in business than all other efforts.

Those Liquor Stamps.

New York pharmacists who still have unused liquor stamps and are anxious to know what to do with them, will be reassured to learn that these stamps may be redeemed at their face value by application to the State Commissioner of Excise at Albany. No doubt a great many are ready to avail themselves of this privilege and as pharmacists will be compelled to wait thirty days from the time they send in stamps before the latter are redeemed, they should lose no time in attending to this important matter.

Plea for the Druggist.

There is much food for thought in "Plea for the Druggist," by Dr. J. H. Mallery, which was printed in a recent issue of the Era. Evidently his remarks are made after long study and reflection upon the subject in its manifold phases. Dr. Mallery's contention is that the druggist is what he is largely because of the attitude of the physician. And this is a view which will be shared by many who have given the subject even so much as a passing thought. The two professions are so dependent, one upon the other, that what works to the good of one is sure to be reflected to some extent in the other. Dr. Mallery points out that the physician should extend a helping hand wherever the pharmacist evinces a disposition to pull himself out of the slough into which he has unwittingly fallen, and in doing this, who shall say that the medical man is not helping himself almost as much as he is the brother to whose aid he has come?

There may be those in the profession who will resent the suggestion of the need of a plea for the pharmacist, but his plight is plainly pointed out. The writer gives pharmacy all credit, and shows that the practice of the profession is as old as medicine. If the practitioners of pharmacy and medicine have fallen from the high state they occupied in earlier days, is not this fall due in great part to the drawing aside of the veil of mystery which surrounded everything pertaining to medicine in ancient days, as much as to the fact that the compounder of drugs has had to recognize that self-preservation is the first law of nature? It is not always evidence of an unpar-

donable weakness when a man yields to a temptation, when to resist would mean that he would eventually be driven to the wall.

Must Work Together.

Dr. Mallery's call for the physician to undo the harm he has done is timely and full of strength. It is a plea that should go straight home. How much effect it will have is problematical. The habit of using the ready-made prescription is an insidious one, and while Dr. Mallery's appeal to physicians to write more of their own formulas will be heeded by some, in too many instances it will fall upon deaf ears. If the druggist would become more than "a bottling machine," and the physician rise above the sphere of "an automaton signing ready-printed prescriptions for dope in the original 12-ounce bottles," they must fight shoulder to shoulder. The disposition to accept things as they are, and to let the manufacturer point the way, must be put aside firmly and finally. An era of push and perseverance must make its advent. There must be no backward step, but the evils which have been engendered by the too eager rush forward must be overcome. Each of the two professions must recognize the weakness of the other and extend a helping hand wherever and whenever it is needful.

It is a case of a strong pull, a long pull and a pull altogether. With the pharmacist and the physician working in unison to remedy present conditions and to remove the much-complained-of evils which have crept into the professions, conditions will soon be restored to a normal state, and both will be in the high position they once occupied as prescriber and compounder of remedies for the alleviation of human ills.

Publicity and Corruption.

We publish this week a letter from a native of Jerusalem who rejoices at a great reform which has taken place in that city. This is no less than the closing of 250 drug stores which had been running without licenses in open violation of the law. Our correspondent attributes this wholesale cleaning up to the influence of an article published in The Era last fall which came to the attention of the Turkish authorities.

Whether the reforms accomplished are the result of natural causes or the influence of this newspaper, the fact remains that the light of publicity is fatal to corruption and crooked practices, or at the least contributes to their destruction. That this light, having its origin here, should have fallen on the other side of the globe is all the more remarkable. Our correspondent

himself furnished the facts for the original article and he may well be proud of the achievement. He goes to his new employment in Cairo with the good wishes of this paper and of all advocates of clean pharmacy.

The Message of Byrne.

Some of the old philosophers have taught that there is an outward man, a man whom we know or think we know, and beneath that outward man, there is a man hidden and unknown. This dual personality, if possible, was in a degree reflected in the life of the late John Byrne, of Columbus, O., who died a few days before the annual meeting of the Ohio Pharmaceutical Association and of which he was the honored president. The address he was to have delivered as the presiding officer was but partially completed, yet in it one may discern the love of right-doing, fair play and justice that existed in his heart.

The pharmacists of Ohio were probably not indebted to John Byrne for any particular new thought, but he was a man among his fellows, and we may believe that none of those who listened to his unfinished address as it was read before the association thought but that the deceased president felt he had a message to deliver, or why these words?

"With the murmuring song of the wave-washed breakers, playing a lullaby at the eve of a strenuous day, lending additional inspiration to the good we may have accomplished in an earnest endeavor to solidify and to make good all claims that pharmacy will, as a profession, remain true to its ancient traditions, and to progress with progressions along lines of scientific research; a research into the earth's storehouse of all that it contains therein, and turn them to good and useful purposes. I say useful and not mercenary; useful in the intent that God and the discoverer of chemicals from Nature's storehouse intended as a means to alleviate human suffering. But, alas, we have in our profession some whose ideas of honor are so low that for a little extra pelf they would rather sell the elixir of Hades than the elixir of life—as has been shown in the courts of this country, and is still an everyday occurrence, much to the disgrace of our profession and the dishonor of those who engage in such a nefarious traffic. I would recommend that this association go on record and assist our Legislature in placing upon the statute as giving to our state board of pharmacy such power as they may require morally and financially in weeding out from our profession such culprits."

These words prove that John Byrne did not shrink from performing his duty, and as a pharmacist to pharmacists his appeal carries with it a demand for the elimination of an evil which is the curse of the calling. It is a pleasant thing for us to cast our thoughts upon the noble aspirations of such a man, and to believe that his sentiments are those of the rank and file of right thinking pharmacists.

That judge in South Dakota who has recently laid down the principle that no man except a registered pharmacist can own and conduct a drug store, even though he employs a registered pharmacist, has not only the

backing of the law, but the moral support of public opinion. When the public buys its drugs, it believes in the shoemaker sticking to his last. In other words, the pharmacist is the only man who can be safely trusted to dispense drugs.

In Hoboken.

Will the New Jersey blue laws be enforced in Hoboken? That is the question which is engrossing the attention of the druggists and grocers and the saloon keepers in the neighboring town across the river. The druggists and grocers, it is reported, seem quite determined to requite the saloon keepers for the energy they have displayed in securing evidence against them for selling liquors without a license. The druggists threaten, it is said, to close the saloons on Sunday, and the saloon keepers retaliate by asking how the druggists would like to be prevented from selling anything except on prescription on the Sabbath? Enforce the blue laws! But who should get gay with intruders knocking at the door?

Those Hyde Park druggists who have formed a club for the purpose of maintaining and increasing prices on counter goods and bringing about pleasant relations with physicians, have taken a step which cannot be too highly commended. Such subjects as refilling of prescriptions, self-dispensing, counter prescribing and the giving of copies of prescriptions are to be discussed. They will be taken up in a friendly spirit, and as the friction between doctor and druggist is too often the result of misunderstandings, an era of better feeling and a clearer conception of these questions should result from the coming together of the two.

Pharmacists' Meeting Time.

This is the season of the year when pharmacists from every section of the country meet in annual convention, at seashore or mountain, for the interchange of ideas and the enjoyment of a brief respite from the cares of business. The yearly meetings of the pharmaceutical associations accomplish much good. They bring together all classes of men, holding diversified opinions on subjects of varying degrees of importance to the trade, and permit of a discussion of these subjects in a friendly spirit, so that the wheat and the chaff of thought are separated, and methods and means of advancing the business interests of all are brought to the front.

The range of discussion is wide and covers an almost unlimited field. For instance, at one of the meetings last week prizes were offered for the first

and second best papers on the scientific pharmacy and commercial pharmacy. Papers from many contributors were read, and among them were erudite compositions upon the matter under discussion, thus adding not a little to the literature on subjects which will always be open to an honest difference of opinion.

At this meeting, as at all of the others, there were papers discussing nearly every phase of pharmacy, containing many suggestions for the advancement of the calling, some of them rather Arcadian, but others filled with the germ of common-sense and practicability. It is the reading of these papers, and the discussion of subjects near to the pharmacist, that make these meetings of value to those who attend them.

Keep Out of the Rut.

The druggist who decries these meetings as a waste of time is in danger of falling into a rut, which he will find it difficult to get out of. There is nothing which so quickly and thoroughly sharpens the wits as contact with one's fellow-men. The philosopher has said that all work and no play makes Jack a dull boy. So it is with the pharmacist who cannot find time to leave his counter. He begins to regard the four walls of his store as encompassing the world, and a tendency to narrowness in his views is developed. It is good for him to get out and away from his business for a few days each summer, to meet his fellow-druggists and learn from them how this or that thing is done in their towns. There may be something new in their ideas. In any event it can do him no harm to listen to them. The mode of expression is different to what he has been accustomed, and this alone will be one step towards getting him out of the rut. Brush against the world, find out how things are done outside of your own town, and there will be no danger of falling into the rut.

At all of these meetings prizes are offered for the best papers read, and while from a monetary standpoint they may not possess large value, from a sentimental viewpoint their value is inestimable, from the fact that they were won in competition with men of brains and in an effort to throw light upon subjects which have baffled able students. The thought that even a single idea for the betterment of pharmacy has been advanced is a gratifying one, and carries with it compensation for any inconvenience which may have resulted from the braving of the terrors of the hot season. The social features of these gatherings are now so mingled with the business sessions as to effect a combination of work and play, which makes them most attractive.

OUR LETTER BOX

THE ERA IN EGYPT.

New York, June 23, 1905.

Editor The Pharmaceutical Era:

Several months ago, on information furnished by me, you published an article on the demoralized condition of the drug stores in Jerusalem and the Holy Land. I sent copies of your paper to Constantinople, Egypt and the United States Consul at Jerusalem. The article came to the attention of the Imperial School at Constantinople, and I now learn that by the authority of the Turkish government, 250 unlicensed drug stores have been closed. In Jerusalem all the stores not regularly licensed as pharmacies were closed, with the exception of the hospitals.

As a result of this work, the druggists of Egypt have offered me several positions, because they consider that I, with the help of The Pharmaceutical Era, was instrumental in securing the closing of these places. One of these positions I have accepted, and as I leave New York next month for Cairo, I take this opportunity to thank The Pharmaceutical Era for the good work done through its aid. I shall be happy to communicate with you while in Egypt on the condition of affairs there.

As a member of the New York Retail Druggists' Association and the Drug Clerks' Circle, I wish them success in their efforts to stop the giving away of presents and to make drug stores real drug stores, without all the foolish side-lines that they have over here. Let them live together in a more brotherly way, without trying to cut each others' throats—the druggists on prices and the clerks on wages.

Very truly yours,

WOLF D. SACHS.

COLLEGES AND DRUGGISTS.

New York, June 27.

Editor The Pharmaceutical Era:

Mr. Weygant seems to have a misconception of the ideas sought to be conveyed in the letter of "Old Fashioned," in The Era of June 15. It is kind of him to admit that there is some logic in a few of the arguments in favor of the druggist who has the misfortune not to be a college man.

There is no argument as to the poor man having a chance, and we all know that many of the men who have made the greatest marks in the history of the world have been those who had to surmount the most difficult obstacles. Man is put upon this earth to work out his own salvation, and if he has real grit, the world will be forced to recognize his worth. But because a man has the pluck to win success in the face of all these obstacles is no reason for making it harder for him to reach the goal. That is equivalent to making his pluck and perseverance a burden upon him, rather than that through which he shall eventually reap his reward in the battle of life.

There was no intention in my former letter to decry the value of a college education either in pharmacy or any other vocation, for the man who assumes this

attitude towards the higher education writes himself down as opposed to progress. But the college education should not bear the hall-mark of selfishness. Because one man has been fortunate enough to be placed in a position where he has acquired a college education, that does not warrant him in saying to his less fortunate brother, "Go thou and do likewise, or you cannot enter the profession of pharmacy." This is, of course, presuming that the two men have an equal knowledge of pharmacy. To the less fortunate brother, who has been barred from the college education through force of circumstances over which he has no control, and despite a willingness to put forth every effort to equip himself for the struggle with the world, such an attitude looks very much like selfishness, however harsh the word may sound.

There is no disposition to tear down the requirements which have been built up for the protection of pharmacy, but it is time to enter a protest when these requirements reach the point where the honest and sincere man may find a single unnecessary obstacle thrown in his way when he seeks to become a member of this honored profession.

"OLD FASHIONED."

BULK PERFUME TRADE.

New York, June 23, 1905.

Editor The Pharmaceutical Era:

In your issue of May 25, page 576, we note that Mr. Spiebler, of Rochester, takes almost a page to make the assertion that there is no such thing known as re-orders for "conc. flower oils." For the benefit of your readers, and in justification to ourselves, we wish to "head off" this very misleading statement, proofs of which we can at any time show.

We started the manufacture of conc. flower oils over seven years ago, and to-day can show by our books that we have more than trebled our sales for 1904, and furthermore that we have customers who bought of us the first year, and who are still reordering three and four times a year. We admit that there may be some concerns who have tried to market a line similar to ours and have not been successful on account of lack of merit in their products, but we wish to protect the good name we have labored successfully to establish, through the good results obtained by the use of our conc. flower oils.

To verify what we have said, we would mention the names of a few people with whom we have been and are now doing quite a large business each year; these names are representative and the fact should speak for itself, viz.: John W. Sheehan & Co., Utica, N. Y.; Brewer & Co., Worcester, Mass.; Woodwards & Co., Boston; Benson, Smith & Co., Honolulu, H. I.; F. F. Mykrantz, Columbus, O.; Reid, Yeomans & Cobit, New York City; F. E. Rockstroh, San Francisco; The Sun Drug Co., Los Angeles, Cal.

Does this list of customers make it look as if re-orders for our goods were unknown. Even Mr. Green, who has been referred to by our friend Spiebler in his letter, and who has stores in Worcester and Springfield, Mass., has been among our heaviest customers and promises to be a still greater purchaser.

Do not all of these facts show that bulk perfume extracts can be successfully

made with conc. flower oils, and doesn't it further show that a little fine feeling of jealousy or something of that nature, which caused Mr. Spiebler, of Rochester, to make the assertion? Furthermore, it shows quite plainly to us that we or some of our contemporaries in the same line, must be treading on his corns rather hard.

Thanking you for the valuable space you may see fit to give this, we remain,

Truly yours,

EVERGREEN CHEMICAL CO.

COMMENDABLE ENTERPRISE.

Detroit, June 26.

Editor The Pharmaceutical Era:

Permit me to disagree with your suggestion that the druggist in Grand Rapids, who has placed an electric push button on the outside of his store, so it can be readily reached by occupants of carriages and automobiles, has sacrificed his dignity, if not his self-respect, by thus appealing for patronage. It seems to me to be commendable enterprise. In these days of keen competition, there are so many things the self-respecting man is reluctantly forced to do if he would keep his trade that it is hardly fair to find fault with him for making it more convenient for the patrons of his store.

Doubtless there are many sales of other things than actual necessities to persons who would not stop to buy if they had to leave their carriages or automobiles. There can be no objection to the enterprise of the druggist who makes shopping the easiest possible task for those who really need him and for those customers who take a fancy to something that they could easily dispense with but which they buy because they find no trouble in gratifying their wishes.

This is certainly drumming up trade with a vengeance, but this druggist has not gone as far as the New Yorker who sends messenger boys over a route to take orders. Probably in nine cases out of ten the customer who is awaited upon at the curb line is a woman, and it is just such little attentions as these, a disposition to inconvenience yourself, ever so little for her comfort, that makes a woman the friend of the merchant who is considerate of her, and with the gentler sex on his side, the druggist can afford to sacrifice any false sense of dignity which might eventually drive trade through the doors of his more accommodating competitor.

By placing the bell in a post on the curb, the Grand Rapids druggist has only advanced one step further than merchants in every line in the rural districts, who make it a practice as far as possible to wait upon customers without putting them to the inconvenience of leaving their vehicles, in that he has provided an easy means by which they may signal, instead of having to wag a wireless message to a clerk within the store.

READER.

PREJUDICE AND LABELING.

Chicago, June 13, 1905.

Editor The Pharmaceutical Era:

Your editorial on "Prejudice Against Druggists" (Era, June 8, page 629) is a timely sermon and of a character that cannot be preached too often. You are right—the percentage of blind ones is small, but that percentage is only the more pernicious in its effect on the entire

rank and file of pharmacists and casts a stigma on all of us, hence we are the ones who must correct and corral that small percentage.

Your editorial on poisons and labels is equally to the point. Many times we have cases against druggists for not labeling articles sold, as the law requires, and at once the cry goes up, "a technical prosecution," "just for not labeling," etc. Labeling articles is not only law per statute, but law per horse-sense for the protection of both public and pharmacist. If the druggist really was mistaken in selling wood alcohol for lime water and had he rightly labeled the stuff, he would have been O. K.

W. BODEMANN.

OUR OFFICE BOY GOES FISHING.

After the painful episode referred to in my last, I was to skared to go bak at one to the drug store & hein afrade the cop wud arrest me for murder I thot I wud go up & see the Editour & when I had told him mi tale he sed he thot it was kwite posibel & very probabel, so noling him to be a jineros kind of man I thot I wud strike him fer a \$5 bill & much to mi sur prize he gave me 10 dollers, so I thot I wud kiere out to the fishin. I will not tell yu where I went in kase yu wud kno to good a thing. I got to the seeside & kame akros a kid that had nothing to do, so I bot 2 dep see lines & loked around fur a bote. There was an old man on the seeshoar that was suposed to let out the botes, but he was havin a gentel nap, so we thot it wud be a pity to disturb him, & we jest tike a bote & were of. We went about 3 miles out befor we dropped the ankur & proceeded to hate our books with makeril. In a short time we had kwite a no. & began to think it was time to pul in. Jest at that mimit the kid kaut a kod fish & wud yu believe it, there was a bas hangin on to its tale, a dog fish hanging on to its tale, & a porpoyse on to its tale. The kod wud not let go the hook, the bas wud not let go the kod, the dogfish wud not let go the bas & the porpoyse hung on like old Harry to the dogfish. We did not want to lose the lines so I kried to the kid to hold on to the line & I cut the ankur klear.

The porpoyse imedately begun to swim away & tike us first to boston, witch is sometimes kald the hub, & then it struck out fur the new hampshire koast. There the porpoyse ran rite on to the land, dragging the bote into the bushes. It was so exhausted that it lay down and expired. The kid & I tike all the other fishes & sold them & with my money teligrated the sleeping buty whare his bote was to be fowned & then we toled the pepul wath a large strange fish we had seon on the shoar. If yu do not believe this true fail yu kan jest luke in the boston Herild, & will see fur yurself, onli the papers sade a see sarpent had ben diskivered.

Gease, a New Enzyme.

Geine is the name of a glucoside obtained from the root of Geum urbanum, or water avens, a native of Europe. An accompanying enzyme called "gease" by Bouquelot and Herisesy (Comp. rend.) decomposes the glucoside, an operation that was found impossible by means of known enzymes like emulsin, invertin, etc. The authors therefore conclude that gease is a new enzyme.

GLYCERITUM ULMI.*

BY F. E. HOMMELL, M.D., PH.G.,

Professor of Materia Medica and Phylso-
logy, New Jersey College of Pharmacy.

At the present time there are many elegant vehicles and adjuvants for the administration of unpleasant and even nauseous medicinal agents. Syrups come first—they are largely prescribed and fill the bill, as a rule, very well; thus we find that the syrups of yerba santa, licorice and chocolate are popular to disguise the bitter taste of such alkaloids as quinine, cinchonidia and cinchona.

Syrups of wild cherry, tolu and licorice are largely exhibited as vehicles for the different cough expectorants, respiratory stimulants and anodynes.

Hypnotics and sedatives are often combined with aromatic syrups to cover disagreeable taste. Aromatics in the form of elegant elixirs are highly esteemed among the physicians to administer remedies of the mineral, vegetable and animal kinds; and like the syrups, they oftentimes give good results, so far as palatability is concerned.

But have these syrups and elixirs any objectionable features so far as ingestion is concerned? They have. Syrups, outside of cough mixtures, have no curative value; they do possess a certain nutritive value, providing they do not undergo active fermentation in the alimentary tract, which they do many times, especially in the stomachs of those who are debilitated and very ill with an acute or chronic disease. J. B. Moore says that the sugar of heavy syrups has a tendency in many cases to debilitate the stomach, and in a measure to destroy the appetite, which should always be avoided where possible.

Some patients will often complain of the medicine souring on their stomach so much so that something else besides sugar has to be substituted, and the agents which replace these syrups are usually some aromatic elixir or elegantly flavored cordial, which not only carries the medicine, but on account of the alcohol in it, tickles the palate and makes the patient feel good. But alcohol is sometimes offensive to sensitive patients and also, on account of its irritating character, it is not admissible in diseases of the mucus membranes.

Malt in liquid form is sometimes employed as a vehicle, but malt combinations cause nausea in some patients, and with iron and manganese and other drugs, constipation is another drawback. Malt is therefore not an ideal vehicle.

Saccharin in the form of an elixir, containing sodium bicarbonate, alcohol and water, is sometimes employed to replace sugar and glucose as a sweetening agent, and it does very well in some instances, as in solution, it has an intensely sweet taste and therapeutically is an antiseptic, but saccharin in the form of an elixir is not always a desirable vehicle, as it is a derivative of coal tar, and the commercial article is not a pure or uniform product.

Borstein, in the course of a series of experiments on himself, found that continued daily doses of four grains of saccharin caused diarrhoea, the feces containing nitrogenous and fatty matter in greater quantity than at other times. It ap-

pears probable that irritation and inflammatory stomach disturbances, as frequently observed with diabetic patients, may be due in many cases to continued use of saccharin. We have then, no ideal vehicle in either syrups, malt or the elixirs containing sugar or saccharin.

What could be suggested to replace these agents so that a large number of valuable therapeutic agents could be successfully given without drawbacks?

I recently found in *Ulmus fulva* or slippery elm bark combined with glycerin, an excellent vehicle for a number of valuable drugs. For subnitrate and subcarbonate of bismuth, it holds these stomach sedatives and intestinal astringents in suspension very nicely, especially so if a little gum arabic is added. The same applies to chalk and the typical antacid magnesia. Citrate and acetate of potassium are oftentimes combined with tritium, buchu, colinsoula and saw palmetto; here Glyceritum ulmi affords an agreeable and efficient vehicle, adding to the effect of the diuretic drugs, on account of its demulcent action on inflamed mucus linings, and also aiding in proper absorption.

Glyceritum ulmi combines well and to some extent renders more palatable the fluid extracts of ergot, hydrastis, hamamelis and viburnum. The iodides of potassium and sodium are ideal mineral alteratives in certain diseases; their judicious exhibition, however, is frequently contraindicated, not alone from the unpleasant effects of "iodism," but from irritating the mucus membrane of the stomach; here the glyceritum ulmi will form a perfect emollient vehicle. The addition of some suitable aromatics will add to the taste.

The carbonate, chloride and iodide of ammonium, with creosote and other agents, cannot always be conjoined with syrup on account of the tendency to produce fermentation and nausea. The value of a properly prepared combination of slippery elm and glycerin as the proper vehicle, is here indisputably demonstrated.

Glyceritum ulmi is particularly valuable as a vehicle for medications administered to diabetic patients, where carbohydrate sweets are positively interdicted. Certain pathological conditions sometimes demand the exhibition of the simple bitters as gentian, colomba and quassia to increase the flow of gastric juice and saccharin vehicles for these are apt to disturb digestion and hence are not proper vehicles. A perfectly innocent and suitable combination for the purpose would be glyceritum ulmi.

It also serves as an efficient lenitive for external use; mucilage of slippery elm is frequently applied in certain cutaneous diseases, the addition of glycerin preventing the lenitive from becoming dry, and enhancing the demulcent and other curative action.

The formula for the glycerite follows:
Slippery elm bark 10 parts
Glycerine, C. P. 25 parts
Water, sufficient quantity to
make 100 parts

Boil the bark with the water for five minutes, macerate for two hours, strain and add sufficient water to make 75 parts, add the glycerin and filter; in order to insure perfect preservation of the product a half a grain of benzoic acid is added to each fluid ounce.

TIMELY TOPICS.*

BY DR. H. M. WHELPLEY, PH.G.,

St. Louis.

THE NEW U. S. P.

The eighth decennial revision of the pharmacopœia will be on the market before the month of June is over. It will be a more useful working manual than any of its predecessors have been and consequently a greater necessity in the drug store. Do not delay ordering a copy.

When the book comes, carefully review it by devoting a few minutes to it each day until you have a good idea of its scope and plan of treating subjects. Note carefully the changes in strength of preparations and remember that as a rule they have been made weaker. This avoids dispensing accidents, but the changes have been made to conform with the standards of the International Congress on Unification of Heroic Remedies.

Talk to your physician about the new pharmacopœia. Show the book and point out the changes in strength so that the doctors can regulate the doses in their prescriptions. Remind the medical profession that the new standard becomes the legal authority on August 1. After that date, the pharmacist is criminally liable who dispenses forty per cent. tincture of veratrum viride in place of the then official ten per cent. tincture or the old thirty-five per cent. tincture of aconite instead of the new ten per cent. preparation. Post the doctors on the changes in official titles and urge them to drop the use of synonyms. The new pharmacopœia relegates synonyms to the index which has become almost a glossary.

You will need a dispensatory when the new revisions are out next winter, but that commentary does not fill the long felt want for the new pharmacopœia, with its well displayed and conveniently arranged formulas and the prominently stated tests and descriptions with the average dose under each article used internally. Perhaps you got along without the old pharmacopœia, but it will be poor economy to try and save the \$2.50 which should be spent for the new revision.

THE N. F.

The National Formulary is absolutely independent of the United States Pharmacopœial Convention which controls the pharmacopœia. The National Formulary is a legitimate child of the A. Ph. A., and is revised by a committee of that organization. A new edition will necessarily follow the appearance of the pharmacopœia, but it is not likely to be out until fall. A few of the National Formulary preparations are now pharmacopœial, but for the rest use the present edition of the National Formulary until a new revision is announced.

A. PH. A. GENERAL INDEX.

The A. Ph. A. General Index to the first fifty volumes of the proceedings is a \$5 book, which does not appeal strongly to even those who belong to the association and have many volumes of the proceedings. This is due to a lack of training in the use of works of reference. Buy the index and make it a rule to consult it whenever you desire information you do not find in a dispensatory. Only in exceptional

*Read at the 1905 meeting of the Mo., Ph. A., June 14.

*Read before the New Jersey Ph. A., Atlantic City, June, 1905.

cases will you fail to find the subject indexed. If the reference is to a volume not in your library, you should write to a pharmaceutical journal and ask the editor to copy the information and publish it. If you live in St. Louis or Kansas City, go to the college of pharmacy and consult the set of proceedings in the library.

JOIN THE A. PH. A.

Join the A. Ph. A. has been a timely injunction for the past fifty-three years. If you have failed to heed it, remember, it is not too late to mend your ways. It will cost you \$5 per year and the volume of proceedings will give you many times that value to formulas and other information. You must, however, exercise the "consultation instinct" and look up things as the occasion suggests. I do not suppose that the druggist writes to the editor one time out of ten when he fails to find in his own library the information he desires. I do believe, however, that nine times out of ten the editor is able to answer the question by reference to the A. Ph. A. proceedings. Does this plain matter of fact statement appeal to your business judgment? If so, lose no time in consulting William Mittelbach, chairman of the A. Ph. A. committee on membership.

Join the N. A. R. D. would be words wasted on you, for your membership in the M. Ph. A. enrolls you as an N. A. R. D. unit. The organization was born in Missouri, and is a development of the Western Interstate Associated Pharmacists Idea.

THE MISSOURI IDEA.

The Missouri idea is the popular way of designating amusements at the State meetings. Many times have I been asked how it is that we all enjoy the extensive programme of sports and games. The stay-at-home druggists figure out that the amusements and the work of the committee on papers and queries must cause the kind of friction that irritates. That such is not the case, we, who attend the meetings, are ready to assert. The explanation I consider easy. When two trains going in opposite directions attempt to pass each other on the same track, trouble is certain to ensue. Our amusement train and the papers and queries train keep to their individual tracks, and all are happy. The sessions adjourn at the appointed time, and the games are called after business is over. Thus it is that we find Mr. Seitz in a front seat at the meetings, and Professor Hemm quickens his step as the band plays for the sports to begin and his face bears the smile that will not come off.

Cleansing Leather Gloves.

A preparation for cleaning and dyeing leather, gloves and tanned skins is made by dissolving stearic acid in "benzine" or other hydrocarbon, adding a concentrated solution of alkali, alkali carbonate or bicarbonate, together with a dyestuff insoluble in water. For example, "benzine" (100 parts) is shaken up with concentrated ammonia (5 to 20 parts); stearic acid (3 to 6 per cent.), is added, together with a suitable dyestuff, e. g. Nigrosine for black gloves. Lanoline may be added to the composition in order to increase the natural softness and flexibility of the leather. The process is patented.

ASSAY OF CAPE ALOES.

BY A. TSCHIRCH AND R. HOFFBAUER.

1. Detection of Capaloin.—A 0.1 per cent. of aqueous solution of the aloes should exhibit a green fluorescence on the addition of 5 per cent. of powdered borax.

2. Detection of Aloe-emodin.—10 c.c. of the same aqueous solution of the aloes are shaken for one minute with 10 c.c. of benzene; the benzene is separated and shaken with 5 c.c. of strong solution of ammonia. The latter should acquire a rose-colored color.

3. Distinction from Barbados Aloes.—To 10 c.c. of the aqueous solution, one drop of a 5 per cent. aqueous solution of copper sulphate is added; the liquid assumes an intense yellow color, which does not change to red on the addition of a trace of sodium chloride and a few drops of alcohol.

4. Distinction from Natal Aloes.—A small quantity dissolved in concentrated sulphuric acid in a porcelain dish and mixed with a trace of fuming nitric acid does not assume a green coloration.

5. Anthraquinone Reaction.—1 Gm. of the aloes is mixed with 20 c.c. of concentrated nitric acid in a porcelain dish, and the mixture treated on a water-bath for two hours, the nitric acid being replaced as it evaporates. The residue, finally dried, leaves a brown residue, insoluble in water, which dissolves in ammonia with violet coloration.

6. Assay of Active Constituents.—5 gm. of the aloes is macerated with 5 c.c. methyl alcohol for two hours in a 50 c.c. flask; the mixture is warmed to 50-60° C., and 30 c.c. chloroform gradually added; the whole is now shaken and allowed to stand for half an hour. The chloroformic solution is filtered into a tared flask and distilled, the distillate being returned to the aloes residue, and the treatment repeated four times in all. The residue from the chloroformic solution, dried at 100° should weigh not less than 4 gm.

The residue obtained in the last test consists of aloin mixed with other substances, some of which are anthraquinone derivatives, whilst others are not. The amount of aloin in them (and also, therefore, in the aloes) can be approximately determined by ascertaining the limit of dilution with borax solution at which fluorescence is still perceptible. This for capaloin is 1 in 250,000. The proportion of substances yielding chrysanmic acid may be determined by a similar colorimetric method applied to the residue after treatment with nitric acid. (See No. 5.) Similar reactions may be applied to other aloes, and the following table gives the results obtained with commercial aloes:

Variety.	Chrysanmic acid.			Other Substances		
	Alcin.	yield, g.	Resin.	substances	not	Resin.
Cape soft.	20	55	11.8	13.2		
Cape dry.	16	59	6.2	18.3		
Uganda.	16	34	30.4	19.6		
Barbados.	18	32	22.4	27.6		
Curacao.	18	32	16.6	32.4		
Socotra.	8	25	3.6	63.4		

The authors conclude that Cape aloes is the best, as it contains much less resin than Barbados, Curacao or Socotra, and the resin is the only non-purgative substance contained in the aloes.—Transl. in abstract from Schweiz. Wochensch. Pharm. Journ.

NEW REMEDIES.*

SODIUM TACROCHOLATE.—Yellowish powder, or brownish resinous mass. Cholagogue. Soluble in water (2 in 1), partially soluble in 90 per cent. alcohol. Given in the form of pill. The substance is so deliquescent that the pill may be massed by simply heating in a mortar with the smallest possible quantity of 60 per cent. alcohol; the pills should be coated with melted salol or keratin. Dose—2 to 6 grains.

IDOPYRIN (Iodantipyrin).—Colorless crystals or white crystalline powder. Antipyretic and antiseptic. Sparingly soluble in water and more soluble in 90 per cent. alcohol. Given in tablets. Dose—5 to 15 grains.

NEURODIN (Acetyl-Para-Oxy-Phenyl-Urethane).—Colorless crystals. Antipyretic and antineuralgic. Dose—5 to 15 grains.

DIGALEN.—A so-called soluble digitoxin which appears in sealed tubes containing 15 c.c. After once opening, the contents can be kept only for fourteen days. Each c.c. contains 0.0003 gm. of amorphous digitoxin, dissolved in distilled water containing 25 per cent. of glycerin and 5 per cent. of alcohol, which serves to prevent the formation of mould growths. The addition of one per cent. of acetone chloroform (chlorotone, tertiary trichlor butyl alcohol) serves also to aid in preserving such solutions. One c.c. of digalen corresponds to 0.15 gm. of the powdered leaves in physiological effect.

OREXIN.—Whitish powder, with pungent taste. Tonic and stomachic. Insoluble in water. Used chiefly in the form of tannate. Dose—1 to 5 grains.

TUKLIN.—An acidified formalin-alcohol-ether mixture containing volatile oils. It is used as an antiseptic inhalant in treatment of diseases of the air passages.

PHLORIZON (Phlorizin).—Whitish or pale yellow crystalline powder. Tonic and antiperiodic. Slightly soluble in water, but readily soluble in 90 per cent. alcohol (1 in 4). Sometimes used as a substitute for quinine. Given in pills or mixtures. Dose—5 to 15 grains.

LECITHIN GRANULATED.—Prepared by dissolving 5 gm. of lecithin and 0.25 gm. vanillin in 40 gm. of 90 per cent. alcohol, which is used for moistening 440 gm. of granulated sugar and then dried. (Phar. Cent.)

FERROCOLIN.—A solution of peptonized guaiacol-ferri albuminate in syrup of thymol. Used in scrofulous conditions, chlorosis and incipient tuberculosis.

NECTANDRA BARK.—Dried bark of *Nectandra Rodioi*. Tonic, febrifuge and antiperiodic. Contains berberine, which is given in the form of sulphate or hydrochloride.

SODIUM GLYCOCHOLATE.—Stellate crystals. Cholagogue, given in dyspepsia and gouty obesity. Dose—2 to 10 grains.

IODOTHYRON (Thyroiodin).—Light-brown powder. Remedy for myxedema, goitre, etc. Insoluble in water, but soluble in alcohol or alkalies, being precipitated from the alkaline solutions by acids. Given in tablets. Dose—5 grains.

QUININE HYDROCHLORO-CARBA-MIDE.—Colorless crystals. Antiperiodic. Soluble in water (1 in 1). Used in the

*Adapted from Pharm. Journ.

form of hypodermic injection. Dose—5 to 15 grains.

TINOSPORA (Guaiacha).—Dried stem of *Tinospora cordifolia*. Tonic, alterative, diuretic and antiperiodic. Contains berberine, starch and a bitter glucoside. Used in the form of infusion (1 in 10), concentrated solution (1 in 2), and tincture (1 in 5).

SODIUM NUCLEINATE.—White or greyish-white amorphous powder. Soluble in water. Germicide. Used in the form of a 5 per cent. aqueous solution.

HEDONAL (Methyl-Propyl-Carbinol-Urethane).—Colorless crystals or white crystalline powder. Hypnotic. Slightly soluble in water. Given in cachets. Dose—15 to 30 grains.

TODDALLIA.—Dried root-bark of *Toddalia aculeata*. Bitter tonic and stomachic. Contains a resin, a bitter principle, and a volatile oil. Used in the form of infusion (1 in 10) and concentrated solution (1 in 2).

NERVOCIDINE.—Yellow, hygroscopic powder. Local anesthetic. Readily soluble in water, but only slightly soluble in 90 per cent. alcohol or ether. Used in dental work.

PURGATIN (Purgatol; Anthrapurpurin Diacetate).—Yellow or brownish-yellow micro-crystalline powder. Purgative. Insoluble in water, but sparingly soluble in 90 per cent. alcohol. Dose—5 to 15 grains.

SIMBABA CEDRON.—Seeds, Febrifuge, and antidote to bites of venomous animals. Contains cedrine. Given in the form of powder or tincture. Dose—2 to 5 grains.

NAPHTHALENE TETRACHLORIDE.—Colorless crystals, without odor. Antiseptic. Given in pills or cachets. Dose—2 to 10 grains.

GUAIAPEROL (Piperidine Guaiacolate).—Yellowish-white crystals. Antiseptic. Soluble in water. Given in mixtures for phthisis. Dose—5 to 30 grains.

GUACAMPFOL (Guaiacol Camphorate).—Colorless crystals or whitish powder with aromatic odor. Antiseptic. Insoluble in water, but soluble in alcohol and chloroform. Given in cachets or tablets for checking night sweats of phthisis. Dose—5 to 10 grains.

NARGOL (Silver Nucleinate).—Light brownish-yellow powder. Antiseptic. Soluble in water (1 in 4). Contains about 10 per cent. of silver. Used in the form of injection ($\frac{1}{4}$ to 1 per cent.) for gonorrhœa, or in aqueous solution (5 to 20 per cent.) for ophthalmic use.

LENTIN.—A trade name given by E. Merck for metaphenylenediamine hydrochlorid, a well-known chemical which is used in treatment of acute diarrhœa. Dose in 0.01 gm. several times daily for children, and 0.1 to 0.5 gm. for adults. The urine takes on a dark brown color.

IODOMENTHOL.—Brownish-white powder, consisting of iodol mixed with 1 per cent. of menthol. Antiseptic.

Mukogen.

Under the name mukogen, the hydrochlorate of dimethylphenyl-ammonium-oxynaphthoxazine has been put on the market as an antipyretic. Its formula is $C_{16}H_{18}N_2Cl$. It forms blue crystals insoluble in water, but soluble in alcohol and in alkaline solution. It is given in doses of 1.5 to 4.5 grains.—Ch. and Dr.

MEDICINAL PLANTS.

"Medicinal Plants, Old and New," was the subject of an address delivered before the Royal Horticultural Society of England recently, the speaker being Mr. E. M. Holmes, well known to English-speaking pharmacists as an authority on medical botany. In his lecture Mr. Holmes pointed out that although horticulture must have begun at a very early period of civilization, the plants required for medicinal use were chiefly collected from the fields and woods and were not specially cultivated, except those which, like the pomegranate and almond, afforded edible fruits, and like hanna were planted for their fragrance, and like the lily for their beauty. Even in the time of the Greeks and Romans, although horticulture had made great strides and pipless apples and long grapes were known, violets and roses were found in winter, yet there is no record of distinct physic gardens. It was only in the records of monasteries, abbeys and nurseries in the Middle Ages, that there is found any mention of a physic garden or portion set apart for the cultivation of medicinal herbs, usually near the surgeon's residence and distinct from another portion of the garden retained for culinary herbs. One of the first lists of plants cultivated in these physic gardens was given in "Capitulary of Charlemagne." Subsequently, wealthy citizens had physic gardens and during the reigns of the Tudors there were physic gardens under the charge of the apothecary who attended royalty. Private physic gardens were followed by municipal physic gardens, and these developed into the modern botanical gardens to which horticulture owes so much.

Descriptive catalogues of the plants grown in these gardens and containing an account of their medicinal properties were published by their owners, and form the herbaria on which domestic medical treatment was based until the early part of the last century, when a large number of medical plants described in them were omitted from the pharmacopœias, and the herbaria were succeeded by more advanced work on medicinal plants and the pharmacopœias. During the last half of the eighteenth century, the growth of the population led to increased demands for medicinal plants and their preparations, and the cultivation of these was carried on on an agricultural scale. The increasing use of quinine led to cultivation of cinchona bark on a large scale in India and Ceylon, followed by that of coca in various colonies. Mr. Holmes also alluded to the cultivation of Indian hemp for medicinal purposes and to the ancient and more extensive cultivation of the opium poppy in various countries.

BRANDY.

The best brandies are those produced in the Cognac districts, viz. Charente and Charente Inferieure; then follow in order of value those from Armagnac, Marmande, Nanfès and Anjou; the cheapest class is that known as "Montpelier." The marc brandies form a class by themselves, those from the Burgundy districts commanding high prices. Cognac brandy is generally made by a system of double distillation, known as "brouillis et repasse," in simple pot-stills. The spirit is distilled very slowly, a charge of 110 gallons occupying 8 hours. The first runnings come over at

a strength of 60-65 per cent. of alcohol, rapidly rising to 70-75 per cent., and distillation is continued until the distillate consists of water. The first distillate is sometimes divided into three fractions; it has an alcoholic strength of 25-35 per cent., and is known as "brouillis"; this is rectified during the "repasse"; the first runnings, to the extent of about 5 per cent. of the whole, are mixed with the next charge of "brouillis." The middle fraction, or fine spirit, comes over at a strength of 80-85 per cent. at first, and is collected until the strength has fallen to about 56 per cent.; the average strength of this spirit is 66-70 per cent. The residue is distilled until water passes over; this last fraction is called "seconde"; it has a strength of 20-25 per cent., and is either mixed with a fresh charge of wine, or is rectified separately.

In recent years simple forms of rectifying stills have, to a certain extent, displaced the pot-stills. Such a still is known as "Alambic des lies." The new stills enable the distiller to obtain the brandy in a single operation, and have had the effect of extending the range of wines which can be employed for brandy manufacture, a result rendered desirable on account of the ravages of Phylloxera. As regards the extent to which rectification of a grape spirit may be legitimately carried, the author would make no restriction beyond that imposed by the necessity of depending only on the natural odor and taste of the wine for the flavor of the brandy. Passing to the question of the definition and chemical analysis of brandy, the author proposes to limit the term "brandy" to a "spirit distilled in France, the volatile constituents of which are derived entirely from the grape, and which contains no added matter of any kind excepting water, sweetening and coloring matter and of which the taste and odor are those ordinarily associated with that designation."

The question of analytical criteria must be approached with great caution, since the number of well authenticated analyses of genuine brandies is really very small; but the tendency to base a judgment as to the genuineness of a sample of brandy upon the proportion of esters alone is emphatically condemned. A spirit fifty years old is in no way comparable with one only five to six years old, and the physiological properties of very old brandies are due only in a minor degree to the initial constituents of the spirit.—J. Inst. Brewing, Journ. Soc. Chem.

Reaction for Quinine

The alkaloid is treated in the cold with a mixture of concentrated sulphuric acid and ammonium molybdate, heated gently with a few crystals of ammonium persulphate, and then treated with a 40 per cent. solution of formaldehyde and a drop of a strong solution of ammonium thiocyanate. The dark blue color produced by the treatment with sulphuric acid and ammonium molybdate changes to yellow on heating with ammonium persulphate. On adding the potassium thiocyanate solution, the mixture is colored an intense reddish-brown if cinchonine be present, while if only quinine be present, either no reaction takes place or the mixture becomes faintly red after a long time.—Pharm. Zeit. and Chem. Zeit.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Oil Elaine.

(P. M. A.)—Replying to your query, this journal, June 15, 1905, page 659, Mr. J. A. Treat, Stuart, Iowa, writes: "Some fifteen years ago there was a kerosene oil in the market under the copyrighted name of 'elaine.' It was a prime article made from the middle run of certain wells in Pennsylvania, and containing very little paraffin and benzine or gasoline. This may be the oil wanted."

Mr. William Bodemann, of Chicago, sends us a letter containing similar information. He adds that he "used to pay 15 cents for paraffin oil at the jobbers," but he "now buys at 7½ cents of the Trust. The monopoly article is received in neatly wrapped packages and sells at fifteen cents." He "recently paid twenty cents a pint for paraffin oil from the jobber that can now be bought from the monopoly at ten cents a gallon. Talk about the small profits of the jobbers and the _____ trusts!"

Quinine Hair Tonic.

(E. L. M.)—We cannot give the formula for the proprietary article. However, the following are formulas for so-called "quinine hair tonics," any one of which will probably answer your purpose:

(1.)

Alcohol	50	c.c.
Quinine sulphate	1	gram
Tincture of cantharides	8	grams
Borax	3½	grams
Ammonia water	3½	grams
Glycerin	100	c.c.
Caramel solution	3½	grams
Bay rum, enough to make	500	c.c.

(2.)

Quinine sulphate	1¾	grams
Alcohol	55	c.c.
Tincture of cantharides	3½	c.c.
Tincture of capsicum	1¾	c.c.
Ammonia water	15	c.c.
Glycerin	30	c.c.
Bay rum, enough to make	175	c.c.

(3.)

Quinine sulphate	20	grains
Tincture of faborandi	2	fl. ounces
Glycerin	1	fl. ounce
Eau de cologne	2	fl. ounces
Bay rum	2	fl. ounces
Diluted sulphuric acid	q. s.	
Rose water, enough to make	20	fl. ounces

Dissolve the quinine in the rose water with a few drops of diluted sulphuric acid, then add the other ingredients and filter.

Lice on Poultry.

(L. J. L.)—Lice result from uncleanness. A work on veterinary medicine directs the birds to be washed daily with wormwood boiled in water, and the fowl and coop to be sprinkled with the infusion. Another remedy is to dust into the feathers flowers of sulphur, or sawdust moistened with petroleum ether (benzine), or carbolic acid. The henhouse should be whitewashed with a solution of lime to which a little carbolic acid has been added. To remove chicken lice from coops, try one of the following:

(1.)

Carbolic acid, crude	1	fl. ounce
Water	15	fl. ounces
Wash the woodwork with this mixture and sprinkle in nests and on floor.		

(2.)

Make the roosts perfectly clean with hot water and soap, and afterward apply spirits of turpentine or kerosene oil. Also strewn some sprigs and branches over the floor of the coop. The building should be kept clean.

(3.)

Crude carbolic acid	6	fl. ounces
Carbon disulfid	5	fl. ounces
Oil tar	2	ounces
Kerosene	1	gallon

Put all in a 2-gallon jug, adding the kerosene last; shake well until thoroughly mixed. Do not cork tight when first put in the jug, or it will burst the jug. After being well mixed, cork tightly. Apply to roosts, walls, etc., with a brush or whisk broom.

Elixir of Lactated Pepsin.

(E. L.)—We cannot give the formula for the proprietary article. A good working formula for "elixir of lactated pepsin" is that given by the National Formulary for "compound digestive elixir," and which contains the equivalent of 10 grains of saccharated pepsin, or 1 grain of pure pepsin to the fluid dram. This is the strength of the ordinary commercial preparations. A similar formula printed in *The Era* some years ago follows:

Pepsin	128	grains
Pancreatin	40	grains
Diastase or ptyalin	10	grains
Powdered cudbear	180	grains
Dilute hydrochloric acid	20	minims
Lactic acid	3	drops
Alcohol	3	fl. ounces
Water	7	fl. ounces
Simple syrup	6	fl. ounces

Mix all of the above except the syrup, macerate for three days, agitate frequently; filter to the filtrate, add the syrup, and through the filter add enough of a mixture of alcohol and water, in the proportion of 5 to 7 by volume, to make the liquid measure 16 fl. ounces. Other formulas of a similar character have been published in *The Era*.

Books on Flavoring Extracts.

(E. E. V.)—There are very few books devoted entirely to the manufacture of fluid extracts. However, Harrop's "Monographs on Flavoring Extracts" (\$2), published by Harrop & Co., Columbus, Ohio, may answer your purpose. The larger formularies all contain formulas for flavoring extracts, and you can find many processes in *The Era* Formulary (\$5). Other smaller books are Hires' "Recipes for the

Manufacture of Flavoring Extracts" (80c.); Scoville's "Extracts and Perfumes" (\$1), and Hires' "Manual of Beverages" (\$4).

Dr. Pepper.

(Inquirer.)—A reader of *The Era* residing in Texas informs us that "Dr. Pepper" is a name applied to a soda beverage sold in that State. He submits the following formula:

Acid solution	6	ounces
Caramel	1	ounce
Essence of bitter almond	1½	drams
Ruby S. aniline, Merck	½	dram
Simple syrup	1	gallon
The acid solution is made as follows:		
Citric acid	8	ounces
Tartaric acid	8	ounces
Boiling water, enough to make	2	pints

The essence of bitter almond is made by dissolving 4 drams of oil of bitter almond in 8 ounces of deodorized alcohol, and the coloring solution by dissolving 4 drams of ruby S. aniline, Merck, in 4 ounces of alcohol and enough water to make 1 pint.

Swedish Nomenclature.

(S. R. C.)—Replying to your inquiry, this journal last week, page 684, a reader of *The Era* informs us that by "dubla malorts droppar" is intended "doppelte malurt droppar," equivalent to a "strong tincture of wormwood" or "*Tr. Artemisia Absinthium fortes*."

Oil of Birch Buds.

H. von Soden and F. Elze (*Berichte*) have undertaken the investigation of oil of birch buds. The oil, first described by Haensel as having a gravity at 20° C. of 0.9592 and as being slightly lauro-rotatory, was found by the authors to be a very thick fluid of characteristic odor, soluble in weak or strong alcohol with the exception of about 1 per cent, which was thrown out in crystalline form. Betulol C₁₅H₂₃O—probably C₁₅H₂₅OH—a primary sesquiterpene alcohol, was isolated by conversion into the phthallic ester. It forms, like the original oil, a very thick fluid, resembling the anisylol obtained from West Indian sandalwood oil, and exhibits an optical rotation of -35°, the specific gravity being 0.975, and the boiling point under 743 mm., pressure about 284 to 288 (138-140 at 4 mm.). Betulol exists in the oil as an acetate, as far as the authors can at present judge. The insoluble crystalline substance appears to be a paraffin.

Celluloid Varnish for Photographic Work.

(1.)

Celluloid	5	grams
Sulphuric ether	16	grams
Acetone	16	grams
Amylacetate	10	grams

(2.)

Celluloid	10	grams
Camphor	4	grams
Ether	30	grams
Acetone	30	grams
Amylacetate	30	grams

(3.)

Celluloid	5	grams
Camphor	5	grams
Alcohol	50	grams

—Apoth. Zeit.

The first thing a druggist wants is a *pure* article. Next he wants a pure article that *SELLS*.

20=Mule=Team Borax

is it. Folks are beginning to wake up to the fact that BORAX is about the most necessary thing to have in the house. It's being extensively advertised everywhere.

PACIFIC COAST BORAX COMPANY,

New York

Chicago

San Francisco

LAXATIVE BROMO QUININE

ON THE

DIRECT CONTRACT, SERIAL NUMBERING PLAN.

Among the universally sold articles — the staples in the Drug line during the past ten years, none has received greater support of the entire Retail Drug Trade than **LAXATIVE BROMO QUININE**.

The manufacturers fully appreciate this, and in keeping with the policy of allowing from the beginning a profit of one hundred to one hundred and thirty per Cent, **LAXATIVE BROMO QUININE** has been placed on the **DIRECT CONTRACT SERIAL NUMBERING PLAN**, as the best discovered means of assisting every legitimate Retail Druggist to maintain this profit under the conditions which he now has to face.

At great expense, not only of money but most complicated labor, the manufacturers have been proceeding quietly for some months to put this plan in operation. A majority of the druggists throughout the country already have signed and returned the contract and the names of hundreds of other druggists who sign and return the contract, are being added to the list every week. The results obtained up to this time insure success to the effort, and in order to make the Plan effective to the greatest possible degree, it simply remains for every Retail Druggist to realize that his individual co-operation is essential. Every Druggist who has not signed and forwarded the contract on **LAXATIVE BROMO QUININE** should take such action immediately.

If a supply of **LAXATIVE BROMO QUININE** is needed or if the stock on hand will permit it, the extraordinary **DATING OFFER** now in force enables the Druggist to purchase a quantity of **LAXATIVE BROMO QUININE**, obtaining the regular free goods, to be delivered at once and invoice dated November 1st, 1905, for cash discount.

LAXATIVE BROMO QUININE

Price \$1.75 per dozen.

6 dozen lots,	1 dozen free,	Cost	\$10.50	or	\$1.50	per dozen
12 dozen lots,	2 dozen free,	5% trade discount,	"	\$19.95	or	\$1.43	" "
36 dozen lots,	6 dozen free,	8% trade discount,	"	\$57.96	or	\$1.38	" "
60 dozen lots,	10 dozen free,	10% trade discount,	"	\$94.50	or	\$1.35	" "

All Wholesale Druggists will accept orders under this **DATING OFFER**.

PARIS MEDICINE COMPANY,

Saint Louis and London.

NEWS SECTION

FOOD MEN COMBINE.

Will Work Next Congress For a National Pure Food Law.

"NATIONAL FOOD MANUFACTURERS' ASSOCIATION" IS THE NAME OF THE ORGANIZATION FORMED LAST WEEK.—DRUG INDUSTRY CONSIDERED FOREIGN AND MAY NOT BE REPRESENTED.

Over fifty manufacturers and representatives of various food industries gathered last Wednesday evening at the Waldorf-Astoria, to perfect the organization of "The National Food Manufacturers' Association." The object of this association, as set forth in the call that was issued, is to secure the co-operation of the various food and drug industries in the United States, "in an endeavor to secure a national food law at the next Congress of the United States; which law shall be one that will, within its scope, protect the public from unwholesome, adulterated and fraudulent goods and drugs, and conserve the rights and legitimate interests of the food and drug industries of the United States; to the end that the various State Legislatures will have all food laws conform to the provisions of the same."

The present officers are: Charles M. Ams, of Max Ams, New York, acting president; Frank C. Rex, of Austin Nichols & Co., New York, treasurer; Thomas E. Lannen, Chicago, secretary. At the opening of the meeting, Secretary Lannen explained the object of the association, which he stated had been organized on May 8 with seventy-five members. Mr. Lannen reported that a thorough canvass of manufacturers had shown them all to be heartily in favor of the project.

Discussion was opened, in which representatives of the glucose, condensed milk, syrup, butter and baking powder industries, and of the National Wholesale Grocers' Association joined. All pledged the support of their respective firms. One speaker expressed the belief that while it was the intention to take in every legitimate manufacturer, big or little, it would make the association too unwieldy to try to bring together too many differing interests. The drug industry, he considered, was foreign and should be left out.

The whole question was summed up by Secretary Lannen with this statement: "There will be a pure food law enacted at the next Congress; of that there is no doubt. What we must decide is, shall it be a pure food law of the manufacturers or of the food commissioners?" On this point some strong opinions were expressed.

After the articles of membership had been read, many of those present came forward and enrolled as members. On motion, the present officers were instructed to prepare nominations for officers, an Executive Board and a Board of Control,

which is to consist of one representative from each of the industries in the movement. These nominations are to be sent to all enrolled members and a vote taken by mail. There are no dues or initiation fee attaching to membership. At the meeting the N. A. R. D. was represented by John C. Gallagher.

N. Y. R. D. A. ANNUAL ELECTION

Before resigning the chair to his successor at the meeting of the N. Y. R. D. A., last Friday evening, President Peter Diamond recommended that the association should create a separate and distinct executive committee whose duty it should be to approve and countersign all drafts upon the treasurer, and to attend to all confidential matters coming up for attention. He also urged the members, on accepting office or membership on any committee to make every effort to lighten the work of each other, and so make the task an easy one. He reviewed the work of the past year, mentioning what had been done in the matter of representation on the board of pharmacy, affiliation with the N. A. R. D. and the qualification of pharmacists. Mr. Diamond, who has served the association for two terms, on making way for his successor was given a rising vote of thanks.

The following officers were elected for the ensuing term: President, Lazarus Marmor, 129 Ninth avenue; first vice-president, Morris Brodtkin; second vice-president, Louis B. Epstein; treasurer, Charles Bernstein; corresponding secretary, William S. Sindey, 460 Grand street; financial secretary, Jesse K. Bernhard; recording secretary, Joseph R. Beck; trustees, A. Segal, J. Muveys, H. Sarabson, S. Merin, J. Herzenburg, A. Sachs and V. Drossner.

S. V. B. Swann, of the M. A. R. D., was present and briefly outlined association work in Greater New York, and also invited the members to be present at the State association meeting this week, in Saratoga.

VETERAN'S GOLDEN WEDDING.

Thomas Scott, a druggist of Baldwin, L. I., celebrated the fiftieth anniversary of his marriage at the home of the daughter of Mr. and Mrs. Scott, Mrs. R. J. Halgin, of Jersey City, on Monday evening. Mr. Scott is eighty-five years old and has been in the drug business for sixty years. He learned the trade in England. It is forty-three years since Dr. William Mulr began as an errand boy, bottle washer and dispenser of "Scott's Em.N.L.D. soda water," at Mr. Scott's drug store, then at Court and DeGraw streets, Brooklyn.

—Victor Newman, a chemist employed by Udoe & Orlotti, Bayonne, N. J., was so badly burned last week that he died within a few hours after the doctors had finished dressing his injuries.

STAMPS TO BE REDEEMED.

Pharmacists May Send Them to Excise Department and Get Refund.

In response to a request for information as to the redemption of liquor stamps held by pharmacists, The Era is informed by the State Excise Department that the following letter has been sent to all pharmacists who have purchased such stamps:

To Pharmacists: It appears from our records that while holding a liquor tax certificate under subdivision 3 of section 11 of the liquor tax law, you applied for and obtained pharmacists' liquor stamps under subdivision 3a of section 11 of said act. Chapter 678 of the laws of 1905, which went into effect June 1, 1905, repealed subdivision 3a of section 11.

You are therefore notified that traffic in liquor in accordance with the provisions of such subdivision is no longer authorized.

Chapter 701 of the laws of 1905 appropriate a sum intended to cover the amount necessary to redeem all unused pharmacists' liquor stamps. If you hold any such stamps, and desire to redeem the same at their face value, forward them immediately to Patrick W. Cullinan, State Commissioner of Excise, Capitol, Albany, N. Y., together with the enclosed blank properly executed.

It will take about thirty days after the stamps are received at this office to audit and pay the refund thereon.

P. W. CULLINAN,

State Commissioner of Excise.

The blank which accompanies the circular is a petition setting forth the pharmacists' name and address and the number of stamps which he holds. Any pharmacist who has not received such a blank should apply to the State Commissioner of Excise.

CHLOROFORM COMBINE.

New Company Formed by Firms Holding Expired Patents.

The Hoessler & Hasslachier Chemical Co., of this city, and the Albany Chemical Co., of Albany, have together formed the Chlorine Products Co., for the purpose of manufacturing chloroform at Niagara Falls. This combination is due to the expiration this month of the chloroform patents in this country, which were held by the two firms mentioned. This makes the process now available to anyone who wishes to use it.

By carrying on the manufacture at Niagara Falls, the two companies hope to cheapen the cost of production in part through the saving of freight charges on bleaching powder. This is made at Niagara Falls, at works already established there. It is stated that in all other interests except the manufacture of chloroform, the Roessler & Hasslachier Co. and the Albany Chemical Co. will continue entirely separate and distinct.

A. P. H. A. EXHIBITION.

The Committee on Exhibition at the coming meeting of the American Pharmaceutical Association, Atlantic City, September 4, Henry P. Hynson, Charles and Franklin streets, Baltimore, chairman, announces that it has secured the large, handsome Cafe Hall of "The Hesperith," headquarters hotel, Boardwalk and Virginia avenue. This hall is about 75x150 feet, is well ventilated and beautifully lighted, with an entrance within one hundred feet of the great promenade.

It is proposed to make the exhibition dignified but popular one. Manufacturers will have an opportunity of advertising and sampling their wares to the laity and there is no doubt but that the exhibition will be very largely attended by general visitors to Atlantic City, as well as by the unusually large number of pharmacists, who will take advantage of the occasion to visit the seashore.

There has not been so great an opportunity in recent years for parties who manufacture goods for the drug trade to show their products, both to the retailer and consumer. Nothing will be excluded that is kept in the average drug store, excepting so-called "patent medicines."

A. B. C. GOES UP THE RIVER.

The A. B. C.'s held their Lake Mohonk Minnewaska run June 15, 16 and 17, and the entire programme went off without a hitch. On June 15 the little party, consisting of Mr. and Mrs. Stolzenburg, Mr. and Mrs. Leinecker, Mrs. Gauss, Mr. and Mrs. S. Faber, Walter E. Faber and William McIntyre, of the Philadelphia D. & D. Bicycle Club, started off for Poughkeepsie, via Albany day line steamer, arriving there about 1 p. m. After dinner the party looked over the town and then crossed over the Hudson River bridge. At Highland the riders took to their wheels in order to ride to New Paltz, while the non-riding ladies were put under the charge of W. E. Faber, who escorted them by trolley.

As the riders had the start of the trolley by half an hour, they stopped for refreshments at Ohioville, when the trolley bearing Mr. Faber and party was very courteously stopped long enough to permit him to have a glass of beer. The party remained over night at the Tamney House and made an early start June 16, for Lake Mohonk, bicycles on a spring wagon and passengers in a very comfortable carriage. The mountain top was reached in about two hours, and after driving around the lake and skytop, the wheelmen bade goodbye to the non-riders, leaving them in charge of W. E. Faber to return leisurely to the city, while they wheeled over the beautiful Cliff Drive to Lake Minnewaska. After dinner the route was resumed via Lake Awoosting, Battlement Terrace and Gertrude's Nose. A three-mile coast over roads full of gravel and loose soil, brought the party to Elleville, where they put up for the night at the Mitchell House.

At 7 a. m. next morning they rode to Middletown, stopping for lunch, and also paying a brief visit to William H. Rogers. After that they rode through Goshen, Turners, Tuxedo and Suffern, then taking the train back to the city. Not a single accident to either rider or wheel marred the trip.

CHEMISTS ELECT OFFICERS.

At the last regular meeting of the New York Section of the American Chemical Society, on June 9, at the Chemists' Club, the following officers were elected for the ensuing year: President, F. D. Dodge; vice president, A. A. Breneman; secretary-treasurer, F. H. Pough; executive committee, Wm. Jay Schieffelin, H. C. Sherman, Charles Baskerville and George C. Stone.

W. M. DAVIS, EAST ORANGE, N. J.
Recently Elected President New Jersey
Pharmaceutical Association.

FOR BROOKLYN UNIVERSITY.

One year ago Thomas D. McElbenie, of Brooklyn, proposed the establishment of a University of Brooklyn, basing his plans on the incorporation of the New York College of Pharmacy with Columbia University, and of the Illinois C. P. with Northwestern University. He suggested that the Brooklyn Institute of Arts and Sciences, Pratt Institute, Adelphi College, Polytechnic Institute, Packer Institute, Hedley School, Long Island Medical College and the Brooklyn College of Pharmacy be consolidated as a university with an enlarged charter as such. Recently Controller Grout has taken up the project and now Mr. McElbenie's dreams seem about to be realized.

At a conference on the subject last Tuesday evening, at the Brooklyn Club, about thirty persons were present. Although the matter was taken up only tentatively, it is understood that a sort of city college will first be formed and around this as a nucleus the various professional schools and colleges will be grouped through affiliation. Among those present were Controller Grout, Edward M. Shepard (a trustee of the College of the City of New York), Dr. Livermore, representing the Adelphi College; Ex-Mayor Boody the Brooklyn Library; Prof. Hooper, the Academy of Arts and Sciences; Dr. Dudley the Long Island Medical College, and William Muir, William C. Anderson and J. H. Rehus the Brooklyn College of Pharmacy.

BRYAN DIES SUDDENLY.

Dr. Walter Bryan, M.A., M.D., who was well known to the drug trade as one of the faculty of the Brooklyn College of Pharmacy, died suddenly on Monday, June 26. He was found dead in his chair in his office at 105 Madison avenue, New York, at an early hour of the morning. He was fully dressed and his table before him was covered with his usual professional paraphernalia. Dr. Farr, of the New York Hospital, was called, but pronounced that Dr. Bryan had been dead for several hours. The last time he was seen alive was at six o'clock the previous evening.

The body was removed to the home of his parents at 372 Claremont avenue, Brooklyn, and from that address the funeral will be held. Dr. Bryan was thirty-eight years old and had been practicing medicine for fifteen years. He was graduated from the College of the City of New York in 1890 and later from the College of Physicians and Surgeons. He was an instructor in natural history at the City College. His work at the Brooklyn College of Pharmacy covered a wide field, for he was professor of physiology and toxicology and assistant professor of materia medica, botany and pharmacognosy. His loss will be greatly felt.

"BOOKIES" ON A SPREE.

A party of nine bookkeepers of Parke, Davis & Co., broke loose last Saturday, and went down to Cooney Island for their annual spree. After being "looked over" by Messrs. Maringer and Kaufman, to see that they were all there, they proceeded to do the town. A. E. Bourne was chief guide, while J. J. Doran carried the dough bag and dispensed solid and liquid joy whenever it was called for—which was pretty often. The crowd had its picture taken not less than ten times. The others who were "among those present" were H. S. Rollinson, L. W. Burgess, C. M. Bruun, F. J. Budelman, Wm. J. Dunham, Sumner Canfield, J. D. Tucker.

NEW YORK NOTES.

—Edwin H. Burr, American representative of Roure-Bertrand Fils of Grasse, France, is expected to return from France next Tuesday.

—Robert Rahiff, long connected with the drug trade here and for many years a salesman for Fritzsche Bros., died last week, at Hoboken, from a complication of diseases.

—During the illness of Frederick B. Perry, manager of the New York office of the Powers-Weightman-Rosegarten Co., Philip A. Loring, eastern representative, is temporarily in charge.

—Karl Fritzsche, junior partner of Schimmel & Co., of Milltitz, Germany, is back from a pleasure trip through the West, made in company with F. E. Watermeyer, of the firm's New York office. Mr. Fritzsche sails for home on July 4.

—The National Pure Food and Drug League has been incorporated to work for pure foods, drugs and beverages by moral and legal methods. A. T. Knuth, of Albany; J. R. Manston, Watervliet; Charles F. Hunt, P. H. Farrell and R. T. Graves, of New York City, are named as directors.

MRS. WALKER WILL DENY CHARGES.

Reply to Mrs. Jones Wister's Petition to be Filed Soon.

Philadelphia, June 24.—Developments in the Weightman will contest this week, show that every charge put forth by Mrs. Jones Wister, in her effort to break the will of the late William Weightman will be denied in the answer soon to be filed in the Orphans' Court by Mrs. Anne Weightman Walker's attorneys. Yet it is confidently asserted by one of Mrs. Wister's attorneys that "everything alleged in the petition we expect to be able to prove, and perhaps more."

Secret evidence is hinted at, but unless they are forced to do it, counsel for Mrs. Wister will not bring this to light until there is a jury trial in the Common Pleas Court. It is said that Mrs. Walker's counselors are aware of the nature of this testimony, which is said to be such that they will renew their efforts to induce Mrs. Walker to settle when she returns from Europe. It is doubtful whether Mrs. Walker will consent to any compromise.

It is intimated that the principal contentions in the answer to Mrs. Wister's petition will be her extravagance while acting as housekeeper for Mr. Weightman and her evasion concerning her marriage with Jones Wister.

The answer of Mrs. Walker will further allege that Martha Weightman, the minor daughter of Mrs. Wister by her marriage with William Weightman's son, in whose behalf the suit is brought, was induced by misrepresentation to sign the papers appointing her mother as her guardian.

Regarding the authenticity of Mr. Weightman's will and in response to the charge that he was unduly influenced in making it by Mrs. Walker and her husband, it will be set forth that Mr. and Mrs. Walker first heard of the document when they, together with several other members of Mr. Weightman's family, were called into the library by him and told of the making of the will that day and of the terms.

SUNDAY CLOSING IN CAMDEN.

Camden, N. J., June 26.—As the result of the effort of a committee of ministers from this city, Mayor Charles E. Ellis has issued strict orders concerning Sunday closing. Members of the drug trade feared for a time that they also would be included in the general order, but to their relief, such has not been the case. All other places of business, including cigar stores, must be kept closed throughout the Sabbath. The violation of the law is a fine of \$10.

EXPLOSION INJURES DRUGGIST.

Philadelphia, June 26.—Explosion among chemicals in the drug store of Edward J. Foehl, Second and McKean streets, on Tuesday afternoon, painfully injured the proprietor and almost entirely destroyed the stock in the store. The damage was \$5,000. Just what caused the explosion, Mr. Foehl declares he is unable to say. When it occurred he was in the dining room directly back of the store. Mrs. Foehl, with her daughter and a young

woman visitor, were upstairs, and with difficulty managed to grope their way to the steps and from there to the street. They were unharmed. The proprietor, dazed, burned and bleeding, also found his way to the pavement and was taken to Mt. Sinai Hospital. His injuries are not of a serious nature. Everything was destroyed except some money and jewelry which the firemen carried out.

DRUGGIST HAYES NOW WEDDED

Atlantic City, N. J., June 26.—The wedding of Dr. G. M. Hayes, a young druggist of this city, to Miss Edna Mae Downs, on Wednesday evening, will be an event long remembered by his friends. The ceremony was performed at the residence of the bride's mother, Mrs. William Downs, by Rev. Dr. William Aikman. The best man was L. T. Layton and the maid of honor Miss Elizabeth Cully, of Baltimore. On the way to the station after the ceremony, members of the bridal party followed the carriage in which were Dr. and Mrs. Hayes, blowing horns and beating a drum. After they had boarded the train, which they did amid a shower of rice and old shoes, enthusiastic friends distributed circulars among the hundreds of other passengers on the train, asking them to make things interesting for the newly married couple and "watch them grin." After an extended tour, Dr. and Mrs. Hayes will be at home about July 15.

FUNERAL IN DRUG STORE.

Philadelphia, June 26.—Funeral services over F. W. Smith, a druggist at No. 2206 South street, who died suddenly, were held in the drug store. The Rev. Dr. Van Deure officiated. The body was viewed by hundreds of persons who had known the dead man, who was very popular in the neighborhood.

PHILADELPHIA NOTES.

E. J. Williams, one of the leading pharmacists of Ashland, accompanied by his wife, spent several days in this city.

—E. E. Bottume, the N. A. R. D. representative in this city, made an address before the annual meeting of the Delaware association at Wilmington last week. A number of persons from Philadelphia attended the sessions.

DEATH OF CHARLES E. MARBLE.

On June 9, Mr. Charles E. Marble died at his home in Rosindale, Mass. His death is a matter of general regret to the drug trade, with many of whom he had been closely associated in business through his position of manager of the advertising department of the American Soda Fountain Company. To all callers at the office of his department in Boston he was consistently courteous and his personality readily drew business acquaintances into the more intimate feeling of friendship. Mr. Marble had been with the American Soda Fountain Company only about three years, but had devoted himself to the advertising branch of the soda fountain manufacturing business for several years previously with the Liquid Carbonic Company, at their home office in Chicago. He was therefore well known throughout the drug trade and his loss will be deplored. He was comparatively a young man, being only about forty-seven years old.

TO DISSOLVE PARTNERSHIP.

Louisville, Ky., June 24.—H. J. Minsterker brought suit last week against his son, Fred J. Minsterker, twenty-one years of age, to dissolve their partnership in the drug business, in which they jointly embarked at Preston street and Ormsby avenue, December 20, 1902. The father also wants the affairs of the firm wound up and asks the court to make an equitable division of the assets.

According to the elder Minsterker's petition, he established his son in the business soon after the latter had attained the age of nineteen years. Now, he says, the boy is claiming to own the whole concern, and denies that the father has any right or title in it whatever. The petition states that the father defrayed the son's expenses at school and prepared him to be a druggist. On December 20, 1902, he bought out the drug store of M. A. McGee, at the location given, for \$4,500, of which he paid \$2,000 in cash and \$2,500 in three notes of equal amount. The father says he agreed with his son that the latter should run the business and receive a salary of \$50 a month. Furthermore, it is averred, it was understood that the son should pay off the three notes on maturity, after which he should have one-half interest in the business, provided the business was otherwise entirely free from debt. The elder Minsterker says that his son has paid off the three notes, and now lays claim to the business as his own absolutely. He charges that his son has a number of debts against the business, many of them unnecessary. He alleges that the young man is neglecting the business and furthermore, that until he gives an accounting he can have no right or title in the business.

The drug store was recently damaged to the extent of \$500 by the explosion of a box of fireworks in the rear of the store.

DRUGGISTS IN TRAIN WRECK.

Baltimore, June 24.—Among those who went through an agonizing experience in the collision of an express train with an extra freight on the Western Maryland Railroad last Saturday evening, near Westminster, Md., were several druggists. A passenger on the ill-fated train, some twenty-five of the people aboard which were killed or died soon afterward, was L. H. Diehlman, who conducts a drug store at New Windsor, and is assistant librarian at the Pratt Library, of this city, which compels him to make the trip between here and his home frequently. Still another druggist aboard was Mr. Erb, of Johnson, Erb & Co., of Reisterstown. All were fortunate enough to get off without serious hurts, though one or two of them were bruised.

MR. DOWNES A BENEDICT.

Baltimore, June 24.—Edwin R. Downes, a member of the retail drug firm of Downes Bros., which has several stores in Baltimore, and who is also in the second branch of the City Council, was married last Wednesday, at Denton, Caroline county, Md., to Miss Lucy F. Richardson, at the home of the bride's mother. The ceremony was performed by Rev. James T. Richardson. The bride wore a dress of steel taffeta silk. The young couple are now on a wedding trip.

DR. JAS. C. HUMMER DEAD.

Baltimore, June 24.—Dr. James C. Hummer, well known in the Methodist Church, in which he served for a time as minister, and a homeopathic physician of prominence, as well as president of the Hummer Medical Company, died on the 16th inst., after an illness of six weeks, of a cancer of the stomach and a number of other diseases, at his residence, 423 North Carey street. He was seventy-one years old and had a host of friends. He leaves a son, who was engaged with him in the medical business. He was a native of Virginia and belonged to several fraternal orders.

BALTIMORE NOTES.

—Dr. A. R. L. Dohme, of Sharp & Dohme, left on Friday of last week on a flying trip to Chicago and returned the following Tuesday.

—Dr. John F. Hancock was a delegate from the Maryland Ph. A. to the annual meeting of the Delaware Ph. A., which was held June 8.

—Mr. Carter, of Mawson & Thompson, exporters of druggists' sundries, London, was here last week, and called on a number of local wholesale houses.

—H. T. Dodge & Co., of Fourteenth and L streets, Washington, D. C., have applied for receivers. The location was formerly occupied by E. M. McComas.

—William Herman, the Cumberland (Md.) druggist, who is accused of having caused the death of Miss Jean Maxwell, his sweetheart, by a criminal operation, has been released on \$10,000 bail.

—Frank P. Fiery, who won the William Simon prize as a graduate of the Maryland C. P., last spring, has accepted a position with Hynson, Westcott & Co., this city. He succeeds Mr. Fifer, who went into business on his own account.

—Dr. M. S. Davis, a graduate of the Maryland C. P., where she took high honors, has resigned her position as apothecary of the Union Protestant Infirmary, to accept a similar post in the State Hospital at Scranton, Pa., her native town.

—Prof. A. H. Bradbury, professor in the National College of Pharmacy, at Washington, celebrated the eleventh anniversary of his marriage by taking a trip to Tolchester, on the eastern shore of Maryland, with his wife. They stopped here on the way over.

—Prof. Charles Caspari, Jr., and Prof. H. P. Hynson are going to Atlantic City this week, to look after the arrangements of the exhibition of drugs and medicinal preparations to be held in connection with the annual meeting of the American Pharmaceutical Association. They will confer with W. C. Westcott, the local secretary, about September 4.

—Among the visiting druggists in Baltimore last week were H. A. Stoneseifer, Littleton, Pa.; A. H. Melhorn, Hanover, Pa.; S. C. Finley, Cardiff, Md.; J. E. Seitz, Glen Rock, Pa.; Horace Smith, York, Pa.; Mr. Kenley, of H. E. Sadler & Co., Havre De Grace, Md.; Thomas K. Shaw, Westminster, Md.; Mr. Henry, of Hitch & Jones, East New Market, Md.; C. C. Tumbleton, Lisbon, Md.; Mr. Keating, of Foreman & Keating, Centerville, Md.; Joseph Boyle, Westminster, Md.

GEMUEHLICHKEIT.**Mr. Jamieson's Toast to Veterans Who Celebrate in His Honor.**

Chicago, June 24.—Space will not permit an extended account of the Chicago Veterans "Jamieson Day" celebration held on June 21. About forty members and guests of the association, decorated with plinks from the hands of Mrs. Jamieson, mounted a tally-ho at John Block's, and journeyed through boulevards and parks to the "White City," where a banquet was served, President Woltersdorf acting as toastmaster.

During the course of the banquet a number of telegrams were received from a number of distinguished personages, of whom the following are a few: President Roosevelt, Emperor William, of Germany, Czar Nicholas, of Russia, the mayor of Blue Island, Dr. Wheelpley, J. D. Rockefeller, John W. Gates and other notabilities. Mr. Bodemann toasted "The Host"; Woltersdorf, "Our Guests"; Engelhard, "Collegueship"; Forsyth, "Auld Lang Syne"; Ebert, "Our Association"; Paterson, "Our Anniversary"; Biroh, "Our Departed Friends."

The toasts were brief and full of feeling, and that of "Mr. Jamieson" was given in the German word Gemuehlichkeit, which may be so variously and largely interpreted. Mr. Jamieson said: "I find upon analysis of the dominant characteristics of each of our members, that collectively they represent all of the good qualities as indicated by this grand old German expression. The parent word, 'gemueh,' stands for mind, soul, disposition, spirit and temper, just the qualities which you have furnished to the retail drug trade of our beloved city in your professional capacities. Socially 'gemuehlichkeit' is represented in our organization in its various phases of meaning by: The good natured, Grassley, Maynard and Braun; the kindly, Krembs, Hottinger and Wottensdorf; the agreeable, Scherer, Behrens and Schmidt; the cheerful, Scroter and Forsyth; the hearty, Bodemann, Morris and Baxter; the affectionate, Ebert and Bradwell; the cordial, Paterson, Dyche and Baker; the poetic sentiment, Gale and Engelhard; the tenderness of feeling, Wilhelm Blocki and Unser Heinrich (Biroh); the freedom from pecuniary cares, Jancy; the comfortableness of Scupham and Sempill; the full of good feeling by all of us, with the Teutonic Gambrinus Johannis Blocki Rex. The tie that binds these flowers of heart and soul and brain is goodfellowship, and that is strong enough to hold our associates and guests who honor us with their presence here to day at our annual love feast."

Mr. Bodemann made a characteristic speech, referring especially to the principle and motto of the Veterans. He said that the cornerstone of the association is emblematic of the most beautiful ideal and that it stands for love, friendship and the memories of the past. He said it was true that Ebert and Jancy had furnished the rank material, the foundation stone and the empty lot, but that it took the master hand of T. N. Jamieson to erect the building and infuse life into the stone. On behalf of the Veterans and out of their regard for Mr. Jamieson, he felt with the poet Schiller: "Genius of Love, Prophet

of Liberty, of Joy and Cheer." For the Veterans and for the world at large, "I embrace you. My kiss is the kiss of the whole world, for the whole world at large is better for such a monument as you have built in our C. V. D. A. Here is the world's thanks and embrace."

The toast of Henry Biroh follows:

Here is to all our absent friends
Who could not be with us to-night,
Who, one by one, crept silently to rest,
And dwell in fairer realms than this.

(Clink, clink, clink.)

To memory dear we drink!

And from this bowl

No goril soul

In such an hour will shrink.

(Clink, clink, clink.)

In silence let us drink.

The day ended with a walk through the "White City" and realistic fire show.

IMPORTANT RETAIL LEASE.

Chicago, June 24.—For the ground floor store in the Reliance building, the southwest corner of State and Washington streets, with a floor space measuring 45x85 feet, the Central Drug Company, of Detroit, has contracted to pay in twenty years \$800,000 rental. The rent every year will amount to \$40,000.

This is one of the most important retail leases ever closed in Chicago or any other city of the country. The new lease will begin January 1, 1936, and expire January 1, 1936. The ceiling of the store is thirty feet high and over \$30,000 was spent on the decorations when the building was finished.

DRUGGISTS ORGANIZE.

Peoria, Ill., June 26.—The druggists of Fulton County have formed a permanent organization. They will affiliate with the national body. The officers elected are as follows: President, H. W. Wymen, of Canton; vice-president, G. F. Loat, of Lewis-ton; secretary, B. E. Greenwell, of Canton; treasurer, A. A. Vandervoort, of Farmington; board of trustees, C. A. Webster, of Canton; J. B. Smith, of Cuba; H. R. Kost, of Astoria.

THE LATE A. B. HUBBARD.

Syracuse, June 27.—Alonzo B. Hubbard, one of the oldest and most prominent druggists in the city dropped dead in his store recently. Mr. Hubbard was fifty years old and had lived in this city for thirty years.

He had been complaining all the morning of pains about the region of the heart.

Mr. Hubbard was born in Brunswick, N. Y. Thirteen years ago the firm of Soldan & Hubbard was organized. Previous to that time Mr. Hubbard had been connected with the firm of Charles Hubbard & Co., wholesale druggists, of which his brother, Charles Hubbard, was the head. He leaves a widow, but no children. Two brothers and a sister also survive, Charles Hubbard, the wholesale druggist, Prof. Willis Hubbard, of the Deaf and Dumb Institute at Flint, Mich., and Miss Maria H. Hubbard, of this city. Mr. Hubbard was a member of the May Memorial Church, of this city. He was an enthusiastic amateur photographer and a member of the Syracuse Camera Club.

MICHIGAN NOTES.

—Arthur Snowman has bought the Heury Heffelbower store at Lapeer.

—S. E. Parrish and Burke Campbell, of Ithaca, have bought a drug business at Hillsdale.

—C. H. Prantz, of Bay City, has removed his business one door, into larger and better quarters.

—A. D. Sturgis, who lost his store in the recent fire at Lowell, will re-engage in the drug business at Sturgis.

—Stanley E. Parkhill, one of the most prominent druggists of the State, was recently re-elected mayor of Owosso.

—Little & Wheeler, formerly in business at Frankfort, have purchased the Cadillac Pharmacy at Cadillac, of T. Burke.

—Fred Louster has acquired an interest in the W. R. Cutler business at Ionia. The new firm is the Cutler-Louster Drug Co.

—Koon & Hopperstead's Central Drug Store at Muskegon, is being enlarged and improved, including new shelving, ceiling and a plate glass front.

—Albert Globensky, manager of the American Drug Co., at Traverse City, has resigned his position on account of ill health. His successor is H. R. MacDonald, formerly of Chas. E. Abell's store at South Haven.

—Robert Patterson has bought the interest of his partner in the drug firm of Remington & Patterson, at South Haven. He has named the establishment "The Big Corner Drug Store" and will enlarge the stock and make other improvements.

—Druggists are nothing if they are not accommodating. E. J. LaLonde, of Alpena, has installed an electric bell at his store, which can be rung by means of a push button from a carriage or an auto on the street. The button is encased in a sign at the street curb.

—A Big Rapids druggist locked his store and went away to get married. When he returned he found that some wag had decorated his door handle with crepe and has been busy since that time guessing what the sinister omen meant. Some of the curbstone philosophers of the town have interpreted it to mean that a married man is practically a dead one, anyway.

—Sid A. Erwin, of Battle Creek, member of the Michigan Board of Pharmacy, "got up on his ear" recently, in front of his store, in a most peculiar manner. It was truly painful. Sid slipped as he came out of the store and bumped against a wire nail, which perforated the cartilaginous sheath of the outer ear, and there he hung, literally buttoned to the wall, until a neighboring jeweler could remove the nail from the building with pincers. A physician dressed the wound and the victim is in no danger, unless blood poisoning sets in.

—To make two drug stores flourish where none was before, seems to be the purpose in some Michigan towns. Two instances of this sort have occurred recently, the first one at Kalamazoo, where L. G. Stewart opened a store on the east side of the river, in a territory that will support one store nicely. Now F. J. Maus has opened a branch store hard by, and the race is on. The second instance is in the eastern part of the State. G. W. Hemmeter opened a new store in Court street, Saginaw, W. S., and now Jay Smith & Son have started a branch store in the same locality.

DETROIT DRUGGIST DEAD.

Detroit, June 24.—John P. Rheinfrank, one of the best-known German pharmacists in Detroit, died at the family home, Gratiot avenue, last Wednesday evening, as the result of uraemic poisoning. He was unconscious for several days before the end came.

Mr. Rheinfrank was forty-nine years old,

THE LATE JOHN P. RHEINFRANK.

and had conducted the pharmacy at the corner of Gratiot and Orleans street for the past eighteen years. He is survived by his widow and three children.

A TRIANGULAR SUIT.

Minneapolis, Minn., June 27.—Judge Holt, of this city, has decided a peculiar triangular dispute among a man, his wife and a mutual friend, growing out of an attempt by the last named to act as intermediary between the two, who had been divorced.

Benjamin Webber owned a drug store and when Mrs. Webber secured a divorce she was awarded \$800 alimony. By agreement the drug store was turned over to the friend, Dr. Charles Straub, who was to pay off a mortgage of \$600 and give the ex-wife the money due her. When the doctor got possession, however, he refused either to pay the woman or turn the store back to the ex-husband, according to the druggist and his former spouse, and they joined in a suit to force him to terms.

By the decision of the court the woman gets her \$800; but as Webber had already received \$50 from Dr. Straub, and it developed during the trial that the property was worth only \$1,500 and was mortgaged for \$600, the former owner gets nothing.

NEW BRANCH OF N. A. R. D.

St. Paul, Minn., June 26.—The Grand Forks County auxiliary of the N. A. R. D. has been formed at Grand Forks, N. D., with the following officers: Edward Litton, Larimore, president; A. I. Widlund, Grand Forks, vice-president; J. B. Breidenbach, Grand Forks, secretary; J. H. McLain, Instert, treasurer.

—E. L. Voelger, a druggist of Little Rock, Ark., is dead. He had been ill for two years.

DRUGGIST'S WILL ATTACKED.

St. Paul, Minn., June 23.—What is virtually an attack on the will of the late Louis Schindler is being heard in the probate court. Mr. Schindler was a druggist of St. Paul who went to San Diego, Cal., in the hope of getting rid of a tubercular affection. He died there in April, 1904, leaving a will which had been drawn in this city and which he executed the day before he died. His estate comprised a farm in North Dakota worth \$5,000 and some \$10,000 in personal property. He left the farm to his St. Paul brother, William J. Schindler. Two other brothers live in North Dakota. He left to William, as trustee and guardian in trust for his little daughter Albertine, aged ten years, life insurance of \$3,000 taken in the Knights of Pythias.

The mother of the child, Juliana Schindler, of Black River Falls, Wis., as legal guardian of the little girl, comes into court in opposition to William J. Schindler, testamentary guardian and trustee. The will was introduced to prove that the testator was too ill to make a will at the time he undertook to draw one, and that the instrument is void. If the will is not sustained, the child inherits her father's property.

PASSED THE BOARD.

St. Paul, Minn., June 24.—The latest quarterly examination by the State Board of Pharmacy at the University of Minnesota had a far happier outcome than was the case at the March examination, when not a candidate for registered pharmacist passed. There were eighty-six applicants at the examination just ended and the following were granted certificates: Registered pharmacists—J. A. Anderson, C. F. Falk, H. W. Gray, F. A. Magnuson, W. F. Pelt. Assistant pharmacists.—A. M. Berg, G. A. Kaiser, Knute Oddin, J. J. Schulkine, A. S. Sigerson, Ed Sebeche, H. W. Hermanson, J. A. Henry, W. Kroonblaud, E. Oredson, G. L. Plemlssel, Frank Peterson, I. W. Swenson, M. E. Sasse, A. G. Schlick, Ned Welch.

The Board has made an important ruling which will attract universal attention among the pharmacists of the country, as it will have the effect at once of diminishing the number of applicants for certificates and raise the grades of the profession in the State. The new rule provides that applicants must first pass an examination in the primary branches taught in the public schools.

AN ELABORATE PROGRAMME.

Duluth, June 24.—An elaborate programme is being prepared for the meeting of the Minnesota State Pharmaceutical Association, which will be held here July 18, 19 and 20. It is now nearly complete and will be sent out to the druggists of the State to interest them in the meeting.

The sessions will be held in the Commercial Club, of this city. The following reception committee has been appointed: A. Charles LeRicheux, C. B. McCall, W. A. Abbott, F. B. Smith, D. Shesgren, Jr., F. W. Kugler, Max Wirth, R. E. Lobdell, D. C. Wakeman, H. E. Harter, James A. Kirkwood, E. H. Nyas, W. R. Goodsell, Charles Gallagher, L. H. Norwood and A. T. Dilworth.

ST. LOUIS RETAILERS.

Elaborate Luncheon Productive of Good Fellowship—Salesmen on Hand.

St. Louis, June 27.—The St. Louis R. D. A. had a banner meeting from a social standpoint, when on June 26 the members were given permission to bring their wives or sweethearts. More than two hundred and fifty persons were seated at the elaborate luncheon which followed the meeting at the Southern Hotel. Nearly one hundred of those present were ladies and the druggists took no small amount of pleasure in seeing the good fellowship that has sprung up in their ranks extended to their families.

Another pleasant feature was the appearance of twenty or more pharmaceutical salesmen who, taking advantage of their knowledge that they would be welcome, appeared at the meeting and asked that they be allowed to join the druggists at luncheon and stated that each man had the price of the meal ready for the cashier. They later insisted on paying.

The visit of the salesmen was a direct result of the happy meeting of the Missouri Ph. A. and the Missouri Ph. Travelers, at Perte Springs, the week before. It had entered the fertile mind of W. H. Lamont, manager of the Ell Lilly branch, that a joint association in St. Louis would be a good thing, and he had called the salesmen together. They entered into the movement with good will, and in an interchange of views when toasts were called for after the luncheon, it was found that the R. D. A. favored the movement, and the St. Louis Drug Salesmen's Association was organized. It will meet at the same time as the R. D. A., and at the same hotel, but in a different room and the two organizations will work together through an interchange of views through committees and will later join at luncheon. One feature of the new association will be to call off all visits to drug stores with an object of selling goods during the hours of the R. D. A. meeting. The officers of the drug salesmen are: W. H. Lamont, president; Adolph Spilker, first vice-president; R. C. Ritter, second vice-president; Oscar Busch, secretary; J. C. Cummings, treasurer; Harry Severson, Harry Lynot, Harry Summers and John Van Dale, executive committee.

DRUGGIST FOILS BURGLARS.

St. Louis, June 27.—Burglars have again failed to profit through a raid on a St. Louis druggist. In the last effort, the booty was not only lost, but the druggist's coolness brought about the immediate arrest of one man suspected of the job.

Edward Goldberg was awakened as he slept at the rear of the store, 1104 North Eighth street, at 2.15 a. m. Thursday, by noise made by two men in the store. He went to the front and looked into the barrel of a revolver in the hand of a man who was carrying away the cash register. Another man stood in the doorway on guard.

The men ran north in Eighth street. Goldberg followed and shouted for the watchman. The burglars dropped the cash register and ran faster. Nothing had been taken from the register.

Five minutes later a man came into the store and asked for a glass of soda water. Goldberg believed this man to be one of the two earlier visitors and while his patron drank the soda water, he summoned two policemen, who arrested the early customer, despite his protests of innocence.

IN MISSOURI.

—J. H. Bradley has opened a new store at Joplin, Mo.

—Crosby's Pharmacy is a new store opened at Twenty-third and Wash streets, St. Louis.

—The St. Louis Drug Clerks' Society gave their annual outing on the Mississippi river, June 8, and a good attendance enjoyed the day.

—H. E. Klostermann is spending \$5,000 on refitting his store at St. Louis and Elliot avenues, St. Louis, with new fixtures and soda fountain.

—M. C. Kallis has completed arrangements for removing his store from Aubert street and Easton avenue, to Euclid and Easton avenues, St. Louis.

—The St. Louis C. P. Alumni had its first excursion of the season June 1, an all-day trip twenty miles down the river to Montesaun Park. Another all-day and one night excursion are in the summer plans, with perhaps a summer garden meeting, with refreshments.

—Edward P. McCullough, who has for seventeen years represented the Colgate Company in the West, has decided to make St. Louis his home, as the city is near the center of his territory of ten States.

—Mr. Chenoweth, for several years a salesman for the J. S. Merrill Drug Co., St. Louis, has bought the drug store of R. N. Gray, at Chouteau avenue and Sarah street, J. F. Cummings, recently with the H. K. Mulford Co., Philadelphia, has succeeded Mr. Chenoweth as salesman.

—Spontaneous combustion in a quantity of chemicals in the rear of the drug store of Dr. N. M. Draper, 3300 Washington avenue, St. Louis, June 16, caused a fire which damaged the building and stock to the extent of \$300. The apartments above the store were damaged \$100, mostly by water.

—The Hostetter Bitters Company, of Pittsburg, filed suit in the United States Circuit Court at St. Louis, June 22, against two saloonkeepers, John E. Blackmann, of 2621 North Broadway and Frank J. Dickmann, of 602 Washington avenue, of that city, for alleged infringement of its trade mark rights.

—Eugene Harris, a St. Louis drug clerk, thirty years old, was arrested June 18, at the instance of John Schnoski, who alleges that the former robbed him of \$4. Both occupy rooms at No. 505 O'Fallon street, Schnoski on the second and Harris on the third floor. Schnoski asserted that he awoke to find Harris rifling his pockets. The latter denied the charge.

—William Parkinson, better known as "Borax Bill," and whose pictures with his twenty mule team is familiar to all druggists, died at Danville, Ill., last week, from an overdose of morphine, taken to relieve pain from a sudden illness. Parkinson and the mule team with which he had led the borax out of the Death valley were features of the World's Fair at St. Louis.

CONDITION POWDERS.

Druggists Will Have Their Exclusive Sale in Oklahoma.

Cuthrie, O. T., June 27.—A recent decision of the attorney general for the territory has given the drug stores exclusive sale of condition powders or stock foods, as that officer has held that they are "pharmaceutical preparations." Included in this decision are poultry powders and similar articles which have heretofore been freely sold in feed and grocery stores and handled by peddlers.

The new order of things which gives additional profit to the druggists, comes about through one of the laws passed by the last Legislative Assembly of Oklahoma, providing for the inspection of commercial fertilizers and of concentrated, patented, proprietary and condimental stock and poultry foods.

The bill did not attract much attention at the time it was under consideration, and there was practically no opposition to its passage. The measure was carefully drawn, one of the expert chemists having aided in its preparation. That there was no apparent pressing necessity for such legislation is evident. There is yet practically no demand for commercial fertilizers and feeding stuffs. In the case of patented proprietary, trade marked and condimental stock foods, however, a different condition exists, though even these do not have so large a sale in Oklahoma as they do in some of the older States.

The condimental stock food business has had a great boom during the past six years.

It was when this law became generally discussed and the feed men began to make protests that the board of pharmacy concluded they had jurisdiction over the stock foods and appealed to the attorney general to define the law, and he sustained them.

TENNESSEE PH. A.

A most attractive programme has been issued by the entertainment committee for the twentieth annual meeting of the Tennessee Pharmaceutical Association, at Bon Aqua Springs, Tenn., July 19, 20 and 21. Much is offered to the visiting druggist in a way that will be pleasant and agreeable. A neat booklet, calling attention to the many attractions, has been issued by the committee.

Special rates have been obtained from the railroads and the Bon Aqua Hotel. Five subjects have been selected for papers, and prizes are offered for the best essays on these subjects. There will be athletic contests open to druggists, and a big banquet. Special prizes will be given to the member coming the greatest distance; to the persons securing the greatest number of new members; to the traveling man who has not solicited an order at the meeting; to the fattest baby in the bunch, and to the handsomest unmarried man present.

DRUGGIST TO MARRY TEACHER.

Danville, Va., June 27.—Announcement has been made of the forthcoming marriage of John L. Hagan, of this city, to Miss Janie Gray, of Fredericksburg. Miss Gray has been one of the teachers in the Danville High School for five years. Mr. Hagan has a drug store at Five Forks.

PENNSYLVANIA DRUGGISTS

Listen to Important Papers and Are Shown Copy of New Pharmacopoeia.

Pittsburg, Pa., June 26.—With a wave of enthusiasm that seldom marks a gathering of druggists, the annual convention of the State Pharmaceutical Association opened its convention at Bedford Springs, Pa., on June 19, continuing in session until June 22. Nearly one hundred delegates were present and business formed the principal part of the programme, the entertainment committee supplying considerable amusement and recreation for the hard-working druggists. As a whole the convention was one of the most interesting, lively and successful ever held under the auspices of the association. The majority of the delegates were accompanied by their wives and they were instrumental in making the affair very successful from a social standpoint. The only maring feature was the inclemency of the weather, as there was a daily rainfall. But this did not check the enthusiasm of the prescription fillers and they conducted their affair as if the most pleasant weather prevailed. The meeting was called to order by Prof. J. A. Koch, of the Pittsburg College of Pharmacy, president of the association. Contrary to general expectation and general rule, he dwelt on the business end of a druggist's life, as well as the professional side. In well-chosen remarks he advised the druggists to adopt business methods to boom their trade and argued against resorting to nineteenth century methods in this advanced age. At the conclusion of his address, he was greeted with loud applause. Professor Koch's term of office expires at the end of the month, and he was rendered a vote of thanks for the capable manner in which he conducted the duties of his office.

There were twenty-eight papers presented to the convention, but only sixteen were read, owing to the lack of time. Every one made a good impression on the delegates, but three stood out more conspicuously than the remainder, owing to the significance of the subjects involved. Those read by J. Leyden White and William O. Frailey were exceptionally interesting papers and were based on the following: "It is said that the N. A. R. D. is only a scheme to get something for nothing. Can this charge be substantiated?" The papers of Messrs. White and Frailey demonstrated beyond a doubt that the N. A. R. D. was "giving and taking," and that it was carrying out its motto, "Live and Let Live." So well did they argue that they convinced the delegates of the sincerity of the national association beyond a doubt. This assertion is attested by the fact that a unanimous vote was given the resolution to continue the State Pharmaceutical Association's affiliations with the national body. Annual dues will be paid on July 1, based on the membership.

Louis Emanuel, of Pittsburg, scored an instantaneous hit, as the dramatic critic would say. He was the only delegate to express his opinion in writing on the query: "The American Pharmaceutical Association has failed, it is claimed, in its

chief purpose, that is, to professionalize the practice of pharmacy, and that it is dying in rot. Is this true?"

Mr. Emanuel took up the question in detail and dwelt upon every phase. He was not modest or backward in criticizing the "old fossil" methods of the association, although he emphatically stated that the association was not "dying in rot." He exhorted the leaders to infuse new spirit into the movement and try to accomplish his ultimate object. Those present voted Mr. Emanuel's paper one of the best ever read at a convention, and the consensus of opinion was that it outlined the true state of affairs in the association.

Prof. Joseph P. Remington presented the first copy of the new pharmacopoeia of 1900 to the convention. The presentation came as a surprise and the act was greatly appreciated by the convention.

The following officers were elected for a year: President, D. J. Thomas, Scranton; vice-presidents, S. A. Stright and Albert Clife, Ridgeway; secretary, J. A. Miller, Harrisburg; treasurer, J. L. Lemberger, Lebanon; executive committee, William E. Lee, Philadelphia; L. L. Walton, Williamsport, and (roll K. Keller, Harrisburg. The convention next year will be held at Glen Summit, beginning on June 20 and extending for three days.

During the convention Dr. Charles T. George, of Harrisburg, fainted. After being revived he was conveyed home.

CONNECTICUT PH. A. MEETS.

New Haven, June 29.—Over 150 members of the Connecticut Pharmaceutical Association met in annual convention last week at the Branford Point House. In his opening address, President R. H. Kimball, of Hartford, referred to the laws relating to the practice of pharmacy and regulation of liquor selling. He thought both laws should be obeyed by the druggist and at his suggestion a committee was appointed to look into the matter.

The treasurer's report showed a balance of \$1,200 on hand. Twenty-six active and three associate members were elected. There are now 435 members. Delegates from various associations were received. After the reading of papers, the report of the legislation committee was read and showed that no bills detrimental to the trade had been passed and that a bill is under consideration which prohibits the sale of cocaine and all preparations containing cocaine, except on a physician's prescription.

The election of officers resulted as follows: President, J. A. Hodgson, New Haven; first vice-president, J. D. Hartigan, Bridgeport; second vice-president, Victor Schmelzer, Meriden; secretary, Charles A. Rapelye, Hartford, and treasurer, John B. Ebbis, Waterbury. A whist tournament was held in the evening, and this morning prizes were awarded the winners in the various field sports, including baseball, tug-of-war, 100 yard dash and fat men's race. The meeting was closed with a banquet this afternoon. Following are the members of the local committee: Y. L. Mix, J. J. Alling, W. P. Keegan, M. F. Hope, C. H. Conway, J. E. Weatherwax, E. F. Hesse, I. Levy, J. A. Hodgson and F. R. Brill.

TEXAS DRUGGISTS MEET.

Twenty-Sixth Annual Meeting of State Pharmacists Held at Fort Worth.

Fort Worth, June 24. The twenty-sixth annual meeting of the Texas State Pharmaceutical Association, which was held in this city last week, was not as largely attended as had been expected, but much business of importance was transacted. The meeting lasted for four days, and the business was interspersed with entertainments of various kinds.

The meeting was called to order by President J. J. Thames, of Taylor, who in his annual address expressed great satisfaction over the present narcotic law. He said that the law as it now stands is satisfactory in every respect. He expressed great regret at not securing a law organizing a State pharmaceutical board.

E. G. Eberle read a paper on what was done and what was discussed at the meeting of the American Pharmaceutical Association. Secretary R. H. Walker made an extemporaneous speech on drug trade conditions in the Lone Star State, in which he did not hesitate to exhortate the druggists for their failure to keep abreast of the times. Prof. R. R. D. Cline, of the department of pharmacy, University of Texas, made a strong talk for a higher standard for pharmacists. "Let the young man who enters the profession be actuated by other motives than 200 and 300 per cent.," said Professor Cline. J. T. Coulson, of Corsicana, also made an appeal for more interest in the association.

Mineral Wells was the unanimous choice as the next meeting place. The following officers were unanimously elected: J. T. Hlyar, Decatur, president; J. T. Coulson, Corsicana, first vice-president; John A. Weeks, Llano, second vice-president, and Miss Virginia Brooks, Waelder, third vice-president. R. H. Walker, of Gonzales, the orator of the association, was elected secretary and treasurer, a position he has filled since the memory of man runneth not to the contrary. H. L. Carleton, of Austin, was elected home secretary, the object of his office being to look after legislative work. E. W. Pearis, of Waxahachie, was elected trustee and R. L. Yeager, Mineral Wells, was elected local secretary. The next meeting will be held the second Tuesday in June, 1906.

The question of dues was discussed at length, and it was voted to receive members for \$2 for both the initiation and the first year's dues, during one day only. The result was many applications for membership.

MISSISSIPPI PH. A.

Meridian, Miss., June 26.—The druggists of Mississippi are preparing for a record-breaking meeting at Crystal Springs, where the Mississippi Pharmaceutical Association will hold its annual convention on July 17. The State Chautauqua will then be in session and this time has been selected so as to combine the greatest amount of pleasure with business. Many new applications for membership have been received. Secretary O. W. Betha reports that a majority of the well-known pharmacists of the State are already in the association, and the others are rapidly coming in.

MARYLAND PHARMACISTS.

Hold Annual Meeting—Elect 29 New Members—President's Recommendations.

Baltimore, June 24.—Though the members of the Maryland Ph. A. were rather slow in getting together for their annual meeting at Betterton this week, much work was accomplished, and a gratifying interest was manifested in the proceedings. The association was to have held its first business session on Tuesday afternoon, but the delegates were late in arriving, the transportation facilities being by no means perfect, and as a consequence the first session was postponed until the following day, when President H. Lionel Meredith, of Hagerstown, called the meeting to order, after which W. F. Russell, of Chestertown, delivered the address of welcome. Prof. H. P. Hynson, of Baltimore, who was born near Betterton, responded. A. C. Meyer, of Baltimore, spoke as the representative of the Proprietors' Association of America, and told of what it was doing to protect the retail trade.

Prof. Charles Caspari, Jr., said a few words in behalf of the A. Ph. A., and invited all present to the meeting of that organization, beginning September 4.

The reports of the secretary and treasurer showed the association to be in satisfactory condition, with all bills paid and 219 members in good standing. A total of twenty were dropped during the year for non-payment of dues.

The committee on by-laws recommended several changes, all of which, with slight amendments, were adopted. The principal ones were the abolition of the initiation fee of \$1 and having the fiscal year commence June 1, instead of July 1.

In his annual address the president said that not in a long time had there been less dissension and internal strife than was manifested during the past year. Factional differences had been dwarfed, and harmony bid fair to be the written history for years to come. Progress was being made by the various State pharmacy boards to discover the middle ground upon which the interchange of certificates of registered pharmacists would prove practicable.

The president recommended further legislation, such as that in Pennsylvania. He said that the anti-narcotic law was working well and had reduced considerably the promiscuous sale of habit-forming drugs which had taken such a strong hold upon the public. For the complete success of this law, he said, it was necessary that the proper officers exercise the utmost vigilance, and that they have the support of the entire citizenship.

Among the president's recommendations were an amendment to the pharmacy law empowering the Board of Pharmacy to enter into reciprocal relations with other States whose requirements as to the awards of certificates of registered pharmacist are satisfactory, and that the law be changed so as to set forth explicitly the sphere and limitations of the assistant pharmacist. The president also urged that the proviso in section 3, which reads, "The characteristic show bottles or globes filled with colored liquid" be stricken out, because the sentence in no way strength-

ened the section, would have no standing in law and was at best a relic of barbarism and superstition. The direct contract serial numbering plan should be indorsed, he said, and a permanent secretary for the association should be selected.

The committee on adulteration of drugs, in its report, stated that a large number of compounds had been examined, among them laudanum, tincture of iodine, cream of tartar, Rochelle salts; essence of lemon, and essence of ginger, and that it was also authorized to examine any other suspected drugs which might be furnished by members of the association. None of the five samples of laudanum examined had anything like the full strength of the official article and some of them were so weak that they could hardly be considered even "counter laudanum." Two out of four samples of tincture of iodine were diluted with water and did not contain the required percentage of alcohol. One sample was of full strength, while two were absolutely to be condemned. Of six samples of cream of tartar five were pronounced to be medicinally pure and one to have a large excess of calcium salt. Of six samples of Rochelle salts the percentage ranged from 99 to 99.5. With essence of lemon, three different coloring agents were used. Six samples were tested. In the six samples of essence of ginger the alcohol in all was found to be thylic, notwithstanding that three of them had been suspected to contain methyl alcohol.

One of the papers read on Thursday was by Dr. J. J. Barnett, chairman of the committee on the progress of pharmacy, and gave a resume of important pharmaceutical discoveries made during the year.

The committee on membership, through B. W. Woolford, the chairman, presented the names of twenty-nine applicants, all of whom were elected.

Two of the recommendations made by the president in his annual address—that the law relative to the scope of the assistant pharmacists' work be made more definite, and to make the interchange of certificates between the States possible were adopted.

The report of the committee on the Proctor monument fund, which was presented by Dr. John F. Hancock, recommended that a bronze statue be erected on the Smithsonian Institute grounds at Washington. The sum of \$100, subject to the approval of the general committee, was subscribed by the Maryland Ph. A.

The election of officers resulted as follows: President, M. A. Toulson, Chestertown; vice-presidents, Henry Howard, Brookeville; Joel J. Barnett, Baltimore, and W. A. Carson, Port Deposit; secretary, Louis Schulze, Baltimore; treasurer, H. H. Rudy, Hagerstown; executive committee, H. A. B. Dunning, chairman, Baltimore; Charles Schmidt, Baltimore; J. S. Black, Cecilton.

The closing session on Friday morning was largely given over to the disposal of unfinished business, which included the reading of a number of papers, among them, "Ammonium Phosphate," by H. F. Baker; "Prescription Complications," by Louis Schulze; "The Diphtheria Antitoxic Unit of the United States Pharmacopoeia," by Henry P. Hynson; "Some Assay Work on Dover's Powder," by E. F. Kelly; "Pepونات and Albuminates," by H. A. Brown Dunning.

FLORIDA DRUGGISTS MEET.

Election of Officers Closes Important Convention at Tampa Bay.

Tampa, June 24.—One of the best attended and most interesting conventions that has ever assembled here was the gathering of the Florida State Pharmaceutical Association last week. The members of the association and the ladies who accompanied them were welcomed to the city in an eloquent speech by the Hon E. B. Gunby. J. I. Remington, of Philadelphia, was unanimously elected an honorary member of the association. After hearing and adopting the reports of the president, secretary and treasurer, there was a banquet. A fishing trip and a Spanish dinner were among the social features of the second day.

Many interesting papers were read. The convention came to a close by the election of the following officers: President, Thomas Clark, of Jacksonville; first vice-president, B. C. Abernethy, of Orlando; second vice-president, William S. Oppenheimer of Tampa; third vice-president, J. M. Stansfield, of Bradenton; secretary, D. W. Ramsaur, of Palatka; treasurer, W. M. Johnson, Gainesville; executive committee, Joseph Hauton, of Palatka; Dr. J. O. Kirk, of Jacksonville; L. P. Lawrence, of Orlando.

The association will meet next year in Orlando on the second Wednesday in June.

CANADIAN WHOLESALEERS.

Toronto, June 26.—Discussion of trade affairs and the election of officers made the annual meeting of the Wholesale Druggists' Association of Canada interesting. The next convention will be held at Gananoque in June of next year. All the Canadian firms except three were represented at the convention.

The following officers were elected: Henry Lyman, Montreal, honorary president; A. B. Evans, Montreal, president; C. W. Tingling, Hamilton, first vice-president; W. S. Elliott, Toronto, second vice-president; H. W. Barker, St. John, N. B., third vice-president; W. C. Niblett, Hamilton, treasurer; James Mattinson, London, secretary; committee of management, C. McD. Hay, Toronto; W. C. Niblett, Hamilton; L. J. Mylius, Halifax; J. W. Knox, Montreal; E. D. Martin, Winnipeg; L. A. Myles, St. John, N. B.; and W. B. Skinner, Kingston. Executive committee, Arthur Lyman and T. H. Wardlawer, Montreal; J. Mattinson, London; C. W. Tingling, Hamilton; W. S. Elliott and C. McD. Hay, Toronto.

WASHINGTON STATE COLLEGE.

Pullman, Wash., June 23.—The commencement day exercises of Washington State College were held yesterday afternoon, in the college auditorium, Chancellor Andrews, of the University of Nebraska, delivering the address to the graduates. Following is a list of the officers and members of the class of '05: C. C. Moffatt, president; William Walls, vice-president; Fred W. Eaton, secretary; Elmo C. Howell, treasurer; E. Worthington Colvin, Mrs. Grace Allard Morse, Albert F. Mattice, Charles B. Neilhart, Halcat E. Roberts, Nat P. Ripley and Lewis L. Swaney.

A SPECIFIC IN
Tuberculosis Cancer Syphilis
GRISERIN
NON-TOXIC

GRISERIN is being brought to the attention of the Medical Profession all over the country. You will have many prescriptions for Griserin. Better put a supply in stock now. Tell your doctors about it.

PRICE LIST

TRADE SECTION

SARGENT MEMORIAL.

Friends of Pharmacist Pay Tribute to His Rare Qualities.

PROMINENT MEN WHO EMANATED FROM HIS STORE.—PRESIDENT OF THE A. PH. A.—A PUBLIC SPIRITED CITIZEN.—FATE COULD NEVER KEEP HIM DOWN.—HIS INTEREST IN PHARMACEUTICAL EDUCATION.

Chicago, June 24.—The memorial services for the late E. H. Sargent were held in Northwestern University. Many family and business friends and associates, and teachers and students of the School of Pharmacy attended. After prayer and music, commemorative speeches were made by President T. F. Holgate, of the University; Rev. Louis P. Mercer, for a number of years pastor of the deceased; Henry Biroth, representing the Chicago Veteran Druggists' Association, and Albert E. Ebert on behalf of the A. Ph. A. Mr. Sargent was a member of the Executive Committee of the School of Pharmacy of Northwestern University from its beginning in 1886 until the time of his death in 1904.

In his address, Mr. Biroth spoke of his long acquaintance with Mr. Sargent, which dated back to 1857, when the latter arrived in Chicago from the East, a young man of twenty-two. He soon became known to every pharmacist and physician in Chicago, and his store had a reputation which extended beyond the confines of the city. From that store emanated men like Albert E. Ebert, T. N. Jamieson, W. Gray Bartlett and others well known in pharmacy. Mr. Sargent's ideal, Mr. Biroth said, was scientific pharmacy, from which "commercialism" should be separated and subordinated. He was president of the A. Ph. A. in 1869. Socially he was a broad minded and public-spirited citizen. Fate could never keep him down. Even the great fire of 1871 that wiped out his splendid store, and the loss incident to a second calamity which again almost destroyed his store, did not weaken his courage. Mr. Biroth said the name of Mr. Sargent would be an incentive to every student of pharmacy.

Mr. Ebert, representing the A. Ph. A., spoke in a similar strain. He had known Mr. Sargent as employer, preceptor, counselor and friend. Mr. Sargent was deeply interested in pharmaceutical education and was prominently identified with the organization of the Chicago C. P. in 1859, serving both as its secretary and president, retaining the latter office many years. After closing his work with the college, he became identified with the School of Pharmacy of Northwestern University, serving as one of its trustees up to his death.

It was through his influence, Mr. Ebert said, that the A. Ph. A. held its meeting in Chicago in 1869, and he was recognized

by Procter, Parrish, Maisch and Squibb as the leader of Western pharmacy. It was he who suggested the means for providing a fund from life membership in the A. Ph. A., thereby putting the association financially on its feet. His plan for a world's congress of pharmacy at the Centennial Exposition, in Philadelphia, was not carried out, but was adopted many years later at the World's Fair in Chicago. He was a member of many associations and did great work in other branches of science.

Mr. Ebert spoke very feelingly and said that the deceased was an honored member of the Veterans' Association, whose motto is "Cheers for the living and tears for the dead."

A PHASE OF CITY PRACTICE.

A New York City druggist was called upon a short time ago to aid a customer who had been injured in a street car. The customer was an old man who had been knocked down by a passing street car just in front of the drug store. He was rendered unconscious and a policeman, after carrying him into the drug store, called an ambulance. In the meantime restoratives applied by the druggist revived the victim, and he refused to go to a hospital, ride in the ambulance or to give his name and address. The patrolman fumed and fussed, and while out to see what was the matter with the ambulance, the druggist slipped the old fellow out and who thereupon mingled with the crowd and disappeared. The patrolman was furious and vowed that the druggist would receive but little consideration from him in the future.

IN THE PROCTOR HOUSES.

For nearly six years the excellent stock companies maintained by F. F. Proctor, at his three New York theatres and his playhouses in Albany, have been steadily increasing in clientele. In summer and winter alike the productions are scrupulously given, and the high standard of the acting has never varied. The present summer promises to witness better results than heretofore. Not only are the plays selected of a better artistic grade, but the personnel of the stock company has been strengthened. Better than all, the theatres are kept wonderfully cool during these warm days and nights. Broad palm leaf fans are distributed to each auditor, while the means for artificial ventilation are admirable in all of the theatres. The only theatre open in Harlem during the summer is Proctor's One Hundred and Twenty-fifth Street Theatre, where special midsummer bills are arranged to present all the favorites of the big company. "The Tigress," a play never before offered by a stock company, is on for the week of July 3. In the immediate future Harlem will see the first performances of "Little Nell," "Fanchon" and "Dora Thorne."

SODA IN SMALL TOWNS.

How One Indiana Druggist Has Made Success of His Fountain.

HARVESTS HIS OWN ICE.—DOES NOT ENCOURAGE FADS.—WORK AND PLENTY OF IT, NEEDED TO MAKE THE BUSINESS PAY.—CLEANLINESS BIG FACTOR.

The soda trade, according to the successful managers who have spoken through The Era, is one of unceasing effort and planning. Of doing things first, if they are to be successful. Then how about the small town?

Thomas A. Jennings, at Moore's Hill, Ind., a small college town having perhaps 600 inhabitants and 150 students, both young men and women who are seeking an education as inexpensively as compatible with comfortable living, has owned the only soda fountain in the town for twenty years or more. No opposition has been offered him and more compliments than complaints are heard of his soda water.

"Does it pay to run a fountain in a small town? Why and how?" was asked Mr. Jennings.

"In the first place, I put up my ice and sell enough to fully or nearly pay for filling the ice house," was the answer.

"You need a modest fountain. Mine is an eight syrup apparatus, and I find it meets all requirements. The fountain must be reasonably up-to-date. A few years ago, when I went through a series of accidents and some complaints were made that my drinks were not cold enough, I realized my old fountain was out of date.

"I selected a Lipincott fountain with porcelain jars and other improvements. I paid something more for looks than might have seemed necessary. I let the cost run to make the initiative cost of any opposition a bit heavier.

WORK BRINGS SUCCESS.

"You must not be afraid of work. I make my own syrups from granulated sugar. I use only fruit juice flavors, selecting my list from those in the trade that have seemed most satisfactory on trial. The cost in lots of one kind is a small item. I let results speak for themselves. I make chocolate every day, cooking it on my residence stove and the women of the household become expert chocolate makers, as they like the syrup to drink in soda, and take a direct interest in the making.

"I make my own ice cream, first from necessity and then for better cream. Buy good, rich, fresh milk. All arguments to the contrary, rich, fresh milk makes better ice cream than any manufactured ingredient. To all, however, this kind of milk is not available, but to the soda water man in a town of less than 1,000, it is.

"I do not use fancy or mixed drinks. So many occasions arise when I cannot

take the time to make them and we must sell our product for five cents, and to turn the limited finances of our customers into necessarily high-priced drinks, means a cutting down of the trade, as there is only a limited amount of cash to be turned to the fountain. Two crushed fruits are sufficient. Pineapple and strawberry are the best sellers, with sometimes a run on others. If the fruit is before you in suitable price, crush your own, but the market is limited on fruits; so is the use of the fruits after they are crushed. The crushed fruits must keep, or you can turn them back. They are the cheaper in the long run, except on exceptional occasions.

BEWARE OF THE FADS.

"Acid phosphates, headache salts and a touch of the fads, if they can be simply made, come in good turn, but get rid of the fads as soon as possible. The simpler your methods, the more satisfactory your trade, but the customers must have no reason to call your fountain a back number. With limited occasions for spending money, people learn to live simply, and I never complain when compelled to throw away half of the condensed supply of some fad base that I bought to meet a sporadic demand. Another thing, in the small town you soon know your trade, and a well-directed hint as to the fads turns the trade your way.

"The hard work and the pains I take, may seem a little unnecessary, but there is a popular idea abroad that soda water is wind and water and the revenue is eighty-nine-one hundredths profits, or even a greater proportion. I always take pains to show any one who might be considered a possible competitor, my tanks in the cellar, the gas tank, my sugar barrel and other things that look like running into money.

"It is just as necessary to keep things clean and sweet to tempt the public in a small town as in the larger one, where you have opposition. Soda trade must be cultivated anew each season.

HARVESTS OWN ICE.

"The ice proposition is my biggest argument for profit. In a small town where there are no saloons, as is the case here, the ice trade is not sufficient to tempt a man to go into it for its own sake. The combination helps me wonderfully and I would advise any druggist intending to put a fountain in a small town to look into its possibilities. There are some dull days when I would feel that I was not making much if my ice parted my cash for me, but as it is, it is only my work of getting out the ice that is counted on that side of the ledger."

Mr. Jennings' fountain is in the center of his storeroom. He does not consider that a drawback.

"Signs attract the occasional transient. The townspeople know the fountain is here. They are drawn to the coolest part of the room and they must pass the candy and perfumes. It helps the candy trade more directly than any other line," he said.

To insure the remembrance of his new store, John F. Tiedman, 327 Atlantic avenue, Brooklyn, gives souvenirs on Saturdays. He announces this policy by the liberal distribution of yellow pasteboard slips on which are printed the facts.

SUBWAY SODA FOUNTAIN.

Net Profits Equal to Those of Bar— A Unique Sign.

The Subway Tavern soda fountain has proved an agreeable surprise to the owners and a source of wonder to druggists in particular. The fountain, situated as it is in the front room of the building, facing the intersection of Bleecker and Mulberry streets, this city, has an advantageous position in that all who enter that main door have to traverse the room before entering the lounging room, café or descending to the basement which contains the old fashioned tavern dining room with sanded floor and other appropriate appointments.

The fountain, the latest sanitary type of the Twentieth Century, of marble, onyx and mahogany, is on the right on entering the room from the street. The other side of the room has a number of chairs and tables for the accommodation of patrons. Syrups are contained in bottles, which in turn are partially submerged in an ice cooling tank in front of the machine and plainly visible to all.

Manager J. Jantzen imparted a few facts in relation to the fountain that will interest the druggist. He said that the fountain netted the Tavern Corporation equally as much profit as the bar. Farther, he thought the most important reason was that only pure cream and fresh fruits were utilized in the manufacturing which was done on the premises under the supervision of a trained man. No material of any kind whatever is used to give body to the cream and no preservatives are used in the fruits and syrups.

A unique feature is a large and tasteful sign, which surmounts the partition which separates the fountain room from the lounging room. The sign is of dark green, with gold lettering. That side, which can be readily seen from the lounging room and bar has on it the forcible direction:

"This way to the water wagon," and never fails to elicit a hearty smile from each newcomer, for he seems to know instinctively that there is something in that direction to dispel clouds and doubts.

Aside from the regulation fountain drinks the tavern dispenses two exclusive drinks which have a good sale. One is "Violet," which has the taste and odor of the freshly crushed flower, and the other is called "Yara," a Japanese name for a tasteful mixture which makes one think of strawberries and raspberries.

NEW FOUNTAIN IN ROANOKE.

Roanoke, Va., June 27.—The Barnes Drug Company, of this city, has installed a new "Innovation" fountain in its store, which is perhaps the handsomest in the State of Virginia. The dispenser faces the customer, and the rapid dispensing devices enable him to serve three persons in the length of time it would ordinarily require for him to serve one. The serving counter is also a refrigerator, which keeps all the syrups, fruits, etc., at a proper temperature and ready at all times for instant service. The fountain is built entirely of marble, on onyx, glass and silver.

When the customer steps up to the fountain in the Barnes store, there is everything to appeal to his appetite. There is neatness in every nook and corner, and the glasses, cups and other equipment are tastefully arranged and attractively displayed.

At the opening of his new pharmacy at 327 Atlantic avenue, in Brooklyn, J. F. Tiedman distributed as souvenirs many pretty articles to adult customers and made the hearts of the children happy with baseballs, fans, and china dolls. The situation of the new store is especially good, as it is the only pharmacy between Court street and Third avenue on Atlantic avenue.

SODA FOUNTAIN IN SUBWAY TAVERN.

THE CASTOR OIL INDUSTRY.*

United States Ranks as One of the Largest Consumers.

UNITED KINGDOM LEADS IN EUROPE.—LARGELY USED IN DYING OPERATIONS.—VALUE AS A MEDICINE.—ITS MANUFACTURE IN THIS COUNTRY CONFINED TO THREE CITIES.—PROCESSES OF PRODUCTION.—ONLY TWO COMMERCIAL GRADES.

Castor oil is now extensively used in countries which manufacture large quantities of calicoes and colored cotton goods. The United Kingdom is the greatest European consumer, and of the other principal consuming countries the United States ranks easily among the first. As compared with the enormously increased consumption of other fixed or expressed oils, the use of castor oil in the United States is on a small scale; the annual consumption is measured by hundreds of thousands of gallons, where that of either cottonseed oil or linsed oil amounts to tens of millions. However, the functions that castor oil performs in industry and in the arts are of great economic importance, as becomes apparent from a consideration of the varied uses to which its peculiar properties adapt it.

USE IN DYING COTTON GOODS.

Within comparatively recent years, that is, since aniline dyes have almost completely supplanted the mineral and vegetable dyes formerly used in coloring cotton textiles, an extensive demand for castor oil has sprung up in the industry of dyeing and printing cotton goods. Without presuming to invade the intricacies of the dyer's art wherein secret recipes for the compositions of colors and their application to cloth are the property of each individual dyer, it may be said that the general principle underlying the utility of this oil in coloring processes is that the aniline and alizarine dyes are soluble in sulphurated castor oil; in other neutral fats and oils these dyes, with few exceptions, are in general insoluble. In certain processes of dyeing and printing, therefore, castor oil enjoys a practical monopoly over all other oils.

USE FOR MEDICINAL PURPOSES.

Probably the next most important channel of consumption is the drug trade. In earlier days castor oil was best known as a medicine. The once universal disposition to regard it as a "sovereign remedy" is still among the early remembrances of living men. Not only was the customary maternal diagnosis of each childish ailment prone to result in a repulsive dose of castor oil, but even among hardy adults, occasional self-prescribed doses of this so-called panacea were deemed necessary to the continuance of perfect health. Thus, two factors contributed to its consumption—its positive value as a medicine and its apparently harmless effect upon good health. In addition to its common use as a purgative, rheumatism, lumbago, skin

affections, cramps, colds and a host of other ills were popularly believed to yield to its curative properties; in fact, medicinal use was a highly important element in the castor oil trade. Naturally, the marvellous advance that has been made in medical science in recent years, has resulted in the widespread substitution for this once popular cure-all, of less nauseating, if not more efficacious drugs. As a general rule, physicians less frequently prescribe it. Modern preparations in capsules and compounds, has, it is true, had a decided tendency everywhere to perpetuate its traditional uses as a self-prescribed remedy. In some rural communities, too, especially among the colored people of the South, its medicinal virtues still retain much of their old-time popularity, and in some pharmaceutical compounds it is still a staple. In short, considerable quantities of the high grade of castor oil are still absorbed by the drug trade, although its value as a medicine has, on the whole, somewhat declined in public esteem, and there no longer exists for it so universal a demand as a "home remedy."

MISCELLANEOUS USES.

Castor oil has many other and varied ones, some of which are not common to the United States. Was the trite saying, "Every man to his taste," ever better exemplified than by the almost incredible custom, said to prevail in parts of China, of using castor oil as a cooking grease, as lard is used in America? A less surprising, but, as judged by American standards, almost equally uncommon custom, is the use of this oil in British India and in some other Oriental countries as an illuminant. In British India, it is reputed among other uses, to be extensively used as a lamp oil, and reports of no ancient date even refer to it as the illuminating agent in railway cars. Castor oil also has in some countries extensive uses as a lubricant. In Australia, which imported 769,392 gallons in 1898, the chief use is officially stated to be for this purpose, and the decline in imports in 1902 to less than 500,000 gallons, is attributed to the substitution for this vegetable product of the mineral product, petroleum. It may also be noted that in the Cape of Good Hope, where the oil is probably largely used for the same purpose, 307,728 gallons were imported in 1902. To a limited extent this oil is used for lubricating purposes in the United States. As is well known, the mechanical function of lubricating oils is to form a coating or cushion between the rotary surfaces, thus keeping them free from contact and preventing loss of power through friction. To this purpose castor oil, being heavily bodied, viscous, and non-drying, is in most cases well adapted. It is the heaviest of fatty oils, having a density of 0.96, and is particularly adapted to the oiling of fast moving machinery, because the heat generated keeps it in a liquid state. In the oiling of special kinds of machinery, carriage wheels, etc., it is still used to a small extent in the United States; but for general lubricating purposes the cheaper but lighter bodied mineral oils, to which the required viscosity is frequently given by the admixture of resin, have almost completely supplanted this as well as other oils. The esteem in which castor oil was popularly held as a lubricant, however, is

suggested by the fact that petroleum products adulterated with resin are in some instances now sold in the markets under the designation of "machine castor oil." Castor oil also has properties that adapt it to use in the dressing of leather, and a demand for limited quantities exists in the United States, especially in the country districts, for domestic use in oiling and softening boots, shoes and harness. Among minor uses may be mentioned its use in the manufacture of "sticky fly paper" and of the so-called glycerin soap. For some of its varied uses it is apparent that the demand for castor oil in the United States has declined; for others, especially in recent years, it has increased. The resultant of these opposing forces, however, is that consumption as a whole is on the upward trend. Quantitatively, the consumptive demand for this product in the United States is now probably at its maximum up to this date, and absorbs in round numbers about 1,600,000 gallons annually.

MANUFACTURE OF CASTOR OIL.

The manufacture of castor oil in the United States is an economically important, but, as measured by the capital invested and labor employed, a small industry. As is true of most of the industries engaged in this country in the expression of oil from oleaginous seeds, however, the productive capacity is far in excess of the total demand for oil. Of the dozen castor oil mills located in different sections of the United States, several have been practically idle for some years. The remaining mills, though constituting the so-called active branch of the industry are operated with irregularity or as the exigencies of the supply of castor beans and the demand for castor oil require. The present principal active centers of the industry are Jersey City, N. J., St. Louis, Mo., and Memphis, Tenn. A single mill is located in each of these centers, excepting that in St. Louis (including one mill in East St. Louis) there are three. The mill in Jersey City, containing six presses, the largest number in any mill in the United States, is advantageously situated for handling imported beans. The western mills, operating three or four presses each, were originally established for pressing the crop of the castor bean belt of the United States. There are also two mills in Boston, Mass., one of which is operated in connection with an alizarine assistant manufactory; one in Brooklyn, N. Y., and a mill in Grand Rapids, Mich., adjuncts to the manufacture of sticky fly paper. Doubtless the productive capacity of the castor oil mills of the United States is sufficient to supply double the country's requirements of castor oil.

PROCESSES OF MANUFACTURE.

The equipment of a castor oil mill is identical in its main feature with that of a linsed oil mill or of a cotton seed oil mill; that is, the mechanical unit of production is the hydraulic press. Oil is obtained from castor beans, as it now is most commonly from all oleaginous seeds, by hydraulic pressure. In the preparation of the beans for pressure and in the clarifying and refining of the oil after expression, it is possible that slightly different processes are used in different mills; consequently, as is natural in a small industry like this, considerable reserve is maintained by owners concerning even the

*By Charles M. Daugherty, of the Bureau of Statistics.
Reprinted from Yearbook of the U. S. Department of Agriculture for 1904.

mechanical operations of their plants. The principal features of the process of extracting oil from castor beans, however, are evident. The beans, first cleansed of fragments of capsules, stones, dust, etc., an operation that in the case of imported beans entails a loss of from 2 to 5 per cent., are not decorticated, as cotton seed is, nor crushed between rolls, as most oleaginous seeds are, but pressed whole. Decortication is not necessary, and the operation of crushing is impracticable, because the beans would cake too much upon the rolls. They are heated or not before pressure, according to the purposes for which the oil is destined. Heat renders the oil in the beans sufficiently liquid for easy expression, but if carried to a degree higher than the hand can easily bear, has a tendency to discolor the oil and render it unfit for medicinal and undesirable for some other uses. The more common custom, therefore, is to press the beans cold by submitting them, inclosed in bags, to gradual pressure for the requisite length of time in a powerful hydraulic press. In most mills the practice seems to be to submit the beans to a single pressing. This custom differs from that prevailing in some other countries, where after the first pressing the pulp or pomace is removed from the press or broken in pieces, heated, and submitted to pressure a second or even a third time, each subsequent pressing, however, producing a lower grade of oil. The oil, as it flows from the press is a whitish liquid, from which the starch, albumen and mucilage are afterwards removed by careful processes of clarifying and refining; the resultant product is the castor oil of commerce.

Two grades are placed upon the market, known commercially as No. 1 and No. 3. The former grade commands the higher price and enters largely into medicinal uses; the latter is usually quoted at from $\frac{1}{2}$ cent to 1 cent less per pound, and supplies various industrial needs. Both grades are sold by the pound, or unit of weight, and have lately been commanding from 9 to 11 cents per pound, as compared with 10 to 12 cents per pound a few years ago.

VALUE OF PRICED DISPLAYS.

An uptown druggist with a very attractive window display of toilet accessories and luxuries, failed to put a price mark on a single item of the big variety he has, and, as a consequence, a nearby pharmacist with not nearly so attractive a display, but with each article distinctly price marked, is doing double the business. Observation on the part of the reporter developed that phase and inquiries elicited the surprising information that the apothecary having the unmarked goods on display was selling many articles at a much lower price than the "fellow around the corner." The latter said he had the bulge on the other fellow, who, in turn, admitted that he had made a mistake by omitting the price marks, but he said there were so many articles to mark that he did not feel that any of his force could be spared to attend to the work.

Wolf-Wilson Drug Co., Sixth street and Washington avenue, St. Louis, have a fine window of sponges, in boxes and bins,

SHOW WINDOW FEATURES.

Originality Characterizes Displays in Many Drug Stores.

A MINIATURE AQUEDUCT MADE OF CARTONS OF A BALM—FEATURING THE THERMALITE BAG.—GOOD USE MADE OF INSIGNIFICANT MATERIAL.—WASH-TUB USED TO ATTRACT ATTENTION.

One of the Kinsman windows in the One Hundred and Twenty-fifth street store was filled with Oxzyn Balm last week. There was nothing very striking about the display, save the method of treatment of the price card. The goods were built into a miniature aqueduct of two arches and the square cartons of the goods suggest masonry very well. The floor and background was covered with green crepe paper against which the white of the cartons stand out prominently. The price card gives first the regular prices of the various sizes through which are run pen scratches, and under are prices cut about 25 per cent.

The Kalish Pharmacy, Twenty-third street and Sixth avenue, New York, has been running two demonstrations, the Thermalite bag and "De Miracle." Of the former it is said that it sells rapidly. Its own novel points are its best introduction and display, which is later backed up by its solid merit in use. The demonstration of the latter article is backed up, however, by a window display. Being a mechanical automatically moving device it attracts great crowds. In brief, the window is fitted up as a lady's boudoir in the height of style. The floor is covered with Persian rugs. In one corner is an oak dresser with an unusually large mirror. All the requisite articles for a Twentieth Century woman's toilet are displayed. In the center stands a small table on which are grouped carelessly a few unwrapped containers of the featured goods. In the most prominent corner is a lay figure decked out effectively as a faxen haired young woman, seated in a Morris chair. One foot, gracefully extended, rests upon a hassock, thus displaying a fancy black hose and a neat oxford tie. She is evidently in deep mourning, as she wears a heavy black negligee robe. The skirt of this flows back and displays very dainty lingerie. She is mechanically alive, for she lifts a hand mirror and gazes intently into it, moving her head so as to view first one side and then the other of her face. Occasionally she appears to discover a superfluous hair, whereupon she slowly lifts the other hand and touches it with a camel's hair brush, supposedly saturated with "De Miracle." After this she relaxes and rests comfortably with a relieved expression, for a short time.

POSSIBILITIES IN INSIGNIFICANT MATERIAL.

F. K. James, 700 Eighth avenue, has a blue and white window. The article featured is a new corn file. The goods come on white cards which are folded so as to have three sides, a cross section of the whole arrangement forming an equilateral triangle. On each face are four files, the entire card thus carrying a dozen. On

these white surfaces is blue lettering so that the rows of cards in the window produce a white and blue harmony. The store has a long frontage on Eighth avenue and the window runs the large distance. The glass is bordered with large round labels, enlarged reproductions of the labels on the cards, lettering blue, ground white. These pasters create a camera effect for the whole display. The rows of triangular based, three-faced cards, suggest the tents of a miniature military encampment.

Louis B. Epstein signaled his purchase of Sanborn's Pharmacy, Second avenue and Fifth street, by an unique window display. A large wash-tub, complete with board, soap and scraps of soiled linen occupied the center, and bore the sign, "All the old business washed out, new management washed in." A line of handkerchiefs, each tagged with the name of a perfume, was strung across the rear of the window. With this went a generous display of perfume and the sign, "You cannot wash the odor out!"—thus killing two birds with one stone.

G. Wiley Holmes, 1921 Broadway, led with a violet window display. Along the floor, close to the glass, small violet-colored cartons are placed on their sides, with every third one erect. Behind this, reaching half of the height of the window, and exactly in the center, is a framed testimonial, with seal and ribbons attached, which was awarded at the Louisiana Exposition. Flanking this and filling the side spaces are the opened boxes containing one dozen each of the small violet cartons. Garlands of violet crepe paper are draped from the sides of the window to the lighting fixtures and attached to these hang violet paper bells. The price is shown by pasting some of the cardboard cartons themselves on the glass to form the figures 15. A card with violet lettering reads, "Every May morning I bring the violets."

George F. Schreyer, 747 Second avenue, is selling nursing bottles by simply filling the window with them in a careless manner. At the rear a little above this pile of glass is a small bath tub in which is seated the lay figure of an infant. A card states, "Carrying a large stock of nursing bottles is a sign of being abreast of the times." In the second window, above a soap display hangs a card list of forty-one names and addresses of physicians in the territory from which the store draws its trade.

OLD THINGS IN NEW GUISE.

There is a bulletin board across the rear of the store within, attached to the prescription desk, upon which customers find price changes and other notices of interest. Here too are labels of seasonable goods. One of these on a telegraph blank, reads, "Give a quarter of a quart of lime water for one-fifth of a quarter." Another is, "Eight options for five cents. 1 pint lime water in your own bottle, 1 pint lime water in our bottle, 1 pint lime water in one of our sterilized bottles, 1 pint distilled water in your own bottle, 1 pint distilled water in nursing bottle, 1 pint distilled water in sterilized bottle, 1 pint graduated nursing bottle, 1 pint plain nursing bottle." A row of glass containers filled with crude drugs, placed on the top of the shelves, features the prescription department.

A STATIONERY WINDOW.

J. A. Prolen, 295 Amsterdam avenue, already has his stock of summer stationery on hand, and calls the attention of the traveling public to that fact by a window display. In one corner is a single darked box of paper, the cover lettered in gold, "Red Royal." In the opposite corner is another single box, but this is green with silver label. Between come several boxes of "yachting" paper in boxes of a cool green tint adorned with a representation of the last cup defender under full sail, tossing up the sea at her bow and standing out against the background in her pure whiteness. Then follow Swiss mull, Dresden lawn, and other varieties of paper with covers which represent the goods contained. The central group is very pretty, for it is composed of boxes of Holland lawn which are stamped with views of windmills, canals, and Dutch women in their large wooden shoes. There are several other varieties. A card states, admirably in its simplicity, "Fine Papeterie."

Among the Brooklyn druggists who state that their business has already been benefited by the N. A. R. D. movement is Adolph Schwartz, whose store is at Atlantic and Third avenues. Notwithstanding his close proximity to several large department stores, he finds his trade increasing at the improved prices. The public, he says, pays very little attention to the various articles in the daily press regarding a drug trust and a rise in prices. Indeed the masculine customers completely refuse to even go around the corner to see what the department stores are quoting, claiming it is too much trouble over a small matter.

The Hegeman Corporation store on One Hundred and Twenty-fifth street has been pushing the sale of package roasted coffee by a window display. There was nothing extraordinary about the decorative arrangement, but the whole matter served to call attention to the fact that there is a good profit for druggists in the handling of package coffee. The corporation also distributes a rather elaborate circular on the subject. It is about twice the size of the ordinary circular, but is folded several times before mailing. Printed on plain white paper in black ink, the major portion of the space is devoted to a description of the merits of this particular brand of coffee and a brief talk on the process of growing and marketing in the Sierra Madre mountains of Guatemala. On the left margin is a reproduction of a picture of a quetzal bird, or coffee bird, which is used as a trade mark.

A short time ago W. T. Jordan, of Lock Berlin, near Lyons, N. Y., exported 2,000 pounds of peppermint root to Toronto, Canada, for propagation. Several attempts to cultivate the root were unsuccessful, but a later one justified the experimenters in making the attempt again.

The Zwarts Pharmacy, Broadway and Locust streets, St. Louis, is attracting attention to their line of stogies, with the following sign in their window: "Are you fishing for a good smoke? If so, try these poles. They are good ones; a little rough on the outside, but fine inside, and they cost three for five cents."

APPRAISERS' DECISIONS.

The protest of the Eastman Kodak Company against the assessment of duty on paper coated with baryta, was overruled by the Board of General Appraisers on the ground that it was paper surface-coated for photographic purposes.

M. Noser, et al, was sustained in his protest by the Board, that storage charges on detained merchandise consisting of food held for examination as to purity, should be paid by the Federal government.

The Federal Circuit Court of the Southern District of New York reversed the decision of the Board of General Appraisers that F. Zaloum & Sons be assessed duty on an importation of sesame oil or ground sesame seed, as an unenumerated manufactured article. The court held that sesame oil, or ground sesame seed from which the oil had been extracted, was not dutiable, irrespective of the fact that there was another and more refined product on the market, known by the same name. It was held that the product in question was not a food as contended by the contestants.

DRUG WINDOW DISPLAYS.

J. Colp, at 209 Bleecker street, changes his window often, but makes no special effort to attract trade, as he has been in his present place of business nineteen years and is satisfied that his method of getting trade and retaining it is the best. Mr. Colp's method is to have in stock a complete variety of drugs and chemicals, so that he can fill any prescription brought in or supply any known want of that cosmopolitan locality. One of the most striking features of the Colp Pharmacy is its compactness and another is the thoroughness with which every inch of available space is utilized. The store with its central window and two doors, one on each side of the window, is specially adapted for display purposes. However, as has been mentioned, Mr. Colp does not make window dressing an important part of his business, depending upon his ability to supply every demand made upon him. Every wall and show case is filled with a full line of the prerequisites of the business and so arranged that no time is lost hunting for a single article; everything within easy reach of the dispenser's hand. Another striking feature is that everything is clean; even if old, the fittings have a lustre which few of the other downtown stores have.

It was a boarding-house. The newcomer was given a general introduction to the regulars over the dinner bell rang. He was seated between the cheerful idiot and the Girl with the Auburn Hair. "Mr. Snodklns," began the landlady, "we have adopted a rule that business shall be taboed at the table. Likewise religion and politics. Have you any scruples—" "Pardon me," said Snodklns, "I am a druggist. Business should be cut out, by all means."

NEW CROP SPONGES.

Commenting on the sponge industry, Albert Hart, manager of the sponge department of Smith, Kline & French Co., Philadelphia, says:

"The new crop of Rock Island sheep-wool sponges just marketed brought very high prices. Some of the dealers paid as high as \$10 per bunch (1 1/4 lb. to 1 1/2 lb.) for them, owing to the shortage of the crop. This grade of sponges is so very valuable to the trade that most any price it has to fetch will be paid by some retailers, owing to its strength and adaptability to certain classes of work. The crops of recent years have been very small, and the demand very large, chiefly attributed to the depletion of the beds, which do not have sufficient time to recuperate, hence the prevailing high prices, which give every appearance of permanency."

THE BOER WAR.

So far as genuine realism is concerned, the Boer War at Brighton Beach is a great success. The field covers twenty-seven acres, ten of which are devoted to military and native camps. The arena is backed by a finely-painted scene representing the Drakensburgh mountains, with the quaint Boer homesteads and churches in the foothills. These form a background for a most realistic reproduction of two of the most decisive battles of the Boer War—the Boer victory of Colenso and the surrender of Cronje at Paardeberg. In these battles eight hundred British troopers, veterans of the contest they now rehearse, and three hundred and fifty Boers, led by the commanders whose names are found in history, take part. The Baldwin air ship, the famous "California Arrow," is soon to make daily ascents from Brighton Beach. Leo Stevens will be the aeronaut. This air ship is the only one that was successfully navigated at the World's Fair.

A SPONGE MAN.

A Sixth avenue department store window dresser got entangled in the sponge store room not long ago, and as a result created a little sponge man which is attracting no end of attention to shoppers in that crowded district. The little man is made of sponges from scalp to heel, and the effect is realistic, being materially aided by a few dashes of paint of black and red. He stands gazing into space from his foot and a half height and reigns supreme in the window. He possesses a large and well-developed cranium, fronted with well-balanced features and surmounting a rounded body, which in turn is supported by a pair of spindle stanks. Attired in a costume made of the several flat varieties of sponges, the lightsome fellow stands to attract sponge business. Druggists would do well to follow the idea out.

It is said in Alexandria, Ind., that T. H. Jones, of that city, boasts of the smallest ginseng farm in the city, if not in the State. The farm covers an area of 396 square feet and in that space are 1,025 plants, of three ages, from one to three years. So far Mr. Jones has expended about \$80 and expects to net at the rate of \$8 the pound, between \$500 and \$600, calculating that each root will weigh one quarter of a pound at the time of selling.

CHANCE FOR LARGE PROFITS.

Big protected profits are assured by Wells & Richardson Co. to druggists who handle Lactated Food. The company is in the field with a new and strong proposition to the retailers, which, it is claimed, will enable them to get a larger profit on Lactated than on any other food. The proposition is one which has made something of a sensation in the trade. With a purchase of an \$8 quantity of Lactated Food, Wells & Richardson Co. offers to mail to twenty customers of the purchaser, a convincing booklet, bearing the imprint of the druggist and offering for free trial on receipt of the postage, a 25-cent package of Lactated Food. The company will also send, charges prepaid, for store advertising, 200 picture cards, with the name of the druggist printed on them, one four-fold window display card and twenty-five baby booklets, with the druggist's imprint. With a purchase of a \$16 quantity, this special advertising offer will be doubled, and a discount of five per cent. will be allowed. The offer is printed in full in the advertising columns of The Era.

IN BIG DEMAND.

In one respect burnt leather Postal Cards differ from so many novelties, which become a fad for a time and then lose their popularity. These Postal Cards are in larger demand now than they were when they were first put on the market, and the sales show a steady increase. There is a good profit in the cards, and druggists who have handled them are pleased with the result. They make a quick selling and profitable side line for the drug trade, and one which can be carried for a long time, while the demand for them is on the increase. They retail at a profit which makes them easy to dispose of, and which still leaves a good percentage for the trouble of handling them. The Risley-Bird Manufacturing Company elsewhere in The Era call attention to the burnt leather Postal Cards, which "sell like hot cakes."

"IRRESISTIBLY DELICIOUS."

"Irresistibly delicious" is what is claimed for Peter's Milk Chocolate, and with the reputation of being not only the original, but as good as there is on the market, it is a product which finds a ready sale. A standby of the druggist, the makers help push it by extensive advertising, so that the man who handles it is sure of his profits. As an eating chocolate Peter's ranks first, and in the many years it has been before the public, it has only gained in the esteem of lovers of chocolate. In another part of The Era, Lamont, Corliss & Co. make their announcement to the trade.

—George A. Dykeman, who has now been with the H. K. Mulford Company for three years, has opened his retail drug store in Palenville, Green Co., New York, for the summer. Mr. Dykeman's custom is to keep this open from about June 15 until November, devoting the rest of the year to his work with the H. K. Mulford Co. The Palenville store has been very successful for many summers, and all tourists to the beautiful Catskill mountain region are familiar with it. Mr. Dykeman formerly was head of the firm of Dykeman & Schofield, druggists, in Catskill.

BUSINESS RECORD.

ALABAMA.
Fort Deposit.—Fort Deposit Drug Co., succeeds Coleman & Co.
ARKANSAS.
Wilmar.—J. E. King & Co., succeed Ganaway Drug Co.
CALIFORNIA.
San Francisco.—Olsen & Spiro, succeed F. W. Mixer, Market and Haight.
CONNECTICUT.
Bridgeport.—J. C. Prote, 18 Fairfield Ave., new store.
Hartford.—Percy G. S. Buck, succeeds J. C. Duchette, 28 New Britain Ave.
DISTRICT OF COLUMBIA.
Washington.—James O'Donnell, 904 P St., new store.

Richmond.—H. B. Hatcher Drug Co., succeed Chuch & Co., 106 N. Pine St.

WEST VIRGINIA.
Belington.—Belington Drug Co., damaged by fire.

WISCONSIN.
Galesburg.—Model Drug Store, new store.

COCA-COLA CO.'S COUPONS.

Possibly the most attractive piece of magazine advertising, and one of the most expensive ever undertaken by any concern in this country, is the one now being run by the Coca-Cola Company, in several of the leading magazines. This advertisement is in the form of an exceedingly handsome colored insert, which is bound to attract attention. The total issue of these inserts will run up into the millions and while the initial expense will be enormous, it represents but a small proportion of the actual cost of the campaign. Every one of the inserts carries a coupon which, when cut out and presented to any dispenser of "Genuine Coca-Cola," will entitle the holder to a glass of Coca-Cola free, and the Coca-Cola Company stands ready to redeem these coupons at five cents each, when returned to their office in Atlanta, Georgia, with bill.

Not everyone, of course, who sees this advertisement will take the trouble to cut out and present the coupon, but it may be assumed that from three to five million of the coupons will be redeemed and this means an increase in business for the soda fountain owners. One million glasses of Coca-Cola at five cents each amounts to \$50,000, an average of almost \$2 for each soda fountain in the United States. This stupendous offer will continue throughout the season. This sort of enterprise on the part of the Coca-Cola Company is deserving of the support and co-operation of the dispenser, who should display signs inviting holders of Coca-Cola coupons to drink at his fountain, conspicuously about the front of his store. A short ad. in the druggist's local newspaper will bring persons, and returns to his fountain far in excess of the cost of the advertisement.

—Charles B. Winslow, a druggist in Hutchinson, Kan., since 1872, is dead. He was a Mason, a Knight Templar and an Elk.

PATENTS.

Issued June 20, 1905.

- 792,578—Harry S. Arnold, Scranton, Pa. Non-refillable bottle.
- 792,589—Samuel B. Grimes, Cincinnati, O. Percolator.
- 792,601—Walter S. Little, Lynn, Mass. Sanitary attachment for speaking tubes or telephone mouthpieces.
- 792,608—Michael J. Owens, Toledo, O., assignor to the Toledo Glass Co., Toledo, O., a corporation of Ohio. Method of forming interiorly grooved bottle necks.
- 792,621—Adolph H. Schlueter and Theodore A. Schlueter, Oakland, Cal. Containing and pouring can.
- 792,629—William Sunderland, Lehi, Utah. Process of treating the plant balsam orrisa.
- 792,698—John F. Cunningham, Springfield, Mo., assignor of one-half to J. O. Moore, Springfield, Mo. Fumigating candle.
- 792,711—Edward Koerber, Chicago, Ill. Artificial limb.
- 792,783—Wilhelm Muthmann, Munich, Germany, assignor to the Roessler & Hasslacher Chemical Co., New York, N. Y. Manufacture of prussic acid.
- 792,812—Ralph E. Brown, Cleveland, O. Closure for jars or bottles.
- 792,857—William E. S. Strong, Detroit, Mich., assignor to The Winkley Company, Hartford, Conn., a corporation of Connecticut. Filling apparatus.
- 792,886—Max Engelmann, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co., New York, N. Y., a corporation of New York. Process of making dialkyl harbituric acids.
- 792,911—Henry Metzinger, New York, N. Y. Fraud-detecting bottle.
- 792,918—Charles A. Ohlendorf and William Brough, Baltimore, Md., assignors by direct and mesne assignments to Burt Machine Co., a corporation of Delaware. Tablet or pill counting machine.

- 792,926—Lewis Quimby, Youngstown, O. Filter.
- 792,934—Robert A. Sibbitt, Carleton Place, and Archibald K. McLean, Ottawa, Canada. Apparatus for recovering turpentine or other products from wood.
- 792,936—Arthur R. Smith, Providence, R. I. Bottle stopper.
- 792,991—Fred Jost, San Francisco, Cal. Non-refillable bottle.
- 793,026—Henry S. Blackmore, Mount Vernon, N. Y., assignor by direct and mesne assignments, to Blackford Utility Oil Company, a corporation of the District of Columbia. Process of separating sulphur from the sulphur containing constituents of petroleum and making hydrogen carbid.

TRADE-MARKS.

Registered June 13, 1905.

- 1,722—Kress & Owen Co., New York, N. Y. Alternative solution for the treatment of mucous membrane. The hyphenated word "glyco-Thymoline."
- 1,769—E. C. De Witt & Co., Chicago, Ill. Remedies for the bowels and liver. The words "De Witt's Little Early Risers."
- 1,815—Henry Heil Chemical Co., St. Louis, Mo. Medicinal preparation in the form of a mixture used as an antiseptic, germicide, and healing agent. The words "Diamond Eczema Cure."
- 1,847—George Mortimer, Boston, Mass. Liquid specific for female complaints. A fanciful representation of the head and shoulders of a woman with herbs projecting above each shoulder, the portrait and herbs surmounting inclined spaces.
- 1,848—George Mortimer, Boston, Mass. Medicated adhesive plasters. The same representation as in the preceding.
- 1,977—Fairchild Bros. & Foster, New York, N. Y. Artificially digested food or pepton preparation. The word "Panopepton."
- 1,980—Fairchild Bros. & Foster, New

- York, N. Y. Digestive preparation. The word "Pepsencia."
- 1,981—Fairchild Bros. & Foster, New York, N. Y. Artificial digestive preparation. The word "Zymine."
- 2,023—The Weber Medical Tea Co., Brooklyn, N. Y. Herb teas. A portrait of the late Dr. Ernest A. Weber.
- 2,025—Sophia North, Arlington, Mass. Remedy for scap diseases and tonic for the scalp. The letters "D. R." arranged in monogram form.
- 2,111—Albert G. Groblewski, Plymouth, Pa. Remedy for diseases of the stomach, eruptive skin diseases and as a spring-medicine. The word "Egiterro."
- 2,130—Pneumo-Phtysine Chemical Mfg. Co., Oklahama, Okla. The compound word "Pneumo-Phtysine."
- 2,171—The Sanssep Chemical Co., Lexington, Ky. Remedy in tablet form for dyspepsia and all forms of indigestion. The word "Sanssep."
- 2,200—Maas & Waldstein Co., Newark, N. J. Medical tonics. The word "Iron-brew" associated with the representation of an uplifted arm and hand grasping a hammer.
- 2,470—Percival Gassett, Dedham, Mass. Remedy for headache. A representation of the sun rising from the sea. Above the sun, in a semi-circle with the rays behind them are the words "Quick Stop."
- 2,484—J. Lee Cruce Co., Fort Smith Ark. Headache, fever and pain powder. The representation of a shield on which is a monogram composed of the letters "I. L. C."
- 2,557—Capudine Chemical Co., Raleigh, N. C. Cure for headaches, colds and indigestion. The word "Capudine."
- 2,723—J. C. Mayfield Manufacturing Co., Birmingham, Ala. Non-intoxicating tonic beverage. The hyphenated word "Celery-Cola."
- 2,747—The Lambert Pharmaceutical Co., St. Louis, Mo. The word "Listerine."

MARKET ADJUST REPORT

MENTHOL ERRATIC.

Its Price Now Advances Because of Speculative Covering.

OTHERWISE MARKET QUIET AND STEADY.—OPUM FIRMER.—QUININE STATISTICS UNFAVORABLE BUT NO DECLINE EXPECTED.—A NUMBER OF MINOR FLUCTUATIONS.—JOBBER'S REDUCE WOOD ALCOHOL A TRIFLE.—CHLOROFORM DEVELOPMENTS DUE TO EXPIRATION OF PATENTS.

New York, June 26.—As is usual at this season, the market presents a more quiet appearance. Changes in quotations are not numerous or important. Business keeps up fairly well, although orders from consumers are usually limited to current requirements. Features of interest are hard to find. The only development of the week approaching this nature is the advance in menthol. This occurred quite unexpectedly, and was due to efforts of speculative shorts in Hamburg to cover by purchases in this market. In one day wholesale prices rose rapidly by leaps of five cents. Starting at \$1.75, sales were made at \$1.80, and then at \$1.85, some holders even believing in \$2.00. The leading staples are quiet and routine, although statistics are still exerting a bearish influence on quinine. Opium shows an upward tendency.

OPUM.—Crop reports from Turkey have been so unfavorable that the market is firmer, with an upward tendency to prices. Indeed, a few holders have advanced the quotation for cases to \$3.05. The old price of \$3 still prevails, however. Foreign markets are also firmer. The shortage of the Turkish crop is reported from Smyrna to be due to dry weather and prevailing hot southerly winds. There has been a little rain recently, but it came too late to benefit the crop in the lowlands much. The highland sowings were small because of heavy snow fall in planting time. The maximum production is now estimated at 3,500 to 4,000 cases. The demand on jobbers continues moderately satisfactory and their quotations remain unaltered at \$3.10@3.25 for 9 per cent. and \$3.20@3.40 for 11 per cent. powdered, \$4.00@4.25 for 13 per cent. and \$4.75@5.00 for 16 per cent.

MORPHINE SULPHATE.—There is nothing new to report. The tone of prices holds steady and demand is normal. Jobbers are asking \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, and \$2.30@2.40 in 5-oz. tins, according to brand and quantity.

QUININE SULPHATE.—At the recent bark sale at London the unit realized was the lowest in several years, most authorities calling it as 1d. against 1 1/16 d. at the previous sale. The offerings to be made at the next Amsterdam sale on July 13 have been announced as 11,500 packages, a quantity larger than at any auction

since December. These influences are all in favor of lower prices, but a decline is not expected. It is understood that leading interests in Amsterdam are combined to support values. This is naturally the dull season of the year and it is held that a decline in quotations now would not even produce the effect of stimulating demand. Jobbers report the usual run of orders for retail necessities and the volume of these is fairly satisfactory. Prices continue 20@21c. for bulk in 100-oz. tins; 20½@21½c. in 50-oz. tins; 21@22c. in 25-oz. tins; 22@23c. in 15 or 10-oz. tins; 25@26c. in 1-oz. tins, and 27@28c. in ounce vials, as to brand and quantity.

MENTHOL.—The feature of the market this week has been furnished by this commodity. Last week values declined, but at the close of the week suddenly shot up again at wholesale with surprising rapidity. This was due to the strength of foreign markets as a result of speculative operations. Spot supplies of menthol are rather scarce abroad, especially so in Hamburg. In that center there is always a good deal of speculation in the drug. It is said that a number of such operators there had oversold the market and were forced to cover by purchases here. In one day quotations at wholesale in New York rose ten cents. London advanced in sympathy to 6s. 3d. The effect of this movement on jobbers will probably be seen next week, but at present they are still quoting \$2.35@2.50 per pound.

BAYBERRY BARK.—Supplies in every quarter are very scarce. Export orders have been received in this market for round lots which could not be filled. Under these conditions, jobbing prices have advanced to 22@27c. for whole, and 27@32c. for powdered, per pound.

PECAN BARK.—Values are higher, both in Europe and here, because of some scarcity and fair demand. Jobbers have advanced quotations to \$1.60@1.70 for whole, \$1.70@1.80 for ground and \$1.80@1.90 for powdered. No distinction in the price for Rio or Cartagena.

OIL LAVENDER.—Jobbing quotations have declined to \$1.25@1.40 for Garden and \$1.00@1.15 for Spike. This change was due to a readjustment to a level corresponding to similar oils.

WOOD ALCOHOL.—Lower cost at wholesale, causes a reduction in jobbers' prices to 70@71c. per gallon in barrels and 80@85c. per gallon in smaller quantities.

CRAMP BARK.—New bark is arriving in sufficient quantities to force a decline and jobbers have lowered quotations to 23@28c. for whole, and 26@30c. for ground per pound.

JAMAICA GINGER.—Foreign markets are higher and local jobbing prices have risen in sympathy to 17@21c. for whole and 19@23c. for powdered per pound.

SENEGAL ROOT.—Prime western is easier because of the approach of the new crop. It is stated that diggers in producing regions are experiencing difficulty from wet ground. Jobbing prices have eased to 79@89c. for the whole, 84@94c. for ground, and 89@99c. for powdered per pound.

ANISE SEED, STAR.—Larger supplies and freer offerings induce jobbers to quote the lower terms of 30@35c. per pound.

MATIOO LEAVES.—A firmer tone prevails, jobbing prices being 45@50c. for whole and 50@55c. for powdered.

COLCHICUM ROOT.—Scarcity continues and primary markets are hungry for supplies. To some of them exports have been made recently. Values here as quoted by jobbers are 21@26c. for whole and 26@31c. for powdered.

FUMIGATING PASTILLES.—Latest jobbing terms are 35@40c. per pound for black and 45@50c. for red per pound.

SAPPRON.—American continues to decline. The market is no longer closely controlled and new supplies are arriving. Latest jobbing figures are 1.05@1.15c. per pound.

TARTAR EMETIC.—Another advance has resulted from the increased cost of raw material, making jobbing prices 38@44c. per pound.

GOLDEN SEAL ROOT.—The demand for spring dug has been so good that offerings have been mostly cleaned up, leaving the market firmer. There has been a good export demand. It is reported that shrewd operators in producing sections are buying up supplies from collectors and holding for a rise which they anticipate later when large consumers come into the market to purchase. Predictions of \$2.00 per pound at wholesale during the coming season have been made. Jobbing quotations remain unchanged at \$1.75@1.85 for the whole.

OIL CLOVES.—Because of higher figures for spice, the oil is firmer and the market shows an upward tendency, but no change has resulted in jobbers' prices.

CAMPBON.—Seasonable activity continues in a jobbing way, but most deliveries by manufacturers are on old contracts. The prices remain unaltered.

ROSEMARY OIL.—Foreign markets are higher and so are wholesale terms here, but jobbing figures hold.

LACOPORIUM.—Referring to market conditions on the continent, the London Chemist and Druggist quotes the statement that they are lifeless, as most consumers have covered their wants for this season. It also appears as if there will not be a revival of trade before the new crop. Situation here remains the same.

ALOES.—For other varieties than Curacao, there is little demand, but for that kind, steady buying is the feature. Stocks of Curacao are diminishing. Primary markets are strong. Prices here unchanged.

CELERY SEED.—Foreign advices report a small advance in prices, but local quotations are unaltered.

ROSE LEAVES AND POPPY FLOWERS.—For both reports from abroad are the same. Prices there are higher because the crop is practically a failure. At wholesale here values have risen one cent, but jobbers make no changes.

CHLOROFORM.—As a result of the expiration of the patents on the modern acetone process of manufacture, the two big manufacturing firms who controlled the patents, the Roessler & Hassacher Chemical Co. and the Albany Chemical Co., have consolidated their interests in that line and formed the Chlorine Products Co., to produce chloroform entirely at their Niagara Falls plants. This arrangement is expected to lessen the cost of production to them and thus enable them to successfully meet any new competition entering the field. Prices show no further change.
